*Physics and Chemistry of Clouds and Weather Modification Research Programme (PCCWMP).* This program encourages scientific research in physics and chemistry of clouds and its application to all fields where clouds have a major role. Examples include weather enhancement (rain making) and hail suppression. The program provides information on worldwide weather modification projects and guidance in the design and evaluation of experiments. It also studies the role of clouds in the transport, transformation, and dispersion of pollution.

#### E. Hydrology and Water Resources

The purpose of the WMO's Hydrology and Water Resources Programme is to promote worldwide cooperation in the assessment

of water resources and their development through the coordinated establishment of hydrological networks and services, including data collection and processing, hydrological forecasting and warnings, and the supply of meteorological and hydrological data to be used for the design of projects. The three components of the program are: the Operational Hydrology Programme—Basic Systems; the Operational Hydrology Programme—Applications and Environment; and the Programme on Water-related Issues.

The emphasis is on the operational hydrology program, and particularly its hydrological operational multipurpose subprogram, the main aim of which is to provide an efficient means and systematic institutional framework for transfer of operational hydrological technology to and between developing countries.

The program for applications and services in regard to water resources provides technical support for WMO activities dealing with environmental problems, such as the Tropical Cyclone Programme, the World Climate Programme, and WMO activities relating to droughts and desertification.

#### F. Education and Training

The Education and Training Programme is designed to support the scientific and technical programs of the WMO, as well as to assist in the development of the required personnel in the national meteorological and hydrological services of member countries.

Activities under the program include surveys of personnel training requirements; the development of appropriate training programs; the establishment and improvement of regional training centers; the organization of training courses, seminars, and conferences; and the preparation of training materials in the form of compendia of lecture notes, problem workbooks, and visual and audiovisual aids. The program also arranges individual training programs and provides fellowships. Training programs place several hundred specialists in advanced courses each year.

The program provides advice on education and training in meteorology and operational hydrology and on the availability of suitable training facilities. A training library is maintained. Films are provided on a loan basis to members on request.

The Panel of Experts on Education and Training serves as the focal point of the program.

#### G. Technical Cooperation

The WMO's technical cooperation activities—in the form of fellowships, expert missions, equipment, and assistance for group training, such as workshops and seminars—are carried out through UNDP, the Voluntary Cooperation Programme, trust-fund arrangements, and the regular budget of the organization. Assistance has been given in support of projects ranging from the establishment, organization, and operation of meteorological and hydrological services to the application of meteorology in increasing food production and assessing alternative energy sources.

WMO's Voluntary Cooperation Program (VCP) is maintained by contributions from members to the Voluntary Cooperation Fund and to the Equipment and Services Program. Although priority is given to the implementation of the World Weather Watch, the VCP also provides assistance and supports other WMO programs in such fields as agrometeorology, hydrology, and climate. It grants fellowships to nationals of developing countries.

Under trust-fund arrangements, countries make funds available through the WMO for technical cooperation activities either in the country providing the funds or in another country.

Activities under the WMO's regular budget are only a small percentage of the total assistance and are confined mainly to the awarding of fellowships and participation in group training.

#### **H. WMO Regional Program**

WMO provides support through three regional offices and six subregional offices: Regional Office for Africa (Burundi), Regional Office for Asia and the South-West Pacific (Switzerland), and Regional Office for Americas (Paraguay); Subregional Offices are West Africa (Nigeria), Eastern and Southern Africa (Kenya), South-West Pacific (Samoa), North and Central Ameri-

ca and the Caribbean (Costa Rica), Asia (Bahrain), and Europe (Switzerland).

The Regional Program helps bridge the gap between developed and developing countries and accelerates the implementation and operation of the World Weather Watch, operational hydrology, and Global Atmosphere Watch. The Regional Program also assists in implementing the recommendations made by the six Regional Associations and provides the necessary support to their presidents. It contributes to activities of regional intergovernmental bodies as well as to high-priority activities such as those relating to climate change, sustainable development, and protection of the environment resulting from UNCED and the UN Framework Convention on Climate Change.

---

# THE INTERNATIONAL MARITIME ORGANIZATION (IMO)

**BACKGROUND:** The seven seas, accounting for about two-thirds of the earth's surface, are the only truly international part of our globe. Except for a marginal belt a very few miles wide, touching on the shores of countries, the greater part of the world's oceans and maritime resources are the common property of all nations. Since ancient times, however, "freedom of the seas" has too often been a theoretical ideal rather than a reality. In each historic era, the great maritime powers tended to use their naval might to dominate the sea. Some of those powers, while serving their own interests, served the world as a whole, as in the great explorations of unknown continents. Many sought to use the waters for purely national interests, particularly in matters affecting straits and other narrow waterways. Private shipping interests, often supported by their national governments, have been even more competitive, and international cooperation in maritime matters has been very limited.

The need for an international organization to develop and coordinate international maritime cooperation was expressed by President Woodrow Wilson, who called for "universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world." However, it was not until after the creation of the UN that such an organization came into being.

---

## CREATION

The convention establishing the International Maritime Organization (originally called the Inter-Governmental Maritime Consultative Organization) was drawn up in 1948 by the UN Maritime Conference in Geneva, but it was 10 years before the convention went into effect. The conference decided that the IMO's success depended on participation by most of the nations with large merchant navies, and it specified that the organization would come into being only when 21 states, including seven having at least 1 million gross tons of shipping each, had become parties to the convention. On 17 March 1958, the convention went into effect. The first IMO Assembly met in London in January 1959. The relationship of the IMO to the UN as a specialized agency was approved by the UN General Assembly on 18 November 1958 and by the IMO Assembly on 13 January 1959.

## PURPOSES

The purposes of the IMO, as set forth in the convention, are the following:

- to facilitate cooperation among governments on technical matters of all kinds affecting shipping engaged in international trade;
- to encourage the general adoption of the highest practicable standards in matters concerning maritime safety, efficiency of navigation, and the prevention and control of marine pollution;
- to encourage the removal of discriminatory action and unnecessary restrictions by governments engaged in international trade, so as to promote the availability of shipping services to world commerce without discrimination;

- to consider matters concerning unfair restrictive practices by shipping concerns; and
- to consider any matters concerning shipping that may be referred to the IMO by any UN organ or specialized agency.

## MEMBERSHIP

Any state invited to the 1948 Maritime Conference or any member of the UN may become a member of the IMO by accepting the 1948 convention. Any other state whose application is approved by two-thirds of the IMO membership becomes a member by accepting the convention. If an IMO member responsible for the international relations of a territory (or group of territories) declares the convention to be applicable to that territory, the territory may become an associate member of the IMO. As of 30 August 2005 there were 166 IMO members and three associate members.

## STRUCTURE

The IMO's structure comprises the Assembly, the Council, the Maritime Safety Committee, the Marine Environment Protection Committee, the Legal Committee, the Technical Cooperation Committee, and the secretariat, headed by a Secretary-General.

### Assembly

The governing body of the IMO is the Assembly, composed of all IMO members. The Assembly determines the work program and votes on the budget to which all members contribute. It meets once every two years in regular sessions, but may also meet in extraordinary session if necessary.

## Council

Between sessions of the Assembly, the Council performs all functions of the organization except that of recommending the adoption of maritime safety regulations, a prerogative of the Maritime Safety Committee. The Council also has an important policymaking role. Drafts of international instruments and formal recommendations must be approved by the Council before they can be submitted to the Assembly.

The Council is made up of 40 members elected by the Assembly for two-year terms: ten members represent states with the largest international shipping services; ten represent states with the largest international sea borne trade; and 20 represent states, not elected under the foregoing categories, that have special interests in maritime transport or navigation and whose presence in the Council will ensure representation of the world's major geographic areas. The Council normally meets twice a year. The members of the Council for 2006-07 were: (from the first category) China, Greece, Italy, Japan, Norway, Panama, Republic of Korea, Russian Federation, United Kingdom, United States; (from the second category) Argentina, Bangladesh, Brazil, Canada, France, Germany, India, Netherlands, Spain, Sweden; and (from the last category) Algeria, Australia, Bahamas, Belgium, Chile, Cyprus, Denmark, Egypt, Indonesia, Kenya, Malaysia, Malta, Mexico, Philippines, Portugal, Saudi Arabia, Singapore, South Africa, Thailand, and Turkey.

## Committees

The Maritime Safety Committee is made up of all IMO member states. Its work is carried out mainly through nine sub-committees working in the following areas: bulk liquids and gases; carriage of dangerous goods, solid cargoes and containers; fire protection; radiocommunication and search and rescue; safety of navigation; ship design and equipment; stability and load lines and fishing vessels safety; standards of training and watch-keeping; flag state implementation.

The Marine Environment Protection Committee is responsible for all matters relating to the prevention and control of marine pollution from ships.

The Legal Committee, established in the aftermath of the *Torrey Canyon* disaster of 1967 to deal with the legal problems arising from that incident, is responsible for any legal matter within the scope of the IMO.

The Technical Cooperation Committee coordinates the work of the IMO in providing technical assistance in the maritime field, especially to developing countries.

The Facilitation Committee is a subsidiary body of the Council. It was established in May 1972 and deals with IMO's work in eliminating unnecessary formalities and "red tape" in international shipping.

## Secretary-General and Secretariat

The secretariat consists of a Secretary-General, appointed by the Council with the approval of the Assembly, and an international staff of about 300. IMO headquarters are at 4 Albert Embankment, London, England, UK, SE1, 7SR.

The Secretary-General since 2004 is Efthimios E. Mitropoulos of Greece. He heads a staff of approximately 300.

## BUDGET

The IMO Assembly approved a budget of €49,730,300 for the 2006–07 biennium. Contributions to the IMO budget are based on a formula that is different from that used in other agencies. The amount paid by each member state depends primarily on the tonnage of its merchant fleet. In 2006 the top ten contributors to the IMO budget (and the percentage of the total budget) were Panama, 18.47%; Liberia, 7.72%; Bahamas, 5.03%; United Kingdom, 4.64%; Greece, 4.34%; Singapore, 4.02%; Japan, 3.76%; Marshall Islands, 3.58%; United States, 3.44%; and China, 3.34%.

## ACTIVITIES

The IMO's general functions, as stipulated in its convention, are "consultative and advisory." It thus serves as a forum where members can consult and exchange information on maritime matters. It discusses and makes recommendations on any maritime question submitted by member states or by other bodies of the UN and advises other international bodies, including the UN itself, on maritime matters. Various other intergovernmental agencies deal with specialized maritime matters, such as atomic propulsion for ships (IAEA), health at sea (WHO), maritime labor standards (ILO), meteorology (WMO), oceanography (UNESCO), and ship-to-ship and ship-to-shore communications (ITU). One of the functions of the IMO is to help coordinate the work in these different fields.

The IMO is also authorized to convene international conferences when necessary and to draft international maritime conventions or agreements for adoption by governments. These conferences, and the conventions resulting from them, have been mainly concerned with two subjects of primary concern to the IMO: safety at sea and the prevention of marine pollution.

### A. Safety at Sea

A conference convened by the IMO in 1960 adopted the International Convention on Safety of Life at Sea (SOLAS) to replace an earlier (1948) instrument. The convention covered a wide range of measures designed to improve the safety of shipping, including subdivision and stability; machinery and electrical installations; fire protection, detection, and extinction; lifesaving appliances; radiotelegraphy and radiotelephony; safety of navigation; carriage of grain; carriage of dangerous goods; and nuclear ships. A new convention, incorporating amendments to the 1960 agreement, was adopted in 1974 and entered into force in 1980. The SOLAS convention was updated with the SOLAS Protocol of 1978, which entered into force in 1981, and with the SOLAS Protocol of 1988, which entered into force in February 2000. In December 2002, amendments were adopted related to maritime security, which were scheduled to enter into force in July 2004.

In 1966, an IMO conference adopted the International Convention on Load Lines (LL), which sets limitations on the draught to which a ship may be loaded, an important consideration in its safety. The convention was updated by the LL Protocol of 1988, which entered into force in February 2000. The 1969 International Convention on Tonnage Measurement of Ships is designed to establish a uniform system for tonnage measurement.

Two conventions were adopted in 1972, following IMO conferences: the Convention on the International Regulations for Preventing Collisions at Sea, which concerns traffic separation

### Membership of IMO (as of May 2006)

Albania	El Salvador	Liberia	San Marino
Algeria	Equatorial Guinea	Libyan Arab Jamahiriya	São Tomé and Príncipe
Angola	Eritrea	Lithuania	Saudi Arabia
Antigua and Barbuda	Estonia	Luxembourg	Senegal
Argentina	Ethiopia	Madagascar	Serbia and Montenegro
Australia	Fiji	Malawi	Seychelles
Austria	Finland	Malaysia	Sierra Leone
Azerbaijan	France	Maldives	Singapore
Bahamas	Gabon	Malta	Slovakia
Bahrain	Gambia	Marshall Islands	Slovenia
Bangladesh	Georgia	Mauritania	Solomon Islands
Barbados	Germany	Mauritius	Somalia
Belgium	Ghana	Mexico	South Africa
Belize	Greece	Moldova (Republic of)	Spain
Benin	Grenada	Monaco	Sri Lanka
Bolivia	Guatemala	Mongolia	Sudan
Bosnia and Herzegovina	Guinea	Morocco	Suriname
Brazil	Guinea-Bissau	Mozambique	Sweden
Brunei Darussalam	Guyana	Myanmar	Switzerland
Bulgaria	Haiti	Namibia	Syrian Arab Republic
Cambodia	Honduras	Nepal	Thailand
Cameroon	Hungary	Netherlands	The Former Yugoslav Republic of Macedonia
Canada	Iceland	New Zealand	Timor-Leste
Cape Verde	India	Nicaragua	Togo
Chile	Indonesia	Nigeria	Tonga
China	Iran, Islamic Republic of	Norway	Trinidad and Tobago
Colombia	Iraq	Oman	Tunisia
Comoros Islands	Ireland	Pakistan	Turkey
Congo, Republic of	Israel	Panama	Turkmenistan
Congo, Democratic Republic of the	Italy	Papua New Guinea	Tuvalu
Costa Rica	Jamaica	Paraguay	Ukraine
Côte d'Ivoire	Japan	Peru	United Arab Emirates
Croatia	Jordan	Philippines	United Kingdom
Cuba	Kazakhstan	Poland	United Republic of Tanzania
Cyprus	Kenya	Portugal	United States
Czech Republic	Kiribati	Qatar	Uruguay
Denmark	Korea, Democratic	Romania	Vanuatu
Djibouti	People's Republic of	Russian Federation	Venezuela
Dominica	Korea, Republic of	St. Kitts and Nevis	Vietnam
Dominican Republic	Kuwait	St. Lucia	Yemen
Ecuador	Latvia	St. Vincent and the Grenadines	Zimbabwe
Egypt	Lebanon	Samoa	

schemes; and the Convention for Safe Containers, which provides uniform international regulations for maintaining a high level of safety in the carriage of containers by providing generally acceptable test procedures and related strength requirements.

The International Convention on the International Maritime Satellite Organization, adopted in 1976, concerns the use of space satellites for improved communication, enabling distress messages to be conveyed much more effectively than by conventional radio.

Three additional conventions concern safety at sea: the 1977 Torremolinos Convention for the Safety of Fishing Vessels, which applies to new fishing vessels of 24 m (79 ft) in length or longer; the 1978 Convention on Standards of Training, Certification, and Watch-keeping for Seafarers, which aims to establish internationally acceptable minimum standards for crews; and the 1979 International Convention on Maritime Search and Rescue, which is designed to improve existing arrangements for carrying out search and rescue operations following accidents at sea.

In September 1994, a roll-on/roll-off (ro-ro) automobile ferry the *Estonia* capsized and quickly sank, killing over 900 people. Following the disaster, the IMO Maritime Safety Committee made

major changes to the safety standards of ro-ro passenger ships, including amendments to the 1974 International Convention for the Safety of Life at Sea.

### B. Prevention of Marine Pollution

The 1954 Oil Pollution Convention, for which the IMO became depositary in 1959, was the first major attempt by the maritime nations to curb the impact of oil pollution. Following a conference convened by the IMO, the 1954 convention was amended in 1962, but it was the wreck of the oil tanker *Torrey Canyon* in March 1967 that fully alerted the world to the great dangers that the transport of oil posed to the marine environment. In 1969, two new conventions were adopted: the Convention on Intervention on the High Seas in Cases of Oil Pollution Casualties, which gives states the right to intervene in incidents on the high seas that are likely to result in oil pollution; and the Convention on Civil Liability for Oil Pollution Damage, which is intended to ensure that adequate compensation is available to victims and which places the liability for the damage on the shipowner.

Two years later, a conference convened by the IMO led to the adoption of the Convention for the Establishment of an Inter-

national Fund for Compensation for Oil Pollution Damage. The fund, with headquarters in London, is made up of contributions from oil importers. If an accident at sea results in pollution damage which exceeds the compensation available under the Civil Liability Convention, the fund is made available to pay an additional amount.

These three conventions all deal with the legal aspects of oil pollution, but the continuing boom in the transportation of oil showed that more work needed to be done on the technical side as well. The problem of oil pollution—not only as a result of accidents but also through normal tanker operations, especially the cleaning of cargo tanks—was so great in some areas that there was serious concern for the marine environment.

In 1973, a major conference was convened by the IMO to discuss the whole problem of marine pollution from ships. The result of the conference was the International Convention for the Prevention of Pollution from Ships, which deals not only with oil but also with other sources of pollution, including garbage, sewage, and chemicals. The convention greatly reduces the amount of oil that can be discharged into the sea by ships and bans such discharges completely in certain areas, such as the Black Sea and the Red Sea. It gives statutory support for such operational procedures as “load on top,” which greatly reduces the amount of mixtures to be disposed of after tank cleaning, and for segregated ballast tanks.

A series of tanker accidents that occurred in the winter of 1976/77 led to demands for further action and to the convening of the Conference on Tanker Safety and Pollution Prevention in 1978. The most important measures adopted by the conference were incorporated in protocols to the 1974 Convention on Safety of Life at Sea and the 1973 Marine Pollution Convention.

The protocol to the 1973 convention strengthened the provisions regarding oil pollution and at the same time was modified to incorporate the parent convention. It was amended in 1984, and further amendments were made in 1985 to Annex II, which deals with pollution by noxious liquid substances carried in bulk.

In 1989, a conference of leading industrial nations in Paris called upon IMO to develop further measures to prevent oil pollution from ships. In 1990 IMO adopted the International Convention on Oil Pollution Preparedness, Response and Cooperation (OPRC). The convention provides a global framework for international cooperation in combating major incidents or threats of marine pollutions. Parties to the convention will be required to establish measures for dealing with pollution incidents and ships and operators of offshore oil units will be required to have oil pollution emergency plans. The convention also calls for the establishment of stockpiles of oil spill-combating equipment, the holding of oil spill-combating exercises, and the development of detailed plans for dealing with pollution incidents. It entered into force in May 1995.

In addition, through its Maritime Environment Protection Committee, the IMO has been working on various other projects designed to reduce the threat of oil pollution—for example, the Regional Oil-Combating Center, established in Malta in 1976 in conjunction with UNEP. The Mediterranean is particularly vulnerable to pollution, and a massive oil pollution incident there could be catastrophic. The center’s purpose is to coordinate anti-pollution activities in the region and to help develop contingency

plans that could be put into effect should a disaster occur. The IMO has also taken part in projects in other regions, including the Caribbean and West Africa.

### C. Other Maritime Questions

In 1965, the IMO adopted the Convention on Facilitation of Maritime Traffic, the primary objectives of which are to prevent unnecessary delays in maritime traffic, to aid in cooperation between states, and to secure the highest practicable degree of uniformity in formalities and procedures.

In association with the IAEA and the European Nuclear Energy Agency of the OECD, the IMO convened a conference in 1971, which adopted the Convention on Civil Liability in the Field of Maritime Carriage of Nuclear Matter.

The Convention on Carriage of Passengers and Their Luggage, adopted in 1974, establishes a regime of liability for damage suffered by passengers carried on seagoing vessels. It declares the carrier liable for damage or loss suffered by passengers if the incident is due to the fault or neglect of the carrier. The limit of liability was originally set at US\$55,000 per carriage, but on 1 November 2002, a new protocol was adopted by the IMO, which would substantially raise that liability limit, to approximately US\$325,000. It was due to enter into force 12 months after being accepted by 10 states.

Another convention on liability, the 1976 Convention on Limitation of Liability for Maritime Claims, covers two types of claims: claims arising from loss of life or personal injury and claims arising from damage to ships, harbor works, or other property. To further clarify liability issues, in 1996 the IMO adopted the International Convention on Liability and Compensation for Damage in connection with the Carriage of Hazardous and Noxious Substances by Sea (called the HNS Convention); as of 1 May 2006, it had not entered into force.

In addition to such conventions, whose requirements are mandatory for nations that ratify them, IMO has produced numerous codes, recommendations, and other instruments dealing with maritime questions. These do not have the legal power of conventions but can be used by governments as a basis for domestic legislation and for guidance. Some of the recommendations deal with bulk cargoes, safety of fishermen and fishing vessels, liquefied gases, dangerous goods, timber deck cargoes, mobile offshore drilling units, noise levels on ships, and nuclear merchant ships.

Certain codes dealing with the transport of bulk chemicals and liquefied gas, have been made mandatory through amendments to the International Convention on Safety of Life at Sea.

In 1988, IMO adopted the Convention for the Suppression of Unlawful Acts Against the Safety of Maritime Navigation, which entered into force in 1992. The main purpose of the convention is to ensure that appropriate action is taken against persons committing unlawful acts against ships and fixed platforms engaged in the exploitation of offshore oil and gas.

The International Convention on Salvage was adopted in 1989, and entered into force in July 1996. The convention is intended to replace an instrument adopted in Brussels in 1910. That convention incorporated the “no cure, no pay” principle that has been in existence for many years and is the basis of most salvage operations today. However, it did not take compensation into account. The new convention seeks to remedy this by making provisions

for “special compensation” to be paid to salvors when there is a threat to the environment.

#### **D. Technical Assistance and Training**

While the adoption of conventions, codes, and recommendations has been the IMO's most important function, in recent years the agency has devoted increasing attention to securing the effective implementation of these measures throughout the world. As a result, the IMO's technical assistance activities have become more important, and in 1975 it established the Technical Cooperation Committee. The purpose of the technical assistance program is to help states, many of them developing countries, to ratify IMO conventions and to reach the standards contained in the conventions and other instruments.

Advisors and consultants employed by the IMO, in the field and at headquarters, deal with such matters as maritime safety administration, maritime legislation, marine pollution, training for deck and engineering personnel, the technical aspects of ports, and the carriage of dangerous goods.

Through its technical assistance program, the IMO is able to offer advice in these and other areas and to assist in the acquisition of equipment and the provision of fellowships. IMO relies almost exclusively on extra-budgetary sources for financing the International Technical Cooperation Program (TCP) and in the 1990s funding became a serious problem, in particular since the strategic reorientation of the United Nations Development Program

(UNDP), traditionally the core provider of TCP funding. For example, in 1990 approximately US\$5.6 million was received from UNDP; by 1997 this support had dwindled to US\$3.93 million. In 2000, IMO's funding partners for the TCP included international funding agencies, regional development banks, donor countries, recipient countries, the private sector (shipping and port industries), non-Governmental organizations involved in maritime and port activities, and individuals.

The World Maritime University, in Malmö, Sweden, which was established under the auspices of the IMO and opened in 1983, provides advanced training for more than 100 maritime personnel annually—senior maritime teachers, surveyors, inspectors, technical managers, and administrators from developing countries. Funded by UNDP and by Sweden and other countries, the university offers two-year courses in maritime education and training, maritime safety administration, general maritime administration, and technical management of shipping companies, as well as field and other training. It is designed to help meet the urgent need of developing countries for high-level maritime personnel and to contribute to maintaining international standards for maritime safety and preventing pollution of the seas by ships. The university serves as the apex of an international system of training in the maritime field, collaborating with regional, subregional, and national maritime training institutions throughout the world. By 2002 the university had produced more than 1,400 graduates from over 130 countries.

---

# THE WORLD INTELLECTUAL PROPERTY ORGANIZATION (WIPO)

**BACKGROUND:** Intellectual property includes industrial property, such as inventions, trademarks, and designs, on the one hand, and the objects of copyright and neighboring rights on the other. Until a century ago, there were no international instruments for the protection of intellectual property. Legislative provisions for the protection of inventors, writers, dramatists, and other creators of intellectual property varied from country to country and could be effective only within the borders of states adopting them. It came to be widely recognized that adequate protection of industrial property encourages industrialization, investment, and honest trade. That the arts would be advanced by legal safeguards in favor of their practitioners had long been argued, but such safeguards were difficult to devise and enact into law. The Paris Convention of 20 March 1883 and the Bern Convention of 9 September 1886 represented initial steps toward systematic provision of the two sorts of international protection that led eventually to the creation of the World Intellectual Property Organization (WIPO).

---

## CREATION

The 1883 Paris Convention established the International Union for the Protection of Industrial Property, also called the Paris Union. The convention is open to all states. Its most important functions have to do with patents for inventions and marks for goods and services.

The term industrial property is applied in its widest sense in the convention. In addition to inventions, industrial designs, trademarks, service marks, indications of source, and appellations of origin, it covers small patents called utility models in a few countries, trade names or the designations under which an industrial or commercial activity is carried on, and the suppression of unfair competition.

The convention states that members must provide the same protection of rights in industrial property to nationals of the other members as they provide to their own nationals. It permits foreigners to file for a patent that will apply in all member states within a year after first filing in the country of origin. Additionally, it defines conditions under which a state may license the use of a patent in its own territory—for example, if the owner of the patent does not exploit it there.

The 1886 Bern Convention established the International Union for the Protection of Literary and Artistic Works, also called the Bern Union. It also is open to all states. Its function is the protection of copyright, the main beneficiaries of which include authors of books and articles; publishers of books, newspapers, and periodicals; composers of music; painters; photographers; sculptors; film producers; and creators of certain television programs. Under the convention, each member state must accord the same protection to the copyright of the nationals of the other member states as it accords to that of its own nationals. The convention also prescribes some minimum standards of protection—for example, that copyright protection generally continues throughout the au-

thor's life and for 50 years thereafter. It includes special provisions for the benefit of developing countries.

In 1893, the secretariats of the Paris Union and the Bern Union were joined in the United International Bureaus for the Protection of Intellectual Property (BIRPI).

The World Intellectual Property Organization (WIPO) was established by a convention signed at Stockholm 14 July 1967 by 51 states. When the convention entered into force on 26 April 1970, WIPO incorporated BIRPI and perpetuated its functions. BIRPI still has a function for members of the Paris or Bern unions that have not yet joined WIPO.

WIPO became the fourteenth specialized UN agency, the first new one since 1961, when the General Assembly approved that status on 17 December 1974.

## PURPOSES

The purposes of WIPO are twofold: (1) to promote the protection of intellectual property throughout the world through cooperation among states and, where appropriate, in collaboration with any other international organization; and (2) to ensure administrative cooperation among the unions.

Intellectual property comprises two main branches: *industrial property*, chiefly in inventions, trademarks, and industrial designs; and *copyright*, chiefly in literary, musical, artistic, photographic, and cinematographic works.

The WIPO Convention lists rights in intellectual property relating to literary, artistic, and scientific works; performances of artists; phonograms; broadcasts; inventions in all fields of human endeavor; scientific discoveries; industrial designs; trademarks; service marks; and commercial names and designations. The convention also offers protection against unfair competition and covers all other rights resulting from intellectual activity in the industrial, scientific, literary, or artistic fields.

As of May 2006, WIPO administered the following 23 unions or treaties (in addition to the convention establishing WIPO), listed in the chronological order of their creation:

1. *Industrial property (15)*: the Paris Union (1883), for the protection of industrial property; the Madrid Agreement (1891), for the repression of false or deceptive indications of source on goods; the Madrid Union (1891), for the international registration of marks; the Hague Union (1925), for the international deposit of industrial designs; the Nice Union (1957), for the international classification of goods and services for the purpose of registration of marks; the Lisbon Union (1958), for the protection of appellations of origin and their international registration; the Locarno Union (1968), establishing an international classification for industrial designs; the International Patent Cooperation (IPC) Union (1970), for the establishment of worldwide uniformity of patent classification; the Strasbourg Patent Classification Treaty (PCT) Union (1971), for cooperation in the filing, searching, and examination of international applications for the protection of inventions where such protection is sought in several countries; the Vienna Union (1973), establishing an international classification of the figurative elements of marks; the Budapest Union (1977), for the international recognition of the deposit of microorganisms for the purpose of patent procedure; the Nairobi Treaty (1981), on the protection of the Olympic symbol; the Washington (DC) Treaty (1989) on intellectual property in respect of integrated circuits; the Geneva Trademark Law Treaty (1994); the Agreement on the Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement; 1995/96) between WIPO and the World Trade Organization; and the Singapore Treaty on the Law of Trademarks (2006), as of 1 May 2006 not yet in force.
2. *Copyright and neighboring rights (8)*: the Bern Union (1886), for the protection of literary and artistic works; the Rome Convention (1961), for the protection of performers, producers of phonograms, and broadcasting organizations, jointly administered with the ILO and UNESCO; the Geneva Convention (1971), for the protection of producers of phonograms against unauthorized duplication of their phonograms; the Brussels Convention (1974), relating to the distribution of program-carrying signals transmitted by satellite; the Film Register Treaty (1989), on the international registration of audiovisual works; the WIPO Copyright Treaty (1996); the WIPO Performances and Phonograms Treaty (1996); and the Patent Law Treaty (2000), which applies to national and regional applications for patents for invention.

## MEMBERSHIP

Membership in WIPO is open to any state that is a member of any of the unions, is a member of the UN or any of the specialized agencies or the IAEA, is party to the Statute of the International Court of Justice, or is invited by the General Assembly of WIPO to become a party to the WIPO Convention. The 183 members of WIPO (W), 169 members of the Paris Union (P), and 160 mem-

bers of the Bern Union (B) as of 1 May 2006 are listed in the table on the next page.

## STRUCTURE

The Paris and Bern unions each have an assembly consisting of the member states, meeting biennially. An executive committee elected by the General Assembly, consisting of one-fourth of the member states, meets annually. The other unions, in most cases, have an assembly but no executive committee.

WIPO itself has four organs: the General Assembly, the Conference, the Coordination Committee, and a secretariat called the International Bureau.

### General Assembly

The General Assembly consists of all states party to the WIPO Convention that are also members of any of the unions. It meets biennially and has the highest authority of all the organs.

### Conference

The Conference consists of all states party to the WIPO Convention, whether or not they are members of one or more of the unions. It meets biennially to discuss matters of general interest in the field of intellectual property, as well as to establish WIPO's program of technical legal assistance and the budget for that program.

### Coordination Committee

The Coordination Committee meets annually. It consists of executive committee members of the Paris or the Bern union or both.

### International Bureau

The International Bureau, located in Geneva, is the secretariat of the various governing bodies of WIPO and the unions. In 2006 it consisted of a staff of 938 people from 95 different countries, headed by a Director General. Arpad Bogsch, of the United States, was elected to successive terms as Director General since the establishment of WIPO in 1974. In 1997 he was replaced by Kamil Idris of Sudan as Director General.

## BUDGET

Until January 1994, the budget was entirely met from contributions of member states; from fees paid by applicants for international protection of inventions, international registration of trademarks and appellations of origin, and deposit of industrial designs; and from the sale of publications. Beginning with the 1994–95 biennium, the WIPO governing bodies instituted a system of unitary contributions. The advantages of the unitary contribution system are that it makes the administration of contributions simpler, and will be an incentive for states to join more unions, since adherence will not increase the amount of their contribution. In addition, the governing bodies adopted a new formula for contributions that was intended to significantly lower overall cost of contributions for developing countries. About 85 percent—approximately SFR 540 million—of WIPO's budgeted expenditure for the 2004–2005 biennium came from earnings from registration systems. The remaining 15 percent came mainly from contributions from member states and sales of WIPO publications. All this in-

come finances WIPO's operating expenditures, slightly over SFR 320 million per year.

## ACTIVITIES

### A. Assistance to Developing Countries

One of the main objectives of WIPO is to assist developing countries in the fields of both industrial property and copyright.

In the field of industrial property, WIPO's chief aims are the following: (1) to encourage and increase, in quantity and quality, the creation of patentable inventions in developing countries by their own nationals and in their own enterprises and thereby to increase their technological self-reliance; (2) to improve conditions for the acquisition of foreign patented technology; (3) to increase the competitiveness of developing countries in international trade through better protection of trademarks; and (4) to make it easier

and cheaper for developing countries to locate the technological information contained in patent documents.

In the field of copyright, the main objectives are the following:

- to encourage and increase the creation of literary and artistic works in developing countries by their own nationals and thereby to maintain their national culture in their own languages and corresponding to their own ethnic and social traditions and aspirations; and
- to improve conditions for the acquisition of the right to use or enjoy the literary and artistic works in which copyright is owned by foreigners.

In order to attain these objectives, most developing countries need to create or modernize domestic legislation and government-

tal institutions, accede to international treaties, and have more specialists in the fields of industrial property and copyright.

WIPO's assistance consists mainly of advice, training, and the furnishing of documents and equipment. Advice is given by the staff of WIPO, by experts chosen by WIPO, or at international meetings convened by WIPO. Training may be individual (on the job) or collective (in courses, seminars, and workshops) and may take place in the interested developing country, in an industrialized country, or in another developing country. The resources for such activities are provided in WIPO's budget or from donor countries or organizations, particularly UNDP.

More than 8,000 men and women from some 140 developing countries annually benefit from the 350 courses, seminars, and other meetings held under WIPO's cooperation for development program. In addition, the International Bureau gave advice and assistance to officials from newly independent governments of the former Soviet Union in connection with the preparation and enactment of intellectual property laws, the establishment of industrial property offices, as well as adherence to WIPO-administered treaties. In particular, the International Bureau advised the Interstate Council on the Protection of Industrial Property (which groups nine states from the former Soviet Union: Armenia, Belarus, Kazakhstan, Kyrgyzstan, the Republic of Moldova, the Russian Federation, Tajikistan, Ukraine, and Uzbekistan) on a plan to set up a regional patent system under the Eurasian Patent Convention.

#### **B. Other Activities**

In order to adapt the treaties administered by WIPO to changing circumstances and needs, a constant watch is kept to see whether they need to be revised. The Paris Convention, for example, has had six revisions, the last in Stockholm in 1967, and the Bern Convention has had five, the last in Paris in 1971. WIPO also keeps international classifications of patents, trademarks, and industrial designs under review in order to keep them up-to-date.

In addition, WIPO observes changes in international industrial, trade, and cultural relations that seem to call for adaptations not only in the treaties administered by WIPO but also in national laws, regional arrangements, contractual practices, and professional activities in the field of intellectual property.

Thus, for example, in the field of industrial property, WIPO is considering the possibilities of uniform provisions in national patent laws, particularly concerning the effects on the patentability of an invention or a public disclosure of the invention by the inventor prior to filing a patent application. It also advocates laws and treaty provisions that would give more efficient protection against the counterfeiting of goods and would protect the intellectual creators of microchips or integrated circuits and inventions in biotechnology, including genetic engineering.

In the field of copyright, WIPO has been engaged, in some cases jointly with UNESCO, in recommending laws for the protection of computer programs, for works created by employee-authors, for expressions of folklore, for more effective protection of authors and performers in connection with cable television, and for protection against piratical editions of books, phonograms, and videotapes and excessive unauthorized reproduction. WIPO is also studying the copyright law aspects of the rental of phonograms and videograms, of direct broadcast satellites, and of electronic libraries and the possibility of creating an international register of audiovisual works.

In 1993, WIPO established the WIPO Worldwide Academy to conduct encounter sessions on current intellectual property issues at the policy level for government officials from developing countries. WIPO also awarded to three nationals from developing countries the first long-term scholarships to institutions in industrialized countries for intellectual property law studies.

The WIPO Arbitration and Mediation Center was established in July 1994 to offer enterprises and individuals four dispute-settlement procedures: mediation, arbitration, expedited arbitration (for small-scale disputes), and a combined procedure of mediation and arbitration.

The rise in the use of the Internet in the late 1990s and into the 2000s presented challenges for the intellectual property system in guaranteeing the orderly development of the digital society. WIPO developed the Digital Agenda, a work program to be developed in the new millennium, to respond to the connections between the Internet, digital technologies, and the intellectual property system. The Digital Agenda also aims to integrate developing countries into the Internet environment.

WIPO also developed a project called WIPOnet, a global intellectual property information network. It facilitates the digital exchange of intellectual property information between member states, and works to develop global standards and guidelines for the protection and enforcement of intellectual property rights.

#### **International Registrations**

The International Patent Documentation Center, established in Vienna in 1972 under an agreement between WIPO and the government of Austria, puts on computer the principal bibliographic data of almost 1 million patent documents a year and permits the retrieval of the data required for various purposes by patent offices, industry, and research and development institutions. The financial and operational responsibility lies with the Austrian government, but WIPO assists the center in its contacts with the patent offices of the various countries.

The International Bureau of WIPO, in Geneva, maintains four registration services in the fields of patents, trademarks, industrial designs, and appellations of origin.

---

# THE INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT (IFAD)

**BACKGROUND:** The International Fund for Agricultural Development (IFAD) is the first international institution established exclusively to provide additional resources for agricultural and rural development in developing countries and to channel those resources to the poorest rural populations in Africa, Near East and North Africa, Asia, and Latin America and the Caribbean that suffer from chronic hunger and malnutrition.

---

## CREATION

IFAD was one of the major initiatives of the World Food Conference, held in Rome in 1974, following two years of negotiations. The agreement establishing the fund was adopted by 91 governments on 13 June 1976 and was opened for signature or ratification on 20 December 1976, following attainment of the target of US\$1 billion in initial pledges. The agreement came into force on 30 November 1977.

## PURPOSES

The objective of the fund is to mobilize additional resources to be made available on concessional terms to help developing countries improve their food production and nutrition. The fund is unique in that its projects are focused exclusively on agricultural development, concentrating on the poorest sections of the rural populations in developing countries. It deals with all aspects of agriculture, including crops, irrigation, agricultural credit, storage, livestock, and fisheries.

The UN Social Summit in Copenhagen agreed in 1995 that each member country would devise a program to halve the incidence of “dollar poverty” between 1995 and 2015. In 1996 OECD agreed to set their country-specific aid into the context of these national programs. Rural areas of developing countries contain over 75% of the world’s dollar-poor. Therefore, policies for the reduction of rural poverty must make a large contribution if the poverty reduction target is to be achieved.

## MEMBERSHIP

IFAD had a total of 164 member nations in 2006, compared with 91 at the time of its establishment. In February 1997, all member states were reclassified as follows: Category I (developed countries) were reclassified as List A countries; Category II (oil-exporting developing countries) reclassified as List B countries; and Category III (other developing countries) reclassified globally as List C Countries. In 2002 there were 23 List A countries, 12 List B countries, and 129 List C countries.

## STRUCTURE

IFAD is a new kind of institution in the UN system. The governing bodies that supervise its operations reflect an innovative formula

that brings together the interests of industrialized countries. As an action-oriented organization, the fund normally works by consensus rather than by voting. Originally there were 1,800 votes, distributed equally among each of the three categories (600). Under a new system, of the 1,800 votes, 790 are membership votes divided equally among all members. After subtracting the membership votes from the original 1,800 votes, the remaining 1,010 contribution votes are distributed among members in accordance with their paid share of cumulative convertible currency contributions. The 790 membership votes are redistributed each time a new member joins IFAD.

The three main organs are the Governing Council, the Executive Board, and the secretariat, headed by a president.

In 2002, IFAD’s professional staff numbered 134 and general service staff numbered 181.

### Governing Council

The highest governing body of the fund is the Governing Council, which meets once a year and on which all members are represented by a governor and an alternate governor. The council adopts the fund’s budget, approves the applications of new members, and elects the president of the fund and members of the Executive Board.

### Executive Board

The Executive Board, composed of 18 members and 18 alternates, oversees the operations of the fund, including its investments and work program. The board holds three sessions a year.

### President and Secretariat

The president of the fund, elected for four years, is responsible for its management. He is chairman of the Executive Board and heads the secretariat. Lennard Båge of Sweden was elected in February 2001 and reelected for a second four-year term in February 2005. The fund’s headquarters are located at 107, Via del Serafico 00142 Rome, Italy.

## BUDGET

During 1996–97, IFAD developed a strategy to streamline budget formulation. An internal reorganization made a considerable contribution to cost-effectiveness, reducing administrative costs by

over 23% during the period 1993–97 (while the loan volume over the same period increased by approximately 20%). The program of work for 2005 was us\$500 million. As of 2005, IFAD had 192 ongoing programs and projects worth a total of us\$6.1 billion.

## ACTIVITIES

### A. Loans and Resources

The first project loans were approved by IFAD's Executive Board in April 1978. At the end of the three-year period, 1978–80, the fund's cumulative commitments amounted to nearly us\$900 million in loans and grants for some 70 of its developing member states.

For the period 1981–83, IFAD expanded its operational program. By 1983, IFAD's total financial commitments since April 1978 exceeded us\$1.4 billion for projects and programs in some 80 member countries in Africa, Near East and North Africa, Asia, and Latin America and the Caribbean. By mid-1987, IFAD had extended loans totaling us\$2.3 billion to 89 developing countries to finance 204 projects. From 1978 to 2002, IFAD financed 617 projects in 115 countries, committing us\$7.7 billion in loans and us\$31.9 billion in grants. These assisted 47 million rural poor households, equivalent to 257 million people. Loans were extended to lower income countries at highly concessional terms, repayable over 40 years, including a grace period of ten years and a 0.75% service charge per annum.

The first replenishment of IFAD resources was unanimously approved by the fund's Governing Council in January 1982. Member countries offered to provide contributions totaling us\$1 billion for the period 1981–83, including us\$620 million from List A (developed) countries, us\$450 million from List B (oil exporting developing) countries, and us\$32 million from List C (other developing) countries.

In 1986, the Governing Council agreed on a second replenishment of IFAD's resources totaling us\$488 million, of which List A countries pledged us\$276 million; List B countries, us\$184 million; and List C countries, us\$28 million. In 1990, the Governing Council agreed on a third replenishment. Member countries offered to provide contributions totaling us\$567 million of which List A countries pledged us\$378 million; List B countries, us\$124 million, and List C countries, us\$65 million. A fourth replenishment, totaling us\$470 million, began in February 1997. Of this, us\$419 million was pledged as of 9 December 1999. A fifth replenishment, totaling us\$473 million, covered the period 2001–03. Over the IFAD V period, donor contributions covered 46% of IFAD's total resource needs, and the rest were met through reflows from past loans (49%) and investment income (5%). A seventh replenishment was being prepared in 2005.

### B. Lending Policies and Operations

IFAD loan operations fall into two groups: projects initiated by the fund and projects cofinanced with other financial and development institutions. IFAD-initiated projects are those for which the fund has taken the lead in project identification and preparation and in mobilizing additional resources from other financial agencies where necessary.

Most of IFAD's assistance has been provided on highly concessional terms—loans repayable over 50 years with a 10-year grace period and an annual service charge of 1%. About one-quarter of

	Papua N. Guinea	

the loans are repayable over 20 years at 4% annual interest, while a few have been offered at 8% over 15–18 years. However, at its 17th session of January 1994, the Governing Council adopted a resolu-

tion which amended the lending terms and conditions for the first time since the fund's establishment.

In the future, those developing members countries having a Gross National Product (GNP) per capita of US\$805 or less in 1992 prices, or which qualify for loans from the World Bank's "soft loan" agency, the International Development Association, will normally be eligible to receive loans from IFAD on highly concessional terms. Loans on highly concessional terms will be free of interest but will bear a service charge of 0.75% per annum and have a repayment period of 40 years, including a grace period of 10 years. The total amount of loans provided each year on highly concessional terms will be approximately two-thirds of the total lent annually by IFAD.

IFAD loans represent only a part of the total project costs; the governments concerned contribute a share. In most of its projects, IFAD has cooperated with the World Bank (IBRD and IDA); the African, Asian, Inter-American, and Islamic development banks; the Arab Fund for Economic and Social Development; the Central American Bank for Economic Integration; the World Food Programme; the EU; OPEC; and other multi-institutions.

IFAD, while seeking to preserve an appropriate balance in its regional allocations, also has attempted to respond to the special needs of the 74 low-income, food-deficit countries. Well over 80% of the fund's loans were channeled to these countries in the 1978–95 period. The regional shares of IFAD-supported projects approved between 1978–95 under both regular and special programs were: Africa (sub-Saharan), 41%; Asia and the Pacific, 26%; Latin America and the Caribbean, 16%; and Near East and North Africa, 16.4%.

In January 1986, IFAD, as the first international financial institution to respond to the socioeconomic crisis in sub-Saharan Africa, in the wake of the disastrous droughts and famines of 1983–85, launched the Special Programme for Sub-Saharan African

Countries Affected by Drought and Desertification (SPA), with a target for resource mobilization of US\$300 million. This target was outrun by contributions reaching US\$322.8 million from five developing countries and the European Community.

The program aims to restore the productive capacity of small farmers, promote traditional food crops mainly grown by smallholders, and initiate small-scale water control schemes, in addition to recommending measures for environmental protection and providing assistance to governments in regard to policy.

By January 1993, a second phase of the program became effective. While it preserves the focus of the first phase, it extends its conceptual frame and operational scope. Specifically it carries environmental and soil conservation objectives from on-farm to off-farm (particularly in the common property resource domain), and addresses overall coping strategies of households and communities through economic diversification. New commitments in 2001 totaled US\$405 million for 25 loans averaging US\$16 million each.

In selecting an area of a country for assistance, IFAD determines whether the area is geographically or functionally isolated from the rest of the national economy; the extent to which its population has a lower average per capita income than the national average; the degree to which the area is food-deficient; whether it has relatively inadequate delivery systems and infrastructure in comparison with the rest of the country; and the proportion of poverty—for example, the proportion of landless—in comparison with other rural areas. In terms of impact, IFAD's projects, at full development, will help some 30 million poor rural households out of hunger and poverty.

### C. Technical Assistance

IFAD provides grant financing for technical assistance in project preparation, institutional development, agricultural research, training, and other activities which support the fund's activities.

---

# THE UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION (UNIDO)

**BACKGROUND:** Industrialization is one of the primary goals of the developing countries, to increase their share of world manufacturing output and decrease their dependence on imported goods and services and on their traditional raw-materials export economies. The United Nations Industrial Development Organization (UNIDO), the newest specialized agency of the UN, seeks to further that goal through its programs of technical cooperation with developing countries, designed to aid in the planning and implementation of industrial projects, the training of personnel in manufacturing and managerial skills, the transfer of technology and the provision of information, and the promotion of investment in industry in developing countries.

---

## CREATION

UNIDO was established by the General Assembly in November 1966 as an autonomous organization within the UN to promote and accelerate the industrialization of developing countries and to coordinate the industrial development activities of the UN system.

The first General Conference of UNIDO was held in Vienna in 1971. The second General Conference, held in Lima in 1975, proposed the conversion of UNIDO into a specialized agency “in order to increase its ability to render assistance to developing countries in the most efficient ways.” The conference also adopted the Lima Declaration and Plan of Action, which called for developing countries to reach the target of 25% of world industrial output by the year 2000.

In 1979, a conference of plenipotentiaries, meeting in Vienna, adopted a constitution for UNIDO, to become effective when at least 80 states had ratified it. This was achieved on 21 June 1985, and UNIDO’s conversion into a specialized agency became effective on 1 January 1986.

## PURPOSES

UNIDO’s mandate from the General Assembly is to act as the central coordinating body for industrial activities within the United Nations system and to promote industrial development and cooperation at global, regional, national, and sectoral levels.

In the wake of the reorganization of the activities of the United Nations and its specialized agencies in the early 1990s, UNIDO identified five development objectives that provide a new conceptual framework for the organization’s future programs:

- industrial and technological growth and competitiveness;
- human resource development;
- equitable development through industrialization;
- environmentally sustainable industrial development; and
- international cooperation in industrial investment and technology.

By applying its expertise at three levels—policy, institution, and enterprise—UNIDO acts as:

- the central coordinating agency for matters related to industrial development;
- a focal point for industrial technology;
- an honest broker for industrial cooperation;
- a center of excellence on industrial development issues; and
- a global source of industrial information.

## MEMBERSHIP

As of 21 August 2003, UNIDO had a membership of 171, an increase of 21 countries since 1987. The growth in membership was mainly caused by the emergence of the newly independent nations of Central and Eastern Europe in the wake of the collapse of the Soviet Union. A few of the most industrialized countries chose to withdraw from UNIDO, claiming that the organization is inefficiently operated. In December 1995, the United States decided to withdraw, followed by Germany in November 1996 and the United Kingdom in December 1996. The United Kingdom and Germany later rejoined, but as of 2003, the United States had not.

## STRUCTURE

The four organs of UNIDO are the General Conference, the Industrial Development Board, the program and budget committee, and the secretariat, headed by a Director-General.

### General Conference

UNIDO’s strategies and policies in regard to industrial development are outlined at its General Conference, which meets every two years and is composed of representatives of all members. Since the organization’s inception, the General Conference has met in 1971 (Vienna), 1975 (Lima), 1980 (New Delhi), 1984 (Vienna), 1985 (Vienna—UNIDO’s transition to a specialized agency), 1987 (Bangkok), 1989 and 1991 (Vienna), 1993 (Yaoundé), 1995, 1997, 1999, 2001, 2003, and 2005 (Vienna).

### Industrial Development Board

The Industrial Development Board consists of 53 members elected by the General Conference for four-year terms. The board reviews the implementation of the work program and the budget and makes recommendations to the General Conference on policy matters, including the appointment of the Director-General, when required. It meets once during General Conference years, and twice in other years.

As of 2 December 2005 the members of the Industrial Development Board were: Afghanistan, Algeria, Austria, Belgium, Bolivia, Brazil, Burkina Faso, Chile, China, Colombia, Côte d'Ivoire, Cuba, Czech Republic, Egypt, Ethiopia, France, Germany, Ghana, Greece, Guatemala, India, Indonesia, Iran (Islamic Republic of), Ireland, Italy, Japan, Kenya, Luxembourg, Mexico, Morocco, the Netherlands, Nigeria, Norway, Pakistan, Paraguay, Poland, Republic of Korea, Russian Federation, Saudi Arabia, Senegal, Slovakia, South Africa, Spain, Sri Lanka, Switzerland, Syrian Arab Republic, Thailand, Tunisia, Turkey, Ukraine, United Kingdom, Uruguay, and Zimbabwe.

### Program and Budget Committee

The program and budget committee is composed of 27 members elected for two-year terms. Member states meet once a year to assist the board in the preparation and examination of the work program, budget, and other financial matters.

As of 2 December 2005 the members were: Algeria, Austria, Burkina Faso, China, Côte d'Ivoire, Cuba, Ethiopia, France, Germany, Greece, Guatemala, Hungary, Iran (Islamic Republic of), Italy, Japan, Democratic People's Republic of Korea, Republic of Korea, Mexico, Pakistan, Peru, Poland, Russian Federation, South Africa, Switzerland, Tunisia, Turkey, and the United Kingdom.

### Director-General and Secretariat

The Director-General of UNIDO, elected by the General Conference in December 2005 for a four-year term was Kandeh Yumkella of Sierra Leone.

Prior to its conversion into a specialized agency, UNIDO was headed by an executive director appointed by the Secretary-General of the UN. The first two executive directors were Ibrahim Helmi Abdel-Rahman (1967–74) and Abd-El Rahman Khane (1975–85). Domingo L. Siazon, Jr., of the Philippines was the first Director General of UNIDO when it became a specialized agency in 1985. He served as Director General from 1985 to 1993, when he was succeeded by Mauricio de Maria y Campos of Mexico (to 1997). Carlos Alfredo Magarinos of Argentina served from 1997 to 2005.

UNIDO maintains a professional staff of more than 500 at its Vienna headquarters, including engineers, economists, and technology and environment specialists, and more than 100 in the field.

### Offices

UNIDO is headquartered in Vienna, Austria. It maintains liaison offices at UN headquarters in New York and at the UN office in Geneva. UNIDO maintains 43 field offices worldwide. UNIDO operates Investment Promotion Units (IPUs) in Egypt, Jordan, Morocco, Tunisia and Uganda, all of which are financed by the Italian government, and an associate member in Turkey. It also has 35 National Cleaner Production Centers (NCPCs), estab-

lished by UNIDO and UNEP, and 10 International Technology Centers in Brazil, China, India, Italy, the Republic of Korea, and the Russian Federation.

### BUDGET

Funding for UNIDO activities is drawn from the regular budget, the operational budget, and voluntary contributions. The regular budget is derived from member states' assessed contributions. The operational budget is derived from the implementation of projects. The estimated volume of UNIDO operations for 2006-07 was €355.8 million. The breakup was as follows: regular budget €150.8 million, operational budget €19.9 million and anticipated voluntary contributions €185.1 million. Most costs of expert advice, equipment, and other forms of technical assistance, in partnership with and at the request of developing countries, are met by the UNDP, for which UNIDO is an executing agency. Special UNIDO projects use the Industrial Development Fund (IDF), established in 1976 with a "desirable funding level of us\$50 million annually." UNIDO annually awards about 200 contracts valued at about us\$20 million. Spending on training in the form of fellowships, study tours, and group training annually amounts to about us\$15 million.

### ACTIVITIES

Forty-nine integrated programs were formulated and approved as of May 2006, most of which had been developed and were in operation.

#### A. Technical Cooperation

For 2005, UNIDO's programs and projects totaled approximately us\$463 million. Of that total, 41% had been allocated to sub-Saharan Africa and 43% to the least developed countries in the world.

UNIDO's objectives in technical cooperation are the following:

- To elaborate programs and projects for the industrial development of developing countries, including special measures for the least developed countries;
- To formulate policies and strategies for the development of UNIDO's operational activities, from different sources of finance and with particular focus on the country, subregion, and region concerned;
- To prepare technical cooperation programs and formulate specific projects, in collaboration with other UN bodies and with governments, as well as through participation in round-table meetings or consultative groups;
- To help improve the effectiveness of technical cooperation programs by assessing the progress made and the results achieved by projects at intermediate and final stages and by feeding back into the programming process the results of their impact; and
- To maintain a program of UNIDO country directors that enhances the services rendered to the developing countries.

In seeking to industrialize their economies, developing countries face a wide spectrum of problems, ranging from preparation of national plans, development of sectoral programs, and elaboration of appropriate policies and strategies of industrial development, to concerns relating to the technical processes to be em-

ployed in manufacturing any specific product, preparation of preinvestment studies, organization of production facilities, training of personnel in new skills, management of factory operations, and establishment of an industrial infrastructure to support industrial enterprises and to mobilize financial resources for investment in industrial production.

UNIDO assists in addressing these problems by in-depth studies on specific priority problems of industrialization in particular countries, with consideration given to important concerns, such as the rehabilitation of troubled industries, international cooperation for small-and medium-sized industry development, institutional development for technology transfer and adaptation, and technical cooperation among developing countries.

UNIDO also works to increase the resources available for technical cooperation purposes, working with traditional as well as new funding sources, such as trust funds under which the developing countries themselves finance UNIDO technical assistance projects, and mobilizing the support of nongovernmental organizations.

**Industrial Operations Technology**

A common problem of developing countries is how best to exploit their natural resources and other comparative advantages in order to ensure a worthwhile share for themselves in world production and trade in manufactured products, including replacement of imported industrial products with locally manufactured ones. In order to increase industrial production in developing countries, UNIDO assists them, through the implementation of technical cooperation projects, in acquiring the technological base and know-how that will enable them to establish, expand, rehabilitate, and improve the efficiency and productivity of industrial facilities in the main branches of industry. It provides this help through direct assistance to manufacturing enterprises or through the establishment or strengthening of specialized technology centers servicing individual industrial sectors.

UNIDO also extends assistance in the efficient utilization of energy resources by industry, in the industrial-scale production of fuel and feedstock from renewable resources, and in promoting environmentally sustainable industrial development. Continued

attention is given to the establishment of pilot and demonstration plants to accelerate the utilization of locally available raw materials, including industrial and agricultural wastes. Particular attention is given to technical assistance in chemical industries and in the production of capital goods, including equipment for telecommunications and transportation, especially in support of rural development and in the manufacture of pesticides, fertilizers, and agricultural equipment.

#### **Industrial Institutions and Services**

In order to increase industrial production, developing countries have to make extensive use of planning techniques and preinvestment studies and also need to establish and strengthen institutional infrastructures and support services and the skills required to set up and operate manufacturing enterprises. Institutional infrastructures are particularly critical in order to compensate, at least in part, for the absence of a long tradition of industrial development in most developing countries. There is a continuous demand for the establishment or strengthening of institutions dealing with standardization and quality control, industrial research, small-scale industries, and rural development. The lack of production, managerial, and entrepreneurial skills is frequently the greatest obstacle to industrial development.

Through its technical cooperation programs, UNIDO seeks to assist developing countries, particularly in the development of human resources, by identifying priority areas for industrial training and for the establishment of national institutes for research and development and for training and consultancy that may become centers for training of personnel, including training in management and in the preparation of preinvestment studies, project implementation, and operation of industrial enterprises. UNIDO extends assistance through fellowships, study tours, and group training programs.

#### **B. Investment Promotion**

Another major focus of UNIDO activities is the acceleration of investment in the private and public sectors of developing countries, in a manner consistent with their national plans and policies, and through the implementation of technical cooperation projects in the field of industrial investment.

Although there is a need for a massive flow of financial and technical resources from outside sources to implement projects necessary to achieve the targets of industrial growth laid down in the plans of developing countries, the lack of sound and well-pre-

pared investment projects backed by suitable entrepreneurs has been a more serious obstacle to the flow of these needed resources than the lack of investment funds. Information is scarce regarding the sources of financing and the identification of enterprises that are suitable and willing to participate in manufacturing projects in developing countries or to redeploy their industrial plants to developing countries. At the same time, there is often a lack of awareness among development finance institutions and entrepreneurs in industrialized and selected developing countries of the possibilities for cooperation with project sponsors in developing countries.

UNIDO seeks to stimulate industrial development in developing countries by promoting cooperation between industrialists in both developed and developing countries in the generation, formulation, and promotion of investment projects through investment promotion services, access to information stored in computer data banks, and links with international, regional, subregional, and national development finance institutions.

UNIDO's Investment Promotion Resources Information System contains thousands of records on industrial investment project proposals, potential partners, development finance institutions, investment-related institutions, and project sponsors. UNIDO also maintains investment service offices in Athens, Vienna, Paris, Cologne, Seoul, Tokyo, Zurich, Warsaw, Washington, and Milan, which serve as a direct link to businesses and governments in developing countries and can be the "eyes and ears" of firms in industrialized countries interested in investment opportunities in developing countries.

#### **C. Information and Consultations**

Through its Industrial and Technological Information Bank, UNIDO seeks to accelerate the flow of information to developing countries, many of which lack access to such information and to technological trends and advances. It also assists in advancing the capacities of developing countries for acquisition of technology through workshops and advisory services and through its System of Consultations. At both the regional and interregional levels, UNIDO's System of Consultations is an instrument in promoting industrial cooperation among developing countries.

---

# THE WORLD TRADE ORGANIZATION (WTO)

**BACKGROUND:** The World Trade Organization (WTO) was established on 1 January 1995 as the legal and institutional foundation of the multilateral trading system. It provides the principal contractual obligations determining how governments frame and implement domestic trade legislation and regulations. And it is the platform on which trade relations among countries evolve through collective debate, negotiation and adjudication. The WTO is the embodiment of the results of the Uruguay Round trade negotiations and the successor to the General Agreement on Tariffs and Trade (GATT).

---

## CREATION

The origin of the WTO can be traced back to the creation of the International Trade Organization at the 1944 Bretton Woods Conference. While the terms of the ITO charter were being drafted and debated (a process which began in February of 1946 and lasted until their a final draft was produced in March 1948) and countries pondered whether they would join the organization, representatives from a group of 17 nations assembled in Geneva and concluded an interim agreement (GATT) to lower trade barriers and tariffs among themselves. The agreement, which was to take effect on 1 January 1948, was not meant to be a permanent trade body but rather a stopgap agreement to serve until the time that the ITO would be put in place.

However, when the Truman Administration decided not to submit the charter creating the ITO to the US Senate for ratification (since there were not enough votes in the Senate in favor of ratification) the plan to create the ITO was abandoned leaving the GATT Treaty in its place.

While the GATT functioned well enough, the leading members wished to replace it with a world-wide trade-regulating body like the WTO for a number of reasons. First, the GATT rules applied to trade only in merchandise goods. In addition to goods, the WTO covers trade in services and trade-related aspects of intellectual property (through the agreement on Trade-related Aspects of Intellectual Property Rights—TRIPs). Second, while GATT was a multilateral instrument, by the 1980s many new agreements of a plurilateral, and therefore selective nature had been added. The agreements which constitute the WTO are almost all multilateral and, thus, involve commitments for the entire membership. Third, The WTO dispute settlement system is faster, more automatic, and thus much less susceptible to blockages, than the old GATT system.

But beyond these practical and functional reasons for establishing the WTO, there were also more philosophical and symbolic reasons. The GATT was a set of rules, a multilateral agreement, with no institutional foundation, only a small associated secre-

ariat which had its origins in the attempt to establish an International Trade Organization in the 1940s. By contrast, the WTO is a permanent institution with its own secretariat. Moreover, the GATT was applied on a “provisional basis” even if, after more than forty years, governments chose to treat it as a permanent commitment while the WTO commitments are fully and functionally permanent.

For the above reasons, the creation of a new, permanent trade body became one of the principal objectives about half-way through the GATT’s Uruguay round, which ran from 1986 to 1994. A draft for the new international trade body, the WTO, was drafted and formally approved at the Ministerial Conference held in the ancient trade center of Marrakesh in July of 1994. Under the terms of the so-called “Final Act” signed there, the GATT was replaced by the WTO on 1 January 1995.

The Preamble of the Agreement Establishing the WTO states that members should conduct their trade and economic relations with a view to “raising standards of living, ensuring full employment and a large and steadily growing volume of real income and effective demand, and expanding the production of and trade in goods and services, while allowing for the optimal use of the world’s resources in accordance with the objective of sustainable development, seeking both to protect and preserve the environment and to enhance the means for doing so in a manner consistent with their respective needs and concerns at different levels of development.”

Furthermore, members recognize the “need for positive efforts designed to ensure that developing countries, and especially the least-developed among them, secure a share in international trade commensurate with the needs of their economic development.”

To contribute to the achievement of these objectives, WTO Members have agreed to enter into “reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international trade relations.”

As the successor to GATT, WHO celebrated the golden jubilee of the multilateral trading system in May 1998.

## PURPOSES

The fundamental principles of the WTO are:

- *Trade without discrimination.* Under the “most-favored nation” (MFN) clause, members are bound to grant to the products of other members no less favorable treatment than that accorded to the products of any other country. The provision on “national treatment” requires that once goods have entered a market, they must be treated no less favorably than the equivalent domestically-produced good.
- *Predictable and growing access to markets.* While quotas are generally outlawed, tariffs or customs duties are legal in the WTO. Tariff reductions made by over 120 countries in the Uruguay Round are contained in some 22,500 pages of national tariff schedules which are considered an integral part of the WTO. Tariff reductions, for the most part phased in over five years, will result in a 40% cut in industrial countries’ tariffs in industrial products from an average of 6.3% to 3.8%. The Round also increased the percentage of bound product lines to nearly 100% for developed nations and countries in transition and to 73% for developing countries. Members have also undertaken an initial set of commitments covering national regulations affecting various services activities. These commitments are, like those for tariffs, contained in binding national schedules.
- *Promoting fair competition.* The WTO extends and clarifies previous GATT rules that laid down the basis on which governments could impose compensating duties on two forms of “unfair” competition: dumping and subsidies. The WTO Agreement on agriculture is designed to provide increased fairness in farm trade. An agreement on intellectual property will improve conditions of competition where ideas and inventions are involved, and another will do the same thing for trade in services.
- *Encouraging development and economic reform.* GATT provisions intended to favor developing countries are maintained in the WTO, in particular those encouraging industrial countries to assist trade of developing nations. Developing countries are given transition periods to adjust to the more difficult WTO provisions. Least-developed countries are given even more flexibility and benefit from accelerated implementation of market access concessions for their goods.

## MEMBERSHIP

As of 11 December 2005, there were 149 member nations of the WTO. There were over 30 applicants negotiating membership at that time. All GATT signatory nations who signed the Final Act of the Uruguay Round in Marrakesh in July of 1994 automatically became original members of the WTO. In addition, several other countries who joined the GATT later in 1994 and signed the Final Act of the Uruguay Round and became original WTO members. When the WTO became effective on 1 January 1995, there were 76 original WTO members and another 50 nations at various stages in the membership process.

Aside from the original WTO members, any nation or “customs territory” having full autonomy in the conduct of its trade policies may accede to the WTO on terms agreed with WTO members. The process of a nonmember nation joining the WTO takes place in several stages. In the first stage of the accession procedures the applicant government is required to provide the WTO with a memorandum covering all aspects of its trade and economic policies having a bearing on WTO agreements. This memorandum becomes the basis for a detailed examination of the accession request in a working party.

Alongside the working party’s efforts, the applicant government engages in bilateral negotiations with interested member governments to establish its concessions and commitments on goods and its commitments on services. This bilateral process, among other things, determines the specific benefits for WTO members in permitting the applicant to accede. Once both the examination of the applicant’s trade regime and market access negotiations are complete, the working party draws up basic terms of accession.

Finally, the results of the working party’s deliberations contained in its report, a draft protocol of accession, and the agreed schedules resulting from the bilateral negotiations are presented to the General Council or the Ministerial Conference for adoption. If a two-thirds majority of WTO members vote in favor, the applicant is free to sign the protocol and to accede to the Organization; when necessary, after ratification in its national parliament or legislature.

After becoming a member, many countries are represented in the WTO by permanent diplomatic missions in Geneva usually headed by a special Ambassador.

As a result of regional economic integration—in the form of customs unions and free trade areas—and looser political and geographic arrangements, some groups of countries act together in the WTO with a single spokesperson in meetings and negotiations.

The largest and most comprehensive grouping is the European Union and its 25 member states. The EU is a customs union with a single external trade policy and tariff. While the member states coordinate their position in Brussels and Geneva, the European Commission alone speaks for the EU at almost all WTO meetings. The EU is a WTO member in its own right as are each of its member states.

It is important to note that any country can withdraw at any time from the WTO.

## STRUCTURE

The highest WTO authority is the Ministerial Conference which meets at least once every two years and is composed of representatives from all WTO signatories. The day-to-day work of the WTO, however, falls to a number of subsidiary bodies, principally the General Council, which is required to report to the Ministerial Conference. The General Council meets several times a year in the Geneva headquarters. Like the Ministerial Conference, the General Council is composed of representatives from all member nations. As well as conducting its regular work on behalf of the Ministerial Conference, the members of the General Council also convene as the Dispute Settlement Body (DSB) and as the Trade Policy Review Body. At the next level are the Goods Council, Ser-

vices Council and Intellectual Property (TRIPS) Council, which report to the General Council.

Five other bodies are established by the Ministerial Conference and report to the General Council: the Committee on Trade and Development, the Committee on Trade and Environment, the Committee on Regional Trade Agreements, the Committee on Balance of Payments, and the Committee on Budget, Finance and Administration. A Trade Negotiations Committee was also established in November 2001 as a result of the Doha Declaration (see below). At the second Ministerial Conference in Geneva in 1998, ministers decided that the WTO would also study the area of electronic commerce, a task to be shared by existing councils and committees.

Each of the plurilateral agreements of the WTO—those on civil aircraft, government procurement, dairy products and bovine meat—have their own management bodies which report to the General Council.

The DSB itself also establishes subsidiary bodies for the resolution of trade disputes. One such set of bodies are called “panels.” These panels are set up on an ad-hoc basis and last only long enough to hear the merits of a particular trade dispute between WTO members and reach a decision as to whether unfair trade practices are involved. After the DSB approves the formation of a panel, the WTO Secretariat will suggest the names of three potential panelists to the parties to the dispute, drawing as necessary on a list of qualified persons. If there is real difficulty in the choice, the Director-General can appoint the panelists. The panelists serve in their individual capacities and are not subject to government instructions.

The DSB also has the responsibility of establishing an Appellate Body to review decisions made by individual panels. The Appellate Body is modeled after the structure of the U.S. Federal Appeals Courts: the Appellate Body is composed of seven persons, three of which are assigned to each appeal from a panel’s judgment. The members of the Appellate Body must be broadly representative of WTO membership, and are required to be persons of recognized standing in the field of law and international trade, and not affiliated with any government. Each member serves a four-year term.

The procedural operation of panels and the Appellate Body are described below under the heading of “Activities.”

## SECRETARIAT

The WTO Secretariat is located in Geneva. It had 635 staff in 2006 and is headed by a Director-General, and four Deputy Directors-General. Its responsibilities include the servicing of WTO delegate bodies with respect to negotiations and the implementation of agreements. It has a particular responsibility to provide technical support to developing countries, and especially the least-developed countries. WTO economists and statisticians provide trade performance and trade policy analyses while its legal staff assist in the resolution of trade disputes involving the interpretation of WTO rules and precedents. Other Secretariat work is concerned with accession negotiations for new members and providing advice to governments considering membership. Despite the increased responsibilities of the WTO when compared with the GATT, there has been no significant increase in administrative or other staffing levels. Pascal Lamy of France, the fifth Director-General, began his four-year appointment on 1 September 2005.

## BUDGET

The WTO’s annual budget for 2006 was 175 million Swiss francs, with individual contributions calculated on the basis of shares in the total trade conducted by members. Part of the budget also goes to the International Trade Center.

## ACTIVITIES

### A. Reviewing Member Nations’ Trade Policies

Surveillance of the national trade policies of WTO member nations is a fundamentally important activity running throughout the work of the WTO. At the center of this work is the Trade Policy Review Mechanism (TPRM).

Reviews are conducted on a regular, periodic basis. The four biggest traders—the European Union, the United States, Japan and Canada—are examined approximately once every two years. The next 16 countries in terms of their share of world trade are reviewed every four years; and the remaining countries every six years, with the possibility of a longer interim period for the least-developed countries.

The review examines the overall trading practices of a WTO member rather than focusing on the legal compatibility of any particular trade policy or practice.

Reviews are conducted in the Trade Policy Review Body (TPRB)—established at the same level as the General Council. The TPRB conducts its review through the use of two documents: a policy statement prepared by the government under review, and a detailed report prepared independently by the WTO Secretariat. These two reports, together with the proceedings of the TPRB are published after the review meeting.

In addition to the TPRM, many other WTO agreements contain obligations for member governments to notify the WTO Secretariat of new or modified trade measures. For example, details of any new anti-dumping or countervailing legislation, new technical standards affecting trade, changes to regulations affecting trade in services, and laws or regulations concerning the TRIPs agreement all have to be notified to the appropriate body of the WTO. Special groups are also established to examine new free-trade arrangements (e.g. regional trade associations like NAFTA—The North American Free Trade Agreement) and the trade policies of acceding countries.

In 2000, new talks began on agriculture and services. At the WHO’s Fourth Ministerial Conference held during November 2001 in Doha, Qatar, these talks were extended, and a number of other issues were added to the WTO agenda. The Doha Declaration set 1 January 2005 as the date for completing all but two of the negotiations. That deadline was missed, but members unofficially aimed to finish the negotiations by the end of 2006. A Trade Negotiations Committee (TNC) was also set up by the Doha Declaration, operating under the authority of the General Council.

### B. Settling Trade Disputes

The WTO also functions to settle trade disputes between member nations. Indeed, one of the goals of the WTO is to dissuade members from taking unilateral action against perceived violations of the trade rules and to instead seek recourse in the multilateral dispute settlement system and to abide by its rules and findings. Unlike the situation in a TPRM review, where a nation’s

overall trade policy is examined, a trade dispute between member nations usually involves the legality of a particular trade policy or practice. Which one member nation, the complainant, has called into question.

When any such trade dispute arises, the nations party to the dispute first engage in bilateral meetings between themselves (usually conducted by the nations' respective representatives in Geneva). If this fails the WTO Director-General, who, acting in an *ex officio* capacity, will try conciliation or mediation to settle the dispute.

If consultations and mediation fail to arrive at a solution after 60 days, the complainant can ask the Dispute Settlement Body (DSB) to establish a panel to examine the case. Generally, the DSB can-

not refuse to establish a panel and must constitute the panel within 30 days of its establishment.

Each party to the dispute submits to the panel a brief on the facts and arguments in the case, in advance of the first substantive meeting. At that first meeting, the complainant presents its case and the responding party its defense. Third parties which notified their interest in the dispute may also present views. Formal rebuttals are made at the second substantive meeting.

The panel then submits an interim report, including its findings and conclusions, to the parties, giving them one week to request a review. The period of review is not to exceed two weeks, during which the panel may hold additional meetings with the parties. A

final report is submitted to the parties and three weeks later, it is circulated to all WTO members.

If the panel decides that the measure in question is inconsistent with the terms of the relevant WTO agreement, the panel recommends that the member concerned bring the measure into conformity with that agreement. It may also suggest ways in which the member could implement the recommendation. Panel reports are adopted by the DSB 60 days after being issued, unless one party notifies its decision to appeal or a consensus emerges against the adoption of the report.

The WTO dispute settlement mechanism gives the possibility of appeal to either party in a panel proceeding. However, any such appeal must be limited to issues of law covered in the panel report and the legal interpretation developed by the panel. Appeals are heard by the standing Appellate Body established by the DSB.

An Appellate Body can uphold, modify or reverse the legal findings and conclusions of the panel. As a general rule, the appeal proceedings are not to exceed 60 days but in no case shall they exceed 90 days.

Thirty days after it is issued, the DSB adopts the report of the Appellate Body which is unconditionally accepted by the parties to the dispute—unless there is a consensus against its adoption.

After the DSB adopts the report of the panel or the Appellate Body, the DSB has the responsibility of implementing the decision. At a DSB meeting held within 30 days of the adoption of the panel or appellate report, the party against whom the panel or the Appellate Body has ruled, must state its intentions in respect of the implementation of the recommendations. If it is impractical to comply immediately, the member will be given a grace period (set by the DSB) to come into compliance. If it fails to act within this period, it is obliged to enter into negotiations with the complainant in order to determine a mutually-acceptable compensation—for instance, tariff reductions in areas of particular interest to the complainant.

If after 20 days, no satisfactory compensation is agreed, the complainant may request authorization from the DSB to suspend concessions or obligations against the other party. The DSB should grant this authorization within 30 days of the expiration of the grace period established by the DSB.

There is a peculiar component of the WTO structure, the Dispute Settlement Review Commission, that applies solely to the United States. The commission is composed of five appellate judges and is activated whenever a panel decision is made against the United States. The commission analyzes the decision to determine whether it was unjustified, that is whether the panel exceeded its authority in making the decision or whether the panel went beyond the powers in the Uruguay round in making the decision. If the commission determines that three unjustified decisions occurred within any five year period a member of Congress can begin the process of removing the United States from the WTO. It

should be noted that since any member can withdraw at any time from the WTO, the existence of this commission does not explicitly enhance US power in the WTO. It was created primarily as a mechanism to assure the US Congress that the WTO would monitor itself against any anti-US bias and in fact the commission was established within the WTO to secure the support of Senator Robert Dole for US entry into the WTO.

### C. Training and Technical Instruction to Developing Countries

The WTO Secretariat has also continued GATT's program of training courses. These take place in Geneva twice a year for officials of developing countries. Since their inception in 1955 and up to the end of 1994, the courses have been attended by nearly 1400 trade officials from 125 countries and 10 regional organizations. Beginning in 1991, special courses have been held each year in Geneva for officials from the former centrally-planned economies in transition to market economies.

The WTO Secretariat, alone or in cooperation with other international organizations, conducts missions and seminars and provides specific, practical technical cooperation for governments and their officials dealing with accession negotiations, implementing WTO commitments or seeking to participate effectively in multilateral negotiations. Courses and individual assistance is given on particular WTO activities including dispute settlement and trade policy reviews. Moreover, developing countries, especially the least-developed among them, are helped with trade and tariff data relating to their own export interests and to their participation in WTO bodies.

The WTO continues the GATT's participation in operating the International Trade Center (which it operates jointly with World Bank's Economic Development Institute). The Center responds to requests from developing countries for assistance in formulating and implementing export promotion programs as well as import operations and techniques. It provides information and advice on export markets and marketing techniques, and assists in establishing export promotion and marketing services and in training personnel required for these services. The Center's help is freely available to the least-developed countries. Since the beginning, GATT/WHO has trained more than 1,700 officials from developing countries.

### D. Participation in Global Economic Policy-Making

An important aspect of the WTO's mandate is to cooperate with the International Monetary Fund, the World Bank and other multilateral institutions to achieve greater coherence in global economic policy-making.

Although the original agenda (established at a GATT meeting in Punta del Este, Uruguay in 1986) made no mention of a world trade body, a draft for such an organization was put forth in 1991 and quickly gained interest among many members for establishing such an organization.

---

# THE INTERNATIONAL MONETARY FUND (IMF)

**BACKGROUND:** The 1930s was a period not only of great political upheaval but also of grave financial and economic difficulty. The gold standard was largely abandoned, and currency exchange rates fluctuated wildly. Economic chaos was aggravated by a lack of coordination between governments that imposed controls on international financial transactions and engaged in ruthless economic warfare.

During World War II, most countries realized that they would emerge from the conflict with depleted economic resources just when they would have to confront a reconstruction effort of staggering dimensions. It was also known that the United Kingdom would emerge from the war as the world's principal debtor nation and the United States, whose productive capacity had greatly increased during the war, as the world's principal creditor nation.

---

## CREATION

The United Kingdom, the United States, and their allies were convinced that international economic and financial cooperation through intergovernmental institutions was required to prevent a more serious recurrence of the economic and monetary chaos of the 1930s. Two plans were proposed almost simultaneously in 1943: a United States plan for an International Stabilization Fund, referred to as the White plan, after H. D. White, then assistant to the United States secretary of the treasury; and a British plan for an International Clearing Union, referred to as the Keynes plan, after the British economist John Maynard Keynes. Both plans called for international machinery to stabilize currencies and—a radical innovation—a prohibition against altering exchange rates beyond narrow limits without international approval. Both would have introduced a new international currency unit defined in terms of gold. The American plan called for participating nations to contribute to a relatively limited stabilization fund of about \$5 billion, on which they would be permitted to draw in order to bridge balance-of-payments deficits. The British plan would have established a system of international clearing accounts, under which each member country could borrow up to its own quota limit, while its creditors would be credited with corresponding amounts, expressed in international currency units. Both plans were discussed with financial experts of other powers, including the Republic of China, the French Committee for Liberation, and the USSR. The International Monetary Fund as finally constituted resembled the United States-suggested stabilization fund. The proposal to establish a new international monetary unit was deferred for the time being.

### The Bretton Woods Conference

A conference called by President Franklin D. Roosevelt and attended by delegates from all 44 United and Associated Nations was held from 1 to 22 July 1944 at Bretton Woods, New Hampshire. The Bretton Woods Conference produced the constitutions, or Articles of Agreement, of two agencies conceived as sister insti-

tutions: the International Monetary Fund (IMF) and the International Bank for Reconstruction and Development (IBRD).

The IMF came into existence on 27 December 1945, when 29 governments, responsible for 80% of the quotas to be contributed to the Fund, signed the IMF Articles of Agreement. An agreement with the UN, under which the IMF became a specialized agency, entered into force on 15 November 1947.

## PURPOSES

The purposes of the IMF are the following:

- to promote international monetary cooperation;
- to facilitate the expansion and balanced growth of international trade and contribute thereby to the promotion and maintenance of high levels of employment and real income;
- to promote exchange stability, maintain orderly exchange arrangements among member states, and avoid competitive currency depreciations;
- to assist in establishing a multilateral system of payments of current transactions among members and in eliminating foreign-exchange restrictions that hamper world trade; and
- to alleviate serious disequilibrium in the international balance of payments of members by making the resources of the Fund available under adequate safeguards, so as to prevent the members from resorting to measures that endanger national or international prosperity.

## MEMBERSHIP

The original members of the IMF were the 29 nations whose governments had ratified the Articles of Agreement by 27 December 1945. Any other state, whether or not a member of the UN, may become a member of the IMF in accordance with terms prescribed by the Board of Governors. The IMF had 184 members as of 10 May 2006. (See membership list at the end of this section.) Membership in the IMF is a prerequisite to membership in the IBRD. A member may withdraw from the IMF at any time, and its

withdrawal becomes effective on the day that a written notice to that effect is received by the Fund.

If a member state fails to fulfill its obligations under the IMF Articles of Agreement, the Fund may declare that country ineligible to use its resources. If, after a reasonable period has elapsed, the member state persists in its failure to live up to its obliga-

tions, the Board of Governors may require it to withdraw from membership.

The Third Amendment of the IMF's Articles of Agreement came into force on 11 November 1992. It allows for the suspension of voting and related rights of a member that persists in its failure to fulfill its obligations under the Articles.

## STRUCTURE

The Fund has a Board of Governors, composed of as many governors as there are member states; 24 executive directors; and a managing director and staff.

### Board of Governors

All powers of the IMF are vested in its Board of Governors, on which all member states are represented. Each member state appoints one governor and one alternate governor, who may vote when the principal governor is absent. A government customarily appoints its minister of finance, the president of its central bank, or another high-ranking official as its governor. For example, in 2006, the United States governor was Secretary of the Treasury John W. Snow, and the alternate, Federal Reserve Board Chairman Ben S. Bernanke.

The principle that applies in most international bodies—one nation, one vote—does not apply in the IMF Board of Governors. Multiple votes are assigned to IMF member states, more votes being assigned to those subscribing larger quotas to the Fund's resources. Each member has 250 votes plus 1 additional vote for each SDR 100,000 of its quota. (The SDR is an international reserve asset created by the Fund. See section F.) The total number of votes of all IMF members was 2,175,345 on 2 May 2006, of which the United States held about 17.1%, Germany and Japan about 6% each, and the United Kingdom and France about 5% each.

Each governor is entitled to cast all the votes allotted to his country as a unit. On certain matters, however, voting power varies according to the use made of the Fund's resources by the respective member. IMF decisions are made by a simple majority of the votes cast, unless otherwise stipulated in the constitution. The Board of Governors regularly meets once a year. It may also be convened for other than annual meetings.

Except for such basic matters as admission of new members, quota changes, and the like, the Board of Governors delegates most of its powers to the Executive Directors of the Fund.

The Board of Governors has an advisory committee, the International Monetary and Financial Committee (IMFC), formerly known as the Interim Committee, which meets twice a year. Its composition reflects that of the Executive Board; each country that appoints, and each group that elects, an Executive Director, also appoints a member to the IMFC. These members are governors of the Fund, ministers, or others of comparable rank.

### Executive Board

The 24 executive directors (and 24 alternates) of the IMF are responsible for the Fund's general operations, and for this purpose they exercise all the powers delegated to them by the Board of Governors. They "function in continuous session" at the Fund's headquarters and meet as often as business may require, usually several times a week.

Of the 24 executive directors, five are appointed by the countries having the largest quotas (United States, Japan, Germany, France, and the United Kingdom), and the other 19 are elected by regional groups of the remaining members. The IMF's managing director also serves as chairman of the Executive Board.

### Managing Director and Staff

The managing director, who is chosen by the executive directors, is responsible for the conduct of the ordinary business of the

Fund. He is appointed for a five-year term and may not serve concurrently as a governor or executive director of the IMF. The managing director chairs meetings of the executive directors but may vote only in case of a tie.

The permanent headquarters of the IMF are at 700 19th Street, N.W., Washington, D.C. 20431. As of 10 May 2006, the staff consisted of 2,693 persons from 141 countries.

The IMF has a regional office for Asia and the Pacific, located in Tokyo.

## BUDGETS

The Fund's income considerably exceeds its administrative expenditures. This income is derived principally from charges on the Fund's transactions. The IMF's annual expenses are financed largely by the difference between annual interest receipts and annual interest payments. In fiscal year 2005, interest and charges received from borrowing countries and other income totaled us\$3.6 billion, while interest payments on the portion of members' quota subscriptions used in IMF operations and other operating expenses amounted to us\$2.6 billion. The remainder was added to the IMF's General Resources Account, the funds available for lending to member countries.

## ACTIVITIES

### A. Resources of the IMF

The Fund obtains its necessary financial resources from the accumulated subscriptions made by its members. How much a member government subscribes to the Fund's resources is determined by the quota assigned to that country. As mentioned above, the quota also determines the country's voting strength in the IMF. Furthermore, the quota, which is expressed in SDRs, determines the amounts that the country may draw from the Fund's currency pool, as well as the country's allocations of SDRs.

In determining a member's quota, the IMF considers relevant economic data, including the country's national income, its international reserves, and the volume of its imports and exports.

The method of payment for initial quota subscriptions or increases in quotas was modified when the Second Amendment to the Articles of Agreement went into effect in 1978. Under the original Articles, members were required to pay 25% of their quota in gold and the remainder in their own currencies. Following the Second Amendment, an amount not exceeding 25% of new members' initial quotas, or existing members' increases in quotas, is paid in reserve assets, while the remainder is paid in the members' own currencies.

The Fund is required by its constitution to review its members' quotas at regular intervals of not more than five years and to propose called-for adjustments in quotas. A member may also at any time request an adjustment of its own quota. All quota changes must be approved by an 85% majority of the total voting power.

Several reviews of the adequacy of members' quotas have led to general and selective increases of Fund quotas. A special review in 1958/59 resulted in a 60.7% increase in quotas, which was followed by a 30.7% general increase in 1965 and a further 35.4% general increase in 1970. The 1976 review of quotas was affected by developments in the international monetary system, including the quadrupling of oil prices. As a result of that review, total quo-

tas were increased by 33.6%, to SDR 39 billion, reflecting a doubling of the collective share in total quotas of the major oil-exporting countries. The share of all other developing countries was maintained at its then existing level. The 1978 review provided for a 50.9% general quota increase for most members and additional special increases for 11 members. Consents to increases under this review raised total quotas to SDR 59.6 billion. The 1983 review increased quotas by 47.5%, to SDR 90 billion, and the quotas increased by 50.0% in November 1992 as a result of the Ninth General Review (in 1990).

The Tenth General Review in 1995 did not result in an increase. As of September 1996, total quotas amounted to SDR 145.3 billion (about US\$210 billion). In September 1997, the IMF's Executive Board concluded the Eleventh General Review, which resulted in an agreement on an overall increase in quotas of 45%, to SDR 213 billion (about US\$308 billion in March 2006). The IMF stated that the increase reflected changes in the size of the world economy, the scale of potential payments imbalances, and the rapid globalization and liberalization of trade and payments. The quota increase became effective in January 1999. The Twelfth General Review began in December 2001 with the formation of a Committee of the Whole to consider the possible need to increase quotas, but the review concluded in January 2003 had no increase in quotas.

The Fund is authorized under its Articles to supplement its resources by borrowing. In January 1962, a four-year agreement was concluded with 10 industrial members (the Group of 10)—subsequently joined by Switzerland as an associate and by Saudi Arabia under a special arrangement in 1983—by which they undertook to lend to the Fund to finance drawings by participants of the General Arrangements to Borrow (GAB) “if this should be needed to forestall or cope with an impairment of the international monetary system.” These General Arrangements to Borrow have been renewed every four or five years, most recently in November 2002.

On 19 January 1983, the ministers of the Group of 10 agreed in principle to enlarge the GAB to SDR 17 billion, from approximately SDR 6.0 billion, and to permit the Fund to borrow under the enlarged credit arrangements to finance exchange transactions with members that are not GAB participants. In addition, the ministers agreed to authorize Swiss participation in the agreement. The amounts of credit arrangements (in millions of SDRs) are as follows: the United States, 4,250; the Deutsche Bundesbank of Germany, 2,380; Japan, 2,125; France, 1,700; the United Kingdom, 1,700; Saudi Arabia, 1,500; Italy, 1,105; Switzerland, 1,020; Canada, 892.5; the Netherlands, 850; Belgium, 595; and the Riksbank of Sweden, 382.5.

In January 1997, the IMF approved the New Arrangements to Borrow (NAB). The NAB combines with the GAB to provide supplementary resources to the IMF. The amount of the resources available to the IMF under the NAB (which became effective November 1998) and the GAB is SDR 34 billion (about US\$45 billion), twice the amount of the GAB alone.

The Fund has also, in the past, supplemented its resources by borrowing, for example, for the oil facility for 1974 and 1975 and for the supplementary financing facility, whose resources of SDR 7,784 billion were borrowed from 14 members or institutions.

## B. General Obligations of IMF Members

The economic philosophy of the Bretton Woods Agreement holds that monetary stability and cooperation and the unhampered movement of money, especially in payment of current international transactions, will promote national and international prosperity. This principle is reflected in certain general obligations that countries undertake by accepting the IMF's Articles of Agreement. The Articles favor stabilization measures to help overcome short-term balance-of-payments difficulties, and they discourage exchange controls under normal conditions. The Agreement also enables the Fund to help governments in short-term payments difficulties.

## C. Consultations

Consultations with members are an essential component of the Fund's work and provide a major instrument for Fund surveillance of members' policies in several key areas.

Article IV of the Articles of Agreement, entitled “Obligations Regarding Exchange Arrangements,” allows individual members considerable freedom in the selection of their exchange arrangements, but it also stipulates general obligations and specific undertakings.

In order to help the Fund ensure observance of these obligations through the exercise of “firm surveillance” over exchange-rate policies, members are required to consult with the Fund regularly under Article IV, in principle on an annual basis. These consultations provide an opportunity for detailed review of the economic and financial situation and the policies of members from both the national and international viewpoints. They also help the Fund deal expeditiously with members' requests for the use of Fund resources and for proposed changes in policies or practices that are subject to Fund approval. For the individual member, regular consultations provide the occasion for an external appraisal of policies and for discussion of any special difficulties that may arise from the actions of other members.

Members availing themselves of the transitional arrangements permitted under Article XIV of the Articles of Agreement to maintain multiple exchange rates or other restrictions on current international payments are required to consult annually with the Fund. Article VIII countries have accepted the obligation to avoid such practices. Consultations under Article IV include the regular consultations under Article VIII and Article XIV and are required for all members.

Between annual consultations, there is a supplemental surveillance procedure under which the managing director initiates an informal and confidential discussion with a member whenever he thinks that a modification in the member's exchange arrangements or exchange-rate policies or the behavior of the exchange rate of its currency may be important or may have important effects on other members.

Special consultations with selected countries also supplement regular consultations in connection with the periodic reviews of the world economic outlook undertaken by the Executive Board. The purpose of these consultations is to provide up-to-date knowledge of the economic situation in countries whose external policies are regarded as being of major importance to the world economy.

## D. Transactions Between the Fund and Its Members

### Use of Resources

Members of the Fund may draw on its financial resources to meet their balance-of-payments needs. As of 31 March 2006, the IMF had credits and loans outstanding to 75 countries for an amount of us\$34 billion. Financial assistance is made available under a number of policies and facilities. Member countries may, for example, use the reverse tranche and the credit tranche, or they may receive emergency assistance. The IMF has set up various facilities for specific purposes—the Compensatory and Contingency Financing Facility (CCFF); the Buffer Stock Financing Facility (BSFF); the Extended Fund Facility; and the Structural Adjustment Facility (SAF), which was superseded by the Enhanced Structural Adjustment Facility (ESAF). (For full descriptions of these policies and facilities, see farther on.)

For any drawing, a member is required to indicate to the Fund that the desired purchase is needed to stabilize its balance-of-payments or reserve position or to deal with adverse developments in its reserves.

When a member draws on the Fund, it uses its own currency to purchase the currencies of other member countries or SDRs held by the General Resources Account. Thus, a drawing results in an increase in the Fund's holdings of the purchasing member's currency and a corresponding decrease in the Fund's holdings of other currencies or SDRs that are sold. Within a prescribed time, a member must reverse the transaction (unless it is a reserve tranche purchase; see farther on) by buying back its own currency with SDRs or currencies specified by the Fund. Usually, repurchases are to be made within three to five years after the date of purchase. However, under the extended Fund facility, the period for repurchases is within four and a half to ten years, and under the supplementary financing facility, within three and a half to seven years. In addition, a member is expected normally to repurchase as its balance-of-payments or reserve position improves.

*Reserve Tranche.* The difference between a member's quota and the Fund's holdings of that member's currency is referred to as the member's reserve tranche. Purchases in the reserve tranche—a reserve asset that can be mobilized by the member with minimum delay—are subject to balance-of-payments need but not to prior challenge, economic policy conditions, or repurchase requirements. This drawing does not constitute a use of IMF credit, as its reserve position is considered part of the member's foreign reserves, and is not subject to an obligation to repay.

*Credit Tranche.* Credits under regular facilities are made available to members in tranches (segments) of 25% of quota. For first credit tranche drawings, members must demonstrate reasonable efforts to overcome their balance of payments difficulties. Upper credit tranche drawings (over 25%) are normally phased in relation to certain conditions or "performance criteria."

*Policy on Emergency Assistance.* The IMF provides emergency assistance to members to meet balance of payments needs arising from sudden and unforeseeable natural disasters and in post-conflict situations. Normally this takes the form of an outright purchase of up to 25% of quota, provided the member is cooperating with the IMF. For post-conflict cases, additional access of up to 25% of quota can be provided.

All requests for the use of the Fund's resources other than use of the reserve tranche are examined by the Fund to determine

whether the proposed use would be consistent with the provisions of the Articles of Agreement and with Fund policies.

The criteria used by the Fund in determining whether its assistance should be made available are more liberal when the request is in the first credit tranche (that is, when the Fund holdings of a member's currency are above 100% but not above 125% of the member's quota) than when it is in the higher credit tranches (that is, when the Fund's holdings following the drawing exceed 125% of quota).

A member requesting a direct purchase expects to draw the full amount immediately after approval of the request; under a standby arrangement (SBA), a member may make the agreed drawing at any time during the period of the standby arrangement.

Requests for purchases in the higher credit tranches require substantial justification. Such purchases are almost always made under standby or similar arrangements. The amount available under a standby arrangement in the upper credit tranches is phased to be available in portions at specified intervals during the standby period, and the member's right to draw is always subject to the observance of certain key policy objectives described in the program or to a further review of the situation.

*Compensatory and Contingency Financing Facility.* In November 1987, the Executive Board began to examine the need to address external contingencies in Fund arrangements and the design of appropriate contingency financing mechanisms. These deliberations resulted in the establishment of the Compensatory and Contingency Financing Facility (CCFF) in August 1988. The CCFF incorporated existing facilities—the Compensatory Financing Facility (established in 1963), which provided financial assistance to members experiencing temporary export shortfalls, and the facility providing compensatory financing for excesses in cereal import costs that were largely attributable to circumstances beyond the members' control. The CCFF also introduced a new element—the external contingency mechanism (ECM). This mechanism gave members with fund arrangements the opportunity to protect themselves from unexpected, adverse external developments.

The compensatory element of the CCFF is designed to provide compensation to member countries experiencing shortfalls in export earnings and/or excesses in cereal import costs. The eligibility criteria require that the shortfall/excess be temporary and stem from factors beyond the authorities' control, and that the member have a balance of payments need. In addition, where the member is experiencing balance of payments difficulties beyond the effects of the temporary shortfall/excess, the member is expected to cooperate with the Fund in an effort to address them. The export shortfall (cereal import excess) is calculated as the amount by which a member's export earnings (cereal import costs) for a 12-month period are below (above) their medium-term trend. Other provisions of the CCFF ensure that requests for compensatory financing are met in a timely fashion, in particular that a request cannot be made later than six months after the end of the shortfall year, and that the calculation for the shortfall year may include up to 12 months of estimated data.

*The Buffer Stock Financing Facility.* In 1969 the BSFF was established to provide assistance to members in connection with their contributions to international buffer stocks of primary products, operating in the context of approved international commodity agreements (ICAs). The BSFF was the Fund's contribution to ef-

forts to stabilize commodity prices, which were seen at the time as excessively volatile, with damaging consequences for the stability of export earnings of developing countries heavily dependent on commodity exports. The BSFF provides support in the context of those ICAs whose objective is the stabilization of international prices through market intervention by buffer stocks, and that satisfy certain participation requirements adopted by the United Nations Economic and Social Council, in particular that they are open to participation of both consuming and producing countries, and that they do not maintain artificially high prices through long-term restrictions of supply. The IMF had, as of December 1999, authorized the use of its resources in connection with buffer stocks of cocoa, tin, sugar, and natural rubber. At that time, all eligible commodity agreements had expired (the last to expire was the 1987 International Natural Rubber Agreement in December 1993); there were no agreements under which drawings under the BSFF could be made. But the Fund has recently been requested to consider whether the International Rubber Agreement (1995) was suitable for BSFF support.

*Extended Facility.* Under the extended facility, the Fund may provide assistance to members to meet their balance-of-payments deficits for longer periods and in amounts larger in relation to quotas than under the credit tranche policies. For example, a member might apply for assistance under the facility if it has serious payments imbalances relating to structural maladjustments in production, trade, and prices and if it intends to implement a comprehensive set of corrective policies for two or three years. Use of the facility might also be indicated by an inherently weak balance-of-payments position that prevents the pursuit of an active development policy.

Drawings under extended arrangements generally take place over periods of up to three years, although this may be extended to four years.

*Structural Adjustment Facility.* In response to the particularly difficult situation confronting the low-income members of the Fund, the Executive Board established in March 1986 a Structural Adjustment Facility (SAF) within the Fund's Special Disbursement Account. This facility provided concessional balance-of-payments assistance—in conjunction with the World Bank and other lenders—to low-income countries eligible for IDA loans that were facing protracted balance-of-payments problems and were undertaking comprehensive efforts to strengthen their balance-of-payments position.

In December 1987 the IMF established the Enhanced Structural Adjustment Facility (ESAF). As successor to the SAF, it was similar in objectivity, eligibility and program features, but differed in scope, terms of access, and funding sources. The ESAF was renewed and extended since its creation; in September 1996 the IMF decided to make it a permanent facility, as the centerpiece of the agency's strategy to help low-income countries. It also decided that the IMF's participation in the initiative to lower the debt of the heavily indebted poor countries (HIPC) would be through special, more concessional ESAF operations. The HIPC Initiative was established in 1996, to reduce the debt burdens of the world's poorest countries. As of May 2006, 29 low-income countries were receiving debt relief under the HIPC Initiative.

*Poverty Reduction and Growth Facility (PRGF).* In September 1999, the IMF established the Poverty Reduction and Growth Fa-

cility (PRGF), as a low-interest lending facility for poor countries, to replace the ESAF. This allowed the IMF to include a more explicit focus on poverty reduction in the context of a growth oriented strategy. These broad objectives were reaffirmed in the IMF staff review of the PRGF in March 2002, and other reviews in 2004 and 2005.

#### **Conditionality**

A country making use of the Fund's resources is generally required to implement economic policies aimed at achieving a viable balance-of-payments position over an appropriate period of time. This requirement is known as "conditionality," and it reflects the principle that balance-of-payments financing and adjustment must go hand in hand.

A comprehensive review of the guidelines for conditionality was undertaken in 1979. These guidelines include the use of consultation clauses in Fund-supported programs, the phasing of purchases, and the injunction that objective indicators for monitoring performance be limited only to those variables necessary to ensure achievement of the objectives of the programs. In addition, the guidelines emphasize the need to encourage members to adopt corrective measures at an early stage of their balance-of-payments difficulties; to recognize that in many cases adjustment will take longer than the period associated with standby arrangements; to provide for the adoption of a flexible approach for the treatment of external borrowing in adjustment programs; and to stress the necessity to pay due regard to the domestic social and political objectives, the economic priorities, and the circumstances of members, including the causes of their payments problems.

Within the context of the guidelines, Fund-supported programs emphasize a number of major economic variables, including certain financial aggregates, such as domestic credit, public sector financial needs, and external debt, as well as some key elements of the price system, including the exchange rate, interest rates, and, in exceptional cases, the prices of commodities that bear significantly upon public finances and foreign trade.

The Fund-supported corrective strategy provides for a reorientation of the economy toward sustained growth and avoids purely deflationary policies that may have a deleterious effect on investment and fail to encourage the required shift of resources to the external sector.

#### **Charges for Use of Resources and Remuneration on Creditor Positions**

The Fund applies charges for the use of its resources, except for reserve tranche purchases. A service charge of 0.5% is payable on purchases other than reserve tranche purchases. In addition, the Fund levies charges on balances of members' currencies resulting from purchases. The rate of charge on purchases in the four credit tranches and under the extended Fund facility, the compensatory financing facility, and the buffer-stock financing facility is determined at the beginning of each financial year on the basis of the estimated income and expense of the Fund during the year and a target amount of net income. The average rate of charge on the use of the Fund's ordinary resources as of 1 May 2006 was 4.87%, after adjustments for burden sharing, and an average rate of remunera-

tion of 3.25%. Members that use the Fund's borrowed resources pay charges that reflect the Fund's borrowing costs plus a margin.

When the Fund's holdings of a member's currency are reduced below a specified level, the member acquires a creditor position in the Fund on which it earns remuneration (that is, interest). The Fund pays remuneration on creditor positions at a rate determined by a formula based on short-term market interest rates in the United States, the United Kingdom, Germany, France, and Japan.

#### E. Technical Assistance

Technical assistance is a major activity of the Fund. Staff officials are sent to member countries, sometimes for extended periods, to give advice on stabilization programs, the simplification of exchange systems, the modification of central banking machinery, the reform of fiscal systems and budgetary controls, or the preparation of financial statistics. The Fund collects and publishes a considerable number of statistics supplied by members. As part of its technical cooperation, the Fund established the IMF Institute in May 1964 to coordinate and expand its training program for staff members of finance ministries and central banks. The IMF established the Joint Vienna Institute in the Fall of 1992. In May 1998, the IMF inaugurated its Singapore Regional Training Institute (STI). Additionally, the agency operates other regional training programs. Today, the IMF provides approximately 300 person-years of technical assistance annually to its member countries. In the late 1990s technical assistance projects grew larger and more complex, requiring multiple sources of financing to underwrite costs.

#### F. Special Drawing Rights (SDRs)

The SDR is an international reserve asset created by the Fund and allocated to its members as a supplement to existing reserve assets. The Fund has allocated a total of SDR 21.4 billion in six allocations.

The last allocation of SDRs in the third basic period was made on 1 January 1981, when a total of SDR 4,052 million was allocated to the 141 countries that were members of the Fund at that time. Similar amounts were allocated in each of the two previous years. The Fund allocates SDRs to its members in proportion to their quotas at the time of allocation. In deciding on the timing and amount of SDR allocations, the Fund considers whether there exists a global need to supplement existing reserve assets, and it takes into account the objectives of the Fund's Articles of Agreement, which call upon Fund members to collaborate with each other and with the Fund with a view to making the SDR the principal reserve asset of the international monetary system.

A proposal for a special one-time allocation of SDRs was approved by the IMF's Board of Governors in September 1997 through the proposed Fourth Amendment of the Articles of Agreement. This allocation would double cumulative SDR allocations to SDR 42.8 billion. Its intent is to enable all members of the IMF to participate in the SDR system on an equitable basis and correct for the fact that countries that joined the Fund subsequent to 1981—more than one-fifth of the current IMF membership—have never received an SDR allocation. The Fourth Amendment will become effective when three-fifths of the IMF membership (111 members) with 85% of the total voting power accept it. As of end-August 2005, 131 members with 77.3% of total voting power had

accepted the proposed amendment. Approval by the United States, with 17.1% of total votes, would put the amendment into effect.

All 184 member countries of the Fund are participants in the SDR Department and are eligible to receive allocations. They may use SDRs in transactions and operations among themselves, with prescribed "other holders," of which there are now 15, and with the Fund itself. The SDR is the Fund's unit of account, and, increasingly, commercial transactions and private financial obligations are being denominated in SDRs.

Members with a balance-of-payments need may use SDRs to acquire foreign exchange in a transaction with designation—that is, one in which another member, designated by the Fund, provides currency in exchange for SDRs. The Fund designates members to provide currency on the basis of the strength of their balance-of-payments and reserve positions. However, a member's obligation to provide currency does not extend beyond the point at which its holdings are three times the net cumulative allocation that it has received. Fund members and "other holders" may also use SDRs in a variety of voluntary transactions and operations by agreement. They may buy and sell SDRs, both spot and forward, use SDRs in swaps and in settlement of financial obligations, or make donations (grants) with SDRs.

The valuation of the SDR is determined on the basis of a basket of five currencies. Since 1981, the currencies of France, Germany, Japan, United Kingdom, and United States have been included in the five-year reviews since these countries have the largest exports of goods and services. With the introduction of the euro on January 1, 1999, the currency amounts of the deutsche mark and French franc were replaced with the euro. The latest review of the SDR valuation basket was completed in November 2005. The value of the SDR in U.S. dollar terms is calculated daily as the sum of the values in U.S. dollars of the specific amounts of four currencies (euro, U.S. dollar, Japanese yen, pound sterling), based on exchange rates quoted at noon at the London Market. On 10 May 2006, SDR 1 equaled US\$1.49106. The SDR exchange rate is posted daily on the IMF web site <http://www.imf.org>.

#### G. Gold Sales by the Fund

The Fund's original Articles of Agreement required members to pay one-fourth of their quota subscription in gold. The establishment of the SDR in 1969 and the Second Amendment to the Articles of Agreement in 1978 virtually eliminated the monetary role of gold from the Articles, although gold still remains an important component in the reserve holdings of member countries. As a result of these developments, the Executive Board decided to sell off a portion of the Fund's gold holdings, beginning in 1976. In May 1980, the Fund completed a four-year gold sales program, through which 50 million oz, or one-third of the Fund's gold holdings at the beginning of the period, were sold. One-sixth of the gold (25 million oz) was sold to members at the former official price of SDR 35 an ounce. Another one-sixth was sold at auction for the benefit of developing countries. Some of the profits from these auctions were used to finance a trust fund, providing concessional balance-of-payments assistance to eligible developing countries. Repayments of these concessional loans form the basic funding for the structural adjustment facility.

# THE WORLD BANK GROUP

The World Bank Group comprises five organizations: the International Bank for Reconstruction and Development (IBRD), the International Development Association (IDA), the International Finance Corporation (IFC), the Multilateral Investment Guarantee Agency (MIGA), and the International Centre for the Settlement of Investment Disputes (ICSID).

---

## INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT (IBRD)

### Background

As early as February 1943, United States Undersecretary of State Sumner B. Welles urged preparatory consultation aimed at the establishment of agencies to finance reconstruction and development of the world economy after WWII. The United States and the United Kingdom took leading roles in the negotiations that were to result in the formation of the IBRD and the IMF. The IBRD is the main lending organization of the World Bank Group and, like its sister institution, the International Monetary Fund (IMF), was born of the Allies' realization during World War II that tremendous difficulties in reconstruction and development would face them in the postwar transition period, necessitating international economic and financial cooperation on a vast scale. The IBRD, frequently called the "World Bank," was conceived in July 1944 at the United Nations Monetary and Financial Conference in Bretton Woods, New Hampshire, United States.

### Purposes

Although one of the Bank's early functions was to assist in bringing about a smooth transition from wartime to peaceful economies, economic development soon became the Bank's main object. Today, the goal of the World Bank is to promote economic development that benefits poor people in developing countries. Loans are provided to developing countries to help reduce poverty and to finance investments that contribute to economic growth. Investments include roads, power plants, schools, and irrigation networks, as well as activities like agricultural extension services, training for teachers, and nutrition-improvement programs for children and pregnant women. Some World Bank loans finance changes in the structure of countries' economies to make them more stable, efficient, and market oriented. The World Bank also provides technical assistance to help governments make specific sectors of their economies more efficient and more relevant to national development goals.

### Membership

The Bank's founders envisioned a global institution, the membership of which would eventually comprise all nations. Membership

in the IBRD rose gradually from 41 governments in 1946 to 184 as of May 2006.

A government may withdraw from membership at any time by giving notice of withdrawal. Membership also ceases for a member suspended by a majority of the governors for failure to fulfill an obligation, if that member has not been restored to good standing by a similar majority within a year after the suspension. Only a few countries have withdrawn their membership from the Bank, and all but Cuba (withdrew in 1960) have rejoined.

Although the Soviet Union took part in the 1944 Bretton Woods Conference, and signed the final act establishing the IMF and the IBRD, it never ratified the Articles of Agreement or paid in the 20% of its subscribed capital that was due within 60 days after the Bank began operations. Had it joined, the Soviet Union would have been the Bank's third largest shareholder, after the United States and the United Kingdom. Over the next four decades, as the Bank grew in size and scope, it couldn't fulfill its founders' intentions of being a truly global institution due to the absence of the Soviet Union. Then, at the beginning of the 1990s, as political and economic change swept through the 15 republics of the USSR, the Soviet government indicated its interest in participating in the international financial system and sought membership in the IMF and World Bank. On 15 July 1991, Soviet President Mikhail Gorbachev formally applied for membership for the USSR in the IBRD and its three affiliates (IFC, IDA and MIGA). However, by December 1991, the USSR had ceased to exist. During 1992, the Russian Federation and 15 former Soviet republics (including the Baltic states) applied for membership and were accepted. Eleven of them also applied to IDA, 14 to IFC and 15 to MIGA. To accommodate these countries, the total authorized capital of the bank was increased.

A "graduating" country is one where lending is being phased out. As of 2002 there were 27 countries that had "graduated" from the IBRD. These include (with the fiscal year of their final loan): France (1947), Luxembourg (1948), Netherlands (1957), Belgium (1958), Australia (1962), Austria (1962), Denmark (1964), Malta (1964), Norway (1964), Italy (1965), Japan (1967), New Zealand (1972), Iraq (1973), Iceland (1974), Finland (1975), Israel (1975), Singapore (1975), Ireland (1976), Spain (1977), Greece (1979), Oman (1987), Bahamas (1989), Portugal (1989), Cyprus (1992), Barbados (1993), the Republic of Korea (1995), and China (1999).

## Structure

### Board of Governors

All powers of the Bank are vested in its Board of Governors, composed of one governor and one alternate from each member state. Ministers of Finance, central bank presidents, or persons of comparable status usually represent member states on the Bank's Board of Governors. The board meets annually.

The Bank is organized somewhat like a corporation. According to an agreed-upon formula, member countries subscribe to shares of the Bank's capital stock. Each governor is entitled to cast 250 votes plus 1 vote for each share of capital stock subscribed by his country.

### Executive Directors

The Bank's Board of Governors has delegated most of its authority to 24 executive directors. According to the Articles of Agreement, each of the five largest shareholders—the United States, Japan, Germany, France and the United Kingdom—appoints one executive director. The other countries are grouped in 19 constituencies, each represented by an executive director who is elected by a group of countries. The number of countries each of these 19 directors represents varies widely. For example, the executive directors for China, the Russian Federation, and Saudi Arabia represent one country each, while one director speaks for 24 Francophone African countries and another director represents 22 mainly English-speaking African countries.

### President and Staff

The president of the Bank, elected by the executive directors, is also their chairman, although he is not entitled to a vote, except in case of an equal division. Subject to their general direction, the president is responsible for the conduct of the ordinary business of the Bank. Action on Bank loans is initiated by the president and the staff of the Bank. The amount, terms, and conditions of a loan are recommended by the president to the executive directors, and the loan is made if his recommendation is approved by them.

According to an informal agreement, the president of the Bank is a US national, and the managing director of the IMF is a European. The president's initial term is for five years; a second term can be five years or less. Past presidents of the Bank include Robert S. McNamara (1968–81), A. W. Clausen (1981–86), Barber B. Conable (1986–91), Lewis T. Preston (1991–95), James D. Wolfensohn (1995–2005), and Paul Wolfowitz (2005–). Wolfowitz heads a staff of approximately 10,000 persons from around the world.

The IBRD's headquarters are at 1818 H Street, N.W., Washington, D.C. 20433.

### Budget

A total administrative budget of us\$1,320 million was approved for fiscal year 2005.

### Activities

#### A. FINANCIAL RESOURCES

*Authorized capital.* At its establishment, the IBRD had an authorized capital of us\$10 billion. Countries subscribing shares were required to pay in only one-fifth of their subscription on joining, the remainder being available on call but only to meet the IBRD's liabilities if it got into difficulties. Moreover, not even the one-fifth had to be paid in hard cash at that time. The sole cash require-

ment was the payment in gold or US dollars of 2% of each country's subscription. A further 18% of the subscription was payable in the currency of the member country concerned, and although this sum was technically paid in, in the form of notes bearing no interest, it could not be used without the member's permission. In 1959, each member was given an opportunity to double its subscription without any payment. Thus, for countries joining the IBRD after the 1959 capital increase and for those subscribing to additional capital stock, the statutory provisions affecting the 2% and 18% portions have been applied to only one-half of their total subscriptions, so that 1% of each subscription that is freely usable in the IBRD's operations has been payable in gold or US dollars, and 9% that is usable only with the consent of the member is in the member's currency. The remaining 90% is not paid in but is subject to call by the IBRD.

*Financial Resources for Lending Purposes.* The subscriptions of the IBRD's members constitute the basic element in the financial resources of the IBRD. Subscribed capital for fiscal year 2005 was about us\$189.7 billion. The Bank also draws money from borrowings in the market and from earnings. In 2005, the Bank's outstanding borrowings were us\$101.3 billion, raised in the capital markets of the world. The IBRD is able to raise large sums at interest rates little or no higher than are paid by governments because of confidence in the Bank engendered by its record of stability since 1947 and the investors' knowledge that if the IBRD should ever be in difficulty, it can call in unpaid portions of member countries' subscriptions. In connection with its borrowing operations, the Bank also undertakes a substantial volume of currency and interest rate swap transactions. These swaps have enabled the IBRD to lower its fund-raising costs and to expand its direct borrowing transactions to markets and currencies in which it otherwise would not have borrowed.

#### B. LENDING OPERATIONS

The IBRD lends to member governments, or, with government guarantee, to political subdivisions, or to public or private enterprises.

The IBRD's first loan, us\$250 million for postwar reconstruction, was made in the latter part of 1947. Altogether, it lent us\$497 million for postwar reconstruction, all to European countries. The IBRD's first development loans were made in the first half of 1948. As of 30 June 2005, the cumulative total of loans made by the Bank was over us\$407 billion. The Bank's lending commitments in FY 2005 were \$13.6 billion, reflecting an increase of \$2.6 billion over FY 2004 (\$11.0 billion).

*Loan Terms and Interest Rates.* The IBRD normally makes long-term loans, with repayment commencing after a certain period. The length of the loan is generally related to the estimated useful life of the equipment or plant being financed. Since July 1982, IBRD loans have been made at variable rates. The lending rate on all loans made under the variable-rate system is adjusted semi-annually, on 1 January and 1 July, by adding a spread of 0.5% to the IBRD's weighted average cost during the prior six months of a "pool" of borrowings drawn down after 30 June 1982. Since July 1989, only borrowings allocated to lending have been included in the cost of borrowings with respect to new loans and existing variable rate loans that are amended to apply the new cost basis. Before July 1982, loans were made at fixed rates, and, accordingly, the

semiannual interest-rate adjustments do not apply to payments made on these older loans.

### C. PURPOSES OF THE LOANS

The main purpose of the Bank's operations is to lend to developing member countries for productive projects in such sectors as agriculture, energy, industry, and transportation and to help improve basic services considered essential for development. The main criterion for assistance is that it should be provided where it can be most effective in the context of the country's specific lending programs developed by the Bank in consultation with its borrowers. In the late 1980s, the World Bank came under criticism that its policies, intended to encourage developing countries to restructure their economies in order to render them more efficient, were actually imposing too heavy a burden on the world's poorest peoples. This, and charges by environmentalists that World Bank lending had underwritten projects that were severely detrimental to the environment of developing countries, led to a re-thinking of the Bank's policies in the 1990s.

*Implementing the Bank's Poverty Reduction Strategy.* The fundamental objective of the World Bank is sustainable poverty reduction. Underpinning this objective is a two-part strategy for reducing poverty that was proposed in the World Development Report 1990. The first element is to promote broad-based economic growth that makes efficient use of the poor's most abundant asset, labor. The second element involves ensuring widespread access to basic social services to improve the well being of the poor and to enable them to participate fully in the growth of the economy. Progress in implementing the poverty-reduction strategy is clearly visible in Bank-wide statistics on new lending. At the September 1999 annual meetings of the World Bank Group and IMF, ministers agreed to link debt relief to the establishment of a poverty reduction strategy for all countries receiving World Bank/IMF concessional assistance.

*Sector and Structural Adjustment Lending.* Bank lending for sector adjustment and structural adjustment increasingly supports the establishment of social safety nets and the protection of public spending for basic social services.

In its assistance to countries that are preparing adjustment programs, the Bank works with them to (a) design the phasing of programs to accommodate the needs of the poor, (b) give priority to relative price changes in favor of the poor early in the reform process, (c) secure adequate resources for the provision of basic social services aimed at the poor, and (d) design social safety nets into economic-reform programs. These efforts better position the poor to be major beneficiaries of the economic growth and associated employment opportunities that are facilitated by the implementation of adjustment programs.

*Human Resource Development.* Bank lending for human resource development has largely been committed for education, and its focus has been towards development of basic education. Lending for education increased from an average US\$700 million during the 1980s to an average US\$1,907 million during the first four years of the 1990s. In 2005 the amount climbed to US\$1,951.1 million.

Bank lending for population, health, and nutrition has expanded even more rapidly. Average yearly lending to this sector during

the 1980s was US\$207 million, while lending during fiscal 2005 was US\$2,216.4 million.

*The Environment.* The Bank has continued to support environmental protection efforts with loans totaling US\$2,493.8 million in fiscal year 2005, compared to US\$404 million in fiscal 1990. But the full story cannot be told by stand-alone environmental projects. As of the late 1990s, half of all World Bank projects now have an environmental component of some kind.

In fiscal 1993 the World Bank undertook structural changes to respond to growing borrower demand for Bank assistance in environmental issues, and to the need for internal strengthening of monitoring and implementation. A Vice Presidency for Environmentally and Socially Sustainable Development was established. Three departments were placed under this vice presidency—the Environment Department, the Agriculture and Natural Resources Department, and the Transport and Urban Development Department.

The Global Environment Facility is a cooperative venture between the World Bank, the United Nations Development Programme, the United Nations Environment Programme, and national governments. The Facility provides grants to help developing countries deal with environmental problems that transcend boundaries, such as airborne pollution produced by smokestacks or hazardous waste dumped into rivers. The GEF gives priority to four objectives: limiting emissions of greenhouse gases; preserving biodiversity; protecting international waters; and protecting the ozone layer.

*Private Sector Development.* The promotion of private sector growth in developing member countries has always been central to the Bank's overall mission of fostering sustainable growth and reducing poverty. In December 1999, the Bank Group announced a restructuring to better align and expand its work related to the private sector. The reforms took effect 1 January 2000. The reorganization tightened the link between the Bank's public sector work and its private sector transactions in the developing world, which are made through the IFC. The World Bank helps governments to formulate policy frameworks that encourage a positive environment for business to function as the primary engine of growth while the IFC, the private sector arm of the Bank Group, provides advice and makes loans and equity investments in companies in developing countries. According to an IFC official the changes were in response to "one of the biggest challenges facing [the Bank's] client countries: How to create a favorable business environment and help finance small and medium enterprises." In addition to creating a new combined unit to coordinate Bank Group activities, help capitalize local financial institutions, and teach them the business of financing small and medium enterprises, the restructuring also involved the creation of joint World Bank-IFC departments, or product groups, for industries where there is a strong interface between public policy and private sector transactions. Three new industry groups, telecommunications/informatics, oil/gas/petrochemicals, and mining, include both policy and transaction capacity. Beyond the new industry groups, the principal advisory services focused on the private sector in both the World Bank and IFC are coordinated under single management.

**D. OTHER ACTIVITIES**

*Technical Assistance.* The Bank provides its members with a wide variety of technical assistance, much of it financed under its lending program. The volume of technical assistance in which the Bank is involved as lender, provider, or administrator rose sharply during the 1990s. In addition to loans and guarantees to developing countries, the World Bank carries out its mission by providing advice and assistance with telecommunications sector reform and national information infrastructure strategies. Special programs in this category include InfoDev and TechNet. The Information for Development Program (InfoDev) began in September 1995 with the objective of addressing the obstacles facing developing countries in an increasingly information-driven world economy. It is a global grant program managed by the World Bank to promote innovative projects on the use of information and communication technologies (ICTs) for economic and social development, with a special emphasis on the needs of the poor in developing countries. In recognition of the critical role that science and technology play in promoting economic growth and social progress, in July 1999 TechNet was created as a cross-cutting thematic group to promote knowledge and education in the areas of science and technology and informatics. TechNet acts as a clearing-house and network for professionals inside and outside the Bank.

*Interagency Cooperation.* The Bank's overarching purpose is helping to reduce global poverty. To this end, the institution encourages the involvement of other development agencies in preparing poverty assessments and works closely with other UN agencies in preparing proposals to improve the quality of poverty-related data. At the country level, the Bank is broadening its efforts to coordinate work with UNDP, UNICEF, and the Interna-

tional Fund for Agricultural Development in specific countries on preparing or following up poverty assessments and planned human development assessments.

Coordination between the Bank and the UN system on poverty at the project level is extensive, particularly in the design of social funds and social action programs. Together with other UN agencies, the World Bank has taken the lead in mobilizing groups of donors, both multilateral and bilateral, to tackle specific areas of concern—for example, the Consultative Group on International Agricultural Research (CGIAR), which is cosponsored by the FAO, UNDP, and the World Bank. The Bank is an active partner in interagency activities which include the follow-up to the World Conference on Education for All and the World Summit for Children; the Safe Motherhood Inter-Agency Group; the Onchocerciasis (riverblindness) Control Programme; the Global Programme for AIDS; and the Task Force for Child Survival. The Bank also has links with the United Nations at the political and policy making level in the work of the General Assembly and its related committees, and the Economic and Social Council.

The Economic Development Institute was the Bank's department responsible for such dissemination. Through seminars, workshops and courses, EDI enabled policy-makers to assess and use the lessons of development to benefit their own policies. On 10 March 1999, the World Bank unveiled the successor to the EDI, the World Bank Institute (WBI). The new learning entity also absorbed the World Bank's Learning and Leadership Center. The WBI drives the Bank's learning agenda, working in three main areas: training, policy services, and knowledge networks. WBI is located at World Bank headquarters in Washington, D.C.. Many of its activities are held in member countries in cooperation with regional and national development agencies and education and training institutions. The Institute's distance education unit conducts interactive courses via satellite links worldwide. While most of WBI's work is conducted in English, it also operates in Arabic, Chinese, French, Portuguese, Russian and Spanish.

*Economic Research and Studies.* The Bank's economic and social research program, inaugurated in 1972, is undertaken by the Bank's own research staff and is funded out of its administrative budget. The research program is shaped by the Bank's own needs, as a lending institution and as a source of policy advice to member governments, and by the needs of member countries. Its main purposes are to gain new insights into the development process and the policies affecting it; to introduce new techniques or methodologies into country, sectoral, and project analyses; to provide the analytical bases for major Bank documents, such as the World Development Report; and to help strengthen indigenous research capacity in developing countries.

**Total Loans by Region in Millions of US Dollars  
(as of 30 June 2005)**

REGION	AMOUNT
Africa	\$3,887.5
East Asia and Pacific	2,883.3
South Asia	4,993.3
Europe and Central Asia	4,093.5
Latin America and the Caribbean	5,165.7
Middle East and North Africa	1,283.6
<b>TOTAL</b>	<b>22,307</b>

**Total Loans by Major Purpose in Millions of US Dollars  
(as of 30 June 2005)**

PURPOSE	AMOUNT
Agriculture, Fishing, and Forestry	\$1,933.6
Law and Justice and Public Administration	5,569.3
Information and Communication	190.9
Education	1,951.1
Finance	1,675.1
Health and Other Social Services	2,216.4
Industry and Trade	1,629.4
Energy and Mining	1,822.7

Water, Sanitation, and Flood Protection	2,180.2
<b>TOTAL</b>	<b>22,307</b>

**INTERNATIONAL CENTRE FOR  
SETTLEMENT OF INVESTMENT DISPUTES  
(ICSID)**

Developing countries depend heavily on foreign private capital to finance development. Such capital flows are sensitive to legal and political conditions in developing countries. The International Centre for Settlement of Investment Disputes is an autonomous institution founded in 1966 to promote increased flows of international investment by providing facilities for the conciliation and arbitration of disputes between governments and foreign inves-

tors. ICSID also provides advice, carries out research, and produces publications in the area of foreign investment law. Its publications include a semiannual law journal, *ICSID Review-Foreign Investment Law Journal*, and multivolume collections of *Investment Laws of the World* and *Investment Treaties*. As of May 2006, ICSID had 143 member countries, and as of December 2002 it had tried 104 cases; 104 other cases were pending. Disputes have dealt with investments in agriculture, banking, construction, energy, health, industry, mining, and tourism.

## MULTILATERAL INVESTMENT GUARANTEE AGENCY (MIGA)

MIGA was established in 1988. Its main purpose is to promote the flow of foreign direct investment among member countries by insuring investments against non-commercial (political) risk, and by providing promotional and advisory services to help member countries create an attractive investment climate. MIGA offers four basic types of coverage:

*Currency Inconvertibility.* Protects against losses arising from an inability to convert local currency investment returns into foreign exchange for transfer outside the host country;

*Expropriation.* Protects against loss from acts by the host government that may reduce or eliminate ownership of, or control over, rights to the insured investment;

*War and Civil Disturbance.* Protects against losses arising from military action or civil disturbance that destroys or damages tangible assets of the project enterprise or interferes with its operations; and

*Breach of Contract.* Protects against losses from the investor's inability to obtain and/or enforce a decision or award against a host country that has repudiated or breached an investment contract.

Since its inception, MIGA by 2006 had issued nearly 800 guarantees for projects worth more than US\$14.7 billion in 91 developing countries. As of 10 May 2006, 167 countries had completed membership requirements with an additional 4 countries in the process of becoming members.

## THE INTERNATIONAL DEVELOPMENT ASSOCIATION (IDA)

### Background

The world's poorer countries have gone heavily into debt to finance their development. The total outstanding debt of 90 such countries rose from US\$51 billion in 1970 to an estimated US\$485 billion in 1985. Annual interest and amortization charges on this debt had, by 1985, reached over US\$100 billion. Many countries have long since arrived at the point where they can no longer afford to raise all the development capital that they are in a position to use at ordinary rates of interest and in the time span of conventional loans, IBRD loans included.

The International Development Association (IDA), an affiliate of the World Bank, was established in 1960 to promote economic development in the world's poorest countries—those that cannot afford to borrow from the IBRD. It is the largest single multilateral source of concessional lending to low-income countries. The following criteria are used to determine which countries are eligible to borrow IDA resources: relative poverty, defined as GNP per capita below an established threshold (as of 2004, US\$965);

lack of creditworthiness to borrow on market terms and therefore a need for concessional resources to finance the country's development program; good policy performance, defined as the implementation of economic and social policies that promote growth and poverty reduction. As of May 2006, 81 countries were eligible to borrow from the IDA. At the time, these countries were home to 2.5 billion people, comprising half of the total population of the developing nations, and 1.5 billion of these people survived on incomes of US\$2 or less a day.

The IDA's loans are interest-free and repayable over very long terms, with extended grace periods. As a result, the IDA's resources, unlike the resources of a regular lending institution, must be regularly replenished through contributions if the agency is to continue in business.

### Creation

The creation of an international agency such as the IDA was discussed in the UN at various times during the 1950s. A report drawn up in 1951 by a group of experts on financing and economic development referred to the need for an "international development authority." Although such proposals were at first opposed by the United States, the IDA as it was finally launched was largely the result of US initiative. In 1958, the US Senate passed a resolution introduced by Senator A. S. ("Mike") Monroney calling for cooperative international action along these lines. On 1 October 1959, the IBRD's Board of Governors approved, without objections, a motion of US Secretary of the Treasury Robert Anderson that a new agency, under the name International Development Association, be established as an affiliate of the Bank.

The debate that preceded the Board's action revealed potential disagreements among members of the Bank on a number of points, such as the terms that the IDA should set for its loans, the permissible restrictions that countries subscribing to the IDA's capital could place on the use of funds supplied in their national currencies, and related matters. Rather than decide these matters itself, the Board of Governors asked the Executive Directors of the IBRD to draw up Articles of Agreement for the IDA, which would then be submitted to the Bank's member governments.

The IDA's Articles of Agreement were accordingly drafted by the Executive Directors of the IBRD and early in 1960 transmitted to the member governments of the Bank. The next step was for those governments desiring to join the IDA to take whatever legislative or other action might be required to accept membership and to subscribe funds.

The new lending association came into existence on 24 September 1960, when governments whose subscriptions to its capital aggregated US\$650 million, or 65% of the projected one-billion-dollar goal, had accepted membership. The IDA started operations in November of that year.

### Purposes

In the preamble to the Articles of Agreement, the signatory governments declare their conviction that mutual cooperation for constructive economic purposes, healthy development of the world economy, and balanced growth of international trade foster peace and world prosperity; that higher standards of living and economic and social progress in the less developed countries are desirable not only in the interest of the latter but also for the international community as a whole; and that achievement of these

objectives would be facilitated by an increase in the international flow of capital, public and private, to assist in the development of the resources of less developed countries.

As stated in its Articles of Agreement, the purposes of the IDA are “to promote economic development, increase productivity, and thus raise standards of living in the less-developed areas of the world included within the Association’s membership, in particular by providing financing to meet their important developmental requirements on terms which are more flexible and bear less heavily on the balance of payments than those of conventional loans, thereby furthering the developmental objectives of the [IBRD] and supplementing its activities.”

### Membership

As of May 2006, IDA had 165 member countries, of which 81 were eligible to borrow. Between its founding in 1960 and 2006, IDA lent approximately US\$161 billion to 108 countries. It lends, on average, about US\$6–8 billion a year (US\$6–8.7 billion in FY 2005) for different types of development projects. When a country’s Gross National Product (GNP) exceeds IDA’s eligibility threshold and it becomes creditworthy to borrow from IBRD, it is no longer eligible for IDA’s interest-free credits. It may then borrow from IBRD at market rates. Some countries, such as India and Indonesia, are eligible for a combination of financing from both IBRD and IDA. Such countries are known as “blend” borrowers. Countries that once borrowed from IDA but became too prosperous to qualify included China, Costa Rica, Chile, Egypt, Morocco, South Korea, Thailand, and Turkey.

### Structure

The IDA is administered by the same officers and staff who administer the affairs of the IBRD. The president of the Bank also serves as the president of the IDA, and the governors and the executive directors of the Bank serve in the same capacity in the IDA. As in the IBRD, a member’s voting power in the IDA is roughly proportionate to its capital subscription.

### Budget

Since the IDA relies entirely on the IBRD’s staff and facilities for all its activities, it reimburses the Bank through a management fee for administrative expenses incurred on its behalf.

### Activities

#### A. Financial Resources

The IDA’s funds are obtained from three main sources: members’ subscriptions; periodic “replenishments” provided by richer members and certain special contributions; and transfer of income from the IBRD and repayments on IDA credits.

While IBRD raises most of its funds on the world’s financial markets, IDA is funded largely by contributions from the governments of the richer member countries. As of 30 June 2005, their cumulative contributions since IDA’s beginning totaled US\$124.35 billion. Donors get together every three years to replenish IDA funds. The 14th replenishment finances projects over the three years beginning 1 July 2005. Funding for the 14th Replenishment will allow IDA to lend about US\$33 billion, of which donors’ contributions will provide a little over half.

The largest pledges to the 14th replenishment were made by the United States, Japan, Germany, France, United Kingdom, Italy

and Canada. Some less wealthy nations also contribute to IDA. Turkey and Korea, for example, once borrowers from IDA, became donors. Other contributors to the 14th replenishment were Australia, Austria, Barbados, Belgium, Denmark, Finland, Greece, Iceland, Ireland, Israel, Kuwait, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Saudi Arabia, Singapore, Slovenia, Spain, Sweden, Switzerland, and Venezuela. Brazil, Czech Republic, Hungary, Mexico, Poland, Russia, Slovak Republic, and South Africa, though all then eligible to borrow from IBRD, made contributions to IDA’s 14th replenishment.

Aside from their contributions under replenishment agreements, a number of countries have agreed over the years to make voluntary increases and special contributions in excess of their normal shares. Since 1964, the IDA has received regular support from the IBRD through the transfer of some of its net income not needed for the Bank’s own purposes. When combined with repayments by IDA borrowers and contributions from the World Bank’s net income, the 13th replenishment will finance a total of about US\$23 billion in development credits.

#### B. Terms of IDA Lending

IDA provides credits to its borrowers, interest-free with a 20-, 35-, or 40-year final maturity and a 10-year grace period. Although IDA does not charge interest, it does charge a small administrative fee of 0.75% against the outstanding balance of credits to meet administrative expenses. There is also a commitment fee of 0.5% of 50 basis points, but this has been waived since fiscal year 1989. IDA’s credits are thus highly concessional with a grant element of about 85%.

#### C. IDA Operations

While the IDA’s financial terms are liberal, its economic and technical criteria for development credits are exactly the same as those applied by the IBRD in lending on conventional terms. Each credit must be justified by the borrowing country’s economic position, prospects, and policies. Credits are extended only for high-priority purposes that, in the words of the IDA’s Articles of Agreement, will “promote economic development, increase productivity, and thus raise standards of living in the less-developed areas of the world.”

Since the IDA’s resources have been considerably less than the need of developing countries for additional external finance on easy terms, they must be carefully rationed on the basis of need and prospects for their most effective use. Borrowing countries typically have per capita GNPs below an established threshold. Most eligible countries have incomes below US\$965 per capita.

#### D. IDA’S Evolving Role

IDA has taken an active role in helping governments undertaking structural adjustment to protect and expand social and environmental programs. It supports rural development programs and projects which aim to increase agricultural productivity and ensure adequate food supplies. IDA also finances projects that give special attention to improving women’s incomes and status in their communities. The Association has markedly increased its support for population, health, and nutrition projects.

Environmental concerns have been integrated into all aspects of IDA’s operations. The Association is helping borrowers develop their own Environmental Action Plans to identify the policy

changes and investments that are required for environmentally sustainable development.

In fiscal 2005, IDA disbursed US\$8.7 billion; of this amount, 45% went to countries in sub-Saharan Africa, 33% to South Asia, 12% to East Asia and the Pacific, 6% to Eastern Europe and Central Asia, and the remainder to poor countries in North Africa and in Latin America. New commitments in FY 2005 comprised 160 new operations in 64 countries.

IDA is the largest single source of multilateral concessional funds. Its annual net disbursements of around US\$8.4 billion are about 30% of net concessional multilateral disbursements, and 12% of Official Development Assistance. The Association also helps mobilize and coordinate aid from other multilateral organizations and donor countries. IDA's involvement is often a catalyst for other bilateral aid donors and regional development banks to participate in providing assistance. On average, for every dollar IDA commits, 50 cents of cofinancing is mobilized.

## THE INTERNATIONAL FINANCE CORPORATION (IFC)

### Background

The International Finance Corporation is the member of the World Bank Group that promotes the growth of the private sector in less developed member countries. The IFC's principal activity is helping finance individual private enterprise projects that contribute to the economic development of the country or region where the project is located. The IFC is the World Bank Group's investment bank for developing countries. It lends directly to private companies and makes equity investments in them, without guarantees from governments, and attracts other sources of funds for private-sector projects. IFC also provides advisory services and technical assistance to governments and businesses.

### Creation

Within a few years of the founding of the International Bank for Reconstruction and Development (IBRD), it became evident that sufficient provision had not been made for financing the development of the private sector in countries looking to the UN system for aid. The Bank's charter restrained it from making equity (capital stock) investments or from lending money, directly or indirectly, to a private company without a governmental guarantee. Yet "venture capital" was the very thing needed in many developing countries to get a variety of productive enterprises underway, and the amount of venture capital available through private banking and investment channels was inadequate.

The first public suggestion for an international institution to close this gap appeared in a report, "Partners and Progress," which Nelson Rockefeller (then chairman of the advisory board of the Point 4 Program) had submitted to President Harry S. Truman in 1951. The matter was taken up by the staff of the IBRD, and in 1952, the Bank submitted proposals for such an institution to the UN Economic and Social Council. Some members of the Council, including the United Kingdom and the United States, voiced the fear that the proposed institution might deter the flow of private capital to the developing countries. They also objected in principle

to an inter-governmental organization's having the right to purchase shares in private companies.

The majority of members of the Economic and Social Council, however, strongly endorsed the idea of an international financial institution to aid private sector development, and by late 1954, a compromise was worked out. The International Finance Corporation, as originally established, could lend money to private enterprises without government guarantees, but it was not empowered to make equity investments, though loans with certain equity features, such as stock options, were allowed. The 31 countries necessary to launch the IFC pledged their consent over the next 18 months, and the IFC formally came into existence on 14 July 1956 as a separate legal entity affiliated with the IBRD.

The IFC's early investments often included such features as stock options and other profit-sharing devices in lieu of direct equity financing, but the terms were complex and difficult to negotiate, and it soon became apparent to all concerned that IFC's effectiveness was severely circumscribed by the restriction on equity investment. Proposals to amend the charter so as to permit the IFC to hold shares were put to the Board of Directors and the Board of Governors and approved in 1961—with the support, this time, of both the United Kingdom and the United States. The revision of IFC's charter in 1961 to permit investment in equities made it possible to broaden and diversify operations, as well as to simplify the terms of investment. With the demand for IFC's services steadily expanding, the Board of Directors amended the charter again in 1965 to permit the IFC to borrow from the IBRD up to four times its unimpaired subscribed capital and surplus.

### Purposes

IFC's purpose is to foster economic growth by promoting private sector investment in its developing member countries. It accomplishes this by providing venture capital for productive private enterprises in association with local investors and management, by encouraging the development of local capital markets, and by stimulating the flow of private capital. The Corporation is designed to supplement, rather than replace, private capital. It plays an important catalytic role in mobilizing additional project funding from other investors and lenders, either in the form of cofinancing or through loan syndications, the underwriting of debt and equity securities issues, and guarantees. In addition to project finance and resource mobilization, IFC offers a full array of advisory services and technical assistance in such areas as capital market development, corporate restructuring, risk management, and project preparation and evaluation, and advises governments on creating an environment that encourages the growth of private enterprise and foreign investment.

### Membership

Membership in the IFC is open to all members of IBRD. As of May 2006, IFC had 178 member states.

### Structure

The structure of IFC is similar to that of the IBRD. IFC's Board of Governors consists of those governors of the Bank (IBRD) whose countries are also members of IFC. Its Board of Directors is composed of all the Executive Directors of the Bank. The annual meet-

ing of the IFC Board of Governors is held in conjunction with the annual meeting of the Board of Governors of the IBRD. IFC headquarters are at 2121 Pennsylvania Ave. N.W., Washington, D.C., 20433.

The first president of the IFC was Robert L. Garner, formerly vice-president of the IBRD. Since 1961, the president of the Bank also has been the president of the Corporation. The immediate direction of the Corporation is the responsibility of the executive vice-president, Lars H. Thunell, whose term became effective 1 January 2006. IFC has more than 2,400 staff, 55% of whom work in Washington, and 45% of whom are stationed in over 80 IFC field offices.

## Activities

### A. Financial Resources

IFC's investments are funded out of its net worth—the total of paid-in capital and retained earnings. Of the funding required for its lending operations, 80% is borrowed in the international financial markets through public bond issues or private placements; the remaining 20% is borrowed from the IBRD.

*Earnings and Borrowings.* IFC's operating income for fiscal year 2005 was US\$1.95 billion; its net income was US\$2.02 billion. Paid-in capital was US\$2.4 billion; retained earnings were US\$7.4 billion; and borrowings amounted to US\$2 billion. IFC may borrow from the IBRD for use in its lending operations as long as the Corporation's total borrowings do not exceed four times its unimpaired subscribed capital and surplus.

*Disbursements.* In 2005 IFC approved 236 new projects in 67 countries. The total project cost of commitments was US\$19.3 billion. Since its founding in 1956 and through 2005, IFC committed more than US\$49 billion of its own funds and arranged US\$24 billion in syndications and underwriting for 3,319 companies in 140 developing countries.

### B. Investment Policies

Unlike the IBRD, IFC lends to private companies and does not accept guarantees from host-country governments. It also makes equity investments in developing-country businesses, and mobilizes additional loan and equity financing in the international financial markets. Because of the success of IFC's operations, its bond issues in the international markets have earned triple-A ratings from Moody's and Standard and Poor's.

IFC is the single largest source of direct financing for private sector projects in developing countries. Although IFC invests and lends on market terms, it does not compete with private capital. It finances projects unable to obtain sufficient funding on reasonable terms from other sources. Normally, IFC does not finance more than 25% of total project costs, so as to ensure that most of the project financing comes from private investors and lenders. And while IFC may buy up to 35% of the stock of a company, it is never the largest shareholder and does not take part in a firm's management. But since IFC does not accept government guarantees, it shares all project risks with its partners.

IFC finances the creation of new companies as well as the expansion or modernization of established companies in sectors ranging from agribusiness to manufacturing to energy to mining.

A number of IFC projects involve building up the financial sectors of developing countries, for example by financing the creation of institutions such as investment banks and insurance companies.

IFC can provide loans, equity investments, and arrange quasi-equity instruments—in whatever combination is necessary to ensure that a project is soundly funded from the outset. The Corporation can provide additional financial support through contingent financing or full or partial guarantees of other sources of financing. In the past few years, IFC has made derivative products, such as currency and interest rate swaps, available to companies in developing countries. It has intermediated several such swaps for companies in Bolivia, Egypt, Ghana, and Mexico, helping them gain access to risk-management techniques commonly used by companies in industrialized countries but not normally available to companies in the developing world.

### C. IFC Investments

The IFC's history has been marked by growth in the number and size of investments and by a continued search for new ways to assist its member countries. An improved policy environment in many of IFC's developing member countries has helped the Corporation to make a larger contribution to economic development. Helping companies in developing countries achieve a proper balance between debt and equity financing is a key IFC objective.

In addition to approving debt and equity financing for its own account, in 2005 the Corporation approved the mobilization of US\$5.3 billion in financing from other investors and lenders through loan syndications and the underwriting of securities issues. It also mobilized considerable cofinancing. Thus, for every US\$1 of financing approved by IFC for its own account, other investors and lenders will provide US\$4.75.

The efficient provision of services in such sectors as power, water, transportation, and communications is critical to successful private sector development. A growing number of IFC's member countries are opening these sectors, once the preserve of the state, to private investment and management.

The countries of Eastern and Central Europe and the former Soviet republics are a new focus of IFC's work. IFC's role includes financing private-sector projects and advising governments on creating a modern financial sector, selling off state-owned enterprises, and attracting foreign investment.

IFC advised governments officials in Russia and Ukraine on different techniques for privatizing state enterprises, and developed privatization programs that can be used as models by local authorities in both republics. It helped design and implement the auction of small enterprises in three regions in Russia—Nizhny Novgorod, Volgograd, and Tomsk—and in the city of L'viv, Ukraine, and produced a manual on the privatization of small enterprises.

In many developing countries small-scale entrepreneurs with promising ideas are often unable to get the financing or advice they need to start or expand businesses. IFC has set up project development facilities in Sub-Saharan Africa, Central America and the Caribbean, the South Pacific Islands, and Poland to help entrepreneurs prepare project proposals. Although these facilities do not themselves fund projects, they help entrepreneurs find loans and equity financing on reasonable terms. The Africa Enterprise

Fund, established in 1989, is a special program devoted to financing small and medium-sized businesses in Sub-Saharan Africa.

*Advisory Services and Technical Assistance.* In the course of conducting project appraisals, IFC may provide considerable technical assistance to companies—for example, by helping them select a technical partner or a technology, identify markets for their products, and put together the most appropriate financial package. The Corporation also advises companies on financial restructuring, helping them reduce their debt.

IFC advises member governments on an array of issues, such as capital markets development. It helps governments create and put in place the regulatory, legal, and fiscal frameworks necessary for financial institutions to operate efficiently. IFC also provides advice on privatization and on restructuring state enterprises slated for privatization. The Foreign Investment Advisory Service, established by IFC and operated jointly with the Multilateral Investment Guarantee Agency and IBRD, advises governments on attracting direct foreign investment.

# POLAR REGIONS

## ANTARCTICA

Antarctica, the coldest and second-smallest continent (after Australia), is centered on the South Pole and is situated almost entirely within the Antarctic Circle at 66 1/2° S. Some 97% of the total area of about 13,924,000 sq km (5,376,000 sq mi) is covered by ice, and the continent contains about 90% of the world's ice and 70% of the fresh water. Antarctica is bounded by the Southern Ocean. The nearest points of land are the southern tip of South America, South Georgia, the South Sandwich Islands, the South Orkney Islands, and the South Shetland Islands. All of these islands are located within the Antarctic Convergence, which encircles Antarctica at approximately 1,600 km (1,000 mi) from the coast and divides the cold Antarctic waters from the warmer waters of the four oceans, in a zone of perpetual turbulence.

The Southern Ocean, which totally encircles Antarctica, was delimited in 2000 as a result of a decision of the International Hydrographic Organization. It was delimited from the southern parts of the Atlantic, Indian, and Pacific Oceans, and extends from the Antarctic coast north to 60° S latitude. The Southern Ocean encompasses 360° of longitude, and is slightly more than twice the size of the United States, or 20,327,000 sq mi (52,646,000 sq km). It is smaller than the Atlantic, Indian, and Pacific Oceans, but larger than the Arctic Ocean.

Some 200 million years ago, Antarctica was joined to South America, Africa, India, and Australia in a large single continent, Gondwanaland; subsequent geological changes caused the break-up into separate continental masses. Recent geological studies and fossil finds indicate that Antarctica once had a tropical environment, but that its present ice sheet is at least 20 million years old.

The Transantarctic Mountains divide the continent into two parts: the larger East Antarctic ice sheet, with land mostly above sea level; and the smaller West Antarctic ice sheet, with land mostly below sea level. The highest point is the Vinson Massif (4,897 m/16,066 ft), in the Ellsworth Mountains of West Antarctica. The South Pole lies at an altitude of about 3,000 m (9,800 ft). The Antarctic ice sheet averages 2,160 m (7,090 ft) in depth and is 4,776 m (15,670 ft) deep at its thickest point. Glaciers form ice shelves along nearly half the coastline. The larger ice shelves—the Amery in the east, Ross in the south, and Ronne in the northwest—move seaward at speeds of from 900 to 1,300 m (2,950–4,250 ft) per year. Sea ice up to 3 m (10 ft) thick forms a belt about 500 km (300 mi) wide that encircles the continent in winter. Ice-free areas are located generally along the coast and include the dry valleys in southern Victoria Land and the Bungee Oasis in Wilkes Land. Largely ice-free areas where much scientific activity takes place are on the coast of the Antarctic Peninsula, and on Ross Island in McMurdo Sound.

An increased amount of calving of the Antarctic ice shelves became an issue of international concern beginning in 2000. In March 2000, the largest iceberg ever recorded split off from the

Ross Ice Shelf. Known as B-15, the iceberg was approximately the size of Connecticut—it weighed about 2 billion tons and measured some 4,250 sq mi (11,007 sq km) before breaking up into five smaller sections. In March 2002, the Larson B ice shelf collapsed, causing 720 billion tons of ice to float into the South Atlantic Ocean. The Larson ice shelf was reduced to 60% of its former size.

Although Antarctica produces icebergs as part of a natural process, many scientists hold that global warming is one factor responsible for the increase in calving. Since the 1950s, ocean temperatures have increased by an average of half a degree Fahrenheit near the surface, and a tenth of a degree at deep levels. The Antarctic waters are warming more than four times faster than those in the rest of the world, with temperatures rising some 2.5° since 1950. These warmer waters could be melting the undersides of Antarctica's ice shelves. (See GLOBAL CLIMATE CHANGE below)

The severity of the Antarctic cold varies with location and altitude. East Antarctica has the coldest climate; the Antarctic Peninsula in the west has the mildest, with summer temperatures generally remaining above freezing. The mean annual temperature of the interior regions is 57° C (71° F); mean temperatures at the coastal McMurdo station range from 28° C (18° F) in August to 3° C (27° F) in January. The world's record low temperature of 89.2° C (128.6° F) was registered at what was the Soviet's Vostok station on 24 August 1960; highs of 15° C (59° F) have been measured on the northernmost Antarctic Peninsula. The interior is a vast desert, with annual precipitation averaging below 3 cm (1 in). The coastland is considerably more humid, with annual precipitation of about 25 cm (10 in) along the coasts of East Antarctica and the Antarctic Peninsula. Adélie Coast, in the southeast near the South Magnetic Pole, has recorded average wind speeds of 64 km/hr (40 mph), with gusts of nearly 320 km/hr (200 mph).

Because of its polar location, Antarctica has six months of continuous daylight from mid-September to mid-March, with the maximum 24 hours of light received at the summer solstice on 22 December; and six months of continuous darkness from mid-March to mid-September, with the winter solstice occurring on 22 June. In summer, the continent receives more solar radiation than even the Equator over a 24-hour period.

Although Antarctica has no native humans or large terrestrial mammals, it does have a varied marine life ranging from microscopic plankton to the largest whales and including about 100 species of fish. Land life includes bacteria, lichens, mosses, two kinds of flowering plants (in the ice-free areas), penguins, and some flying birds. Six types of seal—the crabeater, Weddell, elephant, leopard, fur, and Ross—thrive in Antarctica and together number about 32.7 million, with the crabeaters accounting for nearly 94% of the total. The once-numerous fur seals were reduced by uncontrolled slaughter (about 1 million were killed on South Geor-

gia alone in 1820–22) to near extinction by 1870. This ended the Antarctic fur-sealing industry; since then, the number of fur seals has gradually increased, to more than 1 million, mostly on South Georgia. In 1972, the 12 nations active in the Antarctic signed the Convention for the Conservation of Antarctic Seals, which prohibits the killing of fur, elephant, and Ross seals, and sets annual quotas for the harvest of crabeater, leopard, and Weddell seals. The treaty entered into force in 1978, and as of 2005 had been ratified by 16 nations. In 1982, the Convention on the Conservation of Antarctic Marine Living Resources entered into force, assuring the protection of ecosystems found in the Antarctic waters; as of 2005, 31 countries and the European Union (EU) were parties to the treaty.

Exploitation by humans threatens the survival of the Antarctic whales—the sperm, blue, humpback, fin, minke, and sei—which decreased in number from more than 1,500,000 at the beginning of the 20th century to fewer than 700,000 by the mid-1980s. Since 1972, the International Whaling Commission (IWC) has set quotas by species on the taking of whales, and the survival of all species of Antarctic whales seemed assured by the early 1980s. In 1982, the IWC approved a moratorium on the commercial killing of all whales that began in 1985. However, Japanese fishermen caught 3,087 whales in 1985 and 2,769 in 1986. Japan promised to end commercial whaling in 1988 but announced plans to harvest 300 minke (nonendangered) whales in Antarctic waters for “research” purposes during the winter of 1987–88; these plans were criticized by the IWC. In 2003, the IWC voted to uphold the ban on commercial whaling, despite a proposal from Japan to allow for an allocation of 50 minke whales. As of June 2005 there were 66 members of the IWC. Canada is a former member of the IWC but is generally adheres to IWC regulations and decisions. In August 2003, Iceland conducted a whale hunt for 38 minke whales for what it deemed to be research purposes. Whale meat not used for research was to be sold commercially in Iceland. It was the first whale hunt since Iceland ceased whaling operations in 1989. Iceland is a member of the IWC.

### Exploration

The ancient Greeks reasoned that there must be an “Antarctic” (opposite the Arctic) to balance the large land mass in the Northern Hemisphere, but it was not until the 19th century that definite proof was found that the continent existed. British Capt. James Cook had crossed the Antarctic Circle and circumnavigated the continent without sighting land (1772–75). In 1820, however, two other British mariners, William Smith and James Bransfield, discovered and mapped the Antarctic Peninsula, which was also explored by the American sea captain Nathaniel Palmer and the Englishman James Weddell, who discovered the sea that bears his name. Russian Adm. Fabian von Bellingshausen sailed around Antarctica during his 1819–21 voyage and found Queen Maud Land and Peter I Island.

On 7 February 1821, US Capt. John Davis made the first known landing on the continent at Hughes Bay, in the northwest. Many other British and US sealers explored the area, including 11 shipwrecked Englishmen who spent the winter of 1821 on King George Island, in the South Shetlands. Palmer and Benjamin Pendleton led a pioneering expedition in 1828–30 that included James Eights, the first American scientist to visit Antarctica. In 1837, a

French expedition under J. S. C. Dumont d’Urville discovered the Adélie Coast (named for his wife) in eastern Antarctica. A year later, Lt. Charles Wilkes of the US Navy sailed along the coast of eastern Antarctica for about 2,400 km (1,500 mi), thereby definitely establishing that Antarctica was a continent, not a cluster of islands. During his 1839–43 Antarctic voyage, British Capt. James C. Ross discovered Victoria Land and the sea and the ice shelf that were later named in his honor.

With the decline of the fur seal industry, Antarctic exploration was neglected for about 50 years, until Norwegian and Scottish whalers began operating in the area. A Norwegian whaling captain, Carl Anton Larsen, explored the east coast of the Antarctic Peninsula in 1892 and found the first fossils. Thus began a period of intensive exploration during which 9 countries sent 16 expeditions to Antarctica. Another Norwegian captain, Leonard Kristensen, landed at Cape Adare, on McMurdo Sound, in 1895. It was there that a British expedition, led by a Norwegian, Carsten Egeberg Borchgrevink, established a base in 1899; Borchgrevink became the first explorer to probe inland by sledge. Swedish, Scottish, Belgian, and French expeditions also arrived, and four British expeditions set up bases on Ross Island. From there, Sir Ernest Henry Shackleton sledged to within 156 km (97 mi) of the South Pole on 9 January 1909.

This feat encouraged five national expeditions to compete for the goal in 1911, and the competition narrowed to a “race to the pole” between Capt. Robert F. Scott and Roald Amundsen of Norway. Amundsen and four companions, with sledges and 52 dogs, left their base on the Ross Ice Shelf on 20 October, scaled 3,000-m (10,000-ft) glaciers in the Queen Maud Mountains, ascended to the icy plateau, and located the South Pole by celestial observation on 14 December. They returned to their base by late January 1912. Meanwhile, Scott’s party of five explorers, who had left McMurdo Sound on 1 November, reached the pole on 18 January 1912, only to find that Amundsen had beaten them there by more than a month. Disheartened, they met with mishaps on the return journey and, weakened by food shortages and exhausted from man-hauling their sledges, they all perished on the ice in late March. Another expedition that ended badly was led in 1914–15 by Shackleton, who lost his ship *Endurance* in heavy pack ice in the Weddell Sea and, with five companions, made a perilous 1,300-km (800-mi) journey in an open whale boat to South Georgia Island, where he got help to rescue his stranded men. Shackleton died at South Georgia in 1922, while preparing another expedition.

Technological advances were applied to Antarctic exploration after World War I. An Australian, Sir Hubert Wilkins, in 1928 became the first man to fly an airplane along the Antarctic Peninsula. The following year, US Navy Adm. Richard Evelyn Byrd flew over the South Pole, with his Norwegian-American pilot Bernt Balchen; Byrd established the Little America base on the Ross Ice Shelf, and was the first explorer to coordinate airplanes, radios, aerial cameras, and other technological aids for the purpose of exploration. Another American, Lincoln Ellsworth, was the first to complete a transantarctic flight, from the Antarctic Peninsula to the Ross Ice Shelf, in 1935. American, British, German, and Norwegian scientific expeditions did considerable aerial mapping of the continent throughout the 1930s; research in oceanography and marine biology by a British expedition resulted in the discovery of the Antarctic Convergence. The US expedition of 1939–41,

headed by Byrd, established two continuing bases in the Antarctic, but the program ended with the outbreak of World War II.

### Scientific Research

After the war, the United States took the lead in conducting scientific research in Antarctica. The Navy's Operation Highjump (1946–47), the largest expedition ever made to the continent, involved 4,700 men, 13 ships, and 25 airplanes to map extensive coastal areas by aerial photography. The Antarctic Research Expedition (1947–48), headed by Finn Ronne, was a privately sponsored US expedition to the continent. A major joint international expedition (1949–52), mounted by the United Kingdom, Norway, and Sweden, initiated the use of geophysical methods on a large scale to determine the thickness of ice caps. The former USSR also mounted expeditions, in 1946–47 and 1951–52.

The greatest scientific undertaking involving the Antarctic was the International Geophysical Year (IGY) of 1957/58, in which 67 nations participated. The purpose of the IGY's Antarctic program was to study the effects of the continent's huge ice mass on global weather, the oceans, the aurora australis, and the ionosphere. More than 50 Antarctic stations were established by 12 countries: Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the United Kingdom, the United States, and the former USSR. The United States built a supply base and airfield on Ross Island, a station at the South Pole that was provisioned by air, and four other stations. The former USSR had 4 bases, the United Kingdom 14, Argentina 8, and Chile 6. The South Pole was the terminus of three pole-to-pole observation chains along three meridians, and the US station at Little America analyzed meteorological reports from all over the world. Valuable information was gleaned from meteorological and seismic observations, studies of the upper atmosphere, magnetic measurements, and ice-sheet core drillings. The first surface transantarctic crossing, between the Weddell and Ross seas, was accomplished by the Commonwealth Transantarctic Expedition. After the IGY, very little of the continent remained to be explored.

An important result of the IGY's success was the continuation of significant research programs in Antarctica after 1958. Old stations were either closed or replaced with new buildings, and new stations were opened. The United States constructed a year-round scientific village at McMurdo Sound, heated and lighted by a small atomic power plant that also used waste heat to distill seawater (the atomic reactor was replaced by diesel-powered units in 1972). Besides McMurdo Station, the United States maintains two other year-round stations, at the South Pole and on Anvers Island, off the Antarctic Peninsula. Other countries maintaining year-round stations are the former USSR 7, Argentina 6, the United Kingdom 4, Chile 3, Australia 3, Japan 2, and 1 each by Brazil, China, the Federal Republic of Germany (FRG), France, India, Italy, New Zealand, Poland, and South Africa.

Transportation services are essential to Antarctic operations; for example, transportation expenses accounts for about half of the United States's yearly expenditure in Antarctica. The United States, along with Argentina and New Zealand, routinely uses aircraft to carry both passengers and priority supplies to Antarctic stations. However, only four airfields can handle wheeled aircraft, those of Argentina, Chile, the former USSR, and the United States. France reportedly built a fully equipped airport on the Adélie Coast. Air

transport to other bases is by ski-equipped aircraft. The United States has a fleet of transport airplanes which can carry large loads virtually anywhere in Antarctica. Transport between stations in the interior is provided mainly by tractor-trains and ski-equipped light aircraft. The longest surface supply route is from the former Soviet's Mirnyy station on the east coast to Vostok station in the interior, a distance of nearly 1,400 km (860 mi). Most nations operating in Antarctica rely on shipping for long-distance transportation and employ icebreakers to clear channels of pack ice. When conditions are favorable, ships offload cargo directly onto land or the ice shelf; when harbors are blocked by ice, tractors and helicopters carry passengers and cargo to shore.

### Territorial Claims and International Cooperation

Seven nations have made separate territorial claims in Antarctica. Five of the claims begin at 60° S latitude and continue in the shape of a pie wedge to the South Pole. The exceptions are the claims of the United Kingdom, which start at 50° S in order to include the South Sandwich and South Georgia Islands of the Falkland chain; and of Norway, the northern and southern boundaries of which are undefined. The United Kingdom, the first nation to claim a "slice" of the continent (in 1908), was followed by New Zealand (1923), France (1924), Australia (1933), Norway (1939), Chile (1940), and Argentina (1943). The claims of Argentina and Chile overlap with each other and with that of the United Kingdom. Neither the United States nor the former USSR has claimed any Antarctic territory, and neither recognizes the claims of other nations. Since international law requires "effective occupation" as the basis for ownership, and since no nation has met the criteria by sustaining such permanent occupation in Antarctica, these territorial claims have not been recognized by other countries, by the UN, or by any other international body.

In order to clarify the issue of territorial claims and to form a legal framework for the activities of nations in Antarctica, the 12 countries that had participated in the IGY signed the Antarctic Treaty on 1 December 1959: Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the former USSR, the United Kingdom, and the United States. All 12 had ratified the treaty by 23 June 1961, when it duly entered into force. Other nations that conduct Antarctic research are entitled to consultative membership; as of 2003, 27 nations had consultative status. As of January 2005, there were 45 nations party to the treaty: Poland (1961), Czech Republic (1962), Slovak Republic (1962), Denmark (1965), the Netherlands (1967), Romania (1971), Brazil (1975), Bulgaria (1978), Germany (1979), Uruguay (1980), Papua New Guinea (1981), Italy (1981), Peru (1981), Spain (1982), China (1983), India (1983), Hungary (1984), Sweden (1984), Finland (1984), Cuba (1984), the Republic of Korea (1986), Austria (1987), the Democratic People's Republic of Korea (1987), Ecuador (1987), Greece (1987), Canada (1988), Colombia (1989), Switzerland (1990), Guatemala (1991), Ukraine (1992), Turkey (1996), Venezuela (1999), and Estonia (2001).

The Antarctic Treaty provides that "Antarctica shall be used for peaceful purposes only," and prohibits military bases, weapons testing (including nuclear explosions), and disposal of radioactive wastes. It seeks to foster freedom of scientific investigation and cooperation between nations, with the free exchange of scientific programs, observations, results, and personnel guaranteed. The

treaty neither recognizes nor nullifies any preexisting territorial claims, but it does forbid any new claim or enlargement of any existing claim. The document specifies that contracting parties have the right to designate observers, and that such observers shall at all times have the right to inspect any station or installation. The treaty provides for the peaceful settlement of all disputes by the parties concerned or by the International Court of Justice. It also specifies periodic meetings between member states to exchange information and to enact measures in furtherance of treaty objectives. In 1991 the treaty was reviewed and renewed by 39 nations. The nations agreed to maintain the unique status of Antarctica for another 50 years. The nations also agreed to establish regulations and guidelines with respect to Antarctica's mineral and natural resources.

Scientific research has continued under the provisions of the treaty, but the emphasis has shifted from short-term reconnaissance to long-term, large-scale investigations of Antarctic phenomena. Detailed study of the ice sheet has brought about increased understanding of global weather and climatic changes. The largest cooperative program completed to date has been the International Antarctic Glaciological Project (1971–81), conducted by Australia, France, the former USSR, the United Kingdom, and the United States. The principal objectives are to measure precisely the East Antarctic ice sheet by means of core drillings through the ice to bedrock at several coastal and interior locations, and to make extensive aerial surveys of the area. Another collaborative project, Polar Experiment (POLEX)–South (1975–85), mounted by Argentina, the former USSR, and the United States, expanded on existing national research programs on the atmosphere, ocean currents, and the ice sheet. The Dry Valley Drilling Project (1971–76), a joint project conducted by Japan, New Zealand, and the United States, included geophysical exploration and bedrock drilling in the McMurdo Sound area. The Ross Ice Shelf Project, an ongoing US endeavor begun in 1973, has incorporated contributions from at least 12 other nations to measure the surface and under-ice topography, ice thickness, gravity, and seismic activity of the Ross Ice Shelf. Another US project, inaugurated in November 1983, involved the most intensive study yet of the relationship between the West Antarctica ice sheet and the global climate. A Soviet exploration project (1975–80) in the Filchner Ice Shelf of West Antarctica used aerial photography and geological surveys to evaluate the area's mineral resources. During the austral summers of 1983–86, international research resulted in significant discoveries of plant and animal fossils in Antarctica that provided new data on the geologic, climatic, and oceanic history of the Southern Hemisphere; enabled glaciologists to learn more about cycles of ice ages; and facilitated studies of Antarctic sea-ice algae and bacteria thought to be vital to the advancement of genetic engineering. In addition, a satellite link was established between the United States and the McMurdo and South Pole stations. In the late 1980s, some of the most compelling research in Antarctica was focused on study of the springtime depletion of stratospheric ozone—a phenomenon popularly termed “the ozone hole”—allowing high levels of potentially harmful ultraviolet radiation to reach the earth's surface.

### Resources

Estimates of Antarctica's mineral deposits are imprecise. A US Geological Survey study has concluded that the continent may contain some 900 major mineral deposits, but that only about 20 of these are likely to be found in ice-free areas. Two minerals, iron ore and coal, have been discovered in quantities that, were they accessible, would be commercially attractive. Small amounts of copper, chromium, platinum, nickel, gold, and hydrocarbons have also been found. Mineral exploration has been limited to comparatively small ice-free areas, but the Dufek Massif in the Pensacola Mountains of the Transantarctic Range shows the most potential for discovery of valuable metals. Offshore deposits of oil and natural gas show the greatest economic promise: traces of natural gas were discovered in a core taken from the Weddell Sea in 1972. However, the difficulty of operating in the harsh Antarctic climate, the inaccessibility of the deposits, and the high cost involved in mining and transportation make mineral exploitation of Antarctica unlikely for some time, if ever.

### THE ARCTIC

The northernmost area of the earth's surface, the Arctic may be defined as all land and water within the Arctic Circle at 66° 31' N. However, the regional boundary may also be considered the 10° C (50° F) atmospheric isotherm for the warmest month (July), which extends well below the Arctic Circle in some places and coincides roughly with the tree line. The region, centered around the North Pole, includes the ice-covered Arctic Ocean basin, which is surrounded by the northern mainland and islands of North America and Eurasia, with outlets to the Bering Sea and the North Atlantic Ocean. The Arctic Ocean, with an area of about 14 million sq km (5.4 million sq mi), comprises nearly two-thirds of the total area. Principal land masses are the northern reaches of the former USSR, Scandinavia, Greenland, Canada, and Alaska.

Unlike Antarctica, the Arctic region has a year-round habitable climate at its fringes, a permanent population, and established territorial sovereignty over all land areas. The Arctic also is of great strategic importance because of its central location between North America and Eurasia; the northern tip of Canada lies only about 4,000 km (2,500 mi) from what was the Soviet city of Murmansk on the great circle route. As a consequence of such proximity, the Arctic region is the site of many radar stations maintained by Canada, the former USSR, and the United States to monitor air traffic and to provide early warning of an air attack.

The continental shelf around the Arctic basin occupies more than half the ocean area, a much larger proportion than in any other ocean; the edge of the continental shelf near Franz Josef Land lies about 1,500 km (930 mi) from the Eurasian mainland. The landmasses that extend above the Arctic Circle exhibit three major types of landforms: rugged uplands and deep fjords formed by glaciation; swampy coastal plains and high ice plateaus covered by glacial deposits; and folded mountains, including the high peaks of the Canadian Rocky Mountains, Alaska's Brooks Range, and the rounded slopes of the Ural Mountains of the former USSR. Principal rivers flowing into the Arctic Ocean are the Mackenzie, in Canada, and the Ob, Yenisey, Lena, and Kolyma, in the former USSR. Major seas in the Arctic include the Chukchi, East Siberian, Laptev, Kara, Barents, Norwegian, Greenland, and Beaufort.

The Arctic Ocean remains frozen throughout the year (except for its fringes during summer) and is virtually icelocked from October to June. The vast Arctic ice pack expands from an average area of 7.8 million sq km (3 million sq mi) in summer to an average of 14.8 million sq km (5.7 million sq mi) during winter. The average thickness of the ice pack is estimated at 3–3.5 m (9.8–11.5 ft). Ice “islands” up to 60 m (200 ft) thick and 30 km (19 mi) wide break away from the moving ice pack off North America and float slowly in erratic circles before disintegrating or exiting to the North Atlantic. Smaller fragments called icebergs break off glaciers in Greenland and northeastern Canada and move southward via the East Greenland and Labrador currents into Atlantic shipping lanes. An estimated 1,000 icebergs each year cross 55° N, and nearly 400 reach the Grand Banks off Newfoundland. A few icebergs have traveled as far as 4,000 km (2,500 mi) over a three-year period and have been sighted as far south as Bermuda.

The most recent Ice Age climaxed about 15,000 years ago, when continental ice sheets covered most of the Northern Hemisphere. The retreat of the glaciers was stabilized some 8,500 years ago in Europe and 7,000 years ago in North America. The warming period that followed reached its maximum in historic times during AD 800–1000, making possible the Viking colonization of Arctic lands, and from the 1880s to the 1940s, when extensive Arctic exploration occurred. However, a minor cooling trend that began in the 1940s had severe effects in the Arctic, increasing the ice-covered area substantially and reducing the annual mean air temperatures by several degrees, thereby shortening the summer season along the Arctic coast of Eurasia by nearly a month.

The Arctic experiences alternating six-month periods of winter darkness and summer daylight, including 24 hours of daylight within the Arctic Circle during the summer equinox (hence the designation “land of the midnight sun”). The region is subject to long, cold winters and short, cool summers. The snow cover is relatively light, averaging 20–50 cm (8–20 in) and lasting for about 10 months over the frozen ocean. Air temperatures above the pack ice average 30° C (22° F) in January and near 0° C (32° F) in July. Annual mean temperatures on land vary from 12° C (10° F) at Barrow, Alaska, and 16° C (3° F) on Resolute Island, in northern Canada, to 0° C (32° F) at Murmansk, in what was the western USSR. Annual mean temperatures in Greenland are low because of the island’s high elevation and vast interior ice sheet; they range from 40° C (40° F) in January to 10° C (14° F) in July, temperatures significantly colder than those of the North Pole. Total annual precipitation varies from 10 to 25 cm (4–10 in) on the Arctic ice pack to 45 cm (18 in) or more in Greenland.

A climate-dependent phenomenon is the presence of perennially frozen ground, or permafrost, which has impeded human use of land in the Arctic region. Permafrost, occurring wherever ground temperatures remain below freezing for two or more years, underlies most of the Arctic landmass of Alaska and Greenland, half of that in Canada and the former USSR, and parts of Scandinavia. It also has been found under coastal seabeds of the Arctic Ocean. The maximum thickness of permafrost has been measured at 500 m (1,640 ft) in Canada, 900 m (2,950 ft) in Alaska, and 1,500 m (4,920 ft) in the former USSR. Alternate freezing and thawing of the outer permafrost layer shortens the growing season during the summer and causes serious engineering problems for construction and mining operations in the Arctic region.

Vegetation on the Arctic tundra, or treeless plain, is limited to mosses, lichens, sedges, and a few flowering plants which blossom during the brief spring and summer seasons. The outer edges of the Arctic ice pack support a small number of animal species by providing an overhead platform for algae and plankton, which are eaten by fish that, in turn, serve as food for seals, walruses, and birds; the food chain is continued by foxes and polar bears which feed upon young seals. Altogether, the Arctic has about 20 species of land mammals, including the moose, caribou, reindeer, wolf, and squirrel. The arrival of migratory birds each spring increases the bird population enormously.

Principal fish are cod, herring, and capelin, a true Arctic fish; all of these have great commercial value, as do shrimp and crab. Since 15 October 1975, when Iceland extended its fishing zone to 200 nautical mi, all nations bordering the Arctic have done the same, and fish catch quotas are now under national management.

The ecological cycle of Arctic life has been damaged by human encroachment, but in recent years the natural environment has been increasingly protected by the five circumpolar countries (Canada, Denmark, Norway, the former USSR, and the United States). In 1956, the former USSR prohibited hunting of the polar bear, and in 1973 the five nations agreed to protect the bear’s habitat. During construction in the 1970s of the trans-Alaska oil pipeline from Prudhoe Bay on the Arctic coast to the port of Valdez on the Gulf of Alaska, the US government required contractors to clean up the work site and to restore displaced vegetation; drillers were directed to trap and remove spilled oil. The pipeline carrying hot oil was suspended above ground level to prevent the permafrost from thawing, and crossings under the pipeline were provided at intervals for caribou and moose migrations. The Alaska Native Claims Settlement Act (1971) set aside about one-fourth of the state’s area for wilderness preserves, wildlife refuges, and national parks. To prevent or control oil spills in the Arctic Ocean, Canada in 1970 authorized a 161-km (100-mi) offshore pollution control zone north of the 60° line. The former USSR has established nature preserves on several islands off the Kola Peninsula, east of the Barents Sea, and on Wrangel Island. In 1973, Norway established nature reserves and national parks in its Svalbard territory in the Barents Sea, and the next year, Denmark designated the northeastern third of Greenland as a national park.

The 19-million acre Arctic National Wildlife Refuge (ANWR) lies in the northeast corner of Alaska, 1,300 miles south of the North Pole and entirely within the Arctic Circle. ANWR is located less than 100 mi east of Prudhoe Bay, the United States’s largest oil field, which, together with three smaller fields, accounts for 25% of US domestic oil production. In the early 2000s, the debate over whether to begin petroleum exploration and drilling in ANWR, (regarded as the highest petroleum potential onshore yet to be explored in North America), or to preserve it as a wilderness area, was fierce.

#### Settlement and Exploration

The Arctic region was settled some 10,000 to 12,000 years ago, after the last Ice Age, by peoples of Central Asia, probably of Mongoloid stock, who pursued animal herds northward in the wake of retreating glaciers. The ancestors of the Lapps migrated to northern Scandinavia and the Kola Peninsula, while further east diverse peoples settled along the Arctic coast. At about the same time,

the forebears of the American Indians came from Asia via a land bridge across the Bering Strait or traveled along the Aleutian Islands to North America. It is believed that the Eskimos arrived in Alaska much later.

These migratory peoples adapted to the harsh Arctic environment by inventing snowshoes, the kayak, the igloo, and primitive tools. They fashioned clothing and tents of caribou or reindeer skins, perfected efficient hunting techniques, and evolved distinctive forms of social organization. Gradually, over the course of centuries, these hunter-gatherers made the transition to herding and trading; especially for the Indians and Eskimos of Canada and the United States, however, intense contact with modern culture in the 20th century has meant abrupt change. In addition to Indians and Eskimos, principal indigenous Arctic population groups include the mixed Eskimo-Caucasian peoples of Greenland; the Lapps in Scandinavia; and the Samoyedic, Yakuts, Tungus-Manchurian, and Chukchi peoples of the former USSR. These aboriginal peoples constituted about half of the Arctic's total population.

The first explorers in Arctic waters were the Vikings (Northmen) from Scandinavia, who ventured into the North Atlantic as far as Greenland and the North American continent in the 10th and 11th centuries. It is generally accepted that the Norse chieftain Leif Ericson explored part of the northeastern North American mainland, which he called Vinland, although its actual location is disputed. During the 16th and 17th centuries, European explorers such as Martin Frobisher, William Baffin, and William Barents probed the Arctic Ocean for the fabled Northwest Passage around North America to the Orient. Arctic geographical landmarks have been named after them and for Vitus Bering, the Danish explorer who sailed in the service of Russia in 1728 through the strait that bears his name. In the late 18th century, while developing trade routes for English fur companies, Alexander Mackenzie and Samuel Hearne followed Canadian rivers to reach the Arctic coast. In 1819, William Parry sailed west through the northern Canadian islands as far as M'Clure Strait before being stopped by heavy pack ice. That year, Swedish explorer Nils Nordenskjöld became the first to complete the Northeast Passage along the Russian Arctic coast. The disappearance in 1845 of Sir John Franklin's expedition spurred further exploration and the mapping of many Canadian islands in the Arctic Ocean. Norwegian explorer Roald Amundsen successfully transited the Northwest Passage for the first time, from 1903 to 1906.

Amundsen's accomplishment shifted the emphasis of Arctic exploration to reaching the North Pole. American explorer Robert E. Peary came within 280 km (174 mi) of the goal in his 1905–06 expedition, and on 6 April 1909, he and his party, including four Eskimos, were the first men to reach the North Pole. In 1926, Adm. Richard E. Byrd, of Antarctic exploration fame, and his copilot Floyd Bennett were the first to fly over the pole, and Amundsen and Lincoln Ellsworth flew from Spitsbergen (now Svalbard) across the pole to Alaska. In 1958, the US atomic-powered submarine *Nautilus* was the first underwater vessel to navigate the North Pole, and in 1960, the *Skate*, a US submarine, became the first to surface at the pole. The Soviet icebreaker *Arktika* was the first surface vessel to reach it, in 1977.

Unresolved Arctic territorial disputes concern Norway's exclusive claim to the resources of the Svalbard continental shelf and conflicting Norwegian-Soviet claims in the Barents Sea. After the

Antarctic Treaty was signed in 1959, hopes were raised for a similar agreement in regard to the Arctic, but the strategic importance of the Arctic region, its increasing economic value, and complex legal problems involving national sensitivities have thus far prevented the attainment of such an accord.

### Arctic Development

The five nations with territories within the Arctic Circle have all developed the area's natural resources to some degree, but the former USSR has taken the lead both in populating the region and in exploiting its rich mineral deposits and other resources. The largest Arctic city is Murmansk, with a population of about 308,100 (2004), and there are some 30 other ex-Soviet cities and towns in the Arctic with more than 10,000 inhabitants. In contrast, the largest town on the North American mainland located north of the Arctic Circle is Inuvik, in Canada's Northwest Territories, with a population of 3,451 (2004); Godthaab, the capital of Greenland, has approximately 14,500 (2005) residents. The estimated population of what Russia terms its "far north" (including areas in eastern Siberia as far south as 55° N) is about 11 million (2004). The majority live in mining districts or coastal settlements based on fishing and military activities, and the rest are concentrated in northern river valleys, or scattered in the hinterlands. Canada's Yukon Territory, Northwest Territories, and Nunavut Territory (created in 1999), have over 40% of the country's land area but less than 1% of the total population. Alaska is the largest but fourth least populous of all the states of the United States (North Dakota, Vermont, and Wyoming have fewer people).

Beginning in the 1930s, with the establishment of the northern sea route to link coastal and river settlements, the Soviet government undertook the exceptionally costly task of fostering industrial development of the Arctic region. Because the harsh climate, the shortage of housing and amenities, and the low level of social services discouraged voluntary migration to the area, the Soviet government offered special resettlement inducements to workers, such as high wages and extensive fringe benefits. As a result, Soviet migration to the far north was nearly equal to the region's natural population increase between 1940 and 1970. However, labor turnover was rapid, with most new workers staying only one to three years. The most important economic activity was the mining of large nickel, copper, tin, platinum, cobalt, iron, and coal deposits. Eastern Siberia produced more than half the country's total output of nickel and much of the nation's copper, while the Kola Peninsula's apatite deposits provided at least two-thirds of the raw materials used to produce phosphate fertilizer. Eastern Siberia also produced about 90% of the former USSR's annual output of diamonds and tin. In addition, valuable oil fields and about two-thirds of proved Soviet natural gas reserves was located in western Siberia. Expansion of Soviet mining operations in the Arctic region continued into the 1980s and up until its collapse in the early 1990s. As of the mid-2000s, Russia was discussing further Arctic development, including mining.

The most significant economic development in the Arctic during the 1970s was the \$4.5-billion trans-Alaska oil pipeline project and the exploitation of vast petroleum reserves (estimated at more than 10 billion barrels) at Alaska's Prudhoe Bay. Construction began on the 1,270-km (789-mi) pipeline to Valdez in 1974, and oil began to flow through the pipeline in 1977. Tens of thousands of

American workers migrated to Alaska to take part in the project (earning the highest average wage rates in the United States), and many stayed there after its completion, thereby contributing to Alaska's population increase of 32.4% during the decade. Coal reserves estimated at 5 trillion tons are located on Alaska's North Slope; coal is mined at Healy, between Anchorage and Fairbanks. Gold, copper, lead, zinc, tin, platinum, tungsten, and uranium have been mined in the past, and there are known reserves of silver, lead, nickel, cobalt, mercury, molybdenum, and asbestos. However, the remoteness of mining sites and the high production costs continued to hinder mineral development (except for oil) in the 1980s and 1990s.

Valuable minerals produced in the Canadian Arctic include gold, silver, lead, zinc, copper, nickel, platinum, cadmium, and uranium. Canada also has proved oil reserves totaling 1.5 billion barrels in the Mackenzie River delta and offshore areas of the Beaufort Sea. Although Greenland also has considerable mineral resources, only lead, zinc, and coal have been mined in recent years. The two largest iron mines in Scandinavia are situated in the vicinity of Kiruna, in Swedish Lapland, and in Norway, near the Soviet border. Both Norway and the former USSR operate coal mines in Svalbard, and both have explored for offshore oil beneath the Barents Sea.

Lack of adequate transportation facilities long hampered Arctic development. Since World War II, however, a network of air, water, and land routes has been developed, and modern technology has made most polar areas accessible. Scheduled flights from many airfields scattered throughout the region link cities and remote towns in Alaska, Canada, and the former USSR. In Greenland, where the rugged terrain makes the building of airstrips both difficult and costly, there is scheduled jet helicopter service. Air transport serves both military and civilian needs in Norway's polar region and links Svalbard with the mainland. Although water transport is seasonal because of ice-blocked channels in winter, large quantities of cargo generally move by ship. Several hundred Russian vessels, including icebreakers, ply the 2,800-km (1,740-mi) northern sea route between Novaya Zemlya and the Bering Strait, moving an estimated 4 million tons of cargo annually during 2–4 months of navigability.

The former USSR and Norway use waterborne shuttles to supply Svalbard and to convey coal to their respective home ports. Canada's shipping service for Hudson Bay, the Arctic islands, and the Mackenzie River delta is provided by the coast guard and by private companies. The Alaskan ports of Prudhoe Bay and Barrow are served by ships for a two-month period during late summer. Inland waterways provide important supply links in the Soviet Arctic and northwestern Canada.

Land routes in the Arctic are relatively undeveloped in the colder regions. However, railroad lines in North America that penetrate the Arctic Circle include Alaska's heavily used Anchorage–Fairbanks line, and a Canadian railroad, providing a link to Churchill, on Hudson Bay. A number of Russian railroads serve the Arctic region, including the ports of Murmansk and Arkhangel'sk. Canada has Arctic highways that connect Inuvik with Dawson and with the Great Slave Lake towns of Hay River and Yellowknife. The most heavily traveled highway is Alaska's Arctic haul road between the Yukon River and Prudhoe Bay; this road was instrumental in hauling supplies and equipment to build

the trans-Alaska oil pipeline. The Soviet Arctic has few roads, but the Murmansk area in the west connects with a well-developed Scandinavian road network.

### Scientific Research

Scientific research in the Arctic region is directed mainly toward economic development and military applications. Research studies have dealt primarily with the Arctic's role in global air and water circulation and with such natural phenomena as pack ice, permafrost, geomagnetism, the aurora borealis, and other upper atmospheric conditions.

International cooperation has long played a vital role in Arctic research, dating back to the 1882/83 and 1932/33 International Polar Years. The most intensive multinational scientific study of the Arctic was accomplished during the International Geophysical Year (1957/58), in which some 300 Arctic stations were set up to monitor polar phenomena. The United States and the former USSR each launched two drifting stations on the pack ice to gather data on Arctic currents and the topography of the Arctic seabed. It was found that little marine life existed on the Arctic Ocean floor and that rocks were scattered in profusion on the ocean bottom. The land stations obtained detailed information on the aurora borealis, ionosphere, and polar magnetic field. During 1969–75, Canada and the United States jointly conducted an Arctic ice experimental program involving manned and unmanned drifting stations to determine the dynamics of sea-ice movement within the polar environment.

Scientific efforts by the former USSR in the Arctic have exceeded the combined activities of all the other circumpolar nations. By the late 1970s, the former USSR operated at least 100 polar stations and more than a dozen specially equipped sea and air vehicles to collect data on weather, ocean currents, and sea ice, with the aim of maintaining shipping services over the northern sea route. Drifting ice stations maintained year-round make a variety of meteorological observations and conduct oceanographic and geophysical experiments. Each year, Russia mounts air expeditions to hundreds of sites along the ice pack, emplacing nearly two dozen automatic buoys to radio data on environmental conditions to the mainland.

US Arctic research centers mainly on Alaska but extends also to northern Canada, Greenland, and the Arctic Ocean. Civilian research is coordinated by the National Science Foundation (NSF), which awards funds for research to universities; the principal research centers are at Fairbanks and Barrow. Small outposts to gather weather information have been established at US military facilities in Alaska and at radar stations on the 4,800-km (3,000-mi) Distant Early Warning (DEW) line extending from Alaska to Greenland.

The United States operates an average of one drifting ice station per year in the Arctic Ocean, supplemented by automatic data buoys. Ice reconnaissance flights are conducted, as well as ocean surveys by icebreakers and submarines in the Bering and Greenland seas. In the early 1980s, the NSF conducted a six-year project, called Processes and Resources of the Bering Sea Shelf (PROBES), to study the marine ecosystem of the Bering Sea in order to predict the environmental impact of both natural events and human activities. In 1987, the NSF initiated a follow-up program, Inner Shelf Transfer and Recycling (ISHTAR), conducted in the Ber-

ing and Chukchi seas to study the ways in which seasonal and annual variations in the northward transport of water influence life processes. In 1985, scientists from the National Oceanic and Atmospheric Administration (NOAA) embarked on a study of a 5,200-sq km (2,000-sq mi) polynya (open water in pack ice that is a source of heat in an extremely cold area) in the Bering Sea, hoping to assess its effects on weather patterns, wind behavior, and ocean currents. In the summer of 1981, the United States cooperated with Denmark and Switzerland to obtain ice cores from the bottom of the Greenland ice sheet, which represents a record of the climate over the past 130,000 years. Other recent US programs include studies of the geology and geophysics of the Arctic basin and research in Alaska on so-called surging glaciers, which move forward at the unusually rapid rate of several miles a year.

Other circumpolar nations have concentrated their Arctic research on the land and continental shelf. Canada's ongoing Polar Continental Shelf Project, begun in 1959, makes intensive studies of the North American continental shelf, Arctic islands, and Arctic Ocean. From March to October of each year, Canada also conducts aerial surveys of sea ice in the Arctic Ocean, Baffin Bay, and Beaufort Sea. Norway's Polar Institute, in Oslo, supervises mapping and scientific surveys of Svalbard, Jan Mayen, and the Arctic Ocean. In Greenland, the United States participates in geophysical and weather studies at Thule Air Base. Scientists from Russia, the United Kingdom, France, and other countries also conduct geological and biological research on the Danish dependency.

## GLOBAL CLIMATE CHANGE

Recent shifts in the global climate, while not proven to be caused by humans, by 2006 conformed to a prevailing scientific view: without significant changes in emissions rates, global warming from the buildup of carbon dioxide and other greenhouse gases is likely to lead to substantial, and largely irreversible, transformations of climate, ecosystems, and coastlines later in the 21st century. The Earth's average surface temperature rose approximately 1 degree Fahrenheit over the 20th century, to about 59 degrees Fahrenheit, but the rate of warming from the 1970s until the mid-2000s was three times the average rate of warming since 1900. Seas have risen from some six to eight inches globally over the 20th century and the rate of rise increased markedly in the 1990s. The 1990s were the warmest decade on record, with 1998 the warmest year on record. Although there is a debate about the pace and extent of climate change, one thing remains clear: an increase in the levels of greenhouse gases will cause more global warming. The impact of such change on wildlife, agriculture, disease, local weather, and the height of the world's oceans is also debated.

In April 2006, the journal *Nature* published a study of estimates that foresaw a probable warming of some 5 degrees Fahrenheit should the concentration of carbon dioxide reach twice the 280-parts-per-million figure that had been the norm on Earth for at least 400,000 years. This figure is both far higher than conservative warming rates focused on by climate change skeptics, and far lower than the rates projected by those fearful of further climate change. As a result, by approximately 2100, sea levels could be several feet higher than they were in 2005, resulting in retreating shorelines as the Antarctic and Arctic ice sheets erode.

Many scientists say that to avoid a doubling of carbon dioxide concentrations, energy efficiency must be increased drasti-

cally in the near future. They argue that by the mid-21st century, there must be a complete transformation of energy technology. Nevertheless, some scientists report that they lack incontrovertible evidence to connect recent weather to the human influence on climate. However, the Intergovernmental Panel on Climate Change (IPCC), a worldwide network of 2,500 leading scientists and experts sponsored by the UN, reported in 2001 that most of the warming observed over the last 50 years is attributable to human activities. These scientists project a global warming of between 1.4 and 5.8 degrees C (2.5 to 10.4 degrees F) as early as 2100, the fastest rate of change since the end of the last ice age. In addition to the rise in sea levels and flooding of low-lying coastal areas and islands, rainfall patterns would change, increasing the threat of drought or floods, and a more variable climate would bring more extreme weather conditions, such as intense storms and heat waves. According to the IPCC, Arctic sea ice has thinned by 40% in recent decades in summer and autumn, and decreased in extent by 10-15% since the 1950s in spring and summer. Global snow cover has shrunk by 10% since the 1960s, and mountain glaciers have sharply retreated. The Northern Hemisphere has seen earlier plant flowering, earlier bird arrival and earlier emergence of insects.

The 1992 UN Convention on Climate Change-ratified by 186 nations-holds that developed countries, which account for some 20% of the global population and about 60% of annual emissions of carbon dioxide, should lead efforts to reduce greenhouse gas emissions. Forty-one industrialized nations listed in Annex 1 of the Convention agreed to a voluntary aim of returning their greenhouse gas emissions to 1990 levels by the year 2000. This goal was not met by many. States parties then launched a new round of talks to decide on stronger and more detailed commitments for industrialized countries. The outcome was the Protocol to the Convention agreed in Tokyo, Japan, in 1997. The Kyoto Protocol contains legally binding targets by which developed countries must reduce their combined emissions of six greenhouse gases by at least 5% by the period 2008-12, calculated as an average over those five years. Cuts in the three most important gases-carbon dioxide, methane, and nitrous oxide-are to be measured primarily against a base year of 1990. By reducing greenhouse gas emissions to 5% below 1990 levels, the Kyoto Protocol will result in 2010 emissions levels that are about 20% below what they would have been in the absence of the Protocol. The legally binding emissions commitments under the Kyoto Protocol apply only to developed countries, leaving to the future the question of similar commitments for developing countries. The Protocol entered into force on 16 February 2005, with the ratification of 55 nations and by including developed nation parties accounting for at least 55% of 1990 carbon dioxide emissions. Shares of 1990 carbon dioxide emissions included: United States, 36.1%; European Union, 24.2%; Russian Federation, 17.4%; and Japan, 8.5%. As of April 2006, 163 nations had ratified the Protocol, including all EU members, the Russian Federation, and Japan. The United States at that date was a signatory to the Protocol, but had not ratified it.

# BIBLIOGRAPHY

This bibliography is arranged in two parts. Part I presents sources on the United Nations and its agencies. Part II lists sources that provide information on the individual countries of the world.

## I. SOURCES RELATED TO THE UNITED NATIONS

The following is a selected list of titles for further reading about the United Nations. If no publisher is attributed, the book is published by the United Nations and available through the annual *United Nations Publications Catalog* <https://unp.un.org/>. UN publications may be ordered from: United Nations Publications, 2 United Nations Plaza, Room DC2-853, New York, NY 10017, (800) 253-9646, email: [publications@un.org](mailto:publications@un.org); or from Bernan Associates (formerly UNIPUB), 4611-F Assembly Drive, Lanham, MD 20706, (800) 274-4888. In Europe, UN publications may be obtained from United Nations Publications, Sales and Marketing Section, Bureau E-4, CH-1211 Geneva 10, Switzerland, 41(22) 917 15 or [unpubli@unog.ch](mailto:unpubli@unog.ch).

## GENERAL INFORMATION

*Basic Facts about the United Nations*, annual.

*Everything You Always Wanted to Know about the United Nations*, 2000.

*A Global Agenda: Issues before the 60th General Assembly of the United Nations*, 2005.

*An Insider's Guide to the UN*, Linda Fasulo, New Haven: Yale University Press, 2004.

*International Geneva Yearbook 2005–2006: Organization and Activities of International Institutions in Geneva*, 2005.

*International Institutions at Work*, Paul G. Taylor, New York: St. Martin's Press, 1988.

*International Organizations and Democracy: Accountability, Politics, and Power*, Thomas D. Zweifel, Boulder, Colo.: L. Rienner, 2006.

*Peace by Pieces—United Nations Agencies and Their Roles: a Reader and Selective Bibliography*, Robert N. Wells, Jr., Metuchen, NJ: Scarecrow Press, 1991.

*Programme Budget for the Biennium 2006–2007*, 2006.

*Resolutions and Decisions Adopted by the General Assembly*, United Nations, annual.

*60 Ways the United Nations Makes a Difference*, 2006.

*UN Chronicle*, bi-monthly.

*United Nations, Divided World*, 2nd edition, Adam Roberts and Benedict Kingsbury, editors, New York: Oxford University Press, 1993.

*Who's Who in the United Nations and Related Agencies*, Detroit: Omnigraphics, 1992.

## HISTORY OF THE UNITED NATIONS

*Act of Creation: The Founding of the United Nations—A Story of Superpowers, Secret Agents, Wartime Allies and Enemies, and Their Quest for a Peaceful World*, 2005.

*A Dangerous Place*, Daniel P. Moynihan, New York: Little Brown, 1978.

*Hammarskjöld*, Brian Urquhart, New York: Norton, 1994.

*International Instruments of the United Nations: A Compilation of Agreements, Charters, Declarations, Principles, Proclamations, Protocols and Treaties adopted by the General Assembly of the United Nations—50 Years of Service to Humanity*, 1997.

*Kofi Annan: Center of the Storm*. David Grubin and Sarah Colt, producers. New York: PBS Home Video, 2003. [videorecording]

*A Life in Peace and War: Memoirs*, Brian Urquhart, New York: Harper & Row, 1987.

*Pilgrimage for Peace: a Secretary-General's Memoir*, Javier Pérez de Cuéllar. New York: St. Martin's Press, 1997.

*Ralph Bunche: An American Life*, Brian Urquhart, New York: W.W. Norton, 1993.

*The Structure of the United Nations General Assembly: An Organizational Approach to Its Work, 1974–1980s*, Blanche Finley, Kraus International Publications, 1988.

*The United Nations under Boutros Boutros-Ghali, 1992–1997*, Stephen F. Burgess, Lanham, Md.: Scarecrow Press, 2001.

*The United Nations under Javier Pérez de Cuéllar, 1982–1991*. George J. Lankevich. Lanham, Md.: Scarecrow Press, 2001.

*The US, the UN, and the Management of Global Change*, New York: New York University Press, 1983.

## THE FUTURE OF THE UNITED NATIONS

*The Diplomacy of Hope: the United Nations since the Cold War*, Newton R. Bowles, New York: I. B. Tauris, 2004.

*Global Outlook 2000: an Economic, Social, and Environmental Perspective*, 1990.

*The Parliament of Man: the Past, Present, and Future of the United Nations*, Paul Kennedy, New York: Random House, 2006.

## DISARMAMENT

*Alternative Approaches in Multilateral Decision Making: Disarmament as Humanitarian Action*, 2005.

*Building a Weapons of Mass Destruction Free Zone in the Middle East: Global Non-proliferation Regimes and Regional Experiences*, 2005.

*Coming to Terms with Security: A Lexicon for Arms Control, Disarmament, and Confidence-building*, 2004.

*Costs of Disarmament: Disarming the Costs—Nuclear Arms Control and Nuclear Rearmament*, 2003.

*Disarmament as Humanitarian Action: From Perspective to Practice*, 2006.

*Five Years of Implementing the United Nations Programme of Action on Small Arms and Light Weapons: Regional Analysis of National Reports*, 2006.

*United Nations Disarmament Yearbook*, annual.

## PEACEFUL USES OF OUTER SPACE

*Common Security in Outer Space and International Law*, 2006.

*Highlights in Space 2005: Progress in Space Science, Technology and Applications, International Cooperation and Space Law*, 2006.

*Outer Space and Global Security*, 2003.

*Report of the Committee on the Peaceful Uses of Outer Space*, 2004.

## INTERNATIONAL PEACE AND SECURITY

*The Blue Helmets: A Review of UN Peace-Keeping*, 3rd edition, United Nations, 1996.

*Cooperating for Peace in West Africa: An Agenda for the 21st Century*, 2001.

*The Evolution of UN Peacekeeping: Case Studies and Comparative Analysis*, William Durch, editor, New York: St. Martin's Press, 1993.

*Peacekeeping in Africa: Capabilities and Culpabilities*, 2000.

*Report of the Special Committee on Peacekeeping Operations and Its Working Group: 2005 Substantive Session*, 2005.

*The Use of Force in UN Peace Operations*, Trevor Findlay, New York: Oxford University Press, 2002.

## ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

*Capacity Building for Sustainable Development: An Overview of UNEP Environmental Capacity Development Activities*, 2003.

*Class of 2006: Industry Report Cards on Environment and Social Responsibility*, 2006.

*Climate Change 2001: Synthesis Report*, 2003.

*Climate Change and Biodiversity*, 2003.

*Energy Indicators for Sustainable Development: Guidelines and Methodologies*, 2005.

*Environment and Human Well-being: A Practical Strategy*, 2005.

*Planet in Peril: An Atlas of Current Threats to People and the Environment*, 2006.

*Natural Allies: UNEP and Civil Society*, 2004.

*Report of the World Summit on Sustainable Development*, 2003.

*UNEP Annual Report 2005*, 2006.

## ECONOMIC DEVELOPMENT

*Better World for All 2000: Progress towards the International Development of Goals*, 2000.

*Beyond Conventional Wisdom in Development Policy: An Intellectual History of UNCTAD 1964–2004*, 2005.

*International Trade Statistics Yearbook*, annual.

*The Least Developed Countries Report*, UNCTAD, annual.

*Monthly Bulletin of Statistics*, monthly.

*Prospects for Foreign Direct Investment and the Strategies of Transnational Corporations 2005–2008*, 2006.

*Report of The Council of the United Nations University*, annual.

*Trade and Development Report*, UNCTAD, annual.

*Transnational Corporations, December 2005*, 2006.

*United Nations Development Programme: A History*. Cambridge, Eng.: Cambridge University Press, 2006.

*World Economic and Social Survey*, annual.

*World Investment Report 2005: Transnational Corporations and the Internationalization of R&D*, 2005.

*World Statistics Pocketbook*, annual.

## SOCIAL DEVELOPMENT

*Costs of Poverty and Vulnerability*, 2001.

# INDEX TO COUNTRIES AND TERRITORIES

This alphabetical list includes countries and dependencies (colonies, protectorates, and other territories) described in the encyclopedia. Countries and territories described in their own articles are followed by the continental volume (printed in *italics*) in which each appears. Country articles are arranged alphabetically in each volume. For example, Argentina, which appears in *Americas*, is listed this way: Argentina—*Americas*. Dependencies are listed here with the title of the volume in which they are treated, followed by the name of the article in which they are dealt with. In a few cases, an alternative name for the same place is given in parentheses at the end of the entry. The name of the volume *Asia and Oceania* is abbreviated in this list to *Asia*.

- Adélie Land—*Asia*: French Pacific Dependencies: French Southern and Antarctic Territories  
Afars and the Issas, Territory of the—*Africa*: Djibouti  
Afghanistan—*Asia*  
Albania—*Europe*  
Algeria—*Africa*

# READER'S GUIDE

**GENERAL NOTE:** The Twelfth Edition of *Worldmark Encyclopedia of the Nations* (WEN) is comprised of five volumes. Volume 1 is dedicated to the United Nations and its related agencies. Volumes 2 through 5, “Africa,” “Americas,” “Asia and Oceania,” and “Europe,” contain entries on the countries of the world.

Reflecting the ever-changing status of the world geopolitical situation, the Twelfth Edition includes entries for 194 countries, one more than the previous edition. This reflects the 2006 decision of Montenegro to dissolve its relationship with Serbia to become an independent nation in its own right. Seven entries describe dependencies. This edition no longer includes volume 6, which was entitled *World Leaders*.

Some notable changes in previous editions include the Eleventh Edition's inclusion of an entry on East Timor, coverage of the aftermath of the terrorist attacks of 11 September 2001, and the expansion of the European Union and the North Atlantic Treaty Organization (NATO). Changes in the Tenth Edition included recording of the change in status for Macau; as of December 1999 Macau came under Chinese authority, and thus Macau was incorporated into the China entry (previously it was described under Portuguese Asian Dependency). Similarly, the entry for United Kingdom Asian Dependency (Hong Kong) was eliminated with the Ninth Edition; as of 1997 Hong Kong came under Chinese authority and, like Macau, is described in that country's entry. Also with the Tenth Edition, the introduction of the euro as currency in the nations of the European Union was noted. The Eighth Edition of this encyclopedia (1995) reported on the dramatic changes in the world in the early 1990s, including the dissolution of the USSR, Czechoslovakia, and Yugoslavia; the unification of Germany; the unification of Yemen; and the independence of Eritrea. These changes resulted in twenty-five new country articles. Whereas the First Edition of the *Worldmark Encyclopedia of the Nations*, in one volume, contained 119 articles, the present Twelfth Edition now contains 201.

In compiling data for incorporation into the *Worldmark Encyclopedia of the Nations*, substantial efforts were made to enlist the assistance of the government of every nation in the world, as well as of all pertinent UN agencies, who cooperated by supplying data and by revising and updating materials relevant to their sphere of interest. Material received from official sources was reviewed and critically assessed by the editors as part of the process of incorporation. Materials and publications of the UN family and of intergovernmental and nongovernmental organizations throughout the world provided a major fund of geographic, demographic, economic, and social data.

In compiling historical, economic, and political data, primary materials generated by governments and international agencies were supplemented by data gathered from numerous other sources including newspapers (most notably *The European*, the *Financial Times*, the *New York Times*, and the *Wall Street Journal*); periodicals (most notably *Current History*, *Elections Today*, *The Economist*, the *Far Eastern Economic Review*, *Foreign Affairs*, and *World Press Review*); and thousands of World Wide Web sites hosted by government agencies and embassies.

The reader's attention is directed to the Glossary of Special Terms for explanations of key terms and concepts essential to a fuller understanding of the text.

**COUNTRY NAMES:** Country names are reported (as appropriate) in three forms: the short-form name (generally conformed to the U.S. Central Intelligence Agency's *World Factbook 2006*), as commonly used in the text; the English version of the official name (generally conformed to the United Nations list of country names); and the official name in the national language(s). When necessary, textual usages of some short-form names have been rectified, usually through the substitution of an acronym for the official name, in order to strike a better balance between official usages and universal terminology. Thus the following short-form names have been adopted throughout (except in historical context to preserve accuracy): DROC (Democratic Republic of the Congo—known as Zaire prior to the Ninth Edition); ROC (Republic of the Congo); FRG (Federal Republic of Germany); North Korea: DPRK (Democratic People's Republic of Korea); and South Korea: ROK (Republic of Korea). In addition, Vietnam has replaced Viet Nam to reflect common usage.

**MAPS:** Spellings on the individual country maps reflect national usages and recognized transliteration practice. To clarify national boundaries and landforms, dark shading has been applied to waters, and lighter shading to lands not within that nation's jurisdiction. Cross-hatching has been used to designate certain disputed areas. Rivers that run dry during certain times of the year are indicated by dashed instead of solid lines.

**FLAGS AND NATIONAL EMBLEMS:** All depictions of flags, flag designations, and national emblems have been reviewed and, where necessary, corrected or changed to reflect their official usage as of 2006. In general, the term “national flag” denotes the civil flag of the nation.

**CURRENCY:** In most cases, currency conversion factors cited in the Twelfth Edition are as of the first quarter of 2006.

**WEIGHTS AND MEASURES:** The general world trend toward adoption of the metric system is acknowledged through the use of metric units and their nonmetric (customary or imperial) equivalents throughout the text. The two exceptions to this practice involve territorial sea limits, which are reported in nautical miles, and various production data, for which (unless otherwise stated) units of measure reflect the system in use by the country in question. All tons are metric tons (again, unless otherwise indicated), reflecting the practice of the UN in its statistical reporting.

**HOLIDAYS:** Except where noted, all holidays listed are official public holidays, on which government offices are closed that would normally be open. Transliterations of names of Muslim holidays have been standardized. For a fuller discussion on these points, and for a description of religious holidays and their origins and meanings, see the Glossary of Religious Holidays in this volume.

**GEOGRAPHIC INFORMATION:** To update the sections on Location, Size, and Extent; Topography, Climate, Flora and Fauna, and Environment, the following print publications (and their publishers) were used: *Geo-Data: The World Geographical Encyclopedia* (Gale Group), *World Development Indicators 2005* (The World Bank), and *World Resources* (Oxford University Press). Additional data was acquired from these websites: Library of Congress, *Country Studies: Country Profiles* (<http://lcweb2.loc.gov/frd/cs/profiles.html>); *Ramsar Convention on Wetlands* (<http://www.ramsar.org>); *UNESCO World Heritage Centre* (<http://www.whc.unesco.org>); *United Nations Environment Programme* (<http://www.unep.org>); *Weather Channel: Averages and Records* (<http://www.weather.com/common/home/climatology.html>); *World Conservation Union: Species Survival Commission* (<http://www.iucn.org/themes/ssc>); *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>).

**POPULATION DATA:** Data for the four rubrics describing population (Population, Migration, Ethnic Groups, Languages) were compiled from numerous publications of the U.S. Department of State, the World Bank, the United Nations, and the Organization for Economic Co-Operation and Development (OECD), specifically its publication *Trends in International Migration*. Also consulted were *The State of the World's Refugees* (Oxford University Press) and *International Committee of the Red Cross Annual Report* (International Committee of the Red Cross)

**RELIGIONS:** Data for this section were compiled in large part from the *2005 International Religious Freedom Report* released by the Bureau of Democracy, Human Rights, and Labor, U.S. Department of State. This is an annual report to Congress compiled in compliance with Section 102(b) of the International Religious Freedom Act (IRFA) of 1998. The *2005 Report* covers the period from 1 July 2004 to 30 June 2005 and includes the work of hundreds of State Department, Foreign Service, and other U.S. government employees. The authors gathered information throughout this period from a variety of sources, including government and religious officials, nongovernmental organizations, journalists, human rights monitors, religious groups, and academics.

**TRANSPORTATION:** Sources consulted for updated information on transportation include publications of the American Automobile Manufacturers Association, the International Road Transport Union, specifically its publication *World Transport Data*, and the *World Factbook 2006*.

**HISTORY:** In writing the History rubric, a variety of news and background information sources on each country were used. Full country profiles—including information on the history, economy, political institutions, and foreign relations on most nations of the world—are provided by the U.S. Library of Congress and by the U.S. Department of State; similar formats are published by the *BBC News International* version and *The Economist's* Country Briefings feature. In consulting news sources for up-to-date information on events, only reported facts (not editorials) were used. The *New York Times* and the *Washington Post* are more comprehensive than the *Wall Street Journal*, whose focus is placed on financial and business news. While the website of the United Nations was used extensively in compiling Volume 1 “United Nations,” of the *Worldmark Encyclopedia of the Nations*, its coverage of such problems as politics in the Middle East and global terrorism pertained to and supported the updating of history rubrics of a number of countries. Other organizations that publish journals or studies on global current events, foreign policy, international relations, and human rights include Amnesty International; Human Rights Watch; *Foreign Affairs*, published by the Council on Foreign Relations; and *Great Decisions*, published by the Foreign Policy Association. In addition, the

official websites of each nation were consulted critically for information that could be gleaned from a state's view of its own history and place in the world.

**GOVERNMENT:** The Government rubric is constructed by outlining the institutions of government as they were formed throughout a nation's modern history, up to those existing under the present constitution. *Countries of the World and Their Leaders Yearbook 2006* (Thomson Gale) outlines the form of government and provides information on political conditions.

The U.S. Library of Congress and the U.S. Department of State chronicle constitutional changes and also provide information on the form of government. Electionworld and the *World Factbook 2006* provide information on officeholders in place at the time of publication. The *BBC News International* "Country Profiles" cover current leaders and their political parties, and *The Economist* is comprehensive in its coverage of political structures and political forces in place and at work in the nations it profiles. The official government websites of individual nations were also consulted.

**POLITICAL PARTIES:** *Countries of the World and Their Leaders Yearbook 2006* not only lists the political parties present in each nation, but provides additional information on the political parties in its "History" and "Government and Political Conditions" sections. *The Economist* also has sections in its country briefings labeled "political structure" and "political forces," which describe the political climate of each nation the magazine profiles. In addition, *The Economist* provides a brief history of the nation, which often includes the history of political parties. Editors reviewed the profiles of selected nations prepared by the U.S. Library of Congress, which include comprehensive coverage of politics and political parties. The *World Factbook 2006* was consulted for a list of political parties, and often, their leaders. The website, Electionworld.org, describes the major political parties and their leaders, and also lists minor and defunct parties. Political Resources on the Net, a website, compiles links to a variety of sites useful to the researcher with a critical eye.

**LOCAL GOVERNMENT:** *Countries of the World and Their Leaders Yearbook 2006* lists the administrative subdivisions in each nation of the world; as does the U.S. State Department in its *Background Notes*, and the U.S. Central Intelligence Agency in its *World Factbook 2006*. *The Economist* was consulted for a description of regional legislatures. The U.S. Library of Congress "Country Profiles" briefings describe administrative divisions and provincial and local government.

**JUDICIAL SYSTEM:** *Countries of the World and Their Leaders Yearbook 2006*, *Background Notes*, and the *World Factbook 2006* all provided basic information on each nation's judicial system. *The Economist* was consulted for a description of the legal systems of each nation it profiles. The U.S. Library of Congress "Country Profiles" briefings provided more in-depth detail about judicial power and structure in the nations it profiles. Jurist, a web-based legal news and real-time legal research service based out of the University of Pittsburgh School of Law in Pittsburgh, Pennsylvania, was consulted as well for concise information on each nation it profiles.

**ARMED FORCES:** Statistical data on armed forces was compiled from the *World Factbook 2006*, *The Military Balance* (The International Institute for Strategic Studies), the *SIPRI Yearbook* (Stockholm International Peace Research Institute), and other print and online sources including *Current World Nuclear Arsenals* maintained by the Center for Defense Information.

**INTERNATIONAL COOPERATION:** This section was updated using data provided by news agencies and the following websites: *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>) and *Background Notes* (<http://www.state.gov/r/pa/ei/bgn>).

**ECONOMY:** In addition to numerous official online sources, data on the economies of the world were compiled from the most recent editions of the following U.S. government publications: *National Trade Estimate on Foreign Trade Barriers*, *Country Commercial Guides*, and *Economic Policy and Trade Practices*. *The Economist* was consulted for detailed information on economic structures and select indicators in its "Country Profiles" archive; it also included economic and political forecasts for the nations it profiled. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries it profiled, in addition to detailing the current state of various sectors of those economies. *The Index of Economic Freedom* (Heritage Foundation) was also consulted for its measurement of independent variables into broad factors of economic freedom.

**INCOME:** Statistics on national income were obtained from sources published by the United Nations, The World Bank, and the U.S. Central Intelligence Agency (CIA). CIA figures are for gross domestic product (GDP), defined as the value of all final goods and services produced within a nation in a given year. In most cases, CIA figures are given in purchasing power parity terms.

**LABOR:** Labor statistics were compiled from *World Employment* and *Yearbook of Labour Statistics* (International Labour Office—ILO) and the ILO’s website *Child Labor Statistics by Country* (<http://www.ilo.org/public/english/standards/ipecc/simpoc/countries.htm>); the World Bank publication *World Development Indicators 2004*; and the U.S. State Department’s *Human Rights Reports 2005*.

**AGRICULTURE, FISHING AND FORESTRY:** In addition to government sources, statistical data for these sections was compiled from the following yearbooks published by the Food and Agriculture Organization of the United Nations: *Trade; Fishery Statistics: Commodities; Fisheries; Production; Agriculture; and Forest Products*.

**MINING:** Data on mining and minerals production came from various online sources and from statistics compiled by the Minerals Information office of the U.S. Geological Survey, U.S. Department of the Interior, including Volume III of the *Minerals Yearbook*. This volume of the *Minerals Yearbook* is published both electronically on the Internet and in various print formats available from the U.S. Government Printing Office Superintendent of Documents. The *Yearbook* provides an annual review of mineral production and trade and of mineral-related government and industry developments in more than 175 countries.

**ENERGY AND POWER:** Key sources consulted include *Country Analysis Briefs* (U.S. Energy Information Administration, U.S. Department of Energy), *Key World Energy Statistics* (International Energy Agency), and *World Development Indicators* (The World Bank).

**INDUSTRY :** The primary source material for the Industry rubric was the U.S. State Department’s *Country Commercial Guides*, which provide a comprehensive look at countries’ commercial environments, using economic, political, and market analysis. *Background Notes* were consulted for the information on the industrial history and climate of each country profiled. Also useful was information contained in the “Country Profiles” published by the U.S. Library of Congress. The *World Factbook 2006* provides a list of key economic indicators. *The Economist* and, to a lesser extent, *BBC News* were useful in providing background material for the Industry rubric.

**SCIENCE AND TECHNOLOGY:** The following print sources were consulted: *The Nature Yearbook of Science and Technology* (Palgrave Macmillan Publishers Ltd.); *NIRA’s World Directory of Think Tanks* (National Institute for Research Advancement); in addition, the following websites were accessed: *International Science and Technology Activity* (maintained by Industry Canada, Government of Canada); *Economics Departments, Institutes, and Research Centers in the World* (maintained by the Department of Economics, University of Connecticut); *Science and Technology Statistics* (maintained by UNESCO Institute for Statistics); *World Development Indicators* (maintained by The World Bank); and *Annual Statistics* (patent and trademark information, maintained by the World Intellectual Property Organization).

**DOMESTIC TRADE:** Source material for the Domestic Trade rubric came from the U.S. State Department’s *Country Commercial Guides*, *Background Notes*, and the United Nations publication, *International Trade Statistics Yearbook*. Also used was information contained in the “Country Profiles” published by the U.S. Library of Congress. *The Economist* and, to a lesser extent, the *BBC* were consulted in providing background material for the Domestic Trade rubric. The World Bank’s service “Doing Business” database and the U.S. Commercial Service’s “Buy USA” website were consulted for information on conducting business in a nation, which included business hours and business regulations. Finally, most nations’ government websites provided information on domestic trade.

**FOREIGN TRADE:** Sources consulted included *2005 International Trade Statistics Yearbook* (Department of Economic and Social Affairs, Statistics Division, United Nations) and *Direction of Trade Statistics* (Real Sector Division, IMF Statistics Department, International Monetary Fund). The U.S. Department of State’s *Country Commercial Guides* and *Background Notes* were also used. *The Economist* and the *World Factbook 2006* were consulted in listing import and export partners and key products traded. Various UN bodies—such as UNCTAD and UNESCO—provided up-to-date trade statistics.

**BALANCE OF PAYMENTS:** Balance of payments tables were computed from the International Monetary Fund’s *Balance of Payments Statistics Yearbook*. In some cases, totals are provided even though not all components of those totals have been reported by the government of the country. Accordingly, in some instances numbers in the columns may not add to the total. Supplementing the IMF’s *Balance of Payments Statistics Yearbook* were *The Economist*’s “Country Briefings,” the *World Factbook 2006*, and information taken from the U.S. State Department, in particular, the *Country Commercial Guides*. “Country Profiles” from the U.S. Library of Congress were also used. Also consulted was the United Nations publication *National Accounts Statistics: Main Aggregates and Detailed Tables*.

**BANKING AND SECURITIES:** Statistical data on securities listings and market activity was compiled in part from *Emerging Stock Markets Factbook, 2005* (Standard and Poor’s) as well as from the websites *Country*

*Forecasts* (www.countrywatch.com) and *International Banking Statistics* (www.bis.org/statistics/bankstats.htm). Various websites specific to the individual countries of the world were also consulted.

**INSURANCE:** Primary sources for information on insurance include the online resources of the Insurance Information Institute, Rowbotham and Co. LLP, PricewaterhouseCoopers, the Swiss Reinsurance Company, and J. Zakhour & Co., as well as numerous national websites dealing with insurance.

**PUBLIC FINANCE:** In addition to official government websites, analytical reports from the U.S. Department of Commerce, and news reports, the following publications were consulted for standardized statistical data: *World Factbook 2006*, *International Financial Statistics Yearbook, 2002* (International Monetary Fund), and *Government Finance Statistics Yearbook, 2002* (International Monetary Fund).

**TAXATION:** Information on Taxation was compiled from country data sheets published by international accounting firms (Deloitte and Ernst & Young). Additional information was obtained from the U.S. Commerce Department and the government websites of the countries of the world.

**CUSTOMS AND DUTIES:** Information on Customs and Duties was compiled from country data sheets published by the accounting firms of Deloitte and Ernst & Young. Additional information was obtained from the U.S. Commerce Department, the World Trade Organization and the government website of the countries of the world.

**FOREIGN INVESTMENT:** Source material for the Foreign Investment rubric included the U.S. State Department's *Country Commercial Guides*, which provided a comprehensive analysis of the foreign direct investment environments of the countries of the world, as did the World Bank publication, *A Better Investment Climate for Everyone*. The International Monetary Fund's publications *International Financial Statistics Yearbook* and *Balance of Payments Statistics Yearbook*, and the U.S. State Department's *Background Notes* were consulted for the information on foreign direct investment. Also used was information contained in the "Country Profiles" published by the U.S. Library of Congress. *The Economist* was consulted in providing basic FDI figures and other relevant data.

**ECONOMIC DEVELOPMENT:** Source material for the Economic Development rubric included the U.S. State Department's *Country Commercial Guides* and *Background Notes*. *The Economist* was consulted for economic and political forecasts for selected nations. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries profiled, in addition to detailing the current state of various sectors of those economies. The *Index of Economic Freedom* was also consulted for its broad description of economic freedom and development. Information on foreign aid was taken from the print publications and websites of the International Monetary Fund, World Bank, and the United States Agency for International Development (USAID).

**SOCIAL DEVELOPMENT:** Publications consulted in the preparation of this rubric include *2005 Country Reports on Human Rights Practice* (<http://www.state.gov/g/drl/rls/hrrpt/2005/index.htm>), *International Save the Children Alliance Annual Report 2004* (Cambridge House), *The State of the World's Children* (Oxford University Press), and the *World Development Report* (Oxford University Press). Additional information was obtained from country-specific websites and general news publications.

**HEALTH:** Statistical sources consulted include *Country Health Briefing Papers* (a series of reports produced by IHSD Limited and DFID Health Systems Resource Centre for the United Kingdom Department for International Development); *Health Care Systems in Transition* (European Observatory on Health Care Systems, World Health Organization Regional Office for Europe); *Health in the Americas*, Volume II (Pan American Health Organization, World Health Organization) as well as numerous websites on the individual nations of the world. In addition, country-specific health profiles published by the World Health Organization and the World Bank were consulted.

**HOUSING:** The latest government population and housing census information available was used for each country through access of official government websites. Also of use was the World Bank publication *World Development Indicators 2005*. Topics accessed on the World Bank's website included *Countries and Regions*, *Urban Development*, and *Housing and Land*. Other websites consulted included Habitat for Humanity (<http://www.habitat.org>), United Nations Human Settlements Programme (<http://unhabitat.org>) and the U.S. Agency for International Development (USAID—<http://www.usaid.gov>). USAID topics accessed included *Locations* and *Urban Programs*.

**EDUCATION:** Data on Education was obtained from various UNESCO publications including *World Education Report*, *Global Education Digest*, *Education for All Global Monitoring Report 2005*, and the UNESCO *Statistical Yearbook*. Also consulted was *EdStats* compiled by the World Bank (<http://devdata.worldbank.org/edstats/>), the *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>), the UNESCO

website's *Country and Regional Profiles* (<http://www.uis.unesco.org/profiles/>), and *World Data on Education* (International Bureau of Education).

**LIBRARIES AND MUSEUMS:** Some information concerning libraries and museums was accessed through official government websites of various countries when links were available to tourism, education, and/or cultural ministries or departments. In addition, the following websites were consulted: American Library Association (<http://www.ala.org>); International Federation of Library Associations and Institutions (<http://www.ifla.org>); Museums of the World (<http://www.museum.com>); and United Nations Educational, Scientific, and Cultural Organization (<http://www.unesco.org>).

**MEDIA:** Primary sources for this section include the annual *Editor & Publisher* publication *International Year Book*, online data provided by UNESCO, and the media sections of the "Country Profiles" featured on the website of *BBC News*. The UNESCO profiles provide key statistics and indicators on education, science and technology, and culture and communication. In addition, government and other websites related to the countries of the world were consulted. Additional sources consulted include the publications *World Development Indicators 2005* (World Bank), *World Media Handbook* (United Nations), *World Factbook 2006*, and *2005 Country Reports on Human Rights Practices*.

**ORGANIZATIONS:** Lists of member countries were obtained through the official websites of a variety of prominent international organizations and associations, such as the International Federation of Red Cross and Red Crescent Societies, Amnesty International, Kiwanis International, the World Alliance of YMCAs, the World Organization of the Scout Movement, etc. *Associations Unlimited* (Thomson Gale) was also consulted.

**TOURISM, TRAVEL, AND RECREATION:** Statistical sources consulted include *Yearbook of Tourism Statistics* and *Compendium of Tourism Statistics*, both published by the World Tourism Organization. Tourism websites of the individual countries were also consulted, as well as the United Nations publication *Schedule of Daily Subsistence Allowance Rates* and the U.S. Department of State per diem travel allowances published online at [www.state.gov/r/pa/ei/bgn](http://www.state.gov/r/pa/ei/bgn).

**FAMOUS PERSONS:** Entries are based on information available through March 2006. Where a person noted in one country is known to have been born in another, the country (or, in some cases, city) of birth follows the personal name in parentheses.

**DEPENDENCIES:** Source material for the Dependencies rubric was taken from *Background Notes* and from the website of the United Nations. The Library of Congress's "Country Profiles" archive provided up-to-date information on dependencies. *The Economist* and the website of *BBC News* were also consulted, as was *Countries of the World and Their Leaders Yearbook 2006*.

**BIBLIOGRAPHY:** Bibliographical listings at the end of country articles are provided as a guide to further reading on the country in question and are not intended as a comprehensive listing of references used in research for the article. Effort was made to provide a broad sampling of works on major subjects and topics as covered by the article; the bibliographies provide, wherever possible, introductory and general works for use by students and general readers, as well as classical studies, recent contributions, and other works regarded as seminal by area specialists. The country article bibliographies were supplemented with information obtained from a search conducted in July 2006. An extensive bibliography listing key references related to the facts in this encyclopedia follows. However, it is not a complete listing since many fact sheets, brochures, World Wide Websites, and other informational materials were not included due to space limitations.

# GUIDE TO COUNTRY ARTICLES

All information contained within a country article is uniformly keyed by means of small superior numerals to the left of the subject headings. A heading such as "Population," for example, carries the same key numeral (6) in every article. Thus, to find information about the population of Albania, consult the table of contents for the page number where the Albania article begins and look for section 6 thereunder. Introductory matter for each nation includes coat of arms, capital, flag (descriptions given from hoist to fly or from top to bottom), anthem, monetary unit, weights and measures, holidays, and time zone.

## SECTION HEADINGS IN NUMERICAL ORDER

1	Location, size, and extent	27	Energy and power
2	Topography	28	Industry
3	Climate	29	Science and technology
4	Flora and fauna	30	Domestic trade
5	Environment	31	Foreign trade
6	Population	32	Balance of payments

## FREQUENTLY USED ABBREVIATIONS AND ACRONYMS

AD—Anno Domini	fl.—flourished	m <sup>3</sup> —cubic meter(s)	rev. ed.—revised edition
AM—before noon	FRG—Federal Republic of Germany	mi—mile(s)	s—south
b.—born	ft—foot, feet	Mt.—mount	sq—square
BC—Before Christ	ft <sup>3</sup> —cubic foot, feet	Mw—megawatt(s)	St.—saint
c—Celsius	GATT—General Agreement on Tariffs and Trade	N—north	UK—United Kingdom
c.—circa (about)	GDP—gross domestic products	n.d.—no date	UN—United Nations
cm—centimeter(s)	gm—gram	NA—not available	US—United States
Co.—company	GMT—Greenwich Mean Time	oz—ounce(s)	USSR—Union of Soviet Socialist Republics
Corp.—corporation	GNP—gross national product	PM—after noon	w—west
cu ft—cubic foot, feet	GRT—gross registered tons	r.—reigned	
cu m—cubic meter(s)	ha—hectares		
d.—died	i.e.—id est (that is)		
E—east	in—inch(es)		
e—evening	kg—kilogram(s)		
e.g.— <i>exempli gratia</i> (for example)	km—kilometer(s)		
ed.—edition, editor	kw—kilowatt(s)		
est.—estimated	kwh—kilowatt-hour(s)		
et al.— <i>et alii</i> (and others)	lb—pound(s)		
etc.— <i>et cetera</i> (and so on)	m—meter(s); morning		
F—Fahrenheit			

A fiscal split year is indicated by a stroke (e.g. 1998/99).  
For acronyms of UN agencies and their intergovernmental organizations, as well as other abbreviations used in text, see the United Nations volume.  
A dollar sign (\$) stands for US\$ unless otherwise indicated.  
Note that 1 billion = 1,000 million.

# ALGERIA

Democratic and Popular Republic of Algeria

*Al-Jumhuriyah al-Jaza'iriyah ad-Dimuqratiyah ash-Sha'biyah*

**CAPITAL:** Algiers (Alger)

**FLAG:** The national flag consists of two equal vertical stripes, one green and one white, with a red crescent enclosing a five-pointed red star in the center.

**ANTHEM:** *Kassaman (We Pledge)*.

**MONETARY UNIT:** The Algerian dinar (DA) is a paper currency of 100 centimes. There are coins of 1, 2, 5, 10, and 50 centimes and 1, 5 and 10 dinars, and notes of 10, 20, 50, 100, and 200 dinars. DA1 = \$0.01395 (or \$1 = DA71.67) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Overthrow of Ben Bella, 19 June; Independence Day, 5 July; Revolution Day, 1 November. Muslim religious holidays include 'Id al-Fitr, 'Id al-'Adha, 1st of Muharram (Muslim New Year), and Milad an-Nabi. Christians observe their own religious holidays.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in northwestern Africa along the Mediterranean Sea, Algeria is the second-largest country on the continent. Comparatively, it is slightly less than 3.5 times the size of Texas, with a total area of 2,381,740 sq km (919,595 sq mi). Extending about 2,400 km (1,500 mi) E–W and 2,100 km (1,300 mi) N–S, Algeria is bounded on the N by the Mediterranean Sea, on the E by Tunisia and Libya, on the SE by Niger, on the SW by Mali, on the W by Mauritania, and on the W and NW by the Western Sahara and Morocco; the total boundary length is 6,343 km (3,933 mi). Land boundary and claims disputes with Libya were unresolved as of late 2002.

Algeria's capital city, Algiers, is located on the northern boundary of the country on the Mediterranean Sea.

## <sup>2</sup> TOPOGRAPHY

The parallel mountain ranges of the Tell or Maritime Atlas, comprising coastal massifs and northern inland ranges, and the Saharan Atlas divide Algeria into three basic longitudinal zones running generally east–west: the Mediterranean zone or Tell; the High Plateaus, including the regions of Great and Small Kabilia; and the Sahara Desert, accounting for at least 80% of Algeria's total land area. About half of Algeria is 900 m (3,000 ft) or more above sea level, and about 70% of the area is from 760 to 1,680 m (2,500 to 5,500 ft) in elevation. The highest point is Mount Tahat (3,003 m/9,852 ft), in the Ahaggar Range of the Sahara.

Only the main rivers of the Tell have water all year round, and even then the summer flow is small. None of the rivers are navigable. The mountainous areas of the High Plateaus are poorly watered; most of the rivers and streams (oueds) flow irregularly, since they depend for water upon an erratic rainfall. In the High Plateaus are many salt marshes and dry or shallow salt lakes (sebkhas or shotts). Farther south, the land becomes increasingly arid, merging into the completely dry desert.

Farther south, the land becomes increasingly arid, merging into the completely dry desert.

Algeria lies on the African Tectonic Plate. Northwestern Algeria is a seismically active area. Earthquakes on 10 October 1980 in a rural area southwest of Algiers left over 2,500 persons dead and almost 100,000 homeless.

## <sup>3</sup> CLIMATE

Northern Algeria lies within the temperate zone, and its climate is similar to that of other Mediterranean countries, although the diversity of the relief provides sharp contrasts in temperature. The coastal region has a pleasant climate, with winter temperatures averaging from 10° to 12°C (50° to 54°F) and average summer temperatures ranging from 24° to 26°C (75° to 79°F). Rainfall in this region is abundant—38 to 69 cm (15 to 27 in) per year, and up to 100 cm (40 in) in the eastern part—except in the area around Oran (Ouahran), where mountains form a barrier against rain-carrying winds. When heavy rains fall (often more than 3.8 cm/1.5 in within 24 hours), they flood large areas and then evaporate so quickly that they are of little help in cultivation.

Farther inland, the climate changes; winters average 4° to 6°C (39° to 43°F), with considerable frost and occasional snow on the massifs; summers average 26° to 28°C (79° to 82°F). In this region, prevailing winds are westerly and northerly in winter and easterly and northeasterly in summer, resulting in a general increase in precipitation from September to December and a decrease from January to August; there is little or no rainfall in the summer months.

In the Sahara Desert, temperatures range from -10° to 34°C (14° to 93°F), with extreme highs of 49°C (120°F). There are daily variations of more than 44°C (80° F). Winds are frequent and violent. Rainfall is irregular and unevenly distributed.

## 4 FLORA AND FAUNA

Characteristic trees of northern Algeria are the olive and the cork oak. The mountain regions contain large forests of evergreens (Aleppo pine, juniper, and evergreen oak) and some deciduous trees; the forests are inhabited by boars and jackals, about all that remain of the many wild animals once common. Fig, eucalyptus, agave, and various palm trees grow in the warmer areas. Esparto grass, alfa, and drinn are common in the semiarid regions. On the coastal plain, the grape vine is indigenous.

Vegetation in the Sahara is sparse and widely scattered. Animal life is varied but scarce. Camels are used extensively. Other mammals are jackals, jerboas, and rabbits. The desert also abounds with poisonous and nonpoisonous snakes, scorpions, and numerous insects.

## 5 ENVIRONMENT

Algeria's principal environmental problem is encroachment of the desert onto the fertile northern section of the country. Soil erosion from overgrazing adds to the effect. To impede desertification, the government in 1975 began a project to erect a "green wall" of trees and vegetation 1,500 km (930 mi) long and 20 km (12 mi) wide along the northern fringes of the Sahara. The annual cost of this 20-year afforestation project was about \$100 million. In 2000, about 0.9% of the land was forested. As of 2003, about 5% of the total land area was protected. The country has two Ramsar sites: Karavasta Lagoon and Butrint.

Other significant environmental problems include water shortages and pollution. The small amount of water available in Algeria is threatened by regular droughts. The problem is further complicated by lack of sewage control and pollutants from the oil industry, as well as other industrial effluents. The Mediterranean Sea has also been contaminated by the oil industry, fertilizer runoff, and soil erosion.

As of 2002, there were at least 92 species of mammals, 183 species of birds, and over 3,000 species of higher plants. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 11 species of birds, 2 types of reptiles, 1 species of amphibian, 10 species of fish, and 2 species of plants. Endangered species include the Barbary hyena, Barbary leopard, Barbary macaque, the Algerian nuthatch, the North African fire salamander, the African lion, the common otter, and the Mediterranean monk seal. The red gazelle and the Sahara oryx were listed as extinct as of 1994.

## 6 POPULATION

The population of Algeria in 2005 was estimated by the United Nations (UN) at 32,814,000, which placed it at number 35 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 31% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.5%, which the government feels is too high. The government has placed emphasis on reproductive health, with a resulting decline in fertility rates from 4.7 births per woman in 1990 to 3.6 in 2005, due in part to increased use of contraceptives. The projected pop-

ulation for the year 2025 was 40,604,000. The population density was 14 per sq km (36 per sq mi).

The UN estimated that 49% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.45%. The capital city, Algiers (Alger), had a population of 3,060,000 in that year. Other large cities and their estimated populations include Batna, 948,000; Oran, 794,200; and Constantine (Qacentina), 688,100.

The population is concentrated in the cultivated areas of the northern Tell region near the Mediterranean coast. More than 90% of the populace lives in approximately one-eighth of the country. The plateau and desert regions are sparsely populated.

## 7 MIGRATION

In 1962, some 180,000 Algerian refugees were repatriated from Tunisia and Morocco; after independence was declared in July 1962, about 650,000 French Algerians and more than 200,000 harkis (Algerian Muslims who fought on the French side during the war of independence and chose to retain French citizenship) emigrated to France. The exodus reduced the French population from about 10% of the total in 1961 to less than 1% in 1981. There were around 24,000 displaced persons from Mali and Niger located in the southern Algerian region of Tamanrasset, Adrar, and Illizi. In 1995, the United Nations High Commissioner for Refugees (UNHCR) started the repatriation of the Tuareg refugees back to Mali and Niger. Repatriation was complete as of June 1998, benefiting some 6,302 Malians and 3,259 Nigerians. At the closing of the refugee camps, some 200 residual refugees remained. As of May 1997, there were an estimated 4,000 Palestinians that were well integrated in Algerian society. As a result of the war between the Polisario guerrillas and Morocco over the Western Sahara, about 150,000 Sahrawi refugees fled to Algeria. In November 2005, the UN Office for the Coordination of Human Affairs reported that 165,000 refugees from Western Sahara have remained in the region of Tindouf in southwestern Algeria since 1999. In 2003, there were approximately one million internally displaced persons (IDP) within the country. As of 2004, there were 169,500 refugees remaining in Algeria. In 2004, the main countries in which over 9,700 Algerians sought asylum were France, Spain, the United Kingdom, Switzerland, Belgium and Germany.

The estimated net migration rate for Algeria for 2005 was -0.37 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The population consists almost entirely of Arabs. They are primarily of Berber origin, particularly in the Kabilia and Aurès areas and in the Sahara oases, or admixtures of Berbers with invaders from earlier periods. The Berbers, who resemble the Mediterranean subrace of Southern Europe, are descendants of the original inhabitants of Algeria and are divided into many subgroups. They account for 99% of the population. The Kabyles (Kaba'il), mostly farmers, live in the compact mountainous section in the northern part of the country between Algiers and Constantine. The Chaouia (Shawiyah) live in the Aurès Mountains of the northeast. The Mzab, or Mozabites, include sedentary date growers in

LOCATION: 18°57' to 37°5' N; 8°44' W to 12° E. BOUNDARY LENGTHS: Mediterranean coastline, 1,104 kilometers (686 miles); Tunisia, 958 kilometers (595 miles); Libya, 982 kilometers (610 miles); Niger, 956 kilometers (594 miles); Mali, 1,376 kilometers (855 miles); Mauritania, 463 kilometers (288 miles); Morocco, 1,637 kilometers (1,017 miles). TERRITORIAL SEA LIMIT: 12 miles.

the Ued Mزاب oases. Desert groups include the Tuareg, Tuat, and Wargla (Ouargla).

Europeans are of French, Corsican, Spanish, Italian, and Maltese ancestry. Algeria's European population was estimated at less than 1% of the population in 2005. About half the Jews in Algeria were descended from converted Berbers, and the remainder were mainly descendants of Spanish Jews. Within a month after Algeria became independent, about 70,000 Jews emigrated to France and

10,000 to Israel. Almost all the rest left Algeria during the next seven years; fewer than 100 Jews remained as of 1998, and virtually all synagogues had been converted to mosques.

### 9 LANGUAGES

The official and majority language is Arabic, with many variations and dialects, but many Algerians also speak French; "Arabization" has been encouraged by the government. About one-fifth of the

population speaks a wide variety of Berber dialects, particularly in Kabilia, in the Aurès, and in smaller, relatively protected areas in the mountains and the Sahara. Berber is a distinct branch of the Hamitic language group; dialects vary from district to district. In antiquity, the Numidians wrote Berber in script form.

## 10 RELIGIONS

About 99% of the population adheres to the practice of Islam, which is named in the constitution as the state religion. Except for a small minority of Kharijites (Ibadhis) in the Mزاب region, most Muslims are adherents of the Maliki rite of the Sunni sect, with a few Hanafi adherents. The law prohibits assembling for purposes of practicing any faith other than Islam. However, there are Roman Catholic churches that conduct services without government interference. Non-Muslims usually congregate in private homes for worship services. Proselytizing of non-Muslim faiths is and the importation of non-Muslim religious materials are legally prohibited. In practice, however, the government does not actively interfere in religious conversions. Foreigners who practice non-Muslim faiths are generally shown a greater degree of social tolerance than non-Muslim citizens.

The number of non-Muslim residents has been estimated as being less than 5,000. Many non-Muslims have fled the country because of the civil war and acts of terrorism by Islamic extremists. The number of Christians and Jews is thus significantly lower than in the early 1990s. The largest non-Muslim groups are Methodists and Evangelists, followed by Roman Catholics and Seventh-Day Adventists.

## 11 TRANSPORTATION

In 2004, Algeria's nationally owned railroad had about 3,973 km (2,471 mi) of track, which consisted of 2,888 km (1,796 mi) of standard gauge right of way (283 km electrified), and 1,085 km (675 mi) of narrow gauge track. The system consists principally of a main east–west line linked with the railways of Tunisia and Morocco and of lines serving the mining regions of Béchar (formerly Colomb Béchar); the esparto grass country on the High Plateaus; the date-producing areas of Biskra, Touggourt, and Tebessa; and the main port cities.

Roads are most adequate in the Tell zone, but in the mountainous and rural areas, they are relatively poor. In 2002 there were 104,000 km (64,625 mi) of roads, of which about 71,656 km (44,527 mi) were paved, including 640 km (398 mi) of expressways. In 2003, there were 372,300 passenger cars and 528,000 commercial vehicles. The French colonial administration built a good road system, partly for military purposes, which after independence was allowed to deteriorate to some extent; however, new roads have been built linking the Sahara oil fields with the coast. Algeria's portion of the trans-Saharan highway, formally known as the Road of African Unity, stretching about 420 km (260 mi) from Hassi Marroket to the Niger border south of Tamanrasset, was completed in 1985.

Algiers is the principal seaport. Other significant ports are Arzew, Bejaïa (Bougie), Skikda (a large gas-exporting center also known as Philippeville), Oran, Annaba, Ghazaouet, and Mostaganem. Algeria's merchant fleet numbered 56 ships of 1,000 GRT or over, totaling 837,676 GRT as of 2005

An extensive air service used an estimated 137 airports and airstrips in 2004. As of 2005, a total of 52 had paved runways, and there was one heliport. The main international airport, H. Boumediene Airport, is about 20 km (12 mi) from Algiers. Constantine, Annaba, Tilimsen (Tlemcen), and Oran have smaller modern airports that can accommodate jet aircraft. Air Algérie, the national airline, provides international service. In 2003, a total of about 3.293 million passengers were carried on domestic and international flights.

## 12 HISTORY

Before the period of recorded history, the North African coastal area now known as Algeria was inhabited by Berber tribal groups, from whom many present-day Algerians are descended. Phoenician sailors established coastal settlements, and after the 8th century BC, the territory was controlled by Carthage. Roman dominance dates from the fall of Carthage in 146 BC. Completely annexed in AD 40, the region, known as Numidia, became a center of Roman culture. Christianity flourished, as did agriculture and commerce; Numidian wheat and olives were shipped to Rome. By the mid-3rd century there were some 20 Numidian bishops. Despite the prosperity of the Roman cities and the cereal-growing countryside, there were frequent Berber revolts. The Roman influence gradually declined, especially after the Vandal invasion of 430–31. The Byzantine conquered eastern Numidia in the 6th century.

After the Arab conquest began in 637, the area was known as Al-Maghrib al-Awsat, or the Middle West and continued for a century. The Berbers accepted Islam but preserved their own traditional political and social institutions, in effect absorbing the invaders. Arabs from the east attacked in the 11th century. These newcomers, unlike their predecessors, were nomadic herders rather than farmers; they destroyed many of the towns and farms and reinforced a more pastoral type of economy. Almoravids from Morocco also took possession of part of the region in the 11th century, and they were succeeded by Almohads a century later. Although these and other dynasties and individuals united the territory and consolidated it with Morocco and Spain, local rulers retained considerable autonomy. Meanwhile, seafaring and piracy became important.

Spain conquered part of the coast in the early 16th century, and Algerians asked the aid of 'Aruj, known as Barbarossa, a Turkish pirate. He expelled the Spaniards from some of their coastal footholds, made himself sultan, and conquered additional territory. The area of Barbarossa's control was extended by his brother, Khayr ad-Din, also called Barbarossa, who placed his territory under the suzerainty of the Ottoman sultan in Constantinople. Until 1587, Algiers was governed by beylerbeys; from 1587 to 1659, by pashas, who were appointed for three-year terms; and after 1659, by aghas and finally by deys (28 deys in all, 14 of whom were assassinated). Other parts of what is now called Algeria were ruled either by Turkish officials or by local chieftains. Spain held a small area around Oran until 1708 and controlled it again from 1732 to 1791.

Algiers became increasingly independent of Constantinople and, joining with other states of the Barbary Coast, thrived on piracy. At this time, it had diplomatic and trade relations with

many European countries, including France. But with the defeat (though not suppression) of the Barbary pirates by US and European fleets during 1815–16, and with the growing European interest in acquiring overseas colonies, Algiers was seen as a possible addition to either the British or the French empire. In 1830, the French took over the principal ports; they gradually subjugated the Berbers, annexed the northern regions, and set up a system of fortified posts. Thereafter, sporadic revolts broke out, notably the guerrilla war from 1830 to 1847, led by the legendary hero, Abd al-Qadir, and the Kabyle rebellion in 1871. Other sections, however, remained independent of France until the first decade of the 20th century.

Al-Jazair, as it was called in Arabic, became, in French, *Algérie*, a name that France applied to the territory for the first time in 1839. In 1848, northern Algeria was proclaimed an integral part of France and was organized into three provinces. Following the Franco-Prussian War of 1870–71, large numbers of Alsatians and other French colonizers settled the most fertile confiscated lands, as did other Europeans at the invitation of France. Muslims had no political rights except for limited participation in local financial delegations.

Following World War I, France took the first steps toward making all Algeria an integral part of France. In 1919, voting rights were given to a few Muslims, based on education and military service qualifications. French citizenship had previously been open to Muslims who renounced their Koranic status.

During World War II, in exchange for loyalty to France, many Muslims hoped for political concessions, and moderates believed that France might be persuaded to grant Algeria a separate status while retaining close diplomatic, economic, and defense ties. In 1957, all Muslims became French subjects, but about nine million Muslims and 500,000 Europeans voted on separate electoral rolls for a joint assembly. Unsuccessful in obtaining further reforms and faring poorly in several apparently rigged elections, the moderate Muslim nationalist group led by Ferhat Abbas was greatly weakened.

The war in Algeria toppled several French governments before causing the demise of the Fourth Republic in May 1958. Gen. Charles de Gaulle was then brought to power by French rightists and military groups in Algeria. To their surprise, however, he pursued a policy of preparing for Algerian independence. He offered self-determination to Algeria in September 1958. Referendums in France and Algeria on 8 April and 1 July 1962 approved a settlement, and independence was formally proclaimed on 3 July, despite a program of counterterrorism by the French Secret Army Organization in Algeria. Meanwhile, younger nationalists had formed what would become known as the National Liberation Front (Front de Libération Nationale—FLN), and a guerrilla war was launched on 1 November 1954. The FLN's National Liberation Army (Armée de Libération Nationale—ALN) perpetrated acts of terrorism and sabotage throughout Algeria and gained increasing mass support. Eventually, France was forced to maintain at least 450,000 troops in Algeria. During the hostilities, the French army completely cleared many rural areas of their civilian populations and evacuated some two million Muslims to army-controlled *regroupment* centers or new large villages. Although the army gradually eliminated the power of the FLN to carry out

large-scale attacks, the latter continued its terrorist acts against the French army, French settlers, and pro-French Muslims. Terrorist activities, mainly as a result of factional disputes, also were carried on by Algerian Muslims in France. During more than seven years of civil war, well over one million Muslim guerrillas and civilians and 10,000 French soldiers lost their lives.

With independence achieved, a seven-man Political Bureau, set up as the policy-making body of the FLN, took over effective control of the country on 5 August 1962. Ahmed Ben Bella became the first premier, and Ferhat Abbas was chosen speaker of the Assembly. The Assembly adopted a constitution, which was endorsed by referendum in September 1963.

Elected president in October, Ben Bella began to nationalize foreign-owned land and industry. Opposition to his authoritarian regime led to an outbreak of armed revolts in the Kabilia and Biskra areas in July 1964 and to open attacks on the regime by leading political figures. On 19 June 1965, the Ben Bella government was overthrown in a bloodless coup directed by Col. Houari Boumedienne, first deputy premier and defense minister. The 1963 constitution was suspended, and a revolutionary council headed by Boumedienne took power. The new government shifted to a gradualist approach to national development, with deliberate economic planning and an emphasis on financial stability. During the 1970s, the council nationalized the oil industry and initiated agrarian reforms. Boumedienne ruled by decree until June 1976, when a national referendum approved a Socialist constitution providing for a one-party state with a strong presidential system and an elected National Assembly. Boumedienne was elected president in December 1976 but died two years later.

The FLN Central Committee, with strong army backing, chose Col. Chadli Bendjedid as the party's leader, and his presidential candidacy was ratified by the electorate on 7 February 1979. He was reelected without opposition in January 1984 for a second five-year term. After a period of maintaining continuity with the previous regime, the Bendjedid government moved toward more moderate policies, expanding powers for the provinces and state enterprises and attempting to revitalize the FLN and government agencies. In foreign affairs, Algeria reduced its earlier support for liberation groups around the globe and for hard-line nonaligned positions. It patched up its dispute with Morocco over the Western Sahara and sharply reduced its aid to the Polisario. Algeria played a key role in helping the United States resolve the hostage crisis in 1981 and worked hard for the Arab Maghreb Union, a planned EC for North Africa. Serious internal trouble developed in 1988 when young Algerians rioted over high prices, unemployment, and the dictatorship of an aging, inept, and corrupt revolutionary regime. Shocked by the 500 deaths in the streets, Bendjedid moved to liberalize his government. Political parties were allowed to form outside the FLN and the prime minister and cabinet were made responsible to the National Assembly. He won a third term in 1989, supported by 81% of the electorate.

Burdened by heavy debts and low oil prices, Bendjedid was obliged to pursue austere economic policies and to abandon socialism for the free market—actions which further inflamed his opposition, now led by the Islamic Salvation Front (FIS). In 1989, the party won 55% of urban election seats while the FLN maintained power in the countryside. Elections to the National Assem-

bly, postponed six months, were held in December 1991 under relatively free conditions. FIS candidates won 188 out of 231 contested seats, needing only 28 more places in a second vote to control the 430-member Assembly. The FLN won only 16 seats.

The army intervened, arresting FIS leaders and postponing indefinitely the second stage vote. Bendjedid resigned under pressure from the army and Mohammed Boudiaf, a hero of the revolution, returned from exile to lead the High State Council which the army established. A harsh crackdown on Islamists began; the FIS was banned and its local councils were closed. As acts of terrorism continued by both sides in 1992 and 1993, the regime declared a state of emergency, set up special security courts and arrested more than 5,000 persons. Boudiaf was assassinated in June 1992 to be replaced by Ali Kafi with Redha Malek as prime minister in August 1993. In January 1994, Defense Minister Liamine Zeroual was named president and the five-man presidential council was abolished.

Zeroual released two top FIS leaders in September 1994 and began a dialogue with the FIS. After six weeks of apparently half-hearted talks, Zeroual ended the dialogue and called for new presidential elections. Opposition parties—including the FLN, the FIS, and other Islamist groups—met in late 1994 and early 1995 under the auspices of the Sant' Egidio Roman Catholic community in Italy to produce a national contract to end the violence through a transitional government that would include all parties. Zeroual rejected the meeting as foreign interference in Algeria's internal affairs and condemned the contract that it produced. He continued to attempt dialogue with the legalized opposition parties with no results.

While parties accounting for nearly 80% of the vote in the 1991 parliamentary elections were excluded from participating, Zeroual did have three opponents for the presidency in the November 1995 elections. The elections went ahead as scheduled. Despite widespread calls for boycotts and threats of violence, the government claimed 75% of registered voters participated in the election, which gave Zeroual the office of presidency with 61% of the votes. Opposition groups disputed the turnout figures.

Zeroual's first objective after election was the passing of a new constitution greatly expanding presidential powers. The referendum approving the new constitution was passed with nearly 80% of the registered voters participating and 86% approving the new constitution. While there were widespread electoral irregularities, the vote was generally viewed as reflecting Algeria's weariness with civil war (which, as of 2003, had claimed approximately 100,000–120,000 lives since 1992) and a willingness to give the government the power to end it. At the very least, the elections showed that few of Algeria's registered voters respected the boycott calls made by opposition parties, even when those calls were backed up with threats of violence.

However, the elections did not stop the cycles of violence. When the government thought it had effectively stopped the terror campaign, the Ramadan of 1997 (the traditional high point of terrorist activity) was the bloodiest ever, with daily reports of bombings and massacres.

Despite the violence and instability, Zeroual continued to hold elections as he reshaped Algeria's government. In June 1997, parliamentary elections were held. Thirty-nine political parties registered for the elections with over 7,000 candidates contesting for

the 280 seats in the National People's Assembly. Violence continued throughout the campaigning. The result of the election was a victory for pro-government parties. However, though the FIS and other religious parties were barred from participating, two other more moderate Islamist parties won more than 100 seats and received over 20% of the votes cast. Regional and municipal council elections were held in October 1997, with the RND (Rassemblement national pour la démocratie or National Democratic Rally) winning more than half of the seats.

In September 1998 President Zeroual gave a surprise address announcing that he would step down from power in February 1999, two years before his term was to expire. The decision was most likely due to infighting in the regime, which had become increasingly public. Forty-seven candidates presented themselves for election, but only seven made it to the final list, with Abdelaziz Bouteflika quickly emerging as the leading candidate. Tarnishing the results of the election, four of the candidates officially withdrew from the contest two days before the 15 April election day claiming massive fraud in favor of Bouteflika in the forming of election lists. They were joined the following day by the other two candidates. The fraud claims were rejected by the minister of the interior and the election went ahead with Bouteflika as the single candidate.

Following his election victory, Bouteflika instituted dialogue with opposition groups and at the end of 1999 moved against corruption. Within weeks of his election, Bouteflika announced a "Civil Concord Plan" based upon a 1997 truce between the military and the FIS's Islamic Salvation Army (AIS). In September 1999, a referendum was held on the plan, which was approved by more than 98% of the voters; voter turnout was over 85% nationwide, but was below 50% in eastern regions of the country, which are dominated by the opposition. The plan included an amnesty for those Islamists who renounced violence; up to 5,500 rebels participated in the amnesty, and the AIS formally disbanded in 2000. Those guilty of murder, rape, or the placing of bombs were to be prosecuted; however, the death penalty would not be used, and no prison sentence would be longer than 20 years. The plan was supported by the FIS; however, violence continued, and was still ongoing as of March 2003.

In April 2001, a Berber youth taken into custody by the police was killed, sparking months of demonstrations and rioting in the northeastern region of Kabylie. More than 90 people died in the unrest, which also spread beyond Kabylie. The Berber protesters' complaints went beyond the act of police brutality, addressing concerns of ethnic discrimination, corruption, housing shortages, unemployment, repression, and violence. In May, the mainly Berber party, the Rally for Culture and Democracy, withdrew from the government in protest against the government's handling of the unrest. In October, Bouteflika agreed to a constitutional amendment granting national recognition to the Berber language, Tamazight. However, the language would not be granted "official" status, like Arabic.

In the aftermath of the 11 September 2001 terrorist attacks on the United States, the United States called upon all states to implement counterterrorism measures. Algeria pledged its support for the Bush administration's campaign against terrorism, and sent the United States a list of 350 Islamic extremists known to be living abroad who may have had contacts with Osama bin Laden's al-

Qaeda network. Bouteflika made two official state visits to President Bush in 2001, the first such visits by an Algerian president in 15 years. In return for Algeria's aid, the Bush administration agreed to ease restrictions on arms sales to Algeria.

In parliamentary elections held on 30 May 2002, the FLN won 199 of 389 seats in the National Assembly; it was one of 23 parties participating. Four parties, including two Berber parties, boycotted the elections, which were marred by violence and low voter turnout (47%).

On 3 March 2003, French president Jacques Chirac visited Algiers, the first state visit by a French president since Algeria won independence in 1962. Chirac stated that the two countries could not forget the brutal war for independence that had created "countless victims, tore families apart, and shattered destinies and dreams." He laid flowers at a monument for Algerians who fought the French during the war, which was regarded as an act of reconciliation. Chirac also called on the government to use dialogue to end the Islamic insurgency ongoing since 1992.

On 21 May 2003 an earthquake, which measured 6.7 on the Richter scale, struck along Algeria's northern coast. The worst hit areas were east of Algiers. More than 2,200 people were killed, over 9,000 were injured, and over 1,000 people were missing, while 51,000 were made homeless in the Algeria's most devastating quake in more than 20 years. On 27 May an aftershock of a magnitude of 5.8 was centered just a few miles away from the epicenter of the May 21 earthquake. Buildings damaged earlier fell down and survivors accused the government of a slow response and of turning a blind eye to shoddy construction in a quake-prone area. President Bouteflika was pelted with debris as he attempted to tour damaged villages.

Under Bouteflika the security situation in Algeria improved noticeably. However, terrorism was not totally eliminated. Terrorist incidents still occurred, particularly in the provinces of Boumerdes, Tizi-Ouzou, and in the remote southern areas of the country. An estimated 50–60 Algerians were killed monthly in the early 2000s, down from a high of 1,200 or more in the mid-1990s. In a landslide victory Bouteflika was reelected to a second term in April 2004. Promising to devote himself to seeking "true national reconciliation," the government promised the Berber leaders more investment in the Kabylia region and greater recognition of the Tamazight language.

Algeria assumed a two-year seat on the UN Security Council in January 2004.

In January 2005, the arrest of rebel Armed Islamic Group (GIA) head Nourredine Boudiafi was announced. His deputy was killed. It was declared that the group was virtually dismantled. GIA was an Islamic extremist group that since 1992 aimed to overthrow the secular government and replace it with an Islamic state. In August 1992, GIA's founder, Mansouri Miliani, was arrested for his role in the attack on Algiers airport. He was executed in May 1993. GIA's violent terrorist campaigns were aimed at entire villages, journalists and foreign residents. Between 1992 and 1998, GIA violence was responsible for some 100,000 deaths, averaging 1,200 per month, leading to a civil war. Killings continued at a rate of 300 civilians per month well into 2002; more than 100 expatriates were killed since 1993. In March 2005 a government-commissioned report stated that security forces were accountable for

the disappearances of more than 6,000 people during the 1990s civil conflict.

Since 1976 Algeria has supported the exiled Sahrawi Polisario Front (Polisario) in the Western Sahara and rejects Moroccan administration of Western Sahara. Algeria experiences continuing border disputes with Libya and Morocco and incursions from armed bandits of the Sahel region who destabilize southern Algerian towns. Algeria and Morocco each accuse the other of harboring militants, smuggling arms, and have imposed visa requirements on each other that Morocco lifted in mid-2004; Algeria has not reciprocated the gesture.

### 13 GOVERNMENT

Algerian voters approved a new constitution in 1996 that strengthened the role of the already-dominant executive. Under the constitution, a second legislative body called the Council of the Nations (Senate) would join the already existent National People's Assembly, or Al-Majlis Ech-Chaabi Al-Watani. The number of seats in the National People's Assembly was changed from 380 seats to 389 seats in the 2002 elections; members are elected by popular vote to serve five-year terms. In the Council of Nations (Senate) with 144 seats; one-third of the members of the Council are appointed by the president, two-thirds are elected by indirect vote (local and regional government); members serve six-year terms. The constitution requires half the Council to be renewed every three years. This body must approve, by a three-fourths vote, any legislation proceeding from the National Assembly. The president is elected for a five-year term, renewable once. A second round is held if no candidate obtains a simple majority in the first round.

Since the annulment of the 1991 election, the military has been the ultimate power in Algeria. In 1994 it appointed a retired general, Liamine Zeroual, to the presidency. In somewhat irregular elections, Zeroual was elected with 61% of the vote over three other candidates. In 1998, Zeroual announced he would step down as president before his term ended. Abdelaziz Bouteflika won the presidential election of April 1999. He was the lone candidate after all of his rivals pulled out on the eve of the poll, protesting massive fraud.

Elections for the National Assembly were held in June 1997, with pro-government parties winning 57% of the 380 seats. Moderate Islamic parties won over 100 seats, with the rest of the seats going to independent candidates and an ethnic Berber party. Several opposition parties, including the FIS, were barred from participating. Regional and municipal council elections were held in October 1997, with the government's RND winning more than half of the seats.

Elections for the National Assembly were next held on 30 May 2002. The FLN took 199 of the now 389 seats; the National Democratic Rally, Bouteflika's party, took 48 seats; Islah, the Movement for National Reform took 43 seats; the Movement for a Peaceful Society won 38 seats; the socialist Worker's Party won 21 seats; and smaller parties and independents took the remaining 40 seats. Again, the FIS was banned from participating. In local elections held 10 October 2002, the FLN won a majority of town councils and provincial assemblies.

On 8 April 2004 a presidential election took place. The election was democratically waged throughout for the first time since independence. Incumbent president, Bouteflika, competed against

five other candidates. Although the Opposition candidates complained of some discrepancies and unfair media coverage, the election was considered the most untainted in Algerian history. Bouteflika was reelected in the first round of the election with 84.99% of the vote. Just over 58% of Algerians eligible to vote participated in the election.

## 14 POLITICAL PARTIES

One of the earliest active figures in the struggle for Algerian self-determination was Messali Hadj, who in 1925 formed the Star of North Africa (*Étoile Nord Africaine*) movement among Algerian workers and intellectuals in Paris and in 1937 founded the Algerian People's Party (*Parti Populaire Algérien*—PPA). Banned in 1939, the PPA operated illegally and militantly under the Vichy regime, with strong support from students and workers.

In 1944, Ferhat Abbas formed the Friends of the Manifesto and of Liberty (*Amis du Manifeste et de la Liberté*—AML), a moderate reform group that was later transformed into the Democratic Union of the Algerian Manifesto (*Union Démocratique du Manifeste Algérien*—UDMA). In 1946, some AML members joined the PPA and, under Messali Hadj's leadership, formed a legal front organization, the Movement for the Triumph of Democratic Liberties (*Mouvement pour le Triomphe des Libertés Démocratiques*—MTLD). On a program favoring "the return of the Algerian people to national sovereignty," the MTLD won 5 of the 15 elected seats in the National Assembly elections of 1 November 1946; in 1948, however, the MTLD lost all its seats and was reduced to semi-illegality. Two years later, it was suppressed by the police.

In 1951, an Algerian Front was formed by the MTLD, the UDMA, the Algerian Communist Party, and the Society of 'Ulema, a political-cultural organization. Policy differences in the following years resulted in the creation of three groups: supporters of Messali Hadj; centrists, who hoped to obtain constitutional advances by cooperating with the French administration; and a militant group who proposed violent action. By 1954 there was an open split. The centrist majority repudiated Messali Hadj's leadership. An activist group of nine members formerly associated with an MTLD splinter group calling for armed rebellion then established the Revolutionary Committee for Unity and Action (*Comité Révolutionnaire d'Unité et d'Action*—CRUA) with headquarters in Cairo, divided Algeria into six military zones and appointed commanders for each, and launched a war with France on 1 November 1954.

Shortly thereafter, the CRUA changed its name to the National Liberation Front (*Front de Libération Nationale*—FLN), and its forces became known as the National Liberation Army. The FLN was an amalgamation of various nationalist tendencies in Algeria. Its membership gradually incorporated most members of the former MTLD, most members of the UDMA, and members of the Society of 'Ulema, as well as former independents and young people with no previous political allegiance. Its goal was the complete independence of Algeria, and it appeared to have the support of the great majority of Muslims. After Messali Hadj broke with the FLN, he formed the National Algerian Movement (*Mouvement National Algérien*—MNA), supported mainly by Algerians in France. The MNA attacked both the FLN and the war through acts of terrorism in France, but became almost completely without influence following Messali's imprisonment.

In August 1956, an FLN congress established an embryo parliament, the 34-member National Committee of the Algerian Revolution, enlarged in 1957 by 20 more members to a total of about 50, and a 5-member executive body, the Executive and Coordinating Committee, enlarged in Cairo in 1957 by additional members. In September 1958, a provisional government was established with Ferhat Abbas as president and with headquarters in Cairo and Tunis. (Benyousséf Ben Khedda succeeded Abbas as premier in August 1961.) President de Gaulle in effect recognized the FLN as the only political organization that had the authority to speak for the Muslims during peace negotiations with the French government. During this period, French expatriates in Algeria organized the Secret Army Organization, which violently opposed Algerian independence.

After independence, differences of opinion arose among the members of the Political Bureau, the FLN's policy-making body, regarding the organization of the FLN. While Ben Bella envisaged the creation of an elite party, Mohammed Khider (assassinated in Spain in January 1967) sought to create a broader mass party. The FLN mobilized popular political participation by forming mass organizations for peasants, youth, guerrilla veterans, and women. It organized itself into departmental federations, sections, and cells, staffed largely by former guerrillas (*mujahedin*). In April 1964, the first congress of the FLN adopted the Charter of Algiers, a guideline for government policy that provided for a wide range of agricultural, industrial, and social reforms. The FLN's National Charter of April 1976 outlined a plan for creating a Socialist system commensurate with Islamic principles. A new National Charter adopted in January 1986 de-emphasized Socialism and placed greater stress on Islam. The chief organs of the FLN are the Central Committee, the highest policy-making body of both the FLN and the nation, the Political Bureau and the Secretariat. The Islamic Salvation Front is an umbrella organization of groups, which support a government guided by Islamic law. In September 1989 the government approved a multiparty system, and by 31 December 1990, over 30 legal political parties existed, including Islamic Salvation Front (FIS), National Liberation Front (FLN), and Socialist Forces Front (FFS).

With the annulment of elections, several parties, notably the FIS, were outlawed. The main parties that participated in the June 1997 elections included the official government party known as the National Democratic Rally (*Rassemblement national pour la démocratie*—RND); the Movement for a Peaceful Society (formerly *Hamas*); *Ennahda* (a moderate Islamic party); two ethnic-Berber parties, the Socialist Forces Front and the Rally for Culture and Democracy; and the FLN.

Twenty-three parties participated in the May 2002 parliamentary elections. Two Berber parties boycotted the elections, including the Rally for Culture and Democracy and the Socialist Forces Front. The FLN took a majority of seats in the National Assembly. Also winning seats were *Islah*, the National Democratic Rally, the Movement for a Peaceful Society, the Workers' Party, the Algerian National Front, the Islamic Renaissance Movement, the Party of Algerian Renewal, and the Movement of National Understanding. Independents won 29 of 389 seats.

In June 2003, the leader of the outlawed Islamic Salvation Front (FIS) Abassi Madani and his deputy Ali Belhadj were freed after serving 12-year sentences.

## 15 LOCAL GOVERNMENT

In 1969, a governorate of 48 provinces (*wilayats*) system replaced the departments that had been established by the French. Each wilaya has its own elected people's assembly, executive council, and appointed governor (*wali*), who is responsible to the Ministry of the Interior. The 48 wilayats have subdivisions called *da'iraats* (districts), which are further subdivided into 1,541 communes. The commune is the basic collective unit, governed by an assembly elected for four years. Winning a majority of local council and assembly seats in the 10 October 2002 elections was the FLN, taking control of 668 communes and 43 of the country's 48 cities. The National Democratic Rally lost its previously held majority, taking control of 171 communes. The Socialist Forces Front won 65 communes and independents took control of 77. Islamic parties declined in popularity overall.

## 16 JUDICIAL SYSTEM

After independence in 1962, Algeria's judicial system was reorganized. The former French magistrates were replaced by Algerians and the judiciary was extended into regions of the country previously ignored.

The judicial system now includes civil and military courts. Within each wilayat is a court of first instance for civil and some criminal cases. At the head of the system is the Supreme Court. The Special Court of State Security was abolished in 1995.

The constitution guarantees independence of the judiciary. However, executive branch decrees have restricted some of the judiciary's authority. Judges are appointed by the executive branch without legislative approval, and the government can remove judges at will. A judge's term is 10 years.

Algeria's present legal codes, adopted in 1963, are based on the laws of Islam and of other Northern African and Socialist states, as well as on French laws. Efforts were made to harmonize the laws and legal procedures with those of the Maghreb nations. A first plan for judicial reorganization was approved in 1965; this was followed in 1966 with the beginning of large-scale structural reforms. A new civil code was promulgated in 1975 and a new penal code in 1982.

In civilian courts, Shariah (Islamic law) is applied in resolving social issues. Defendants in civilian courts are afforded a wide range of procedural protections including a public trial, right to counsel, right to confront witnesses, and right of appeal.

Military courts have jurisdiction in cases involving military personnel and have heard some cases in which civilians are charged with security-related and terrorism offenses.

The Constitutional Council reviews the constitutionality of treaties, laws, and regulations. The Constitutional Council is not part of the judiciary but it has the authority to nullify unconstitutional laws. The constitution prohibits torture and other cruel, inhuman, or degrading treatment. The constitution prohibits arbitrary arrest and detention. In criminal cases, the suspect must be charged or released within 48 hours of incommunicado detention. However, the 1992 Antiterrorist Law provides up to 12 days of prearrest detention.

President Bouteflika announced a major reorganization of the judiciary in August 2000. He changed approximately 80% of the heads of the 187 lower courts and all but three of the presidents of

the 37 higher-level courts. By the end of 2001, women sat at the head of 26 courts.

## 17 ARMED FORCES

Six months of military service is compulsory for males. Algeria's armed forces in 2005 totaled 137,500 active personnel. The Army had 120,000 officers and men, plus reserves of up to 150,000. Weaponry included 920 main battle tanks, 139 reconnaissance vehicles, 1,084 armored infantry fighting vehicles, 910 armored personnel carriers, and 1,019 artillery pieces. The Navy had an estimated 7,500 active personnel. Major naval units included 2 tactical submarines, 3 frigates, 6 corvettes, 24 patrol/coastal vessels, 3 amphibious landing craft and 3 logistics/support ships. The Air Force had an estimated 10,000 active members. Equipment included 178 combat capable aircraft, including 88 fighter aircraft and 72 fighter ground attack aircraft, and 33 attack helicopters. Algerian paramilitary forces totaled an estimated 181,200 personnel, including 20,000 gendarmerie, 16,000 national security forces and 1,200 Republican Guards. Algeria's defense budget was \$2.87 billion in 2005.

## 18 INTERNATIONAL COOPERATION

Algeria was admitted to the United Nations on 8 October 1962 and is a member of ECA and all the nonregional specialized agencies, such as the ICAO, IFC, FAO, IAEA, ILO, IMF, UNESCO, UNHCR, UNIDO, WHO, and the World Bank. Algeria is an observer in the WTO and was a temporary member of the UN Security Council until December 2005. Algeria also participates in the African Development Bank, G-77, G-15, G-24, League of Arab States, African Union, the Organization of the Islamic Conference (OIC), the Arab Maghreb Union, the New Partnership for Africa's Development (NEPAD), OAUPEC, and OPEC. The country is a partner in the OSCE. Algeria is a member of the Nonaligned Movement and the Organization for the Prohibition of Chemical Weapons. In cooperation on environmental issues, Algeria participates in the Basel Convention, Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, MARPOL, the Montréal Protocol, and the UN conventions of the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Saharan oil and natural gas have been important export items since 1959, and they now dominate Algeria's economy, accounting for over 96% of total export value, 60% of government revenue, and 30% of GDP. Algeria is the largest supplier of natural gas to the EU. During the late 1970s, as oil prices rose, real economic growth topped 20% annually, with the manufacturing sector averaging about 15%; during 1980–81, however, the rate dropped to 7–8% because of the weakening oil market, and a decline of 5% was registered in 1982, followed by an average annual growth rate of 4.5% during 1983–86. Because of the weak oil market, growth continued to fall, to 3.4% in 1989, 1.1% in 1990, and negative growth in 1994 of -1.1%. Debt restructuring accomplished in 1994 and 1995 allowed increased imports and restored economic growth to an estimated 3% per year. The real growth rate in 1998 was 3.2%, and was estimated at 6.1% in 2004. It was expected to reach 6.9% in 2005. These healthy growth rates in the early 21st century were driven by real export growth, based on expanding

crude oil production, although government consumption played a role. As of 2005 Algeria had a large trade surplus, high foreign exchange reserves, and had reduced its foreign debt.

Although 14% of Algerians make their living directly from the soil, agriculture produces only about 10–11% of Algeria's GDP in an average year, and 9% in drought years, and meets only a small portion of the country's needs. The government targeted agricultural development as a priority in the late 1990s, but drought in 1997 dimmed agricultural prospects. However, good rains in 2002 produced a stronger performance for cereals in terms of real growth.

Before independence, the Algerian economy was almost completely dependent on the Europeans, who employed more than 90% of those working in industry and commerce, accounted for about 90% of gross business earnings, and provided some 90% of the country's private investment. The exodus of most Europeans in 1962 temporarily disrupted Algeria's economic life. The FLN governments established a Socialist economy by nationalizing the mining industry and creating state farms and state-owned industries on abandoned farms and on expropriated French landholdings. The nationalization with compensation of all foreign-owned companies was completed in 1974, although certain companies operating in partnership with Algerian state enterprises were allowed to continue. In the 1980s, decentralization was emphasized, with over 90 state corporations split into 300 specialized units. It was announced in 1987 that these enterprises would adopt their own annual plans, decide on the prices of their products, and invest their profits freely. In 1990 the money and credit law opened the way for substantial international participation in Algeria's economy. The 1993 investment code opened up Algeria to foreign investment, and investment promotion agencies were created in 1995 in order to stimulate the economy. Since then, Algeria has taken steps to liberalize foreign trade, the price structure, and foreign exchange system, and to reevaluate the public sector while encouraging the private sector and competition.

The dramatic decline in oil prices in 1985–86 affected Algeria at a time when it also faced a heavy foreign debt burden. The Algerian government thus attempted to diversify the economy and privatize business. In the late 1990s and into the 2000s, challenges to the Algerian economy included civil strife, inefficient agricultural methods, and an unemployment rate of 25.4% in 2004 (and possibly as high as 50% for those under the age of 30) that extended into the ranks of professionals, engineers, and highly trained workers. Although the government remains committed to greater economic deregulation and will continue to solicit foreign investment in such sectors as telecommunications, water, and power, the hydrocarbons sector remained the engine of GDP growth in 2005–06. With average crude oil prices rising during that period, Algeria was able to increase its export earnings and trade surplus.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Algeria's gross domestic product (GDP) was estimated at \$237.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$7,300. The annual

growth rate of GDP was estimated at 7.1%. The average inflation rate in 2005 was 4.7%. It was estimated that agriculture accounted for 10% of GDP, industry 59.5%, and services 30.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.090 billion or about \$34 per capita and accounted for approximately 1.6% of GDP. Foreign aid receipts amounted to \$232 million or about \$7 per capita and accounted for approximately 0.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Algeria totaled \$27.37 billion or about \$861 per capita based on a GDP of \$68.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 0.7%. It was estimated that in 1999 about 23% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, the estimated workforce stood at 10.15 million. The government employed around 32% of the labor force in 2003, with agriculture accounting for 14%, industry 13.4%, construction and public works 10%, trade 14.6%, and other occupations 16%. An estimated 22.5% of the workforce was unemployed in 2005.

Algerian law permits collective bargaining for all unions. While there is no legal restrictions on a worker's right to join a union, government approval is required by those workers seeking to form a union. Approximately two-thirds of Algerian workers were unionized as of 2005. Minimum wages are set by the government with the advice of the General Union of Algerian Workers (Union Générale des Travailleurs Algériens—UGTA). The standard workweek is 37.5 hours, and those employees who worked past the standard workweek were subject to receiving "time-and-a-half" or "double-time," on whether they worked during a holiday, a weekend, or on a normal work day. As of 2005, the minimum wage was around \$138 per month. This amount does not provide a family with a decent standard of living. Health and safety regulations are also specified by law, but enforcement is irregular. The minimum age for employment is 16 years. However, child labor remains a problem in agriculture and in the informal economy. UNICEF last reported in 2003, that around 3% of Algerian children worked in some capacity.

## 22 AGRICULTURE

Although almost 24% of the population is engaged in agriculture (including subsistence farming), only 3.5% of Algeria's land is cultivated. The soil is poor and subject to erosion, and the water supply is generally irregular and insufficient; about one-quarter of northern Algeria is completely unproductive. Agriculture contributed 13% to GDP in 2004.

Before independence, European-owned agriculture accounted for about two-thirds of vegetable production and employed about 800,000 farm laborers, 700,000 of them Muslims. Most Muslim-owned farms were small—10 hectares (25 acres) or less—and were located mainly in marginal areas on the interior plains and on mountain slopes. The Muslim sector, comprising the bulk of the agricultural population, accounted for only one-third of vegetable production but nearly all the livestock raising.

Within six months after independence was declared, at least half the European-owned land had been vacated. Algerian peasants soon began to work on these abandoned farms under a self-management system. During the 1960s, the government established more than 2,300 state farms on expropriated French landholdings; by the end of the decade, these farms accounted for two-thirds of total agricultural production and employed about 500,000 workers. In July 1971, President Boumediene announced an agrarian program providing for the breakup of large Algerian-owned farms and their reorganization into cooperatives. The first stage of the plan, the registration of land ownership, began in March 1972. In the second stage, many absentee landlords were forced to hand over part of their land to the state. By July 1973, of a total of 5 million hectares (12.4 million acres) of public land, 1 million hectares (2.5 million acres) of cultivable land had been redistributed to 54,000 families of landless peasants (*fellahin*), and 1,348 cooperatives had been created. By 1980, the number of cooperatives had increased to about 6,000; in the early 1980s, however, the government split large cooperatives into smaller units to improve efficiency. In 1982–83, about 450,000 hectares (1.1 million acres) of land previously nationalized were returned to private ownership, mostly in plots of 10 hectares (25 acres) or less. In 1987, a further breakup of large state-owned farms into private cooperatives was implemented. Long-term leases of land to cooperatives were begun. Farmers were given autonomy in production and investment decisions, including the right to keep profits. The National Union of Algerian Peasants, established in March 1973, played a leading role in the land reform program and has about 1.2 million members. By 1995, most of the cooperatives had been dispersed because of internal disputes and land was divided into individual plots. The government does not officially endorse this development, which compels farmers to sell their output on the black market. The Ministry of Agriculture is considering land privatization as a way to stimulate private investment.

Government policy aims at increased use of fertilizers and improved seeds, conversion of vineyards to the production of cereals and other staple foods, and achievement of self-sufficiency in food production. The main agricultural products continue to be wheat, barley, pulses, fresh vegetables, dates, table and wine grapes, figs, olives, and citrus. Grain and pulse production varies significantly and depends upon the frequency and amount of rainfall during the growing season. Estimated agricultural output in 2004 included 2,600,000 tons of wheat; 1,314,000 tons of barley; 1,800,000 tons of potatoes; 815,000 tons of tomatoes; 360,000 tons of oranges; 275,000 tons of grapes; and 450,000 tons of dates. In 2002, nearly 7.6 million tons of cereals were imported. Modest agricultural productivity growth along with rapid population increase makes Algeria one of the world's largest agricultural import markets; imports of food and agricultural products amount to about \$3 billion per year. Food and agricultural products accounted for over 22% of all imports in 2004.

### 23 ANIMAL HUSBANDRY

Algeria has 31,800 hectares (78,600 acres) of permanent pastures and grazing land, 13% of the country's total area. About half of the livestock is owned by only 5% of the herdsmen. In 2004 there were an estimated 18,700,000 sheep, 3,200,000 goats, 1,560,000 head of cattle, 245,000 camels, 170,000 donkeys, 44,000 horses, and 43,000

mules. There were also 125 million chickens. Algeria is self-sufficient in poultry meat and eggs, but must import all inputs (chicks, hatching eggs, feed, veterinary products, equipment). Algeria has a severe shortage of milk, meat, and cheese and must therefore rely on imports. Algeria produces about one billion liters of milk annually, while consumption amounts to three billion liters.

### 24 FISHING

Fishing is fairly extensive along the coast, but the industry is relatively undeveloped. Sardines, bogue, mackerel, anchovies, and shellfish are caught. The 2003 catch was 142,000 tons, 54% sardines.

### 25 FORESTRY

Only 1.6% of the land area is forested. The mountain ranges contain dense forests of evergreens (evergreen oak, Aleppo pine, and cedar) and deciduous trees, whereas the warmer regions contain large numbers of fruit and palm trees. Algeria is an important producer of cork; other forestry products are firewood, charcoal, and wood for industrial use. Roundwood production was estimated at 7.5 million cu m (94.7 million cu ft) in 2003.

Two-thirds of the French-planted forests in eastern Algeria were burned by French forces during the 1954–62 war. Reforestation was begun on 12,100 hectares (30,000 acres) of unused land in the semiarid region in 1960. By 1964, 25 million trees had been planted: eucalyptus in clay soils, Aleppo pine in calcareous regions, and olive trees. Current reforestation projects include the planting of a "green wall" across Algeria from the Moroccan to the Tunisian frontier to halt the encroachment of the Sahara. During the first half of the 1980s, reforestation proceeded at a rate of 52,000 hectares (128,000 acres) per year, but from 1984 to 1994, deforestation averaged about 45,000 hectares (111,200 acres) per year, so that Algeria now has 10% less forested land than in 1979.

### 26 MINING

In 2000, the government proposed allowing foreign investors to develop mineral deposits held by the national mining companies. The national geologic and mineral research office has identified many mineral deposits. However, they were located in remote areas that lacked infrastructure or government funding for development. With Algeria's proximity to Europe, its major minerals customer, the country's base and precious metals are of interest to foreign investors. Guerrilla activity, though, remains a significant deterrent.

Algeria's phosphate deposits at Djebel Onk, in the northeast, are among the largest in the world, covering about 2,072 sq km (800 sq mi), with an output of 905,000 metric tons in 2003, down from 1.16 million tons in 1998. There are deposits of high-grade iron ore at Ouenza, near the Tunisian border. Production totaled 1.378 million metric tons in 2003; half is exported. Among other mineral production in 2003, zinc concentrate output was 2,796 metric tons, down from 10,452 metric tons in 2000; bentonite, 25,346 metric tons in 2003, up from 22,708 metric in 2000; lead concentrate, 1,105 metric tons in 2002, the last year for which there is any data, according to the US Geological Survey, and up from 818 metric tons in 2000; mercury, 175,00 kg in 2003, down from 215,625 kg, in 2000; crude barite, 45,649 metric tons in 2003, down from 51,925 metric tons in 2000; salt (brine and sea salt),

183,000 metric tons in 2003, up from 182,000 metric tons in 2000; hydraulic lime, estimated at 100,000 metric tons in 2003, up from an estimated 96,000 metric tons, in 2000. Marble, silver, kaolin, sulfur, fuller's earth, and strontium are also mined.

## 27 ENERGY AND POWER

Algeria is an important producer and exporter of oil and gas and supplies a significant portion of Europe's energy requirements. Natural gas and petroleum dominate the economy; in 2003, estimated exports of hydrocarbons were valued at more than 90% of total exports, and around 30% of gross domestic product (GDP). In the 1950s, natural gas was found in the east, near the Libyan border, and at Hassi R'Mel in the Sahara. Algeria's proven natural gas reserves are among the world's largest, totaling an estimated 4.5 trillion cu m (160.4 trillion cu ft) as of end 2004. Algeria produced 82 billion cu m (2.9 trillion cu ft) of natural gas in 2004. A 500-km (310-mi) main pipeline connecting Hassi R'Mel to Arzew (between Oran and Mostaganem) was opened in 1961, and branch lines to Oran and Algiers were completed four years later. Since then, six other pipelines have been constructed, including the first trans-Mediterranean gas pipeline (Transmed) to Europe via Sicily, built at a cost of \$3 billion. The Transmed consists of three segments, linking Algeria, 550 km (342 mi); Tunisia, 370 km (230 mi); and the Mediterranean to Sicily, 154 km (96 mi) underwater. In 2001, Algeria's total LNG export capacity amounted to over 6 billion cu m (212 billion cu ft) per year. The \$2.3-billion Gazoduc Maghreb-Europe pipeline to Spain and Portugal via Morocco began operating in November 1996. Total dry exports of natural gas amounted to 2,066.28 billion cu ft in 2002. Algeria's total natural gas export capacity as of 2001 was 57 billion cu m (2 trillion cu ft).

Oil was discovered at Edjeleh and Hassi Messaoud in 1956 and at Al-Gassi in 1959; by 1969, the Franco-Algeria Cooperative Association (ASCOOP), a petroleum development company, had discovered eight major fields. Proven reserves of crude oil amounted to 11.8 billion barrels as of end 2004; crude oil production averaged 1,933,000 barrels per day in 2004. There are four main pipelines linking the wellheads in the eastern Sahara with Algerian ports and a fifth with the Tunisian port of Sekhira; there are also several branch pipelines. In late 2002, Algeria's total refinery capacity was 450,000 barrels per day. There were four gas liquefaction plants in 2000, three at Arzew and one at Skikda, all operating well below capacity because of disrepair and lack of funds for spare parts. In 2000 Algeria was the world's second-largest exporter of liquefied natural gas (LNG); its exports, which went mainly to Western Europe, accounted for 19% of the world's total.

The Société Nationale pour la Recherche, la Production, le Transport, la Transformation et la Commercialisation des Hydrocarbures (Sonatrach), founded in 1964 as the state-owned petroleum company, handles the distribution and transport of oil. On 24 February 1971, President Boumediene announced the Algerian takeover of controlling interest in all French oil company subsidiaries and the nationalization of all pipelines and natural gas deposits. Holdings of all other foreign petroleum interests in Algeria were nationalized by the end of 1971. Subsequent agreements have generally treated foreign companies as minority partners in Algerian state enterprises. Contracts for sales of natural gas to Western Europe and the United States increased spectacularly

in the 1970s but decreased in the 1980s as world energy prices fell, pushing Algeria into severe debt. By 1991, Sonatrach was reversing its monopolistic policy, and forming joint ventures for new exploration contracts. The company planned to invest \$20 billion through 2004 to develop Algeria's oil and gas fields, focusing on wet gas field development, enhanced oil recovery techniques, pipeline expansion, exploration, and dry gas field development. In April 2000 Sonatrach announced a \$500 million joint venture with Amerada Hess to develop the el-Gassi, el-Agreb, and Zotti oilfields, with the goal of increasing production to 45,000 barrels per day by the end of 2003.

In 2002, net electricity generation was 25.992 billion kWh, of which 95.6% came from fossil fuels, and the rest from hydropower. In the same year, consumption of electricity totaled 24.151 billion kWh. Total capacity in 2002 was 6.4 million kW.

In 1996, Algeria signed a nuclear cooperative agreement with China, which built the two nuclear reactors in Algeria. Algeria claims that these reactors are for research and the peaceful exploitation of nuclear power. Algeria has signed a cooperative agreement with the International Atomic Energy Agency and has opened its reactor facilities to agency inspectors.

## 28 INDUSTRY

The industries of Algeria, which traditionally have been concentrated around Algiers and Oran, have included carpet mills, cement factories, chemical plants, automobile assembly plants, food-processing installations, oil refineries, soap factories, and textile plants. Other major industries have produced bricks and tiles, rolled steel, farm machinery, electrical supplies, machine tools, phosphates, sulfuric acid, paper and cartons, matches, and tobacco products.

Before independence, industry made significant gains. New enterprises were developed in food processing and packaging, textiles, leather, chemicals, metalworking, building materials, and farm machinery. A new large steel plant was built at Annaba, a petroleum refinery at Algiers, a petrochemical complex at Arzew, and a phosphate production center at Djebel Onk, near the Tunisian border. Other industries were set up to produce automobiles, tractors, cement, rubber tires, and ammonia.

French firms were nationalized after independence, between 1962 and 1974. The government put great emphasis on the development of the hydrocarbons sector, including the building of refineries and natural gas liquefaction plants. Algeria contains an estimated 11.8 billion barrels of proven oil reserves, but analysts consider Algeria to be underexplored. As of 2005, Algeria had four oil refineries with a capacity of 450,000 barrels per day. Algeria's crude oil production in 2004 was 1.23 million barrels per day. Algeria is a member of the Organization of the Petroleum Exporting Countries (OPEC), and its crude oil production quota was set at 862,000 barrels per day as of November 2004. Algeria has been pressing to have its OPEC quota raised, as its production capacity is increasing rapidly.

The government has encouraged diversification away from Algeria's heavy reliance on hydrocarbons, although those efforts have not been entirely successful, especially given the increase in oil and natural gas export revenues since 1999. Algeria is considered to be underexplored, and significant oil and natural gas discoveries have been made in recent years, which have increased Al-

geria's proven oil reserves to 11.8 billion barrels, placing it 14th in the world in total oil reserves. Algeria's proven natural gas reserves were 160 trillion cu ft in 2005, the eighth-largest in the world. The state-owned hydrocarbons company, Sonatrach, invested nearly \$20 billion between 1996 and 2000 on new pipelines and extensions. The company's Trans-Maghreb pipeline opened in 1996, supplying Spain and Portugal with natural gas, and Sonatrach substantially increased the capacity of its Trans-Med gas pipeline to Italy. In 2001, Sonatrach undertook a feasibility study on another natural gas pipeline under the Mediterranean to Sicily, the Italian mainland, and southern France; the project could come on-stream by 2008. The Medgaz natural gas pipeline, to be completed in 2008, will link Beni Saf, Algeria, to Almeria, Spain. As of 2005, there was also the possibility of a Trans-Saharan natural gas pipeline, running from Nigeria, across the Sahara, and on to Algeria and the Mediterranean coast. In 1998, Sonatrach issued bonds for the first time, showing the regime's loosening hold on the state-run enterprise. Algeria's oil and natural gas industries increasingly are becoming more open to foreign investors.

The textile and leather industry declined 14.7% in 2001, and 27 state-owned textile companies had gone out of business since 1996, resulting in a loss of 22,000 jobs. Textile manufacturer Group Texmaco, however, was successful as of 2002. It accounted for 30% of the market and had 18,000 employees, although it was operating at 20% capacity in 2002. The textile industry by 2005 was faced with competition from Asia, particularly China.

As of 2004, industry accounted for about 57.4% of the nation's GDP. The hydrocarbons sector (mostly petroleum and natural gas) alone accounted for 30% of GDP in 2005 and over 96% of export revenues. Algerian industry has been in the process of a structural transformation as it moves from a socialist, government-controlled economy to a free-market economy. Consequently, industrial production has fallen as inefficient plants are closed and large oversized industries are scaled back. As of 2002, of the 1,270 state-owned companies, 53% were considered sound after substantial restructuring, 30% were functioning but in poor financial shape, and the remaining 18% were bankrupt or nearly so (approximately 230 companies). The government has spent \$15 billion to restructure industry in the early 2000s. By 2004, the estimated industrial production growth rate stood at 6%.

## 29 SCIENCE AND TECHNOLOGY

Since independence, Algeria has made major technological advances, especially in the steel and petrochemical industries. However, Algeria still has a severe shortage of skilled workers and is heavily dependent on foreign technologies. Scientific training is principally conducted at the Hovari Boumedienne University of Sciences and Technology, founded at Algiers in 1974; the Oran University of Sciences and Technology, founded in 1975; the universities of Annaba (founded in 1975), Blida (founded in 1981), Boumerdes (founded in 1981), Constantine (founded in 1969), Oran Es-senia (founded in 1965), and Tlemcen (founded in 1974); and the Ferhat Abbas-Setif University of Setif (founded in 1978). In 1987–97, science and engineering students accounted for 58% of college and university enrollments. The government's National Bureau of Scientific Research operates 18 research centers in biology; anthropology; oceanography and fisheries; astronomy, astro-

physics, and geophysics; renewable energy; arid zones; technology transfer; and other fields.

In 2002, Algeria's high technology exports totaled \$21 million, 4% of the nation's manufactured exports.

## 30 DOMESTIC TRADE

European trading firms formerly played a major role in the economy; however, many Europeans, fearful of eventual Muslim control, sold their holdings or gave them up in 1961–62. After independence, about one-half of the country's shops closed down, and in 1963, state agencies began taking over nearly all wholesaling and marketing operations. Since 1996, the Algerian government has prioritized the privatization of state-owned enterprises.

The principal cities of the north are the largest trade centers. While most trade is done on a cash or credit basis, some bartering still goes on among the rural dwellers and in the Muslim quarters of cities. In the mountain regions there are local market days or special local fairs for the exchange of products during different seasons.

Normal business hours are 8 AM to noon and 2 or 2:30 to 5:30 or 6 PM, Saturday–Wednesday, and 8 AM to noon on Thursday. Banks are generally open from 9 AM to 3 PM, Monday to Thursday, but some banks close for lunch. Shopping is normally carried out from 8 AM to 12 PM and 2 to 6 PM, Saturday to Thursday. Ramadan hours are shorter.

## 31 FOREIGN TRADE

Crude oil and natural gas account for nearly all of Algeria's export value; industrial equipment and semifinished goods and foodstuffs, especially wheat, dominate the country's imports. Surpluses accrued with the oil and gas price increases beginning in the mid-1970s and continuing through 1985, with the exception of 1978. In 1986, however, because of a severe drop in oil prices, Algeria experienced the first trade deficit since 1978 and the largest ever. The 1986 collapse of oil prices drove the government to implement decentralizing IMF programs in order to stabilize the economy. Algeria was able to register a trade surplus during most of the nineties, except during 1994, after a season of political turmoil. On 30 April 1998, the Algerian government chose not to re-sub-

### Principal Trading Partners – Algeria (2003)

scribe to IMF structural programs. Coupled with low oil prices, this move brought about diminished export revenues, threatening a trade deficit. Rising oil prices during 1999 brought back a trade surplus. Higher oil prices during 2005–06 also increased export earnings and the trade surplus. Average crude oil prices increased by one-third in 2004. Coupled with higher crude production, total export earnings rose to \$34.2 billion in 2004, while the trade surplus increased to \$16.3 billion.

The majority of Algeria's foreign trade continues to be with the European Union (EU) and the United States. The major exports in 2003 included hydrocarbons (98.1% of all exports), semifinished goods (1.3%), and raw materials (0.2%). The major imports were capital goods (28.8% of all imports), food (17.9%), and semifinished goods (15.2%). Algeria's leading markets in 2004 were the United States (21.1% of all exports), Italy (16.1%), and France (10.6%). Algeria's leading suppliers in 2004 were France (32.3% of all imports), Italy (8.8%), and Germany (6.4%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Algeria long had a current-accounts deficit, which before independence was covered by the French government. While the departure of Europeans after independence contributed to a more equitable balance of trade (Europeans had been the chief consumers of foreign goods), it also caused a heavy withdrawal of capital and a decrease in French aid, resulting in a continued deterioration of Algeria's payments position. However, with the continued growth of the petroleum sector, Algeria recorded substantial payments surpluses during the 1970s. In 1986, the fall of oil prices brought about a large deficit and an economic restructuring through the IMF that was intended to help service the country's debt and begin government privatization. In 1991, many import restrictions were abolished, although foreign exchange and external credit access were still restricted. By 1996, Algeria promulgated a liberalized trade regime in which nearly all export restrictions were removed and foreign investment was encouraged.

Debt rescheduling by the Paris Club and other lenders allowed the Bank of Algeria in the late 1990s to increase its reserves of hard currency. Algeria must increase its nonhydrocarbon exports, however, in order to generate enough foreign exchange so that when oil prices are low, it will be able to pay for necessary imports and to service its external debt, which stood at \$24.7 billion in 2001. The external debt was estimated at \$21.9 billion in 2004.

Average crude oil prices increased by one-third in 2004; combined with higher crude production in Algeria, export earnings rose to \$34.2 billion, while the trade surplus increased to \$16.3 billion. In 2005–06, the outlook for the current account remained strong. Algeria's current-account surplus was forecast to be 18.8% of GDP by the end of 2007. From 2000–04, the current account balance averaged 13% of GDP.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank of Algeria, created in December 1962, was the sole bank of issue at that time. Following the separation of the French and Algerian treasuries in late 1962, the Directorate of Treasury and Credit was established as the government's fiscal agent. The state also established cooperative banks. It wasn't until 1996 that private companies were permitted to set up money-changing shops following a directive issued by the Central Bank

initiating open market operations. This opened a field previously restricted to state-owned banks. Bank base interest rates officially fell from 18.5 to 15% during 1996, according to the prime minister, Ahmed Ouyahia. In 1998, local commercial banks cut interest rates on loans to between 10% and 12.5%, down from a range of 18.5–23.5% in 1996. The Bank of Algeria's primary method of financial control was to limit lending, and interest rate cuts were aimed at encouraging growth.

Foreign banks ceased operations after the nationalization of banks in 1963 and were absorbed by three government-owned banks including the Foreign Bank of Algeria, the National Bank of Algeria, and the People's Credit of Algeria. There were also four government banks for financing economic development and a savings institution that offered housing loans. These included the Algerian Development Bank, the Agricultural Bank for Rural Development, and the Maghreb Bank for Investment and Commerce.

In 1997, the banking industry of Algeria included one Central Bank (Banque d'Algerie), six state-owned banks, one public development bank and one private bank (Union Bank, concentrating on merchant banking since 1995). In 1998, five new private banks opened, including one US-based bank.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$16.0 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$26.9 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 3.35%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6%.

The Algiers stock exchange was opened in July 1999. With only three companies listed (a food processing company, a pharmaceutical company, and a hotel) the exchange was in its early stages. Bonds issued in 1998 by Sonatrach, the national oil company, were rated in the Algiers stock exchange on 18 October 1999.

### 3<sup>4</sup> INSURANCE

In 1966, a state monopoly based on the Algerian Company of Insurance (ACI), and the Algerian Insurance of Reinsurance Fund (AIRF), replaced foreign insurance companies. Ten Algerian insurance companies were operating in 2003: the Compagnie Algérienne d'Assurances, the Compagnie Algérienne des Assurances Transports, the Compagnie Centrale de Réassurance, the Agricultural Mutual Fund, the Algerian Fund Insurance for Workers in Education and Culture, the CAGEX Insurance Company, and Guarantee for Exports and the Société Nationale d'Assurances. In 1998, Trust-Algeria, the International Company of Insurance and Reinsurance, and Algerian Insurance were approved as Algerian Insurance Companies. In 2001 (the latest year for which data was available), the state insurer, Société Algérienne d'Assurance (SAA) was the top nonlife and life insurer, with gross written premiums of \$81.3 million and \$6.4 million, respectively. In 2003, total direct premiums written came to \$399 million, of which nonlife premiums totaled \$384 million.

The government sponsors an export credit insurance agency, managed by the Algerian Export Management Company, that is financed by 10% of a tax on imported luxury goods. This has been set up to aid the growth of nonhydrocarbon exports.

### 35 PUBLIC FINANCE

Algeria's fiscal year coincides with the calendar year. Government expenditures increased rapidly from independence until 1986, when IMF adjustment plans attempted to curb spending. Government expenditures have continued to rise, despite austerity measures and the spread of liberalization to the economy. Instead of gaining funds from the sale of state-run industry, the government has had to foreclose companies for a lack of investors. About 60% of total government revenue came from the petroleum and natural gas industries, which are still state-operated.

The US Central Intelligence Agency (CIA) estimated that in 2005 Algeria's central government took in revenues of approximately \$42 billion and had expenditures of \$30.7 billion. Revenues minus expenditures totaled approximately \$11.3 billion. Public debt in 2005 amounted to 14.8% of GDP. Total external debt was \$21.54 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, budgetary central government revenues in billions of dinars were 1,603.2 and expenditures were 1,550.6. The value of revenues in millions of US dollars was \$20, based on an official exchange rate for 2002 of 79.682 as reported by the IMF.

### 36 TAXATION

The most important sources of government revenue have been oil and gas royalties. Algeria's tax system has been streamlined through the replacement of a number of different taxes by a value-added tax, a personal income tax, and a corporate profits tax. The corporation tax was 45% on distributed profits and 20% on reinvested earnings. Many fiscal advantages have been granted to developing and expanding industries, especially to private investment. For established domestic industry and commerce there is a tax on production (a single tax that was passed on to the consumer) and a tax on industrial and commercial activities.

Algeria's 1993 investment code offered foreign investment companies a three-year exemption from VAT, a property tax abatement, lower customs duties, and a two to five year exemption from corporate income taxes. The tax break was meant to stimulate investment in Algeria's export market. After 1993, foreign workers whose monthly salaries exceeded \$1,333 per month paid a 20% income tax, instead of one up to 70%.

### 37 CUSTOMS AND DUTIES

A customs union between Algeria and France allows regulations applicable in the metropole to apply also in Algeria, making Algeria a de facto adherent of GATT. By a special agreement with the European Union (EU), Algerian industrial products are granted duty-free entry into the EU market and agricultural products get seasonal tariff reductions, while Algeria gives reciprocal treatment to EU imports. Algeria has also concluded preferential customs agreements with Tunisia and Morocco and is a founding member of the Arab Maghreb Union (UMA), a trade union composed of Algeria, Libya, Mauritania, Morocco, and Tunisia. The UMA intended to create a free trade zone, but this had not yet come to fruition.

Goods from France are admitted at a preferential rate; secondly, goods from other European Union countries; and thirdly, goods

from countries that grant Algeria most-favored-nation treatment which are subject to a basic standard tariff. Tariffs on imports ranged from 3–40% in 1998, in addition to a value-added tax (VAT) of 17% on most products, although for some products the VAT is 7%. Some imports are also eligible for the *Taxe Spécifique Additionnelle*, ranging from 20–110% and generally applied to luxury goods. As part of its application to join the World Trade Organization, Algeria lowered its rates to bring them within acceptable WTO levels. The government has further abolished the required import licenses. The only imports subject to restriction are firearms, explosives, narcotics, and pork products. Pharmaceuticals marketed in their country of origin may be freely imported.

### 38 FOREIGN INVESTMENT

Under investment codes issued in 1983 and 1986, Algeria's foreign investment regime was quite restrictive. Foreign investment was permitted only in joint ventures with state-owned companies, although repatriation of profits was guaranteed. The economy's main hydrocarbon sector and many others were off limits.

The money and credit law of March 1990 allowed majority foreign-owned joint ventures in almost all sectors except the hydrocarbon sector, electricity production, railroad transport, and telecommunications. The law provided for the safe transfer of capital and terms for international arbitration. The hydrocarbon law of November 1991 allowed foreign firms to exploit existing oil fields in partnership with the state oil firm. The Investment Code of October 1993 did not distinguish between investments made by foreigners or Algerians and granted new investors limited tax exemptions and reductions in duty on imported goods.

In 1995, the Algerian government set up the National Agency of Investment Development (*Agence de Promotion, de Soutien, et de Suivi des Investissements—APSI*) and regional investment promotion agencies to serve as a network of regional one-stop shops to eliminate layers of bureaucracy for investors. In 1996, APSI approved 50 foreign investment projects, including American (2), French (16), Italian (11), Spanish (8), and German (4) investors. As of 2002, 20 foreign-owned businesses had been established and the government set a goal to double this number.

In 1997, foreign direct investment (FDI) was \$260 million and from 1998 to 2000 averaged \$482 million. In 2000, the German firm Henkel acquired 60% of the state detergent and cleaning products firm, ENAD, and an Egyptian company bought a second GSM mobile phone license. In 2001, FDI more than doubled to \$1.196 billion thanks mainly to the privatization and sale of one major state enterprise, the El Hadjar steel complex, SIDER, to the Indian steel firm ISPAT, which acquired 70% ownership. In August 2001, the government reorganized the public sector companies to facilitate investment. The 11 sectoral holding companies into which state economic enterprises (EPEs) had been organized in 1996 were replaced with 28 shareholding management companies and the National Privatization Council was renamed the State Shareholding Council. All sectors were opened to foreign investment in 2001, including the hydrocarbon sector, in which the government put exploratory contracts for particular blocks up for auction.

By 2003, 30 foreign oil and gas companies were working in exploration in Algeria. In 2005, the Algerian parliament adopted a new law to further liberalize the hydrocarbons sector. The law

separates the commercial role of Sonatrach, the state-owned hydrocarbons company, from its previous regulatory and procurement/contracting functions. Sonatrach is now compelled to bid on domestic projects alongside foreign firms: it will no longer be an automatic partner in all projects.

Algeria's stock exchange, established in 1999, remains rudimentary, with only four companies listed as of 2005. As part of the government's ambitious privatization program, 11 other state-owned companies are expected to trade on the stock exchange in the near future.

The total value of investment declarations in 2004 was \$3.5 billion, of which \$2 billion was in nonhydrocarbons areas. There were 105 foreign investment projects in 2004, of which 40 were partnership projects and the rest 100% foreign-owned. Hydrocarbons FDI registered \$1.8 billion in 2003, up from \$671 million in 1999. This amount represented 10% of all FDI inflows in Africa (excluding South Africa).

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

Following independence, Algeria adopted an economic policy favoring a socialist organization of society. Under the Charter of Algiers, the basis of Algerian policy was that the workers themselves were responsible for management, while ownership of the property was maintained by the state. The first stage of development, covering 1967–69, set up a basis for expansion of industry, improvement of agriculture, and training of personnel.

The second four-year plan (1974–77) established a heavy industrial base for the economy and largely completed agricultural reforms. The period 1978–79 was used to consolidate economic gains. In 1979, the government decided to limit oil and gas exports and to decentralize industry away from Algiers in order to build up the country's less developed regions. The new five-year plan for 1980–84 switched the emphasis from heavy to light industry and to neglected social areas, especially housing. The second five-year plan (1985–89) emphasized agriculture and water supply in order to reduce the chronic food deficit, but industry (32%) and social infrastructure (27%) were allotted the largest shares of the proposed total investment. By 1999, the government defined broader national economic policy objectives for diversification and development.

In the early 1980s, Algeria said it would allocate 1% of its gross domestic product (GDP) to aid Third World countries, with about 80% going to other African countries, but Algeria has been chiefly a recipient of aid.

In 1995, Algeria signed a three-year program for debt rescheduling with the International Monetary Fund (IMF), and rescheduled \$13 billion of debt with the Paris Club. These programs resulted in an improved balance of trade, lowered government expenditures, and a government surplus. The government did not renew its programs with the IMF in 1998, saddling the economy with a total debt in 1998 that amounted to \$31 million, and capital expenditures reaching almost 10% of the GDP.

Trade surpluses in the early 2000s led to improvements in Algeria's level of foreign debt. The stock of debt was reduced to \$22.5 billion, or 43% of GDP, by the end of 2001, and to \$21.9 billion in 2004. In fact, in the early 1990s, Algeria's foreign debt was equivalent to 72% of GDP and servicing it absorbed a similar proportion of export revenue. By 2004, foreign debt had dropped to about

one-third that level. Foreign exchange reserves amounted to \$36 billion, triple the stock from 2000. The government adopted a fiscal stimulus plan covering the period 2001–04. By 2005, Algeria's fiscal account was healthy, and was expected to record an average surplus of 11.7% of GDP over 2006–07. Inflation was projected to remain modest (the inflation rate averaged 2.6% over the period 2000–04).

In 2002, Algeria entered into an Association Agreement with the European Union (EU). Continuing privatization and economic and trade liberalization have been key structural reforms. Another long-term priority is addressing the high rate of unemployment. The government in 2005 had increased spending on labor-intensive housing, road, and water projects. In September 2004 the government announced a \$50 billion capital spending package covering the period 2005–09. The country is not free of the violence of the mid-1990s, however, with struggle continuing between Islamists and the army, which controls the government. In October 2005, President Bouteflika's Charter on Peace and National Reconciliation was approved in a referendum, giving Islamist rebels an amnesty and releasing imprisoned opposition party leaders. But it is unclear how effective it will be at healing Algeria's wounds.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

A social insurance system for old age, disability, sickness and death cover all employees and self-employed persons. The program is financed with contributions from employees and employers. Retirement is set at age 60 for men and age 55 for women and veterans, with early retirement available for those in arduous work, mothers, and the disabled. Work injury benefits are available to all employed individuals including technical students, voluntary social security administrators, those undergoing rehabilitation, students, and certain prisoners. Only salaried workers are entitled to unemployment benefits. The law also provides for an employment related family allowance funded by the government and the employer.

The Family Code, based on Islamic principles, effectively treats women as legal minors for life, under the authority of the father, husband, or other male head of the family. The code permits polygamy and proscribes marriage between a Muslim woman and a non-Muslim man while allowing a Muslim man to marry outside the faith. In a court of law, a woman's testimony is not considered as equal to a man's, and women do not have full legal guardianship of their children, requiring the father to sign all official documents.

Women are allowed to work but constitute only 19% of the work force. Traditional Islamic views of the role of women still dominate keeping most women from seeking jobs outside the home. The labor laws prohibit sexual discrimination in the workplace, but this is not enforced. Spousal abuse is a common problem especially in rural areas. Spousal rape is not prohibited by law, and it accounts for an estimated 27% of domestic abuse. Many of the abused women are uneducated and illiterate.

The human rights record remains poor and includes extrajudicial killings, torture, and failure to control abuses by security personnel, including massacres of suspected Islamic militants. In 2004, terrorists also committed numerous abuses in the continuing insurgency. Ethnic tensions between the Arabs and the Ber-

bers, who were the original inhabitants of Algeria, continued. The government created the High Commission for Berber Affairs, which protects and promotes Berber language and culture.

#### 41 HEALTH

The Ministry of Health has overall responsibility for the health sector, although the Ministry of Defense runs some military hospitals. In 1990, Algeria had 284 hospitals with 60,124 beds (2.4 per 1,000 people; as of 1999 this ratio had declined to an estimated 2.1). There were also 1,309 health centers, 510 polyclinics, and 475 maternity hospitals (64 privately owned) in 1990. In 2004 medical personnel numbered 84.6 doctors and 297.8 nurses per 100,000 people. Health care expenditure was estimated at 3.6% of GDP.

Free medical care was introduced in 1974 under a Social Security system that reimburses 80% of private consultations and prescription drugs.

The principal health problems have been tuberculosis, malaria, trachoma, and malnutrition. By 1999, the incidence of tuberculosis was 45 in 100,000. In 2005, the average life expectancy was 73 years, which represented a steady increase. Infant mortality in 2005 was 31 per 1,000 live births. The government is interested in creating public awareness of birth control. As of 2003 an estimated 51% of women ages 15 to 49 were using some form of contraceptive. The total fertility rate decreased to 3.2 in 2000 from 5.0 in 1987. Malnutrition was present in an estimated 18% of all children under the age of five according to the most recent figures available as of 2000. The HIV prevalence among adults in 2004 was only 0.7 per 100 adults. As of 2004, there were approximately 9,100 people living with HIV/AIDS in the country.

Algeria's immunization rates as of 1999 for one-year-old children were: diphtheria, pertussis, and tetanus, 83%; and measles, 83%. In 2000, 94% of the population had access to adequate sanitation.

Algeria's government has developed plans to boost domestic production of pharmaceuticals as well as to remedy a serious shortage of dentists and pharmacists.

#### 42 HOUSING

The need for adequate housing has been a pressing problem for Algeria for several decades. In 1964, the Ministry for Housing and Construction was created to aid in reconstruction and upgrading of damaged and substandard dwellings. The government's 1965 financial reform provided for regularization of ownership and collection of rents from some 500,000 nationalized or sequestered apartments and houses in the major cities. Migration to the coastal cities during the 1960s and 1970s aggravated the housing problem, and in the 1974–77 development plan the government took steps to curb the flow. The 1980–84 plan called for the construction of 450,000 new housing units; the building effort failed to meet the target because of shortages of construction materials. In 1982, the government committed more than \$1.5 billion to prefabricated housing, some of it as part of a program to build "model villages" for workers on state farms or in state-owned enterprises. In 1998, the World Bank offered the nation a loan of US\$150 million for a 10-year program to improve and create low-income urban housing, thus eliminating urban slums.

Despite all these efforts, 2003 reports indicated that the country still needed 1.5 million to 2 million housing units. The average oc-

cupancy rate was at about 7.5 persons per household; with one report indicating that 52% of all households included 15 to 20 members. About half of all housing units are individual houses, with the remaining housing falling into three categories: traditional houses called *haouches*, flats or apartments, and shacks or other marginal arrangements. In 2000, about 94% of the population had access to improved water sources; 73% had access to improved sanitation systems. The government announced plans to build one million new homes by the end of 2009, but observers were skeptical that this plan could be achieved.

#### 43 EDUCATION

Education in Algeria largely continues to follow the pattern laid down during the French administration, but its scope has been greatly extended. Public primary and secondary schools were unified in 1976 and private schools were abolished. Expenditure on education was estimated at 6% of GDP in 1999. The government has given priority to teacher training, technical and scientific programs, as well as adult literary classes.

About 4.2% of all children were involved in preprimary education programs in 2001. The compulsory education program last for 12 years, with most students beginning at age six. Basic education consists of a nine-year program. Students may then choose to continue in general secondary or technical school programs, with each involving three years of study. Education is compulsory through secondary school. Primary school enrollment in 2003 was estimated at about 95%; 96% for boys and 94% for girls. The same year, secondary school enrollment was about 67%; 65% for boys and 69% for girls. It is estimated that about 95% of all students complete their primary education. About 79% progress to secondary levels. The pupil to teacher ratio for primary school was at about 28:1 in 2003. The academic year goes from September to June. The public schools are regulated jointly by the Ministry of Education and the Ministry of Religious Affairs and the study of Islam is a required part of the curriculum. Arabic is the official language although French and Berber are also in widespread usage.

The adult literacy rate for 2004 was estimated at about 69.8%, with 79.5% for males and 60.1% for females. In January 2006, there were over 50 universities and other institutes of higher learning. The University of Algiers (founded in 1909), its affiliated institutes, and other regional universities enrolled 267,142 students in 1996. The universities provide a varied program of instruction that stresses development-related subjects. Many technical colleges also are in operation. Approximately 21% of the adult population were enrolled in tertiary programs in 2003. The National Conference of Universities was created in 2000 to serve as a coordinating body for higher education.

#### 44 LIBRARIES AND MUSEUMS

The largest libraries in Algeria are those of the University of Algiers (over 800,000 volumes) and the National Library (founded in 1835, over 950,000 volumes). In 2005, the National Library (Bibliothèque nationale d'Algérie) had seven annex locations to supplement its main location in Algiers. There also exist several sizeable university collections, including the University of Constantine (208,000 volumes), the University de Mentouri (240,000 volumes), and the University d'Oran Es-Senia (200,000 volumes).

Other collections of size are the Municipal Library in Constantine (25,000 volumes) and the Aubert Library in Oran (26,000 volumes). The Pasteur Institute in Algiers has a special library of over 47,000 volumes, and the Institute of National Studies in Tiaret has a library of 25,000 volumes.

Museums of importance in Algiers include the Bardo National Museum of Prehistory and Ethnography (1928), the National Museum of Fine Arts of Algiers (1930), the National Museum of Antiquities and Islamic Art (1897), and the Museum of the Revolution (1968) with a collection of memorabilia celebrating Algeria's long-fought war of independence against France. Various regional museums are located at Constantine, El Biar (west of Algiers), Oran, Sétif, and Skikda. There is a fine antiquities museum in Cherrhell, a decorative arts museum in Ghardaia Oasis, and a botanical garden in Beni-Abbes. The situation of many of Algeria's cultural treasures has been in doubt because of ongoing anti-Western civil terrorism.

#### 45 MEDIA

In 2003, there were an estimated 69 mainline telephones for every 1,000 people; about 727,000 people were on a waiting list for telephone service installation. The same year, there were approximately 46 mobile phones in use for every 1,000 people. Satellite, cable, and radiotelephone services link Algeria with most other parts of the world.

As of 1999, President Bouteflika has maintained that the media should ultimately be at the service of the state. As such, radio and television remain primarily under government control. Censorship is not considered a rule of law, but jail terms and fines are enforced against those issuing any statements defaming the president, the army, or other government officials.

The country's independent media includes about 43 publications. The seven largest papers had substantial circulations in 2004: *El-Khabar* (circulation 530,000), *Quotidien d'Oran* (195,000), *Liberte* (120,000), *El-Watan* (70,000), *L'Expression* (29,000), *Djazair News* (20,000) and *Chorouk El-Youmi* (9,000). There are two state-owned French-speaking papers, *El-Moudjahid* and *Horizons*, and two state-owned Arab speaking papers, *El-Chaab* and *El-Massa*.

Algeria has approximately 25 radio stations and 46 television stations. Satellite dish antennas are widespread and millions of citizens have access to European and Middle Eastern broadcast stations. In 2003, there were an estimated 244 radios and 114 television sets for every 1,000 people. The Algerian Press Service (APS) and the Algerian News Agency (ANA) are the primary news services.

In 2004 the country had about 897 Internet hosts. In 2003, there were 7.7 personal computers for every 1,000 people and 16 of every 1,000 people had access to the Internet.

#### 46 ORGANIZATIONS

There are foreign and domestic chambers of commerce, industry, and agriculture in the major cities and the country has a national committee of the International Chamber of Commerce. The African Federation of Mines, Energy, Chemical and Allied Trade Unions is an organization of labor unions, seeking to advance the trade union movement by facilitating communication and cooperation among members and representing the interests of members before business organizations and government

agencies. The leading trade union, Union Générale des Travailleurs Algériens (UGTA), sponsors many organizations in Algeria. The "professional trade sectors" affiliated with the UGTA include food, agriculture, construction, teachers, energy, finance, information sciences, light and heavy industry, health social security, and telecommunications. There are some national associations for medical professionals, such as the Algerian Association of Medical Physicists.

The National Union of Algerian Youth (UNJA) was originally established by the National Liberation Front (FLN) in 1969 as the youth wing of the FLN. Since then UNJA has broadened its youth representation and the Algerian National Youth Forum (FNJA) was established to represent other political tendencies. The National Union of Algerian Students (UNEA) and the National League of Algerian Students (LNEA) are active groups of university students. The Government's Ministry of Youth and Sports was established in 1998 and there are other national sports associations, some of which are linked to international associations as well. Other youth NGOs in Algeria include the Federation of Algerian Youth Hostels and the Union of Youth of Segouia El Hamra Río Oro. A scouting movement (Scouts Muslmans Algériens/Algerian Muslim Scouts) is also present.

Red Cross and Red Crescent societies, including one for youth, are active. There is an organization of Amnesty International represented within the country. There are chapters of the Lions Club and Kiwanis International. The Society of St. Vincent De Paul also has members in Algeria.

Learned societies are active in such fields as anthropology, archaeology, geography, history, and various branches of medicine.

#### 47 TOURISM, TRAVEL, AND RECREATION

Visitors need a valid passport and a visa. There are no required vaccinations, although inoculations against typhoid, tetanus, and rabies are recommended. Vaccination against yellow fever is required of those coming from an infected area.

Among popular tourist attractions are the Casbah and Court of the Great Mosque in Algiers, as well as the excellent Mediterranean beaches, Atlas Mountains resorts, and tours of the Sahara Desert. The government has encouraged tourism as an increasingly important source of foreign exchange. In 2003, there were 1,166,287 visitor arrivals. The majority of foreign tourists were from France and Tunisia, with over 192,000 visitor arrivals from those countries. Receipts from tourism came to \$161 million.

The most popular Algerian sport is football (soccer), which is played throughout the country by professionals and amateurs alike. Tennis is widely played as well.

#### 48 FAMOUS ALGERIANS

The most famous Algerian of antiquity was St. Augustine (Aurelius Augustinus, 354–430), a Church father and theologian who was born in eastern Numidia. An important 19th-century figure was Abd-el-Kader ('Abd al-Kadir bin-Muhyi ad-Din al-Hasani, 1808–73), emir of Mascara, who led the resistance against the French invaders from 1830 to 1847. Two early figures in the drive for Algerian independence were Messali Hadj (1898?–1974), who organized several political movements, and Ferhat Abbas (1900–86), who led the first provisional government and was elected first speaker of the National Assembly in 1962. Other important na-

tionalist leaders include Ahmed Ben Bella (b.1916), a founder of the FLN and the first premier of independent Algeria, who, after becoming president in 1963, was overthrown and imprisoned for 15 years (until 1980); Belkacem Krim (1922–70), political leader in Kabilia; Benyoussef Ben Khedda (1922–67), head of the provisional government in 1961–62; and Houari Boumedienne (Muhammad Boukharrouba, 1927–78), who overthrew Ben Bella in 1965 and became president in 1976. Boumedienne's successor as president and FLN leader was Col. Chadli Bendjedid (b.1929).

Two renowned French Algerian writers were playwright Jules Roy (1907–2000) and novelist, playwright, and essayist Albert Camus (1913–60), winner of the Nobel Prize for literature in 1957. Frantz Fanon (b.Martinique, 1925–61), a psychiatrist, writer, and revolutionary, was a leading analyst of colonialism.

#### 49 DEPENDENCIES

Algeria has no territories or colonies.

# ANGOLA

Republic of Angola  
*República de Angola*

**CAPITAL:** Luanda

**FLAG:** The upper half is red, the lower half black; in the center, a five-pointed yellow star and half a yellow cogwheel are crossed by a yellow machete.

**ANTHEM:** *Angola Avanti.*

**MONETARY UNIT:** The Angolan escudo (AE) was the national currency until 1977, when the kwanza (Kw) of 100 lwei replaced it. There are coins of 50 lwei and 1, 2, 5, 10, and 20 kwanza, and notes of 20, 50, 100, 500, and 1,000 kwanza. Kw1 = \$0.01129 (or \$1 = Kw88.6) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of Outbreak of Anti-Portuguese Struggle, 4 February; Victory Day, 27 March; Youth Day, 14 April; Workers' Day, 1 May; Armed Forces Day, 1 August; National Heroes' Day, 17 September; Independence Day, 11 November; Pioneers' Day, 1 December; Anniversary of the Foundation of the MPLA, 10 December; Family Day, 25 December.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Angola is located on the west coast of Africa, south of the equator. Angola is slightly less than twice the size of Texas, with a total area of 1,246,700 sq km (481,353 sq mi), including the exclave of Cabinda (7,270 sq km/2,810 sq mi), which is surrounded by the Democratic Republic of the Congo (DROC—formerly Zaire) and the Republic of the Congo (ROC). Angola proper extends 1,758 km (1,092 mi) SE–NW and 1,491 km (926 mi) NE–SW; Cabinda extends 166 km (103 mi) NNE–SSW and 62 km (39 mi) ESE–WNW. Angola proper is bounded on the N and NE by the DROC, on the SE by Zambia, on the S by Namibia (South West Africa), and on the W by the Atlantic Ocean. Its total boundary length, including Cabinda's, is 5,198 km (3,233 mi).

## <sup>2</sup> TOPOGRAPHY

Topographically, Angola consists mainly of broad tablelands above 1,000 m (3,300 ft) in altitude; a high plateau (planalto) in the center and south ranges up to 2,400 m (7,900 ft). The highest point in Angola is Mt. Moco, at 2,620 m (8,596 ft), in the Huambo region; other major peaks are Mt. Mejo (2,583 m/8,474 ft), in the Benguela region, and Mt. Vavéle (2,479 m/8,133 ft), in Cuanza Sul.

Rivers are numerous, but few are navigable. There are three types of rivers in Angola: constantly fed rivers (such as the Zaire River), seasonally fed rivers, and temporary rivers and streams. Only the Cuanza, in central Angola, and the Zaire, in the north, are navigable by boats of significant size.

## <sup>3</sup> CLIMATE

Angola's climate varies considerably from the coast to the central plateau and even between the north coast and the south coast. The north, from Cabinda to Ambriz, has a damp, tropical climate. The zone that begins a little to the north of Luanda and extends to

Namibe, the Malanje region, and the eastern strip have a moderate tropical climate. Damp conditions prevail south of Namibe, dry conditions in the central plateau zone, and a desert climate in the southern strip between the plateau and the frontier with Namibia. There are two seasons: a dry, cool season from June to late September, and a rainy, hot season from October to April or May. The average temperature is 20°C (68°F); temperatures are warmer along the coast and cooler on the central plateau. The Benguela Current makes the coastal regions arid or semiarid. The annual rainfall is only 5 cm (2 in) at Namibe, 34 cm (13 in) at Luanda, and as high as 150 cm (59 in) in the northeast.

## <sup>4</sup> FLORA AND FAUNA

Thick forests (especially in Cabinda and in the Uíge area in the north) cover the wet regions, and in the drier areas there is a thinner savanna vegetation. Fauna includes the lion, impala, hyena, hippopotamus, rhinoceros, and elephant. There are thousands of types of birds and a wide variety of insects.

## <sup>5</sup> ENVIRONMENT

Long-standing environmental problems in Angola have been aggravated by a 30-year war. The main problems are land abuse, desertification, loss of forests, and impure water. The productivity of the land is continually threatened by drought and soil erosion, which contributes to water pollution and deposits silt in rivers and dams.

The cutting of tropical rain forests for international timber sale and domestic use as fuel contributes to the destruction of the land. Angola's forests and woodland declined 3.1% between 1983 and 1993. Between 1990–2000, a further decline of 0.2% was reported. In 2003, about 6.6% of the total land area was protected, including the Quicama National Park. In 2002, improved water sources

were available to 70% of the urban population and 40% of rural dwellers.

Endangered species in Angola include the black-faced impala, three species of turtle (green, olive ridley, and leatherback), the giant sable antelope, the African slender-snouted (or long-snouted) crocodile, the African elephant, Vernay's climbing monkey, and the black rhinoceros. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 11 types of mammals, 20 species of birds, 4 types of reptiles, 9 species of fish, 5 types of mollusks, and 26 species of plants.

## **6** POPULATION

The population of Angola in 2005 was estimated by the United Nations (UN) at 15,375,000, which placed it at number 61 in population among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.6%. This relatively high rate, which the government viewed as satisfactory, is due in part to the low rate of contraceptive use (about 4.5%) in country. The projected population for the year 2025 was 25,876,000. The population density was 12 per sq km (32 per sq mi).

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.92%. The capital city, Luanda, had a population of 2,623,000 in that year. Other principal cities are Huambo (population about 400,000), Benguela, Lobito, Cabinda, Malanje, and Lubango (population about 136,000).

The prevalence of HIV/AIDS has had a significant impact on the population of Angola. The UN estimated that 5.5% of adults between the ages of 15–49 were living with HIV/AIDS in 2001, and that the number was increasing rapidly. In addition, years of civil conflict have had significant impact on the populace, including the creation of one million internally displaced persons and refugees. Life expectancy in Angola is an average of 41 years.

## **7** MIGRATION

From the 1960s until the mid-1990s, Angola was ravaged by civil war, with terrible effects on the Angolan population and social structure. Although fighting stopped in 1994, at the beginning of 1997 there were still an estimated 200,000 Angolan refugees in the Democratic Republic of the Congo (DROC); 96,000 Angolan refugees in Zambia; 12,000 refugees in the Republic of the Congo; 1,000 refugees in Namibia; and 15,000 Angolan refugees in 15 other countries. As of May 1997, there were still 1.2 million Angolans displaced within their country as a result of the civil war. By June 1996, 74,000 Angolan refugees had returned to their country. However, with an upsurge in the fighting again between May 1998 and June 1999, some 100,000 refugees fled the country once again. The Angolan repatriation operation of the United Nations High Commissioner for Refugees (UNHCR) was suspended in September 1998. However, by June 2002 UNHCR had directly repatriated 45,000 Angolans and another 124,000 had returned on their own. By October 2005 another 40,000 Angolans were repatriated from Zambia. This was more than half the total Angolan refugee

population living in camps and settlements in Zambia and more than double the number that returned from Zambia in 2004, the UN reports. Besides Zambia major countries of asylum for Angolans in 2004 were the Democratic Republic of the Congo, Namibia, and South Africa.

In 2003, there were 450,000 internally displaced persons (IDP) within the country. Despite internal conflict, Angola still hosted some 105,145 refugees as of 2004. In 2005, the net migration rate was estimated as 0.28 migrants per 1,000 population. The government views the migration levels as satisfactory.

## **8** ETHNIC GROUPS

The overwhelming majority of the population is Bantu, divided into a number of ethnolinguistic groupings. The main ones are the Ovimbundu, constituting some 37% of the population in 2005, the Kimbundu, totaling 25% of the population, and the Bakongo with 13%.

The mestiço (mixed European and Native African) make up about 2% of the population. Since the mestiços are generally better educated than the black population, they exercise influence in government disproportionate to their numbers. Europeans, mostly of Portuguese extraction, constitute 1% of the population; other varied groups account for the remaining 22%.

## **9** LANGUAGES

Portuguese is the official language, although Bantu and other African languages (and their dialects) are used at the local level.

## **10** RELIGIONS

Christianity is the primary religion, with Roman Catholicism being the largest denomination. An estimated five million people are Roman Catholic. About 3–5 million people are of Protestant denominations; the largest of which include Methodists, Baptists, Congregationalists (United Church of Christ), and Assemblies of God. Almost half the population (47%) follow African traditional beliefs either exclusively or in conjunction with other faiths. The largest syncretic religious group is the Kimbanguist Church, whose followers believe that the mid-20th century Congolese pastor Joseph Kimbangu was a prophet. Communities in rural areas of the country practice animism and other indigenous religions. There is also a small Islamic community. There are very few declared atheists in the country.

The constitution provides for freedom of religion and this right is generally respected in practice. However, there is still a colonial-era law in effect banning non-Christian religions. Though this law has generally not been enforced, the minister of justice announced in 2004 that the law could be enforced against religious groups linked to public disturbances or acts of terrorism. Religious groups with a outreach for political and social change include the Inter-Church Committee for Peace in Angola and the Catholic Pro-Peace movement.

## **11** TRANSPORTATION

According to Portuguese estimates, there were 72,323 km (44,939 mi) of roads at the time of independence (1975), of which only 8,371 km (5,201 mi) were paved, all-weather highways. In the mid-1980s, these figures had increased to perhaps 80,000 km (50,000 mi), but by 2002 had fallen back to 76,626 km (47,615 mi),

LOCATION: Angola proper: 5°49' to 18°3' s; 11°40' to 24°5' E. Cabinda: 4°21' to 5°46' s; 12°2' to 13°5' E. BOUNDARY LENGTHS: Democratic Rep. of the Congo, 2,291 kilometers (1,423 miles); Zambia, 1,110 kilometers (690 miles); Namibia, 1,376 kilometers (855 miles); Atlantic coastline, 1,600 kilometers (995 miles). Cabinda: Democratic Rep. of the Congo, 220 kilometers (136 miles); Republic of the Congo, 201 kilometers (125 miles). TERRITORIAL SEA LIMIT: 20 miles.

of which 19,156 km (11,904 mi) were paved. In 2003, there were 40,000 passenger cars and 63,400 commercial vehicles.

The rail network had a total extension in 2004 of 2,761 km (1,717 mi), of which 2,638 km (1,641 mi) were 1.067-m and 123 km (76.5 mi) were 0.600-m (narrow) gauge track. There was lim-

ited trackage in use because land mines were still in place from the civil war. There are three main railway lines, the Luando, Namibe, and Benguela railways, all of which experienced service disruptions as a result of the civil war. The Luanda railway connects the national capital with the provincial capital of Malanje in the north.

The Namibe railway, which theoretically runs from Angola's port of Namibe to the provincial capital of Menongue in the south, formerly hauled an average of six million tons of iron ore a year from the Kassinga mines. The Benguela railway was formerly the main exit route for DROC and Zambian copper, extending through the country from the port of Benguela to the border with the DROC. As of 1991, service had resumed between Lobito and Huambo. By mid-1992, normal passenger traffic resumed from Lobito to Ganda. East of Ganda, however, the route was still severely damaged, with at least 75 bridges in serious disrepair. The Southern African Development Coordination Conference could not obtain the estimated \$600 million in funds needed to repair the entire line, so a modest partial repair of the section from Lobito to Kuito was approved, for an estimated cost of \$17 million. Angola has 1,300 km of navigable waterways. The merchant marine had 4 ships of 1,000 GRT or over in 2005, totaling 26,123 GRT.

Angola had an estimated total of 43 airports as of 2004, of which 31 had paved runways as of 2005. There is an international airport at Luanda. International and domestic services are maintained by Transportes Aéreos de Angola (TAAG), Air France, Air Namibe, Sabena, South African Airways, TAP (Portugal) and several regional carriers. In 2003, domestic and international carriers carried 198,000 passengers. There are airstrips for domestic transport at Benguela, Cabinda, Huambo, Namibe, and Catumbela (near Lobito).

## 12 HISTORY

Angola was inhabited first by people of the Khoisan group (Bushmen), and then by various Bantu peoples from farther north as well as east between 1300 and 1600. By the 15th century, several African kingdoms had developed in the area; the most notable included the kingdoms of the Kongo and Mbundu peoples. The Portuguese arrived on the coast in the late 15th century, and Luanda was founded as a trading settlement in 1575. The Portuguese developed trade with African nations, particularly with the Mbundu, whose ruler was called the ngola (from which the name of Angola comes). The slave trade assumed paramount importance during the 17th century, when slaves were carried to Portuguese plantations in Brazil. From the late 16th through the mid-19th century, Angola may have provided the New World with as many as two million slaves.

Slavery was formally abolished (with a 20-year grace period) in 1836, although under Portuguese rule forced labor was common until the early 1950s. Trade in other commodities was needed to replace the slave trade; hence, between 1870 and 1903 the Portuguese claimed control over more and more of the interior of the country. To strengthen their control, the Portuguese began building the Benguela railway in 1902. European domination continued until 1951, when Angola's status changed into an overseas province of Portugal. Increasing numbers of Portuguese settlers came to Angola, and by 1960 there were about 160,000 Europeans in the country.

Organized armed resistance to Portuguese rule began on 4 February 1961, when urban partisans of the Popular Movement for the Liberation of Angola (MPLA) attacked the São Paulo fortress and police headquarters in Luanda. Within six weeks, the war had been extended to the north by the rural guerrillas of another organization, the Union of Angolan Peoples, which later became the

National Front for the Liberation of Angola (FNLA). The FNLA, headed by Holden Roberto, set up a revolutionary government-in-exile in Zaire on 3 April 1962. A third movement, the National Union for the Total Independence of Angola (UNITA), headed by Jonas Savimbi, came into being as the consequence of a split in the government-in-exile, of which Savimbi had been foreign minister. All three movements were divided by ideology, ethnic considerations, and personal rivalries; they were also active militarily in 1974 when the Portuguese decided to put an end to their African empire after the coup in Portugal on 25 April. After negotiations with FNLA, MPLA, and UNITA leaders, the Portuguese agreed on 15 January 1975 to grant complete independence to Angola on 11 November 1975. The agreement also established a coalition government headed by a three-man presidential council including MPLA leader António Agostinho Neto, Roberto, and Savimbi. As independence day approached, however, the coalition government fell apart; mediation attempts by other African countries failed.

Thus, at the dawn of Angola's independence, each of three rival organizations had its own army and sphere of influence. The FNLA primarily represented the Kongo people; it was based in Zaire and it received financial support mainly from China and the United States. Together UNITA and the FNLA established the Popular Democratic Republic of Angola (with its capital at Huambo); this was sustained with US funds, South African troops, and some white mercenaries (mostly former commandos in the Portuguese armed forces). UNITA had the support of the Ovimbundu, the largest ethnic group in Angola. The MPLA, a Marxist-oriented party, drew social support from mestiços in Luanda and other urban areas and from the Mbundu people. It received military as well as financial assistance from the USSR and from some 15,000 Cuban soldiers. The MPLA and Cuban forces soon seized the initiative, and by mid-February 1976 the FNLA and UNITA strongholds had fallen. On 11 February, the OAU formally recognized the MPLA government in Luanda as the legitimate government of Angola. South African troops subsequently withdrew, but the Cuban forces remained to consolidate the MPLA's control over the country and provide technical assistance. By 1982 there were 18,000 Cuban troops in Angola, with the number reportedly rising to 25,000 during the first half of 1983 and to 30,000 in late 1986.

A coup attempt on 27 May 1977 by an MPLA faction opposed to the Cuban involvement was suppressed and followed by a massive purge of the party. Activist groups were reined in, and the organization became more centralized. Meanwhile, UNITA, which had never been rooted out of southern Angola, began to regroup. Despite the Cuban troops and Soviet-bloc military assistance, the MPLA government remained vulnerable to the UNITA insurgency, operating from the southern Angolan countryside and from Namibia. Implicated in this conflict was the government of South Africa, whose continual incursions into southern Angola in the late 1970s and early 1980s were aimed chiefly at the forces of the South West Africa People's Organization (SWAPO), who were using Angola as a base in their bid to force South Africa to give up Namibia. By 1983, South African soldiers were said to be permanently stationed in southern Angola; in December, South Africa launched a major offensive in the region. In addition to harassing SWAPO, South Africa was continuing to provide supplies to UNI-

TA. The Angolan government resisted efforts by the United States to secure the withdrawal of Cuban troops in return for Namibian independence and a South African pullback.

Under an agreement brokered by the United States, South African troops withdrew from southern Angola in 1985 but continued to raid SWAPO bases there and to supply military aid to UNITA, including air support. In 1986, the United States sent about \$15 million in military aid to UNITA, reportedly through Zaire.

Fighting escalated in 1987 and 1988 even as negotiations for a settlement progressed. An Angolan settlement became entangled with the resolution of civil war in and the independence of Namibia. A controversial battle at Cuito Cuanavale in 1988, at which South African and Angolan/Cuban forces were stalemated, led to a South African willingness to agree to end its involvement in Angola and eventually to withdraw from Namibia. Included in the settlement was the Cuban commitment to a phased withdrawal of its military forces from Angola by mid-1991.

Those two agreements, signed on 22 December 1988 in New York by Angola, South Africa, and Cuba, also included a pledge that the signatories would not permit their territories to be used "by any state, organization, or person in connection with any acts of war, aggression, or violence against the territorial integrity...of any state of southwestern Africa." This meant that South Africa would be prohibited from aiding UNITA and Angola would remove the ANC's training bases.

All the major parties had been brought to the conclusion that a settlement was better than a prolongation of the fighting. The Soviet Union wanted to disentangle itself from Angola. The administration of US president Ronald Reagan wanted to take the lead in a successful resolution, and its Assistant Secretary of State for African Affairs, Chester A. Crocker, took the lead in the negotiations.

But as settlement in Namibia was moving forward, it proved much harder to bring the Angolan government and UNITA to terms. At a summit at Gbadolite involving 19 African leaders, MPLA Leader José Edvardo dos Santos and Savimbi shook hands publicly and endorsed the "Gbadolite Declaration" (cease-fire and reconciliation plan) on 22 June 1989. But from the start, the terms were disputed and swiftly unraveled. The parties returned to the battlefield.

Yet, the powers began to scale back their support. The relaxation of cold war tensions provided the basis for contacts between the warring parties. Progress moved in fits and starts and in April 1991, Savimbi and dos Santos initialed an agreement that led to the establishment of a UN-supervised cease-fire and a process of national reconciliation.

Tension increased when UNITA took de facto control of several provinces, and its generals were withdrawn from the officially "merged" national army. Fighting broke out in Luanda in October and more than 1,000 were killed in a week. UNITA gained control of 75% of the country. Its refusal to accept UN-brokered cease-fire terms agreed to by the government in May led to a Security Council resolution on 1 June 1993, condemning unanimously UNITA for endangering the peace process and to US recognition of the Angolan government on 19 May. In 1994, it was estimated that 1,000 were dying every day in the fighting.

On 20 November 1994, the Lusaka Protocol was signed, promising a new, if tenuous, era of peace in Angola. The third peace effort between the opposing groups, it was the first to guaran-

tee a share of power to UNITA and the first to be supported by over 6,000 armed UN peacekeepers. Demobilizations of fighters were suspended and renewed as new offensives broke out and were halted. In 1995, the international community imposed sanctions against UNITA, though several governments have violated them, including African countries serving as arms transshipment points. In September 1995, the United States pledged \$190 million to support Angolan reconstruction and development at the Brussels Roundtable.

In June 1997, the government and UNITA found themselves involved on opposite sides of the Zaire civil war (now the Democratic Republic of the Congo—DROC). UNITA supported its ally, President Mobutu Sese Seko, while the government backed Laurent Kabila. Following Kabila's victory in May 1997, and subsequent to the 1998 invasion of DROC by Rwanda and Uganda, dos Santos joined other SADC leaders in providing military support to the Kabila government. By July 1999, all sides at war had signed the Lusaka Accords leading to an eventual withdrawal of most foreign troops by 2003.

In Angola, full-scale war resumed as the government launched offensives in December 1998, and again in March 1999. In February 1999, the UN Security Council voted to end its peacekeeping operations after Secretary-General Kofi Annan declared there was no longer any hope of carrying out the 1994 Lusaka peace agreement. In August 1999, the Office for Coordination of Human Affairs estimated 2.6 million persons were internally displaced in Angola. The following month, Human Rights Watch released a 200-page report detailing how the UN deliberately overlooked evidence showing rearmament and retraining of soldiers by both sides in breach of the 1994 accords. In October 1999, UNITA's main headquarters at Bailundo and Andulo had fallen, and in February 2000, the Fowler report was issued on strengthening UN sanctions against UNITA.

In February 2002, prospects for peace changed dramatically when the army announced that it had killed Savimbi in an attack in southeastern Angola. In addition, the death from illness of Savimbi's second-in-command, General Antonio, further weakened UNITA's military capacity. In March 2002 UNITA commanders issued a joint communiqué with the Angolan army (FAA) confirming a cessation of hostilities and reiterating unequivocal support for a political settlement based on the 1994 Lusaka Peace Accord. A peace accord between the government and UNITA followed in April.

As disarmament, demobilization and reintegration of the armed forces, the repatriation of refugees, and the arduous task of rebuilding the country got underway, dos Santos said he would not seek reelection in the elections scheduled for late 2003–early 2004. However, his departure depended on a successor who could be trusted not to prosecute him for human rights abuses and large-scale diversion of state funds. He may choose a hardliner to succeed him, who will permit dos Santos to run a shadow government. Yet another option for dos Santos would be to remain in power—for one extra term, or for as long as possible. To seek either option, he could cite difficulties arising from Angola's tortuous postwar reconstruction, the demilitarization of society, and the integration of former militias into the national army. The next elections were scheduled for September 2006.

### **1<sup>3</sup> GOVERNMENT**

The constitution of 1975, amended in 1976 and 1980, was promulgated and revised by the MPLA. The president of the republic is both chief of state and head of government. He appoints and leads the council of ministers. In 1980, a 223-member National People's Assembly, indirectly elected, replaced the Council of the Revolution as the supreme organ of the state. In January 1987, the Assembly was enlarged to 289 members, and later reduced to 220. In 2006, there were 220 members elected by proportional vote to four-year terms.

A transitional government was established in December 1992 dominated by the MPLA. UNITA held six cabinet posts, and four other parties were also represented. In 1997, the MPLA and UNITA reached an agreement that allowed UNITA to participate in a Government of National Unity and Reconciliation. With the ruling party's approval, UNITA would nominate candidates for four ministerial positions: Trade, Geology and Mines, Health, and Hotels and Tourism. UNITA members would also occupy a number of deputy ministerial, governor, deputy governor, and ambassadorial posts. In early 1997, 70 elected UNITA deputies assumed their seats in the National Assembly, and Jonas Savimbi assumed the role of special advisor to President José Eduardo dos Santos.

The resumption of war in 1998 all but doomed this arrangement, and rendered the National Assembly nominally functional. In reality, it had little independence and did not have oversight over presidential appointments or the ability to initiate legislation. In 1999, dos Santos abolished the post of prime minister, vesting these powers in the director of his own office. He also created a parallel ministry of defense within the presidency.

The civil war officially ended in August 2002, after Jonas Savimbi died in a gun duel with government forces in February and UNITA signed a cease-fire agreement in April. In December 2002, Fernando da Piedade Dias dos Santos Nando was appointed prime minister, though the position had very little real power. Elections were slated for 2006, but they were likely to be constrained by the poor state of roads and railways. A postponement was likely to allow more progress on the clearing of land mines, infrastructure development, and the return and resettlement of refugees.

### **1<sup>4</sup> POLITICAL PARTIES**

Until 1974, the Portuguese suppressed movements and political parties that stood for self-determination and independence. The three leading political organizations at independence were the Popular Movement for the Liberation of Angola (Movimento Popular de Libertação de Angola—MPLA), founded in 1956; the National Front for the Liberation of Angola (Frente Nacional de Libertação de Angola—FNLA), founded in 1962; and the National Union for the Total Independence of Angola (União Nacional para a Independência Total de Angola—UNITA), founded in 1966. The victory of the MPLA and Cuban forces brought recognition to the MPLA government by the OAU and by most non-African countries. The MPLA-Workers' Party (MPLA-Partido de Trabalho, or MPLA-PT), a Marxist-Leninist vanguard party, was created in December 1977. UNITA remained in de facto control of part of the country, while the remnants of the FNLA continued

low-level guerrilla activity in the northwest, as did the Front for the Liberation of the Cabinda Enclave.

Some 18 parties and 11 presidential candidates contested the 1992 elections. In the presidential contest, the MPLA's Dos Santos won 49.6% of the presidential vote and UNITA's Savimbi got 40.1%, requiring a runoff. Though international observers considered the elections reasonably free and fair, Savimbi repudiated the results and refused to participate in a second round. The contest was regarded as generally free and fair however; the MPLA won 54% of the votes and 129 seats, while UNITA took 34% of the votes and 70 seats. Also represented were the Angolan Democratic Forum (FDA), the Democratic Renewal Party (PRD), and the Angola Youth Worker, Peasant Alliance Party (PAJOCA). Separatist groups in Cabinda, such as the Frente Nacional de Libertação do Enclave de Cabinda (FLEC) and the National Union for the Liberation of Cabinda (UNLC) did not take part in the national elections. They continue to wage a low-level armed struggle for the independence of oil-rich Cabinda province.

Opposition parties are extremely weak and fractured, many with little apparent influence in the National Assembly. Some—the UNITA Renovada is one example—have formed working relationships with the MPLA. Such arrangements could well strengthen the ruling party's hands vis-a-vis small splinter groups; but they could also create opportunities for new opposition parties to spring up and find their feet. New elections were expected in September 2006.

### **1<sup>5</sup> LOCAL GOVERNMENT**

Angola consists of 18 provinces. Cabinda is separated from the others. The provinces are divided into districts and communes. The communes are led by commissioners who are appointed by the president on the recommendation of the MPLA-PT.

Provincial legislatures consisting of 55–85 members were created in 1980. In 1986, these legislatures were expanded up to 100 members each. In the 1992 elections, MPLA carried 14 of the provinces to UNITA's four. The civil war severely disrupted the performance of local government, and for many years, severed ties between Luanda and the outlying provinces.

### **1<sup>6</sup> JUDICIAL SYSTEM**

The legal system is based on Portuguese civil law system and customary law, recently modified to accommodate political pluralism and increased use of free markets. Prior to independence, Portuguese civil and military law was applied by municipal courts, labor courts, ordinary courts, and administrative tribunals; final appeal was to the Metropolitan High Court in Lisbon. A 1978 law declared that people's courts with working class representatives would be courts of first instance. It also made provisions for criminal, police, and labor courts with lay judges whose voices would be equal to those of professional judges.

The judicial system includes municipal and provincial courts at the trial level and a Supreme Court at the appellate level. Municipal court judges are usually laymen. In theory, the Ministry of Justice administers provincial courts located in each of the 18 provincial capitals. The Supreme Court nominates provincial court judges. The judge of the provincial court, along with two laymen, acts as a jury.

In 1991, the constitution was amended to guarantee an independent judiciary. In practice, however, the president appoints the 16 Supreme Court judges for life upon recommendation of an association of magistrates, and he appoints the attorney general. Confirmation by the General Assembly is not required.

Several issues confront the legal system. Many of the seats on the Supreme Court remain vacant, and a Constitutional Court, authorized by law in 1992, has not yet been established. In addition, the courts were crippled by the war and are perceived as ineffective and untrustworthy by the few who have access to it. The system lacks the resources and independence to play an effective role and the legal framework is obsolete. Much of the criminal and commercial code reflects the colonial era with modifications from the Marxist era.

## 17 ARMED FORCES

Defense responsibilities are vested in the Armed Popular Forces for the Liberation of Angola (Forças Armadas Populares de Libertação de Angola—FAPLA), which as of 2005, had 108,400 active personnel, divided into the Army, Navy, Air Force/Air Defense Force, and territorial troops (a militia). In 2005, FAPLA had a total of 90,000 active personnel of which the Army had 100,000 members, whose major equipment included over 300 main battle tanks, 600 reconnaissance vehicles, over 250 armored infantry fighting vehicles, 170 armored personnel carriers and more than 1,396 artillery pieces. The Navy had an estimated 2,400 personnel whose major naval units consisted of nine patrol/coastal vessels. The Air Force /Air Defense Forces had 6,000 personnel and 90 combat capable aircraft, including 22 fighters, 59 fighter ground attack aircraft and 16 attack helicopters. The defense budget in 2005 totaled \$1.16 billion.

## 18 INTERNATIONAL COOPERATION

Angola, a United Nations member since 1 December 1976, participates in ECA and all the nonregional specialized agencies such as FAO, IAEA, IMF, ILO, UNESCO, UNIDO, WHO, and IFC; the nation is a member of the WTO (1996) and the World Bank. Angola also participates in the African Development Bank, G-77, the ACP Group, Interpol, the New Partnership for Africa's Development (NEPAD), and the African Union. It is one of 14 countries in the SADC. Angola has observer status in the OAS and CEMA. It is also a participant of COMESA. As a result of offshore oil discoveries in the Gulf of Guinea, Angola has recently strengthened cooperation with Equatorial Guinea and São Tomé and Príncipe. Angola promotes the revival of the Community of Portuguese-Speaking Countries (CPLP). Angola is part of the Nonaligned Movement. In environmental cooperation, Angola is part of the Convention on Biological Diversity, the Montréal Protocol, MARPOL, and the UN conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Angola is a potentially rich country of abundant natural resources, a surplus-producing agricultural sector, and a sizable manufacturing potential. This promise has remained unfulfilled due to the effects of the war for independence and a 27-year-long civil war that only ended in April 2002 when the army signed a peace agreement with the UNITA rebels. With the end of the war Angola has be-

gan to score astounding economic growth rates. In 2004 Angola's GDP grew by 12.2% and in 2005 the growth rate was 19.1%. This growth is expected to continue with heavy flow of foreign direct investments into the oil and mining sectors.

Having both temperate and tropical zones, Angola had the potential for producing a wide variety of agricultural products. Prior to the outbreak of hostilities, Angola produced major surpluses of coffee, sisal, cotton, and maize. Cassava was the staple food crop and the leader, though consumed almost entirely domestically, in terms of volume of agricultural output. The civil war resulted in famine conditions in many parts of Angola, especially during the 1990s. Although the civil war ended in 2002, farmers have been reluctant to return to their farms, and the country is littered with land mines. As such, food must be imported.

Petroleum production and diamond mining have led Angola's industrial sector. Economists estimated that Angola's alluvial reserves of diamonds totaled between 40 and 130 million carats. In addition, there were untapped diamond reserves in volcanic pipes called kimberlites. Angola's six known kimberlite pipes, among the ten largest on earth, held an estimated 180 million carats worth several billion dollars. Diamond production (official and unofficial) was estimated to be worth \$1 billion per year in 2002.

The petroleum sector benefited from major investments, totaling over \$2 billion since 1987, and from a relative immunity from the civil war. Producing around 980,000 barrels a day in 2004, up from 950,000 barrels a day in 2002, Angola was the second-largest oil producer in sub-Saharan Africa. Crude oil accounted for 90% of total exports, more than 80% of government revenues, and 45% of the country's GDP. Known recoverable reserves were estimated to total several billion barrels, but Angola was not a member of OPEC at the time. In 2000, Angola was one of three countries to receive the largest amount of global and US foreign investment to the sub-Saharan region (the other two were Nigeria and South Africa). Inflation, always a problem, ran at approximately 44% in 2004 down from a high of 150% in 2001. The IMF was critical of the government's economic policy on a number of aspects, such as persistent opacity and uncertainty in the government's accounts, lack of progress on structural reforms, failure to implement policies to deal with systematically with poverty, and corruption in the management of oil revenues. The IMF recommended a slate of reforms, such as increasing foreign exchange reserves and encouraging a more transparent accounting of government spending. In 2005 the IMF gave some credit to the government's handling of the economy, particularly the sustained progress in lowering inflation and improved transparency in government financial accounting.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Angola's gross domestic product (GDP) was estimated at \$27.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,500. The annual growth rate of GDP was estimated at 14.1%. It was estimated that

agriculture accounted for 8% of GDP, industry 67%, and services 25%.

Foreign aid receipts amounted to \$499 million or about \$37 per capita and accounted for approximately 4.6% of the gross national income (GNI).

The World Bank reports that in 1990 household consumption in Angola totaled \$3.67 billion or about \$272 per capita based on a GDP of \$13.8 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1980 to 1990 household consumption grew at an average annual rate of -0.1%. It was estimated that in 2003 about 70% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, the Angolan workforce was estimated at 5.58 million. As of 2003, around 85% of the workforce was still engaged in agriculture, while the industry and services sectors together accounted for the remaining 15%. More recent employment figures are not currently available. In 2001, it was estimated that more than half of the population was unemployed or underemployed.

The 1991 constitution recognizes the right for Angolans to form unions, bargain collectively, and to strike. However, these rights are not respected in practice. While strikes are permitted by law, lockouts and the occupation of places of employment by workers are prohibited. Non-striking workers are also protected under the law. Armed forces personnel, firefighters, prison workers and police are prohibited from striking. Compulsory labor by children is also prohibited.

The government has established a 40-hour workweek, along with minimum health and safety standards, including 26 hours of rest per week. However, inadequate resources have prevented the government from enforcing these standards. The minimum working age is 14, but the government has been unable to enforce this standard. Although the legal minimum wage in 2005 was \$60 per month, most wage earners must hold a second job, or rely on the informal economy, subsistence agriculture, or income from abroad in order to survive.

## 2<sup>2</sup> AGRICULTURE

Agriculture has long been the backbone of the Angolan economy. Even though an abundance of arable land is available, only about 2.6% is cultivated. Agriculture engages about 85% of the population but accounts for 9% of GDP. Diverse climatic conditions favor a wide variety of crops, and there is also considerable irrigation potential. Coffee, primarily of the robust variety, at one time made Angola the world's fourth-largest producer, but during the civil war almost all the main plantations were abandoned, and crop disease set in. Moreover, the widespread use of landmines has discouraged farmers from venturing into their fields.

Marketed cash crops in 2004 included 1,250 tons of coffee (down from 225,000 tons in 1972), 4,400 tons of cotton (48,000 in 1972), and 500 tons of sisal. The principal food crops are cassava, with an estimated 5,600,000 tons in 2004, corn, 510,000 tons, and sweet potatoes, 430,000 tons. Other 2004 estimated yields included bananas, 300,000 tons; citrus fruits, 78,000 tons; millet, 96,000 tons;

dry beans, 66,000 tons; potatoes, 27,000 tons; sugar cane, 360,000 tons; rice, 16,000 tons; and peanuts (in shell), 30,000 tons.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Lack of a pastoral tradition among northern Angolans, abundance of the tsetse fly in many regions, and the poor quality of natural pastures are some of the factors most frequently cited to explain the lag in animal husbandry in Portuguese Angola. What little there was of the livestock industry was virtually destroyed in the 1975–76 civil war.

Estimated livestock in 2004 included cattle, 4,150,000 head; goats, 2,050,000; hogs, 780,000; and sheep, 340,000. There were 6.8 million chickens. Livestock products included an estimated 85,000 tons of beef and veal and 195,000 tons of milk in 2004. Honey production totaled 23,000 tons in 2004 from 1.1 million beehives.

## 2<sup>4</sup> FISHING

Fresh fish, fishmeal, dried fish, and fish oil are produced for the domestic market and for export. During 1975–76, some of the processing plants were destroyed, and most of the modern fishing boats departed with refugees. In 2003, the Angolan catch was 211,539 tons (up from 122,781 tons in 1995), 95% from marine fishing. Exports of fish products in 2003 totaled \$8.9 million. Some of the Spanish, Japanese, and Italian vessels fishing under license also pay in kind. About 13% of the 2003 catch consisted of *cupone* horse mackerel.

## 2<sup>5</sup> FORESTRY

About 18.4% of the country is classified as forest and woodland. Angola's large timber resources include the great Maiombe tropical rain forest in Cabinda. In addition, eucalyptus, pine, and cypress plantations cover 140,000 hectares (346,000 acres). In 2003, roundwood production was estimated at 4,518,000 cu m, and exports amounted to 1,000 cu m.

## 2<sup>6</sup> MINING

Diamonds are an important source of revenues to Angola, and are only second to petroleum. Petroleum accounted for more than 90% of exports by value (\$7.56 billion) while diamonds followed at \$638 million or 7.6% of the value of exports in 2002. Official reported diamond production in 2003 was 5 million carats, up from 5.022 million carats in 2002. However, that total does not include smuggled production. Sociedade Miniera de Catoca Ltd (SMC) is Angola's leading producer of diamonds, with an annual production of around 2.8 million carats from its Catoca kimberlite pipe. Reserves in the Catoca kimberlite were estimated to be at 189.3 million carats. SMC is a joint venture of Empresa Nacional de Diamantes de Angola (Endiama), the state-owned diamond mining company and the Joint Stock Company Almazy Rossii-Sakha (Russia), Odebrecht Mining Services Inc. (Brazil), and the Leviev Group (Israel).

Large iron ore deposits have been discovered in many areas. The deposits at Kassinga, with an estimated reserve of one billion tons of high-grade hematite iron ore, annually yielded millions of tons of ore exports before the civil war halted mining in 1975. Ferrangol, the state iron ore mining company, produced a slight quantity of ore in 1988; it has shown no output since. The mines

in Lunda Norte and Lunda Sul provinces, previously controlled by UNITA rebel forces, were opened to foreign companies for exploration and development in 1996, and an Endiama-De Beers venture announced the discovery of 17 new kimberlites there in 2000. These areas contributed about \$400 million to the annual \$1.1 billion value of diamond production. SDM, an Endiama-Australian-Odebrecht venture formed in 1995 to mine alluvial diamonds in the Cuango River Valley, near Luzamba, produced 210,000 carats of high-quality diamonds in 2000 and 185,000 carats in 1999. Other such ventures saw their operations frequently suspended because of security problems. A feasibility study of the proposed Camafuca kimberlite estimated 23.24 million carats of diamonds valued at \$109 per carat.

Salt production has remained steady at an estimated 30,000 metric tons annually from 1999 through 2003. Clay, granite, marble, and crushed stone were also reportedly mined throughout the country. The country is also rich in nickel, platinum-group metals, magnetite, copper, phosphates, gypsum, uranium, gold, asphalt, and feldspar, but areas have been off-limits to exploration during the civil war.

## 27 ENERGY AND POWER

Angola has extensive hydroelectric power resources that far exceed its present needs. The Cambambe Dam, on the Cuanza River, provides Luanda's industries with cheap power. Two dams on the Catumbela River produce power for the Lobito and Benguela areas. Matala Dam in southern Cunene provides power to Lubango and Namibe. The Ruacan Falls Dam, near the Namibian border, was completed in the late 1970s, but the power station is in Namibia. A 52 million kW hydroelectric station on the Cuanza River at Kapanda was tentatively scheduled to have begun production in early 2003. As of late 2002, only three of the country's six dams (Cambambe, Biopo, and Matala) were operational; \$200 million has been allocated to repair the remaining dams, which suffered major damage in the civil war. In 2002, electricity generation was 1.728 billion kWh, of which 34.5% came from fossil fuels and 65.5% from hydropower. In the same year, consumption of electricity totaled 1.607 billion kWh. Total capacity in 2002 was 0.635 million kW.

Crude oil, in the production of which Angola ranks second in sub-Saharan Africa, has been Angola's chief export since 1973; it is also the leading source of government revenue, accounting for \$2.9 billion in exports in 1994, or 95% of the total. As of end 2004, Angola had proven oil reserves of 8.8 billion barrels. Oil reserves are along the Atlantic coast, mostly offshore Cabinda and the northern border area between Quinzau and Soyo. In 1999, several oil companies were engaged in production, of which the largest was a subsidiary of Chevron, Cabinda Gulf Oil Company. This firm has a 49/51% participation agreement with Sonangol, the state oil company. Other firms included Fina Petrleos de Angola (a Belgian subsidiary), Elf Aquitaine, and Texaco. In 2004, crude oil production averaged 991,000 barrels per day. ExxonMobil subsidiary Esso began development of a section of the Xikomba offshore oilfield in August 2002. Development was planned for a new 200,000 barrel per day refinery in the city of Lobito, on the coast.

Gross natural gas production totaled 296.65 billion cu ft in 2002. Total natural gas reserves were estimated at 45 billion cu m (1.6 trillion cu ft) as of 2002. Domestic demand for refined petro-

leum products is expected to increase as the economy gradually rebuilds following the end of the civil war. As of 2002, Sonangol and Chevron Texaco had joined forces in a \$2 billion project to develop liquefied natural gas from natural gas in Angola's offshore fields. Production was slated to begin in 2007.

## 28 INDUSTRY

In its pre-1975 prime, the Angolan industrial sector centered on petroleum refining and machinery, construction inputs, food processing, electrical products, chemicals, steel, and vehicle assembly. As a consequence of the civil war, Angola's industrial sector started operating at a fraction of prewar levels.

Industrial production during the 1990s included food processing and the production of textiles, soap, shoes, matches, paint, plastic bottles, and glues. In 1993, industrial production also included 9,000 tons of crude steel, 250,000 tons of cement, and 9 million barrels of refined petroleum products. Heavy industry for that year (cement, steel, oil refining, vehicle assembly, and tire production) accounted for about 15% of Angola's manufacturing output. Angola is now an importer of machinery, vehicles, and spare parts.

Angola is the second-largest oil producer in sub-Saharan Africa, behind Nigeria. In 2004, the petroleum industry accounted for about half of the GDP and over 90% of export revenues. Sonangol is the state-owned oil company, which controls exploration and production, although foreign companies participate in joint ventures and production sharing agreements. Oil production was expected to surpass 1 million barrels per day in 2003 but this target had not been achieved by 2004. However, with the coming online of new oil drilling platforms such as the Kizomba B platform owned by ExxonMobil and the Dalia platform owned by Total, the 1 million barrels per day should be surpassed in 2006. It is expected that by 2007 Angola will be producing 2 million barrels per day. Angola has one oil refinery in Luanda, with a crude oil processing capacity of 39,000 barrels per day, but is planning to build a 200,000-barrels per day refinery in Lobito. Angolan oil exports to Asia are growing, and China's oil imports from Angola grew by more than 400% in 2001. The government stated in 2003 that foreign oil companies would invest \$25 billion in Angola over a five-year period, by building offshore production ships and a liquefied natural gas plant, among other projects. Many of these investments, such as ExxonMobil's Kizomba B have already begun to produce oil.

The diamond mining industry also plays an important role in Angola's economy, but during the 27-year-old civil war, many of the gemstones had been sold on the black market and were referred to as "conflict diamonds" because the parties in the civil war used the sale of them to fund their military campaigns. Since the civil war ended in 2002, Angola began to restructure its diamond sector. The government in 2003 ended the four-year-old monopoly of the state-controlled diamond marketing company, AscCorp, which was controlled by the state diamond company Endiama. AscCorp now competes with other private companies to buy diamonds from miners and small producers. The government also planned to build a new diamond cutting factory, to create an industry of diamond cutting in Angola.

The Economist Intelligence Unit, quoting a new report published in June 2005 by a Canadian nongovernmental group, Part-

nership Africa Canada, highlighted the fact that, although some \$900 million-worth of diamonds will be mined in 2005, relatively little of the revenue will be spent on development in the diamond areas or will benefit the poor. The report said that 145 diamond licenses had been granted in 2004, often through nontransparent processes, of which nine were already operational, around ten were in the process of starting up and the remainder were vacant and were steadily being recolonised by *garimpeiros* (artisanal miners). The report also highlighted a number of problem areas in the sector, saying that transparency is lacking not only in published tax data but also in the 10% revenue allocation due to the diamond-producing provinces.

## 29 SCIENCE AND TECHNOLOGY

Security considerations and a severe shortage of skilled personnel have limited Angola's development of its extensive mineral reserves and abundant fertile land. Angola's research institutes include the Cotton Scientific Research Center in Catete, the Agronomic Research Institute in Huambo (founded in 1962), the Institute for Veterinary Research in Lubango (founded in 1965), the Angola Medical Research Institute in Luanda (Founded in 1955), and the Angolan Directorate of Geological and Mining Services in Luanda (founded in 1914). The University Agostinho Neto (founded in 1963) has faculties of sciences, agriculture, medicine, and engineering, and the National Center of Scientific Investigation. In 1987–97, science and engineering students accounted for 24% of college and university enrollments. The National Museum of Natural History and the National Anthropology Museum are located in Luanda.

## 30 DOMESTIC TRADE

Practically all domestic trade was in Portuguese hands before independence, when state people's stores and consumer cooperatives were established in the cities. Over half of Angolan consumer goods were still imported from Portugal in 1998. The Angolan domestic economy faced sporadic fighting during the late 1990s despite the 1994 peace accord, inhibiting domestic commerce. The rural population was displaced—first by the war for independence that started in 1961, and then by the civil war that started after independence was gained in 1975—and has not been able to fully return to agricultural production. Imports were strictly controlled due to a lack of foreign exchange, and barter was common. Though a privatization program has been in effect, there are very few groups or individuals in the private sector with the finances and/or administrative abilities to purchase and effectively run larger public corporations.

## 31 FOREIGN TRADE

Crude petroleum and products top the commodities export list for Angola (89%), while only accounting for a small percentage of the world's exportation. Diamonds and other precious and semiprecious stones are the second-largest export, and shellfish exports follow. A small amount of natural and manufactured gas is also exported from Angola. As of 1999, the United States was buying up to 75% of Angola's crude oil production. Since then China has entered the picture as a second major trading partner for Angola.

### Balance of Payments – Angola (2002)

(In millions of US dollars)

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

In 2004, the United States bought 40% of Angola's crude oil while China bought 30%, Taiwan 8%, and France 7%.

## 32 BALANCE OF PAYMENTS

Oil exports produced substantial trade surpluses during the late 1970s and early 1980s. Despite this positive cash flow, Angola in 1979 began to request lines of credit in order to finance its reconstruction projects. By 1991 the government's economic policies encouraged neither private investment or non-oil exports. Furthermore, poor monetary policy created price distortions, which exacerbated a trade deficit and rapidly diminished agricultural exports. The results of the end of the 27-year-old civil war in 2002 on trade had yet to be assessed as of 2005.

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Angola's exports was \$12.8 billion while imports totaled \$4.9 billion resulting in a trade surplus of \$7.9 billion. With high prices of crude oil, the Economist Intelligence Unit predicts sustained trade surpluses in the near future.

## 33 BANKING AND SECURITIES

In 1976, the government nationalized the two major banks, the Bank of Angola and the Commercial Bank of Angola (renamed the People's Bank of Angola). The Bank of Angola became the central bank, renamed the National Bank of Angola (Banco Nacional de Angola-BNA). In 1996, this bank transferred its commercial accounts to the Caixa de Credito Agro-Pecuaria e Pescas (CAP) in order to function more as a regulatory organization for other state-owned banks. CAP, established in 1991, was owned by the Ministry of Finance and used to finance government activities. It has had liquidity problems in recent years, making it unable to clear checks at times, so some businesses refuse to accept CAP checks.

Banco de Comercio e Industria (The Bank of Commercial and Industrial Commerce-BCI) was a semiprivate bank, but was oc-

casionally restricted to government financing. The government owns about 40% of the BCI's shares.

The opening in mid-November 1996 of the Banco Africano de Investimento (BAI) was Angola's first private bank launched since it gained independence in 1975, and Angola's only investment bank. Other major banks included Banco de Poupanca e Credito (BPC), serving primarily the trade sector and construction; and Banco Fomento Exterior and Banco Totta e Azores, both Portuguese commercial banks.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$648.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.9 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 150%.

There were no securities exchanges in 2000.

### 34 INSURANCE

The conflicts that began in the mid-1970s greatly shook the insurance industry, which was nationalized in 1978. At that time, the National Insurance and Reinsurance Co. of Angola was created. All private company policies were declared null and void except for life insurance.

### 35 PUBLIC FINANCE

Liberal monetary policies financed large public sector deficits, which led to high inflation and price distortions. Military expenditures consumed an enormous portion of the national budget. Since the 1970s, Angola has relied heavily on oil exports for revenue. However, revenues from oil sales went down as the result of a fall in the international price of oil in the late 1990s. Until 1991, Angola had a Soviet-style, centrally planned economy. The government planned privatization for the 1990s, but most companies remain state-run as of 2000, including the major energy companies and the diamond distributor.

The US Central Intelligence Agency (CIA) estimated that in 2005 Angola's central government took in revenues of approximately \$8.5 billion and had expenditures of \$10 billion. Revenues minus expenditures totaled approximately -\$1.5 billion. Public debt in 2005 amounted to 40.9% of GDP. Total external debt was \$9.879 billion.

### 36 TAXATION

The ordinary corporate tax is 35%, with a reduced rate of 20% for agricultural and forestry enterprises. Various corporate tax exemptions and reductions, and exemptions from real estate taxes on land and buildings are offered by the government as investment incentives.

Income tax for individuals ranges from 1–40% for employees, and 3–60% for self-employed professionals. Also levied are inheritance and gift taxes, and a payroll tax for social security.

The main indirect tax is a manufacturer's sales tax with rates ranging from 5–50% on 100 listed products.

### 37 CUSTOMS AND DUTIES

Both specific and ad valorem duties are levied; but, as a member of the World Trade Organization, Angola is reviewing the

need for reductions in tariffs and nontariff barriers. Specific duties are assessed by weight. Additional taxes are levied on luxury items and preferential treatment is accorded to goods from Portugal, Mozambique, Guinea-Bissau, Cape Verde, and São Tomé and Príncipe. All imports require a license and are handled by one of several state companies. Most exports are similarly handled by state agencies.

### 38 FOREIGN INVESTMENT

In spite of the civil war and the socialist legacy, sizable investments in the petroleum sector were made during the 1990s. In 1994, Texaco announced plans for a five-year, \$600 million investment in its Angolan oil exploration and production efforts aimed at increasing the company's Angolan oil output by 50%. Approximately 15 foreign companies, including Chevron, Texaco, ExxonMobil, and Occidental, had invested more than \$8 billion in Angola as of 1997. Elf Oil and Chevron both had major investments underway. In 1999, the Angolan government issued three new licenses to oil drilling companies in order to conduct exploration in ultra-deep water. By 2005, ExxonMobil's Kizomba B deep water platform had begun the production of oil. Total was also in the process of completing its Dalia platform and other oil companies were in the process of construction of new platforms.

Countering the illegal trade in diamonds, De Beers, in a 1991 agreement with the government diamond company Endiama, invested in new diamond exploration. A UN sanction on the purchase of black market diamonds has been hard to enforce and corruption in the diamond business continued as of 2005.

In spite of a 27-year civil war (1975 to 2002), an investment climate characterized by corruption, ineffective governance, arbitrary decision making, a deteriorating infrastructure, kidnappings for ransom targeted at foreigners in the Cabinda enclave, socialist suspicions about free markets, openly solicited bribes, no capital market or stock exchange, scarce skilled labor, and scarcer foreign exchange, Angola ranked second in the world in 2000 (after Lesotho) in foreign investment as a percent of GDP. The statistic is a result of both Angola's small economy and substantial investments in its oil sector that continued despite the civil war. With the war over and a semblance of peace and normalcy back to Angola, more investments should be forthcoming both in the oil and gas industries as well as the diamond mining sector.

On the basis of joint ventures (JVs) or production sharing contracts (PSCs), at least \$8 billion (\$1 billion a year average) was invested by foreign oil companies from 1990 to 1997 with the state oil company, Sonangol, which dominates both upstream and downstream operations. The main foreign operators upstream were Energy Africa (South Africa), Agip (Italy; now ENI-Agip), Elf (France; now TotalFinaElf), Chevron and Texaco (United States; now ChevronTexaco). About 30 other foreign companies have substantial interests in upstream enterprises. Petrofina of Belgium is both a major producer and a major downstream partner with Sonangol. Downstream operations are hampered by poor infrastructure and a small domestic market.

From 1998 to 2001, reported foreign direct investment (FDI) totaled about \$5.6 billion, averaging about \$1.2 billion a year from 1997 to 2001. This performance was driven by giant class offshore discoveries, particularly in 1999 when FDI peaked at close to \$2.5 billion. Between 2000 and 2004 annual FDI flows averaged \$2.05

billion with a peak in 2003 of \$3.5 billion. With a combination of Diamond and oil reserves, Angola is expected to become one of the largest destination for FDI inflows in Africa.

FDI outflows are insignificant. FDI inward stock grew steadily from \$1 billion in 1990 to \$2.9 billion in 1995, and in 2002 it rose to \$11.4 billion. In 1999, the Angolan government issued three new licenses to oil drilling companies in order to conduct exploration in deep-water, including ExxonMobil, the major investor in the offshore Kizomba field that began operations in August 2002. The only substantial FDI outside the oil sector before 2002 was a \$36 million Coca-Cola bottling plant in 2000, 45% of which was bought in 2001 by SAB Miller of South Africa, which in 2003 was considering adding a brewery.

Before the peace accords of April 2002, there had been three other peace agreements, starting with the Lusaka Protocol of 1994, which had had virtually no effect. However, with the death of UNITA leader, Jonas Savimbi, in February 2002, Angola finally seemed to be able to move past the civil war. In September 2002, IDAS Resources, a subsidiary of London-based American Mineral Fields, Ltd., was granted the first clearance for diamond mining in 27 years. Under the contract, IDAS holds 51%; the state diamond company Endiama, 36%; and private investors 13%.

A 1991 agreement between Endiama and De Beers for diamond exploration was moribund because the territory was under the control of UNITA, which used smuggled diamonds to finance its operations. In 1998 the UN Security Council imposed an embargo on diamonds from areas controlled by UNITA. A report in 2000 implicated De Beers in the purchase of "blood diamonds," prompting the company to alter its policy of buying up diamonds to uphold the world price to a world certification system. In 2000, Angola set up ASCORP, a state-controlled company in partnership with Lev Leviev (Russian/Israeli diamond manufacturer), and established a monopoly on certified diamond buying. De Beers' plans to build a \$30 million diamond processing facility in Luanda did not come to fruition, but in April 2003 the newly established National Private Investment Agency (ANIP) announced it was seeking funding for a diamond cutting and polishing factory in Luanda.

Before peace in 2002, the foreign investment regime as laid out in the foreign investment law of 1994 and administered by the Foreign Investment Institute (IIE) stood little chance of implementation. In February 2003, a new law on private investment and a companion law on tax incentives for private capital were passed, forming a new agency, the National Private Investment Agency (ANIP), for their implementation. As under the old regime, foreign companies are guaranteed national treatment, the right to repatriate profits, and the right to indemnification for property nationalized or expropriated. Added are incentives for private investment and provisions for streamlining the approval process. New investments receive up to 15 years exemption from industrial taxes and smaller investments, \$50,000 to \$250,000, are exempted from all customs duties. By law, approval requests for investments less than \$5 million must be processed in 15 days and requests for larger investments, in 30 days. Despite the reforms, serious obstacles remain: poor infrastructure, a small market, single-entry visas, and registration costs that range from \$20,000 to \$60,000 for foreign corporations.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

In March 2003, the South Africa-Angola Chamber of Commerce (SAACC) was established with the potential of channeling considerable investment from South Africa. In 2003, major South African investors included the construction company Grinaker-LTA, Investec Bank, Securicor Gray and the Shoprite Supermarket chain. In May 2003, TotalFinaElf announced a major offshore oil discovery and awarded contracts totaling \$780 million to the French oil services company, Technip, for its development. Since then to 2005, a number of other partnerships have also been announced, which should see a large increase in diamond prospecting. For example in 2005 De Beers signed a prospecting agreement. On 22 June 2005, Russia's Technopromexport signed a \$112 million contract to build a new, 260-MW generating unit at the Capanda dam near the northern town of Malange. The project will be financed with a ten-year, \$225 million loan from a consortium of Russian banks, led by the Russian Regional Unified Bank. As well as this contract, two other contracts relating to the supply of equipment and the completion of civil engineering works have been signed with Brazil's Odebrecht. By 2005 the government of Angola was involved in diversifying the economy by continued attraction of foreign investors to partner with local private firms and government owned companies.

With the exception of the petroleum industry and possibly the fishing industry, economic development in Angola depended upon a political settlement of the civil war, which came in 2002. The diamond industry was no exception to this rule. In 1997, the Angolan state diamond enterprise, Endiama, provided for the establishment of a UNITA-backed mining company, SGM. Although the government initially granted SGM the right to prospect, UNITA claimed that the government was attempting to gain control over its mining operations. The continuation of the Angolan civil war began shortly thereafter (1998), with diamonds acting as the UNITA rebels' main source of income. The termination of the UN mission to Angola in early 1999 spelled disaster for any form of economic growth during the following years.

In 2000, Angola entered into a Staff-Monitored Program (SMP) with the International Monetary Fund (IMF). Although the program lapsed in 2001, the IMF remained engaged in the country. The World Bank prepared a Transitional Support Strategy (TSS) as a short- to medium-term plan for involvement in Angola. In 2002, the IMF reported that \$900 million had disappeared from government finances in 2001. That amount was greater than the value of humanitarian assistance sent to Angola in 2002. In all, over \$4 billion was unaccounted for from 1997–2005. These difficulties notwithstanding, the IMF in 2005 concluded that oil and diamonds will continue to form the backbone of Angola's economy for the unforeseeable future.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

Until recently, social services for Africans were almost entirely the responsibility of the various tribal groups. The Roman Catholic Church also played an integral part in the administration of welfare, health, and educational programs. A number of international

nongovernmental organizations have also gotten involved, particularly in the provision of health care.

Although women's rights are protected in the constitution, in practice there is discrimination in the workplace and in the home, and most women hold low-paid jobs. Spousal abuse against women is widespread. Credible evidence suggests that the majority of homicides against women were a result of a domestic dispute. Women and children are also at high risk for mutilation from land mines, due to foraging in the fields for food and firewood. Children are recruited to fight in both the government and UNITA forces. There were an estimated 1,500 children living on the street in Luanda in 2004, many of them engaging in prostitution. Angola's government has a poor human rights record. Security forces have reportedly been responsible for torture, beatings, rapes, and disappearances and prison conditions are life-threatening.

#### 41 HEALTH

Angola lies in the yellow fever endemic zone. Cholera incidence is high. Only a small fraction of the population receives even rudimentary medical attention. As of 2004, the ratio of physicians per population was estimated at 7.7 per 100,000 people. In 2005, average life expectancy was estimated at only 38.43 years, one of the lowest in the world. That year infant mortality was estimated at 187.49 per 1,000 live births, the highest in the world. The incidence of tuberculosis in 1999 was 271 per 100,000 people. Immunization rates for one-year-old children in 1999 were estimated at 22% for diphtheria, pertussis, and tetanus and 46% for measles. Malnutrition affected an estimated 53% of children under five years of age as of 1999. From 1975 to 1992, there were 300,000 civil war-related deaths. The overall death rate was estimated at 24 per 1,000 in 2002. The HIV/AIDS prevalence was 3.90 per 100 adults in 2003. As of 2004, there were approximately 240,000 people living with HIV/AIDS in the country. There were an estimated 21,000 deaths from AIDS in 2003.

In 2000, 38% of the population had access to safe drinking water and 44% had adequate sanitation.

#### 42 HOUSING

Decades of war and lack of appropriate economic and legal reforms have posed a serious housing problem in Angola. During the war for independence, a majority of the Portuguese residents abandoned homes that were then confiscated by the government. In fact, all urban land is considered to be property of the State. But management and administration of dwellings is under the control of provincial governments and leasing or other housing and property regulations are ambiguous or nonexistent. As a result, a UN report indicated that about 90% of urban residents live in settlements without a clearly defined legal status.

Most people live in multi-family dwellings that were constructed in the 1960s and have since deteriorated to the point that basic utilities are limited or unavailable. Housing shortages have led to urban slum developments. These are most prominent in Luanda, where about four million people are living in a city designed for about 700,000.

Over the years, the government has made some efforts to ease the situation. The most recent has included government-sponsored housing construction projects. In April 2003, 331 houses

were completed in Kilamba-Kiaxi. At least 65 of them were given to government employees and other civil servants.

#### 43 EDUCATION

In 1999 the adult illiteracy rate was estimated at 42%. Education is compulsory for children between the ages of six and ten. As of 2001, the basic educational program consisted of a primary education system lasting for six years and a secondary education system divided into two cycles of three years each. There are also three-year vocational and four-year technical programs available for secondary students. In 2000, about 61% of eligible children were enrolled in primary school. Similar figures for secondary students were unavailable. The pupil to teacher ratio for primary school was at about 42:1 in 2003. The ratio for secondary school was about 18:1.

While Portuguese was the language of instruction in earlier times, the vernacular is more commonly used now. The academic year runs from October to July. The Ministry of Education oversees the national public programs. The government spends and estimated 2.8% of the GDP on education.

The University Agostinho Neto in Luanda was established in 1963 and has a faculty for science, engineering, law, medicine, economics, and agriculture. In 2001, all higher-level institutions had about 8,000 students and 800 faculty members.

#### 44 LIBRARIES AND MUSEUMS

The National Library of Angola, founded in Luanda in 1969, had 84,000 volumes in 2002 and the library of the University of Luanda (1963) had 75,000 volumes. The Municipal Library in Luanda has more than 30,000 volumes. Additional libraries of note are the Geological and Mining Services Directorate Library (1914) in Luanda (40,000 volumes) and the National Historical Center Library (1982) with 12,000 volumes located in Luanda.

The Angola Museum (which contains Angola's historical archives), the Coffee Museum, Museum of Geology, National Museum of Natural History, National Museum of Archaeology, Central Museum of the Armed Forces, and National Museum of Anthropology are all located in Luanda. There are regional museums in Namibe, Huambo, Lobito, Lumbango, and Uíge. The Museum of Chitato, located in Dundo, houses a distinctive ethnographic collection featuring the art of the local Chokue people, recordings of local folk music, and a photographic collection dating to the 1880s. The Municipal Museum of New Lisbon houses a collection of traditional and modern African sculpture. Elinga Teatro is gaining popularity as a modern urban art gallery and theater in Mutamba.

#### 45 MEDIA

Telephone service is primarily limited to government and business use. In 2003, there were an estimated seven mainline telephones for every 1,000 people; about 240,300 people were on a waiting list for telephone service installation. The same year, there were approximately nine mobile phones in use for every 1,000 people.

Most of the media is controlled by the state. Rádio Nacional de Angola broadcasts in Portuguese, English, French, Spanish, and major local languages; government-owned, it is the only station with the capacity to broadcast nationwide. In 2004, there were five commercial radio stations, including the Catholic Church's Ra-

dio Ecclesia and Radio Lac Luanda. The primary news agency is the Angola Press. The only television station was the government Angola Public Television (TPA), which broadcasts in Luanda and most provincial capitals. In 2003, there were an estimated 78 radios and 52 television sets for every 1,000 people.

In 2005, the only national daily newspaper was the government-owned *Jornal de Angola* (circulation in 2000 was 41,000). There were at least seven private weekly publications with circulation in the low thousands.

In 2003 the country had about 17 Internet hosts. The same year, there were 1.9 personal computers for every 1,000 people and 3 of every 1,000 people had access to the Internet.

Though a constitution provides for basic freedom of speech and press, the government is said to restrict these freedoms in practice. Journalists are intimidated into practicing self-censorship, and the government tightly restricts the main newspapers, television stations, and radio broadcasts.

#### 46 ORGANIZATIONS

Organizations established by the MPLA include the Organization of Angolan Women, the Medical Assistance Service, and the Centers for Revolutionary Instruction. There are professional associations for a variety of fields.

The Angolan National Youth Council, founded in 1991, serves as a major nongovernmental organization representing the opinions and concerns of the nation's youth. The Association of Students of Higher Education (AEES: Associaçao dos Estudantes de Educacao Superior) and the National Union of Angolan Students (UNEA) have been major student movements. A scouting organization (Associação de Escuteros de Angola) is also present. There are branches of the YMCA and YWCA present. There are a few sports associations.

Angolan Action For Development (A.A.D.), the Angolan Women's Organization, and the League Of Angolan Women (LIMA) are groups focusing on the political, social, and developmental issues and concerns of women. There are associations for professional women in the fields of journalism, law, and law enforcement.

Africare-Angola provides aid to the rural population. The ACM - YMCA of Kuanza Sul offers assistance to displaced persons within the country. There are active chapters of the Red Cross, Caritas, and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism was an important activity until 1972, when the guerrilla war and the subsequent civil war led to a precipitous drop in the number of tourists and hence of tourist revenues. Throughout

the late 1990s, a yo-yo effect seemed to hit the tourist industry. In 1996, only about 21,000 visitors came to the country. In 1997, the number jumped to 45,000 and increased to 52,000 the following year. In 2003, the number of visitors again jumped to 106,625. Tourism receipts totaled approximately \$71 million. A valid passport, visa, and International Certificate of Vaccination against yellow fever and cholera are required.

The US Department of State estimated the daily cost of staying in Luanda at \$289 in 2005. Staying in rural areas would cost much less.

#### 48 FAMOUS ANGOLANS

António Agostinho Neto (1922–79), a poet and physician who served as the president of MPLA (1962–79) and president of Angola (1975–79), was Angola's dominant political figure. José Eduardo dos Santos (b.1942) succeeded Neto in both these posts. Jonas Malheiro Savimbi (1934–2002), the son of a pastor, founded UNITA in 1966.

#### 49 DEPENDENCIES

Angola has no territories or colonies.

Republic of Benin  
*République du Bénin*

**CAPITAL:** Porto-Novo

**FLAG:** Two equal horizontal bands of yellow (top) and red with a vertical green band on the hoist side.

**ANTHEM:** *L'Aube Nouvelle* (*The New Dawn*).

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc has coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00208 (or \$1 = CFA Fr480.56) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of Mercenary Attack on Cotonou, 16 January; Labor Day, 1 May; Independence Day, 1 August; Armed Forces Day, 26 October; National Day, 30 November; Harvest Day, 31 December. Most religious holidays have been abolished, but Good Friday, Easter Monday, Christmas, 'Id al-Fitr, and Id al-'Adha' remain public holidays.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The People's Republic of Benin (formerly Dahomey) is situated in West Africa on the northern coast of the Gulf of Guinea, and has an area of 112,620 sq km (43,483 sq mi), extending 665 km (413 mi) N-S and 333 km (207 mi) E-W. Comparatively, the area occupied by Benin is slightly smaller than the state of Pennsylvania. Roughly wedge-shaped, Benin is bounded on the N by Niger, on the E by Nigeria, on the S by the Gulf of Guinea (Atlantic Ocean), on the W by Togo, and on the NW by Burkina Faso, with a total boundary length of 1,989 km (1,233 mi). The capital city of Benin, Porto-Novo, is located in the southeastern corner of the country.

## <sup>2</sup> TOPOGRAPHY

Difficult to access because of sandbanks, the coast has no natural harbors, river mouths, or islands. Behind the coastline is a network of lagoons, from that of Grand Popo on the Togo border (navigable at all seasons) and joined to Lake Ahémé, to that of Porto-Novo on the east, into which flows Benin's longest river, the Ouémé, navigable for some 200 km (125 mi) of its total of 459 km (285 mi). Besides the Ouémé, the only other major river in the south is the Kouffo, which flows into Lake Ahémé. Lake Ahémé is the largest lake in the country with an area of 100 sq km (39 sq mi). The Mono, serving from Parahoué to Grand Popo as the boundary with Togo, is navigable for 100 km (62 mi) but subject to torrential floods in the rainy season. Benin's northern rivers, the Mékrou, Alibori, and Sota, which are tributaries of the Niger, and the Pandjari, a tributary of the Volta, are torrential and broken by rocks.

North of the narrow belt of coastal sand is a region of lateritic clay, the main oil palm area, intersected by a marshy depression between Allada and Abomey that stretches east to the Nigerian frontier. North of the hills of Dassa, the height ranges from

60 to 150 m (200–500 ft), broken only by the Atakora Mountains (Chaine de L'Atakoria), stretching in a southwesterly direction into Togo.

## <sup>3</sup> CLIMATE

South of Savalou, especially in the west, the climate is typically equatorial—hot and humid, with a long dry season from December to March, in which the dry harmattan blows in a northeasterly to southwesterly direction. Temperatures range between 22°C (72°F) and 35°C (95°F), with the average 27°C (81°F). The great rains fall from March to July; there is a short dry season from July to September and a short wet season from mid-September to mid-November. In the southwest, average rainfall is considerably lower and the dry season longer: at Grand Popo, for example, average rainfall is about 82 cm (32 in) as compared with about 127 cm (50 in) in Porto-Novo and Cotonou. Northern Benin has only one wet season (May to September, with most rain in August) and a hot dry season in which the harmattan blows for three or four months. Temperatures range from a maximum of 40°C (104°F) in January to a minimum of 13°C (56°F) in June.

Although rainfall, which is highest in central Benin (135 cm/53 in), decreases as one moves northward, it remains high (97 cm/38 in) in most of northern Benin. In the southwest region, average rainfall drops to 82 cm (32 in) per year. This region is sometimes referred to as the "Benin window." The uncharacteristically low level of precipitation here is attributed to the destruction of native rain forest, which in turn caused a decrease in the evaporation of moisture into the air, resulting in fewer convection rains.

## <sup>4</sup> FLORA AND FAUNA

Apart from small isolated patches, little true forest remains. The coconut plantations of the coastal strip give way to oil palms and

ronier palms growing as far north as Abomey; these are in turn succeeded by savanna woodland, in which the vegetation of the Guinea forest and the vegetation of the southern Sudan are intermingled, and then by characteristic Sudanic savanna. Trees include coconut, oil palm, ronier palm, ebony, shea nut, kapok, fromager, and Senegal mahogany.

Among the mammals in Benin are the elephant, lion, panther, monkey, and wild pig, as well as many kinds of antelope. Crocodiles and many species of snakes (including python, puff adder, and mamba) are widely distributed. Partridge, guinea fowl, and wild duck, as well as many kinds of tropical birds, are common. Insects include varieties of tsetse fly and other vectors of epidemic disease.

## 5 ENVIRONMENT

Benin has two national parks and several game reserves. In addition, the government has set aside 5,900 hectares (14,580 acres) for nurseries to foster reforestation. As of 2000, 6.9% of Benin's natural areas were protected. Among the government organizations with responsibility for the environment are the National Commission for Combating Pollution and for the Protection and Improvement of the Environment, which is under the Ministry of Public Health, and the Ministry of Rural Development and Cooperative Action.

The main environmental issues facing the people of Benin are desertification, deforestation, wildlife endangerment, and water pollution. The spread of the desert into agricultural lands in the north is accelerated by regular droughts. Benin has also lost 59% of its forests from uncontrolled agricultural practices and fires. Between 1983 and 1993 alone, forest and woodland was reduced by 12%. For the period between 1990–1995, deforestation occurred at an average rate of 1.25% per year. Benin has 10.3 cu km of renewable water resources. About 74% of the city dwellers and 55% of rural residents have access to safe drinking water.

Factors which contribute to the endangerment of the wildlife in Benin are the same as those which threaten the forests. As of 2002, there were at least 188 species of mammals, 112 species of birds, and over 2,500 species of plants. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 6 types of mammals, 2 species of birds, 1 type of reptile, 8 species of fish, and 14 species of plants. Threatened species include the cheetah, the sandbar shark, the green turtle, and the roan antelope.

## 6 POPULATION

The population of Benin in 2005 was estimated by the United Nations (UN) at 8,439,000, which placed it at number 89 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.9%. The government has been encouraged by international organizations to implement programs to reduce population growth and to prevent the spread of HIV/AIDS. The number of AIDS orphans grew from 22,000 in 1999 to 34,000 in 2003. The projected popula-

tion for the year 2025 was 14,254,000. The population density was 75 per sq km (194 per sq mi).

The UN estimated that 40% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.11%. The capital city, Porto-Novo, had a population of 238,000 in that year. Cotonou, the administrative and economic center and port, had a population of about 734,600. Other important towns are Abomey, Ouidah, and Parakou.

## 7 MIGRATION

Seasonal labor migration to both Nigeria and Ghana is considerable and of long duration, but estimates of its extent are not available. In 1995, there were 70,000 refugees from Togo in Benin. In June 1998, Benin and Burkina Faso became the first African countries to take in refugees approved by United Nations High Commissioner for Refugees (UNHCR) for resettlement. The total number of migrants living in Benin in 2000 was 101,000.

The total number of refugees living in Benin in 2004 was 5,855. The net migration rate for 2005 was estimated as zero. Worker remittances totaled \$101 million in 2003.

## 8 ETHNIC GROUPS

The population of Benin is 99% African. However, even though several of the larger groups in southern Benin are culturally and socially closely related, Benin is not ethnically or linguistically homogeneous, and there is a particularly marked division between the peoples of the south and those of the north. The largest ethnic group is that of the Fon or Dahomeyans (about 25%), the closely related Adja (about 6%), and the Aizo (about 5%), who live in the south of the country and are predominantly farmers. The Goun (about 11%), who are related to the Adja, are concentrated around Porto-Novo. The Bariba (about 12%) are the dominant people in northeast Benin. The Yoruba (more than 12%), essentially a farming people, came from Nigeria and are settled along the southeastern boundary of the country. In the northeast, the Somba (more than 4%) subdivide into a number of distinct groups. The Fulani (about 6%), traditionally nomadic herders, gradually are becoming sedentary. Other groups include the Holli, the Dendi, the Mina, and the Pilapila (or Yowa). The remaining 1% of the population is largely European, numbering about 5,500 in 2005.

## 9 LANGUAGES

The official language is French. However, many African languages are spoken. Fon and Yoruba are the most important in southern Benin. In the north there are at least six major tribal languages, including Bariba (a subgroup of the Voltaic group in which the Mossi language is most important) and Fulani.

## 10 RELIGIONS

An estimated 50% of the population follow traditional African religions. Even some who identify themselves as Christian or Muslim are likely to observe some traditional indigenous customs as well. The most common indigenous religion is Vodoun. Vodoun spread to the Americas with slavery and later became a source for African-inspired religions such as Santeria (in the Spanish-speaking Caribbean), voodoo (in Haiti), and Candomble (in Brazil).

The Vodoun religion is based on a belief in one supreme being who rules over a number of lesser deities, spirits, and saints.

About 30% of the population are nominally Christian, with a majority belonging to the Roman Catholic church. Other denominations include Methodists, Baptist, Assemblies of God, Jehovah's Witnesses, The Church of Jesus Christ of the Latter Day Saints, Celestial Christians, Seventh-Day Adventists, Rosicrucians, the Unification Church, Eckankar, and the Baha'i faith. About 20% of the population are Sunni Muslim.

The constitution provides for freedom of religion and this right is generally respected in practice. There is no state sponsored religion. Certain Christian and Muslim holidays are officially observed, along with one traditional indigenous holiday. An Ecumenical Day is celebrated in Ouidah each year on the first Wednesday of May.

## 11 TRANSPORTATION

In 2004, Benin had 578 km (359 mi) of narrow-gauge railroad. The Benin-Niger Joint Railway and Transport Organization, a public corporation, operates the passenger and freight railroad. The main line runs north from Cotonou to Parakou, with a branch to Segboroué in the west. The eastern line runs from Cotonou to Porto-Novo and Pobé.

Of Benin's 6,787 km (4,217 mi) of roads (excluding tracks) in 2002, only about 1,357 km (843 mi) are paved. The major roads are the coastal highway linking Benin with Lagos in Nigeria and Lomé in Togo; the road from Cotonou to Parakou (terminus of the railroad) and its extension via Kandi to Malanville on the Niger River; and the road north from Tchaourou that links Benin with Burkina Faso. In 2003, Benin had about 9,400 passenger cars and 14,900 commercial vehicles.

As of 2004, Benin had only 150 km of navigable waterways, which consisted of its portion of the River Niger, which forms the country's northern border. Regular transportation services from Parakou to Malanville and thence to Niamey (in Niger), either by road or, in the season when the Niger River is navigable, by river steamer, are important for the movement of produce to and from Niger via Cotonou, Benin's one port. Until 1965, the port was serviced by a wharf built in 1891. In 1965, a new deepwater port, constructed with French and European Development Fund assistance and capable of handling 1 million tons annually, was opened. In the mid-1980s, the port was expanded to handle 3 million tons a year. Landlocked Niger has a free zone in the port area of Cotonou. Because of overcrowded conditions at the port of Lagos, Cotonou has served as a relief channel for goods destined for Nigeria. It also serves as the chief port for Niger. There is boat traffic on the lagoons between Porto-Novo and Lagos, Nigeria, as well as on the rivers. Benin has no merchant marine.

In 2004, there were five airports, only one of which (as of 2005) had a paved runway, Cadjehoun Airport. Located at Cotonou, Cadjehoun Airport, has direct international jet service to Accra, Niamey, Monrovia, Lagos, Ouagadougou, Lomé, and Douala, as well as connections to other West African cities. Direct services also link Cotonou to Paris. International airlines include UTA and Air Afrique. There is a major airport at Parakou, and airfields of lesser importance at Natitingou, Kandi, and Abomey. Transports Aériens du Bénin (TAB), offering domestic services to Parakou, Natitingou, Djougou, Savé, and Kandi, and abroad to Lagos,

LOCATION: 0°47' to 3°47' E; 6°15' to 12°25' N. BOUNDARY LENGTHS: Niger, 190 kilometers (118 miles); Nigeria, 750 kilometers (466 miles); Atlantic coastline, 125 kilometers (78 miles); Togo, 620 kilometers (385 miles); Burkina Faso, 270 kilometers (168 miles). TERRITORIAL SEA LIMIT: 200 miles.

Lomé, Ouagadougou, and Niamey, was founded in 1978. Benin also has a share in Air Afrique. In 2003, a total of about 46,000 passengers flew on domestic and international flights.

## 12 HISTORY

Benin (formerly Dahomey) has no geographical or historical unity and owes its frontiers to Anglo-French rivalry in the late-19th-century partition of Africa. This is especially marked in northern Benin, whose affinities are rather with the neighboring countries of West Africa than with the peoples of the south. Southern Benin has some historical unity, owing to the existence there of several kingdoms, all traditionally related and peopled by Fon and Adja (related to the Ewe of southern Togo and southeastern Ghana). Traditionally, the kingdoms of Allada, Abomey (or Dahomey), and Adjatché (later Porto-Novo) were founded when two brothers of the king of Allada created new states, respectively, north and southeast of Allada. Abomey conquered Allada in 1724, seized the port of Ouidah in 1727, and became a famous slave-trading kingdom. At this time, women soldiers ("Amazons") were recruited by Abomey for regular service.

The Portuguese—the first Europeans to establish trading posts on the West African coast—founded the trading post of Porto-Novo on what is now the Benin coast. They were followed by English, Dutch, Spanish, and French traders as the slave trade developed. The French established posts at Ouidah and Savé in the middle of the 17th century, and the English and Portuguese also built forts nearby in the early 18th century. The Portuguese fort at Ouidah, which remained Portuguese territory until 1961, was built in 1727. French, English, and Portuguese coastal trade continued, and as Yoruba power weakened, Abomey continually raided the Yoruba and westward toward the Ashanti. Prisoners seized in these campaigns were sacrificed or exported as slaves until the latter half of the 19th century. European traders were closely controlled by the yevogan of Ouidah, the Abomey functionary stationed there, and subjected to substantial levies. It was not until the mid-19th century, with the gradual replacement of the slave trade by trade in palm oil, that European activity brought forth new developments. In 1857, the French established themselves in Grand Popo. In 1868, the French made a treaty with the king of Abomey by which they were permitted to establish a trading post at Cotonou. The British meanwhile established themselves in Lagos, which they annexed in 1861 in order to eliminate the slave trade. Anglo-French rivalry in Porto-Novo, in which successive local kings took different sides, eventually ended with a French protectorate there (1882) and British posts at various points farther west, which were abandoned by the Anglo-French agreements of 1888–89. But Abomey remained outside French control, and its levies on European trade became increasingly irksome. War between Abomey and Porto-Novo broke out in 1889 over France's rights of sovereignty to Cotonou, and Béhanzin, who succeeded to the throne of Abomey in that year, attacked the French posts there. His forces included some 2,000 Amazons. Béhanzin next attacked Porto-Novo and Grand Popo in 1891. In 1893, a French expeditionary force commanded by Dodds took Abomey, and a French protectorate was declared. Renewed hostilities were followed by Béhanzin's surrender to the French in 1894. (He died in exile in Martinique in 1906). His successor, his brother Agoli Agbo, was exiled in 1899 for misadministration, and the kingdom of Abomey finally came to an end.

From 1892 to 1898, the territory took its modern shape with the exploration and extension of French control in the north. The construction of the railroad to the north was begun in 1900. Dahom-

ey became a component colony of the federation of French West Africa in 1904. In 1946, under the new French constitution, it was given a deputy and two senators in the French parliament, and an elected Territorial Assembly with substantial control of the budget. Under the reforms of 1956–57, the powers of the Territorial Assembly were extended, and a Council of Government elected by the Assembly was given executive control of most territorial matters. Universal adult suffrage and a single electorate were established at the same time. In September 1958, the territory accepted the French constitution proposed by General de Gaulle's government and opted for the status of an autonomous republic within the French Community, as provided by the new constitution.

On 4 December 1958, the Territorial Assembly became a national constituent assembly and the Republic of Dahomey was proclaimed a member of the French Community. On 14 February 1959, a constitution was adopted; the first Legislative Assembly was elected on 3 April. Hubert Maga, chairman of the Dahomeyan Democratic Rally, was named prime minister on 18 May 1959. On 1 August 1960, Dahomey proclaimed its complete independence, and on 25 November a new constitution, calling for a strong unitary state, was adopted. Other constitutions were adopted in 1963, 1965, 1968, and 1990.

After independence, the country suffered from extreme political instability, with military coups in 1963, 1965 (twice), 1967, 1969, and 1972. The numerous and often ingenious efforts at constitutional government, including, from 1970–72, a three-man presidential council with a rotating chairman, failed for a number of reasons. The major ones were regionalism, especially the north–south differences, and the country's poor economy; unemployment was high for the relatively large number of educated Beninese, and economic growth minimal.

The coup on 26 October 1972 established Maj. Mathieu Kérékou as the leader of a military regime. It represented a clear break with all earlier Dahomeyan administrations, introducing revolutionary changes in the political and economic life of the country. In late 1974, President Kérékou said that the national revolution would follow a Marxist-Leninist course, and the state sector was rapidly expanded by nationalization. As of 1 December 1975, the country's name was changed to the People's Republic of Benin by presidential proclamation.

On 16 January 1977, about 100 persons, including 27 Africans and 62 European mercenaries, made a poorly organized assault on Cotonou. After directing small-arms fire on the presidential palace, they departed three hours later on the DC-8 jet on which they had arrived. The government blamed "international imperialism" in general and France, Morocco, and Gabon in particular. Until 1990, the government routinely dealt with political opponents by incarcerating them—often without trial.

In 1979, a National Revolutionary Assembly was elected from the single list of candidates offered by the Party of the People's Revolution of Benin, the only legal political organization. This body elected Kérékou to a new term as president in 1980. In that year, in the course of an official visit to Libya, he converted to the Islamic faith in the presence of the Libyan leader, Col. Mu'ammarr al-Qadhafi, and accordingly took the first name Ahmed. During the visit the two countries signed a major bilateral cooperation agreement.

In February 1990, after weeks of unrest and economic disorder, Kérékou convened a National Conference of Active Forces of the Nation to discuss Benin's future. The National Conference—the first of its kind in Africa—became a public critique of Kérékou's 17 years of rule. On 2 December 1990, a new constitution was adopted by popular referendum, and Kérékou was forced to turn over power to a transitional government. Presidential and parliamentary elections were held on 10 March 1991, and runoffs on 24 March resulting in a victory by Prime Minister Nicéphore Soglo. The conferees also changed the name of the country to the Republic of Benin. Referred to popularly as a "civilian coup", Benin's National Conference spawned several similar conferences throughout the continent.

Following a period of considerable tension between the executive branch and the legislature, and in the wake of protests caused by the devaluation of the CFA currency, a second National Convention of Forces of Change was held, and calls were issued for new elections to be administered by a national electoral commission. After some delay, elections were held on 28 March 1995 and were considered to be generally free and fair, although the Constitutional Court heard complaints of irregularities in April and invalidated 13 seats. New elections for those seats were scheduled for May, amid opposition complaints that Soglo's dominance of the PRB would again lead to irregularities. After the squabbling, the PRB did in fact emerge with a plurality, holding 20 seats along with 13 held by parties aligned with Soglo and the PRB. In the presidential elections that followed in 1996, Soglo was defeated by his old rival Kérékou, who won the runoff garnering 52.49% of the vote to Soglo's 47.51%. In sum, the 1990s proved quite remarkable for Benin with two transfers of presidential and legislative power freely and fairly at the ballot box, one of which marked the first successful transfer of power in Africa from a dictator to a democratically elected leader.

In the new millennium, Benin held fresh rounds of elections for president and parliament. In presidential elections on 4 and 22 March 2001, Kérékou received 45.4% of the vote to Soglo's 27.1. Adrien Houngbedji, president of the National Assembly, won 12.6%, and Bruno Amoussou, who was minister of state to Kérékou, received 8.6% of the vote. Following the first round, Soglo and Houngbedji withdrew from the second round, charging electoral fraud. Nine members of the National Autonomous Electoral Commission (CENA) and the Constitutional Court resigned after severe criticism that the election results they authorized were false. In the second round of voting, Kérékou won a landslide victory, taking 84.1% of the vote to Amoussou's 15.9%.

In December 2002 the country launched its decentralization program as three million people went to the polls to elect mayors and municipal councilors, who were previously appointed by the government. They were the first municipal and communal elections since the end of one-party rule in 1990. Soglo was elected mayor of Cotonou by its council in February 2003, and Houngbedji was elected mayor of Porto Novo. On 30 March 2003, legislative elections were won by the Presidential Movement, which took 52 of the 83 seats in the National Assembly.

As March 2006 approached, Benin once again was caught up in the fever of an election campaign. Having confirmed that he would step down after his term, President Kérékou put an end to the national debate over a constitutional review that potentially

would have removed the upper age limit of 70 and allowed him to run for a third consecutive term. However, the sharp divisions in the Parliament and indeed all over the country triggered by this prospect as well as the practical difficulties of budgeting for a national referendum, caused Kérékou, who was 72 to take a decision to stand down. Former president, Niéphore Soglo, also exceeding the 70-year age limit for candidates, was ineligible to run.

Leading candidates to replace Mr. Kérékou included Bruno Amoussou of the governing coalition, Union du Bénin (UBF); Adrien Houngbédji of the PRD, and Antoine Idji Kolawolé of MADEP, who was also president of the National Assembly. Daniel Wawéma of Fard-Alafia, the leading political party in the north was also considered a front-runner. Despite his decision to step down, President Kérékou failed to endorse any candidate by early 2006.

### 13 GOVERNMENT

Maj. Mathieu Kérékou assumed the presidency after the military coup of October 1972 and ruled essentially by decree. In 1973, the National Council of the Revolution, headed by President Kérékou, became the ruling authority. The country's name was changed to the People's Republic of Benin in December 1975. The council disbanded itself in 1979 in accordance with a fundamental law it issued in 1977. The supreme authority of the state became the 336-member National Revolutionary Assembly (NRA), elected from a single list in November 1979 and June 1984. In 1984, this body was reduced to 196 members. The NRA elected the incumbent president, Mathieu Kérékou, as president on 5 February 1980 and reelected him on 31 July 1984. On 29 July 1988, the cabinet was restructured. Cabinet ministers, as well as six prefects (provincial governors) made up the National Executive Council.

The 1990 constitution enshrined multiparty elections, a unitary republic, and changed the country's name to The Republic of Benin. The 1990 constitution stipulates that the president is elected by popular vote for a five-year term, reelectable only once. A directly elected National Assembly of 83 seats elected by direct universal suffrage (at age 18) has a maximum term of four years.

### 14 POLITICAL PARTIES

The political evolution of Benin since the end of World War II (1939–45) was largely outside the main currents of French West African politics and determined mainly by local factors. The leading political figures in the 1950s and 1960s were Sourou Apithy and Justin Ahomadegbé in the south and Hubert Maga in the north.

As a result of the first Legislative Assembly elections in April 1959, Apithy's Dahomeyan Republican Party (Parti Républicain du Dahomey—PRD) obtained 28 seats; Maga's Dahomeyan Democratic Rally (Rassemblement Démocratique Dahoméen—RDD), 22; and Ahomadegbé's Dahomey Democratic Union (Union Démocratique Dahoméenne—UDD), 20. A coalition of the three parties took office, with Maga as prime minister. In November 1960, after losing a vote of confidence, the UDD ministers resigned, and the PRD and RDD united first in the Dahomeyan Nationalist Party (Parti des Nationalistes de Dahomey) and then in the Dahomeyan Unity Party (Parti Dahoméen de l'Unité—PDU), again under Maga as prime minister. At the end of 1960, the PDU's single list of candidates won overwhelmingly over the

UDD and thereby gained complete control of the executive and the legislature. In 1961, the UDD was banned, and Dahomey became a one-party state.

After the fall of the Maga government in October 1963, the PDU was disbanded and replaced by the Dahomeyan Democratic Party (Parti Démocratique Dahoméen), which was in turn dissolved following the 1965 military coup. The Union for Dahomeyan Renewal (Union pour le Renouveau du Dahomey) was later formed, but it was dissolved after the military coup of December 1969.

The Kérékou regime, which took power in 1972, appeared at first to be unwilling to return to party government, but following the adoption of a Marxist-Leninist policy in 1974, the government formed a political organization as the basis of a one-party state. This organization, which became known as the Party of the People's Revolution of Benin (Parti de la Révolution Populaire du Benin—PRPB), was the sole legal party until 1990. An illegal opposition group, the Front for the Liberation and Rehabilitation of Dahomey, was reportedly responsible for the 1977 coup attempt. The three major political and regional leaders—Maga, Apithy, and Ahomadegbé—remained under house arrest in Benin until 1981, when they were allowed to leave the country. In 1986, President Kérékou began to modify his Marxism-Leninism and, by December 1989, the ideology was officially abandoned.

The 1990 multiparty general elections produced a National Assembly in which the largest bloc of votes (12 of 64) were held by a Coalition of Democratic Forces (RFD), made up of The Forces of Progress (UDFP), the Movement for Democracy and Social Progress (MDPS), and the Union for Liberty and Development (ULD). This group was renamed the Union Pour le Triomphe du Renouveau Democratique (UTRD—Union for the Triumph of Democratic Renewal) in March 1992. At its peak, it could count on 34 deputy votes. It was replaced on 30 October 1993 by the African Assembly for Progress (RAP) and was composed of 11 parties and associations. The second-largest bloc, with nine seats, was the Alliance of the National Party for Democracy and Development (PNDD) and the Démocratic Renewal Party (PRD). Kérékou's PRPB was reduced to one of a number of opposition groups, although it was popular in the armed forces.

The National Convention for the Forces of Change, formed in February 1993, was an alliance of opposition groups. The Communist Party of Benin was registered in October 1993. In 1994 the Party for the Renaissance of Benin (PRB) was founded by then-President Soglo's wife. Soglo, who had previously aligned himself with no party, was quickly elected head of the party. In the 1995 legislative elections, the PRB emerged with the largest bloc of seats (20) in the newly expanded National Assembly—now made up of 84 seats. Parties closely allied with the PRB won an additional 13 seats. The remainder was split among 25 smaller parties, with the largest opposition bloc being the PRD, which won 19 seats. Kérékou's newly formed Action for Renewal and Development (FARD-ALAFIA) took 10 seats; PSD, 7; Our Common Cause, 3; Liberal Democrats, 3; Communist Party, 2; Alliance Chameleon, 1; RDP, 1; Alliance for Democracy and Progress, 1; and others, 16.

The March 1999 elections produced 70% turnover in the National Assembly where opposition party candidates held a slim majority. Overall, they took 42 of 83 seats, leaving 41 seats to be shared among pro-Kérékou parties. Adrien Houngbedji (PRD) became president of the National Assembly. In November 1999,

the Ministry of the Interior registered Benin's 118th party, the PRD-Arc-en-ciel, which was led by Kamarou Fassassi, formerly campaign director for Houngbedji. Soglo made his comeback as the PRB presidential candidate in 2001. His party won 27 seats in the March 1999 elections. Also winning seats were the PRD, 11; FARD, 10; PSD, 9; African Movement for Democracy and Progress (MADEP), 6. Eleven other parties took the remaining seats.

In the 30 March 2003 legislative elections the Presidential Movement comprising the UBF, MADEP, FC, IDP, and four small parties won 52 of the 83 seats in the National Assembly. Opposition parties including the PRB, PRD, E'toile, and 5 other small parties took the remaining 31 seats. President Kérékou, as head of the Presidential Movement, declared that he would not run for reelection in March 2006. Legislative elections were due in March 2007.

## <sup>15</sup> LOCAL GOVERNMENT

The country is divided into 12 provinces for administrative purposes, and these in turn are divided into districts. There are elected provincial, district, commune, town, and village councils. Benin must place greater emphasis on local government capacity, including more collaboration among the local governments and civil society to formulate, implement, and enforce policy decisions, and to help education and health providers involve communities and their residents in decision-making.

Benin has been slow to decentralize. In December 2002, the country held its first municipal and communal elections since the end of one-party rule in 1990. However, central government has resisted devolution of budget authority to the communes and several mayors were removed by municipal councils allegedly for mismanagement.

## <sup>16</sup> JUDICIAL SYSTEM

The legal system in Benin was formerly based on French and customary law. However, on 4 September 1981, Kérékou announced the creation of people's courts presided over by a Central People's Court that would control all judicial activities under the supervision of the executive and legislature. Each district has a court with the power to try cases, and each province has a court that acts as an appeals and assizes court. At the lowest level, each commune, village, and city ward has its own court.

The 1990 constitution provided for establishment of a new Constitutional Court responsible for judicial review of the constitutionality of legislation and for deciding disputes between the president and the National Assembly. This court began functioning in 1993. It also established a High Court of Justice to be responsible for hearing charges of crimes against the nation committed by the president or other government officials. However, the highest court for nonconstitutional judicial review under the new constitution was the Supreme Court. In general, the judiciary retains its independence from the government.

Human and civil rights are also enshrined in the constitution. Citizens have the right to a fair public trial, and criminal defendants enjoy the presumption of innocence, the right to counsel, and the rights to confront witnesses and have access to government-held evidence. The members of the military may be tried in case of minor offenses at military disciplinary councils. These councils have no power to try civilians.

The constitution also prohibits arbitrary interference with privacy, family, home, and correspondence. Police need a judicial warrant before entering a private home. Although these basic procedural rights are respected, the judiciary in Benin is curtailed by executive powers, is inefficient, and susceptible to corruption at all levels.

## 17 ARMED FORCES

In 2005, Benin's armed forces had 4,550 active personnel. The Army of 4,300 members included 3 infantry battalions. Equipment included 18 light tanks and 16 artillery pieces. There were 150 personnel in the Air Force, whose major equipment included 13 transports, and one utility and two support helicopters. There were no combat aircraft. The Navy numbered an estimated 100 personnel with one patrol boat. A paramilitary gendarmerie totaled 2,500. The defense budget in 2005 totaled \$70.8 million.

## 18 INTERNATIONAL COOPERATION

Benin was admitted to UN membership on 20 September 1960, and is a member of ECA and several nonregional specialized agencies. The country joined the WTO on 22 February 1996. It is a member of the African Development Bank, the ACP Group, the West African Economic and Monetary Union, ECOWAS, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), G-77, and the African Union. The nation is part of the Franc Zone and the Community of Sahel and Saharan States (CENSAD).

Benin has joined with Côte d'Ivoire, Niger, Burkina Faso, and Togo in the Conseil d'Entente, a loose grouping of like-minded states with a common loan guarantee fund. Benin, as a member of the Niger Basin Authority, cooperates with other riparian states of the Niger River in planning the further use and development of the river for fishing, transportation, flood control, and hydroelectricity. The Organization Commune Bénin-Niger regulates common problems of transportation and communications. Benin became a member of the Association of African Petroleum Producers in 1987. The country is part of the Nonaligned Movement and the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, Benin is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Benin's economy is recovering from the economic problems that led to the collapse of the socialist government in power between 1974 and 1989. However, as of 2005, the West African nation remained severely underdeveloped. Although the country's economic output grew by an average of 5% between 1999 and 2005, rapid increases in population offset those gains. The government was expected to continue efforts to privatize telecommunications, water, electricity, and agricultural companies that had been publicly owned through the former socialist economy.

Much of Benin's fate also is influenced by the much larger Nigerian economy, where trade barriers ban a growing list of imports from Benin and other nations. This effect has caused Benin's GDP to fluctuate between recovery and decline. Benin's debt situation

has been eased due to measures undertaken by the Paris Club and other creditors, and the IMF agreed in late 2005 to provide 100% debt relief to Benin under its Multilateral Debt Relief Initiative.

Agriculture is the most important sector in the Benin economy, accounting for 33.9% of GDP in 2004. About 90% of this output is produced on family farms using low-technology inputs and focusing primarily on domestically consumed crops, such as cashews, corn, sorghum, millet, paddy rice, pineapples, cassava, yams, and beans. Typically, Benin is self-sufficient in food. Cotton, palm oil, and peanuts are grown and exchanged for cash. However, the reliance on agriculture has kept much of Benin's population in poverty; about one-third of the population lived below the poverty line, according to a US Central Intelligence Agency (CIA) assessment in 2005.

Benin's livestock population increased an estimated 40% during the late 1980s and early 1990s, though it still does not satisfy local demand. Wood production for local fuel consumption also falls behind national demand. The fishing sector, made up of artisanal fishers, has overfished the stock and is in decline.

Benin's mineral resources are limited. Limestone, marble, and petroleum reserves are exploited commercially. Gold is produced at the artisanal level. Phosphates, chromium, rutile, and iron ore have been located in the north but remain undeveloped resources.

In January 1994 France devalued the CFA franc, causing its value to drop in half overnight. The devaluation was designed to encourage new investment, particularly in the export sectors of the economy, and discourage the use of hard currency reserves to buy products that could be grown domestically. In the short term, the move left the economy reeling and provoked anger and confusion among the population. Price-gouging by local merchants and a sharp rise in inflation to 55% led the government to impose temporary price controls on existing stocks of imports. By 2001, however, inflation was back down to 3% and was estimated at 3.2% in 2005. Real GDP growth was estimated at 4.2% in 2005.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Benin's gross domestic product (GDP) was estimated at \$8.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,200. The annual growth rate of GDP was estimated at 4.2%. The average inflation rate in 2005 was 3.2%. It was estimated that agriculture accounted for 33.9% of GDP, industry 13.6%, and services 52.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$84 million or about \$12 per capita and accounted for approximately 2.4% of GDP. Foreign aid receipts amounted to \$294 million or about \$44 per capita and accounted for approximately 8.5% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Benin totaled \$2.80 billion or about \$417 per capita based on a GDP of \$3.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that

for the period 1990 to 2003 household consumption grew at an average annual rate of 4.1%. In 2001 it was estimated that approximately 52% of household consumption was spent on food, 15% on fuel, 5% on health care, and 3% on education. It was estimated that in 2001 about 33% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

The total labor force was about two million in 1999 (the latest year for which data was available) of which 56% were primarily engaged in agriculture. Less than 2% of the labor force is salaried. There is a great disparity between the income of the wage earner and that of the uneducated traditional laborer, whose yearly income is less than the average monthly income of the salaried worker.

Trade union activity is concentrated in urban areas and particularly in the south, where most wage and salaried workers are employed. The constitution gives workers the right to organize, join unions, meet, and strike. As of 2005, around 75% of government workers were unionized, but the percentage is much smaller in the private sector.

The fundamental labor legislation provides for collective agreements between employers and workers, for the fixing of minimum wages by the government on the advice of advisory committees, and for a 40- to 46-hour basic workweek, with a 24 hour rest period per week. Domestic and agricultural workers generally work more than 70 hours per week. The legislation also provides for paid annual leave and for family allowances for children. These arrangements affect only the small proportion of the total labor force that is in wage-paid employment. Although health and safety standards have been established, enforcement has been ineffective. The minimum wage was about \$50 per month in 2005, but was only enough to provide rudimentary food and shelter for a family. Most workers earn more than the minimum wage by engaging in subsistence farming or informal sector trade. Although the labor code prohibits employment for children under age 14, child labor remains a huge problem. A 2000 study shows that an estimated 75% of apprentices working as seamstresses, hairdressers, carpenters, and mechanics were under the legal employment age.

## 2<sup>2</sup> AGRICULTURE

Benin is predominantly an agricultural country. About 51% of the economically active population was engaged in the agricultural sector in 2003, which accounted for 36% of GDP that year. Small, independent farmers produce 90% of agricultural output, but only about 17% of the total area is cultivated, much of it in the form of collective farms since 1975. The agricultural sector is plagued by a lack of infrastructure, poor utilization of rural credit, and inefficient and insufficient use of fertilizer, insecticides, and seeds. Smuggling of crops for export or the domestic black market results in understating of crop figures. An estimated 20% of output is informally traded with Nigeria. The main food crops are manioc, yams, corn, sorghum, beans, rice, sweet potatoes, pawpaws, guavas, bananas, and coconuts. Production estimates for the main food crops for 2004 were yams, 2,500,000 tons; manioc, 4,000,000 tons; corn, 803,000 tons; sorghum, 190,000 tons; rice, 70,000 tons; dry beans, 105,000 tons; sweet potatoes, 75,000 tons; and millet,

40,000 tons. Benin is self-sufficient in food crops, given favorable weather conditions.

Palm products were long Benin's principal export crop, but cotton has increased in importance, with production increasing since 1981. Despite improved production, however, cotton storage and ginning capacity are still insufficient. Production of most cash crops fell between the 1970s and 1980s because of drought and state mismanagement. Cotton is grown on some 175,000 hectares (432,400 acres), and the crop is managed by the National Agricultural Society for Cotton. Cotton production was 150,000 tons in 2004, down from 175,000 tons in 1999. Peanut production has also recently become important; in 1999, 121,000 tons of shelled groundnuts were produced from 145,000 hectares (359,000 acres). These statistics are distorted by the smuggling of cash crops to and from Nigeria, depending on which country's prices are more attractive. Some 400,000 hectares (990,000 acres) of natural palms are exploited, and there are 30,000 hectares (74,000 acres) of palm plantations, the largest of which is managed by SOBEPALH, a government enterprise producing palm oil and cottonseed oil. Palm oil production was 13,500 tons in 2004 and palm kernel output was 22,000 tons. Other crops with their 2004 production figures were cashews, 10,000 tons; bananas, 13,000 tons; mangoes, 12,000 tons; and coconuts, 20,000 tons.

## 2<sup>3</sup> ANIMAL HUSBANDRY

In 2004 there were an estimated 1,745,000 head of cattle; 700,000 sheep; 1,350,000 goats; 309,000 hogs; and 13 million chickens. Most of Benin's cattle are in the north beyond the main trypanosomiasis (sleeping sickness) zone inhabited by the tsetse fly, but there is also a small hardy type in the lagoon area. Horses are rare owing to the ravages of trypanosomiasis. Poultry are mainly confined to the south of the country.

Estimated output of livestock products in 2004 included 21,100 tons of beef and veal; 6,800 tons of sheep and goat meat; and 3,900 tons of pork. Although the livestock population had increased by 40% in the 1990s, Benin still imports substantial amounts of meat and poultry to meet local demand.

## 2<sup>4</sup> FISHING

Ocean fishing, which had been carried on largely by Ghanaian fishermen, is gaining importance at Cotonou (where a fishing port was opened in 1971) and other coastal centers. Under an agreement with the Senegal government, Senegalese fishermen introduced deep-sea-fishing methods to the Beninese, and a national fishing company was established as a joint venture with Libya. Exports of fish commodities amounted to nearly \$1.9 million in 2003. Lagoon and river fishing remain of primary importance; of an estimated catch of 41,900 tons in 2003, 30,000 tons were from inland waters. The production of fish steadily declined during the 1980s due to over fishing and ecological degradation, but started increasing by the mid-1990s. In 2003, fishery products accounted for 2.8% of agricultural exports.

## 2<sup>5</sup> FORESTRY

There are about 3.4 million hectares (nearly 8.4 million acres) classified as forest and woodland, about 31% of the total land area. Most forests are in northern Benin, and exploitation is subject to public control. Timber production is small. Firewood, charcoal,

and building wood for local use are the most important forest products. In 2003, 494,000 cu m (17.4 million cu ft) of roundwood were produced, down from 6.2 million cu m (218 million cu ft) in 2000. However, the value of forest product exports increased from \$1.18 billion in 2000 to \$8.59 billion in 2003. American Peace Corps volunteers have assisted with the development of the forestry sector, with special attention on the dilemma between ecological balance and fuelwood production.

## 26 MINING

With the exception of oil, Benin was relatively poor in mineral resources, all of which belonged to the government. Sedimentary phosphate deposits were located along the Mekrou River in the north. There was low-grade iron ore at Loumbou-Loumbou and Madekali, in the Borgou district, where surveys discovered resources of more than 500 million tons. Development of the hydroelectric power station was seen as a key factor in the future potential development of the iron ore and phosphate deposits. Limestone was quarried for use in cement plants. There was potential for small-scale gold mining in the Atacora gold zone, in the northwest. Other mineral resources included chromium, rutile, and diamonds; small quantities of industrial diamonds were exported. In 2004, the country produced 250,000 metric tons of hydraulic cement, 21,000 metric tons of clay, 20 kg of gold, and 29,000 cubic meters of gravel.

## 27 ENERGY AND POWER

Production from the Sémé offshore oil field began in October 1982 by Saga Petroleum, a Norwegian firm working under a service contract. The field yielded 1.35 million barrels of oil in 1991. In 1990, Benin exported an estimated 1.27 million barrels of crude oil. In 1986, the contract was transferred to Pan Ocean Oil (Panoco), a Swiss-based US firm, but loans to Benin from international development agencies were frozen because the company could not furnish satisfactory financial and capability statements; it withdrew, forcing Benin to take over oil production. Reserves, which were estimated at 44 million barrels, were considered sufficient to meet domestic needs, but there is currently no refinery in Benin; consequently, refined petroleum products have to be re-imported. In 2002, imports of refined petroleum products amounted to 12,600 barrels per day.

Electrical generating capacity in 2002, totaled 0.122 million kW. Total domestic power output in that same year was 0.055 billion kWh, of which hydropower accounted for 0.002 billion kWh and fossil fuels for the rest. Electricity consumption in 2002 was 0.488 billion kWh. An agreement was signed with Togo and Ghana in 1967 under which Benin receives low-cost electric power from the Akosombo Dam on the Volta River in Ghana. Total electricity imports for 2002 were estimated at 0.4370 billion kWh. Togo and Benin are constructing a dam on the Mono River, along the Togo border, that will feed a power station to supply the southern regions of both countries.

## 28 INDUSTRY

Benin's industrial sector accounted for 13.6% of GDP in 2005. Industrial activity centers primarily on construction materials, chemical production, textiles, and the processing of agricultural

products. Enterprises such as the Onigbolo cement factory and the Savé sugar refinery have characterized Benin's industrial sector.

Production of crude steel ceased in 1993. Production of crude oil began in 1982 but ceased in the 1990s. The Sémé oil field near Cotonou was shut down in 1998, but there were plans to redevelop it. Exploration of oil is ongoing. Benin imports refined petroleum from Nigeria, and is involved in a planned \$500 million West African natural gas pipeline that will run 385 miles between Nigeria and Côte d'Ivoire. Gas delivery from the pipeline was expected to begin in 2005. Although work began at the pipeline's final terminus in late 2005, political questions about multinational oil companies' roles in the project have raised new concerns.

A textile factory at Parakout was revitalized with financing from the West African Development Bank. Benin's industrial electricity needs are met by hydroelectric power from Akosombo dam in Ghana and the Nangbeto dam on the Mono River in Togo. The Société Beninoise d'Electricité et d'Eau (SBEE) controls most electrical production within Benin (which is minimal), and the Communauté Electrique du Benin (CEB) imports the electricity from Ghana through Togo.

Together with other countries belonging to the West African Economic and Monetary Union (WAEMU), Benin adopted the common external tariff in 2000, which was designed to encourage domestic production. Revenues from the cotton sector are substantial, comprising 90% of Benin's foreign currency earnings.

Although the cotton industry remains state-owned, Benin has privatized its cement, textile, tobacco, and public transportation enterprises in recent years, in addition to breweries. Efforts to privatize SONAPRA, Benin's state-owned cotton enterprise, were scheduled to be completed in mid-2004. However, delays have prevented that from occurring.

## 29 SCIENCE AND TECHNOLOGY

Much of the scientific and technical research conducted in Benin is directed toward agriculture and is supported by France. The Benin Office of Mines, which is attached to the Ministry of Industry, Trade, and Tourism, is located at Cotonou; the Institute of Applied Research, founded in 1942, is at Porto-Novo. The National University of Benin in Cotonou has faculties of scientific and technical studies, health sciences, and agriculture. In 1987-97, science and engineering students accounted for 18% of college and university enrollments.

## 30 DOMESTIC TRADE

Despite the economy's reliance on subsistence agriculture, Benin has developed into a West African trading center. Except in Cotonou and Porto-Novo, retailers deal in a wide variety of goods rather than specializing in a few products. In the two larger towns, some shops specialize in such lines as dry goods, foodstuffs, and hardware. In the smaller towns, bazaars and individual merchants and peddlers deal in locally grown products and a few imported items. Domestic trade is generally on a cash basis, but in the countryside barter is common. Advertising is not widely used.

Many small business are privately owned by Beninese residents, but a number of enterprises are held by foreigners, particularly French nationals. Since 2001, there has been a somewhat reluctant effort on behalf of the government for greater privatization of industries such as telecommunications, utilities, and agriculture.

Business hours are from 9:30 AM to 1 PM and from 4 to 7 PM Monday through Friday, from 3 to 7 PM on Saturday, and from 9 to 11 AM on Sunday. Banks are open on weekdays from 8 to 11 AM and 3 to 5 PM Monday through Friday.

**3<sup>1</sup> FOREIGN TRADE**

Benin consistently runs a trade deficit. The leading exports are cotton, uranium and thorium ores, cottonseeds, and cigarettes. Leading imports are foodstuffs, petroleum products, beverages, tobacco, capital goods, and light consumer products.

As of 2004, Benin's main trading partners for exports were: China (29.5%), India (18.8%), Ghana (6.4%), Niger (6%), Indonesia (4.3%) and Nigeria (4.3%). Benin imports products primar-

ily from China (32.2%), France (13%), Thailand (6.7%), and Côte d'Ivoire (5.3%).

**3<sup>2</sup> BALANCE OF PAYMENTS**

Large annual transfers from the French government and other sources are necessary for Benin to offset its chronic trade deficit. As producer prices declined in the late 1980s, Benin's export revenues fell sharply. By 1989 and 1990, foreign aid matched export earnings. Benin's current account deteriorated sharply from the years of high prices for crude oil exports, and since oil production slowed down in the 1990s. A growing dependence on imports also increased the deficit, but official statistics do not include substantial amounts of informal trade flows to neighboring countries.

Benin accepted an IMF structural adjustment program in the early 1990s. The IMF formula called for modest real GDP growth, reducing public sector employment, improving tax collection and privatizing of public-sector enterprises. In addition, Benin's government initiated tariff reforms and lifted price controls. While debt cancellations by the United States and France helped bring the debt-service ratio down to 7.0%, Benin still has a serious debt problem that has only partially been resolved.

The US Central Intelligence Agency (CIA) reported that in 2005 the Benin's exports were \$826.2 million while imports totaled \$1.043 billion resulting in a trade deficit of \$155.1 million.

**3<sup>3</sup> BANKING AND SECURITIES**

In 1959, the Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest-BCEAO) succeeded the Currency Board of French West Africa and Togo as the bank of issue for the former French West African territories. In 1962, it was reorganized as the joint note-issue bank, and in 2000 included Benin, Burkina Faso, Côte d'Ivoire, Guinea-Bissau, Mali, Niger, Senegal, and Togo. BCEAO notes, known as CFA francs, are unreservedly guaranteed by France. Foreign exchange receipts of the member states go into the franc area's exchange pool, which in turn covers their foreign exchange requirements.

In December 1974, the government nationalized the banking sector, amalgamating the three main commercial banks into the Commercial Bank of Benin. There is also the Benin Development Bank. Other commercial banks include the Bank of Africa Benin, Banque Internationale du Benin, Ecobank-Benin, the Financial Bank, Equibail-Benin, Credit du Benin, Continental Bank Benin, and Credit Promotional Benin.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$548.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$734.7 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There is no securities market in Benin.

### 34 INSURANCE

Insurance companies were nationalized in 1974, and the National Society of Insurance and Reinsurance (SONAR) is the state agency.

### 35 PUBLIC FINANCE

Benin has both an ordinary and a development budget. High personnel costs have been a continuing problem in Benin, which has a surfeit of civil servants. Many government-backed enterprises are near bankruptcy and some are barely functioning. The fiscal year follows the calendar year. Most investment expenditure is financed by foreign loans and grants. During the 1980s, the external debt nearly tripled, and stood at \$909 million by 1988. In 1989, the government rescheduled its arrears through the Paris Club. Since 1991 Benin has been implementing a structural adjustment program supported by the World Bank. The program calls for reduced fiscal expenditures, deregulation of trade, and the privatization of money losing state-owned enterprises. Economic aid amounted to \$265 million in 2003, although Benin was eligible to receive debt relief under the Heavily Indebted Poor Countries (HIPC) initiative.

The US Central Intelligence Agency (CIA) estimated that in 2005 Benin's central government took in revenues of approximately \$766.8 million and had expenditures of \$1 billion. Revenues minus expenditures totaled approximately -\$250.2 million. Total external debt was \$1.6 billion.

### 36 TAXATION

Indirect taxes provide almost 60% of government revenues, and direct taxes, about 25%. The corporate tax rate had been reduced to 35% from 38% in 2003. The top marginal rate for personal income tax was reported to have increased to 60% in 2003, from 35%, although the marginal rate for the average taxpayer was 6%.

A value-added tax (VAT) with a standard rate of 18% was introduced in 1991. In 2003, an estimated three-fourths of VAT collected was collected on imports, despite the fact that most imports, including those pursuant to all government contracts and most investments, are exempt from VAT. There is also a 1% community solidarity levy.

### 37 CUSTOMS AND DUTIES

Benin enacted a common external tariff, which has eliminated most nontariff trade barriers. A fiscal import duty has rates of: 0%; 5%; 10%; 15%; and 20% according to tariff class. Port security is an issue of pressing concern, with theft as a major problem. Bonded warehouses are available, but difficult to come by. A port police was established in 1999 to combat the crime problems, but it has had little impact on the situation.

### 38 FOREIGN INVESTMENT

With government privatization of the nationalized industrial sector well under way, the 1980s–90s were a period of considerable investment activity in Benin. In the financial sector, Rasmal Finance, a Swiss banking interest backed by American Express and Citicorp; Ecobank, based in Togo and correspondent for the Midland Bank; the Bank of Africa, a Malian financial interest; and the

Banque Internationale de Bénin, a Nigerian consortium, have operated in Benin since 1989.

Rothmans-UK invested in the formerly state-run cigarette factory. An American private investor has entered the steel industry, manufacturing reinforcing bars and roofing materials. While current oil reserves are negligible, investments in further exploration possibilities offshore have been considerable. Formerly state-owned cement, auto parts, and stationery supply operations have also been privatized. La Beninoise (brewery) brought us\$13.7 million; Sotraz (public transportation), brought us\$73,752. In terms of legislation, Benin adopted an investment code in 1990 designed to attract private sector investment. The Beninese government requires that nationals partly own privatized companies.

Other arenas of interest to foreign investors are the potential for building apparel factors in Benin and investments in tourism. A Chinese-European joint venture was reportedly considering plans for an apparel factory in Seme. Tourism investment has been increasing, with plans to establish a tourism investment zone along the country's breathtakingly beautiful coastline. Bidders were sought in 2004 for the Benin Marina Hotel, which previously had been managed by Sheraton.

Foreign direct investment (FDI) in Benin has been steadily increasing since Benin's transition to a democratic government in the early 1990s. According to the UN Conference on Trade and Development, FDI averaged \$39 million between 1985 and 1995. Since then, it has risen from \$44 million in 2001 to \$60 million in 2004. Benin reported holdings of \$291 million in FDI stocks in 2004, accounting for about 7% of its GDP.

### 39 ECONOMIC DEVELOPMENT

Benin's economic development goals rest on the government's ability to carry out privatization schemes mapped out initially in 2001. Although progress has been slow in some sectors, privatization efforts are ongoing in telecommunications, water, electricity, and agriculture.

Economic development was conducted within the context of a 2000–2004 International Monetary Fund (IMF) Poverty Reduction and Growth Facility (PRGF), and the Heavily Indebted Poor Countries (HIPC) Initiative with the IMF and the World Bank. The devaluation of the CFA (Communauté Financière Africaine) franc, the local currency, in 1994, made imports more expensive and brought the CFA Fr closer in value to the Nigerian currency. This was meant to inhibit imports while stimulating local production and raw material exports, but little progress was made in these areas by 2003.

While privatization efforts were mixed, an IMF assessment completed in 2004 noted Benin's willingness to shift its macroeconomic policies to comply with market-oriented reforms. Foreign investment in the country remains relatively strong, and the receipt of a B+ rating by Standard & Poor's was expected to encourage more private sector interest.

The economy has grown steadily in the early 21st century and most social indicators of standard of living have shown improvement. Nevertheless, a high incidence of poverty, a continued reliance on agriculture and political resistance to structural reforms may continue to hinder growth for the long term.

## 40 SOCIAL DEVELOPMENT

A social insurance system provides benefits to employed persons with a special system for public employees. The first law was established in 1970, and was updated in 2003. It is funded by contributions from employees and employers. It provides pensions for old age, disability, and survivorship. Maternity benefits, worker's compensation, and a family allowance program, financed entirely by employers, are also offered. The majority of the population, however, are self-employed or work in the agricultural sector and fall outside the scope of these programs.

Although the law provides for equality for women, they are victims of discrimination in most areas of society. Domestic violence and spousal abuse are common and the police generally hesitate to interfere.

Although outlawed in 2003, female circumcision, also known as female genital mutilation, is still widely practiced in Benin. This practice is both physically and psychologically harmful to girls and women, and in some cases may cause death. Some traditional practices inflict hardship and violence on children, and child labor remains a serious problem. In 2004, trafficking of women and children continued to be widespread.

Human rights are somewhat protected in Benin. Reports of killings and beatings by police, arbitrary arrests and detentions continue. Prison conditions continue to be harsh.

## 41 HEALTH

Most serious epidemic diseases have been brought under control by mobile health units and other facilities. Yaws has been almost totally eradicated in the northern part of the country. Sleeping sickness (trypanosomiasis) has also been greatly reduced in the north and yellow fever has all but disappeared. Meningitis, once endemic in the north, now appears only sporadically and measures against tuberculosis have been intensified. In 2002, 203 new cases of cholera were reported. Malnutrition was prevalent in an estimated 25% of children under five years old. Access to safe water had improved to 63% by 2000 (between 1990 and 1995, only 20% had access to safe water), but only 23% of the population had adequate sanitation. Estimated average life expectancy in 2005 was 53 years.

As of 2004, there were an estimated 6 physicians and 20 nurses per 100,000 people. Total health care expenditure was estimated at 3.3% of GDP.

About 16% of married women (age 15 to 49) used contraception in 2000. The maternal mortality rate was estimated at 500 per 100,000 live births. The infant mortality rate in 2005 was 81 per 1,000 live births. The total fertility rate was 6.4 per woman in 1999. Nearly half of the women in Benin undergo female genital mutilation.

The HIV/AIDS prevalence was 1.90 per 100 adults in 2003. As of 2004, there were approximately 68,000 people living with HIV/AIDS in the country. There were an estimated 5,800 deaths from AIDS in 2003.

The government of Benin has set goals of expanding its health care system, upgrading the quality of first referral care, promoting private sector care, and improving public sector care.

## 42 HOUSING

Improvement in overall appearance and in sanitation facilities in towns and villages has been fostered by the government. Low-cost housing has been provided by a public corporation backed by French development funds.

Over the past decade, many residents have been looking to build more modern "western" style homes. However, most of the construction materials for such a structure need to be imported, making materials (and labor) too expensive for many residents to consider this an option. In the rural areas, the typical dwelling of northern Benin is a round hut of beaten mud with a conical roof of thatch. In southern Benin, rectangular huts with sloping roofs of palm or straw thatch are more usual. Along the coastal lagoons, houses are often built on stilts.

## 43 EDUCATION

During the French colonial period, Benin produced the educational elite of French West Africa. The percentage of primary-school attendance was higher than in any other French West African territory, largely because of intense missionary activity. The educational system is patterned on that of France, but changes have been introduced to modify the elitist system and to adapt the curriculum to local needs and traditions. The most significant change has been the takeover of mission schools following legislation in 1975, by which the state made all education free, public, secular, and compulsory from ages 6 to 12.

Primary school covers a six-year course of study. For secondary studies, students may choose between a seven-year general education program or a six-year technical program. At last estimates (1999) primary school enrollment was at about 55% of age-eligible students; 67% for boys and 44% for girls. In 2001, secondary school enrollment was estimated at about 19% of eligible children; 26% for boys and 12% for girls. The student-to-teacher ratio for primary school was at about 54:1 in 2000; the ratio for secondary school was about 22:1. In 2003, it was estimated that about 51% of all students complete their primary education.

The National University of Benin at Cotonou, founded in 1970, offers courses in agriculture, medicine, liberal arts, science, law, economics, and politics. There are at least eight other institutes of higher learning in the country. In 2001, there were about 19,000 students enrolled in higher education programs. The adult literacy rate for 2004 was estimated at about 33.6%, with 46.4% for males and 22.6% for females.

As of 2003, public expenditure on education was estimated at 3.3% of GDP.

## 44 LIBRARIES AND MUSEUMS

The National Archives and National Library, which has around 35,000 volumes, are in Porto-Novo. Also in the capital are the Institute of Applied Research, which maintains a research collection of 8,000 volumes and the library of the National University of Benin with 50,000 volumes. The French Cultural Center in Cotonou maintains a library of 30,000 volumes. The library of the National University of Benin in Cotonou serves as a depository library of the United Nations. There are historical museums in Abomey and Ouidah, an ethnological museums in Porto-Novo, and Cotonou, and a museum of natural history and ethnography in Parakou.

There are monuments and historical sites maintained by the government and three zoos and botanical gardens.

#### 45 MEDIA

Virtually all media in Benin are controlled by the government. The state provides telegraph and telephone service and government-owned radio and television services broadcast in French, English, and 18 indigenous languages. In 2003, there were an estimated nine mainline telephones for every 1,000 people. The same year, there were approximately 34 mobile phones in use for every 1,000 people.

As of 2005, there was one state TV channel, a few commercial TV channels, and more than 30 state, commercial and local radio stations. In 2003, there were an estimated 445 radios and 12 television sets for every 1,000 people. The same year, there were 3.7 personal computers for every 1,000 people and 10 of every 1,000 people had access to the Internet.

In 2002, there was only one daily newspaper; *Ehuzu* (also known as *La Nation*), is the primary government publication, with a daily circulation of about 12,000. There are about 50 other newspapers and periodicals. Weeklies included *La Gazette du Golfe* (circulation 18,000) and *Le Forum de la Semaine*. Other publications included *L'Opinion* and *Tam-Tam Express* (8,000 every other week). All were published in Cotonou. There are also several general interest and a few special interest periodicals.

The Constitution of Benin ensures freedom of expression, including speech and the press, and the government is said to respect this freedom.

#### 46 ORGANIZATIONS

The Chamber of Commerce and Industry of Benin is in Cotonou. There are professional organizations for teachers and doctors.

The Organization of Revolutionary Youth of Benin, founded in 1983, has about 150,000 members from all parts of Benin. The organization has direct relations with all youth-serving ministries of the Government and is affiliated with the Pan African Youth Movement and the World Federation of Democratic Youth. The Scoutisme Béninois is a scouting organization sponsoring both Boy Scouts and Girl Guides. There are also organizations of the Junior Chamber of Benin, YMCA/YWCA, and the Special Olympics.

There are active chapters of the Red Cross, Amnesty International, Africare, Caritas, and Friends of the Earth.

#### 47 TOURISM, TRAVEL, AND RECREATION

Benin has great potential for tourism, and the government is striving to develop this sector of the economy. The country has a rich cultural heritage, varied scenery, and impressive national parks. The tourist industry remains underdeveloped. For trips to the Pendjari game park, there is a small (21-room) hotel in Porga. In

2000, there were 2,733 hotel rooms, with 5,040 beds and an 11% occupancy rate. In 2002 there were 72,288 visitor arrivals.

Tourist attractions include the lake village of Ganvie, two game parks in the north, the ancient royal city of Abomey, several museums, and beaches. Hunting lodges have been built to foster safaris in the two national parks, where efforts have also been made to preserve wild game. In the south are picturesque villages built on stilts over the waters of the coastal lagoons. A visa is required for all visitors except those from Denmark, Germany, France, Sweden, and many of the African nations. Proof of vaccination against yellow fever is required in most of West Africa. In 2004, the US Department of State estimated the daily cost of staying in Cotonou at \$167 per day, depending on the choice of hotel. In other regions, the cost was as low as \$87 per day.

#### 48 FAMOUS BENINESE

Perhaps the most famous historical ruler in the area now known as Benin was Béhanzin (d.1906), who was king of Abomey from 1889 until he was defeated by the French in 1894. The best-known modern Beninese are the political leaders Hubert Maga (1916–2000); Sourou-Migan Apithy (1913–1989); Justin T. Ahomadegbé (1917–2002); and Brig. Gen. Ahmed Mathieu Kérékou (b.1933). Nicephore Soglo (b.1934), a former World Bank economist, was elected president in 1991 in Benin's first multiparty presidential election. In 1996, he lost his bid for reelection to Kérékou in a runoff.

#### 49 DEPENDENCIES

Benin has no territories or colonies.

# BOTSWANA

Republic of Botswana

**CAPITAL:** Gaborone

**FLAG:** The flag of Botswana consists of five horizontal stripes. The top and bottom stripes are light blue and wider than the middle stripe, which is black. The blue stripes are separated from the black by thin white stripes.

**ANTHEM:** *Fatshe La Rona (Blessed Country)*.

**MONETARY UNIT:** On 23 August 1976, the pula (P) of 100 thebe replaced the South African rand (R) as Botswana's legal currency. There are coins of 1, 2, 5, 10, 25, 50 thebe and 1 pula, and notes of 2, 5, 10, 20, 50 and 100 pula. P1 = \$0.19380 (or \$1 = P5.16) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; President's Day, 15 July; Botswana Days, 30 September–1 October; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, and Ascension.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country in southern Africa, Botswana has a total area of 600,370 sq km (231,804 sq mi), extending 1,110 km (690 mi) NNE–SSW and 960 km (597 mi) EWE–WNW. Comparatively, the area occupied by Botswana is slightly smaller than the state of Texas. It meets Zambia at a point in the N and is bordered on the NE by Zimbabwe, on the SE and S by South Africa, and on the W and N by Namibia, with a total land boundary length of 4,013 km (2,493 mi).

## <sup>2</sup> TOPOGRAPHY

The country is a broad tableland with a mean altitude of 1,000 m (3,300 ft). A vast plateau about 1,200 m (4,000 ft) in height, extending from near Kanye north to the Zimbabwean border, divides the country into two distinct topographical regions. The eastern region is hilly bush country and grassland (veld). The Tsodilo Hills in the northwest contain the highest point in the country at about 1,489 m (4,884 ft). To the west lie the Okavango Swamps and the Kalahari Desert. The only sources of year-round surface water are the Chobe River in the north, the Limpopo in the southeast, and the Okavango in the northwest. The Limpopo is the longest river with a length of 1,600 km (1,000 mi). In seasons of heavy rainfall, floodwaters flow into the Makgadikgadi Salt Pans, Lake Ngami (the largest lake, 1,040 sq km/401 sq mi), and Lake Xau.

## <sup>3</sup> CLIMATE

Most of the country has a subtropical climate, with cooler temperatures prevailing in the higher altitudes. Winter days are warm and nights are cool, with heavy frost common in the desert. Temperatures range from average maximums of 33°C (91°F) in January and 22°C (72°F) in July to average minimums of 18°C (64°F) in January and 5°C (41°F) in July. In August begin the seasonal winds

that blow from the west and carry sand and dust across the country. Rainfall normally averages 45 cm (18 in) but ranges from 69 cm (27 in) in the north to less than 25 cm (10 in) in the Kalahari; drought conditions prevailed in the early and mid-1980s.

## <sup>4</sup> FLORA AND FAUNA

Although about 90% of Botswana is covered by some kind of savanna, even the Kalahari Desert contains adequate vegetation to support tens of thousands of wild animals. Common trees are the mopane, camel-thorn, motopi (shepherd's tree), and baobab. Botswana is a natural game reserve for most animals found in southern Africa, including lions, leopards, cheetahs, elephants, giraffes, zebras, hippopotamuses, rhinoceroses, African buffalo, hyenas, and 22 species of antelope. The duiker (a small, horned antelope), wildebeest (gnu), and springbok (gazelle) are familiar. As of 2002, there were at least 164 species of mammals, 184 species of birds, and over 2,100 species of plants.

## <sup>5</sup> ENVIRONMENT

Overgrazing due to the rapid expansion of the cattle population is a continuing threat to the vegetation and wildlife of Botswana. There are 5 game reserves, 3 game sanctuaries, and 40 controlled hunting areas. About 18% of the land has been set aside as national parks and game reserves. Natural hazards to the environment include seasonal winds from the west that blow sand and dust across the country.

Botswana has a very limited water supply that is inadequate for its increasing population, and the nation's water shortage is exacerbated by periodic droughts. One major factor in Botswana's water supply problem is that 68% of the country is part of the Kalahari desert. The country has about 3 cu km of renewable water resources, 48% of which is used for farming. Almost all of Bo-

tswana's urban dwellers and 90% of its rural people have access to safe water.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 6 types of mammals and 9 species of birds. Endangered species included the black rhinoceros, the African hunting dog, and the African savannah elephant. Burchell's zebra has become extinct.

## 6 POPULATION

The population of Botswana in 2005 was estimated by the United Nations (UN) at 1,640,000, which placed it at number 143 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 39% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be -0.3%. The projected population for the year 2025 was 1,583,000. The population density was 3 per sq km (7 per sq mi).

The UN estimated that 54% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.54%. The capital city, Gaborone, had a population of 19,000 in that year. Other cities and their populations are Mahalapye, 109,811; Serowe, 153,035; Tutume 123,514; Bobonong, 66,964; Francistown, 87,000; Selebi-Phikwe, 52,300; Maun, 48,057; and Lobatse, 29,700.

The prevalence of HIV/AIDS has had a significant impact on the population of Botswana. The UN estimated that 38.5% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy. Life expectancy dropped from 65 years in 1990 to 35 years in 2005.

## 7 MIGRATION

At least 50,000 Botswanans are working in South Africa at any particular time. In 1991, 21,468 South African residents were listed as born in Botswana. Botswana had some 500 refugees at the end of 1992, about 40% from South Africa. In 1998, the United Nations High Commissioner for Refugees (UNHCR) had been planning to phase out its Botswana office by the end of the year. However, in October 1998 the influx of 2,500 asylum seekers from the Caprivi region of Namibia provided them with an urgent new caseload. As of 1999, the repatriation plan to return the Namibian refugees had been temporarily halted, due to a deterioration of the situation in the Caprivi region. In 2005, the net migration rate was estimated as 6.07 per 1,000 population. There were 52,000 migrants living in Botswana in 2000. In 2004 there were 3,800 refugees. The government views the immigration level as too high.

## 8 ETHNIC GROUPS

The population, predominantly of Tswana stock (79%), is distributed among eight tribes, Batswana being the largest. The others include Bamangwato, Bakwena, Bangwaketsi, Bakgatla, Barolong, Bamalete, and Batlokwa. The next largest single group of indigenous peoples is the Kalanga, which accounts for about 11% of the

population. There are about 3% Basarwa (Bushmen). Kgalagadi and whites account for about 7%.

## 9 LANGUAGES

Though English is the official language, it is only spoken by about 2.1% of the population (2001 census). Setswana is the most widely spoken language, spoken by about 78.2% of the population. About 7.9% of the population speak Kalanga and 2.8% speak Sekgala-gadi. Other languages are used by about 8.6% of the population; 0.4% of the population did not specify their native language.

## 10 RELIGIONS

It is estimated that about one-half the population are nominally Christian. Anglicans, Methodists, and the United Congregational Church of Southern Africa—formerly the London Missionary Society—are the largest groups. Other congregations include Lutherans, Roman Catholics, the Church of Jesus Christ of Latter-Day Saints (Mormons), Seventh-Day Adventists, Jehovah's Witnesses, Baptists, the Dutch Reformed Church, Mennonites, and other Christian denominations. Most people practice a blend of indigenous beliefs alongside of their Christianity. About 1% of the population is Muslim and about 1% is Hindu. There is a small community of Bahai's.

Freedom of religion is provided for in the constitution and this right is generally respected in practice. Religious groups, like all organizations within the country, must be registered with the state Registrar of Societies, a department of the Ministry of Labor and Home Affairs. Some Christian holidays are celebrated as public holidays.

## 11 TRANSPORTATION

In 2003, Botswana had 25,233 km (15,694 mi) of roads, of which 8,867 km (5,506 mi) were paved. Bituminous roads have been extended to the Zambian and Zimbabwean borders, thereby reducing Botswana's economic dependence on South Africa. In 2003, there were 52,120 passenger cars and 75,400 commercial vehicles in Botswana.

The main railroad from Cape Town in South Africa to Bulawayo in Zimbabwe runs through Botswana for a distance of 641 km (398 mi), connecting Lobatse, Gaborone, and Francistown. Two branch lines totaling 71 km (44 mi) connect the coal field of Morupule and the copper-nickel complex at Selebi-Phikwe with the main line; these lines are owned by Botswana but operated by National Railways of Zimbabwe. In 1991, a new 165 km (103 mi) spur connecting Sua Pan to Francistown was completed, at a cost of \$45 million. Botswana had a total of 888 km (552 mi) of narrow gauge railways in 2004.

In 2004 there were an estimated 85 airports, 10 of which (as of 2005), were paved. The government-owned Air Botswana operates scheduled flights to Francistown, Gaborone, Maun, and Selebi-Phikwe. There is international service to Johannesburg, South Africa; Mbabane, Swaziland; and Harare, Zimbabwe. A new international airport near Gaborone was opened in 1984. Air passengers arriving to and departing from Botswana during 2003 totaled about 183,000.

LOCATION: 17°47' to 26°54' s; 20° to 29°21' E. BOUNDARY LENGTHS: Zimbabwe, 813 kilometers (505 miles); South Africa (including Bophuthatswana), 1,778 kilometers (1,105 miles); Namibia (South West Africa), 1,461 kilometers (908 miles). LOCATION: 17°47' to 26°54' s; 20° to 29°21' E. BOUNDARY LENGTHS: Zimbabwe, 813 kilometers (505 miles); South Africa, 1,840 kilometers (1,141 miles); Namibia, 1,360 kilometers (843 miles).

## <sup>12</sup>HISTORY

According to tradition, the founder of the Batswana tribe was a 14th-century chief named Mogale. His great-great-grandson Malope had three sons, Kwena, Ngwaketse, and Ngwato, who became the chiefs of the major tribes that now inhabit Botswana.

The foundations of the modern state lie in the 1820–70 period, when the Batswana suffered many tribulations at the hands of the Matabele. In 1872, Khama III became chief of the Bamangwato. He was the son of Chief Sekgoma, the only Batswana chief who had succeeded in turning back the Matabele. Up to that time, the Batswana had no permanent contact with Europeans, except for the missionaries Robert and Mary Moffat and David Livingstone, who had established missions in the first half of the 19th century. But with increased exploration and the partition of southern Africa among the European powers, hostility developed between the Batswana and the Boer trekkers from the Transvaal. Khama III appealed to the United Kingdom for assistance, and in 1885 the whole of what was then known as Bechuanaland was proclaimed to be under the protection of Queen Victoria. The territory south of the Molopo River was constituted a crown colony called British Bechuanaland, and in 1895 it was incorporated into South Africa. The northern part of the territory, the Bechuanaland Protectorate, remained under the protection of the British crown, the powers of which, beginning in 1891, were exercised by the high commissioner in South Africa. The South African Act of Union of 1909, which created the Union (now Republic) of South Africa, provided for the eventual transfer to South Africa of Bechuanaland and the two other High Commission Territories, Basutoland and Swaziland, despite their requests to the contrary. The provision was dropped in 1961, after the withdrawal of South Africa from the Commonwealth.

The first significant political progress was made in 1921–22 with the creation of European and African advisory councils, added to which was a joint advisory council. In 1961, executive and legislative councils were created. A major step on the road to independence was taken in 1965 with the implementation of Bechuanaland's self-government constitution under Seretse Khama, the former chief-designate of the Bamangwato, who had become prime minister after Bechuanaland's first general elections. Final constitutional talks were held in London in February 1966, and on 30 September 1966, under the leadership of President Khama, the newly named Republic of Botswana came into being.

On 18 October 1969, the Botswana Democratic Party (BDP), under the leadership of Sir Seretse Khama, was returned to power in the general elections, and he was sworn in for a second term as president on 22 October. Khama was reelected president after the BDP won 27 out of 32 regular elective seats in the National Assembly in national elections held on 26 October 1974. During this first decade of independence, Botswana refused to support the United Nations (UN) sanctions against South Africa because, although officially opposed to apartheid, Botswana recognized its own economic dependence on South Africa. Following the 1969 elections, President Khama banned the import of goods from the white minority regime in Rhodesia (now Zimbabwe). Tensions were high in the 1970s as Botswana harbored 20,000 refugees from Rhodesia, and Rhodesian forces several times crossed into Botswana on "hot pursuit" raids against guerrillas.

In elections held in October 1979, the BDP won 29 of the 32 elective seats, and Khama was elected to a fourth presidential term. He died in 1980 and was succeeded by Vice President Quett Ketumile Joni Masire, who was elected to a full five-year term on 10 September 1984. Masire was reelected on 7 October 1989 and the BDP won 31 and the BNF 3 of the elected assembly seats.

South Africa repeatedly, but fruitlessly, pressed Botswana to sign a mutual-security agreement, and it accused Botswana of harboring insurgents opposed to the Pretoria regime and allowing them to mount acts of terrorism and sabotage against South Africa, a charge Botswana denied. An attack by South African commandos on 14 June 1985, aimed at South African refugees, killed at least 15 people in Gaborone. Further South African border violations and attacks on targets in Botswana took place during 1986, but such incursions had ended by 1988. In 1992 the two countries established formal diplomatic relations.

Before the 1994 legislative elections, the assembly was expanded to 44 seats, 40 of which would be elected, with the majority party given the right to appoint the remaining 4 seats. The opposition maneuvered before the election, attempting to form a broad coalition to unseat the BDP, which had so dominated the country since independence. Many opposition politicians insisted on electoral reforms, specifically the introduction of absentee balloting (20% of the population were migrant workers) and the lowering of the voting age from 21 to 18. On 15 October the elections were held and the BDP won a significant majority of seats in the assembly. The assembly named Masire president on 17 October. In November 1995, amidst worsening economic conditions and civil unrest, the government announced constitutional reforms, which limited the president to two terms, although a stipulation was added that the rule would not apply to the sitting president. The voting age was also lowered to 18, but no action was taken to introduce absentee balloting.

On 1 April 1998, Festus Mogae succeeded Quett Masire after the latter stepped down. Mogae was subsequently elected president in the 16 October 1999 polls with 54.3% of the National Assembly vote. He faced a number of issues such as environmental degradation, the need to diversify the economy, and political power struggles within the ruling party.

The Botswanan general election of 2004 was fought between the Botswana Democratic Party (BDP) and eight opposition parties. A total of 57 seats in the parliament were contested. The election was won by the BDP which won 51.7% of popular votes and obtained 44 seats in the new parliament. The largest opposition party, the Botswana National Front (BNF) won 26% of the popular vote and 12 seats. The Botswana Congress Party (BCP) won 17% of the popular vote and only 1 seat. Voter turnout in the 2004 general election was 76%. The other five smaller political parties did not win any seats. The BNF accused the country's Independent Election Commission of fundamental errors in its conduct of voter registrations. The leader of BDP, Festus Mogae, was serving his second and last term as President of Botswana. Although the political landscape in Botswana has been dominated by the BDP since independence, the country has a flourishing multiparty constitutional democracy. As of 2004, each of the elections since independence were freely and fairly contested and had been held on schedule.

The escalating HIV/AIDS pandemic has meant that political and economic challenges have taken a back seat. As of 2003, Botswana had one of the highest HIV/AIDS adult prevalence rates in the world. The government's goal was to have no new infections by 2016, and Botswana has been commended for being the first country in Africa to widely distribute antiretroviral drugs through its public health system.

### 13 GOVERNMENT

Under the 1965 constitution, as subsequently modified, Botswana is a republic. It is Africa's longest continuous multiparty democracy. The president is the chief of state, chief executive, and commander-in-chief of the armed forces. He is elected by a simple majority of the National Assembly. The president appoints a cabinet from among the National Assembly members, including the vice president, who also serves as a cabinet minister. The president also has the power to declare war, and he can summon or dissolve the National Assembly at any time. He can veto any bill, but if it is passed again within six months, he must either sign it or dissolve the Assembly.

The bi-cameral parliament consists of a National Assembly and a House of Chiefs. The National Assembly comprises 61 seats—57 are directly elected members and 4 are appointed by the majority party. After a no-confidence vote, the Assembly must be dissolved, or the president must resign. The House of Chiefs is largely advisory and consists of the chiefs of the eight principal tribes, four chiefs elected from minority districts, and three others elected by the House. Any proposed bill relating to matters of tribal concern must be referred to the House of Chiefs before the Assembly can pass it. It was chaired by Chief Seepapitso IV as of 1997. All citizens of Botswana aged 18 and over are eligible to vote. Both the President and members of parliament are elected for five-year terms.

### 14 POLITICAL PARTIES

Botswana has had multiparty competition since independence, although the Botswana Democratic Party (BDP), founded in late 1961 as the Bechuanaland Democratic Party by Seretse Khama, won every election since 1966 to 2004. The BDP gained prominence by advocating a gradual approach to independence through democracy, nonracialism, and a multiparty state. While maintaining opposition to apartheid, the BDP acknowledged Botswana's economic dependence on South Africa and the need to maintain friendly relations. Other parties included the Botswana People's Party (BPP), founded in 1960; the Botswana Independence Party (BIP), founded in 1964 under the leadership of Motsamai Mpho; and the Botswana National Front (BNF), which put up its first candidates in 1969.

In the March 1965 elections, the BDP won 28 of the 31 contested seats, and the BPP took the other 3. Seretse Khama became prime minister and appointed Quett Masire as deputy prime minister. Under the transitional constitutional provisions for the immediate postindependence period, they automatically acceded to the offices of president and vice president, respectively. The members elected to the Legislative Assembly in 1965 continued to hold office in the new National Assembly. The first postindependence elections were held on 18 October 1969; the BDP won 24 seats,

the BPP 3 seats, the BNF 3 seats, and the BIP 1 seat (only 31 seats were contested).

In the elections of 26 October 1974, the ruling BDP raised its total of elective seats to 27, while the BNF won 2 seats, the BPP 2, and the BIP 1. In the elections of October 1979, the BDP won 29 seats, the BNF 2, and the BIP 1. In elections held in September 1984, the BDP won 29 seats, the BNF 4, and the BPP 1. The division in the October, 1989 elections was BDP 31 and BNF 3. Since then, the opposition parties, largely concentrated in urban areas, formed a common front and threatened to boycott the 1994 elections unless electoral reforms were enacted. Principal among these demands were that the voting age be lowered from 21 to 18 and absentee balloting be allowed—20% of the country's electorate were migrant workers. However, the coalition collapsed before the election and the BNF ran alone, winning 13 of the 40 contested seats, with the BDP taking the rest. The Assembly was enlarged to 44 seats prior to balloting with four seats appointed by the majority.

In the parliamentary elections held on 16 October 1999, the BDP won 33 out of the 40 parliamentary seats. The remaining seats went to the Botswana National Front led by Otswotse Moupou (6 seats) and the Botswana Congress Party led by Mokgweetsi Kgosipula (1 seat). A number of minor parties formed a coalition, but did not capture any seats. These were the United Action Party led by Ephraim Lepetu Setshwaelo, the Independence Freedom Party (IFP) led by Motsamai Mpho, and the Botswana Progressive Union (BPU) led by D. K. Kwele.

In the parliamentary elections held on 30 October 2004, the BDP led by Festus Mogae, won 51.73% of the popular vote and 44 of the 57 seats contested. BNF led by Motsweletse Moupou won 26.06% of the popular vote and 12 seats; and BCP led by Otladisa Koosaletse won 16.62% of the popular vote and only 1 seat. The other 5 smaller political parties that contested did not win any seat but in total won about 5% of the popular vote. These included the Botswana Alliance Movement led by Ephraim Lepetu Setshwaelo (2.84% of the popular vote), Botswana People's Party led by Motlatsi Molapise (1.91% of the popular vote), the New Democratic Front led by Dick Bayford (0.78% of the popular vote) and the Marx, Engels, Lenin, Stalin (MELS) Movement of Botswana led by Themba Joina (0.03% of the vote).

### 15 LOCAL GOVERNMENT

Local government is carried out by 10 district councils and 5 town councils—Gaborone, Francistown, Lobatse, and Selebi-Phikwe. Executive authority in each district is vested in the district commissioner, who is appointed by the central government. The commissioner is assisted by the district council and the district development committee, which are partly appointed and partly elected. Botswana also has traditional village councils, called *kgotla*, which serve as public forums at which villagers can express opinions.

### 16 JUDICIAL SYSTEM

The 1965 constitution provides for a high court, a court of appeal, and subordinate first-, second-, and third-class courts. The chief justice, appointed by the president, is chairman of the Judicial Services Commission, which advises the president on the appointment of other judges and magistrates. The African Courts Proclamation of 1961 provides for courts with competence in matters

of tribal law and custom, presided over by chiefs and headmen. A court of appeals for such cases was created in 1986. The customary courts handle marital and property disputes as well as minor offenses. The judiciary is independent of the executive and the legislative branches. The legal system is based on Roman-Dutch law and local customary law.

## 17 ARMED FORCES

The armed forces personnel of Botswana numbered 9,000 in 2005. The Army consisted of 8,500 members while the remaining 500 were in the Air Wing, which had 31 combat capable aircraft, including 15 fighter aircraft. There were also about 1,500 paramilitary police. The defense budget in 2005 totaled \$359 million.

## 18 INTERNATIONAL COOPERATION

Botswana became a member of the United Nations (UN) on 17 October 1966 and is a member of the ECA and several nonregional specialized agencies. It is a member of the African Union, the ACP Group, and the WTO (1995). It belongs to the Southern African Customs Union (with South Africa, Lesotho, Namibia, and Swaziland) and the Preferential Trade Area for East and Southern Africa. Botswana also participates in the African Development Bank, the Commonwealth of Nations, G-77, and the Southern African Development Community (SADC), which maintains a secretariat at Gaborone. In 2000, the United States and Botswana jointly established the International Law Enforcement Academy (ILEA) in Gaborone. Botswana is part of the Nonaligned Movement. In environmental cooperation, Botswana is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Most economists regard Botswana as one of Africa's major success stories. The country's economy was dependent almost entirely on livestock production until the 1970s, when it became an important exporter of diamonds and other minerals. Then, the Botswana Development Corporation, adopting a conservative investment policy, actively sought foreign capital for investments in crop agriculture, tourism, and secondary industries. The rapid growth in diamond production helped Botswana achieve average high economic growth from independence through the early 2000s.

The diamond industry developed in 1971 in cooperation with De Beers Consolidated Mines. Botswana is the one of the world's largest producer of gem diamonds in value terms. It is also the one of the world's most diamond-dependent economy. Diamond production in 2003 stood at over 30 million carats. Botswana also produced copper-nickel matte production, and had significant coal deposits. Botswana had exploitable deposits in platinum, gold, and silver as well. Exploration for petroleum and natural gas deposits has been underway in western Botswana. As of 2003, Botswana was the second-largest mining producer by value (after South Africa, which is the largest mining producer in the world).

In spite of the gains recorded by the mining sector, agriculture employed more than 80% of the labor force in 2004. Provided with inadequate rainfall and poor soil, agriculture supplied only 50% of the country's food needs and accounted for only 4% of GDP

in 2003. Commercial farms played a critical role in agricultural and livestock production. Of Botswana's total output of sorghum, maize, millet, beans and pulses, 37% was produced by 100 of the 360 commercial farms. Ownership of the national herd of cattle was highly concentrated: 5% of households owned over 50%.

Botswana had the highest rate of economic growth in the world from 1966–1997 (averaging at 9.2%), after which it was adversely affected by the Asian financial crisis. Economic growth was 7.7% in 2000, 4.2% in 2004 and 3.3% in 2005; Botswana had an inflation rate of about 7% in 2004 and 8.3% in 2005. Although Botswana had an advanced infrastructure with good roads, communications, and dependable utilities, there was a general lack of technical and managerial skills among its workers. High rates of unemployment estimated at 23.8% in 2004 and severe poverty (estimated at 47% of the population living below the poverty line in 2002) keep the country from fully sharing its economic success with all its citizens. HIV/AIDS rates are among the highest in the world, with 37% of the sexually active population (defined as those between the ages of 15 and 49) being HIV positive in 2003. This high prevalence rate is expected to force a greater percentage of the population into poverty. Botswana was in the process of diversifying its economy in 2005, and was engaged in promoting sustainable development. It was encouraging foreign direct investment in non-mining sectors of the economy, including light manufacturing, tourism, financial services, and pharmaceuticals.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Botswana's gross domestic product (GDP) was estimated at \$16.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$10,100. The annual growth rate of GDP was estimated at 4.5%. The average inflation rate in 2005 was 8.3%. It was estimated that agriculture accounted for 2.4% of GDP, industry 46.9%, and services 50.7%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$27 million or about \$16 per capita and accounted for approximately 0.4% of GDP. Foreign aid receipts amounted to \$30 million or about \$17 per capita and accounted for approximately 0.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Botswana totaled \$2.03 billion or about \$1,177 per capita based on a GDP of \$7.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.0%. In 2001 it was estimated that approximately 24% of household consumption was spent on food, 12% on fuel, 2% on health care, and 7% on education. It was estimated that in 2003 about 47% of the population had incomes below the poverty line.

## 21 LABOR

In 2004, Botswana had 288,400 people employed in a formal economic sector. As of 2001, a total of 12.3% of the workforce was

employed in the agricultural sector, with 25.5% in industry, 61.3% in the services sector, and 0.9% in not defined occupations. As of 2004, unemployment among the workforce stood at 23.8%.

Botswana's unions are concentrated mostly in the mining sector, and to a lesser extent in the country's railway and banking sectors. In 2004, employees in the public sector were granted the right to organize, but as of 2005, this process was still underway. An employment act controls employment contracts, work by women and children, wage guarantees, conditions of work, and paid holidays. The law severely restricts the right to strike. There was a government-set minimum wage of \$0.64 per hour in 2005 for most full-time workers in the private sector, which cannot provide a living wage to a worker and family. However, most jobs in the formal sector of the economy paid in excess of the minimum wage. There is a maximum 48-hour workweek, although 40 hours per week can be found in most private sector jobs. Public sector employees however, had a 48 hour workweek. Although there are minimum safety and health standards, due to lack of resources they are not regularly enforced.

## 22 AGRICULTURE

Only about 0.7% of total land area is arable. Crop production is hampered by traditional farming methods, recurrent drought, erosion, and disease. Most of the land under cultivation is in the eastern region. The principal crops for domestic use are sorghum, corn, and millet. Sorghum and corn production in 2004 were 32,000 tons and 10,000 tons, respectively. The sorghum and corn harvests comprise less than 10% of the annual requirement of 250,000 tons. In 2004, Botswana's agricultural imports (primarily cereals) exceeded agricultural exports by \$102.5 million. Grain is often imported from South Africa. Smaller quantities of cowpeas, beans, and other pulses are also grown. The 2004 output of all these crops was about 20,000 tons; in addition, 16,000 tons of vegetables and 10,000 tons of fruit were grown.

Agricultural research has been devoted to soil conservation, grazing experiments, and developing and distributing improved strains of grain. The construction of dams and the drilling of boreholes to tap underground water are continuing government programs. In early 1990, the government changed its official agricultural policy to emphasize the production only of those foodstuffs that can be raised economically. The Arable Lands Development Program and the Tribal Grazing Land Policy are government programs designed to help farmers in communal areas.

## 23 ANIMAL HUSBANDRY

In 2004, the cattle population was about 1,700,000. Other livestock included 2,250,000 goats; 400,000 sheep; 33,000 horses; 330,000 donkeys; and 4,000,000 poultry. Cattle are valued for wealth and prestige and are used in the payment of bride price, but there is little of the cultural prohibition against selling cattle found in some other parts of Africa. Herds are grazed in the open veld where water and grass are available; the borehole-drilling program is extending the available grazing land. A gradual upgrading of stock quality has been achieved through selective breeding, culling, and controlled grazing. A system of disease-control fences has been installed. A vaccine institute was opened in 1981 to deal with the threat of foot-and-mouth disease. In the mid-1980s, the Botswana Meat Commission's plant at Lobatse was the largest export abat-

toir in Africa. In 2004, meat production totaled 54,100 tons, with beef accounting for 28,000 tons. Much of Botswana's annual beef production is exported to South Africa and Western Europe. Beef and beef products are Botswana's second-largest export earner (after minerals); about 140,000 cattle were slaughtered in 2004.

## 24 FISHING

Botswana is landlocked, but some fishing for local consumption is carried out by the inhabitants of the Limpopo River Valley and the Okavango region. Landings were estimated at 122 tons in 2003.

## 25 FORESTRY

About 47% of Botswana's land area is covered with forests and woodlands. The indigenous forests of northeast Ngamiland include the valuable mukwa, mukusi, and mopane woods. Some small-scale exploitation has taken place. Roundwood production was an estimated 755,000 cu m (27 million cu ft) in 2003.

## 26 MINING

Botswana, home to the world's largest gem diamond mine, is a leading producer of diamonds by value. The diamond sector accounted for 36% of GDP in 2003, around 50% of government revenues, and 81.5% of the country's exports, by value. Nickel, cobalt, and soda ash production also played significant roles in the economy. The minerals industry employed over 13,000 workers, of which about 50% were involved in mining and quarrying in 2003. The northeast contains copper, nickel, and precious metals; the northwest has copper and silver; and the south holds base and precious metals. Other valuable minerals produced included agate, clay, coal, cobalt, gold, salt, sand, silver, soda ash, and construction stone. Major mines were situated in regions with few job opportunities. Diamonds were the most notable area of exploration in 1996, but Botswana's mineral resources were still largely unexplored. Mineral rights (separate from surface rights) were vested in the state. For significant mineral operations, the government usually exercised its legal right to acquire for free an equity interest of 15–25%. Royalties are collected on the sales of certain minerals, such as 3% on base metals, 5% on gold, and 10% on diamonds. The 1999 Mines and Minerals Act, designed to promote foreign investment, diversify the economy, and reduce reliance on the diamond industry, continued to vest all mineral rights in the state, but introduced a new "retention license." The government retained an option to acquire up to a 15% interest in new ventures on commercial terms, thus abolishing its previous free equity participation. Favorable geologic environment and mineral investment climate, political stability, and low tax rates should make Botswana a target for foreign mineral investment.

The government maintained an equity position in most of the major mining companies, but the industry was operated, for the most part, on a privately owned free-market basis. In a 50–50 joint partnership with De Beers Centenary, the government owned Debswana Diamond, the country's largest mining company.

De Beers Botswana Mining (Debswana) and Botswana Concessions (BCL), both partly owned by the government, developed major mineral fields in the eastern and central regions in the 1970s. Starting in 1981, the Debswana diamond mine at Orapa had to stockpile diamonds to halt the decline in world prices. The world's largest gem diamond mine was opened at Jwaneng in

1982, and processing capacity was increased in 1996 by the addition of a fourth treatment line. Jwaneng, the richest diamond mine in Africa, treated 8.9 million tons of ore and recovered 12.8 million carats in 2003. Reserves and resources in Jwaneng's three main kimberlite pipes were reported to be 287.6 million tons at a grade of 143.6 carats per hundred tons. The Letlhakane Mine recovered 1.061 million carats in 2003. The Orapa Mine recovered 16.3 million carats in 2003. Total reserves and resources at Orapa were reported to be 652.9 million tons at a grade of 49 carats per hundred tons. Debswana completed an expansion at Orapa in 2000 that was designed to double production to 12 million carats per year and treat an additional 8.9 million tons per year of ore. It was expected to allow production from the open pit for 30 years, with the potential of extending the mine life by another 20 or 30 years by shifting to underground mining. The expanded facilities included a completely automated recovery plant (CARP), a 15-story building in which only X-ray technology is used to recover diamonds and no human picking or sorting is done. Botswana's diamond output for 2003 was 30.4 million carats, up from 24.635 million carats in 2000.

BCL developed a nickel-copper smelter at Selebi-Phikwe in the 1970s and owns the Phikwe, Selebi, and Selebi North mines. National output for mined copper in 2003 was estimated at 30,400 metric tons; for mined nickel was estimated at 32,740 metric tons; and for smelted cobalt, 283 metric tons. BCL's smelter produced 24,289 metric tons of copper, 27,400 metric tons of nickel. Reserves were reported at 27 million tons for BCL at a grade of 0.86% copper and 0.84% nickel, and for Tati Nickel's Phoenix Mine, at 46 million tons at a grade of 0.32% copper and 0.56% nickel.

A brine mining and treatment facility at Sua Pan produced 309,350 metric tons of soda ash in 2003, up from 233,643 in 1999, and 190,000 metric tons of salt from natural soda ash, down from 233,069 metric tons in 1999. The country produced an estimated 102,000 kg of other precious gemstones, principally agate, in 2003. Gold output totaled 8 kg in 2003, down from 28 kg in 1997.

## 27 ENERGY AND POWER

Most electric power is generated thermally in installations run by the Botswana Power Corp., a public enterprise established in 1970. Electric generating capacity consists of the 132 MW Morupole coal-fired plant and the 60 MW coal-fired plant at Selebi-Phikwe. Total capacity in 2002 stood at 0.132 million kW. Production of electricity in that same year totaled 0.930 billion kWh. Fossil fuels were used exclusively. Consumption of electricity totaled 1.989 billion kWh. Coal production in 2002 consisted entirely of the bituminous type and totaled 992,000 tons. Coal is mined solely at Morupole by Anglo American, mostly for the generation of electricity. The government is considering constructing a coal-fired power plant at the same coal field, which would be designed to export power to South Africa.

Several companies are prospecting for oil, but none had been discovered as of 2002. However, Amoco has studied the possibility of extracting methane from coal beds.

## 28 INDUSTRY

Botswana has a small, but dynamic, manufacturing sector, which contributed approximately 5% to GDP in 2004. Average growth in this sector during the 1990s was 3.8%, and it was seen in the

early 2000s as having the most growth potential in the country. The sector has diversified into textiles, beverages, chemicals, metals, plastics, and electrical products. The government parastatal, the Botswana Development Corp., has declined in significance relative to private initiatives, but still is a major promoter of industrial development with interests in brewing, sugar, furniture, clothing, tourism, milling, and concrete. Though promising, industrial development is limited by a small domestic market, weak infrastructure, import dependence, and small skilled labor force. Indeed this sector has seen slow growth since 2000 following the closure of the Hyundai vehicle-assembly plant and the emphasis on manufacturing as the main source of future growth has been questioned.

Local coal supplies the fuel required for Botswana's energy sector. Peak requirements are generally supplied by the South African grid. In 1991, Botswana also linked to the Zambian and Zimbabwean grids. Botswana has no hydroelectric power resources, but solar power has potential as an energy source.

The construction industry was the fastest growing sector of the economy in the 1980s, and rapid urbanization created a need for low-income housing. This sector has decreased in importance, however, as there has been a shortage of building material and supplies. On the other hand, the chemicals industry has expanded; soda ash (for use in steel, glass, paper, and detergent manufacturing industries) is an important commodity, and Botswana Ash is the leading soda ash company operating in the country. The production of copper and nickel has contributed to an increase in the local production of electrical components. The motor industry is growing, with vehicle assembly, tire manufacturing, leather finishing, paint manufacturing, batteries, and the manufacture of spare parts being government priorities and opportunities for foreign investment.

Diamond mining is the engine of growth in Botswana. Diamond mining has fueled much of the economic expansion and in 2005 accounted for more than one-third of GDP and for 80% of export earnings. Mining and livestock production remain the primary economic activities. Botswana has been referred to as the world's largest diamond producer in terms of the quality and grade of its diamonds. The country's growth is heavily dependent upon developments in the diamond industry, which in turn is affected by global economic conditions. The slowdown in the global economy that began in 2001 thus adversely impacted Botswana's diamond industry. Botswana's diamond reserves are estimated to last 30 years at 2003 production rates, and the government emphasizes the need to diversify the economy.

## 29 SCIENCE AND TECHNOLOGY

The University of Botswana (founded in 1976), the Botswana Agricultural College (founded in 1967), and Botswana Polytechnic, all located in Gaborone, offer training in science, agriculture, and engineering. In 1987-97, science and engineering students accounted for 37% of college and university enrollments. The Geological Survey of Botswana, founded in 1948, publishes mineral resource reports and bulletins.

## 30 DOMESTIC TRADE

Small general stores usually carry a variety of items, but food, fuel, and clothing staples make up most of their stock. There are also

a few wholesalers, and some traders act as local agents for larger firms. To augment their incomes, other traders operate postal or transport services, restaurants, butcheries, and bakeries. The traders play an important role as middlemen between the local livestock and crop producers and the slaughterhouses, factories, and exporters. There are also a number of South African and US franchises in Botswana, including fast food, supermarkets and department stores. Major US investors include Owens Corning, H.J. Heinz, Coca-Cola, IBM, Xerox, and Kentucky Fried Chicken. Such private sector, foreign investments are encouraged by low corporate taxes and no prohibitions of foreign ownership. The government has eliminated all foreign exchange controls.

Business hours are 7:30 AM to 4:30 PM, Monday through Friday with a 45-minute lunch break, and most retail businesses are also open Saturdays and Sundays until midday.

### 3<sup>1</sup> FOREIGN TRADE

Botswana's leading trade partners are the European Union (EU), other Southern African Customs Union nations (South Africa, Lesotho, Namibia, and Swaziland), and Zimbabwe. The government of Botswana has increased economic integration with the Southern African Development Community (SADC), ratifying a Trade Protocol to ease trade barriers, which was scheduled to come into effect eight years from its completion. With recurrent drought and only 5% arable land, Botswana imports much of its food and other basic needs, primarily through South Africa. Indirectly, the United States accounts for a sizeable portion of Botswana's imports (manufactured goods) and exports (diamonds).

Exports fell as a result of the 1997 East Asian financial recession, especially diamond exports, which dropped from \$2.1 billion in 1997 to 1.7 billion in 1998. However, between 1999 and 2000 exports rebounded at a rate of 7.7%. By 2004 Botswana's exports were estimated to be \$2.94 billion. Imports in 1997 and 1998 were \$1.6 billion both years. These had risen to \$2.26 billion in 2004. In 2003 diamonds accounted for 82.5% of exports; and copper and nickel, 4.9% with the remainder being exports of beef, soda ash and textiles. Leading imports included foodstuffs; vehicles and transport equipment; textiles; and petroleum products.

#### Principal Trading Partners – Botswana (2001)

(In millions of US dollars)

Country	Exports	Imports	Balance
World	5,410.9	3,907.8	1,503.1

SOURCE: Balance of Payment Statistics Yearbook 2004, Washington, DC: International Monetary Fund, 2004.

Over the years Botswana has maintained a positive and healthy balance of payments.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Botswana's exports was \$2.94 billion while imports totaled \$2.26 billion resulting in a trade surplus of \$680 million. Because of the substantial diamond exports, Botswana always reports healthy trade surpluses. After falling slightly in 2001, diamond exports rose sharply in 2002 due to increased global demand. In 2004 international prices for diamond were raised three times which netted Botswana \$2.8 billion in diamond exports, 95% of all export earnings.

### 3<sup>3</sup> BANKING AND SECURITIES

Prior to 1976, Botswana belonged to the South African Monetary Area. Its currency, like those of Lesotho and Swaziland, was issued by the South African Reserve Bank. On 23 August 1976, however, the central Bank of Botswana was established, and Botswana began issuing its own currency. The Bank of Botswana has responsibility for administering exchange control delegated for it by the Ministry of Finance and Development Planning. As of 1999, the major commercial banks were the following: First National Bank of Botswana, Ltd.; Barclays Bank of Botswana, Ltd.; Standard Chartered Bank of Botswana, Ltd.; and Stanbic Bank Botswana Ltd. Total assets of the four banks came to about \$14 million in January 1999. Given a high level of reserves, there was little necessity for the Bank of Botswana to raise domestic interest rates to the real levels of South Africa in an attempt to attract portfolio capital.

The policy of the Bank of Botswana in 1999 was to maintain the relative international prices, and hence competitiveness, of non-diamond tradeables against its most important trading partners, notably South Africa. In 1999, the government launched a new

loan guarantee scheme to support new, small businesses in non-diamond enterprises by providing partial security for loans.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$402.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.6 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 14.25%.

In November 1996, the Bank of Botswana relaxed controls that prevented the dual listing of foreign companies on the Botswana Stock Exchange (BSE). Prior to this, any investment by a Botswana-based entity in a foreign company was regarded as an external investment covered by the relevant rates and limits. There became free transferability of shares between the BSE and any other stock exchanges listing the shares. Nine companies had dual listed by the end of 1998, and the BSE had recorded a growth rate of 14%. As of December 2004, there were 18 companies listed on the BSE, which had a market capitalization of \$2.548 billion.

In 1998, an investment bank was licensed; Investec Bank Botswana was set up to provide merchant banking and investment advisory services. The Botswana Development Corporation (BDC) and the National Development Bank (NDB) offer specialized development assistance.

### 34 INSURANCE

The South African insurance giant, Metropolitan Life, established First Health Medical Administrator in Botswana in mid-September 1996. It launched Metropolitan Life of Botswana in 1997 in a joint venture with the Botswana Development Corporation (BDC), and had a 25% stake in the company. In a similar move several years ago, BDC established Botswana Insurance Holdings (BIHL) in conjunction with St. Paul (USA) and African Life. St. Paul Fire and Marine of Minnesota bought out Botswana General Insurance in November 1997.

### 35 PUBLIC FINANCE

About half of the government's revenues in 1998 came from the diamond industry with another 20% from returns on foreign reserves. Tourism was becoming increasingly important, accounting for 12% of GDP in 2000. Government spending in 2001 accounted for almost 20% of GDP.

The US Central Intelligence Agency (CIA) estimated that in 2005 Botswana's central government took in revenues of approximately \$3.766 billion and had expenditures of \$3.767 billion. Revenues minus expenditures totaled approximately -\$1 million. Public debt in 2005 amounted to 7.3% of GDP. Total external debt was \$556 million.

### 36 TAXATION

The basic corporate tax rate in 2005 was 15% (plus a 10% surcharge). For manufacturing companies, approved as such by the Minister of Finance, a reduced rate of 15% (5% company tax and 10% surcharge) applies. A withholding tax of 15% is assessed on the payment of all dividends and on the payment of interest on offshore loans. Taxes on such capital income may be reduced or eliminated in double taxation treaties. In 2005 Botswana had tax treaties with South Africa, the United Kingdom, Sweden, France,

the Russian Federation and Mauritius. The capital gains rate is 25% and is assessed on 100% of the gains from real estate transactions and on 50% of the gains from transactions in moveable property. Only 75% of the gain from the sale of shares in a company is subject to the tax. However, capital gains from the sale of shares of a company listed on the Botswana Stock Exchange are tax-exempt.

The income tax law establishes for individual incomes progressive rates ranging up to 25%, reduced from 30%. A local government tax is paid to the district or town council to finance social and sanitary services.

As of 7 January 2002 a value-added tax (VAT) with a standard rate of 10% replaced Botswana's 10% sales tax which was imposed on fuel, liquor, cigarettes, motor vehicles, computers, domestic electrical appliances, and other consumer and luxury goods.

### 37 CUSTOMS AND DUTIES

Botswana belongs to a customs union called the Southern African Customs Union (SACU), with South Africa, Lesotho, Swaziland, and Namibia. South Africa levies and collects most of the customs, sales, and excise duties for the five member states, paying a share of the revenues to the other four. In addition, all customs duties are eliminated among the five countries. The SACU implements high protectionist tariffs on countries outside of the club, though, disheartening potential nonmember investors. In 1996, the Southern African Development Community (SADC) launched a free trade agreement for the elimination of tariff and nontariff trade barriers between its member countries (Angola, Democratic Republic of the Congo, Lesotho, Malawi, Mauritius, Mozambique, Namibia, Seychelles, South Africa, Swaziland, Tanzania, Zambia, and Zimbabwe), to be completed by 2010.

South Africa has put in place a value-added tax (VAT) for imports coming into the SACU from outside, but its implementation on Botswana's borders has so far been unsuccessful. Additionally, as a signatory of GATT and a member of the World Trade Organization, Botswana and the rest of the SACU will have to reduce tariffs by 24% over the course of 10 years.

### 38 FOREIGN INVESTMENT

Since independence in 1966, Botswana has been open to foreign investment. With the discovery of diamonds in 1967, this has also meant an economy dependent on diamond mining and, more importantly, the diamond monopoly strictly maintained by the De Beers Company. Highly developed auditing and security systems, developed to preserve the diamond monopoly, helped minimize corruption in Botswana and give its bonds the highest rating in Africa.

From 1966 to 1999, Botswana had the highest average growth rate in the world (9%), a record it still holds, though by 2004 the average had fallen to 3.5%. This did not translate into significant foreign investment outside of the mining sector, however, nor into a solution for chronic high unemployment (officially 21%, but generally thought to be closer to 40%). Moreover, recent controversy about "conflict diamonds" and the HIV/AIDS epidemic in Botswana have led to substantial divestment by traditional investors, De Beers of South Africa and Anglo American of the United Kingdom.

The government began actively encouraging foreign investment in the mid-1980s. Government policies offered attractive tax rates (10% on corporate income), including a five-year tax holiday, capital grants on new projects, and duty-free access to the large South African market (source of 80% of foreign direct investment). Botswana also enjoys duty-free access to the European Community for most of its products (source of 15% of foreign direct investment). Its liberal policies allow unrestricted repatriation of earnings and capital. Furthermore, it has a substantial financial assistance policy for foreign investors and has established an export-processing zone in Selebi-Phikwe. Investment law is scrupulously observed by the Botswana bureaucracy and courts. Investment incentives, including cash grants, have been offered to small and medium-scale investors for labor-intensive schemes, particularly outside urban areas. The complete liberalization of exchange controls occurred in February 1999.

In the late 1990s, with the exposure of the link between De Beers' purchases of uncontrolled raw diamonds to maintain its monopoly and socially corrosive brutality in diamond-producing countries, the diamond industry transformed to a system of certified diamonds and a list of "Suppliers of Choice." Although Botswana's diamond mining company, Debswana, continued to be owned 50% by the Botswana government and 50% by De Beers Centenary, the latter, in 2002, became part of the private holding company De Beers SA, 45% owned by the London-based mining conglomerate, Anglo-American, and 45% by the Oppenheimer Group. Botswana's two other major mining companies, Tati Nickel and BCL (copper, nickel, cobalt), had become 85% owned and 50% owned, respectively, by LionOre Mining of Canada, to which Anglo-American had sold its shares.

The HIV/AIDS epidemic in Botswana, with over 37% of the population 15 to 49 years old estimated to be HIV positive in 2003, affects everything, including foreign investment. Anecdotal evidence suggests it has increased production and training costs for companies and reduced the pool of skilled labor available for foreign investors.

Foreign direct investment (FDI) is chiefly in mining, accounting for 81% of FDI in 2001, up from 79% in 2000. The largest investors have been the Anglo-American Corporation, which bought out De Beers, and LionOre of Canada, which bought out Anglo-American interests. AMAX mining is also important. The retail and wholesale trade sector accounted for 7% of FDI inflow in 2001 and finance 6%. The British Commonwealth Development Corp. has invested in a Lobatse slaughterhouse and in three large cattle ranches, two in the northern part of the country and one on the Molopo River in the Kalahari. H. J. Heinz (South Africa) owns 80% of Kgalagadi Soap Industries, with assets of over \$5 million. Houston-based brick manufacturer, Interkiln Corp., has a 17.5% interest in the Lobatse Clay Works. Owens-Corning owns 50% of a plant producing fiberglass piping for water transportation, in conjunction with the BDC.

Other areas of investment included specialty agricultural production; construction; and manufacturing of textile, health and beauty, agricultural and construction equipment products. The government seeks investments in infrastructure, telecommunications, tourism, and housing development. It is estimated that total direct foreign investment (FDI) exceeded \$1 billion in 1998. The inflow of FDI averaged \$98 million 1997 and 1998, but fell to

\$36.7 million in 1999. For 2000 and 2001, annual FDI inflow averaged about \$57 million. FDI inward stock declined in 1995 to \$1.1 billion from \$1.3 billion in 1990, but made a bold recovery in 2002 to \$1.9 billion. The key investor countries in Botswana are South Africa, Luxembourg and the United Kingdom. The three accounted for 61%, 25% and 10%, respectively, of total FDI stock in 2000. In 2001, these countries accounted for 60%, 29% and 6% respectively.

Botswana's prudent financial and monetary policies have contributed to continued strong performance on Botswana's stock exchange. In 2002, its index increased 8.5% in dollar terms and the market capitalization of listed stocks reached \$1.67 billion, up from \$1.27 billion in 2001 and from \$295 million in 1992. As of 31 December 2001, US holdings of Botswana securities totaled \$23 million, \$20 million in equity shares, \$2 million in long-term debt, and \$1 million in short-term debt.

### 39 ECONOMIC DEVELOPMENT

Botswana has made job creation a top priority of government planning in the past few years. Although employment rates have grown, unemployment is formally estimated at 23.8%, but is closer to 40% in unofficial estimates in 2004.

The government has a long-standing policy of promoting human capital development and health care. All education through the university level is free, but 20% of the population over 15 in 2004 was illiterate. Great importance is placed on the development of rural areas so as to reduce rural-urban migration.

In light of the limited resources, Botswana's government now follows "food security" agricultural policy of promoting only those foodstuffs that can be grown economically.

Botswana's long-term economic prospects are highly dependent on South Africa and its other Southern African neighbors. The government has been a strong proponent of economic integration among the 14 members of the Southern African Development Community (SADC). The organization's 2000 Trade Protocol called for the elimination of all tariff and nontariff barriers to trade by 2012 among the 11 countries signing the protocol.

Botswana has been rated the least-corrupt country in Africa, according to Transparency International. The country aims to diversify its economy away from minerals, and ecotourism is being promoted. Botswana has been a victim of the HIV/AIDS pandemic, and the government has taken steps to tackle the virus through prevention programs and the provision of advanced drug therapies to those infected. The Government of Botswana has put in place policies that enhance competitiveness, including a new Foreign Direct Investment Strategy, Competition Policy, Privatization Master Plan, and National Export Development Strategy.

### 40 SOCIAL DEVELOPMENT

The first universal pension program was inaugurated in Botswana in 1996. It covers all residents aged 65 and older, and is funded completely by the government. It pays a flat-rate monthly pension, which is adjusted periodically according to the cost of living. Many social welfare needs are met through the provisions of tribal custom. Employed persons are covered by work injury laws, with the exclusion of casual workers and family labor. There are no statutory benefits for sickness and maternity. After 60 months of continuous employment, a severance unemployment benefit is

available. Destitute residents are provided with a small monthly cash payment and food rations.

Traditional views of male dominance are pervasive in Botswana. Customary law allows men to physically punish their wives for wrongdoing and spousal abuse is common. Sexual harassment, rape, and other violence against women is widespread. Rape is especially serious considering the prevalence of HIV/AIDS. Women are accorded the same civil rights as men, but under traditional marriage laws, they require their husbands' consent to buy or sell property, obtain a loan, or sign a contract. There are legal provisions, however, that allow women to marry "out of common property" and thereby retain their legal rights. Polygamy is legal, but is not widely practiced.

While ethnic minorities are not subject to discrimination, some groups remain marginalized and underrepresented in government. Human rights are generally respected in Botswana. However, there are still reports of abusive police tactics, and prison conditions remain poor.

#### 41 HEALTH

The government stresses primary health care with emphasis on disease prevention and healthy living. As of 2004, there were an estimated 241 nurses, 29 physicians and 2 dentists per 100,000 people.

The major health problems are malnutrition and tuberculosis. As of 2000, 17% of children under five years of age were considered malnourished. Public health teams conduct tuberculosis and malaria control campaigns. In 1999, there were 702 cases of tuberculosis per 100,000 people. In 1995, 70% of the population had access to safe water and 55% of the population had access to sanitation.

Approximately 33% of married women (ages 15 to 49) were using contraception. As of 1999, immunized children one year of age were as follows: diphtheria, pertussis, and tetanus, 90%; and measles, 86%.

The average life expectancy in 2005 was 33.87 years, the second-lowest in the world. The largest change in life expectancy was for females, which dropped from 60 years in 1980 to 33.84 years in 2005. The infant mortality rate in 2005 was 54.58 per 1,000 live births. For every 100,000 live births, 300 women died in pregnancy or childbirth as of 1998.

The HIV/AIDS prevalence was 37.30 per 100 adults in 2003. As of 2004, there were approximately 350,000 people living with HIV/AIDS in the country. There were an estimated 33,000 deaths from AIDS in 2003. The rapid transmission of HIV in Botswana has been due to three main factors: the position of women in society, particularly their lack of power in negotiating sexual relationships; cultural attitudes to fertility; and social migration patterns.

#### 42 HOUSING

There is no overcrowding in tribal villages, but slums have developed in the larger towns. The Botswana Housing Corp., a public enterprise, concentrates its efforts on the main urban centers, where growth, and therefore demand, is greatest. The 1999 National Policy on Housing has shifted some of the control on housing from government to private hands. Part of this policy includes

the Poverty Alleviation and Housing Programme, a pilot program through which those who cannot afford to purchase a home might learn the skills necessary to build their own. This self-help policy is particularly helpful to rural residents.

Housing ranges from flats and bungalows to huts and all other structures intended for human use. Squatter-occupied "improvised" housing units account for about 2% of all housing. Of all housing units, about 30% were acquired through tribal authorities. Nearly 71% of the total land area in Botswana is under tribal control. Sanitation facilities included pit latrines, and flush toilets; however, two-thirds of housing units had no facilities. The water supply is piped or drawn from wells, river beds, rivers, or other sources.

#### 43 EDUCATION

The government aims to achieve universal education. Education is compulsory for students between the ages of 7 and 15. Education at the primary level lasts for seven years, though it is not compulsory. This is followed by three years of junior secondary school and two years of senior secondary school. Primary school enrollment in 2003 was estimated at about 81% of age-eligible students; 79% for boys and 83% for girls. The same year, secondary school enrollment was about 54% of age-eligible students; 50% for boys and 57% for girls. It is estimated that about 91% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 27:1 in 2003; the ratio for secondary school was about 16:1. Schooling is conducted in Setswana for the first four years, and in English for the remaining years. The academic year runs from August to May.

Until 1961, primary schooling was completely financed by tribal treasuries, with some tribes spending up to 70% of their budgets on education. Between 1985 and 1994, the government launched a major program of secondary school construction. As of 2003, public expenditure on education was estimated at 2.2% of GDP, or 25.6% of total government expenditures.

The University of Botswana, established on 1 July 1982 by an Act of Parliament, has a faculty of social sciences, education, sciences, agriculture, and humanities. In 2001, there were about 8,000 students enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 78.9%, with 76.1% for males and 81.5% for females.

#### 44 LIBRARIES AND MUSEUMS

The Botswana National Library Service was founded in 1967 to provide nationwide public library service and act as the national library. There are 21 branches located throughout the country holding a total of 160,000 volumes; mobile library service is also provided. The main library is located in Gaborone, has 65,000 volumes, and the University of Botswana (1971) has over 250,000. The National Archives, with 20,000 items, are in Gaborone. The Botswana Libraries Consortium was established in 2003 as a cooperative organization of public, private, and academic libraries.

The renovated National Museum and Art Gallery in Gaborone houses a collection of the ethnography and natural history of Botswana, and sub-Saharan African art. There are also ethnographic museums in Kanye and Mochudi and a postal museum in Gaborone.

rone. In 1986, the Supa Ngwao Museum Centre in Francistown opened, holding ethnographic and historical installations.

#### 45 MEDIA

In 2003, there were an estimated 75 mainline telephones for every 1,000 people. The same year, there were approximately 297 mobile phones in use for every 1,000 people.

The government controls the content of nearly all radio and television broadcasts through the Botswana Press Agency (BOPA), which produces the free *Daily News* newspaper, Radio Botswana and Radio Botswana 2 (which broadcast nationally to most of the country), and Botswana Television (BTV). Radio Botswana broadcasts, in English and Setswana, a variety of news, educational, cultural, and entertainment programs. In 2004, there were two private radio stations, Yarona FM and Gabz FM, broadcasting in 5 of the country's 10 largest towns. The privately-owned Gaborone Broadcasting Company (GBC) is the only other television station in the country; it broadcasts mostly foreign programming. In 2003, there were an estimated 150 radios and 44 television sets for every 1,000 people. The same year, there were 40.7 personal computers for every 1,000 people and 35 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

There is one daily newspaper in Botswana, the government published *Dikgang Tsa Gompieno* (or *Daily News*, circulation 50,000 in 2002) in both English and Setswana. The government also publishes, in a bilingual edition, the monthly magazine *Kutlwaro* (circulation 24,000). In 2002, 4 independent newspapers were publishing on a weekly basis, with a total circulation of over 50,000. *MMegi Wa Digmang*, or *The Reporter*, is published in both Setswana and English with a weekly circulation of 24,000. The major political parties publish monthly journals.

The constitution of Botswana ensures a free press and free speech, and the government is said to highly respect these rights.

#### 46 ORGANIZATIONS

There is a chamber of commerce in Gaborone and there are some professional associations. The Botswana Council of Nongovernment Organizations (BOCONGO) serves as an umbrella group to encourage and support nongovernment organizations as recognized partners in national development. Member organizations (which numbered about 67 as of 2002) include the Botswana Christian Council; the Cooperation for Research, Development, and Education; the Botswana Council of Women, and the Environmental Conservation Society.

Educational and cultural organizations include Botswana Society and the Botswana Technology Center. Youth organizations include Junior Achievement, Junior Chamber, Girl Guides, Boy Scouts, Botswana Christian Council Youth Unit, and the YWCA. Most towns have women's clubs. The Emang Basadi Women's Association is a national organization promoting women's development and legal rights.

There are national chapters of the Red Cross Society, UNICEF, and the Society of Saint Vincent de Paul. The Botswana Center for Human Rights was founded in 1996.

#### 47 TOURISM, TRAVEL, AND RECREATION

Botswana's well-stocked game reserves are its principal tourist attraction, with both hunting and photographic safaris available. Popular with tourists is the Okavango Delta region, which during the rainy season is a maze of waterways, islands, and lakes; it includes the Moremi Wildlife Refuge; nearby is Chobe National Park. In all, eight national parks and game reserves cover almost 20% of the land area. The Kalahari Desert is another attraction, as are the country's tapestry weavers, potters, and rug makers. The Tsodilo Hills have cave paintings by the ancestors of the Basarwa (Bushmen), the earliest known inhabitants of Botswana. The government's "National Conservation Strategy and Tourism Policy" promotes tourism while protecting wildlife areas. All nationals except citizens of the United States, South Africa, Commonwealth countries, and most Western European countries, need visas for visits up to 90 days. Visitors are required to have a passport, ongoing/return ticket, and proof of sufficient funds for the stay. Proof of yellow fever and cholera vaccinations are required of travelers from infected areas. Antimalarial precautions are advisable. As of 2003, there were 3,589 hotel rooms with 6,646 beds. In 2003, about 975,000 visitors arrived in Botswana, more than 865,000 of whom were from other African nations.

In 2005, the US Department of State estimated the daily cost of staying in Gaborone at \$171. In other regions, costs were as low as \$155 per day for food and lodging. That year, the average estimated expenditure per tourist in Kasane was \$205.

#### 48 FAMOUS BOTSWANANS

Khama III (1837–1923), chief of the Bamangwato and a Christian convert, reigned for 48 years. His grandson, Sir Seretse Khama (1921–80), was Botswana's first president. Quett Ketumile Joni Masire (b.1925) succeeded him in 1980. President Masire resigned in April 1998, and was succeeded by his vice president, Festus Mogae.

#### 49 DEPENDENCIES

Botswana has no territories or colonies.

# BURKINA FASO

Republic of Burkina Faso  
*Burkina Faso Jamahiriya*

**CAPITAL:** Ouagadougou

**FLAG:** The flag consists of two equal horizontal stripes of red and green divided by a narrow gold band. A five-point gold star is at the center.

**ANTHEM:** The national anthem begins “Contre le fêrùle humiliante il y a déjà mille ans” (“Against the humiliating bondage of a thousand years”).

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr) is a paper currency with one basic official rate based on the euro. It was originally pegged to the French franc. There are coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00193 (or \$1 = CFA Fr518.65) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Anniversary of the 1966 Revolution, 3 January; Labor Day, 1 May; Independence Day, 5 August; Assumption, 15 August; All Saints’ Day, 1 November; Christmas, 25 December. Movable religious holidays include Id al-Fitr, ‘Id al-’adha’, Milad an-Nabi, Easter Monday, Ascension, and Pentecost Monday.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Burkina Faso (formerly Upper Volta), a landlocked country in West Africa, has an area of 274,200 sq km (105,869 sq mi), with a length of 873 km (542 mi) ENE–WSW and a width of 474 km (295 mi) SSE–NNW. Comparatively, the area occupied by Burkina Faso is slightly larger than the state of Colorado. Bounded on the E by Niger, on the SE by Benin (formerly Dahomey), on the S by Togo, Ghana, and Côte d’Ivoire, and on the W and N by Mali. Burkina Faso has a total boundary length of 3,192 km (1,983 mi).

The capital city of Burkina Faso, Ouagadougou, is located in the center of the country.

## <sup>2</sup> TOPOGRAPHY

Burkina Faso consists for the most part of a vast lateritic plateau in the West African savanna, approximately 198–305 m (650–1,000 ft) above sea level. The highest point (749 m/2,457 ft) of Têna Kourou is near the Mali border, southwest of Orodara. The land is slightly inclined toward the south and notched by valleys formed by the three principal rivers, the Black, White, and Red Voltas, and their main tributary, the Sourou. They are alternately dry or in flood and all are unnavigable. In general, the land is dry and poor.

## <sup>3</sup> CLIMATE

The climate is characterized by high temperatures, especially at the end of the dry season. The humidity, which increases as one moves south, ranges from a winter lows of 12–45% to a rainy season highs of 68–96%. The harmattan, a dry east wind, brings with it spells of considerable heat from March to May, when maximum temperatures range from 40°C to 48°C (104° to 119°F); from May to October, the climate is hot and wet, and from November to

March, comfortable and dry. January temperatures range from 7°C to 13°C (44° to 55°F). Average annual rainfall varies from 115 cm (45 in) in the southwest to less than 25 cm (10 in) in the extreme north and northeast. The rainy season lasts from four months in the northeast to six months in the southwest, from May through October. From 1969 to 1974, Burkina Faso suffered from drought, especially in the north, which is in the semiarid Sahel zone.

## <sup>4</sup> FLORA AND FAUNA

The area is largely wild bush country with a mixture of grass and small trees in varying proportions. The savanna region is mainly grassland in the rainy season and semidesert during the harmattan period. Fauna, possibly the widest variety in West Africa, includes the elephant, hippopotamus, buffalo, monkey, crocodile, giraffe, various types of antelope, and a vast variety of bird and insect life. As of 2002, there were at least 147 species of mammals, 138 species of birds, and over 1,100 species of plants.

## <sup>5</sup> ENVIRONMENT

The major environmental problems facing Burkina Faso are recurrent drought and the advance of the northern desert into the savanna. This trend toward desertification has been increased by overgrazing of pasture, slash-and-burn agriculture, and overcutting of wood for fuel. Almost all the trees within 40 km (25 mi) of the capital have been felled. The frequency of droughts in Burkina Faso and its location in the Sahara desert contribute to the nation’s water supply problems. The country has about 13 billion cu m (459 billion cu ft) of renewable water resources, but only 82% of the city population and 44% of rural dwellers have access to safe water. According to the World Health Organization, about 80% of all disease in Burkina Faso is caused by unsafe water. Pollution

problems result from uncontrolled disposal of sewage and industrial wastes.

The Ministry of Environment and Tourism is the principal government agency concerned with the environment. Burkina Faso has 12 national parks and wildlife reserves totaling 2.855 million hectares (7.05 acres). In 2003, 11.5% of its total land area was protected. The country has three Ramsar Wetlands of International Importance.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 6 types of mammals, 2 species of birds, 1 types of reptiles, and 2 species of plants. Threatened species include the African hunting dog, the chimpanzee, and the African elephant. The Sahara oryx, or white oryx, has become extinct in the wild.

## 6 POPULATION

The population of Burkina Faso in 2005 was estimated by the United Nations (UN) at 13,925,000, which placed it at number 64 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.5%, a rate the government viewed as too high. The projected population for the year 2025 was 22,459,000. The population density was 51 per sq km (132 per sq mi).

The UN estimated that 17% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5.18%. The capital city, Ouagadougou, had a population of 821,000 in that year. The only other large city is Bobo-Dioulasso.

The prevalence of HIV/AIDS has had a significant impact on the population of Burkina Faso. The UN estimated that 6.4% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy. Counterbalancing the negative impacts of HIV/AIDS on population growth is a high fertility rate, due to low contraceptive use.

## 7 MIGRATION

Seasonal labor migration in Burkina Faso began in the colonial period as a means of obtaining money for taxes and continues as a remedy for economic deficiencies. According to some estimates, as many as two million Burkinabe live abroad at any one time, about half in Côte d'Ivoire and the rest throughout West Africa, where many are employed on coffee and cocoa plantations. In 1995, there were 49,500 refugees from Mali in Burkina Faso; repatriation of the Tuareg refugees from Mali and Niger was successfully completed by 1998. In June 1998, Burkina Faso and Benin became the first African countries to accept applicants for resettlement from other African nations. The initial goal of the resettlement program was to resettle 200 individuals over a two-year period. As of 2004, 492 people were registered as refugees. Another 518 were registered as asylum seekers. The total number of mi-

grants in the country numbered 1,124,000 in 2000. In 2005, the net migration rate was estimated as zero.

## 8 ETHNIC GROUPS

The principal ethnic group in Burkina Faso is the Mossi, who make up about 40% of the total population. They are mainly farmers and live in the central portions of the country. The Bobo, the second-largest ethnic group (about one million), are mostly farmers, artisans, and metalworkers living in the southwest around Bobo-Dioulasso. Other groups include the Gurunsi, Senufo, Lobi, Mande, and the nomadic Fulani, or Peul, who inhabit the areas near the country's northern borders. The number of nomads in the north has diminished since the Sahelian drought of the 1970s.

## 9 LANGUAGES

French is the official language of Burkina Faso. However, tribal languages belonging to the Sudanic family are spoken by 90% of the population. Moré, spoken by 55% of the population, is the most important indigenous language. The various ethnic groups speak their own languages.

## 10 RELIGIONS

About 55–60% of the population practice Islam, about 15–20% practice Roman Catholicism, and approximately 5% are Protestant. It is believed that a majority of the population also includes traditional indigenous elements within their religious practice. About 20–25% of the population practice traditional indigenous religions exclusively or principally.

Citizens in rural areas tend to practice the traditional religions. Members of the Fulani and Dioula ethnic groups are predominantly Muslim. The majority of all the nation's Muslims are Sunni, but minority groups belong to the Shia, Tidjania, and Wahhabite sects. A large number of foreign missionary groups are active within the country, including the Assemblies of God, the Christian Missionary Alliance, the Campus Crusade for Christ, Baptists, Mennonites, Jehovah's Witnesses, Mormons, Seventh-Day Adventists, the World Evangelical Crusade, and the Pentecostal Church of Canada. Islamic missionary groups include the World Islamic League and Ahmadiya.

The constitution provides for freedom of religion and this right is generally respected in practice. Religious groups must register with the Ministry of Territorial Administration to obtain legal status. Certain Muslim and Christian holidays are observed as public holidays.

## 11 TRANSPORTATION

In 2002, Burkina Faso had 12,506 km (7,771 mi) of roads, of which about 2,001 km (1,243 mi) were paved. Many of the secondary roads are not open all year. Vehicles in 2003 included 49,800 passenger cars, and 28,650 commercial vehicles.

The 510-km (317-mi) Mossi Railroad in Burkina Faso is part of the line that begins at Abidjan, Côte d'Ivoire, and ends in Niger, some 1,145 km (710 mi) away. The line serves the towns of Banfora, Bobo-Dioulasso, Koudougou, and Ouagadougou; 25–40% of the railway traffic passes through Burkina Faso, where total rail trackage consisted of 622 km (386 mi) of 1,000-m narrow gauge track in 2004. Planning for the construction of a railroad from Ouagadougou to Tambao (353 km/219 mi) to exploit the mineral

LOCATION: 9°30' to 15° N; 2° to 5° W. BOUNDARY LENGTHS: Niger, 628 kilometers (390 miles); Benin, 306 kilometers (190 miles); Togo, 126 kilometers (78 miles); Ghana, 548 kilometers (341 miles); Côte d'Ivoire, 584 kilometers (363 miles); Mali, 1,000 kilometers (621 miles).

deposits in the area was begun in October 1981. Constructed by volunteers, the line reached Donsin, 33 km (21 mi) from Ouagadougou, in 1987, and the second stage to Kaya (77 km/48 mi) was completed by 1991.

There are international airports at Ouagadougou and Bobo-Dioullasso and numerous smaller airfields. In 2004, the number of airports totaled 33, only 2 of which had paved runways as of 2005. Burkina Faso owns part of Air Afrique, which provides the country with international service. Air Burkina, which began in 1967, is government-run and has a monopoly on domestic service. It also flies to neighboring countries. In 2003, about 55,000 passengers were transported on domestic and international flights.

## 12 HISTORY

Until the end of the 19th century, the history of Burkina Faso is the history of empire-building by the Mossi. Legend and tradition as well as some ethnographic evidence all suggest that the Mossi entered the region from the 11th to the 13th century as a warrior

group from Central or East Africa and subjugated the weaker aboriginal Ninigi tribes.

They called their land Mogho ("country of the Mossi") and established five independent kingdoms—Tenkodogo, Yatenga, Gourma, Zandoma, and Ouagadougou. Each was ruled by a king, the mogho or moro naba ("ruler of the Mossi"); and Ouagadougou was the most powerful of the kingdoms.

Through the centuries, the Mossi population was augmented by groups of immigrants, such as the Hausa and the Fulani, who settled in Mossi territory but retained their ethnic identity. Contact and conflict with Islam came early. From the beginning of the 14th century, the Mossi had been engaged in recurrent wars with the neighboring empires of Mali and Songhai. They also occupied Timbuktu (now in Mali) at various times. After suffering defeat in the hands of Askia Daoud of Songhai in the 16th century, the Mossi ceased fighting with their powerful neighbors. Their warrior tradition and their internal unity continued, however.

By the 19th century, Mossi power seems to have declined. When the first known European incursions occurred late in the 19th

century, internal dissension made the Mossi prey to the invaders. A French lieutenant, Voulet, was sent with an infantry column to subjugate the territory in 1896. Ouagadougou fell to Voulet in September of that year. The Mossi accepted French domination as a form of protection from their hostile neighbors.

In 1919, the French created a separate colony called Upper Volta (now Burkina Faso). But in 1932, Upper Volta's territory was divided among Niger, French Sudan (now Mali), and Côte d'Ivoire. Throughout the colonial period, the traditional political structure of the Mossi was retained; hence, the *moro naba* of Ouagadougou was regarded by the French as the emperor of the Mossi. When World War II broke out, the *moro naba* sent his two eldest sons to fight for France; more than 10,000 youths in the territory also followed suit. The restoration of Upper Volta as a territorial unit, long the aim of the traditional chiefs, became a reality in 1947. In 1958, voters in Upper Volta overwhelmingly approved the new constitution of the Fifth French Republic, and Upper Volta's territorial assembly voted to make the country an autonomous state within the French Community. By this time, the traditional chiefs had lost much of their influence, and political power was in the hands of the young, European-educated elite.

The republic achieved independent status on 5 August 1960. Maurice Yaméogo, leader of the Volta Democratic Union, became president. His government quickly took on an authoritarian cast and banned all opposition parties. In 1965, a single electoral list was offered to the people, and the opposition—joined by civil servants, trade unionists, and students—fomented riots. Yaméogo was replaced in January 1966 by Lt. Col. (later Gen.) Sangoulé Lamizana, a former army chief of staff, who suspended the 1960 constitution, dissolved the National Assembly, and formed a military-civilian cabinet.

During the 1970s and early 1980s, Upper Volta suffered from severe political instability. A constitution that provided for an elected assembly was adopted in 1970, but factional struggle broke out and became so disruptive that in February 1974, President Lamizana announced that the military had again taken over the government. A new constitution was approved in 1977; under this constitution, Lamizana won election to the presidency in 1978. On 25 November 1980, however, Lamizana was deposed in a bloodless coup led by Col. Sayé Zerbo, who became president. Zerbo's government was overthrown on 7 November 1982 by yet another army coup, and Maj. Jean-Baptiste Ouédraogo was named president.

Under the moderate Ouédraogo regime, a military faction emerged that was suspected of having close ties to Libya. Prominent in this group was Capt. Thomas Sankara, who served as prime minister from January until May 1983, when he was purged by Ouédraogo. On 4 August 1983, Sankara seized power in what was Upper Volta's third coup in as many years. As many as 20 persons may have died in the disturbances. After the coup, Sankara, who emerged at the head of the ruling National Revolutionary Council, sought to retain Upper Volta's traditional foreign aid ties with the West while establishing warm relations with such nations as Ghana, Libya, the USSR, and Cuba.

Sankara also sought to instill his nation with a spirit of revolutionary fervor. In August 1984, on the first anniversary of his rule, he renamed the nation Burkina Faso, meaning roughly "Land of Upright Men." He led a campaign against corruption and tax eva-

sion; and he trimmed government spending by cutting the salaries of civil servants, an action that earned him the enmity of the nation's small but influential labor unions. A substantial number of politicians, soldiers, government officials, and labor leaders were jailed, and seven men were executed in 1984 for allegedly plotting to overthrow the government.

In December 1985, Burkina Faso took up arms against Mali. At issue was a strip of land 20- by 160-km (12- by 100-mi) that had triggered clashes first in 1974, and again in 1975. On 22 December 1986, the International Court of Justice ruled in favor of dividing the territory into roughly equal parts, a decision both nations accepted.

On 15 October 1987, faced by opposition among the trade unions and civil servants, the government was overthrown by an army unit. The putsch was led by Capt. Blaise Compaoré, the president's chief adviser who is also said to have been his inseparable companion. Sankara and 12 aides (including two of the coup plotters) were immediately shot, and Compaoré assumed the presidency. Executions of highly placed military men followed a coup attempt on 18 September 1989.

As the 1990s dawned, the authorities sought to legitimize their position at the ballot box. They championed the drafting of a new constitution that called for multiparty elections for president and a national legislature. In March of 1991, the ruling party abandoned its Marxist ideology and embraced free enterprise.

Elections were held for president in December 1991; a parliamentary election followed in 24 May 1992. Results from both were disputed, and they led to no changes in the government. Compaoré ran unopposed for president and his party, the Popular Democratic Organization-Worker's Movement (ODP-MT), carried the legislative elections. Only three opposition parties contested seats nationwide; 35 parties boycotted the poll and only 35% of eligible voters voted. The ODP-MT won 78 of 107 seats, with 9 other parties splitting the remainder of the vote. The government convened on 15 June and Youssouf Ouédraogo was named prime minister. The introduction of multiparty competition was a major reform, but the lack of probity in the electoral process prompted critics to label the government and its reforms a "shamocracy."

Under Compaoré, Burkina Faso has conducted an active foreign policy in West Africa. It sent troops to Liberia and harbors dissidents from Gambia. This has alienated Compaoré from his fellow West African leaders and from western governments, including the United States, which recalled its ambassador in 1992. Burkina Faso continued its support for Liberian insurgent Charles Taylor and his NPFL despite a West-Africa-wide deployment of forces—ECOMOG—in Liberia to help resolve the lingering and bloody civil war there. Burkina Faso had refused to contribute forces to ECOMOG, despite international pressure, until 1995, when the Compaoré regime announced it was satisfied with the cease-fire accord signed that year in Nigeria.

Human rights violations have been commonplace under the Compaoré regime. The government has suppressed a vocal independent press, and the security forces have used excessive force against demonstrations and government critics. In December 1998, the sudden and suspicious death of Norbert Zongo, an investigative reporter, unleashed a backlash of demands for reforms. Zongo had been investigating allegations that the president's brother, Francois Compaoré had taken part in the murder of his

own chauffeur, David Ouédraogo. Zongo's charred body and those of three companions were found in a bullet-riddled car near the capital.

In March 1999, thousands of students, school children, and other protesters had marked Zongo's death with a peaceful march to his gravesite. Since then, high school and university student groups, and a group known as *Le Collectif* comprising human rights groups, NGOs, labor unions, and political parties, have organized numerous stay-at-home's, and strikes throughout the country. Besides a full and independent investigation into Zongo's death, they demanded reforms to the judiciary, guarantees for human rights, revisions to the constitution, and to the electoral code. In late 1999, an independent inquiry concluded that Zongo had been a victim of political assassination. In April 2000, the Committee for the Protection of Journalists (CPJ) condemned the closure of a private radio that had aired a communiqué from a coalition of opposition and human rights groups, calling for a rally to protest the government's handling of the Zongo case.

Progress toward the rule of law was made when the National Reconciliation Commission (NRC), established by Compaoré in November 1998, asked the government in February 2000 to arrange special trials of people implicated in economic crimes and political killings. Though estimates placed the number of political killings since 1989 at 100 or more, 60 of these cases and compensation for widows and orphans were to be handled by these special units located in each of the districts. In 2001, Compaoré established a fund of \$7.75 million to compensate families of victims of political violence and rights abuses.

In 2001 and 2002 the country experienced outbreaks of meningitis that killed more than 2,500 in two consecutive seasons. Since September 2002, more than 150,000 Burkinabe refugees have returned home owing to the civil conflict in Côte d'Ivoire. The May 2002 parliamentary elections marked the first time in Burkina's history that three consecutive legislative elections were held without a military coup. It was also the first time that the single ballot was used in an election. Some 30 parties participated in the elections, but seats were shared between a few. The major winners were President Compaoré's Congress for Democracy and Progress (CDP) with 57 seats and The African Democratic Rally-Alliance for Democracy and Federation (ADF/RDA), which took 17 seats.

### 13 GOVERNMENT

Under the constitution of 27 November 1960, Upper Volta was governed by a president, a council of ministers, and a National Assembly of 50 members. On 5 January 1966, President Lamizana suspended the constitution and dissolved the National Assembly, announcing that he would exercise legislative and executive power by ordinance and decree. A constitution approved in 1970 provided for eventual restitution of democratic institutions, although with a formal role in the government for the military. The 1970 constitution was suspended in February 1974, when the army again assumed full power.

A democratic constitution, adopted in 1977, provided for a president and a 57-member National Assembly. This document was abolished after the coup of 25 November 1980, and the Military Committee for Reform and National Progress (*Comité Militaire de Redressement pour le Progrès National*—CMRPN), led by Col. Sayé Zerbo, assumed power. The military coup of 7 Novem-

ber 1982 led to the abolition of the CMRPN and the formation of the People's Salvation Council (*Conseil du Salut du Peuple*—CSP) under Maj. Jean-Baptiste Ouédraogo. The CSP was itself dissolved by the military coup of 4 August 1983, which established the National Revolutionary Council (*Conseil National de la Révolution*—CNR), a body that included radical former CSP members. Under Capt. Thomas Sankara, its chairman and the head of state, the CNR was the supreme governmental authority and was assisted by a Council of Ministers. Following the October 1987 coup, this body was renamed the Popular Front, with Capt. Blaise Compaoré as its chief.

A new constitution, establishing the fourth republic, was adopted on 2 June 1991. Among other provisions, it called for an Assembly of People's Deputies with 107 seats (now 111). The president is chief of state, chairs a council of ministers, appoints a prime minister, who with the legislature's consent, serves as head of government. In April 2000, the constitution was amended reducing the presidential term from seven to five years, enforceable as of 2005, and allowing the president to be reelected only once. However, it is not clear whether this amendment would be applied retroactively or not—and how it might affect a possible future ambition on the part of President Compaoré. The legislative branch is a unicameral National Assembly (*Assemblée Nationale*) consisting of 111 seats. Members are elected by popular vote for five-year terms. New elections were expected in May 2007.

In April 2005, President Compaoré was re-elected for a third straight term. He won 80.3% of the vote, while Benewende Stanislas Sankara came a distant second with a mere 4.9%. The next presidential election was due in November 2010.

### 14 POLITICAL PARTIES

After the 1978 competitive presidential and legislative elections, the government recognized only the three largest parties in the National Assembly: the Voltaic Democratic Union–African Democratic Rally, the National Union for Democracy, and the Voltaic Progressive Union. The last subsequently merged with smaller groups to form the Voltaic Progressive Front.

Following the coup of 25 November 1980, all political parties were banned. To disseminate government views on a grass-roots level, the CNR, which took power in 1983, sponsored the formation of Committees for the Defense of the Revolution.

The Compaoré government legalized parties prior to holding elections on 24 May 1992. Compaoré's Popular Democratic Organization-Worker's Movement (ODP-MT) gained 78 seats. The National Convention of Progressive Patriots-Social Democratic Party (CNPP-PSD) won 12 seats and the African Democratic Assembly (ADA) won 6. Eight other parties were represented in the Assembly of People's Deputies. Abstention of 65% of the voters diminished the significance of this election.

National Assembly elections were held 11 May 1997. Again, a boycott resulted in an approximate 50% voter turnout with the CDP of President Compaoré winning 101 seats, the PDP 6 seats, the RDA 2 seats, and the ADF 2 seats.

In the municipal elections of September 2000, the CDP took 802 of 1,098 council seats based on a voter turn-out of 68.4% in a field of 25 parties. The African Democratic Rally-Alliance for Democracy and Federation (ADF/RDA) took second place with 133 seats. Third place was taken by l'Union des Démocrates Libéraux

(ULD), a pro-presidential group with 49 seats. The l'Union pour la Démocratie et la Fédération (UDF), an opposition group, took fourth place with 22 seats. The Party for African Independence (PAI) took fifth place with 20 seats. A number of younger parties including the Democratic Convention for Federation (CDF) took the remaining seats. Numerous complaints of fraud were brought forward to the Constitutional Court, but they hardly affected the overall results.

The parliamentary elections of May 2002 saw the CDP retain its majority, but its control declined to 57 seats against 17 for ADF/RDA led by Hermann Yaméogo. The Party for Democracy and Progress (PDP/PS) of Joseph Ki-Zerbo won 10 seats; the CFD took 5; PAI led by Philippe Ouédraogo also took 5 while other parties won 17 seats. The next elections were scheduled for May 2007.

### **15 LOCAL GOVERNMENT**

In 1986, Burkina Faso was divided into 30 provinces; the number of provinces increased to 45 following approval by the National Assembly of a new electoral code in 1997. Provinces were subdivided into 300 departments and 7,285 villages. In the 1995 municipal elections, President Compaoré's supporters won absolute majorities in 26 of 33 municipalities. Fewer than 10% of the eligible voters registered, and 25% of the registered voters abstained. The 24 September 2000 municipal elections were boycotted by a coalition of opposition parties known as the February the Fourteenth movement; as such, the ruling CDP party won in 40 of the 49 municipalities.

### **16 JUDICIAL SYSTEM**

At the apex of the judicial system is the Supreme Court and beneath it are courts of appeal at Ouagadougou and Bobo-Dioulasso. Courts of the first instance in Ouagadougou, Bobo-Dioulasso, Ouahigouya, and Fada N'Gourma deal with cases involving civil, criminal, and commercial law, and a court at Ouagadougou specializes in common law. The courts of appeal are in the capital. Following the 1983 coup, the CNR created tribunals to try former government officials for corruption and mismanagement. These "people's tribunals" infringed to some degree on the functions of courts of the first instance. In 1993, the "people's tribunals" were abolished.

In addition to the courts described above, traditional courts at the village level apply customary law in cases involving divorce and inheritance. The legal system is based on the French civil law system and customary law. There is also a High Court of Justice to try the president and high government officials for treason or other serious crimes.

In June 1991, a new constitution was adopted which provided a number of safeguards including a right to public trial, right to access to counsel and a right to appeal. In 1995, an Office of Ombudsman "Mediateur du Faso" was created for resolving disputes between the state and its citizens. The judiciary operates independently of the executive; yet the president has considerable power as well as influence over the appointment of judges.

### **17 ARMED FORCES**

In 2005, Burkina Faso had 10,800 active personnel in its armed forces. The Army had 6,400 personnel. The 200-member Air Force had 5 combat capable aircraft. The gendarmerie consisted of 4,200 personnel, and 45,000 men and women were on reserve in a "people's militia." The defense budget in 2005 totaled \$72.7 million.

### **18 INTERNATIONAL COOPERATION**

Burkina Faso was admitted to UN membership on 20 September 1960. It is a member of ECA and several nonregional specialized agencies. It is also a member of the WTO (1995), the African Development Bank, the West African Economic and Monetary Union, the ACP Group, ECOWAS, G-77, the Organization of the Islamic Conference (OIC), and the African Union. The nation is part of the Franc Zone and the Community of Sahel and Saharan States (CENSAD). Together with other countries of former French West Africa, it participates in the Council of the Entente. The headquarters of the Communauté Economique de l'Afrique de l'Ouest are in Ouagadougou. Burkina Faso also belongs to the Niger Basin Authority. Burkina Faso is part of the Nonaligned Movement. In environmental cooperation, the nation is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

### **19 ECONOMY**

Burkina Faso remains one of the poorest countries in the world. Agriculture accounts for about 35% of the GDP and employs about 90% of the labor force. Food staples—millet, sorghum, maize, and rice—are the principal crops grown for domestic consumption. Cotton is the principal export crop; its cultivation, however, is notably price sensitive. In addition, Burkina exports small amounts of shea nuts, sesame, groundnuts, sugar, cashews, and garden vegetables. The livestock sector was once substantial, but had declined by 2002.

The environmental conditions for agriculture are often precarious. Northern Burkina is at the edge of the Sahara Desert and has been subject to severe drought. Furthermore, Burkina soils are generally poor and lateritic. However, expansion of agriculture to more fertile fields in river valleys was supported by a multimillion-dollar UN project to eradicate "river blindness" (onchocerciasis) which had previously rendered these locations uninhabitable.

Burkina's mineral sector is largely undeveloped. Long underestimated, the Poura gold reserves have proven to be capable of generating nearly 10% of export earnings annually. Zinc and silver deposits at Perkoa have been judged commercially viable. The World Bank issued loans in 1996 to upgrade the mining industry.

Mineral deposits in the north of the country were hostage to the extension of the Abidjan-to-Ouagadougou rail line to Dori. Significant limestone deposits basic to cement manufacturing are located near Tambao at Tin Hrassan. Other mineral resources are manganese, vanadium-bearing magnetite, bauxite, lead, nickel, and phosphates.

In January 1994 France devalued the CFA franc, causing its value to drop in half overnight. Immediately, prices for almost all imported goods soared, including prices for food and essential

drugs, like those to combat malaria. The devaluation was designed to encourage new investment, particularly in the export sectors of the economy, and discourage the use of hard currency reserves to buy products that could be grown domestically. Prior to devaluation, Burkina Faso imported most of its food and had little to export; since 1994, exports have risen. As of 2003, economic progress depended upon reducing the trade deficit, the continuation of low inflation rates, improving the infrastructure, pursuing privatization, developing mineral resources, and encouraging private investment. Foreign aid remains the chief source of finance for investment and economic development. In 1999, the World Bank agreed to implement a five-year structural adjustment program of \$53 million, and in 2000, it approved an interest-free \$45 million Poverty Reduction Support Credit (PRSC) for the country, to help it carry out poverty-reduction policies and programs.

The growth rate of the economy was 6.5% in 2003, up from 4.4% in 2002. By 2004, the rate was expected to fall to 4.6%, and to 3.5% by 2005. Inflation decreased from 5.0% in 2001 to subzero levels in 2004. Inflation targeting and macroeconomic policy were devolved to the West African Regional Central Bank, but the government of Burkina Faso maintains control over microeconomic policies. The prolonged crisis in neighboring Côte d'Ivoire has also hit the economy of Burkina Faso, which now is even more dependent on international aid.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Burkina Faso's gross domestic product (GDP) was estimated at \$16.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,200. The annual growth rate of GDP was estimated at 5%. The average inflation rate in 2005 was 6.4%. It was estimated that agriculture accounted for 39.5% of GDP, industry 19.3%, and services 41.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$50 million or about \$4 per capita and accounted for approximately 1.2% of GDP. Foreign aid receipts amounted to \$451 million or about \$37 per capita and accounted for approximately 10.8% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Burkina Faso totaled \$3.34 billion or about \$281 per capita based on a GDP of \$4.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.8%. It was estimated that in 2003 about 45% of the population had incomes below the poverty line.

## 21 LABOR

In 2003, Burkina Faso's labor force totaled five million people. However, a large part of the country's male labor force migrates annually to neighboring countries for temporary employment. As of 2005, approximately 85% of workers were involved in subsis-

tence farming. There is no data available as to the nation's unemployment rate.

Although the vast majority of the country's workforce was in the agricultural sector and were not members of a union, the majority of the remaining workforce were union members. About 60% of the country's public employees were union members, while around 50% of the workers in the private sector were unionized in 2005. However, essential workers such as police officers may not unionize. Workers may use strikes to achieve their labor goals.

The minimum age for employment is 14 years, although due to the economy and vast number of agricultural workers, child labor remains a huge problem. There was a standard workweek of 40 hours and a minimum monthly wage of \$53 in 2005. However, the minimum wage does not apply to those in subsistence agriculture. There are also public safety and health laws, which also exclude subsistence agriculture. Nevertheless, a lack of resources means that these standards are seldom enforced anywhere.

## 22 AGRICULTURE

Agriculture employs the vast majority of the work force and accounted for an estimated 31% of GDP in 2004. However, only an estimated 13% of the total land area is under annual or perennial crops. Government attempts to modernize the agricultural sector have met with some success, especially with cotton, whose export accounted for 51% of total exports in 2004. In 2004, about 85% of the 210,000 tons of cotton produced was exported. The resistance to improvement has been due mostly to the insufficient water supply and poor soil. Burkina Faso is not self-sufficient in food. Although total cereal production rose from 1,547,000 tons in 1990 to 3,063,000 tons in 2004, imports are needed to meet demand.

In the early 1980s, local laborers constructed a 1,144-km (711-mi) canal to bring water for irrigation from the Black Volta to the newly constructed Sourou Dam. This work was part of a plan to establish 40,000 hectares (100,000 acres) of irrigated land for smallholders and state projects. Production figures for principal subsistence crops in 2004 were sorghum, 1,481,000 tons; millet, 881,000 tons; corn, 595,000 tons; and rice, 95,000 tons. Commercial crops (with 2004 production figures) included cottonseed (315,000 tons), groundnuts (321,000 tons), cotton fiber (210,000 tons), and sesame (29,000 tons). Other important crops are cassava, cowpeas, sweet potatoes, and tobacco. Sugarcane has been introduced on a large scale and is becoming an important cash crop; 450,000 tons were produced in 2004.

## 23 ANIMAL HUSBANDRY

In 2004 there were an estimated 10,586,000 goats; 7,000,000 sheep; 541,000 asses; 674,000 pigs; 27,000 horses; and 24,000,000 chickens. Meat production in 2004 included 58,100 tons of beef; 28,200 tons of poultry; 27,000 tons of goat meat; 14,000 tons of mutton; and 9,700 tons of pork. In 2004, 9,500 tons of cattle hides; 7,100 tons of goatskins; and 3,400 tons of sheepskins were produced. Dairy products that year included 187,100 tons of cow's milk; 54,000 tons of goat's milk; and 1,400 tons of butter and ghee. Hens produced 18,200 tons of eggs in 2004. During 2002–04, livestock production was 6.3% higher than during 1999–2001 and almost 30% higher than during 1992–94. Further development depends

on the availability of pasturage and water, as well as the import policies and tax levels of neighboring countries.

## 24 FISHING

The country has no access to the sea, and freshwater areas are limited. Fish are caught by traditional methods, and production amounted to 9,005 tons in 2003.

## 25 FORESTRY

Almost all vestiges of Burkina Faso's primitive forest have been cut down for fuel or to make way for farmland, and reforestation did not begin until 1973. About 50% of the total land is considered forest or woodland. Deforestation proceeded at the rate of 0.2% per year during 1990–2000. Roundwood removals were estimated at 7.3 million cu m (259 million cu ft) in 2003, 84% for fuel.

## 26 MINING

Mining does not play a significant role in Burkina Faso's economy. However, government revenues are dominated by gold, the third-leading export commodity. Gold mining output for 2004 was 1,125 kg, and artisanal miners have become the predominant producers. The gold mine at Poura, which was estimated to contain 450,000 tons of ore at a grade of 12 grams per ton of gold, closed in 1999, reportedly because of low gold prices, after completion of an \$11.6 million rehabilitation project in 1997 financed by the European Union. The mine was operated by the parastatal Société de Recherches et d'Exploitations Minières du Burkina (SOREMIB), and production was complemented by the output of tens of thousands of individual prospectors called *orpaillages*. An estimated 40%–60% of artisanal gold production was smuggled out of the country.

Exploitation of an estimated 15 million tons of high-grade manganese ore at Tambao awaited better commercial prospects and completion of a railway extension from Ouagadougou to Tambao. As of 2004, the mine remained closed. Bauxite deposits have been located in the regions of Kaya and Bobo-Dioulasso. Significant mineral deposits included copper at Gaoua and Wayen, graphite at Kaya, and phosphate at Kodjari. Four main deposits of limestone have also been discovered. For many years, iron has been worked at Ouahigouya and near Banfora to make farm and home implements. The Perkoa high-grade zinc ore deposit, in development, had resources of 7 million tons and planned to produce 60,000 tons per year with an estimated mine life of 15 years. Other deposits included cassiterite, cobalt, diamonds, granite, lead, marble, nickel, phosphate rock, pumice, salt, sand and gravel, uranium, and vanadium. The government adopted a new mining code in 1997 primarily to standardize all the legal measures used to regulate the sector and to amend those parts of the previous legislation that had hindered future development.

## 27 ENERGY AND POWER

All petroleum products are imported since the country has no known crude oil reserves or refining capacity as of 1 January 2003. Imports and consumption of petroleum in 2002 amounted to 8,870 barrels per day. As for natural gas, Burkina Faso is known to have no natural gas production, consumption, or reserves. Electricity accounts for all energy production. Total installed electrical capacity in 2001 was 0.121 million kW. Production rose from 42

million kWh in 1973 to 0.28 billion kWh in 2001, of which 73.6% was thermal and 26.4% hydroelectric. Consumption of electricity was 0.26 billion kWh in 2001. Construction of a 15,000 kW hydroelectric facility at Kompienga was finished in 1989. In 1999, with a grant from the government of Denmark, Burkina Faso built a new power station, completing it in just five months to meet the country's emergency energy needs. Production and distribution of electricity and water are controlled by the state-owned Société Nationale d'Électricité du Burkina (SONABEL), established in Ouagadougou in 1968.

## 28 INDUSTRY

Industry accounted for about 28% of Burkina's GDP in 2000, yet employed only 2% of the population. The principal centers for economic activity are Bobo-Dioulasso, Ouagadougou, Banfora, and Koudougou, cities on the rail line to Abidjan, Côte d'Ivoire. Burkinabe industry reflects an interesting diversity, but is dominated by unprofitable state-controlled corporations. Important sectors are food processing, textiles, and leather, although small-scale operations manufacture cigarettes, bricks, and light metal goods such as beds and agricultural implements. Other enterprises are a brewery and moped and bicycle assembly plants. Cotton production (cotton is Burkina Faso's main export) reached record levels in 1999, reaching 419,000 tons, marking the fifth consecutive year of strong growth in the sector. Gold is the country's third-largest export.

Efforts were underway in 2003 to develop a shea butter industry in Burkina Faso: shea butter is used as a skin moisturizer and as a substitute for cocoa butter in the production of chocolate. Of 42 state enterprises selected for sale, 21 were divested by 1999. Shell, Elf Oil, Mobil Oil, and Texaco operate in Burkina Faso; the country has no hydrocarbon resources. SONABEL (Société Nationale Burkinabe d'Electricité) is the state-owned utility supplying electricity to the country. Burkina Faso has undeveloped phosphate resources and manganese deposits.

The industry's share in the economy dropped to 19.3% in 2004; agriculture accounted for 39.5% of the GDP, while services came in first with 41.3%. The bulk of the five million working people are engaged in agriculture, and a numerous male workers migrate annually to neighboring countries for seasonal employment.

## 29 SCIENCE AND TECHNOLOGY

Burkina Faso has a shortage of skilled scientists and technicians. Scientific and technical aid comes chiefly from France. In 1997 (the latest year for which data is available), expenditures for research and development totaled \$16.951 million or 0.2% of GDP. In that year there were 17 scientists and 16 technicians per million people, actively engaged in R&D. In 1997, high technology exports totaled \$2 million, or 7% of total manufactured exports. Burkina Faso has four national institutes conducting research in agriculture, medicine, and natural sciences; and two French institutes conducting research in medicine, hydrology, and geology; and an international institute (founded in 1960) to combat endemic and transmitted diseases and malnutrition and to train medical workers in eight member African states. The University of Ouagadougou (founded in 1969) has institutes of mathematics and physics, chemistry, natural science, technology, and health sciences. A 14-nation school of engineering and rural equipment

(founded in 1968) is in Ouagadougou. In 1987–97, science and engineering students accounted for 37% of college and university enrollments.

### 30 DOMESTIC TRADE

As of 2000, about 90% of the population was employed in subsistence farming. The country relies heavily on imports for capital goods and food products. Importers generally are their own wholesalers and often their own retailers, dealing in everything from matches to farm equipment. There are a limited number of privately-owned factories for cotton and textiles manufacturing and food processing. Many residents migrate to surrounding countries to find work and send money back home. The main commercial centers are in Ouagadougou and Bobo-Dioulasso, where French commercial practices prevail.

### 31 FOREIGN TRADE

The leading imports are machinery and food products. Refined petroleum products also account for much of the nation's imports, along with cement, clinker, and fertilizers. Cotton is Burkina Faso's largest export (57%), with gold in second place (17%), and animal products coming in third. Vegetables, leather, oil seeds, and animal hides account for about 20% of exports.

In 2004, exports reached \$419 million (FOB—free on board), while imports grew to \$866 million (FOB). The bulk of exports went to China (32.1%), Singapore (11.5%), Ghana (4.7%), and Bangladesh (4.3%). Imports mainly came from France (29.3%), Côte d'Ivoire (16%), Togo (9.8%), and Belgium (5.0%).

### 32 BALANCE OF PAYMENTS

Burkina Faso's balance of payments is chronically negative, as receipts from exports of goods and services typically only cover 30–40% of imports. It has had to rely heavily on remittances from Burkinabe working abroad and on international credits and other forms of borrowing to help offset widening trade imbalances. These factors, together with net capital inflows, generated a slight surplus from 1986 to 1988. Declining gold exports and falling cotton prices in 1989, coupled with increased imports and declining remittances from abroad, seriously deteriorated Burkina Faso's

trade balance. By 1990, however, recovery in the gold and cotton sectors reduced the current account deficit to about 14% of GDP (from over 17% in 1989).

Burkina Faso and the IMF agreed upon a structural adjustment program in 1990 in which rigorous financial control was made a priority. Tax collections were improved and salaries stabilized to the point that budget surpluses were attained in 1989 and 1991. A value-added tax took effect in 1993. An enhanced structural adjustment program negotiated in 1993 sought growth of 3–11% annually while curbing ongoing financial imbalances. In 2003, the IMF approved a three-year \$34 million Poverty Reduction and Growth Facility (PRGF) Arrangement with Burkina Faso.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Burkina Faso's exports was \$265 million while imports totaled \$580 million resulting in a trade deficit of \$315 million.

The International Monetary Fund (IMF) reported that in 1994 Burkina Faso had exports of goods totaling \$216 million and imports totaling \$344 million. The services credit totaled \$56 million and debit \$138 million.

Exports of goods and services reached an estimated \$435 million in 2004, up from \$321 million in 2003. Imports grew from \$685 million in 2003, to \$791 million in 2004. The resource balance was consequently negative in both years, reaching -\$364 million in 2003, and -\$356 million in 2004. The current account balance was also negative, slightly decreasing from -\$368 million in 2003, to -\$397 million in 2004. Foreign exchange reserves (excluding gold) grew to \$528 million in 2004, covering around eight months of imports.

### 33 BANKING AND SECURITIES

In 1959, the Central Bank of West African States (Banque Centrale des États de l'Afrique de l'Ouest-BCEAO) succeeded the Currency Board of French West Africa and Togo as the bank of

issue for the former French West African territories. In 1962, it was reorganized as the joint note-issue bank of Benin (then Dahomey), Côte d'Ivoire, Mauritania (which withdrew in 1973), Niger, Senegal, Togo, and Burkina Faso (then Upper Volta). BCEAO notes, known as CFA francs, are guaranteed by France without limitation. Foreign exchange receipts of Burkina Faso go into the BCEAO's exchange pool, which in turn covers its foreign exchange requirements.

Other banks are the International Bank for Commerce, Industry, and Agriculture of Burkina Faso; the National Development Bank (80% government-owned); the National Fund of Agricultural Credit of Burkina Faso (54% state-owned); the state-owned National Fund of Deposits and Investment; the International Bank of Burkina; Banque Nationale de Paris (BNP); Bank of Africa (BOA); and Ecobank Burkina.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$357.8 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$537.5 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

### 34 INSURANCE

Insurance companies must have government approval and are subject to government supervision. Automobile third-party liability insurance is compulsory. Two French companies provide most types of insurance, as does the National Society for Insurance and Reinsurance (SONAR-51% state-owned). In 1986, nonlife insurance accounted for 95.7% of all premiums.

### 35 PUBLIC FINANCE

Burkina Faso's revenue sources are limited, and the country depends heavily on subsidies from France. An extensive fiscal adjustment program was begun in 1991 with the help of the IMF, that outlined plans for the privatization of state-owned enterprises. Over 40% of government income is derived from customs duties, but \$18 million had been netted from parastatal sales by 1999. Personnel expenses account for over 40% of outlays. Budget deficits averaging 10% of GDP during 1998 added significantly to the debt service burden. At least 20% of the government budget is financed by foreign aid.

The US Central Intelligence Agency (CIA) estimated that in 2005 Burkina Faso's central government took in revenues of approximately \$1 billion and had expenditures of \$1.3 billion. Revenues minus expenditures totaled approximately -\$349 million. Total external debt was \$1.85 billion.

### 36 TAXATION

The contribution of direct taxation of all kinds to the governmental revenue is relatively low. Individuals pay a single income tax, varying from 2–30% on salaries, tips, and other remuneration, and 10–45% on business income. Companies pay a tax on profits, a forfeit tax, and taxes on income from debt and investments.

There are also a number of real estate taxes. Sales and transaction taxes are shared by most of the population. Indirect taxes include customs duties and license fees. Burkina Faso also levies a value added tax that varies from 15–20%. There is also a 1% statistical tax and a 1% community solidarity tax. Additional taxes may be levied on industrial and agricultural products, livestock breeding, and fishing industry products.

There are consumption taxes on specified items, such as petroleum products and tobacco, and local taxes on motor vehicles.

### 37 CUSTOMS AND DUTIES

Burkina Faso has made several trade reforms in the past decade. Most notably, almost all nontariff barriers to trade have been eliminated and the maximum tariff has been lowered from 200% to 66%, except for petroleum, which still carries a 150% tariff. Additionally, Burkina Faso is working with the World Trade Organization to get its tariff rates within WTO parameters.

### 38 FOREIGN INVESTMENT

Most foreign investments in Burkina Faso come from private French sources; however, investment capital from other EU members has increased in recent years. Under the Investment Code of 1992, the Ministry of Industry, Commerce, and Mines approves new investments based on the recommendations of the National Investment Commission. The principal criterion used is value added, with a minimum acceptable level of 35%. The investment code has three incentive schedules: Schedule "A" for investment under 200 million CFAF (about 390,000), a more generous Schedule "B" for investments above this level, and an even more generous (permanent exemption from all Burkinabe taxes) Schedule "C" for export companies. The 1993 Mining Code regulates foreign mining enterprises. Investment has been sought for hotels, textile factories, agroindustrial projects, communications, and other fields in addition to mining. As of 1996, over 140 companies were holding exploration licenses while total investment in the mining sector amounted to \$38 billion. As of the late 1990s, the most promising sectors for foreign interest and investment were the cotton industry and the gold mining industry. Foreign firms must reserve at least 35% of capital for Burkinabe participation and 50% for priority-sector investments.

Between 1997 and 1999, FDI inflow into Burkina Faso averaged \$11.77 million, but then jumped to an annual average of \$24 million of FDI in 2000 and 2001. France has been the source of most investment with Lebanese investors playing a prominent role in 2001. The only sizeable US investment has been from ExxonMobile in gas distribution.

### 39 ECONOMIC DEVELOPMENT

Development of the agricultural sector and of infrastructure have been the priorities established by Burkina's recent development plans. The 1991–95 plan estimated that 75% of the investment total would be allocated to agriculture. A 1995–97 plan, developed with support by the International Monetary Fund (IMF), included a goal of 5% real annual growth in gross domestic product (GDP), with inflation controlled to a maximum of 3% per year. The plan placed emphasis on privatization and encouragement of foreign

investment, particularly in industrial mining. As of the early 2000s, there was considerable interest in mining, especially of gold.

The country regularly receives bilateral and multilateral aid, primarily in technical assistance. France and the United States are the leading bilateral aid donors. Since 1991, Burkina Faso has been supported by relief from the IMF's Enhanced Structural Adjustment Facility (ESAF), and a Poverty Reduction and Growth Facility (PRGF). Burkina Faso reached its completion point for assistance under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative in 2000. The country completed a PRGF arrangement in 2002 that was fully disbursed. A three-year \$34 million PRGF arrangement was approved in June 2003 to support the government's economic reform program for 2003–06. The 2002–03 political crisis in Côte d'Ivoire, Burkina Faso's major regional trading partner, had repercussions in Burkina Faso, particularly with regard to the collection of taxes, and to the need for increased humanitarian assistance, border control, and security spending. Spending in 2002 was for goods and services including telephones, electricity, and water. Spending was also necessary for education, health, and other poverty-reducing initiatives.

The economy is expected to expand by 5.2% in 2006, up from 3.5% in 2005, as a result of more efficient agriculture programs, and a stabilized price for cotton. Other sectors with promising potential for the future are gold mining and the services sector (which is expected to grow following increased domestic demand).

#### 40 SOCIAL DEVELOPMENT

A social insurance law provides employed persons with pensions for old age and disability. Spouses of pensioners receive survivor benefits equal to 50% of the insured person's pension. These programs are funded by equal contributions from employers and employees. Retirement age varies according to occupation. Medical coverage is limited to maternity benefits, consisting of 100% of regular earnings payable for 14 weeks. A worker's compensation program provides both temporary and permanent disability benefits and medical benefits. Employment-related family allowances are also paid to families with children under the age of 14. However, most citizens of Burkina Faso are subsistence farmers and fall outside the scope of the social security system.

The constitution prohibits discrimination based on race, religion, or ethnic origin, but does not mention sexual discrimination. Women do not have equal opportunities to education and employment, and they do not have the same property rights as men. Spousal abuse is common and polygyny is legal. Female circumcision, also known as female genital mutilation, is still widely practiced. It has been estimated that as much as 70% of the female population has undergone this painful and dangerous procedure. The government is collaborating with nongovernmental organizations to stop this practice. Child abuse remains a widespread problem.

Prison conditions are poor and facilities are overcrowded. Serious human rights violations continue and perpetrators of these abuses are rarely punished.

#### 41 HEALTH

The government of Burkina Faso took on the project of improving the quality of health services by upgrading facilities and skills, achieving control of endemic parasitic diseases, and strengthening sector institutions. Total health care expenditures were an estimated 4.1% of GDP.

As of 2004, it was estimated that there were as few as 4 physicians per 100,000 people. In addition there were only 26 nurses, and 4 midwives per 100,000 people. However, the hospital at Ouagadougou is one of the most modern in Africa. Medical centers at Bobo-Dioulasso carry on research on insect-borne diseases. Mobile medical units attempt to control leprosy, sleeping sickness, yellow fever, and other contagious diseases.

One of Burkina Faso's most serious health problems is onchocerciasis (river blindness), which touches 84% of the total land area and causes many thousands of people to desert settlements infected by the fly vector. A control program has had some success. About two-thirds of Burkina Faso residents have access to safe water. In early 1997, a meningitis epidemic in West Africa spread to Burkina Faso, resulting in 724 deaths out of 5,571 cases.

The infant mortality rate in 2005 was 92.94 per 1,000 live births. The crude birth rate was 44.34 in 1999. The incidence of low-birth weight babies was 21% in 1993–96. As of 2000, only 12% of married women (ages 15 to 49) used contraception. As of 1999, Burkina Faso immunized children up to one year old as follows: diphtheria, pertussis, and tetanus, 42% and measles, 53%.

Average life expectancy in 2005 was estimated at 48.45. The HIV/AIDS prevalence was 4.20 per 100 adults in 2003. As of 2004, there were approximately 300,000 people living with HIV/AIDS in the country. There were an estimated 29,000 deaths from AIDS in 2003.

In Burkina Faso, 70% of all women undergo female genital mutilation. Approximately 3.5 million women and girls were affected. No laws restrict this procedure.

#### 42 HOUSING

Architecture in the metropolitan centers is essentially French. Many African people, especially the Mossi, live in round huts with conical straw roofs or in rectangular huts with flat roofs.

Burkina Faso has experienced housing shortages in the past few decades primarily due to urbanization and poverty. In Ouagadougou, most houses are built with mud brick and/or plaster. About 10% are made with cement block. In 1991, there were about 1,399,149 households. About 92% of rural dwellings and 65% of urban housing were owner occupied. According to a 2002 report of The World Bank, about 70–80% of the residents in Ouagadougou had access to safe water and sanitation. Only 78% of the total population has access to safe water.

#### 43 EDUCATION

All public education is free. Primary education is compulsory for six years (ages 6 to 12). Secondary students then have an option of continuing in seven years of general studies or seven to eight years

of technical programs. The academic year runs from October to June. The language of instruction is French.

Primary school enrollment in 2003 was estimated at about 36% of age-eligible students; 42% for boys and 31% for girls. The same year, secondary school enrollment was about 9% of age-eligible students; 11% for boys and 7% for girls. It is estimated that only about 29% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 45:1 in 2003; the ratio for secondary school was about 31:1. In 2000, private schools accounted for about 12% of primary school enrollment and 34% of secondary enrollment.

The Center for Higher Education was established in 1969, and in 1974 it became the University of Ouagadougou. The Université Polytechnique de Bobo-Dioulasso was organized in 1996. In 2001, there were about 16,000 students enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 12.8%, with 18.5% for males and 8.1% for females.

The primary administrative body is the Ministry of Secondary and Higher Education and Scientific Research. Public expenditure on education has been estimated at about 2% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The largest library, now part of the University of Ouagadougou, was founded in 1969 and had 70,000 volumes as of 2002. Other libraries are attached to institutes such as the Center for Economic and Social Studies of West Africa and the Institute of Environmental and Agricultural Research. There is also a large library (20,000 volumes) attached to the Grand Seminary of Koumi in Bobo-Dioulasso. The French Cultural Center in Ouagadougou holds 30,000 volumes. The National Museum in Ouagadougou has a collection of the ethnography, costumes, and domestic artifacts of Burkina Faso. There is the Museum of Southwest Civilizations in Gaoua, a regional museum in Pobe, and, opened in 1990, a Provincial Museum of Music in Bobo-Dioulasso housing a number of traditional instruments.

#### 45 MEDIA

Radio, telephone, and telegraph services are available to Paris and to the neighboring countries. In 2003, there were an estimated five mainline telephones for every 1,000 people; about 12,400 people were on a waiting list for telephone service installation. The same year, there were approximately 19 mobile phones in use for every 1,000 people.

Two radio stations, one in Ouagadougou and one in Bobo-Dioulasso, are run by Radiodiffusion Nationale, the government radio corporation. Broadcasts are in French and 13 indigenous languages. There are several independent radio stations. As of 2002, there were a total of 3 AM and 17 FM radio stations. Télévision Nationale du Burkina, the government-owned television transmitting station, was established in 1963. Transmissions are made six days a week and are received only in Ouagadougou and Bobo-Dioulasso. The government has been establishing public viewing centers. There is also one privately operated television station. In 2003, there were an estimated 433 radios and 12 television sets for every 1,000 people. In 2003, there were 2.1 personal computers

for every 1,000 people and 4 of every 1,000 people had access to the Internet. There were two secure Internet servers in the country in 2004.

Burkina Faso had seven daily newspapers in 2002, all published in Ouagadougou. *L'Observateur Paalga* and *L'Observateur* had the highest circulations (8,000 each). Other dailies included the *Bulletin Quotidien D'Information* (circulation 1,500), *Le Pays* (4,000), and *Sidwaya* (3,000). Several published periodicals, all issued in Ouagadougou, include the *Bulletin Economique et Social*, (circulation 550) published by the Chamber of Commerce six times a year, and *Carrefour Africain*, (circulation unavailable) published monthly with government sponsorship. The press agency Agence d'Information du Burkina is based in Ouagadougou.

The 1990 Information Code provides for freedom of speech and freedom of the press, and it is said that these freedoms are in some degree circumscribed by self-censorship, as the government is sensitive to criticism.

#### 46 ORGANIZATIONS

The Chamber of Commerce, Industry, and Handicrafts of Burkina Faso has its headquarters in Ouagadougou. There is also an Office for the Promotion of Burkinabe Enterprises. The National Farmers Union was created in 1987. Cooperative groups and unions are active, as are employers' and professional groups.

Student movements have played an influential role in national politics. A national student union was founded in 1965 at the University of Ouagadougou. Other youth organizations include chapters of the Boy Scouts, Girl Guides, Junior Chamber, Youth For Christ, Catholic Youth Organization, and Red Cross Youth. There are several sports associations, including those representing such pastimes as tennis, handball, and taekwondo. There is a national organization for the Special Olympics.

There are national chapters of the Red Cross Society, Caritas, UNICEF, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include the Nazinga, Arly, and "W" park game preserves. The National Museum and Museum of Music showcase the rich culture in Burkina. The market in the capital of Burkina, Ouagadougou, boasts crafts, art, and food, along with the Salon International de l'Artisanat de Ouagadougou (International Craft Show of Ouagadougou), the largest craft fair in Africa.

All visitors must have a passport, visa, and certificate of yellow fever vaccination. In 2000, there were 612,787 tourist arrivals. Hotels had an occupancy rate of 59%.

In 2005, the US Department of State estimated the cost of staying in Ouagadougou at \$192 per day. Costs were significantly lower outside the capital. Daily expenses in Bobo-Dioulasso were estimated at \$90.

#### 48 FAMOUS BURKINABE

The best-known persons are Maurice Yaméogo (1921–93), a former president of Upper Volta during 1960–66; Moro Naba Kougri (1930–82), the traditional sovereign of the Mossi; and Sangoulé Lamizana (1916–2005), a former army chief of staff, who

was president of Upper Volta from 1966 to 1980. Capt. Thomas Sankara (1949?–87), who gained a following in the 1974 clashes with Mali, seized power in a 1983 coup; he was overthrown and executed in 1987. Capt. Blaise Compaoré (b.1951) assumed the presidency after Sankara's execution.

#### 49 DEPENDENCIES

Burkina Faso has no territories or colonies.

# BURUNDI

Republic of Burundi

*République du Burundi; Republika yu Burundi*

**CAPITAL:** Bujumbura

**FLAG:** The national flag consists of a white circle in the center with arms extending to the four corners. The circle contains three red stars with green borders. Upper and lower fields formed by the circle and its arms are red; the fields on the sides are green.

**ANTHEM:** *Burundi Bwacu (Our Burundi)*, beginning “Burundi bwacu, Burundi buhire” (“Our Burundi, O blessed land”).

**MONETARY UNIT:** The Burundi franc (BFR) is a paper currency. There are coins of 1, 5, and 10 francs, and notes of 10, 20, 50, 100, 500, 1,000, and 5,000 francs. BFR<sub>1</sub> = \$0.00088 (or \$1 = BFR<sub>11,138</sub>) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; Independence Day, 1 July; Assumption, 15 August; Victory of UPRONA, 18 September; 13 October; All Saints’ Day, 1 November; Christmas, 25 December. Movable religious holidays include Easter Monday, Ascension, and Pentecost Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Burundi is a landlocked country in east-central Africa with an area of 27,830 sq km (10,745 sq mi), of which about 7% consists of lakes. Comparatively, the area occupied by Burundi is slightly smaller than the state of Maryland. It extends 263 km (163 mi) NNE–SSW and 194 km (121 mi) ESE–WNW. Burundi is bounded on the N by Rwanda, on the E and S by Tanzania, and on the W by the Democratic Republic of the Congo (DROC), with a total boundary length of 974 km (605 mi).

Burundi’s capital city, Bujumbura, is located in the western part of the country.

## <sup>2</sup> TOPOGRAPHY

Burundi is a country mainly of mountains and plateaus, with a western range of mountains running north–south and continuing into Rwanda. The highest point is Mt. Heha at 2,670 m (8,760 ft). The only land below 914 m (3,000 ft) is a narrow strip of plain along the Ruzizi River (about 800 m/2,600 ft), which forms the western border north of Lake Tanganyika. From the mountains eastward, the land declines gradually, dropping to about 1,400 m (4,600 ft) toward the southeastern and southern border. The average elevation of the central plateau is about 1,525 to 2,000 m (5,000 to 6,500 ft). The major rivers form natural boundaries for most of the country. The Kanyaru and the Kagera separate Burundi from Rwanda along many sections of the common border. The Kagera and the Ruvubu are important as the southernmost sources of the Nile. Most of Burundi’s southern border is formed by the Malagarasi River. The principal lakes are Tanganyika, Cohoha, and Rweru.

## <sup>3</sup> CLIMATE

Burundi in general has a tropical highland climate, with a considerable daily temperature range in many areas. Temperature also

varies considerably from one region to another, chiefly as a result of differences in altitude. The central plateau enjoys pleasantly cool weather, with an average temperature of 20°C (68°F). The area around Lake Tanganyika is warmer, averaging 23°C (73°F); the highest mountain areas are cooler, averaging 16°C (60°F). Bujumbura’s average annual temperature is 23°C (73°F). Rain is irregular, falling most heavily in the northwest. Dry seasons vary in length, and there are sometimes long periods of drought. However, four seasons can be distinguished: the long dry season (June–August), the short wet season (September–November), the short dry season (December–January), and the long wet season (February–May). Most of Burundi receives between 130 and 160 cm (51–63 in) of rainfall a year. The Ruzizi Plain and the northeast receive between 75 and 100 cm (30–40 in).

## <sup>4</sup> FLORA AND FAUNA

Most of the country is savanna grassland. There is little forest left; Burundi is one of the most eroded and deforested countries in all of tropical Africa. Of the remaining trees, the most common are eucalyptus, acacia, fig, and oil palms along the lakeshores. There are over 2,500 species of plants.

Wildlife was abundant before the region became agricultural. Still found are the elephant, hippopotamus, crocodile, wild boar, lion, antelope, and flying lemur, as well as such game birds as guinea fowl, partridge, duck, geese, quail, and snipe. Some 451 breeding bird species have been reported. The crowned crane is prevalent. As the region becomes more densely populated, some species are dwindling or disappearing.

In Lake Tanganyika there is a great variety of fish, including the Nile perch, freshwater sardines, and rare tropical specimens. Most of the 133 fish species in Lake Tanganyika are found nowhere else in the world.

## 5 ENVIRONMENT

Wildlife survives only in those areas of the country not heavily cultivated, and rapid population growth is reducing the amount of uncultivated land. The cutting of forests for fuel is uncontrolled despite legislation requiring permits. Only about 5.7% of Burundi's total land area is protected. Soil erosion due to deforestation, improper terracing, and overgrazing is also a serious problem. Burundi also has a problem with maintaining the purity of its water supply. It has only 4 billion cu m of renewable water resources, of which 64% is used for agricultural purposes. About 90% of the nation's urban population and 78% of rural dwellers have access to pure water.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 7 types of mammals, 9 species of birds, 6 species of amphibian, 1 type of mollusk, 3 types of other invertebrates, and 2 species of plants. Threatened species include the mountain gorilla, cheetahs, African elephants, and the whale-headed stork.

## 6 POPULATION

The population of Burundi in 2005 was estimated by the United Nations (UN) at 7,795,000, which placed it at number 93 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 47% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.8%, a rate the government viewed as too high. (Adolescent pregnancy was a significant problem, as was low rate of contraceptive use.) The projected population for the year 2025 was 13,913,000. The population density was 280 per sq km (725 per sq mi), making it one of the most densely populated countries in Africa. The density is greatest in north-central Burundi.

The UN estimated that 9% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 6.57%. The capital city, Bujumbura, had a population of 378,000 in that year. Apart from Bujumbura, urban areas are small and serve mainly as commercial and administrative centers.

The prevalence of HIV/AIDS has had a significant impact on the population of Burundi. The UN estimated that 8.3% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

At the end of 1992 there were about 271,700 refugees in Burundi. When ethnic massacres broke out anew in Rwanda in 1994, several hundred thousand Rwandan refugees streamed across the border into Burundi. By August 1996, all of these refugees had returned to Rwanda, compelled by the insecurity in Burundi. At the end of 1992, Tanzania was harboring 149,500 refugees from Burundi, and Rwanda another 25,200. Hundreds of thousands of Hutu from Burundi crossed into Rwanda, Tanzania, and the Democratic Republic of the Congo (DROC, formerly Zaire) in late 1993 to escape massacre at the hands of the Tutsi-dominated army. In early 1994, many of these refugees returned home.

In 1994, with the outbreak of the civil war in Rwanda, 270,000 Burundi refugees who were there returned home. By November 1996, 120,000 Burundians returned home from the DROC. However, there were still over 240,000 Burundi refugees in the DROC and Tanzania.

At the end of 1996, it was estimated that 500,000 Burundians were still displaced internally, either clustered with military posts if they were of Tutsi ethnicity or in the hills if they were Hutu. In January 1999 Burundi and Tanzania took steps to revive talks on repatriation. However, a series of rebel attacks in the Ruyigi province in April 1999 seriously hindered repatriation efforts in that area. Increased violence in Bujumbura, beginning in July 1999, also slowed efforts. In 2003, there were 381,000 internally displaced persons (IDP) within the country. As of 2004, 48,805 people were registered as refugees, primarily from the DROC; another 11,893 were registered as asylum seekers. Also in 2004, there were 90,321 returned refugees. In 2004 over 19,500 Burundians sought refuge in the DROC and over 440,000 in Tanzania. The net migration rate for 2005 was estimated as zero.

## 8 ETHNIC GROUPS

The population is made up mainly of Hutu, a Bantu people, traditionally farmers, who constitute about 85% of the inhabitants. A tall warrior people, the Tutsi (Watutsi, Watusi, Batutsi), a Hamitic people, constitute about 14% of the population but dominate the government and military. The earliest known inhabitants of the region were the Twa (Batwa), a Pygmy tribe of hunters, related to the Pygmies of the DROC. They make up about 1% of the population. There are about 82,000 immigrant Africans. Europeans and Asians number about 5,000.

## 9 LANGUAGES

The main language is Kirundi, a Bantu language. Both Kirundi and French are official languages. Swahili is used as a lingua franca along Lake Tanganyika and in the Bujumbura area.

## 10 RELIGIONS

About 60% of the population are Roman Catholic and about 10% are Muslim. The remainder practice other Christian faiths, indigenous religions, or have no religious affiliation.

The Transitional Constitutional Act of 2001 provided for freedom of religion and this right is generally respected in practice. Religious groups must register with the Ministry of Interior and maintain a headquarters within the country. The heads of major religions are given diplomatic status. Certain Catholic holidays are observed as public holidays.

## 11 TRANSPORTATION

A great hindrance to Burundi's economic development is lack of adequate transportation. The country is landlocked, and there are no railroads. Roads total 14,480 km (8,998 mi) as of 2002, and only about 7% of them remain open in all weather; the rest are classed as local roads or tracks. In 2003, there were 24,000 passenger cars and 23,500 commercial vehicles.

Burundi is dependent on Tanzania, Uganda, Zambia, and the Democratic Republic of the Congo (DROC) for its imports. Through Bujumbura, Lake Tanganyika serves as the country's sole inland waterway, and as a link with Kigoma in Tanzania for rail

shipment to Dar es Salaam. In 1987, the African Development Bank awarded a 50-year loan of CFA Fr218 billion to finance the construction of a shipyard in Bujumbura.

Air service is maintained by Air Burundi, which operates domestic service and flies to Rwanda, Tanzania, and the DROC. International service is also provided by Air Zaïre, Sabena, and other airlines. As of 2004, there were an estimated eight airports in Burundi, of which the international airport in Bujumbura (as of 2005) was the country's primary and only paved airport. There are also a number of helicopter landing strips. In 1997, 11,000 passengers traveled on international and domestic flights.

## 12 HISTORY

The first known inhabitants of what is now Burundi were the Twa, a Pygmy tribe of hunters. Between the 7th and 10th centuries, the Hutu, a Bantu agricultural people, occupied the region, probably coming from the Congo Basin. In the 15th and 16th centuries, tall warriors, the Tutsi, believed to have come originally from Ethiopia, entered the area.

The Tutsi, a nomadic pastoral people, gradually subjugated the Hutu and other inhabitants of the region, although they adopted the Hutu language, as did the Twa, so that all three groups were Bantu-speaking. A feudal social system based on caste—the conquering Tutsi and the subjected Hutu—became the dominant feature of social hierarchy, and especially of economic and political relations. The Hutu did the farming and grew the food in return for cattle, but generally had no part in government. The Tutsi were the ruling caste and did no manual labor. To a certain extent, however, the castes were open to each other. Custom allowed a particularly worthy Twa or Hutu to rise to the rank of a Tutsi; conversely, an impoverished Tutsi who had fallen from his former estate could be assimilated into the Hutu.

The penetration of and eventual conquest by the Tutsi was reported as a slow and peaceful process that initiated a process of political integration. The ownership of land was gradually transferred from the Hutu tribes to the *mwami*, the semidivine king of the Tutsi. The first *mwami*, Ntare I Rushatsi, is thought to have come to power in the 16th century. While the ruling *mwami* was in theory an absolute king, he was often regarded as *primus inter pares* among the *ganwa*, prince-like aristocrats of royal lineage. But the *mwami* had his court and his army, and he could not easily be removed from office.

The first European known to have reached the territory was John Hanning Speke, who traveled with Richard Burton to Lake Tanganyika in 1858. They paddled to the north end of the lake in their search for the headwaters of the Nile. In 1871, Stanley and Livingstone landed at Bujumbura and explored the Ruzizi River region. Subsequently, other explorers, principally German, visited Burundi. After the Berlin Conference of 1884–85, the German zone of influence in East Africa was extended to include Rwanda and Burundi. A German, Count von Götzen, discovered Lake Kivu in 1894. The first Roman Catholic missionaries came in 1898 and in 1899 the territories then known as Ruanda-Urundi officially came under the administration of German East Africa.

The German authorities made no changes in the indigenous organization, choosing only Tutsi for positions of colonial authority. They administered the territory through the traditional authorities in accordance with the laws and customs of the region.

LOCATION: 2°20' to 4°28' S; 29° to 30°50' E. BOUNDARY LENGTHS: Rwanda, 290 kilometers (180 miles); Tanzania, 451 kilometers (280 miles); Democratic Republic of the Congo, 233 kilometers (145 miles).

However, the history of Burundi under the German administration was marked by constant factional struggles and rivalry, in contrast to the peaceful state of affairs in Rwanda. When Belgian troops occupied the country in 1916, they found it in dissension and the three-year-old *mwami*, Mwambutsa IV, the center of court intrigue. In 1923, the League of Nations awarded Belgium a mandate to the region of Ruanda-Urundi. The Belgians adopted the same policy of indirect administration employed by the Germans, retaining the entire Tutsi-dominated hierarchy. In 1946, Ruanda-Urundi became a United Nations Trust Territory under Belgian administration.

On 18 September 1961, elections for the National Assembly were held in Urundi under the auspices of the UN. The result was a sweeping victory for UPRONA, the party headed by Prince Louis Rwagasore, eldest son of the *mwami*. On 13 October 1961, shortly after Prince Rwagasore had become premier, he was assassinated. Two leaders of the Christian Democratic Party were charged, convicted of responsibility for the murder, and executed.

The UN had strongly urged that Urundi and Ruanda come to independence united, since their relationship had long been close, their economies were integrated, and their people were ethnically one. However, the UN reluctantly decided that there was insufficient support for the union in both regions, and on 27 June 1962, the UN General Assembly passed a resolution that called for the creation of two independent nations, Burundi and Rwanda.

On 1 July 1962, Burundi became an independent, constitutional monarchy headed by Mwami (King) Mwambutsa IV. The king set up a government that comprised equal numbers of Hutu and Tutsi, with a Hutu as prime minister. In 1965, the assassination of the prime minister, and Mwambutsa's subsequent refusal to appoint a Hutu prime minister even though the Hutu won a parliamentary majority, began a destabilizing cycle of Hutu uprisings and government repression. Mwambutsa was deposed in July 1966, and was succeeded in September by his son, Charles, who then became known as Ntare V. On 29 November 1966, Ntare V was in turn overthrown by a military coup headed by the Tutsi prime minister, Col. Michel Micombero, who abolished the monarchy and declared Burundi a republic with himself as president.

In 1969, an alleged Hutu coup attempt ended in the arrest of 30 prominent businessmen and officials. Another Hutu-led coup attempt in April 1972 led to widespread civil war, in which mass killings of Hutu by Tutsi and of Tutsi by Hutu were reported. Ntare V was killed on 29 April 1972, reportedly by Hutu, which led to the massacre of 150,000 Burundian Hutu a month later. On 21 July 1973, the UN High Commissioner for Refugees reported that there were at least 85,000 Hutu refugees from Burundi, of whom an estimated 40,000 were in Tanzania, 35,000 in Zaire, and 10,000 in Rwanda. President Micombero later conceded that more than 100,000 persons had been killed in the course of the 1972 insurgency, and perhaps hundreds of thousands of refugees had fled. Most of the deaths were among the Hutu, and educated Hutu were systematically massacred under Micombero's de facto military regime. By August 1972 nearly all educated Hutu had fled or been killed. During 1973, rebel bands conducted raids into Burundi from across the Rwandan and Tanzanian borders, and Burundi's relations with those two neighbors deteriorated. By the end of 1973, however, the government was fully in control.

On 1 November 1976, President Micombero was stripped of all powers in a bloodless military coup led by Lt. Col. Jean-Baptiste Bagaza, and the Supreme Revolutionary Committee (SRC) that subsequently took power named Bagaza president. The new regime, like the old, was dominated by Tutsi. At a party congress of UPRONA in 1979, a party central committee headed by President Bagaza was selected to replace the SRC, and civilian rule was formally restored. Although the military remained active in both the party and in the government, Bagaza encouraged land reform, electoral reform, and reconciliation. A new constitution was adopted in a national referendum in 1981, and a National Assembly was elected in 1982. Bagaza was reelected unopposed to a new

five-year term in 1984. However, after 1984 Bagaza's human rights record worsened due to his suppression of religious freedom and political opposition. In September 1987, he was overthrown in a bloodless military coup while he attended a conference in Canada. Maj. Pierre Buyoya became president.

Buyoya withdrew recognition of opposition parties, suspended the 1981 constitution, and established his ruling Military Committee for National Salvation (CSMN). Ethnic violence erupted in 1988, and in response to rumors of the murder of Tutsi in the north, the army massacred between 5,000 and 25,000 Hutu. Over 100,000 were left homeless and 60,000 took refuge in Rwanda. Throughout 1988, an estimated 150,000 people were killed.

Major Buyoya agreed to the restoration of multiparty politics in 1991, and a new constitution was approved in March 1992. Competition between approved, ethnically balanced parties in the June 1993 election brought to office Burundi's first elected president, as well as its first Hutu president, Melchior Ndadaye. Ndadaye got 66% of the vote, while Buyoya received just 33%. Ndadaye began to talk of reform of the Tutsi-dominated armed forces, but on 21 October 1993, Ndadaye and several cabinet members were assassinated by a faction of Tutsi soldiers. Other cabinet officers, including Prime Minister Sylvie Kinigi, a Tutsi, took refuge in the French embassy. Ethnic violence continued, launching the country into civil war, with some 10,000 murdered and 800,000 fleeing the country. It has been estimated that as many as 100,000 may have been killed in this round of violence.

The military coup attempt failed, however, and Ndadaye's FRO-DEBU party (Burundi Democratic Front) regained control, electing Cyprien Ntaryamira as president in January 1994. In February, Ndadaye's successor was inaugurated, but his coalition was unable to restore order. In an effort to negotiate peace, he went to Tanzania for consultations. On his flight home, the plane in which he was returning, along with Rwanda's President Habyarimana, was shot down near the Rwanda capital, Kigali, on 6 April 1994. Two other members of his cabinet also died in the attack. This crash marked the beginning of the Rwandan genocide.

The constitutionally provided line of succession left the post of president to Sylvestre Ntibantunganya. He served in a transitional capacity until October 1994 when the Assembly elected him to serve a four-year term. In contrast to the genocide that erupted in Rwanda, Ntibantunganya managed to maintain relative stability in Burundi—for a time. However, the influx of refugees from Rwanda and increased armament of Hutu and Tutsi groups fueled sporadic violence prompting the government to impose a curfew in Bujumbura in December.

The death toll attributable to ethnic strife and political problems continued to mount during the first half of 1995. In 1993 alone, an estimated 150,000 had died in ethnic violence between Hutu and Tutsi. The averting of a citywide strike in the capital of Bujumbura in early February 1995 helped ease the ethnic tension, but the relief was short-lived. On 11 March, Mines and Energy Minister Ernest Kabushemeye was shot to death as the violence flared anew. Later that month, fighting in the central market left four people dead. By 25 March, thousands of people were fleeing Bujumbura to escape the violence, and hundreds were feared dead in new fighting. The exodus grew to 50,000 refugees from a city with a total population of 300,000. Two suburbs where clashes had occurred were practically deserted.

The flare-up also affected refugees from neighboring Rwanda who had fled to seven northern Burundi camps to escape Hutu-Tutsi violence in their own country. An estimated 20,000 refugees undertook a two-day trek to Tanzania to escape the violence at one of the camps, which left 12 dead and 22 wounded. The seven camps, which once held more than 25,000 Rwandans, were closed by August 1996 as the last group of the refugees returned to its homeland.

Despite an Organization of African States (OAS) peace mission, the Hutu militias and Tutsi-dominated government army battled throughout the early days of June in Bujumbura's suburbs. The OAS mission was aimed at ending months of fighting between the majority Hutu and the Tutsi before the clashes could develop into an all-out war.

On 25 July 1996, Maj. Pierre Buyoya seized power in a coup backed by the Burundi military. The National Assembly continued to function, although during Buyoya's "Transition Period" its powers were severely curtailed. Soon thereafter, six East African nations cut trade ties to the country and imposed an economic embargo after demanding Maj. Buyoya restore parliament. The African leaders also demanded that Major Buyoya, president of Burundi from 1987 to 1993, begin peace talks with Hutu rebels. Yet ethnic violence escalated in the months following Major Buyoya's takeover. Each side blamed the other for the assassination in September of Archbishop Joachim Ruhuna, Burundi's senior Roman Catholic archbishop. In 1999, in his new role as facilitator of the Arusha Peace Process, Nelson Mandela asked all parties—the government, rebel forces, and international organizations—to sit down and discuss the issues. In the early months of 2000 several such meetings were held in Tanzania, leading up to the signing of the Arusha Peace and Reconciliation Agreement for Burundi on 28 August 2000. However, Mandela's efforts ran up against entrenched regional conflicts and ethnic animosities as several armed factions refused to accept the peace agreement.

Seeking to secure national borders, Burundian troops intervened in the conflict in the Democratic Republic of the Congo in 1998, but were redeployed to Burundi to engage rebels operating within the country and from across the Congolese border. In October 2002, Burundi's smaller rebel groups—the CNDD-FDD (Conseil national pour la defense de la democratie-Forces pour la defense de la democratie—National Council for the Defense of Democracy-Forces for the Defense of Democracy) of Jean Bosco Ndayikengurukiye and the Palipehutu-FNL (Forces for National Liberation) of Alain Mugabarabona—signed a cease-fire, followed by a similar agreement between the CNDD-FDD of Pierre Nkurunziza and the transitional government of Burundi. Only the Palipehutu-FNL of Agathon Rwasa had not signed a cease-fire with the transitional government by mid-June 2003.

Under the Arusha Accords, a three-year transitional government was inaugurated 1 November 2001 under the leadership of Pierre Buyoya. On 30 April 2003, Buyoya stepped down under the terms of the accord, making way for a Hutu vice president, Domitien Ndayizeye, to assume the presidency for the remaining 18 months. However, since the signing of the cease-fires, fighting between the army and CNDD-FDD rebels has occurred on a daily basis. On 3 February 2003, the African Union authorized an African Mission in Burundi (AMIB), which fielded troops from South Africa, Ethiopia, and Mozambique to safeguard cantonment ar-

reas and to provide technical assistance to the disarmament and demobilization process. In late 2003 the Burundian government and the CNDD-FDD signed renewed cease-fire and power-sharing agreements. In March 2004, members of the CNDD-FDD assumed governmental and parliamentary offices. Many bilateral donors, as well as the World Bank, assisted in funding Burundi's disarmament, demobilization, and reintegration program for former rebel combatants. However, some conflict continued, and in August 2004, the extremist Palipehutu-FNL massacred more than 150 Congolese Tutsi refugees, and as of late 2005 continued to stage attacks.

Reaching a stable compromise on post-transition power sharing was difficult. Although a post-transition constitution was approved in September 2004, it was approved over a boycott by the Tutsi parties. In addition, the Arusha Peace Agreement mandated that local and national elections be held before the ending of the transitional period on 31 October 2004, but transitional institutions were extended. On 28 February 2005, however, Burundians popularly approved a post-transitional constitution by national referendum, with elections set to take place throughout the summer of 2005. After local, parliamentary, and other elections in June and July, on 19 August 2005, the good governance minister, Pierre Nkurunziza, became the first post-transitional president.

### 13 GOVERNMENT

Under the 1981 constitution, the president of the republic was elected by universal adult suffrage. The sole candidate was the president of UPRONA, the only legal political party. The president, who was head of state, was assisted by a council of ministers. Legislative power was vested in the 65-member National Assembly, of which 52 were elected and 13 appointed by the president. The president and legislators served five-year terms. Following the September 1987 coup, President Pierre Buyoya dismissed all members of the government and ruled as head of the newly established Military Committee of National Redemption until it was disbanded in December 1990. A new constitution, which recognized "democracy, human rights and development", was adopted on 13 March 1992 after a popular referendum. It provides for a directly elected president, a prime minister, and an 81-seat National Assembly.

In 1998, the position of prime minister was abolished. In 2001, the National Assembly was expanded from 121 to approximately 140 seats under the transitional constitution adopted October 18, 2001. On 17 September, 2004, the National Assembly adopted a post-transition constitution that was approved in a nation-wide referendum 28 February, 2005. A new electoral calendar was established at a regional summit in Uganda, and during the summer of 2005, a post-transition government was elected. Burundian people voted in Commune Council direct elections on 3 June 2005, and National Assembly direct elections on 4 July 2005. Senate members were elected by the electoral college on 29 July 2005, and a joint legislative session elected Pierre Nkurunziza as president on 19 August 2005 in a vote of 151 to 9.

According to the 2005 constitution, the president can be elected to a maximum of two five-year terms, and is named by a vote in the two houses of parliament. The permanent, post-transition government was established 26 August 2005, consisting of 100-seat directly elected National Assembly, and a senate. As of 2005,

the assembly also had 18 additional deputies appointed as needed to ensure the stipulations made in the Arusha agreement. This mandates that the assembly is composed of at least 30% women and has an ethnic composition of 60% Hutu, 40% Tutsi, and 3 Batwa members. The structure of the senate from the transitional government was retained, which includes no less than 37, and no more than 54 seats, for five-year terms. There are two senators for each of the 17 provinces (including the capital), one each for Hutu and Tutsi, which are elected in three rounds of voting by communal electoral colleges. Three seats are reserved for the Batwa minority. Additional seats are reserved for all former presidents. Up to 14 additional senators are appointed by the president to achieve the 30% gender quota for women. In 2005, the senate had a total membership of 49 seats.

## 14 POLITICAL PARTIES

It was only after 1948 that Belgium permitted competing political parties, and two emerged: the multi-ethnic Union for National Progress (Parti de l'Unité et du Progrès National—UPRONA), led by Tutsi Prince Louis Rwagasore, and the Belgium-supported Christian Democratic Party (Parti Démocrate Chrétien—PDC). However, in 1961, Rwagasore was assassinated following the the UPRONA victory in legislative elections.

Before independence, no fewer than 23 political parties were officially registered. Of these, only two retained political significance in the years following independence: UPRONA, and the People's Party (Parti du Peuple—PP), an all-Hutu party. UPRONA, which initially controlled 58 seats in the National Assembly out of a total of 64, was soon torn by internecine leadership rivalries. In time, these rivalries took on the qualities of a racial feud between Tutsi and Hutu. In the National Assembly, the PP merged with the Hutu wing of UPRONA to form the so-called Monrovia Group, while the Tutsi wing of UPRONA referred to itself as the Casablanca Group.

In June 1965, legislative elections were held for the first time since independence. UPRONA won 21 seats, the PP 10, and independents 2. President Micombero, a Tutsi, proclaimed UPRONA to be the sole legal political party by a decree promulgated on 23 November 1966. On 1 November 1976, leaders of the coup that deposed Micombero announced that UPRONA had been dissolved, but in 1979, the party was incorporated into the government structure. According to the 1981 constitution, it was the only legal political organization. The president of UPRONA was president of the republic and also head of the party's 70-member Central Committee and 8-member Politburo.

Fifty-two members of the National Assembly were elected under the auspices of UPRONA in October 1982 from 104 candidates, about 75% of them Tutsi, chosen by local UPRONA committees. Several cabinet members and high party officials were defeated. In September 1987, following the coup that ousted President Bagaza, all members of UPRONA were dismissed.

The 1 June 1993 presidential election and the 29 June parliamentary election that year led to the defeat of UPRONA. President Ndadaye's party, the Burundi Democratic Front (FRODEBU) received 72% of the vote and 65 of parliament's 81 seats. UPRONA won the remaining seats with 21% of the ballots cast. Other parties include the Burundi People's Party (RPB), the Party for the Reconciliation of the People (PRP), and the People's Party (PP).

Newer, smaller parties have emerged in recent years, including: the Burundi African Alliance for the Salvation (ABASA), Rally for Democracy and Economic and Social Development (RADDES), Party for National Redress (PARENA), and the People's Reconciliation Party (PRP).

Smaller rebel factions with political influence include the CNDD-FDD (Conseil national pour la defense de la democratie—Forces pour la defense de la democratie—National Council for the Defense of Democracy—Forces for the Defense of Democracy) and the Palipehutu-FNL (Forces for National Liberation).

As of the elections in late 2005, there were 30 registered political parties without representation in either house of parliament. Six parties are represented in one or both houses, with the formerly small CNDD-FDD controlling the overwhelming majority of seats in both houses. The six major parties are the CNDD-FDD with 32 Senate and 64 Assembly seats; FRODEBU with 5 Senate, 30 Assembly; UPRONA with 2 Senate, 15 Assembly seats; and the CNDD, the breakaway party from the CNDD-FDD with 3 Senate and 4 Assembly seats.

## 15 LOCAL GOVERNMENT

Burundi was formerly divided into 8 provinces, but a redistricting plan in 1982 increased the number to 15—which eventually expanded to 16—each under a military governor. However, as of the mid-1990s, Burundi was divided into 17 provinces, including the capital city regions.

Communal councils exist for each of the 129 communes. Twenty-five members sit on each of the councils, and on 2 June 2005, the CNDD-FDD won 1,781 of the 3,225 available council seats (55%). There are also local Colline (hill) councils elected independent of party. These elections were held on 23 September 2005. Both of these local councils are directly elected, and the Colline councils serve a term of five years.

## 16 JUDICIAL SYSTEM

The legal system of Burundi is based on German and French civil codes and customary law. In 1987 there were 64 tribunals of first instance. The Court of Appeal and the Supreme Court are located in the capital, Bujumbura.

The 1992 constitution established a number of new courts, including a constitutional court to review all new laws for conformity to the constitution. It also created a high court responsible for resolving charges of high level crimes by high level government officials. A military court had jurisdiction over crimes by members of the military.

The military coup in 1996 abrogated the 1992 constitution and replaced it by a transitional decree. The decree of 13 September 1996 provided for an independent judiciary, which in fact was dominated by the Tutsi ethnic group. The decree also provided for the right to privacy. Authorities generally respect the law requiring search warrants.

As of 2005, the judicial system was divided into the Cour Supreme (Supreme Court), Constitutional Court (created by the 2005 constitution), and three Courts of Appeal. The president nominates members of the Supreme and Constitutional Courts, with the Supreme Court the final court of appeal. There are 17 province-level Tribunals of First Instance, and 123 local tribunals.

## 17 ARMED FORCES

In 2005, Burundi had 50,500 active personnel in its armed forces. The Army had 40,000 personnel, including a 200 member Air Wing. The troops included seven infantry battalions, two light armored squadrons, one engineer battalion, one air defense battalion, and one artillery battalion. The Air Wing had two combat capable aircraft that were also used in a training capacity. Paramilitary gendarmerie numbered around 5,500. The defense budget in 2005 was \$46.1 million.

## 18 INTERNATIONAL COOPERATION

Burundi was admitted to UN membership on 18 September 1962 and is a member of ECA and several nonregional specialized agencies. It also belongs to the African Development Bank, G-77, the ACP Group, COMESA, the New Partnership for Africa's Development (NEPAD), and the African Union. It became a member of the WTO on 23 July 1995. Burundi, Rwanda, and the DROC form the Economic Community of the Great Lakes Countries (CEP-GL), which is intended to foster development in the region of lakes Kivu and Tanganyika. Burundi also cooperates with Rwanda and Tanzania in the development of the Kagera River Basin. In addition, Burundi is part of the Nonaligned Movement. The United Nations Operation in Burundi (ONUB) was established in May 2004 and consists of 44 member countries offering support for reconciliation and peacekeeping among the Tutsi, Hutu, and other conflicting ethnic groups from the boundary regions of Burundi, DROC, Rwanda, and Uganda.

In environmental cooperation, Burundi is part of the Basel Convention, the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Burundi's is an agricultural and livestock economy with over 90% of the population engaged in subsistence agriculture. Bananas, plantains, sweet potatoes, and manioc are Burundi's staple crops, followed by beans, taro, and maize. Coffee and tea are the main export crops. Coffee provides roughly 50% of export earnings, which are thus vulnerable to international coffee prices and seasonal yields. Cotton is Burundi's other principal export, but cotton production has been plagued by excessive rain. Livestock sales are discouraged by a tradition that encourages the maintenance of large herds. Sales of hides and skins amount to some 3% of exports.

Burundi's mineral sector is currently small, with a potential that remains undetermined. Gold, tungsten, columbo-tantalite, bastnaesite, and cassiterite are each mined in small quantities. Explorations have revealed petroleum under Lake Tanganyika and in the Ruzizi Valley, as well as large nickel deposits at Musongati. Copper, cobalt, and platinum are expected to be found in association with the nickel. Phosphate rock deposits have also been located.

Since 1993, ethnic tensions and ongoing violence have severely disrupted the economy, bringing the government's economic reforms to a halt. International sanctions in 1996 exacerbated the poor economic situation, causing further food shortages, and high inflation. There was a 50% increase in the number of people falling below the poverty line. Although the Arusha Peace Accords had

been signed in 2000, violence continued into 2003, as one million people fled their homes. Over 300,000 people since 1993 had been killed in Burundi's civil war. Political instability is also compounded by the HIV/AIDS epidemic. Nearly one in ten adults are infected with HIV/AIDS, and medicines are in short supply. Sanctions imposed by neighboring countries on Burundi have stunted the economy, although a regional trade embargo was lifted in 1999. However, by the end of 2005 fighting had stopped in most of the country, and greater internal stability and donor-financed capital expenditure is hoped to aid growth throughout the economy during 2006 and in coming years. This can be seen in the gross domestic product (GDP) growth for the period 2000–2004. In 2000 GDP grew at a negative growth rate of 0.9% but bounced back in 2001 and 2002 to 3.2% and 3.6% respectively. It declined to a -1.3% in 2003 but strongly bounced back to 5.5% in 2004.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Burundi's gross domestic product (GDP) was estimated at \$4.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$700. The annual growth rate of GDP was estimated at 5.5%. The average inflation rate in 2005 was 14%. It was estimated that agriculture accounted for 45.6% of GDP, industry 20.8%, and services 33.6%.

Foreign aid receipts amounted to \$224 million or about \$31 per capita and accounted for approximately 39.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Burundi totaled \$519 million or about \$72 per capita based on a GDP of \$595.0 million, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption changed at an average annual rate of -1.7%. It was estimated that in 2002 about 68% of the population had incomes below the poverty line.

## 21 LABOR

The total labor force in 2002 was put at 2.99 million, mostly in small subsistence farming. Of the total labor force, an estimated 93.6% were engaged in agriculture, followed by 4.1% in the services sector and 2.3% in industry. There was no unemployment data available.

Workers are legally permitted to form and join unions, although the army, gendarmie, and foreign workers are prohibited from unionizing. The current labor code permits strikes but only after alternative remedies have been exhausted and six days notice given. Unions are permitted to be affiliated with international organizations. Urban civil servants make up the majority of union members. Approximately 50% of the country's public sector employees are union members, but less than 10% of those that made up the formal workforce in the private sector were unionized. Most of Burundi's labor force was employed in the informal sector of the economy, which was unregulated and offered little or no protection to worker's labor rights.

Although the country's labor code restricts child labor, limiting minors under the age of 18 to only those forms of employment deemed acceptable to the Ministry of Labor, such as light work, and to apprenticeships that do not hamper the child's health, normal development or schooling, in addition to forced and compulsory labor, reports indicated that the nation's security forces continue to use children (and adults) to perform menial tasks without pay. According to a 2003 survey by UNICEF, some 640,000 minors were performing compulsory labor. In addition, children in rural areas under 16 years of age performed heavy manual labor during the day, during the school year, on a regular basis.

While there was a formal minimum wage of \$0.15 per day, as of 2005, this was insufficient to support a family, so most families rely on second incomes and subsistence agriculture as well. Burundi's labor codes mandate a 45-hour workweek and an eight-hour work day, excluding those activities that are related to the country's security. However, enforcement was not always carried out.

## 22 AGRICULTURE

About 90% of the population depends on agriculture for a living. Most agriculture consists of subsistence farming, with only about 15% of the total production marketed. An estimated 1,351,000 hectares (3,338,000 acres), or about 52.6% of the total land area, is arable or under permanent crops; about 5.5% of cropland is irrigated. The average farm family plot is 0.8 hectares (two acres). Agriculture accounted for 51% of the GDP in 2004. Coffee and tea exports comprise the majority of foreign earnings; coffee alone accounted for 39% of exports of goods in 2004. Agricultural exports accounted for 48% of exports in 2004. Principal crops for local consumption are manioc, beans, bananas, sweet potatoes, corn, and sorghum. Production in 2004 included bananas, 1,600,000 tons, mostly for wine; manioc, 710,000 tons; sweet potatoes, 834,000 tons; beans, 220,000 tons; sorghum, 74,000 tons; corn, 123,000 tons; peanuts, 8,800 tons; and yams, 9,900 tons.

The primary export crop is coffee, chiefly of the arabica variety. The government regulates the grading, pricing, and marketing of the coffee crop, and all coffee export contracts require approval. In 2004, coffee production was 20,100 tons. Other export crops are cotton and tea. Seed cotton production was 3,000 tons, and cotton fiber production (after ginning) was about 1,300 tons in 2004. That year, tea production was 6,600 tons. Tea exports in 2004 of 753 tons represented 3% of total exports; the government has been encouraging cotton and tea production in order to diversify exports. Palm oil is obtained from trees in plantations along the shore of Lake Tanganyika. Tobacco and wheat cultivated in the highland areas also yield some cash income.

Much of the land has suffered a loss of fertility because of soil erosion from poor agricultural practices, irregularity of rainfall, lack of fertilizer, and shortened fallow periods.

## 23 ANIMAL HUSBANDRY

Livestock in 2004 included some 325,000 head of cattle, 750,000 goats, 230,000 sheep, 70,000 pigs, and 4.3 million chickens. Social prestige has traditionally been derived from ownership of cattle. This, together with improved sanitary conditions, has resulted in the accumulation of large herds of poor-quality stock; for example, the average milk yield per cow is only 350 kg a year (17% of world average). Total milk production was estimated at 19,200

tons in 2004. Meat consumption is estimated at only 48 calories per person per day, only one-tenth of the world's average. Production of meat in 2004 was 23,400 tons. The herds retard economic development by cutting down the amount of land available for food growing, and they destroy pastureland by overgrazing. Through various technical assistance programs, the government is seeking to eliminate excess cattle, improve the remaining livestock, and introduce modern stock-raising methods.

## 24 FISHING

There are three main methods of fishing in Lake Tanganyika: industrial, native, and traditional. Industrial fishing, which developed after 1946, is carried on by small trawlers accompanied by several rowboats. Native fishing is in catamarans equipped with lights, nets, and engines. Traditional fishing is in pirogues equipped with lights and landing nets. The total fish catch was 14,897 tons in 2003.

## 25 FORESTRY

Erosion and cutting, chiefly for fuel, have almost entirely eliminated Burundi's forests. The harvesting of wood has increased only slightly since the late 1970s, and the emphasis has now shifted to reforestation. Forests and woodlands cover an estimated 325,000 hectares (803,000 acres). Natural forest covered only about 3.7% of the land area in 2000. The average annual deforestation rate was 9% during the 1990s. Of an estimated 8.6 million cu m (303 million cu ft) in roundwood production in 2003, 99% was for fuel.

## 26 MINING

Mining and energy accounted for about 1% of Burundi's GDP in 2004. The country has been known to produce columbium (niobium)-tantalum ore, gold, kaolin (china clay), tin, and tungsten ore, mostly for export, and limestone, peat, sand, and gravel for domestic consumption. Burundi had significant deposits of feldspar, kaolin, nickel, phosphate, platinum-group metals, quartzite, rare-earth metals, vanadium, and limestone for cement. There were gold deposits at Mabayi, Muyinga, Cankuzo, and Tora-Ruzibazi, where artisanal mining took place. After waning in the early 1990s, gold production rose to 1,000 kg in 1994 and 2,200 kg in 1996, and then dropped to 1,500 kg in 1997–2000. In 2004, gold mine production totaled an estimated 2,900 kg. The government has tried to transfer technical skills to artisanal miners, to raise productivity and increase state revenues. The Burundi Mining Corp., a government-private venture, was exploring the possibility of producing gold on a commercial basis at Muyinga, where resources were estimated at 60 tons of gold. Deposits of cassiterite, columbite-tantalite, and wolframite associated with pegmatites were found in Kayanza and Kirundo provinces. Nickel reserves, found in 1974, were estimated at 370 million tons (3%–5% of the world's total); high transportation costs, low world market prices, and political instability have delayed their exploitation. Since 1993, foreign investment and development of Burundi's resources have been hindered by civil unrest, social strife, and economic sanctions imposed by regional states; the economy contracted by 23% in the period 1993–96. Although the sanctions were lifted in 1999, internal strife continued to hurt the economy. In 2000, Burundi joined with 19 other nations to form Africa's first free-trade area, and the World Bank and other international donors pledged

to give \$440 million in reconstruction aid to Burundi. In 2004, production of columbite-tantalite (gross weight) was 23,356 kg, and of peat, 4,643 metric tons. Kaolin was not mined in 2004. Tin mines produced an estimated 10 metric tons in 2004. Tungsten mine output totaled 9 metric tons in 2004.

## 27 ENERGY AND POWER

Bujumbura and Gitega are the only two cities in Burundi that have municipal electricity service. Burundi's total installed capacity was 49,000 kW in 2001. Two dams completed since 1984 have increased the amount of power production from hydroelectric installations. In 2001, estimated production of electricity totaled 0.155 billion kWh, of which 0.154 billion kWh was from hydroelectric sources, with geothermal and thermal sources accounting for the rest. Consumption in 2001 was estimated at 0.17 billion kWh. Burundi imports all of its petroleum products from Kenya and Tanzania, and has no known reserves of petroleum or natural gas. Consumption of oil in 2001 is estimated at 3,000 barrels per day. Burundi is estimated to have no known consumption of natural gas in 2001. A subsidiary of Amoco has an oil exploratory concession in and around Lake Tanganyika. Wood and peat account for 94% of energy consumption in Burundi. Peat offers an alternative to increasingly scarce firewood and charcoal as a domestic energy source. The government is promoting peat production and is fostering the development of renewable energy resources, such as solar electricity and biogas.

## 28 INDUSTRY

Industrial activities are almost exclusively concentrated in Bujumbura and accounted for an estimated 19.4% of the GDP in 2002. The industrial sector transforms to varying degrees agricultural and forestry products: cotton, coffee, tea, vegetable oil, and woods. There are also several small plants for soft drinks, blankets, footwear, soap, insecticides, building materials, furniture, and metal goods. The future of industrial development is largely linked to the development of political stability and the growth of electric power and transportation, as well as improved commercial relations with neighboring countries.

Industrial production rose almost 2% in 1998, the first increase since ethnic warfare began in 1993. Production of sugar, milk, paints, soap, bottles, pharmaceutical products, and textiles increased between 10% and 40% in 1998. The Teza tea plant was reconstructed (after being destroyed by rebels in 1996), increasing production from 1997 by 59% in 1998. Mining projects were also resumed, including nickel and gold operations. The country has no known oil, natural gas, or coal resources. Since 2001, the construction industry recovered somewhat, as new building projects were started in Bujumbura. Brarudi, a brewery, is the country's largest and most reliable source of tax revenue. Brarudi beer has a good reputation in the region.

## 29 SCIENCE AND TECHNOLOGY

Technical aid is supplied by many donors, including the EEC, the World Bank, Belgium, France, the Federal Republic of Germany (FRG), the United States, Switzerland, and China. The National Center of Hydrometeorology, the Ministry of Geology and Mines, the Institute of Agronomical Sciences of Burundi (founded in 1960), and a medical laboratory devoted to nutritional studies

are located in Bujumbura. The University of Burundi, in Bujumbura, has faculties of sciences, medicine, psychology and education, agriculture, and applied sciences. In 1987–97, science and engineering students accounted for 18% of college and university enrollments. The Higher Institute of Agriculture is in Gitega. In the period 1987–97, total expenditures for research and development totaled 0.3% of GDP. A total of 32 technicians and 21 scientists and engineers per million people were actively engaged in research and development for the period.

The Living Museum of Bujumbura has a reptile house, an aquarium, an aviary, a fishing museum, a botanical garden, and a herpetology center.

## 30 DOMESTIC TRADE

Ethnic violence since 1993 has limited domestic commerce. Burundi's economy is characterized by subsistence agriculture; commercialization and nationwide distribution of daily necessities and foodstuffs are practically nonexistent. There is a very small manufacturing sector centered in Bujumbura, producing beer, soft drinks, soap, insecticides, textiles, and cigarettes, primarily for local distribution. Rural markets are the principal distribution centers. The National Office of Commerce is a state trading concern. Smaller trading operations are often in the hands of Greeks, Indians, and Arabs. All domestic trade is influenced by the coffee harvest, which during the harvest season (June–September) provides increased income and stimulates trading, with a somewhat inflationary effect.

Business hours are usually 8 AM to noon and 2 to 5 PM on weekdays and 8 AM to noon on Saturday. Banks are open 8 to 11:30 AM Monday–Friday.

## 31 FOREIGN TRADE

In 2004, Burundi's imports exceeded its exports by 266%. Burundi's export income is highly volatile and fluctuates sharply with shifts in world coffee prices. Burundi's most important cash crop is coffee (73.3%), which is the most exported commodity. Tea (7.0%), hides (6.7%), gold (5.6%), and sugars (4.9%) encompass practically all of Burundi's remaining exports. Important im-

**3<sup>2</sup> BALANCE OF PAYMENTS**

The Economist Intelligence Unit reported that in 2004 the purchasing power parity of Burundi's exports was \$48 million while imports totaled \$175.9 million, resulting in a trade deficit of \$127.9 million.

**3<sup>3</sup> BANKING AND SECURITIES**

Until the DROC became independent in 1960, the monetary and banking systems of Ruanda-Urundi were integrated with those of the Congo. Thereafter, Ruanda-Urundi had its own monetary structure and central bank. Shortly after the UN-sponsored Addis Ababa conference of July 1962, Rwanda and Burundi entered into an economic agreement providing for a continuation of the monetary union. After the breakup of the economic union in December 1963, Burundi's banking operations were transacted through the Bank of the Kingdom of Burundi, which in 1967 became the Bank of the Republic of Burundi, the central bank and bank of issue. Burundi has a number of commercial banks, which handle a substantial portion of short-term credit (vital for the coffee season) that include the Commercial Bank of Burundi, the Credit Bank of Bujumbura, and the Belgian-African Bank of Burundi. There are also a savings bank, a postal savings bank, and a joint Libyan-Burundian financial institution. Other financial institutions are the National Economic Development Bank and the Central Fund for Mobilization and Finance.

The World Bank suspended all but three minor social-sector programs in late October 1996. A World Bank delegation visited Burundi in February 1997 to assess the situation, and concluded that conditions were not right for a resumption of funding. As a result of the deteriorating balance-of-payments situation, reserves

were run down, from \$209 million at the end of 1995 to \$140 million in December 1996 and \$108 million in 1998.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$96.4 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$138.7 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 14%.

**3<sup>4</sup> INSURANCE**

Insurance companies operating in Burundi include the Commercial Union of Insurance and Reinsurance (Union Commerciale d'Assurances et de Réassurances-UCAR), the partly state-owned Insurance Co. of Burundi (Société d'Assurances du Burundi-SO-CABU), and a branch of the General Insurance of France. Motor vehicle insurance is the only compulsory coverage.

**3<sup>5</sup> PUBLIC FINANCE**

Burundi is extremely dependent on foreign aid, although the crisis in 1993 forced the International Monetary Fund (IMF) to suspend structural adjustment programs. Emphasized reforms included price liberalization, governmental transparency, debt reduction, and a wider variety of exports.

The US Central Intelligence Agency (CIA) estimated that in 2005 Burundi's central government took in revenues of approximately \$215.4 million and had expenditures of \$278 million. Revenues minus expenditures totaled approximately -\$62.6 million. Total external debt was \$1.2 billion.

The IMF reported that in 1999, the most recent year for which it had data, budgetary central government revenues were BFR63,536 million and expenditures were BFR88,593 million. The value of revenues in US dollars that year was us\$113 million and expenditures us\$157 million, based on a official exchange rate for 1999 of us\$1 = BFR563.56 (as reported by the IMF). Government out-

lays by function were as follows: general public services, 43.1%; defense, 27.7%; public order and safety, 2.8%; economic affairs, 5.2%; health, 2.6%; recreation, culture, and religion, 0.4%; education, 18.0%; and social protection, 0.2%.

### 36 TAXATION

There are income taxes on businesses and individuals, and a tax on transactions. Other direct taxes are on vehicles and real estate. About twice as much money is collected from indirect taxes, of which the most important are import and export duties, and a tax on beer.

### 37 CUSTOMS AND DUTIES

Import duties, which are levied mainly *ad valorem*, include a revenue duty averaging 15–35% and an import duty averaging 2–5%. The government also levies a 4% statistical tax on all imports. Burundi is a member of the Common Market of Eastern and Southern Africa (COMESA) and, as a party to the Lomé Convention, receives preferential treatment by the European Union.

### 38 FOREIGN INVESTMENT

Because of its ethnic conflict, limited domestic market, and lack of infrastructure, Burundi has attracted few private foreign investors. The 1979 investment code provides basic guarantees to foreign investors and the corporation tax may be waived for five years. In practice there were delays in the repatriation of profits. Foreign direct investment (FDI) flows to Burundi were insignificant until 2000 when they reached \$11.7 million. They later became zero again. The low level of FDI inflows is attributed to the fact that Burundi is a landlocked least developed country with little natural resources and a tiny market. FDI inward stock grew from \$30 million in 1990 to about \$34 million in 1995 and then jumped to \$48 million in 2002. Two of the three largest affiliates of foreign transnational companies (TNCs) in Burundi in 2002 originated from Belgium and are engaged in financial sector activities. The third, which is also engaged in financial sector activities is jointly owned by Belgium and Germany.

### 39 ECONOMIC DEVELOPMENT

Burundi began a complete review of economic and financial policy with the help of the UN in 1986, when a reform of the currency and the first of a series of devaluations occurred. The first five-year plan was designed to improve economic growth, reduce inflation, and diversify export production. Few of these objectives were met, and the program was discontinued in 1991. A second reform of the currency and further devaluation took place in 1992. These reforms led up to the gradual decline of living standards and exacerbated ethnic tensions, resulting in the ethnic clashes of the 1990s.

Burundi is dependent on foreign assistance for both development programs and current operations. Diversification of its export base and financial stability are key goals. The African Development Bank, European Union, and Belgium are Burundi's principal providers of development financial and technical support. Support has been pledged for the health sector, education, refugee rehabilitation, and general reconstruction.

The International Monetary Fund (IMF) approved \$13 million in assistance to support Burundi's reconstruction and economic recovery program in 2003, following the 2000 Arusha Peace and

Reconciliation Agreement. It was the first such IMF assistance to Burundi since the outbreak of hostilities in 1993. The program addresses security and humanitarian assistance needs, as well as the improvement of basic infrastructure. Low world coffee prices in the late 1990s and early 2000s resulted in a reduction of foreign exchange earnings, and the government resolved to find other ways to generate growth.

In 2005, the new government stated its intention to continue with the economic policy reforms contained in the IMF's poverty reduction and growth facility. Inflation has remained high averaging 10.1% per annum for the period 2000–2005 due in part to a poor harvest which kept food prices elevated. However, there is optimism that the next harvest will be better, and food prices are expected to decline. Strong coffee production in 2004/05 and high international prices boosted exports in the first half of 2005. Donors have promised to support the country's political transition to democracy with financial aid.

### 40 SOCIAL DEVELOPMENT

Under the tribal system, the individual's basic welfare needs have traditionally been the responsibility of the group. Even now, the family remains the most important social welfare institution. There are social centers for women and youth. Missions help to look after orphans and the aged. For the small percentage of wage earners, there is a government social security system that insures against accidents and occupational diseases and provides old-age and disability pensions. This program is funded by employer and employee contributions. Workers covered by the labor code are entitled to workers' compensation for temporary and permanent disabilities. Employed persons are entitled to family allowances.

The Transitional Constitution Act guarantees equal protection for all citizens, but it has not been effectively implemented. Women suffer job discrimination and sexual violence, which is rarely reported to the authorities. The stigma of rape is so pervasive that women are subject to ridicule by authorities, and often are required to provide food and other costs of incarcerating the rapist. Domestic violence is commonplace although no cases involving abuse of women have ever been heard in a Burundian court. Children are often used for forced labor, have been subjected to violence, and have lost family members to the civil war.

Burundi's poor human rights record remains unchanged, with failure to control excesses by security forces, including reprisals against civilians following rebel attacks. Abductions are commonplace. Prison conditions are life threatening.

### 41 HEALTH

Following independence, the World Health Organization (WHO) assisted in the organization of public health services and the training of sanitarians and public health nurses for Burundi. Students from Burundi received medical training at universities in France and in the Democratic Republic of the Congo. WHO coordinated all public health programs and helped in campaigns against smallpox, tuberculosis, and malaria. WHO, the UN Food and Agriculture Organization, and UNICEF also provided aid for nutrition and maternal and child health programs. Following the assassination of the president of Burundi in 1993, widespread violence involving tribal groups uprooted many of the country's people. Ap-

proximately 683,000 people fled to neighboring countries, rural villages, or towns where sanitation is poor.

Outbreaks of group A meningitis are occurring in Burundi. There have been over 2,500 cases of meningitis. Trypanosomiasis (sleeping sickness), borne by the tsetse fly, is a problem in the Ruvuvu River Valley. Malaria and schistosomiasis (bilharziasis) are common along the Ruzizi River. Intake of animal protein and fat is inadequate and almost all diseases associated with malnutrition are found in Burundi. In 1995, 2,297 cases of cholera were reported. A four-year program covering 30–40% of the country, started in 1986, was intended to rehabilitate and expand rural water supplies. Approximately 58% of the population had access to safe water.

In 2004, there were an estimated 5 doctors, 28 nurses, and 1 pharmacist per 100,000 people. Total health care expenditures were estimated at 3.7% of GDP.

In 2005, the infant mortality rate was 64.39, down from 102 per 1,000 live births. The maternal mortality rate of 1,900 per 100,000 live births was one of the highest in Africa. Only 9% of married women (ages 15 to 49) practiced contraception. In 1999, Burundi immunized children up to one year of age as follows: diphtheria, pertussis, and tetanus, 74% and measles, 75%. Approximately 38% of children under five years old were considered to be malnourished.

Average life expectancy in 2005 was estimated at 50 years, up from 42 years in 2000. There were approximately 8,000 war-related deaths during the conflict between the Tutsis and Hutus from 1988 to 1992. The death rate was estimated at 16 per 1,000 as of 2002. The HIV/AIDS prevalence was 6.00 per 100 adults in 2003. As of 2004, there were approximately 250,000 people living with HIV/AIDS in the country. There were an estimated 25,000 deaths from AIDS in 2003.

## 42 HOUSING

Civil war has caused homelessness through displacement of residents and destruction of homes. In 2004, about 1.2 million people were still without basic permanent shelter. Foreign assistance programs for reconstruction and improvements in housing are underway. The basic type of housing in the rural areas is the hut, most commonly beehive shaped, made of strips of wood woven around poles, and covered with tin (thatch has become scarce). The huts are generally not grouped into villages but are organized in groups on a family basis. Government resettlement projects have been considering plans to build mud and cement brick dwellings with roofs of corrugated iron sheets or ceramic tile. The average dwelling is a two- or three-room home, which generally houses about five people.

## 43 EDUCATION

Until 1954, all education was provided by religious missions; it was almost entirely limited to the primary grades. Education is now compulsory for children between the ages of 6 and 12. Primary education lasts for six years. General secondary education lasts for seven years. At the secondary level, students also have an option of technical studies (five years) or vocational schooling

(seven year). The academic year runs from October to June. The languages of instruction in schools are Kisundi and French.

Primary school enrollment in 2003 was estimated at about 57% of age-eligible students; 62% for boys and 52% for girls. The same year, secondary school enrollment was estimated at about 9% of age-eligible students; 10% for boys and 8% for girls. In 2000, it was estimated that only about 26.7% of all students complete their primary education. The student-to-teacher ratio for primary school was estimated at about 50:1 in 2003; the ratio for secondary school was about 19:1.

The University of Burundi, in Bujumbura (founded in 1960), is the country's only institution of higher learning. In 2001, there were about 11,000 students enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 58.9%, with 66.8% for males and 51.9% for females.

The Ministry of National Education is the primary administrative body. As of 2003, public expenditure on education was estimated at 3.9% of GDP, or 13% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

There are about 60 public libraries in Burundi, with the largest in and around the capital. Libraries in Bujumbura include the Public Library, which has 27,000 volumes; the library of the University of Burundi, with 192,000 volumes; and a specialized collection at the Department of Geology and Mines. The French Cultural Center in Bujumbura holds 33,000 volumes.

The National Museum in Gitega (founded in 1955) houses a collection of musical instruments, weapons, witchcraft implements, and a sizeable library. The Musée Vivant, established in 1977 in Bujumbura, contains exhibits reflecting all aspects of life in the country. It also includes a reptile house, aquarium, aviary, open-air theater, and botanical gardens.

## 45 MEDIA

In 2003, there were an estimated three mainline telephones for every 1,000 people; about 4,700 people were on a waiting list for telephone service installation. The same year, there were approximately nine mobile phones in use for every 1,000 people.

In 2001, there were four FM radio stations, two of which were owned by the government, including the Voice of the Revolution, broadcasting in Kirundi Swahili, French, and English. There were eight privately owned radio stations in 2004, including Radio Isanganiro, Bonesha FM, and African Public Radio (RPA); all of these are broadcast in French, Kirundi, and Kirundi Swahili. Some stations receive funding from international donors. Transmissions can be received from British Broadcasting and Radio France Internationale. A television service, Télévision Nationale du Burundi, was established in 1984, and began color transmission in 1985. In 2004, there was only one television station, which was owned by the government. In 2003, there were an estimated 220 radios and 35 television sets for every 1,000 people. The same year, there were 1.8 personal computers for every 1,000 people and two of every 1,000 people had access to the Internet. There were two secure Internet servers in the country in 2004.

The government issues a French-language daily, *Le Renouveau du Burundi*, with a circulation of 20,000 in 2002, and several periodicals, including a weekly newspaper, *Ubumwe*, published in Kirundi, with a 1999 circulation of 20,000, and *Burundi Chrétien*, an-

other weekly published in French. There were five private weekly papers as of 2004 and eight private Internet and fax newsheets.

Though there are no official restrictions upon expression or the press, the regime owns the only daily newspaper and two of the major radio stations, and information is said to be slanted toward pro-government opinions.

#### 46 ORGANIZATIONS

Various commercial, agricultural, cultural, social, and welfare organizations exist in Burundi. The Burundi Chamber of Commerce and Industry is located in Bujumbura. The UPRONA has affiliate labor, youth, and women's organizations.

The National Council of Churches of Burundi has a membership of 500,000 Protestant denominations and congregations. The group supports issues of social welfare, peace, reconciliation, human rights, and general educational as well as evangelical activities.

Youth organizations include the National Youth Council, the Young Catholics Movement, the Red Cross Youth, YMCA, Boy Scouts, and Girl Guides. There are sports associations representing such pastimes as tennis, handball, and track and field. There are a number of women's organizations, including the Burundi Women's Union, which serves to encourage participation in government and politics, and the multinational Women's International League for Peace and Freedom.

There are national chapters of the Red Cross Society, UNICEF, the Society of St. Vincent de Paul, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Due to an ongoing civil war, tourism in Burundi has declined since 1993, although it has many tourist attractions. Lake Tanganyika is internationally famous for its scenic beauty. Points of interest include Bujumbura, the capital, on Lake Tanganyika; Gitega, the former capital, with its museum and traditional handicraft center; and the Mosso area in the southeast, with its fairly abundant wildlife. The northeast has a great variety of tropical birds. Burundi is rich in folk art; the dances and drummers of the Tutsi are particularly well known.

In 2003, tourist expenditure receipts totaled \$1.2 million. All visitors require a valid passport and visa. A certificate of vaccination against yellow fever is recommended along with precautions for malaria.

In 2004, the US Department of State estimated the cost of staying in Burundi at \$184 per day.

#### 48 FAMOUS BURUNDIANS

Mwami Ntare I Rushatsi (c.1500), a warrior and astute administrator, succeeded in unifying the country under Tutsi rule. Mwambutsa IV (1913–78), the last mwami under the Belgian administration, was deposed in July 1966. Prince Louis Rwagasore (1930–61), the son of Mwambutsa, was the founder of UPRONA. Michel Micombero (1940–83) was president from 1966 until 1976, when he was replaced by Jean-Baptiste Bagaza (b.1946). Bagaza served until 1987, when he was succeeded by a military junta led by Pierre Buyoya (b.1949).

#### 49 DEPENDENCIES

Burundi has no territories or colonies.

# CAMEROON

Republic of Cameroon  
*République du Cameroun*

**CAPITAL:** Yaoundé

**FLAG:** The flag is a tricolor of green, red, and yellow vertical stripes with one gold star imprinted in the center of the red stripe.

**ANTHEM:** The national anthem begins “O Cameroun, berceau de nos ancêtres” (“O Cameroon, cradle of our ancestors”).

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00192 (or \$1 = CFA Fr521.74) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Youth Day, 11 February; Labor Day, 1 May; National Day, 20 May; Christmas, 25 December. Movable religious holidays include Ascension, Good Friday, Easter Monday, End of Ramadan (Djoulde Soumae), and Festival of the Lamb (‘Id al-Kabir or Djoulde Laihadji).

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in West Africa, Cameroon, shaped like an elongated triangle, contains an area of 475,440 sq km (183,568 sq mi), extending 1,206 km (749 mi) N–S and 717 km (446 mi) E–W. Comparatively, the area occupied by Cameroon is slightly larger than the state of California. It is bordered on the N and NE by Chad, on the E by the Central African Republic, on the E and S by the Republic of Congo, Gabon, and Equatorial Guinea, on the SW by the Gulf of Guinea (Atlantic Ocean), and on the W and NW by Nigeria, with a total boundary length of 4,993 km (3,103 mi). The coastline accounts for 402 km (249 mi) of this length.

Cameroon’s capital city, Yaoundé, is located in the south central part of the country.

## <sup>2</sup> TOPOGRAPHY

There are four geographical regions. The western lowlands (rising from sea level to 600 m/2,000 ft) extend along the Gulf of Guinea coast and average about 100 km (60 mi) in width. The northwestern highlands consist of forested volcanic mountains reaching over 2,440 m (8,000 ft) in height. Mt. Cameroon (4,095 m/13,435 ft), which stands isolated on the coast to the south, is the nation’s only active volcano and the highest peak in West Africa. The central plateau region extends eastward from the western lowlands and northwest highlands to the border with the Central African Republic and northward to the Bénoué (Benue) River. It includes the Adamawa Plateau, at elevations of 900 to 1,500 m (2,950 to 4,920 ft). This is a transitional area where forest gives way to savanna. The northern region is essentially a vast savanna plain that slopes down to the Chad Basin. Of the two main rivers, the Bé-

noué is navigable several months during the year, and the Sanaga is not navigable. Part of Lake Chad is in Cameroonian territory.

## <sup>3</sup> CLIMATE

The southern and northern regions of the country are two distinct climatic areas. On the coast, the average annual rainfall ranges between 250 and 400 cm (100 and 160 in); in the inland south, between 150 and 250 cm (60 and 100 in). The western slopes of Mt. Cameroon receive 600 to 900 cm (240 to 350 in) a year. The mean temperature ranges from 22° to 29°C (72° to 84°F) along the coast. In the south there are two dry seasons, November to March and June to August. The northern part of the country has a more comfortable climate. Total rainfall drops from 150 cm (60 in) a year in the central plateau to 60 cm (24 in) northward near Lake Chad, and the mean temperature ranges from 23° to 26°C (73° to 79°F), although it can reach 50°C (122°F) in the far north. The dry season in the north is from October to March.

## <sup>4</sup> FLORA AND FAUNA

Cameroon possesses practically every variety of flora and fauna found in tropical Africa. Dense rain forest grows along the coast and in the south. This gives way northward and eastward to open woodland and savanna. Wooded steppe is found in the northern panhandle. Major game animals include buffalo, elephant, hippopotamus, antelope, Derby eland, and kudu. Twenty-two primate species are known in the coastal forests along the Gabon border. As of 2002, there were at least 409 species of mammals, 165 species of birds, and over 8,200 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Cameroon has 18 national parks and equivalent protected areas covering about 2 million hectares (6 million acres), about 4.5% of

the country. Nevertheless, poaching is a major problem because of insufficient guards. Destruction of the remaining forests is heavy, even within reserved lands. Fires and commercial exploitation of the forests have resulted in the elimination of 200,000 hectares (494,200 acres) per year. Overgrazing is degrading the semi-arid northern range lands. By the mid-1980s, Cameroon had lost 40% of its mangrove swamps. The Dja Faunal reserve is a natural UNESCO World Heritage Site.

Air pollution is a significant environmental problem in Cameroon. The main sources of pollution are industrial chemicals and vehicle emissions. Cameroon has 273 cu km of renewable water resources. About 84% of urban dwellers and 41% of the rural residents have access to safe drinking water.

The country also has a problem with volcanic activity, flooding, and insect infestation. In August 1986, poisonous gases emanating from Lake Nyos in northwestern Cameroon killed 1,746 villagers, by official count. The lake lies within the crater of a dormant volcano, and scientists speculated that the toxic gases were released by molten rock that had seeped into the lake.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 42 types of mammals, 18 species of birds, 1 type of reptile, 50 species of amphibians, 35 species of fish, 1 type of mollusk, 3 other species of invertebrates, and 334 species of plants. Threatened species include the cheetah, Allen's swamp monkey, the spotted eagle, and the Cameroon clawless otter.

## 6 POPULATION

The population of Cameroon in 2005 was estimated by the United Nations (UN) at 16,380,000, which placed it at number 58 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.3%, a rate the government viewed as too high. The government planned to address the high birth rate, which averages five per woman, with only about 7% of women using contraception. The projected population for the year 2025 was 22,440,000. The population density was 34 per sq km (89 per sq mi).

The UN estimated that 48% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.74%. The capital city, Yaoundé, had a population of 1,616,000 in that year. Douala had a metropolitan population of 1,980,000. Other cities and their estimated populations include Garoua (425,000), Maroua (299,600), and Bafoussam (242,000).

The prevalence of HIV/AIDS has had a significant impact on the population of Cameroon. The UN estimated that 11.8% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

In 1981, nearly 10,000 Cameroonians living in Gabon were repatriated following anti-Cameroonian demonstrations there. At the end of 1980 there were 110,000 refugees from Chad at a camp in Kousséri, but by the end of 1981, all but 25,000 had returned

to Chad. The camp was closed in March 1982, with the remaining refugees transferred to the Poli region. As of 1995, there were an estimated 42,900 Chadian refugees in Cameroon. In 1998, the voluntary repatriation of Chadian refugees continued, but a new group of refugees, mostly urban dwellers seeking asylum, began arriving from Rwanda, Republic of Congo (ROC), and the Democratic Republic of the Congo (DROC). As of 2000 there were 150,000 migrants living in Cameroon. As of 2004, 58,861 people were registered as refugees, mainly from Chad and Nigeria. Another 6,123 were registered as asylum seekers. The net migration rate estimated for Cameroon in 2005 was zero. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Cameroon has an extremely heterogeneous population, consisting of approximately 250 ethnic groups. Cameroon Highlanders constitute the majority at 38% of the total population. They include the Bamileke and the Bamoun. The coastal tropical forest peoples, including the Bassa, Douala, and many smaller entities account for about 12% of the population. In the southern tropical forest, ethnic groups include the Ewondo, Bulu, and Fang (all Beti subgroups), and the Maka and Pygmies (officially called Bakas). They account for about 18% of the population. The Fulani (Peuhl) account for about 14% of the population and the Kirdi account for about 18%.

## 9 LANGUAGES

French and English are the official languages. However, there are 24 major African language groups, with some 270 indigenous dialects spoken. Most belong to the Bantu and Semi-Bantu (or Sudanic) language groups.

## 10 RELIGIONS

About 40% of the population are at least nominally Christian, of whom approximately half are Roman Catholics and half are affiliated with Protestant denominations. As many as 20% are at least nominally Muslim and about 40% practice traditional indigenous religions or no religion at all. Many of the indigenous religions are practiced primarily in rural areas.

The Fulani people in the north are mainly Muslim, as are the Bamoun group of the western provinces and the Kirdi. The Christian missionaries (Protestants since 1845 and Roman Catholics since 1890) have been particularly active in other areas, with the English-speaking citizens of provinces of the western region being primarily Protestant and the French-speaking citizens in provinces of the southern and western regions being predominantly Catholic. Missionary groups include Baptists, Presbyterians, Methodists, Jehovah's Witnesses, the Unification Church, Seventh-Day Adventists, and Mormons.

Social discrimination by Muslims against those of indigenous religions is fairly widespread. In the northern region, the tension between the Fulani and Kirdi groups is based in part on such past religious differences. The Fulani have been traditionally Muslim while the Kirdi have traditionally practiced indigenous religions. Many of the Kirdi are now Muslim, yet they remain economically, socially, and educationally disadvantaged in this region.

Freedom of conscience and freedom of religion are guaranteed by the constitution and these rights are generally respected in

LOCATION: 1°40' to 13°5' N; 8°30' to 16°11' E. BOUNDARY LENGTHS: Chad, 1,047 kilometers (651 miles); Central African Republic, 822 kilometers (511 miles); Republic of the Congo, 520 kilometers (323 miles); Gabon, 302 kilometers (188 miles); Equatorial Guinea, 183 kilometers (114 miles); Gulf of Guinea coastline, 364 kilometers (226 miles); Nigeria, 1,921 kilometers (1,194 miles). TERRITORIAL SEA LIMIT: 50 miles.

practice. Relations between the government and religious groups are governed by the Law on Religious Congregations. All religious groups must register with the Ministry of Territorial Administration and Decentralization; however, there are no specific penalties for failure to register. The practice of witchcraft is considered a criminal offense, however, prosecution is generally applied only in conjunction with other criminal actions, such as murder. Certain Christian and Muslim holidays are celebrated as public holidays.

## 11 TRANSPORTATION

In 2002, Cameroon had about 80,932 km (50,340 mi) of roads, of which only 5,398 km (3,358 mi) were paved. Unpaved roads are not usable in all seasons, and as a result, the government recently has been rerouting and paving heavily used roads in order to provide all-weather links between agricultural areas and commercial shipping centers. A major highway between Yaoundé and Douala was opened in 1985. In 2003 there were 157,800 passenger automobiles and 84,250 commercial vehicles in use.

Cameroon's railroad system consists of 1,008 km (626 mi) of 1,000-m narrow gauge railways. The oldest line, constructed before 1927 and rebuilt in the mid-1980s, links Douala to Yaoundé (307 km/191 mi) and Douala to Nkongsamba (172 km/107 mi). On the Douala-Yaoundé line there is a spur from Ngoume to Mbalmayo (30 km/19 mi). Kumba is linked to the Douala-Nkongsamba line by another spur. The Trans-Cameroon Railway, Cameroon's most recently constructed line, extends the Douala-Yaoundé line northward 622 km (386 mi) to Ngaoundéré, a cattle-marketing city on the Adamawa Plateau.

Of the operating maritime ports in Cameroon, Douala is the busiest and most important. Lesser ports include Kribi, used chiefly for the export of wood, and Limbé, used only for palm-oil exports. Garoua, on the Benoué River, is the main river port, but it is active only from July to September. In 2005, Cameroon's merchant fleet consisted of one petroleum tanker, totaling 169,593 GRT.

The main international airport is at Douala. Secondary international airports are at Yaoundé and Garoua. In total, there were 47 airports in 2004, only 11 of which had paved runways as of 2005. Cameroon Airlines, which went into operation 1 November 1971, flies to Paris, London, Frankfurt, Brussels, and many African cities; it also operates all scheduled domestic flights. In 2003, about 315,000 passengers were carried on domestic and international flights. Cameroon Airlines is jointly owned by the government and Air France. Among the other airlines serving Cameroon are Pan Am, Air Afrique, Alitalia, Swissair, Iberia, Air Zaire, Air Mali, and Nigeria Airways.

## 12 HISTORY

Linguistic evidence indicates that the area now known as Cameroon and eastern Nigeria was the place of origin of the Bantu peoples. After the 12th century AD, the organized Islamic states of the Sudanic belt, especially those of the Kanem and Fulani peoples, at times ruled the grasslands of northern Cameroon. Small chiefdoms dominated the western highlands and coastal area. Portuguese travelers established contact with the area in the 15th century, but no permanent settlements were maintained. Slaves, however, were purchased from the local peoples.

The modern history of Cameroon began in 1884, when the territory came under German rule after the explorer Gustav Nachtig

gal negotiated protectorate treaties with the local chiefs. Although British missionaries had been active in the area since 1845, the United Kingdom recognized the German protectorate, called Kamerun, which included areas that were later to become British Cameroons and French Cameroun. During their occupation from 1884 to 1914, the Germans advanced into the interior, cultivated large plantations, laid roads, and began constructing a railroad and the port of Douala. When World War I broke out, the territory was invaded by French and British forces. After the war, one-fifth of the former German Kamerun, which was contiguous with eastern Nigeria, was assigned to the United Kingdom, and the remaining four-fifths was assigned to France under League of Nations mandates.

During the period 1919–39, France made notable contributions to the development of the territory. Agriculture was expanded; industries were introduced; roads were built; medical services were broadened; and more schools were established. Political liberty was restricted, however, and the system of compulsory labor introduced by the Germans continued. In August 1940, Col. Philippe Leclerc, an envoy of Gen. Charles de Gaulle, landed at Douala and seized the territory for the Free French. The birth of the Fourth French Republic and the UN trusteeship in 1946 signified a new era for the territory. French Cameroun was granted representation in the French National Assembly and the Council of the Republic. An elected territorial assembly was instituted and political parties were recognized, thus establishing a basis for Cameroonian nationalism.

Immediately after the setting up of the trusteeship in 1946, many parties began to emerge, but only one had effective organization and strength, the Union of Cameroon Peoples (Union des Populations du Cameroun—UPC). The party demanded immediate reunification of the British Cameroons and French Cameroun and eventual independence. In 1955, the UPC, accused of being under extreme left-wing influence, launched a campaign of sabotage, violence, and terror that continued sporadically until 1971, 11 years after independence. The death toll from this struggle has been estimated at between 10,000 and 80,000.

A new stage in self-government was reached in 1957, when the French government created the autonomous state of Cameroun, and Cameroonian institutions were created along the lines of French parliamentary democracy. In 1958, the Legislative Assembly of Cameroun voted for independence by 1960, and France and the UN General Assembly assented. In 1959, the last step in the evolution of political institutions prior to independence took place when a government of Cameroun was formed and given full internal autonomy. Ahmadou Ahidjo became prime minister. Earlier in the year, on 1 January 1959, the Kamerun National Democratic Party had won the general elections in Southern British Cameroons, and John Foncha had become prime minister. Soon Foncha and Ahidjo were discussing the possibilities of unification upon the achievement of independence.

On 1 January 1960, Cameroun became an independent republic. Fierce UPC-led riots in the Dschang and Nkongsamba areas caused Ahidjo to summon French reinforcements to suppress the rebellion, but intermittent rioting continued. A draft constitution was approved in a referendum of 21 February, and on 10 April a new National Assembly was elected. Ahidjo's Cameroun Union

Party won a majority, and Ahidjo, who ran unopposed, was elected president in April 1960.

During 1960, consultations between Foncha and Ahidjo continued, and a proposed federation was tentatively outlined. On 11 February 1961, separate plebiscites were held in the Southern and Northern British Cameroons under the auspices of the United Nations. The voters in Southern Cameroons chose union with the Cameroun Republic, while those in Northern Cameroons opted for union with Nigeria, which was accomplished on 1 June 1961. During the months that followed, terrorist activity was renewed and the Cameroun Republic had to devote one-third of its national budget to the maintenance of public order.

A draft constitution for the federation was approved by the Cameroun National Assembly on 7 September 1961, and the new federation became a reality on 1 October. The Cameroun Republic became the state of East Cameroon, and Southern British Cameroons became the state of West Cameroon in the new Federal Republic of Cameroon, with Ahmadou Ahidjo as president and John Foncha as vice president. Both were reelected in 1965, but Foncha was later replaced as vice president, and the office was abolished in 1972.

A proposal to replace the federation with a unified state was ratified by popular referendum on 20 May 1972; the vote was reportedly 99.97% in favor of unification. A new constitution went into effect on 2 June, under which the country was renamed the United Republic of Cameroon. Ahmadou Ahidjo remained president of the republic; running unopposed, he was reelected for a fourth five-year term on 5 April 1975. In June, by constitutional amendment, the office of prime minister was created, and Paul Biya was appointed to the post. Ahidjo, reelected unopposed, began his fifth five-year term as president in May 1980. In November 1982 he resigned and was succeeded by Biya; Ahidjo remained head of the ruling party, the Cameroon People's Democratic Movement (CPDM).

Biya proved more independent than Ahidjo had anticipated. Following allegations of a military coup plot allegedly masterminded by Ahidjo, the former president retired to France in August 1983, and Biya became party chairman. Ahidjo was sentenced to death (later commuted to life imprisonment) in absentia in February 1984. Biya's own presidential guard attempted to overthrow the government in April; the rebellion was stamped out by the army. Purges followed, and 46 of the plotters were executed. A state of emergency was declared, which lasted several years. Late in 1984, the position of prime minister was abolished, and the name of the country was changed to the Republic of Cameroon.

Despite democratic reform begun in 1990 with the legalization of political parties other than the CPDM, political power remains firmly in the hands of President Biya and a small circle of CPDM members from his own ethnic group. Biya was reelected on 11 October 1992 amid accusations of voting irregularities. Biya reportedly got 39% of the vote to 35% for John Fru Ndi. (Ndi briefly proclaimed himself president before the government released the polling figures.) In contrast, the 1 March 1992 legislative election was considered free and fair by international observers, although many parties boycotted the elections and the CPDM won several constituencies by default. But even though opposition parties were well-represented in the legislature (92 of 180 seats), there

were, according to the 1992 constitution, few legislative or judicial checks on the president.

Following the elections, civil unrest erupted as the population expressed the widespread belief that Ndi had won the presidential elections. By late 1992, Ndi and his supporters were under house arrest and the international community had made clear its displeasure at the antidemocratic and increasingly violent turn the Biya regime was taking.

Biya agreed in May 1993 to hold a so-called Great National Constitutional Debate and in June he began preparing a draft of a new constitution to be adopted either by referendum or by the National Assembly. In 1994, 16 opposition parties formed a loose alliance, dominated by Ndi's Social Democrats, to work for constitutional and electoral reform. In October 1995, the CPDM reelected Biya as its leader. In December of that year the National Assembly adopted a number of amendments to address the power of the president. These reforms included a strengthening of the judiciary, the creation of a partially elected 100-member senate, the creation of regional councils, and the fixing of the presidential term to 7 years, renewable once. Strikes and demonstrations became commonplace as Biya resisted implementation of reforms.

The May 1997 legislative elections were marred by mismanagement, vote-rigging, and fraud, resulting in the Supreme Court's cancellation of results in three constituencies (seven seats). Based on the misconduct of these elections, the opposition boycotted the October 1997 presidential elections, in which Biya claimed victory with 93% of the vote. To add further insult, Cameroon topped Transparency International's list of the most corrupt countries in the world in 1998, prompting the creation of an anticorruption body.

On 30 June 2002 the country held legislative and municipal elections that again were denounced by the opposition as fraudulent. The Supreme Court cancelled the results of nine constituencies, ordering new elections in these constituencies on 15 September. In the end, the Cameroon People's Democratic Movement (CPDM)/Rassemblement Démocratique du Peuple Camerounaise (RDPC) won 149 of 180 seats.

The victory for the ruling party was cemented with the re-election of the 72-year old president Paul Biya in October 2004, thus enhancing the chances of continued domination by the ruling party until the end of his term in 2011. By 2006, appeals were being heard in Biya's home province in favor of a constitutional amendment that would allow him to run for another term when his current term expires. However, against the backdrop of worsening social conditions and high poverty, students protested and conducted strikes for several weeks in April 2005, and clashes with police led to two student deaths. Opposition parties registered their intention to block any attempt to amend the constitution that would allow Biya to run for a third term.

In early 2006 a final resolution to the dispute between Cameroon and Nigeria over the oil-rich Bakassi peninsula was expected. In October 2002, the International Court of Justice had ruled in favor of Cameroon. Nonetheless, a lasting solution would require agreement by both countries' presidents, parliaments, and by the United Nations. The peninsula was the site of fighting between the two countries in 1994 and again in June 2005, which led to the death of a Cameroonian soldier.

### 13 GOVERNMENT

Under the 1972 constitution, as amended in 1984, Cameroon has nominally been a republic headed by a president elected by universal suffrage to successive five-year terms, amended to a maximum of two seven-year terms under the 1996 constitution. The president appoints the ministers, vice-ministers, and regional functionaries; is the head of the armed forces; and promulgates the laws. Since 8 December 2004, Ephraim Inoni has been the prime minister. The president can decree a state of national emergency and can be invested with special powers. The next presidential election was due in October 2011.

The legislative branch is composed of a National Assembly of 180 members from 49 single and multi-seat constituencies. The Assembly is directly elected to a five-year term by universal suffrage. Members meet three times a year in March, June and November. Elections were last held in June and September 2002; the next elections were due in June 2007.

Government checks and balances remain extremely weak under a strong executive system. Censorship was abolished in 1996, but the government sometimes seizes or suspends newspapers and occasionally arrests journalists. A 1990 law authorizing private radio and television stations was implemented by decree in 2000; however, the annual licensing fees are prohibitive. Nonetheless, in 2001, over 100 licensing applications were filed by independent broadcasters. The government's human rights record has been improving over the years but remains generally poor.

### 14 POLITICAL PARTIES

The Cameroon National Union (Union Nationale Camerounaise—UNC) was Cameroon's sole legal political party until 1990. It was formed in 1966 through a merger of the Cameroon Union (Union Camerounaise) and the Kamerun National Democratic Party, the major political organizations, respectively, of the eastern and western regions, and four smaller parties. The UNC sponsors labor, youth, and women's organizations and provided the only list of candidates for the 1973, 1978, and 1983 legislative elections.

Ahmadou Ahidjo became the first head of the UNC in 1966 and continued in that capacity after his resignation as the nation's president in 1982. Following President Biya's assumption of emergency powers in August 1983, Ahidjo, then in France, resigned as party leader. Biya was subsequently elected party chief at a special party congress in September. In 1985, the UNC was renamed the Cameroon People's Democratic Movement (CPDM or Rassemblement Démocratique du Peuple Camerounaise—RDPC).

Opposition parties were legalized in 1990. In the elections to the National Assembly on 1 March 1992, the RDPC/CPDM won 88 of the 180 seats; the National Union for Democracy and Progress (UNDP), 68 seats; the Union of Cameroonian Populations (UPC), 18 seats; and the Movement for the Defense of the Republic (MDR), 6 seats. The RDPC/CPDM and the MDR formed a coalition.

In the presidential election of 11 October 1992, the voting was split—RDPC/CPDM 40%; Social Democratic Front (SDF), 36%; and UNDP 18%. The SDF accused Biya of stealing the election, but Biya was reelected to his post as head of the RDPC/CPDM in October 1995.

In the May 1997 National Assembly elections, the RDPC/CPDM took 109 seats, the SDF 43, the UNDP 13, the UDC 5, others 3, and cancelled constituencies 7. The opposition, backed by international observers, declared the legislative elections highly flawed, and based on their perception of misconduct, the main opposition parties boycotted the presidential elections of October later that year.

The SDF and its allies in the Union for Change remain critical of Biya but are also critical of France, which they call an "accomplice of those in power." However, in 2000 the alliance reportedly was falling apart as the SDF sought to distance itself from the SCNC. The SCNC apparently was accusing the SDF of delaying independence for the northwest and southwest English-speaking provinces by refusing to force its English-speaking members of parliament to resign from the Francophone-dominated National Assembly. Moreover, some members of the opposition wanted their party leaders to join Biya's coalition government so they could share the spoils of office.

By 2000, Biya had shored up his government by forming a coalition with the northern-based UNDP, which had 13 Assembly seats, and with the UPC, which had one seat. Together, the ruling coalition gave Biya a four-fifths majority in the Assembly. The coalition government enjoyed support from seven of Cameroon's 10 provinces, and thus secured former President Ahidjo's north-south alliance, which he had created in 1958.

In the June and September 2002 National Assembly elections, the RDPC/CPDM took 149 seats, the SDF 22, the UDC 5, the UPC 3, and the UNDP 1. Voting irregularities in 9 constituencies (17 seats) in the June elections led to the subsequent by-elections in September for those seats. Nineteen of the SDF's seats came from the English-speaking northwest province. The biggest loser in the election was the UNDP: it had won 68 seats in 1992 and 13 seats in 1997. Observers attributed the party's poor showing to its participation in the RDPC/CPDM-led government.

In the 11 October 2004 election, President Paul Biya was reelected with 70.9 % of the vote. His longtime opponent, John Fru Ndi scored 17.4%, Adamou Ndam Njoya took 4.5%, and Garga Haman Adjia came in last with 3.7%. Biya's second seven-year term extended through October 2011; constitutionally he was not eligible to run for reelection.

### 15 LOCAL GOVERNMENT

The Republic of Cameroon is divided into 10 administrative provinces, each placed under the jurisdiction of a governor appointed by the head of state. Each province is subdivided into departments, which are under the administrative control of divisional officers (*préfets*). In turn, departments are composed of subdivisions (*arrondissements*) headed by assistant divisional officers (*sous-préfets*). Municipal officials are elected for five-year terms. Traditional institutions such as chiefdoms were in noticeable decline during the 1970s and 1980s, although traditional rulers were treated as administrative adjuncts and received a government salary.

In 1996, Biya's government organized relatively free and fair municipal elections where opposition candidates won in nearly every major city. However, three-fourths of the local councils are dominated by the ruling coalition. Municipal elections for 336 local councils were held on 30 June 2002, and were charged by

church leaders and opposition politicians as being flawed; vote-buying, stuffing of ballot boxes, intimidation, and multiple voting were among the accusations brought by the opposition. In January 2003, Biya announced that the government would begin a major program of decentralization to complete the process of democratization begun by the June parliamentary and municipal elections.

## 16 JUDICIAL SYSTEM

Cameroonian law has three main sources: local customary law, the French civil code, and British law, although drafting of a unified code was reported under way in the 1980s. The Supreme Court, in addition to its other powers and duties granted by the constitution, gives final judgment on such appeals as may be granted by the law from the judgments of the provincial courts of appeal. The system also includes appeals courts in each of the 10 provinces, courts of first instance in each of the country's 58 divisions and a 15-member High Court of Justice, appointed by the National Assembly. Proposals for appointments and sanctions against magistrates throughout the republic are started by the Higher Judicial Council, of which the head of state is president. A Court of Impeachment has the right to try the president for high treason and cabinet ministers for conspiracy against the security of the state.

A State Security Court established in 1990 hears cases involving internal or external state security. Traditional courts that resolve domestic, probate, and minor property disputes remain an important element in the judicial system. These courts vary considerably according to region and ethnic group. Appeal is possible in most cases to traditional authorities of a higher rank.

Prior to the 1995 amendments (promulgated in 1996) to the 1972 constitution, the judiciary was supervised by the Ministry of Justice, part of the executive, and did not function as an independent branch of government. The December 1995 amendments provided for a more independent judiciary. However, as of 2003, these provisions were not implemented. There continues to be reported abuses, including beatings of detainees, arbitrary arrests, and illegal searches. The judiciary remains frequently corrupt, inefficient, and subject to political influence.

## 17 ARMED FORCES

Cameroon's armed forces totaled 23,100 active personnel in 2005. The Army had 12,500 personnel organized into three military regions. Equipment included 65 reconnaissance vehicles, 55 armored personnel carriers and over 94 pieces of artillery. There were no tanks. The Navy had an estimated 1,300 personnel, whose primary naval units were 21 patrol/coastal vessels. The Air Force had 300 personnel, and 15 combat capable aircraft, including 15 fighter aircraft and three attack helicopters. Paramilitary gendarmerie totaled 9,000. The defense budget in 2005 totaled \$306 million.

## 18 INTERNATIONAL COOPERATION

Cameroon was admitted to UN membership on 20 September 1960 and is a member of ECA and several nonregional specialized agencies. Cameroon is also a member of the African Development Bank, G-77, the African Union, the Islamic Development Bank, the Monetary and Economic Community of Central Africa (CEMAC), the Organization of the Islamic Conference (OIC), the Central African States Development Bank, the New Partnership

for Africa's Development (NEPAD), and the ACP Group. The nation is part of the Franc Zone. Cameroon was formally admitted to the Commonwealth of Nations in 1995. The nation is part of the Nonaligned Movement. In environmental cooperation, Cameroon is part of the Basel Convention, the Convention on Biological Diversity, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Cameroon's economy is based on a diversified and self-sufficient agriculture supplemented by substantial petroleum production and a sizable manufacturing sector. Coffee and cocoa are Cameroon's principal agricultural exports, along with cork, wood, and cotton. Cameroon in 2002 stood as number six in the world among cocoa producers, and is the eighth-largest producer of coffee. Petroleum, basic manufactures, and machinery and transport equipment provide additional export revenues. The government is trying to stimulate more timber processing. Construction is a growth sector.

The economy suffered since the 1986 decline in the prices for oil, cocoa, coffee, and cotton, as well as the appreciation of the CFA franc, which contributed to the erosion of GDP by more than 60%. Some economic reforms were then initiated, but the government was unable to meet the financial and economic reform goals of several International Monetary Fund (IMF) standby programs.

In January 1994, France devalued the CFA franc, causing its value to drop in half overnight. Immediately, prices for almost all imported goods soared, including prices for food and essential drugs. The devaluation encouraged new investment, particularly in oil, and discouraged the use of hard currency reserves to buy products that could be grown domestically. Cameroon's real GDP increased by 3.3% in 1994–95, an improvement from the decline of 4.3% in 1993–94. The 2001 real growth rate of the GDP was around 5%.

An IMF agreement was signed in 1997, an Enhanced Structural Adjustment Facility (ESAF) program which concluded in 2000. In 1999, the ESAF was replaced by the Poverty Reduction and Growth Facility (PRGF), under which Cameroon was to receive assistance for three years (beginning in 2000). The IMF is pressing for reforms in the areas of budget transparency and privatization. Cameroon is attracting some foreign investment: French and South African companies have bought previously state-owned enterprises, including banks and railroads. The \$4 billion, 670-mile-long (1,070 km) Chad-Cameroon petroleum pipeline, which was underway in 2003, could potentially increase revenues dramatically. Production is estimated to be 225,000 barrels per day.

The economy expanded by 4.3% in 2004, down from 4.5% in 2003; in 2005, the GDP growth rate was expected to shoot up to 5.9%. The inflation rate has been fluctuating, dropping from 4.5% in 2001 to 0.4%, but it did not pose serious problems to the overall health of the economy. Unemployment has remained fairly stable, hovering at around 6.5%. While all indicators point to a stable economic system, Cameroon still has a lot of reforms to implement, and it is still susceptible to changes in oil and cocoa prices.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Cameroon's gross domestic product (GDP) was estimated at \$32.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,000. The annual growth rate of GDP was estimated at 5%. The average inflation rate in 2005 was 1.5%. It was estimated that agriculture accounted for 44.8% of GDP, industry 17.3%, and services 37.9%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$11 million or about \$1 per capita and accounted for approximately 0.1% of GDP. Foreign aid receipts amounted to \$884 million or about \$55 per capita and accounted for approximately 7.5% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Cameroon totaled \$8.860 billion or about \$550 per capita based on a GDP of \$12.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.1%. In 2001 it was estimated that approximately 33% of household consumption was spent on food, 8% on fuel, 2% on health care, and 9% on education. It was estimated that in 2000 about 48% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, Cameroon's workforce totaled an estimated 6.86 million, of which 70% were engaged in the agricultural sector, with 13% in commerce and industry. The remaining 17% were in varying occupations. In 2001, the unemployment rate was estimated at 30%.

Although workers are allowed to organize and join unions, there are numerous government-imposed restrictions. Private and public sector employees cannot belong to the same union, nor can a union include different or closely related sectors of the economy. In addition, under penalty of fines and/or prison for union members, a union must register with the government. In practice, unions have found it difficult to obtain registration. Those unions which are registered have been the subject of harassment and interference by the government. The law recognizes the right to strike, but only after mandatory arbitration. However, decisions arising from arbitration are not legally enforceable and can be overturned or even ignored by employers or the government. The right to strike is denied to national security personnel, civil servants and prison system employees.

There are minimum working age and safety and health regulations; however, a lack of resources has greatly compromised their enforcement. The minimum wage in 2005 was about \$47 per month, but was not enough to support a wage earner and family. The workweek is set at 40 hours in public and private nonagricultural firms, and 48 hours in agricultural endeavors. The minimum age of employment is 14 years, although this is not enforced. Child

labor remains a problem in Cameroon as does forced and compulsory labor.

## 22 AGRICULTURE

Agriculture was the main source of growth and foreign exchange until 1978 when oil production replaced it as the cornerstone of growth for the formal economy. In 2004, agriculture contributed 44% to GDP. Agricultural development and productivity declined from neglect during the oil boom years of the early 1980s. Agriculture was the principal occupation of 56% of the economically active population in 2003, although only about 15.4% of the land was arable. The most important cash crops are cocoa, coffee, cotton, bananas, rubber, palm oil and kernels, and peanuts. The main food crops are plantains, cassava, corn, millet, and sugarcane. Palm oil production has shown signs of strength, but the product is not marketed internationally. Cameroon bananas are sold internationally, and the sector was reorganized and privatized in 1987. Similarly, rubber output has grown in spite of Asian competition.

Cameroon is among the world's largest cocoa producers; 130,000 tons of cocoa beans were produced in 2004. Two types of coffee, robusta and arabica, are grown; production was 60,000 tons in 2004. About 85,000 hectares (210,000 acres) are allocated to cotton plantations. Some cotton is exported, while the remainder is processed by local textile plants. Total cotton output was 109,000 tons in 2004. Bananas are grown mainly in the southwest; 2004 estimated production was 630,000 tons. The output of rubber, also grown in the southwest, was 45,892 tons in 2004. Estimated production in 2004 of palm kernels and oil was 64,000 and 1,200,000 tons, respectively. For peanuts (in the shell) the figure was 200,000 tons. Small amounts of tobacco, tea, and pineapples are also grown.

Estimated 2004 production of food crops was as follows: sugarcane, 1,450,000 tons; cassava, 1,950,000 tons; sorghum, 550,000 tons; corn, 750,000 tons; millet, 50,000 tons; yams, 265,000 tons; sweet potatoes, 175,000 tons; potatoes, 135,000 tons; dry beans, 95,000 tons; and rice, 62,000 tons.

## 23 ANIMAL HUSBANDRY

In 2004 there were 5,950,000 head of cattle, 4,400,000 goats, 3,800,000 sheep, 1,350,000 hogs, and 31 million chickens. Most stock breeding is carried out in the north. Ngaoundéré has one of the largest and best-equipped slaughterhouses in Africa. Meat production in 2004 included 95,000 tons of beef, 30,000 tons of poultry, 16,200 tons of pork, 16,380 tons of mutton, and 15,700 tons of goat meat. Dairy and other livestock products that year included 189,300 tons of milk, 13,400 tons of eggs, and 13,000 tons of cattle hides. Meat products are exported to UDEAC countries. During 2002–04, livestock production was up 2.3% compared to 1999–2001. Attempts to improve livestock and hides and skins have been hindered by the social system, in which livestock constitutes a source of prestige, security, and wealth; by slowness in

developing an effective transportation system; and by difficulty in controlling the tsetse fly.

## 24 FISHING

The fishing industry is not highly developed. Most fish are caught by artisan fishermen in rudimentary motorized pirogues. The total catch was an estimated 108,121 tons in 2003.

## 25 FORESTRY

The forested area of 23.9 million hectares (58.9 million acres) occupies about 51% of the land area. Forestry is mostly conducted in the Littoral, Center, South, and South West provinces. Of the 300 commercially valuable species, the principal types of trees felled are assié, azobe, dussil, eloorba, mahogany, sapele, sipo, illomba, ayus, iroko, dibetu, and silk cotton. Timber exports in 2003 were valued at \$403.4 million. In 2003, roundwood production was estimated at 10.9 million cu m (384 million cu ft). Wood sales make up the fourth-largest source of foreign revenue, but infrastructural problems and weak demand for lower-quality wood limits the development of the forestry sector.

## 26 MINING

While Cameroon has steadily increased its oil production, the discovery and exploitation of other mineral resources have been slow. Bauxite deposits, in the Minam and Martap regions, were estimated at 1 billion tons. Iron deposits containing an estimated 200 million tons have been discovered south of Kribi.

Other mineral deposits included diamonds, tin, gold, mica, marble, columbo-tantalite, silica sand, cassiterite, lignite, and rutile. Gold, the sole commercially exploited mineral, yielded an estimated 1500 kg in 2004 and was produced by small-scale artisanal miners, mostly in the eastern part of the country. Limestone production was 260,000 metric tons, and production of pozzolana, ash for cement was 600,000 metric tons in 2004. Diamond production in 2004 was estimated at 12,000 carats, and as with gold, was produced by small-scale artisanal miners.

## 27 ENERGY AND POWER

Cameroon began offshore oil production in 1977. Annual production has gradually fallen since 1985, and the decline is expected to continue as existing reserves are depleted. Output amounted to 76,600 barrels per day in 2001, down from 100,000 barrels per day in 1999. However, Cameroon is sub-Saharan Africa's sixth-largest crude oil producer, with output in 2003 at 67,000 barrels per day, and estimated reserves at 400 million barrels as of 1 January 2004, according to the Energy Information Administration (EIA). Field development and production began in the Kribi-Campo basin in the mid-1990s, and the Ebome field came online in 1996. As of 2002, the major operators were ExxonMobil, Shell, and Total-Fina Elf. Work was under way on development of the Doba basin oil fields and construction of a pipeline between Cameroon and Chad, with the aid of a \$93 million loan from the World Bank. Production was expected to have begun in early 2004. In October 2002, Cameroon and Nigeria, both of whom claimed the potentially oil-rich Bakassi Peninsula, received a ruling on the dispute from the International Court of Justice, which granted the penin-

sula to Cameroon. Cameroon's petroleum consumption in 2001 was 22,000 barrels per day.

The country reportedly has large reserves of liquid petroleum gas, which are largely untapped. According to the EIA, Cameroon's natural gas reserves stood at 3.9 billion cu ft as of 1 January 2004, with no known production in 2002.

Hydroelectric resources remain the most readily exploitable form of energy in Cameroon, which, together with the Democratic Republic of Congo, is considered to have the greatest hydroelectric potential in Africa. Electrical energy is produced primarily by two hydroelectric stations on the Sananga River. Nearly 60% of the power from these stations goes to the aluminum smelter at Edéa. Cameroon's electrical capacity was 0.81 million kW in 2002, for which output for that year was 3.249 billion kWh, of which about 90% was from hydropower and the remainder from fossil fuels. Consumption amounted to 3.022 billion kWh in 2002.

In the 1980s, hydroelectric capacity was expanded by an additional complex on the Sananga River (Song-Loulou) and a 72-MW generator (built with Chinese aid) on the Bénoué. However, despite Cameroon's impressive waterpower resources, the national electricity grid runs principally from Douala to Yaoundé and from Douala to Bafoussam. Most other areas are served by diesel-generated electricity or have no electricity at all. Cameroon's National Energy Plan attempts to prepare for a diminishing petroleum output. Hydro-Québec of Canada conducted a feasibility study of the Nachtigal Power Station, which could provide 280 MW of hydroelectric power on the Sananga River north of Yaoundé. In 1998, Hydro-Québec was awarded a contract to upgrade the Song-Loulou hydroelectric facility.

## 28 INDUSTRY

Industry accounted for 17.39% of GDP in 2002. Considerable advances in industrial development have been made in recent years, mostly in the south. Cameroon's first oil refinery opened at Limbé in May 1981. Since then, oil production has gained paramount importance for the country. Cameroon is sub-Saharan Africa's fifth-largest oil producer. The government, once a large shareholder in many industries, including aluminum, wood pulp, and oil refining, now advocates privatization. The government reported an annual growth of 8.2% in the manufacturing sector for 1998. Exports of logs and rubber were down 50% in 1998, partly because of tightening logging restrictions. There is a rubber factory in the Dizangué region, and about 20 large sawmills and 5 plywood factories and lumber mills.

The first industrial establishment not connected with agriculture processing and forestry was the Cameroonian Aluminum Refining Co. In 1957, the company opened at Edéa, importing ore from Guinea. Output was estimated at 74,800 metric tons in 1995. This was the only public sector monopoly not privatized by the year 2000. The most significant agricultural processing enterprises were the peanut and palm oil mills at Edéa, Douala, Bertoua, and Pitoa; soap factories at Douala and Pitoa; and tobacco factories at Yaoundé. Other concerns included a factory at Kaélé that produced cotton fiber and a cotton oil plant there that produced for export. There was a textile-weaving factory in Douala and a bleaching, dyeing, and printing factory in Garoua.

Cement plants were at Figuil and near Douala; in 1995, cement production was 620,000 tons, but demand for cement declined because of decreased public works. However, as of 2001, the construction sector had expanded, due in part to foreign financing of road construction. Residential and commercial construction was also underway. These construction projects boosted cement production. Several breweries supply both internal demand and surplus for export. Other manufactured products include beer and soft drinks, cigarettes, flour, chocolate, cocoa paste, construction materials, furniture, and shoes.

The \$3.7-billion Chad-Cameroon oil pipeline, with estimated production at 225,000 barrels per day, was completed in late 2003. Although Cameroon's oil production was expected to decline in 2003 (crude oil production was 76,600 barrels per day in 2001, down from 84,000 barrels per day in 2000) as older oil fields become exhausted and fewer new discoveries are made, the position of Kribi as the end point on the pipeline and Cameroon's refinery capacity could turn the nation into a major oil transport center. The government-controlled Sonara (Société Nationale de Raffinage) oil refinery in Limbe produces 42,000 barrels per day. In October 2002, the International Court of Justice ruled in Cameroon's favor in a border dispute with Nigeria over the Bakassi Peninsula. Cameroon now has sovereignty over the peninsula, which is located in the Gulf of Guinea and is believed to contain significant oil reserves. Large-scale exploration and exploitation of the Bakassi reserves is expected to compensate for the decline in Cameroon's other reserves.

Cameroon has great potential for hydroelectric power, and it could become an exporter of electricity. The state-owned electricity utility Sonel (Société Nationale d'Electricité du Cameroun) was being privatized as of 2001. Cameroon has natural gas reserves of approximately 3.9 trillion cubic feet (Tcf), and known gas fields had yet to be developed by 2003.

By 2004, the share of the industry in the overall GDP has fallen to 20.1%; agriculture was the main contributor to the economy—43.7%, and also the largest employer, with more than 70% of the labor force; services came in second with a 36.2% share of the GDP. In October 2005, the government and Alcan Primary Metal Group made plans to expand the Alucam aluminum smelter and to construct a new hydroelectric power station in Edea—a \$900 million investment project.

## 29 SCIENCE AND TECHNOLOGY

The Ministry of Higher Education and Scientific Research is charged with formulating research policy and programs in Cameroon. It operates five university institutes and five research institutes concerned with soil science, hydrology, nutrition, psychosociology, demography, economics, geography, archaeology, botany and vegetal biology, and medical entomology. The French Institute of Scientific Research for Cooperative Development is located in Yaoundé. The universities of Buea, Yaoundé, and Douala (founded in 1977, 1962, and 1977, respectively) have Faculties of science. The University of Dschang (founded in 1977) offers training in agricultural sciences. In 1987–97, science and engineering students accounted for 45% of college and university enrollments. For the period 1990–01 there were only three researchers and four technicians actively engaged in research and development. High

technology exports in 2002 totaled \$1 million, accounting for only 1% of all manufactured exports.

## 30 DOMESTIC TRADE

Most imported consumer goods are distributed among the European population and the salaried and urban African workers. The internal markets are run by African entrepreneurs, while important import-export houses are controlled by Europeans, usually French. The main firms are found in Douala (the main port and industrial center) and Yaoundé (the capital city). The internal markets deal mainly with cattle, locally produced foodstuffs, and textiles, sewing machines, and radios. Trade in capital equipment and construction materials is practically restricted to the local industrialists and government contractors. Agricultural extension, modernization programs, cooperatives, and provident societies have all assisted in expanding markets. Credit, marketing of produce, transport of produce, and storage fall within their jurisdiction.

Economic reforms toward privatization have been in effect throughout the late 1990s. Though progress has been slow, by the end of 2001 four out of eleven state-owned assets were privatized under the current economic program.

Usual office hours are from 7:30 AM to noon and from 1:00 to 3:30 PM, Monday through Friday, and 8 AM to noon Saturday. Many businesses are open from 8 AM to 6 PM. Banks are open 8 to 11:30 AM and 2:30 to 3:30 PM.

## 31 FOREIGN TRADE

Crude petroleum was the most expensive export from Cameroon (35%) in 1999, ending up primarily in France. Wood exports accounted for over a fifth of Cameroon's exports (21%). Cocoa (10%) led agricultural exports, while aluminum (6%) led mineral exports. During the 1990s, Cameroon's export-import volume either remained stable, or increased.

In 2004, exports reached \$2.5 billion (FOB—free on board), while imports grew to \$2.0 billion (FOB). The bulk of exports went to Spain (15.2%), Italy (12.3%), the United Kingdom (10.2%), France (9.2%), the United States (8.8%), South Korea (7.1%), and

the Netherlands (4.3%). Imports included machinery, electrical equipment, transport equipment, fuel, and food, and mainly came from France (28.2%), Nigeria (9.9%), Belgium (7.6%), the United States (4.9%), China (4.8%), Germany (4.6%), and Italy (4.1%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

In the late 1970s, increased oil production compensated for the low world market prices of Cameroon's agricultural exports and helped the country achieve a favorable balance of payments. From 1994 to 1997, the volume and value of Cameroon's exports increased annually, in part due to the CFA currency devaluation. As of the early 2000s, cocoa and lumber exports had declined, due in part to lower world commodity prices. Petroleum remains Cameroon's chief export commodity. Cameroon has been attempting to attract further foreign investment into offshore and onshore concessions to raise export earnings. Cameroon imports primarily semiprocessed products and other industrial goods, machinery, and food products.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Cameroon's exports was \$2.1 billion while imports totaled \$1.5 billion resulting in a trade surplus of \$600 million.

The International Monetary Fund (IMF) reported that in 1995 Cameroon had exports of goods totaling \$1.74 billion and imports totaling \$1.11 billion. The services credit totaled \$304 million and debit \$499 million.

Exports of goods and services reached \$3.7 billion in 2004, up from \$3.2 billion in 2003. Imports grew from \$3.2 billion in 2003, to \$3.7 billion in 2004. The resource balance was consequently insignificant in both years, reaching \$14 million in 2003, and \$40 million in 2004. The current account balance was negative, improving from -\$317 million in 2003, to -\$183 million in 2004. Foreign exchange reserves (including gold) grew to \$119 million in 2004, covering less than one month of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The bank of issue is the Bank of the Central African States (Banque des États de l'Afrique Central-BEAC), which replaced the Central Bank of the State of Equatorial Africa and Cameroon in November 1972. Its headquarters are in Yaoundé. In 1993, member states of the BEAC created a supranational supervisory authority, Commission Bancaire de l'Afrique Centrale (COBAC) in order to secure the region's banking system. The government's Exchange Control Office controls all financial transactions effected between Cameroon and foreign territories.

Cameroon's banking system consisted of nine commercial banks with 60 branches in 1999. The major commercial banks, all with important foreign participation, were the Amity Bank, Banque Internationale du Cameroun pour l'Épargne et le Crédit (the last bank to be privatized, in 1999), Caisse Commune d'Épargne et d'Investissement, Commercial Bank of Cameroon, Citibank, Societe General de Banque au Cameroun, Standard Chartered Bank, and the Societe Commerciale de Banque Credit Lyonnais-Cameroun. There was also a savings bank and a postal bank. Informal savings and loan systems known as tontines take the place of banks for many tribal members, with repayment enforced by social pressure.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$971.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.6 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

In April 2003 the Douala Stock Exchange was declared open for business by Cameroon's prime minister, Peter Mufany Musonge, although no exact date was given for the start of trading or the number of companies that will be listed. Cameroon has been criticized for a lack of transparency in its economic institutions and observers question whether the exchange will perform to international standards. The recently privatized electricity company, AES Sonel, is expected to be one of the first companies listed on the exchange when 5% of its shares are offered for sale to its employees; a sale required by an agreement between the company and the government.

### 3<sup>4</sup> INSURANCE

As of 2003, there were a number of foreign (predominately French) and domestic insurance companies doing business in Cameroon. However, foreign firms must have local partners. Cameroon was one of the fourteen French-speaking African nations that adopted a common code with respect to the insurance sector. Enforcement of these new regulations led to the closure of some weak insurance companies and the restructuring of the sector.

### 3<sup>5</sup> PUBLIC FINANCE

Cameroon relies heavily on customs duties and direct taxes as sources of government revenue. Most of Cameroon's oil revenues do not appear in the national budget and are maintained in secret accounts abroad. The year 2000 budget was increased from \$112 million to almost \$2.2 billion in order to repay public debt, subsidize national education, public health, maintain infrastructure,

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

and fund the police and armed forces. Also in 2000, the government of Cameroon was commended by the International Monetary Fund (IMF) for sound macroeconomic policies and thereby qualified for \$2 billion in debt relief under the Heavily Indebted Poor Countries (HIPC) initiative.

The US Central Intelligence Agency (CIA) estimated that in 2005 Cameroon's central government took in revenues of approximately \$3.2 billion and had expenditures of \$2.7 billion. Revenues minus expenditures totaled approximately \$558 million. Public debt in 2005 amounted to 64.8% of GDP. Total external debt was \$9.223 billion.

The IMF reported that in 1999, the most recent year for which it had data, budgetary central government revenues were CFA Fr867.46 billion and expenditures were CFA Fr859.8 billion. The official exchange rate for 1999 reported by the IMF was us\$1 = CFA Fr615.70. Government outlays by function were as follows: general public services, 43.6%; defense, 9.5%; public order and safety, 4.0%; economic affairs, 6.8%; housing and community amenities, 1.0%; health, 3.4%; recreation, culture, and religion, 0.7%; education, 12.0%; and social protection, 0.5%.

**3<sup>6</sup> TAXATION**

The tax on individual income ranged from 10-60% in 1996. Also levied were housing fund and employment taxes, a tax to finance Cameroon television, and social security taxes. The corporate tax rate was 38.5%. There is an 18.7% value-added tax (VAT) on goods and services sold in Cameroon, although some transactions are exempt. Other levies include taxes on business licenses, certain consumption goods, and stock dividend distributions.

**3<sup>7</sup> CUSTOMS AND DUTIES**

In accordance with the trusteeship agreement between France and the United Nations, all nations had equal tariff treatment in Cameroon when it was a trust territory. Many types of goods essential for economic, social, and educational development were exempt

from duty. Export duties were moderate. Despite this situation, the direction of Cameroon's trade was to the franc currency zone and importers were required to secure import licenses for non-franc zone products. Following independence, the import licensing system was continued, but was less strict for EU countries.

In 1994, Cameroon's new Regional Reform Program included reduced taxes on imports, from over 7-4%, and reduced the overall rate from a maximum 200% to a maximum 70% on luxury goods, and a minimum of 5% on necessities. AS of 2006, however, Cameroon employed the common external tariff (TEC) using four categories: necessities, 5%; raw materials and equipment, 10%; semifinished goods, 20%; and finished products, 30%. There was also an excise tax and an indirect tax on consumer goods, of 25%.

The 2000 Financial Law was designed largely to attract foreign capital, providing exemptions from export duties on bananas, cocoa, coffee, cotton, rubber, sugar, palm oil, and medicinal plants. Legislation to establish free trade zones was enacted in 1990. Prohibited imports include certain sanitary products, chemicals, toxic waste, some cosmetics, and some food items.

**3<sup>8</sup> FOREIGN INVESTMENT**

Under the terms of a structural adjustment program, Cameroon has liberalized its investment code, eliminated most price controls, reduced import and export duties, and sought to privatize its parastatals. Foreign and domestic investors are provided with guarantees that substantially comply with international standards. Cameroon's investment code, enacted in 1990, eliminated requirements for technology transfer and geographic location. Investments are not screened and foreign exchange privileges are not rationed. Investors can freely transfer dividends, return of capital, and interest and capital on foreign debt. The code requires at least 35% Cameroonian equity ownership in small- and medium-sized enterprises. In 1990, Cameroon also promulgated an industrial free zone (IFZ) regime which features a comprehensive package of incentives (a ten-year tax holiday and 15% corporate tax year beginning the 11th year) for enterprises which export at least 80% of their output, with licenses awarded by an independent regulatory agency, the National Office for Industrial Free Zones (NOIFZ). From 1996 to late 1999, the licensing process was suspended pending audits, but in 2002, the government declared all of Cameroon an IFZ, with benefits available to any enterprise meeting the export criterion. Cameroon has a special agreement with France only recently implemented which gives preferential treatment to France, including a special 15% tax and tax deductions for technical assistance.

Despite Cameroon's attractive investment code and IFZ regime, few foreign investors have come forward because of problems in its implementation. In 2002, Transparency International scored Cameroon 2.2 on its 10-point International Corruption Perceptions Index, ranking 90th of 102 countries scored. In June 2003, the government got a soft official development assistance (ODA) loan from the World Bank for about \$50 million to help it buy back \$953.3 million of commercial debt and suppliers' credits at 14.5% face value. If acceptable to creditors who have not received payments for years, this could increase Cameroon's attractiveness for foreign investment.

The government does not publish reliable statistics on foreign investment, but according to estimates by the UN Conference on Trade and Development (UNCTAD), foreign direct investment (FDI) in Cameroon was in the range of \$30 million to \$50 million from 1997 to 2000. FDI inflow rose to \$75 million in 2001, reflecting the sale of 56% of the state electricity company, Sonel, to the US company AES Sirocco for about \$70 million.

France has been the biggest source of foreign investment. The French company Pechiney has long owned the majority share of Alucam, the state aluminum complex, and in the privatization process begun in 1994, a French firm bought a state sugar mill in 1998; a French telecom firm was granted a mobile telephone license in 1999 and a French bank bought Cameroon's last state bank in 2000. South African firms acquired controlling shares in the privatized national railroad and the state-owned mobile telephone company. The Commonwealth Development Corporation had over £36 million (us\$58 million) invested in Cameroonian enterprises as of 1999, including CDC, HEVECAM, Printpak, SNEC, and SOCATRAL. In 2001 and 2002, the principal investors in the \$2.2 billion Chad/Cameroon pipeline project were Exxon-Mobile with 40% (also the project operator), Petronas of Malaysia (35%), and ChevronTexaco (25%), with the US Export-Import Bank providing \$158 million in loan guarantees for the project.

In June 2003, the government officially launched the Douala Stock Exchange, after more than three years of preparation and two missed launch dates, with the announced purpose of facilitating foreign investment in the Cameroon economy. No listings had yet been published.

In October 2005, a major investment plan for Alucam—the country's main aluminum smelter—was devised between the government and the Alcan Primary Metal Group. The investment plan was estimated to cost around \$900 million and targeted an expansion and upgrade of the smelter and the construction of a new hydroelectric power station in Edea. A new cobalt mine is planned to open in Cameroon's Eastern Province in 2006, which would translate into significant inflows of capital and which would make Cameroon the world's leading producer of cobalt.

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

The government has initiated several efforts to further reduce its role in the economy and to promote private sector development during the 1990s and early 2000s, including reforms in taxation, tariffs, labor, and trade. Price controls were lifted in 1994 with the exception of pharmaceuticals, petroleum products, and goods and services produced by public monopolies. The government marketing board for coffee and cocoa was restructured and most restrictions on marketing and exporting were eliminated. During 1996, the government took bids from private companies for the privatization of the state-owned rubber company, shipping company, and railroad.

A prominent feature in Cameroon's economic development strategy was the development of an Industrial Free Zone (IFZ), which covers the entire country. Manufacturing and service industries authorized to operate under the program pay no duties on imported inputs, require no licenses, and are exempt from customs control. An IFZ firm must produce goods or services that are 80% export-bound and which are not environmentally destructive.

Multilateral aid from international financial institutions and UN organizations totaled \$606 million in 1996. France agreed to loan \$55 million in 1999 while the Paris Club agreed to reduce debt by 50% and reschedule payments through 2000. Total external debt in 2000 was \$10.9 billion. Cameroon had a three-year \$133.7 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the International Monetary Fund (IMF) approved in December 2000 that was due to expire in December 2003. The country reached its decision point under the IMF/World Bank's Heavily Indebted Poor Countries (HIPC) initiative in October 2000, qualifying for some \$2 billion in debt relief. The ongoing construction of the Chad-Cameroon oil pipeline in 2003 resulted in growth in the service sector. Economic development remained fragile, however, in part due to a decline in oil output. The government needs to focus on revenue collection, and target spending to key poverty-reduction policies such as health, education, and basic infrastructure.

Economic growth levels are expected to continue to hover between 4% and 5% in coming years, reaching around 4.5% in 2007. While oil production is expected to pick up in the future (as a result of recently discovered oil fields), the overall effect on the economy will probably be offset by weak oil prices. Agriculture is expected to be an important growth sector, owing to high and steady returns on the production of cocoa, coffee, cotton, and timber.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

Social services were introduced by the French in 1950. The current law provides an employees' old age, disability, and survivors' pension plan, financed by employee and employer contributions. Benefits are also paid for occupational diseases and accidents. Old age benefits are payable at age 60, or age 50 for early retirement. Maternity benefits are available for working women, but there are no general sickness benefits. There is a work injury insurance program covering all employed persons which provides cash benefits and medical care as well. Covered employees with children under the age of 14 receive a family allowance. Family assistance is a part of the traditional social system.

Although the constitution prohibits discrimination based on sex, under powerful customary laws, women do not have the same rights as men. Inheritance practices are dictated by tradition and custom, which favor male heirs. Custody of children after a divorce is determined by the husband's wishes, and spousal abuse is not accepted as grounds for divorce. Domestic violence is common and polygamy remains legal. As of 2004, child labor and incidents of slavery continued.

There are over 200 different ethnic groups in Cameroon, and instances of ethnic favoritism are widespread. There are serious human rights abuses, including political and extrajudicial murders. Arbitrary detention and physical abuse of detainees is common. Although the press is independent and criticizes the government, the authorities seek to intimidate journalists. The government has also failed to cooperate with nongovernmental organizations monitoring human rights. Prison conditions are harsh and life threatening.

### **4<sup>1</sup> HEALTH**

The Ministry of Public Health is responsible for the maintenance of all public health services. Many missionaries maintain health

and leprosy centers. The government is pursuing a vigorous policy of public health improvement, with considerable success in reducing sleeping sickness, leprosy, and other endemic diseases. The demand for all types of health services and equipment is high and constant. The need for modern equipment is especially urgent, with many clinics using outdated equipment, some of which is imported illegally from Nigeria.

Malaria is prevalent in the Bénoué River Valley, the basin of Lake Chad, the coastal region, and the forests of southern Cameroon. A large percentage of the adult population is affected. Other serious water-borne diseases are schistosomiasis and sleeping sickness, which is spread by the tsetse fly. Cameroon lies in the yellow fever endemic zone.

As of 2004, there were an estimated 7 physicians, 36 nurses, 1 dentist, and 1 midwife per 100,000 people. Total health care expenditure was estimated at 5% of GDP.

In 2005, the average life expectancy was 51 years. The estimated death rate in 2002 was 12.08 per 1,000 people and the birth rate was estimated at 35.66 per 1,000 people. As of 1999, only an estimated 19% of the country's married women (ages 15 to 49) used any type of contraception. The infant mortality in 2005 was 65 per 1,000 live births. An estimated 29% of children under the age of five suffered from malnutrition. In the same year, 62% of the population had access to safe drinking water and 92% had adequate sanitation. In 1999 Cameroon immunized children up to one year old for tuberculosis (52%); diphtheria, pertussis, and tetanus (48%); polio (37%); and measles (31%).

The HIV/AIDS prevalence was 6.90 per 100 adults in 2003. As of 2004, there were approximately 560,000 people living with HIV/AIDS in the country. There were an estimated 49,000 deaths from AIDS in 2003.

## 42 HOUSING

Differences in climate, building materials, and patterns of living have resulted in a variety of traditional structures in rural areas. After 1946, the French government took measures to cope with growing urbanization, particularly in Douala and Yaoundé. There is still a housing shortage and many people still live in thatched hovels of mud and wood, with no running water or modern facilities. In 2000, only 62% of the population had access to improved water sources. The Cameroonian government has engaged in housing improvement and construction programs in urban and rural areas. A new population and housing census was scheduled to begin in 2005; the last census was taken in 1987.

## 43 EDUCATION

Education is free in state schools and compulsory between ages 6 and 12. There are Francophone and Anglophone systems running side by side. The primary level of the Francophone system covers a six-year course of study. This is followed by four years of general secondary studies and three years of upper secondary studies. The primary schools of the Anglophone system cover a seven-year course, followed by five years of lower and two years of upper secondary studies. Both systems offer seven-year technical programs for secondary students as well. Working alongside the public schools are the missionary schools, which have been extremely important in the history of Cameroonian education. Government

funds are available to mission and private schools. The school year runs from October to July.

In 2001, about 2,742,000 students were enrolled in primary schools and 836,000 were enrolled in secondary schools. It is estimated that about 70% of all students complete their primary education.

The student-to-teacher ratio for primary school was at about 57:1 in 2003; the ratio for secondary school was about 21:1.

There are two universities in the capital, in addition to those in Dschang, Nyaoundere, Douala and Buea. At Yaoundé University (founded in 1962), there are faculties of science, law and economics, and arts at Yaoundé, which maintains four regional campuses. Higher institutions attached to the university include the University Health Sciences Center, the Higher School of Sciences and Techniques of Information, the Institute of International Relations, the Advanced Teachers Training College, and the Polytechnic School. There is also a national school of public administration and an institute of business administration. In 2003, about 5% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 67.9%, with 77% for males and 59.8% for females.

As of 2003, public expenditure on education was estimated at 3.8% of GDP, or 17.3% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Archives is in Yaoundé and has an annex in Buea, where documents on colonial conditions and administration are stored. The National Archives also serves as the National Library of Cameroon and has a library of about 64,000 volumes in Yaoundé. The University of Yaoundé has about 90,000 volumes. There is a public library system with about 40 branches. The French Cultural Institute maintains a library in Douala with approximately 15,000 volumes. Douala also houses the Pan African Institute for Development Library, with about 13,000 volumes. The Cameroon Association of Librarians, Archivists, Documentalists and Museologists (ABADCAM) was established in 1974.

The Museum of Douala has prehistoric and natural history galleries devoted primarily to the main Cameroonian ethnic groups. The Museum of Bamounian Arts and Traditions at Fomban maintains objects of ancient art and a small library. The museums of Diamaré and Maroua at Maroua have ethnographic materials. Dschang has an ethnographic museum devoted to the Bamiléké and a fine-arts museum. Yaoundé has a museum of art and archaeology and a museum of Cameroonian art. There are also museums in Bamenda, Kousséri, and Mokolo.

## 45 MEDIA

The telecommunications network has been improving over the years. An automatic telephone exchange system links all important cities and towns. Cable, telegram, and telex services connect Cameroon to the outside world. In January 1974, a satellite telecommunications earth station was inaugurated, greatly improving the quality of Cameroon's international telephone service. However, service is still limited to mostly business and government use. In 2003, there were an estimated seven mainline telephones for

every 1,000 people. The same year, there were approximately 66 mobile phones in use for every 1,000 people.

In 1987 Cameroon's radio and television networks were merged to form the Office de Radiodiffusion-Télévision Camerounaise (CRTV), which operates under the authority of the Ministry of Information and Culture. There are broadcasting stations at Yaoundé, Douala, Garoua, Buea, Bertoua, Bamenda, and Bafoussam, offering programs in French, English, and many African languages. In 2004, there were about 20 privately owned radio stations operating in the country; however, these were not officially licensed. The state-owned Cameroon Radio Television (CRTV) is the only officially recognized and fully licensed broadcaster in the country. In 2003, there were an estimated 161 radios and 75 television sets for every 1,000 people. The same year, there were 5.7 personal computers for every 1,000 people and 4 of every 1,000 people had access to the Internet. There were three secure Internet servers in the country in 2004.

Most Cameroonian publications are issued irregularly and have small circulations. The majority are published in French, but some appear in Bulu, Duala, and other native languages of Cameroon. The major daily is the *Cameroon Tribune*, the official government newspaper, published in French in Yaoundé, with a weekly English-language edition; circulation was 66,000 in French and 20,000 in English as of 2002. There are 40 to 50 private newspapers, most of which are published sporadically.

The constitution guarantees freedom of the press, but in practice the threat of government censorship generally prevents opposition viewpoints from appearing in print, especially in the government-controlled press.

#### 46 ORGANIZATIONS

The various economic interests of the country are represented in the Chamber of Commerce, Industry, and Mines in Douala and the Chamber of Agriculture, Pasturage, and Forests in Yaoundé. The Cameroonian Union of Professional Syndicates acts as a coordinating agency of the 20-odd syndicates of merchants and producers. There are also the Professional Banking Association and the Confederation of Small- and Medium-Sized Enterprises. The government has encouraged the formation of cooperatives. The National Produce Marketing Office, created in 1978, has a monopoly on marketing cocoa, cotton, coffee, peanuts, and palm kernels. It is responsible for the prices paid the producers, the quality of produce, and the development of production.

The Association to Fight Against Poverty and AIDS, founded in 1999, seeks to improve the lives of women through education, health, farming, economic development and women's rights. Cameroon Association for the Protection and Education of the Child was founded in 2002 to work on issues of children's welfare, particularly among disadvantaged and abused children of rural areas. There are student unions based at the universities in Yaoundé and Douala. There are sports organizations in the country representing such pastimes as baseball, softball, badminton, and handball. There is also an organization of the Special Olympics. The Boy Scouts of Cameroon and Girl Guides are active in the country, as are chapters of the YMCA/YWCA.

Volunteer service organizations, such as the Lions Clubs International, are also present. There are national chapters of the Red

Cross Society, Habitat for Humanity, UNICEF, the Society of St. Vincent de Paul, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

All visitors to Cameroon must have valid passports, visas, onward/return tickets, and certificates showing yellow fever immunization.

Cameroon's chief tourist attractions are its forests, savanna, jungle, and wild game. The national parks and game reserves are equipped with camps for tourists. In October 2005, the government announced the creation of two new national parks, Boumba Bek and Nki. Together the parks house 283 bird species and 300 species of fish. The diverse ethnic groups, their cultures, and Cameroonian art have also proved of interest to visitors. There are several first-rate hotels in the major cities.

In 2005, the US Department of State estimated the cost of staying in Yaoundé at \$255 per day, in Douala, \$267, and in smaller towns, \$112.

#### 48 FAMOUS CAMEROONIANS

Ahmadou Ahidjo (1924–89) was president of Cameroon from 1960 until 1982. Paul Biya (b.1933), after having served as prime minister since 1975, became president in 1982. William-Aurélien Eteki Mboumoua (b.1933) was OAU secretary-general during 1974–78 and foreign minister of Cameroon during 1984–87. The best-known literary figures are the novelists Ferdinand Oyono (b.1928) and Mongo Beti (1932–2001).

#### 49 DEPENDENCIES

Cameroon has no territories or colonies.

# CAPE VERDE

Republic of Cape Verde  
*República de Cabo Verde*

**CAPITAL:** Praia

**FLAG:** The flag consists of two white horizontal stripes above and below a red horizontal stripe in the lower half of a blue field. A circle of ten gold stars (representing major islands) is centered around the red stripe on the hoist side.

**ANTHEM:** *É Patria Amada (This Is Our Beloved Country)*.

**MONETARY UNIT:** The Cape Verde escudo (cve) is a paper currency of 100 centavos. There are coins of 20 and 50 centavos and 1, 2½, 10, 20, and 50 Cape Verde escudos, and notes of 100, 500, and 1,000 Cape Verde escudos. cve1 = \$0.01238 (or \$1 = cve80.78) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; National Heroes' Day, 20 January; Women's Day, 8 March; Labor Day, 1 May; Children's Day, 1 June; Independence Day, 5 July; Assumption, 15 August; Day of the Nation, 12 September; All Saints' Day, 1 November; Immaculate Conception, 8 December; Christmas Day, 25 December.

**TIME:** 10 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Cape Verde, containing an area of 4,033 sq km (1,557 sq mi), is situated in the Atlantic Ocean about 595 km (370 mi) west of Dakar, Senegal. Comparatively, the area occupied by Cape Verde is slightly larger than the state of Rhode Island. Extending 332 km (206 mi) SE–NW and 299 km (186 mi) NE–SW, it consists of 10 islands and five islets, divided into a northern windward group (Barlavento)—Santo Antão, São Vicente, Santa Luzia (uninhabited), São Nicolau, Sal, Boa Vista, and two islets—and a southern leeward group (Sotavento)—Brava, Fogo, São Tiago, Maio, and three islets. The total coastline is 965 km (600 mi).

Cape Verde's capital city, Praia, is located on the southeastern coast of São Tiago Island.

## <sup>2</sup> TOPOGRAPHY

The island chain is of volcanic origin. Fogo has the only active volcano, Pico do Cano (Mount Fogo), which reaches 2,829 m (9,281 ft) above sea level, the highest point in the nation. Peaks on Santo Antão and São Tiago reach 1,979 m (6,493 ft) and 1,392 m (4,567 ft), respectively. All but three of the islands are quite mountainous, with prominent cliffs and deep ravines. High ground and southwestern slopes support lush vegetation because of moisture condensation. Only four islands have year-round running streams. Mindelo on São Vicente is the principal port, but there are several other fine harbors.

## <sup>3</sup> CLIMATE

A cold Atlantic current produces an arid atmosphere around the archipelago. There are two seasons: December–June is cool and dry, with temperatures at sea level averaging 21°C (70°F); July–November is warmer, with temperatures averaging 27°C (81°F). Although some rain comes during the latter season, rainfall is sparse

overall. Accumulations are generally around 13 cm (5 in) annually in the northern islands and 30 cm (12 in) in the south. The archipelago is subject to cyclical droughts; a devastating drought began in 1968 and was broken only briefly in 1975, 1978, 1984, and 1986.

## <sup>4</sup> FLORA AND FAUNA

There are trees typical of both temperate and tropical climates, depending on elevation. The only native mammal is the long-eared bat.

## <sup>5</sup> ENVIRONMENT

Much of the land used for raising crops or livestock is too arid or steep for these purposes, resulting in soil erosion. Drought contributes to Cape Verde's land problems along with cyclones, volcanic activity, and insect infestation. The intense demand for wood as fuel has led to the virtual elimination of native vegetation. By 1978, nearly all indigenous plants in farmed areas and within a half-day's walk of small villages had been removed. The land and water supply is adversely affected by insecticides, pesticides, and fertilization. In 2000, about 74% of the population had access to safe drinking water. A resource still almost untapped is an estimated 80–90 million cu m of underground water, but the investment required to exploit it would be very large in relation to Cape Verde's resources.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 types of mammals, 4 species of birds, 14 species of fish, and 2 species of plants. Endangered species in Cape Verde included the Mediterranean monk seal, the northern bald ibis, the green sea turtle, and the hawksbill turtle.

## 6 POPULATION

The population of Cape Verde in 2005 was estimated by the United Nations (UN) at 476,000, which placed it at number 161 in population among the 193 nations of the world. In 2005, approximately 6% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 92 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–2010 was expected to be 2.3%, a rate the government viewed as too high. The government is focusing its concerns on adolescent fertility, since much of the country's reproductive health services are provided through foreign aid, which was declining significantly as of 2006. The projected population for the year 2025 was 692,000. The population density was 118 per sq km (306 per sq mi).

The UN estimated that 53% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.16%. The capital city, Praia, had a population of 107,000 in that year. Mindelo, on São Vicente, had the second-largest population after Praia.

## 7 MIGRATION

Economic development has not kept pace with rapid population growth. This factor, in combination with the prolonged drought, has produced a sizable outflow of emigrants. By the early 1990s there were some 600,000 Cape Verdean emigrants in the United States, Europe, Latin America, and other African countries. Some 325,000 were in the United States alone—mostly in New England. Remittances to Cape Verde from emigrants enabled many of those who remained in the islands to survive the drought. In 1998, Cape Verde received some 2,000 refugees from Guinea-Bissau when violence erupted there. Of these, about 1,500 left for other countries. At the end of 1998, some 500 refugees remained at two refugee centers, Trinidad and San Jorginho. Between May and August 1999, 500 refugees returned to Guinea Bissau. In 2002 Cape Verdean remittances were an estimated \$72 million, or about 13% of GDP. In 2005, the estimated net migration rate for Cape Verde was -11.99 migrants per 1,000 population.

## 8 ETHNIC GROUPS

About 71% of the inhabitants of Cape Verde are Creole, descendants of Portuguese colonists and their African slaves, who came, most often, from what is today Guinea-Bissau. Another 28% of the inhabitants are entirely African. There is a small minority (1–2%) of Europeans on the islands.

## 9 LANGUAGES

Portuguese is the official language, but Crioulo, an archaic Portuguese dialect with a pronunciation that reveals African influences, is the spoken language of Cape Verde.

## 10 RELIGIONS

About 85% of the population of Cape Verde are nominally Roman Catholic. Protestant churches account for a small percentage with the largest denomination being the Church of the Nazarene. Other denominations include the Seventh-Day Adventists, the Church of Jesus Christ of Latter-Day Saints, Assemblies of God, the Universal Church of the Kingdom of God, and various

Pentecostal and evangelical groups. There are also small groups of Muslims and Baha'is. Several African traditional religions are practiced, especially on São Tiago, with some traditional elements infused in other religions. Though there is no state religion, the Catholic Church seems to enjoy a somewhat privileged status, including officially observed religious holidays. The constitutional right of freedom of religion is generally respected in practice. All associations, religious and secular, must register with the Ministry of Justice in accordance with the Law of Associations.

## 11 TRANSPORTATION

There are about 1,350 km (840 mi) of roadway on the islands, of which some 1,053 km (655 mi) were paved in 2002. In 1997, Cape Verde had 30 vehicles per 1,000 population. Commercial transportation is largely by coastal craft and domestic airlines. The ports of Mindelo on São Vicente and Porto Novo on Santo Antão are important as international fueling stops. The state-owned Companhia Nacional de Navegacao runs an interisland ferry service. As of 2005, the merchant fleet of Cape Verde consisted of five ships of 1,000 GRT or over, totaling 5,395 GRT. In November 1990, the IBRD announced the complete rehabilitation of two deepwater berths at Praia Port, which can now provide modern cargo handling techniques.

In 1975, the international airport on Sal was renamed the Amílcar Cabral International Airport, in honor of the former nationalist leader of the African Party for the Independence of Guinea-Bissau and Cape Verde. It is an important refueling point on many African flights with the second longest runway in Africa. In 2001, 242,800 passengers embarked or disembarked at Amílcar Cabral. There are smaller airports on seven islands. In 2004 there were seven airports, with three reported to be nonoperational. In 2005, six of them had paved runways. A new airport is under construction in Praia and will accommodate mid-sized jet aircraft. The national airline is Air Transport of Cape Verde, which began service to Lisbon in 1985 and Boston in 1987.

## 12 HISTORY

Parts of the Cape Verde Islands were probably discovered in about 1455 by António da Noli, a Genoese, who was in service to Prince Henry the Navigator of Portugal (Henrique o Navegador); the islands showed no signs of any previous human settlement, although new excavations in Sal Island might suggest earlier visitors. In 1462, São Tiago was the first island to receive permanent settlers. Plantation agriculture was established by the Portuguese community and worked by African slaves, who were brought in from the nearby Upper Guinea coast. There was a population of slaves, and free Africans and a population of Crioulos on the islands from this early period, and they retain strong, but complex cultural ties with the African mainland.

The islands produced trade goods; especially important were cattle, cotton cloths (*panos*) made by slave women, and rum (*grog*). These goods were used to purchase slaves and consumer items from slavers trading in the African interior as well as engage in the slave trade to the New World. The economy of the islands suffered from colonial restrictions on the production of potentially competitive export commodities, as well as from cyclical drought. Between 1747 and 1960, an estimated 250,000 Cape Verdeans died of famine.

The phase out of the Atlantic slave trade and the abolition of slavery in the Portuguese Empire, coupled with an 1886 law providing for the settlement of former Cape Verde slaves on open lands, brought the end of Cape Verde's importance as a slave-trading center. The islands' historical role as a port of call (prior to the building of the Suez Canal) became important again in the mid-20th century, when they were used by Portuguese troops as a transit area for their African counter-insurgency campaigns. For five centuries, the Portuguese were strong enough to keep the archipelago as a colony until the African Party for the Independence of Guinea-Bissau and Cape Verde (Partido Africano da Independência da Guiné e Cabo Verde—PAIGC) took power on 5 July 1975. This Cape Verdean-led movement was engaged in 11 years of armed struggle in Guinea-Bissau (1963-1974) until this precipitated a military coup in Portugal in April 1974. In turn this resulted in Portuguese decolonization in Africa, and an independence agreement was signed between Portuguese and PAIGC representatives on 30 December 1974, leading to the establishment of the two linked, but independent republics: the Republic of Guinea-Bissau on 24 September 1974 and the Republic of Cape Verde on 5 July 1975.

Cape Verde and Guinea-Bissau—where Luís de Almeida Cabral, a Cape Verdean, was president—were politically unified until a military coup in Guinea-Bissau toppled Cabral in November 1980. The Cape Verde wing of PAIGC subsequently broke its links with the mainland and temporarily abandoned the goal of unification and became known as the African Party for the Independence of Cape Verde (PAICV), dropping the G representing Guiné (the Portuguese designation for Guinea-Bissau). Diplomatic relations with Guinea-Bissau, severed at the time of the coup, were resumed in June 1982.

After 15 years of single-party rule by the African Party for the Independence of Cape Verde (PAICV), dissidents agitated to legalize an opposition party in 1990. A hastily assembled opposition coalition, the Movement for Democracy (MPD), won the 13 January 1991 parliamentary elections with 68% of the votes and 56 out of 79 seats in the National Assembly. In February, an independent candidate, António Mascarenhas Monteiro, defeated the incumbent, Aristides Pereira, for the presidency with 72.6% of the vote. The governmental transition went smoothly and without violence. President Mascarenhas cooperated with the prime minister, Dr. Carlos Wahnnon de Carvalho Veiga, and his party (MPD), who formed the government.

In 1992, the new constitution came into force, and the government began to privatize state-run industries. In 1994, during an MPD party conference, two leading politicians split with the party and formed the Party for Democratic Convergence (PCD). Legislative elections were again held in 1995, with the MPD winning 50 of the 72 seats (the assembly had been shrunk since the 1991 balloting). The PAICV won 21 seats and the PCD won one seat. On 18 February 1996, Monteiro was reelected to the presidency, and Veiga retained his post as prime minister.

On 11 and 25 February 2001, Pedro Pires (PAICV) was very narrowly elected president, and inaugurated on 22 March 2001. On 8 December 2005, president of the Parliament Aristides Raimundo Lima became acting president per a constitutional requirement that Pedro Pires suspend his duties of office while he ran in the 2006 election; Pires won reelection in February 2006.

LOCATION: 14°48' to 17°12' N; 22°40' to 25°22' W.  
TERRITORIAL SEA LIMIT: 12 miles.

In 2001, Pires was elected president with 49.43% of the vote to 49.42% of the vote for Carlos Veiga of the MPD; by 2006, support for Pires had increased, to 51.2% to 48.8% for Veiga. The next presidential election was scheduled for February 2011. José Maria Pereira Neves has been prime minister since 1 February 2001; in January 2006 elections, PAICV won 52.3% and 41 seats to MPD's 44% and 29 seats. The next parliamentary election was scheduled for January 2011 with the main contenders again being the PAICV and the MPD.

### 13 GOVERNMENT

According to the 1980 constitution—the nation's first—the Republic of Cape Verde was a one-party state, under the guidance of the PAIGC; this party was replaced by the African Party for the Independence of Cape Verde (Partido Africano da Independência do Cabo Verde—PAICV) in January 1981, after the coup in Guinea-Bissau. The secretary-general of the PAICV and president of the republic, Aristides Maria Pereira, was elected to national office by the People's Assembly, the national legislative body. He was elected to a second five-year term in January 1986. He was

replaced in a popular election on 17 February 1991, by President Monteiro.

The prime minister, who heads the government, is nominated by the Assembly, and appointed by the president. The Council of Ministers is appointed by the president on the recommendation of the prime minister. Presently, the unicameral National Assembly or Assembleia Nacional consists of 72 seats with members elected by popular vote to serve five-year terms.

The constitution was amended on 28 September 1990 to legalize opposition parties and revised again in 1992. It underwent a major revision on 23 November 1995, substantially increasing the powers of the president, and a further revision in 1999, to create the position of national ombudsman (Provedor de Justiça). It guarantees human rights and includes the principle of the separation of powers, a market-based economy, and individual rights and liberties. Multiparty democracy has peacefully prevailed ever since.

#### 14 POLITICAL PARTIES

The African Party for the Independence of Cape Verde (Partido Africano da Independência do Cabo Verde—PAICV) was the sole legal political party from 1975 until 1990. On 28 September 1990, the constitution was amended to legalize opposition parties. In the parliamentary elections held 13 January 1991, the PAICV was defeated by the Movement for Democracy (MPD), which garnered 68% of the vote. Through the 1990s and into the early 21st century, PAICV was the opposition in the National Assembly. In 1993 and 1994, divisions within the MPD led to the resignation of key members and the emergence of a new party, the Party for Democratic Convergence (PCD). In the 1995 legislative elections, the MPD won 50 seats; the PAICV, 21; and the PCD, 1. Assembly elections were held 22 January 2006 with the PAICV strengthening its position, obtaining 52.3%, the MPD 44%, and the Democratic and Independent Cape Verdean Union (União Caboverdeano Independente e Democrática—UCID), 2.7%. The number of seats held by party was PAICV 49, MPD 29, and other 2. The next parliamentary election was scheduled for January 2011.

#### 15 LOCAL GOVERNMENT

The islands are divided into 17 districts (*concelhos*) and 31 *freguesias*, which are subdivisions of *concelhos*. The *concelhos* are: São Nicolau, Sal, Boa Vista, Maio, Brava, São Vicente, Praia, Tarrafal, Santa Cruz, Santa Catarina, Ribeira Grande, Porto Novo, Paúl, Calheta, Mosteiros, São Domingos, and São Filipe. There are local elections for the officials of these administrative units.

#### 16 JUDICIAL SYSTEM

In the colonial period, Cape Verde was subject to the Portuguese civil and criminal codes. Most provisions of these codes remain in effect. A Supreme Tribunal of Justice hears appeals from subregional and regional tribunals. Informal popular tribunals serve as courts of the first instance for minor disputes.

The 1992 constitution provides for a judiciary independent from the executive branch. The Supreme Tribunal (Court) of Justice has a minimum of five members, one appointed by the president, one appointed by the National Assembly, and three appointed by the Supreme Council of Magistrates. The Ministry of Justice and Labor appoints local judges.

Criminal defendants are presumed innocent and have the right to counsel, to public, nonjury trial, and to appeal.

#### 17 ARMED FORCES

Active armed forces personnel numbered 1,200 in 2005. Of these, 1,000 were in the Army which consisted of two battalions. The Coast Guard, which numbered an estimated 100 personnel, had two patrol boats. The Air Force had up to 100 personnel, but had no combat aircraft. The military budget totaled \$6.8 million in 2005.

#### 18 INTERNATIONAL COOPERATION

On 16 September 1975, the Republic of Cape Verde was admitted to the United Nations. It belongs to the ECA and several nonregional specialized agencies. It is also a member of the African Development Bank, the ACP Group, ECOWAS, G-77, the African Union, the New Partnership for Africa's Development (NEPAD), and the Alliance of Small Island States (AOSIS). Cape Verde is an observer in the WTO and part of the Nonaligned Movement. In environmental cooperation, Cape Verde is part of the Basel Convention, the Convention on Biological Diversity, the London Convention, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

#### 19 ECONOMY

Commerce, transport, and public services accounted for 72% of GDP in 2001. Tourism was regarded as one of the most important growth sectors for the islands, along with transportation infrastructure. Construction was also thriving in the early 2000s. Only 11% of the GDP was accounted for by agriculture and fishing in 2001, which supplies the country's export market. Tuna and lobster are the main fishing products. Bananas, maize, and beans are key crops, with cassava, sweet potatoes, coconuts, dates, and sugar cane also produced on small, low-technology farms for domestic consumption. Cape Verde is drought-prone, and less than 10% of food requirements are met by local producers. Salt, *pozzolana* (a volcanic rock used in cement production), and limestone are mineral resources.

Remittances from Cape Verdeans living abroad supplemented GDP by more than 20% in 2002. The government established tax incentives to attract emigrants' investment in Cape Verdean enterprises. Total debt in 2001 amounted to almost half of the country's annual GDP. Cape Verde runs a high trade deficit.

Perhaps Cape Verde's most important asset is its strategic economic location. It is an important refueling location for international air (Amílcar Cabral International Airport on the island of Sal) and ocean traffic (at the port of Porto Grande, at Mindelo on São Vicente Island). In 1997, a four-year World Bank-sponsored project designed to upgrade the port facilities at Porto Grande was completed. Two new ports were also built on the islands of Maio and Boa Vista.

The government aimed to develop the private sector, liberalize trade, and attract foreign investment in 2003. Political stability and transparency have helped Cape Verde's economic development. The World Bank in 2002 funded a study of the potential of Cape Verde's light industrial manufacturing sector.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Cape Verde's gross domestic product (GDP) was estimated at \$3.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$6,200. The annual growth rate of GDP was estimated at 5.5%. The average inflation rate in 2005 was 1.8%. It was estimated that agriculture accounted for 12.1% of GDP, industry 21.9%, and services 66%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$92 million or about \$196 per capita and accounted for approximately 11.5% of GDP.

It was estimated that in 2000 about 30% of the population had incomes below the poverty line.

## 21 LABOR

The unemployment rate stood at an estimated 21% in 2001. There is no data on the size of Cape Verde's labor force or its occupational breakdown.

All workers are free to form and join unions of their choosing without interference from the government. About 22% of the country's workforce was unionized. The government generally respects the worker's right to strike, but this right has been limited at times by the government if an emergency situation or essential services might be affected.

The law sets the minimum work age at 16, but child labor is a problem. Minors under the minimum age cannot work at night, over seven hours per day, or in places that produce toxic products. However, enforcement by the government is rare.

Although there is no established minimum wage for the private sector, most private employers pay their workers what an entry-level government official would make, approximately \$146 per month in 2005. However this is inadequate to support a family and most workers rely upon extended family help or second jobs. The legal workweek is limited to 44 hours for adults, with 12 consecutive hours per week for rest and premium rates of pay for overtime. Larger employers generally respect this restriction, but agricultural and domestic laborers work longer hours.

## 22 AGRICULTURE

The most widespread agricultural activity of the islands is gardening for domestic consumption. Garden crops include corn, cassava, sweet potatoes, and bananas. Only about 11.2% of the land area is suitable for crop production. Frequent droughts often exacerbate an ongoing water shortage. Agriculture employed about 21% of the active population and contributed 15% to GDP in 2003. Estimated 2004 production figures were sugarcane, 14,000 tons; corn, 14,000 tons; bananas, 6,000 tons; coconuts, 5,000 tons; mangoes, 4,500 tons; cassava, 3,000 tons; and potatoes, 3,500 tons. Only the islands of São Tiago, São Vicente, São Nicolau, and Santo Antão have conditions suitable for raising cash crops. Bananas, the only agricultural export, are grown on irrigated land. Sugarcane, another cash crop, is used on the islands to produce rum.

Agriculture has been the focus of development aid programs since the 1960s, but progress has been frustrated by drought, lo-

custs, overgrazing, and archaic cultivation methods. Approximately 85–90% of food needs are met by imports; agricultural imports had a value of \$112.8 million in 2004.

The PAIGC nationalized a few large-scale irrigated agricultural operations and began a program of land reform and cooperative agriculture; sharecropping was abolished. During 1976–80, 7,200 rainwater dikes were built. Torrential rains in 1984 destroyed much of this work, but by 1986, 17,000 dikes and 25,000 stone retaining walls had been completed. There has been little land redistribution, despite a 1982 law distributing farms over five hectares (12.5 acres)—1 hectare (2.5 acres) if irrigated—among the tenants if the land is not directly farmed by the owners.

## 23 ANIMAL HUSBANDRY

Periodic droughts have significantly lowered the capacity of the islands to pasture livestock. In 2004 there were an estimated 205,000 pigs, 112,500 goats, 22,500 head of cattle, 14,500 asses, 9,500 sheep, and 1,850 mules. Total meat production in 2004 was 8,554 tons (up from 5,000 tons in 1996), with pork accounting for over 80%.

## 24 FISHING

The cold Canaries current, running adjacent to the islands, is an ideal environment for many kinds of marketable fish, and the fishing and fish-processing industries in the islands offer the best potential for expansion. São Vicente and Brava each have processing plants, and a fish-freezing plant was opened at Mindelo in 1991. The total catch in 2003 was 8,721 tons, entirely from marine fishing. Maritime resources are under-exploited; of the estimated 50,000 tons of fish, lobster, and other marine products available for harvest, only some 1,500 tons of marine products reach the market annually, either for domestic consumption or export.

## 25 FORESTRY

Forests on the island have been cut down for fuel, and the drought damaged many wooded areas. Large-scale reforestation is under way as part of a program of water-resource development. There are about 1,000 hectares (2,470 acres) of forest plantations. A total of 4.3 million trees were planted during 1978–83. Roundwood production in 2003 was 2,000 cu m.

## 26 MINING

Mining's contribution to Cape Verde's economy was minimal, and the geological potential of the islands remained largely unexplored. Pozzolana (a volcanic rock used in pulverized form in the manufacture of hydraulic cement) from four mines on Santo Antão and salt were the only minerals exploited commercially, salt being a leading industry. In 2004, around 1,600 metric tons of salt was produced. Sal and Boa Vista had sea-salt refineries and deposits of calcareous rocks, used in paving, building ornaments, and tile production. There were also deposits of kaolin, clay, gypsum, and basalt.

## 27 ENERGY AND POWER

In 2001, the islands produced and consumed 0.04 billion kWh of electricity, entirely from thermal sources. Installed capacity totaled about 0.007 GW as of 1 January 2001. Electra, the public electricity utility, maintains thermal power plants on Praia, Min-

delo, and Sal; local councils operate 12 rural power plants. Ten wind generators of 30 kW each were in operation on Mindelo in 1991. Because Cape Verde has no known crude oil reserves, or oil refining capacity as of 1 January 2003, the country must import all of its petroleum products. In 2002, petroleum imports and consumption both totaled 8,870 barrels per day. The country has no known production or consumption of natural gas, as of 2001, and as of 1 January 2003, there are no known natural gas reserves

## 28 INDUSTRY

After 1993, the industrial sector in Cape Verde was born, with garment and shoe production factories. Industry accounted for about 18% of GDP in 2000 and dipped to 17% in 2001. Besides the salt refining, Cape Verdean manufactures include frozen and canned fish, tobacco, bread and biscuits, and soft drinks. Rum is produced from locally grown sugarcane. The government announced in 2002 that it was launching an initiative to increase investment in infrastructure, which will aid the construction industry. The African Development Bank granted Cape Verde a \$3.3 million loan to finance its economic reform programs that year, including privatizing industries. Also in 2002, the government announced that an Italian company was going to undertake oil exploration on the island of Santo Antão.

## 29 SCIENCE AND TECHNOLOGY

No information is available.

## 30 DOMESTIC TRADE

As of 2003, over 70% of the economy was based on the service sector, with commerce, transportation, and public services as the strongest segments. However, the majority of the workforce lives and works in the rural sector employed in agriculture or fishing, which accounted for only about 10% of the GDP in early 2003. Most consumer goods are imported and sold or distributed in the major centers of Praia and Mindelo by EMPA, a state wholesale-retail company that controls the prices of many basic consumer goods. Nearly 20% of the GDP is supported by remittances from expatriates.

The GDP growth rate has fluctuated modestly in recent years. In 1993 the GDP was put at \$ 410 million growing at 3.5% per year, or about \$1,000 per capita. By 1995 it had risen further to \$1,569, which is certainly low by European standards, but is likely the highest for West Africa. Eleven years later, in 2004 it dipped to 3.3% per year, with inflation at 4 % or about \$1,770 per capita. Data for 2005 again put the GDP growth rate at 3.4% annually. Despite the increase in per capita income, the effects of inflation substantially curbed the buying power and the level of unemployment is put at about 30% of the work force. Another measure of this predicament is that cell phone usage is expanding rapidly relative to neighboring Africa, but it is far from the density one finds in Europe. Also indicative of this problematic economy is that the majority of Cape Verde's population can be classified as rural, but the low yield and subsistence agriculture contributes only 20% of the GDP.

Since 1991, the government has pursued economic policies that promote privatization and a market economy. In particular, the government seeks ways to encourage foreign investment and to expand the important tourist sector.

## Principal Trading Partners – Cape Verde (2001)

(In millions of US dollars)

Business hours for banking, government, and industry are 8 AM to 12 noon and 2 PM to 6 PM. Commercial/retail hours are generally from 8 AM to 12:30 PM and 3 PM to 7 PM. Some establishments are open on Saturdays from 9 AM to 1 PM.

## 31 FOREIGN TRADE

Cape Verde has been increasingly dependent upon imports, especially foodstuffs and manufactured goods, a situation that has led to a severe trade imbalance. Chronic drought exacerbates the problem. About 90% of food had to be imported in 1999. In 2002 Cape Verdean exports were \$218 million. Imports to Cape Verde rose from \$173 million in 1992 to \$237 million 2000.

Major commodity export items were traditionally bananas, fish, and now also include garments and shoes. Cape Verde's fishing resources were estimated to contain a potential of 43,000 to 50,000 tons per year, but only one-third of these resources were utilized in 1999. Other exports include transport containers, shoes, and garments. About half of Cape Verde's trade was done with Portugal in 1999.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Cape Verde's massive annual trade deficit is only partially offset by remittances from Cape Verdeans employed abroad. Annual payment deficits were substantial and could be met only through foreign assistance. The average import growth rate between 1990 and 1995 was 14%, compared to a GDP growth rate of 4%. Debt in 2000 reached \$301 million. Due to foreign investment, largely in free-zone enterprises, exports rose during the 1990s and early 2000s. In 1992, banana, lobster, and fresh and frozen fish accounted for 92% of the country's exports, led by banana exports. In contrast, in 1999, shoe parts, shoes, and garments accounted for 76% of exports, led by shoe exports.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Cape Verde's exports was \$273 million while imports totaled \$218 million resulting in a trade surplus of \$55 million. In 1999, the International Monetary Fund (IMF) reported that Cape Verde had exports of goods totaling \$26 million, and imports totaling \$241 million. By 2001 the value of exports had risen modestly to \$27.3 million, and the value of imports had decline to \$218 million. The services credit totaled \$106 million and debit \$117 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Banco de Cabo Verde (BCV, Bank of Cape Verde) was the central bank before 1993, also acting as a commercial and development bank. This organization was supplemented by the Caixa Economica de Cabo Verde (CECV), a savings bank. Liberalization in September 1993 caused the division of the BCV into a central bank, which was privatized in 1999, and a commercial bank called the Commercial Bank of the Atlantic (BCA), which is still majority-state owned. In March 1993, the financial market was opened for private and foreign banks, as long as at least 50% of the workers were Cape Verdean nationals.

In 1999, four Portuguese banks opened offices in Cape Verde: Totta and Acores, Caixa Geral de Depositos, Banco Nacional Ultramarino (BNU), and Banco Mello. The first totally private bank opened in 1999, the Banco Interatlantico.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$170.0 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$363.4 million.

In early October 1996, the Ministry of Economic Coordination held a conference in Praia to consider opening a stock exchange. With the help of GARSEE, a World Bank institution, the Capital Markets Implementation Committee was created (Comissão Instaladora do Mercado de Capitais). The committee established the first stock exchange in March 1999 in Praia. The president of the Lisbon Stock Exchange, José Lemos, assisted GARSEE with the \$500,000 project. Operations were not expected to begin until the end of 1999.

### 3<sup>4</sup> INSURANCE

There are two insurance companies in Cape Verde.

### 3<sup>5</sup> PUBLIC FINANCE

About 44% of the 1998 Cape Verdean budget of \$229 million was allocated to economic reforms (continued privatization), and natural resource, infrastructure, and social development. The government has supported market-oriented policies since about 1991, trying to attract foreign investment.

The US Central Intelligence Agency (CIA) estimated that in 2005 Cape Verde's central government took in revenues of approximately \$328.1 million and had expenditures of \$393.1 million. Revenues minus expenditures totaled approximately -\$65 million. Total external debt was \$325 million.

### 3<sup>6</sup> TAXATION

There are substantial tax incentives for foreign investors in Cape Verde. There is a consumption tax on nonpriority goods, ranging between 5% and 60% for hard liquor. In 2003, a 15% value added tax (VAT) was introduced.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Cape Verde is a member of the Economic Community of West African States (ECOWAS). In 1991, import tariffs were organized into a system of 10 ad valorem rates ranging between 5% and 50%. There is a customs tax of 7% and a consumption tax on luxury items ranging from 5–60%. There are no export controls. The import of narcotics is prohibited and pharmaceuticals can only be imported by the government.

### 3<sup>8</sup> FOREIGN INVESTMENT

Prior to 5 July 1975, Portuguese corporations were the principal investors in the islands. On that date, foreign corporate landholdings were nationalized by the government. During the 1990s, the shipbuilding and repair yard at Mindelo was jointly owned by the government and Portuguese investors; the fish-freezing plant was jointly owned by the government and Dutch investors; and the clothing factory by the government and 107 Cape Verdean nationals living abroad. Private enterprise is now encouraged by the government and has been a major objective of the on-going privatization effort. In 1993, to further encourage investment by Cape Verdean emigrants, the government created favorable tax conditions for such investors. A 100% tax exemption was granted to the first five years of a foreign exportation operation. After five years, a foreign-owned exportation company must pay a 10% tax, which after 10 years was capped at 15%. Foreign-owned industrial endeavors received an exemption for the first three years of operation, with progressively higher customs duties afterwards (25%, 50%, and 75%). The tourism and fishing industries were also granted tax breaks. By the mid-1990s, most sectors of the economy were open to foreign investment, with highest priority given to light manufacturing, tourism, and fishing.

In 1997, the inflow of foreign direct investment (FDI) was \$11.6 million and fell to \$8 million in 1998. However, the increase in privatization sales increased FDI flow to record levels of \$53.3 million and \$21.2 million, in 1999 and 2000, respectively. The economic slowdown in 2001 combined with the worldwide decline

in FDI flows and tourism helped bring Cape Verde's FDI to a reported \$700,000.

Most FDI has been in tourism (54%), with manufacturing accounting for 15.5% of FDI. The main sources have been Italy, Portugal, Spain (Canary Islands), and Hong Kong.

Cape Verde launched a stock exchange in 1999, but it has never been operative. Aside from the endlessly unfavorable balance of payments, the Cape Verdean economic and political systems must be regarded as relatively stable.

### 39 ECONOMIC DEVELOPMENT

The development plan adopted in 1991 sought to transform Cape Verde into an open-market style economy. The development priorities include the promotion of the service-sector industries such as tourism, fishing, maritime services, and transshipping. The problems of persistent drought and water shortage offer strong negative features for economic growth.

Travel and tourism is now one of the most significant parts of the Cape Verdean economy. In 2005 this accounted for 20% of the GDP, generating \$373.2 million and growing at 5.8% per year, or much higher than any other economic sector. By 2015 it is projected to be \$646 million. In other terms, by 2005, this sector alone accounts for 11,201 direct jobs and 19,282 indirect jobs or 10.2% of all jobs in Cape Verde.

In 1994, the government announced a five-year plan to develop the fishing industry, focusing mostly on lobster and tuna. A free-trade port was projected, and offshore banking was planned. In 1997, the government adopted a four-year development plan that focused on debt management and sustainable development. Cape Verde entered into an \$11 million three-year Poverty Reduction and Growth Facility (PRGF) Arrangement with the International Monetary Fund (IMF) in April 2002. Economic growth and international reserves increased in 2002, and inflation fell. The fiscal deficit was lower than expected, the balance of payments was stronger, and investment increased. The government that came into office in 2001 focused on implementing tight monetary policies and improving the social and economic infrastructure. A new tax package was scheduled to be implemented in 2003.

### 40 SOCIAL DEVELOPMENT

Old age, disability, and survivorship pensions are provided for employed persons with a special system for public employees. The system is funded with contributions from the insured person as well as the employer. Cash and medical benefits are provided for sickness, maternity, and work injury. Company managers, shareholders, and owners are excluded from work injury coverage. Family allowances are payable to low income families with children under the age of 14.

The constitution bans sex discrimination, although social discrimination and violence against women persist. The penal code was amended to broaden the definition of sexual abuse and increase penalties. Domestic violence against women is commonplace and societal values discourage reporting these criminal offenses. Discrimination in the workplace continues in hiring, pay, and promotion. Women are often unaware of their rights and suffer unjust treatment in inheritance, family, and custody issues. In

2004 there were active women's organizations working to address these issues.

The government and nongovernmental organizations have been working to highlight the problems of child abuse and abandoned children. Human rights are generally respected by the Cape Verde authorities although there have been some reports of abuses by police.

### 41 HEALTH

Malnutrition (exacerbated by prolonged drought), influenza, and malaria are the major health problems in Cape Verde. The Portuguese government carried out a program of smallpox, yellow fever, and tuberculosis prevention throughout the 1960s. In the 1990s there were 1.5 hospital beds per 1,000 people. In 2000 there were 0.2 physicians, 0.6 nurses, and 0.02 dentists per 1,000 people.

The average life expectancy in 2005 was 70.45 years. The infant mortality rate was 47.77 per 1,000 live births in that year. It was estimated that 83% of children had been vaccinated against measles. The HIV/AIDS prevalence was 0.04 per 100 adults in 2003. As of 2004, there were approximately 775 people living with HIV/AIDS in the country. There were an estimated 225 deaths from AIDS in 2003.

### 42 HOUSING

Housing on the islands varies greatly, from the elegant, Mediterranean-style homes of Europeans and middle-class Cape Verdeans to the simple timber and mud-block houses of peasants. At last estimate, approximately 95% of all housing units were one-floor dwellings. External walls were mostly of stone and clay, stone and cement, or all stone. Water supply was delivered by pipes, wells, tanks and cisterns, and other sources. As of 2000, only about 76.7% of the population had access to safe drinking water. At least 54% did not have access to improved sanitation systems and 50% did not have access to electricity. About 15% of families were homeless. About 80% of all housing units were individual homes.

### 43 EDUCATION

In the pre-independence period, education in the country followed the Portuguese system. Education under the independent government has been patterned after the program of popular education carried out in the liberated areas of Guinea-Bissau. The program stresses universal literacy and primary skills, with advanced education geared toward agricultural and technical skills for production.

Primary education is compulsory and lasts for six years. Secondary education consists of six more years divided into three cycles of two years each. At the second and third cycles, students may choose to switch to a technical or vocational school program.

In 2001, about 55% of all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 58% of age-eligible students; 55% for boys and 61% for girls. It is estimated that about 96% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 28:1 in 2003. The ratio for secondary school was about 24:1.

The most prominent institute of higher learning is the Universidade Jean Piaget de Cabo Verde. There are also a number of technical schools. In 2001, there were about 2,000 students enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 75.7%, with 85.4% for men and 68% for women.

The primary administrative body is the Ministry of Education and Human Resources. As of 2003, public expenditure on education was estimated at 7.9% of GDP, or 17% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Library of the National Assembly in Praia has about 5,000 volumes. The National Library of Cape Verde and the Cape Verde National Historical Archives can both be found in Praia as well. The city also hosts a privately maintained technical and scientific library of 10,000 volumes. There is also a historical museum in the city.

#### 45 MEDIA

In 2003, Cape Verde had 71,700 main line telephones with an additional 53,300 cellular phones in use throughout the country. In 2004, there were seven radio stations; six independent and one state owned. There were also three television stations; one state owned and two foreign owned. In 2002, there were about 100,000 radios and 15,000 television sets nationwide. Broadcasts are in Portuguese and Crioulo. There were approximately 20,400 Internet subscribers nationwide in 2003.

The only daily newspaper in 2005 was *Horizonte* (circulation figures unavailable). The government-run *Novo Jornal-Cabo Verde* (2002 circulation 5,000) is published twice per week. Other periodicals include the weekly *A Semana* (5,000) and *Boletim Informativo* (1,500).

The Constitution of Cape Verde provides for free expression, and the government is said to uphold this right generally. Government authorization is not needed to establish newspapers, other printed publications, or electronic media.

#### 46 ORGANIZATIONS

Cooperative organizations in agriculture, marketing, and labor have been formed. The Chamber of Commerce, Industry, and Services is located at Praia and the Chamber of Commerce, Industry, Agriculture, and Services of the Barlavento is located on São Vicente. The Council of Free Labor Unions serves as a network for 14 unions. The National Union of Cape Verde Workers also represents about 14 unions.

Mass organizations for youth and women are generally tightly controlled by the government. The Scout Association of Cape Verde is an active youth organization. There are national chapters of the Red Cross Society, Caritas, and UNICEF. Some volunteer service organizations, such as the Lions Clubs International, are also present.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism is a potentially important source of revenue for the picturesque islands and has increased steadily since the mid-1980s. The number of hotels and other accommodations grew from 24 in 1985 to 40 in the early 1990s. In 1995 there were 1,436 hotel rooms, and in 2002 the number of hotel rooms rose again to 2,489 with 4,628 beds and an occupancy rate of 49%. There were 125,852 tourist arrivals that year. The average length of stay was five nights. The majority of visitors came from Italy and Portugal.

The ruins at Cidade Velha on São Tiago and the beaches at Baia das Gatas on Boa Vista hold considerable tourist interest. The three-day festival of Bais das Gatas, known for its music, has gained international fame. Hiking, fishing, and water sports are also popular.

The US Department of State estimated the cost of staying in Praia at \$186 per day in 2005. On São Tiago, the average daily expenses were \$171.

#### 48 FAMOUS CAPE VERDEANS

Aristides Maria Pereira (b.1923) was the cofounder, with Amílcar Cabral (1921–73), of the PAIGC. He became PAIGC secretary-general after Cabral's assassination. Pereira was the first president of the independent Republic of Cape Verde, a position he held until 1991. Luis de Almeida Cabral (b.1931), a brother of Amílcar, became the first president of Guinea-Bissau; after being ousted, he went into exile in Cuba. Antonio Mascarenhas Monteiro was president (1991–2001). He was succeeded by Pedro Verona Rodrigues Pires (b.1934). Cesaria Evora (b.1941) gained an international reputation as a blues singer in the 1990s.

#### 49 DEPENDENCIES

The Republic of Cape Verde has no territories or colonies.

# CENTRAL AFRICAN REPUBLIC

République Centrafricaine

**CAPITAL:** Bangui

**FLAG:** The national flag consists of four horizontal stripes (blue, white, green, and yellow) divided at the center by a vertical red stripe. In the upper left corner is a yellow five-pointed star.

**ANTHEM:** *La Renaissance (Rebirth)*.

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00189 (or \$1 = CFA Fr528.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Anniversary of President Boganda's Death, 29 March; Labor Day, 1 May; National Day of Prayer, 30 June; Independence Day, 13 August; Assumption, 15 August; All Saints' Day, 1 November; Proclamation of the Republic, 28 November; National Day, 1 December; and Christmas, 25 December. Movable religious holidays include Easter Monday, Ascension, Pentecost Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located entirely within the tropical zone of Central Africa, the Central African Republic has an area of 622,984 sq km (240,535 sq mi), extending 1,437 km (893 mi) E–W and 772 km (480 mi) N–S. Comparatively, the area occupied by Central African Republic is slightly smaller than the state of Texas. Entirely landlocked, it is bordered on the north by Chad, on the east by Sudan, on the south by the Democratic Republic of Congo (DROC—the former Zaire) and the Republic of the Congo (ROC), and on the west by Cameroon, with a total boundary length of 5,203 km (3,233 mi). The Oubangui and Mbomou rivers form much of the southern border; the eastern border coincides with the divide between the watersheds of the Nile and the Zaire rivers. The Central African Republic capital city, Bangui, is located in the southwestern part of the country.

## <sup>2</sup> TOPOGRAPHY

The land consists of an undulating plateau varying in altitude from 610 to 762 m (2,000–2,500 ft). Two important escarpments are evident: in the northwest is a high granite plateau (rising to 1,420 m/4,659 ft), which is related to the Adamawa Plateau of Cameroon; in the northeast the Bongos Range rises to 1,368 m (4,488 ft) and extends into Sudan.

Soils are complex; sands and clays are predominate, sometimes covered with a lateritic layer, over granite and quartz rocks. The land is well drained by two river systems: the Ubangi and its tributaries in the south, and the tributaries of the Chari and Logone rivers in the north.

## <sup>3</sup> CLIMATE

The climate is tropical, with abundant rainfall of about 178 cm (70 in) annually in the south, decreasing to about 86 cm (30 in) in the

extreme northeast. There is one rainy season (December–March) and one long, hot, dry season (April–November). Temperatures at Bangui have an average minimum and maximum range from 21°C (70°F) to 34°C (93°F).

Flooding is common during the rainy season. An unusually heavy rainfall beginning in August 2005 caused severe flood damage to homes in Bakala, Grimari, Kouango, and Bambari. Damage to local farmland, particularly in Ouaka, posed the threat of famine to follow.

## <sup>4</sup> FLORA AND FAUNA

The tropical rain forest in the southwest contains luxuriant plant growth, with some trees reaching a height of 46 m (150 ft). Toward the north, the forest gradually becomes less dense, with wider patches of grassland, and eventually gives way to the rolling hills of the savanna, interrupted by taller growths along riverbeds. Almost every animal of the tropics is found, including the elephant; its ivory was once a major source of wealth but has declined in economic importance. The southwest has a colorful variety of butterflies. As of 2002, there were at least 209 species of mammals, 168 species of birds, and over 3,600 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The most significant environmental problems in the Central African Republic are desertification, water pollution, and the destruction of the nation's wildlife due to poaching and mismanagement. The encroachment of the desert on the country's agricultural and forest lands is due to deforestation and soil erosion. There are 13 national parks and wildlife reserves. About 8.7% of the total land area was protected in 2003. The Dzanga-Sangha nature reserve in the southwest protects the nation's last rain forest. The Manovo-

Gounda St. Floris National Park is a natural UNESCO World Heritage Site.

The Central African Republic has reported major losses in its elephant population. In 1979, it was disclosed that three-quarters of what had been the nation's elephant population at independence (40,000–80,000) had been killed so that the tusks could be sold for ivory. In the mid-1990s, it was estimated that 90% of the nation's elephant population had been eliminated over the previous 30 years, 85% since 1982. Elephant hunting is now banned.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 11 types of mammals, 3 species of birds, 1 type of reptile, and 15 species of plants. Endangered species in the Central African Republic included the black rhinoceros and northern square-lipped rhinoceros.

## 6 POPULATION

The population of Central African Republic in 2005 was estimated by the United Nations (UN) at 4,238,000, which placed it at number 120 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 5,487,000. The population density was 7 per sq km (18 per sq mi), but large areas in the east are almost uninhabited.

The UN estimated that 41% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.81%. The capital city, Bangui, had a population of 698,000 in that year. Other cities and their estimated populations include Bouar (95,193), Bambari (87,464); and Berbérati (82,492).

The prevalence of HIV/AIDS has had a significant impact on the population of Central African Republic. The UN estimated that 12.9% of adults between the ages of 15–49 were living with HIV/AIDS in 2001; the number of AIDS orphans grew by more than 20,000 from 2001 to 2003. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Both internal and external migration is mainly seasonal. As of 1999, there were 34,831 Sudanese refugees and 3,590 Chadians. Refugees from the Democratic Republic of the Congo (DROC) also arrived in the Central African Republic in January and July 1999. Many settled on their own; however, the government was attempting to relocate all to the Boubou refugee camp. Repatriation efforts began in 1999. Some 1,500 Chadians were ready to return home, and some 500 from the DROC had requested assistance to return to Kinshasa. In 2000, the total number of migrants was 59,000, of which 95% were refugees. In 2003, there were 200,000 internally displaced persons (IDP) within the country. In 2004, some 1,300 Central Africans sought asylum in Cameroon and France. In that same year 28,136 people sought refuge in the Central African Republic: 25,020 refugees, 2,748 asylum seekers

(some from Chad), and 368 returned refugees. The net migration rate for the country estimated for 2005 was zero.

## 8 ETHNIC GROUPS

There are more than 80 ethnic groups, which are classified according to geographic location. The Baya (33% of the population) to the west and the Banda (27%) in the east central region are estimated to be the most numerous groups. In the savanna live the Mandjia, accounting for 13% of the population, the Sara, accounting for 10%, and the Mboum, accounting for 7%, each with several subgroups. In the forest region are the Pygmies (Binga) and some Bantu groups, including the Mbaka, who account for another 4% of the population. About 4% of the population are Yakoma. There were about 6,500 Europeans in 1998, including 3,600 French.

## 9 LANGUAGES

Many languages and dialects are spoken, including Arabic, Hunsu, and Swahili, but Sangho, the language of a group living on the Ubangi River, is spoken by a majority and is the national language. French is the official language of government and is taught in the schools.

## 10 RELIGIONS

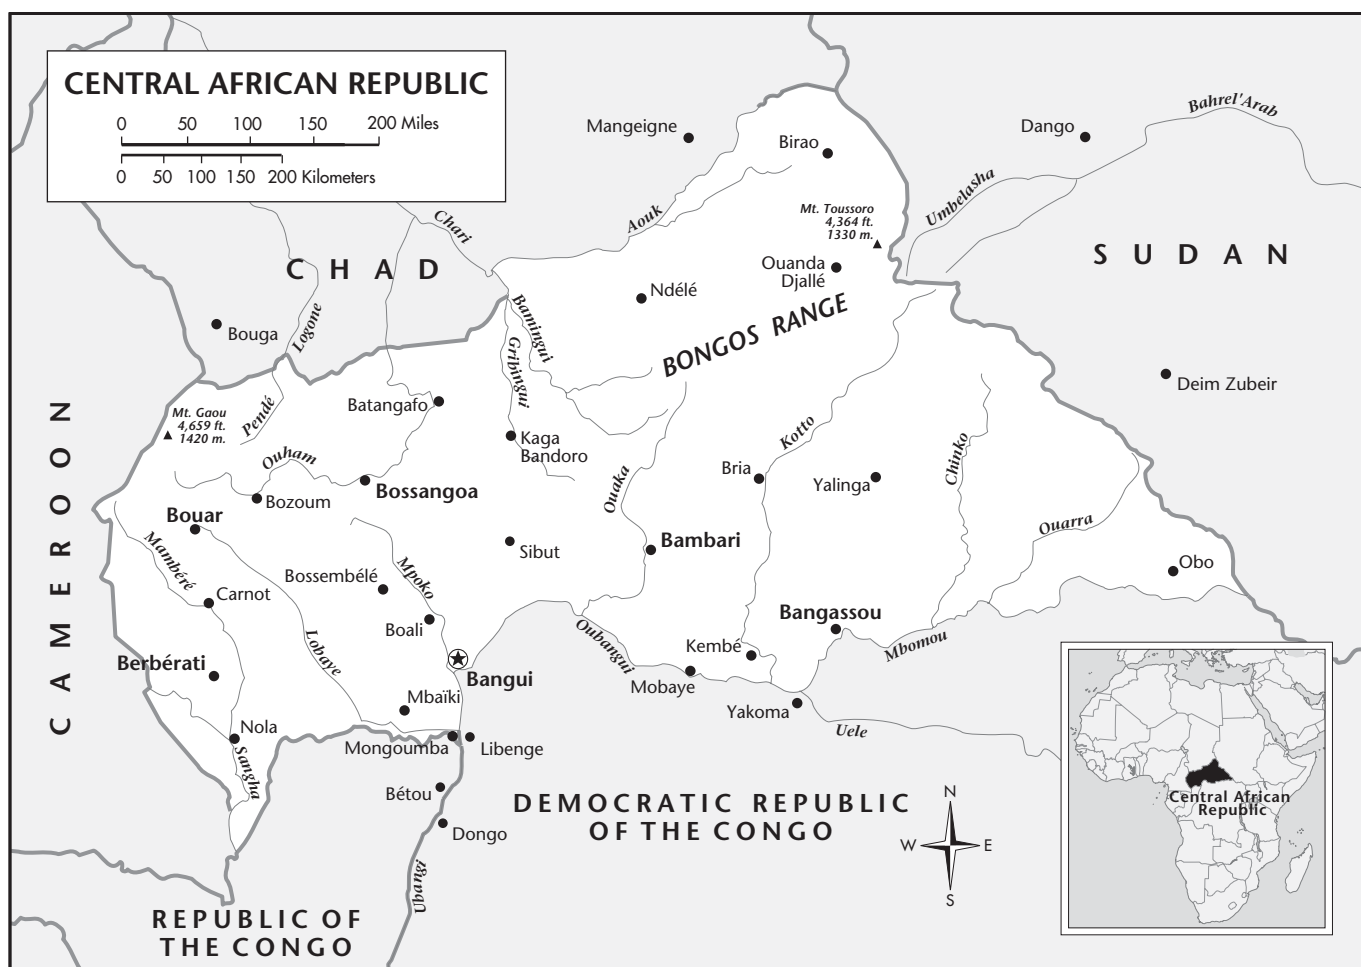

Though about 50% of the population are Christians, it is believed that most of these followers incorporate traditional indigenous elements into their faith practices. Catholic and Protestant missions are scattered throughout the territory. Islam is practiced primarily in the north. About 25% of the population are Protestant, another 25% are Roman Catholic, and 15% are Muslim. Traditional indigenous beliefs are practiced by about 35% of the population as a primary or exclusive belief system. Missionary groups within the country include Lutherans, Baptists, Grace Brethren, and Jehovah's Witnesses.

The constitution (suspended since 2003) provides for freedom of religion while prohibiting certain forms of religious fundamentalism. This prohibition is generally considered to be directed toward Muslim fundamentalists. Christian holidays are celebrated as national holidays. All religious groups must be registered through the Ministry of Interior. The Unification Church has been banned since the mid-1980s. The practice of witchcraft is considered a criminal offense, however, prosecution is generally made only in conjunction with other criminal activity, such as murder.

## 11 TRANSPORTATION

Transportation is limited to river, road, and air, with river transportation the most important for movement of freight. As of 2004, there were some 2,800 km (1,750 mi) of navigable waterways, which consisted mainly of the Sangha and Oubangui rivers. The important Oubangui River route leads to the Zaire River port of Brazzaville, Republic of the Congo, where a rail line travels to the Atlantic port of Pointe-Noire. The Lobaye and several tributaries of the Chari and Logone rivers are partly navigable, but service is irregular during the dry season. The port of Kilongo (at Bangui) is the largest in the country. Both Kilongo and the port of Nola are being enlarged to accommodate steadily increasing maritime traffic.

In 2002, the country had 23,810 km (14,796 mi) of roads, of which only 429 km (267 mi) were paved. A rehabilitation project,

LOCATION: 2°13' to 11°2' N; 14°25' to 27°26' E. BOUNDARY LENGTHS: Chad, 1,199 kilometers (745 miles); Sudan, 1,167 kilometers (725 miles); Democratic Republic of the Congo, 1,577 kilometers (980 miles); Republic of the Congo, 467 kilometers (290 miles); Cameroon, 822 kilometers (511 miles).

begun in 1974 and completed ten years later, centered on three highways running north, west, and south from Nola. In 2003, there were about 1,850 passenger cars and 1,650 commercial vehicles in use. There are no railroads.

In 2004, there were an estimated 50 airports. However, only three had paved runways, as of 2005. There is an international airport at Bangui-Mpoko. Five airlines provide international transport. The Republic is also a partner in Air Afrique. Inter-RCA provides domestic service. In 2003, about 46,000 passengers were carried on domestic and international flights.

## 12 HISTORY

Before its colonial history, the area now known as the Central African Republic was settled by successive waves of peoples, mostly Bantu. Both European and Arab slave traders exploited the area in the 17th, 18th, and 19th centuries, and slave raids and intertribal wars were frequent until the French conquest. In the 19th century, the main population groups, the Baya and the Banda, arrived from the north and east, respectively, to flee the slave trade.

The French explored and conquered the country, chiefly from 1889, when an outpost was established at Bangui, to 1900, as part of a plan to link French colonies from the Atlantic to the Nile. The strongest and most sustained opposition to the French came from

Sultan Senoussi, who was finally defeated in 1912. Isolated local revolts continued well into the 20th century, however. The strongest and bloodiest of these, known as the War of Kongo-Wara, lasted from 1928 to 1931.

The territory of Ubangi-Shari was formally established in 1894, and its borders fixed by treaties between the European colonial powers. The western border with the German Cameroons was fixed by a convention with Germany in 1884; a convention of 1887 with Belgium's King Leopold II delineated the southern border with the Independent State of the Congo; the eastern border with the Sudan was fixed by an 1899 convention. These boundaries were drawn with little knowledge of the human geography of the area, so ethnic groups were sometimes separated into different territories. From 1906 to 1916, Ubangi-Shari and Chad were merged as a single territory. In 1910, Gabon, Middle Congo, and Ubangi-Shari (including Chad) were constituted administratively as separate colonies forming parts of a larger French Equatorial Africa. Ubangi-Shari's resources were exploited by French companies, and abuses of the forced labor system were common.

In 1940, the colony quickly rallied to the Free French standard raised at Brazzaville, Congo. After World War II, the territory elected Barthélémy Boganda as its first representative to the French Parliament in Paris. In a referendum on 28 Septem-

ber 1958, Ubangi-Shari voted to become an autonomous republic within the French community. The Central African Republic was proclaimed with Boganda as president on 1 December 1958. On 30 April 1959, Minister of the Interior David Dacko was elected to succeed Boganda, who had died in a plane crash on 29 March. The country declared itself an independent republic on 13 August 1960, with Dacko as president. In 1961, the constitution was amended to establish a presidential government with a single-party system.

On 1 January 1966, a military coup d'état led by Col. Jean-Bédél Bokassa overthrew Dacko (Bokassa's cousin), abolished the constitution, and dissolved the National Assembly. Bokassa, who became president in 1968 and president for life in 1972, proclaimed himself emperor of the newly formed Central African Empire on 4 December 1976. A year later, on that date, he crowned himself emperor in a lavish ceremony at an estimated cost of \$25 million—a quarter of the nation's annual export earnings.

On 20 September 1979, Dacko, with French support, led a bloodless coup that overthrew Bokassa while he was out of the country. The republic was restored, and Bokassa, who took refuge in Côte d'Ivoire and France, was sentenced to death in absentia for various crimes, including cannibalism. Moreover, an African judicial commission reported that he had "almost certainly" taken part in the massacre of some 100 children for refusing to wear the compulsory school uniforms. In January 1981, six of his supporters, including two sons-in-law, were executed.

A new constitution allowing free political activity was approved by referendum in February 1981. A month later, Dacko was elected, polling a bare majority against four rivals. Violence followed the election, which the losers charged was fraudulent. Economic conditions failed to improve, and Dacko was overthrown on 1 September 1981 by a military coup led by army chief of staff Gen. André Kolingba. Kolingba became chairman of the ruling Military Committee for National Recovery, and the constitution and all political activities were suspended. The Kolingba regime survived an attempted coup in 1982 and an aborted return by Bokassa in 1983. On 21 November 1986, Kolingba was elected unopposed to a six-year term as president, and a new constitution was adopted establishing a one-party state. The new ruling party, the Central African Democratic Party (Rassemblement Démocratique Centrafricain—RDC), nominated a list of 142 of its members, from which voters elected 52 to the new National Assembly on 31 July 1987.

Bokassa made an unexpected return in October 1986 and was retried. On 12 June 1987, he was convicted of having ordered the murders of at least 20 prisoners and the arrest of the schoolchildren who were murdered. He was sentenced to death, but this was commuted to a life term in February 1988. He was released from prison on 1 September 1993, as a result of an amnesty. He died of a heart attack in Bangui on 3 November 1996 at age 75.

The 1990s proved to be a decade of unsteady democratization. In April 1991, under pressure from France, the IMF, and local critics, Kolingba agreed to legalize opposition parties, many of which had already formed a united front to press for further reforms. Elections were held on 25 October 1992, but widespread irregularities led to the Supreme Court dismissing the results for both the National Assembly and the presidency. Elections were rescheduled, and on 19 September 1993 citizens elected Ange-Félix Patassé as

head of the Movement for the Liberation of the Central African People (MLPC), president. A new National Assembly of 85 members was elected. Patassé's party won only 33 seats, and Kolingba's RDC won 14 seats. Despite some irregularities, an international observer delegation certified the validity of the outcome.

Despite the 1994 national referendum and a new constitution instituting democratic reforms, nonpayment of salaries provoked three mutinies and widespread ethnic violence in 1996 and 1997. The French army quelled the mutinies, leaving over 100 people dead and hundreds more injured.

Mediation from four heads of neighboring states produced the Bangui Accord in January 1997. The accord included an 800-strong Inter-African Peace Force (MISAB) composed of six French-speaking countries, approved and supported by the UN and French government. In April 1998, the UN deployed a peace-keeping force of 1,498 military personnel called MINURCA. Its mandate was mainly to monitor implementation of the Bangui Accord. MINURCA succeeded in maintaining security, stability, and an environment conducive for peaceful elections.

On 22 November and 13 December 1998 parliamentary elections were held, overseen by MINURCA. The ruling MLPC won 47 of the 109 seats of the National Assembly, but the opposition formed a parliamentary majority. Patassé won the presidential elections held on 19 September 1999, taking 51.6% of the vote. His runner-up, Kolingba, got 19.3%. Despite opposition allegations of rigging and irregularities, the UN and other international observers declared both elections generally free and fair.

The dawn of the new millennium witnessed more civil unrest in the country. On 15 February 2000, a UN peace-building mission replaced MINURCA and UN troops were withdrawn. However, on 28 May 2001, Kolingba led an unsuccessful coup attempt against Patassé during which at least 59 people were killed and thousands fled Bangui in 10 days of violence. Chadian and Libyan troops, and rebel troops from the Congolese Liberation Movement (MLC) from the Democratic Republic of the Congo, aided Patassé in suppressing the coup attempt. Economic instability followed the aborted coup. Former army chief of staff, François Bozizé, was accused of being involved in the coup attempt, and in November, fighting broke out between government forces attempting to arrest Bozizé, and Bozizé's supporters. Libya, Chad, and the United Nations intervened to attempt to resolve the conflict. Bozizé fled to Chad, but his supporters returned in October 2002 engaging the government in six days of heavy fighting. Libyan forces aided Patassé's troops in suppressing the rebellion.

On 15 March 2003, Bozizé staged a coup, captured Bangui, declared himself president, suspended the constitution and dissolved parliament. Patassé, who had been in Niger for a meeting of African heads of state, fled to Cameroon. Bangui was ravaged by two days of looting and violence, in which at least 13 people were killed. Bozizé replaced the National Assembly with a National Transitional Council (NTC) composed of the leading political factions, police and army personnel, and civil society representatives, including Nicolas Tiangaye, a prominent human rights advocate. His rule brought a measure of stability, but state sector arrears brought about strikes in February and March 2004, and his government squandered an opportunity to strengthen support in the countryside by failing to compensate people for their farms and businesses that were destroyed during the 2003 coup.

Despite these shortcomings, and his promise to step down at the end of the transition, Bozizé contested the 13 March 2005 presidential elections in which all of the leading opposition candidates were allowed to run except for Patassé. Bozizé won on the second run-off round on 8 May 2005, defeating Martin Ziguélé, who ran on the former ruling party ticket of the MLPC. The National Elections Commission declared Bozizé the winner with 64.6% of the vote to 35.4% for Ziguélé. The election received a general declaration of fairness, although the absence of Patassé cast a shadow over the legitimacy of the process.

On 8 May 2005, Bozizé gained yet a further victory when his coalition, *Convergence Kwa Na Kwa* won 42 parliamentary seats in the legislative run-off vote. The MLPC came in second with 11 seats while the RDC managed only eight seats. The remaining seats were won by independents or by smaller parties. In June later that year, the African Union (AU) lifted sanctions against the country, which had been applied after the 2003 usurpation of power.

In early 2006, Bozizé's government appeared stable. However, Patassé, who was living in exile in Togo, and whose supporters reportedly were joining or were prepared to join rebel movements in belief that their leader was still the official elected leader of the MLPC and the rightful head of state of the country, could not be ruled out as a leader of a future uprising. Further, members of Kolingba's Yakoma tribe in the south posed a potential threat to Bozizé's government because of their widespread boycott of the second round of the legislative elections. Members of the Yakoma dominate the army.

### 13 GOVERNMENT

The 1959 constitution was suspended after the January 1966 coup, and the National Assembly was dissolved. An imperial constitution issued in December 1976 lapsed with Bokassa's fall in 1979. A new constitution was promulgated on 6 February 1981 after 97.4% of the voters had approved it in a referendum. It provided for the election of a president and National Assembly by universal adult suffrage, and it allowed multiple parties. It was suspended after the military coup of 1 September 1981. All executive and legislative power was assumed by the ruling Military Committee for National Recovery (*Comité Militaire pour le Redressement National*), headed by Gen. André Kolingba. This committee was disbanded in 1985.

A new constitution adopted by plebiscite on 21 November 1986 established a one-party state and a 52-member National Assembly; simultaneously, Kolingba was elected unopposed to a six-year term as president. The National Assembly provided a forum for debate, but it had little substantive impact on government policy.

In 1991, Kolingba was forced to legalize opposition parties. After the Supreme Court invalidated a 1992 election, new elections were conducted successfully in September 1993. For the 1993 elections, the unicameral National Assembly was enlarged to 85 members. Upon Kolingba's defeat, Ange-Félix Patassé, was installed and a transition to multiparty democracy took place. His coalition government was headed by the MLPC and included members of three other parties. Constitutional reforms passed by referendum in 1994 and instituted in 1995 and 1996 created a stronger prime minister, a constitutional court, and created regional assemblies. On 15 March 2003, former army chief François Bozizé dissolved parliament and suspended the constitution.

Prior to the March 2003 coup, the constitution provided for an independent judiciary, although it was subject to executive interference. The president could veto legislation, although the legislature could override his veto, and he could rule by decree under special conditions. Members of the National Assembly served five-year terms. Suffrage was universal at age 21.

The national referendum on 5 December 2004 validated constitutional amendments proposed by the NTC including shortening the presidential term to five from six years, renewable only once; the strengthening of the office of the prime minister and the National Assembly; and a reduction in fees required of political candidates.

Following the resignation of Celestin Gaombalet on 11 June 2005, Prime Minister Elie Doté was named to head the government (on 13 June 2005). The prime minister is appointed by the party with a parliamentary majority. Bozizé's nephew holds the key mining and energy portfolio, his son is cabinet director in charge of the Ministry of Defense, and Bozizé himself retains control over the defense portfolio. The next presidential elections were scheduled for April 2010.

### 14 POLITICAL PARTIES

The Movement for Social Evolution of Black Africa (*Mouvement d'Évolution Sociale de l'Afrique Noire—MESAN*) was founded by Barthélémy Boganda in September 1949. Boganda, himself a deputy in Paris for some years, constantly fought for greater internal autonomy and an end to French administration.

Internal antagonism to Boganda came particularly from those who resented his electoral laws, which made it difficult to contest any seats with MESAN. In the election of 25 September 1960, MESAN received 80% of the votes, while the newly founded Movement for the Democratic Evolution of Central Africa (*Mouvement d'Évolution Démocratique de l'Afrique Centrale—MEDAC*) received 20%. MEDAC was dissolved by the government in February 1961. In December 1962, a constitutional amendment recognized MESAN as the sole party in the republic, but with the military coup d'état in January 1966 all political activity was banned. MESAN was revived in 1972 by Jean-Bédél Bokassa.

After Bokassa's fall, the single-party system was maintained, but the name of the party was changed to the Central African Democratic Union (*Union Démocratique Centrafricaine—UDC*) in 1980. The February 1981 constitution allowed other parties, and five competed in the presidential election of 15 March 1981. President David Dacko, the UDC candidate, received 50.2% of the vote. His chief opponent was Ange-Félix Patassé of the Movement for the Liberation of the Central African Republic (*Mouvement pour la Libération du Peuple Centrafricain—MLPC*), who received 38.1%. Following the military coup of 1 September 1981, all political activity was suspended. The MLPC was formally banned on 6 March 1982 after an unsuccessful coup that the government blamed on Patassé. Patassé subsequently fled to Togo.

The Central African Democratic Party (*Rassemblement Démocratique Centrafricain—RDC*), the sole legal political party adopted by the Kolingba regime, held its founding assembly in February 1987. The same year three opposition parties in exile in Paris, including the MLPC, established a coalition called the *Unité Front*.

In 1991, opposition parties were legalized and in October 1992, multiparty elections were held. The Supreme Court invalidated the results and on 19 September 1993, new elections led to Kolingba's defeat. His old nemesis, Patassé, became president and the MLPC gained 33 of the 85 seats in the National Assembly. The RDC won 14 seats.

Other parties in the government coalition included the Liberal Democratic Party, the Alliance for Democracy and Progress, and the David Dacko Movement (an informal grouping of supporters of the ex-president). In opposition, along with the RDC, were the Consultative Group of Democratic Forces (CFD), an alliance of 14 opposition groups; the Social Democratic Party; and the National Convention.

A record 849 candidates from 29 parties and 118 independents contested the parliamentary elections that were held in November and December 1998. Patassé's MLPC won 47 of the 109 seats; Koringba's RTC had 20; Dacko's MDD (Movement for Democracy and Development) got 8; and Goumba's FPP (Patriotic Front for Progress) won 7 seats. Eleven of the 29 contesting parties won seats to the National Assembly.

Patassé was reelected for a second presidential term with a narrow majority of 51.6% of the vote and sworn in as president on 22 October 1999. Kolingba came second (19.3%), Dacko third (11.1%), and Goumba fourth (6%) in the 10-candidate contest.

The National Assembly was dissolved in March 2003 after François Bozizé seized power in a coup. Bozizé scored 43% of the vote in the 13 March 2005 presidential elections, and won the second run-off round on 8 May 2005 with 64.6% of the vote to 35.4% for Martin Ziguélé of the MLPC. André Kolingba of the RDC came in a distant third on the first round with 16.4% of the vote. Bozizé was supported on the second round with endorsements from Jean-Paul Ngoupandé of the Parti de l'unité nationale, and the leader of the Forum démocratique pur la modernité (Fodem), Charles Massi.

On 8 May 2005, Bozizé's coalition, the Convergence Kwa Na Kwa, won 42 parliamentary seats in the legislative run-off vote giving it the largest coalition in the 105-seat body. The MLPC came in second with 11 seats while the RDC managed only eight seats. The remaining seats were won by independents or by smaller parties.

## 15 LOCAL GOVERNMENT

The country is divided into 16 prefectures, 69 subprefectures, and the autonomous commune of Bangui. In 1988, local elections created 176 municipal councils, each of which was headed by a mayor or appointed by the president.

## 16 JUDICIAL SYSTEM

There are several civil courts, criminal courts, and a court of appeal situated in Bangui. At the apex is a Supreme Court, also located in Bangui, the members of which are appointed by the president.

There are also provisions for a High Court of Justice, a body of nine judges created to try political cases against the president, members of congress and government ministers, which has never convened.

The 1994 constitution reorganized the judiciary, which consists of regular and military courts. A Constitutional Court was formed in 1996 to determine if laws passed by the National Assembly conform to the constitution: three of its judges are appointed by the

president, three by the president of the National Assembly, and three by fellow judges. New courts of justice were created in 1997 in both urban and rural areas, and a juvenile court in 1998. The functioning of these courts is undermined by inefficient management, shortage of trained personnel, increasing salary arrears, and a general lack of material resources. Significant case backlogs are not uncommon.

The legal system is based on the French civil law system. Criminal defendants are presumed innocent and have the right to counsel, to public trial, and to confront witnesses. Trials are public and frequently broadcast on national radio.

## 17 ARMED FORCES

The Army, numbering 1,400 active personnel in 2005, had three main battle tanks and eight reconnaissance vehicles in its arsenal. The 150-man Air Force had no combat aircraft or helicopters. The paramilitary gendarmerie numbered around 1,000. The defense budget in 2005 totaled \$15 million.

## 18 INTERNATIONAL COOPERATION

On 26 September 1960, the Central African Republic was admitted to the United Nations; CAR is a member of ECA and several nonregional specialized agencies. In 1959, together with Chad, the Congo, and Gabon, it formed the Equatorial Customs Union (Union Douanière Equatoriale—UDE), a customs union in which merchandise, property, and capital circulated freely. The Monetary and Economic Community of Central Africa (CEMAC), has superceded the UDE. The nation is part of the Franc Zone. The country is also a member of the African Development Bank, the Central African States Development Bank (BDEAC), the Community of Sahel-Saharan States (CENSAD), the New Partnership for Africa's Development (NEPAD), G-77, and the African Union, and is a signatory to the Lomé Convention. CAR is part of the Nonaligned Movement and is an observer in the Organization of the Islamic Conference (OIC). In environmental cooperation, CAR is part of the Convention on Biological Diversity, CITES, the International Tropical Timber Agreement (1994), the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The Central African Republic (CAR) has a basically agricultural economy supplemented by the export of diamonds. Agriculture engages about 85% of the workforce and produces about half of GDP. Food crops—manioc (tapioca), corn, millet, bananas, and rice—are grown on low-technology farms for domestic consumption. Coffee, tobacco, timber and cotton are the CAR's principal export crops. The large forest reserves support growth in timber exports; timber accounted for 48% of export earnings in 2004. Livestock production grew in the early 1990s as the northern limit of the tsetse fly zone retreated south. Diamond output leads the mining sector, with sales of uncut diamonds contributing approximately 47% of export revenues in 2004. Published figures on production levels for diamond mines are considered unreliable, due to widespread smuggling and mine owner's attempts to minimize their exposure to export taxes. It is possible there are oil deposits along Cameroon's northern border with Chad. The country suffers as a result of its isolation from its major markets, deteriorat-

ing transportation infrastructure, and largely unskilled workforce. The communication network also is limited.

Economic growth stagnated between 1989 and 1991, severely affected by declining world prices for its exports. In 1994, the CFR franc was devalued. This had the effect of increasing diamond, timber, coffee, and cotton exports, resulting in a 5% growth in GDP. On the other hand, imports rose in price, driving inflation to 45% in 1994. By 2005, the inflation rate had dropped to 2.5%, with a GDP growth rate of 2.2%. The country runs both budget deficits and trade deficits, has a large debt burden and limited foreign direct investment, and, as of 2002, had seen a decline in per capita GNP in the last 30 years. World Bank and IMF programs to support investments in livestock, agriculture, and the transportation sectors have not been successful. As such, the World Bank and IMF as of 2005 were concentrating on poverty reduction programs and reform plans to refuel the economy, including the privatization of state-owned enterprises and corruption-fighting measures.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 the Central African Republic's gross domestic product (GDP) was estimated at \$4.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,200. The annual growth rate of GDP was estimated at 2.5%. The average inflation rate in 2001 was 3.6%. It was estimated that agriculture accounted for 55% of GDP, industry 20%, and services 25%.

Foreign aid receipts amounted to about \$13 per capita.

The World Bank reports that in 2003 household consumption in Central African Republic totaled \$917 million or about \$236 per capita based on a GDP of \$1.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1980 to 1990 household consumption grew at an average annual rate of 1.5%.

## 21 LABOR

The vast majority of the labor force is engaged in subsistence farming, herding, and fishing. The unemployment rate was approximately 8% in 2001, (the latest year for which data was available) with up to 23% unemployed in the capital city of Bangui. There is no data on the size of the country's workforce.

According to the law, workers can join or form a union without getting prior authorization, and while civilian police forces and judges can form a union and strike, national security forces, such as the gendarmerie and military personnel, are prohibited from striking or forming a union. Unions have the right to strike after certain conditions are met. Prior to the actual strike action, union demands must be presented to the employer, followed by the latter's response, a conciliation meeting between the two sides and the finding of an arbitration council that an agreement could not be reached on valid demands must take place. In addition, eight days advance notice of a planned strike must be given.

Although forced or coerced labor is prohibited, reports have been made of prisoners, children and pygmies being forced or coerced into performing labor.

The 40-hour workweek has been established for government and most private sector employees. Also required is a minimum 48-hour-per-week rest period. The government sets minimum wage laws sector by sector. As of 2005, agricultural workers had a minimum wage of \$12 per month while office workers were promised \$28 per month. However, wage levels have not changed for more than two decades and the minimum wage is insufficient to support a worker and a family with a decent living standard. There are general safety and health standards, but the Ministry of Labor and Civil Service has never defined them or enforced them. Although the labor code prohibits the employment of children under the age of 14, child labor is a common practice especially in rural areas.

## 22 AGRICULTURE

Agricultural output is dominated by subsistence crops. Agriculture (including forestry and fisheries) accounted for 61% of GDP in 2003, and it employed about 70% of the labor force. The FAO estimates that about 2,024,000 hectares (5,001,000 acres, or 3.2% of the total land area) are arable or under permanent crops, and 3,125,000 hectares (7,722,000 acres, or 5% of total land area) are in permanent pasture. The CAR is nearly self-sufficient in food production and has potential as an exporter.

Manioc, the basic food crop, is raised on about 200,000 hectares (494,000 acres); output was about 563,000 tons in 2004. Bananas are the second major food crop. Production was 110,000 tons in 2004, while plantain production was 80,000 tons. Other food crops in 2004 included 119,000 tons of corn, 10,162 tons of millet, and 42,480 tons of sorghum. Some tropical fruits are produced in small quantities, including 20,000 tons of oranges and 1,800 tons of lemons and limes in 2004. An oil-palm plantation covering 2,500 hectares (6,200 acres) opened in 1986 at Bossongo, 35 km (22 mi) sw of Bangui. In 2004, production of palm kernels totaled 2,000 tons.

The first commercial cotton production in French Equatorial Africa began in Ubangi-Shari in 1924. Cotton is grown in the Bamingui and Gribingui river valleys. In 1969–70, 58,000 tons of seed cotton were produced, a national high, but production quickly slumped: in 2004, it totaled 1,000 tons.

Another important cash crop is high-quality coffee, which is cultivated on the plateaus along with sisal and tobacco; coffee production was 7,500 tons in 2004; coffee exports were valued at only \$587,000 in 2004, down from \$2.8 million in 2001.

Production of peanuts, which are cultivated in conjunction with cotton, was an estimated 133,600 tons in 2004.

## 23 ANIMAL HUSBANDRY

Although most of the Republic is in the tsetse fly belt, some animal husbandry is carried on. In 2004 there were an estimated 3,423,000 head of cattle, 3,087,000 goats, 805,000 pigs, and 259,000 sheep. About 127,300 tons of meat were produced in 2004, with beef accounting for 58%. Cow's milk production was around 65,000 tons the same year. There were an estimated 4,760,000 chickens in 2004

when some 1,476 tons of eggs were produced. Honey production amounted to 13,000 tons in 2004.

## 24 FISHING

Fishing is carried on extensively along the rivers, but most of the catch is sold or bartered on the DROC side of the Ubangi. In 1950, the government began a fish-farming program, and by the end of 1968 there were almost 12,000 ponds. The 2003 fish catch was about 15,000 tons.

## 25 FORESTRY

There are 22.9 million hectares (56.5 million acres) of forest (37% of the total land area), but only 3.4 million hectares (8.4 million acres) of dense forest, all in the south in the regions bordering the DROC. The CAR's exploitable forests cover 27 million hectares (68 million acres), or 43% of the total land area. Transportation bottlenecks on rivers and lack of rail connections are serious hindrances to commercial exploitation. Most timber is shipped down the Ubangi and Zaire rivers and then on the Congo railway to the Atlantic. More than a dozen types of trees are felled, but 95% of the total is composed of obeche, sapele, ebony, and sipo.

A dozen sawmills produced 516,000 cu m (18 million cu ft) of sawn logs and veneer logs in 2003. The government is encouraging production of plywood and veneer. Roundwood removals were estimated at 2.8 million cu m (99.7 million cu ft) in 2003. Competition from lower-cost Asian and Latin American loggers has hurt the local industry, which is encumbered with high transportation and labor costs. In 2003, the country exported \$89.8 million of forest products.

## 26 MINING

Diamond mining was the country's leading industry and top export commodity in 2002. Mining accounted for about 4% of GDP and 40%–50% of export earnings. Diamonds were discovered in alluvial deposits in various parts of the country in 1935 and 1947. Production, which reached 609,360 carats in 1968, was put at around 350,000 carats in 2004. In 2003, diamond output totaled 332,700 carats in 2003. However, sizable quantities are smuggled out of the country. About 60% of the nation's diamonds came from the upper Sangha region. Preliminary gold production in 2004 was put at 7 kg, unchanged from 2003. Gold was still mined in alluvial deposits, by artisanal miners, primarily in the Bandas and the Bogoin-Boali greenstone belts.

Uranium was discovered in 1966 in the Bakouma region in the eastern part of the country, and there was further prospecting in the Berbérati and Bangassou areas; exploitation has not occurred, because of high start-up costs and poor transportation. Reserves were estimated at 18,000 tons. Iron deposits estimated at 3.5 million tons have been exploited, but production has ceased. The country also had deposits of nickel, graphite, ilmenite, lignite, monazite, rutile, manganese, cobalt, tin, copper, china clay, and limestone. The lack of adequate transportation and industrial infrastructure hindered the development of the nation's mineral industry. Little of the country's 400,000-sq-km Precambrian terrain has been explored using modern exploration techniques.

## 27 ENERGY AND POWER

Electric power production totaled 103 million kWh in 2002, with consumption at 0.096 billion kWh for that same year. The capital city of Bangui is supplied by two hydroelectric generators and one thermal plant. A new dam on the Mbali (a joint project with Democratic Republic of the Congo), which permits year-round hydroelectric generation, opened in late 1991. Total generating capacity was 40,000 kW in 2002, with thermal sources accounting for 21,000 kW and hydroelectric at 19,000 kW for that year.

Exxon drilled an exploratory oil well in 1985, but further work was deemed economically infeasible. Any oil production would depend on the connection of a pipeline from Chad to Douala, Cameroon. In 2002, the Central African Republic's average daily fuel imports included 610 barrels of distillate fuel oil, 590 barrels of jet fuel, 530 barrels of kerosene, and 470 barrels of gasoline. As of 2002, the country has no known reserves of oil, natural gas or coal.

## 28 INDUSTRY

Industry contributed 11.4% of GDP in 2004. Textile and leather manufacturing are the leading industries. The largest single factory is a joint-venture textile complex (51% French owned) in Bangui, which handles spinning, weaving, dyeing, and the manufacture of blankets. All cotton produced in the country is ginned locally, with cotton-ginning plants scattered throughout the cotton-producing regions. Refined sugar and palm oil also are produced, as are soap, cigarettes, beer, bottled water, and soft drinks. Other light industries are paint, bricks and utensil manufacture, and motorcycle and bicycle assembly. Manufacturing primarily serves local needs. The Central African Republic's (CAR) total annual diamond production is estimated at \$100 million. The CAR is the world's 10th largest producer of diamonds. There are seven major diamond exporting companies operating in the country. Most diamond mining is artisanal.

## 29 SCIENCE AND TECHNOLOGY

Among the research institutes in the Central African Republic are a study center on animal sleeping sickness in Bouar and an agricultural institute in M'Baiki. The National Institute of Textile Research and Food Crops is in Bambari. The Pasteur Institute in Bangui conducts research on various diseases. French institutes include the Institute of Scientific Research for Cooperative Development, at Bangui, and the experimental station of Maboké, in M'Baiki, under the direction of the National Museum of Natural History in Paris. The University of Bangui has faculties of science and technology, health science, a polytechnic institute, and a research institute for mathematics teaching. The Central School of Agriculture is located in Boukoko, and the Territorial School of Agriculture is in Grimari. In the period 1990–2001, there were 27 technicians, and 47 scientists and engineers per million people engaged in research and development. Also, in 1987–97, science and engineering students accounted for 30% of college and university enrollments.

## 30 DOMESTIC TRADE

A vast majority of the population is employed in agriculture, which accounts for about 58% of the GDP (2004 est.). Light in-

dustries, primarily in Bangui, include food processing, textiles, cigarettes, a brewery, and a diamond-cutting facility. Most local produce and imports are sold at markets in towns and villages. Company agents and independent middlemen buy export crops at local markets or directly from the producers for sale to large companies. Most commercial businesses are controlled by French and Lebanese owners. The government fosters the distribution of agricultural products through a monopolistic state trading company.

A chamber of commerce at Bangui promotes trade and provides information to business firms. Advertising is found in local newspapers, company publications, and handbills and on billboards and radio. Normal business hours are from 7 AM to noon and 2:30 to 6:30 PM, Monday through Friday. Saturday hours are from 7 AM to noon.

**31 FOREIGN TRADE**

Diamonds are the largest Central African commodity export, sold either for jewelry (35%), or natural abrasives (35%). Many diamonds are smuggled out of the country, so exact figures are difficult to compile. Agricultural exports are cotton (14%) and coffee (2.6%). Another 5% can be attributed to the manufacture of motor vehicles and parts. In 2004 the main destinations for CAR's exports were Belgium (39%), Italy (9%) and Spain (8%). Imports came mainly from France (17.6%), the United States (16.3%) and Cameroon (9.3%).

**32 BALANCE OF PAYMENTS**

The Central African Republic's frequent deficits in trade and services are financed mainly through international aid. In the early 1980s, the Republic faced a severe balance-of-payments problem caused by low world prices for its exports and high fuel import costs. A structural adjustment program was begun in 1986 (and further developed in 1988 and 1990) to curb the public sector and to promote private-sector investment in an effort to decrease the reliance on infusions of foreign aid. In 1998, the IMF approved a three-year structural adjustment program equivalent to \$66 million (subsequently augmented and extended); this program expired in 2002. The first six-month emergency post-conflict assistance (EPCA) program expired in December 2004. In 2005, the

IMF decided to delay the approval of a new post-conflict program. This decision followed the government's failure to meet key macroeconomic targets, reflecting poor fiscal performance. This undermines the return of foreign investors, which is critical for economic recovery.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of the Central African Republic's exports was \$188.6 million, while imports totaled \$143.5 million, resulting in a trade surplus of \$45.1 million.

**33 BANKING AND SECURITIES**

In November 1972, a new central bank, the Bank of the Central African States (Banque des États de l'Afrique Central-BEAC), replaced the existing Central Bank of the States of Equatorial Africa and Cameroon, which had been controlled by French interests. This move was designed to strengthen the monetary solidarity and sovereignty of the Central African Republic (CAF) and other member African nations, which would now control part of their foreign exchange and monetary policies. France continues to guarantee the convertibility of the CFA franc.

Other banks are the International Bank for Occidental Africa (20% state owned) and the Union Bank of Central Africa (60% state owned). The state has a one-third share in the Bank of Agricultural Credit and Development, established in 1984. By late October 1996, the efforts of the prime minister (and minister of finance and economics), Jean-Paul Ngoupandé, and reformist colleagues to rescue government finances and public sector management were impressing the IMF, the World Bank, and France. Hopes were rising that the country might eventually secure an agreement with the IMF for an enhanced structural adjustment facility (ESAF). Only with an ESAF in place can the Central African Republic look forward to large-scale, longer-term economic aid commitments or the granting of debt relief from the Paris Club of its official bilateral creditors.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$135.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$149.6 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There is no securities market.

### **3<sup>4</sup>INSURANCE**

In 1986, one state enterprise (SIRIRI) and eight foreign companies were represented in the Central African Republic, including La Mutuelle du Mans, Mutuelle Générale Française-Accidents, the Reliance Marine Insurance Company, Union Centrafricaine d'Assurances et de Réassurances, and l'Union des Assurances de Paris (IARD). In the same year, over 99% of all premiums paid were for nonlife insurance. Motor insurance is compulsory.

### **3<sup>5</sup>PUBLIC FINANCE**

A rapidly expanding civil service, nationalization of enterprises, and expensive short-term borrowing in the 1970s led to large budget deficits, which were made even worse in the early 1980s by falling commodity prices. The Central African Republic and the IMF have worked together since 1980 to attempt to better manage the economy. The 1980 austerity plan focused on stabilizing budget and foreign deficits by concentrating on agricultural production. The 1982 Recovery Plan, also conducted within IMF frameworks, led to a formal structural adjustment plan in 1987. A second structural adjustment plan was agreed to in 1990, at a time when political instability began to affect the government's ability to reach its targets. Goals of the IMF-sponsored program were a reduction of the number of government employees and their salaries, price-policy reforms, and privatization of the parastatal sector. In 1999, the IMF loaned the Central African Republic \$11 million to fund unpaid government salaries and continue economic reforms that were launched in 1998. The government owed about nine months of unpaid salaries to 20,000 civil servants and army soldiers, and was behind in payments of grants for students and retirement benefits for pensioners.

The US Central Intelligence Agency (CIA) estimated that Central African Republic's total external debt was \$1.06 billion.

### **3<sup>6</sup>TAXATION**

Current information is unavailable.

### **3<sup>7</sup>CUSTOMS AND DUTIES**

In 1959, the four territories of French Equatorial Africa joined the Equatorial Customs Union (Union Douanière Equatoriale—UDE), within which goods and capital flowed without obstruction. The UDE was expanded in December 1964 to include Cameroon and together they formed the Central African Customs and Economic Union (Union Douanière et Economique de l'Afrique Centrale—UDEAC). The Republic therefore had no customs sys-

tem of its own. In early 1968, the Central African Republic left the UDEAC to join an economic union with Zaire and Chad, but in December 1968 it returned to the UDEAC. As of 1993, the Central African Republic was a member of both UDEAC and the Economic Community of Central African States (CEEAC).

The UDEAC covers the entire range of commodity trade and bans all import and export taxes between member states. Goods and merchandise originating in member states are exempt from various taxes except in special circumstances. The gains derived from import duties in member states go into the state budgets, but to offset the advantages gained by transit trade, especially to coastal countries, a share of import duties is deposited in a common fund. There is a uniform customs tariff levied against all third parties, but since the UDEAC countries are associated with the common market, imports from EU countries receive a reduction in customs duties. Imports from outside the franc zone require a license. Customs evasion through the smuggling of goods across the Democratic Republic of the Congo and Cameroon borders is a serious problem. Such goods are sold at 10–40% off the price of legitimate items, depriving the government of significant revenue.

### **3<sup>8</sup>FOREIGN INVESTMENT**

Until the late 1980s, almost all foreign investment in the Central African Republic was by the French government and private French firms. For many years, the territory had been worked by French concessionaires who obtained privileges in the area by decree. But with the decline of concessions, interest in private investment diminished. Foreign investment was further discouraged by the nationalization without compensation of private textile, oil distribution, and river transport interests in 1974.

In the early and mid-1980s, in an attempt to revitalize the nation's sagging economy, the Kolingba government reaffirmed its interest in foreign investment, stressing joint partnerships between private business and government. A 1982 investment code provided liberal incentives, including priority in the allocation of foreign exchange for the import of equipment and raw materials.

As of the late 1990s, the Central African Republic continued to be heavily dependent on foreign assistance. The World Bank, European Union, UN Development Program, and the African Development Fund all provided grants; one-fourth of all development assistance continued to come from France, followed by Japan, Germany, and the United States.

Armed insurrections in May 2001, October 2002, and March 2003, ending in the government's forceful overthrow by coup on 15 March 2003, have taken the Central African Republic off the map in terms of foreign investments. Although the presidential election held earlier in 2005 passed without major incident, potential investors have remained cautious about making any real commitments until instances of banditry and extortion are reduced and the government moves ahead with its reform program.

### **3<sup>9</sup>ECONOMIC DEVELOPMENT**

The 1981–85 five-year plan called for CFA Fr233,117 million in expenditures, including CFA Fr83,363 million for rural transport and CFA Fr54,935 million for agriculture and livestock raising.

The 1986–90 plan called for CFA Fr261.4 billion in spending (86% from foreign sources), with 53% for infrastructure and 35% for rural and regional development. Development expenditures are financed almost exclusively by foreign donors. The World Bank extended a \$30-million loan in 1986.

In 1986, the government began a structural adjustment program (SAP) to improve agricultural production, to encourage early retirement among government workers, and to privatize government enterprises. Phase two of this program began in 1988, and phase three in 1990. The goals of phase three—particularly in privatizing utilities and fuel distribution—had not been met by the mid-1990s. Although the state-owned water company had been privatized, no changes were accomplished with either the electric utility or fuel distribution monopoly.

The 1994 devaluation of the CFA franc made products such as coffee, timber, cotton, and diamonds more attractive on the world market. On the other hand, prices for imports also rose, creating a period of high inflation in 1994. By 1995, the inflation rate had dropped to levels near the prevailing rate prior to devaluation.

As of 2003, the estimated external debt was \$1,328 million. The International Monetary Fund (IMF) and World Bank have encouraged the Central African Republic to privatize state-owned business enterprises, address corruption, and streamline labor and investment codes. Economic reforms are tailored to alleviate poverty. Between 2001–2005 GDP grew at an average rate of -0.96% while inflation averaged 2.14% annually. The lowest GDP growth rate during this period was in 2003 when GDP grew at -7.7% and inflation was 4%. An IMF Poverty Reduction and Growth Facility (PRGF) Arrangement, approved in 1998 expired in January 2002. The Central African Republic introduced a value-added tax (VAT), and the state-owned petroleum company (PETROCA) was liquidated. At the beginning of 2002, wage payments fell approximately 20% short of commitments, and many civil servants were owed 16 months of pay during the Patasse administration, and 14 months of pay during the Kolingba administration.

François Bozizé, the new president elected in 2005, has pledged to apply austerity measures in an attempt to improve the fiscal situation. However, his government can expect popular opposition and strike action, if the government fails to kick-start the economy and pay public-sector salary arrears. Improved security conditions and the resumption of donor support will help the economy to recover slowly, with real GDP growth forecast to rise to 3% in 2006 and 4% in 2007.

#### 40 SOCIAL DEVELOPMENT

A social insurance program provides benefits to all employed persons with the exception of agricultural workers and temporary laborers. Old-age pensions are payable at age 55 (men) or 50 (women). Disability pensions come to 30% of average monthly earnings. There is also a survivor pension available for those who are pensioners at death or meet other qualifications. Other payments include prenatal allowances, a lump sum payable at the birth of each of the first three children, and if the mother is employed, a recuperation allowance for 14 weeks. The government's commitment to social welfare and health has been neglected due

to lack of funds. The majority of the population work in the agricultural sector and therefore are not covered by these programs.

The constitution mandates that all persons are equal, although in practice women face widespread discrimination. Single, widowed, and divorced women are not considered to be heads of household. Economic and educational opportunities are limited for women. Polygyny remains legal and is widely practiced. Although banned by law, female genital mutilation is practiced in some rural areas. Spousal abuse and violence is a widespread problem. The government does not adequately fund programs for women and children.

The government's human rights record remains poor. Indigenous pygmies face discrimination despite constitutional provisions. Freedom of speech and press are restricted. Arbitrary arrests and detention are common, police beat and torture detainees, and prison conditions are harsh.

#### 41 HEALTH

Mobile crews treat local epidemic diseases, conduct vaccination and inoculation campaigns, and enforce local health regulations. They conduct research on sleeping sickness, malaria, and other tropical diseases and devise prophylactic methods best suited to the rural population. The most common diseases are bilharziasis, leprosy, malaria, tuberculosis, and yaws. The Central African Republic is a yellow fever endemic zone country. The Pasteur Institute at Bangui cooperates actively with vaccination campaigns. All medicine, antibiotics, and vaccine imports must be authorized by the Ministry of Health.

As of 2004, it was estimated that there were fewer than 3 physicians and 9 nurses per 100,000 people. Average life expectancy was 43.39 years in 2005. Also in 2000, 60% of the population had access to safe drinking water and 31% had adequate sanitation.

The infant mortality rate in 2005 was 87.33 per 1,000 live births. As of 1999, the immunization rates for children up to one year old were as follows: diphtheria, pertussis, and tetanus, 33% and measles, 39%.

The Central African Republic is one of several African nations with a high incidence of AIDS. The HIV/AIDS prevalence was 13.50 per 100 adults in 2003. As of 2004, there were approximately 260,000 people living with HIV/AIDS in the country. There were an estimated 23,000 deaths from AIDS in 2003.

#### 42 HOUSING

The Central African Republic has struggled with overcrowding and housing shortages, particularly in rural areas where only 5% of the population live in permanent structures. A majority of the population live below the poverty line, further contributing to the lack of resources through which housing improvements can be made. In 2000, there were an estimated 751,000 households. UN-HABITAT projects that that number will leap to 1.1 million households by 2015. In 2000, only 60% of the population had access to improved water sources and only 31% had access to improved sanitation.

The Central African Real Estate Investments Society makes small loans for the repair of existing houses and larger loans

(amounting to almost the total cost of the houses) for new construction. Interest rates are low, and repayment extends over a long period. Because of their higher credit ratings, salaried civil servants and employees of large trading companies receive most of the loans. Loans are made to mutual self-help groups and others for the construction of waterworks or electrical distribution systems and to individuals for the purchase of refrigerators, furniture, and other household equipment.

### 43 EDUCATION

The educational system is patterned on that of France, but changes designed by the government are being introduced gradually to adapt the curriculum to local needs. Education is provided free in government-financed schools. There are a few mission schools operated by religious groups; they receive little government aid but must comply with government guidelines. Education is compulsory the first six years of primary school (students between ages 6 and 12). A second stage of basic education covers a four-year course of study. Students may then choose to attend general secondary schools or technical schools, all of which offer three-year programs. The academic year runs from September to July. The primary language of instruction is French.

In 2001, there were about 411,000 students enrolled in primary schools. The pupil-teacher ratio at the primary level was 77 to 1 in 1999.

Specialized institutions include two agricultural colleges, a national college of the performing and plastic arts, and the University of Bangui, founded in 1969. In 2001, about 6,000 students were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 48.6%, with 64.8% for men and 33.5% for women.

As of 2003, public expenditure on education was estimated at 1.9% of GDP.

### 44 LIBRARIES AND MUSEUMS

The French Institute of Scientific Research for Development and Cooperation maintains a research collection of 18,000 volumes in Bangui. The Agricultural Research Center in M'baïki has a library of 2,800 volumes. There is a municipal library in Bangui as well as a Roman Catholic mission library. The University of Bangui library has 26,000 volumes.

The Barthélemy Boganda Museum in Bangui (founded in 1964) includes collections on the ethnography, archaeology, and natural history of the country. There are regional natural history and anthropology museums in Bouar and M'baïki. The Labasso Museum in Bangassou (1975) features archaeological and anthropological exhibits from the Nzakara and Zandé areas.

### 45 MEDIA

Bangui is linked by satellite for telephone communication with France, the United Kingdom, the United States, and Greece. The Republic has radiotelephone, telegraphic, and telex links with Paris. In 2003, there were an estimated two mainline telephones for every 1,000 people; about 1,200 people were on a waiting list for

telephone service installation. The same year, there were approximately 10 mobile phones in use for every 1,000 people.

Television broadcasting services are government owned and operated by Radio-Télévision Centrafrique. Television transmissions are available only in Bangui. Broadcasting is in Sango and French. In 2002, there were five FM and one AM radio stations along with one television station. Radio Centrafrique is operated by the state. Radio Notre Dame is held by the Roman Catholic church and Radio Ndeke Luka is backed by the United Nations. In 2003, there were an estimated 80 radios and 6 television sets for every 1,000 people. The same year, there were two personal computers for every 1,000 people and one of every 1,000 people had access to the Internet.

The nation's first daily newspaper, the government controlled *E Le Songo*, began publication in 1986. Its circulation in 1995 was 2,000. *The Centrafrique Presse*, was created by the government in 2001 to reflect the views of the ruling MLPC. *Echo de Centrafrique* is a private daily newspaper but seems to be linked to the ruling party. *Le Citoyen*, *Be Afrika*, and *Le Democrate* are the most widely read private newspapers; however, many private papers publish sporadically. The official news agency is Agence Centrafricaine de Presse. *The Agence Centrafricaine de Presse* (ACAP) bulletin appears sporadically.

The constitution provides for freedom of speech and of the press. In 2000, the president dissolved the High Broadcast Council, which had been created to regulate the media. However, the government still seems to control much media and its content.

### 46 ORGANIZATIONS

The Chamber of Agriculture, Livestock Raising, Water, Forests, Hunting, and Tourism and the Chamber of Commerce, Industry, Mines, and Handicrafts have their headquarters at Bangui. In rural areas, cooperatives promote the production and marketing of agricultural products. There are some national professional and trade associations, including a major teachers union called the National Union of Teachers and School and University Administrators of the Central African Republic (NUTSUACAR). The National Olympic and Sport Committee (CNOS) coordinates about eight national youth sports groupings. Youth scouting organizations are active and there are a few Catholic youth organizations as well. There are national chapters of the Red Cross Society, Caritas, Habitat for Humanity, UNICEF, and the Society of St. Vincent de Paul.

### 47 TOURISM, TRAVEL, AND RECREATION

Development of the tourism industry in the Central African Republic has been held back due to periods of political unrest since the country gained independence from France in 1960. The main tourist attractions are hunting, fishing, the many varieties of wild animals, and the waterfalls. Of special interest are the falls at Boali and Kembé, and the megaliths of Bouar. Ecotourism is popular in the southern Dzanga-Sangha National Park.

Visitors must have a valid passport and a visa. A certificate indicating vaccination against yellow fever is also required.

In 2005, the US Department of State estimated the cost of hotel, food, and other basic expenses in the Central African Republic at \$201 per day.

#### 48 FAMOUS CENTRAL AFRICANS

Barthélémy Boganda (1910–59), a dynamic leader of Central African nationalism, worked toward independence and attained virtually complete political power. The first president of the independent Central African Republic was David Dacko (1930–2003), who served from 1960 to 1966 and again from 1979 to 1981. Jean-Bédel Bokassa (1921–96) overthrew Dacko in 1966, proclaimed himself emperor in 1976, and was himself ousted by Dacko in 1979. Gen. André Kolingba (b.1936) seized power in 1981, and he served as president until he was defeated in the 1993 elections

by Ange-Felix Patassé (b.1937). Patassé served from 1993–2003, when he was deposed by rebel leader François Bozizé (b.1946).

#### 49 DEPENDENCIES

The Central African Republic has no territories or colonies.

# CHAD

Republic of Chad  
*République du Tchad*

**CAPITAL:** N'Djamena (formerly Fort-Lamy)

**FLAG:** The flag is a tricolor of blue, yellow, and red vertical stripes.

**ANTHEM:** *La Tchadienne* begins "Peuple Tchadien, debout et à l'ouvrage!" ("People of Chad, stand up and set to work!").

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00194 (or \$1 = CFA Fr516.5) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; National Holiday, 11 January; Labor Day, 1 May; African Independence Day, 25 May; Independence Day, 11 August; Assumption, 15 August; All Saints' Day, 1 November; Proclamation of the Republic, 28 November; Christmas, 25 December. Movable religious holidays include 'Id al-Fitr, 'Id al-'Adha, Milad an-Nabi, Easter Monday, Ascension, and Pentecost Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country situated in northern Central Africa, the Republic of Chad has an area of 1,284,000 sq km (495,755 sq mi), extending 1,765 km (1,097 mi) n-s and 1,030 km (640 mi) e-w. Comparatively, the area occupied by Chad is slightly more than three times the size of the state of California. It is bounded on the north by Libya, on the e by the Sudan, on the s by the Central African Republic, on the sw by Cameroon, and on the w by Nigeria and Niger, with a total boundary length of 5,968 km (3,708 mi).

The Aozou Strip of Chad, an area along the northern border of about 114,000 sq km (about 44,000 sq mi), was occupied and annexed by Libya in 1973. In February 1994, the International Court of Justice rejected Libya's claim to the territory. Armed clashes broke out in 1983 with Nigeria over several islands in Lake Chad that had emerged as the water level fell.

Chad's capital city, N'Djamena, is located in the southwestern part of the country.

## <sup>2</sup> TOPOGRAPHY

The country's most marked feature is Lake Chad, which is situated at the foot of a gently sloping plain, is surrounded by vast marshes and is fed chiefly by the Chari and Logone rivers. The surface area of the lake varies from about 9,842 to 25,641 sq km (3,800–9,900 sq mi). From this low point of 230 m (750 ft) above sea level, the land rises to a maximum of 3,415 m (11,204 ft) at Emi Koussi, an extinct volcanic peak in the Tibesti Mountains of northern Chad. The center of the country is primarily a shallow bowl known as the Bodélé Depression.

## <sup>3</sup> CLIMATE

The three chief climatic zones are the Saharan, with a wide range of temperatures between day and night; the Sahelian, a semidesert;

and the Sudanic, with relatively moderate temperatures. Extreme temperatures range from -12° to 50°C (10°–122°F); at N'Djamena the average daily maximums and minimums are 42°C (108°F) and 28°C (73°F) in April and 33°C (91°F) and 14°C (57°F) in December. The rains last from April (in the south) or July (farther north) through October. Average annual rainfall is about 76 cm (30 in) at N'Djamena. In the far south, it is as much as 122 cm (48 in), but at Faya-Largeau in the north, it averages only 2.5 cm (1 in). A severe drought affected two-thirds of the country from 1967 through 1973 and again in the early 1980s, especially 1984.

## <sup>4</sup> FLORA AND FAUNA

Animal and plant life correspond to the three climatic zones. In the Saharan region, the only flora is the date-palm groves of the oases. Palms and acacia trees grow in the Sahelian region. The southern, or Sudanic, zone consists of broad grasslands or prairies suitable for grazing. Elephants, lions, buffalo, hippopotamuses, rhinoceroses, giraffes, antelopes, leopards, cheetahs, hyenas, snakes, and a variety of birds are found in the savanna country. As of 2002, there were at least 134 species of mammals, 141 species of birds, and over 1,600 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

With two national parks, five game reserves, and two Ramsar Wetlands of International Importance, about 9% of Chad's natural areas are protected. The chief environmental problem is increasing desertification after a decade marked by below-normal rainfall and periodic droughts. Warring factions in Chad have damaged the environment and hampered the efforts of the government to address environmental problems for 25 years. Locust swarms periodically cause crop damage. The availability of fresh water is also a major problem. Safe drinking water is available to 40% of urban

dwellers and 32% of the rural population. About 82% of the nation's renewable water resources are used for farming activity.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 12 types of mammals, 5 species of birds, 1 type of reptile, and 15 species of plants. Endangered species in Chad include the black rhinoceros, Dallon's gerbil, and African wild ass. The Sahara oryx, also called the scimitar-horned oryx, is extinct in the wild. Elephant herds were reported greatly decimated in the 1970s.

## 6 POPULATION

The population of Chad in 2005 was estimated by the United Nations (UN) at 9,657,000, which placed it at number 82 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 48% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 16,979,000. The population density overall was 7 per sq km (19 per sq mi), but almost half of the area is desert, and almost half the population lives in the southwestern 10% of Chad.

The UN estimated that 24% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.71%. The capital city, N'Djamena, had a population of 797,000 in that year. Other cities and their estimated populations include Sahr (formerly Fort-Archambault), 193,800; Abéché, 187,900; and Moundou, 127,500.

## 7 MIGRATION

At least 200,000 Chadians fled the country during the civil war in 1979–81, mostly to Cameroon and Nigeria. About 150,000 returned in 1982. In 1983, up to 200,000 of the estimated 700,000 Chadians in Nigeria were expelled as part of a general expulsion of foreigners. Beginning in 1983, tens of thousands of Chadians fled from Libyan-controlled northern Chad and other areas of the country. The government of Chad reported that more than 152,000 Chadians returned home between November 1985, when a general amnesty was proclaimed, and the end of June 1987. As of 1995, there were 42,900 Chadian refugees in Cameroon; 21,500 in the Central African Republic; 2,000 in Niger; and 1,300 in Nigeria. A total of some 10,500 Chadian refugees were repatriated from the Central African Republic between April 1995 and September 1997, and from Niger between December 1997 and January 1999. The Chadian government, in agreement with the United Nations High Commissioner for Refugees (UNHCR), decided to facilitate the repatriation of another 55,000 Chadian refugees between 1999 and the end of 2000.

As of 2004, there were 260,064 asylum seekers, refugees, and others of concern to UNCHR living in Chad, of which 52,663 were refugees. Of the total migrant population, 88% were living in camps. In 2004, 39,261 Chadian refugees were in Cameroon and 5,023 were in Sudan. In that same year, countries of asylum for Chadians were Cameroon, the Central African Republic, and France. The net migration rate for 2005 was estimated as 0.11 per

1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The basic population of Chad derives from indigenous African groups, whose composition has been altered over the course of years through successive invasions from the Arabic north. The present population is a mixture of at least 200 ethnic groups.

The population can be broadly divided between those who follow the Islamic faith and the peoples of the south, by which is meant the five southernmost prefectures. The Arab invaders brought Islam, perhaps as early as the 8th century, and today their descendants form a relatively homogeneous group, localized in the regions of Chari Baguirmi and Ouaddai, but mostly seminomadic. Muslim indigenous groups include Arabs, Toubou, Hadjerai, Fulbe, Kotoko, Kanembou, Baguirmi, Boulala, Zaghawa, and Maba. Some indigenous groups, such as the Salamat and the Taoudjor, were largely Arabized by intermarriage over the years. Other Muslim peoples include the Fulani, the great sheep and goatherders of Chad.

Among the non-Muslim indigenous peoples, the most important (and the largest single group in Chad) are the Sara, about 30% of the population. They live in the valleys of the Chari and Logone rivers and are farmers of considerable skill. Others include the Ngambaye, Mbaye, Goulaye, Moundang, Moussei, and Massa.

There are about 150,000 nonindigenous inhabitants, of whom about 1,000 are French.

## 9 LANGUAGES

More than 120 languages and dialects are spoken by the different ethnic groups, but Arabic is commonly spoken in the north and Sara and Sango languages in the south. French and Arabic are the official languages.

## 10 RELIGIONS

As of 2004, about 54% of the people are Muslims, 33% are Christians, and the remainder are followers of indigenous religions or no religion. Most of the people of northern Chad are Muslims. Islam, brought both from Sudan and from northern Nigeria, spread through the area around Lake Chad long before the coming of Europeans. Protestant and Catholic missionaries have been in the territory only in this century. A majority of the nation's Muslims are of the mystical Tidjani sect (also known as Sufism). Some indigenous religious elements are also incorporated into this Muslim practice. About 5–10% of the nation's Muslims are considered fundamentalists. Most of the people of southern Chad are Christian, with a majority of Roman Catholics. Protestants tend to be affiliated with evangelical groups. Followers of two minority religions, the Baha'i and Jehovah's Witnesses, also have small communities in the country. Some people of the south, particularly those living in the valleys of the Chari and Logone rivers, follow African traditional religions. There are also small communities of Baha'is and Jehovah's Witnesses.

The constitution provides for freedom of religion, but this right has been restricted by the government in some situations. For instance, the Islamic group Faïd al-Djariahas has been banned because of religious customs that are considered to be non-Islamic. In 2002, the Catholic Church was formally admonished by the

LOCATION: 7°26' to 23° N; 13°28' to 2° E. BOUNDARY LENGTHS: Libya, 1,054 kilometers (655 miles); Sudan, 1,360 kilometers (845 miles); Central African Republic, 1,199 kilometers (745 miles); Cameroon, 1,047 kilometers (651 miles); Nigeria, 88 kilometers (55 miles); Niger, 1,175 kilometers (730 miles).

government for its sponsorship of a training program for election observers. The Minister of Territorial Administration claimed that the church was taking on the role of a political party, thus promoting an illegal combination of religion and politics. All religious organizations must be registered with the Department of Religious Affairs in the Ministry of the Interior. Though there is no state religion, a majority of the senior government officials are Muslim. Certain Muslim and Christian holidays are officially observed.

## 11 TRANSPORTATION

Chad suffers from poor transportation both within the country and to outside markets; its economic development depends on the expansion of transport facilities. During the rainy season, the roads become impassable and the economy slows down almost to a standstill. There are no railways.

In 2002 there were an estimated 33,400 km (20,754 mi) of roads, of which only 450 km (280 mi) were paved. In 1992 there were

about 8,720 passenger cars and 12,350 commercial vehicles in use, including trucks and buses. The main export routes are to the Nigerian railhead of Maiduguri and the Cameroonian railhead of Ngaoundéré. A bridge across the Chari, linking N'Djamena to Kousséri, Cameroon, was completed in 1985. In the same year, a us\$19.2 million loan for road rehabilitation was provided by the IDA.

Most rivers flow but intermittently. On the Chari, between N'Djamena and Lake Chad, transportation is possible all year round. In September and October, the Logone is navigable between N'Djamena and Moundou, and the Shari between N'Djamena and Sarh. Total waterways cover 4,800 km (3,000 mi), of which 2,000 km (1,250 mi) are navigable all year.

Chad had an estimated 50 airports in 2004, only 7 of which had paved runways as of 2005. Air Tchad (60% state owned) provides internal service to 12 locations but suffers from lack of fuel and equipment. The international airport at N'Djamena was damaged in fighting in 1981, but is now served by several international carriers including Air Afrique, which is partly owned by Chad. Another major airport, developed as a military staging area, is located at Sarh. In 2003, scheduled airlines in Chad carried about 46,000 passengers on domestic and international flights.

## <sup>12</sup>HISTORY

Fine prehistoric rock engravings and paintings can be found in northern Chad, dating from between 5000–2000 BC. In 2002, an international research team announced the discovery of the fossil remains of the earliest hominid on record. The six specimens, collected in Chad in 2001–2002 are the oldest hominid evidence, and are dated as between six and seven million years old.

As early as the 8th century AD, Arabs (Berbers) entered from the north and their records tell of the existence of great African empires—Kanem, Bornu, Baguirmi, and Ouaddai—between the 9th and 16th centuries. By the end of the 19th century, many small states south of Lake Chad became vassals of the northern sultanates, which conducted a flourishing slave trade.

Europeans began exploration of Chad in the 19th century. Chad was explored in part in 1822 by Dixon Denham and Hugh Clapperton, two British travelers. More detailed explorations were carried out by Heinrich Barth (1853) and Gustav Nachtigal (1870–71). In the decade after 1890, French expeditions gradually expanded French control of the lands to the south and east of Lake Chad. Completed conquest of the territory was achieved by 1913. The borders of Chad as they presently stand were secured by conventions between France and Germany (1894) and France and the United Kingdom (1898). In 1910, Gabon, Middle Congo, and Ubangi-Shari (which included Chad) were constituted administratively as colonies; together they formed French Equatorial Africa. Chad was separated in 1916 and became a colony in 1920.

On 26 August 1940, during World War II, French officials in Chad rallied to the Free French standard, making Chad the first colony to do so. N'Djamena, formerly Fort-Lamy, was an important Allied air base on the route to the Middle East, and from there Col. Philippe Leclerc's troops departed to fight in the North African campaign. After 1945, Chad became one of the territories of French Equatorial Africa in the French Union, and in the referendum of 28 September 1958 the territory of Chad voted to become an autonomous republic within the French Community. On

26 November 1958, the territorial assembly became a constituent assembly and proclaimed the autonomous Republic of Chad. On 11 August 1960, Chad achieved full independence, with François (later Ngarta) Tombalbaye as head of state and prime minister. On 4 April 1962, a new constitution was proclaimed, and a new government formed with Tombalbaye as president.

By 1965 power had been consolidated, and Chad was a one-party state. In 1965 there was full-scale rebellion in the Muslim north country, largely the result of Muslim resentment toward the Christian- and animist-oriented government in N'Djamena. Prominent in the rebellion was the National Liberation Front (Front de Libération Nationale—FROLINAT). In late 1968, President Tombalbaye requested and received the aid of French troops in combating the rebels. French troops were officially withdrawn from Chad in 1972 although technical advisers remained. In 1973, Libya, a major source of covert aid for the rebels, occupied and annexed the Aozou Strip in northern Chad.

On 13 April 1975, Tombalbaye's 15-year rule ended with an army coup and his assassination. Gen. Félix Malloum became the new president. Like his predecessor, Malloum was a Southerner whose rule was opposed by the Muslim north. In 1976, however, a faction led by Hissène Habré split with FROLINAT and eventually formed the Armed Forces of the North (Forces Armées du Nord—FAN). Goukouni Oueddei, a powerful leader from the north, with Libyan support, emerged as head of FROLINAT, but a FROLINAT advance south was stopped by additional French troops in 1978. In a government shuffle, Malloum named Habré prime minister in 1978, but the two broke in early 1979 as antagonism between Muslims and Southerners intensified. After Habré's FAN party seized control of the capital, Malloum resigned as president on 23 March 1979 and fled the country. In April Habré became defense minister and Oueddei interior minister in a coalition government, which in August was reconstituted with Oueddei as president. In November it became the interim Government of National Unity, representing 11 armed factions, with Oueddei remaining as president and Habré as minister of defense.

Fighting between FAN and government forces broke out in March 1980, and Habré was dismissed from the cabinet in April. France withdrew its forces from Chad in May, and the FAN occupied Faya-Largeau in June, as well as holding part of N'Djamena. By October, Libya had intervened on Oueddei's behalf, and, in December, an estimated 7,000 to 10,000 Libyan troops completed the conquest of Chad by occupying N'Djamena. Habré's forces fled to eastern Chad and the Sudan.

Libya's action and proposed union with Chad angered other African leaders and France; Oueddei himself may have become alarmed at the growth of Libyan influence. At Oueddei's request, Libyan troops withdrew in November 1981 and were replaced by a 3,600-man OAU peacekeeping force. These troops did nothing, however, to halt the FAN's subsequent advance from the east. On 7 June 1982, Habré's forces occupied the capital, and Oueddei fled to Algeria. Habré declared himself president of Chad on 19 October 1982.

By early 1983, Habré's dictatorial regime had extended its control to southern Chad, but was meeting increasing difficulties in the north. Ousted president Oueddei formed a rival government and, with a rebel army of about 3,000, captured the northern town of Faya-Largeau on 10 August 1983, with the support of Libyan

aircraft and artillery. Although Habré's regime was characterized by widespread atrocities, France and the United States supported his quest for power, seeing him as a bulwark against Libya's Muammar el-Qaddafi. As of early 1984, Chad was effectively partitioned, with a chain of French military posts stretching across the center of the country. To the south, the Habré regime was consolidating its position. France subsequently moved its defensive line 100 km (60 mi) to the north. Northern Chad, however, remained under the control of Libya and Oueddei's rebel forces, and there were growing fears that Libya was moving to annex the area.

A November 1984 agreement between France and Libya called for both countries to withdraw their forces from Chad, but although France complied, Libya reneged. French troops returned in 1985 to help repulse an enemy offensive. On 8 August, Aozou, and with it the entire disputed strip, fell to Chad, but a Libyan counteroffensive recaptured the settlement on 28 August. However, after a damaging Chadian raid on an air base within Libyan territory on 5 September, Libya agreed to a cease-fire, effective 11 September. During 1987 fighting, Chad captured us\$500 million to us\$1 billion worth of Libyan military equipment, most of it intact. US-supplied Stinger missiles allowed Habré's forces to neutralize Libya's air force. In 1987 Libya withdrew, and Hissène Habré was officially recognized as president of the whole of Chad.

The struggle for Chad took another twist in November 1990. After a three-week campaign by guerrillas loyal to an ex-army commander, Idriss Déby, Habré's dictatorship fell. Déby was supported by Libya and Sudan, but he also was backed by the United States, France, and Nigeria. A French force of 1,200 assisted Déby against pro-Habré rebels, who were eventually put down in 1993.

In May 1992, Déby appointed a new prime minister, Joseph Yodoyman, who formed a new cabinet that included several opposition figures. A democratization process was agreed upon, parties were legalized and, by the end of 1992, 28 parties had registered. In April 1992, Yodoyman stepped down. He died in November.

A Sovereign National Conference that lasted from January to April 1993 brought together a diverse group of government, economic, military, and special interest representatives. It confirmed Déby as Chief of State, established a new transitional government, elected 57 counselors to a Higher Transitional Council (a quasi-legislative body), and adopted the Transitional Charter, an interim constitution. This government was given a one-year mandate. Late in 1993, a technical commission of jurists was constituted, which began work on a new constitution, an electoral code, and a charter for political parties. In April 1994 Déby's mandate was extended by 12 months, and the work of the jurists was continued. Elections were scheduled for April 1995 but were postponed. The Transitional Council submitted a proposed constitution in 1994 calling for a directly elected president, a bicameral legislature, and a constitutional court.

Chad's long-standing territorial dispute with Libya over the Aozou Strip was taken up by the International Court of Justice in June 1993. On 3 February 1994, the Court rejected Libya's claim to Chadian territory. Libyan withdrawal was slow, but was fully completed by May 1994. French forces remained in the area despite Libyan protests. In December 1994 the government announced an amnesty for exiled opposition politicians and for political prisoners, excluding Habré. Opposition activity expanded afterwards, but Déby was accused of sponsoring harassment despite the am-

nesty. Opposition forces coalesced early in 1995, to form the Political Parties Concentration (CPP), which, joining with Western nations—notably France—began calling for changes in the administration of the Transitional Council. In March, ignoring such demands, the Transitional Council expanded its mandate to govern the country and removed the sitting prime minister. In August, the chairman of the Transitional Council resigned amid allegations of fiscal mismanagement. Later that month, the Council sponsored raids of opposition parties, and the government briefly detained a prominent opposition leader. Elections and the required constitutional referendum continued to be postponed.

In March 1996 the government signed a cease-fire agreement with 13 opposition parties for the constitutional referendum and following elections to take place. The agreement was brokered by Gabon in Franceville, with assistance from the Central African Republic and Niger. Though an election timetable was established and proceeded, numerous opposition groups, and particularly those who wished a federal governmental system rather than a unitary one, urged a boycott of the referendum polling. Despite these calls and opposition in the southern part of the country, 63.5% of the voters on 31 March 1996 agreed to adoption of the constitution.

The presidential elections could then proceed. The first round of voting took place on 2 June 1996 with Déby garnering 43.8% of the votes. The second round, held on 3 July was contested between Déby and Wadal Abdelkader Kamagoué, representing the URD (Union pour le renouveau et la démocratie), who had taken 12.4% of the voters in the first round. Déby was inaugurated as president on 8 August.

Legislative elections, though delayed again, took place in January and February 1997, with 658 candidates representing 49 political parties in polling for 125 national assembly seats.

Much of Déby's presidency since his 1996 inauguration has been engagement in negotiations or armed conflict with continuing dissident groups in the northern and southern regions of the country. Due to the desire to see the oil reserves from the Doba oil fields brought into production, his government has been particularly eager to bring a cessation to hostilities in the south, with mixed results. Outbreaks of violence continued to be reported in both the northern and southern regions, and in 1998, Youssouf Togoimi left the government and his position as Defense Minister to form the MDJT (Movement for Democracy and Justice in Chad), and organized an armed rebellion against the government.

The Chadian security forces continue to be charged with human rights violations by various internal and international rights organizations. In October 1996 Amnesty International also accused France of participating in these violations in Chad. Despite various disagreements over the years, France continues to see maintenance of an armed force in Chad as essential to securing its strategic position as a border state of Libya and Sudan. Déby's government also continues to be accused of harassing the opposition, including detentions, prosecutions, and jail terms. Chadian forces have taken part in the UN peacekeeping mission in the Central African Republic in 1998 and in the Democratic Republic of the Congo from September of that year.

In January 1998 Déby's government stated its intention of requesting extradition of Hissène Habré from Senegal in order to prosecute him for human rights abuses and embezzlement of gov-

ernment funds. In a separate approach toward Habré, the Chadian Truth Commission, which spent 15 months studying charges against the former president, has pressed for his criminal trial in Senegal, where he has lived in exile since his ouster in 1990. They are joined by several international human rights organizations. The Commission, in a 1992 report, estimated that Habré's forces killed 40,000 Chadians, most of the deaths being attributed to his National Security Service. Habré was indicted in 2000 on charges of torture and crimes against humanity, and placed under house arrest under the 1984 UN Convention Against Torture. However, in March 2001, Senegal ruled it did not have jurisdiction to try Habré in Senegal on torture charges during his tenure in power in Chad. On 18 August 2005, at the urge of Human Rights Watch, Prime Minister Pascal Yoadimnadjé announced in a letter that all remaining Habré-era officials accused of human rights violations and still holding key government positions would be released from service of the Chadian government while awaiting trial.

On 20 May 2001, Déby won reelection as president with 63% of the vote in an election determined by credible sources to have been marked by fraud and vote-rigging. Six of the candidates opposing Déby were detained for questioning by the police, but were released within an hour. Although results from 25% of the polling stations were cancelled due to irregularities, Déby's reelection was confirmed and he was sworn in August for a second five-year term. During the campaign, Déby promoted a us\$3.5 billion development project from southern Chad to the coast of Cameroon. Supported by an international consortium of companies with the ExxonMobil affiliate EssoChad serving as the primary operator. The Chad/Cameroon Development Project was the largest development project in the history of Chad; as many as 11,000 workers developed the Doba oil fields of southern Chad, and built a 1070-kilometer pipeline to transport the oil from land-locked Chad to the coast of Cameroon. Of the total investment, us\$2 billion of this was invested in Chad. Planned for a 25-year production phase, Chad began to export oil extracted from the Doba Basin in late 2003, adding an estimated us\$100 million to government revenues, an increase of approximately 40%. An estimated one billion barrels existed in oil reserves. The World Bank estimates that government income could increase annual government revenue from a minimum of us\$80 million to us\$100 million; Chad expects to receive between us\$2.5 billion and us\$5 billion in direct revenues from royalties, taxes, and dividends, depending on the price of oil over the Chadian oilfield's production period. Despite the increase in oil revenue, 80% of the population relies on agriculture and subsistence farming, herding, and fishing. Although the government committed 80% of its future oil revenues on health, education, rural development, infrastructure, environment, and water, according to the World Bank, the government of Chad distributed us\$67.7 million from oil revenues during 2004 for the priority poverty-reduction sectors, us\$4.2 million for the oil production region, and us\$12.7 million for the general budget.

In the first half of 2005, Chad netted us\$102.5 million in net revenues. Chad estimated its direct oil revenues for the whole year would reach us\$225 million.

In November 2001, relations between Chad and the Central African Republic (CAR) broke down when the CAR army chief of staff, François Bozizé, fled to Chad after being accused of involvement in a failed coup attempt. Chad and the CAR accused each

other of supporting dissidents in cross-border attacks. CAR President Ange-Félix Patassé claimed Chad was looking to annex part of the CAR's oil-rich north, as, according to Patassé, 85% of the rebels occupying the north and center of the country were Chadians. In March 2003, rebels overthrew President Ange-Félix Patassé, and approximately 400 Chadian troops were sent to help stabilize the situation and back the newly self-declared president, General Bozizé. The relations between the new CAR government and Chad have significantly warmed.

In January 2002, the Chadian government and Togoimi's MDJT reached a peace agreement, brokered by Libya. The accord provided for an immediate cease-fire, an amnesty for prisoners held by both sides, the integration of rebels into the national army, and government jobs for MDJT leaders. However, in May, fighting between the two forces broke out in the far north of the country, and 64 were killed. As of early 2003, skirmishing between government forces and the MDJT continued.

In January 2003, the government signed a peace agreement with the National Resistance Army (ANR), a rebel group operating in eastern Chad, near the border with Sudan and the Central African Republic. The accord provided for an immediate cease-fire and an amnesty for prisoners. The following December, a new peace agreement was signed with the northern rebels. Fighting between rebel groups, militias, and the government in the neighboring Darfur region of Sudan has driven upwards of 180,000 refugees into eastern Chad, as well as sparking clashes between these militias and Chad's military. Tensions also remained high along the Central African Republic and Libyan borders, especially due to increased CAR refugees, amounting to 52,000, from clashes between Central African rebels and the CAR.

Although Chad is peaceful in contrast to its neighbors, much of the money initially earned on the pipeline was reportedly used to buy arms, and the influx of refugees as well as the nearby political instability has contributed to the unease. Although the Chadian government attempted to broker a peace accord between the Sudanese government and the Darfur rebels in April 2004, the Chadian army itself clashed with the Janjaweed militia, and the conciliatory attitude the Chadian government has taken with the Sudanese government is thought to be partly responsible for the 2004 uprising in the capital.

Drought, locusts, and a cholera epidemic in western Chad, in addition to the influx in primarily women and children refugees, have also led to the general dissatisfaction of the 9.2 million people. Human rights criticism continued, fueled by such incidents as the imprisonment of a parliamentarian, and the brief censure of media organizations.

### 13 GOVERNMENT

According to the constitution of 1962, Chad was an indivisible, secular, democratic, and social republic with a president and National Assembly. One-party rule was established and presidential elections were held on 15 June 1969, the first by universal suffrage. An official announcement on 16 June stated that President Tombalbaye, being the only candidate, had been reelected for a further seven years by 93% of the voters.

The National Assembly was dissolved after the coup of 13 April 1975 that ousted Tombalbaye. A provisional constitution, which came into force 16 August 1975, was abolished on 23 March 1979,

when President Malloum fled. In October 1982, a National Consultative Council was formed with two representatives from each prefecture and two from N'Djamena. This body was to draft a new constitution by 1990, but it was replaced in the Déby coup on 1 December 1990.

The three-month-long national conference in early 1993 established a new transitional government with a 57-member higher transitional council (elected by the 254 conference delegates) and a transitional charter.

Work on a new draft constitution began near the end of 1993, and a provisional document was drafted and made public in 1994. The constitution, approved in a March 1996 referendum, mandates a directly elected president serving a five-year term, a bicameral legislature, and a constitutional court. The 1996 presidential election under this constitution returned Idriss Déby to the presidency, and 1997 legislative elections brought an absolute majority to Déby's MPS party, with three opposition parties sharing the remaining 62 seats. Déby was reelected in May 2001, and his MPS party won an overwhelming majority in the 21 April 2002 elections for the National Assembly. Elections for the National Assembly were scheduled for April 2006. Although the 1996 constitution provides for a bicameral legislative branch, only the National Assembly functions, as the Senate has not yet been created. Senate members are to serve six-year terms, with one-third of representatives renewable every two years. Members of the National Assembly are elected for four-year terms in 25 single-member and 34 multi-member constituencies (155 seats total). In May, 2004, after an uprising in the capital that the president claimed was intended to overthrow him, the National Assembly approved a constitutional amendment that ended the two-term limit on the presidency, allowing Déby to run for a third term in 2006, which he won. Pascal Yoadimnadjé was appointed prime minister on 3 February 2005.

#### **14 POLITICAL PARTIES**

Prior to independence, Chad was split politically. The Northerners, predominantly Muslim, were supporters of the Party of African Reunion (Parti de Regroupement Africain). The non-Muslim southern farmers were supporters of the Chad Progressive Party (Parti Progressiste Tchadien—PPT). In 1958, the Legislative Assembly of Chad was controlled by PPT members, who had a majority of 42 of the 65 seats. In the election of 31 May 1959, the PPT obtained 57 seats in the new Assembly, and François (later Ngar-ta) Tombalbaye of the PPT became prime minister. In February 1960, four smaller parties joined forces to form the opposition African National Party (Parti National Africain—PNA). In 1962, the PNA was dissolved, and Chad became a one-party state. In 1973, the name of the PPT was changed to the National Movement for Cultural and Social Revolution (Mouvement Nationale pour la Révolution Culturelle et Sociale—MNRCS). Following the 1975 coup, the MNRCS was banned, and the National Assembly was dissolved. As a consequence, all formal political activity ceased.

In 1984, Habré established the National Union for Independence and Revolution (Union Nationale pour l'Indépendance et la Révolution—UNIR), with a 14-member Executive Bureau headed by himself and an 80-member Central Committee. After the Déby coup, his Patriotic Salvation Movement (MPS) took over. Parties were legalized in 1992, and eventually 28 registered with the au-

thorities. These parties have continued to evolve, unite, disband, and reform.

The 1996 constitution provides for many political parties, with approximately 60 involved politically or culturally. In the 2002 elections, seven major parties were represented in the National Assembly. The Patriotic Salvation Movement (MPS) had 110 assembly seats, the Rally for Democracy and Progress (RDP); 12, Federation Action for the Republic; (FAR) 9, National Rally for Development and Progress; 5, Union for Renewal and Democracy (URD); 5, National Union for Democracy and Renewal (UNDR); 3, with the remaining 11 seats spread over a variety of other parties.

#### **15 LOCAL GOVERNMENT**

Chad is divided into 28 departments and 98 sub-prefectures, in addition to the city of N'Djamena. In many areas, the traditional chief still retains power as the head of his people.

#### **16 JUDICIAL SYSTEM**

Since the 1990 coup, the structure and functioning of the judicial system has been seriously disrupted. Because of the breakdown of law and order, as well as interference by the government and the military, the judiciary was unable to handle criminal cases. Many magistrates went on strike in 1993 to protest difficult working conditions and nonpayment of salaries.

Traditionally, the legal system was based on a combination of French civil law and Chadian customary law. The judicial system consisted of four criminal courts, four magistrate courts, four labor tribunals, 14 district courts (in major cities), 36 justices of the peace (in larger townships), and a court of appeal (the Appellate Court of N'Djamena). A Supreme Court was inaugurated in 1963 and abolished in 1975. A Court of State Security was established in 1976. Courts-martial, instituted early in the Déby regime to try security personnel, no longer operate and the remaining military magistrates sit as civilian judges on the N'Djamena Court of Appeals. In most rural areas where there is no access to these formal judicial institutions, sultans and chiefs preside over customary courts. Their decisions may be appealed to ordinary courts.

Under the transitional charter, the Appellate Court of N'Djamena was charged with responsibility for constitutional review as well as review of decisions of lower courts and criminal convictions involving potential sentences of over 20 years.

The 1996 constitution guarantees an independent judiciary. Though a Supreme Court has been created and a functioning judicial system exists, it is clear that there continues to be significant interference in its independence, as the president names most judicial officials. The Supreme Court consists of one chief justice, appointed by the president, and 15 councilors chosen by both the president and National Assembly, all lifetime appointments. A Constitutional Council made up of nine judges elected to nine-year terms has the power to review legislation, treaties, and international agreements prior to their adoption. In local contexts, customary and traditional law is recognized to the extent it does not interfere with national law or public order.

In 2000, the chief justice of the Supreme Court demoted two Supreme Court justices, reportedly because they made a decision which adversely affected the interests of the chief justice. A Superior Council of Magistrates is to act as a guarantor of judi-

cial independence, and in 2001, sanctioned several justices for malfeasance.

## 17 ARMED FORCES

In 2005, Chad's armed forces totaled 30,350 active personnel, with 25,000 in the Army, 350 in the Air Force, and the remainder in the Republican Guard. The gendarmerie and other paramilitary forces totaled about 4,500. The Army's equipment included 60 main battle tanks, over 174 reconnaissance vehicles, 29 armored personnel carriers and 5 pieces of artillery. The Air Force had two combat capable aircraft that were also used as training aircraft. About 950 French troops were based in Chad. The defense budget in 2005 totaled \$57.4 million.

## 18 INTERNATIONAL COOPERATION

Chad was admitted to UN membership on 20 September 1960 and is a member of ECA and several nonregional specialized agencies. It is also a member of the African Development Bank, the ACP Group, the Central African States Development Bank (BDEAC), the Monetary and Economic Community of Central Africa (CEMAC), the Organization of the Islamic Conference (OIC), G-77, the New Partnership for Africa's Development (NEPAD), and the African Union. Chad joined the WTO 19 October 1996. The nation is part of the Franc Zone and the Community of Sahel and Saharan States (CENSAD). Chad is part of the Nonaligned Movement and the Organization for the Prohibition of Chemical Weapons. Chad, Cameroon, the Central African Republic, Niger, and Nigeria are members of the Lake Chad Basin Commission, formed in 1964. Chad is also active in the Interstate Commission for the Fight Against the Drought in the Sahel. In other environmental cooperation efforts, Chad is part of the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Water-resource limitations are the critical factor influencing the Chadian economy. Much of the country is desert suitable only for very limited agriculture and livestock production, while the remainder is threatened by periodic drought. Petroleum and natron are the principal mineral resources. Key industry is centered on cotton processing. Periodic civil war has compounded Chad's chronic negative trade imbalance. It was estimated that the Chadian GDP grew by approximately 0.6% during 2000 and was forecast to grow considerably after oil from the Chad-Cameroon pipeline was expected to begin flowing in 2004.

Services was Chad's primary sector, accounting for 37.7% of GDP in 2005, but agriculture employs the majority of Chadians. Approximately 80% of the population engages in farming and livestock, accounting for 23.7% of the GDP in 2005. Sorghum, millet, and groundnuts are the principal food crops, while cassava, rice, dates, maize, and wheat augment domestic consumption. While most groundnut production is consumed locally or turned into oil, Chadian groundnuts also make their way to Central African markets. Chad also has a successful sugar production agro-industry. Cotton is a principal export commodity, but the sector suffered considerably from a variety of ills. The 75% state-owned cotton company was reorganized in 1986, but a steady decline in

international prices for cotton reduced foreign exchange earnings in the late 1980s. Cotton's share of total exports fell from 80% in 1990 to 40% in 1999.

Livestock production accounted for 12% of exports in 2000. Much of the industry is conducted following seasonal rain patterns and, as a result of the extended drought, is increasingly centered in the south.

In January 1994 France suddenly devalued the CFA franc, causing its value to drop in half overnight. Immediately, prices for almost all imported goods soared, including prices for food and essential drugs, like those to combat malaria. The devaluation, long expected in the investment community, was designed to encourage new investment, particularly in the oil sector, and discourage the use of hard currency reserves to buy products that could be grown domestically. In 1999, an American-led group (Exxon, Shell, and Elf) planned to produce 150,000 to 250,000 barrels of oil per day from fields in the Doba region in the south of Chad, from reserves estimated at one billion barrels. Smaller oil reserves north of Lake Chad were slated to be used by the government for power generation.

The rate of growth of the GDP has been impressive in previous years, jumping from 9.9% in 2001 and 2002, to 11.3% in 2003, and 29.7% in 2004; in 2005 it was expected to fall back to 6.0%. This impressive economic expansion can be attributed to the newly established oil exploitations in southern Chad. The inflation rate also registered a dramatic evolution, dropping from 12.4% in 2001, to -5.3% in 2004. However, a deflated currency poses problems to Chad's export economy and its competitiveness on world markets. In addition, Chad suffers from its landlocked position and high energy costs, and continues to be dependent on foreign aid for most private and public sector investment projects.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Chad's gross domestic product (GDP) was estimated at \$18.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,900. The annual growth rate of GDP was estimated at 14%. The average inflation rate in 2005 was 5.5%. It was estimated that in 2005 agriculture accounted for 23.7% of GDP, industry 38.6%, and services 37.7%.

Foreign aid receipts amounted to \$247 million or about \$29 per capita and accounted for approximately 10.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Chad totaled \$1.350 billion or about \$158 per capita based on a GDP of \$2.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.4%. It was estimated that in 2001 about 80% of the population had incomes below the poverty line.

## 21 LABOR

Over 80% of all Chadian workers are involved in subsistence agriculture, animal husbandry, or fishing. There is no data on the size of the nation's workforce or on its unemployment rate.

Although workers (except those in the armed forces) can form or join unions, authorization must be granted by the ministry of the interior. The right of collective bargaining is protected under the law, but the government can intervene under certain circumstances. The right to strike is also protected but in the public sector is limited by a decree that requires minimum services to be maintained. Over 90% of employees in the formal economy were unionized, excluding herders and subsistence cultivators.

Child labor in Chad is a problem. Although minors under the age of 18 are prohibited from working under circumstances that would impair the health, safety, or morals of a child, the means to enforce the law were lacking from the government. About one-fifth of all children between the ages of 6 and 18 worked in the informal economy in urban areas. Children were also employed throughout the country in the agricultural and herding sectors, as well as manual laborers, street vendors, and helpers in small shops in the country's urban centers.

The minimum wage of \$51 per month in 2005 was insufficient to support a worker and family. Most employment is limited to 39 hours per week, with overtime for additional hours. Agricultural workers are limited to an average of 46 hours per week. All workers are entitled to a consecutive 48 hours of rest each week. Although there are occupational safety and health standards, these are rarely followed in the private sector and are nonexistent in the civil service.

## 22 AGRICULTURE

Only 2.6% of Chad's land is cultivated. Agriculture engaged 80% of the active population in 2005, and accounted for 23.7% of GDP. Prolonged periodic droughts and civil war and political instability have cut agricultural production and necessitated food relief. Because of drought, annual cereal production can widely fluctuate. Chad's cereal yield during 2002–04 was 713 kg per person, up from 659 kg per person during 1992–94.

Since the 1960s, cotton crops have accounted for a high percentage of Chad's export earnings. Cotton growing began about 1929 and spread gradually throughout southern Chad. Production was 84,500 tons in 2004, still far below the high of 174,062 tons in 1975–76. Production is dominated by the parastatal Cotton-Tchad, which regulates output, operates the ginneries and cottonseed-oil works, and markets and exports both cotton and cottonseed. Chad's medium staple cotton is sold to 20 different countries; Germany, Portugal, and Japan are the principal customers. Although most cotton is exported, factories in Chad produce cottonseed oil for domestic consumption.

Production of peanuts has rapidly increased since the early 1990s, rising from an annual average of 164,000 tons during 1989–91 to an estimated 450,000 tons in 2004. Millet is the basic foodstuff (except in the Lake Chad area, where corn is the main cereal). Production of millet totaled 430,000 tons in 2004. Rice production was about 109,000 tons in 2004; corn production amounted to 120,000 tons that year. Other products, with 2004 production figures, include cassava, 325,000 tons; yams, 230,000 tons; and

sweet potatoes, 64,000 tons. Sugarcane production on a French-managed irrigated estate of about 3,000 hectares (7,400 acres) on the Shari River yielded 366,000 tons in 2004.

## 23 ANIMAL HUSBANDRY

About 36% of the total land area of Chad is given over to pastureland. In 2004 there were about 2.57 million sheep, 5.72 million goats, and 6.4 million head of cattle; more than 1.5 million cattle died during the 1984–85 drought. In 2004 there were about 735,000 camels, 388,000 asses, 273,000 horses, and 5,200,000 chickens. Actual totals may have been considerably higher because herders are reluctant to declare the extent of their herds and flocks, because all full-grown animals are subject to taxation.

Live cattle, sheep, and goats are exported, with considerable smuggling, to Nigeria. Also important are exports of meat, hides, and skins. In 2004, about 125,000 tons of meat were produced. Livestock is Chad's second most important export, after cotton.

## 24 FISHING

Fish, either fresh or dried, forms an important element in the diet of the people living in the major valleys. The catch from the Chari and Logone rivers and the Chad Basin was approximately 70,000 tons in 2003. Production is far below potential.

## 25 FORESTRY

Chad has wooded areas covering more than 25% of its land area but no real forests. The only exportable forest product is gum arabic, the yield of which has averaged 300 to 400 tons a year. Roundwood removals were estimated at 7 million cu m (247 million cu ft) in 2003, 89% for fuel. Acacia trees were extensively planted in 1978.

## 26 MINING

The mineral industry was poised to become a significant segment of Chad's economy as the Doba Basin petroleum project got under way. Exportation of crude oil began in 2004. Nonfuel mineral production in 2004 included: gold (150 kg); aggregate, sand and stone (300,000 metric tons); natron or soda ash (12,000 metric tons); and salt (9,000 metric tons). The country's undeveloped mineral resources included bauxite, columbium (niobium)-tantalum, diatomite, graphite, kaolin, quartz, soapstone, tin, thorium, tungsten, and uranium. There were also occurrences reported of chromite, copper, diamond, iron, lead, nickel, titanium, and zinc. The government actively encouraged foreign investment in the development of domestic hydrocarbons, but Chad's landlocked geography and lack of infrastructure and water remained impediments to development.

## 27 ENERGY AND POWER

Although Chad lacks coal, natural gas, and hydroelectric sources, the country does have crude oil reserves that as of 1 January 2004, have been placed at 900 million barrels, with production in 2003 at 36,000 barrels per day. Continental Oil Co., in association with Shell Oil, struck oil in the Kanem area, north of Lake Chad, in 1978, and wells briefly produced 1,500 barrels a day (about 80% of national consumption) before fighting disrupted the operation in 1980. An Exxon-led consortium drilled eight wells in the south during 1985–86. In 1988, interest in the region renewed, and in

November 1996 Exxon and the government of Chad signed an agreement outlining the development of oil reserves in the Doba basin. In July 2003 the first oil began to be pumped following the completion of the Chad-Cameroon pipeline, which was built with the aid of a \$93 million loan from the World Bank. A second project to develop oil fields in the Sedigi Basin (with reserves put at 150 million barrels) has been delayed. The problem arose after it was found that the pipeline to carry oil from the Sedigi Basin to a refinery and power plant in the capital of N'Djamena was of such poor quality that it could not be used.

All of Chad's power plants are thermal. The two at N'Djamena provide most of the national output. As of 2002, only around 2% of the households in Chad had access to electricity and the majority of the country's population must rely upon wood for fuel. Production of electricity rose from about 31 million kWh in 1968 to 92 million kWh in 2000, and 101 million kWh in 2002, all generated by fossil fuels. In 2002, consumption of electricity in Chad totaled 94 million kWh. Installed capacity in 2002 was 29,000 kW.

## 28 INDUSTRY

The industrial sector accounted for about 38.6% of GDP in 2005. Because it lacks power and adequate transportation, Chad is industrially one of the least developed countries in Africa. Cotton processing is the largest activity. Cottonseed oil is processed at Sarh and Moundou. Coton-Tchad, the state-owned company that produces and exports cotton, is the country's main manufacturing concern, and many of its subsidiary operations (including oil and soap) were being privatized in 2002.

Other enterprises include several modern slaughterhouses, a flour mill complex, a sugar refinery, and textile plants. There are also rice and peanut oil mills, a brewery, a soft-drink plant, a soap factory, and a cigarette factory. Factories at N'Djamena also produce bicycles and mopeds, radios, and perfume.

The construction sector was growing in 2002, with investment in roads and schools, among other public works projects. There was interest in building a cement factory in the Mayo Kebbi region in 2002, and plans to produce detergent and establish assembly plants for agricultural equipment. If electrical costs could be reduced, light industry could be further developed.

Oil exploration in Chad began in the 1970s in the northern Lake Chad Basin and the Doba Basin in southern Chad. Chad's full hydrocarbon potential has yet to be fully determined. The Chad-Cameroon oil pipeline, with estimated production at 225,000 barrels per day, was completed in 2003. There were plans in 2002 to build a refinery in N'Djamena, to make Chad self-sufficient in oil products. The development of Chad's petroleum sector is aimed in part at raising electricity output, which is crucial to Chadian industry. Only 2% of households in Chad are supplied with electricity.

The share of the industry in the GDP has dramatically increased to 35.6% in 2004, and was largely due to investment in the oil industry; agriculture accounted for 22.6% of the GDP, but was by far the largest employer; services came in first with a 41.7% share of the economy.

## 29 SCIENCE AND TECHNOLOGY

N'Djamena has an institute for cotton research, founded in 1939. The University of N'Djamena, founded in 1971, has faculties of

sciences and of medicine and health. In 1987–97, science and engineering students accounted for 14% of college and university enrollments. There is a national telecommunications school in Sarh. Most research in Chad is dependent on foreign scientists and technicians; however, many foreign personnel were evacuated during the fighting of the early 1980s.

## 30 DOMESTIC TRADE

As of 2002, more than 80% of the population was employed in agriculture, either in subsistence farming, herding or fishing. Most local produce is sold directly to consumers or to intermediaries and barter is common. Company agents and intermediaries buy export crops at local markets or directly from the producers for sale to large companies. Distribution is largely unstructured, except for a few international and local companies. Most sell through retail points. A large portion of produce is transported by animals and carts, but trucks operate as well.

The country's domestic economy continues to rely heavily on foreign investment from the European Union for both private and public sector concerns. Business hours are 7:30 AM–3:30 PM, Monday through Thursday, and 7:30 AM to 1:00 PM, on Friday. Commercial hours are generally from 7:30 AM to 12:30 PM and 4 PM to 8 PM. Offices are closed Friday afternoons during Muslim prayer time and on Sundays.

## 31 FOREIGN TRADE

Cotton is Chad's primary export, making the economy's trade balance vulnerable to fluctuations in world cotton prices and the rising competition of synthetic materials. In 2000, exports totaled \$172 million, and imports amounted to \$223 million. Cotton accounted for 50% of exports that year, with cattle exports contributing 35%. Exports of textiles and fish products accounted for most of the remaining 15%. Leading imports in 1998 were machinery and transportation equipment, industrial goods, petroleum products, foodstuffs, and textiles.

In 2004, exports reached \$365 million (FOB—free on board), while imports grew to \$501 million (FOB). The bulk of exports went to the United States (67.8%), China (21.5%), Portugal (4.3%), and South Korea (1.4%). Imports mainly came from France (21.9%), Cameroon (16.1%), the United States (10.8%), Portugal (10.4%), Germany (6.4%), and Belgium (4.6%).

## 32 BALANCE OF PAYMENTS

Normally Chad has a deficit in trade and services that is offset, or nearly offset, by foreign assistance, largely from France. France contributed over 30% of all international financial assistance to Chad between 1990 and 1996. Due to Chad's receipt of foreign aid, it was able to maintain a small budget surplus in 1998. Chad's current account deficits have ranged between 17% and 21% in recent years, figures deemed acceptable by international financial institutions for developing countries. Chad's levels of external debt have been moderate, and the country has in general met its repayment schedule.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Chad's exports was \$172 million while imports totaled \$223 million resulting in a trade deficit of \$51 million.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund (IMF) reported that in 1994 Chad had exports of goods totaling \$135 million and imports totaling \$212 million. The services credit totaled \$55 million and debit \$199 million.

Exports of goods and services reached \$2.3 billion in 2004, dramatically increasing from \$547 million in 2003. Imports grew from \$1.4 billion in 2003, to \$1.5 billion in 2004. The impressive performance of the exports sector can be attributed to the newly established oil exploitations in southern Chad. The resource balance was consequently negative in 2003, reaching -\$859 million, and positive in 2004, swelling at \$759 million. The account balance was negative in both years, however, improving from -\$1 billion in 2003, to -\$786 million in 2004. Foreign exchange reserves (including gold) grew to \$283 million in 2004, covering less than three months of imports.

**33 BANKING AND SECURITIES**

As of 1999 there were six banks in Chad, including Banque de Developpement Tchadienne (BDT), Banque Tchadienne de Credits et de Depots (BTCD), Banque Meridien BIAO Tchad (BMBT, privately owned), Financial Bank Tchad, Banque Commercial du Chari (BCC), and the Banque Agricole du Soudan au Tchad (BAST). Estimated assets of Chad's banking system were about \$100 million in 2002. Two major Chadian banks, BTCD and the BDT, were privatized in 1999. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$189.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$202.7 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There were no securities exchanges in Chad, but a financial market was planned between the member countries of the UDEAC

(Cameroon, Central African Republic, Chad, Congo/Brazzaville, Gabon, and Equatorial Guinea) to open by December 2000.

**34 INSURANCE**

In 1986, there were three local companies and about a dozen French companies providing insurance in Chad. The domestic insurance companies operating in 1999 included Societe Mutuelle d'Assurances des Cadres (SMAC), Faugere and Jutheau (les Assureurs Conseils Tchadiens), and Star Nationale.

**35 PUBLIC FINANCE**

Customs duties are the principal revenue source. Privatization of government-owned enterprises continues under IMF restructuring plans. The government spent an estimated 20% of GDP in 1999, and has made incremental progress with structural reforms since 1995.

The US Central Intelligence Agency (CIA) estimated that in 2005 Chad's central government took in revenues of approximately \$765.2 million and had expenditures of \$653.3 million. Revenues minus expenditures totaled approximately \$111.9 million. Total external debt was \$1.5 billion.

**36 TAXATION**

A graduated income tax is imposed on civil servants and others who are paid fixed salaries or who have sufficient income. A head tax is imposed on all other persons, the amount varying according to regional levels of prosperity. There is also a domestic turnover tax, and a corporate minimum tax. Further revenue is derived from business and professional licensing, from taxes on business transactions, real property, and profits, and from mining royalties.

In 1999, company taxes were 45% of corporate profit and 25% of rental properties income.

**37 CUSTOMS AND DUTIES**

Customs duties, which are ad valorem, range from 5% on essential items to 30% for less essential products, in addition to an 18% value-added tax (VAT) applicable to all but the most basic goods. There is an extra tax on luxury products of 20% and automobiles had an excise tax of 51%. There are no quotas and import licenses are no longer required. Prohibited imports include live animals, arms and munitions, pornography, narcotics, illicit drugs, and explosives.

**38 FOREIGN INVESTMENT**

Under the investment code issued in 1987, the government officially encouraged foreign private investment on two conditions: that the enterprise benefit the local population and that local materials be processed as far as possible. The code offers full foreign ownership to companies in Chad, except in national security or strategic industries. Benefits include preferential export duties and taxes, restrictions on the import of similar competitive products, preference in financial assistance from the Development Bank of Chad, and possible exemption from the sales tax and other fees and taxes for 15 years. The present government took over by coup after years of civil war in 1990 (and subsequently has won two elections in which international observers have charged fraud and intimidation).

tion) and political turmoil, compounded by Chad's environmental difficulties, has delayed significant foreign investments.

By far the most ambitious and innovative foreign investment project underway is the \$3.7 billion Chad-Cameroon Petroleum Development and Pipeline Project, which entails drilling about 300 oil wells in Chad's Doha fields (\$1.7 billion) and constructing a \$2.2 billion, 1,070-km (670-mile) pipeline to carry the oil across Cameroon and out into the Atlantic to a floating storage and loading facility for shipment to Europe and the United States.

The Chad-Cameroon pipeline is the largest energy infrastructure project in Africa and has taken decades to bring about. Though the first discovery well in the Doha field was drilled in 1974, it was not until 1994 that Houston-based ExxonMobil determined that at least one billion barrels of oil could be extracted, making investment profitable. Four years later a complex agreement had been reached between the oil companies consisting of ExxonMobil (operator with 40% of private equity), ChevronTexaco (25% of private equity), and Petronas of Malaysia (35% of private equity), with Elf and Shell dropping out in 1999, the World Bank and other international financial institutions, and the Chad government.

The World Bank's contribution amounts to only 2.7% (including loans to Chad and Cameroon to finance their government's share in the project), but the sign of its support was essential for the participation of the other investors. The pipeline project has World Bank backing on condition that there not be environmental damage and that the revenue be put into social welfare and development projects.

The government of Chad agreed to give up some of sovereign control by having project management and expenditure overseen by an independent nine-member oversight committee, with four members from outside institutions and five representing Chad's religious, political, and community institutions. Revenues will go first to an escrow account in London, then to two commercial banks in Chad where the oversight committee is to see that 80% goes to priority areas (education, health, housing, and rural infrastructure) and 10% to a savings fund for the future, with the rest distributed according to a formula devised by the committee.

For their part, the oil companies have been obliged to make over 60 changes in the proposed pipeline route to accommodate social and environmental concerns and to offer a "Sears catalogue" of items (bicycles, sewing machines, plows, community wells) as compensation to villagers along the route. The Clinton administration put an Export-Import Bank loan guarantee of \$158.1 million behind the pipeline and the Bush administration approved OPIC insurance up to \$250 million for Houston-based Pride International, which is drilling oil wells for the project. The pipeline was due to begin operations in late 2004. Chad is expected to derive about \$100 million a year in revenue from the sale of the oil from the three fields being developed, with a total of \$2.5 billion over the estimated 28-year life of the project. Even before revenues began to flow, however, President Idriss Déby, in early 2003, dismissed the head of the oversight committee because the official opposed with the president's plans to use the revenue on such items as prisons and automobiles.

Foreign direct investment (FDI) in Chad in 1995 was only \$7 million, or 0.6% of GDP, but from 1997 to 2000, the range was \$15 million to \$16 million. In 2001, FDI rose to \$80 million as con-

struction on the Chad-Cameroon pipeline got underway, eclipsing previous levels of foreign investment. Historically, Chad has depended upon FDI for over 50% of the capital in Chadian enterprises, the majority from France. Other sources of foreign investment include the United Kingdom, South Korea (gold mining), the Netherlands (MSI cellular telephone services), Egypt (Orascom cellular telephone services), Sudan (oil production and refining north of Lake Chad), and Libya (hotels and real estate investments).

The oil industry has dramatically increased the levels of capital inflows. Thus, in 2004, it is estimated that foreign direct investments grew to \$537 million, or 12.5% of the GDP. US companies dominate investments in the oil sector, but France continues to lead the field in most other sectors—cotton, sugar, electricity, water, construction, transportation, and other small industries.

### **39 ECONOMIC DEVELOPMENT**

Foremost among governmental objectives are the expansion and improvement of the transportation and telecommunications network, the expansion and diversification of agriculture, and the attainment of food self-sufficiency. These goals were far from being met in 2003, but a steadily increasing trade balance reflects a growing economy. Petroleum reserves promise future rewards.

Net loans and grants from international financial institutions and UN organizations in 1994 totaled \$109 million. Chad received a total of \$238 million in economic aid in 1995, including \$41 million from the World Bank, \$13 million in concessional aid from the African Development Bank, and \$6 million in concessional support from the International Monetary Fund (IMF). In 1997, Taiwan committed \$125 million, and \$30 million was given by the African Development Bank. Chad was \$1.1 billion in debt in 2000.

In 2000, Chad negotiated a \$48 million (subsequently augmented to \$62 million) Poverty Reduction and Growth Facility (PRGF) with the IMF, which was due to expire in December 2003. In 2001, the IMF announced Chad qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative. Chad began exporting oil in late 2003, and the country aims to use its oil revenue to alleviate poverty. CotonTchad, the cotton parastatal, was being privatized in 2002.

2003 and 2004 saw an explosive growth of the economy as a result of a booming oil sector. By 2005, this growth was expected to slow down however, as a result of diminished oil production levels, and an incapacity of the government to spend excess oil revenues on crucial public projects. Other sectors that are expected to perform well are cattle production and cotton, although predictions are more moderate for the latter. An area that poses major problems is energy production—energy prices in Chad are among the highest in the world and only a fraction of the population has access to electricity.

### **40 SOCIAL DEVELOPMENT**

Social services were introduced in Chad very slowly and have been largely disrupted by warfare. Salaried workers are entitled to old age, disability, and survivorship benefits. There are no statutory benefits for sickness, but there is a 50% maternity benefit for employed women. Employed persons are covered by a work injury law that is funded by employer contributions. Family allowances

are available for working parents, and there is a birth grant awarded for the first three births of the first marriage.

The position of women in Chad is a subordinate one. While property and inheritance laws do not discriminate against women, tradition and local custom favors men. Women generally receive less education than men, and do not have equal job opportunities. Rural women do most of the strenuous agricultural work in the fields, and girls are often married as young as 11 or 12. Female circumcision, also known as female genital mutilation, is widespread. Domestic violence and abuse are common, and women have limited recourse. Child labor continues to be a major problem.

The government's human rights record remains poor. A pattern of arbitrary violence continues, including arbitrary arrest and detention, torture, beatings, and other abuse. Prison conditions are life-threatening. The government continues to hold political prisoners, and restricts freedom of speech and religion.

#### 41 HEALTH

In 1987 Chad had 4 hospitals, 44 smaller health centers, 1 UNICEF clinic, and 239 other clinics—half under religious auspices. Many regional hospitals were damaged or destroyed in fighting, and health services barely existed in 1987. Public health care expenditures were estimated at 2.9% of GDP. As of 2004, it was estimated that there were fewer than 3 physicians, 15 nurses, and 2 midwives per 100,000 people.

All medicine, antibiotic, and vaccine imports must be authorized by the Ministry of Health. The most common diseases are schistosomiasis, leprosy, malaria, spinal meningitis, tuberculosis, and yaws, as well as malnutrition. Immunization rates in 1999 were very low for children up to one year of age: diphtheria, pertussis, and tetanus, 21%, and measles, 30%. In 2000, 27% of the population had access to safe drinking water and 29% had adequate sanitation.

Chad had a birth rate of 43 per 1,000 people in 1999. The infant mortality rate in 2005 was 93.13 per 1,000 live births. Maternal mortality has increased to one of the highest rates in Africa. Over 300 women died in childbirth or pregnancy per 100,000 live births. As of 2000, only 4% of married women (ages 15 to 49) used any form of contraception. In Chad, 60% of the women underwent female genital mutilation.

The average life expectancy in 2005 was estimated at 47.18 years. The HIV/AIDS prevalence was 4.80 per 100 adults in 2003. As of 2004, there were approximately 200,000 people living with HIV/AIDS in the country. There were an estimated 18,000 deaths from AIDS in 2003.

#### 42 HOUSING

Forty thousand buildings and homes were destroyed during the civil war. According to the latest available figures, the total housing stock numbered 700,000, with 7.2 people per dwelling. In 2000, about 27% of the population had access to improved water systems and only 29% had access to improved sanitation systems.

#### 43 EDUCATION

The educational system is patterned on France's, and the primary language of instruction is French. Arabic is used in some schools. Private schools of an exclusively religious character (such as the catechism classes of Christian missions and the Muslim schools)

receive no assistance from public funds, but the schools that conform to the officially prescribed educational programs are aided by government grants. Education is theoretically compulsory between ages 6 and 12. Primary education lasts for six years followed by either general secondary education, which lasts for another seven years, or technical and vocational secondary education, which last for six. The academic year runs from October to June.

Primary school enrollment in 2003 was estimated at about 61% of age-eligible students; 72% for boys and 49% for girls. The same year, secondary school enrollment was about 12% of age-eligible students; 17% for boys and 6% for girls. It is estimated that only about 25% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 71:1 in 2000. The ratio for secondary school was about 32:1.

The University of N'Djamena (est. 1971) is the only university in the country. The university has four faculties—exact and applied sciences; law, economics, and business administration; letters, languages, and human sciences; and medicine. There is a zoological and veterinary institute at Farcha, a national communications college in Sarh, and a national college of administration in N'Djamena. In 2000, about 6,000 students were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 25.5%, with 40.6% for men and 12.7% for women.

As of 2003, public expenditure on education was estimated at 2% of GDP.

#### 44 LIBRARIES AND MUSEUMS

Many of the libraries in Chad are the small private collections of research institutes in N'Djamena. The public library system includes a network of about 100 reading rooms. Among the largest are the Chadian National Institute for the Humane Sciences, with 3,200 volumes, and the Educational Documentation Center, with 3,300. Other notable libraries include the University of N'Djamena with about 12,000 volumes, the French Cultural Center in N'Djamena, with 12,000 volumes, and the United States Information Agency, also in N'Djamena, with 3,000 volumes.

The National Museum in N'Djamena was founded in 1962 and has an excellent collection on the natural history, archaeology, and ethnography of Chad. The Museum of Abéché, which was founded in 1962 and formally opened in 1984, features an ethnographical collection. Fort-Lamy houses the country's premiere historical and public affairs museum with exhibits chronicling its fight for independence.

#### 45 MEDIA

Postal and telephone service are under the direction of the Minister of Posts and Telecommunications. There are direct telephone connections between N'Djamena and Paris and several African capitals. In 2003, there were an estimated 2 mainline telephones for every 1,000 people. The same year, there were approximately 8 mobile phones in use for every 1,000 people.

The government-operated Radiodiffusion Nationale Tchadienne and Tele-Tchad have broadcasting stations in N'Djamena that broadcast in French, Arabic, and seven African languages. Other radio stations are privately owned. In 2002, there were 2 AM and 4 FM radio stations and 1 television station. In 2003, there were an estimated 233 radios and 2 television sets for every

1,000 people. The same year, there were 1.7 personal computers for every 1,000 people and 2 of every 1,000 people had access to the Internet.

The government press agency publishes the daily news bulletin *Info-Tchad* (circulation about 1,500 in 1999). Other publications include the weekly *N'Djamena Hehdo* (1999 circulation 9,500), and the monthly *Tchad Et Culture* (3,500).

The Constitution and Transitional Charter ensure freedom of speech and the press, and the government is said to respect these rights. The Higher Council on Communications (mandated by the CNS) promotes free access to the media.

#### 46 ORGANIZATIONS

The Chamber of Commerce, Agriculture, and Industry at N'Djamena has branches at Sarh, Moundou, Bol, and Abéché. In rural areas, cooperatives promote the production and marketing of agricultural products. Fishermen and artisans also maintain cooperatives. Self-help tribal societies have grown rapidly, particularly in the larger towns, where members of ethnic groups act together to assist newcomers and to maintain links with those remaining in traditional areas. The Student Association of the University of Chad (AEUT) is one of the largest student organizations affiliated with the National Union of Chadian Students and Pupils (UGEST). Church youth organizations are active, as are chapters of scouting and Girl Guide organizations. Sports organizations are active as well, including chapters of the Special Olympics.

The three primary human rights groups within the country are the Chadian Association for the Promotion of Human Rights, The Association for the Promotion of Fundamental Liberties in Chad, and the Chadian Human Rights League. There are national chapters of the Red Cross Society, Caritas, and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

Chad, a developing country, has gone through years of war and famine leaving its tourism industry very limited. Most visitors are attracted to the Zakouma National Park.

Visitors must have valid passports and visas. Visitors must check in with the National Police within 72 hours of arrival and obtain a registration stamp. Vaccination for yellow fever is recommended. There were approximately 20,960 tourist arrivals in Chad

in 2003, a decrease from 2002 by 35%. This decline may be attributed to ongoing rebellion and civil unrest. The country had 802 hotel rooms with 1,274 beds in 2002.

In 2005, the US Department of State estimated the daily cost of staying in N'Djamena at \$254. Daily expenses, estimated at \$70 in smaller towns, were significantly lower.

#### 48 FAMOUS CHADIANS

Ngarta Tombalbaye (1918–75) was the first president of the independent Republic of Chad. Gen. Félix Malloum (b.1932) became chief of state after the 1975 coup, but was ousted in 1979. Goukouni Oueddei (b.1944) served (1979–82) as president and subsequently led a Libyan-backed rival government in northern Chad. Hissène Habré (b.1942), a Muslim military leader, seized the capital in 1982 and became president. Idriss Déby (b.1952) seized power in 1990 after a French-supported invasion from Sudan.

#### 49 DEPENDENCIES

Chad has no territories or colonies.

# COMOROS

Federal Islamic Republic of the Comoros  
*République Fédérale Islamique des Comores;*  
*Jumhuriyat al-Qumur al-Ittihadiyah al-Islamiyah*

**CAPITAL:** Moroni

**FLAG:** Four equal horizontal bands of yellow (top), white, red, and blue with a green isosceles triangle based on the hoist; centered within the triangle is a white crescent with the convex side facing the hoist and four white, five-pointed stars placed vertically in a line between the points of the crescent.

**ANTHEM:** No information available.

**MONETARY UNIT:** The Comorian franc (Co Fr) is the equivalent of the Communauté Financière Africaine franc (CFA Fr), which has been pegged to the euro since January 1999 at a rate of 655.957 CFA francs to 1 euro. The Comorian franc is issued in notes of 500, 1,000, and 5,000 Co Fr. Co Fr1 = \$0.00252 (or \$1 = Co Fr396.21) as of 2004.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Second Coup d'État, 13 May; Independence Day, 6 July; Admission to UN, 12 November; Christmas Day, 25 December. The principal Muslim holidays are observed.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The Comoros are located at the northern entrance of the Mozambique Channel, between the eastern shore of the African continent and the island of Madagascar, which lies about 480 km (300 mi) to the SE. Comparatively, the area occupied by the Comoros Islands is slightly more than 12 times the size of Washington, DC. The islands have a combined area of 2,170 sq km (838 sq mi), of which Grande Comore (Njazidja), the largest and northernmost island, comprises 1,148 sq km (443 sq mi); Mohéli (Mwali), lying to the S of Grande Comore, 290 sq km (112 sq mi); and Anjouan (Nzwani) to the E of Mohéli, 424 sq km (164 sq mi). There are also several small islands. The Comoros extend about 180 km (110 mi) ESE–WNW and 100 km (62 mi) NNE–SSW, with a total coastline of 340 km (211 mi). Mayotte, the fourth major island in the Comoros Archipelago, covering an area of 374 sq km (144 sq mi), is claimed by the Comoros but remains under French territorial administration. The capital city Moroni, is located at the western edge of the island of Grande Comore.

## <sup>2</sup> TOPOGRAPHY

The islands are volcanic in origin and their highest peak, Mt. Kartala at 2,360 meters (7,743 feet), is an active volcano located near the southern tip of the island of Grande Comore. In the center of Grande Comore lies a desert lava field. To the north, a number of volcanic peaks rise from a plateau nearly 600 meters (2,000 feet) in altitude. The island of Anjouan, to the southeast, has steep hills reaching heights of nearly 1,500 meters (5,000 feet) in a central volcanic massif. Mohéli, to the west of Anjouan, has wide and fertile valleys, with a ridge in the center that reaches about 580 me-

ters (1,900 feet) above sea level, and a thick forest cover. The lowest point is at sea level (Indian Ocean).

## <sup>3</sup> CLIMATE

The climate in the Comoros is humid and tropical, with coastal temperatures averaging about 28°C (82°F) in March and 23°C (73°F) in August. The monsoon season lasts from December to April. Rainfall in January averages 42 cm (16.5 in), and in October, the driest month, 8.5 cm (3.3 in). Cyclones and tidal waves are frequent in the summer.

## <sup>4</sup> FLORA AND FAUNA

The rich volcanic soils on the islands foster the growth of a profuse vegetation. Beyond the coastal zones, where mangroves predominate, there are coconut palms, mangoes, and bananas, and above them is a forest zone, with many varieties of tropical hardwoods. Broom, lichens, and heather grow on the highest peaks. The animal life is similar to that found on Madagascar. Comorian waters harbor the coelacanth, a rare primitive fish once thought to have been extinct for 70 million years. Fossil remains of the coelacanth dating back 400 million years have been found.

## <sup>5</sup> ENVIRONMENT

Although Mohéli has large tracts of fertile land not yet cultivated, parts of Anjouan are so densely populated that farmers have been forced to extend cultivation to the higher slopes, leading to deforestation and soil erosion, especially when crops are cultivated on slopes without adequate terracing. Population growth has also increased the demand for firewood, threatening the remaining forest areas. Soil erosion is aggravated by lack of terracing. Comoros has about 0.2 cu mi of water, of which 47% is used for agricultural

purposes, 48% is used in urban centers and for domestic purposes, and 5% is used in industry.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 2 types of mammals, 10 species of birds, 2 types of reptiles, 4 species of fish, 4 species of other invertebrates, and 5 species of plants. Endangered species in the Comoros include the Anjouan sparrow hawk and Anjouan scops owl.

## 6 POPULATION

The population of Comoros in 2005 was estimated by the United Nations (UN) at 671,000, which placed it at number 159 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.0%, a rate the government viewed as too high. Government programs to address population growth succeeded in increasing the use of contraception from 11.4% in 1996 to 19.3% in 2001. The projected population for the year 2025 was 1,127,000. The population density was 301 per sq km (779 per sq mi). Grande Comore, the largest island, has the largest populace, followed by Anjouan and then Mohéli.

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.36%. The capital city, Moroni, had a population of 53,000 in that year.

## 7 MIGRATION

About 40,000 Comorians live in France and 25,000 in Madagascar. About 16,000 were expelled from Madagascar in 1977–78, following a massacre there of Comorians in December 1976. In 2000, there were 18,000 migrants living in Comoros. For 2003 it was estimated that 25–30% of the population lived outside the country. In 2003, an estimated \$36.4 million in remittances, approximately 12% of GDP, flowed to Comoros. These remittances amounted to about \$50 per Comorian. The net migration rate in 2005 was estimated as zero per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The islands' indigenous population consists almost entirely of persons of mixed African, Malagasy, Malay, and Arab descent. Ethnic groups include the Antalote, Cafre, Makoa, Oimatsaha, and Sakalava. Small numbers of Indians, Malagasy, and Europeans play an important part in the economy.

## 9 LANGUAGES

French and Arabic are the official languages. The main spoken language, Shaafi Islam (Shikomoro or Comoran), is akin to Swahili but has elements borrowed from Arabic. Other languages spo-

ken include French, Malagasy, Swahili, Arabic, and Makua (an African language).

## 10 RELIGIONS

Islam is followed by about 99% of Comorians, almost all of whom are Sunni Muslims. Fewer than 400 citizens—approximately 1% of the population—are Christian, all of whom reportedly converted to Christianity within the last half of the 1990s. Small groups of foreigners are Hindus or Christians.

Following a 1999 military coup, the May 2000 constitution did not allow for freedom of religion. The December 2001 constitution does provide for this freedom, however, it also makes Islam the state religion and the government tends to discourage the practice of other faiths. The practice of Christianity is particularly restricted. There are two Roman Catholic churches and one Protestant church. Since before the 1999 coup, the government has restricted the use of these churches to noncitizens only. Harassment and social discrimination of Christians is widespread. Proselytizing of Christianity is prohibited. The Grand Mufti, who is nominated by the president to serve in the Ministry of Islamic Affairs, serves as the government counsel on Islamic faith and law.

## 11 TRANSPORTATION

Each island has a ringed road, and there were some 880 km (547 mi) of roads in 2002, with 673 km (418 mi) paved. There is an international airport at Hahaia, on Grande Comore; other islands have smaller airfields. There were a total of four airports, all with paved runways, in 2004. Air Comores (51% owned by Air France) provides regular interisland flights. Air France and Air Madagascar provide service to Madagascar; Air Mauritius provides service to Mauritius; and South African Airways makes a weekly stop. In 1997 (the latest year for which data was available), 83,000 passengers traveled on international and domestic flights. As of 2005, Comoros' merchant marine totaled 79 ships of 1,000 GRT or over, totaling 452,801 GRT. There is a year-round port at Dzaoudzi, off the island of Mayotte. Until recently, the other ports, at Moroni and Mutsamudu, could accommodate only small ships. Larger vessels had to anchor offshore and be loaded and unloaded by *dhows*. Expansion of the port of Mutsamudu to allow direct access to Anjouan was completed in 1985.

## 12 HISTORY

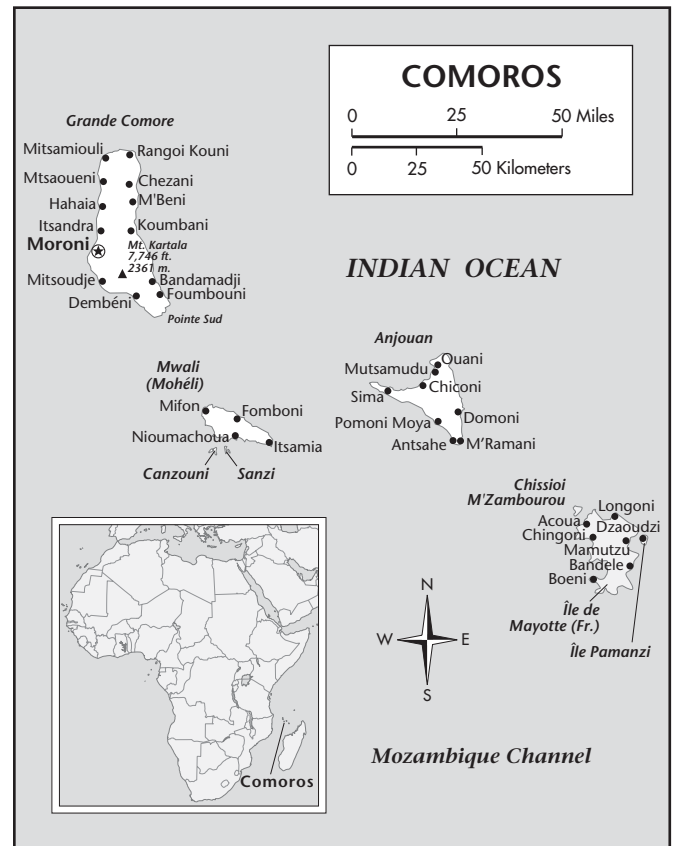

The Comoros are an archipelago of four small Indian Ocean islands that lie between East Africa and the northwestern coast of Madagascar. The four islands are called Ngazidja (formerly Grande-Comore), Nzwani (formerly Anjouan), Mwali (formerly Moheli), and Mayotte. In all likelihood they were visited in antiquity by Phoenician sailors. The first settlers were probably Melanesian and Polynesian peoples, who came to the Comoros by the 6th century AD; later immigrants arrived from East Africa, Arab lands, Indonesia, Persia, and Madagascar. The Portuguese discovered the islands in about 1503, and Frenchmen first landed in 1517. The Englishman James Lancaster visited the islands toward the end of the 16th century; at that time, and for many years afterward, Arab influence predominated over that of Europeans. Malagasy invasions also took place in the 16th century. In 1843, a Malagasy who ruled over Mayotte ceded the island to France, and in 1865, a Malagasy ruler of Mohéli signed a friendship treaty with

France. A French protectorate was placed over Anjouan, Grande Comore, and Mohéli in 1886, and in 1908 the islands were joined administratively with French-ruled Madagascar. In World War II, the islands were occupied by a British force and turned over to the Free French. The Comoros were granted administrative autonomy within the Republic of France on 9 May 1946, acquiring overseas territorial status, and on 22 December 1961 achieved internal autonomy under special statute. This status was amended on 3 January 1968 to give the territory greater internal autonomy.

On 11 December 1958, the Territorial Assembly voted to remain in the Republic, but the cause of independence, championed by the Comoro National Liberation Movement, based in Tanzania, was eventually embraced by the ruling coalition on the islands. An agreement for independence within five years was signed in Paris on 15 June 1973, and in a referendum held on 22 December 1974, a large majority on all islands except Mayotte voted in favor of independence. The vote was ratified by the French parliament, which decided that each island should vote separately on a new constitution. On 6 July 1975, nevertheless, the Comoros legislature unilaterally declared independence for all the islands, including Mayotte. The French government, rejecting the Comorian claim to Mayotte, ordered a separate referendum for the island. As preparations were made for the 1976 referendum, relations between France and the Comoros deteriorated. The Comorian government nationalized all French administrative property and expelled French officials. With strained French-Comorian relations as the backdrop, Mayotte voted on 7 February 1976 to remain part of France. The UN General Assembly, however, backed the Comorian claim to Mayotte in 1976 and 1979 resolutions.

Considerable domestic turmoil accompanied the birth of the new nation. The first Comorian government took power on 6 July 1975 and was led by Ahmed 'Abdallah. It unilaterally declared independence from France and was overthrown within a month on 3 August 1975 with the aid of foreign white mercenaries. A National Executive Council led by Prince Said Mohammed Jaffar was created. Jaffar was the leader of a group that favored a more conciliatory policy toward Mayotte and France. In January 1976 he was replaced by 'Ali Soilih who led a military coup that toppled Jaffar a year earlier. In 1977 Soilih's government changed the French names of the four islands (Grande-Comore, Mohéli, Mayotte, and Anjouan) to Ngazidja, Mwali, Mahore, and Nzwani. Four unsuccessful coup attempts were launched during Soilih's rule. However, on 13 May 1978, Soilih was overthrown and killed by mercenaries led by Bob Denard, whose previous exploits in Zaire and elsewhere made him infamous throughout Africa. Denard reinstated the nation's first president, Ahmad 'Abdallah, who had been living in exile in Paris. Denard remained the true power behind 'Abdallah. Their government was close to right-wing elements in France and to South Africa, where the Comoros served as a conduit for supplies to the Renamo rebels in Mozambique. Soon after the coup, France agreed to restore economic and military aid, which had been suspended during the Soilih regime. Most African countries were, however, unhappy with the role of mercenaries in toppling the Soilih government and the Comoros were expelled from the OAU (Organization of African Unity).

In September 1978, Denard and his mercenaries were asked to leave the Comoros due to the international stigma their presence caused the island nation. This was a façade, as Denard remained

LOCATION: 43°1' N to 44°32' E; 11°21' W to 12°25' S.  
TERRITORIAL SEA LIMIT: 12 miles.

the true power on the islands; however, the ruse did succeed in getting the Comoros back into the OAU. A new constitution was approved on 1 October 1978 by 99.31% of the voters. The new constitution created a Federal Islamic Republic in which each island was granted increased autonomy. On 22 October, 'Abdallah, the only candidate, was elected president with a reported 99.94% of the valid votes.

Chronic economic problems were worsened in January 1983 by tropical cyclone Elena, the worst in 30 years. The damage was estimated at Co Fr200 million; up to 80% of the crop was damaged.

'Abdallah was reelected unopposed with 99.4% of the vote in September 1984. There were coup attempts in 1985 and 1987. Elections to the Federal Assembly were held in March 1987. By 1989, however, resentment for the overbearing influence of Denard and his men grew. Even 'Abdallah grew disenchanted and, with the backing of France and South Africa, he moved to displace Denard's mercenaries. Before this could be implemented, however, on 26 November 1989 a member of the Presidential Guard (many suspect Denard) assassinated 'Abdallah. This unit included European mercenaries and was under the command of Denard.

Said Mohamed Djohar, head of the Supreme Court, was appointed interim president pending a presidential election. With the help of Paris and Pretoria, on 15 December 1989, he forced Denard to relinquish power in exchange for safe passage to South Africa.

In January 1990, demonstrators protested the postponement of the presidential election that was scheduled for February. A French peacekeeping force enabled the government to lift political restrictions and conduct the presidential election as originally scheduled. The election was held on 18 February, but it was abandoned following allegations of fraud. On 4 March, fresh elections were held in which no single candidate for the president received a majority of the votes. In a run-off election held one week later, Djohar won with 55% of the vote to the UNDC's (Union Nationale pour la Democratie aux Comores) Mohammed Taki Abdulkarim's 44%. In March, Djohar appointed a government that included two of his opponents in the previous presidential election. Prince Said Ali Kemal, a lawyer and grandson of the last Sultan of Comoros was one of the former presidential hopefuls who was made part of the coalition government. Djohar's coalition government survived three coup attempts and several ministerial defections. One coup attempt was launched on August 1990, by army rebels with help from European mercenaries. Another coup was attempted a year later and involved the president of the Supreme Court Ibrahim Ahmed Halidi, who announced that he was dismissing President Djohar and assuming the role of president. The bloodless coup received support from opposition parties who saw Djohar as corrupt and viewed the presidency itself as being vested with too much power. The coup was thwarted, however, and Djohar responded by ordering the arrest of several supreme court members, including Halidi, and imposing a month-long state of emergency. Djohar pledged to seek constitutional reforms and reshuffled his cabinet, bringing in disgruntled opposition members.

In January 1992, amid continued unrest, a new transitional government of national union was installed, as constitutional reforms were debated and prepared for referendum. A new constitution was voted on in June and was passed overwhelmingly. However, allegations of corruption against Djohar's son-in-law, Mohamed M'Changama, Minister of Finance, plagued the regime. Amid heightened political unrest and a deteriorating economic situation, elections for the Federal Assembly produced a badly divided polity (the largest party had 7 of the 42 seats) and no consensus with the president on his choice of ministers could be reached. On 18 June 1992, Djohar dissolved the National Assembly, and legislative elections were held in December 1993 after long delays.

Supporters of Djohar won 24 of the 42 seats in the Assembly, but members of the opposition rejected Djohar's appointment of Mohamed Abdou Madi as prime minister and the choice of Djohar's son-in-law as president of the Assembly. Demonstrations against Djohar's authoritarian posture became frequent. A public sector strike began in April 1994 and grew quite acrimonious, and lasted until January 1995. Civil order continued to deteriorate as 1995 provincial elections were repeatedly postponed and as government after government collapsed. Djohar, however, remained in power, and his son and son-in-law held various ministerial posts.

By September 1995 conditions had deteriorated badly, and Bob Denard, from exile, staged a coup that resulted in the arrest of President Djohar. Denard appointed a close associate, Capt. Ayouba Combo, as the leader of a provisional government called the Transitional Military Committee. The Transitional Military Committee released political prisoners and in October transferred authority to two civilians, Mohammed Taki and Said Ali Kemal. Although France was no friend of Djohar, it was less enthusiastic

about Denard's action and landed 1,000 troops to oust the coup leaders. In presidential elections held on 6 March 1996 and a run-off on 16 March, Mohammed Taki Abdulkarim won with 64% of the vote. Legislative elections on 1 and 8 December of that year resulted in an Assembly situated as follows: National Rally for Democracy, 36; National Front for Justice, 3; independents, 4.

In July 1997, security forces killed two people after separatists on Nzwani raised the French flag, blocked roads, and engaged in demonstrations demanding a return of French rule. Unrest quickly spread throughout Nzwani and Mwali. On 3 August 1997, separatists on the island of Anjouan (Nzwani) declared independence from the central government and were soon joined by the island of Mwali. In early September 1997, President Taki dispatched the army in an unsuccessful attempt to reunify the islands. Hoping to find a peaceful solution to the situation, the OAU intervened in favor of a negotiated settlement. In October, despite the objections of the Taki's government, a referendum was held on Nzwani in which 99% of those voting supported independence. France, for its part, rejected demands by the islands to reestablish its sovereignty.

In November 1998, President Mohammed Taki died shortly after returning from a trip to Turkey and Spain. Interim president Ben Said Massoude took power in Ngazidja (Grande Comore). A month later, a reported assassination attempt on Nzwani (Anjouan) island leader Foundi Abdullah Ibrahim led to heavy fighting in the island. At least 60 people were reported killed. The assassination attempt and fighting was thought to have been instigated by Chamasse Said Omar, a political opponent of Ibrahim who was upset that the Nzwani leader wanted to negotiate a new relationship with the government of Ngazidja.

On 30 April 1999, interim president Massoude was toppled in a bloodless coup, and was replaced by Col. Azali Assoumani on 6 May 1999. The coup was triggered by unresolved issues in the negotiations with the separatist islands that would have given them greater autonomy within a political union of the three islands. The autonomy proposal, which caused widespread resentment on Ngazidja, erupted in rioting in which residents from the other islands were targeted and blamed for the harsh economic conditions on the main island. As the secession stalemate continued, the government announced on 21 March 2000 that it had foiled the country's 19th coup attempt since independence while Assoumani was in Saudi Arabia. Among the suspected plotters were two sons of the assassinated first President Ahmed 'Abdallah.

Assoumani pledged to resolve the secessionist crisis through a confederal arrangement named the 2000 Fomboni Accord. In December 2001, voters approved a new constitution, and Assoumani resigned his post on 16 January 2002 to run for president in the 14 April 2002 elections. In a poll boycotted by the other two candidates, he was elected with 75% of the vote and was sworn in 26 May 2002. In the interregnum, his prime minister, Jamada Madi Bolero, was appointed interim president and Djaffar Salim the interim deputy prime minister.

Following the election, the confederal arrangement went into effect, and the three islands of Moheli, Anjouan, and Grande Comore assumed authority over most of their own affairs. However, power struggles continued over the authority of certain ministries, and in February 2003 the central government arrested a dozen soldiers and two local ministers in connection with an al-

leged coup attempt. The accused were said to be linked closely to the island government of Grande Comore. In April, traders organized a strike on Grande Comore to protest double taxation by the island and union governments.

President Assoumani's woes continued to mount in 2004 as the three island presidents and their supporters joined forces against the president's Convention pour le renouveau des Comores (CRC) party in the legislative elections. The results of this poll showed that the CRC had only a weak following, winning just 11 of 55 seats in the island parliaments, and 6 of the 18 seats up for reelection in the federal assembly. Col. Assoumani attempted to regain his posture by naming all members of his cabinet from the loyal ranks of his CRC party. In 2005, the country was wracked by demonstrations over a 40% increase in gasoline prices. At least one person was killed and 15 injured in the protests.

As 2006 unfolded, Comoros was scheduled to hold fresh elections for the Union presidency in April, which was due to move to Anjouan according to the rules in the 2000 Fomboni Accord. Nevertheless, widespread doubts that Assoumani actually would hand over power as required raised the specter of civil unrest and violence throughout the islands. Indeed, there was speculation that Assoumani might provoke incidents so as to destabilize Anjouan giving him a pretext to delay handing over power. One additional complication was that some Assoumani supporters claimed that the president's term began not in 2002 when he became Union president, but rather in 2004 after the transition to the federal system had been completed.

The National Assembly passed electoral legislation in September 2005 placing administration of the elections under the control of the Constitutional Court, which had been quite independent in other matters. Further, some 200,000 Comorians living abroad were given the right to vote in diplomatic missions abroad. Finally, South Africa, which has a stake in Comoros' stability, sent a delegation to the islands to assess elections preparedness for the AU's Peace and Security Committee.

On another front, a French court was planning to try Bob De-nard and 26 others for their coup attempt in the islands in 1995. If convicted, they face up to ten years in prison.

### **13 GOVERNMENT**

Immediately prior to independence, the Comoros had partial autonomy and were governed by a 31-member Council of Ministers responsible to a Chamber of Deputies. The territory was represented in the French parliament by one senator and by two delegates to the National Assembly. A high commissioner represented the French president. After independence was declared, the Chamber of Deputies was reconstituted as a National Assembly. After the August 1975 coup, the National Assembly was abolished; supreme power was subsequently vested in the National Council of the Institutions, headed by President 'Ali Soilih.

The constitution of 1978, the first for the Comoros, established a Federal Islamic republic. Under this document, as amended in 1982, the president was elected to a six-year term, and there was an elected federal assembly of 42 members. Following the secession and subsequent breakup of the republic in 1997, the islands created a union consisting of semiautonomous islands led by their own presidents in addition to the president of the federal government, who retains control over defense, economic policy, and for-

eign affairs. The three island presidents are also vice presidents of the union. A new constitution was adopted in June 1992, and again in December 2001. It came into full operation following the election of the Union parliament in 2004.

Under the new constitution, the federal presidency rotates every four years among the elected presidents from the three main islands in the Union. Of the 33-member unicameral Assembly, 15 Assembly deputies are selected by the individual islands' local assemblies and the 18 by universal suffrage. Deputies serve for five years. The next presidential elections were scheduled for April 2006, and legislative elections for 2009.

### **14 POLITICAL PARTIES**

In February 1982, the Comorian Union for Progress (Union Comorienne pour le Progrès—UCP) was established as the only legal party; in March; UCP members won 37 of 38 seats in the National Assembly in contested elections that also involved independents. In March 1987, UCP candidates won all 42 seats. Despite earlier assurances of a free ballot, few opposition candidates were allowed to run, and dissidents were subject to intimidation and imprisonment.

The UCP (known as Udzima) had been President Djohar's party until November 1991. But it had no seats in the Assembly. On 10 September 1993, it merged with the Union for Democracy and Decentralization (UNDC), the largest party in the Assembly with just seven seats. Before the dissolution of the Assembly in June 1993, the Islands' Fraternity and Unity Party (CHUMA) had three seats, and the MDP/NGDC had five seats. No other party had more than two seats. Djohar hastily created his own party, the RDR, to contest the December 1993 elections. After 1993, the party distribution in the Assembly was RDR and its coalition partners, 24 seats, and the UNDC and its allies, 18 seats.

A coup in September 1995 overthrew the Djohar government. A transitional government was set up after French military intervention removed the coup-plotters, and new elections were held in December 1996, resulting in a National Assembly situated as follows: National Rally for Development, 36; National Front for Justice, 3; independents, 4. In the April 2004 elections, the president's CRC party suffered a major defeat, winning only 6 of 18 seats up for election in the Union Assembly, and just 11 of 55 seats in the island parliaments. There were some 20 parties on the scene including Forces pour l'Action Républicaine (FAR) led by Col. Abdourazak Abdulhamid, and the Forum pour la Redressement National (FRN), an alliance of 12 parties.

### **15 LOCAL GOVERNMENT**

Under the federal system, each of the main islands has its own president and elected legislature. The governors, formerly elected, were appointed by the president after the constitution was amended in 1982. There are also four municipalities: Domoni, Fomboni, Moroni, and Mutsamudu.

### **16 JUDICIAL SYSTEM**

The legal system incorporates French and Islamic law in a new consolidated code. Most disputes are settled by village elders or by a court of first instance. The High Council as the High Court of Justice (Cour Suprême) resolves constitutional questions, supervises presidential elections, and arbitrates any case in which

the government is accused of malpractice. The High Council also reviews decisions of the lower courts, including the superior court of appeals at Moroni. The High Council consists of two members appointed by the president, two members elected by the Federal Assembly, and one elected by the Council of each island; others are former presidents of the republic. Lower courts of the first instance are located in major towns. Religious courts on the islands apply Muslim law in matters relating to social and personal relationships.

The judiciary is largely independent of the executive and legislative branches. The 1996 constitution provides a number of safeguards including equality of all citizens before the law. However, it does not mention right to counsel.

The island of Mayotte (Mohere) has been administered by France ever since the Comoros unilaterally declared independence in July 1975. The Comoros claims Mayotte and officially represents it in international organizations, including the United Nations. The constitution of Mayotte states that the island is to be ruled by a prefect assisted by a secretary-general and a General Council of 19 members.

## 17 ARMED FORCES

The armed forces consist of a police force numbering 500 and a defense force of 500 members. France provides a small military presence, military training, and naval protection. Defense spending in 2001 was \$6 million, or 3% of GDP.

## 18 INTERNATIONAL COOPERATION

On 12 November 1975, the Comoros became a member of the United Nations. The nation participates in the ECA, FAO, World Bank, IDA, IFAD, ILO, IMF, ITU, UNESCO, UNIDO, UPU, WHO, and WMO. It is also part of the African Development Bank, the ACP Group, G-77, the Arab League, the Organization of the Islamic Conference (OIC), and the Arab Monetary Fund. Comoros is a member of the Indian Ocean Commission, the Alliance of Small Island States (AOSIS), and COMESA. The nation is part of the Franc Zone. Comoros is part of the Nonaligned Movement. In environmental cooperation, Comoros is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

The economy of the Comoros is agriculture-based, and dependent on trade and foreign assistance. Foreign aid accounts for about half of GDP. Mineral resources are few; there is little industry. Tourism increased considerably in the 1990s as a result of promotion by South African interests, but subsequent political upheaval offended potential visitors. Agriculture accounts for 40% of GDP, and employs 80% of the population. Cassava, sweet potatoes, rice, and bananas are the staple crops along with yams, coconuts, and maize. Meat, rice, and vegetables are leading imports. Comoros is the world's second-largest producer of vanilla, with one-third of exports going to France, and the world's leading producer of ylang-ylang, a perfume oil. Cloves and copra are also exported.

Land access is a problem, as is overpopulation. The fishing industry has potential but is still largely undeveloped.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Comoros's gross domestic product (GDP) was estimated at \$441.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$600. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2005 was 3%. It was estimated that agriculture accounted for 40% of GDP, industry 4%, and services 56%.

It was estimated that in 2002 about 60% of the population had incomes below the poverty line.

## 21 LABOR

The majority (about 80%) of the economically active population was engaged in subsistence agriculture, fishing, or local commerce, in 2002 (the latest year for which data was available). The labor force was estimated at 144,500 in 1996 (the latest year for which data was available), with the unemployment rate that year amounting to an estimated 20%.

The constitution provides the right for workers to create and join unions and the right to strike. However, this affected only a small percentage of the population. The wage-earning labor force consists of less than 7,000 individuals, of which about 5,000 were government employees. The minimum age for employment is 15 years, but children generally work with their families in the large subsistence farming and fishing sectors, or as domestic servants. The government has few resources to enforce this minimum age restriction. There is no minimum wage, and payment to workers is irregular. There are no occupational health and safety standards for the country's tiny manufacturing base. A 37.5 hour workweek is specified by law, with one day off every week and one month paid vacation annually.

## 22 AGRICULTURE

The economy of the Comoros is primarily agricultural, with arable land comprising 45% of the total land area. Among the chief crops in 2004, in tons, were manioc, 58,000; coconuts, 77,000; bananas, 65,000; sweet potatoes, 5,500; rice, 17,000; corn, 4,000; and cloves, 3,000. Other crops include sugarcane, sisal, peppers, spices, coffee, and various perfume plants such as ylang-ylang, abelmosk, lemon grass, jasmine, and citronella. The chief export crops are vanilla, cloves, ylang-ylang, and copra. The Comoros, including Mayotte, account for about 80% of world production of ylang-ylang essence, which is used in some perfumes. Marketed exports in 2004 included 44 tons of dried vanilla, valued at nearly \$18.8 million, or 47% of agricultural exports.

Food demand is not met by domestic production, so Comoros is highly dependent on imported foods, especially rice. Over half of all foodstuffs are imported, and about 50% of the government's annual budget is spent on importing food. Agricultural productivity is extremely low, and cultivation methods are rudimentary. Fertilizer is seldom used by smallholders. About 20% of the cultivated land belongs to company estates; 20% to indigenous land-

owners who live in towns and pay laborers to cultivate their holdings; and 60% to village reserves allotted according to customary law. Agriculture contributed about 51% to GDP in 2002.

### 23 ANIMAL HUSBANDRY

Small amounts of livestock are raised. In 2004 there were an estimated 115,000 goats, 45,000 head of cattle, 21,000 sheep, and 5,000 asses. An estimated 1,100 tons of beef and 1,000 tons of other meat were produced in 2004, along with 4,550 tons of milk and 776 tons of eggs.

### 24 FISHING

The fish catch in the Comoros amounted to about 14,115 tons in 2003, 60% of which was tuna. A Japanese-funded fisheries training center was opened on Anjouan in 1985.

### 25 FORESTRY

Forested areas amounted to about 8,000 hectares (20,000 acres) in 2000. Numerous fruit trees and tropical hardwoods are found. Some timber is produced, notably on the island of Grande Comore, which has about half the remaining forest. Roundwood production in 2003 amounted to 9,000 cu m (300,000 cu ft).

### 26 MINING

There were no commercially exploitable mineral resources in the Comoros. Small quantities of clay, sand, gravel, and crushed stone were produced for domestic consumption, and the former French colony was dependent on imports to meet all its energy and cement needs. Promotion of a new construction technique using lava and volcanic ash was expected to reduce cement imports and coral mining. In 2002, imports of cement totaled 29,985 tons, down from 40,000 tons in 2001. Political instability in recent years has continued to hurt the economy, and the outlook on minerals output was not expected to change significantly.

### 27 ENERGY AND POWER

In 2004, Comoros had no known reserves or production of petroleum, having had to import whatever it consumed. Petroleum imports and consumption for that year each stood at 1,000 barrels per day. As of 1 January 2005, Comoros had no proven reserves of

natural gas, and for 2003 it had no natural gas output or consumption. With no proven coal reserves, there was no consumption or output of coal in 2003. Electricity is the main source of power. As of 1 January 2003, Comoros had an installed electrical generation capacity of 0.005 GW. In 2003, the consumption and generation of electricity each totaled 0.02 billion kWh. Of the power produced in 2002, 0.004 million kW was from thermal sources and 20% came from hydroelectric sources.

### 28 INDUSTRY

There are various small-scale industries, mostly for processing the islands' agricultural products. Aside from perfume distilleries (perfume is one of the country's main exports), the Comoros has sawmills, a soap factory, a printing plant, a small plastics factory, a soft-drink plant, and metalworking shops. Industry accounted for a mere 4% of GDP in 2001.

### 29 SCIENCE AND TECHNOLOGY

There are no research institutes or institutions of higher learning in the Comoros.

### 30 DOMESTIC TRADE

As of 2006, nearly 80% of the population was employed in agriculture, primarily subsistence farming. However, most of the farmland is owned by foreign investors and the majority of the nation's food products are imported. An underdeveloped transportation system limits domestic trade. A small industrial sector is focused on processing ylang-ylang and vanilla, which are produced primarily for export. The government is attempting to privatize commercial and industrial enterprises. Business hours are 7:30 AM to 2:30 PM Monday–Thursday, 7:30 to 11:30 AM Friday, and 7:30 AM to noon on Saturday.

### 31 FOREIGN TRADE

Ylang-ylang essence, vanilla, cloves, copra, and other agricultural commodities make up the bulk of Comorian exports; of these, vanilla is by far the most important export earner. Imports include rice and other foodstuffs, petroleum products, and motor vehicles. Exports brought in \$34 million in 2004, while Comoros imported \$115 million worth of goods. France is the country's most important trade partner. In percentage terms, in 2004 Comoros's primary export partners were: the United States (43.8%), France (18.6%), Singapore (16.5%), Turkey (4.8%), and Germany (4.5%). The primary import partners that year were: France (23.5%), South Africa (11%), Kenya (7.5%), the UAE (7.2%), Italy (4.9%), Pakistan (4.7%), Mauritius (4.2%), and Singapore (4.1%).

### 32 BALANCE OF PAYMENTS

In general, the chronic deficit on current accounts is counterbalanced by foreign aid, especially from France. By 2002, Comoros was in debt by \$225 million. In 2004, the value of Comoros's exports was \$34 million, and imports were valued at \$115 million.

### 33 BANKING AND SECURITIES

The Central Bank of the Comoros was established in 1981. The Banque Pour l' Industrie et le Commerce, is the main commercial bank; the French Commercial Bank is also represented. The

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

Banque de Développement des Comores is half state owned. The Banque Nationale de Paris Intercontinentale is the only international financial institution.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$41.7 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$57.2 million.

There are no securities exchanges.

**34 INSURANCE**

Société Comorienne d'Assurances is based in Moroni. The Paris-based Préservatrice Foncière d'Assurances has an agent in Moroni.

**35 PUBLIC FINANCE**

The Comoros government and the IMF agreed in 1990 to a structural adjustment program covering 1991 to 1993. The program provided \$135 million and proposed a plan whereby the government diversified its exports, reduced public expenditures, and privatized its parastatal sector. Furthermore, the plan called for the abolishment of levies on export crops, privatization of the state-owned hotels, liquidation of the state-owned meat marketing company, initiation of a number of environmental projects, and the reduction of the number of civil servants. This last measure prompted civil disorder and economic disruptions. Concerned over the progress of reforms in 1993, the IMF and the government reassessed the program. Measures were adopted which persuaded the IMF to continue its support of the program. A military coup in 1999 halted most restructuring programs.

The US Central Intelligence Agency (CIA) estimated that in 2001 Comoros's central government took in revenues of approximately \$27.6 million; information on expenditures was not available. Total external debt was \$232 million.

**36 TAXATION**

Tax collection, formerly the role of the island governors, became a federal responsibility under the 1982 constitutional revision.

**37 CUSTOMS AND DUTIES**

Import and export licenses are required but often limited to a few firms. Since 1992, the government has reorganized the customs office, computerized customs, and introduced taxes on petroleum products and rice.

**38 FOREIGN INVESTMENT**

Private foreign investment in the Comoros has been minimal since independence. The Comoros economy is supported by foreign aid and assistance, primarily from France but to a lesser extent from Japan, Saudi Arabia, Kuwait, and the United Arab Emirates. A French company took over Comoros' electrical utility company in 1997. A Swiss concern owns and operates the country's two main hotels. Officially, the Comoros welcomes foreign investment and is prepared to offer a package of incentives.

In 1998, FDI inflow was \$3.2 million. Inflows of only \$300,000 and \$900,000 were reported for 1999 and 2000, respectively, but there was an increase to \$1.5 million in 2001. By 2003, the total stock of inward FDI amounted to \$23 million. In 2003, inward flow of FDI totaled approximately \$1 million.

**39 ECONOMIC DEVELOPMENT**

Development projects in the late 1980s and early 1990s focused on the agricultural sector, hydroelectric development, fishing, and start-up investment funds for small and intermediate enterprises. In addition, the European Development Funds provided resources for the redevelopment of the port at Moroni. International Monetary Fund (IMF) plans during the 1990s focused on agriculture diversification. The country has an unemployment level estimated at 20% and one of the highest illiteracy rates in the world. The government has many aims: to develop education and technical training, to improve health services, to reduce the high population growth rate, to privatize state-owned enterprises, to promote tourism, and to diversify exports. Political instability has led to disruptions in government services, as has the general lack of revenue. As of 2006, increased foreign assistance was needed if the goal of 4% annual GDP growth was to be met. Remittances from 150,000 Comorans abroad help supplement the GDP.

**40 SOCIAL DEVELOPMENT**

Women occupy a subservient position in this extremely traditional society but retain some strength from the matrilineal social structure. Although women do not have the same legal protection as men, traditional custom grants women favorable inheritance and property rights. There are few women in management positions in the private sector or in government. Violence against women occurs, but is not a widespread problem. As of 2004, the government did not take any action to protect women against domestic violence. Some poor families are forced to send children to live in other households, where they work as domestic servants, often at ages as young as seven years old. Priority in education is given to boys.

Prisons are overcrowded and lack proper sanitation but have been visited by international monitors. Societal discrimination

against Christians persists. Human right abuses and political violence have been reported.

#### 41 HEALTH

In 2004, there were 7 physicians, 34 nurses, 14 midwives, and 14 dentists per 100,000 people. The average life expectancy was 61.96 years in 2005. The infant mortality rate for that year was estimated at 74.93 deaths per 1,000 live births. The maternal mortality rate was 950 per 100,000 live births.

Lack of animal protein is a serious problem. In addition, a large percentage of the adult population suffers from malaria and there is a high incidence of tuberculosis and leprosy. The immunization rates were the following in the mid-1990s: tuberculosis, 95%; diphtheria, pertussis, and tetanus, 60%; polio, 60%; and measles, 60%.

The HIV/AIDS prevalence was 0.12 per 100 adults in 2003.

#### 42 HOUSING

At last estimate, approximately 65% of all housing units were straw huts with roofs of cocoa leaves, and about 25% were made of durable materials including stone, brick, or concrete. Of all housing units, nearly 90% were owned, 3% rented, and 3% occupied rent free. In 2000, about 98% of the population had access to improved sanitation systems and safe water.

#### 43 EDUCATION

Education is compulsory for children between the ages of 7 and 16 years. Primary education lasts for six years followed by seven years of secondary education, four years in the first stage followed by three years in the second stage.

Primary school enrollment in 2001 was estimated at about 89.6% of age-eligible students. The same year, secondary school enrollment was about 28% of age-eligible students. In 2003, was estimated that about 58% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 37:1 in 2003; the ratio for secondary school was about 11:1.

There are two technical schools and a teacher-training college near Moroni. In 2001, there were about 700 students enrolled in some type of higher education programs. The adult literacy rate for 2004 was estimated at about 56.2%, with 63.5% for men and 49.1% for women.

As of 2003, public expenditure on education was estimated at 3.9% of GDP, or 24% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

At the time of independence there were two public libraries and three school libraries, with a total of 13,400 volumes. There is a National Center of Documentation and Scientific Research in Moroni as well as a National Museum of Comoros.

#### 45 MEDIA

In 2003, there were 13,200 mainline telephones in use throughout the country, along with an additional 2,000 mobile phones.

Radio-Comoros, a government agency, provides services on shortwave and FM in Comorian, French, English, Arabic, Malagasy, and Swahili. In 2001, radio stations included one AM and four FM. A national television station was started in 2001 with assistance from China. RFO Mayotte, run by French public radio

and TV, is received by some. There are also a number of local radio and television stations.

The primary weekly newspaper *Al Watwany* is published by the government; the weekly *L'Archipel* is published independently. There are several smaller privately held papers that are published fairly regularly, including *L'Archipel* (a monthly). A new constitution provides for freedom of speech and of the press and it is believed that the government generally respects these rights.

#### 46 ORGANIZATIONS

There is a Chamber of Commerce, Industry, and Agriculture at Moroni. Youth organizations are developed in part through the national Union of Youth and Students of the Comoros (Union Jeunesse et des Etudiants des Comores: UJEC), founded in 1975. Scouting organizations are also active for youth. There are some sports organizations. There are national chapters of the Red Crescent Society, Caritas, and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

The tourism industry was undeveloped at independence and has stagnated since 1983. There were 188 hotel rooms in 2002 with a total of 376 beds, and an occupancy rate of 19%. Tourist arrivals numbered 18,936 and tourist receipts totaled \$11 million. Vaccination for yellow fever is recommended as well as antimalarial precautions. A passport, visa, and return/onward ticket are required. Water sports are the primary recreational activities.

#### 48 FAMOUS COMORIANS

Heads of state since independence include 'Ali Soilih (1937–78), who came to power as a result of the 1975 coup and who died after the 1978 takeover; and Ahmad 'Abdallah (1919–89), president briefly in 1975 and restored to power in 1978. Mercenary Bob Denard (b.France, 1929) virtually ruled the country through figure-head presidents between 1978 and 1989, when France negotiated his departure after the assassination of 'Abdallah. Col. Assoumani Azali (b.1959?) took power in a coup in 1999, assuming the titles of president, prime minister, and defense minister.

#### 49 DEPENDENCIES

The Comoros has no territories or dependencies.

# CONGO, DEMOCRATIC REPUBLIC OF THE (DROC)

Democratic Republic of the Congo  
*République Démocratique du Congo*

**CAPITAL:** Kinshasa

**FLAG:** The flag is a sky blue field divided diagonally from the lower hoist corner to upper fly corner by a red stripe bordered by two narrow yellow stripes; a yellow, five-pointed star appears in the upper hoist corner.

**ANTHEM:** *Song of Independence.*

**MONETARY UNIT:** In 1997, the New Congo replaced the zaire (z) as the national currency with the Congolese franc (CF). CF1 = \$0.00228 (or \$1 = CF437.86) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Commemoration of Martyrs of Independence, 4 January; Labor Day, 1 May; Anniversary of the Popular Movement of the Revolution, 20 May; Promulgation of the 1967 Constitution, 24 June; Independence Day, 30 June; Parents' Day, 1 August; Youth Day, 14 October; Army Day, 17 November; the Anniversary of the Regime, 24 November; and Christmas Day, 25 December.

**TIME:** In Kinshasa, 1 PM = noon GMT; in Lubumbashi, 2 PM = noon GMT.

---

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The Democratic Republic of the Congo is situated in central Africa and is crossed by the equator in its north-central region. It is the third-largest country on the continent, covering an area of 2,345,410 sq km (905,568 sq mi), with a length of 2,276 km (1,414 mi) SSE–NNW and a width of 2,236 km (1,389 mi) ENE–WSW. Comparatively, the area occupied by the country is slightly less than one-quarter the size of the United States, or about as large as the United States east of the Mississippi River. On the N it is bounded by the Central African Republic, on the NE by Sudan, on the E by Uganda, Rwanda, Burundi, and Tanzania, on the SE and S by Zambia, on the SW by Angola, and on the W by the Cabinda enclave of Angola and the Republic of the Congo (ROC), with a total boundary length of 10,744 km (6,661 mi). Its extreme western portion is a narrow wedge terminating in a strip of coastline along the Atlantic Ocean. The DROC and Zambia dispute the border to the east of Lake Mweru. Kinshasa, the capital, is located in the western part of the country.

## <sup>2</sup> TOPOGRAPHY

The principal river is the Congo, which flows over 4,344 km (2,700 mi) from its headwaters to its estuary. The gigantic semicircular bend in the river, which is called the Lualaba in its upper course, delineates a central depression known as the cuvette, with an average altitude of about 400 m (1,312 ft). Around this densely forested section, which covers nearly half the area of the country, plateaus rise gradually to heights of 900–1,000 m (2,950–3,280 ft) to the north and south.

The highest altitudes are found along the eastern fringe of the country, on the edge of the Great Rift Valley, where dislocation of the strata has produced important volcanic and mountain masses, the most notable of which is Margherita Peak. Lying on the border

with Uganda, the peak rises to 5,109 m (16,762 ft), the third-highest point in Africa. Nyriagongo (11,365 ft/3,465 m), located south of Margherita Peak is considered to be one of the most active volcanoes in Africa. On 10 January 1977, a lava lake poured out of the summit covering the countryside at speeds of 40 mph and killing about 2,000 people. It erupted again in 1982 and 1994. On 17 January 2002, lava flow from the volcano Nyriagongo forced the evacuation of Goma. About 45 people died and 14 villages were damaged by the lava flow, leaving 12,000 homeless. Mt. Nyamulagira, located about 15 km (9 mi) northwest of Nyriagongo, has erupted 34 times since 1882.

Savanna and park forest vegetation predominate north and south of the equatorial forest belt; the southern savanna belt is far more extensive than the northern one. All major rivers are tributaries of the Congo; these include the Lomami, the Aruwimi or Ituri, the Ubangi, the Uélé, the Kasai, the Sankuru, the Lulua, the Kwango, and the Kwilu. The largest lakes include Tanganyika, Albert (L. Mobutu Sese Seko), Edward, Kivu, and Mweru, all of which form parts of the eastern border. Other large lakes are Mai-Ndombe and Tumba.

## <sup>3</sup> CLIMATE

The climate is tropically hot and humid in the lower western and central regions, with frequent heavy rains from October or November through May south of the equator and from April to June and September to October in the north, while along the equator itself there is only one season. In the cuvette, temperatures average 24°C (75°F), with high humidity and almost no seasonal variation. Annual rainfall is between 130 cm and 200 cm (51–79 in). In the northern and southern plateaus there are wet and dry seasons, with temperatures slightly cooler in the latter and annual rainfall of 100–160 cm (39–63 in). The eastern highlands have tempera-

tures averaging 18°C to 24°C (64°–75°F), depending on the season. Rainfall averages 120–180 cm (47–71 in).

#### 4 FLORA AND FAUNA

The flora and fauna of the DROC include some 95% of all the varieties found in Africa. Among the many species of trees are the red cedar, mahogany, oak, walnut, the silk-cotton tree, and various palms. Orchids, lilies, lobelias, and gladioli are some of the flowers found, along with shrubs and plants of the euphorbia and landolphia families. Larger species of mammals include the lion, elephant, buffalo, rhinoceros, zebra, leopard, cheetah, gorilla, chimpanzee, wild boar, giraffe, okapi, and wild hog. The baboon and many kinds of monkeys are common, as are the jackal, hyena, civet, porcupine, squirrel, rabbit, and rat. Hippopotamuses and crocodiles are found in the rivers. Large snakes include the python, puff adder, and tree cobra. Lizards and chameleons are among the numerous small reptiles.

Birds are mainly of species common to much of Africa. They include the eagle, vulture, owl, goose, duck, parrot, whidah and other weaver birds, pigeon, sunbird, cuckoo, and swift, along with the crane, heron, stork, pelican, and cormorant. The rivers and lakes have many kinds of fish, among them catfish, tigerfish, and electric eels. Insects include various dragonflies, bees, wasps, beetles, mosquitoes, and the tsetse fly, as well as scorpions, spiders, centipedes, ants, and termites.

As of 2002, there were at least 200 species of mammals, 130 species of birds, and over 6,000 species of plants throughout the country.

#### 5 ENVIRONMENT

Deforestation is caused by farming activity and the nation's dependency on wood for fuel. By 1985, 3,701 sq km (1,429 sq mi) of forestland had been lost. In 2000, about 59% of the total land area was forested. The DROC has nine national parks. There are five Natural World Heritage Sites, three biosphere reserves, and two Ramsar wetland sites. In 2003, about 5% of the DROC's total land area was protected.

The main environmental problem is poor water and sanitation systems, which result in the spread of insect- and rodent-borne diseases. The water is polluted by untreated sewage, industrial chemicals, and mining by-products. The nation has 900 cu km of renewable water resources with 23% used for farming activities and 16% used for industrial purposes. Roughly 83% of city dwellers and 29% of the people living in rural areas have access to improved water sources.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 29 types of mammals, 30 species of birds, 2 types of reptiles, 13 species of amphibians, 10 species of fish, 14 types of mollusks, 8 species of other invertebrates, and 65 species of plants. Endangered species in the DROC include the Marunga sunbird and the northern white and northern square-lipped rhinoceros.

#### 6 POPULATION

The population of Democratic Republic of the Congo (formerly Zaire) in 2005 was estimated by the United Nations (UN) at

60,764,000, which placed it at number 20 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 48% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.1%. The government is concerned about high fertility levels (6.7 births per woman), which contributes to the high population growth rate. The projected population for the year 2025 was 107,982,000. The population density was 26 per sq km (67 per sq mi).

The UN estimated that 30% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.85%. The capital city, Kinshasa, had a population of 5,277,000 in that year. Almost one third of the population lives in or around Kinshasa, in the lower Congo area. Other large cities are Lubumbashi, Mbuji-Mayi; Kolwezi; Kananga; and Kisangani.

The DROC's population was significantly affected by warfare in the 1990s and early 2000s, when an estimated three million people died mostly from malnutrition and disease. The eastern portion of the country has seen more than one million refugees from neighboring nations. Also, many Congolese have been displaced or fled the country due to internal violence.

#### 7 MIGRATION

Political tensions and crises in neighboring African countries have resulted in large-scale migration to the Democratic Republic of the Congo (DROC, formerly Zaire). Many refugees were resettled in the DROC through the aid of outside governments, private relief organizations, the United Nations (UN), and UN-related agencies.

After a general amnesty for refugees and political exiles in 1978, some 200,000 Zairians were repatriated from Angola, Zambia, Sudan, Tanzania, and Europe. There were 60,200 officially registered Zairians living in neighboring countries at the end of 1992, including 25,800 in Burundi, 16,000 in Tanzania, 15,600 in Uganda, and 2,300 in Sudan.

By early 1997, over 800,000 Rwandan Hutu refugees had returned to Rwanda from the DROC due to the armed rebellion in the DROC. There were still 250,000 Rwandan Hutus unaccounted for in the DROC at the beginning of 1997. The DROC harbored 400,000 Burundian refugees, 160,000 Angolans, 110,000 Sudanese, and 18,500 Ugandans as of May 1997. In 1998, more than 285,000 Angolans, Sudanese, Congolese, Ugandans, Rwandans, and Burundians remained in the DROC. Following the signature of an agreement between the DROC, Republic of Congo (ROC), and the United Nations High Commissioner for Refugees (UNHCR) in April 1999, some 36,000 Congolese were repatriated to Brazzaville, ROC. However, instability in Angola made similar repatriation for Angolans unlikely. As a result of internal conflict that started in August 1998, more than 700,000 people were internally displaced. Some 95,000 sought asylum in Tanzania and 25,000 fled to Zambia.

In 2004, the total number of migrants living in the DROC was 213,520 of which 199,323 were refugees; 21% of refugees resided in camps. In 2004, there were an estimated 3,400,000 internally displaced persons in the DROC. In that same year, 11,166 Burundians and 2,011 Central Africans were repatriated. Also in 2004, over 295,000 Congolese applied for asylum in Tanzania, Zambia,

LOCATION: 5°28' N to 13°27' S; 12°12' to 31°18' E. BOUNDARY LENGTHS: Central African Republic, 1,577 kilometers (980 miles); Sudan, 628 kilometers (390 miles); Uganda, 765 kilometers (475 miles); Rwanda, 217 kilometers (135 miles); Burundi, 233 kilometers (145 miles); Zambia, 1,930 kilometers (1,206 miles); Angola, 2,511 kilometers (1,565 miles); Atlantic coastline, 37 kilometers (23 miles); Republic of the Congo, 2,410 kilometers (1,486 miles); Tanzania, 459 kilometers (285 miles). TERRITORIAL SEA LIMIT: 12 miles.

Rwanda, Uganda, South Africa, and the United Kingdom. The net migration rate in 2005 was -0.17 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

There are over 200 African ethnic groups, of which the majority are Bantu. Bantu-speaking peoples form about 80% of the population. Most of the rest are Sudanic-speaking groups in the north

and northeast. In the cuvette are found about 80,000–100,000 Pygmies. Among the Bantu-speaking peoples, the major groups are the Kongo, or Bakongo, in Lower Zaire; the Luba, or Baluba, in East Kasai and Shaba; the Mongo and related groups in the cuvette area; and the Lunda and Chokwe in Bandundu and West Kasai; the Bemba and Hemba in Shaba; and the Kwango and Kasai in Bandundu. The four largest tribes—Mongo, Luba, Kongo (all Bantu), and the Mangbetu-Azande (Hamitic)—make up about 45%

of the total population. Non-Africans include Belgians, Greeks, Lebanese, and Asian Indians.

## <sup>9</sup>LANGUAGES

As many as 700 languages and dialects are spoken in the DROC. Serving as regional *linguae francae* are four African languages: Lingala is used in the north from Kisangani to Kinshasa, as well as in the armed forces; Swahili, in the Kingwana dialect, is used in the east; Kikongo in Lower Zaire; and Tshiluba in the south-central area. In addition, Lomongo is widely spoken in the cuvette. French is the official language and is widely used in government and commerce.

## <sup>10</sup>RELIGIONS

Until 1990, only three Christian churches were officially recognized denominations: the Roman Catholic Church; the Church of Christ; and the charismatic Kimbanguist Church, which claims to be the largest independent African church on the continent. Kimbanguists constitute about 10% of the population. About 50% of the population are Roman Catholic and about 20% are Protestant. Another 10% are Muslim. Others adhere to syncretic sects and traditional African beliefs. Protestant missionary groups include Lutherans, Baptists, Mormons, and Jehovah's Witnesses.

During the 1970s, the regime of President Mobutu moved to curb the influence of the Roman Catholic Church. All church-affiliated schools and voluntary associations were either disbanded or taken over by the state. The power of the church was further eroded in 1974 with the cancellation of religious holidays, and as of January 1975, religious instruction in primary and secondary schools was abolished. As of the mid-1980s, however, the Roman Catholic Church, along with the smaller churches, remained independent of government apparatus.

As of 2004, freedom of religion was provided for in article 26 of the transitional constitution and this right was generally respected in practice. Religious groups are required to register with the government according to the Regulation of Nonprofit Associations and Public Utility Institutions statute; however, there are no penalties for failure to register. The Consortium of Traditional Religious Leaders provides a forum for the discussion of religious concerns between faiths and with the government. The Consortium is composed of leaders from the five major religious groups: Catholic, Muslim, Protestant, Orthodox, and Kimbanguist.

## <sup>11</sup>TRANSPORTATION

Inland waterways—rivers and lakes—are the main channels of transportation. No single railroad runs the full length of the country, and paved highways are few and short. Lack of adequate transportation is a major problem affecting the development of the DROC's vast area. While the rivers, particularly the Congo and its tributaries, are mostly navigable, they are blocked at various points from through navigation by cataracts and waterfalls, making it necessary to move goods by rail or road between the navigable sections. Principal river ports are Kinshasa, Ilebo, Mbandaka, Kisangani, Kalemie, Ubundu, and Kindu. A total of 15,000 km (9,321 mi) of river and lake waterways are in service. The chief seaport and only deepwater port is Matadi on the Congo River, 148 km (92 mi) from the Atlantic Ocean. Other seaports include

Boma and Banana, also on the Congo below Matadi. The Zaire Maritime Company is the national shipping line.

In 2002, there were about 157,000 km (97,560 mi) of roads, but were mere tracks. One of the major routes was from Kinshasa to Lubumbashi. The road network was in a state of deterioration. Motor vehicles in 2003 included 148,900 passenger cars and 135,000 commercial vehicles.

As of 2004, the DROC's railroad system consisted of 5,138 km (3,192 mi) of narrow gauge railway, which used three differing gauges. Among the most important internal links are Lubumbashi-Ilebo, Kingala-Kindu, Ubundu-Kisangani, and Kinshasa-Matadi. In the early 1980s, the Kinshasa-Matadi line was extended by a Japanese company. A road and rail bridge across the Congo River at Matadi was completed in 1983. The southeastern network connects with the Angolan and Zambian railroad systems. In 1974, all railroads were consolidated under a single state-controlled corporation, SNCZ.

Air transport has become an important factor in the country's economy. The DROC has five international airports—N'Djili (Kinshasa), Luano (Lubumbashi), and airports at Bukavu, Goma, and Kisangani—which can accommodate long-distance jet aircraft. Altogether, there were an estimated 230 airports, airfields, and landing strips in 2004, of which 25 had paved runways as of 2005. The national airline, Air Zaire, was organized in 1961 and has flights to European and African cities, as well as within the country. Zaire Aéro Service and Scibe Airlift Cargo Zaire also offer domestic and international flights. In 2003, about 95,000 passengers were carried on scheduled domestic and international airline flights.

## <sup>12</sup>HISTORY

The earliest inhabitants of the area now called the DROC are believed to have been Pygmy tribes who lived by hunting and gathering food and using stone tools. Bantu-speaking peoples entered from the west by 150 AD, while non-Bantu-speakers penetrated the area from the north. These peoples brought with them agriculture and developed iron tools. In 1482, the Portuguese navigator Diogo Cão visited the mouth of the Congo River, marking the first known European contact with the region, but this did not lead to penetration of the interior. The Portuguese confined their relations to the Kongo kingdom, which ruled the area near the mouth of the Congo River as well as what is now the coast of northern Angola. A lucrative slave trade developed.

In the 16th century, the powerful Luba state developed in what is now Katanga Province; soon afterward, a Lunda state was established in what is now south-central DROC. In 1789, a Portuguese explorer, José Lacerdu e Almeida, explored in a cuvette and penetrated as far as Katanga, where he learned of the rich copper mines. A thriving Arab trade in slaves and ivory reached the Luba country from the east in the late 1850s or early 1860s.

The Scottish explorer David Livingstone reached the upper course of the Congo in 1871, when his whereabouts became unknown, and Welsh-American explorer Henry M. Stanley, commissioned by a US newspaper, located and rescued him (in modern Tanzania). In 1876–77, after the death of Livingstone, Stanley followed the river from the point that Livingstone had reached to its mouth. King Leopold II of Belgium commissioned Stanley to undertake further explorations and to make treaties with the

tribal chiefs. In 1878, the monarch formed the International Association of the Congo, a development company, with himself as the chief stockholder. The Berlin Conference of 1884–85 recognized the Independent State of the Congo, set up by Leopold II under his personal rule, and its ultimate boundaries were established by treaties with other colonial powers.

International criticism and investigation of the treatment of the inhabitants, particularly on the rubber plantations, resulted in 1908 in the end of personal rule. The territory was transferred to Belgium as a colony called the Belgian Congo, and in that year a law known as the Colonial Charter set up its basic structure of government.

The rise of nationalism in the various African territories following World War II seemed to have bypassed the colony, which remained without self-government (except for a few large cities) until 1959. The Congolese demanded independence and rioted, first in Léopoldville (now Kinshasa) and then in other parts of the colony. Following the first outbreaks, the Belgian government outlined a program for the gradual attainment of self-rule in the colony, but as the independence movement persisted and grew, Belgium agreed to grant the Congo its independence in mid-1960. It also promised to assist in the training of Congolese administrators, as well as to continue economic and other aid after independence.

### Independence

The newly independent Republic of the Congo was inaugurated on 30 June 1960, with Joseph Kasavubu as its first head of state and Patrice Lumumba its first premier. It was immediately confronted by massive economic, political, and social problems. A week after independence the armed forces mutinied, and separatist movements and intertribal conflict threatened to split the country. Following the mutiny and the ousting of its European officers, the Congolese National Army became an undisciplined and uncertain force, with groups of soldiers supporting various political and military leaders.

A major blow to the new republic was the secession of mineral-rich Katanga Province, announced on 11 July 1960 by Moïse Tshombe, head of the provincial government. The central government was hamstrung by the loss of revenues from its richest province and by the departure of Belgian civil servants, doctors, teachers, and technicians. After some assaults on Belgian nationals, Belgium sent paratroopers into the Congo, which appealed to the UN for help. Faced with the threatened collapse of a new nation, the UN responded with what grew into a program of massive assistance—financial, military, administrative, and technical. It established the UN Operation for the Congo (UNOC), sent in a UN military force (made up of contingents volunteered by nonmajor powers), and furnished considerable numbers of experts in administration, teachers, doctors, and other skilled personnel.

In September 1960, Kasavubu dismissed Lumumba as premier, and Lumumba announced that he had dismissed Kasavubu as head of state. The parliament subsequently rescinded both dismissals. Kasavubu then dismissed the parliament and with Col. Joseph-Désiré Mobutu, the army's newly appointed chief of staff, succeeded in taking Lumumba prisoner. UN troops did not interfere. As demands for Lumumba's release mounted, Lumumba was secretly handed over to the Katanga authorities, who had him put

to death early in 1961. Shortly afterward, the UN Security Council for the first time authorized UN forces in the Congo to use force if necessary, as a "last resort," to prevent civil war from occurring.

In September 1961, after Katanga forces fired on UN troops seeking to secure the removal of foreign mercenaries, UN Secretary-General Dag Hammarskjöld flew to the Congo, where he boarded a plane for Northern Rhodesia (now Zambia) to meet with Tshombe. The plane crashed, killing him and all others on board. In December 1962, Katanga forces in Elisabethville (now Lubumbashi) opened sustained fire on UN troops. The UN troops then began broad-scale military operations to disarm the Katanga forces throughout the province. As they neared the completion of their task, Tshombe capitulated, and the secession of Katanga was ended on 14 January 1963.

Almost immediately, a new insurrection, in the form of a series of rebellions, broke out. The rebels at one point exercised *de facto* control over more than half the country. As UN troops were withdrawn on 30 June 1964, the self-exiled Tshombe was recalled and offered the position of prime minister, largely at US and Belgian instigation. Tshombe promptly recruited several hundred white mercenaries to spearhead the demoralized national army. Rebel-held Stanleyville (now Kisangani) was recaptured in November 1964, when a US-aided contingent of Belgian paratroopers disarmed the insurgents. Widespread government reprisals against the population followed. By then, the rebellion had been contained.

Tshombe's attempt to establish a nationwide political base was successful in parliamentary elections held in early 1965, but on 13 October 1965 he was removed from office by Kasavubu, who attempted to replace him with Evariste Kimba, also from Katanga. When Kimba was not endorsed by the parliament, Gen. Joseph Desiré Mobutu, commander-in-chief of the Congolese National Army, seized power in a coup d'état on 24 November 1965 and assumed the presidency.

A new constitution adopted in June 1967 instituted a centralized presidential form of government, coupled with the creation of a new political movement, the Popular Movement of the Revolution (Mouvement Populaire de la Révolution—MPR). Tshombe's hopes for a comeback were dashed when he was kidnapped in June 1967 and imprisoned in Algeria, where he died two years later. His supporters, led by French and Belgian mercenaries, mutinied again in July 1967 but were finally defeated in November, in part because of logistical support of Mobutu extended by the US government. Other sources of opposition were summarily dealt with in 1968 with the disbanding of independent labor and student organizations.

Mobutu officially transformed the Congo into a one-party state in 1970, and in 1971, changed the name of the country, river, and currency to Zaire. (This name, an inaccurate rendition of the Kikongo word for "river," had been given by 16th-century Portuguese navigators to the river that later came to be known as the Congo.) This turned out to be the first step in a campaign of national "authenticity," which led not only to the Africanization of all European toponyms (a process that had already been applied to major cities in 1966) but also to the banning of Christian names (Mobutu himself changed his name to Mobutu Sese Seko).

Mobutu was elected without opposition to a new seven-year term as president in 1977, but he continued to face opposition,

both external and internal. Former Katangan gendarmes, who had earlier fled to Angola, invaded (then) Shaba Province on 8 March 1977. Mobutu, charging that Cuba and the former USSR were behind the invasion, enlisted the aid of 1,500 Moroccan troops. The incursion was quelled by late May. In May 1978, however, the rebels again invaded Shaba and occupied Kolwezi, a key mining center. French paratroopers retook Kolwezi on 19 May and were later joined by Belgian troops, but several hundred foreigners and Zairians were killed during the eight-day rebel occupation. Troops from Morocco, Gabon, and Senegal replaced the French and Belgians in June; Zairian troops later reoccupied the region.

In 1981, Premier Nguza Karl-I-Bond resigned and became spokesman for an opposition group based in Belgium; however, he returned to Zaire in 1985 and was appointed ambassador to the United States in 1986. In June 1982, 13 former parliament members were jailed allegedly for trying to organize an opposition party. They were released in 1983, as part of an announced amnesty for political detainees and exiles, but six of the 13 were sent into internal exile in 1986.

In 1982, Mobutu resumed diplomatic ties with Israel, which had been broken in 1974; five Arab nations quickly cut ties with Zaire, and \$350 million in promised Arab aid to Zaire was blocked. In 1983, Zaire sent 2,700 troops to Chad to aid the government against Libyan-backed rebels; they were withdrawn in 1984. Mobutu was reelected "unopposed" to a new seven-year presidential term in July 1984. In 1986 and 1987 there were reports that the United States was using an airbase in Zaire to supply weapons to the antigovernment guerrillas in neighboring Angola; Mobutu denied these charges and affirmed his support of the Angolan government.

For his support of western positions through the Cold War, Mobutu was handsomely rewarded. Western aid and investment and state seizures of private property made some individuals extraordinarily wealthy. Mobutu allegedly became the wealthiest person in Africa, with a fortune estimated at \$7 billion, mostly in Swiss bank accounts. However, widely publicized human rights violations in the late 1980s put Mobutu on the defensive. He lobbied the US Congress vigorously, conducted public relations campaigns in Europe and North America and, until the collapse of his authority in the 1990s, managed to gain support from abroad. French and Belgian troops intervened in the Kinshasa unrest of 1990.

To stave off criticism, Mobutu promised to create a multiparty Third Republic. But, in fact, he raised the level of repression. He originally hoped to create two new parties, both of which reflected his own political philosophy and were to join with his own MPR. Those opposed to Mobutu rejected this scheme. But the opposition was divided into a score of parties. With the army in disarray and disorder growing, Mobutu was forced to call a National Conference of some 2,800 delegates in September 1991 to draft a new constitution. Some 130 opposition parties joined together as the Sacred Union. Mobutu on several occasions suspended the Conference, but it continued to meet. It often failed to arrive at a consensus. When it did, Mobutu thwarted its decisions. Neither side was in a hurry to finish the Conference and get on with political reforms because the Conference allowed Mobutu to delay real political competition, while conferees received a handsome per diem for their attendance.

Mounting impatience for reforms unleashed widespread looting in Kinshasa in September 1991 and again the following year, which the Congolese remember as *les piages*. Mobutu himself abandoned his presidential palace for the security of his yacht on the Congo River. On 16 February 1992, the Catholic Church organized a massive demonstration to reopen the National Conference. Thousands of marchers from all backgrounds converged on the stadium Tata Rafael. Police and soldiers opened fire on the marchers before they could reach their destination, killing hundreds.

In November 1991, Mobutu split the Sacred Union by naming Nguza Karl-I-Bond of the Union of Federalists and Independent Republicans (UFERI) as prime minister. Nguza closed the National Conference in February 1992. Pressure from inside and from western aid donors forced Mobutu to allow the Conference to resume in April. It sought to draft a new constitution and threatened to rename Zaire "Congo." On 14 August 1992, the Sacred Union got the Conference to elect Etienne Tshisekedi of the Union for Democracy and Social Progress (UDPS) as prime minister of a transitional government. Mobutu, who countered by forming a new government under his control and dismissing Tshisekedi in December 1992, controlled the army, the central bank, and the police. Continuing the struggle for control of the state, the Conference drafted a constitution and set a referendum date for April 1993, but it was never held. In March, Mobutu called a conclave of political leaders and named Faustin Birindwa as prime minister. The High Council of the Republic, the interim legislature, continued to recognize Tshisekedi, as did Zaire's principal economic partners abroad. Mobutu was able to incite ethnic violence through "ethnic cleansing policies," thereby dividing his opponents and then using his armed forces to quell the violence.

Two parallel governments attempted to rule Zaire. One controlled the country's wealth and the media; the other had a popular following and professed support from western governments. In September 1993, there was a minor breakthrough. Thanks to UN mediation, the rival powers agreed on a draft constitution for the Third Republic. The two legislatures were to combine into a single, 700-person assembly. New presidential and parliamentary elections were promised. However in January 1994, Mobutu dissolved both governments and a joint sitting of the two legislatures (the HCR-Parliament of Transition). It met on 19 January and appointed the Roman Catholic archbishop of Kisangani as its president. Tshisekedi organized a successful, one-day strike in Kinshasa.

In 1993, Mobutu's Bank of Zaire introduced new currency on three occasions, but it soon became worthless. Merchants would not accept it and riots broke out when soldiers could not spend their pay. French and Belgian troops were deployed in Kinshasa to help restore order as foreigners fled. Public employees also went on strike because of the economic conditions. Anarchy, corruption, uncontrolled violence, and poverty prevailed. Government authority dissolved, leaving the country to pillaging soldiers and roaming gangs. The situation led one journalist to call it "a stateless country." Shaba (Katanga) province declared its autonomy. AIDS was rife. The struggle of two rival claimants to power continued with neither able to mount much overt support.

Due, at least in part, to this chaotic domestic situation, a new outbreak of the Ebola virus was reported in May 1995. Ebola, a virulent disease for which there are no known treatments and which may kill as many as 90% of those infected by it, was respon-

sible for approximately 250 deaths in this outbreak that occurred in Kitwit, a city of about 600,000, 402 km (250 mi) southeast of the capital. Hospitals lacked basic supplies, such as sterile dressings, gowns, and gloves. Many of those who died were medical professionals who had treated the first Ebola patients brought into medical facilities.

Meanwhile the nation was experiencing other problems on its eastern border. Civil war in neighboring Rwanda throughout 1994 and 1995 had forced over one million people to flee into North and South Kivu provinces where refugees settled into densely populated camps. These refugees, mostly Rwandan Hutus—many of whom had participated in the genocide against Rwandan Tutsis—quickly became a great strain on the region's scarce resources and in August 1995 the government stepped up efforts to repatriate them to Rwanda. Within a month, over 75,000 refugees had been expelled. However, the expulsion proved counterproductive. Many of the refugees were afraid of being imprisoned or killed by the Tutsi-led government of Rwanda. Some refugees fled into the countryside to avoid being deported while others returned across the border only hours after being expelled. Discussions involving several nations from the region, chaired by Jimmy Carter, sought to resolve the problem.

In October 1996, increasing insecurity, the high cost of living, and the destruction of the fauna and flora led the government of South Kivu province to initiate a series of repressive measures. These reprisals were directed against Rwandan Hutu refugees and against a group of ethnic Rwandans Tutsis, who claimed their ancestors had settled in Zaire more than a century before. This action prompted a rebellion by the Rwandans. By early November the provincial government had been overthrown; the major cities of the province had come under rebel control; and hundreds of thousands of Rwandan refugees were repatriated into Rwanda, attempting to flee the fighting.

At this point the rebellion took a strange turn as Laurent-Desiré Kabila took control. Kabila had originally fought with Lumumba for independence but had been living as a local warlord in the South Kivu province. Kabila's presence as the leader of the rebellion shifted its focus from protecting ethnic Rwandans to conducting a rebellion against the Mobutu government. Kabila obtained the backing of President Museveni of Uganda and Paul Kagame, the leader of the Rwandan Patriotic Front.

During the first few months of the rebellion, President Mobutu had been abroad to seek treatment for his prostate cancer. In mid-December, Mobutu returned, appointed a new defense minister, and reshuffled the army command. He also hired Serbian mercenaries and Hutu Rwandans to strengthen his army. In January 1997 the army launched a disastrous counteroffensive against the rebels. By February the rebels controlled nearly all of the Eastern provinces and were threatening to overtake the country. South African-brokered peace talks failed to bring about a cease-fire. The rebels soon took Kisangani, the nation's third-largest city without a fight in March. Any serious opposition to the rebels completely crumbled in the wake of their onslaught. In April, while the UN attempted to negotiate a meeting between Mobutu and Kabila (with Mobutu refusing), the rebels seized Lubumbashi, the second-largest city, and also took control of the diamond-rich province of Kasai.

As rebels closed in on the capital in May, Nelson Mandela hosted talks between Kabila and Mobutu aboard a South African ship. Mobutu agreed to stand-down the army forces in Kinshasa but refused to agree on conditions for his departure. However, as rebel forces drew ever closer, Mobutu realized that his hopes of retaining any of his former power were misplaced, and he fled first to his hometown in the northern part of the country and then abroad. Kabila's forces entered the capital to a hero's welcome. Kabila announced that the country would return to using the name it had been known as from 1960 to 1970, the Democratic Republic of the Congo.

While most citizens were glad to be rid of the brutal and corrupt government of Mobutu, and most Western nations were glad to be rid of an embarrassing remnant of the Cold War, Kabila soon proved to be an ambiguous hero. Most of Kabila's top associates were Tutsis in 1997 and were implicated in alleged massacres of Rwandan Hutu refugees in the Eastern Provinces, which they had controlled since November 1996.

By August 1998, a full-fledged war, which eventually involved nine African countries, erupted. It began with a disagreement between Kabila and his Rwandan and Ugandan allies over their future participation in the Congolese state, which soon led to Rwandan and Ugandan attacks on the eastern towns of Goma, Bukavu, and Uvira. With Southern African Development Community (SADC) members Angola, Namibia, and Zimbabwe supplying troops and materials to Congo, and Chad and Sudan also backing Kabila, US Assistant Secretary of State for Africa, Susan Rice, dubbed the conflict, "Africa's first world war."

Initially, a Congolese faction called the Rassemblement Congolais pour la Démocratie (RCD), which included former Mobutu supporters and Kabila dissidents, claimed popular support against the Kabila government to establish democracy in the DROC. This group never achieved wide popularity and some analysts believe it was principally a Rwandan creation to overthrow Kabila by proxy. In April–May 1999, the RCD split into two factions with Ilunga claiming that Wamba dia Wamba no longer controlled significant forces. Shooting also broke out between sides of allied Ugandan and Rwandan forces in Kisangani leaving several dead. A third rebel group, the MLC of Jean-Pierre Bemba, controlled parts of Equateur Province and Province Orientale. The UN estimates that some 6,000 people died by the end of the first year of the Congo conflict, many of them civilians. The financial cost to Zimbabwe alone was estimated at \$3 million per day.

In July 1999, all sides signed the Lusaka peace accords, and eventually the UN agreed to send some 5,000 peacekeepers under the MONUC mission to DROC to monitor the implementation of the accord. However, with more than half the national territory under rebel control, and with Kabila refusing to cooperate with the UN negotiator, a political and military stalemate ensued. The country fell further into economic chaos due to gross mismanagement of monetary and fiscal policy. On 16 January 2001, a presidential guard shot and killed Laurent Kabila. Kabila was succeeded by his son, Joseph, who was confirmed unanimously by his father's appointed parliament to be the new head of state on 27 January 2001. In mid-January 2003 the assassination trial was concluded, and despite questionable evidence, 29 people were found guilty and condemned to death.

In August 2002, Joseph Kabila succeeded in concluding a peace deal with Rwanda, and with Uganda in September 2002 and in March 2003. By April 2003 most but not all foreign troops had withdrawn, and Kabila had extracted commitments from his neighbors to respect pre-1997 Congolese borders.

Given his youth and inexperience, few observers thought Joseph Kabila could have orchestrated the power-sharing agreement signed in Pretoria on 17 December 2002 between his government, the Mouvement pour la Libération du Congo (MLC), the Rassemblement Congolais pour la Démocratie (RCD-Goma), the unarmed opposition, and civil society. The agreement permitted Kabila to remain president of the republic until elections were held, a condition on which he insisted throughout the Inter-Congolese Dialog (ICD) talks. However, despite the Pretoria agreement and the presence of several dozen French peacekeeping troops, fierce fighting continued between the Hema and Lendu tribes over control of Bunia, a town in the northeast.

Fighting also continued in other parts of the country. In early 2003, the MLC rebel faction was accused of mass murder, cannibalism, rape, and other human rights abuses committed against Pygmies in Ituri located in the northeast. Fighting, raping, looting, and theft also were reported into June 2003 in towns and villages in the eastern Kivu provinces. Despite having signed a peace agreement in Sun City, South Africa in April 2003, the Rwandan-backed RCD-Goma captured the town of Lubero in June 2003.

In June 2003 concrete steps were taken to resolve the conflict and to implement the Pretoria Accord. A transitional power-sharing government with representation from all the main factions was charged with the responsibility of preparing the country for its transition to democratic elections in 2005. Implementation of the timetable, however, was slow with the government in no hurry to speed the transfer of power. Citizen protests over the delays culminated in a major demonstration organized by the Union for Democracy and Social Progress (UDPS) party in July 2005, and only under concerted pressure from donors did the parliament announce a new and presumably final elections deadline for March/April 2006. The enormous task of voter registration, which began in June 2005, proceeded apace throughout 2005, and the deadline for candidate registration was set for 17 January 2006.

Despite progress in moving the political transition forward, renewed clashes between armed factions operating in Ituri district and North Kivu province threatened to derail the process. Leaders of RCD-Goma were opposed to the transition, claiming that armed Hutu Interahamwe militias continued to conduct attacks on the Banyamulenge Congolese Tutsi population. It was also clear that RCD-Goma was interested in staying in power as long as possible, benefiting from the smuggling of cassiterite and other precious minerals from the DROC into Rwanda. Talks between Kabila and the Rwandan Hutu Democratic Forces for the Liberation of Rwanda (FDLR) aimed at disarming them and repatriating them to Rwanda broke down because the FDLR wanted to impose amnesty conditions that Rwanda refused.

The protracted fighting was responsible for an estimated 3.3 million war-related deaths in the Kivus between 1998 and 2002. This scale of human calamity had not been seen anywhere on the globe since World War II. In December 2005, the International Court of Justice ruled that Uganda would have to pay reparation to the DROC for looting during the 1998-2003 war. Meanwhile,

the specter of a return of Rwandan armed forces to Congolese soil was very real.

In late 2005, the UN MONUC peace-keepers numbered over 16,500 strong and additional police were authorized to maintain order in the run-up to the elections. MONUC claimed to have successfully demobilized several thousand militia fighters in Ituri, however, some 2,000 militia members were thought to be operating with most of their weaponry in that area. While MONUC provided a deterrent to conflict, observers noted that the failure to restructure the armed forces, to disarm militias, and redirect the loyalty of soldiers to the central government presented a major obstacle to the success of the transition process. Congo's "gold curse" and the illegal exploitation of precious minerals from eastern Congo by rebel factions and foreign governments were expected to continue to fuel the fighting. In January 2006, eight MONUC soldiers were killed and several wounded allegedly in an attack by the Ugandan Lord's Resistance Army rebels.

### 13 GOVERNMENT

A basic law (*loi fondamentale*) was adopted in early 1960, before independence, pending the adoption of a permanent constitution by a constituent assembly. It provided for a division of executive powers between the head of state (president) and the head of government (premier). The premier and a cabinet known as the Council of Ministers were both responsible to the bicameral legislature on all matters of policy. This document was replaced by a constitution adopted in 1964 and modeled closely on the 1958 constitution of the French Fifth Republic. Under its terms, the president determined and directed the policy of the state and had the power to appoint and dismiss the prime minister. The powers of the parliament were sharply reduced. After his takeover in November 1965, Gen. Mobutu initially adhered to the 1964 constitution, but in October 1966 he combined the office of prime minister with the presidency. In June 1967 a new constitution was promulgated. It provided for a highly centralized form of presidential government and virtually eliminated the autonomy that provincial authorities had previously exercised.

The constitution was further amended on 23 December 1970 when the MPR was proclaimed the sole party of the republic. MPR primacy over all other national institutions, which resulted from the 1970 establishment of a single-party system, was affirmed in constitutions promulgated in 1974 and 1978. Instead of directly electing the president of the republic, voters confirmed the choice made by the MPR for its chairman, who automatically became the head of state and head of the government. The president's leading role in national affairs was further institutionalized by constitutional provisions that made him the formal head of the Political Bureau, of the Party Congress, and of the National Executive and National Legislative councils.

Organs of the MPR included the 80-member Central Committee, created in 1980 as the policy-making center for both party and government; the 16-member Political Bureau; the Party Congress, which was supposed to meet every five years; the National Executive Council (or cabinet); and the National Legislative Council, a unicameral body with 310 members. The Legislative Council was elected by universal suffrage from MPR-approved candidates. In practice, however, most government functions were directly controlled by President Mobutu through his personal entou-

rage and through numerous aides and advisers. The constitution was amended in April 1990 to permit the formation of alternative parties.

In 1990, Mobutu was challenged by a rival government and he was unable to secure compliance with his decrees. In September 1993, the transitional Tshisekedi government elected by the National Conference in August 1992 and the Mobutu forces agreed on a draft constitution for the Third Republic and on an electoral process leading to a popular government in 1995. However, on 14 January 1994, Mobutu dismissed both governments and rival parliaments, a move that had little effect on the nation. Zaire had (as it had since 1992) two ineffectual governments, neither of which was capable of carrying out policy.

A rival legislature, the 435-member High Council of the Republic (HCR) was established by the National Conference in December 1992, and a government set up by the HCR and headed by Prime Minister Tshisekedi claimed to rule. Yet the army evicted his officers from government facilities. Mobutu repeatedly tried to remove Tshisekedi from office, but Tshisekedi refused to recognize Mobutu's authority to do so. Mobutu had de facto control of the administration but it was unable to act effectively. As a result of this stalemate, the government virtually collapsed.

With the overthrow of Mobutu in 1997, much uncertainty prevailed concerning the structure and organization of the new government. Zaire was renamed the Democratic Republic of the Congo, and the names of some provinces were changed. Bas-Zaire became Bas-Congo; Haut-Zaire became Province Orientale; Shaba assumed its former name, Katanga; and the two Kivus and Maniema were grouped together as one Kivu. In September 1997, Laurent Kabila had named several associates to the ministries, and others to governor posts. In November 1998 he approved a draft constitution, but it was not ratified by a national referendum; one outcome of the ongoing inter-Congolese dialogue is to be a new constitution. Laurant Kabila was assassinated in January 2001.

The December 2002 Pretoria agreement led to the establishment in June 2003 of a power-sharing transitional government led by President Joseph Kabila and co-led by four vice presidents who represented the five main armed factions, unarmed civilian opposition, civil society, and members of the previous Joseph Kabila government. The parliament was composed of a 500-member National Assembly and a 120-seat Senate with deputies appointed by the factions participating in the transition government. An electoral commission, a media-regulator, a truth and reconciliation commission, a national human rights watchdog, and an anticorruption commission rounded out the remaining temporary governmental bodies. The constitution was amended to change the age limit to 30 years old for presidential candidates, allowing Joseph Kabila (34 years old) to run.

## 14 POLITICAL PARTIES

Political activity was sharply restricted during the colonial period, but several dozen political parties had sprung into existence by early 1960, most of them small and based on local or ethnic organizations. Only the National Congolese Movement (Mouvement National Congolais—MNC) led by Patrice Lumumba entered the May 1960 elections and emerged with an effective national organization. Although the MNC captured only 30% of the popular vote,

it formed alliances with two regional parties and controlled 64 of the 137 seats in the House of Representatives.

The national government subsequently organized in June 1960, however, won the backing of a much broader (although less cohesive) coalition which included, among others, Joseph Kasavubu's Bakongo Alliance (Alliance des Bakongo—ABAKO), the largest of the ethnic parties. Kasavubu became the country's head of state and in September 1960 ousted Lumumba. After Tshombe's accession to the post of prime minister in 1964, national and provincial elections were scheduled. In a rather belated effort to organize national support for his policies, Tshombe persuaded some 40-odd local formations to go to the polls under the hastily improvised label of the National Congolese Convention (Convention Nationale Congolaise—CONACO). The elections, held in March–April 1965, gave CONACO 106 of the 166 seats in the lower house of the legislature. Kasavubu's subsequent dismissal of Tshombe in October 1965 and the failure of his handpicked successor, Evariste Kimba, to secure majority support in the CONACO-controlled lower house led to a complete stalemate, which was finally resolved only by Mobutu's seizure of power on 25 November 1965.

The new regime initially suspended all political parties, but in April 1967, Mobutu created the Popular Movement of the Revolution (Mouvement Populaire de la Révolution—MPR) in order to develop a political base for his regime. The constitution promulgated in June 1967 provided for the existence of “no more than two” political parties. However, all attempts to organize an opposition party to the MPR were summarily repressed, and the facade of bipartisanship was officially abandoned on 23 December 1970 when a constitutional amendment formally transformed the country into a single-party state. The chairman of the MPR held the office of head of state and head of the government after approval by the voters. Party and state were effectively one, and every citizen was automatically a member of the MPR. Of the four exiled opposition groups headquartered in Brussels, the Union for Democracy and Social Progress (Union pour la Démocratie et du Progrès Social—UDPS) appeared to be the most significant.

The constitution was amended to permit party activity in April 1990. By the time the National Conference was called in September 1991, more than 200 parties had emerged. Half of them belonged to the *mouvement présidentielle* but had no popular basis. The most important opposition parties formed a coalition known as the Sacred Union. These included the UDPS, the Union of Federalists and Independent Republicans (UFERI), the Unified Lumumbist Party (PALU) of Antoine Gizenga, and the Social Democratic Christian Party (PDSC). UFERI was later pried away from the Sacred Union by Mobutu's offer of the prime ministership to UFERI's Nguza Karl-I-Bond in November 1991.

In 1997, President Kabila outlawed all political parties and party activities until at least 1999 when elections were promised. However, party leaders such as Zahidi Ngoma (Les Forces du Future), and Olenghakoy (Forces for Renovation for Union and Solidarity—FONUS), who were previously jailed, did participate in the clergy-sponsored “Consultation Nationale” to discuss national issues. In April 2000, Tshisekedi of the UDPS traveled to the United States and Europe, signaling a thaw in the provisional ban on party activities.

In the run-up to the scheduled June 2006 elections, parties once again were legalized. The dominant players appeared to be Joseph

Kabila's Party of the People for the Reconstruction of Democracy (Parti du Peuple pour la Reconstruction et la Démocratie—PPRD); the PDSC; FONUS; the National Congolese Lumumbist Movement (MNC); the MPR—divided into three factions; PALU; UDPS; and UFERI—divided into two factions.

## 15 LOCAL GOVERNMENT

Since independence, the number of provinces has varied from six to 21, with an autonomous capital district at Kinshasa (formerly Léopoldville). In 1966, the number of provinces was cut back to 12, later to 8, and then to 10. At the same time, provincial autonomy, considerable in the republic's early years, was virtually eliminated following the adoption of a new constitution in 1967. The regions then were Bas-Zaïre, Bandundu, Equateur, Haut-Zaïre, Nord-Kivu, Shaba (formerly Katanga), Kasai-Oriental, Maniema and Sud-Kivu, and Kasai-Occidental. They were administered directly by regional commissioners. The regions were divided into 37 subregions (the former districts), of which 13 are major towns and their environs. These were further subdivided into 134 zones. Urban zones contained localities, while rural zones contained collectivities (chiefdoms), which in turn contained rural localities (groups of villages). Kinshasa, although autonomous, was organized like a region with subregions and zones (see Government Section).

Local administration was for years virtually coterminous with the local branch of the MPR. Regional, subregional, and zone commissioners were appointed by the central government. There were rural and urban councils. Urban councils were elected in 1977 and 1982; rural councils were elected in 1982. But the current breakdown of government leaves the operation of local government in doubt.

In April 1999, Laurent Kabila launched the CPP (Comité de pouvoir populaire), whose main purpose was to report to the authorities the needs of the population. CPP offices were located in each commune, and each neighborhood had its own representative. To some degree, their responsibilities overlapped with the existing local government. However, CPP more easily obtained funds to implement local projects, such as street lighting, sanitation, schools, and transportation. One example was the City Train, a tractor-trailer cab pulling a passenger wagon. Conventional local government administration was handicapped without a source of funding.

The country is divided into ten provinces and one city—Kinshasa, the capital.

Changes to the country's administrative structure were expected once the new government issuing from the 2006 elections was in place.

## 16 JUDICIAL SYSTEM

The legal system is based on both Belgian and tribal law. The courts include courts of first instance, appellate courts, a Supreme Court and the Court of State Security. Many disputes are adjudicated at the local level by administrative officials or traditional authorities. Although 1977 amendments to the constitution and the new constitution proposed in 1992 guarantee an independent

judiciary, in practice the president and the government have been able to influence court decisions.

In theory, the constitution guarantees defendants the right to counsel and a public trial. Appellate review is afforded in all cases except those involving national security and serious crimes adjudicated by the Court of State Security. Since August 1998, and because of the war, the president appealed for a provisional court (la Cour d'Ordre Militaire). The judges are soldiers who apply the law vigorously, and sometimes the rights of the defendants are totally ignored.

The judicial system in Congo is broken in almost every way—from the crumbled physical infrastructure of the courts to the low salaries of judges, to the bribes and enticements that compromise judgments and decisions of the courts.

## 17 ARMED FORCES

In 2005, the armed forces of the DROC numbered 64,800 active personnel, with the Army consisting of around 60,000 personnel. Equipment included 30 main battle tanks, over 40 light tanks, and more than 130 artillery pieces. The Navy numbered approximately 1,800 active members whose primary units consisted of eight patrol/coastal vessels, of which two were largely inoperative. The Air Force had around 3,000 members whose primary combat aircraft were two fighters and four fighter ground attack aircraft. Paramilitary forces operated at both the national and provincial levels and included a rapid intervention police force. There was no data on the DROC's defense budget.

## 18 INTERNATIONAL COOPERATION

The DROC was admitted to membership in the United Nations on 20 September 1960. It is a member of ECA and several nonregional specialized agencies and is a member of the WTO. The DROC is also a member of the African Development Bank, COMESA, the ACP Group, G-24, G-77, the SADC, the New Partnership for Africa's Development (NEPAD), and the African Union. The DROC is a member of the International Council of Copper Exporting Countries. The DROC, Rwanda, and Burundi form the Economic Community of the Great Lakes Countries (CEPGL).

The United Nations Organization Mission in the DROC (MONUC) was established in 1999 to assist in the disengagement of forces and the continuation of cease-fire agreements stemming from the 1998 civil war within the country. In 2005, MONUC was the largest UN peacekeeping mission in the world, with 47 nations participating. The DROC is part of the Nonaligned Movement.

In environmental cooperation, the DROC is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

The DROC has a wealth of natural resources that should provide the foundation for a stable economy. However, in September 1991 mutinous military troops looted all major urban centers bringing the economy to a virtual standstill. A large government deficit, primarily to pay salaries for the military and civil servants, was financed by printing currency. Hyperinflation, rapid devalu-

ation, and abandonment of the formal economy ensued. As a result of the accompanying widespread uncertainty and civil disorder, most businesses that were unable to leave the country adopted a defensive stance, minimizing their exposure in the DROC and waiting for an upturn in the economy. After the civil war began in August 1998, the government depreciated the franc four times to keep up with inflation. This did not help the economy, only serving to increase mistrust in the currency.

When operational, the DROC's economy is mixed. The state dominates the mining and utility sectors, but private industry is dominant elsewhere. Except for petroleum products, utilities, and parts of the transportation sector, market-determined prices are the norm, and many parastatal enterprises compete with private ones. Although the DROC possesses large amounts of unused agricultural land, its urban population is dependent on imported food due to the lack of a transportation network. Foreign exchange for food and other imports is generated primarily through export of diamonds, crude petroleum, and coffee.

The government under Joseph Kabila in 2001 implemented stabilization measures designed to break the spiral of hyperinflation and currency depreciation caused by the war. Growth of the GDP increased from -2.1% in 2001 to 6.6% in 2005, fueled by the mining, export agriculture, and forestry sectors. International donors supply the DROC with humanitarian aid, including the EU, World Bank, IMF, African Development Bank, and such bilateral donors as Belgium, Canada, and France. In 2003, a debt cancellation program under the Heavily Indebted Poor Countries program came into effect, with 80% of the DROC's external debt being written off.

Because the government only controlled the western and southwestern regions of the DROC in 2002, any estimates of the state of the economy applied only to those regions. The war caused an increase of government debt; reduced government revenue and economic output; increased corruption; caused a collapse of the banking system; and, because many industries and businesses could not operate, relegated much of the population to subsistence agriculture and barter. A UN report released in 2002 stated that over 85 multinational corporations, largely based in Europe, the United States, and South Africa, had taken advantage of the instability caused by the war and violated ethical guidelines by dealing with criminal networks exploiting the DROC's natural resources, including gold, diamonds, cobalt, and copper. This activity must be seen against the backdrop of the plunder undertaken by the combatants themselves and other African nations involved in the fighting.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Congo's gross domestic product (GDP) was estimated at \$32 billion. The per capita GDP was estimated at \$590. The annual growth rate of GDP was estimated at -4%. The average inflation rate in 2004 was 9%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 54% of GDP, industry 9%, and services 37%. Foreign aid receipts amounted to about

\$5 per capita and accounted for approximately 5% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$57. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 30%.

## 21 LABOR

Unemployment and underemployment have remained serious problems for the DROC. In 1998, there was an estimated labor force of 20 million; perhaps fewer than 20% were wage and salary workers. Agriculture employs 80% of the population, with the modern sector employing only about 400,000 persons. More recent data is unavailable.

The law provides for the right to unionize with the exception of magistrates and military personnel. The right to strike is limited by restrictions (mandatory arbitration and appeal procedures), and the unions have difficulty protecting workers' rights due to the difficult economic situation and lax government enforcement.

The official workweek is 48 hours in six days, with one 24-hour rest period required every seven days. The legal minimum employment age is 18, although many children work to help feed their families. As of 2005, minimum wage laws continue to be under suspension. All wages and salaries are extremely low, and most people cannot maintain a decent lifestyle. Civil servants supplement their incomes through various types of corruption, including bribery.

## 22 AGRICULTURE

The agricultural sector supports two-thirds of the population. Agricultural production has stagnated since independence. The principal crops are cassava, yams, plantains, rice, and maize. The country is not drought-prone but is handicapped by a poor internal transportation system, which impedes the development of an effective national urban food-supply system.

Land under annual or perennial crops constitutes only 3.5% of the total land area. Agriculture is divided into two basic sectors: subsistence, which employs the vast majority of the work force, and commercial, which is export-oriented and conducted on plantations.

Subsistence farming involves four million families on plots averaging 1.6 hectares (four acres), usually a little larger in savanna areas than in the rain forest. Subsistence farmers produce mainly manioc, corn, tubers, and sorghum. In 2004, food-crop production included manioc, 14,950,000 tons; sugarcane, 1,787,000 tons; corn, 1,155,000 tons; peanuts, 364,000 tons; and rice, 315,000 tons. In 2004, plantains totaled 1,199,000 tons; sweet potatoes, 224,500 tons; bananas, 313,000 tons; yams, 84,000 tons; and pineapples, 193,000 tons. Domestic food production is insufficient to meet the country's needs, and many basic food products have to be imported.

The production of cash crops was severely disrupted by the wave of civil disorder that engulfed the country between 1960 and 1967, and production fell again after many small foreign-owned plantations were nationalized in 1973-74. By the mid-1990s, the production of the DROC's principal cash crops (coffee, rubber,

palm oil, cocoa, tea) was mostly back in private hands. Commercial farmers number some 300,000, with holdings between 12 and 250 hectares (30 and 618 acres). Coffee is the DROC's third most important export (after copper and crude oil) and is the leading agricultural export. An estimated 33,000 tons were produced in 2004 (down from an average of 97,000 tons during 1989–91); 80% of production comes from the provinces of Haut Zaire, Equateur, and Kivu. Only 10–15% of production is arabica coffee, the vast majority being robusta; coffee exports are mostly sold to Italy, France, Belgium, and Switzerland. The collapse of the International Coffee Agreement in 1989 quickly led to a doubling of exports by the former Zaire, whereupon the surplus entering the world market drove down prices rapidly.

Rubber is the second most important export cash crop. The plantation crop has been slowly recovering from nationalization. Some plantations are now replanting for the first time in over 20 years. In 2004 production amounted to 7,000 tons. Oil palm production is concentrated in three large operations, two of them foreign-owned. Production in 2004 totaled 1,150,000 tons. Palm oil production remains profitable in the DROC due to a 100% tax on competing imported oil. The production of cotton engages about 250,000 farmers, who annually produce about 8,000 tons. Domestic production, however, is not sufficient for the country's textile manufacturers. Other cash crops produced in 2004 were 3,700 tons of tobacco, 1,400 tons of tea, and 5,800 tons of cocoa.

### 23 ANIMAL HUSBANDRY

In 2004, domestic meat production was an estimated 218,000 tons, but only half of the meat demand is met domestically. The number of head of cattle in 2004 was estimated at 765,000, found in the higher eastern regions, above the range of the tsetse fly. ONDE, a state agency, manages large ranches, mainly in Shaba and West Kasai. The number of goats in 2004 was estimated at 4,009,000; hogs totaled 953,000; and sheep, 897,000.

### 24 FISHING

Fish are the single most important source of animal protein in the DROC. Total production of marine, river, and lake fisheries in 2003 was estimated at 222,965 tons, all but 5,000 tons from inland waters. PEMARZA, a state agency, carries on marine fishing.

### 25 FORESTRY

Forests cover 60% of the total land area. There are vast timber resources, and commercial development of the country's 61 million hectares (150 million acres) of exploitable wooded area is only beginning. The Mayumbe area of Lower Zaire was once the major center of timber exploitation, but forests in this area were nearly depleted. The more extensive forest regions of the central cuvette and of the Ubangi River valley have increasingly been tapped. Roundwood removals were estimated at 72,170,000 cu m in 2003, about 95% for fuel. Some 14 species are presently being harvested. Exports of forest products in 2003 totaled \$25.7 million. Foreign capital is necessary in order for forestry to expand, and the gov-

ernment recognizes that changes in tax structure and export procedures will be needed to facilitate economic growth.

### 26 MINING

Mining was the country's leading industry in 2003, and diamonds, copper, and cobalt ranked first, second, and fourth, respectively, among export commodities. Mining has historically accounted for 25% of gross domestic product (GDP) and three-quarters of export revenues. In 2000 the mining sector's share of GDP was 6%, down by 21% between 1996 and 2000 (the latest year for which data was available). GDP declined by an annual average of 5% from 1998 to 2000. The outbreak of civil conflict in the DROC (then known as Zaire) in 1996 severely disrupted the economy, including metals mining, leaving diamond exports as the major source of revenue. Despite the collapse of much of the formal mining infrastructure, the DROC remained an important source of industrial diamond and cobalt. The value of mineral exports in 2003 were valued at \$1.28 billion, of which diamonds accounted for \$813 million, according to the International Monetary Fund (IMF). The public mining company La Générale des Carrières et des Mines (Gécamines) in 2002 reported total "global reserves" of 54 million tons of copper, 4.66 million tons of cobalt, and 6.4 million tons of zinc, expressed in contained metal. Gécamines, the country's most important company, produced all of its coal, cobalt, copper, and zinc. The Congo also produced, and was richly endowed with, cadmium, coal, columbium (niobium), and tantalum (locally referred to as "coltan"), germanium, gold, lime, manganese, petroleum, silver, crushed stone, sulfuric acid, tin, tungsten, uranium, and zinc. Uranium for the first US atomic bomb was mined in the former Zaire. Most foreign exploration activity and development-oriented feasibility work came to a halt in 1998, following the flare-up of a new full-scale civil war. Negotiations on a 1999 cease-fire agreement continued into 2001, and the decrease in military conflict permitted the government to address a proposal for new foreign investment and mining laws. Over half of the DROC's mineral exports took a circuitous route by air, riverboat, railway, and road from Shaba to the Matadi port (copper shipments could take 45 days to go from the plant to the dock), because the Benguela railway to Angola has effectively been closed since 1975; most of the rest went south by rail to South Africa, which was an important source of imports. Because of the size and wealth of its resources, the long-term potential of the Congo was more promising, and the country could return to world markets as an important supplier of cobalt, copper, diamond, and zinc, dependent on its ability to achieve political and economic stability and to put in place the legal and business framework needed to attract new foreign investment.

Until 1986, the former Zaire was the leading producer of industrial diamonds. The chief diamond-producing center was Mbuji Mayi, in East Kasai. The 80%-government-owned Société Minière de Bakwanga (MIBA) produced 6.9 million carats of low-value, near-gem-quality stones in 2003, up 25% from 2002. However, the majority of the diamonds produced by the DROC comes from artisanal mining in the Tshikapa, Kinsangani, and Mbujimayi regions. In 2003, artisanal production of diamonds totaled 21.1 million carats, compared with output in 2002 of 16.4 million carats.

Mine copper output in 2003 was 52,700 metric tons, up from 32,300 metric tons in 2002. Copper was produced exclusively in

the Shaba Region (formerly Katanga), *shaba* meaning “copper” in Swahili. Gécamines holdings in the Copperbelt, in Shaba, contained one of the greatest concentrations of high-grade copper and coproduct cobalt resources in the world. Since 1993, most mining operations have come to a standstill. This condition was attributed to aging equipment, lack of domestic and international investment, lack of spare parts, shortages of fuel, lubricants, and sulfuric acid, problems with transporting ore and finished products, theft of finished products, debts owed to the state electrical company and Société Interrégionale Zaïroise de Rail (Sizarail), flooding of open-pit mines, and the inability to retain professional and other personnel. First Quantum Minerals Ltd.’s small, high-grade Lonshi copper deposit began open pit mining in 2001; it contained a measured and indicated resource of 5.1 million tons grading 5.75% acid-soluble copper.

The output of cobalt from mined ore was 12,000 metric tons in 2003, down from an estimated 14,500 metric tons in 2002. In 1994, Gécamines initiated a program to shift emphasis toward cobalt production, which jumped 57% that year, after falling 87% since 1987. Gécamines’s strategy was to concentrate development and mining activities at cobalt-rich zones of several copper ore bodies, with plans to produce 10,000–15,000 tons of higher value cobalt by the end of 2002. The decline of copper and cobalt production in the 1990s has led to the deterioration of Gécamines.

OM Group, Inc. (OMGI), of the United States, one of the world’s largest consumers of refined cobalt, and l’Enterprise Générale Malta Forrest SPRL (EGMF) completed the first major foreign investment in Shaba in recent years; full operating capacity from their Luiswishi copper-cobalt mine was reached in 2000. As of early 2002, total resources remaining at the Luiswishi Mine—the only mine operating in Gécamines’s Southern Group in 2001—were reported to be 7.5–8 million tons at a grade of 2.8% copper and 1.0% cobalt; the second phase of mining would develop 3.5 million tons of oxide reserves at a rate of 500,000 tons per year of ore. Anvil Mining NL of Australia and First Quantum announced plans to develop the high-grade Dikulushi copper-silver deposit. Anvil also held a number of exploration licenses covering more than 43,000 sq km (16,600 sq mi), including gold and platinum prospects near Kalemie, copper and gold prospects near Kapulo, and copper prospects near Lungeshi. The Kolwezi copper-cobalt tailings project, operated by a 50–50 joint US–UK venture, was based on reprocessing of a resource of nearly 113 million tons grading 1.49% copper and 0.32% cobalt of oxide tailings from the Kingamyambo and Musonoi tailings dams; mining would be by high-pressure water monitor guns with the material pumped along a slurry pipeline to a new leach SX-EW plant.

Mined output of zinc (mineral content) fell from 172,000 tons in 1969 to zero in 1999 and 1,014 in 2001. There was no recorded zinc production in 2002 or 2003. Scoping studies in 2001 of the Kipushi zinc mine, which ceased full-scale mining in 1993, concluded that mining operations of up to 100,000 tons per year contained in concentrate could be sustained for 20 years; the mine, started in 1929, has been maintained in excellent condition, and the bulk of measured and indicated mine resources remaining for development amounted to 17 million tons at a grade of 16.7% zinc and 2.32% copper, with an additional inferred resource reported to be 9 million tons at a grade of 23.3% zinc and 1.93% copper.

Congo recorded no silver production in 2000 and 2001, but did produce 2,100 kg in 2002 and 35,500 kg in 2003. Gold output was 20 kg in 2002, down from 207 kg in 1999. Undocumented artisanal gold production in areas controlled by the rebel faction Rally for Congolese Democracy (RCD) could range from 3,000 to 6,000 kg. No cassiterite (tin ore) was produced in 1997–2001, compared with 500 tons in 1994 and 7,502 in 1974.

According to the 1994 Constitution, the soil and subsoil belonged to the state. A draft of a new mining code, to reach parliament in 2002, was to create a framework of incentives conducive to private investment, including a change in the role of government from mining operator to mining regulator, creation of a single investment agreement framework, introduction of a special tax regime, and the option of issuing mining titles on a first-come-first-served basis, transparently managed. The government maintained at least partial ownership and generally majority ownership of all the productive and service sectors of the economy.

## 27 ENERGY AND POWER

The Democratic Republic of the Congo (DROC) has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The DROC’s Inga dam, alone on the Congo River, has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region. However, ongoing uncertainties in the political arena, and a resulting lack of interest from investors has meant that the Inga dam’s potential has been limited. In 2001, the dam was estimated to have an installed generating capacity of 2,473 MW. But, it is estimated that the dam is capable of producing no more than 650–750 MW, because two-thirds of the facility’s turbines do not work. As of 1 January 2003, the DROC had a total installed electric generating capacity of 2.548 GW. For that year, a total of 6.04 billion kWh were generated, with domestic consumption accounting for 4.32 billion kWh. The DROC is also an exporter of electric power. In 2003, electric power exports came to 1.30 billion kWh, with power transmitted to the Republic of Congo and its capital, Brazzaville, as well as to Zambia and South Africa.

The DROC has crude oil reserves that are second only to Angola’s in southern Africa. As of 1 January 2005 the DROC’s crude oil reserves came to 187 million barrels (Angola: 5,412.0 billion barrels as of the same date). In 2004, the DROC produced 21,100 barrels of petroleum per day. For that year, domestic consumption and net exports came to 7,000 barrels per day and 14,100 barrels per day, respectively. However, the DROC had no refining capacity as of 1 January 2005, and must import refined petroleum products. In 2002, imports of refined petroleum products totaled 8,180 barrels per day. Oil product imports consist of gasoline, jet fuel, kerosene, aviation gas, fuel oil, and liquefied petroleum gas.

As of 1 January 2005, the DROC had natural gas reserves of 35 billion cu ft. However, for 2003 there was no domestic production or consumption of natural gas.

As of July 2005, the DROC is reported to have coal reserves of 97 million short tons. Domestic coal production and consumption in 2003 totaled 0.11 million short tons and 0.26 million short tons, respectively.

## 28 INDUSTRY

Manufacturing was nearly nonexistent in the DROC in 2003, and has remained so due to the war, foreign exchange problems, and a decline in local purchasing power due to hyperinflation (estimated at 357% in 2001 and 21.7% in 2005). Much of the DROC's industry is the processing of agricultural products (sugar, flour) and mineral-bearing ore (copper, zinc, petroleum, cement). The production of consumer goods (beer, soft drinks, textiles) plays a leading role in the sector, as does palm oil processing and cigarette making.

A five-year investment in the copper smelter in Shaba was completed in 1990. However, the center was severely damaged by political unrest in 1992–93. The Maluju steel mill was unprofitable and closed in 1986. The Société Congo-Italienne de Raffinage (SOCIR) refinery operated at 50% of capacity and produced 2 million barrels of refined petroleum products in 1994. The country's domestic crude oil has been too heavy to be processed by the refinery, although as of 2000 the refinery had resumed limited refining activity to process some imported crude oil.

Despite the war, reconstruction plans were underway during the 2003–05 period, including building construction, construction for pipelines, communication and power lines, highways, roads, airfields, and railways. Construction for plants, mining and manufacturing, and buildings related to the oil and gas industry was also being undertaken.

## 29 SCIENCE AND TECHNOLOGY

The General Commission on Atomic Energy, conducting research in peaceful application of atomic energy, is in Kinshasa, as are the Geographic Institute of Zaire, the Institute of Tropical Medicine, the National Institute for the Study of Agronomical Research, the Institute of Nature Conservation, the Center for Geological and Mineral Research, and France's Bureau of Geological and Mineral Research. The University of Kinshasa (founded in 1954) has faculties of sciences, polytechnic, medicine, and pharmacy. The University of Kisangani (founded in 1963) has faculties of science and medicine. The University of Lubumbashi (founded in 1955) has faculties of sciences, polytechnic, veterinary medicine, and medicine. In addition, five university-level institutes offer training in information science, agronomy, and medicine.

## 30 DOMESTIC TRADE

Decades of corruptions and poor economic policies, as well as political unrest, have led to a very poor domestic economy. By the mid-1990s, the government controlled 116 enterprises, of which 56 were fully publicly owned. Since the 1980s, a large underground market has also operated. However, since 2001, the government has embarked upon a series of economic reforms, including a new commercial court and a new investment code that focuses on encouraging foreign and domestic investment.

Kinshasa, connected by rail with Matadi, the main port of entry, is the principal general distribution center for mining equipment and the chief center for trade with Zambia and South Africa. Kisangani is a major distribution and marketing center for the northeast. Other commercial centers are Likasi, Kolwezi, Kananaga, Mbandaka, and Matadi. High transportation costs and the lack

of transportation systems in many areas have been prohibitive for domestic trade.

Gratuities are a part of almost every commercial transaction conducted. Tips and gifts are routinely expected, particularly in the public sector where salaries are low and often unpaid. Soldiers and officials typically extort money for agreeing not to impede with commerce.

Usual business hours are from 8 AM to noon and from 2:30 to 5 PM, Monday through Friday, and 7:30 AM to noon on Saturday. Most correspondence and advertising are in French. Most transactions are conducted with cash. Major credit cards are not widely accepted. Travelers checks have limited acceptance; however, high fees may be imposed for cashing them.

## 31 FOREIGN TRADE

During his administration, which ended in 1997, President Mobutu routinely diverted much of the country's export revenues to special accounts held outside the country.

Foreign exchange earnings have traditionally been highly sensitive to changes in the world market prices for copper and cobalt, two of its principal exports. Other leading exports include crude oil, diamonds, and coffee. Principal imports are consumer goods, foodstuffs, mining and other machinery, transport equipment, and fuels. According to recent IMF estimates, the high world prices of oil and copper and rising diamond production boosted exports in 2005 to \$2.2 billion, an increase of 21% on 2004. But it is also noted that imports have also risen by 19% to \$2.4 billion.

## 32 BALANCE OF PAYMENTS

Substantial illegal exports, imports, and transfers of capital and profits abroad are unrecorded; indeed, the central bank does not include adjustments for fraud of close to 100% for DROC's primary exports. In August 1991, the government permitted the zaire, the national currency, to float because the central bank had exhausted its foreign exchange reserves. By statute, the government no longer controls the import or export of capital or the foreign exchange markets. DROC has no external credit, almost no central bank reserves, and external financial operations are largely carried out by private entities. Large external payments arrears have not been cleared. In 2001, the external debt was estimated at \$13.9 billion but had declined slightly to \$10.98 billion by 2005.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of DROC's exports was \$2.19 billion while imports totaled \$2.35 billion resulting in a trade deficit of \$164 million.

## 33 BANKING AND SECURITIES

The Bank of Zaire serves as the country's central bank and bank of issue. In the mid-1990s, the commercial banks in the former Zaire included the Zairian Commercial Bank, the Union Banks of Zaire, Barclays Bank (Zaire), the Bank of Paris and the Low Countries, the Bank of Kinshasa, Citibank (Zaire), and Grindlays International Bank of Zaire. The only public savings banks were the People's Bank and the General Savings Fund of Zaire. There is also a state-owned National Fund of Savings and Real Estate Credit. An

indication of the deterioration of economic life was a strong disinclination by the public to keep money in banks.

The International Monetary Fund reports that in 1995, currency and demand deposits—an aggregate commonly known as M1—were equal to \$268.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$380.4 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 125%.

There are no securities exchanges in the DROC.

### 34 INSURANCE

In 1959, there were eight insurance firms, each representing many foreign companies. Workers' compensation was the only form of compulsory insurance in the territory. In 1967, all private insurance companies were abolished and replaced by the state-owned National Society of Insurance (SONAS-La Société Nationale d'Assurance).

### 35 PUBLIC FINANCE

Public finance from the late 1970s to the 1990s was characterized by uncontrolled spending, poor tax collection, and large deficits, often covered by creating new money. Expenditures are almost entirely current. The state-owned copper mining company typically generates one-third of the government's revenue. In 2001, the government, under Joseph Kabila, undertook a program of economic reform to reverse the economy's steep decline. The program worked, reducing the inflation rate from over 500% in 2000 to about 10% by the end of 2001. In June 2002, the IMF and the World Bank approved new credits for the DROC for the first time in more than a decade.

The US Central Intelligence Agency (CIA) estimated that in 2004 DROC's central government took in revenues of approximately \$700 million and had expenditures of \$750 million. Rev-

enues minus expenditures totaled approximately -\$50 million. Total external debt was \$10.6 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were CF158,395 million and expenditures were CF159,397 million. The value of revenues in US dollars was us\$457 million and expenditures us\$461 million, based on a market exchange rate for 2002 of us\$1 = CF346.485, as reported by the IMF.

### 36 TAXATION

In the mid-1990s, personal income was taxed progressively, with a 50% ceiling on total payable tax. The corporate tax rate was 50% of taxable profits. Profits of branches of foreign corporations were subject to the same rate of taxation. There was also a 3–30% sales tax on imports, exports, local manufactured goods, construction works, local services, and imported services. An employment tax of 33% was imposed on services by foreigners. Other taxes included an educational tax, property tax, and a transfer tax.

### 37 CUSTOMS AND DUTIES

Congo adopted the Harmonized System in 1988. Most tariffs are ad valorem. The tariff rate system has four categories: 5% on basic necessities; 10% on raw materials and capital goods; 20% on intermediate and miscellaneous goods; and 30% on consumer goods. There is also an 18.7% value-added tax (VAT) based on CIF (cost, insurance, freight) plus the duty. The DROC is associated with the EU countries through the Lomé Convention, which provides for the reduction of tariff barriers between the signatories and EU members.

### 38 FOREIGN INVESTMENT

Beginning in 1966, when the Mobutu government began to assert control over the economy, foreign firms with assets and operations predominantly based in the former Zaire were ordered to incorporate under national law and to transfer their headquarters to the country. For a time, a liberal investment code enacted in 1969 encouraged private investments. In 1973, however, Asians and Europeans were barred from any commercial activity in five of the country's eight regions. Shortly thereafter, a deliberate policy of Zairization of the retail sector was introduced. Under these measures, expatriates were barred from a wide range of business activities, mostly in the retail and service sectors. Foreigners affected by this policy were compelled to sell their interests to Zairian nationals, many of whom turned out to be officials of the national party. Many of the new owners had little or no business experience, and quite a few of them simply liquidated the stock and never repaid the low-interest loans extended by the government for acquisition of the businesses. More frequently, Zairization involved some form of mixed ownership, with the government usually the major shareholder but with management remaining in largely foreign hands.

Generally poor results brought new changes. The Congo's investment code of 1979, updated with World Bank advice in 1986, provides packages of tax breaks and duty exemptions for three categories of investment: General System (\$200,000 to \$10 million), Contractual System (above \$10 million with extra incentives negotiated on a case-by-case basis), and Special Regimes (meeting various priorities at different times). The country's complex

and arbitrary judicial system made implementation of this legal framework problematic at best.

The ending of the Mobutu regime in May 1997 has solved no problems as corruption and decay has been replaced by successive wars in the renamed Democratic Republic of the Congo (DROC). In 2001, timber investments by firms from Zimbabwe (about \$300 million), Germany, Malaysia, and China were reported, but for the most part looting of the country's wealth of natural resources—diamonds, gold, timber and tantalite deposits (used in mobile phones), particularly—by rival military groups had taken the place of investment. In June 2002, a three-year standby agreement was concluded with the IMF, but stabilization and welfare spending targets were missed because of the need for increased military spending.

The country stands in need of timely and sufficient foreign assistance, but the DROC was ranked third from the bottom of 140 countries on UNCTAD's Inward FDI Potential Index for 1998–2000 with a score of 8.5 out of a possible 100. With a semblance of peace some foreign direct investment has begun to flow into the DROC once again. It is estimated that FDI of \$352.6 million in 2003 and \$241.6 million in 2004 was invested in the DROC, largely in the telecommunications sector.

### **39 ECONOMIC DEVELOPMENT**

The announced priorities of the Mobutu government were economic nationalism and the development of an infrastructure appropriate to an industrial economy. Infrastructural development would involve the extension of the country's hydroelectric potential, transportation network, harbor facilities, and oil-refining capability, as well as the development of basic industries such as iron and aluminum smelters and cement plants. Many development plans were poorly planned and mismanaged, however. Development expenditures were usually made year-by-year and despite occasional, vaguely conceived three-year plans, little progress was made over the years.

Since 1992, any semblance of economic planning and development management evaporated. In 1997, the overthrow of Mobutu by Laurent Kabila continued the destabilization, and civil war in 1998 further dashed the hopes for economic development. The fighting was fueled by the DROC's vast mineral wealth, with all parties using the anarchic climate to exploit the country's natural resources. Kabila was assassinated in January 2001, and his son Joseph Kabila became president. A cease-fire between the warring parties was signed in December 2002, and plans were made for a government of national unity. In June 2003, Kabila named an interim government, to include members of the political opposition and rebel groups.

The DROC negotiated a three-year \$850 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the International Monetary Fund (IMF) in June 2002. The Kabila government undertook a number of economic reforms upon being installed in 2001, including implementing stringent fiscal and monetary policies, and an anti-inflationary program that reduced inflation from over 500% in 2000 to about 15.9% at an annual rate for the 2002–2005 period. In August of 2005, the IMF completed the delayed fifth review of performance under the \$850 million poverty reduction and growth facility (PRGF) awarded to DROC in June 2002, triggering the release of a \$39 million installment of

the facility to the government in spite of the fact that several criteria were not fulfilled under the PRGF. The fifth review had originally been scheduled for completion in late 2004. At the same time as completing the fifth review, the IMF also extended the life of the PRGF from October 2005 to March 2006, to give enough time for the completion of a sixth and final review. Bilateral donors who previously directed their assistance solely to humanitarian needs, also began to fund development projects. Efforts are underway to encourage business activity in the country as a part of the peace process.

### **40 SOCIAL DEVELOPMENT**

A social insurance program is in place for all employees providing pensions for old age, disability, and survivorship. Contributions are made by employers and employees, with the government providing an annual subsidy. Retirement is at age 65 for men and age 60 for women, unless the person is "prematurely aged." Survivorship ceases when the widow or widower remarries. Workers are entitled to medical, dental, surgical, and hospital care, as well as medicine, appliances, and transportation. There is a family allowance for employed persons with one or more children. However, large segments of the population are subsistence farmers and are therefore excluded from coverage under these programs.

Discrimination and violence against women is widespread and common. A married woman must obtain her husband's authorization before opening a bank account, accepting a job, obtaining a passport, or renting or selling real estate. Usually women are relegated to agricultural labor and household and child-rearing duties. The small percentage in the work force receive less pay than men for comparable work and remain severely underrepresented in management positions. Domestic abuse is pervasive. Widows are generally deprived of all possessions including dependent children. Children are forced into labor and military service.

Discrimination against ethnic Tutsi and indigenous Pygmies persists. The human rights situation is extremely poor, especially in rebel-held areas. Abuses include large scale killing, disappearances, torture, rape, dismemberment, extortion, robbery, arbitrary arrest and detention, and harassment of human rights workers and journalists.

### **41 HEALTH**

The departure of large numbers of European medical personnel in mid-1960 left the country's health services greatly weakened. Not a single African doctor had been graduated at the time of independence. In 1960, 90 doctors of 28 nationalities recruited by the World Health Organization (WHO) were working in the country. The WHO's emphasis was on the training of national health workers, to prepare them to run their own health services. In 2004, there were an estimated 7 physicians, 44 nurses, and 1 dentist per 100,000 people. Most facilities are concentrated in the major cities.

The first Ebola hemorrhagic fever identified in 40 years occurred in 1995. Of the 317 cases reported, an extremely high mortality rate was observed (77%). Common diseases include malaria, trypanosomiasis, onchocerciasis, schistosomiasis, diarrheal diseases, tuberculosis, measles, leprosy, dysentery, typhoid, and hookworm.

The Democratic Republic of the Congo lies in the area of Africa with the highest number of cases of AIDS. The HIV/AIDS prevalence was 4.20 per 100 adults in 2003. As of 2004, there were approximately 1,100,000 people living with HIV/AIDS in the country. There were an estimated 100,000 deaths from AIDS in 2003.

Malnutrition is a serious health problem, especially among children; malnutrition was prevalent in an estimated 34% of all children under five years old in 2000. In 1999, there were 301 cases of tuberculosis reported per 100,000 people. In 1995, children up to one year old were immunized against tuberculosis (51%); diphtheria, pertussis, and tetanus (35%); polio (36%); and measles (41%). Approximately 45% of the population had access to safe drinking water and 20% had adequate sanitation.

In 2003 the birth rate was 45.2 per 1,000 people with only an estimated 3% of married women (ages 15 to 49) using contraception. Average life expectancy was 51.10 years in 2005. In the same year, infant mortality was 90.66 per 1,000 live births. Maternal mortality was 870 per 100,000 live births and general mortality was 14.9 per 1,000 people.

In the mid-1990s, 1.1 million women, or 5% of the female population in the DROC, underwent female genital mutilation. The government has not published a policy opposing this procedure.

## 4<sup>2</sup> HOUSING

The massive urban influx that began after independence led to a fourfold increase in the population of Kinshasa, creating a massive housing problem that is still far from solved. Tens of thousands of squatters are crowded into squalid shantytowns on the outskirts of the capital. Other, more prosperous migrants have built themselves permanent dwellings. Unable to control the spread of unauthorized and generally substandard construction or to come up with adequate alternatives, the government tolerated what it could not prevent and began extending basic utilities to the new settlements.

Housing falls under the responsibility of the Department of Public Health and Social Affairs. Public housing and home-building loans sponsored by the National Housing Office still cover no more than a tiny fraction of the country's massive housing needs. At last estimate, more than half of housing units were traditional one-room adobe, straw, or mud structures, and less than half were modern houses of durable or semidurable material containing one or more rooms. About 61% of households were owner occupied at the last estimates.

## 4<sup>3</sup> EDUCATION

The colonial system of education became notable for its failure to provide university training for Africans although the rate of elementary school attendance under the Belgians was one of the highest in Africa (56% in 1959). This figure was deceptive, however, since most elementary schooling was limited to the first two grades. Fewer than 10% of school-age children completed the six-year elementary cycle. Understandably, one of the chief efforts of the successive governments of the DROC has been to push as many schoolchildren as possible beyond the threshold of the two-

year cycle. This effort has accounted for a massive increase in elementary-school population since 1960.

Education is compulsory between ages 6 and 12. Primary school lasts for six years. General secondary school covers another six-year course of study; however, students may choose a six-year technical program or a five-year vocational program instead. The academic year runs from October to June. The primary language of instruction is French.

In 1998, there were about 4,022,000 students enrolled in primary school. In 1995, there were about 1,514,323 students enrolled in secondary school. It has been estimated that about 32.4% of all students complete their primary education. The student-to-teacher ratio for primary school was about 13:1 in 1995; the ratio for secondary school was about 26:1.

University education was virtually nonexistent in the Belgian Congo prior to the mid-1950s. Up to that time, only a handful of Africans had been permitted to enroll in Belgian universities. Teacher-training institutions, religious seminaries, and advanced technical training in medicine, agronomy, and public administration were available, but did not lead to recognized university degrees. The Catholic University of Lovanium at Kinshasa (affiliated with the Catholic University of Louvain in Belgium) was organized in 1953. The State University of the Belgian Congo and Ruanda-Urundi at Lubumbashi was set up in 1955. A third university was established at Kisangani under Protestant auspices in 1962. A number of specialized institutes of higher learning were also created following independence.

In August 1971, the existing institutes and the three universities were amalgamated into a single national university system, the National University of Zaire, organized into three separate campuses located in Kinshasa, Lubumbashi, and Kisangani. The three campuses were reorganized as separate universities in 1981. The DROC also has numerous university institutes, including ones specializing in agriculture, applied technology, business, and the arts. In 1998, about 60,000 students were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 65.3%, with 79.8% for men and 51.9% for women.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library in Kinshasa holds 1.2 million volumes. The University of Kinshasa library holds 300,000 volumes. Smaller academic libraries are attached to various specialized university institutes. The Kinshasa Public Library has 24,000 volumes, and is a part of a national system with nine branches.

There are several museums in the capital, including the Anthropology Museum, the Fine Arts Museum, the Private Museum of Zoology, and museums on the campuses of the National University of Zaire and the University of Kinshasa. There are regional museums at locations throughout the country, including Buteme, Kananga, Kisangani, Lubumbashi, Mbandaka, and Mushenge.

## 4<sup>5</sup> MEDIA

The postal, telephone, and telegraph services are owned and operated by the government. In 2002 there were an estimated 10,000

mainline phones in use nationwide. In 2003 there were an estimated 19 cell phones in use for every 1,000 people.

State-controlled radio and television transmissions, operated under Radio-Television Nationale Congolaise (RTNC), are the prominent broadcasting stations, reaching the largest number of citizens. The RTNC radio broadcast of *La Voix du Congo*, is available in French, Swahili, Lingala, Tshiluba, and Kikongo. There are also many privately run broadcasting stations. In 2001, there were 3 AM and 11 FM radio stations and 4 television stations. In 2003, there were an estimated 385 radios and 2 television sets for every 1,000 people.

Major newspapers are only nominally privately owned. Journalists must be members of the state-controlled union to practice their profession. The press today is firmly under MPR control. The largest dailies are *La Depeche* (2002 circulation, 20,000), *Courrier d'Afrique* (15,000), and *Salongo* (10,000).

While the constitution provides for freedom of speech and the press, the government has restricted this right in practice.

#### 46 ORGANIZATIONS

The Corps of Volunteers of the Republic (CVR), a semipolitical movement, including major student movements, directly under the control of then president Mobutu, was created in February 1966. Its objectives were to promote "national reconstruction" and to "awaken national consciousness." The relative lack of enthusiasm generated by the CVR led to its being taken over in April 1967 by the MPR, which created a youth section for the ruling party—the Young Popular Movement of the Revolution.

Mobutu's conflict with the Roman Catholic Church provided the government with an excuse to ban all independent youth associations (most of which were church-related) and to replace them with party-controlled organizations. Student associations were similarly disbanded and superseded by an MPR-affiliated agency. Sports organizations are sponsored by the African Confederation of Sports for All. Scouting programs exist for youth and there are active branches of the YMCA.

ANEZA, the national association of private enterprises, with nearly 1,000 members, has absorbed all chambers of commerce. The Coffee Board of the Democratic Republic of Congo promotes the coffee trade. The African Committee for Trade Union Coordination and Action Against Apartheid and Colonialism serves as an umbrella organization in support of labor unions and human rights.

Human rights organizations within the country include the Committee of Human Rights Observers, The Christian Network of Human Rights and Civic Education Organizations, and the African Association for the Defense of Human Rights. There are national chapters of the Red Cross Society, Caritas, the Society of St. Vincent de Paul, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Virunga National Park in the Virunga Mountains is one of the best game preserves in Africa and is particularly noted for lions, elephants, and hippopotamuses. Kahuzi-Biega Park, west of Lake

Kivu, is one of the last refuges of the endangered mountain gorilla. Kinshasa has two zoos and a presidential garden.

There were 35,141 tourist arrivals in 2003. In that year there were also 5,829 hotel rooms with 10,000 beds and a 50% occupancy rate. Visitors stayed in the Democratic Republic of the Congo for an average of seven nights. Tourists and visitors are required to have a passport with a valid visa. A certificate of vaccination against yellow fever is required for entry.

In 2005, the US Department of State estimated the daily cost of staying in Kinshasa at \$289. Expenses were estimated at \$134 in Goma and \$135 in Bukavu.

#### 48 FAMOUS ZAIRIANS AND CONGOLESE

In the period of the transition to independence, two Zairian political leaders emerged as national figures: Joseph Kasavubu (1917–69), head of the ABAKO party, became the first chief of state; Patrice Emery Lumumba (1926–61) became the new nation's first premier, and his subsequent murder made him a revolutionary martyr in Communist and many third-world countries. In 1960, Moïse Kapenda Tshombe (1919–69), who headed the government of Katanga Province, became prominent when he declared Katanga an independent state with himself as its president and maintained the secession until early 1963. Gen. Mobutu Sese Seko (Joseph-Désiré Mobutu, 1930–97), commander-in-chief of the Congolese National Army from 1961 to 1965, assumed the presidency after he deposed President Kasavubu on 25 November 1965. The MPR party congress promoted Mobutu to the rank of field marshal in December 1982. Laurent Désiré Kabila (1941–2001), seized power in May 1997 when he declared himself president and changed the name of the country back to the Democratic Republic of the Congo. After Kabila's assassination in 2001, Kabila's son Joseph Kabila (b.1971) became president.

#### 49 DEPENDENCIES

The DROC has no territories or colonies.

# CONGO, REPUBLIC OF THE (ROC)

Republic of the Congo  
*République du Congo*

**CAPITAL:** Brazzaville

**FLAG:** The flag consists of a green triangular section at the hoist and a red triangular section at the fly, separated by a diagonal gold bar.

**ANTHEM:** *The Congolaise*.

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00208 (or \$1 = CFA Fr480.56) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Three Glorious Days, 13–15 August (including Independence Day, 15 August); Christmas Day, 25 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Lying astride the Equator, the Republic of the Congo contains an area of about 342,000 sq km (132,047 sq mi), extending approximately 1,287 km (798 mi) NNE–SSW and 402 km (249 mi) ESE–WNW. Comparatively, the area occupied by the Congo is slightly smaller than the state of Montana. It is bounded on the N by Cameroon and the Central African Republic, on the E and S by the Democratic Republic of Congo (DROC—formerly Zaire), on the SW by Cabinda (an enclave of Angola) and the Atlantic Ocean, and on the W by Gabon, with a total land boundary length of 5,504 km (3,413 mi) and a coastline of 169 km (105 mi).

The Congo's capital city, Brazzaville, is located in the southeastern part of the country.

## <sup>2</sup> TOPOGRAPHY

The Congo is roughly divided into four topographical regions. The coastal region consists of a low, relatively treeless plain, with occasional high spurs jutting down from the Mayombé Escarpment. The escarpment region is made up of a series of parallel folds of moderate height (600–900 m/2,000–3,000 ft) that are almost completely forested. To the east and north of the escarpment, and forming the watershed between the Niari and Ogooué river systems, lies the plateau region, with savanna covering more than 129,000 sq km (50,000 sq mi) and separating the Zaire and Ogooué basins. The northeastern region of the country is a swampy lowland covering some 155,000 sq km (60,000 sq mi); flooding is seasonal, with different tributaries of the Congo/Zaire overflowing into one another. The country has two river systems: that of

the coastal rivers, which flow into the Kouilou River, and that of the Zaire River and its tributaries.

## <sup>3</sup> CLIMATE

The Congo has a tropical climate characterized by high humidity and heat. There are two wet and two dry seasons. At Brazzaville, in the south, the average daily maximum temperature is 30°C (86°F) and the average minimum temperature 20°C (68°F). At Souanké, in the far north, the extremes are 29°C (84°F) and 18°C (64°F). Annual rainfall varies from 105 cm (41 in) at Pointe-Noire, in the southwest, to 185 cm (73 in) at Impfondo, in the northeast.

## <sup>4</sup> FLORA AND FAUNA

About half the land area is covered by okoumé, limba, and other trees of the heavy rain forest. On the plateaus, the forest gives way to savanna broken by patches of bushy undergrowth. The savanna supports jackals, hyenas, cheetahs, and several varieties of antelope; elephants, wild boar, giraffes, and monkeys dwell in the forest. As of 2002, there were at least 450 species of mammals, 345 species of birds, and over 11,000 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The most significant environmental problems in the Congo are deforestation, increases in urban population, and the protection of its wildlife. The Congo's forests are endangered by fires set to clean the land for agricultural purposes. The forests are also used as a source of fuel. The most accessible forest, that of the Kouilou-Mayombé Mountains, has been overexploited. During 1981–85, deforestation in the Congo proceeded at a rate of 22,000 hectares (54,400 acres) a year. From 1990–2000, deforestation occurred at

a rate of about 0.1% per year. As of 2000, about 64% of the total land area was forested.

The Congo has nine protected areas, covering some 1.5 million hectares. The two largest, the 7,800-sq-km (3,000-sq-mi) Léfini Reserve and the 2,600-sq-km (1,000-sq-mi) Odzala National Park, were established during the French colonial era. The country has one Wetland of International Importance at the Lake Télé Reserve. Altogether, 6.5% of the nation's natural areas were protected as of 2003.

The Congo's urban centers are hampered by air pollution from vehicles and water pollution from sewage. Its water purity problem is most apparent in rural areas where, as of 2000, only 51% of the people had safe drinking water.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 14 types of mammals, 4 species of birds, 1 type of reptile, 10 species of fish, 1 type of mollusk, and 35 species of plants. Threatened species include the green turtle, the African sharp nose crocodile, the spotted hyena, and black crowned crane.

## 6 POPULATION

The population of Republic of the Congo in 2005 was estimated by the United Nations (UN) at 3,999,000, which placed it at number 124 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 46% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.1%, a rate the government viewed as too high. The projected population for the year 2025 was 7,404,000. The population density was 12 per sq km (30 per sq mi), although large portions of the Congo basin in the northernmost region are sparsely populated or uninhabited.

At least four-fifths of the people live in the southern third of the country; the greatest concentration is in the Brazzaville area. The UN estimated that 52% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.75%. The capital city, Brazzaville, had a population of 1,080,000 in that year. Other large cities include Pointe-Noire, 663,400; Lou-bomo, 106,300; and Nkayi, 56,700.

The prevalence of HIV/AIDS has had a significant impact on the population of Republic of the Congo. The UN estimated that 7.2% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

There is continuous migration to urban centers, but immigration from other African countries is negligible. Some French, Greek, and Lebanese immigrants have settled in the Congo. In 1995, the Congo was host to 15,500 refugees, 12,700 of whom were from Angola and 2,100 from Chad.

In 1999, the Republic of the Congo (ROC), the Democratic Republic of the Congo (DROC), and the United Nations High Commissioner for Refugees (UNHCR) signed an agreement, launching a repatriation operation. Later that year approximately 36,000 refugees returned to Brazzaville. That year, 1.8 million Congolese

were internally displaced and 300,000 Congolese refugees fled to surrounding countries.

In 2004, there remained about 100,000 internally displaced people. Also in 2004, there were 68,536 refugees in the ROC, about 35% residing in camps and 58% residing in urban areas. Asylum seekers numbered 3,232, with 1,035 returned refugees and another 630 voluntarily returned refugees to Gabon. Numbers of Congolese seeking asylum in the DROC were 6,626, and Gabon, 12,122. In 2005, the net migration rate for the Congo was estimated as -0.17 per 1,000 population.

## 8 ETHNIC GROUPS

The population belongs to four major ethnic groups—the Kongo (48%), Sangha (20%), Teke (17%), and M'Bochi (12%)—which comprise more than 40 tribes. Europeans and other groups make up 3% of the population.

The major ethnic group, the Kongo, occupies the entire area southwest of Brazzaville and accounts for nearly half the nation's population. The Teke, who live north of Brazzaville, are chiefly hunters and fishermen. The M'Bochi (or Boulangi) live where the savanna and the forest meet in the northwest; this group has furnished many immigrants to the urban centers, including the majority of Brazzaville's skilled workers and civil servants. There are about 12,000 Pygmies, possibly Congo's original inhabitants, in the high forest region. In regard to the non-African community, Europeans numbered 8,500, mostly French, before the 1997 civil war. However, the number was thought to be half of that by 1998, following the widespread destruction of foreign businesses in 1997.

## 9 LANGUAGES

French is the official language. Several related African languages and dialects of the Bantu family are spoken. Kikongo has the most users. Monokutuba and Lingala are lingua franca trade languages.

## 10 RELIGIONS

Almost 50% of the population are Christian, with about 90% of all Christians affiliated with the Roman Catholic Church. Protestant denominations include Methodists, Seventh-Day Adventists, the Church of Jesus Christ of Latter-Day Saints, and Jehovah's Witnesses. A small number of Christians practice Kimbanquism, a combination of Christian and native customs and beliefs which originated in the Democratic Republic of the Congo. Less than 2% of the population are Muslim, mostly immigrants from north and west Africa who work or reside in urban centers. The remainder practice traditional indigenous religions or no religion.

With the approval of a new constitution in January 2002, freedom of religion is officially protected and discrimination on the basis of religious affiliation is specifically forbidden. All social, religious, and business organizations must register with the government. Certain Christian holidays are celebrated as national holidays. All organized religious groups have representation in the joint ecumenical council, which meets once a year.

## 11 TRANSPORTATION

The most important transportation system is the Congo-Ocean Railroad. Completed in 1934, the 510-km (317-mi) line runs be-

LOCATION: 3°42' N to 5°1' S; 11°7' to 18°39' E. BOUNDARY LENGTHS: Cameroon, 520 kilometers (323 miles); Central African Republic, 467 kilometers (290 miles); Democratic Republic of the Congo, 1,625 kilometers (1,010 miles); Angola, 201 kilometers (125 miles); Atlantic coastline, 156 kilometers (97 miles); Gabon, 1,656 kilometers (1,020 miles). TERRITORIAL SEA LIMIT: 200 miles.

tween Brazzaville on Pool Malebo and the ocean port of Pointe-Noire. In the course of descending the Mayombé Escarpment, it crosses 172 bridges and goes through 12 tunnels. To relieve congestion on this stretch, a 91-km (57-mi) line was completed between Bilinga and Loubomo in 1985. The 285-km (177-mi) Comilog rail line was completed in 1962 to transport manganese ore extracted at Moanda, Gabon, from M'Binda on the Gabonese border to the Congo-Ocean line at Mont-Bélo. This traffic was expected to end in the late 1980s with the completion of a railway in Gabon that

will transport the ore to the port of Libreville. In 2004, the country's total rail trackage was 894 km (555 mi), all narrow gauge.

Dense tropical forests, rugged terrain, and swamps, together with a hot, humid climate and heavy rainfall, make construction and maintenance of roads extremely costly. In 2002 there were about 12,800 km (7,954 mi) of highways, but only about 1,242 km (772 mi) were paved, and it was considered extremely risky to venture more than 150–200 km (90–125 mi) from Brazzaville because of the poor road conditions. A Brazzaville-to-Duesso road was

completed as far as Owando in the mid-1980s. In 2003, there were 40,585 passenger cars and 17,540 commercial vehicles in use.

River transportation is managed by the state-owned Trans-Congo Communications Agency. As of 2004, the Congo had a total of 4,385 km of navigable waterways on the Congo and Oubangui rivers. The river port of Brazzaville, which is the junction point of the Congo-Ocean Railroad and the Zaire-Oubangui river system, is an important center for trade with the Central African Republic, Chad, and the DROC. A ferry connects Brazzaville with Kinshasa, DROC. Pointe-Noire is the Congo's only seaport and the terminus of the Congo-Ocean Railroad.

Because of the great distances and the inadequacy of land transportation, air travel and air freight services are rapidly expanding. Brazzaville (Maya-Maya) and Pointe-Noire airports are the hubs of a network of air routes that connect the four equatorial republics with several European cities. The state-owned Lina-Congo holds a monopoly on domestic routes. The Congo is a member of Air Afrique, of which it owns a share. Air Afrique and Union des Transportes Aériens (UTA) are the chief international carriers. As of 2004, there were an estimated 32 airports, of which only 4 had paved runways as of 2005. In 2003, about 52,000 passengers traveled on scheduled domestic and international flights.

## 12 HISTORY

Although little is known of the early history of the Congo, it has been established that there was a Congo Empire that extended into present-day Angola and reached its height in the 16th century. The kingdom of Loango, which broke away from the Congo Empire, also prospered for a time. Another African state mentioned in the accounts of the first European explorers was the Anzico kingdom of the Teke. By the end of the 17th century, however, all these kingdoms had grown weak.

The coastal regions of the area were known to Portuguese sailors as early as the 15th century. The mouth of the Zaire River was discovered by Diogo Cão in 1482. French trading companies, interested in slaves and ivory, appeared on the scene during the 17th century; by 1785, more than 100 French ships annually sailed up the coast. After the French Revolution, however, French interest in the area waned.

With the abolition of the slave trade, merchants began to seek new sources of commerce. The first forays into the interior began at this time, but extensive exploration came only toward the end of the 19th century, with Pierre Savorgnan de Bràzza and Henry Morton Stanley. In 1880, Bràzza signed a treaty with the powerful Teke tribal ruler Makoko, bringing the right bank of the Zaire River under French control. The Congress of Berlin (1885) gave formal recognition to French claims to the region. The period after 1900 was marked by a slow but steady establishment of French administrative machinery. By 1910, Gabon, Middle Congo, and Ubangi-Shari (including Chad) were constituted administratively as colonies; together they constituted French Equatorial Africa, all under a governor general at Brazzaville. In 1940, French Equatorial Africa joined the Free French movement and the Allied war effort against the Axis powers. The first territorial assembly was elected in 1947. In a referendum held on 28 September 1958, the territory of Middle Congo voted to become an autonomous republic within the French Community.

The Territorial Assembly of the Middle Congo proclaimed the Republic of the Congo on 28 November 1958. On 8 December, Fulbert Youlou, mayor of Brazzaville and leader of the Democratic Union for the Defense of African Interests (UDDIA), was elected to head the provisional government. The adoption of a constitution on 20 February 1959 transformed the provisional government into the first official government of the republic. Legislative elections were held that June. The new National Assembly elected Fulbert Youlou prime minister on 27 June and president on 21 November.

The constitutional law of 4 June 1960, adopted by the French Parliament and by the Senate of the French Community, made it possible for a member state to become independent without leaving the community. The Republic of the Congo thus proclaimed its independence on 15 August 1960. President Youlou resigned on 15 August 1963, in the wake of antigovernment rioting that threatened to turn into civil war. Alphonse Massamba-Debat became provisional president and was formally elected to the presidency on 19 December 1963; a new constitution was approved by national referendum that same month. In 1964, Massamba-Debat established relations with the USSR and China, and then announced the establishment of a "scientific Socialist state" with one-party control.

On 4 September 1968, Massamba-Debat resigned following a military coup that deprived him of most of his presidential powers. Capt. Marien Ngouabi then established a new revolutionary regime. Ngouabi was named president on 1 January 1969, and he proclaimed the People's Republic of the Congo the following December. Political stability proved difficult to achieve, however, and there were seven coup attempts during his seven years in office, which ended with his assassination on 18 March 1977. He was succeeded by Col. Joachim Yhombi-Opango, who abrogated the 24 June 1973 constitution. Yhombi-Opango resigned on 5 February 1979 and was succeeded in March by Col. Denis Sassou-Nguesso. A 20-year treaty of friendship and cooperation with the USSR was signed in 1981. Sassou-Nguesso was reelected president in July 1984 and was chairman of the Organization of African Unity (OAU) during 1986–87.

The 1990s ushered in multiparty competition, but also became a tumultuous decade of armed uprisings and civil war. A four-month-long National Conference in 1991 led to the appointment of an interim government, headed by André Milongo. Pascal Lissouba won the multiparty elections in 1992, but his unstable coalition, the Presidential Tendency, was rocked by strikes and violent civil unrest. Legislative elections on 2 May 1993, gave way to armed conflict in June and July. To avoid a civil war, the OAU and the president of Gabon brokered an accord that accepted first-round results and called for second-round elections on 6 October. The opposition alliance, the Union for Democratic Renewal-Congolese Workers' Party (URD-PCT), won seven of the 11 seats contested. Still, Lissouba's Pan-African Union for Social Democracy (UPADS) and its coalition partners won 69 of the 125 seats and Lissouba's shaky presidency continued. However, fighting broke out in the capital in November 1993, continuing into 1994 as armed forces loyal to Lissouba battled independent partisan militias.

On the one side was the northern Mbochi ethnic group, which had been aligned with the military government of Sassou-Ngues-

so. On the other sides were two main southern groups, the Pool Lari and the coastal Vili. Transitional Prime Minister Milongo surrounded himself with Lari and Bakongo. Lissouba replaced them with his own people, the Nibolek, and “cleansed” the presidential guard. Although a mediation force was set up after a 30 January 1994 cease-fire, it was difficult to disarm the tribal factions.

By mid-1994 the government announced it would work to integrate the military and security forces with members of tribal militias if they would agree to a cease-fire, but integration proved illusive. After the by-elections in 1995, the Lissouba regime took an authoritarian turn in the face of severe mismanagement and intractable street fighting, imposing restrictions on public demonstrations and eliminating press freedom.

In June 1997 Sassou-Nguesso’s forces besieged the capital and shelled the parliament building. In October 1997, forces loyal to Sassou-Nguesso engaged the help of Angolan troops and forced Lissouba into exile. Sassou-Nguesso once again assumed the reins of power and replaced the 1992 constitution with a Fundamental Act, conferring sweeping powers upon himself. He brought a degree of stability back to the country by forming a broad-based government that included former backers of Lissouba and Bernard Kolelas. The government convened a National Reconciliation Forum in January 1998, which elected a 75-member National Transition Council (NTC), replacing the National Assembly. Members of opposition parties and civil society were included in the NTC.

Civil conflict between the government and armed groups of southerners broke out again in mid-1998, intensifying in early 1999, before subsiding during the second half of the year. An estimated 10,000 people died and 800,000 civilians were displaced during the fighting, as rapes, looting, and destruction of many southern towns escalated.

The second half of 1999 saw the government regaining effective control over most of the south through military offensives, offers of amnesty, negotiations, and efforts to broaden the government’s political base. The government signed a cease-fire and reconciliation accord with leaders of some rebel groups in November. In December 1999 Gabon’s president, Omar Bongo, sponsored another accord, which involved the National Resistance Council (CNR), the only rebel group with military and political organization. With improved prospects for peace, Sassou-Nguesso declared a three-year transition period leading up to elections.

In presidential elections held 10 March 2002, Sassou-Nguesso was reelected president with 89.4% of the vote over Joseph Kignoumbi Kia Mboungou with 2.7%. In the legislative contest held 11 July 2002, the Democratic and Patriotic Forces (FDP) won 56 seats to 10 seats for other parties in the Senate, and 83 seats to 6 seats for the Union for Democratic Renewal (URD), 3 for the UPADS, and 45 seats for other parties. However, the most serious contenders—former president Lissouba and Prime Minister Kolelas—were banned from participation, and most parties boycotted the election.

In late March 2002 conflict erupted in the Pool region between government forces and “Ninja” rebels loyal to the Rev. Frederic Bitsangou (alias Pasteur Ntoumi) with the result that thousands of people were trapped or displaced with little or no relief support for those caught in the fighting. A peace agreement reached on 17 March 2003 between the government and Ntoumi guaranteed

amnesty to combatants willing to disarm, but by July 2003 several thousand were still awaiting either integration into the military or reinsertion into civilian life. Ninja groups and government security units continued to skirmish in the Brazzaville suburbs in December 2003.

In January 2004, Pasteur Ntoumi dealt the peace process a blow when he announced that unless the government engaged in a national dialogue, allowed political exiles to return, and formed a new government of national unity, his forces would no longer disarm. An uneasy truce broken by sporadic security incidents—including rebel attacks on the country’s main railway—has held since the government’s rejection of these demands. In January 2005, President Sassou-Nguesso further consolidated power by forming a new government without a single member of the opposition coalition.

In early 2006, Congo received the news that Sassou-Nguesso would be the next African Union (AU) head and would lead the organization for a one-year term in 2006.

### 13 GOVERNMENT

Until 1992, the Republic of the Congo was governed under a constitution, approved by referendum on 8 July 1979 and amended in July 1984. The chairman of the 75-member Central Committee of the Congolese Labor Party (PCT) was the president of the republic and head of state. He was elected for an unspecified term as chairman (and therefore as president) by the party congress. Executive powers resided with the Council of Ministers, appointed by the prime minister and chaired by the president. The 153-member National Assembly, the sole legislative body, was elected by universal suffrage at age 18 from candidates named by the PCT.

On 15 March 1992, voters approved a new constitution, which provided for a mixed presidential-parliamentary form of government after the French model. Executive authority is vested in a directly elected president, who appoints the prime minister and cabinet. A National Assembly of 125 members was elected in two-round elections in June and July 1992. There was also a 60-member Senate. Pascal Lissouba was chosen president (61%) and his Pan-African Union for Social Democracy (UPADS) gained 39 seats. That legislature was dissolved in October and new legislative elections in May 1993 led to partisan fighting. A mediated settlement then confirmed a UPADS majority, yet fighting continued into 1994. In the view of many, the “democratic election” was the catalyst that unleashed tribal hatreds.

Soon after the defeat of Lissouba in the four-month 1997 civil war, Col. Denis Sassou-Nguesso formed a transitional government and replaced the 1992 constitution with a Fundamental Act. The Act gave additional powers to the executive making the president head of state and government, commander in chief of the armed forces with powers to appoint all members of the government, all senior military officers and government officials at sub-national level. He was also mandated to direct the general policy of the government and to exercise regulatory powers.

In 1998, Sassou-Nguesso appointed a committee to draft a new constitution, which eventually was approved by national referendum in January 2002. Under the constitution the bicameral parliament consists of the Senate with 66 seats and the National Assembly with 137 seats where members are elected to serve five-year terms. The president may serve for two seven-year terms. The next

presidential elections were scheduled for 2009 and legislative elections for 2007.

## **14 POLITICAL PARTIES**

Three political parties were active in the Middle Congo before the territory achieved its independence. Of these, the most important proved to be the Democratic Union for the Defense of African Interests (Union Démocratique de Défense des Intérêts Africain—UDDIA), founded by Abbé Fulbert Youlou. The UDDIA received 64% of the popular vote and won 51 of the 61 seats in the National Assembly elected in June 1959. Following the resignation of President Youlou and the dissolution of the Assembly in 1963, all political parties were banned. On 2 July 1964, the National Movement of the Revolution (Mouvement National de la Révolution—MNR), led by President Massamba-Debat, was officially established as the country's sole political party. A power struggle between the People's Militia and the army, tribal rivalries, and other conflicts led to Massamba-Debat's resignation in September 1968. The army commander in chief, Marien Ngouabi, then became head of state.

The Congolese Labor Party (Parti Congolais du Travail—PCT), created in December 1969 to succeed the MNR, had been based on the principles of Marxism-Leninism and democratic centralism. But at its 1990 conference, the PCT abandoned this ideology. The 1979 constitution recognized the PCT as the sole party: all other political parties and any political activity outside the PCT were illegal. In the National Assembly elections of 8 July 1979, all candidates were PCT members.

After his assassination on 18 March 1977, Ngouabi was succeeded by Col. Joachim Yhombi-Opango, and in March 1979 by Col. Denis Sassou-Nguesso, who was reelected in July 1984.

The 1991 National Conference led to an interim government and multiparty elections in 1992. Continual shifts in parties and in coalitions of parties have taken place since. The most significant of the many parties is the Democratic and Patriotic Forces (FDP), which is an alliance of six parties including that of Sassou-Nguesso's Union for National Renewal. Others include the Pan-African Union for Social Development (UPADS), the party of former President Pascal Lissouba. Lissouba's former coalition included the Rally for Democracy and Development (RDD) and was opposed by the PCT and the Union for Democratic Renewal (URD).

Following the 1993 elections, the National Assembly was broken down as follows: UPADS, 47 seats; Congolese Movement for Democracy and Integral Development, 28; PCT, 15; Association for Democracy and Social Progress, 10; RDD, 6; Union of Democratic Forces, 3; others, 14; independents, 2. Elections due in July 1997 were delayed until the new constitution was adopted. The civil war and fighting between 1997 and 1999 restricted party activity. Sassou-Nguesso allowed some politicians from the former government to return and resume political activity in 1999, but he banned former president Lissouba and former prime minister Bernard Kolelas. Indeed Kolelas and former interior minister Col. Philippe Bikinkita were sentenced to death in absentia on 5 May 2000 in the Brazzaville criminal court for illegal detention, false imprisonment, and torture. The National Transitional Council (NTC) included representatives of opposition parties and members of civil society, but the NTC composition was criticized by

some as being government-controlled and not being broad-based enough for a fair representation of Congo's 15 political parties.

In the absence of any serious competition, Sassou-Nguesso's coalition easily won the 2002 presidential and parliamentary elections. Opposition parties remained in disarray. President Sassou-Nguesso allowed Kolelas to return to Congo for his wife's funeral in October 2005 and subsequently asked that parliament grant Kolelas amnesty. Parliament complied with Sassou-Nguesso's request in December 2005.

## **15 LOCAL GOVERNMENT**

There are 10 administrative regions and one federal district, each under the authority of a government commissioner. As of the mid-1990s, these were subdivided into 46 districts.

## **16 JUDICIAL SYSTEM**

The legal system is based upon French civil law and customary law. The Revolutionary Court of Justice, created in 1969, consists of nine judges who deal with cases involving state security. Judicial bodies include a Supreme Court (appointed by the president), a court of appeals, a criminal court, regional and magistrate's courts, labor courts, and courts of common law, where local chiefs apply traditional laws and customs. These courts are based on the French model while traditional courts in rural areas handle local property, domestic, and probate disputes. All special courts and secret trials were abolished in 1991. The 1992 constitution called for a special court—not established—to protect freedom of speech and press.

The 1992 constitution also provided for a number of fundamental rights and freedoms including prohibition of arbitrary arrest and detention. In practice, judicial inefficiency often results in denial of bail and long pretrial detention, a situation exacerbated by the civil war period where extra-judicial killings and executions were committed by security forces. Generally, prison conditions were poor and the judiciary was unable to ensure fair and expeditious trials.

## **17 ARMED FORCES**

In 2005, the Republic of the Congo had 10,000 active military personnel, of which the Army had 8,000 members, the Navy an estimated 800, and 1,200 personnel in the Air Force. The Army included two armored battalions, two infantry battalion groups, one parachute commando battalion, one engineer battalion, and one artillery group. Equipment included over 40 main battle tanks, 13 light tanks, over 68 armored personnel carriers and more than 66 artillery pieces. The Navy had three patrol craft, and the Air Force had 12 fighter planes, including 12 MiG-21s. There was a paramilitary force of 2,000. The military budget in 2005 totaled \$57.4 million.

## **18 INTERNATIONAL COOPERATION**

The Congo was admitted to the United Nations on 20 September 1960 and is a member of all of the specialized agencies except IAEA. It is also a member of the African Development Bank, the ACP Group, G-77, the Central African States Development Bank (BDEAC), the New Partnership for Africa's Development (NEPAD), and the African Union. The nation is part of the Franc Zone. The country belongs, with the Central African Republic,

Gabon, and Cameroon, to CEMAC, in which merchandise and capital circulate freely, and it is a signatory to the Lomé Convention. Congo is a member of the WTO. In addition to close ties with France and other Western European nations, the Congo has established friendly relations with China. Brazzaville is the African headquarters of WHO. Congo is part of the Nonaligned Movement. In environmental cooperation, Congo is part of the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Montréal Protocol, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The Congo's economy is built on its petroleum resources, lumber, transport services, and agriculture. After several prosperous years in the early 1980s, the price of oil declined and cast the Congolese economy into financial turmoil. The country long flirted with state socialist approaches to its economy before embarking on market-style reforms in 1989. Early efforts at state-farm production of staple foods failed. The devaluation of Franc Zone currencies in 1994 resulted in inflation of 61%, but this subsided rather quickly. Reforms by the IMF and World Bank were in place when the civil war started in 1997. The economy worsened considerably in 1997, at -1.9% annual GDP growth, rebounding in 1998 to 2.5%, but falling again in 1999 due to renewed fighting. It grew at an average annual rate of 4.28% between 2001 and 2005 with a high of 8% in 2005. In 2001, the IMF approved a \$14 million credit to aid the government's post-conflict economic program.

Congo's staple food crops are cassava, maize, plantains, yams, and sweet potatoes. The livestock industry is small and subject to health limitations imposed by the prevalence of the tsetse fly. Petroleum is Congo's most significant resource, contributing over 90% of exports in 2005. Production increased as new fields were developed and improvements in recovery technology were implemented. The oil industry is concentrated in and around Pointe Noire.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Congo's gross domestic product (GDP) was estimated at \$2.5 billion. The per capita GDP was estimated at \$900. The annual growth rate of GDP was estimated at 4.2%. The average inflation rate in 2005 was 3%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 10% of GDP, industry 48%, and services 42%. Foreign aid receipts amounted to about \$24 per capita and accounted for approximately 4% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$357. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 7%. Approximately 34% of household consumption was spent on food, 12% on fuel, 3% on health care, and 3% on education.

## 21 LABOR

There were about one million economically active people in 1998. Almost half of all salaried employees work for the government. More recent data is unavailable.

The Fundamental Act entitles workers to form and join unions, and the Labor Code prohibits restrictions on the unions. However, members of the security forces cannot join a union. As of 2005, nearly all workers in the public sector and around 50% of those in the formal wage sector belonged to a union. However, this represents only a small portion of workers since most are subsistence farmers or are involved in the informal economy. The right to strike is guaranteed (except for those in the public sector), but there are serious limitations. Workers must file an intent to strike at least three days before the planned date of the strike and must simultaneously participate in arbitration proceedings. Due to extreme economic hardship and reconstruction, in 2002 labor and the government agreed to a "social" truce.

The standard workweek is seven hours per day, six days per week, with a one-hour lunch break per day. Overtime must be paid for work over 40 hours. Compulsory overtime is not prohibited. As of 2005, the minimum wage was \$100 per month in the formal economy. Due to high prices in urban areas and the demands of extended families, many workers, including health workers and teachers, have had to accept additional employment, primarily in the informal economy. The prohibition of child labor is focused on the formal sector. Child labor persists in the informal economy. Minors under the age of 16 are prohibited from working, but in rural areas and in the informal economy of urban areas, enforcement lagged. Minimum occupational health and safety standards exist and are only somewhat enforced.

## 22 AGRICULTURE

Total arable land only amounts to 240,000 hectares (593,000 acres), or just 0.7% of the total land area. Agricultural activity is concentrated in the south, especially in the Niari Valley. Main crops for local consumption are manioc (880,000 tons in 2004), plantains (73,000 tons), yams, (12,000 tons), bananas (88,000 tons), sugarcane (460,000 tons), and peanuts (23,000 tons). Small amounts of tobacco are also grown. Domestic production of cereals plummeted in the 1990s; by 1999, grain production was 80% less than it had been during 1989–91. However, crop production during 2002–04 was 4% higher than during 1999–2001. Landholdings are small, averaging less than 1.4 hectares (3.5 acres) per plot.

Export crops are coffee, cocoa, and palm oil; in 2004, 1,700 tons of coffee and 1,260 tons of cocoa beans were produced. Palm trees are under the management of a state-owned company. Production of oil from palm kernels, mainly from palm trees indigenous to the Niari Valley, the Pool Malebo, and the Bateke Plateau regions, was estimated at 16,300 tons in 2004. The rural population has fallen from 80% in 1960 to 38% in 2000. Since 1987, the government has encouraged agricultural development by abolishing state marketing boards and retail monopolies, freeing prices, removing tariffs on essential inputs, launching new agricultural credit institutions, and selling or closing most state farms. Sugar output rebounded after a 1989 restructuring of the sugar industry, which has since been privatized.

## 23 ANIMAL HUSBANDRY

Animal husbandry has high government priority, and production is steadily increasing. In 2004 there were an estimated 294,000 goats, 98,000 sheep, 46,000 hogs, 100,000 head of cattle, and 2.2 million chickens. Total meat production in 2004 was 30,423 tons.

## 24 FISHING

Most fishing is carried on along the coast for local consumption. The catch rose from 14,939 tons in 1970 to 45,577 tons in 1991 and to 52,400 tons in 2003. Almost 50% of the annual catch is from saltwater fishing.

## 25 FORESTRY

Congolese forests cover some 22 million hectares (54.3 million acres), or 65% of the total land area of the country. There are three main zones. Mayombé forest, covering about 1 million hectares (2.5 million acres), is the oldest forest under commercial exploitation and is almost exhausted. The Niari forest, covering 3 million hectares (7.4 million acres), along the Chaillu River, was reopened for exploitation after completion of the Comilog railroad. The third zone, situated in the north, is the largest, with 15.5 million hectares (38.3 million acres); because of constant flooding, however, it is the least exploited. Total production of roundwood was 2.5 million cu m (86 million cu ft) in 2003; exports of roundwood were valued at \$165.5 million. Okoumé, sapele, sipo, tiama, moaki, limba, and nioré were the main species cut. Eucalyptus and pine are raised commercially in southern and coastal Congo. Foreign private companies dominate commercial production. The Congolese Forestry Office was set up in 1974 to implement an ambitious reforestation program. Forestry contributes only 3% to GDP, and development was neglected during the oil boom years. Forest products contribute over 5% to the value of all exports. Isolated harvestable tracts, difficult weather conditions, and limited rail transport capacity inhibit the expansion of the forestry sector.

## 26 MINING

The Republic of the Congo's mineral sector, excluding oil, accounts for only a small part of the country's export earnings and its gross domestic product (GDP). In 2004, 90% of the country's export earnings came from oil, as did more than 50% of its GDP. Although potash was the primary mining product before the rapid growth of oil, production was not enough to make operations profitable and ceased after 1977. Gold, mined in the Mayombé area, reached 158 kg in 1967 but fell to an estimated 60 kg in 2003. Iron deposits estimated at 400 million tons have been found. AfriOre Ltd., of Canada, though inactive in the Congo in 2000, held exploration permits on the Boko Songo copper prospect, with 2 million tons of ore, and the Yanga Koubanza lead-zinc-copper prospect, with 5.5 million tons, both west of Brazzaville, and the company located high-grade copper mineralization at four other drilled prospects. Significant resources of magnesium, with by-products of salt, potash, and possibly chlorine, were being evaluated for development in the Makola and the Youbi magnesium salt evaporite deposits, in the Kouilou region.

In 2004, diamond production (artisanal) was estimated at 50,000 carats, up from 30,000 carats in 2003. Lime was also produced in 2004. Lime output that year was estimated at 400 metric

tons. There was no recorded production of hydraulic cement from 2001 through 2004.

## 27 ENERGY AND POWER

Since the 1980s, the oil industry has provided the government of the Republic of the Congo (ROC) with a major portion of its revenues, and the nation, with much of its exports. Around two-thirds of the ROC's real gross domestic product (GDP) comes from the oil industry. The ROC is the fifth-largest oil producer in sub-Saharan Africa, after Nigeria, Angola, Gabon, and Equatorial Guinea, respectively. The crude oil produced typically falls into the sweet and medium categories. As of 1 January 2005, the ROC's proven oil reserves totaled an estimated 1.5 billion barrels. In 2004 oil output (all of it crude) was estimated to have amounted to 235,500 barrels per day. Domestic consumption for that same year is estimated at 6,000 barrels per day and forecast to reach 7,000 barrels per day for 2005. Net oil exports were estimated at 229,500 barrels per day. Refining capacity, as of 1 January 2005, is estimated at 21,000 barrels per day.

The ROC's natural gas reserves are the third-largest in sub-Saharan Africa, (after Nigeria and Cameroon, respectively), with estimated reserves of 3.2 trillion cu ft as of 1 January 2005. In 2002, of the 118.31 billion cu ft produced, nearly all was vented or flared (44.14 billion cu ft), or re-injected (70.63 billion cu ft) due to a lack of infrastructure. Only 3.53 billion cu ft was marketed.

The Societe Nationale d'Electricite (SNE) manages the ROC's electric power sector. As of 1 January 2002, electric power generating capacity was put at 118 MW, with two hydroelectric power facilities, the 15 MW Djoue and the 74 MW Bouenza (Moukoulou) plants as the nation's primary domestic sources of electric power. Total electrical output for 2002 has been estimated at 358 million kWh, and while electric power consumption in the country is low, estimated at 570 million kWh in 2002, it significantly exceeds domestic production. As a result, the ROC has been forced to import electric power from the Democratic Republic of the Congo to the make up the difference. Compounding matters is the state of repair to the nation's electric power infrastructure. Attacks during the country's civil war on the Moukoulou facility have cut the plant's actual capacity to around 55 MW. In addition, the civil war also destroyed large portions of the remaining power infrastructure. Plans by the ROC's government to lower the nation's dependence on imports of electric power, call for the construction of new facilities, as well as expanding those currently in use. In 2003, construction began on the 120 MW Imboulou hydroelectric dam, located on the Lefini River, which is expected to be finished in 2009. In addition, the Anglo Belgian Corporation was awarded a contract in January 2005 to build and finance a 35 MW thermal power plant in the ROC's capital of Brazzaville. A 180 MW hydroelectric plant is also being studied by the Canadian-based Magnesium Alloy Corporation, that would be located on the Kouilou River. Although the power generated would be mainly used by the firm's magnesium plant, estimates by the company indicate that up to 50 MW could be sold commercially.

## 28 INDUSTRY

Industry is concentrated in the southern part of the country around Brazzaville and Pointe-Noire. Many industries, until re-

cently, were partially or completely nationalized. Industry accounted for about 64% of GDP in 2004.

The largest industries are petroleum production, followed by food processing, including beverages and tobacco, chemicals, woodworking, metalworking and electrical industries, nonmetallic mineral products, paper and cardboard, and textiles. The ROC is the fourth-largest oil producer in sub-Saharan Africa, and the oil industry accounts for two-thirds of government revenue, 90% of export earnings, and close to 50% of GDP. There are an estimated 1.3 million tons of crude oil reserves in the country. An oil refinery at Pointe-Noire has a capacity of 21,000 barrels per day, but only 50% of the capacity is utilized. In 1996, the government privatized the refinery. Other industries include sawmills, sugar refineries, and cement factories. Artisans create distinctive jewelry, ceramics, and ebony and ivory sculptures. The timber industry was reviving in 2003 and contributed 1.2% of exports in 2004.

### 29 SCIENCE AND TECHNOLOGY

Science-related institutions include a Center of Research and Initiation of Technological Projects in Brazzaville, a Technical Center of Tropical Forestry in Pointe-Noire, and a Research Institute for Oils in Sibiti. Marien Ngoubai University in Brazzaville has a faculty of sciences and attached institutes of health sciences and rural development. Sibiti has an agricultural college, and Brazzaville contains a technical, commercial, and industrial college and a school for railway engineering. In 1987–97, science and engineering students accounted for 48% of college and university enrollments. In 2000, there were 29 researchers and 32 technicians per million people engaged in research and development.

### 30 DOMESTIC TRADE

Small-scale, village agriculture accounts for most of the domestic trade. Most local produce is sold directly to consumers or middlemen at local markets in towns and villages, where imported goods are also sold. Company agents and independent middlemen buy export crops at local markets or directly from the producers for sale to large companies. Most of the country's domestic commerce is managed by West and North Africans and Lebanese, since during the colonial and Marxist eras, Congolese were oriented towards working in the public sector. The country has developed a new investment code to attract foreign investment; however, high production costs, militant labor unions, and poor transportation systems have prohibited investment and domestic productivity.

There is some advertising in the local newspapers and through company publications, handbills, and billboards, but radio stations do not carry advertising. Normal banking hours are 6:30 to 11:30 AM Monday through Saturday. Shops open by 8 AM, usually close for a midday break, and then stay open to at least 5:30 PM Tuesday through Friday, and are open Saturday morning. They may also be open Saturday afternoon, Sunday morning, and Monday morning.

### 31 FOREIGN TRADE

Crude petroleum and products account for the vast majority of the Congo's commodity export revenues (90%). Diamonds and cement also support the Congolese economy, as do wood exports, including lumber and plywood. In 2004, the main destinations of exports were China (26.8%), North Korea (8.4%), the United

States (7.3%) and France (5.5%) while the main origins of imports were France (32.7%), the United States (10.1%), Germany (6.2%) and Italy (6.0%). Figures published in the IMF's Direction of Trade Statistics confirm the growing importance of China as a market for Congo's oil exports. These have increased in the last decade, from \$1.2 million in 1994 to \$249 million in 2004.

### 32 BALANCE OF PAYMENTS

Until the 1970s, the Congo's chronic trade deficit led to an annual payments deficit. With the growth of oil revenues, the balance of payments became positive; this trend did not last long, however, since the deficit in services grew even faster than the trade surplus during the early 1980s. In recent years, imports have represented over 70% of private consumption.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Congo's exports was \$4.24 billion while imports totaled \$1.26 billion resulting in a trade surplus of \$2.98 billion. According to the latest World Economic Outlook, published by the IMF in September 2005, Congo's current-account surplus will increase from 2.3% of GDP in 2004 to 7.3% of GDP in 2005 and 10% of GDP in 2006.

### 33 BANKING AND SECURITIES

The bank of issue is the Bank of the Central African States (BEAC), which serves all the members of the Central African Customs and Economic Union (UDEAC). Among the commercial banks are the Congolese Union of Banks, the International Bank of Congo, and the Congolese Commercial Bank. The state is the major shareholder in the two commercial banks. The National Development Bank of the Congo extends loans for economic development. The Congo has a 13% share in UDEAC's development bank, headquartered in Brazzaville.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—

were equal to \$324.8 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$352.0 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There is no securities market in the Congo.

### 34 INSURANCE

In March 1974, all private insurance companies were nationalized and put under the Congo Insurance and Reinsurance Co. (ARC), which is 50% government owned.

### 35 PUBLIC FINANCE

Oil revenues in the 1970s helped expand public sector employment. The collapse in oil prices in the mid-1980s dramatically decreased government revenues, which led to a surge in international borrowing. In 1985, Congo entered negotiation with the IMF for standby credits to satisfy domestic and foreign creditors. In 1986, Congo reluctantly joined with the IMF in a structural adjustment program for which the country received \$40 million in funds and was able to reschedule its international payments. By 1988, the Congo's external debt had risen to an unsustainable \$4.1 billion. In 1989, a second structural adjustment program was agreed to. In the late 1980s and early 1990s, weak oil prices and a massive public sector combined to drive up Congo's debt. Civil service salaries absorbed over half of the government's 1995 budget. The budget deficit rose from 5.5% of GDP in 1985 to 14% in 1991 and was estimated at 25% in 1998. In 1995, total external debt was approximately \$5 billion with service on the debt amounting to 155% of revenues annually, one of the highest ratios in the world. Although the Paris Club agreed to reduce Congo's debt by 67%, debt reduction payments were still expected to reach \$500 million in 1996. In 1995, Congo reached another agreement with the IMF and World Bank that would help alleviate some of its debt burden. This reform program came to a halt when civil war erupted in 1997.

The US Central Intelligence Agency (CIA) estimated that in 2005 Congo's central government took in revenues of approximately \$1.3 billion and had expenditures of \$1 billion. Revenues minus expenditures totaled approximately \$263 million. Total external debt was \$5 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were CFA Fr675.48 billion. The value of revenues in US dollars was about us\$1 million, based on an official exchange rate of us\$1 = CFA Fr696.99 as reported by the IMF for 2002.

### 36 TAXATION

A graduated income tax at rates of 1–50% is levied, varying with an individual's marital status and number of dependents. Employees also pay social security taxes and regional income taxes. As of 2005, the corporate tax rate was 38%, with a minimum of 1% on turnover. Agricultural companies have a 30% corporate rate. Foreign companies that do not have a registered branch in the country are subject to a 7.7% withholding tax on turnover from activities within the country. Foreign companies receiving income sourced from the ROC, but not active within the country are sub-

ject to a 20% withholding tax. Dividends are also taxed at a 20% rate. Also levied are excise duties, and property taxes.

### 37 CUSTOMS AND DUTIES

The Republic of the Congo is a member of the Central African Economic and Monetary Community (CEMAC) with Cameroon, Central African Republic, Chad, Equatorial Guinea, and Gabon. There is a 5% duty on basic necessities, 10% on raw materials and capital goods, 20% on intermediate and miscellaneous goods, and 30% on consumer goods. There is also an 18.7% value-added tax based on CIF (cost, insurance, freight) plus the duty. Significant nontariff trade barriers include import license requirements and a corrupt and inefficient customs system.

### 38 FOREIGN INVESTMENT

The 1973 investment code guaranteed the free transfer of capital, normally earned profits, and funds resulting from sales of foreign companies. According to legislation adopted in 1982, reduced import duties and taxes are offered on production equipment and profits on manufacturing and trading are tax exempt for the first five years. However, in view of the Congo's fragile economy, banks required a public guarantee before investing their funds. A new investment code enacted in 1992 and amended in 1996 legislates equal treatment for domestic and foreign investors.

In 1994, the regiment for participation by foreign oil companies was changed from the joint ventures that had prevailed since 1968 to production sharing agreements (PSAs), by which foreign oil companies operate under contracts with the national oil company, SNPC. Plans were announced in 1995–96 to privatize state-owned enterprises in the oil distribution, oil refining, telecommunications, rail and water transportation, electricity, and water distribution sectors designed to attract foreign investment.

In June 1997, the United States and Congo concluded a bilateral investment treaty (BIT). That month, the outbreak of civil war brought most privatization initiatives to a halt. The flow of for-

eign direct investment (FDI) was a negative divestment of an estimated -\$11.9 million in 1997. Despite renewed violence in 1998 and 1999, privatization of some upstream and downstream operations of Hydro-Congo increased FDI inflow to \$117.8 million and \$134.6 million, respectively. A fragile peace accompanied by an IMF-directed austerity program in 2000 helped produce a negative outflow of FDI of -\$75.2 million. For 2001, FDI inflow was estimated at a modest \$77 million. It had risen to \$323 million in 2003 and \$668 million in 2004 reflecting the donor and international confidence and the end of political turmoil.

Virtually all foreign investment in the Republic of Congo has been in the oil and timber sectors, with the French company TotalFinaElf historically dominant in the oil sector, which in turn historically dominates the economy. The second-largest oil investor has been ENI-Agip (Agip-Congo) of Italy. US oil companies that have investments include Anadarko, ChevronTexaco, CMS-Nomeco, Exxon-Mobile, and Marathon. Other foreign oil participants are Royal Dutch Shell (United Kingdom), Energy Africa (South Africa), and Heritage Oil (Canada). Most of the oil industry is not only an enclave, employing mostly foreign personnel, but offshore. Investment in the wider economy continues to be hampered by numerous factors even apart from political turmoil, including a poorly developed financial sector; an inadequate and war-damaged infrastructure; high labor, transportation and raw material costs; low productivity; and militant labor unions.

### 39 ECONOMIC DEVELOPMENT

The 1982–86 development plan called for expenditures of over \$2.5 billion for the improvement of infrastructure (roads, electricity, water) and for the development of production in agriculture, forestry, and light industry; however, economic difficulties caused the plan to be cut back sharply. The 1987–91 development plan promoted agricultural self-sufficiency and rural development through the planned creation of 160 village centers and a mandatory national service program for youths. Reduction of the country's dependency on petroleum and the reform of the parastatal sector were set as priorities. The devaluation of the CFA (Communauté Financière Africaine) franc in 1994 was implemented to boost those economic activities which did not rely on imports.

France is the leading foreign donor country. For a time the country reduced its participation (1985–89), but raised it to record levels in 1990. China and the former Soviet Union also provided substantial aid. Between 1946 and 1999, Congo also received funds from the European Economic Community (now the European Union), from the World Bank, the International Development Agency, and the African Development Bank.

In the mid-1990s, Congo embarked on a path of economic reform, including reform of the tax, investment, labor, and hydrocarbon codes. The privatization of state-owned enterprises was planned, particularly telecommunications and transportation monopolies. The Paris Club agreed to a debt restructuring plan in 1996. When war broke out in 1997, economic reform came to a halt. President Sassou-Nguesso, reelected in 2002, indicated his desire to reestablish cooperation with international financial institutions, and to further pursue privatization and other economic reforms. The president's economic program, called Nouvelle espérance (New Hope), was to cover the period 2003–10. A peace accord was signed in March 2003, which was designed to pave the

way for sound economic development. In August 2005, the board of the IMF completed its first annual review of Congo's three-year poverty reduction and growth facility (PRGF) and gave a positive endorsement of progress in spite of problems of accountability of the revenues from the oil industry.

### 40 SOCIAL DEVELOPMENT

Employed persons are covered by the social insurance system, with a special system in place for civil servants. The insured provides 4% of gross earnings, with the employer contributing 8% of payroll to fund the program. Old age, disability and survivorship benefits are provided. Employed women are covered by maternity benefits, which amount to 50% of earnings for 15 weeks. Workers' compensation benefits are funded by employer contributions and include medical care. There is a funeral grant to cover the cost of final arrangements, up to a maximum. Employees are entitled to a family allowance for each child under 16 years of age, and there is a birth grant for the first three children.

The Fundamental Act prohibits discrimination based on race, gender, or religion, but many marriage and family laws do discriminate against women. Polygamy is legal, while polyandry is not. Adultery is legal for men but not for women. Women receive less education on average than men, and their salaries are generally lower. Women are not prominent at the highest levels of political or professional life. However, the Union of Congolese Women promotes the advancement of women and has launched major literacy and female education campaigns. Domestic violence is widespread and rarely reported. Civil conflict is thought to have increased the number of indigent children living on the streets of Brazzaville.

Pygmy minorities also face discrimination despite legal protections. They are often paid with food or goods for their labor, rather than with salaries. Pygmies are underrepresented in government and are largely marginalized from government decision making.

The human rights record has improved somewhat since the transition to democracy, but abuses have continued. There were reports of torture and extrajudicial killings, as well as disappearances, rapes, and arbitrary searches, arrests, and detention.

### 41 HEALTH

In 2004, there were an estimated 25 doctors, 175 pharmacists, 185 nurses, and 25 midwives. per 100,000 people. The birth rate was 38 per 1,000 people. The infant mortality in 2005 was at 87.41 deaths per 1,000 live births. In 2005, the average life expectancy was estimated at 52.26 years.

An endemic disease control service conducts vaccination and inoculation campaigns. All medicine, antibiotic, and vaccine imports must be authorized by the Ministry of Health. In 1999, there were 318 reported cases of tuberculosis per 100,000 people. As of 1999, immunization rates for children up to one year old were as follows: diphtheria, polio, and tetanus, 29%, and measles, 23%. In 1990, 24% of children under five years old were considered malnourished. In the mid-1990s, 50% of urban and 11% of rural inhabitants had access to safe water.

The HIV/AIDS prevalence was 4.90 per 100 adults in 2003. As of 2004, there were approximately 90,000 people living with HIV/AIDS in the country. There were an estimated 9,700 deaths from AIDS in 2003.

## 4<sup>2</sup> HOUSING

At last estimate, more than 88% of all housing units were private houses. Owners occupied more than 60% of dwellings, tenants nearly 25%, and over 9% were occupied rent free. Close to one-third of all units had brick external walls, more than 25% had stone walls, nearly 16% had planks, and over 10% cob. In 2000, only about 51% of the population had access to improved water systems.

## 4<sup>3</sup> EDUCATION

The educational system is patterned on that of France, but changes have been introduced gradually to adapt the curriculum to local needs and traditions. All private schools were taken over by the government in 1965. Six years of primary school are compulsory. Secondary school covers a seven-year course of study; students may choose a general course of studies or a technical program for their secondary education. The academic year runs from October to June. The language of instruction is French.

Primary school enrollment in 2003 was estimated at about 54% of age-eligible students. It is estimated that about 59% of all students complete their primary education. In 2001, there were 183,000 students enrolled in secondary schools. The student-to-teacher ratio for primary school was at about 24:1 in 2003; the ratio for secondary school was about 13:1.

The National University, which opened in Brazzaville in 1971, was later renamed Marien Ngouabi University. In 2003, about 4% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 82.8%, with 88.9% for men and 77.1% for women.

As of 2003, public expenditure on education was estimated at 3.2% of GDP, or 12.6% of total government expenditures.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

Brazzaville has Marien Ngouabi University Library, with 20,000 volumes in 2002, and the National Popular Library with 15,000 volumes. The French Cultural Center houses a library of 33,000 volumes, and the World Health Organization holds 40,000 in Brazzaville.

The National Museum of the Congo (1965), also in Brazzaville, contains ethnography displays and historical displays. There are regional museums in Pointe-Noire and Kinkala.

## 4<sup>5</sup> MEDIA

National and international communications are state owned and operated. In 2003, there were an estimated two mainline telephones for every 1,000 people. The same year, there were approximately 94 mobile phones in use for every 1,000 people.

Radio and television are the primary sources of news and information. In 2004, there was one privately owned radio station and one privately owned television station. There were two government-owned radio stations, Radio Congo and Radio Brazzaville and one government-owned television station, Tele Congo. Radio Brazzaville broadcasts in French and local languages. telecasts are in French, Kikongo, and Lingala. The news coverage and the editorial positions of the state-owned media reflected govern-

ment priorities and views. There are several satellite television connections available. In 2003, there were an estimated 109 radios and 13 television sets for every 1,000 people. The same year, there were 4.3 personal computers for every 1,000 people and 4 of every 1,000 people had access to the Internet.

In 2002, there were five daily newspapers, all published in Brazzaville: *Mweti*, published by the government information ministry (2002 circulation, 7,000); *ACI* (Daily News Bulletin, circulation 1,000); *Courrier d'Afrique*; *Journal de Brazzaville*; and *Journal Officiel de la Republique du Congo*. There are also a few periodicals and magazines, the most popular among them being *La Semaine Africaine*, published by the Catholic Church, with a 1995 circulation of 8,000. The state owned Agence Congolaise d'Information is the primary news service.

Though the constitution provides for free expression and a free press, the government retains a monopoly over radio and television. A 2001 press law abolished long-standing jail sentences for libel and insult, but penalties still exist for incitement to violence and racism.

## 4<sup>6</sup> ORGANIZATIONS

There are Chambers of Commerce, Agriculture, and Industry in Brazzaville, Loubomo, Pointe-Noire, and Ouesso. In rural areas, cooperatives promote the production and marketing of agricultural products. Among the tribes, self-help societies have grown rapidly, particularly in the larger towns. Some volunteer service organizations, such as the Lions Clubs International, are also present.

Larger towns have youth centers. The two major national youth movements are the Union of Socialist Youth of the Congo (UJSC) and the National Federation of Young Students (FENAJEST). The Congolese Olympic Committee (COC) coordinates about 10 national youth sports organizations. There are a few scouting programs as well.

The Congolese Observatory for Human Rights is a national group. There are also national chapters of the Red Cross Society, UNICEF, and Caritas.

## 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

The main tourist attractions are the beaches near the Côte Sauvage region and water-skiing on the Kouillou and Congo rivers. In 2002, there were 21,611 visitors from other countries and 2,986 rooms in hotels. More than 91% of the tourists were from Africa and Europe. All visitors need passports, and visas must be secured in advance. Vaccination for yellow fever is required and precautions for malaria are recommended.

The US government estimated the daily cost of staying in the Congo in 2005 at \$284, depending upon choice of accommodations.

## 4<sup>8</sup> FAMOUS CONGOLESE

The best-known figures are Abbé Fulbert Youlou (1917–72), a former Roman Catholic priest who served as president from 1960 to 1963, as well as mayor of Brazzaville; Alphonse Massamba-Debat (1921–77), president from 1963 to 1968; and Marien Ngouabi (1938–77), who came to power in a 1968 coup and was president from 1968 to 1977. Denis Sassou-Nguesso (b.1943?) became

president in 1979; he served until 1992, and then again beginning in 1997. Prominent author and playwright Emmanuel Dongala-Boundzeki (b.1941) is also a chemistry professor at Marien Ngouabi University in Brazzaville.

#### 49 DEPENDENCIES

The Republic of the Congo has no territories or colonies.

# CÔTE D'IVOIRE

Republic of Côte d'Ivoire  
*République de Côte d'Ivoire*

**CAPITAL:** Yamoussoukro

**FLAG:** The flag is a tricolor of orange, white, and green vertical stripes.

**ANTHEM:** *Abidjanaise*, beginning: "Greetings, O land of hope."

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00192 (or \$1 = CFA Fr521.74) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Assumption, 15 August; All Saints' Day, 1 November; Independence Day, 7 December; Christmas, 25 December. Movable religious holidays include Good Friday, Easter Monday, Ascension, Pentecost Monday, 'Id al-Fitr, and 'Id al-'Adha.

**TIME:** GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of Côte d'Ivoire, on the south coast of the western bulge of Africa, has an area of 322,460 sq km (124,502 sq mi). Comparatively, the area occupied by Côte d'Ivoire is slightly larger than the state of New Mexico. Roughly rectangular in shape, it extends 808 km (502 mi) SE–NW and 780 km (485 mi) NE–SW. It is bordered on the N by Mali and Burkina Faso, on the E by Ghana, on the S by the Gulf of Guinea and the Atlantic Ocean, and on the W by Liberia and Guinea, with a total boundary length of 3,110 km (1,932 mi) and a coastline of 515 km (322 mi).

In 1983, Côte d'Ivoire's capital was moved to Yamoussoukro, about 225 km (140 mi) northwest of the former capital, Abidjan, in the south-central part of the country.

## <sup>2</sup>TOPOGRAPHY

Except for the prolongation of the Guinea Highlands (in the northwest, from Man to Odienné), which has peaks of over 1,000 m (3,280 ft), the greater part of Côte d'Ivoire is a vast plateau, tilted gently toward the Atlantic. It is drained by four major rivers running roughly parallel from north to south—the Cavally (on the Liberian frontier), Sassandra, Bandama, and Komoé. They are not of much value for transportation, since they are sluggish in the dry season, broken by numerous falls and rapids, and subject to torrential flooding in the rainy season. Lake Kossou (Lac de Kossou), in the center of the country, has been formed by the impoundment of the Bandama. From Ghana to Fresco, the coast is almost a straight line, flat and sandy, with a series of deep lagoons behind it; from Fresco to the Liberian frontier, it is more broken, with small cliffs and rocky outcrops.

## <sup>3</sup>CLIMATE

The greatest annual rainfall, about 200 cm (79 in), is along the coast and in the southwest. The coastal region has a long dry sea-

son from December to April, followed by heavy rains from May to September. Farther north, there is only one wet and one dry season, with rainfall heaviest in summer, culminating in September, and lightest in January. The country's lightest rainfall is in the northeast, averaging 109 cm (43 in) annually. Average temperatures along the coast range from 24° to 32°C (75° to 90°F) in January and from 22° to 28°C (72° to 82°F) in July. At Bouaké, in the center of the country, minimum and maximum temperatures in November, the hottest month, average 21° and 35°C (70° and 95°F); the range is from 20° to 29°C (68° to 84°F) in July, the coolest month. At Ferkéssédougou, in the far north, temperatures range from 21° to 36°C (70° to 97°F) in March and from 17° to 30°C (63° to 86°F) in November.

## <sup>4</sup>FLORA AND FAUNA

The southern Côte d'Ivoire forest is a typical rain forest; it has a canopy at around 21–24 m (70–80 ft), with isolated trees pushing up above 37 m (120 ft). Farther north, the rain forest gives way to scattered stands of deciduous trees, and mahogany is widespread. Still farther north, oil palm, acacia, breadfruit, and baobab characterize the transition to true savanna, where shea nut and traveler's palm are common.

The jackal, hyena, panther, elephant, hippopotamus, numerous monkeys, and many other mammals are widely distributed. Crocodiles and chameleons, as well as venomous serpents (horned vipers, mambas, and many others) and pythons, are numerous. Among indigenous birds are vultures, cranes, pigeons, turtle doves, parrots, and herons. Venomous spiders and scorpions abound. As of 2002, there were at least 230 species of mammals, 252 species of birds, and over 3,600 species of plants throughout the country.

## 5 ENVIRONMENT

Most of Côte d'Ivoire's forests, once the largest in West Africa, have been cut down by the timber industry, with only cursory attempts at reforestation. During the first half of the 1980s, deforestation averaged 290,000 ha (717,000 acres) per year, while reforestation was only 6,000 ha (15,000 acres) per year. Between 1983 and 1993, the country's forest and woodland was reduced by nearly 25%. In 2000, about 22% of the total land area was forested.

The land is also affected by desertification and climate changes, including decreased rainfall. In 2000, Côte d'Ivoire had 76.7 cu km of renewable water resources, of which 67% was used for farming and 22% for urban and domestic use. Water pollution is a significant environmental problem in Côte d'Ivoire due to chemical waste from agricultural, industrial, and mining sources: about 92% of the country's city dwellers and 72% of the rural population have safe water. Reports indicate that in the mid-1990s, the nation was using approximately 6,000 tons of pesticides and 78,000 tons of fertilizers per year. The country's lack of sanitation facilities also contributes to the pollution problem. Only about 39% of the population has access to sanitation systems.

In 2003, about 6% of the total land area was legally protected. There were three natural UNESCO World Heritage Sites and six Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 23 types of mammals, 11 species of birds, 2 types of reptiles, 14 species of amphibians, 11 species of fish, 1 type of mollusk, and 105 species of plants. Threatened species include Pel's flying squirrel, the white-breasted guinea fowl, the thresher shark, and the red-capped monkey.

## 6 POPULATION

The population of Côte d'Ivoire (Ivory Coast) in 2005 was estimated by the United Nations (UN) at 18,154,000, which placed it at number 56 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 103 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–10 was expected to be 2.2%, a rate the government viewed as too high. Factors the government planned to address included the high fertility rates (5.5 births per woman) and low contraceptive use. The projected population for the year 2025 was 25,114,000. The population density was 56 per sq km (146 per sq mi).

Movement to the cities has been a problem in recent decades. The UN estimated that 46% of the population lived in urban areas in 2005 (up from 13.2% in 1950), and that urban areas were growing at an annual rate of 2.58%. The capital city, Yamoussoukro, had a population of 416,000 in that year, while the metropolitan population of the former capital, Abidjan, was estimated at 3,660,682. Other major urban areas are Bouaké (estimated at more than 461,618) and Daloa (206,200); towns with populations of more than 20,000 include Gagnoa, Korhogo, Agboville, Abengourou, Dimbokro, Man, and Grand Bassam.

The prevalence of HIV/AIDS has had a significant impact on the population of Côte d'Ivoire. The UN estimated that 9.6% of adults between the ages of 15–49 were living with HIV/AIDS in

2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Flourishing economic activity in Côte d'Ivoire attracts large numbers of workers from neighboring countries. In 1988 foreign workers constituted 28% of the national total. Migratory laborers from Burkina Faso, estimated at more than one million, work chiefly on the cocoa and coffee plantations. In addition, several hundred thousand Ghanaians, Guineans, Malians, Senegalese, and Mauritians live in Côte d'Ivoire. As of September 1998, Côte d'Ivoire was harboring 85,000 of the more than 350,000 Liberian war refugees who started coming to Côte d'Ivoire in 1989 with the start of the civil war in Liberia. Following a 1997 census, it was discovered that some 1,500 Sierra Leonean refugees had been living in Côte d'Ivoire disguised as Liberian refugees. The government has since agreed to recognize them as Sierra Leonean refugees. A mass voluntary repatriation program for the Liberian refugees was implemented between June 1997 and December 1999, after which remaining Liberian refugees were to receive assistance in local integration. In 2004, there were 72,088 refugees living in Côte d'Ivoire along with 2,111 asylum seekers, and an official 38,039 displaced persons. Another 7,594 refugees returned to Liberia that year.

In 2005, the net migration rate for Côte d'Ivoire was estimated as zero migrants per 1,000 population, down from 3.0 in 1990. Most of the non-African population consists of French and other Europeans, and Lebanese and Syrians. Foreigners can buy land and vote in Côte d'Ivoire; some cabinet ministers are foreign-born. In 2004 an estimated 500,000 to 800,000 internally displaced persons lived in Côte d'Ivoire.

## 8 ETHNIC GROUPS

The ethnic composition of Côte d'Ivoire is complex with more than 60 ethnic groups represented. The Akan group, which primarily occupies the eastern and central regions of the country, accounts for about 42.1% of the population. The Baoulé are the single largest subgroup of the Akan people, accounting for about 20% of the total population. The Voltaiques (Gur) account for about 17.6% of the population. The Northern Mandes from the northwest region of the country make up about 16.5% of the population. The Krou people in the southwest account for about 11%; the Bété are the largest subgroup. The Southern Mandes from the western regions account for about 10% of the population. Non-Africans include about 14,000 French and 130,000 Lebanese expatriates.

## 9 LANGUAGES

The official language is French. Of the more than 60 African languages spoken by different ethnic groups, the most important are Agni and Baulé, spoken by the Akan group; the Krou languages; the Sénoufo languages; and the Mandé languages (especially Malinké-Bambura-Dioula).

## 10 RELIGIONS

Approximately 38.6% of the total population are Muslims. The next largest group is the Roman Catholic Church, with membership accounting for about 19.4% of the population. About 11.9% of the people practice traditional indigenous religions, about 6%

LOCATION: 2°30' to 7°30' w; 4°20' to 10°50' n. BOUNDARY LENGTHS: Mali, 515 kilometers (320 miles); Burkina Faso, 531 kilometers (330 miles); Ghana, 668 kilometers (415 miles); Gulf of Guinea coastline, 507 kilometers (315 miles); Liberia, 716 kilometers (445 miles); Guinea, 605 kilometers (376 miles). TERRITORIAL SEA LIMIT: 12 miles.

are Protestant, and 3.1% follow other Christian faiths. About 1.3% belong to the Harrist Church, a Protestant denomination founded in 1913 by the Liberian minister William Hade Harris. There are also a number of syncretic religions combining Christian tenets with African traditional customs and beliefs. These include the Church of the Prophet Papa Nouveau and Eckankar. About 16.7% of the population do not claim any religious affiliation or preference.

A large variety of denominations are represented in the country, including Methodists, Southern Baptists, Seventh-Day Ad-

ventists, Assemblies of God, the Union of the Evangelical Church of Services and Works of Côte d'Ivoire, the Autonomous Church of Celestial Christianity of Oschoffa, the Yoruba First Church, and the Church of Jesus Christ of Latter-Day Saints. There are a small number of Buddhists.

Religious and political affiliation often follows ethnic and regional lines. Most Muslims live in the north and most Christians live in the south. Traditionalists are generally concentrated in rural areas in the north and across the center of the country. The Akan ethnic group traditionally practices a religion called Bossonism.

The constitution implemented in 2000 provides for freedom of religion, however, Christianity has historically enjoyed a privileged status in national life with particular advantage toward the Catholic Church. For instance, Christian schools have long been considered official schools and so have received subsidies through the Ministry of Education; however, Muslim schools were considered religious institutions and were not considered for similar subsidies until 1994.

In 2001, the government initiated the Forum for National Reconciliation, designed in part to ease relationships between religious and ethnic groups. Through the Forum, Muslims accused the government of attempting to create a Christian state. Since then, the president has met with Muslim leaders to discuss their concerns and government leaders have made greater attempts towards interfaith understanding and acceptance. The Forum of Religious Confessions serves to improve relations and understanding between faiths. The Ministry of Religion promotes dialogue between religious groups and the government. All religious groups must register through the Ministry of the Interior. Muslim and Christian holidays are recognized as national holidays.

## 1<sup>1</sup> TRANSPORTATION

Côte d'Ivoire has one of the best-developed and best-maintained transportation systems in Africa. As of 2004, the nation's railway system consisted of a state-controlled 660-km (410-mi) section of a 1,146-km (712-mi) narrow gauge railroad that ran north from Abidjan through Bouaké and Ferkéssédougou to Ouagadougou, Burkina Faso. In 2002, Côte d'Ivoire had 50,400 km (31,318 mi) of roads, of which 4,889 km (3,038 mi) were paved. In 2003, there were 19,450 registered passenger automobiles and 94,900 registered commercial automobiles, trucks, and buses.

Harbor activity is concentrated at Abidjan (West Africa's largest container port), which has facilities that include a fishing port and equipment for handling containers, and San Pedro, a deepwater port that began operations in 1971. There are also small ports at Sassandra and Tabou. Two nationalized shipping lines serve West Africa and Europe. As of 1998, the merchant marine had one oil tanker (1,000 GRT or over) totaling 1,200 GRT. However, in 2002, there is no merchant marine. There are 980 km (56 mi) of navigable rivers, canals, and numerous coastal lagoons.

Air Ivoire, government-owned since 1976, operates domestic services and also flies to Ouagadougou, Burkina Faso, and Bamako, Mali. International flights to Paris, Dakar, and other African and European capitals are handled by Air Afrique, a joint venture owned by Côte d'Ivoire and other participating Yaoundé Treaty countries (72%) and by Air France and Union des Transports Aériens (28%). Côte d'Ivoire's principal airport, F.H. Boigny, is located in Abidjan. Secondary airports are located at Bérébi, Bouaké, Daloa, Man, Sassandra, Korhogo, Tabou, San Pedro, Guiglo, Bondoukou, Yamoussoukro, and Odienné. In 2004 there were an estimated 37 airports, 7 of which had paved runways as of 2005. In 2003, about 46,000 passengers were carried on scheduled domestic and international flights.

## 1<sup>2</sup> HISTORY

Little is known of the early history of the area now called Côte d'Ivoire. Most of its peoples entered the country in comparatively recent times, mostly from the northwest and the east, although the

Kru-speaking peoples came from west of the Cavally River (modern Liberia). European travelers described flourishing and well-organized states in the north and east, with strongly hierarchical social organization and elaborate gold weights and ornaments. These states, such as the Agni kingdom of Indénié and the Abron kingdom of Bondoukou, were closely related linguistically and socially to the neighboring Ashanti of modern Ghana and formed with them, and with the Fon of Dahomey (now Benin) and the Yoruba and Bini kingdoms in Nigeria, an almost continuous string of relatively rich and developed states of the Guinea forest zone. Nearer the coast, the scale of social organization was much smaller, and innumerable small units recognized no political superior.

Modern European acquaintance with the west coast of Africa began with the Portuguese discoveries of the 15th century, culminating in the discovery of the route to India around the Cape of Good Hope in 1488 and the establishment of trading posts along the Senegal coast and the Gulf of Guinea. The Portuguese and Spanish were soon followed by the Dutch and English. Gold, ivory, ostrich feathers, gum arabic, and pepper were succeeded by slaves as the major trading commodities. French activity in what is now Côte d'Ivoire began in 1687, when missionaries landed at Assinié. In 1843, Adm. Louis-Édouard Bouet-Willamez established French posts at Assinié and Grand Bassam, where treaties with the local chiefs provided for the cession of land for forts in exchange for tribute to the chiefs (*coutumes*) at fixed rates and regular intervals.

After the Franco-Prussian War of 1870, the small garrisons of Assinié, Grand Bassam, and Dabou were withdrawn. French interests were confided to a resident trader named Verdier. He and a young assistant, Treich-Laplène, consolidated the French position along the coast. In 1887, Treich-Laplène signed treaties with Indénié, Bettié, Alangoa, and other chiefdoms of the interior, thus preventing British advances into eastern Côte d'Ivoire from Ashanti. Continuing northward to Kong, he joined forces with Col. Louis Binger, who had made his way from Bamako in French Sudan (Soudan Française, now Mali) to Kong and from there northeast to Ouagadougou in Upper Volta (now Burkina Faso) and back to Kong through Bondoukou. French claims to Upper Volta and northern Côte d'Ivoire, joining French Sudan and Niger in a continuous territory, were thus established. In 1893, the territory was renamed Côte d'Ivoire, and Col. Binger was appointed the first French governor. The new colony's frontier with Liberia was settled by a convention in 1892, and that with the Gold Coast (modern Ghana) by the Anglo-French agreement of 1893. The northern border was not defined until 1947.

French control of Côte d'Ivoire was, however, far from secured. Much of the region remained unexplored, and administrative control had still to be effectively organized in those areas whose chiefs had concluded treaties with the French. More serious still, Samory Touré, a Malinké from Guinea who periodically fought the French, had moved southeast after the French capture of Sankoro in 1892 and was continuing his struggle against the invaders in the region of Kong. Not until 1898, after prolonged fighting, was he finally captured near Man. Systematic military operations in the densely forested area between the upper Cavally and the upper Sassandra were carried out from 1908 onward before French rule was finally established in Côte d'Ivoire on the eve of World War I. In other parts of the colony, intermittent revolts continued

throughout this period, stimulated by the imposition of a poll tax and opposition of many of the chiefs to the substitution of a tax rebate for the coutumes promised in the treaties. Nevertheless, some 20,000 Ivoirian troops were raised in the colony during World War I, when the greater part of the French forces was withdrawn.

In the interwar years, Côte d'Ivoire became a considerable producer of cocoa, coffee, mahogany, and other tropical products. Although European planters produced about one-third of the cocoa and coffee and most of the bananas, the share of African planters rapidly increased throughout this period. The railroad, begun in 1904, did not reach the northern part of the colony until 1925. Until 1954, Grand Bassam (opened 1901) and Port Bouet (opened 1932) were the principal ports; that year the deepwater port of Abidjan opened, following the cutting of the Ébrié Lagoon in 1950.

During World War II, Côte d'Ivoire, like the rest of French West Africa, remained under control of the Vichy government between 1940 and 1943. In 1941, the king of Bondoukou and thousands of his people made their way into the Gold Coast to join Gen. Charles de Gaulle's resistance forces. At the end of the war, Côte d'Ivoire was established as an overseas territory under the 1946 French constitution and given three deputies and three senators in the French parliament and an elected territorial assembly. By 1956, it produced 45% of all French West African exports, took in 30% of the imports, and seemed assured of continued economic advance.

In 1958, Côte d'Ivoire accepted the new French constitution in a referendum on 28 September and opted for the status of an autonomous state within the new French Community. On 4 December 1958, the Territorial Assembly, which had been elected by universal suffrage on 31 March 1957, formed itself into the Constituent Assembly and proclaimed the Republic of Côte d'Ivoire as a member state of the French Community. On 26 March 1959, the assembly adopted the first constitution of the new country. The legislature provided for in this constitution was chosen by a national election held on 17 April, and Félix Houphouët-Boigny was unanimously selected by the Assembly as prime minister on 27 April.

On 7 August 1960, the Republic of Côte d'Ivoire proclaimed its complete independence. On 31 October, a new constitution providing for a presidential system was adopted. In elections held on 27 November, Houphouët-Boigny was unanimously elected the country's first president. Although two plots to overthrow him, organized by government and party officials, were discovered in 1963, both failed, and in that year Houphouët-Boigny took over most key ministerial portfolios and consolidated his control over the Democratic Party of Côte d'Ivoire (PDCI).

Outbreaks of unrest plagued the Houphouët-Boigny government during the late 1960s and early 1970s. In 1969, some 1,500 unemployed youths were arrested in the course of widespread rioting. In 1970, disturbances broke out in Gagnoa, Bouaké, and Daloa. These incidents were followed in 1973 by an alleged conspiracy to overthrow the government. Following a brief trial, two army captains and five lieutenants were sentenced to death, while others were given jail sentences ranging from 15 to 20 years of hard labor. Before the sixth PDCI congress in 1975, President Houphouët-Boigny pardoned some 5,000 persons, among who were 145 political prisoners, some associated with the Gagnoa disturbances. All death sentences were also commuted to 20 years of

hard labor. Throughout this period, the government used a series of mass meetings called "dialogues" to win over new adherents. These public discussions were usually led by prominent members of the administration, and President Houphouët-Boigny often presided over them personally. During the second half of the 1970s, Houphouët-Boigny and the PDCI remained firmly in control, and Côte d'Ivoire became one of black Africa's most prosperous nations.

Houphouët-Boigny was reelected unopposed to his fifth five-year term as president in October 1980. The nation's first competitive National Assembly elections were held in the following month, as the ruling PDCI allowed 649 candidates to compete for the 147 seats, with a runoff between the two best-placed candidates in each constituency where there was no majority choice. A total of 121 new members were elected, while 54 of the 80 deputies who ran for reelection were defeated. Relations with neighboring countries have generally been favorable; in 1981, however, the death by suffocation of 46 Ghanaians who had been jailed near Abidjan on suspicion of drug smuggling led to friction with Ghana, which was resolved through Togolese mediation. Declining economic prospects in the early 1980s led to a series of strikes among professional workers, which Houphouët-Boigny accused a foreign power (presumed to be Libya) of fomenting.

Houphouët-Boigny won an unopposed sixth term as president in October 1985, reportedly receiving 100% of the vote in a turnout of over 99% of the eligible voters. In the following month, fewer than 30% turned out for the National Assembly elections, in which 546 candidates—all members of the PDCI but not screened—competed for 175 seats. Only 64 deputies were returned to office. Côte d'Ivoire celebrated the 25th anniversary of its independence on 7 December 1985 by releasing 9,500 convicted criminals from prisoners.

In 1990, Côte d'Ivoire entered a new political era as months of prodemocracy demonstrations and labor unrest led to the legalization of opposition parties, previously banned. Even within the PDCI, a progressive wing called for further liberalization. The first multiparty presidential and legislative elections were held on 28 October 1990 and 25 November 1990, respectively. Houphouët-Boigny was reelected as president with 81% of the vote. The PDCI carried 161 of the 175 seats and the Ivoirian Popular Front (FPI), 9 seats. Yet, outside observers saw the elections as less than free and fair. That November, the National Assembly passed a constitutional amendment to allow the Speaker to take over the presidency in the event of a vacancy (a provision eventually invoked on Houphouët-Boigny's death on 7 December 1993).

Meanwhile, popular disillusionment grew. Early in 1992, the president rejected the findings of his own investigative commission, which had found army chief of staff Gen. Robert Guei responsible for the shootings at Yopougon University in May 1991. Then Houphouët-Boigny left for a four-month "private visit" to France. Rioting followed a mass demonstration in February 1992, and the government used this as a pretext to jail opposition leaders. In protest, the FPI withdrew from the National Assembly, leaving it a PDCI exclusive preserve. Houphouët-Boigny continued to manage affairs from Paris. He returned in June to release the opposition leaders as part of an amnesty that also shielded the soldiers.

After Houphouët-Boigny's death, power was transferred smoothly to Henri Konan Bédié, who became president until the 1995 elections. Born in 1934 in Dadiékro, Côte d'Ivoire, Henri Konan Bédié was of the Baoulé ethnic group. Bédié's ties to his idol Boigny began at a young age. During his initial schooling in Bokanda, Guiglo, and Dabopu, Côte d'Ivoire, he distributed newspapers of Boigny's political party—the Rassemblement Démocratique Africain. As he grew up, Bédié's aspirations became clearer. He traveled to France to study law at the University of Poitiers after reconsidering a career in education; he worked his way through law school. He also obtained advanced degrees in economics and political science, as well as a doctorate in economics, and was appointed the first Ivoirian ambassador to the United States in his 20s. He opened the Ivoirian embassy in Washington, DC, during the last months of the Eisenhower administration and also established the Ivoirian mission to the United Nations when he was only 27. Bédié also served as Minister of Finance and National Assembly President, as well as an advisor to the International Bank on Reconstruction and Development. Throughout his posts, Boigny was his most significant supporter.

Bédié proved to be a controversial leader. A split in the PDCI occurred on his watch, as departing Assembly members formed the Rally of the Republicans (RDR) and, later, the Republican Front. Bédié, meanwhile, began cracking down on dissent, briefly imprisoning and exposing to beatings the editor of a prominent newspaper. In the year preceding the scheduled elections, Bédié also instigated electoral reforms strictly limiting candidates who desired to run for president. Opposition parties decried the new electoral code and vowed to boycott the elections.

The presidential elections held on 22 October 1995 were boycotted by the opposition in protest of Bédié's antidemocratic maneuvering since assuming office. Bédié was reported by government officials to have won 95% of the vote. Legislative elections were held in December. The opposition threatened to extend their boycott to these elections as well, but Bédié engaged the major parties in negotiations and agreed to allow representatives from the two largest parties to serve on the electoral commission overseeing the balloting. The elections were seen as relatively fair and resulted in a National Assembly with 146 seats held by the PDCI, 14 by the RDR, and 9 by the FPI. Presidential, legislative, and municipal elections were held, and Bédié was officially elected president.

Though Bédié's presidential win was seen as a significant accomplishment for the Baulé ethnic group, allegations of his corruption and discontent among Ivoirians continued to increase. After becoming president, Bédié maintained a low profile and granted few interviews to the press. Facing opposition from other politicians, Bédié invited members of some opposition parties to join his government. Only Bernard Zadi of the Union des Sociaux Démocrates party accepted and became minister of culture. Even though Bédié appointed nine ministers from his party, Alassane Ouattara—a Mandé from the northern tribes continued to be Bédié's most harsh enemy. Bédié had banned Ouattara's participation in the 1995 elections by claiming him a foreigner from neighboring Burkina Faso. Bédié subsequently stripped Ouattara of all outward signs of power and began a campaign against Ouattara's northern Dioulla-speaking tribes. Further, Bédié became very strict against any political opposition and went as far as to name a new director of the main television station to support

his own agenda. Criticisms of corruption under his rule began to grow.

Therefore, as many believe, all of these actions could only lead to one outcome: a coup. Regardless, what occurred on 24 December 1999 nonetheless shocked many watchers of Côte d'Ivoire around the world. On that day, Gen. Robert Gueï led a coup d'état and overthrew Bédié. Familiar scenes ensued: gunfire, occupation of the public television station, and the president fleeing the country. However, never before had such an event occurred in the country that was often referred to as the "Ivoirian miracle." Bédié immediately sought refuge in the French ambassador's residence, who, along with the French government, denounced the coup. Bédié, who mistakenly assumed the loyalty of the military, was evacuated from Côte d'Ivoire soon after. While many people around the world, including numerous African leaders, condemned the coup, the streets of Abidjan filled with celebrations. The fact was that Bédié had become increasingly unpopular after the 1995 elections. Gueï rallied his supporters by pledging to honor all Ivoirians, no matter where they were born.

However, many see Gueï's rise to power as a pro-Ouattara and pro-northern movement. Though he pledged to create conditions for democracy, fair elections, and a quick hand-over of civilian rule, many were skeptical. The ruling party for 39 years did not yet have time to recuperate from the shock.

Regardless of in-country support, Gueï and his office remained unstable. Many soldiers originally protested out of anger for lack of pay, but Gueï did not find a way to address their concerns and offer payment. This resulted in increased corruption and bribery—soldiers and police officers are known to stop motorists at random and demand payment through threats. As of 2000, all foreign debt repayment had been suspended. Gen. Gueï promised that as soon as political parties were formed, he would hold elections. They were tentatively set for October 2000, but the international community was concerned that Gueï had not ruled out his own presidential bid. Increasing military power and more defiance against Gueï's orders added to tensions in Côte d'Ivoire. Regional leaders, including US and French diplomats, warned Gueï against trying for the presidential bid, using the reasoning that international support for Côte d'Ivoire would be in jeopardy.

Presidential elections in which the principal candidates were excluded—including Ouattara and Bédié—were held on 22 October, which Gueï, who stood for election, proclaimed he had won. (In all, 15 of 19 presidential candidates were barred from running). In response to criticism that he had rigged the election, a violent popular uprising caused him to flee, and Laurent Gbagbo of the FPI, who was believed to be the actual winner, was proclaimed president. The results were eventually determined to be 59.4% for Gbagbo and 32.7% for Gueï. The main opposition parties, Ouattara's RDR and Bédié's PDCI, boycotted the elections. Although they joined Gbagbo's supporters in demanding Gueï's departure, they also called for the election to be annulled. In addition, that month fighting had erupted between the mainly southern Christian supporters of Gbagbo and the mainly northern Muslim supporters of Ouattara.

Parliamentary elections were held on 10 December 2000 and 14 January 2001; voter turnout was a mere 33.1%, as the elections were boycotted by the RDR. Gbagbo's FPI took 96 of the 225 seats

in the National Assembly, to the PDCI/RDA's (African Democratic Rally) 94.

In March 2001, Gbagbo and Ouattara met for the first time since violence erupted between their supporters in October 2000, and agreed to work towards national reconciliation. Also in March, Ouattara's RDR gained a majority in local elections, taking 64 communes while the PDCI won 58. The FPI secured 34 communes and 38 went to independent candidates. There were calls for new presidential and legislative elections. In the 7 July 2002 county elections, the FPI and the PDCI each won 18 of the 58 departments. In August 2002, the RDR was awarded four ministerial positions in the new government.

On 19 September 2002, as Gbagbo was out of the country, an attempted military coup took place, destabilizing Abidjan and Bouaké, among other cities. Assumedly involved in plotting the coup, Gueï was killed; in addition, the Interior Minister and the former military commander of Bouaké were killed. France increased its military presence in Côte d'Ivoire to protect its large French community, and ECOWAS planned to send a peacekeeping force. Approximately 200 US Special Forces were sent to assist the government in putting down the mutineers. The original mutiny spread quickly into a general uprising in the Muslim north, against Gbagbo's southerner-dominated government. A cease-fire brokered by ministers from six African countries was signed by the government and rebels in Bouaké on 17 October, and direct negotiations between the Côte d'Ivoire Patriotic Movement (MPCI) and the government began on 30 October. The government agreed in principle to the idea of an amnesty and the reintegration of the mutineers into the army, but a political accord was not agreed upon. In what exacerbated the situation, two new rebel groups in the west emerged on 28 November—the Far Western Ivoirian People's Movement (MPIGO) and the Movement for Justice and Peace (MPJ). The MPCI continued to control the north while these two new groups controlled the southwest; the government continued to hold the majority of the south. France increased its troop presence; by the end of December, close to 2,500 French troops were in Côte d'Ivoire.

A succession of unification attempts and agreements have been characterized by broken promises, missed deadlines, deadlock, incomplete implementation, and failure to achieve lasting peace. Following incidents between the MPIGO, MPJ, and French troops in January 2003, the two rebel groups agreed to participate in talks outside Paris on 15 January. Attending the talks were the three rebel movements, a government delegation, the political parties represented in the National Assembly, and the RDR. The talks resulted in a settlement to create a government of national unity and reconciliation in which the rebels would be represented, and Gbagbo would remain as head of state but with diminished powers. Gbagbo signed the French-brokered Linas-Marcoussis Accord on 24 January, but tens of thousands of Ivoirians in Abidjan protested the deal on his return, attacking the French embassy and French-owned businesses, as the protesters accused France of imposing the agreement. In Accra, Ghana, in March, the parties involved in the power-sharing agreement finalized their plan for the creation of the government of national reconciliation: 10 cabinet posts were reserved for President Gbagbo's FPI; the PDCI, RDR, and MPCI each were granted 7 posts; and 7 posts were shared by the MPJ and the MPIGO. Representatives of the rebel movements

and those from the RDR failed to attend the inaugural cabinet meeting in Yamoussoukro on 13 March; only 21 of the newly appointed ministers attended. As of the middle of March 2003, some 3,000 people had been killed in the fighting, and more than one million had been displaced. The first meeting of cabinet ministers in the new government was held on 17 April 2003.

The UN news network IRIN characterizes the time since the Linas-Marcoussis Accord as a period of "no war, no peace." The peace accord faced major challenges. Political deadlock was punctuated with sporadic outbreaks of violence. The unity government was considerably volatile. The government lifted the curfew, French troops cracked down on lawlessness on the western side of the country, and a semblance of law and order was secured, albeit short-lived. Yet core problems of identity and citizenship, disarmament, and power sharing remained. Fresh fighting broke out soon after, followed by a trail of additional peace talks and broken promises. A total cease-fire was agreed on 1 May 2003, and an "End of the War" declaration issued on July 4. Both were broken, leading to the Accra, Ghana, round of talks and the signing, on 30 July 2004, of the Accra III Agreement. Yet again, September and October deadlines for legislative reform and rebel disarmament were not met by the parties. By 2004, a 10,000-strong UN peacekeeping force that included 4,000 French troops already in-country was deployed as part of the blueprint Linas-Marcoussis agreement to control the "zone of confidence" separating rebel-held north and government-controlled south. Still, tensions continued to escalate, and violence at an opposition rally in March 2004, later reported to have been planned, killed 120 people.

Gbagbo tried to crush the rebellion, but failed. Some experts on Côte d'Ivoire have linked Gbagbo to public statements to the effect that he never really accepted the Linas-Marcoussis agreement, but was forced to accept it because he lacked the military capacity to crush the rebellion. On 4 November 2004 the Côte d'Ivoire air force launched a campaign against rebel positions which shattered terms of the cease-fire agreement of 2003. Two days later a government aircraft bombed French barracks in Bouaké, killing nine French soldiers and one American civilian. The French brushed aside government claims that the attack was accidental, and launched a retaliation attack that decimated the small Côte d'Ivoire air force. This sparked several days of violent anti-French riots in Abidjan and elsewhere. On 15 November 2004 the UN Security Council placed Côte d'Ivoire under an immediate arms embargo and gave the government a month to get the peace process moving again. Ensuing talks sponsored by the African Union and mediated by South African president Thabo Mbeki culminated in the Pretoria Agreement, signed April 6, 2005 and a follow-up Pretoria II agreement in June 2005. The Pretoria agreements formally ended Côte d'Ivoire's state of war, and tackled sticky issues such as disarmament, demobilization, and reintegration (DDR); return of New Forces Ministers to government; legal issues surrounding national identity; establishment of an independent electoral commission; and re-affirmed legislative, elections, and disarmament requirements of the Linas-Marcoussis Accord. The legal issues surrounding identity are reported to have been resolved, on paper at least, through constitutional amendments and presidential decrees following Pretoria II. The major challenge remained implementation.

The former colonial master, France, has enjoyed a complex love-hate, and often self-conflicting relationship with the country. On the one hand France has provided military support for Gbagbo against the rebels. On the other hand analysts see French support within the 2003 accord for the rebel's uncompromising demand to change the Ivorian nationality legislation, as legitimizing the rebellion. The change included removing the concept of the ethnic identity (*Ivoirité*) that denied electoral and land-ownership rights to a substantial minority, particularly from the north. In November 2004 and early 2005 anti-French riots swept through the government-run south. The French retaliated, attacking and destroying Gbagbo's air force. Since the 2003 accord, the former colonial power has apparently withdrawn from negotiations.

The much-anticipated presidential elections scheduled for 30 October 2005, when President Laurent Gbagbo's mandate expired, were postponed in September. Disarmament initiatives agreed under the series of peace accords never materialized. On 14 October, the UN Security Council endorsed African Union proposals postponing the elections and allowed Gbagbo to remain in office for up to 12 more months. President Laurent Gbagbo accepted the UN resolution 1633 under which he would have to hand much of his power over to a new consensus prime minister. The prime minister was charged with broad responsibilities for security and defense, and was given the task of organizing credible elections by the end of October 2006.

Six weeks behind schedule because of bitter political bickering among the rebels and opposition parties, and at the third such attempt in one month, a high-powered African Union delegation consisting of Olusegun Obasanjo, Thabo Mbeki, and Niger's president Mamadou Tandja, finally announced the appointment of Charles Konan Banny, governor of West Africa's central bank, as interim prime minister on 5 December 2005. The appointment of Banny, who is seen as independent-minded and potentially neutral, was broadly welcomed by parties to the conflict. Even the New Forces rebels who had previously said that they would accept no one other than their own leader, Guillaume Soro express support for Banny. This appointment finally gave some hope for the war-torn country after more than three years of conflict. Côte d'Ivoire won strong endorsements from parties to the conflict, raising a new glimmer of hope for peace. Banny is said to have international standing and good relations with Gbagbo and Ivorian opposition leaders, assets that diplomats hope will help him to turn his war-weary country around.

### **13 GOVERNMENT**

Under the constitution of 31 October 1960, as subsequently amended, executive power is exercised by a president, elected for a five-year term by direct universal suffrage (from age 18). The president, who appoints the Council of Ministers (cabinet), may initiate and veto legislation; the veto may be overruled by a two-thirds vote of the legislature. A 1980 constitutional amendment created the new post of vice president, to be elected with the president and to become head of state automatically in the case of vacancy by death, resignation, or "absolute hindrance"; the post was left vacant, however. A 1985 constitutional amendment eliminated it, making the president of the National Assembly the interim successor for 45-90 days in the event of a vacancy, and is tasked with organizing new elections in which the winner completes the

remainder of the deceased president's term. In January 2003, Seydou Diarra was appointed as transitional prime minister by President Gbagbo as part of the French-brokered peace plan to create a national government of reconciliation and unity, after civil war began in September 2002. A 41-member cabinet was agreed upon, which was to include 9 ministers from 3 rebel groups: the MPCI, MPIGO, and MPJ. As of December 2005, Banny remained the prime minister, pending yet another transitional premier to oversee transition to peace under a UN-sponsored one-year postponement of elections scheduled for 30 October 2005, and conduct of fresh elections by 30 October 2006. The president is currently the head of state and commander in chief of the armed forces with wide-sweeping powers, and selects the prime minister, who is the head of government. However, the UN Security Council resolution of October 2005 that endorsed postponement of 2005 elections for a year requires the president to hand over much of his powers, including military resources and organizing elections for a more powerful transitional prime minister.

The unicameral National Assembly consists of 225 members, elected by direct universal suffrage for a five-year term in the same year as the president. The country had a *de facto* one-party system until May 1990, when opposition parties were allowed. The post of prime minister was created after the November 1990 elections. Controversial electoral reforms were instituted in 1995, just prior to elections. The Pretoria Agreement of April 2005 provided for reorganization of the electoral commission. However, in late November 2005 a quarrel brewed over composition of the National Electoral Commission that will organize the polls expected in October 2006. The quarrel spilled into the courts where the Supreme Court nullified the election of its chairman on grounds that several members were unfairly excluded from the vote.

### **14 POLITICAL PARTIES**

From 1959 to 1990, the only political party in Côte d'Ivoire was the Democratic Party of Côte d'Ivoire (*Parti Démocratique de la Côte d'Ivoire—PDCI*), headed by President Félix Houphouët-Boigny. The PDCI developed from the Côte d'Ivoire section of the African Democratic Rally (*Rassemblement Démocratique Africain*), formed in 1946. In the 1959 elections, Houphouët-Boigny made it clear that no party that did not fully accept Côte d'Ivoire membership in the French Community would be tolerated. After the elections, the number of constituencies was reduced to four for the whole country, and later a single nationwide constituency was established, with a single list of candidates for the National Assembly. In 1980, members of the National Assembly were chosen in 147 separate districts; in 1985, they were chosen from 175 districts.

In May 1990, opposition parties were legalized and contested the 1990 elections. Among the two-dozen parties registered were the Ivorian Popular Front (FPI), the Ivorian Workers' Party (PIT), the Ivorian Socialist Party (PSI), and the Ivorian Human Rights League. In April 1994, some 19 parties formed a center-left opposition alliance, the *Groupement pour la Solidarité (GPS)*. Also formed in 1994 was the *Rally of the Republicans (RDR)*, a coalition of defectors from the PDCI. The 1995 legislative elections resulted in a National Assembly constituted as follows: PDCI, 146 seats; RDR, 14; and FPI, 9. The year 2000 marked the first time in almost 40 years that the PDCI was not in power. The 10 December

2000 and 14 January 2001 parliamentary elections were boycotted by the RDR. The FPI won 96 of 225 seats; the PDCI took 94; the RDR won 5, although it boycotted the elections; the PIT won 4; the Union of Democrats of Côte d'Ivoire (UDCI) took 1 seat; the Movement of Future Forces (MFA) won 1 seat; and independents secured 22 seats. Two seats were vacant.

Elections scheduled for 30 October 2005 were postponed with UN endorsement. The Security Council resolution 1633 of 2005 requires transparent, free, and fair elections. The elections were scheduled to for 30 October 2006.

## 15 LOCAL GOVERNMENT

Côte d'Ivoire is divided into 19 regions, 58 departments, and 196 communes, each headed by an elected mayor, plus the city of Abidjan with 10 mayors. A process of decentralization began in 1977, and has been regarded as the most thoroughgoing and effective in Francophone Africa. In the March 2001 local elections, the RDR gained control of the largest number of communes (64), followed by the PDCI (58), and the FPI (34). Thirty-eight went to independent candidates. In July 2002, the FPI and PDCI each won 18 of the 58 departments.

## 16 JUDICIAL SYSTEM

The judicial system is based on the French civil law system and customary law. The Supreme Court heads the formal judicial system, which includes a Court of Appeals and lower courts. In rural areas, domestic and other local disputes are often handled through traditional village institutions in accordance with customary law, although the formal court system is increasingly displacing these traditional forms. A grand mediator, whose office is provided for in the constitution to bridge traditional and modern methods of dispute resolution, settles disputes that cannot be resolved solely by traditional means. Military courts only try military personnel. Persons convicted by a military court may petition the Supreme Court. An independent Constitutional Council composed of seven members appointed by the president handles such issues as candidate eligibility in presidential and legislative elections, announcement of final election results, conduct of referendums, and constitutionality of legislation.

The judiciary is independent of the legislative and executive branches in ordinary criminal cases. Under the constitution and in practice, however, the judiciary accedes to the executive on political and national security issues.

## 17 ARMED FORCES

Côte d'Ivoire's armed forces numbered 17,050 active personnel in 2005, including the 1,350-member Presidential Guard. There were 6,500 in the Army, which included three infantry battalions, one armored battalion, and one artillery battalion. Equipment included 10 main battle tanks and five light tanks. There were 900 personnel in the Navy, which had two patrol/coastal vessels and a single amphibious landing ship tank. The air force had 700 personnel, including nine combat capable aircraft, seven of which were also used in a training capacity. There was also a paramili-

tary gendarmerie force of 7,600. The defense budget in 2005 totaled \$191 million.

## 18 INTERNATIONAL COOPERATION

Côte d'Ivoire was admitted to UN membership on 20 September 1960 and is a member of ECA and several nonregional specialized agencies, as well as the WTO (1995). It belongs to the African Union and various other intergovernmental organizations, including the African Development Bank, the ACP Group, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), G-24, and G-77. Together with other countries of former French West Africa, it participates in the West African Customs Union, and it was the organizer of the Conseil d'Entente, which unites Benin, Niger, Togo, and Burkina Faso in a customs union. In May 1975, Côte d'Ivoire was one of the signatories to a treaty that created ECOWAS, an economic organization that includes both French- and English-speaking West African countries. Côte d'Ivoire joined the Community of Sahel and Saharan States (CENSAD) in 2004. It is an associate member of the European Union. Abidjan is the headquarters for the African Development Bank and houses the secretariat of the Conseil d'Entente and the West African office of the World Bank.

Côte d'Ivoire is part of the Nonaligned Movement and the Organization for the Prohibition of Chemical Weapons. The United Nations Operation in Côte d'Ivoire (UNOCI) was established in 2004 to facilitate implementation of peace agreements designed to calm political unrest within the country; 41 nations are a part of the mission. In environmental cooperation, Côte d'Ivoire is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, International tropical timber Agreements, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Côte d'Ivoire's wealth rests essentially on the production of coffee, cocoa, cotton, and tropical woods, which account for over 40% of GDP and two-thirds of exports. It has become the largest cotton producer south of the Sahara and is also investing in rubber production, with the goal of joining Liberia as one of Africa's leading rubber producers. The nation is the world's fifth-largest producer of coffee and the world's largest producer of cocoa; bananas, palm oil, and pineapples are other products of importance. Industrial activity, consisting chiefly of processing industries, is well developed. Mining remains of limited significance, with diamonds and offshore oil the only important minerals produced.

For the first 15 years after independence, Côte d'Ivoire's economy expanded at a remarkable rate reaching the double digits. During the 1980s, however, Côte d'Ivoire began experiencing an economic slowdown because of falling export prices, rising import prices, and heavy debt-service costs as a result of borrowing during the boom years.

In January 1994 France devalued the CFA franc, cutting its value in half. Within days of the devaluation, marketplace fights became common as shoppers reacted to merchants' attempts to cut their losses by marking up the prices of existing stocks. The population was forced to stop buying expensive imports in favor of locally produced products, which put more money into the pockets

of local farmers and tradesmen. In addition, exports became more competitive, encouraging economic production. Despite the initial trauma, the devaluation ultimately led to average growth rates of 7% per year between 1995 and 1999. Although inflation initially shot up to 32% in 1994, it fell to 7.7% in 1995, and 2.5% in 2000. The postdevaluation boom waned in 1999, though, because of lower coffee, palm, rubber, and cocoa prices. The GDP growth rate in 2001 was estimated at -1%. Commodity prices, however, rebounded in 2001.

Due to the instability following the attempted coup that took place in 2002, and the resulting fighting, Côte d'Ivoire's economy suffered greatly, affecting everyone from business people to local artisans and farmers. Côte d'Ivoire's neighbors—including Burkina Faso and Mali—also felt the blow from the civil war.

The economy recovered slightly in 2004, with a GDP growth rate of 1.6% (as opposed to negative growth in 2002, and 2003, when the rate was -1.6% and -3.8% respectively). Inflation remains under control at around 3.3%. Although Côte d'Ivoire is one of the sub-Saharan countries with the highest economic potential, it remains mired in a political and military crisis. The situation has deteriorated in 2004 when the president's troops attacked and killed nine French peacekeeping forces.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Côte d'Ivoire's gross domestic product (GDP) was estimated at \$24.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,400. The annual growth rate of GDP was estimated at -1.5%. The average inflation rate in 2005 was 2%. It was estimated that agriculture accounted for 27.7% of GDP, industry 16.7%, and services 55.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$141 million or about \$1 per capita and accounted for approximately 1.0% of GDP. Foreign aid receipts amounted to \$252 million or about \$15 per capita and accounted for approximately 1.9% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Côte d'Ivoire (Ivory Coast) totaled \$9.46 billion or about \$56 per capita based on a GDP of \$14.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.7%. In 2001 it was estimated that approximately 30% of household consumption was spent on food, 4% on fuel, 1% on health care, and 18% on education. It was estimated that in 1995 about 37% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, Côte d'Ivoire's workforce totaled an estimated 6.95 million, of which about 68% were engaged in agriculture. The unemployment rate in urban areas was estimated at 13% in 1998.

With the exception of the police and the military services, all citizens can form or join a union. All unions must be registered,

a process that takes three months and which is routinely granted. Organized workers account for a very small segment of the workforce because most are involved in the informal sector or agriculture. As of 2005, about 1.5 million workers or 15% of the labor force in the formal economy are unionized. Collective bargaining is recognized as is the right to strike. However, before a strike can be initiated, a six day notification period must be given.

The law provides a 40-hour workweek for all except agricultural workers, for whom longer working hours are permitted. The legal minimum work age is 14 years, but this is only enforced in large companies and in the civil service. Many children work on farms and do menial jobs in the informal sector in urban areas. A government-set minimum wage varies from sector to sector, with the lowest wage being around \$73 per month in 2005, for the industrial sector. Construction workers have a slightly higher minimum wage rate. Foreign workers are generally employed in the informal economy where labor laws do not apply.

## 22 AGRICULTURE

Agriculture provides a living for about 46% of Ivoirians and accounts for about one-half of the country's sizable export earnings. Only 23% of the land is cultivated, but farming is intensive and efficiently organized. Most production is in the hands of smallholders, but there are numerous European-owned plantations, far more than in neighboring West African countries.

The main food crops (with their 2004 production in tons) are yams, 3,050,000; manioc, 1,500,000; rice, 1,150,000; plantains, 1,350,000; and corn, 910,000. Sweet potatoes, peanuts, and in the northern districts, millet, sorghum, and hungry rice (fonio) are also grown. Vegetable and melon production in 2004 amounted to 633,910 tons, consisting mostly of eggplant, fresh tomatoes, cabbage, okra, peppers, and shallots. The government sought during the 1970s to reduce or eliminate rice imports, but in 2004, 868,321 tons were imported. The economic decline during the 1980s coupled with high population growth has necessitated the modernization of agricultural production, with less dependence on coffee and cocoa. When cocoa and coffee prices were booming from the late 1960s until the early 1980s, the government profited by paying the farmers only a fraction of the money earned from the export of the crops.

However, they remain the principal cash crops and together provide about 45% of the country's export earnings. Côte d'Ivoire is Africa's leading producer of coffee, which is grown in the southern and central parts of the country, almost entirely on smallholdings. Coffee production reached a peak of 367,000 tons in 1981 and then declined because of drought and bush fires; in 2004 the total was only 159,769 tons. Cocoa production has increased markedly since the early 1970s; it is now the nation's leading cash crop, and Côte d'Ivoire is the world's leading producer, accounting for 37% of world production in 2004. Output rose from 379,000 tons in 1980 to 1,331,494 tons in 2004, in part because of the use of high-yield plants and improvement in planting methods and upkeep.

Banana production (252,423 tons in 2004) fluctuates from year to year because of climatic conditions; exports in 2004 were 227,225 tons. Production of pineapples in that year was 176,917 tons; palm oil, 292,278 tons; and palm kernels, 50,248 tons. Rubber plantations yielded 136,872 tons, and cotton production

reached 300,000 tons of seed cotton, and 152,000 tons of cotton fiber. Coconut production was 240,000 tons in 2004.

Six sugar complexes were established in the 1970s and early 1980s. These met domestic demand and provided an export surplus of over 60,000 tons of raw sugar in 1982, but the cost of production far exceeded the world market price and two complexes were converted to rice plantations. Production of sugarcane was about 930,000 tons in 2004.

### 2<sup>3</sup> ANIMAL HUSBANDRY

Much of the country lies within tsetse-infested areas, and cattle are therefore concentrated in the more northerly districts. In 2004 there were an estimated 1,460,000 head of cattle (compared with 383,000 in 1968), 1,192,000 goats, 1,523,000 sheep, and 342,700 hogs. There are 33 million chickens; 31,214 tons of eggs were produced in 2004. Milk production is small and there are no processing facilities so the milk is consumed fresh; production in 2004 was 25,912 tons.

In 2004, meat productions included (in tons): beef, 52,200; poultry, 69,300; pork, 11,760; and sheep and goat, 9,429. Nomadic production accounts for around half of cattle herds and is mainly undertaken by non-Ivoirian herders. Settled herders are concentrated in the dry north, mainly in Korhogo, Ferkessedougon, Bouna, Boundali, Odiene, and Dabakala. Sheep and goat rearing is a secondary activity for many herders. Pork production is periodically affected by African swine fever; potential increases are limited by the fact that Muslims account for 40% of the population.

### 2<sup>4</sup> FISHING

In 1964 a modern fishing wharf was opened at Abidjan, which is Africa's largest tuna fishing port, handling about 100,000 tons of tuna each year. There are fish hatcheries in Bouaké, Bamoro, and Korhogo. Commercial fishing for tuna is carried on in the Gulf of Guinea; sardines are also caught in quantity. The total catch was 71,841 tons in 2004, with commercial fishing accounting for 25%; artisanal fishing, 74%; and aquaculture, 1%.

### 2<sup>5</sup> FORESTRY

There are three types of forest in Côte d'Ivoire: rain forest, deciduous forest, and the secondary forest of the savanna region. Total forest area in 2000 was 7,117,000 hectares (17,586,000 acres); the natural rain forest constitutes the main forest area, as only 184,000 hectares (455,000 acres) are planted forests. In 1983, the government acknowledged that the nation's forest area, which totaled approximately 16 million hectares (40 million acres) at independence in 1960, had dwindled to about 4 million hectares (10 million acres). However, the deforestation rate still averaged 3.1% during 1990–2000. The lingering political instability since the outbreak of hostilities in 2002 has contributed to illegal logging and increased deforestation.

The forested area is divided into two zones, the Permanent Domain (PD) and the Rural Domain (RD). The PD consists of classified forests, national parks, and forest areas. This includes major forested areas made up of 231 classified forest areas, 9 national parks and 3 forest reserves, 7 semiclassified forests, and 51 unclassified forests. The total area of the national parks and reserves is 1,959,203 hectares (4,841,191 acres). Forest exploitation activities are prohibited in the classified forest areas, which cover an esti-

mated 4,196,000 hectares (10,368,000 acres). However, for maintenance purposes, limited logging is permitted occasionally in classified forests, which amounted to 148,271 cu m in 2003. These forests are spread throughout the country in three zones: 31.8% in the humid dense forest in the south, 30.5% in the semi-deciduous forests of central Côte d'Ivoire, and 33.7% in the savannah forests in the north. The RD, where logging is permitted, covers 66% of the total land area of Côte d'Ivoire. However, the effective area for forestry production is estimated at 2.9 million hectares (7.2 million acres).

In 2003, forest products accounted for \$269 million in export value, providing the third most important source of foreign revenue after cocoa and petroleum products. The major export markets were Italy, Spain, Germany, France, the Netherlands, the United Kingdom, India, Ireland, Senegal, and Morocco. The total 2003 roundwood harvest was 11,615,000 cu m (410,010,000 cu ft). Tropical hardwood production primarily consists of logs, 70%; lumber, 20%; and veneer and plywood, 10%. At one time, mahogany was the only wood exploited, but now more than 25 different types of wood are utilized commercially. The major species planted are teak, frake, framire, pine, samba, cedar, gmelina, niangon, and bete. The increasing scarcity of forest resources is adversely impacting value-added industries, leaving lumber and veneer production in a steady state of decline.

### 2<sup>6</sup> MINING

Minerals represented a minor component of the economy, of which petroleum was a leading industry. All mineral rights were vested in the state, the Ministère des Ressources Minières et Pétrolières was responsible for administering the sector, and prospecting and mining were subject to control of the state-owned Société d'Etat pour le Développement Minier de la Côte d'Ivoire (SODEMI). Mineral commodities were estimated to account for 10% of the country's exports, excluding the value of smuggled gold and diamonds; the government was planning to implement a diamond certification scheme to respond to worldwide concerns over conflict diamonds. Diamond output in 2004 was estimated at 230,000 carats, unchanged from 2003, but down from the 306,500 carats produced in 2002. Although kimberlites were known to exist at Kanangone, Seguela, and Tortiya, diamonds were produced only from alluvial deposits at Tortiya and Seguela. Gold production in 2004 was 1,219 kg, compared to 1,313 Kg in 2003. The Agbaou gold permit's resources were more than 26,000 kg. A number of foreign companies had gold interests in Côte d'Ivoire, among them a French consortium that in 1991 began to exploit a mine estimated to contain 500,000 tons of gold ore with a content of 7 grams of gold per ton. Tantalite production was estimated at 400 kg in 2004. Côte d'Ivoire in 2004 also produced cement, columbite, gravel and crushed rock, and sand. The production of building materials was a leading industry in the country.

The country's total iron ore resource was estimated to be 3,000 million tons, with deposits at Monogaga, Mount Gao, Mount Klahoyo, Mount Nimba, Mount Segaye, Mount Tia, and Mount Tortro; poor infrastructure has hampered development of these resources. There has been recent interest in constructing a gas pipeline to service an iron ore pelletizing plant onsite, and the government has been actively pursuing a project to build a 500 km railway that would connect Mount Nimba and the San Pe-

dro port. Falconbridge Ltd. of Canada continued evaluation of its Touba-Biankouma license, whose laterite deposit of nickel and cobalt was estimated to be 292 million tons of ore at a grade of 1.46% nickel and 0.11% cobalt. Ilmenite fields containing an estimated 500,000 tons of the rare metal have been discovered near Grand Lahou. Copper, titanium, chromite, bauxite, and asphalt were among other known minerals not yet exploited commercially. In 2001, Côte d'Ivoire agreed with six West African countries to form a free-trade zone to expand economic and infrastructural development. Despite the 1999 military coup and continuing civil unrest in 2001, Côte d'Ivoire's 8,000 paved roads and two active ports made it attractive for business

## 27 ENERGY AND POWER

Côte d'Ivoire has become in recent years an important supplier of energy to the sub-Saharan region as a result of its reserves of natural gas, excess electrical generating capacity, and recent offshore finds of oil and natural gas.

Offshore oil was discovered in 1977, with production starting three years later. The bulk of the country's oil and gas wells, (86%), are situated in shallow marine areas, with another 7% located in deep offshore wells. Only 7% of the country's oil and gas wells are onshore. Estimates by the Oil and Gas Journal have placed the country's proven petroleum reserves at 100 million barrels, as of 1 January 2005. Production for 2004 was estimated at 35,541 barrels per day, with crude oil accounting for 35,000 barrels per day. However, recent finds and new production at several offshore fields and blocks may push the nation's proven reserves and output totals higher. For example, the Espoir field, which began producing in early 2002, is estimated to contain recoverable reserves of 93 million barrels of oil and 180 billion cubic feet of gas. Also, Block CI-40, which is jointly operated by Canadian Natural Resources, Svenska Petroleum and the state oil corporation, Société Nationale d'Opérations Pétrolières de la Côte d'Ivoire (Petroci), and which lies 5 miles to the south of the Espoir field, is estimated to have recoverable oil reserves of 200 million barrels. In Block CI-112, located off Côte d'Ivoire's western coast, is estimated by Vanco Energy Company to contain 2.7 billion barrels of oil in the block's San Pedro ridge and in other deposits.

Although natural gas was initially discovered in Côte d'Ivoire in the 1980s, it has only been recently developed. As of 1 January 2005, the country is estimated to have of natural gas reserves of 1.00 trillion cu ft. In 2003, natural gas output and domestic consumption were each estimated at 46 billion cu ft.

Côte d'Ivoire's oil and gas industry is managed by Petroci. Founded in 1975, Petroci was restructured in 1998 into a holding company, Petroci Holding, with three subsidiaries: Petroci Exploration-Production which handles upstream gas and oil activities; Petroci Gaz, which is responsible for the natural gas sector; and Petroci Industries-Services which manages all other related services. Petroci Holding manages the three subsidiaries as well as the country's holdings in the gas and oil sectors.

Côte d'Ivoire uses hydroelectric and thermal generating facilities to provide all of its electrical power. As of 1 January 2002, the country's generating capacity stood at an estimated 0.90 million kW. Although hydropower accounts for around two-thirds of its generating capacity, it accounts for less than half of the power generated. In 2002, an estimated 4.8 billion kWh of electric power

was generated, of which 38% was hydroelectric and 62% thermal. Gas powered stations alone generated more than half of the total power produced. The use of natural gas fueled power stations has also made Côte d'Ivoire into an exporter of electricity. In 2002, exports of electricity to neighboring countries totaled 1.6 billion kWh. Benin, Ghana, Burkina Faso, Mali, and Togo are among the countries connected to Côte d'Ivoire's power grid. Domestic consumption of electric power in 2002 is reported to total 3.109 billion kWh. Compagnie Ivoirienne d'Electricité (CIE) is the sole supplier of power, and manages, not only the government-owned generating plants, but also the transmission and distribution of power. Although official estimates place the percentage of people living in urban areas that have access to electricity at 77%, less than 15% of those living in rural areas have such access. Rural electrification has become a major priority with the government.

## 28 INDUSTRY

Côte d'Ivoire's industrial activity is substantial by African standards. It accounted for 29% of GDP in 2000. The development of processing industries, especially in the Abidjan region, has been significant. Bouaké has become a large industrial center, and numerous thriving industries have been built up in the forest zone of the southern coastal region. These include palm oil mills, soap factories, a flour mill, fruit canning factories, a tuna canning factory, breweries, beer and soft drink plants, rubber processing plants, sugar mills, cotton ginning plants, and coffee- and cocoa-bean processing plants. The chemical and lubricant industries are also significant. In 1998, industrial GDP grew 12% with increased capacity utilization and plant expansion and renovation. Exports of light manufactured goods had increased by 2002.

The lumber industry, producing largely for export, included plywood factories and numerous sawmills. The construction materials industry, comprised of brick works, quarries, and cement plants, experienced an approximate 25% growth rate from 1996 to 1999. The Abidjan airport was completely renovated in 2001, and there are plans to expand the Port of Abidjan.

Recoverable oil reserves in the country amount to 100 million barrels. Petroleum products account for more than 11% of export earnings. The oil refinery at Abidjan produces enough refined petroleum products for the country to be self-sufficient in them. Côte d'Ivoire is known more as an oil-refining country than an oil-producing one. The Abidjan refinery was scheduled for privatization by 2000. Recoverable gas reserves amount to 1.1 trillion cubic feet (Tcf), and the country is destined to become a gas exporter.

Cotton production is expanding in the north of the country, and a thriving textile industry has developed around it, including such activities as ginning, spinning, weaving, and printing.

The civil war that began in 2002 inhibited growth in all sectors, from large industry in Abidjan to small artisan work. Fighting prevented raw materials from the north of the country to make their way to businesses and ports in the south.

In 2004, industry made up 19.4% of the economy, agriculture, 27.8%, and services, 52.8%. Most (68%) of the 6.7 million laborable population was employed by the agricultural sector. Côte d'Ivoire continues to be one of the most industrialized sub-Saharan countries, but the precarious political situation prevents the country from exploiting this position fully.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.**29 SCIENCE AND TECHNOLOGY**

Scientific institutes in Côte d'Ivoire conduct research in such fields as tropical forestry, livestock and veterinary medicine, cotton and tropical textiles, coffee, cocoa, oils, rubber, savanna food crops, and citrus fruits. The French Institute of Scientific Research for Cooperative Development, founded in 1946, has a center in Abidjan and extensions in Bouaké and Man. The National University of Côte d'Ivoire in Abidjan includes faculties of sciences, medicine, and pharmacy; and an institute of renewable energy. A technical school in Bingerville offers training in electrical engineering, and a teachers' training college at Yamoussoukro includes schools of industrial technology and engineering. In 1987–97, science and engineering students accounted for 31% of college and university enrollments.

In 2002, high technology exports were valued at \$27 million, accounting for 3% of the country's manufactured exports.

**30 DOMESTIC TRADE**

European firms play an important part in the economy, and the French and Lebanese population has a strong influence in importing and marketing decisions. They buy and export lumber, coffee, cocoa, and palm oil products and import capital and consumer goods. Most European firms have their headquarters in Abidjan; many are also represented in Bouaké. In Abidjan and Bouaké there are specialty shops in such lines as dry goods, foodstuffs, hardware, electrical appliances, and consumer electronics. In the smaller towns of the interior, bazaars and individual merchants and peddlers deal in locally grown products and a few imported items.

Domestic trade is generally on a cash basis, but in the countryside, bartering is common. Many shopkeepers extend credit to farmers until the end of the harvest season. Major credit cards are not generally accepted. Installment purchase has been introduced for automobiles and major appliances. Prices and profit margins are regulated by the government for basic food products, many imported goods, and certain services.

Business hours are generally from 8 AM to noon and from 3 to 6 PM, Monday through Friday, and some businesses are open on

Saturday. Banks are normally open on weekdays from 8 to 11:30 AM and 2:30 to 4:30 PM. Many businesses close during the month of August for vacation.

**31 FOREIGN TRADE**

Côte d'Ivoire has generally enjoyed a positive trade balance since independence. Cocoa is Côte d'Ivoire's largest export commodity (28%), cornering over a quarter of the world's exports in the market (26%). The country also exports wood (7.5%), coffee (8.4%), fruits and nuts (4.7%), fish (3.6%), and cotton (4.1%). Côte d'Ivoire's exports go to France, the Netherlands, and the United States.

In 2004, exports reached \$5.1 billion (FOB—free on board), while imports grew to \$3.4 billion (FOB). The bulk of exports went to the United States (11.6%), the Netherlands (10.3%), France (9.5%), Italy (5.5%), Belgium (4.7%), and Germany (4.7%). Imports included fuel, capital equipment, and foodstuffs, and mainly came from France (24.3%), Nigeria (19.2%), and the United Kingdom (4%).

**32 BALANCE OF PAYMENTS**

Côte d'Ivoire's exports have diversified over the years, ranging from a reliance on cocoa, coffee, and other tropical agricultural products, to new growth in exports of light manufactured goods, petroleum products, and electricity. The success of these exports has led to a positive foreign trade balance. The country, however, has external debt service arrears in the amount of \$415 million (2001). Total external debt stands at around \$11 billion, approximately the same amount as annual GDP, or more than three times annual export earnings. The country also has internal debt service payments of over \$2 billion, or approximately 18% of GDP.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Côte d'Ivoire's exports was \$3.6

billion while imports totaled \$2.4 billion resulting in a trade surplus of \$1.2 billion.

The International Monetary Fund (IMF) reported that in 2001 Côte d'Ivoire had exports of goods totaling \$3.95 billion and imports totaling \$2.41 billion. The services credit totaled \$487 million and debit \$1.23 billion.

Exports of goods and services reached \$6.9 billion (FOB—free on board) in 2004, up from \$5.8 billion (FOB) in 2003. Imports grew from \$3.2 billion in 2003, to \$4.2 billion in 2004. The resource balance was consequently positive in both years, hovering at around \$2.6 billion. The current account balance was also positive, slightly improving from \$295 million in 2003, to \$303 million in 2004. Foreign exchange reserves (excluding gold) grew to \$1.7 billion in 2004, covering almost five months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

Côte d'Ivoire is a part of the Communauté Financière Africaine, in particular, the Union Economique et Monétaire de l'Afrique de l'Ouest (UEMOA). The central bank for all UEMOA members is the Banque Centrale des Etats de l'Afrique de l'Ouest (BCEAO) in Dakar. CFA francs (Communauté Financière Africaine francs), are guaranteed by France at a rate of 100:1 without limitation. There are 15 commercial banks in Côte d'Ivoire. These include SGBCI, BIAO, BOCICI, SIB, Citibank, Paribas, BHCI, Ecobank, Bank of Africa, and HSBC Equator Bank. The African Development Bank is headquartered in Abidjan.

In late 1996, the Banque internationale pour le commerce et l'industrie de la Côte d'Ivoire (BICICI) forecast growth of 7.3% for 1996. Banking activity had followed the improving national economic environment. BICICI expected credit in the economy to rise by 4.3% in 1996, and money supply by 20%, marked by further substantial growth in household savings.

Public credit institutions provide credit to farmers and agricultural cooperatives, mortgages and personal loans, real estate financing, and loans to small industries. The Ivoirian Industrial Development Bank was inaugurated in 1965 to provide medium- and long-term credit for industrial projects. The National Agricultural Development Bank, created in 1968, extends loans to the agricultural community. The National Bank for Savings and Credit is the state savings institution.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.5 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

As of 2004, a total of 39 companies were listed on the West African Stock Exchange. Total market capitalization as of that year was \$2.083 billion. As of that same year, the BRVM Composite Index rose 17.1% from the previous year to 87.6.

### 3<sup>4</sup> INSURANCE

There were over 30 insurance companies in Abidjan in 1999. Domestic companies accounted for almost 80% of the business. Third-party motor liability insurance is compulsory. In 2002, all

direct premiums written totaled \$162 million, of which nonlife premiums accounted for \$109 million. In 2000 (the latest year for which data was available), AXA was the country's top nonlife insurer, with \$16.5 million of nonlife premiums written. In that same year, Groupama Vie was the leading life insurer, with \$14.2 million in gross premiums written.

### 3<sup>5</sup> PUBLIC FINANCE

In the first quarter of 1999, the government admitted to a budget shortfall of \$125 million, which it explained as a loss of import duties and tax and customs fraud. The government has been accused repeatedly of corrupt practices and mismanagement of public revenues, including extra-budgetary spending. The government began a privatization program in 1990 that had succeeded in selling 56 out of 60 chosen national enterprises by 1999.

The US Central Intelligence Agency (CIA) estimated that in 2005 Côte d'Ivoire's central government took in revenues of approximately \$2.4 billion and had expenditures of \$2.8 billion. Revenues minus expenditures totaled approximately -\$396 million. Public debt in 2005 amounted to 70.4% of GDP. Total external debt was \$13.26 billion.

The International Monetary Fund (IMF) reported that in 2001, the most recent year for which it had data, central government revenues were CFA Fr1,375.3 billion and expenditures were CFA Fr1,297.3 billion. The value of revenues US dollars was us\$2 million, based on a official exchange rate for 2001 of us\$1 = CFA Fr711.98 as reported by the IMF.

### 3<sup>6</sup> TAXATION

From the end of May 2001, as some order was restored after the coup attempt in January, the government began instituting and planning reforms in tax structure and tax administration under the guidance of the IMF and the World Bank. The government wrote off tax arrears from prior to 1992 amounting to about €460 million. Most domestic state revenues come from indirect taxes

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

on imports and exports, and on consumer products, and from business taxes. In 2002 the minimum 5% customs duty on all imports was extended.

The Côte d'Ivoire divides income into five categories according to its source—industrial and commercial profits, salaries and wages, marketable securities, land, and noncommercial profits. Each type is subject to its own specific tax. Individuals are taxed on their total income from all categories under the progressive Gen. Income Tax (IGR), which takes into account the number and type of persons in the taxpayer's household.

Companies pay a tax for Industrial and Commercial Benefits (BIC) at a rate of 35% of profits, with a 0.5% minimum rate on turnover. Water, oil, and electricity producers are subject to a minimum 0.1% rate. Individually-owned companies pay 25%. The tax on capital gains is included in the corporate tax. The New Code for Investments of 1995 offers programs of tax holidays, exemptions and reductions as incentives for foreign investment. Subsidiaries of foreign corporations are subject to withholding tax of 12% (18% if the profit is exempt from corporate tax). The withholding tax on income from royalties is 20% and from interest, 18%. Dividends to nonresidents are subject to 18% withholding, but this may be reduced to 10% or 12%. All withholding taxes may be reduced or eliminated by the terms of bilateral double-taxation prevention agreements. The Côte d'Ivoire has double-tax treaties with about 20 countries, the United States not included among them. There is a real estate tax and a tax on capital gains from securities. Otherwise capital and capital gains are not taxed.

The main indirect tax is the value-added tax (VAT), which, as of 2 July 2001, was set at the unified rate of 20% with the abolition of the reduced rate of 11%. Supplies to ships and aircraft are exempt from VAT. Also levied is a tax on service provided (TSP) of 10% on certain financial and other services, a business franchise tax, a petroleum products tax, a tax on automobiles (50%-100%).

### 37 CUSTOMS AND DUTIES

A fiscal import duty, applied to all incoming goods regardless of origin, serves primarily as a source of revenue. A customs duty is levied on all goods coming from places other than franc zone countries. Combined, they equal a maximum of 35%. Products from franc zone countries, especially France, receive preferential customs treatment. An excise tax is levied on alcoholic beverages and tobacco; export duties and taxes are imposed on specified commodities. There is also a 20% value-added tax (VAT), and a 2.6% statistical tax that must be paid on all declarations. All imports valued at more than CFA Fr1 million need licenses, which are issued on a quota basis. Bilateral customs agreements have been concluded with Burkina Faso, Niger, Benin, and some other countries. A 1997 agreement with UEMOA countries established a reduction of 60% customs duties manufactured and marketed in the zone.

### 38 FOREIGN INVESTMENT

Foreign (that is, non-French) investment was negligible until the issuance of the 1959 investment code, which eliminated all special privileges for French companies. A new investment code was adopted in 1984. To finance national investment, all businesses had to lend 10% of their profits to the government, but this loan was rebated if they reinvested twice that sum in government-approved

industries. Investment incentives included tax holidays, export bonuses, duty-free imports of equipment and machinery, free repatriation of capital and profits, and tax stabilization clauses. The 1984 code was particularly intended to help small- and medium-sized enterprises, with greater incentives for firms locating outside the Abidjan area.

The New Investment Code of 1995 modified the code of 1984 to further encourage private sector investment for larger enterprises. Incentive packages were particularly aimed at attracting foreign investment in the petroleum, telecommunications, and mining sectors, which were being privatized. As a venue for foreign direct investment, Côte d'Ivoire had in its favor a well-developed infrastructure by third world standards (two ports with inland rail linkages, paved roads, advanced telecommunications facilities), a release from overwhelming external debt through the Paris Club and the HIPC (Highly Indebted Poor Countries) initiative of the IMF and World Bank, and, most famously, a long record of political stability. This last was broken in the coup of 1999, a popular uprising in 2000, and a troop mutiny in March 2002.

Annual foreign direct investment (FDI) inflow fell over 43% between 1997 and 2000–2001—from about \$450 million in 1997 to an average of about \$256 million in 2000 and 2001. The political turmoil has created uncertainty in the private sector, which due to recent privatizations has delayed planned infrastructure improvements in the railroads, the petroleum sector, telecommunications, and electricity and water supply.

FDI has come primarily from France, which is the source of 55–60% of accumulated FDI stock. FDI flows account for 40–45% of total capital in Ivorian firms, about 25% of which is French. Other important sources of FDI include the United States (8.4% in 1997), United Kingdom (7.3%), and Benelux countries (4.6%).

The economic downturn registered in 2004 has depleted the government's cash flow, reduced the tax base, and increased the country's debt. The political turmoil that followed towards the end of that same year has seriously deteriorated the business climate and has scared away potential foreign investors.

### 39 ECONOMIC DEVELOPMENT

Since independence, Côte d'Ivoire has engaged in an economic program aimed at ending its reliance on outside assistance and at achieving self-sustained growth. Its economy has remained one of the most developed on the African continent, and its religious, ethnic, and political stability was a model for other African nations. Under current conditions, however, the Côte d'Ivoire economy will remain highly vulnerable to commodity price variations and dependent upon outside assistance into the foreseeable future, a future mortgaged by its earlier levels of borrowing. Increased efforts to liberalize the economy by privatizing state-owned companies have also helped to improve economic performance, as has increased capital investment. The country's debt in 2000 was approximately \$13 billion. Côte d'Ivoire hoped to become classified as a "newly industrializing country" by the year 2025. In September 2002 mutineering soldiers attempted a coup, however, and the country was divided into government-controlled and rebel-held areas. After a cease-fire was declared in January 2003 and a government of national unity was formed, President Gbagbo declared

on 4 July 2003 that the civil war was over, and there were hopes that the disrupted economy would return to a state of stability.

In March 2002, Côte d'Ivoire negotiated a three-year \$366 million Poverty Reduction and Growth Facility Arrangement with the International Monetary Fund (IMF) to support the government's economic program.

Although it is one of countries with the highest potential in sub-Saharan Africa, Côte d'Ivoire remains a country divided in two, with a fragile political situation and a lot of social tension. The cocoa industry, although largely under government control, has suffered indirectly from this conflict and prospects for the 2005–06 crop are dim. Other sectors suffered permanent damages, notably the tourism sector and the goods hauling one (with much of the trade lost to neighboring Ghana and Togo).

#### 40 SOCIAL DEVELOPMENT

The social insurance system covers all employed persons and there is a special program for civil servants. Contributions from employers and employees finance the system, and the retirement age is set at 55 years. Employed women are entitled to a maternity benefit equal to 100% of the person's last earnings for a total of 14 weeks. Work injury insurance is funded by employers at varying rates depending on the degree of risk in the job. A family allowance is available to all workers with children and there is also a birth grant and a maternity allowance.

Women play a subordinate role in society even though the constitution prohibits sex discrimination. Domestic abuse occurs frequently and is generally not reported due to the shame it brings upon the family. Women are often forced into marriage, and inheritance practices favor men. Women's advocacy groups are addressing the indifference of authorities to female victims of violent crimes. Female circumcision, also known as female genital mutilation, is illegal, but is still practiced in many areas of the country. The government took action against statutory rape of school girls by teachers, in part to combat low rates of enrollment due to teen pregnancies.

Security forces commit widespread abuses, including killings and arbitrary arrest and detention. Journalists are regularly beaten and harassed. The government restricts the freedom of press, assembly, speech, and movement.

#### 41 HEALTH

The public medical services are more important than the small number of private physicians and clinics. In 2004, there were an estimated 9 physicians, 31 nurses, and 15 midwives per 100,000 people. About 77% of the population had access to safe water in 2000. Total health care expenditures were estimated at 3.7% of GDP.

Malaria, yellow fever, sleeping sickness, yaws, leprosy, trachoma, and meningitis are endemic. A broad program was set up in 1961 to control these and other diseases; compulsory vaccination against smallpox and yellow fever was instituted, efforts by mobile health units to track down cases and provide treatment were intensified, and general health measures were tightened both within the country and at the borders. In 1999, the country immunized children up to one year old as follows: diphtheria, pertussis,

and tetanus, 62%, and measles, 62%. Malnutrition affected 24% of children under five years old.

The HIV/AIDS prevalence was 0.60 per 100 adults in 2003. As of 2004, there were approximately 570,000 people living with HIV/AIDS in the country. There were an estimated 47,000 deaths from AIDS in 2003.

The high incidence of HIV/AIDS is attributed to a lack of HIV education programs.

Approximately 60% of females underwent female genital mutilation. The birth rate in 1999 was 41.8 per 1,000. The infant mortality rate in 2005 was 90.83 per 1,000 live births, and 14% of all births were classified as low weight. In 2005, average life expectancy in Côte d'Ivoire was estimated at 48.62.

#### 42 HOUSING

Housing remains an issue of major concern in Côte d'Ivoire, particularly in Abidjan, which has been the focus of continued migration from rural areas. Extensive slum clearance has been carried out in the former capital, but shantytowns still persist on the outskirts. About 70% of the housing in Abidjan are *habitats de cour*. These consist of a series of connected living units with shared outbuildings for kitchen and sanitation services. There is generally a shared courtyard as well. It has been estimated that about 60% of the residents in Abidjan live in slum settlements. Police officers, soldiers, customs officials, top-level bureaucrats, and foreign salaried government employees receive free housing.

According to the latest available figures, the housing stock totaled nearly two million units, with about six people per dwelling. In 1990, only about 49% of the total population had access to improved sanitation systems; 65% had access to improved water systems.

#### 43 EDUCATION

Education is free at all levels. Primary education lasts for six years and secondary for seven years (four years of lower secondary followed by three years of upper secondary). Secondary students might choose a seven-year technical program instead of general studies.

Primary school enrollment in 2003 was estimated at about 61% of age-eligible students; 67% for boys and 54% for girls. In 2001, secondary school enrollment was about 19% of age-eligible students; 24% for boys and 14% for girls. It is estimated that about 51% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 11:1 in 2003. The ratio for secondary school was about 36:1 in 1995.

In 1996, the National University of Côte d'Ivoire split into three separate universities: the Université de Cocody, the Université d'Abobo-Adjamé, and the Université de Bouaké. There are other universities and institutions offering a variety of higher education programs. In 1998, there were about 97,000 students enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 48.1%, with 60.1% for men and 38.2% for women.

As of 2003, public expenditure on education was estimated at 4.6% of GDP, or 21.5% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library, in Abidjan, was created in 1968 from the former library of the French Institute of Black Africa and has a primarily scientific collection; in 2002, it contained over 75,000 volumes. The library of the African Development Bank at Abidjan, was founded in 1970, and has 40,000 volumes. A Public Information Center of the World Bank is also located in Abidjan. Abidjan has a municipal library with 50,000 volumes, the National University library with 95,000 volumes, and several small research libraries. The French Cultural Center holds 43,000 volumes.

The Museum of Côte d'Ivoire in Abidjan features ethnological, sociological, artistic, and scientific exhibits. The Native Costume Museum was founded in 1981 in Grand Bassam. Regional museums are located in Bondoukou, Bingerville, Abengourou, Bonova, Duekoue, and Vavoua. A general interest museum was founded in 1992 in Korhogo.

#### 45 MEDIA

Telephone and telegraph services are government owned. In 2003, there were an estimated 14 mainline telephones for every 1,000 people; about 3,400 people were on a waiting list for telephone service installation. The same year, there were approximately 77 mobile phones in use for every 1,000 people.

All news media are owned or controlled by the government or the ruling PDCI. In 2002, daily newspapers included the French-language daily *Fraternité Matin*, with a circulation of 80,000; *Ivoir'Soir* (50,000); *Le Jour* (16,000); and *La Voie*.

The government also controls radio and television broadcasting. Radio broadcasts are in French, English, and indigenous languages; television is in French only. Some international broadcasts are available, but transmission of some programming has been disrupted by the government in the past. In 1998, there were 2 AM and 9 FM radio stations, with 14 television stations reported in 1999. In 2003, there were an estimated 185 radios and 61 television sets for every 1,000 people. The same year, there were 9.3 personal computers for every 1,000 people and 14 of every 1,000 people had access to the Internet. There were three secure Internet servers in the country in 2004.

Though the constitution provides for free expression and a free press, the government is said to impose significant restrictions on print and electronic media.

#### 46 ORGANIZATIONS

Chambers of commerce, industry, and agriculture have their headquarters in Abidjan, including the National Federation of Industry of Côte d'Ivoire. The International Labour Organization Regional Office for Africa is also in Abidjan. There are a number of employers' associations and agricultural producers' cooperatives. Some multinational trade and professional organizations are based in the country, including the Inter-African Coffee Organization and the African Union of Sports Medicine. A consumer cooperative also functions.

The African Music Rostrum, also based in Abidjan, is a multinational cultural organization to promote African musical arts.

Côte d'Ivoire has many clubs devoted to various sports. There are at least three scouting organizations and several other youth organizations are active, many of which are related to religious organizations.

Amnesty International has chapters within the country. There are also national chapters of the Red Cross Society, Caritas, UNICEF, the Society of St. Vincent De Paul, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Due to political unrest, the small tourism industry has declined since 2002. Fine beaches, specially built tourist villages, and photo safaris through the wildlife preserves are the principal attractions.

Passports are required, but visas are not for stays of up to 90 days. A vaccination certificate for yellow fever is needed from all foreign visitors.

In 2005, the US Department of State estimated the cost of staying in Abidjan at \$241 per day, and in Yamoussoukro, \$218.

#### 48 FAMOUS IVOIRIANS

Queen Abla Pokou (b.1720), the legendary heroine of the Baoulé people, led them to Côte d'Ivoire from the territory that is now Ghana. Félix Houphouët-Boigny (1905–1993) was the first African to be a French Cabinet minister (1956–69); he was elected as Côte d'Ivoire's first president in 1960 and was continually reelected until his death. Henri Konan-Bédié (b.1933) became president in 1993, a post he held until his ouster in a military coup in 2000 led by Robert Guéï. Laurent Koudou Gbagbo (b.1945) defeated Guéï in presidential elections held later in 2000. The nation's outstanding literary figure, Bernard Binlin Dadié (b.1916), is known abroad for several volumes of poetry and a novel; he has held many government posts, including minister of cultural affairs from 1977–86.

#### 49 DEPENDENCIES

Côte d'Ivoire has no territories or colonies.

# DJIBOUTI

Republic of Djibouti

*République de Djibouti Jumhuriyya Djibouti*

**CAPITAL:** Djibouti

**FLAG:** A white triangle, with a five-pointed red star within, extends from the hoist; the remaining area has a broad light blue band over a broad light green band.

**ANTHEM:** No information available.

**MONETARY UNIT:** The Djibouti franc (DjFr) of 100 centimes is the national currency. There are coins of 1, 2, 5, 10, 20, 50, 100, and 500 Djibouti francs, and notes of 500, 1000, 5000, and 10,000 Djibouti francs. DjFr1 = \$0.00563 (or \$1 = DjFr177.72) as of 2004.

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Independence Day, 27 June; Christmas Day, 25 December. Movable religious holidays are Milad an-Nabi, Laylat al-Miraj, 'Id al-Fitr, 'Id al-Adha, and Muslim New Year (1st of Muharram).

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Djibouti (formerly known as French Somaliland and then as the Territory of the Afars and the Issas) is situated on the east coast of Africa along the Bab al-Mandab, the strait that links the Red Sea with the Gulf of Aden. It is bordered by Eritrea to the N, Ethiopia N, W, and S, by Somalia on the SE, and by the Bab al-Mandab, Gulf of Tadjoura, and Gulf of Aden on the E. Djibouti encompasses approximately 22,000 sq km (8,494 sq mi) and has a total boundary length of 830 km (516 mi), which includes a coastline of 314 km (195 mi). Comparatively, the area occupied by Djibouti is slightly smaller than the state of Massachusetts.

Djibouti's capital city, Djibouti, is located in the eastern part of the country.

## <sup>2</sup> TOPOGRAPHY

Originally formed by volcanic action that accompanied the uplifting and faulting of the East African shield and the Rift Valley system, Djibouti consists of a series of high, arid tablelands surrounding faults, within which are low plains. Many areas exhibit thick layers of lava flow. There are three principal regions: the coastal plain, less than 200 m (656 ft) above sea level; the mountains, averaging about 1,000 m (3,300 ft) above sea level; and the plateau behind the mountains, rising 300–1,500 m (984–4,921 ft). The highest point, Mt. Moussa Ali, rises to 2,028 m (6,654 ft) on the northern frontier. The saline Lake Assal, at 155 m (509 ft) below sea level, is the lowest point in Africa and the second-lowest in the world.

In general, the terrain is bare, dry, desolate, and marked by sharp cliffs, deep ravines, burning sands, and thorny shrubs. There is very little groundwater except in an area along the southern border with Somalia, and Djibouti is dependent on saline subterranean aquifers. Located above the meeting point of the Ara-

bian and African tectonic plates, low magnitude earthquakes are common.

## <sup>3</sup> CLIMATE

The climate is torrid, and rainfall is sparse and erratic. During the hot season, from May to September, daytime temperatures in the capital average 31°C (87°F) and the northeastern monsoon blows. During the warm season, from October to April, average daytime temperatures moderate to 37°C (99°F). Humidity is high all year, but annual rainfall averages less than 13 cm (5 in).

## <sup>4</sup> FLORA AND FAUNA

Over 90% of the land in Djibouti is desert. On Mt. Goda, near Tadjoura, there are rare giant juniper trees, acacias, and wild olive trees. However, most of the vegetation is typical of the desert and semidesert, consisting of thorn scrubs and palm trees.

In its animal reserves, Djibouti has antelopes, gazelles, hyenas, and jackals.

## <sup>5</sup> ENVIRONMENT

Djibouti's most significant environmental problems are deforestation, desertification, water pollution, and the protection of its wildlife. Djibouti's forests are threatened by agriculture and the use of wood for fuel. The rare trees on Mt. Goda are protected within a national park. The water supply is threatened by increasing salinity. Underwater reserves have been established in the Gulf of Tadjoura to prevent overfishing of tuna, barracuda, grouper, and other species. No hunting of wild animals is permitted, but abuses continue. Haramous-Loyada is a Ramsar wetland site.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included four types of mammals,

six species of birds, nine species of fish, and two species of plants. Threatened species include the spotted eagle, several species of sharks, the green turtle, the spotted hyena, and Grevy's zebra.

## 6 POPULATION

The population of Djibouti in 2005 was estimated by the United Nations (UN) at 793,000, which placed it at number 155 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–2010 was expected to be 1.9%, a rate the government viewed as too high. The projected population for the year 2025 was 1,107,000. The population density was 34 per sq km (89 per sq mi). The vast majority lives in and around the capital, with much of the rest of the country inhabitable.

The UN estimated that 82% of the population lived in urban areas (primarily Djibouti) in 2005, and that urban areas were growing at an annual rate of 1.81%. The capital city, Djibouti, had a population of 502,000 in that year.

The prevalence of HIV/AIDS has had a significant impact on the population of Djibouti. The UN estimated that 7.1% of adults between the ages of 15–49 were living with HIV/AIDS in 2001, with an estimated 11% of those ages 15–24 infected with the virus. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

The peoples of Djibouti, Somalia, and Eritrea are historically nomadic, migrating with flocks of camels and goats across borders that now separate their nations. Somalis from Djibouti have also historically sought work across the Gulf of Aden in Yemen and the Persian Gulf sheikhdoms.

In mid-1993, some 18,000 Afar refugees from Djibouti fled into northeastern Ethiopia because of ethnic clashes and the civil war. A peace agreement was signed in 1994. Almost all voluntarily repatriated to Djibouti by the end of 1997.

Between September 1994 and November 1996, the United Nations High Commissioner for Refugees (UNHCR) helped repatriate 31,617 Ethiopian refugees from Djibouti; 2,500 remained. In 2004, Somalian refugees numbered 25,444, of which 8,448 were voluntarily repatriated. At the end of 2004, there were 18,035 refugees in Djibouti, and no asylum seekers. In 2005 the estimated net migration rate was zero migrants per 1,000 population, a considerable change from the -11.4 migrants per thousand in 1990.

## 8 ETHNIC GROUPS

The Issa branch of the Somali people and related clans constitutes 60% of all Djibouti's inhabitants; most live in southern Djibouti or in the capital. The Afars, a related people of north and west Djibouti, who also live in the Danakil depression of neighboring Ethiopia, number about 35%. The remaining 5% consists of

French (about 3%), Arabs of Yemeni background, Ethiopians, and Italians.

## 9 LANGUAGES

Although French and Arabic are the official languages, the home languages of the vast majority of Djiboutians are Somali and Afar, both of Cushitic origin.

## 10 RELIGIONS

Over 99% of the population practices Islam, which is the state religion. However, the constitution provides for freedom of religion and there is not widespread discrimination against other faiths. A small number of Djiboutians are Roman Catholic, Protestant, or affiliated with the Baha'i Faith. A large foreign community also supports Greek and Ethiopian Orthodox churches. Proselytizing is not prohibited, but is discouraged. Christmas is the only non-Muslim holiday that is officially recognized. Religious groups must register with the Ministry of the Interior. The Ministry of Muslim Affairs oversees all Muslim activities.

## 11 TRANSPORTATION

Djibouti had about 100 km (62 mi) of single-track, narrow gauge railway in 2004, which linked the capital with Addis Ababa. It was closed during the Somali-Ethiopian War of 1977–78; by the time it reopened, the Ethiopians had developed their port of Assab (now part of Eritrea), so traffic did not return to its former level. However, in 1998, Djibouti and Ethiopia announced plans to revitalize the century-old railroad that links their capitals.

Djibouti had 2,890 km (1,796 mi) of road in 2002, 364 km (226 mi) of which was paved. A tarred road runs most of the distance from Djibouti city to Dikhil, Yoboki, and Galafi, on the Ethiopian border, where it connects with the main Assab-Addis Ababa highway. Except for the 40-km (25-mi) road from Djibouti city to Arta, all other roads are rough. A secondary road connects Obock and Tadjoura, on the northern side of the Gulf of Tadjoura, with Randa and Dorra in the northern interior. A highway between Djibouti city and Tadjoura was completed by 1991.

Djibouti's improved natural harbor consists of a roadstead, outer harbor, and inner harbor. The roadstead is well protected by reefs and the configuration of the land. The inner harbor has five outer and six inner berths for large vessels. A quarter of Ethiopia's imports and half of its exports move through the port. Car ferries ply the Gulf of Tadjoura from Djibouti city to Tadjoura and Obock, which are ports of minor commercial importance. As of 2005, Djibouti had one cargo ship totaling 1,369 GRT.

Also in 2004, there were an estimated 13 airports, only 3 of which had paved runways as of 2005. Ambouli Airport, about 6 km (4 mi) from the city of Djibouti, is the country's international air terminal. There are local airports at Tadjoura and Obock. Air Djibouti, partly government-owned and partly owned by Air France, provides domestic service to six centers and flies to a number of overseas destinations.

## 12 HISTORY

Somali (Issa) and Afar herders, nomadic, Muslim and Cushitic-speaking, lived in and around Djibouti for hundreds of years before European explorers in the 19th century brought the region to the attention of the modern West. Obock and, later, Djibouti city

were recognized as ports of great usefulness on the sea routes to India, Mauritius, and Madagascar. The Italians and British were active colonizers farther south along the Somali coast, and Britain was gaining control in what are now Yemen, the Sudan, and Egypt. France decided to establish its colonial foothold in 1862 along what is now the northeastern coast of Djibouti. This tentative venture became in 1884–85 the protectorates of Obock and Tadjoura, which were merged to form French Somaliland.

The administrative capital of French Somaliland was moved from Obock to Djibouti in 1896, a year before the boundaries of the colony were officially demarcated between France and Ethiopia. In 1898, a French consortium began building the narrow-gauge railway that finally reached Addis Ababa in 1917. During the Italian invasion and occupation of Ethiopia in the 1930s and during the early part of World War II, there were constant border skirmishes between French and Italian forces. In December 1942, French Somaliland forces joined the Free French under Gen. Charles de Gaulle.

After World War II, French Somaliland gradually gained a measure of local autonomy. In 1957, it obtained a territorial assembly and a local executive council to advise the French-appointed governor-general. The following year, the voters of French Somaliland opted to join the French Community as an overseas territory, electing one deputy and one senator to the French National Assembly. In late 1958, the first elections to the local assembly were held under a system of proportional representation. In the second elections, held in 1963, plurality voting based on party lists in seven districts replaced proportional voting. The result was the election of an Afar leader as head of the executive council; the more numerous Issas felt they had been prevented by the new electoral procedures from gaining control of the council. In 1967, 60% of the voters in a special referendum opted to retain the colony's association with France, but the Issas again complained that the franchise lists had been unfairly restricted in a way that favored the Afars. After the referendum, French Somaliland became known as the Territory of the Afars and the Issas.

The country's independence movement had been led throughout the postwar period by the Issas, but their movement had been opposed by Ethiopia, which wanted French control to continue, and by the Afars, who feared Issa domination. Finally, in 1975, the French began to accommodate increasingly strident demands for independence. The territory's citizenship law, which had favored the Afar minority, was revised to admit more Issas. In a referendum in May 1977, the now-enlarged Issa majority voted decisively for independence, which was officially established on 27 June 1977, as the country officially became the Republic of Djibouti. Hassan Gouled Aptidon, the territory's premier, had been elected the nation's first president by the territorial Chamber of Deputies three days earlier. Although Gouled, an Issa, appointed Afar premiers and the cabinet was roughly balanced, the dominance of the Issas in administration led to political conflict, including cabinet crises. Gouled was reelected without opposition by universal suffrage in June 1981 and April 1987. A one-party Chamber of Deputies list, elected without opposition in May 1982, consisted of 26 Issas, 23 Afars, and 16 Arabs. Only 12 seats were won by newcomers in the April 1987 election of a one-party list.

A new constitution was voted on in 1992, although the vote was boycotted by opposition parties. In December, legislative elections

LOCATION: 10°54' to 12°43' N; 41°45' and 43°27' E. BOUNDARY LENGTHS: total coastline, 314 kilometers (196 miles); Somalia, 58 kilometers (36 miles); Ethiopia, 337 kilometers (210 miles); Eritrea, 113 kilometers (70 miles). TERRITORIAL SEA LIMIT: 12 miles.

were held, which, according to the constitution, were to have been open to all parties. Due to administrative restrictions and opposition resolve not to participate, by election time only two parties had been officially allowed to contest seats: the ruling People's Rally for Progress Party (RPP) and the newly formed Democratic Renewal Party (PRD). Due to the antidemocratic nature of the electoral process, more than half the electorate refused to vote. The RPP was said to have won all 65 seats.

Presidential elections were held in March 1993. Five candidates contested the elections for president. The leader of the PDR, Mohamed Elabe, was Gouled's main opponent. But, again, fewer than half the electorate voted, and Gouled was reelected with officially 60% of the vote.

Dissatisfaction with Gouled grew in the late 1980s and contributed to an uprising by Afar guerrillas of the Front for the Restora-

tion of Unity and Democracy (FRUD) in late 1991. FRUD gained control of some areas of the north and west. In February 1992, France deployed forces in Djibouti, and the Afars declared unilaterally a cease-fire. Yet, fighting continued and a government counteroffensive checked the FRUD by July. Rebel bases in the north were occupied, and many opposition leaders were imprisoned, including Ali Aref Bourhan, for an alleged coup attempt. He was released in December 1993. By the end of 1993, about 35% of the central government's budgetary expenditures went toward maintaining "security"; that is, the military occupation of the north by troops of Somali origin.

In 1993, the FRUD suffered severe losses to a government offensive. In 1994, its leadership split over the issue of negotiations with the government. A more moderate wing then entered into negotiations and called a cease-fire. In March 1995, in compliance with the peace accords signed in December 1994, the majority of the FRUD disarmed, and the military integrated a segment of the insurgents into its ranks. Two FRUD leaders accepted ministerial posts. In March 1996 the FRUD was given legal recognition as a political party. A radical wing of the FRUD, (FRUD-Renaissance) led by Ahmed Dini, remains opposed to the cease-fire. Djibouti and Ethiopia jointly attacked the FRUD rebels in October 1997, and skirmishes continued in 1998.

The human rights record of the authoritarian Gouled regime came increasingly under attack in the late-1980s and 1990s, with allegations of beatings, rapes, arbitrary, prolonged, and incommunicado detentions, extra-judicial killings and disappearances of political/ethnic opponents of Gouled, and union leaders. Journalists have also been harassed, intimidated, and detained.

Gouled became ill in December 1995 and spent several months in hospital in France. During this period there appeared a succession struggle between Ismael Omar Guelleh and Ismael Godi Hared, both close advisors of the president. In part to cut down on inter-party fighting, Gouled elected to remain at the helm after his convalescence. In February 1999 he announced his intention to retire and that he would not be a candidate for the scheduled April 1999 elections. At that point the RPP named Guelleh, a key advisor and chief of staff to the former president for over 20 years, as its candidate. The FRUD, in alliance with the RPP, accepted Guelleh as its candidate, as well. An opposition coalition, which included the PRD (Democratic Renewal Party), the PND (National Democratic Party), and (unofficially) the FRUD-Renaissance slated Moussa Ahmed Idriss as their candidate. An estimated 60% of the electorate participated, with Guelleh garnering 74% of the votes cast to 26% for Idriss. There was no official boycott of the elections, for the first time since Djibouti's independence from France in 1977.

In January 2003 Djibouti held a new round of parliamentary elections that the opposition claimed was highly fraudulent. By the official tally, the UAD opposition coalition was only 4,939 votes away from beating the presidential movement. Yet because of Djibouti's winner-takes-all system, the RPP won all 65 seats. For the first time in Djibouti's history, seven women won seats in the parliament.

In the presidential elections that followed on 8 April 2005, the opposition alleged irregularities and intimidation in the run-up to the contest, and boycotted the polls on election day. With the absence of any opposition, President Guelleh was elected to another

six-year term. In an effort to validate his victory, Guelleh claimed a 79% voter turn-out. However, given a turnout of 48% in the parliamentary election just two years earlier, his claim was not credible. Following the election, Guelleh attempted to mend fences by announcing that he would step down after his second term and that he would not amend the constitution to seek a third term.

The electoral victories cemented a nearly complete domination of government by the President's sub-clan, the Issa Mamassans, and severely restricted political space and economic opportunities for the Afar people. In 2005 reports began to surface of rebel insurrections allegedly led by disaffected elements of the FRUD. Among the leaders of the insurgency was Aramis Mohamed Aramis, an Afar and the son of a former FRUD commander, who was killed in 1991.

Djibouti is situated in one of the least stable regions of the world, and it occupies a highly strategic location facing the Saudi Arabian peninsula, straddling the choke point between the Red Sea and the Gulf of Aden. President Guelleh maintained harmonious relations with neighbors and superpowers. In 2004, the government signed a bi-lateral treaty with Eritrea promising economic, political and social cooperation, and Djibouti continued to benefit from the significant transit of goods to and from land-locked Ethiopia via its well-developed seaport. Although a potential magnet for terrorists, the presence of French and American military bases in the country has served to dampen potential threats from Somalia's clan rivalries, which have destabilized greater Somalia and its self-declared autonomous states of Somaliland and Puntland.

### 13 GOVERNMENT

Under the 1981 and 1992 constitutions, Djibouti is a parliamentary republic. The president, who according to the constitution must be an Issa, is elected by universal adult suffrage; the prime minister, who heads the cabinet, must be an Afar. The legislature consists of the unicameral Chamber of Deputies, whose 65 members are elected for five-year terms. Before 1992, candidates came from a single list submitted by the ruling party, the Popular Rally for Progress (RPP).

In January 1992, the Gouled government named a committee to draft a new constitution that would permit multiparty democracy, limit presidential powers, and establish an independent judiciary. On 4 September 1992, 75% of the voters approved the new constitution in a referendum. According to Djibouti's winner-takes-all electoral rules, the party obtaining a majority in a given district is awarded all the seats within that district, which explains how the FRUD won 36.9% of the vote in 2003, but took no seats in the parliament.

### 14 POLITICAL PARTIES

Personalities and clan identities trump party labels, but the system is dominated by the ruling party and its coalition, the Union for the Presidential Majority (UMP), an alliance that includes the People's Rally for Progress (Rassemblement Populaire pour le Progrès—RPP), the Front for the Restoration of Unity and Democracy (FRUD), originally formed in 1991, PSD and PND. The opposition coalition, the Union for Democratic Changeover

(UAD) is composed of the ARD, MRDD, UDJ, and formerly the PDD (expelled in December 2004).

Ruling party dominance harks back to October 1981 when a law was enacted that restricted political activity to the ruling RPP. That year, the government temporarily detained the leaders of and banned the Djiboutian People's Party (Parti Populaire Djiboutien). Illegal Issa and Afar parties, including an Ethiopian-backed Afar party-in-exile and a Somali-backed Issa party-in-exile, waited in the wings. For the 1987 elections to the Chamber of Deputies, a single list of candidates was drawn up by the RPP, headed by President Gouled; about 90% of the nation's 100,985 voters cast ballots.

Despite the 1992 constitutional changes that legalized opposition parties, Djibouti remained tightly controlled by the RPP (People's Rally for Progress). On 18 December 1992, legislative elections were held, with the RPP gaining 74.6% of the vote and the Democratic Renewal Party (PRD) 25.4%. Other parties boycotted the elections on the grounds that Gouled did not consult the opposition in the "democratization" process. Most Afars did not vote. The RPP, therefore, won all 65 seats. Gouled was reelected, although not convincingly, on 7 May 1993. The four losing parties and FRUD, at the time a paramilitary organization in the north (Front for the Restoration of Unity and Democracy) accused the government of election fraud, a charge supported by international observers. Only 50% of the eligible voters were reported to have turned out.

In the December 1997 legislative elections, which generally were not considered to be credible, the RPP won 54 seats to the FRUD's 11, though their campaigns were supported by the RPP in alliance. The PRD and PND contested the elections and received 19.2% and 2.3% of the votes, respectively, but won no National Assembly seats. There were no female candidates in the election.

In February 1999 President Gouled designated his successor, longtime advisor Ismael Omar Guelleh, who was then duly elected president on 9 April 1999 and installed on 8 May 1999. His cabinets reflected the proportional ethnic composition required by the constitution, with continued dominance of his sub-clan of the Issas. Barkat Gourad Hammado, the prime minister, was replaced by Mohamed Dileita Dileita on 4 March 2001.

Two groups, the Democratic Renewal Party (PRD) and the Democratic National Party (PND) have contested elections since 1992. FRUD-Renaissance, which separated from the FRUD in 1996, signed a peace accord in Paris on 7 February 2000 with the government, which also included a general release of prisoners held by both sides. The Movement for Unity and Democracy (MUD) allegedly is associated with the Somali National Movement operating out of northern Somalia. It is a coalition of Afar-oriented and Issa-oriented dissidents.

In the country's first full multiparty parliamentary elections held 10 January 2003, the UMP led by the RPP garnered 62.2% of the vote to 36.9% for the FRUD, which won no assembly seats. In the capital, Djibouti-Ville, the opposition Union pour une Alternance Démocratique (UAD) took 44.9% of the votes, and the UMP 55%. President Ismail Omar Guelleh ran unopposed in the 8 April 2005 elections, guaranteeing him another six-year term in office. His appointed prime minister was Mohamed Dileita, who held the position as head of government since 4 March 2001. The

next parliamentary elections were scheduled for January 2008, and the next presidential elections were due April 2011.

## 15 LOCAL GOVERNMENT

There are five *cercles*, or districts, with councils and appointed administrators: Ali Sabih, Obock, Dikhil, Tadjoura, and Djibouti.

## 16 JUDICIAL SYSTEM

The judicial system consists of courts of first instance, a High Court of Appeal, and a Supreme Court. Each of the five administrative districts also has a customary court. The legal system is a blend of French codified law, Shariah (Islamic law) and customary law of the native nomadic peoples.

The 1992 constitution is modeled on the 1958 French constitution. The judiciary is not completely independent of the executive branch. A state security court handles political trials and cases involving purported threats to national security. Political trials may be applied to the Supreme Court.

The Constitutional Council rules on the constitutionality of laws. The constitution states that the accused enjoys a presumption of innocence and has the right to counsel.

## 17 ARMED FORCES

In 2005, Djibouti's armed forces of 9,850 active members was divided into an 8,000-man army, an estimated 200-man navy with seven patrol craft, and a 250-man air force with no combat aircraft. Paramilitary forces included 1,400 personnel in the gendarmerie and a national security force of an estimated 2,500. A total of 2,850 French troops were based near the city of Djibouti to deal with threats to French interests in the region. The defense budget in 2005 totaled \$25.8 million.

## 18 INTERNATIONAL COOPERATION

Admitted to the United Nations on 20 September 1977, Djibouti belongs to ECA and all the nonregional specialized agencies except the IAEA. It is also a member of the WTO, the African Development Bank, G-77, the Arab League, the ACP Group, the Arab Monetary Fund, the Intergovernmental Authority on Development (IGAD), the Organization of the Islamic Conference (OIC), COMESA, the Community of Sahel and Saharan States (CENSAD), and the African Union. Djibouti is part of the Nonaligned Movement. In 1981, treaties of friendship and cooperation were signed with Ethiopia, Somalia, Kenya, and the Sudan. In environmental cooperation, Djibouti is part of the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

## 19 ECONOMY

Djibouti has a market-based, free-enterprise economy. Its economy is dependent upon its strategic position at the narrow straits at the southern entrance to the Red Sea. The French military base in Djibouti is the country's largest single source of economic and commercial activity. The remainder of the money economy is service oriented and centered upon the free port of Djibouti, the railway terminus there, the airport, and government administration. The free port features a deep-water container terminal; France

has committed substantial funds to its continuing modernization. There is also an active construction industry.

There is little arable farm land in Djibouti, and the country is subject to periods of severe drought. As a consequence, Djibouti produces only 3% of its food needs. Over half of the population derives its income from livestock: goats, sheep, and camels. A fishing industry has emerged, and the Islamic Development Bank helped finance a canning factory.

Since 1990, recession, civil war, and a high population growth rate combined to reduce per capita consumption by 35%. The unemployment rate exceeded 50% as of 2004 (some estimates placed it at over 70%). The border conflict between Ethiopia and Eritrea disturbed the normal commerce in which Djibouti allowed Ethiopia the use of its port and conducted regular trade relations. As a consequence, average annual growth of GDP between 1988 and 1998 was -3.1%, and the economy was at zero growth in 2001. The GDP growth rate reached 3.5% in 2002; the inflation rate that year was 2%.

Due to the fact that Djibouti has few exploitable natural resources and little industry, it is heavily dependent upon foreign aid to finance development projects and support its balance of payments. The country has fallen behind on its debt payments and has had difficulty meeting the reform requirements set by foreign aid donors. Ethiopia has developed other trade routes, limiting Djibouti's port activity.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Djibouti's gross domestic product (GDP) was estimated at \$619.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,300. The annual growth rate of GDP was estimated at 3.5%. The average inflation rate in 2002 was 2%. It was estimated that agriculture accounted for 3.5% of GDP, industry 15.8%, and services 80.7%.

It was estimated that in 2001 about 50% of the population had incomes below the poverty line.

## 21 LABOR

Labor in the cash economy is concentrated in the city of Djibouti, particularly on the docks and in shipbuilding and building construction. In 2002, (the latest year for which data was available) the labor force numbered 282,000. The railway is a significant employer, as is the national government. However, there is no data available on the occupational breakdown. Unemployment and underemployment are widespread; unemployment was estimated at 50% in 2004.

As of 2005 workers were free to join unions and strike provided they complied with prescribed legal requirements. All unions must be legally sanctioned by the government and 48 hours advance notice must be given to the Ministry of the Interior of a planned strike. Independent unions continue to be suppressed. In addition, those who participate in strikes may be arrested. Collective bargaining rarely occurs.

In 2005, the monthly minimum wage for unskilled workers was approximately \$125, which had not changed since its inception in 1976. By law, the standard workweek is 40 hours, often spread over six days. A weekly rest period of 24 consecutive hours is also mandated by law, as is the provision of overtime pay. However, these regulations affect only the small fraction of the population that is involved in wage employment. The minimum age for child labor is 14 years old, although the lack of labor inspectors means that compliance is left largely to market forces. The government also lacks inspectors to enforce workplace safety standards, therefore many workers face hazardous work conditions.

## 22 AGRICULTURE

Agriculture in Djibouti is very limited, due to acute water shortages in rural areas. In 2003, agriculture contributed only a little more than 4% to GDP. In 2004, some 25,464 tons of vegetables were produced. Tomatoes are grown for domestic consumption. Date palms are cultivated along the coastal fringe. Famine and malnutrition in Djibouti have created a reliance on the distribution of food aid for millions of its people. In 2004, grain imports totaled 87,115 tons.

## 23 ANIMAL HUSBANDRY

Cattle, fat-tailed sheep, goats, and camels are grazed in the interior; hides and skins are exported. In 2004, Djibouti had an estimated 512,000 goats, 466,000 sheep, 297,000 cattle, and 8,800 asses. Meat production in 2004 totaled 11,244 tons, of which beef accounted for 6,050 tons. An estimated 13,950 tons of milk were produced in 2004, along with 1,990 tons of cattle hides, sheepskins, and goatskins.

## 24 FISHING

There is no local tradition of commercial fishing or seafaring, although the Gulf of Tadjoura, the Gulf of Aden, and the Red Sea are potentially rich sources of commercial and game fish. The catch was 350 tons in 2003.

## 25 FORESTRY

There are protected forests on the slopes of the mountains north of the Gulf of Tadjoura. Less than 1% of the country's total land area is forested.

## 26 MINING

Mining and manufacturing accounted for 3% of the gross domestic product (GDP) in 2004, which stood at around \$1.6 billion. Djibouti has been known to produce occasional small quantities of clays, granite, limestone, marble, salt, sand and gravel, and crushed and dimension stone for domestic construction projects. There was no cement production in the country; most imports came from Persian Gulf countries. Other mineral occurrences of potential economic interest included diatomite, geothermal fluids and mineral salts, gold, gypsum, perlite, petroleum, and pumice. Salt was the only mineral produced in 2004. Extracted from evaporated pans by artisanal miners in the marshes of Tadjoura, salt production fell sharply from the 173,099 metric tons produced in

2001 to an estimated 30,000 metric tons in 2004. The government hoped to establish, by the end of 2002, a fiscal, institutional, and legal framework to support the development of domestic natural resources. The government also planned to promote the use of local materials in construction and public works. The outlook for the mineral industry was for little growth in the short run; constraints included small domestic markets, minimal known natural resources, and slow GDP growth.

## 27 ENERGY AND POWER

Located in the Horn of Africa region, Djibouti had no proven reserves of oil or natural gas, or refining capacity, as of 1 January 2003. In addition, Djibouti has no known reserves of coal. The country's energy and power sector is dominated by electrical power generation. According to an August 2003 Energy Information Administration (EIA) analysis brief, Djibouti has an installed electrical power generating capacity of 85 MW, which is generated from an oil-fired generating station in the capital. In 2002 electrical power output was put at 0.232 billion kWh, with consumption at 0.216 billion kWh. All petroleum products are imported. In 2002, imports of refined petroleum products totaled 11,410 barrels per day, with consumption placed at 11,400 barrels per day. There were no natural gas imports for that year. The port in Djibouti's capital city is an important oil shipment and storage site. The Dubai Ports Authority, which in 2000 was awarded a long-term contract to manage the port, hoped to increase its handling capacity to 300,000 metric tons per year over the next 20 years through modernization and expansion of port facilities.

## 28 INDUSTRY

Shipbuilding and urban construction traditionally have been industrial undertakings. The two main factories in 2006 were a mineral-water bottling facility and a dairy, although small plants produce food, beverages, furniture, building materials, and bottled gas.

With the help of France, Italy, the World Bank, OPEC, and the United Nations Development Program, Djibouti was promoting a project to develop geothermal energy resources. Interest was focused on the Goubet-Lac Assal region and, through this project, Djibouti hoped to become self-sufficient in energy. Industry accounted for 15.8% of GDP in 2001.

## 29 SCIENCE AND TECHNOLOGY

Because Djibouti is an active volcanic zone, its two principal research organizations—the Higher Institute for Scientific and Technical Research and the Bureau of Geological and Mineral Research—concentrate on the earth sciences.

## 30 DOMESTIC TRADE

As of 2001, about 80.7% of the GDP was contributed by the service sector, primarily those services related to international import/export trade. The main commercial centers are around the Port of Djibouti, the international airport, and the railroad. Domestic trade is dominated by traffic in live sheep and camels, dates, and melons. The government maintains price controls on a number of essential commodities, including wheat flour, bread, sugar, and

petroleum products. French citizens dominate the commerce of the city of Djibouti. Business hours normally are 7:30 AM to noon and 3:30 to 6 PM, Sunday through Thursday. Banks are open Sunday–Thursday from 7 AM to 12 PM. Banks and offices are closed on Fridays and Saturdays.

## 31 FOREIGN TRADE

About 75% of imports are consumed or used in Djibouti, while the remainder is forwarded to Ethiopia or northern Somalia. Exports include hides and skins, and coffee. Imports are vegetable products, foodstuffs, beverages, vinegar, tobacco, machinery and transportation equipment, and mineral products.

In 2004, Djibouti's primary export partners were: Somalia (63.8%), Yemen (22.6%), and Ethiopia (5%). The primary import partners were: Saudi Arabia (19.7%), India (12.4%), Ethiopia (11.8%), China (8.1%), France (5.6%), and the United States (4.8%).

## 32 BALANCE OF PAYMENTS

Since independence, Djibouti has run large trade deficits, which have been offset by surpluses on services and by transfers attributable to the French base, port receipts, the national airline, the national airport, and grants from donors.

In 2004, Djibouti's exports were valued at \$250 million, and imports at \$987 million. In 2002, the country had an external debt burden of \$366 million. In 2001, Djibouti received \$36 million in economic aid.

## 33 BANKING AND SECURITIES

The Djibouti franc was created in 1949 by the government of France. The Djibouti Treasury was replaced in 1983 as the bank

of issue and central bank by the new National Bank of Djibouti. There were five commercial banks in 1993 and a National Development Bank, 51% government owned. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$161.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$318.3 million.

There is no securities exchange.

Both the pace and content of economic reforms are inconsistent. Failures to meet the financial criteria established with the IMF led to a postponement of the disbursal of the second installment of a \$6.6 million credit agreed in April 1996. Wrangling over conditionality with France also delayed payment of part of the \$9.3 million assistance package agreed upon in September 1996. The attitudes of the IMF and France, combined with problems in rescheduling debts to France, provided a rather somber backdrop to the negotiation of the 1997 budget.

### 34 INSURANCE

The State Insurance Co. of Somalia and about 10 European insurance companies provide most of the insurance coverage.

### 35 PUBLIC FINANCE

Increased military expenditures, declining tax receipts, and political unrest in bordering countries have exacerbated the deterioration of public finance in recent years. France, a major provider of aid to Djibouti, has insisted that future aid packages be conditional on an overhaul of the country's muddled finances.

The US Central Intelligence Agency (CIA) estimated that in 1999 Djibouti's central government took in revenues of approximately \$135 million and had expenditures of \$182 million. Revenues minus expenditures totaled approximately -\$47 million. Total external debt was \$366 million.

### 36 TAXATION

The individual income tax, payable by the employer, is collected by withholding from wages and salaries. In addition, the employee and the employer contribute to a medical and pension fund. There is a separate system for civil servants and soldiers. Private corporations and personal companies, as well as public companies and limited companies, pay a flat tax. Other taxes include property, stamp, and registration taxes. There is also an ad valorem consumption tax of 8–30% (as of August 2003) with a surtax on luxury items.

### 37 CUSTOMS AND DUTIES

Formerly a "Free Zone," although the term only applied to the port, Djibouti now levies customs duties on most commodities, with most import taxes ranging from 5–40%. Luxury goods, such as cigarettes and alcoholic beverages, are taxed at higher rates, as

much as 160%. Additionally, Djibouti requires import licenses for all those wishing to import or sell in the country.

### 38 FOREIGN INVESTMENT

Foreign investment is predominantly French, largely in connection with the military base and the port. Saudi Arabia, Pakistan, China, Korea, and Uganda have cooperation agreements. Bilateral investment agreements (BITs) were concluded with Egypt and Malaysia in 1998 and with Switzerland in 2001. Official development assistance (ODA) was \$42 million in 2000 and \$36 million in 2001. There are no exchange controls and investors are allowed to transfer their profits freely without tax. Tax relief is offered to some investors.

In 1998, annual foreign direct investment (FDI) inflow rose from \$2.4 million in 1997 to \$3.5 million and then peaked at a record \$4.2 million in 1999. FDI inflow averaged \$3.35 million for 2000 and 2001. As of 2003, the total stock of inward FDI was \$52 million, and inward FDI flow in 2003 was \$11 million.

### 39 ECONOMIC DEVELOPMENT

In 1990, the Djibouti government significantly expanded its public investment program. Projects in communications, agriculture, and fisheries, as well as in social and environmental areas, were planned. Execution of these plans was put on hold as a result of subsequent domestic disturbances. The Persian Gulf War of 1991 also disrupted investment programs sponsored by Iraq, Kuwait, and Saudi Arabia.

French budgetary support of the Djibouti economy is crucial to its stability, providing some 45% of foreign aid. The long-standing French financial commitment has weakened since 1989, and the International Monetary Fund (IMF) has expressed serious concern over key budget and trade deficits. In 1999, Djibouti negotiated a three-year \$26 million Enhanced Structural Adjustment Facility (ESAF, subsequently Poverty Reduction and Growth Facility—PRGF) with the IMF.

Per capita consumption dropped an estimated 35% over the 1998–2005 period, due to recession, civil war, and a high population growth rate (including immigrants and refugees). The government has fallen in arrears on long-term external debt and struggles to meet the demands of foreign aid donors.

### 40 SOCIAL DEVELOPMENT

Despite full legal protection, women generally play a subordinate role in the workplace and in the household. Customary law favors men in areas of inheritance and property rights. Domestic violence against women is treated as a family problem. As many as 98% of women have undergone female circumcision, also known as female genital mutilation (FGM), a painful and potentially life-threatening procedure. Although the procedure is illegal, no one has been prosecuted under those provisions. The government provides no funds to advance children's welfare.

Discrimination against minority ethnic clans in Djibouti is pervasive. The dominant clan, the Issa, control most government positions and are dominant in the military forces as well. Djibou-

ti's human rights record remains poor, despite the transition to a multiparty system. There are reports of police brutality, deplorable prison conditions, and illegal detentions.

#### 41 HEALTH

Malnutrition is severe and the incidence of tuberculosis high. Malaria is endemic. There were 3,111 reported cases of tuberculosis in 1994. The city of Djibouti's publicly supplied water is suspect because the system is in disrepair.

In 2004 there were an estimated 13 physicians, 2 dentists, 65 nurses, and 2 pharmacists per 100,000 people. Djibouti's government has developed plans to improve public health and the management of hospitals, train more staff, and rehabilitate existing facilities.

In 2005 life expectancy was estimated at 43.10 years, one of the lowest in the world. That year the infant mortality rate was 104.13 per 1,000 live births. The death rate was 14.4 deaths per 1,000 inhabitants. As of 2002, the birth rate was estimated at 40 births per 1,000 people.

The HIV/AIDS prevalence was 2.90 per 100 adults in 2003. As of 2004, there were approximately 9,100 people living with HIV/AIDS in the country. There were an estimated 690 deaths from AIDS in 2003.

There were 1,007 cases of malaria in 1994. Between the mid-1970s and the mid-1990s, 23% of children under five were underweight. In Djibouti nearly every woman has had female genital mutilation.

#### 42 HOUSING

Djiboutian nomads generally live in branch-framed, transportable huts (*toukouls*), which are covered with woven mats or boiled bark pulled into fine strands and plaited; they are carried from place to place on camels. Good-quality urban housing is in short supply. Construction of 5,000 low-cost dwellings was planned for the 1981–86 period, but only 729 were built. In the past, housing costs have often been subsidized by the government, particular for government or civil employees. This status has begun to change since the late 1990s as the government has imposed housing taxes as part of a greater economic reform package sponsored in part by the International Monetary Fund. In 2000, nearly 100% of the total population had access to improved water sources; about 99% of urban and 50% of rural dwellers had improved sanitation systems.

#### 43 EDUCATION

Education is compulsory for six years at the primary level followed by seven years of secondary education. Primary school enrollment in 2001 was estimated at about 32% of age-eligible students; 36% for boys and 28% for girls. The same year, secondary school enrollment was about 16% of age-eligible students; 20% for boys and 13% for girls. It is estimated that about 35% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2003; the ratio for secondary school was about 28:1. In 2003, private schools ac-

counted for about 15.5% of primary school enrollment and 21% of secondary enrollment.

The University of Djibouti is the primary institute of higher education. In 2003, only about 1% of the tertiary age population were enrolled in some type of higher education program. In 2003, the adult literacy rate was estimated at 67.9%; 78% for men and 58.4% for women.

As of 2003, public expenditure on education was estimated at 3.5% of GDP.

#### 44 LIBRARIES AND MUSEUMS

No information is currently available.

#### 45 MEDIA

From the city of Djibouti, telephone connections are available by satellite to Europe and the West and by land line to the main cities and towns of the interior; there were 9,500 mainline telephones and 23,000 cellular phones in use throughout the country in 2003.

All media are government controlled. In 1983, Djibouti inaugurated a powerful state-owned AM radio transmitting station, built with French and FRG funds. A television service was first introduced in 1967. Both are state run and broadcast in French, Afar, Somali, and Arabic. As of 2001, there were 1 AM and 2 FM radio stations and 1 television station. In 1997, there were 77 radios and 37 television sets per 1,000 population. Internet access was available to about 6,500 subscribers in 2003.

Djibouti has one primary weekly newspaper, the government-owned *La Nation de Djibouti*, which had a circulation of 4,300 in 2000. Each political party is allowed to publish a public journal. There are several opposition-run weeklies and monthlies that operate freely. The constitution provides for freedom of speech and the press, and the government is said to generally uphold these rights.

#### 46 ORGANIZATIONS

A chamber of commerce and industry, founded in 1912, has its headquarters in the capital. Youth organizations include the Association of Youth Homes in Djibouti, Djibouti Scout Association, and Red Crescent Youth of Djibouti (JCRD). There are some sports organizations in the country as well. The Eglise Protestante (Protestant Church) offers educational and social welfare programs as well as religious evangelism. Volunteer service organizations, such as the Lions Clubs International, are also present. There are national chapters of the Red Crescent Society, Caritas, and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

In addition to several seldom-visited sandy beaches along the Gulf of Tadjoura, tourist attractions include swimming and snorkeling off the islands in the Gulf of Tadjoura and the Bab al-Mandab. At Goubbet al-Kharab, at the western end of the Gulf of Tadjoura, there are steep cliffs and a bay turned dark green by black lava.

Inland from this point is Lake Assal with a number of active volcanoes nearby. The Forest of the Day is a national park for rare trees on Mt. Goda. In the south, the alkaline Lake Abbé is visited by flocks of flamingos, ibis, and pelicans. Near Ali Sabih are the famous red mountains and a national park full of various gazelles. Passports and visas are required; visas must be secured in advance. Antimalarial precautions are advisable and yellow fever vaccinations are required if traveling from an infected area.

In 2005, the US Department of State estimated the cost of staying in Djibouti at \$278 per day, depending upon the choice of hotel.

#### **48 FAMOUS DJIBOUTIANS**

Hassan Gouled Aptidon (b.1916) was president from independence in 1977 until 1999, when he decided to step down; his nephew and handpicked successor, Ismael Omar Guelleh (b.1947) was elected to the office in April 1999.

#### **49 DEPENDENCIES**

Djibouti has no territories or colonies.

# EGYPT

Arab Republic of Egypt  
*Jumhuriat Misr al-'Arabiyah*

**CAPITAL:** Cairo (Al-Qahira)

**FLAG:** The flag is a tricolor of three horizontal stripes—red, white, and black—with the national emblem in the center white stripe.

**ANTHEM:** *The Arab Republic of Egypt Hymn.*

**MONETARY UNIT:** The Egyptian pound (££) is a paper currency of 100 piasters or 1,000 milliemes. There are coins of 1, 5, 10, and 20 piasters and notes of 25 and 50 piasters and 1, 5, 10, 20, 50, and 1000 pounds. ££1 = US\$0.17301 (or US\$1 = ££5.78) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the official standard, but various local units also are used: 1 feddan, consisting of 333.3 kassabah, equals 0.42 hectare (1.038 acres).

**HOLIDAYS:** New Year's Day, 1 January; Evacuation Day, 18 June; Revolution Day, 23 July; Armed Forces Day, 6 October; Popular Resistance Day, 24 October; Victory Day, 23 December. Movable holidays include Sham an-Nassim (Breath of Spring), of ancient origin, as well as such Muslim religious holidays as 'Id al-Fitr, 'Id al-'Adha, and the 1st of Muharram (Muslim New Year).

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated at the northeastern corner of Africa, the Arab Republic of Egypt has an area of 1,001,450 sq km (386,662 sq mi), extending 1,572 km (997 mi) SE–NW and 1,196 km (743 mi) NE–SW. However, the cultivated and settled area (Nile Valley, Delta, and oases) constitutes only about 3.5% of Egypt's land area; the Libyan and Western deserts occupy about 75% of the total. Comparatively, the area occupied by Egypt is slightly more than three times the size of the state of New Mexico. Beyond the Suez Canal in the east, the Sinai Peninsula overlaps into Asia; the Sinai was occupied by Israeli forces from 1967 to 1982.

Egypt is bounded on the N by the Mediterranean Sea, on the E by Israel and the Red Sea, on the S by Sudan, and on the W by Libya. The total land boundary length is 2,665 km (1,656 mi) and its total coastline is 2,450 km (1,522 mi). Egypt's capital city, Cairo, is located in the northeastern part of the country.

## <sup>2</sup> TOPOGRAPHY

The altitude of Egypt ranges from 133 m (436 ft) below sea level in the Libyan Desert to 2,629 m (8,625 ft) above in the Sinai Peninsula. The Nile Delta is a broad, alluvial land, sloping to the sea for some 160 km (100 mi), with a 250-km (155-mi) maritime front between Alexandria (Al-Iskandariyah) and Port Said. South of Cairo, most of the country (known as Upper Egypt) is a tableland rising to some 460 m (1,500 ft). The narrow valley of the Nile is enclosed by cliffs as high as 550 m (1,800 ft) as the river flows about 900 km (560 mi) from Aswan to Cairo. A series of cascades and rapids at Aswan, known as the First Cataract (the other cataracts are in the Sudan), forms a barrier to movement upstream.

The bulk of the country is covered by the Sahara, which north of Aswan is usually called the Libyan Desert. East of the Nile, the Arabian Desert extends to the Red Sea. The Western Desert con-

sists of low-lying sand dunes and many depressions. Kharijah, Siwah, Farafirah, Bahariyah, and other large oases dot the landscape; another lowland, the Qattara Depression, is an inhospitable region of highly saline lakes and soils covering about 23,000 sq km (8,900 sq mi). The outstanding topographic feature is the Nile River, on which human existence depends, for its annual floods provide the water necessary for agriculture. Before the completion of the Aswan High Dam in 1970, the floods, lasting generally from August to December, caused the river level to rise about 5 m (16 ft). Now, however, floodwaters can be stored, making it possible to provide year-round irrigation and to reclaim about 1 million feddans (about 1.04 million acres) of land. Damming the Nile resulted in the creation of Lake Nasser, a reservoir 292 km (181 mi) long and 9–18 km (6–11 mi) wide.

## <sup>3</sup> CLIMATE

Most of Egypt is a dry subtropical area, but the southern part of Upper Egypt is tropical. Northern winds temper the climate along the Mediterranean, but the interior areas are very hot. The temperature sinks quickly after sunset because of the high radiation rate under cloudless skies. Annual rainfall averages 2.5 cm (1 in) south of Cairo and 20 cm (8 in) on the Mediterranean coast, but sudden storms sometimes cause devastating flash floods. Hot, dry sandstorms, known as khamsins, come off the Western Desert in the spring. In Cairo, average temperatures range from 14°C (57°F) in January to 28°C (82°F) in July. Relative humidity varies from 68% in February to over 70% in August and 77% in December.

## <sup>4</sup> FLORA AND FAUNA

Plants are those common in dry subtropical and tropical lands, such as papyrus. Egypt has no forests but does have date palm and citrus groves; eucalyptus and cypress have been introduced.

Sheep, goats, and donkeys are found throughout the country, and camels are found in all the deserts. Egypt has some 300 types of birds, with about half of them being breeding species within the country. Wild animals are few, except for the hyena, jackal, lynx, mongoose, and wild boar, the last-named inhabiting the Nile Delta. The ibex may be found in the Sinai, and gazelles in the deserts. The Nile is adequately stocked with fish, but crocodiles have been reduced to a few along the shores of Lake Nasser. Reptiles include the horned viper and the hooded snake. In 2002, there were about 98 species of mammals, 123 species of birds, and over 2,000 species of higher plants.

## 5 ENVIRONMENT

Egypt's environmental problems stem from its aridity, extremely uneven population distribution, shortage of arable land, and pollution. Soil fertility has declined because of overcultivation and agricultural land has been lost to urbanization and desert winds. In addition, the nation's beaches, coral reefs, and wildlife habitats are threatened by oil pollution. Heavy use of pesticides, inadequate sewage disposal, and uncontrolled industrial effluents have created major water pollution problems. The expanded irrigation of desert areas after completion of the Aswan High Dam in 1970 has increased soil salinity and aided the spread of waterborne diseases.

With recent improvements, about 97% of the rural population and 100% of the urban population have access to improved water sources. The National Committee for Environment, within the office of the prime minister, is the principal agency with environmental responsibilities.

Centuries of human habitation in the Nile Valley have decimated Egypt's wildlife in that region. The hunting of any bird has been prohibited by law. As of 2003, about 9.7% of the total land area was protected. The Wadi Al-Hitan (White Valley) became a natural UNESCO World Heritage Site in 2005. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 6 types of mammals, 17 species of birds, 6 types of reptiles, 14 species of fish, and 2 species of plants. Endangered species include the Sinai leopard, northern bald ibis, and green sea turtle. The Sahara oryx has been listed as extinct.

## 6 POPULATION

The population of Egypt in 2005 was estimated by the United Nations (UN) at 74,033,000, which placed it at number 16 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 36% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.0%, a rate the government viewed as too high. The projected population for the year 2025 was 101,092,000. The population density was 74 per sq km (191 per sq mi). However, populated areas constitute only 6% of Egypt's total area and density varies from 84,150 per sq km (32,500 per sq mi) in Cairo to 60 per sq km (23 per sq mi) in the Suez governate. Some 99% of all Egyptians live in the Nile Valley.

The UN estimated that 43% of the population lived in urban areas in 2005, and that urban areas were growing at an annual

rate of 2.39%. The capital city, Cairo (Al-Qahira), had a population of 10,834,000 in that year. Alexandria's metropolitan population was 12,036,000. Other large cities include Giza (Al-Jizah), 2,597,000; Shubra El-Khemia, 1,556,000; Port Said, 548,900; and Suez, 497,000.

## 7 MIGRATION

In the early 1960s, most of the Greek population emigrated as the result of the government's nationalization measures; nearly all Jews, who formed less than 0.3% of the population in 1966, left the country after the 1967 war with Israel. With the completion of the Aswan High Dam in 1970, up to 100,000 Nubian tribesmen were moved from flooded parts of the upper Nile and resettled in the plain downstream. During the 1970s there was significant internal migration from rural to urban areas. During the 1970s and first half of the 1980s, more than three million workers took jobs in other countries. In 1992 some 2,850,000 Egyptians were living abroad, including about one million in Libya and 850,000 in Saudi Arabia. In 2003 worker remittances to Egypt were \$2.9 billion.

The Egyptian government estimates that there are 3–5 million Sudanese refugees, some of whom have lived in Egypt for over 30 years. In 2000 there were 169,000 migrants living in Egypt. In 2005, the net migration rate was estimated as -0.22 migrants per 1,000 population. The government views the immigration level as satisfactory, but the emigration level as too low.

## 8 ETHNIC GROUPS

Ethnic groups of Eastern Hamitic stock make up about 99% of the population of Egypt; these include Egyptians, Bedouins, and Berbers. They are a product of the intermixture of ancient Egyptians with the invaders of many millennia from various parts of Asia and Africa. The remaining 1% of the population is made up of minorities, including mainly Nubians, Armenians, Greeks, and other Europeans, primarily Italian and French.

## 9 LANGUAGES

The language of most of the population is Arabic, a Semitic tongue; the 1971 constitution declares Arabic to be Egypt's official language. Dialects vary from region to region and even from town to town. English and French are spoken by most educated Egyptians and by shopkeepers and others. The ancient language of Pharaonic Egypt, a Hamitic tongue, survives vestigially in the liturgy of the Copts, a sizable Christian sect dating back to the 5th century AD. The Nubians of Upper Egypt speak at least seven dialects of their own unwritten language. There are a small number of Berber-speaking villagers in the western oases.

## 10 RELIGIONS

The majority religion is Islam, of which the Sunnis are the largest sect. According to official estimates, 90% of the population are Muslim and 8–10% are Christian, with the Coptic Orthodox Church being the largest Christian denomination. Other denominations represented include Armenian Apostolic, Greek and Syrian Orthodox, Catholics (including Armenian, Chaldean, Greek, Melkite, Roman, and Syrian), and a variety of evangelical Protes-

LOCATION: 21°35' to 31°35' N; 25° to 36° E. BOUNDARY LENGTHS: Total coastline, 2,450 kilometers (1,520 miles); Israel, 255 kilometers (160 miles); Gaza strip 11 kilometers (7 miles); Sudan, 1,273 kilometers (790 miles); Libya, 1,150 kilometers (716 miles). TERRITORIAL SEA LIMIT: 12 miles.

tant denominations. The Baha'i faith is also represented. The Jewish community is extremely small.

The 1971 constitution declares Islam to be the state religion. Though the constitution provides for religious freedom, the government has a long history of infringements upon this right. Any religious practices that can be considered in conflict to Shariah (Islamic law) are prohibited and Article 98(F) of the Penal Code allows for prosecution for unorthodox practices and beliefs that are considered to be "insulting heavenly religions." Government discrimination extends to both Muslim fundamentalists and

Christians. In 2001, two men were convicted and sentenced to five and three years imprisonment under Article 98(F) for allegedly advocating a tolerance of homosexuality in the Islamic faith. In 2002, eight individuals were convicted under the same article for holding unorthodox Islamic beliefs and practices. Sentences ranged from three years imprisonment for two of the offenders to a one year suspended sentence for those who were not accused of promoting their beliefs to others. Proselytizing is generally considered a violation of Article 98(F).

## 1<sup>1</sup> TRANSPORTATION

Egypt's transportation system is well developed, with 64,000 km (39,770 mi) of roads in 2002, of which about 50,000 km (31,070 mi) were paved. In 2003, there were 2,282,760 passenger cars and 688,300 commercial vehicles registered. In 1982, in an attempt to alleviate Cairo's notorious traffic congestion, work began on a city subway system. The first phase, 5 km (3 mi) long, was completed in 1987 at a cost of some \$370 million. Cairo Metro, modeled after the Paris Metro, is the first subway to be built in Africa. Alexandria and Cairo are connected by both the Western Desert Highway, a high-speed toll road and the busier Delta Road. Railroads are managed by the state-owned Egyptian Railways, founded in 1852. As of 2004, there was some 5,063 km (3,149 mi) of standard gauge railway that linked all parts of the country. Alexandria and Port Said are the principal ports. Egypt's oceangoing merchant fleet of 77 ships totaled 1,194,696 GRT in 2005.

As of 2004, Egypt had some 3,500 km (2,175 mi) of inland waterways that include the Nile River, the Alexandria-Cairo Waterway, Lake Nasser, the 193.5 km (120 mi) Suez Canal and many other smaller canals in the Nile River delta. However, the Nile River and the Suez Canal are the country's main inland waterways. Steamer service on the Nile is an important means of domestic transport. The modern Suez Canal was constructed between 1859 and 1869 under the supervision of the French engineer Ferdinand de Lesseps. In 1875 Great Britain became the canal's leading shareholder, and the guarantor of its neutrality in 1888 under the Constantinople Convention. Management of the canal was entrusted to the privately owned Suez Canal Co. British rights over the canal were reaffirmed in the Anglo-Egyptian Treaty of 1936, then repudiated by Egypt in 1951. In 1956, Egypt nationalized the canal and placed it under the management of the Suez Canal Authority, which had paid former stockholders \$64 million by 1963. The canal was closed during the 1967 war with Israel and remained closed until 5 June 1975, when it resumed operations after having been cleared of mines and debris by teams of US, UK, and Egyptian engineers. During its first six months after resuming operations, the canal provided passage for a substantial number of dry-cargo ships but was used by only a comparatively small number of oil tankers, since the newer supertankers could not navigate the canal's 38-ft depth. The first phase of a project to widen and deepen the canal was completed in 1980, permitting ships of 53-ft draft (up to 150,000 tons) to pass through. The second phase includes increasing the navigable depth to 67 ft (up to 270,000 tons). Egypt also announced plans to build five tunnels under the canal and dig a second channel to permit the two-way passage of convoys; the first tunnel at the southern end of the canal was opened to traffic in 1980.

Cairo International Airport is used by numerous international airlines, including Egypt's own Egypt Air. In 2003, about 4.2 million passengers were carried on scheduled domestic and international flights. As of 2004, Egypt had an estimated 87 airports. In 2005 a total of 72 had paved runways, and there were 2 heliports.

## 1<sup>2</sup> HISTORY

Egypt has the oldest recorded history in Western civilization, dating back 5,000 years. In early times, the desert provided protection against marauders, while the Nile River provided bread. There-

fore, by 3400 BC the civilization of Egypt was well developed. The country was united about 3100 BC by Menes (or Narmer), king of Upper Egypt, who conquered Lower Egypt and established the first of some 30 dynasties, ruled over by a divine king, or pharaoh. Menes created a centralized state; under his dynastic successors, trade flourished, and the hieroglyphic form of writing was perfected. During the so-called Old Kingdom, the pharaohs of the fourth dynasty (c.2613–2494 BC), of whom Cheops (Khufu) was the most notable, began to build the great pyramids as royal tombs. The twelfth dynasty of the Middle Kingdom (c.1991–1786 BC) built vast irrigation schemes and developed a thriving civilization at Thebes; under their rule, a system of cursive writing was developed. After a century of domination by Semitic peoples known as the Hyksos, who introduced the horse-drawn chariot, ancient Egypt attained its apex during the eighteenth dynasty (c.1570–1320 BC) of the New Kingdom, under pharaohs Thutmose III, who extended the empire into Asia as far as the Euphrates; Amenhotep III and his son, Amenhotep IV (Akhenaten, or Ikhnaton), who, with his queen, Nefertiti, attempted forcibly to replace Egyptian polytheism with monotheistic worship of the sun god Aten, or Aton; and the boy-king Tutankhamen.

In subsequent centuries, political instability weakened the kingdom, and Egypt was invaded by Assyria (673–663 BC), annexed by Persia (525 BC), and conquered by Alexander the Great (332 BC). Alexander established the Macedonian dynasty of the Ptolemies, which ruled Egypt from 323 to 30 BC. During this period, the city of Alexandria flourished as the intellectual center of the Hellenistic world. The best-known ruler of this dynasty was Queen Cleopatra VII (sometimes designated as VI), who was defeated, together with her lover Mark Antony, at the Battle of Actium in 31 BC by Caius Octavius, later the Roman emperor Augustus. After the official division of the Roman Empire following the death of Theodosius in AD 395, Egypt became part of the Eastern Roman (Byzantine) Empire.

Egypt played an integral role in the Muslim world after the Arab conquest by 'Amr ibn-al-'As in 639–42. Egypt's conquerors brought in settlers from Arabia and established firm control under the Abbasid caliphate (established in 749) and the Fatimids (909–1171), who founded Cairo as their capital in 969. The Fatimids were overthrown by Saladin (Salah ad-Din), founder of the Ayyubid dynasty, which gave way about 1250 to a local military caste, the Mamluks. The Mamluks continued to control the provinces after the conquest of Egypt by the Ottoman Turks in 1517.

Egypt remained a Turkish satrapy for four centuries. In 1805, an energetic Albanian soldier, Muhammad 'Ali, was appointed ruler (wali) of Egypt. He succeeded in establishing his own dynasty, which ruled the country, first under nominal Ottoman control and later as a British protectorate. Muhammad 'Ali destroyed Mamluk feudalism (already weakened by Napoleon's Egyptian campaign in 1798), stabilized the country, encouraged the planting of cotton, and opened the land to European penetration and development.

After the completion of numerous ambitious projects, including the Suez Canal (1869), Egypt became a world transportation hub and heavily burdened by debt. Ostensibly to protect its investments, England seized control of Egypt's government in 1882 and, at the time of the outbreak of World War I, made Egypt a protectorate. After the war, in 1922, the United Kingdom took account of the gathering momentum of Egyptian nationalism and

recognized Egypt as a nominally sovereign country under King Fuad, but retained control over the conduct of foreign affairs, defense, security of communications, and the Anglo-Egyptian Sudan. Militant nationalism was represented by the Wafd Party, led by Sa'ad Zaghlul Pasha and, after his death, by Nahas Pasha. The conditions of association were revised in the 1936 Anglo-Egyptian Treaty, under which Britain maintained armed forces only in specified areas and especially along the Suez Canal. In that year, Faruk ascended the throne.

Egyptian nationalism gathered further momentum in World War II, during which Egypt was used as an Allied base of operations, and in 1951 the government in Cairo abrogated the 1936 treaty. Royal extravagance, government corruption, the unsuccessful Palestine campaign against Israel in 1948, and delays in long-expected social and political reforms motivated a successful coup on 23 July 1952 by a group called the Society of the Free Officers. Faruk was dethroned and replaced by his seven-month-old son. A republic was proclaimed on 18 June 1953, with Gen. Muhammad Naguib (Najib), the nominal leader of the officers, as its first president. He, in turn, was forced out of power in 1954 by a younger man, Lt. Col. Gamal Abdel Nasser (Jamal 'Abd al-Nasir), leader of the revolution.

To increase the productive capacity of his country, Nasser entered into preliminary agreements with the United States, the United Kingdom, and the UN to finance in part a new high dam at Aswan. At the same time, he also negotiated economic aid and arms shipments from the Soviet Bloc when he was unable to obtain what Egypt needed from the West. Financial backing for the dam was subsequently withheld by the United States, whereupon, on 26 July 1956, President Nasser proclaimed the nationalization of the Suez Canal and announced that profits derived from its operations would be used for the building of the dam. (The last British occupation troops had been evacuated from their Suez Canal bases a month earlier.) The dam was completed with aid and technical assistance from the USSR.

Simultaneously, a crisis erupted between Egypt and Israel. Incidents involving Egyptian and Palestinian guerrillas (*fedayin*) and Israeli border patrols multiplied. On 29 October 1956, as part of a three-nation plot to bring down Nasser and reassert control over the Canal, Israeli armed forces swept into Egypt's Sinai Peninsula. The United Kingdom and France then issued an ultimatum to the belligerents to cease-fire. When Egypt rejected the ultimatum, Britain and France took military action in the Port Said area, at the northern end of the canal, landing troops and bombing Egyptian cities from the air. However, the intervention of the United States and the USSR, acting through the UN, led to the withdrawal of the British, French, and Israeli forces by March 1957.

On 1 February 1958, Egypt and Syria proclaimed their union in the United Arab Republic (UAR), under one head of state, one flag, a common legislature, and a unified army. The proclamation was approved by a plebiscite vote of 99.9% in Egypt and 99.98% in Syria. Nasser became president of the UAR, and a new cabinet was formed in March 1958, consisting of 2 Egyptian and 2 Syrian vice presidents, as well as 22 Egyptian and 12 Syrian ministers. Differing economic and political conditions prevented a complete fusion of the two regions, however. Nasser's economic measures were generally accepted, but his program of socialism and nationalization of banks and other commercial establishments were re-

sented and opposed by Syrian businessmen. Syrian opposition to the union was crystallized when Nasser eliminated the separate regional cabinets and set up a unified cabinet in August 1961. On 28 September, the Syrian army revolted, and two days later it proclaimed Syrian independence. Even after the failure of the merger with Syria, Egypt, consistent with its Arab unity ideology, persisted in its attempts to form a union with other Arab states. Cooperation agreements were signed with Iraq, Yemen, Syria again, and Libya during the 1960s and early 1970s. None of these agreements produced a lasting, meaningful political union.

One reason for these political maneuverings was the continuing tension with Israel, which again erupted into open warfare on 5 June 1967, after the UN Emergency Force had on 19 May been withdrawn from the Egyptian-Israeli border at Egypt's demand; on 23 May, Egypt closed the Gulf of Aqaba to Israeli shipping. Israel quickly crippled the Egyptian air force and occupied the Gaza Strip and the Sinai to the Suez Canal, which was blocked and remained so until June 1975. A cease-fire was established on 8 June 1967. On 22 November 1967, the UN Security Council passed a resolution calling on Israel to withdraw from occupied Arab territories and for the recognition by the Arab states of Israel's right to independent existence within peaceful and secured frontiers. But neither side would agree to peace terms, and Israel continued to occupy the Gaza Strip and the Sinai. During the years after 1967, a "War of Attrition" was fought along the Canal with each side shelling the other and Israeli planes bombing Egyptian cities.

When Nasser died on 28 September 1970, his vice president, Anwar al-Sadat, became president. After a political crisis that resulted in the dismissal from office in May 1971 of 'Ali Sabri and other left-wing leaders who had been close to Nasser (they were subsequently convicted of treason), President Sadat firmly established his hold on the government and began to implement pragmatic economic and social policies. Beginning in July 1971 with the announcement of a 10-year development program, he quickly followed with the introduction in September of a permanent constitution and a series of financial measures designed to give more freedom to the banking system and to encourage investment of foreign and domestic capital. In a surprise move on 18 July 1972, Sadat ordered the expulsion of the 15,000 Soviet military advisers and 25,000 dependents who had come to Egypt after the 1967 war. After the ouster of the Russians, Egypt was able to improve relations with the United States, Europe, and the more conservative Arab states, which provided substantial financial assistance under the Khartoum Agreement to replace Suez Canal revenues (which had ceased when the Canal was closed by the 1967 war with Israel).

Frustrated in his ambition to recover the Sinai, President Sadat broke the 1967 cease-fire agreement on 6 October 1973 by attacking Israeli forces in the Sinai Peninsula; this assault was coordinated with a Syrian attack on Israeli forces occupying the Syrian Golan Heights. After initial successes, the Egyptian strike forces were defeated by the rapidly mobilized Israeli troops, who then crossed the Canal south of Isma'iliyah, destroyed Egypt's surface-to-air missile sites, and cut off the Egyptian 3d Army. A cease-fire that came into effect on 24 October left Egyptian troops in the Sinai and Israeli troops on the west bank of the Canal. A series of disengagement agreements negotiated by US Secretary of State Henry Kissinger left Egypt in full control of the Canal and established a

UN-supervised buffer zone in the Sinai between the Egyptian and Israeli forces. In November 1975, the Sinai oil fields at Abu Rudeis and Ra's Sudr were returned to Egypt.

President Sadat took a bold step toward establishing peace with Israel by going to Jerusalem in November 1977 and by receiving Israeli Prime Minister Menachem Begin at Isma'iliyah the following month. In September 1978, he entered into negotiations with Begin, mediated by US President Jimmy Carter, at Camp David, Md., where the two Middle East leaders agreed to a framework for a comprehensive settlement of the conflict. Following further negotiations, Sadat signed the Egyptian-Israeli Peace Treaty in Washington, DC, on 26 March 1979. The treaty provided for the staged withdrawal of Israeli forces from the Sinai, which was completed on schedule by 25 April 1982; set limits on forces and armaments for both sides; established a UN force to supervise the terms of the treaty; and called for full normalization of relations. However, the two nations were unable to agree on the question of autonomy for the Palestinians of the West Bank of the Jordan and in Gaza, as provided for in the Camp David framework. For their roles as peacemakers, Sadat and Begin were jointly awarded the 1978 Nobel Peace Prize. But other Arab leaders denounced the accords and sought to isolate Egypt within the Arab world.

Domestically, Sadat encouraged a shift from Nasser's socialism to greater free-market conditions and some political liberalization, one result of which was an upsurge of activity by religious extremists. In early September 1981, Sadat ordered the arrest of 1,536 Muslims, Christian Copts, leftists, and other persons accused of fomenting violent acts. One month later, on 6 October, Sadat was assassinated in Cairo by four Muslim fundamentalists. The vice president, Muhammad Hosni (Husni) Mubarak, who had been Sadat's closest adviser, succeeded him as president, instituted a state of emergency, and immediately pledged to continue Sadat's policies, particularly the terms of the peace treaty with Israel. Relations with Israel cooled during 1982, however, especially after Israeli troops moved into Lebanon. In 1986, renewed efforts at normalization of diplomatic relations with Israel led to the resolution in Egypt's favor of a dispute over Taba, a tiny sliver of land, which had not been returned with the rest of the Sinai.

As a result of Arab fears of an Iranian victory over Iraq in their eight-year war (1980–88), Egypt, which has the largest army in the Arab world as well as an important arms industry, was welcomed back into the Arab fold following the 'Ammān Arab summit conference in November 1987. Egypt quickly renewed diplomatic relations with a number of Arab states and in May 1989 ended its isolation by rejoining the Arab League, the headquarters of which returned to Cairo. Mubarak continued Sadat's policies of moderation and peacemaking abroad and gradual political liberalization and movement towards free market reforms at home. In July 1989, he became chairman of the Organization of African Unity for one year. In 1990, Egypt played a key role in the coalition to expel Iraq from Kuwait and in 1993 and 1994 was active in promoting the Israeli-Palestinian peace accord.

Mubarak was reelected president in 1987 and 1993. Parliamentary elections in 1987 were termed the fairest since 1952; 100 members of the opposition were elected to the 458-seat chamber. Opposition political forces, however, had become increasingly disenfranchised over the years and after Mubarak's third election, he conceded to their concerns and announced the government

would hold a National Dialogue to hear the grievances of any legal political party. Representatives of the Muslim Brotherhood, an illegal but tolerated political grouping with massive appeal, were not invited. Just before the meeting, the Nasserists and the New World Party announced they would not participate, essentially nullifying the work of the congress.

In 1995, legislative elections were again held, but, unlike the 1990 polling, the opposition parties announced they would not boycott these elections. The elections were held on 29 November and 6 December and the ruling National Democratic Party (NDP) won 316 seats, losing several but retaining a vast majority. Although independents won more than 100 seats, nearly all of them were in reality firmly allied with the NDP. In January 1996, Mubarak replaced the sitting prime minister, Dr. Alif Sidqi, with Kamal Ahmed al-Ganzouri.

The most serious opposition to the Mubarak government comes from outside the political system. Religious parties are banned and, as a consequence, Islamic militants have resorted to violence against the regime, singling out Christian Copts and posing a threat to tourism, a major source of foreign exchange earnings. Starting in the mid-1990s, security forces cracked down hard on the militants, resorting to authoritarian measures, including arbitrary arrest, imprisonment, and torture to subdue the movement. However, it continued to gather strength, fueled by discontent with poor economic conditions, political autocracy, corruption, secularism, and Egypt's ties with the United States and Israel. In November 1997, militants murdered over 70 persons at a popular tourist site in Luxor. It was alleged that Gamma Islamiyya, one of Egypt's Islamic groups, was responsible for the attacks. However, in 1998 and 1999 the number of violent incidents decreased, and the government began releasing some of the jailed members of Islamist groups, said to number 20,000 by that time.

In September 1999, weeks after surviving an assassination attempt, Mubarak was elected to a fourth six-year term as president, running unopposed. Political opponents and Western observers criticized the ruling NDP's refusal to open up the political system, one result of which, they said, would be to channel some of the political passion now given to outlawed Islamists into legal political parties, who could then use it to create a more open society—thus further marginalizing the extremists. However, the government refused to implement electoral reforms. In February 2003, the state of emergency first declared in 1981 was renewed for another three years by President Mubarak.

Following the 11 September 2001 terrorist attacks on the United States, the United States called upon all states to adopt counter-terrorism measures. The attacks on the United States gave Egypt a reason for increasing its restrictions on the Islamic opposition, including members of the Muslim Brotherhood and Gamaa Islamiyya. After 11 September, Egyptian authorities referred increasing numbers of cases of Islamic militants to military courts. One of the leaders of the attacks on the World Trade Center and the Pentagon, Muhammad Atta, was Egyptian, as is Ayman al-Zawahiri, the leader of Egyptian Islamic Jihad who is considered to be Osama bin Laden's second in command. The high-profile positions of these Egyptians in the al-Qaeda organization caused some to place increased scrutiny on Egypt's ability to control Islamic extremism.

Terrorist attacks on tourists and others continued into 2004 and

2005. In October 2004, bomb attacks targeted Israeli tourists on the Sinai peninsula; 34 people were killed. In April 2005, a suicide bomber killed three tourists in Cairo; later that month, another bomb attack in Cairo killed an Egyptian man. On 23 July 2005, nearly 90 people were killed in bomb attacks in the Red Sea resort of Sharm el-Sheikh.

In 2005 Egypt changed its constitution to allow the opposition to contest presidential elections. Potential candidates must meet strict criteria for participation, however, and religious parties remain banned. The Muslim Brotherhood—the only opposition organization with broad popular support—remains outlawed. In the presidential election held on 7 September 2005, Mubarak gained a fifth consecutive term as president. The election was the first under the new system whereby multiple candidates may stand. In previous elections, Egyptians voted yes or no for a single candidate chosen by parliament. In this election, all candidates were permitted to campaign freely and were given equal time on television. Mubarak faced nine opponents in the September election, although only two—Ayman Nour of the Tomorrow party, and Noaman Gomaa of the Wafd party—had any real following. Without monitors in place in most of the nearly 10,000 polling stations, Mubarak supporters engaged in various acts of voter intimidation. Other voting irregularities existed as well. The opposition to Mubarak came largely from a movement called "Kifaya" or "Enough." Kifaya supporters were permitted to protest without police intervention on the day of the election. Different groups affiliated with the Kifaya movement staged demonstrations for several months prior to the election.

In parliamentary elections held in November and December 2005, the Muslim Brotherhood won 34 seats, doubling the number of seats its members held in all of the last parliament, elected in 2000. Nevertheless, the Muslim Brotherhood's candidates run as independents, due to the outlaw status of the group. The Muslim Brotherhood solidified its position as the strongest opposition group in Egypt by winning an additional 42 seats in the second round of voting, and 12 in the third, to make a total of 88 seats in the new parliament. In total, the ruling NDP won 315 seats, noticeably fewer than the 388 it held in the outgoing parliament, but nonetheless still above the two-thirds majority necessary to control legislation. The elections were marred by clashes between voters and security forces, leaving 12 dead.

In April 2006 the parliament voted to extend the state of emergency, in place since 1981, until 2008.

### 13 GOVERNMENT

On 25 March 1964, President Nasser proclaimed an interim constitution; it remained in effect until a permanent constitution, drafted by the National Assembly, was approved by the electorate in a plebiscite on 11 September 1971. The 1971 constitution declares Egypt to be a democratic socialist state and an integral part of the Arab nation. The state of emergency, in effect since the Sadat assassination in 1981, and tough new antiterrorism laws against Islamists have given the government sweeping powers of repression, reminiscent of the Nasser era.

The president of the republic is the head of state and supreme commander of the armed forces. He appoints and retires as many vice presidents and cabinet members as he wishes; he also appoints the prime minister. In addition, he appoints and retires

civil, military, and diplomatic personnel in accordance with the law. The president's power to declare war and conclude treaties with foreign countries is subject to the approval of the People's Assembly, a unicameral legislative body consists of 444 elected and 10 appointed members serving five-year terms. A 264-member advisory body, the Shura Council, was formed in 1980. Until 2005, the People's Assembly nominated the president, who had to be confirmed by plebiscite for a six-year term. The constitution was amended by popular referendum in 1980 to permit Sadat to serve more than two terms. Vice President Mubarak, who became president upon Sadat's assassination, was confirmed in that office in national referendums in October 1981, 1987, 1993, and 1999.

An amendment passed by parliament in May 2005 and approved in a public referendum provides that the president is to be elected in direct public elections to be contested by more than one candidate. In the presidential election held in September 2005, Mubarak was opposed by nine candidates. Official results had Mubarak winning 88.5% of the vote, with voter turnout at 23%. Ayman Nour of the Tomorrow party, who came in second place, took 7.3% of the vote, and Noaman Gomaa of the Wafd party came in third with 2.8%.

Suffrage is universal at age 18.

### 14 POLITICAL PARTIES

Since the founding of the republic in 1953, the president and his army colleagues have dominated Egyptian politics. The Arab Socialist Union (ASU; founded by President Nasser as the Egyptian National Union in 1957) was the sole legal political party until 1976, when President Sadat allowed three minor parties to participate in parliamentary elections. In 1978, Sadat replaced the ASU with his own organization, the National Democratic Party (NDP), of which he became chairman. In elections held in June 1979, the NDP won 342 seats in the People's Assembly; the Socialist Labor Party (SLP), 29 seats; the Liberal Socialist Party, 3; and independents, 8. In 1980, however, Sadat denounced the SLP as the "agent of a foreign power," and 13 of the party's deputies defected either to join the NDP or to become independent members of the legislature, thus reducing the number of SLP seats to 16.

In January 1982, President Mubarak was elected without opposition as chairman of the NDP. In elections held in May 1984, the NDP won 390 seats in the National Assembly. The New Wafd (Delegation) Party, the middle class successor of the dominant party of the pre-Nasser period allied with the Muslim Brotherhood, won 58. In the 1987 Assembly elections, the ruling NDP again won about 70% of the vote. Seventeen percent voted for an alliance of Socialist Labor, Liberal Socialist and, under their banner (religious parties are banned), the Muslim Brotherhood; 11% voted for the New Wafd. Elections in 1990 drew only some 25% of eligible voters when the opposition boycotted the poll, charging unfair and undemocratic procedures.

In 1995, the opposition contested the elections, but to little effect. Balloting was held on 29 November and the NDP won a huge majority (317) of the body's 444 seats. Although independents won more than 100 seats, they are so closely allied with the NDP that nearly all of them joined the party after the elections. The New Wafd Party won 6 seats; the National Progressive Unionist Party won 5; the Socialists won 1; and the Nasserists won 1.

In elections for the National Assembly held in October and No-

vember 2000, the NDP took 353 of 444 elected seats. The New Wafd Party won 35; the New Delegation Party won 7; the National Progressive Unionist Party took 6; the Nasserists won 3; the Liberal Party took 1 seat; independents won 37 seats and 2 seats remained vacant.

Since the beginning of a campaign of terror against tourists and Egypt's Coptic minority, the government has clamped down on Islamist parties, notably the Muslim Brotherhood, which had always been technically illegal. The Mubarak regime has resorted to strict authoritarian measures and holds thousands of suspected Islamic militants in prison. In November and December 2005, the Muslim Brotherhood won a total of 88 seats in the parliamentary elections; the NDP took 315 seats. Non-Muslim Brotherhood-affiliated parties took 14 seats, including the neo-liberal Wafd Party, traditionally recognized as Egypt's largest opposition party. The rest of the seats were won by independents.

## 15 LOCAL GOVERNMENT

Egypt traditionally has been divided into two regions: Lower Egypt (Wagh al-Bahari), north of Cairo, and Upper Egypt (As-Sa'id), south of the capital. Under the local government system established in 1960, Egypt is organized into 26 governorates, each headed by an appointed governor. The governorates are responsible for social, health, welfare, and educational services and for the social and economic development of their region. They are also required to supervise the city and village councils, which are constituted in a similar manner. Real authority resides in Cairo in a highly centralized regime, heavily burdened by bureaucracy. Since 1994, village mayors, who were previously elected, have been appointed by the Ministry of the Interior.

## 16 JUDICIAL SYSTEM

The judicial system is based on English common law, Islamic law, and Napoleonic codes subject to judicial review by the Supreme Court and the Council of State, which oversees the validity of administrative decisions. A tension exists between civil law derived from France and competition from promoters of Islamic law. Islamic activists succeeded in amending the constitution to state that Shariah (Islamic) law is in principle the sole source of legislation. However, Shariah applies primarily to Muslims with regard to family, personal status, and inheritance matters, and non-Muslims have been allowed to maintain separate legislation in all matters except inheritance. Egypt accepts compulsory International Court of Justice (ICJ) jurisdiction, with reservations.

Simple police offenses, misdemeanors, and civil cases involving small amounts are subject to the jurisdiction of single-judge summary tribunals. The trial courts of the central tribunals, consisting of three justices each, sit in cases exceeding the jurisdiction of summary courts and also consider appeals. Traffic in narcotics and press offenses, considered serious crimes, are tried by the courts of appeals of the central tribunals in the first instance, sitting as assize courts. There are seven courts of appeals—at Cairo, Alexandria, Tantā, Al-Manṣurah, Asyut, Bani-Souef, and Ismailia—which sit in chambers of three judges. The highest tribunal is the Court of Cassation, composed of 30 justices, which sits in panels of at least 5 justices.

The 1971 constitution declares that the judiciary is independent of other state powers and that judges are independent and

not subject to enforced retirement. The Supreme Constitutional Court is responsible for enforcing adherence to laws and regulations and for interpreting legislation and the constitution. The Office of the Socialist Public Prosecutor is responsible to the People's Assembly for the security of the people's rights, the integrity of the political system, and other matters.

The president appoints all civilian judges, from nominations by the Supreme Judicial Council, a body designed to assure the independence of the judiciary and composed of senior judges, lawyers, law professors, and the president of the Court of Cassation. Judges are appointed for life, with mandatory retirement at age 64. The judiciary has demonstrated a good degree of independence from the executive branch.

The state of emergency in place since 1981 after the assassination of President Anwar Sadat led to detention without due process for many persons. Emergency security courts try suspected terrorists whose only recourse upon conviction is an appeal for clemency to the president or prime minister.

## 17 ARMED FORCES

Total active armed forces in Egypt numbered 468,500 in 2005. There were also 497,000 reservists divided among all services. The Army had 340,000 active personnel, equipped with 3,855 main battle tanks, 412 reconnaissance vehicles, 520 armored infantry fighting vehicles, 4,750 armored personnel carriers and 4,348 artillery pieces. The Egyptian Air Force in 2005 had 30,000 active personnel, which were equipped with 572 combat capable aircraft, including 218 fighters, 223 fighter ground attack aircraft and 115 attack helicopters. The Air Defense Command is a separate service. As of 2005, active personnel numbered 80,000. Equipment included both missile and gun-based air defense batteries. The Egyptian Navy had an estimated 18,500 active personnel, including 2,000 coast guard personnel. Major naval units included four tactical submarines, one destroyer, 10 frigates, 48 patrol/coastal vessels and 15 mine warfare ships. Egypt's paramilitary forces were estimated at 330,000 active members, including a national guard of 60,000, a central security force of 325,000, and 12,000 border guards. Egypt's defense budget in 2005 was \$2.5 billion.

## 18 INTERNATIONAL COOPERATION

Egypt joined the United Nations as a charter member on 24 October 1945 and participates in ECA, ESCWA, and all the nonregional specialized agencies. The country is a member of the WTO. It belongs to the African Development Bank, the Arab Monetary Fund, COMESA, G-15, G-24, G-77, the Organization of the Islamic Conference (OIC), the Council of Arab Economic Unity, the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), and the African Union (AU). It is also a member in OAPEC, a permanent observer at the OAS, and a partner in the OSCE.

Between 1958 and 1973, Egypt made several attempts to establish united or federated states with its Arab neighbors. Egypt and Syria formed the United Arab Republic from February 1958 to September 1961, when Syria broke away; the United Arab States, consisting of Egypt, Syria, and Yemen, survived formally from March 1958 through December 1961, although never a political reality; and a federation between Egypt, Syria, and Iraq, officially established in April 1963, was never implemented. On 1 January

1972, Egypt, Syria, and Libya established the Federation of Arab Republics, but to little practical effect. A formal merger attempt between Egypt and Libya, nominally consummated on 1 September 1973, dissolved in practice when relations between the two countries soured. Egypt became the first Arab state to normalize relations with Israel following the conclusion of the 1979 peace treaty. As a result of this act, however, Egypt's membership in the League of Arab States was suspended; Egypt did not rejoin the League until 1989. Arab League headquarters are in Cairo. Egypt plays a key role in the peace process between Israel and the Palestinian Authority. Egypt is part of the Nonaligned Movement and a member of the Permanent Court of Arbitration.

In environmental cooperation, Egypt is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, International tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The Egyptian economy has been historically agricultural, with cotton as the mainstay. Land prices are extremely high because of the shortage of arable land, and output of food is not sufficient to meet the needs of a 1.9% population growth rate over the 2001–05 period. Although Egypt has expanded its private sector in recent years, industry remains centrally controlled and for the most part government owned; since the 1950s, the government has developed the petroleum, services, and construction sectors, largely at the expense of agriculture.

Egypt's significant economic growth rate from 1975 to 1981, made possible in large measure through foreign aid and credits, had declined to about 5% by 1986. Revenues for 1985–86 from petroleum exports, Suez Canal traffic, tourism, and remittances from Egyptians working abroad—all mainstays of the Egyptian economy—were eroded in the wake of sharp declines in international oil prices and developments in the Iran-Iraq war. The inflation rate grew from less than 5% annually in the 1960s to nearly 23% by 1986, reflecting worldwide price increases and the government's deficit spending. Egypt's economic position was strengthened when the Gulf states and the United States rewarded the Egyptians for their role in forming the Arab anti-Iraq coalition, reducing external debt to about \$40 billion in 1990.

In the early 1990s, the collapse of world oil prices and an increasingly heavy debt burden led Egypt into negotiations with the IMF for balance-of-payments support. As a condition of the support, Egypt embarked on a comprehensive economic reform and structural adjustment program, under the aegis of the IMF and the World Bank. Egypt succeeded in stabilizing the macroeconomic fundamentals necessary for sustained economic growth: the budget deficit was around 1.3% of GDP, and the inflation rate held steady at 3.8% in 1999. However, progress toward privatizing and streamlining the public sector and liberalizing trade policy was slow. Consequently, despite the improvements, the economy has not experienced the economic growth necessary to reduce unemployment (around 10.9% in 2004, but unofficial estimates are more than twice that figure) and generate the targeted 6–7% growth rates in the GDP (GDP growth averaged 3% over the 2001–05 period). The inflation rate over the 2001–05 period averaged 5.2%,

and the budget deficit had reached 6.2% of GDP in 2003.

Remittances from Egyptians working abroad have aided the Egyptian economy. Reform legislation in the areas of intellectual property rights, mortgage laws, and legislation developing banking and capital markets have made the business climate more favorable to investment. A more economically liberal cabinet was appointed in mid-2004, which announced far-reaching plans for economic reform. In September of that year, Egypt pushed through custom reforms, proposed income and corporate tax reforms, reduced energy subsidies, and privatized several enterprises. The tourism sector feared a downturn in tourist numbers when Islamic terrorists attacked resorts in the Sinai Peninsula in 2004 and 2005, but the industry performed better than expected. The development of an export market for natural gas is something for which Egypt strives, but improvement in the capital-intensive hydrocarbons sector does not ameliorate Egypt's chronic unemployment problem.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Egypt's gross domestic product (GDP) was estimated at \$337.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,400. The annual growth rate of GDP was estimated at 4.5%. The average inflation rate in 2005 was 5.4%. It was estimated that agriculture accounted for 15% of GDP, industry 36.7%, and services 48.4%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.961 billion or about \$44 per capita and accounted for approximately 3.6% of GDP. Foreign aid receipts amounted to \$894 million or about \$13 per capita and accounted for approximately 1.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Egypt totaled \$59.55 billion or about \$881 per capita based on a GDP of \$82.4 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.2%. In 2001 it was estimated that approximately 44% of household consumption was spent on food, 7% on fuel, 3% on health care, and 17% on education. It was estimated that in 2000 about 16.7% of the population had incomes below the poverty line.

## 21 LABOR

Egypt's civilian labor force increased from 14.8 million in 1990 to 16.8 million in 1994, to an estimated 21.34 million in 2005. In 2002, agriculture accounted for 27.5% of the workforce, with 51.9% in services, and 20.6% in industry. Unemployment was estimated at 10% in 2005.

Egyptian workers obtained the legal right to organize trade unions in 1942. However, private sector unions remain the exception, rather than the rule. In 2005, there were 23 trade unions, all of which were required to be members of the Egyptian Trade Union Federation (ETUF). The ETUF in 2005 had four million

members. Approximately 25% of the Egyptian workforce were union members and were employed at state-owned companies. Collective bargaining is permitted, but is handled through a labor consultative council that includes employer, worker and government representatives. Strikes are prohibited while these procedures are in effect. So-called "wildcat strikes" are prohibited. The government sets wages, benefits and job classifications for government and other public sector employees. In the private sector, employee compensation is set according to the country's laws on minimum wages.

For children in the nonagricultural sector, the law sets the minimum working age at 14 or at the age when basic schooling is completed (which is 15), whichever is higher. In addition, minors under the age of 18 are legally limited to the type of work and the conditions under which it is performed. However, child labor remains a problem. In 2005, an estimated two million children were working. The minimum wage for public-sector employees differed among sectors. The maximum number of hours that can be worked was 48 hours per week. Overtime rates of pay begin at 36 hours, with an extra differential rate for daytime and nighttime hours. Minimum rates, in conjunction with a series of bonuses and other benefits generally triples the amount, thus offering a worker and a family with a decent living standard. Enforcement of health and safety regulations is sporadic.

## 22 AGRICULTURE

During the 1970s, despite substantial investment in land reclamation, agriculture lost its position as the dominant economic sector. Agricultural exports, which accounted for 87% of all merchandise export value in 1960, fell to 35% in 1974 and to 13% by 2004. In 2003, agriculture accounted for 16% of GDP and 34% of employment.

Cotton has been the staple crop, but it is no longer important as an export. Production in 1999 was 243,000 tons. Egypt is also a substantial producer of wheat, corn, sugarcane, fruit and vegetables, fodder, and rice; substantial quantities of wheat are also imported despite increases in yield since 1970, and significant quantities of rice are exported. Citrus, dates, and grapes are the principal fruits by acreage. Agricultural output in tons in 2004 included corn, 5,800,000; wheat, 7,199,000; rice, 6,150,000; potatoes, 1,950,000; and oranges, 1,750,000. The government exercises a substantial degree of control over agriculture, not only to ensure the best use of irrigation water but also to limit the planting of cotton in favor of food grains. However, the government's ability to achieve this objective is limited by crop rotational constraints.

Egypt's arable area totals about 3.4 million hectares (8.4 million acres), about one-quarter of which is land reclaimed from the desert. However, the reclaimed lands only add 7% to the total value of agricultural production. Even though only 3% of the land is arable, it is extremely productive and can be cropped two or even three times per year. Most land is cropped at least twice a year, but agricultural productivity is limited by salinity, which afflicts an estimated 35% of cultivated land, and drainage problems.

Irrigation plays a major role in a country the very livelihood of which depends upon a single river; 99.9% of the arable land is irrigated. Most ambitious of all the irrigation projects is that of the Aswan High Dam, completed in 1971. A report published in March 1975 by the National Council for Production and Eco-

nomics indicated that the dam was successful in controlling floodwaters and ensuring continuous water supplies, but that water consumption had been excessive and would have to be controlled. Some valuable land was lost below the dam because the flow of Nile silt was stopped, and increased salinity remains a problem. Further, five years of drought in the Ethiopian highlands—the source of the Nile River's water—caused the water level of Lake Nasser, the Aswan High Dam's reservoir, to drop to the lowest level ever in 1987. In 1996, however, the level of water behind the High Dam and in Lake Nasser reached the highest level since the completion of the dam. Despite this unusual abundance of water supply, Egypt can only utilize 55.5 billion cu m (1.96 trillion cu ft) annually, according to the Nile Basin Agreement signed in 1959 between Egypt and Sudan. Another spectacular project designed to address the water scarcity problem is the New Valley (the "second Nile"), aimed at development of the large artesian water supplies underlying the oases of the Western Desert. Total investment in agriculture and land reclamation for the government's Third Plan (1993–1997) was £16,963 million.

The agrarian reform law of 1952 provided that no one might hold more than 190 feddans for farming and that each landholder must either farm the land himself or rent it under specified conditions. Up to 95 additional feddans might be held if the owner had children, and additional land had to be sold to the government. In 1961, the upper limit of landholding was reduced to 100 feddans, and no person was allowed to lease more than 50 feddans (1 feddan = 0.42 hectares). Compensation to the former owners was in bonds bearing a low rate of interest, redeemable within 40 years. A law enacted in 1969 reduced landholdings by one person to 50 feddans. By the mid-1980s, 90% of all land titles were for holdings of less than five feddans, and about 300,000 families, or 8% of the rural population, had received land under the agrarian reform program. According to a 1990 agricultural census, there were some three million small land holdings, almost 96% of which were under five feddans (2.1 hectares/5.2 acres). Since the late 1980s, many reforms attempting to deregulate agriculture by liberalizing input and output prices and by eliminating crop area controls have been initiated. As a result, the gap between world and domestic prices for Egyptian agricultural commodities has been closed.

The government plans massive irrigation and development projects to create new communities to alleviate population intensity in the valley, with the objective of increasing the percentage of populated areas from 5.3% to 25% of Egypt's total area. These projects are centralized in southern Egypt, by the Suez Canal, and Sinai. The government plans to create a new delta in the south of the Western Desert parallel to the Nile, adding 540,000 feddans (1,134,000 hectares/2,802,000 acres) to the cultivated area, to be irrigated by the Nile's water.

## 23 ANIMAL HUSBANDRY

Because of the very intensive cultivation of the soil, little land is available for animal husbandry, but efforts were made in the 1980s to increase the output of fodder per land unit and the productivity of livestock raising. In 2005, the estimated livestock population included 95,000,000 chickens, 3,960,000 goats, 5,150,000 sheep, 3,920,000 head of buffalo, 4,500,000 head of cattle, and 30,000

hogs. Livestock products in that year included 2,300,000 tons of cow milk, 1,433,000 tons of meat, and 240,000 tons of eggs.

## 24 FISHING

Fishing is concentrated in the Nile Delta and River and in the Mediterranean and Red seas. The catch of sea fish amounted to 160,319,174 tons in 2003. The inland catch was 715,074 tons. Mullet and eels are caught in the Delta and sardines in the Mediterranean. Egypt's production from aquaculture amounted to 445,181 tons. Total fish production from capture and aquaculture was 875,990 tons in 2003. There is a small-scale freezing and canning industry. Nevertheless, Egypt has been a net importer of fish. In the early 1980s, new fish-farming facilities were established at Maryut in the Delta.

## 25 FORESTRY

There are no forests in Egypt. In 2003, Egypt imported \$791.2 million in forest products. The construction and furniture-making industries rely on wood imports. Furniture production engages about 40,000 persons and is concentrated in the Damietta Governorate in the northern part of the Nile Delta. Softwood products come mostly from Russia, Sweden, and Finland; hardwood products from Romania, Croatia, and Bosnia.

## 26 MINING

In recent decades, crude oil, natural gas, and petroleum products have dominated Egypt's mineral industry. However Egypt is also a producer of ferroalloys, gold, iron ore, primary aluminum, steel, secondary copper, lead and zinc, and construction materials such as clay, gypsum, gemstones, dimension stone and raw materials to make glass. Among nonfuel minerals, phosphate rock (around the Red Sea, along the Nile, and in the Western Desert) and iron ore were the most important in terms of value and ore grade. In 2003 Egypt also produced manganese ore, titanium, ilmenite, asbestos, barite, cement, bentonite, fire clay, kaolin, crude feldspar, fluor-spar, gypsum and anhydrite, lime, nitrogen, salt, soda ash, sodium sulfate, basalt, dolomite, granite, dimension stone, gravel, limestone, marble blocks (including alabaster), glass sand, construction sand, talc, soapstone, pyrophyllite, and vermiculite, and there were occurrences of gold, ocher, sulfate of magnesia, and nitrate of soda. The government was engaged in efforts to partially privatize mining and metal assets. Although mineral resources have been exploited in Egypt since antiquity, including gemstones and zinc, some regions of the country remained geologically unexplored. Extraction of limestone, clay, and gypsum during World War II rose in response to the Allied armies' urgent demand.

In 2003, Egypt produced 1.5 million metric tons of phosphate rock, unchanged from 2002, but up from 972,000 metric tons in 2001. Output of iron ore and concentrate was 2.5 million metric tons in 2003, unchanged since 2001. Development of an iron ore mine and steel plant near Aswan ceased in 2000 when the government charged the promoters with misappropriating public funds. Higher-quality deposits were being exploited in the Western Desert. Gold and copper deposits were not of sufficient grade to justify profitable extraction.

## 27 ENERGY AND POWER

Egypt is an important non-OPEC energy producer. (OPEC is the Organization of the Petroleum Exporting Countries.) Commercial quantities of oil were first found in 1908, and more petroleum was found in the late 1930s along the Gulf of Suez. Later, large oil fields were discovered in the Sinai Peninsula, the Gulf of Suez, the Western Desert, and the Eastern Desert. The Abu Rudeis and Ra's Sudr oil fields in the Sinai, captured by Israel in 1967, were returned to Egyptian control in November 1975, and the remaining Sinai oil fields reverted to Egyptian control by the end of April 1982. Egypt's proven crude oil reserves were estimated at 3.7 billion barrels as of 1 January 2005. Oil production in 2004 was estimated at 698,000 barrels per day, (down from 922,000 barrels per day in 1996), of which crude oil accounted for 594,000 barrels per day. Approximately 50% of Egypt's oil production comes from the Gulf of Suez, with the Western Desert, Eastern Desert, and the Sinai Peninsula as country's three other primary producing areas. Domestic consumption was estimated at 564,000 barrels per day in 2004. Net oil exports in that same year were estimated at 134,000 barrels per day. The Suez Canal and the 322-km (200-mi) Sumed Pipeline from the Gulf of Suez to the Mediterranean Sea are two routes for oil from the Persian Gulf, which makes Egypt a strategic point of interest in world energy markets. Although the Suez Canal Authority (SCA) has deepened the canal so that it can accommodate the largest bulk freight carriers, the canal was scheduled to be deepened a further 20 m (66 ft) by the end of 2006 to accommodate very large crude carriers (VLCCs).

Egypt operates nine refineries that are capable of processing crude oil at an estimated rate of 726,250 barrels per day, as of 1 January 2005. The largest refinery is the El-Nasr facility located at Suez. It is able to process 146,300 barrels per day.

Major discoveries in the 1990s have given natural gas increasing importance as an energy source. According to data from Egypt's Ministry of Petroleum, the country's reserves of natural gas are estimated at 66 trillion cu ft, as of 1 January 2005, but probable reserves have been placed at or more than 120 trillion cu ft. Since the early 1990s, significant deposits of natural gas have been found in the Western Desert, in the Nile Delta and offshore from the Nile Delta. Domestic consumption of natural gas has also risen as a result of thermal power plants converting from oil to natural gas. As of 2002, Egypt's production and consumption of natural gas are each estimated at 941 billion cu ft.

The Egyptian electric power system is almost entirely integrated, with thermal stations in Cairo and Alexandria and generators at Aswan. In 2002, output was estimated at 81.3 billion kWh, of which nearly 85% was from fossil fuels and 15% was from hydropower (mostly from the Aswan High Dam). In the same year, consumption of electricity totaled 75.719 billion kWh. Total installed capacity was estimated at 17.6 million kW, as of 1 January 2002.

A \$239 million electricity network link with Jordan was completed in 1998. In late 2002 Egypt announced that it would coordinate a regional energy distribution center to coordinate energy distribution among the nations of the region, including Egypt, Jordan, Syria, Lebanon, Iraq, Libya, Tunisia, Algeria, and Morocco.

## 28 INDUSTRY

Egypt at the time of the 1952 revolution was much further advanced industrially than any other Arab country or indeed any country in Africa except South Africa. Under the socialist Nasser administration, the government coordinated industrial expansion and the establishment of an industrial base. As a result, bureaucracy and a dependence on political directives from the government became common to Egyptian industry. Since the early 1990s the government has promoted privatization as a way to eventually increase industrial output.

Industry accounted for 33% of GDP in 2004, and employed 17% of the labor force. The industrial production growth rate in 2004 was 2.5%. Major industrial products included textiles, chemicals (including fertilizers, polymers, and petrochemicals), pharmaceuticals, food processing, petroleum, construction, cement, metals, and light consumer goods. The clothing and textiles sector is the largest industrial employer.

Greater Cairo, Alexandria, and Helwan are Egypt's main industrial centers, producing iron and steel, textiles, refined petroleum products, plastics, building materials, electronics, paper, trucks and automobiles, and chemicals. The Helwan iron and steel plant, 29 km (18 mi) south of Cairo, using imported coke, processes iron ore mined near Aswan into sheets, bars, billets, plates, and blooms.

The petroleum industry accounts for approximately 40% of export earnings. Egypt is encouraging oil exploration, but natural gas is becoming the focus of the country's oil and gas industries. In 2005, the country's first liquefied gas export terminal began operations. A large natural gas field off the Mediterranean coast of the Egyptian city of Damietta was discovered in 2002. Natural gas reserves in the country were estimated at 66 trillion cubic feet (Tcf) in 2005, based on new finds.

Egypt's industrial sector has undergone major reforms since World Bank adjustment programs went into effect during 1991, privatizing and restructuring state owned enterprises. Some of the companies in important non-oil industries are technically in the private sector, but control still remains with the government.

## 29 SCIENCE AND TECHNOLOGY

Founded in 1971, the Academy of Scientific Research and Technology in Cairo is the national body responsible for science and technology. Egypt also has 12 specialized learned societies in the fields of agriculture, medicine, science, and technology. The National Research Center, also in Cairo, carries out research in pure and applied sciences. The Ministry of Agriculture has 20 attached research institutes in Cairo and Giza. Twenty other institutes conduct research in medicine, science, and technology.

In 2000, (the latest year for which the following data is available) research and development (R&D) expenditures totaled \$438.522 million or 0.19% of GDP. In 2002, high technology exports totaled \$13 million, or 1% of manufactured exports. For the period 1990-01 there were 366 technicians and 493 researchers per million people actively engaged in R&D.

Located in Cairo are museums devoted to agriculture, geology, railways, and marine technology. In addition to polytechnic institutes in Cairo and Mansoura, Egypt in 1996 had 13 universities offering courses in basic and applied sciences. In 1987-97, science

and engineering students accounted for 12% of college and university enrollments.

## 30 DOMESTIC TRADE

Cairo and Alexandria are the most important commercial centers. Virtually all importers, exporters, and wholesalers have offices in one or both of these cities. Egypt's retail trade is dominated by a large number of small privately-owned shops and vendors. Government cooperatives with hundreds of outlets also combine wholesale and retail activities. The principal retail centers have general and specialized stores as well as large bazaars. Smaller bazaars and open markets are found in the towns and villages. There are large wholesaling markets for meat and produce in Cairo, Alexandria, and Mansoura. The franchising of fast food restaurants and retail chains continues to grow quickly, with both American- and Egyptian-based companies holding franchises.

Though most farms are privately owned, manufacturing is largely controlled by the public sector. Domestic industries include textiles (especially in cotton), food processing, and vehicle assembly. In 2001, about 51% of the work force was employed in the service sector, which also accounts for about 50% of GDP.

Government hours are 8 AM to 2 PM, Saturday to Wednesday. Business hours vary widely. Typically, a business schedule in summer would be 8 AM to 2 PM; in the winter, from 9 AM to 1 PM and from 5 to 7 PM, Saturday through Wednesday. Friday is the Muslim holy day, and most people do not work on Thursdays. While the official language is Arabic, commercial firms frequently employ English or French for business correspondence. Haggling or in Arabic, *momarsa* (auction), is a standard business process for determining a fair price for goods and services in Egypt. The Cairo International Trade Fair, held every spring, has been an important promotional event for a number of years.

## 31 FOREIGN TRADE

Before 1973, when Egypt was linked to the then-Soviet Union, 55% of its exports went to Soviet bloc countries, which supplied 30% of its imports. In 1999, the EU countries were the market for about 35% of Egypt's exports, and provided Egypt with 36% of its imports. The US provided some 14% of Egypt's imports and re-

ceived over 12% of its exports. Trade with Libya and Saudi Arabia has increased in recent years. Petroleum replaced cotton and cotton products as Egypt's principal export in 1976. Fuel exports accounted for 37% of Egypt's estimated \$3.5 billion in merchandise exports in 1999. Other exports included textile yarn and cotton (7%), and fabric, and finished garments (7.9%).

In 2004, Egypt's major exports were: finished products (38.4% of all exports); petroleum and petroleum products (38.3%); semifinished products (7.1%); and cotton, textiles, and garments (4.1%). Major imports were intermediate goods (29.5% of all imports); investment goods (22%); petroleum and petroleum products (14.1%); and consumer goods (durables and nondurables, 14%).

Egypt's leading markets in 2004 were: the United States (35.7% of all exports); the EU (34.6%); Arab countries (12.3%); and Asia (8.7%). Leading suppliers that year were: the EU (30.5% of all imports); the United States (23.5%); Asia (14.7%); and Arab countries (7.9%).

### 32 BALANCE OF PAYMENTS

Structural reforms instituted in the early 1990s have helped Egypt to slowly try to take care of its debt. Total outstanding debt stood at \$33.75 billion in 2004. However, Egypt's annual trade deficit has increased steadily during the late 1990s and early 2000s. The structural trade deficit stood at \$9.3 billion in 2004. Merchandise exports, which continue to be dominated by oil, rose strongly to \$12.3 billion in 2004, from \$9 billion in 2003. However, imports soared by more than 40% to \$21.6 billion. The wider trade deficit was offset by a considerable strengthening of the services (fueled by tourism and Suez Canal revenues) and current transfers surpluses, leaving the current-account surplus little changed at 4.7% of GDP. The current-account surplus averaged 2.8% of GDP over the 2001–05 period.

The government has attempted in recent years to improve the balance of payments situation through monetary and foreign ex-

change policies that have kept interest rates high and made access to credit and foreign exchange for imports difficult. These policies, while improving the balance of payments situation, have had an overall negative impact on economic growth and the country's ability to encourage foreign investment.

### 33 BANKING AND SECURITIES

The National Bank of Egypt, founded in 1898, had as a private institution the exclusive right to issue currency and act as the government's banker. In January 1961, although permitted to retain its commercial banking business, it was divested of its central banking function, which was given to the newly established Central Bank of Egypt. In 1957, when foreign banks refused to finance Egypt's cotton crop after the Suez Canal was nationalized, the government took over foreign banks and insurance companies. By the end of 1962, all banks had been nationalized. The number of registered banks dwindled to only four by 1971.

As of 1999, there were 69 banks operating in Egypt: 4 state-owned commercial banks; 29 commercial banks; 33 investment banks, and 7 specialized banks; including 20 foreign bank branches. The four state-owned commercial banks—the National Bank of Egypt, the Bank of Alexandria, the Banque du Caire, and the Banque Misr—dominate the sector due to their size in terms of assets, deposit base, and branches (an average of 200 branches each), accounting for 55% of the banking system's total assets. The Central Bank of Egypt supervises all banks in Egypt except for Misr African International Bank, the Arab International Bank, and the Egypt Export Development Bank. The national stronghold on the system becomes apparent when the public-sector banks' shares in joint-venture banks are taken into account, which reveals the big four to be holders of over 90% of the total assets of commercial banks. The dominance of the public sector is heightened if the National Investment Bank (NIB) is included. Holding the long-term resources mobilized by the social security system, the NIB possesses roughly 25% of total bank deposits. Private sector ownership accounted for less than 30% of the banking sector in 2002, while the total assets of Egypt's banks in the same year amounted to \$72 billion.

In 1975, the public sector was allowed to perform transactions freely with all banks, which became largely free to exercise all banking functions. The government's "open door" policy toward banking permitted international banks of good standing to establish branches in Egypt and exempted those banks from regulations governing the control of foreign exchange. In 1991, foreign exchange rates were liberalized. In 1992 and 1993, laws were passed allowing foreign bank branches to deal in Egyptian currency. In order to bring the Egyptian banking sector into line with international banking norms, banking law 155 of 1998 established a legal basis for the privatization of the four public-sector banks, but by 2002 this process was just getting started.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$14.9 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$65.8 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 11%.

Egyptians habitually have invested their funds in real estate, in

foreign countries, or in gold. In June 1992, a comprehensive Capital Markets Law was passed, sparking a revival of the Cairo and Alexandria exchanges that had been dormant since 1961 nationalization. In 1994, Egypt had one of the world's best-performing stock markets, but the primary stock market remained thin. Most investors preferred to establish closed companies and to resort to bank loans. Stock trading in the secondary market was also limited. Nevertheless, Egypt's first corporate bond since 1951, issued by the German-Egyptian Hoechst Orient in May 1994, was almost three times oversubscribed. In 2004, the Egyptian stock market's capitalization totaled \$38.516 billion. In that same year, a combined total of 792 companies were listed on the Cairo and Alexandria Stock Exchanges. Trading volume (by value) in 2004 totaled \$5.608 billion, up from \$3.278 billion in 2003.

### 34 INSURANCE

Until the 1950s, insurance companies operating in Egypt were mostly branches of foreign institutions. In July 1961, Egypt promulgated laws nationalizing all insurance companies. From 1996, the insurance market was dominated by four public-sector insurance companies (one of which was a re-insurance company), although three private-sector companies existed. Two joint ventures with foreign firms operated in the free zones. The domestic insurance market was closed to foreign companies, although they were able to operate as minority partners in Egypt's eight free zones.

As part of its IMF agreement, the government pushed a new, if still restrictive, insurance law through the People's Assembly in early May 1995. This allowed foreign access to the domestic market on condition that the foreign company owned no more than a 49% stake in the insurance company, that the manager of the company was Egyptian, and that the company met the capitalization requirement of \$9 million. By 1998, the Egyptian parliament had passed a law allowing 100% ownership by foreign insurance companies, and complete privatization of public-sector insurance companies, but little progress has been made towards these goals. In 1999, there were 12 national insurance companies practicing in Egypt, and by 2003 there was \$566 million in direct insurance premiums written, with nonlife premiums accounting for \$386 million. Misr was the country's top nonlife insurer, with gross nonlife written premiums of \$139.2 million in 2003. Al Chark was the top life insurer in that same year, with gross life premiums written of \$55.2 million.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimated that in 2005 Egypt's central government took in revenues of approximately \$18 billion and had expenditures of \$24.5 billion. Revenues minus expenditures totaled approximately -\$6.5 billion. Public debt in 2005 amounted to 93.6% of GDP. Total external debt was \$28.95 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, budgetary central government revenues were ££77,773 million and expenditures were ££100,739 million. The value of revenues in US dollars was us\$17,283 million and expenditures \$22,386 million, based on a market exchange rate for 2002 of us\$ = ££4.5000 as reported by the IMF. Government outlays by function were as follows: general public services, 35.7%; defense, 10.1%; public order and safety,

5.7%; economic affairs, 9.8%; housing and community amenities, 4.0%; health, 4.9%; recreation, culture, and religion, 9.6%; education, 19.2%; and social protection, 0.9%.

### 36 TAXATION

As of 2005, Egypt's standard corporate tax rate was 40%, although there was a reduced rate of 32% for industrial companies, and profits made through export operations. Branches of foreign companies are treated the same as domestic companies. Oil production and prospecting companies are subject to a 40.55% tax on their profits.

Personal income tax is assessed according to a progressive schedule with a top rate of 40%.

The main indirect tax is the general sales tax (GST), set at 10% for most products, and 25% on a few others. Services are taxed at lower rates of 5% and 10%. There are also stamp duties that range from ranging from ££100 to ££600 (roughly, \$15 to \$100).

### 37 CUSTOMS AND DUTIES

Customs duties in Egypt serve not merely for protection but also for revenue. Under-invoicing is common, prompting customs officials to add 10–30% of invoice value to calculate the true value. In September 2004, Egypt's president issued a decree that reduced administrative fees and tariffs on imported goods. Generally, primary foodstuffs and raw materials were subject to a 2% ad valorem duty, followed by a 5% duty on capital goods, a 12% duty on intermediate goods, a 22% duty on nondurable consumer goods, a 32% duty on nondurable consumer goods, a 32% duty on semi-durable consumer goods, and a 40% duty on durable consumer goods. In addition, customs fees and tariffs on information technology machines, spare parts and equipment have been. However, items such as alcoholic beverages, tobacco and automobiles with engines larger than 2000 cc are subject to higher rates. Egypt assesses a 2% or 4% service fee on imports (depending on the cus-

toms duty assigned to the commodity) and a 5–25% sales tax is added to the final customs value of imports.

Free zones have been established in Alexandria, Cairo (Nasr City), Port Said, Ismailia, Damietta, Safaga, Sohag, and Suez; these are exempt from customs duties.

### 38 FOREIGN INVESTMENT

Egypt has declared that foreign private capital is both desired and welcome and that foreign capital investment has a place in the country's economic development. Investors in approved enterprises are assured of facilities for transfer of profits, withdrawal of capital, and employment of necessary foreign personnel. In 1974, Egypt sought specifically to encourage capital investments from multinational corporations in the West, so new projects financed with foreign capital were protected, capital was freed for reexport within five years of its investment in Egypt, and investment profits earned within Egypt were allowed transfer abroad. In 1991, all foreign exchange transfer restrictions were lifted.

The main laws governing foreign investment are the Capital Market Law of 1992, as amended to increase stock market regulation in 1998; the Investment Incentives and Guarantees Law of 1997, establishing the regime for free trade zones (FTZs); and a series of laws in 1998 setting conditions for private (including foreign) participation in public banks, insurance, maritime transport, electricity distribution, and telecommunications.

Depending on their size, location, and other characteristics, new projects financed with foreign capital are exempt from taxation for five to ten years; in addition, payments of interest on foreign loans are not taxable and investors are exempt from certain customs duties. There is one basic condition for approval: the project must be on an approved list in the fields of industrialization, mining, energy, tourism, transportation, reclamation and cultivation of barren land, or animal husbandry. Applications must be made to the General Authority for Arab Investment and the Free Zones, which consists of the minister of state for Arab and foreign economic cooperation and seven other members. The bidding process for contracts has been made more transparent, but Egyptian bids have preference up to 15% above foreign bids. Since 1991, Egypt has liberalized its foreign trade by reducing the number of items on its list of banned imports. In 1990, the list covered 37% of all imports; in 1992, 11%; and in 1999, only apparel was banned. The use of other nontariff barriers on imports and export restrictions has also been reduced. Bureaucratic barriers, however, still hamper investment. FTZs offer exemption from import duties, sales taxes, and taxes and fees on capital goods. A 1% tax is charged on warehoused goods and on exports from assembly plants. Investments are often located in the free zones of Alexandria, Cairo (Nasr City), Port Said, Ismailia, Damietta, Safaga, Sohag, and Suez. In 2003, to deal with the chronic shortage in foreign exchange, a law was passed requiring that 75% of foreign exchange earnings be converted into local currency.

A new Ministry of Investment was created in July 2004 to oversee investment policy, coordinating among the various ministries with investment-related areas of responsibility.

From 1992, foreign direct investment (FDI) inflow was about \$1 billion a year. As of 2005, FDI stock totaled \$15–\$20 billion. Inflows of FDI peaked in 1999 at nearly \$3 billion, but then fell to \$1.2 billion in 2000, to \$510 million in 2001, and to only \$184 mil-

lion in the first three quarters of fiscal year 2003/04. In terms of portfolio investment, the Egyptian stock market declined nearly 60% in 2001, and did not recover by 2004.

The United Kingdom is Egypt's largest foreign investor, followed by the United States; both countries are very active in investing in the oil and gas sector. Other major investing countries are France, Italy, and Arab countries.

### 39 ECONOMIC DEVELOPMENT

At the time of the 1952 revolution, Egypt presented the familiar picture of a dual economy, having a small modern sector developed within a tradition-bound society. A rapidly expanding population was pressing hard on limited agricultural resources; there were severe problems of poverty, unemployment, unequal distribution of income and wealth, disease, political corruption, and illiteracy. Rapid industrialization was viewed as essential to economic improvement. The revolution was both a national revolution, Egyptianizing the economy by ridding it of foreign influence, and a social revolution, developing a "democratic, cooperative, socialist" society. The promised "socialism" was not at that time doctrinaire; it was pragmatically selective in its application. A major objective was the diversion of private investment from land into industry. In this earlier period, industrialization also was fostered through government creation and expansion of industrial firms.

In July 1961, in a major policy shift, socialist decrees brought virtually all economic activity under government ownership or control. The Charter for National Action, which elaborated the philosophy of Arab socialism, was approved by the National Congress of Popular Forces on 1 July 1962. It is clear that the Egyptian government had decided that industrialization and improvement of living standards could come only through central planning and direct government ownership and control of virtually the entire system of production and foreign trade.

Egypt inaugurated its first five-year development program in 1960. By the end of 1965, national income had increased in the five-year period by 39.6%; 171,000 new jobs had been created; and wages and salaries had increased by 54%. A second five-year development plan (1966–70) was canceled in 1967 because of the Arab-Israeli war, and annual plans were instituted. Shortly after the 1973 war, President Sadat introduced an "open door" economic development program that confirmed Egypt's socialist policy but decentralized decision making in the public sector, removed government constraints on the private sector, and attracted foreign private capital by liberalizing financial and trade regulations. As a result, most public-sector industries developed rapidly during the 1973–79 period. A five-year development plan (1980–84) was replaced in 1982 by the new plan for 1982–87, of which the public sector was allocated 76.5% of the total funds. Of fixed investments in development projects, the industrial and mining sector was to receive 26%, transport and communications 16%, agriculture 12%, housing 11%, and electric power 8%. By 1987/88–1991/92 investment allocation for the public sector dropped to 62% and to 42% in the 1992/93–1996/97 plan. It aimed at the privatization of several sectors by encouraging the private sector to invest more capital. Egypt at the end of the 1990s was able to attract more foreign investment, cut the inflation rate, and decrease budget deficits.

As of the early 2000s, the state still controlled virtually all heavy industry, although agriculture was in private hands, and has been

deregulated, with the exception of the cotton and sugar sectors. This and other efforts at privatization have increased the growth of the economy. At the end of 2004, total public debt amounted to 102.74% of gross domestic product (GDP), and foreign debt amounted to \$33.75 billion. A general sales tax was extended to the wholesale and retail levels of business in 2001. Increased spending on infrastructure projects in the early 2000s widened budget deficits once more. In 2003, after a series of currency devaluations, Egypt adopted a floating exchange rate mechanism—the Egyptian pound was no longer pegged to the dollar.

Although such events as the 1997 terrorist attacks at Luxor, the 11 September 2001 terrorist attacks on the United States, and the wars in Afghanistan and Iraq dampened the growth of tourism in Egypt, which experienced below-average growth rates in this sector, tourist arrivals were 10 times higher than global averages over the 2000–03 period, and attracted some 25% of tourist arrivals to the Middle East. There were more than six million visitors to Egypt in 2003. This growth in arrivals generated \$4.6 billion in tourism receipts, accounting for 22% of total exports of goods and services, and 39% of services exports, making tourism the largest foreign currency earner in Egypt. In 2004, tourism was estimated to generate some \$6.1 billion in revenue, although terrorist attacks in the Sinai Peninsula in 2004 and 2005 contributed to below-target tourist arrivals.

#### 40 SOCIAL DEVELOPMENT

Employees pay 10–13% of their wages toward old age, disability, and survivor pensions. Retirement is set at age 60. A death grant and a funeral grant is also available. Employed persons aged 18 or older are covered by work injury insurance, except for casual workers, domestic workers, and the self-employed. Unemployment legislation has been in place since 1959 and covers all employed persons in the public and private sectors. It is funded by contributions from employers with deficits covered by the government.

Equality of the sexes is provided by law, but many aspects of law and traditional practice discriminate against women. Under Egyptian law, only males can transmit citizenship to their children or spouses. Women have won employment opportunities in a number of fields, but Egyptian feminists fear these gains will be halted by resurgent Islamic fundamentalism. Muslim female heirs receive half of the amount of a male heir, and Christian widows of Muslims retain no inheritance rights. The government continues its efforts to eradicate the widespread practice of female genital mutilation (FGM). Domestic abuse and violence is common. Because the concept of family integrity supersedes the well-being of the woman, few women seek redress from authorities.

Christian minorities in Egypt are often subject to discrimination and harassment. Extremists have attacked churches and have killed Christians. They sometimes face discrimination in obtaining higher education and employment. Muslim converts to Christianity have been subject to harassment by police and have been charged under the Penal Code.

Human rights abuses of torture, extrajudicial killings, and prolonged pretrial detentions are on the decline. Arbitrary arrest and detention continue, and prison conditions remain poor. The government restricts freedom of press, assembly, religion, and expression. Islamic extremists also engaged in terrorist attacks, killing civilians. Human rights organizations do not have legal recognition,

but they do operate openly.

#### 41 HEALTH

Nearly all Egyptians have access to health care. Between 1982 and 1987 (during the first five-year plan), the government established 14 public and central hospitals, 115 rural health units, and 39 rural hospitals. The total number of beds increased by 9,257 during this period (to a total in 1985 of 96,700). In 1987, 190 general and central hospitals were established (26,200 beds), as well as 2,082 rural health units, and 78 village hospitals. In 2000, 95% of the population had access to safe drinking water and 94% had adequate sanitation. As of 2004, there were an estimated 212 physicians, 276 nurses, 27 dentists, and 68 pharmacists per 100,000 people.

Serious diseases in Egypt include schistosomiasis, malaria, hookworm, trachoma, tuberculosis, dysentery, beriberi, and typhus. Although malaria and polio cases were small in number, nearly 1,444 measles cases were reported in 1994. In 1999, Egypt vaccinated children up to one year old against tuberculosis; diphtheria, pertussis, and tetanus (94%); polio; and measles (95%). Of children under age five, 4% were malnourished as of 2000.

As of 2000, 56% of reproductive-age women practiced contraception. Abortion is legal only for medical reasons. The overall death rate was estimated at 7.6 per 1,000 inhabitants in 2002 and the infant mortality rate in 2005 was 32.59 per 1,000 live births. Life expectancy in 2005 was 71 years.

A full 80% of all Egyptian women undergo female genital mutilation. There are no specific laws against this practice. Egypt planned to expand its health insurance, with the target of covering 75% of the population. Total health care expenditure was estimated at 3.8% of GDP.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 12,000 people living with HIV/AIDS in the country. There were an estimated 900 deaths from AIDS in 2003.

#### 42 HOUSING

Prior to 1952, most Egyptians lived in mud huts. Post revolutionary governments, however, have actively concerned themselves with housing. In order to encourage rural housing activities on unfertile soil, “extension areas” have been allocated for villages. Efforts have been made to provide low-rent housing in towns; the units were constructed in cooperation with the Reconstruction and Popular Dwellings Co., in which the government held a share. Assisted by the state, which grants long-term and low-interest loans, cooperative societies also engage in housing construction. The state affords facilities for cooperatives to acquire land from the religious foundations.

Despite these efforts, Egypt’s housing shortage remains acute, with about one million units needed in urban areas. Housing construction was a major priority of development plans in the 1980s, but it was considered likely that it would take many years for Egypt’s housing deficit to be met. The greatest shortage is in low-cost housing.

According to the 1996 census, there were about 9.6 million apartments and 4.5 million rural homes throughout the country. About 2.6 million units were built in the period 1981–1999. There were nearly 400 slum/squatter areas housing over seven million people. In 1998, government subsidies helped build about 63,000

housing units. The new housing demand has been estimated at about 750,000 per year. In 2004, only about 260,000 units were available for sale. About 1.8 million housing units are vacant, partly because tenants can not afford the cost of rent, but also because rent controls translate into low rents in some areas and landlords feel that the cost of maintenance would be higher than their return.

### 4<sup>3</sup> EDUCATION

The Education Act of 1953 provided free and compulsory education for all children between the ages of 6 and 15. The nine years of basic education is split into six years of primary education and three years of preparatory studies. Secondary schools cover three-year programs in either general or technical studies. Some students opt for a five-year advanced technical studies program for secondary school. The curriculum was updated in 1995 and includes a greater emphasis on vocational training, as well as on physics and foreign languages. The general secondary education certificate entitles the holder to enter a university.

In 2001, about 13% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 91% of age-eligible students. In 2001, secondary school enrollment was about 78% of age-eligible students; 80% for boys and 76% for girls. It is estimated that about 91% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 22:1 in 2003; the ratio for secondary school was about 17:1.

A decree of 23 July 1962 provided free tuition at all Egyptian universities. The traditional center for religious education in the Muslim world is Al-Azhar in Cairo, which in 1983 celebrated 1,000 years of teaching as the oldest continuously operating school in the world. Al-Azhar offers instruction in three faculties and 14 affiliated institutes and maintains its own primary and secondary schools. There are a total of 13 universities, and numerous institutes of higher learning.

There is also the American University in Cairo, which offers a wide range of undergraduate and graduate courses, as well as an American school in Cairo and one in Alexandria. The American Research Center in Cairo is supported by US universities and museums. It was established in 1948 to encourage the exchange of archaeologists and other researchers in almost all fields of interest.

Adult education, under the Ministry of Education, is increasingly important. Since 1993 the government conducted a campaign against illiteracy. Business firms are required to combat illiteracy among their employees. Recent university graduates are being hired to lead literacy classes, and armed forces recruits are also expected to teach. In addition, the government has set up 3,000 one-class schools to teach a nontraditional study plan. These schools are aimed at girls who are unlikely to attend formal schooling, and as a result, are likely to remain illiterate. The schools provide vocational training and lessons on income generating businesses, in addition to the more traditional classes in Arabic, religion, sciences and arithmetic. In 2003, about 19% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 55.6%, with 67.2% for men and 43.6% for women. As of 1999, public expenditure on education was estimated at 4.7% of GDP.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

In 2003 the Bibliotheca Alexandria was established on the same site of the ancient library destroyed in a fire 2,000 years before. Bibliotheca Alexandria is the largest library in the Middle East and serves as a cultural center with exhibit areas, planetarium, and conference center. Egypt's other major libraries are the Egyptian National Library (2.5 million volumes), Alexandria University Library (with 15 collections, of which the largest—belonging to the Faculty of Arts—numbers 141,300 volumes), and the Cairo University Library (more than 1.4 million volumes). The National Library also functions as the main public library for the nation's capital and supervises 11 branch libraries located throughout the country. The Municipal Library in Alexandria contains one of the country's largest public library collections, with 23,390 Arabic and 35,400 European volumes.

One of the most important special libraries is the Scientific and Technical Documentation Division of the National Research Center at Cairo, which has the best collection of scientific and technical material in the Arab world. American University in Cairo sponsors a library system of nearly 400,000 volumes (primarily English language) and holds the Creswell Collection of Islamic art and architecture, comprising about 3,200 bound volumes. In all, Egyptian libraries affiliated with institutions of higher education hold over 35 million volumes. Assuit University sponsors 16 libraries with an approximate total of 177,274 Arabic volumes and 167,120 foreign books, as well as hundreds of periodicals.

The Egyptian National Museum, founded in 1902, contains unique exhibits from prehistoric times up to the 3rd century AD, and it also has a notable Department of Antiquities, established in 1835, which supervises excavations and administers archaeological museums. There are many specialized museums, including the Coptic Museum, devoted to the history of the old Christian Monophysites; the Museum of Islamic Art; the Greco-Roman Museum; the Agricultural Museum; the State Museum of Modern Art; the Islamic Archaeological Museum; the Railway Museum; and the Cotton Museum. There is a museum dedicated exclusively to the work of Mohmoud Mokhtar in Cairo. Several former royal palaces have been transformed into museums: the Al-Gawhara Palace in Cairo (a converted 19th-century Ottoman palace), Ras at-Tin Palace in Alexandria, and Al-Montazah Palace in Montazah-Alexandria.

### 4<sup>5</sup> MEDIA

Telephone, telegraph, radio, and television services are operated by the state-owned Telecommunication Organization. In 2003, there were an estimated 127 mainline telephones for every 1,000 people; about 99,500 people were on a waiting list for telephone service installation. The same year, there were approximately 84 mobile phones in use for every 1,000 people.

As of 1999, there were 42 AM and 14 FM radio stations and 42 television stations, broadcasting mostly in Arabic. In 2003, there were an estimated 339 radios and 229 television sets for every 1,000 people. The same year, there were 21.9 personal computers for every 1,000 people and 39 of every 1,000 people had access to the Internet. There were 28 secure Internet servers in the country in 2004.

The two leading newspapers, with their estimated 2002 daily

circulations, are *Al-Ahram* (*The Pyramid*; 900,000) and *Al-Akhar* (*The News*; 780,000). *Al-Jumhuriyah* (*The Republic*; 900,000) is the official publication of the government; *Al-Ahram* is the unofficial publication. The leading evening paper is *Al-Misa'a* (405,000). There is also an English-language newspaper, the *Egyptian Gazette* (40,000). *Arev* is a daily Armenian paper. There are two weekly Greek publications, *Phos* (20,000) and *Tachydromos-Egyptos* (2,000). *Le Journal D'Egypte* (weekly, 72,000) and *La Reforme* (daily) are the leading French publications.

On 23 May 1960, all Egyptian newspapers were nationalized and subjected to censorship. President Sadat ended formal press censorship in 1974, but the following year he set up a government council to supervise the newspapers. In 1981, President Mubarak revoked the ban on opposition newspapers, but the press remains sensitive to the wishes of the government. The Middle East News Agency is under the supervision of the information section of the Ministry of National Guidance. The constitution does provide for freedom of speech and press, though the government exercises control through media ownership, oversight, and a monopoly on resources such as newsprint.

#### 46 ORGANIZATIONS

Most organizations in Egypt serve occupational and professional (particularly agricultural) goals. The land reform law makes it compulsory for landholders who have obtained land under it to join cooperative societies (such as the Egyptian Seed Association) to help supply them with tested seeds, tools if available, and possibly markets. Several multinational organizations are based in Egypt, including the African Farmers Association and the Arab Labor Organization. The International Labour Organization has an office in Cairo. There are many chambers of commerce, representing various cities and various economic groups. The Federation of Egyptian Chambers of Commerce is in Cairo.

There are scholastic and archaeological, accounting, economic, historical, and other learned organizations. A national Academy of Scientific Research and Technology was established in 1971. The Egyptian Medical Association promotes research and education on health issues and works to establish common policies and standards in healthcare. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

Egypt serves as a multinational center for many sports organizations, including Arab federations for boxing, fishing, basketball, judo, gymnastics, and fencing, to name a few. Many youth organizations are affiliated with religious institutions. Scouting programs are active, as are chapters of the YMCA/YWCA. The Egyptian Association of Women promotes higher education and professional training for women.

The multinational Arab Organization for Human Rights is based in Cairo. There are national chapters of the Red Crescent Society, CARE, the Society of Saint Vincent de Paul, UNICEF, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Passports and visas are required of tourists. Visitors arriving from most African, American, and Caribbean countries need either a certificate of vaccinations against yellow fever or a location cer-

tificate from the Sudanese government stating that they have not been in southern Sudan within the previous six days.

Tourism has been a major foreign exchange earner. It grew steadily after the end of the Iran-Iraq war. There were 6,044,160 foreign visitors in 2003, almost 69% of whom came from Europe. The 136,510 hotel rooms with 273,020 beds had an occupancy rate of 59%. Tourism receipts totaled \$4.7 billion. The average length of stay that year was eight nights. Principal tourist attractions include the pyramids and Great Sphinx at Giza, the Abu Simbel temples south of Aswan, the Valley of the Kings at Luxor, and the Muhammad Ali Mosque in Cairo. Rides are available on *fellucas*, traditional sailing boats of the Nile. Popular pastimes among Egyptians include card playing, movie-going, and sports such as football (soccer), swimming, tennis, and horse racing.

In 2005, the US Department of State estimated the daily cost of staying in Cairo at \$239. Expenses in Alexandria were \$242 per day.

#### 48 FAMOUS EGYPTIANS

Egypt's first recorded ruler, or pharaoh, was Menes (or Narmer, fl.3100? BC), who united the southern and northern kingdoms and founded the capital at Memphis. Notable successor pharaohs included Cheops (Khufu, fl.26th cent. BC), who built the Great Pyramid at Giza; Thutmose III (r.1504?-1450 BC), who greatly extended the empire through conquest; Amenhotep III (r.1417-1379 BC), who ruled at the summit of ancient Egyptian civilization and built extensive monuments; his son Amenhotep IV (Akhenaten, or Ikhnaton, r.1379-1362 BC), who, with his queen, Nefertiti, instituted a brief period of monotheism; and Tutankhamen (r.1361-1352 BC), whose tomb containing valuable treasures was found practically intact in 1922. Cleopatra VII (69-30 BC) was involved in the political conflicts of the Romans.

Philo Judaeus (13? BC-AD 50?) attempted to combine Greek philosophy with Judaism. Ptolemy (Claudius Ptolemaeus, fl.2d cent. AD) was the foremost astronomer of ancient times. Egyptian-born Plotinus (AD 205?-270) was a neoplatonic philosopher in Rome.

The most notable of Egypt's rulers under the Muslim caliphate was Saladin (Salah ad-Din, 1138-93), sultan of Egypt and Syria and founder of the Ayyubid dynasty. The founder of Egypt as a part of the Ottoman Empire was Muhammad 'Ali (1769-1849), of Albanian origin, the first of a dynasty that ended with the deposition of Faruk in 1952. 'Arabi Pasha (Ahmad 'Arabi, 1841?-1911) led a popular uprising against British intervention in 1882 but was defeated. Later, the fiery political fight against British rule was waged by Sa'ad Zaghlul Pasha (1860?-1927), a founder of the Nationalist Party, Wafd.

No one had greater influence on Egypt during the 1950s and 1960s than Gamal Abdel Nasser (Jamal 'Abd al-Nasir, 1918-70), the moving spirit of the army's revolt against the monarchy in 1952. As prime minister (1954-56) and president (1956-70), Nasser set Egypt on its socialist course and attempted to unify the Arab world through confederation. His successor as president, Anwar al-Sadat (as-Sadat, 1918-81), continued Nasser's policies but with important modifications, especially in relation to Israel; with Menachem Begin he shared the Nobel Peace Prize in 1978 and nego-

tiated the Egypt-Israel Peace Treaty of 1979. Upon Sadat's assassination in 1981, Muhammad Hosni (Husni) Mubarak (b.1928), who had been air force chief of staff (1969–72) and vice-president (1975–81), became president of Egypt. Mohamed ElBaradei (b.1942) is the Director General of the International Atomic Energy Agency (IAEA). ElBaradei and the IAEA were jointly awarded the Nobel Peace Prize in 2005.

The poet Sami al-Barudi (1839–1904) wrote popular and highly regarded verses about Islam's heroic early age. 'Abbas al-Aqqad (1889–1964) has been called the greatest contemporary Arab poet and the most original Arab writer. Involved in a political plot, he was jailed and composed an Arab "De Profundis" about his life in prison. Taha Husayn (1889–1973), the most widely known modern Egyptian intellectual leader, was minister of education from 1950 to 1952. The poet and essayist Malak Hifni Nasif (1886–1918) sought an improvement in the status of women. Ahmad Zaki Abu Shadi (1892–1955) was a renowned poet, essayist, and dramatist. Mahmud Taymur (1894–1973), a leading dramatist, wrote popular social satires and comedies. Um Kalthum (Fatma al-Zahraa Ibrahim, 1898?–1975) was the most famous singer of the Arab world. Mohammed Hassanein Heikal (b.1923), journalist and author, was the outspoken editor of the influential newspaper *Al-Ahram* (1957–74) until he was forced by the government to resign. In 1988, Naguib Mahfouz (b.1912) won the Nobel Prize for Literature. Ahmed Hassan Zewail (b.1946) is an Egyptian-American chemist, and the winner of the 1999 Nobel Prize in chemistry for his work on femtochemistry.

#### 49 DEPENDENCIES

Egypt has no territories or colonies.

# EQUATORIAL GUINEA

Republic of Equatorial Guinea  
*República de Guinea Ecuatorial*

**CAPITAL:** Malabo (formerly Santa Isabel)

**FLAG:** The flag is a tricolor of green, white, and red horizontal stripes; a blue triangle joins them at the hoist. The arms in the center of the white stripe hold a cotton tree (the national symbol), six stars—one for each physical division of the country—and the motto “Unidad, Justicia, Paz.”

**ANTHEM:** *Himno Nacional*, beginning “Caminemos pisando la senda de nuestra inmensa felicidad” (“Let us walk on the path of our immense happiness”).

**MONETARY UNIT:** Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. CFA Fr1 = \$0.00208 (or \$1 = CFA Fr480.56) as of 2005. There are coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs and notes of 50, 100, 500, 1,000, 5,000, and 10,000 francs.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Independence Day, 5 March; Labor Day, 1 May; OAU Day, 25 May; President’s Birthday, 5 June; Armed Forces Day, 3 August; Human Rights Day, 10 December; Christmas, 25 December. Movable Christian holidays include Good Friday and Easter Monday.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located on the west coast of Africa, Equatorial Guinea consists of a mainland enclave, Río Muni, and five inhabited islands: Bioko (between 1973 and 1979, Macías Nguema Biyogo, and before that Fernando Póo), Annobón (Pagalu during the 1970s), Corisco, Elobey Chico, and Elobey Grande. The total area is 28,051 sq km (10,831 sq mi), of which Río Muni, along with Corisco and the Elobeyes, accounts for 26,017 sq km (10,045 sq mi) and Bioko, along with Annobón, 2,034 sq km (785 sq mi). Comparatively, the area occupied by Equatorial Guinea is slightly larger than the state of Maryland.

Río Muni is bounded on the N by Cameroon, on the E and S by Gabon, and on the W by the Gulf of Guinea (Atlantic Ocean), with a length of 248 km (154 mi) ENE–WSW and 167 km (104 mi) SSE–NNW. Bioko, situated 56 km (35 mi) W of Cameroon and about 259 km (161 mi) NW of Río Muni, extends 74 km (46 mi) NE–SW and 37 km (23 mi) SE–NW. Annobón is 686 km (426 mi) SW of Bioko; Corisco and the Elobeyes are off the SW coast of Bioko, within sight of Gabon. The total boundary length of Equatorial Guinea is 835 km (519 mi), of which 296 km (183 mi) is coastline.

The capital city of Equatorial Guinea, Malabo, is located on the island of Bioko (Isla de Bioko).

## <sup>2</sup> TOPOGRAPHY

Bioko and Annobón are volcanic islands that are part of the chain starting with the Cameroon Highlands and outcropping into the Atlantic as far as St. Helena. Río Muni is a fluvial mainland plateau, except for the sandy shore and the ridges of the Sierra Cristal range that separate the coast from the interior plateau. The Muni and Ntem rivers, on the south and north boundaries of Río Muni,

are estuaries navigable for about 20 km (12 mi); the Mbini River, midway between them, is typical of the cascading streams that drain all of Río Muni. Bioko has short cascading streams; Annobón has only storm arroyos. Most of the country, including the islands, is tropical rain forest. On Annobón, volcanic deposits restrict agriculture, and the Muni estuarial islands are sandy, but the rest of the country has tropical humus conducive to agriculture.

## <sup>3</sup> CLIMATE

Equatorial Guinea has a tropical climate with distinct wet and dry seasons. From June to August, Río Muni is dry and Bioko wet; from December to February, the reverse exists. In between there is gradual transition. Rain or mist occurs daily on Annobón, where a cloudless day has never been registered. The temperature at Malabo, Bioko, ranges from 16°C to 33°C (61–91°F), though on the southern Moka Plateau normal high temperatures are only 21°C (70°F). In Río Muni, the average temperature is about 27°C (80°F). Annual rainfall varies from 193 cm (76 in) at Malabo to 1,092 cm (430 in) at Ureka, Bioko, but Río Muni is somewhat drier.

## <sup>4</sup> FLORA AND FAUNA

Dense tropical rain forest vegetation prevails throughout Equatorial Guinea. There are 140 species of trees, especially palms and hardwoods. Yams and bananas were introduced by the early inhabitants and became staples. Monkeys, chimpanzees, elephants, and gray doves are common.

## <sup>5</sup> ENVIRONMENT

Equatorial Guinea’s most significant environmental problems are deforestation, water pollution, desertification, and the preserva-

tion of wildlife. The forests are threatened by agricultural expansion, fires, and grazing. The nation has about 30 cu km of renewable water resource with 6% used for farming purposes. There are three Ramsar wetland sites in the country.

The nation's wildlife is threatened by the expansion of population centers. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 17 types of mammals, 6 species of birds, 2 types of reptiles, 5 species of amphibians, 8 species of fish, 2 species of other invertebrates, and 61 species of plants. Endangered species include the drill (*Papio leucophaeus*), Preuss's monkey, and the green sea, hawksbill, and olive ridley turtles.

## 6 POPULATION

The population of Equatorial Guinea in 2005 was estimated by the United Nations (UN) at 504,000, which placed it at number 160 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.3%, a rate the government viewed as satisfactory; however, because a high percentage of the population is under 15 years of age, increasing adolescent fertility was expected to become a significant problem. The projected population for the year 2025 was 762,000. The population density was 18 per sq km (47 per sq mi).

The UN estimated that 45% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.16%. The capital city, Malabo, had a population of 95,000 in that year.

## 7 MIGRATION

As many as 45,000 Nigerian laborers served in Equatorial Guinea in the early 1970s, mostly working on Bioko cocoa plantations. In 1975, Nigeria began evacuating those contract laborers, charging the Equatorial Guinean government with a long history of mistreating them. These plantations are now short of labor.

The net migration for Equatorial Guinea in 2005 was zero. However, migration to Spain is a traditional and ongoing occurrence. Between 80–90% of Equatorial Guinean nationals who go to Spain do not return. There were approximately 1,000 migrants in Equatorial Guinea in 2000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The largest single tribe is the Fang (Fon, or Pamúe), who entered Río Muni from the east largely between 1687 and 1926. The earlier Riomunians, who had probably arrived in the 14th century, were forced by the Fang to flee to the coast. The Bubi on Bioko are descendants of the indigenous African Bantu-speaking population that fled from the Cameroonian and Riomunian mainland in the 13th century; they are indigenous to Bioko island and account for about 15% of the population. Coastal tribes, sometimes referred to as *Playeros*, consist of Ndowes, Bujebas, Balengues, and Bengas. Fernandinos—descendants of mainland slaves liberated by the British navy in the 19th century—and Europeans, especially Spanish Asturians and Catalonians, have long dominated com-

merce and government. It is estimated that the 67 Fang clans represent 80% of the population. Europeans, mostly Spanish, number less than 1,000.

## 9 LANGUAGES

Spanish is the official language of the government, commerce, and schools. French is also an official language. The principal vernacular is Fang, which, like all the country's indigenous languages, is a Bantu tongue. Bubi and Ibo are also spoken. Annobón uses the *fād'Ambō*, a pidgin form of Bantu speech with heavy 16th-century Portuguese inflection. Much petty commerce is conducted in pidgin English (*Pichinglis*).

## 10 RELIGIONS

Although African traditional religion has left its vestiges among the indigenous tribes, about 93% of the population are Christian. Within the Christian population, 87% are Roman Catholic and about 4.5% are mainline Protestant, primarily Baptist and Episcopalian. Though there is no state religion, a 1992 law established an official preference for the Catholic Church and the Reform Church of Equatorial Guinea, based on the traditional importance of these two denominations in popular culture. Other religious groups must register through the Ministry of Justice and Worship. Religious study (primarily Catholic) is required in public schools.

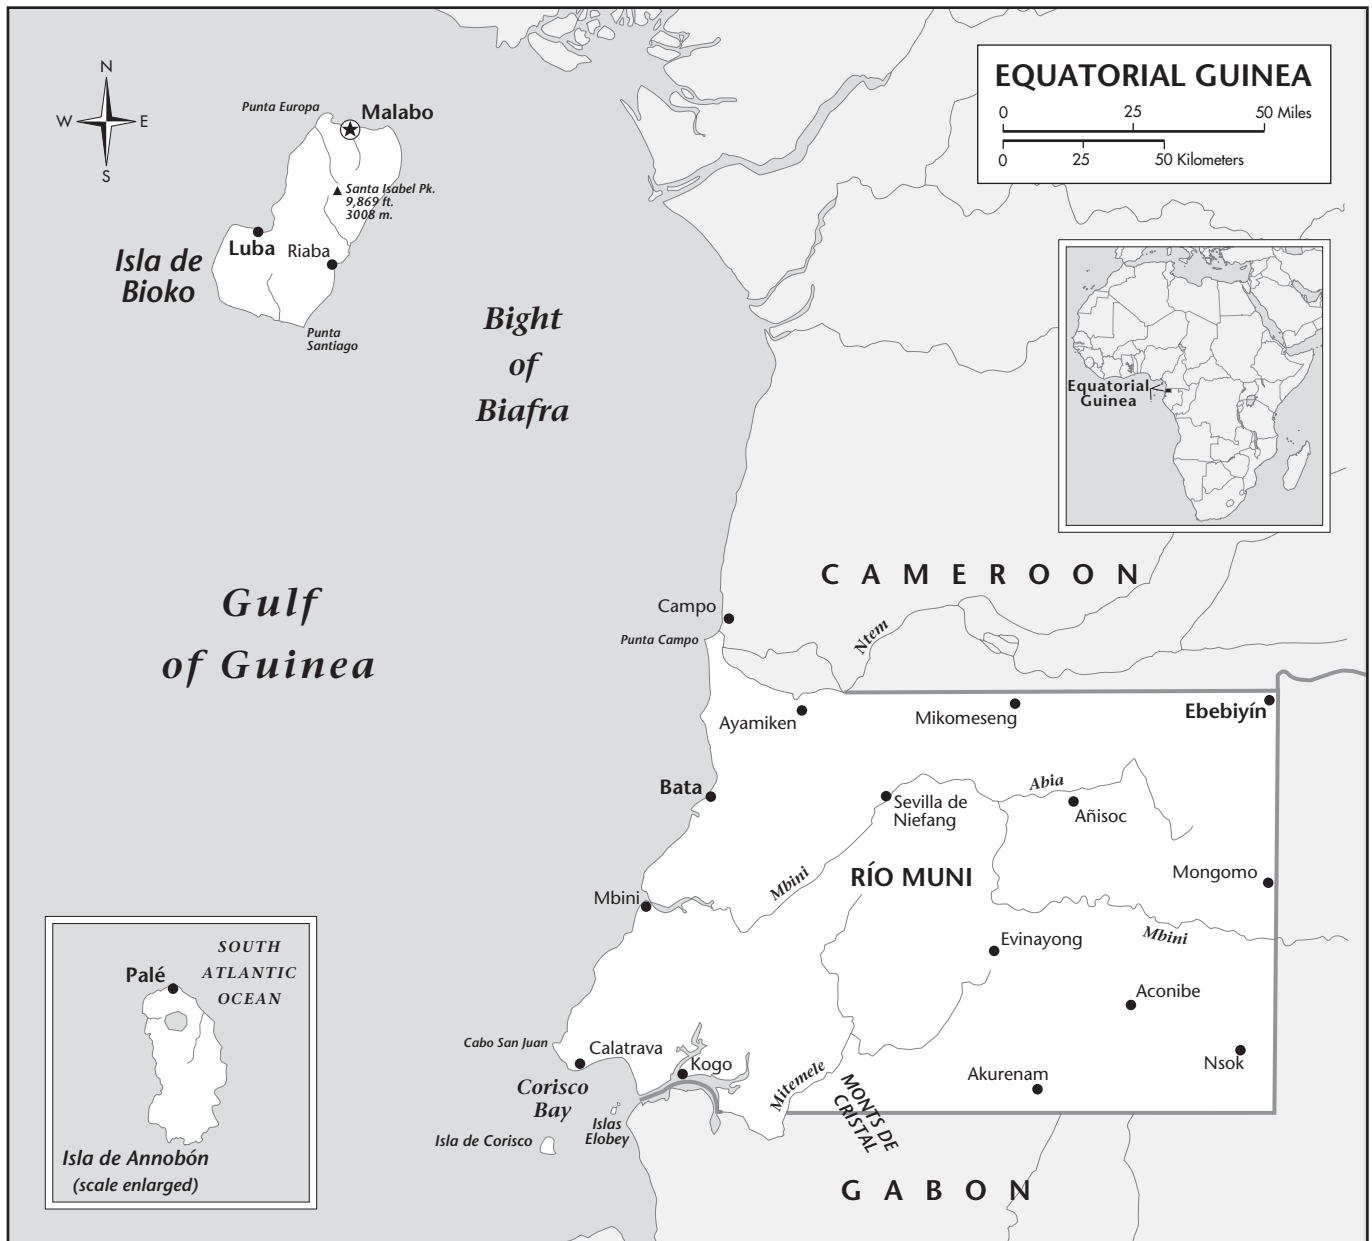

## 11 TRANSPORTATION

There are 2,880 km (1,790 mi) of highways in Equatorial Guinea, none of which were paved in 2002. The chief ports are Bata and Mbini in Río Muni and Malabo and Luba on Bioko. Bata, modernized in the 1970s, can accommodate up to four vessels of 20,000 tons each. There is regular service between Malabo and Bata. In 2005, the country had one merchant ship (a cargo vessel of 1,000 GRT or over) in service, totaling 6,556 GRT.

Bata's airport was the first major air transport facility. Malabo's airport was raised to jet standards in 1964 and became the focus of regional air services. A landing strip was built on Annobón in 1968. As of 2004, there were only four airports, with three (as of 2005), having paved runways. Air transport between Bata, Malabo, and Douala, Cameroon, is provided by Equatorial Guinea Air Lines (Algesa). There is international air service to Gabon, Nigeria, Morocco, and Spain. In 1997 (the latest year for which data was available), about 21,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Although numerous archaeological discoveries indicate a very early Sangoan (modified Acheulean) culture throughout Equatorial Guinea, the earliest traceable inhabitants were Pygmies, remnants of whom remain in northeastern Río Muni. Bioko was apparently uninhabited when the Bubi came by sea from the mainland in the 13th century. Río Muni seems to have been occupied by the Bantu in a series of waves that superseded the Pygmies—first by the Bubi, before 1200; then by the Benga, Bujeba, and Combe, perhaps about 1300; and, finally, by the Fang from the Congo Basin, after 1687. Although Annobón was uninhabited in 1471 when the Portuguese discovered it, it was the only one of the territories later incorporated into Equatorial Guinea that they attempted to develop. The proprietorship of Annobón was ill administered, however,

LOCATION: 1°1' to 3°48' N; 8°26' to 11°20' E Annobón at 1°25' S and 5°36' E. BOUNDARY LENGTHS: Cameroon, 189 kilometers (118 miles); Gabon, 350 kilometers (218 miles); total coastline, 296 kilometers (183 miles). TERRITORIAL SEA LIMIT: 12 miles.

and it was virtually self-governing for 250 years. In 1778, Portugal transferred its nominal claims over Annobón, Fernando Póo, and the entire coast from the Niger Delta to Cape López (in modern Gabon) to Spain, in return for Spain's renunciation of pirate claims in southern Brazil. Later that year, a Spanish expedition of occupation arrived from South America. The expedition withdrew in 1781 after disease and poor administration had cost the lives of 370 of the 547 Spaniards.

The primary Spanish mainland explorations were undertaken between 1875 and 1885. Catholic missionary efforts by the Claretians extended Spanish influence to Annobón (1884), completed the exploration of Fernando Póo (1883–1924), and began the penetration of Río Muni (1886–1925). The first effective efforts to penetrate the interior were undertaken in 1926–27 by Governor

Ángel Barrera, who reportedly employed considerable force to subjugate the Fang. The administrative procedure for the colony was defined as the process of *reducción* (conquest), *repartimiento* (resettlement), and *encomienda* (placing in trust) of the indigenous people—the policy followed in Mexico and Peru 400 years earlier—but this time, the people were *encomendado* (entrusted) not to private masters but to the Claretians. After World War II, the Franco government initiated a policy of heavy investment to turn Spanish Guinea into a model colony.

Spanish Guinea became a province of Spain in 1958. In 1964, two provinces (Fernando Póo and Río Muni) were created under an autonomous regional government. Political opposition and Protestant missions, both banned in Spain, were tolerated, and the regional regime of Bonifacio Ondó Edú was virtually self-govern-

ing internally. In 1966, independence was promised. Two years later, an opposition faction under Francisco Macías Nguema won the preindependence elections and organized a sovereign government on 12 October 1968, when the colony became the independent Republic of Equatorial Guinea. Within six months, hostility between Riomunians and Fernandinos had sharpened. The continued presence of Spanish civil servants, troops, and ships and the unchanged influence of Spanish plantation management provoked a crisis in 1969. Two coups failed, the Spanish were evacuated, medical services were suspended (until WHO restaffed them), and fiscal transactions ceased. However, within six weeks a new understanding was reached with Spain, under UN auspices, and Spanish subsidies were restored.

On 23 August 1972, Francisco Macías Nguema was proclaimed president for life; subsequently he assumed ministerial posts of defense, foreign affairs, and trade. An exile group, the Equatorial Guinean Liberation Front, and others charged in December 1974 that more than two-thirds of the National Assembly elected in 1968 had disappeared, and that many prominent persons, especially political opponents of the president, had been assassinated. It was estimated that a quarter of the country's population was in exile in Cameroon, Gabon, and Europe. On 3 August 1979, Macías Nguema was overthrown in a military coup led by his Spanish-trained nephew, Lt.-Col. Teodoro Obiang Nguema Mbasogo; the former president was tried shortly after the coup and executed on 29 September. International human rights organizations estimated that during his 11-year rule at least 50,000 people had been killed and 40,000 had been enslaved on state-owned plantations.

Under Obiang's leadership, the Supreme Military Council became the highest power in the country. The country continued to decay as corruption flourished and political opponents and others were imprisoned or put to death. Soviet influence was reduced, and economic and military cooperation with Spain was restored. A new constitution, approved in a referendum on 15 August 1982, provided that Obiang would remain head of state until 1989, when direct popular elections would take place. Parliamentary elections (based on a single list, with no political parties permitted) were held on 28 August 1983, and the PDGE won all 41 seats in the Chamber of People's Representatives in 10 July 1988 elections. Obiang was elected without opposition on 25 June 1989.

On 17 November 1991, a new constitution was adopted. Opposition parties began to be organized and sought official recognition in 1992. Eventually an election was held on 21 November 1993 and the PDGE won 68 of 80 seats. But the major opposition parties boycotted the election and as many as 80% of the eligible voters refused to participate. The new cabinet was expanded from 34 to 42 members. On 25 February 1996, Obiang was reelected to the presidency for another seven-year term, receiving 98% of the vote. The poll was declared farcical by foreign observers. Despite a boycott of the elections by the three main opposition parties, voter turnout was 86%. Obiang's plan to form a government of national unity failed because the opposition's conditions for participation had not been met.

New wealth from substantial oil and gas reserves discovered off the coast in 1996 boosted the tiny country's impoverished economy, but the wealth did not reach the poor. Government corruption and mismanagement were rampant and some 80% of the wealth was amassed by less than 5% of the population, mostly

Obiang's family clan. Growing discontent resulted in at least two coups d'état (the government attributed one in May 1997 to opposition Progress Party leader, Severo Moto) and a rebellion on Bioko island by members of the disenfranchised Bubi ethnic group in January 1998. A military court sentenced 15 of the 215 Bubi activists to death. In September Obiang suspended the sentence, under international pressure.

The ruling PDGE won 65 of the 80 seats in the second multiparty parliamentary elections held on 7 March 1999. In July 1999, the prime minister, Angel Serafin Seriche Dougan, and his government resigned, apparently to pave way for a government of national unity. The president offered to give a cabinet position to each of the opposition parties. Second multiparty legislative elections were held on 7 March 1999. Mainstream opposition parties participated in the elections, but along with the international community, denounced the elections for serious irregularities. The ruling PDGE again won 75 seats. The Convergence for a Social Democracy (CPDS) and the People's Union (UP) respectively got one and four seats.

In elections held 15 December 2002 Obiang officially was reelected with 97.1% to 2.2% of the vote for Celestino Bonifacio Bacle, but as in the past, the elections were marred by fraud, and held little credibility either domestically or abroad.

The judiciary, which often has come under international scrutiny, scheduled a national conference in January 2003. The purpose of the meeting was to improve human rights and strengthen rule of law following criticism by rights groups, the opposition, and the Spanish government of the sentencing of 68 opposition activists for between six and 20 years in jail on charges of plotting to overthrow the president. Among those convicted were the leaders of three opposition parties. In August 2003, 31 of the condemned prisoners received amnesty. In elections held in April 2004, the PDGE and its allies won 98 of 100 seats and all but 7 of 244 municipal posts, but the results were judged not credible by international observers.

Political opponents twice attempted to overthrow the government in 2004. In March Zimbabwe police impounded a plane originating from South Africa with 64 mercenaries on board destined for Equatorial Guinea. Simon Mann, the president of Executive Outcomes and the apparent ringleader, was sentenced to seven years in jail in Zimbabwe for trying to buy arms. In all, 22 people were convicted, including 9 tried in absentia. Allegedly backing the operation were Sir Mark Thatcher, son of Margaret Thatcher, Severo Moto, an Equatorial Guinean politician in exile in Spain, and the Spanish government. In October 2004, the military staged an abortive coup leading to the conviction of 23 soldiers.

Equatorial Guinea ranked 152 out of 159 countries on *Transparency International's Corruption Perceptions Index 2005* with almost none of the economic benefits from the oil windfall trickling down to the average Equatorial Guinean. The judiciary was widely considered corrupt and dysfunctional. Further, Obiang's health appeared to be failing, and were he not to finish his third term, or not to seek a fourth term in 2009, his eldest son, commonly referred to as Theodorín, would be his heir apparent. Teodoro Nguema Obiang Mangue was also forestry minister, but was at odds with influential family members and factions within the elite.

### 13 GOVERNMENT

By referendum on 11 August 1968, Equatorial Guineans approved a constitution that became effective on Independence Day, 12 October 1968. The constitution required the country to join the UN and to coordinate Spanish financial, technical, and administrative assistance until total “Africanization” was achieved. Separatist activities on Bioko led to the suspension of the 1968 constitution in May 1971. The president assumed all powers and ruled by decree until a second constitution was approved by referendum in July 1973. Under this constitution, the only legal party, the United National Workers Party, designated deputies to the National Assembly and had the power to remove them. An article requiring election of the president by direct, secret, universal suffrage was suspended for President Francisco Macías Nguema, who had been proclaimed president for life on 23 August 1972. After the 1979 coup, a new constitution was drafted with UN assistance. Approved by 95% of the voters in a referendum on 15 August 1982, this document provided for elections every five years to a National Assembly, for the establishment of a Council of State, and for a human rights, which in practice are poorly defended under the law.

Since adopting the 17 November 1991 constitution, Equatorial Guinea has been a self-declared constitutional democracy with judicial integrity and multiparty elections. In reality, President Obiang Nguema runs the country with an iron fist and his Democratic Party of Equatorial Guinea (PDGE) has no serious opposition. Lt.-Col. Obiang Nguema was inaugurated president on 12 October 1982, ran unopposed in 1989, and was reelected in 1996 and 2002. His term expires in 2009. Obiang appoints a prime minister, who nominally is head of government. A unicameral House of People’s Representatives or *Camara de Representantes del Pueblo* with 100 seats performs little or no check on the powerful executive. Members directly elected by popular vote serve five-year terms. The constitution was modified in 1995.

### 14 POLITICAL PARTIES

Other than the ruling Partido Democrático de Guinea Ecuatorial (PDGE), there are 12 other registered parties. However, given the dominance of the PDGE, the system functions like a one-party state.

Following an abortive coup in March 1969, all existing political parties were merged into the United National Party (Partido Único Nacional) under the leadership of President Macías Nguema. Political activity outside this party was made illegal. The name of the party was later modified to United National Workers Party (Partido Único Nacional de los Trabajadores—PUNT). After the 1979 coup, all political parties were banned and the ruling Democratic Party for Equatorial Guinea (PDGE) monopolized power and patronage. Among the opposition parties in exile in the mid-1980s were the National Alliance for the Restoration of Democracy and the Democratic Movement for the Liberation of Equatorial Guinea. A source of opposition is resentment by Biokans of mainland domination.

The 1991 constitution legalized political parties and a January 1992 law on party formation initiated the process of party organization. But it restricted party membership and activity to those who had lived continuously in Equatorial Guinea for 10 years. Since most opposition politicians had been in exile since inde-

pendence, the effect was to prohibit serious opposition. Small parties—the Liberal Democrat Convention, the Popular Union, and the Progressive Democratic Alliance—were recognized in 1992. The Equatorial Guinea Progress Party (PPGE) was legalized after a long delay and, in 1993, the Socialist Party of Equatorial Guinea (PSGE) was approved. By mid-1993, 13 legal opposition parties stood prepared to contest elections, scheduled for 12 September. A number of opposition leaders were even granted amnesty. In 1995, the government reduced the residency requirement for politicians to five years leading up to an election. Political parties, however, continued to face harassment as of 2006.

In June 1997 the Progress Party, perhaps the only party that could constitute an alternative government, was banned by presidential decree. The government accused journalist Severo Moto, leader of the Progress Party, of plotting a coup against Obiang, by linking him to arms intercepted by Angolan authorities on a Russian boat destined for Equatorial Guinea in mid-May. Moto exiled himself to Spain.

The remaining opposition parties participated in the 7 March 1999 elections but rejected the results due to serious irregularities, challenging them in court. They also refused to take up their seats in the House. Once again, the ruling PDGE won an overwhelming majority with 75 of the 80 seats to 4 seats for the People’s Union (UP), and 1 seat for the Convergence for a Social Democracy (CPDS). The international community also criticized the conduct of the elections. The opposition’s presence in the National Assembly was further reduced when the UP dismissed two of its four parliamentary delegates in April, accusing them of endorsing Obiang’s dictatorial government.

In the 25 April 2004 parliamentary elections—amid allegations of fraud—the PDGE and its affiliates took all but two seats in the expanded 100-seat parliament. They also won all but seven of the municipal posts around the country. The next presidential elections were to be held December 2009 with parliamentary elections scheduled for March 2009.

### 15 LOCAL GOVERNMENT

The country is divided into seven provinces, each headed by a governor appointed by the president. The provinces are divided into districts and 244 municipalities.

### 16 JUDICIAL SYSTEM

The court system, based on Spanish civil law and tribal custom, includes a Supreme Court, two appeals courts, lower provincial courts (first instance), military courts, and customary (traditional) courts. The courts apply a blend of traditional law, military law, and Franco-era Spanish law, which leads to some unpredictability in results. Appeals from courts of first instance are rare. A five-member Constitutional Council established in 1993 decides constitutional issues and releases election results. The customary courts composed of tribal elders adjudicate civil claims and minor criminal matters.

Under the 1991 constitution, the judiciary is not independent from the executive branch. In fact, all judges and clerks and other judicial personnel are appointed and dismissed at the will of the President. In addition, corruption is a problem because of low wages for judicial personnel.

Defendants have constitutional rights to an attorney and to appeal. However, in practice, these rights are not always afforded.

In January 1998, the treatment of Bubi ethnic group activists who were arrested after a rebellion, and the conduct of the trial by a military court, which meted out 15 death sentences, was strongly criticized by Amnesty International and the European Parliament, respectively. Obiang suspended the death sentences in September 1998. Reports of serious and systematic human rights abuses in Equatorial Guinea continue.

## 17 ARMED FORCES

In 2005, active military personnel numbered 1,320, of which the Army accounted for 1,100, the Navy 120, and the Air Force 100. The Army consisted of three infantry battalions, whose equipment included 10 armored personnel carriers and six reconnaissance vehicles. The Navy had two patrol/coastal vessels, while the Air Force operated five fixed-wing transports and two utility helicopters. Paramilitary forces included the Civil Guard and the Coast Guard. The defense budget in 2005 totaled \$7.3 million.

## 18 INTERNATIONAL COOPERATION

Equatorial Guinea joined the United Nations on 12 November 1969; it participates in ECA and several nonregional specialized agencies. The nation is also a member of the African Development Bank, the ACP Group, the Central African States Development Bank (BDEAC), G-77, and the African Union. In December 1983, it joined the Central African Republic, the Congo, Chad, Cameroon, and Gabon in the Central African Customs and Economic Union (Union Douanière et Économique de l'Afrique Centrale—UDEAC); this organization is now known as the Monetary and Economic Community of Central Africa (CEMAC). The nation is part of the franc zone. Equatorial Guinea holds observer status in the WTO and the OAS. The country is part of the Nonaligned Movement. In environmental cooperation, Equatorial Guinea is part of the Convention on Biological Diversity, CITES, the Kyoto Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The agricultural industry employs the majority of the population. The country exports cocoa, coffee, and timber, and imports large quantities of foodstuffs. Production of oil began in 1991, and substantial new reserves were discovered in 1995. Trace deposits of a few minerals have been located. Industry is limited to a few processing facilities for agricultural products. In 1990, compliance difficulties with the IMF structural adjustment program and the government's repeated violations of human rights resulted in the suspension of most foreign economic assistance. The arrival of significant oil revenues, however, has caused the economy to be viewed with guarded optimism. Continuing fiscal mismanagement and the lack of economic reforms casts doubt on the government's ability to fully capitalize on the oil revenues. Nonetheless, oil accounts for 90% of exports and over 60% of GDP. Oil production rose from 120,000 barrels per day (bpd) in 2001 to 420,000

bpd in 2005. Other natural resources that are undeveloped are titanium, iron ore, manganese, uranium, and gold.

In 1985, Equatorial Guinea joined the CFA franc zone, improving the economic situation. In 1994, France devalued the CFA franc, causing its value to drop in half overnight, and raising the value of exports. Increased export revenue, together with newly exploited petroleum reserves, caused GDP to rise dramatically (over 50%) during 1996 and 1997. Between 2001 and 2005 GDP annual average growth rate was 27.78%, with a high of 65.6% in 2001 and a low of 6% in 2005. The growth rates in GDP were a result of discovery of new oil reserves and increases in the production of oil.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Equatorial Guinea's gross domestic product (GDP) was estimated at \$25.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$50,200. The average inflation rate in 2005 was 5%. It was estimated that agriculture accounted for 2.4% of GDP, industry 95.5%, and services 2.2%.

## 21 LABOR

The majority of the population was engaged in subsistence agriculture in 2002. The unemployment rate in 1998 (the latest year for which data was available) was estimated at 30%. There was no data available on the size of the country's workforce.

As of 2005, workers had the right to form unions, but there was no legislation to prohibit antiunion discrimination in the workplace. In 2001, the Small Farmers Syndicate became the first legally recognized union. As of 2005, it was still the country's only legally recognized union, and there was no collective bargaining.

Wages are set by the government and employers, with little or no input by workers. There was a statutory monthly minimum wage of about \$100 in 2002 for unskilled workers, with the minimum for oil sector professionals set at 10 times that amount. The legal minimum age for employment is 14, but the government does not enforce this. The standard legal workweek is set at 35 hours, with a 48-hour rest period.

## 22 AGRICULTURE

Agriculture is the main economic activity, involving about 71% of the economically active population. An estimated 8% of the land is engaged in crop production. The island of Bioko has year-round rainfall, and the prevailing economic activity is cocoa cultivation. In Río Muni (on mainland Africa), where 80% of the population lives, food crops are the dominant economic activity, and cash crop cultivation is secondary. Agriculture (including forestry and fishing) accounts for about 50% of GDP and 60% of exports. The main food crop is cassava, of which 45,000 tons were produced in

2004. Sweet potatoes are the second-largest food crop, with 36,000 tons in 2004, followed by bananas (20,000 tons).

Before independence, the main cash crops were cocoa, coffee, and palm kernels for palm oil. Guinean cocoa, of excellent quality, had an annual production of 38,000 tons in 1967. However, production experienced a sharp drop in the 1970s, falling to 4,512 tons in 1980. In 2004, production was estimated at 2,400 tons. Coffee of comparatively poor quality is grown in northern Río Muni, along the Cameroon border. The preindependence production of 8,959 tons in 1967 fell to 500 tons in 1978; the decline was mainly caused by forcible transfer of coffee farmers to the Bioko cocoa plantations. Coffee production was an estimated 3,500 tons in 2004. Actual cocoa and coffee production is higher, but official figures do not take into account quantities smuggled abroad rather than delivered to state marketing agencies.

### 2<sup>3</sup> ANIMAL HUSBANDRY

Cattle and poultry production is rapidly reaching its preindependence levels of self-sufficiency with the financial help of the African Development Bank. However, production of domesticated animals is hindered by the presence of trypanosomiasis and other tropical deterrents. In 2005 there were 37,600 sheep, 9,000 goats, 6,100 hogs, and 5,000 cattle.

### 2<sup>4</sup> FISHING

The fishing industry gained strength through the 1980s and is now almost entirely modernized; a tuna processing plant went into operation in 1990. Annobón subsists almost entirely on fishing and retains its traditional preeminence in offshore whaling and turtle gathering. Bioko is also a major fishing center, the chief catches being perch, tuna, mackerel, cod, pike, shark, and crayfish. The country's own catch was about 3,500 tons in 2003.

### 2<sup>5</sup> FORESTRY

Timber from Río Muni is Equatorial Guinea's leading export. Forests cover over 62% of the land area. The Río Muni area on the mainland produces okoumé and akoga from rain forests of considerable age. Even though the government has given permission to foreign firms, exploitation is difficult due to infrastructural problems. The government enacted a new forestry action plan in 1990 in an effort to strengthen the sector's development. In 2004, roundwood production was estimated at 811,000 cu m (28.6 million cu ft). In 2004, exports of forest products amounted to \$97 million.

### 2<sup>6</sup> MINING

Petroleum, the country's leading industry and export commodity in 2004, was associated with Equatorial Guinea's rapid economic growth since 1996; natural gas was the country's fourth-leading industry. Geological surveys indicated occurrences of bauxite, alluvial gold, copper, diamond, titanium-bearing sands, ilmenite beach sands, lead, phosphates, zinc, iron, manganese, tantalum, and uranium in Río Muni; there has been no significant exploitation. A 1981 law stipulated that all mineral deposits were state

property. Artisanal miners produced 500 kg of gold in 2004, and clay, gravel, and sand were also presumably produced.

### 2<sup>7</sup> ENERGY AND POWER

As of 1 January 2003, electric power generating capacity stood at 15.4 MW, of which 20% was hydroelectric and 80% conventional thermal. Production in 2002 was estimated at 30 million kWh, while consumption was placed at 25 million kWh. However, poor management and aging equipment has resulted in prolonged power blackouts. As a result, small gasoline and diesel-powered generators are used as backup power sources.

Since 1995, when significant offshore oil discoveries were made in the Gulf of Guinea, oil has become Equatorial Guinea's most important export. According to World Oil, Equatorial Guinea's proven oil reserves were put at 1.28 billion barrels, as of 1 January 2005. In 2005, oil production was estimated at 420,000 barrels per day, of which crude oil accounted for over 90%. Domestic oil demand and net oil exports in 2004 were estimated at 2,000 barrels per day and 369,700 barrels per day, respectively.

Equatorial Guinea has proven natural gas reserves estimated, as of 1 January 2005, of 1.3 trillion cu ft, according to the Oil and Gas Journal. The country's natural gas reserves are located off Bioko island, which is the site of the nation's capital, Malabo, and mainly in the Zafiro and Alba oil and gas fields. Domestic consumption of natural gas is estimated for 2002 at 45 billion cu ft.

### 2<sup>8</sup> INDUSTRY

Equatorial Guinea's manufacturing sector is very small. Sawmilling leads industrial production, followed by cement, bleach, and tuna canning plants. Small-scale soap manufacturing and food processing operations round out the industrial sector. The petroleum mining industry is growing rapidly, as large oil reserves have been discovered. Oil in 2004 accounted for over 88.9% of GDP and over 97% of exports. Proven oil reserves are estimated at 563.5 million barrels. Oil production increased from 17,000 barrels per day in 1996 to around 420,000 barrels per day in 2005. There is a methanol plant on Bioko island that processes natural gas. Proven natural gas reserves are estimated at 68.53 billion cubic meters.

### 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Spain, China, and several other countries have provided Equatorial Guinea with technological assistance.

### 3<sup>0</sup> DOMESTIC TRADE

Most interior wholesale and retail trade has been maintained through *factorías* (small general agencies) managed by individual Spanish owners or the representatives of small firms. Most trade occurs in the major cities of Malabo and Bata.

Consumer price inflation has fluctuated quite a bit throughout the last decade. During the 2001–2005 period, inflation averaged 6.8% per annum. Recent economic policies are designed to encourage foreign investment.

Normal business hours are 8 AM to 12 noon and 4 to 8:00 PM, Monday through Friday, and 9 AM to 2 PM on Saturday. Spanish is the dominant business language, while French and English are also spoken.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.**3<sup>1</sup> FOREIGN TRADE**

Exports were estimated at \$6.94 million in 2005, while imports came to \$2.92 million leading to a trade surplus of \$4.02 billion. Leading exports for 2004 were petroleum (98.7%), timber (1.2%), and cocoa (0.1%). Imports consisted primarily of machinery (77%), building material (7.1%), food and beverages (3.6%), and petroleum products (1.9%). Spain, the United States, and China are Equatorial Guinea's principal export markets. Recent figures from the IMF reveal that exports to China rose rapidly in 2004, from \$374 million in 2003 to \$889 million.

**3<sup>2</sup> BALANCE OF PAYMENTS**

New oil and natural gas production improved Equatorial Guinea's balance of payments situation since the mid-1990s. Additional oil production that came online in 2001, combined with methanol gas exports from the new CMS-Nameco plant, increased export earnings in the early 2000s. Imports were growing as well: in 2004, purchases of equipment for the oil and gas sector accounted for over three-quarters of imports. The country's debt service ratio fell from 20% of GDP in 1994 to less than 1% in 2005. Although relatively low in terms of covering the payments of imports, foreign exchange reserves were increasing slightly in the early 2000s. Many of the aid programs Equatorial Guinea benefited from in the 1980s and 1990s had diminished or ceased altogether by 2000. Some project assistance continued to be provided by France and the EU, as well as by China and Cuba.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Equatorial Guinea's exports was \$6.9 billion while imports totaled \$2.9 billion resulting in a trade surplus of \$4 billion.

**3<sup>3</sup> BANKING AND SECURITIES**

The Bank of Issue of Equatorial Guinea was established on 12 October 1969 as the central bank. In January 1985, the country joined

the CFA zone, and the Bank of the Central African States (Banque des États de l'Afrique Centrale-BEAC) became its central bank. In 1993, a supranational supervisory authority was created for BEAC states, called the Commission Bancaire de l'Afrique Centrale (CO-BAC). The story of commercial banking since independence has been a sorry one, and the lack of cheap and efficient commercial credit is blamed as a major obstacle to economic growth. Banking functions prior to independence were carried out mainly by the Banco Exterior de España (BEE), in association with two smaller Spanish institutions. Spanish banks almost stopped functioning after independence and withdrew altogether in 1972. As of 2002, there were only two banks operating in the country, with net holdings of \$53 million.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$65.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$88.3 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There are no securities exchanges.

**3<sup>4</sup> INSURANCE**

No information is available.

**3<sup>5</sup> PUBLIC FINANCE**

Equatorial Guinea made its first standby loan agreement with the IMF in 1985 and negotiated a structural adjustment agreement in 1988. Government problems with budget overruns and a continuing, structural imbalance of trade frustrated IMF technicians, who stopped payments in 1990. Nonetheless, the government reduced the 1990 budget and enacted key portions of the structural adjustment program: import price liberalization, economic diversification, utility rate increases, clarification of property rights, and private sector stimulus. With these steps taken and with petroleum revenues increasing, the IMF restarted the blocked structural adjustment program in December 1991. By 1994, however, repeated human rights violations and the failure to enact economic reform led to the suspension of most foreign economic assistance. In 1998, the government privatized distribution of petroleum products; petroleum revenues, along with sales taxes and duties, account for two-thirds of government revenues.

The US Central Intelligence Agency (CIA) estimated that in 2005 Equatorial Guinea's central government took in revenues of approximately \$1.9 billion and had expenditures of \$711.5 million. Revenues minus expenditures totaled approximately \$1.2 billion. Total external debt was \$248 million.

**3<sup>6</sup> TAXATION**

Equatorial Guinea has a standard corporate tax rate of 25%, with a minimum 1% rate on turnover. Capital gains are subject to a 25% tax rate, although the tax can be deferred if all of the proceeds are employed in the purchase of new fixed assets within the country within a three-year period or should a merger take place. Dividends paid to nonresidents are subject to a 40% tax. Interest and

royalties (such as from intellectual property and/or patents) are also subject to the 40% rate.

### 37 CUSTOMS AND DUTIES

As a member of the six-nation Central African Economic Community (CEMAC), Equatorial Guinea shares customs systems and practices with its neighbors. The CEMAC makes trade with Central African countries much easier and more efficient. The tariff system is based on the CIF (cost, insurance, freight) value of imported goods, and is divided into four simple categories: basic necessities are taxed at a rate of 5%, raw materials and capital goods at 10%, intermediate and miscellaneous goods at 20%, and consumer goods at 30%. There is also a fiscal tax of 15–40% charged on all imports except alcohol and tobacco, for which there is a different rate, and a turnover tax of 5–12%.

### 38 FOREIGN INVESTMENT

Spain and France are the major aid donor countries working with the Equatorial Guinean government. Spain conditioned aid, however, on improvements in the human rights record and progress in the democratization effort. Other donors include China, Nigeria, and several other Western and Middle Eastern countries.

Foreign investment in the petroleum and lumber industries increased sharply during the late 1990s. Timber production increased by 70% in 1997 and petroleum production reached 85,000 barrels per day in the same year. Offshore drilling operations began production in 2000. In 2001, Equatorial Guinea had the world's fastest-growing economy as oil production, with Exxon-Mobile as the main producer, reached 200,000 barrels per day. The inflow of foreign direct investment (FDI) jumped from an average of \$22 million a year in 1997 and 1998 to an average of \$120 million in 1999 and 2000. FDI inflow was \$88 million in 2001. However, between 2002 and 2004 FDI inflow averaged \$1.14 billion per year. According to figures from the UN Conference on Trade and Development (UNCTAD), Equatorial Guinea received the third-largest amount of foreign direct investment in sub-Saharan Africa in 2004, totaling \$1.66 billion.

### 39 ECONOMIC DEVELOPMENT

During the 1990s, in conjunction with Spain, Equatorial Guinea focused on education, health, administrative reform, and economic infrastructures with little success. According to a 1996 International Monetary Fund (IMF) report, the production base of Equatorial Guinea was extremely small, the level of human capital very weak, and the country had no basic infrastructure. Mismanagement and corruption were widespread in public administration. US oil companies have invested in development of the country's infrastructure.

New oil and gas exploration and development of existing fields resulted in rapid growth in energy exports in the early 2000s. The government sold some state-owned enterprises, and attempted to establish a more favorable investment climate. As of 2005, there had been no formal agreements or arrangements with the IMF since 1996.

### 40 SOCIAL DEVELOPMENT

Old age, disability, sickness, and work injury laws cover employees, public officials, and military personnel. These programs are

funded primarily from employers and the government, with a small contribution from the employee. Family allowances are also paid. Workers' medical benefits include free medical care, hospitalization, and medicine. However, subsistence farmers and agricultural workers are not covered by formal social security systems. The great majority of the population goes without potable water, electricity, basic education, or even minimal health care.

Women have the same legal rights as men, but in practice face discrimination. Male-dominated traditions and customs lead many parents to withdraw their daughters from school. Men are accorded favorable inheritance and property rights. Polygamy is common within the Fang ethnic group. Domestic violence against women is commonplace, and the government does not prosecute perpetrators. As of 2004, forced marriages were customary.

Human rights violations are commonplace. Human rights abuses include incommunicado detention, extrajudicial killings, torture, arbitrary arrest and detention, and searches without warrants.

### 41 HEALTH

The national health system of Equatorial Guinea consists of four levels: health posts in each village of 600 people, dispensaries in health centers with a qualified nurse at the intermediate level, district level hospitals, and two referral hospitals at the most centralized level. In 2004, there were an estimated 25 physicians, 40 nurses, 1 dentist, 1 pharmacist, and 2 midwives per 100,000 people.

In 2005, the infant mortality rate was estimated at 91.16 per 1,000 live births. The maternal mortality rate in 1990 was 820 women per 100,000 live births. Life expectancy in 2005 was 49.70 years, with an overall death rate of 12.9 per 1,000 people.

Major health problems (1992 data) are preventable diseases, mainly malaria (increasingly chloroquine resistant), parasitic disease, upper respiratory infections, gastroenteritis, and complications of pregnancy. In the continental zone, sickle cell anemia is common. Approximately 61% of the country's children were immunized against measles between 1991 and 1994.

The HIV/AIDS prevalence was 3.40 per 100 adults in 2003. As of 2004, there were approximately 5,900 people living with HIV/AIDS in the country. There were an estimated 370 deaths from AIDS in 2003.

### 42 HOUSING

In 1995 there were about 50,000 households with an average of eight persons per household.

### 43 EDUCATION

Education is free and compulsory from 6 to 11 years of age. Primary education is for five years followed by four years of secondary in the first stage and three subsequent years of secondary education in the second stage.

In 2001, about 35% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2001 was estimated at about 87% of age-eligible students; 93% for boys and 81% for girls. The same year, secondary school enrollment was about 24% of all age-eligible students. It is estimated that about 45% of all students complete their primary education. The student-to-teacher ratio for primary school was about 43:1 in 2000; the ratio for secondary school was about 23:1.

The Universidad Nacional de Guinea Ecuatorial is the primary institute of higher learning. The adult literacy rate for 2004 was estimated at about 84.2%, with 92.1% for men and 76.4% for women. As of 2003, public expenditure on education was estimated at 0.6% of GDP, or 1.6% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Malabo Public Library, housed in three branches, contains some 17,000 volumes. The Claretian Mission at Malabo has about 4,000 volumes of Africana and Guineana, and an archaeological-ethnographic museum. In Santa Isabel, the Mission Ethnological Museum houses a collection of the art of the Bubi people and stone sculptures of the Druids.

#### 45 MEDIA

In 2003, there were only about 9,600 mainline telephones in use throughout the country. The same year, there were about 41,500 mobile phones in use nationwide.

Equatorial Guinea has two government-owned radio stations broadcasting in Spanish, French, and local languages, including Fang, Bubi, and Combe. The only privately owned radio station is held by Teodoro Nguema Obiang Mangue, the president's son. There is one television station, also government-owned. Cable television is also available. In 1997, there were about 180,000 radios and 4,000 televisions nationwide. In 2002, there were 1,800 Internet subscribers served by three service providers.

*Poto Poto*, published in Spanish and Fang, may be the only daily national newspaper. There were five general-interest newspapers published regularly in 2002. *La Gaceta*, a monthly publication with informal connections to the Government; *El Correo Guineo Ecuatoriano*, a bimonthly newspaper published by the Gaceta group; *La Opinion*, an opposition newspaper published every 2 to 3 weeks; *El Tiempo*, an opposition newspaper; and *Ebano*, a twice monthly publication of the Ministry of Information, Tourism, and Culture. *Egyptian Mail* is a national English-language publication.

Although the constitution of Equatorial Guinea provides for free speech and a free press, the government is said to severely restrict these freedoms in practice, censoring all criticism of the president and security forces. Access to foreign publications is limited.

#### 46 ORGANIZATIONS

The government generally restricts the formation of nongovernmental organizations and associations. Apart from official and semiofficial organizations, most non government organizations are religious societies and sports clubs. In 2004, the only recognized labor union was the Small Farmers Syndicate. There is also an Equatorial Guinea Press Association. There is an International Lion's Club and the Red Cross has an active chapter.

#### 47 TOURISM, TRAVEL, AND RECREATION

Because Equatorial Guinea has undergone many years of international isolation, its tourism industry is very undeveloped, with limited hotel space available in Malabo and Bata. Attractions include the Spanish colonial architecture of Malabo, the beaches, and the tropical rain forests. A certificate of vaccination against yellow fever is required. A valid passport is needed; there are no visa requirements.

In 2004, the US Department of State estimated the cost of staying in Equatorial Guinea at \$218 per day.

#### 48 FAMOUS EQUATORIAL GUINEANS

Francisco Macías Nguema (1924–79) was president until his overthrow and execution in 1979. His successor, Lt.-Col. Teodoro Obiang Nguema Mbasogo (b.1946), has ruled Equatorial Guinea since 1979.

#### 49 DEPENDENCIES

Equatorial Guinea has no territories or colonies.

# ERITREA

State of Eritrea  
*Hagere Ertra*

**CAPITAL:** Asmara

**FLAG:** A red triangle divides the flag into two right triangles; the upper triangle is green, the lower one is blue. A gold wreath encircling a gold olive branch is centered on the hoist side of the red triangle.

**ANTHEM:** *Eritrea National Anthem* beginning "Eritrea, Eritrea, Eritrea."

**MONETARY UNIT:** After establishing independence from Ethiopia, Eritrea used Ethiopian currency until November 1997. At this time the nafka was issued to replace the Ethiopian birr at approximately the same rate. 1 nafka = \$0.06897 (or \$1 = 14.5 nafka) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 24 May; Martyrs' Day, 20 June; Anniversary of the Start of the Armed Struggle, 1 September. Movable holidays include 'Id al-Fitr, 'Id al-Adha, and 'Id Milad al-Nabi. Movable Orthodox Christian holidays include Fasika and Meskel.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Eritrea is located in eastern Africa. The area occupied by Eritrea is slightly larger than the state of Pennsylvania with a total area of 121,320 sq km (46,842 sq mi). Eritrea shares boundaries with the Red Sea on the NE, Djibouti on the SE, Ethiopia on the S, and Sudan on the W, and has a total land boundary of 1,626 km (1,010 mi) and a coastline of 2,234 km (1,388 mi).

The capital city, Asmara, is located in the central portion of the country.

## <sup>2</sup> TOPOGRAPHY

The topography of Eritrea is dominated by the extension of the Ethiopian north-south trending highlands, descending on the east to a coastal desert plain and on the northeast to hills and on the southwest to flat-to-rolling plains. Approximately 4% of the land is arable. Natural resources include gold, potash, zinc, copper, salt, and fish. Frequent droughts, soil erosion, deforestation, and overgrazing all present environmental challenges.

## <sup>3</sup> CLIMATE

Highs of 60°C (140°F) are not uncommon in the Danakil Depression in Eritrea's southernmost province, Denkalia. This is reportedly the hottest spot in the world. It is cooler and wetter in the central highlands. The western hills and lowlands are semiarid. Heavy rainfall occurs during June, July, and August, except in the coastal desert.

## <sup>4</sup> FLORA AND FAUNA

The giraffe and baboon are extinct in Eritrea. Populations of lion, leopard, zebra, species of monkey, gazelle, antelope, and elephant continue to thrive, however. The coastal areas are home to many

species of turtle, lobster, and shrimp. Plant life includes acacia, cactus, aloe vera, prickly pear, and olive trees. As of 2002, there were at least 112 species of mammals and 138 species of birds throughout the country.

## <sup>5</sup> ENVIRONMENT

The most significant environmental problems in Eritrea are deforestation, desertification, soil erosion, overgrazing, famine, and damage to the infrastructure from warfare. In 2000, about 15.7% of the total land area was forested. In 2003, about 4.3% of the total land area was protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included nine types of mammals, seven species of birds, six types of reptiles, nine species of fish, and three species of plants. Threatened species include the spotted eagle, the cheetah, the black crowned crane, the great white shark, the African wild ass, and the green turtle.

## <sup>6</sup> POPULATION

The population of Eritrea in 2005 was estimated by the United Nations (UN) at 4,670,000, which placed it at number 113 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.6%, a rate the government viewed as too high. Although the fertility rate declined from 6.1 births per woman in 1995 to 4.8 in 2002, the government still considered the fertility rate too high, with only 5% of married women using contraception. The projected popula-

tion for the year 2025 was 7,244,000. The population density was 40 per sq km (103 per sq mi).

The UN estimated that 19% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 5.63%. The capital city, Asmara, had a population of 556,000 in that year.

## 7 MIGRATION

During Eritrea's fight for independence, more than 750,000 fled the country, 500,000 of whom went to Sudan. Following Eritrea's liberation in 1991, many of these refugees returned voluntarily, although there were still some 315,000 in Sudan at the end of 1997. An Eritrean plan for repatriation from Sudan was implemented between 1994 and June 1995, with 25,000 refugees successfully repatriated. Another 80,000 returned on their own. Results of a data collection exercise conducted in Sudan in April 1998 suggested that 90% of Eritrean refugees (some 130,000) were willing to be repatriated. The Eritrean/Ethiopian border conflict had also displaced more than 300,000 people within Eritrea as of 1999. The United Nations High Commissioner for Refugees (UNHCR) began repatriating 150,000 Eritrean refugees from Sudan in 2001 due to renewed diplomatic relations between the two countries. In 2004 UNHCR assisted 9,893 voluntary returnees from Eritrea to Sudan.

In 2004, there were 131,119 refugees in Eritrea, mainly from Somalia and Sudan. Also in 2004, there were 58,953 internally displaced people. There were also 449 asylum seekers that year, mainly Ethiopians. However, over 6,000 Eritreans sought asylum in sixteen countries in 2004, mainly in Ethiopia, Sudan, the United Kingdom, Germany, and Sweden.

In 2005, the net migration rate for Eritrea was estimated as zero migrants per 1,000 population, a significant change from -22.5 per thousand in 1990.

## 8 ETHNIC GROUPS

Ethnologists classify Eritreans by nine prominent language groups. The Afar live in the southeast, the Tigrinya in south central Eritrea, and the Tigre in the north. The Saho live in the south central/southeast. The Bilen live in central Eritrea, the Hadareb in the northwest, and the Kunama and Nara in the southwest. The ninth group, the Rashaida, inhabit the northwest. The Tigrinya (50% of the population), Tigre and Kunama (40%), Afar (4%), and Saho (3%) are believed to be the largest ethnic groups.

## 9 LANGUAGES

No official language has been proclaimed. However, Arabic and Tigrinya are the working languages of the Eritrean government. Tigre is widely spoken in the western lowlands, on the northern coast, and in parts of the Sahel. Afar, Amharic, Kunama, and other minor ethnic group languages are also spoken.

## 10 RELIGIONS

The largest religions in Eritrea are Sunni Muslim (approximately 50%), Orthodox Christian (approximately 40%), Eastern Rite and Roman Catholic (approximately 5%), and the Evangelical Church of Eritrea (approximately 2%). Other minority groups include Seventh-Day Adventists, Jehovah's Witnesses, Baha'is, Buddhists, and Hindus. Geographically, Islam predominates in the eastern

and western lowlands while Christianity is dominant in the highlands. Along ethnic lines, members of the Tigrinya group are primarily Orthodox Christian. Most of the Tigre, Nara, Afar, Saho, Beja, Rashaida, and Blen are Muslim. Over 50% of the Kunama are Roman Catholic.

Though the constitution provides for freedom of religion, the government has placed a number of restrictions on "Pente" groups, or all religious organizations other than the four government-sanctioned religions of Orthodox Christians, Muslims, Catholics, and the Evangelical Church of Eritrea. In 2001, the government began closing all Pente facilities and by 2002 had issued a decree that all religious groups must be officially registered in order to continue practices. This has effectively allowed for the closing of all facilities not belonging to the four principal groups. There is a standing law prohibiting political or other gatherings in private homes of more than five individuals, but it is unclear as to whether or not this law has been enforced against the members of the Pente groups.

Jehovah's Witnesses are particularly subject to discrimination both socially and from the government since their refusal to participate in national service is considered unpatriotic. Besides receiving prison sentences for evading national service (up to three years), a number of Jehovah's Witnesses have been denied or have had trouble obtaining passports, exit visas, identification cards, and trading licenses. Some have been forced from government-subsidized housing.

## 11 TRANSPORTATION

The infrastructure suffered some damage during the war for independence with Ethiopia. Massawa, the principal port, serves Eritrea and northern Ethiopia. The port, which has a 7-m (24-ft) channel and pier facilities capable of accommodating five or six large vessels, was damaged by bombing raids from February 1990 to May 1991. In early 1992, agreements were concluded between the Eritrean and Ethiopian governments to make Assab a free port for Ethiopia, making Ethiopia dependent on Eritrean ports for its foreign trade. Assab has an oil refinery and facilities capable of handling more than one million tons of goods annually. As of 2005, Eritrea had six ships (1,000 GRT or over), totaling 16,069 GRT.

Eritrea had 3,859 km (2,392 mi) of roads, of which 810 km (503 mi) were paved in 2002. A railway, which was almost completely destroyed during the war, once extended 317 km (197 mi) from Massawa on the Red Sea to Asmara, terminating near the Sudanese border. Reconstruction work on this railway, starting from Massawa, began in summer 1994. As of 2004, Eritrea had 306 km (190 mi) of rail line, all of it narrow gauge.

There were 17 airports and airfields in the country as of 2004, only 4 of which had paved runways as of 2005. The airport at Asmara (Yohannes IV) handles international jet transportation. In 1997, (the latest year for which data is available) an estimated 174,000 passengers were carried on scheduled international and domestic flights. Repair of the railroad and highway network is necessary for the revival of agriculture and industry. The government of Eritrea has established a budget for transport rehabilitation, two-thirds of which is allocated for road repair to ensure that all parts of the country have access to modern roads.

LOCATION: 15° N; 39° E. BOUNDARY LENGTHS: Djibouti, 113 kilometers (70 miles); Ethiopia, 912 kilometers (566 miles); Sudan, 605 kilometers (375 miles); coastline, 1,151 kilometers (717 miles). TERRITORIAL SEA LIMIT: 12 miles.

## 12 HISTORY

Eritrea's strategic location on the Red Sea has made the history of this country one dominated by colonial rule. Turks, Egyptians, Italians, British, and Ethiopians have all colonized Eritrea over the years. During the modern European scramble for Africa, Eritrea fell under the colonial rule of Italy in 1890. Sustained resistance to Italian rule developed into a unified sense of Eritrean nationalism among the various ethnic groups in the country. For the first time, Eritrea was welded into a single political entity with unified political and social structures, which cut across the traditional divisions. It broadly followed the pattern of political development experienced in all other European colonies in Africa and which, in the vast majority of cases, formed the basis for eventual independence. Between 1936 and 1941 Eritrea, along with Italian Somaliland and as part of the Italian East African Empire, was ruled together

with Ethiopia for the first time. In 1941, after the Italians were defeated by Allied forces, Eritrea and Somaliland were placed under the British Military Administration while Ethiopia regained its independence under Emperor Haile Selassie. As a loser in the World War II, Italy relinquished its legal right to its colonies in a 1947 treaty. A Four Power Commission (Britain, France, the Soviet Union, and the United States) was set up to decide on how to dispose of the former Italian colonies through negotiations. The agreement was to submit the matter to the UN General Assembly if negotiations were unsuccessful. The four countries could not agree on Eritrea's future. Britain proposed partition of Eritrea, with the western parts to go to the Sudan and the highlands and coastal strip to go to Ethiopia, while the United States suggested complete union with Ethiopia. France proposed Trust Territory with Italian administration while the Soviet Union argued for Trust Territory under international administration. The problem

was referred to the United Nations (UN), which set up a commission of five countries (Burma, Guatemala, Norway, Pakistan, and South Africa) to study and propose a solution. The idea of partition was rejected outright. Guatemala and Pakistan proposed the standard formula of the UN Trusteeship leading to independence, but others favored close association with Ethiopia. For example, Norway wanted full union while Burma and South Africa favored federation with some autonomy. Meanwhile, Ethiopian emperor Haile Selassie was working hard on the diplomatic front to acquire Eritrea. The United States backed Eritrea's federation with Ethiopia and UN Resolution 390A was passed to that effect. This decision was made without giving due attention to the overwhelming presence of groups who were mobilizing the population for independence. From September 1951 Eritrea became an autonomous territory federated with Ethiopia. US strategic interests in the Red Sea and its close ties with the emperor played a major role in influencing the final decision. The United States put forth enormous pressure to have Ethiopia administer Eritrea, under "the Sovereignty of the Ethiopian Crown."

The federation lasted from September 1951 to 1962, but did not bring about harmonious integration of the entities. Ethiopia soon started to impose more direct rule at its will. The UN ignored Eritrea's protests against Ethiopia's intervention in their autonomous rule, and Ethiopia formally annexed Eritrea in 1962.

A year earlier, in September 1961, the Eritrean Liberation Front (ELF) launched an armed struggle for independence. By 1970, when the Eritrean People's Liberation Front (EPLF) was created from within the Eritrean Liberation Front (ELF), Eritrea had become the emperor's main preoccupation. EPLF is the organization that led Eritrea to independence in 1991. After the emperor was overthrown in 1974, the self-styled Marxist military dictatorship, called Dergue, stepped up its campaign against Eritreans. With the help of Soviet Union, Korea, Cuba, and other countries in the Eastern Bloc, the Dergue sustained a very bitter war over Eritrea between 1978 and 1991. The war left Eritrea in complete ruins and created enormous land-mine and population-displacement problems. In terms of infrastructure, all basic services were virtually disrupted. Most towns were without services—such as electricity, water, and transportation—for much of the war years. Industrial sectors were wiped out and the ports were destroyed. Ethiopian forces bombed Massawa extensively during the last days of the war, killing many civilians, destroying most of the buildings, and depopulating the area. Towards the end of the war, Ethiopia had 500,000 troops under arms, half of them in Eritrea. At no time did the Eritrean forces number more than 100,000. It is estimated that the Dergue had spent \$12 billion on military supplies for its war against Eritrea. In the 30 years of war, Eritrea lost more than 60,000 fighters and about 40,000 civilians. Hundreds of thousands were also forced into exile.

In May 1991, the EPLF captured the last Ethiopian outposts in Eritrea. Asmara, Eritrea's capital, was occupied on 24 May 1991. President Mengistu Haile Mariam fled Addis Ababa and the Tigrean People's Liberation Front (TPLF), which had also been fighting against the Dergue since 1975, took over the Ethiopian government. The EPLF created a provisional government for Eritrea, until a referendum was carried out to determine the choice of the Eritrean people. The referendum was scheduled to take place in 1993. Although Eritrea had been absorbed into Ethiopia in 1962,

Eritreans—unlike many Ethiopians—did not regard their struggle as one of secession. They never recognized Ethiopian legitimacy over their territory; rather, they viewed their struggle as anticolonial, seeking to gain the independence they were denied by the UN in 1952. The referendum on 23–25 April 1993 proved that this was indeed the case. The great majority—98.5% of the 1,173,000 registered voters—voted for independence. The UN certified the results and on 24 May 1993, Eritrea became Africa's 52nd independent state. Four days later it was admitted to the United Nations and the OAU.

The colonial boundary between Eritrea and Ethiopia, defined in a treaty between Italy and Ethiopia in July 1900, became the international boundary between the two sovereign states without modification, leaving Ethiopia a landlocked state once more. The decision was consistent with the cardinal article of an OAU charter adopted in 1963, stipulating that colonial boundaries were to be respected, and until May 1998, relations between the two countries were good. The Eritrean ports of Assab and Masawa remained open for Ethiopia free of charges.

In May 1998, disagreement over the sovereignty of border villages erupted into all-out war. Between 2 and 6 May 1998, Eritrean soldiers invaded and occupied Badme, in northeastern Ethiopia. Other areas were subsequently occupied in Tigray State. Ethiopia later recaptured Badme, but fighting continued for two and a half years, interspersed with periods of inactivity. A US- and Rwanda-sponsored peace plan proposed in early June 1998 failed; so did arbitration efforts by the OAU with each side claiming to accept an OAU framework agreement while accusing the other of making impossible preconditions to its implementation.

The war, which according to the UN claimed the lives of an estimated 70,000 people on both sides, ended officially with a peace treaty, the Algiers Agreement, on 12 December 2000. Under the Algiers Agreement, some 4,200 UN soldiers commanded under the UN Mission in Ethiopia and Eritrea (UNMEE) remained on the border to monitor the so-called Temporary Security Zone (TSZ) that separates the two countries. Experts from the Eritrea Ethiopia Boundary Commission (EEBC) established in April 2002 physically demarcated the internationally recognized boundary. However, Ethiopia rejected, as unjust and illegal, the ruling of the Permanent Court of Arbitration in The Hague following its decision on 13 April 2002. Legally, the ruling was binding and final. The Ethiopian government announced in November 2004 that it accepted the EEBC ruling and urged Eritrea to accept its full implementation, but Prime Minister Meles Zenawi later said he would accept border demarcation only in undisputed areas. In October 2005 the Eritrean government banned UN flights in the 25-kilometer demilitarized TSZ, and by mid-November 2005 the UN Security Council expressed deep concern over rising tension in the shaky peace agreement over military movements by both parties towards the TSZ. In the last week of November 2005, the 15-member UN Security Council unanimously adopted a resolution that threatened action, including possible sanctions, to Eritrea if it did not immediately rescind its flight ban, and to Ethiopia if it did not reverse its military build-up. As of 6 December 2005 the military situation in the TSZ remained tense and potentially volatile.

Fallout from the war exacerbated the famine. A four-year drought resulted in malnutrition rates of between 15% and 30% in the under-five population by November 2005.

### 13 GOVERNMENT

After defeating the Ethiopian military government in May 1991, Eritrea functioned as a distinct political unit. Between the end of the war in May 1991 and the celebration of Independence Day in May 1993, the EPLF formed a provisional government to run the country. The provisional government was comprised of a 28-member executive council. This provisional government organized elections at the village, district, and provincial level throughout the country to broaden popular participation.

Following the referendum, in May 1993, an interim administration was created to govern for four years. In this government, a National Assembly was formed, consisting of the Central Committee of the EPLF and 60 other individuals. Ten out of the 60 seats were reserved for women. The assembly elected Isaias Afewerki president. He also served as commander-in-chief of the armed forces and chaired the executive branch—the State Council—whose members he nominated. The National Assembly ratified all of his nominations. This government was to serve until a constitutional commission prepared a constitution and the government organized elections.

In 1996, the 50-member constitutional commission submitted a draft document for public debate. It provided for multiparty democracy based upon Western standards featuring a full array of civil liberties. Ratified by referendum in 1997, the constitution called for national elections in May 1998, which were delayed by the war with Ethiopia, subsequently rescheduled for December 2001, and postponed indefinitely. By mid-2006, there were no elections in sight.

### 14 POLITICAL PARTIES

The Eritrean Liberation Front (ELF) started the armed struggle for the independence of Eritrea in September 1961. In 1970, the Eritrean People's Liberation Front (EPLF) evolved from the ranks of the ELF with a new vision and program. Initially, both fronts intensified the war against Ethiopia. Both the ELF and the EPLF were mixed Muslim-Christian groups. However, they differed in the way they dealt with religious, ethnic, and regional differences inside their organizations. For example, the ELF organized itself into relatively autonomous separate units by regional, and therefore typically religious and ethnic, divisions. The EPLF on the other hand was comprised of units with mixed religion, ethnic, and regional backgrounds. By 1977, the two parties controlled most of the countryside. However, with their contradictions at the breaking point in 1978, the parties fought an all-out war against one another. By 1981, the EPLF had defeated and chased the ELF from Eritrea, leaving it the lone party operating in the country.

One still unsettled issue is the nature and role of political parties. The EPLF government has opposed the creation of parties based on race, religion, region, or ethnicity. A split between Christian and Muslim-based parties would be disastrous because the Christian-Muslim divide in the country is about fifty-fifty. The EPLF itself is a good example of a party free of religious, ethnic, or regional basis. Since its inception in 1970, it represented a united front of people with very diverse political views who shared the common goal of obtaining the right of self-determination for Eritreans.

Following its defeat in 1981, the ELF leadership divided into more than a dozen different factions. Some ELF members joined the EPLF while others fled to Sudan. After 1991, most of the former leadership returned to Eritrea to accept positions in the government or to form businesses. Others continued to discredit the government from outside the country. The Eritrean Islamic Jihad, a militant terrorist group, is a notable example.

At its third Congress on 10–17 February 1994, the EPLF adopted a new name, the People's Front for Democracy and Justice (PFDJ), and committed itself to widening its popular appeal to all sectors of the Eritrean society. The National Assembly, dominated by the PFDJ, declared a ban on opposition political activity until the implementation of the constitution, thereby giving the PFDJ a monopoly on power. Though a political party law was drafted by a committee of the National Assembly in January 2001, it had yet to be debated and approved by the Assembly. Hence Eritrea remains a one-party state, with only the PFDJ allowed to operate legally.

### 15 LOCAL GOVERNMENT

During the years since independence in 1991, Eritreans have been participating in a process of electing governing councils for their villages, districts, and provinces. Between 1993 and 1997, both the central and local governments underwent a series of reorganizations. In 1996, Eritrea was restructured into six semiautonomous zones or regions, each consisting of several sub-zones. The change from ten provinces to six zones was controversial, but gradually won public acceptance.

Zones are administered by governors and have their own local assemblies. At the central level, the Ministry of Local Governments oversees local affairs, and concerns itself with formulating national policy, regulations, and research and manpower development, leaving implementation responsibilities to regional and local governments.

### 16 JUDICIAL SYSTEM

The legal system is a civil law system borrowed from Ethiopia's adaptation of the Napoleonic Code. The court system consists of courts of first instance, courts of appeals composed of five judges, and military courts, which handle crimes committed by members of the military. Traditional courts play a major role in rural areas, where village elders determine property and family disputes under customary law or in the case of Muslims, Shariah law.

Although the judiciary appears to function independently of the executive branch, it suffers from lack of resources and training and there are signs of executive interference. The new constitution promulgated in 1997 provides for democratic freedoms, such as free speech, free assembly, and free association.

The government clamped down on freedom of speech and the press, assembly, association, and religion, and in 2001 it closed all privately owned print media. According to international human rights agencies, including Human Rights Watch and Amnesty International, many journalists viewed as outspoken critics of the government have been arrested and held without trial. Eritrea also has a record of religious persecution over which the US State Department declared it a Country of Particular Concern in both 2004 and 2005. Human rights groups were not permitted to operate in the country, except for the International Committee of the Red Cross (ICR).

## 17 ARMED FORCES

In 2005 active armed forces personnel numbered around 201,750 with a reported 120,000 reservists. The Army constituted an estimated 200,000 personnel, whose equipment included 150 main battle tanks, 40 reconnaissance vehicles, 40 armored infantry fighting vehicles/armored personnel carriers, and more than 170 artillery pieces. The Navy numbered 1,400 members. Primary naval units consisted of eight patrol/coastal vessels and three amphibious land craft. There were 800 members of the Air Force, which had 17 combat capable aircraft, including 13 fighters, in addition to 1 attack helicopter. The defense budget in 2005 totaled \$74 million.

## 18 INTERNATIONAL COOPERATION

Eritrea won its independence from Ethiopia 24 May 1993 and joined the United Nations later that year. The country has since joined several specialized UN agencies, such as the FAO, ICAO, IAEA, IFC, UNESCO, UNIDO, the World Bank, and the WHO. Eritrea is a member of the African Union, the ACP Group, the African Development Bank, the New Partnership for Africa's Development (NEPAD), and G-77. It also belongs to COMESA and the Community of Sahel and Saharan States (CENSAD).

A border dispute with Ethiopia resulted in war from 1998–2000. The United Nations Mission in Ethiopia and Eritrea (UN-MEE) was established in 2000 to monitor the cessation of hostilities agreement made between the two countries, both of which later accepted a 2002 Boundary Commission delimitation decision. Eritrea is part of the Nonaligned Movement. In environmental cooperation, Eritrea is part of the Convention on Biological Diversity, CITES, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The Eritrean economy has yet to stabilize after years of armed struggle against the Ethiopian government. The population is still largely dependent on food aid. Agriculture and raising of livestock occupy over 80% of the population, taking place throughout the country, in both the highlands and lowlands. Long-term prospects for agricultural development appear to be strongest in the western lowlands. A small industrial sector shows signs of growth potential, but infrastructure and skilled labor is lacking.

The natural resource profile of Eritrea is not yet known with certainty. Known mineral resources include copper, zinc, lead, gold, silver, marble, granite, barite, feldspar, kaolin, talc asbestos, salt, gypsum, and potash. Petroleum resources are also suspected, located offshore.

The military regime that ruled Ethiopia from 1974 to 1991 nationalized all housing and all large- and medium-sized businesses and services, including banks, in Eritrea. The postindependence government has denationalized housing, and is committed to denationalization of business and services. As of 2002, there were approximately 2,000 manufacturing companies operating in Eritrea: all but 45 were private enterprises, and of the state-owned businesses, 35 had been sold to private interests and 10 were awaiting privatization.

Eritrea's most significant economic assets may be its unspoiled coastline, which offers some of the best fishing and underwater diving in the world, and its two ports on the Red Sea.

The two-year war with Ethiopia (1998–2000) halted foreign investment. Fears of a resurgence of hostilities, combined with poverty, illiteracy, and a weak transportation and communications infrastructure also hamper the investment climate. The war greatly slowed economic growth (the economy contracted by 9% in 2000), largely due to a disruption in trade relations between Eritrea and Ethiopia. Eritrea's expenditures on defense and relief amounted to 23.5% of GDP in 1999.

The GDP growth rate was 1.0% in 2004, down from 1.8% in 2002, and 2.0% in 2003; in 2005, the economy was estimated to have expanded by only 0.7%. The inflation rate has been fluctuating, and at 18.2% in 2004, it was a significant impediment for economic development. Other impediments to the economy were the erratic rainfall, the late demobilization of agriculturalists from the military, and a relatively unskilled workforce.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Eritrea's gross domestic product (GDP) was estimated at \$4.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,000. The annual growth rate of GDP was estimated at 2%. The average inflation rate in 2005 was 15%. It was estimated that agriculture accounted for 8.7% of GDP, industry 26.3%, and services 65%.

Foreign aid receipts amounted to \$307 million or about \$70 per capita and accounted for approximately 34.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Eritrea totaled \$835 million or about \$190 per capita based on a GDP of \$751.0 million, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of -3.9%. It was estimated that in 2004 about 50% of the population had incomes below the poverty line.

## 21 LABOR

Agricultural work accounted for approximately 80% of the labor force in 2002. The remaining 20% are engaged in industry and services. There is no data on the size of the Eritrean workforce or on its unemployment rate.

As of 2005, the right to form and join unions was limited by the government. All unions were run by the government and union leaders were usually government employees. Any union activity had to be sanctioned by the government. Workers could bargain collectively, but no collective bargaining agreements as of that date were known to exist. Strikes are also allowed, but as of 2005, that right had not been exercised by workers.

The minimum working age is 18, but apprentices may be hired at age 14. However, enforcement of the nation's child labor laws has been ineffective. It is common for children in rural areas who

were not in school to work on family farms, while in urban areas, some children worked as street vendors. Most wage earners are employed by the public sector. Although there is no minimum wage in the private sector, a minimum wage does exist for the civil service sector. In 2005 it stood at \$24 per month and is considered incapable of supporting a worker and family with a decent standard of living. The workweek is set at 44.5 hours, with one rest day every week. Health and safety standards are not regularly enforced.

## 22 AGRICULTURE

Eritrea has 565,000 hectares (1,396,000 acres) of arable land and permanent crops. Three-quarters of Eritrea's people are subsistence farmers dependent on unreliable rainfall to feed families that average seven children. Although these farmers have experienced relative peace and good harvests since May 1991, food production has not been able to keep pace with a rapidly expanding population. Harvests have been variable due to rainfall variations and pest infestations. The present government dissolved the former Ethiopian military regime's marketing board and reinstated private markets for agricultural products. Principal crops in 2004 included sorghum, 56,700 tons; millet, 11,600 tons; barley, 16,900 tons; and wheat, 17,200 tons. Legumes, vegetables, fruits, sesame, and linseed are also grown. War, drought, deforestation, and erosion caused about 70–80% of the population to become dependent on food aid. Agricultural output, however, increased slightly during the 1990s, due to the ending of the war, favorable weather, and a newly developed seed and fertilizer distribution system. The army is involved in agricultural restoration, evidence of the government's commitment to agricultural reform.

## 23 ANIMAL HUSBANDRY

Sheep, goats, cattle (especially zebu), and camels make up the majority of Eritrea's livestock. In 2001, Eritrea had 2,100,000 sheep, 1,700,000 goats, 1,950,000 head of cattle, 75,000 camels, and 1.4 million chickens. Total meat production that year was 30,900 tons; cow's milk, 39,200 tons; and eggs, 2,000 tons. The government is emphasizing development of agriculture and animal husbandry in order to decrease the reliance on international relief, caused by war and drought.

## 24 FISHING

With Eritrea's independence from Ethiopia, access to about 1,011 km (628 mi) of Red Sea coastline was obtained. Because Eritrea now controls the coastline, long-term prospects for development of offshore fishing and oil are good. The total catch rose from 475 tons in 1993 to 6,689 tons in 2003. The Eritrean navy patrols the coastal waters to limit poaching by unauthorized nonnationals. The development of local fishing will decrease the dependence on foreign food aid, even though fish has not been a major source of Eritreans' protein intake.

## 25 FORESTRY

Eritrea's forested area covers 1,585,000 hectares (3,916,000 acres), or 13.5% of the total land area. Total roundwood production in 2004 was 1,266,000 cu m (44.7 million cu ft), nearly all of it used for fuel. Since 1993, the Eritrean People's Liberation Front army

has been involved in tree planting; the annual average rate of deforestation during 1990–2000 was 0.3%.

## 26 MINING

In 2002, mining and quarrying accounted for less than 1% of Eritrea's gross domestic product (GDP). Eritrea produced basalt, cement, common clay, kaolin, coral, gold, granite, gravel, gypsum, laterite, lime, limestone (for other than cement), marble, pumice, quartz, salt, sand, and silica sand. The country also had known resources of chromium, copper, magnesium, zinc, lead, silver, barite, feldspar, talc, asbestos, iron ore, nickel-chromite, potash, and potassium. Marine salt was produced at Massawa and Assab. Quarries for limestone, clay or shale, and gypsum were located near Massawa. Artisanal gold production, extracted over a large area in the southwestern hills, was 33 kg in 2004, up from 9 kg in 2003, but down from 107 kg in 2001. There was no recorded gold output in 2002. Production totals for 2004 included: basalt, 499,349 metric tons, up from 111,677 metric tons in 2003; granite, 192,803 metric tons, up from 140,418 metric tons in 2003; marble blocks, 780,733 cu m, down from 1,777,814 cu m in 2003; and sand, 611,000 tons, down from 788,000 tons in 2003. The outlook for Eritrea's mineral industry was for gradual recovery from the war, with demand for basalt, granite, gravel, limestone, marble, and sand likely to increase.

## 27 ENERGY AND POWER

Oil and gas exploration in the Red Sea off Eritrea began in the 1960s, when Eritrea was part of Ethiopia. Following independence, the country began awarding production contracts in 1995. However, as of 1 January 2003, Eritrea had no proven reserves of crude oil or natural gas. It also has no known reserves of coal. As a result, the country, as of 2001, has had no output of oil, natural gas or coal. Petroleum imports and consumption were estimated each at 4,590 barrels per day in 2002. In 1997, due to high costs, Eritrea and Ethiopia agreed to shut down their joint operations at the petroleum refinery at Assab and import refined petroleum products. The refinery had a capacity of 18,000 barrels per day. In 2000 an estimated 3.2 to 3.3 million barrels per day of oil were shipped through the Bab el-Mandeb, a narrow waterway between Eritrea, Yemen, and Djibouti that connects the Gulf of Aden with the Red Sea.

As of August 2003, about 80% of the population was without electricity, which was available only in the larger cities and towns, although the government was constructing additional electrical distribution lines. In 2002, net electricity generation was 243 million kWh, of which 100% came from fossil fuels. In the same year, consumption of electricity totaled 226 million kWh. As of August 2003 Eritrea had about 60 MW of diesel-fired generating capacity.

## 28 INDUSTRY

Ethiopia nationalized Eritrea's 42 largest factories and systematically dismantled the Eritrean industrial sector during the protracted civil war. By the end of the civil war, however, all production had stopped. Plants were generally inefficient, and most of these industries required significant investment to achieve productivity. Manufactured items in 2002 included beverages, processed foods, tobacco, leather, textiles, metal products, chemicals, print-

ing, nonmetallic minerals, construction materials, salt, paper, and matches. The government sought privatization of these industries, and issued incentives such as exemptions from income tax, preferential treatment in allocation of foreign exchange for imports, and provisions for remittance of foreign exchange abroad. In 2002, there were approximately 2,000 manufacturing companies operating in the country.

The oil industry has potential, as major oil deposits are believed to lie under the Red Sea. In 2001, the United States firm CMS Energy entered into an exploration agreement with Eritrea for exploration in the Dismin Block in northeastern Eritrea. Due to high operating costs, the country's sole oil refinery, at Assab, was closed in 1997. It had crude refining capacity of 18,000 barrels per day. The construction industry is growing, as projects range from the construction and expansion of power plants; road, airport, and dam construction; upgrading sea ports; and the construction of schools and hospitals.

In 2005, industry had a 26.3% share of the GDP; services were the largest sector with a 65% participation in the economy; agriculture was least economically important sector (with only an 8.7% share in the GDP), but was by far the largest employer (80% of the total labor force). Recent industries include food processing, beverages, clothing and textiles, salt, cement, and commercial ship repair.

### 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The University of Asmara, whose Italian and English sections were founded in 1958 and 1968, respectively, is the only facility of higher education in Eritrea offering courses in basic and applied sciences. It issues its *Seismic Bulletin* twice a year. In 1987–97, science and engineering students accounted for 30% of college and university enrollments.

### 3<sup>0</sup> DOMESTIC TRADE

Most of the population depends on subsistence farming and so domestic commerce is not a significant part of the economy. There are, however, a number of thriving small businesses and factories within the Asmara area. These include restaurants, bars, Internet cafes, auto repair shops, crafts, a brewery, cigarette factory, and

small glass and plastics producers. There are also several companies involved in making leather goods, and textile and sweater factories, operating primarily for domestic consumption. Most local industries rely on outmoded technology and suffer from a lack of capital investment.

Business hours are 9:00 AM to 1:00 PM, and 4:00 PM to 8:00 PM, Monday through Saturday in Asmara; and 6:30 AM to 12:00 PM and 5:00 PM to 10:00 PM Monday through Saturday in Massawa and Assab. Banks are open from 8 AM to 12 PM and 2 PM to 4 PM, Monday through Friday.

### 3<sup>1</sup> FOREIGN TRADE

In 1996, exports were estimated at \$95 million, while imports came to \$514 million, resulting in a trade deficit of \$419 million. Main exports were livestock, sorghum, and textiles. Imports were mainly processed goods, machinery, and petroleum. Because Eritrea controlled the total coastline that was formerly part of Ethiopia, Ethiopia depended on Eritrean ports for its foreign trade. The recurring border war, though, ensured little usage of these ports.

In 2004, exports reached \$34 million (FOB—free on board), while imports grew to \$677 million (FOB). The bulk of exports went to Malaysia (21.4%), Italy (13.7%), Egypt (8.3%), India (7.8%), Japan (6.4%), Germany (5.3%), China (4.1%), and the United Kingdom (4%). Imports included machinery and transport equipment, food and live animals, manufactured goods, and chemicals, and mainly came from Ireland (25.7%), the United States (17.9%), Italy (16%), and Turkey (6.2%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Hard currency transactions represented about 90% of imports in 1996. In 1997, the Eritrean currency, the *nafka*, was introduced, changing the financial situation.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Eritrea's exports was \$34.8 million while imports totaled \$470.5 million resulting in a trade deficit of \$435.7 million. The trade gap is covered by external remittances from Eritrean expatriates, bank loans, and grants-in-aid; but mounting debt threatens the country. Eritrea's large trade gap results from a weak export base and the need to import large amounts of capital goods needed to rebuild the country's infrastructure and industrial base. Economic growth slowed substantially due to the war with Ethiopia, largely due to the disruption of trade between the two nations, Ethiopia's boycott of the port of Assab, an increase in military spending, and the drafting of a large percentage of the work force into military service.

Exports of goods and services reached \$80 million in 2004, same as in 2003. Imports decreased from \$577 million in 2003, to \$533 million in 2004. The resource balance was consequently negative in both years, improving however from -\$497 million in 2003, to -\$453 million in 2004. The current account balance was also negative, slightly improving from -\$89 million in 2003, to -\$45 million in 2004. Foreign exchange reserves (including gold) decreased to \$16 million, covering less than a month of imports.

#### Principal Trading Partners – Eritrea (2002)

(In millions of US dollars)

### 33 BANKING AND SECURITIES

After the end of the war in 1991, the Central Bank of Eritrea and the Commercial Bank of Eritrea were reestablished, having been nationalized by the Ethiopian military junta in 1984.

The status of the National Bank of Eritrea (NBE) as central bank was clarified by a proclamation of April 1993. The Commercial Bank of Eritrea has a dozen branches across the country. It is the main retail bank and now has corresponding relations with both the Ethiopian and international banking systems. The Housing and Commerce Bank of Eritrea and the Agriculture and Industry Development Bank are also functioning, albeit at a very low capacity. In 1997, the government issued the Financial Institutions Proclamation, liberalizing the banking and insurance sectors to the private sector.

The CBE recorded assets of \$800 million at the end of 2000. In mid-November 1994, the Housing and Commerce Bank of Eritrea started to issue dollar-denominated certificates of deposit with denominations of \$1,000 and above, while the Eritrean Development and Investment Bank started operations shortly thereafter.

Eritrea was also hoping to establish offshore banking services and facilities to cater to the Middle Eastern market.

### 34 INSURANCE

The National Insurance Corporation of Eritrea (NICE) was established after the end of the war. It engages in all classes of insurance and was the only insurance provider operating in Eritrea as of late 2005. Insurance coverage provided by NICE included life, motor, workers' compensation, and personal accident protection.

### 35 PUBLIC FINANCE

The state retains control over most of the land, mineral resources, and infrastructure of Eritrea. Most government revenues come from custom duties and taxes on income and sales. Massive infusions of foreign aid and investment are needed to restore the

infrastructure and services and to develop private sector growth. Membership into the IBRD and IMF were approved in 1994. The government was set to invest heavily to upgrade and develop infrastructure and utilities.

The US Central Intelligence Agency (CIA) estimated that in 2005 Eritrea's central government took in revenues of approximately \$248.8 million and had expenditures of \$409.4 million. Revenues minus expenditures totaled approximately -\$160.6 million. Total external debt was \$311 million.

### 36 TAXATION

Customs duty and import and export taxes are 33.6% of government revenue; direct domestic tax (business and personal income taxes) are 27.8% of government revenue; domestic sales tax and taxes on services are 26.1% of government revenue. The main indirect taxes are municipal taxes, assessed at different local rates on goods and services. In the capital in 2002, the municipal tax on goods was 4%, and on services, 3.2%.

### 37 CUSTOMS AND DUTIES

As of 2005, customs tariffs are based upon the item's CIF (cost, insurance, freight) value. There is a 2–10% rate on most goods. Luxury goods, such as electronic equipment and automobiles, are assessed at 25–35%. Capital goods, industrial inputs, books, livestock and seeds, school supplies, and pharmaceuticals are assessed at rates of 2–10%. Also, the Eritrean Customs Service levies sales taxes of 2%, 5% and 15% on most goods.

### 38 FOREIGN INVESTMENT

Investment in Eritrea has come primarily from contributions of Eritrean exiles. International aid was restricted by the lack of international recognition of the Eritrean government's sovereignty, a problem resolved in the UN in April 1993. The government issued an investment code in December 1991 to encourage investment in the Eritrean economy. Incentives for investments in certain areas include exemption from customs and duties, exemptions from income tax, and special treatment regarding foreign currency exchange. While foreign direct investment reached \$61 million in 1997, it went down to \$14 million in 1998.

By 1998, the Eritrean investment center had licensed 661 investment projects worth \$562 million, of which \$235 million was foreign. Annual foreign direct investment (FDI) flows have remained remarkably steady, ranging from \$31.7 million in 1998 to \$38.7 million in 1997. In 2001, FDI inflow was \$34.2 million. Major investors included the United States, South Korea, Italy, and China.

### 39 ECONOMIC DEVELOPMENT

The development priorities of the Eritrean government are food security, the development of a market-style economy, and the privatization of formerly nationalized enterprises. Encouraging the return of Eritrean exiles abroad is also a government goal in the reconstruction effort. The Emergency and Recovery Action Program was launched in late 1991 to focus on recovery of the transportation system (roads, railroads, and port and airport facilities), agriculture and fishing (including reliable water sources), and industry. Plans for 2000 were to invest \$1 billion over the following decade to upgrade infrastructure and utilities. Some esti-

mates put food self-sufficiency for Eritrea within the decade, but drought conditions negate this forecast.

Regulatory requirements imposed by the government have discouraged investment in the early 2000s, as had the 1998–2000 war with Ethiopia. The port in Massawa was rehabilitated, and an airport constructed there. In 2003, the worst drought since Eritrea's independence threatened the lives of about a third of the population. Assistance from foreign donors was weak, and the country had to resort to borrowing to prevent starvation.

The humanitarian crisis is expected to hold down growth well into 2006. Other factors that will negatively influence the economy include the small production and population base, limited supplies of hard currency, and the country's dependence on foreign donor aid. Food insecurity is one of the main problems that the country is currently facing, and no solid economic development policies can be devised before this one is resolved.

#### **40 SOCIAL DEVELOPMENT**

During its struggle for independence, the EPLF created an elaborate system of social services. It launched a literacy program, a health care system (including hospitals), and a food distribution network. The provisional government mandated equal pay for equal work, and equal educational opportunities. However, in practice, traditional male privileges in education, employment, and the domestic sphere largely persist as a result of ingrained custom and uneven enforcement of the law. Domestic violence and abuse are pervasive and not addressed by the government. Officially the practice of female genital mutilation (FGM) is condemned, but it remains widespread. As of 2004, it was estimated that 95% of women and girls had been subjected to FGM.

The human rights record remains poor. The government does not allow international human rights organizations to monitor prison conditions, and freedom of the press and speech is restricted.

#### **41 HEALTH**

Infant mortality was estimated to be 47.41 per 1,000 live births in 2005. At that time, the average Eritrean woman who lived through her childbearing years had 5.4 children. Of all children under five years of age, 38% were malnourished. As of 2002, the estimated crude birth rate of 42.2 per 1,000 people was higher than the crude death rate of 11.8. In 2004 there were an estimated 3 physicians, 16 nurses, and fewer than 1 dentist or pharmacist per 100,000 people. In 2000, 46% of the population had access to safe drinking water and only 13% had adequate sanitation. Average life expectancy was 58.47 years in 2005.

The immunization rates for children under one year old in 1997 were as follows: diphtheria, tetanus, and pertussis, 60%; polio, 60%; measles, 53%, and tuberculosis, 67%. There were 6,000 deaths of children under five years old of diarrheal diseases in 1995. Goiter appeared in 22% of all school-age children in 1996.

The HIV/AIDS prevalence was 2.70 per 100 adults in 2003. As of 2004, there were approximately 60,000 people living with HIV/AIDS in the country. There were an estimated 6,300 deaths from AIDS in 2003.

#### **42 HOUSING**

After 30 years of war, thousands of returning refugees experienced a severe housing shortage, particularly in urban areas. In the 2000 border conflict, about 100,000 homes were destroyed and at least 450,000 Eritreans were displaced. Government and economic reform are needed before the housing situation can be fully addressed. Some international aid and foreign programs have helped ease the situation; however, in 2004 there were an estimated 60,000 displaced persons still in shelter camps.

In highland rural communities, most housing is built as a joint project of community members. These homes are generally made from wood, stone, and straw. Rural lowland homes are also made of wood and straw. Nomads build temporary shelters of wood and leaves. Concrete block and wood is generally used in urban housing.

#### **43 EDUCATION**

Education is compulsory for children between the ages of 7 and 14. The educational system is comprised of five years of elementary school, followed by two years of junior secondary and four years of senior secondary school. At tenth grade, students may choose to attend a three-year technical school. The academic year runs from September through June.

In 2001, about 5% of children between the ages of five and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 45% of age-eligible students, 49% for boys and 42% for girls. The same year, secondary school enrollment was about 22% of age-eligible students, 25% for boys and 18% for girls. It is estimated that about 40% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 45:1 in 2000; the ratio for secondary school was about 52:1.

There is a university in Asmara. In 2003, about 2% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2003 was estimated at about 58.6%, with 69.9% for men and 47.6% for women.

As of 2003, public expenditure on education was estimated at 4.1% of GDP.

#### **44 LIBRARIES AND MUSEUMS**

Asmara houses the library of the University of Asmara (60,000 volumes), the Asmara Public Library (28,000 volumes), and the library of the British Council (20,000 volumes).

The National Museum in Asmara—located in a former palace—and the Archeological Museum, operated by the Department of Culture in Asmara, are the country's two principal museums.

#### **45 MEDIA**

In 2003, there were an estimated nine mainline telephones for every 1,000 people; about 46,200 people were on a waiting list for telephone service installation.

The government controls all nonreligious media, including one radio station, one television station, and three newspapers. The law prohibits private ownership of broadcast media. Religious media are prohibited from reporting on political news and events. Television broadcasts are Monday, Wednesday, and Saturday evenings in Tigrinya and Arabic languages. Dimtsi Hafash radio broadcasts

daily in various local languages. In 2003, there were an estimated 464 radios and 53 television sets for every 1,000 people. The same year, there were 2.9 personal computers for every 1,000 people and seven of every 1,000 people had access to the Internet.

Private newspapers have been banned since 2001, as the government cited many journalists for endangering public security. The government-owned daily, *Asmara Herbet*, is published in Arabic and Tigrinya and had a 2002 circulation of 4,000. *Hadas Eritrea* is published three days a week. *Eritrea Profile* is a weekly English-language paper. *Tirigta* and *Geled* are weekly government youth papers.

#### 46 ORGANIZATIONS

Professional organizations exist, such as the Teachers Union, Association of Eritreans in Agricultural Sciences, Eritrean Nurses Association, Eritrean Pharmacists Association, and the Eritrean Medical Association. There is an Association of War Disabled Veterans. Various trade unions formed the National Confederation of Eritrean Workers in September 1994. The Eritrean National Chamber of Commerce is in Asmara.

There are various religious humanitarian groups (Christian and Muslim), sports clubs, and art groups centered around music, theater, painting, and drawing.

The National Union of Eritrean Youth Students has branches throughout the country and around the world. Planned Parenthood Association, the Red Cross Society, Caritas, and a Regional Center for Human Rights and Development all operate in Eritrea.

#### 47 TOURISM, TRAVEL, AND RECREATION

Because Eritrea inherited the entire coastline of Ethiopia, there is long-term potential for development of tourism. However, due to political unrest, the tourism industry is struggling to gain stability. In 2003, there were 80,029 visitors, a 20% decrease from 2002. There were 4,139 hotel rooms with 8,794 beds and an occupancy rate of 52%. Passports and visas are required. Proof of yellow fever vaccination may also be required if traveling from an infected area.

In 2005, the US Department of State estimated the cost of staying in Asmara at \$219 per day. In other areas, the cost was estimated at \$81 per day.

#### 48 FAMOUS ERITREANS

Isaias Afwerki (b.1946) has been president of Eritrea since its independence from Ethiopia 24 May 1993.

#### 49 DEPENDENCIES

Eritrea has no territories or colonies.

# ETHIOPIA

Federal Democratic Republic of Ethiopia  
*Yeltyop'iya Federalawi*

**CAPITAL:** Addis Ababa

**FLAG:** The national flag is a tricolor of green, yellow, and red horizontal stripes with a blue disk and a yellow outlined star and rays in the center.

**ANTHEM:** Traditional "Ityopia, Ityopia" is in use at the present time. A new anthem will be designated in the near future.

**MONETARY UNIT:** The birr (B) is a paper currency of 100 cents. There are coins of 1, 5, 10, 25, and 50 cents, and notes of 1, 5, 10, 50, and 100 birr. B1 = \$0.11468 (or \$1 = B8.72) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used, but some local weights and measures also are employed.

**HOLIDAYS:** Holidays generally follow the Old Style Coptic Church calendar. National holidays include Christmas, 7 January; Epiphany, 19 January; Victory of Adwa (1896), 2 March; Victory Day, 6 April; May Day, 1 May; New Year's Day, 11 September; Feast of the Holy Cross, 27 September. Movable Muslim holidays include 'Id al-Fitr and 'Id al-'Adha.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in eastern Africa, Ethiopia (formerly called Abyssinia) has an area of approximately 1,127,127 sq km (435,186 sq mi), with a length of 1,639 km (1,018 mi) E–W and a width of 1,577 km (980 mi) N–S. Comparatively, the area occupied by Ethiopia is slightly less than twice the size of the state of Texas. It is bounded on the N by Eritrea, on the NE by Djibouti, on the E and SE by Somalia, on the S by Kenya, and on the W by Sudan, with a total boundary length of 5,328 km (3,311 mi). The Ogaden region of eastern Ethiopia is claimed by Somalia and has been the subject of sporadic military conflict between the two nations since 1961; the southeastern boundary has never been demarcated. Ethiopia's capital city, Addis Ababa, is located near the center of the country.

## <sup>2</sup> TOPOGRAPHY

Ethiopia contains a variety of distinct topographical zones. It is a country of geographical contrasts, varying from as much as 116 m (381 ft) below sea level in the Danakil depression to more than 4,600 m (15,000 ft) above in the mountainous regions. Ras Dashen, with an altitude of 4,620 m (15,158 ft), is the fourth-highest peak in Africa. The most distinctive feature is the northern part of the Great Rift Valley, which runs through the entire length of the country in a northeast-southwest direction, at a general elevation of 1,500–3,000 m (4,900–9,800 ft). Immediately to the west is the High Plateau region; this rugged tableland is marked by mountain ranges.

East of the Great Rift Valley is the Somali Plateau—arid and rocky semidesert, extending to the Ogaden, which covers the entire southeastern section of the country. In the north, the Denakil Desert reaches to the Red Sea and the coastal foothills of Eritrea. The western boundary of Ethiopia follows roughly the western escarpment of the High Plateau, although in some regions the Sudan

plains extend into Ethiopian territory. Also part of Ethiopia is the Dahlak Archipelago in the Red Sea.

Ethiopia's largest lake, Lake T'ana, is the source of the Blue Nile River. This river, which winds around in a great arc before merging with the White Nile in the Sudan, travels through great canyons, which reach depths of more than 1,200 m (4,000 ft). Several rivers in the southwest also make up a system of tributaries to the White Nile.

## <sup>3</sup> CLIMATE

Ethiopian climate varies according to the different topographical regions. The central plateau has a moderate climate with minimal seasonal temperature variation. The mean minimum during the coldest season is 6°C (43°F), while the mean maximum rarely exceeds 26°C (79°F). Temperature variations in the lowlands are much greater, and the heat in the desert and Red Sea coastal areas is extreme, with occasional highs of 60°C (140°F). Heavy rainfall occurs in most of the country during June, July, and August. The High Plateau also experiences a second, though much milder, rainy season between December and February. Average annual precipitation on the central plateau is roughly 122 cm (48 in). The northern provinces receive less rainfall, and the average annual precipitation in the Ogaden is less than 10 cm (4 in). The westernmost region of Ethiopia receives an annual rainfall of nearly 200 cm (80 in). Severe droughts affected the country in 1982–84, 1987–88, 1991, and 2002.

## <sup>4</sup> FLORA AND FAUNA

Ethiopia has a large variety of indigenous plant and animal species. In some areas, the mountains are covered with shrubs such as pyracantha, jasmine, poinsettia, and a varied assortment of evergreens. Caraway, carcade, cardamom, chat, coriander, incense,

myrrh, and red pepper are common. The lakes in the Great Rift Valley region abound with numerous species of birds, and wild animals are found in every region. Among the latter are the lion, civet and serval cats, elephant, bush pig, gazelle, antelope, ibex, kudu, dik-dik, oribi, reed buck, wild ass, zebra, hyena, baboon, and numerous species of monkey. As of 2002, there were at least 277 species of mammals, 262 species of birds, and over 6,600 species of plants throughout the country.

## 5 ENVIRONMENT

Overgrazing, deforestation, and poor agricultural practices have contributed to soil erosion so severe, particularly in the Tigray and Eritrea regions, that substantial areas of farmland have been lost to cultivation. As of 1994, 600,000 acres of arable land were washed away each year. The combined effects of severe drought and a 17-year civil war have also added to Ethiopia's environmental problems.

Ethiopia's forests are endangered. Each year, the nation loses 340 square miles of forest land. Its forests and woodland decreased by 3.4% between 1983 and 1993. From 1990–2000 the rate of deforestation was at about 0.8% per year. In 2000, only about 4.6% of the total land area was forested. The government did not begin afforestation and soil conservation programs until the early 1970s.

The nation's water supply is also at risk. Access to safe drinking water is available to 11% of the rural population and 81% of city dwellers. Ethiopia has 110 cu km of renewable water resources with 86% used in agriculture.

Agencies responsible for environmental matters include the Ministry of Agriculture, the Forestry and Wildlife Development Authority, and the Ministry of National Water Resources. In 2003, about 16.9% of Ethiopia's total land area was protected. Simien National Park is a natural UNESCO World Heritage Site.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 35 types of mammals, 20 species of birds, 1 type of reptile, 9 species of amphibians, 3 types of mollusks, 3 species of other invertebrates, and 22 species of plants. Endangered species in Ethiopia included the simian fox, African wild ass, Tora hartebeest, Swayne's hartebeest, Wali-aibex (found only in Ethiopia), waldrapp, green sea turtle, and the hawksbill turtle.

## 6 POPULATION

The population of Ethiopia in 2005 was estimated by the United Nations (UN) at 77,431,000, which placed it at number 15 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.5%, a rate the government viewed as too high. The projected population for the year 2025 was 118,354,000. The population density was 70 per sq km (182 per sq mi), with the area of greatest density being the High Plateau, with more than 70% of the population.

The UN estimated that 15% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.27%. The capital city, Addis Ababa, had a population of

2,723,000 in that year. Other urban centers include Dirē Dawa, Dese, Hārer, Jima, Nazrēt, and Gonder.

The prevalence of HIV/AIDS has had a significant impact on the population of Ethiopia. The UN estimated that 6.5% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy. Life expectancy in Ethiopia was 45 years.

## 7 MIGRATION

Internal migration is from rural to urban areas. In the 1970s and early 1980s, up to 4.5 million people were displaced as a result of occasional drought, civil strife, and border fighting. In 1984–85, over 600,000 northern peasants were resettled, forcibly in some cases, in 77 sites in the more fertile west and south. Meanwhile, over 2.8 million rural inhabitants, mostly Oromo, were moved to collective villages. As the war for control of Ethiopia intensified between 1989 and 1991, more people were displaced.

After the change of government in 1991, 970,000 Ethiopian refugees returned home from neighboring countries. By November 1995, the United Nations High Commissioner for Refugees (UNHCR) had repatriated 31,617 Ethiopian refugees from Djibouti. Between 1993 and 1996, the UNHCR repatriated 62,000 from Sudan. In 1997, UNHCR had started planning the airlift of around 4,400 Ethiopian refugees remaining in Kenya.

As of 1997, there were still 70,000 Ethiopian refugees in neighboring countries. There were 60,000 in eastern Sudan, 5,700 in Kenya, 2,500 in Djibouti, and 450 in Yemen. As of March 1997, Ethiopia was home to more than 338,000 refugees, settled in 12 camps and urban areas. Of these, 285,000 were from Somalia, 35,500 from Sudan, 8,000 from Djibouti, and 8,600 from Kenya. In February 1997, the UNHCR started to repatriate Somalis; 2,600 refugees had returned to northwestern Somalia by the end of March. Repatriation of Somalis and Sudanese continued in 2002. As of 2004 the total of internally displaced people numbered 321,000, most residing in the Gambella region. As of the end of 2004, Ethiopia was home to more than 115,980 refugees, while 63,105 Ethiopians sought refuge elsewhere. Ethiopia had a total of 2,252 asylum applications in 2004, as over 13,000 Ethiopians sought asylum in 16 countries, mainly South Africa, Kenya, the United States, Eritrea, and Yemen. In 2003 remittances to Ethiopia were \$60.8 million.

In 2005, the net migration rate was estimated as zero migrants per 1,000 population for Ethiopia, a significant change from 3.5 per 1,000 in 1990.

## 8 ETHNIC GROUPS

Ethiopia is a composite of more than 77 ethnic groups. The Oromo (Galla) group represents approximately 40% of the population and is concentrated primarily in the southern half of the nation. The Amhara and Tigrean groups constitute approximately 32% of the population and have traditionally been dominant politically. The Sidamo of the southern foothills and savanna regions account for 9%, while the Shankella make up about 6% of the population and reside on the western frontier. The Somali (6%) and Afar (4%) inhabit the arid regions of the east and southeast. Nilotic peoples live in the west and southwest along the Sudan border. The Gurage account for 2% of the population; the remaining 1% is made up of

LOCATION: 3°30' to 18° N; 33° to 48° E. BOUNDARY LENGTHS: Eritrea, 912 kilometers (566 miles); Djibouti, 337 kilometers (210 miles); Somalia, 1,626 kilometers (1,016 miles); Kenya, 830 kilometers (518 miles); Sudan, 1,606 kilometers (1,003 miles).

other groups. The Falasha (who call themselves Beta Israel, and are popularly known as “black Jews”) live in the mountains of Simen; they were reportedly the victims of economic discrimination before the 1974 revolution and of religious and cultural persecution after that time. Some 14,000 were secretly flown to Israel via the Sudan in 1984–85. About 14,000 more were flown out of Addis Ababa in 1991. Another 4,500 are believed to remain. The Beja of the northernmost region, the Agau of the central plateaus, and the Sidamo of the southern foothills and savanna regions are the remnants of the earliest known groups to have occupied Ethiopia.

## 9 LANGUAGES

At least 77 different languages are spoken in Ethiopia. Most of these belong to the Semitic, Cushitic, and Omotic divisions of the

Afro-Asiatic linguistic family. Amharic, the official national language, is a Semitic tongue, the native language of perhaps 30% of the people. Tigrinya and Tigray, also Semitic, are spoken in the north. Orominga, a Cushitic tongue, is widely spoken in the south, perhaps by 40% of all Ethiopians. Somali and Afar, also Cushitic languages, are spoken in the east. Omotic tongues are spoken in the southwest. Nilo-Saharan language speakers live in the far southwest and along the western border. English is the principal second language taught in schools.

## 10 RELIGIONS

Until 1974, the Ethiopian Orthodox Church, a Christian confession associated with the Coptic Church and incorporating elements of Monophysite Christianity, was the established church,

with the emperor as its titular leader. After the deposition of the emperor, the church lost most of its property (including an estimated 20% of all arable land) and political influence. In 2005, about 40–50% of Ethiopians were Ethiopian Orthodox Christians. Islam is practiced by about 45% of the population, most of whom inhabit the Somali, Afar, and Oromia regions of Ethiopia. About 10% of the population are Evangelical or Pentecostal Protestants, which is the fastest growing religion in the country. Prominent Protestant churches include Mekane Yesus (4.03 million members, associated with the Lutheran church) and Kale Hiwot (4.6 million members, associated with Service in Mission), both of which are Evangelical. There are about 7,000 Jehovah's Witnesses in the country and about 500,000 Roman Catholics (Oriental and Latin Rite). Other Christian denominations include Baptists, the Lutheran-Presbyterian Church of Ethiopia, Emnet Christos, Messeret Kristos (associated with the Mennonite mission), and Hiwot Berhan Church (associated with the Swedish Philadelphia Church. Animism, and other traditional indigenous religions are represented by small groups.

Although of Afro-Asiatic stock, the Falasha practice a form of Judaism that is of great antiquity and is traditionally attributed to ancient Arabian-Jewish or Egyptian-Jewish immigration. Few Falasha remain after massive immigration and evacuation to Israel in 1984–85 and 1991. The Feles Mora consists of individuals who claim that their ancestors were Jews who were forced to convert to Ethiopian Orthodox. Many of these individuals are currently pursuing immigration to Israel. There are a large number of missionary groups working within the country.

The constitution provides for freedom of religion and this right is generally respected in practice. Though religious tolerance is generally widespread among established faiths, there have been instances of interfaith discrimination concerning newer religions. For instance, some tension has existed as both Orthodox Christians and Muslims have complained about the proselytizing of Jehovah's Witnesses and the Pentecostals. In some regions, there have also been incidents of violence between Orthodox Christians and Muslims. Religious groups, and all other nongovernmental organizations, must register with the Ministry of Justice and renew their membership every three years. Certain Christian and Muslim holidays are recognized as national holidays. The government mandates a two-hour lunch break on Fridays to allow for the Muslim obligation of prayer.

## 11 TRANSPORTATION

It has been estimated that more than half of Ethiopia's produce is transported by pack animals, reflecting the inadequacy of the country's road network and the rugged terrain. About 75% of Ethiopian farms are more than a one-day walk to the nearest road. The road system in 2003 comprised an estimated 33,856 km (21,058 mi), of which 4,367 km (2,716 mi) were paved. The number of passenger cars in use in 2003 was 63,200, and the number of commercial vehicles was 48,900. As of 2003, there was only one vehicle registered for every 1,101.7 inhabitants. Bus services link provincial centers to the capital.

Railways consist of a narrow gauge line from Djibouti to Addis Ababa that is 880 km (547 mi) long, of which 681 km (423 mi) are in Ethiopia, and is owned jointly by Djibouti and Ethiopia. Ethiopia's merchant fleet of eight ships of 1,000 GRT or over, to-

taled 81,933 tons as of 2005. Neighboring Djibouti also serves as a depot for Ethiopian trade. Only one river, the Baro, is used for transport.

There were an estimated 83 airports in 2004, only 14 of which had paved runways as of 2005. The Addis Ababa airport handles international jet transportation. Before the civil war, the national carrier, Ethiopian Airlines, flew to numerous African, Asian, and European cities, and had sole rights on domestic air traffic. In 2003, about 1.147 million passengers were carried on domestic and international flights.

## 12 HISTORY

Humanlike fossils have been found in the Denakil depression dating back 3.5 million years; in 1981, the 4 million-year-old fossil bones of a direct ancestor of *Homo sapiens* were discovered in the Awash River Valley. Evidence of cereal agriculture dates back to about 5000 BC. Homer refers to the Ethiopians as a "blameless race," and Herodotus claims that they were known in his time as the "most just men"; to the Greeks, however, Ethiopia was a vague and semimythical area that did not exactly correspond to the modern country. Ethiopia first appears in written history as the Aksumite (or Axumite) Empire, which was probably established around the beginning of the Christian era, although national tradition attributes the foundation of the empire to Menelik I, the son of King Solomon and the Queen of Sheba. Christianity was introduced in the 4th century by Frumentius of Tyre, who was appointed bishop of the Ethiopian diocese by Patriarch Athanasius of Alexandria. The rise of Islam in the 7th century and the subsequent conquest of Egypt created a crisis for the Coptic Christian communities of northeast Africa. Ethiopia alone met the challenge, surviving until the 1970s as a Christian island in a Muslim sea.

The Aksumite dynasty suffered a slow decline. In 1137, the ruler of Lasta (now Lalibela), Tékla Haimanot, overthrew the Aksumite emperor, Del-Naad, and established the Zagwe dynasty. In 1270, the throne was again restored to the Solomonic dynasty, with the accession of Yekuno Amlak in the province of Shewa. Subsequently, Emperor Amda-Seyon I (r.1314–44) reestablished the Ethiopian suzerainty over the Muslim principalities along the Horn of Africa. The Muslim penetration of the highland regions resumed in the early 16th century and, from 1527 to 1543, the Muslims threatened to overrun the entire empire. In 1541, Ethiopia enlisted the assistance of several hundred Portuguese musketeers against a jihad led by Imam Ahmad (known as Gragn, or "the left-handed"). With these superior weapons, Ahmad was defeated and killed in battle in 1543.

The 18th and 19th centuries formed a period of political decentralization and incessant civil war; this period is called the *Zamana Masafint* ("Era of the Princes"). A young general named Lij Kassa Haylu established a powerful army, which defeated the forces of his rivals. He was crowned Emperor Tewodros (Theodore II) in 1855 and succeeded in reunifying the empire, but he was defeated and killed by a British expeditionary force under Gen. Robert Napier in 1868. Italy occupied the Eritrean ports of Aseb (1869) and Mits'iwa (1885) and annexed Eritrea in 1890. The Italian advance was stopped by the defeat and total rout of a large Italian army by the Emperor Menelik II at Adwa in 1896, an Ethiopian victory that is still commemorated as a national holiday. Italy, however, maintained control of Eritrea and also occupied the coastal re-

gion of Banadir (Italian Somaliland) in 1900. Meanwhile, France and the United Kingdom had obtained Somali coastal enclaves through purchase and a series of protectorate treaties concluded in the past with local tribal chieftains.

Menelik died in 1913. Three years later, his grandson and successor, Lij Yasu, was deposed in favor of his aunt, Empress Zauditu (Judith). Ras Tafari Mekonnen of Shewa was selected as her apparent and head of government. On 2 November 1930, he was crowned Emperor Haile Selassie I. Italy invaded and conquered Ethiopia in 1935–36. Forced to flee the country, the emperor returned in 1941 with the aid of British forces. By a UN decision, Eritrea, which had been under British administration since 1941, was federated to Ethiopia in 1952 and was incorporated into the empire 10 years later. By this time, an Eritrean secessionist movement was already stirring.

After an abortive coup in 1960, the emperor's political power began to lessen as political opposition increased. Guerrilla activity in Eritrea increased noticeably between 1970 and 1973; student and labor unrest also grew. After an official cover-up of catastrophic drought and famine conditions in Welo and Tigray provinces was uncovered in 1974, the armed forces overthrew the government. From 28 June to 12 September 1974, the emperor was systematically isolated and finally deposed. The monarchy was officially abolished in March 1975. Haile Selassie was killed while in the custody of security forces on 27 August 1975.

The new Provisional Military Administrative Council, also called the Dergue, came under the leadership of Maj. (later Lt. Col.) Mengistu Haile Mariam. The economy was extensively nationalized in 1975. Mengistu declared himself a Marxist-Leninist in 1976 and established close relations with Moscow. Perhaps 10,000 Ethiopians were killed in 1976–78, as the Dergue suppressed a revolt by civilian leftists that involved urban terrorism.

The war with Eritrean secessionists continued inconclusively until 1991. In mid-1977, Somalia invaded the Ogaden area to support the claims of ethnic Somalis there for self-determination. The assault was repulsed with the assistance of Soviet arms and Cuban soldiers in early 1978, when a 20-year treaty with the USSR was signed. Close links with Libya and the People's Democratic Republic of Yemen were established in 1981. In 1982, Ethiopian troops attempted without success to topple the Somali government by mounting an invasion of some 10,000 Ethiopian troops in support of the insurgent Somali Salvation Democratic Front. Hostilities with Somalia later eased and diplomatic relations were reestablished in 1988. But relations with the Sudan soured, as each country supported insurgent movements in the other.

A devastating drought and famine struck northern Ethiopia during 1982–84, taking an unknown toll in lives. Between November 1984 and October 1985 an international relief effort distributed 900,000 tons of food to nearly eight million people. Food aid continued on a reduced scale, while the government launched massive resettlement programs that critics said were really intended to hamper the operations of armed insurgents and to collectivize agriculture.

The Worker's Party of Ethiopia (WPE) was established as the sole legal political party in 1984. Two years later, a constitutional document was unveiled for discussion; after minor changes it was approved by 81% of the voters in a referendum held on 1 February

1987. Later that year, another devastating drought struck northern Ethiopia, continuing into 1988.

Despite mobilizing one million troops and receiving massive Soviet bloc military aid, the government was not able to defeat the Eritrean and Tigrayan insurgencies. Led by the Eritrean People's Liberation Front (EPLF) and the Tigre People's Liberation Front (TPLF), which is part of a larger coalition, the Ethiopian People's Revolutionary Democratic Front (EPRDF) triumphed.

On 21 May 1991, Mengistu was forced to resign as president and fled to Zimbabwe. His vice president surrendered to EPRDF forces on May 27. The next day, Meles Zenawi, leader of the EPRDF, established an interim government. In July, delegates from the three victorious guerrilla groups agreed on a structure of an interim coalition government and to grant Eritrea the right to hold an internationally supervised referendum on independence.

In 1992, the multiparty government split sharply. The Oromo Liberation Front (OLF), the second-largest partner, withdrew from the coalition on 23 June. It claimed that the regional elections held on 21 June had been rigged by the EPRDF. The OLF and five other political groups had boycotted the elections. Some OLF forces took up arms against the government.

Amid the turbulence, the transitional government pledged to oversee the establishment of Ethiopia's first multiparty democracy. During 1993, a new constitution was drafted. For the transitional government, a 65-member Council of Representatives was created by the four constituent parties of the EPRDF, which was dominated by the TPLF, a Tigrayan ethnic party.

In June 1994, elections were held for the newly established Constituent Assembly. The EPRDF won 484 of 547 seats in a contest judged free and fair by observers. However, the majority of opposition candidates boycotted the elections under the banner of the Coalition of Alternative Forces for Peace and Democracy in Ethiopia (CAFPDE). The OLF also boycotted the election. The Assembly's first order of business was to draft a new constitution. When completed, the document called for the establishment of a bicameral legislature, a directly elected president, regional autonomy, including the right to secession, and the division of the country into nine states. Elections were held in 1995 for the Federal Parliamentary Assembly, consisting of the directly elected Council of People's Representatives and the Council of the Federation. Opposition parties again boycotted the elections resulting in a commanding majority for the EPRDF—483 of 548 seats.

The political opposition's refusal to participate in elections has been a major problem for Ethiopia's fledgling democracy. Western governments and representatives of the OAU engaged the parties in talks prior to the 1995 balloting in the hopes of expanding participation, but opposition leaders insisted the government was impeding their efforts to fairly participate in the electoral process.

The Oromo Liberation Army (OLA), the armed wing of the OLF, has continued armed struggle against the Ethiopian government. Fighting intensified with a series of battles between May and August 1999. Both sides claimed victory, giving conflicting figures for the dead and injured. Over 2,000 OLA and government soldiers may have died in the fighting. Military forces also intensified operations against the Somali-based Al'Itthad terrorist organization, rebel elements of the Ogaden National Liberation Front, and Tokuchuma (another terrorist group operating in eastern Ethiopia), both in the country and southern Somalia and in Northern

Kenya. Ethiopia accused Eritrea and Somalia of financially supporting and training the OLF and Al'Ittihad.

Simmering tensions over border alignment with Eritrea came to a boil in 1998. Between 2 and 6 May 1998, Eritrean soldiers invaded and occupied Badme, in northeastern Ethiopia. Other areas were subsequently occupied in Tigray State. Ethiopia later recaptured Badme, but fighting continued, interspersed with periods of inactivity. A US- and Rwanda-sponsored peace plan proposed in early June 1998 failed; so did arbitration efforts by the then OAU. Each side claimed to accept an OAU framework agreement while accusing the other of making impossible preconditions to its implementation. The two and a half year war claimed the lives of an estimated 70,000 people on both sides, and cost both countries—two of the world's poorest—an estimated \$1 million a day, according to the United Nations. The bloody war formally ended on 12 December 2000 with a peace treaty, the Algiers Agreement.

Under the Algiers Agreement, some 4,200 UN soldiers commanded under the UN Mission in Ethiopia and Eritrea (UNMEE) remained on the border by July 2003. Their task was to monitor the so-called Temporary Security Zone (TSZ) that separates the two countries. Meanwhile, as part of the treaty, the Eritrea Ethiopia Boundary Commission (EEBC) demarcated the internationally recognized boundary. The EEBC, which was based in The Hague and comprised five international lawyers chosen by both countries, was established to resolve boundary claims between the two neighboring countries. In its ruling of 13 April 2002, the Hague-based Permanent Court of Arbitration awarded the key town of Badme, where the war first flared up, to Eritrea. Ethiopia labeled the ruling "unjust and illegal," refused to accept it, and would not withdraw from Badme. Legally, the ruling is binding and final. Rejection of the ruling resulted in five years of no war and no peace between the neighbors since formal cessation of hostilities in 2000; this stalemate raised concerns over a possible relapse in fighting.

Ethiopia's second multiparty elections took place on 14 May 2000, but were marred by irregularities and violence at a number of polling stations requiring the rescheduling of voting in certain constituencies. Voting was postponed in Somali regional state because of severe drought. The results gave parties the following number of seats: OPDO, 177; ANDM, 134; TPLE, 38; WGPDO, 27; EPRDF, 19; SPDO, 18; GNDM, 15; KSPDO, 10; ANDP, 8; GPRDF, 7; SOPDM, 7; BGPDUF, 6; BMPDO, 5; KAT, 4, other regional political groupings, 22; and independents, 8. Forty-three seats were unconfirmed. On 8 October 2001, the Council of People's Representatives elected Woldegiorgis Girma president. Girma received 100% of the vote for a six-year term.

By July 2003, Ethiopia suffered yet another drought and food shortfalls in 2003–04. During the previous 30 years, rainfall levels gradually fell by as much as 23 mm a year, leaving some \$12.6 million in need of food aid in 2003, or one in five of the population—at a cost of around \$800 million. In 2004, the government began a program to move more than two million people away from the arid highlands of the east as a strategy to reduce vulnerability to drought and reduce food shortages.

Since rejection of the border ruling of the Permanent Court of Arbitration by Ethiopia, Eritrea and Ethiopia have sent mixed messages and traded accusations as to which side is stalling implementation of the Algiers Agreement. For instance the Ethiopian

Government announced in November 2004 that it finally accepted the EEBC ruling and urged Eritrea to accept its full implementation, but the Prime Minister Meles Zenawi later said he would accept border demarcation only in undisputed areas. Amidst rising tensions and international concerns over a military build-up on both sides of the border, the Eritrean government on 5 October 2005 banned UN flights in the 25 km demilitarized TSZ and UN night patrols by vehicle on its side of the TSZ. This action forced the UN mission in Eritrea (UNMEE) to vacate 18 of its 40 posts.

The UN Security Council passed a resolution in November 2005 imposing a one-month deadline for compliance, and demanding that Eritrea rescind its flight and vehicle ban on the UN mission, or face unspecified sanctions. Instead, Eritrea escalated the situation on 6 December 2005 by expelling 180 North American, Russian, and other international military observers, UN volunteers and international civilian personnel. No reason was given for the action. Eritrea has repeatedly accused the international community, in particular the UN, of failing to enforce the EEBC boundary ruling. The same UN Security Council Resolution 1640 required both Ethiopia and Eritrea to withdraw their troops to the levels of 16 December 2004, and to both take immediate steps to start demarcation of their disputed boundary in accordance with the 2002 EEBC ruling, by 23 December 2005.

On 22 December 2005, the EEBC ruled that Eritrea had caused the war with Ethiopia and violated international law when it invaded its neighbor in May 1998, and was "liable to compensate Ethiopia for damages caused by that violation of international law." However, both countries were likely to receive compensation from the other for breach of various international laws and for human rights abuses. This ruling did not change the separate EEBC ruling on boundaries between the two countries.

Ethiopia held its third multiparty elections on 15 May 2005. The elections resulted in the EPRDF's disputed return to power. The EPRDF retained its control of the government with 327 of the 547 parliamentary seats, or 59 % of the vote, while opposition parties shared 174 seats, or 32 % of the vote. The opposition charged that the ruling EPRDF coalition had rigged the vote and engaged in acts of voter intimidation and violence, necessitating the rescheduling of voting in certain constituencies. On 8 June 2005 demonstrations, mounted by unarmed university students in Addis Ababa protesting the alleged electoral fraud and demanding investigations or a rerun, turned violent when police opened fire killing some 42 people. At least one of the international observer groups, the European Union Election Observation Mission concluded that the election and electoral process had been below international standards. Both the Ethiopian government and electoral commission dismiss the report as biased, self-contradictory and lacking credibility. With the controversy surrounding the elections, final official election results were not released until nearly four months later on 5 September. By the end of December 2005, the main opposition party, CUD, was still boycotting the legislature.

Announcement of the final 2005 election results was followed by more violence starting November 1 when the opposition Coalition for Democracy and Unity led protests of the results and at least 46 people were killed when security forces opened fire. More than 60,000 arrests are reported to have resulted, and Prime Minister Zenawi announced that 3,000 of them would face charg-

es. On 28 December 2005, a Federal High Court judge remanded 129 opposition leaders, journalists, civil society members and a 15-year-old boy on charges related to violent demonstrations. The defendants claimed they were political prisoners, but the state charged the 129 with crimes ranging from treason to genocide, and blamed opposition leaders for the deaths of 34 people and damages allegedly worth \$110 million.

As of 29 December 2005, neither Eritrea nor Ethiopia had met their obligations under the UN resolution 1640, except for a partial withdrawal of troops from the border by Ethiopia. The military situation along the border remained tense and potentially volatile, and the Eritrea-Ethiopia conflict unresolved. The UN Security Council was to meet to review compliance in January 2006.

### 13 GOVERNMENT

In name, Ethiopia was a constitutional monarchy between 1931 and 1974, but sovereignty was vested solely in the emperor, a hereditary monarch. The ruler appointed the prime minister, senators, judges, governors, and mayors. The emperor was assisted by the Council of Ministers and the Crown Council, whose members he appointed.

After the military takeover in 1974, the parliament was dissolved and the provisional military government (PMG) established. The PMG assumed full control of the government and continued to rule through its provisional military administrative council, also called the Dergue, whose chairmanship Mengistu seized in February 1977. Government decisions were made by Mengistu on an ad hoc basis, sometimes in consultation with members of the Dergue's Standing Committee. Control over government ministries was maintained by assigning Dergue representatives to oversee their operations. The Commission for Organizing the Party of the Working People of Ethiopia acted as the Dergue's political arm.

The constitution approved by referendum on 1 February 1987 declared Ethiopia to be a people's democratic republic. A national assembly (Shengo), with 835 members chosen by proportional representation for the various nationalities, theoretically had supreme power. The president, who was elected to a five-year term by Shengo, acted as chief executive and commander-in-chief of the armed forces and nominated and presided over the cabinet and the state council, which had legislative power when the Shengo was not in session. The president also appointed top officials of the Worker's Party of Ethiopia (WPE), which was called the leading force in the state and society. The assembly held its first meeting on 9 September; the next day, it elected Mengistu president. It also redrew the political map, creating five "autonomous regions" in order to weaken the appeal of the independence movements; it failed. Despite the trappings of representative government, all power remained in Mengistu's hands. He was head of state and government, leader of the only party and commander of the armed forces.

After Mengistu's defeat in May 1991, a transitional government was established, under the leadership of the Ethiopian People's Revolutionary Democratic Front, a coalition of parties opposed to the Dergue and led by President Meles Zenawi. Elections for a constituent assembly were held in June 1994. A new constitution was drafted, providing for a directly elected president, a bicameral legislature, regional autonomy with the right to secede, and

a nine-state national structure. Elections to the newly established Federal Parliamentary Assembly were held in 1995; they resulted in a huge victory for the EPRDF owing to opposition boycotts. In the May 2000 elections, Zenawi's coalition gained 368 of the 548 seats in the Council of People's Representative. The next presidential elections were scheduled for October 2007.

The Federal Parliamentary Assembly has two chambers. The Council of People's Representative (Yehizbtewekayoch Mekir Bet), the lower chamber, has 547 members, elected for a five-year term in single seat constituencies. The Council of the Federation (Yefedereshn Mekir Bet) or upper chamber has 117 members chosen by state assemblies to serve five-year terms.

The third multiparty parliamentary elections were held on 15 May 2005. These elections were marred by allegations of vote rigging, voter intimidation, and the death of at least 88 people in postelection violence during two major demonstrations to protest the results. The elections brought Zenawi's EPRDF coalition to power with 327 of the 547 parliamentary seats while opposition parties shared 174 seats. Meles Zenawi began his third five-year term as prime minister. The main opposition party, CUD, won 109 seats in the 547-member parliament but by the end of December 2005, was still boycotting the legislature. The EPRDF won state council elections in 5 of the 10 states.

### 14 POLITICAL PARTIES

In the past, there were no established political parties, although political factions existed on the basis of religion, ethnicity, regionalism, and common economic interests. In the 1970s, a number of illegal separatist groups became active militarily. They included the Eritrean People's Liberation Front (EPLF), Eritrean Liberation Front (ELF), the Oromo People's Democratic Organization (OPDO), Tigray People's Liberation Front (TPLF), Oromo Liberation Front (OLF), and Western Somali Liberation Front (WSLF). Eventually, EPLF defeated the ELF in Eritrea.

Two civilian left-wing parties, the Ethiopian People's Revolutionary Party and the All-Ethiopian Socialist Movement, were crushed by the Dergue in 1976 and 1977, respectively. In 1979, the Dergue established the Commission for Organizing the Party of the Working People of Ethiopia (COPWE), in order to lay the groundwork for a Marxist-Leninist party along Soviet lines. The Worker's Party of Ethiopia (WPE) was established in 1984 as the sole legal political party. Its 11-man politburo was headed by Mengistu.

The separatists successfully defeated Mengistu's forces and after Mengistu fled in May 1991, they established a transitional government under their coalition banner, the Ethiopian People's Revolutionary Democratic Front (EPRDF). The TPLF is the most prominent member of the EPRDF, which also includes the Ethiopian People's Democratic Movement (EPDM) and the Afar Democratic Union. The OLF is not part of the coalition. There are also numerous small, ethnic-based groups and several Islamic militant groups. Following 1994 elections to a transitional national assembly, 30 opposition groups—not including the OLF—formed the Coalition of Alternative Forces for Peace and Democracy in Ethiopia (CAFPDE), and began pressing for electoral reform. New elections were held in 1995 for a newly created Federal Parliamentary Assembly (consisting of two chambers). The elections, despite being overseen by international observers, were boycotted

by the opposition and were won by the EPRDF, which secured substantial majorities.

The main parties contesting the 14 May 2000 elections were: Afar Democratic Association, Afar Democratic Union, Amhar National Democratic Movement, Ethiopia People's Revolutionary Democratic Front (EPRDF), Ethiopian Democratic Officers' Revolutionary Movement, Oromo People's Democratic Organization, and Tigre People's Liberation Front. There were approximately 58 national and regional parties, 29 of them belonging to the four-party coalition of the ruling EPRDF.

The People's Revolutionary Democratic Front (EPRDF) ruling coalition were returned to power in the contested elections of 15 May 2005 amidst opposition charges of widespread vote rigging and intimidation. A total of 10 parties and coalitions and one independent won the 547 parliamentary seats, which were split as follows: Ethiopian People's Revolutionary Democratic Front (EPRDF), 327; the Coalition for Unity and Democracy (CUD), 109; United Ethiopian Democratic Forces (UEDF) Alliance, 52; Oromo Federalist Democratic Movement, (OFDM) 11; Afar National Democratic Party (ANDP), 8; Gambela People's Democratic Movement (GPDM), 3; Sheko and Mezenger People's Democratic Unity Organization (SMPDUO), 1; Somali People's Democratic Party (SPDP), 24; Hareri National League (HNL), 1; Argoba Nationality Democratic Organization (ANDO), 1; and Independent, 1.

## <sup>15</sup> LOCAL GOVERNMENT

According to a 2006 CIA report, Ethiopia has nine ethnically based states and two self-governing administrations—Addis Ababa and Dirē Dawa. Until 1987, Ethiopia was divided into 15 administrative regions, which in turn were subdivided into 103 sub-regions and 505 districts. In 1976, peasant associations were empowered to collect taxes and form women's associations, cooperatives, and militias. In the mid-1980s, an estimated 25,000 such peasant groups were in existence. Urban dwellers' associations were established for a variety of functions, including law and order.

In 1987, at its first sitting, the Shengo redrew the political map. It created five "autonomous regions" (Eritrea, Assab, Dirē Dawa, Ogaden, and Tigre). The remaining provinces were further subdivided into 24 administrative zones.

The establishment of regions was altered with the creation of the transitional government in 1991. In 1993, Eritrea gained its independence. The new regime called for 14 regional governments, but the June 1992 elections for 11 of the 14 regional assemblies were challenged and widespread fraud was alleged. In the May 2000 elections, 3,300 regional and national seats were to be contested. Results of the third multiparty elections of 15 May 2005 were equally protested. The EPRDF alliance won half of the 10 state councils. According to the National Electoral Board of Ethiopia, a total of 1,920 Regional Council and City Administration seats were contested in 10 of the 11 regions. Results for the Dirē Dawa Region were still outstanding by the end of 2005.

## <sup>16</sup> JUDICIAL SYSTEM

The government of Ethiopia is now putting into place a decentralized federal system of courts consisting of regional and district courts consistent with the 1994 constitution. Each region has district (woreda), higher, and supreme courts. There are also local

Shariah courts that hear religious and family cases involving Muslims. The Federal High Court and Federal Supreme Court have jurisdiction over cases involving federal laws, transregional issues, and issues of national import. The president and vice president of the Federal Supreme Court are recommended by the prime minister and appointed by the House of People's Representatives; for other federal judges, the prime minister submits to the House of People's Representatives for appointment candidates selected by the Federal Judicial Administrative Council.

The constitution provides for an independent judiciary; trials are public. Defendants have a right to legal counsel and a public defender's office provides counsel to indigent defendants. The law, however, does not allow the defense access to prosecutorial evidence before the trial, and the current judiciary suffers from a lack of trained personnel and financial constraints. In 1995, the government began training new judges and prosecutors. However, it is estimated that the creation of a fully independent and skilled judicial system will take several decades.

In 1992, a special prosecutor's office was established. In 1994 this office began trying defendants charged with crimes against humanity during the Mengistu regime. As of 1997, approximately 1,300 detainees were charged with war crimes. Up to 5,198 persons had been charged with war crimes by the end of 1999.

The Council of People's Representatives in October 1999 passed enabling legislation to meet the constitutional requirement for the creation of a human rights commission and office of the ombudsman. The commission has full powers to receive and investigate all complaints of human rights violations made against any person. By the end of 1999, neither entity was operational.

## <sup>17</sup> ARMED FORCES

In 2005, Ethiopia had 182,500 active armed forces personnel. The Army, which was in the process of being organized into three military regions, was equipped with more than 250 main battle tanks and over 460 artillery pieces. The Air Force had an estimated 2,500 members and was equipped with 48 combat capable aircraft, including 31 fighters and 15 fighter ground attack aircraft. The service also had 25 attack helicopters. The military budget for 2005 was \$229 million.

## <sup>18</sup> INTERNATIONAL COOPERATION

Ethiopia is a charter member of the United Nations (UN), having joined on 13 November 1945; it belongs to the ECA and all the nonregional specialized agencies. A participant in the African Development Bank, G-24, and G-77. The former Ethiopian emperor, Haile Selassie, was a founder of the Organization of African Unity (OAU), which is now known as the African Union (AU). The AU secretariat and the UN Economic Commission for Africa are located in Addis Ababa. The nation has observer status in the WTO. It is part of COMESA, the ACP Group, the New Partnership for Africa's Development (NEPAD), and the Intergovernmental Authority on Development, a Horn of Africa regional grouping.

Ethiopian troops fought under UN command in the Korean conflict and served in the Congo (now the Democratic Republic of the Congo) in the early 1960s. The nation also supports the UN Operation in Burundi (est. 2004). A border dispute with Eritrea resulted in war from 1998–2000. The United Nations Mission in Ethiopia and Eritrea (UNMEE) was established in 2000 to moni-

tor the cessation of hostilities agreement made between the two countries, both of which later accepted a 2002 Boundary Commission delimitation decision. Ethiopia has received UN technical assistance in the fields of public administration, telecommunications, vocational training, agriculture, animal husbandry, education, civil aviation, and health. Ethiopia is a member of the Non-aligned Movement and the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, Ethiopia is part of the Basel Convention, the Convention on Biological Diversity, CITES, the Montréal Protocol, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Ethiopia's economy has undergone major reforms since May 1991, when a market-oriented government came to power. Droughts, civil war, and cross-border conflicts have devastated the economy as much as socialist-style totalitarianism. The government continues to institute economic reforms designed to liberalize the economy and increase the role of private capital. Land, however, as of 2002 remained firmly in the hands of the government. A large trade deficit hampers economic development.

Agriculture, hunting, forestry, and fishing engaged 85% of the Ethiopian population and in 2002 accounted for over half of GDP and almost all exports. The agricultural sector is diverse, producing maize, sorghum, millet, other cereals (barley, wheat, and teff), tubers, and sugarcane. Coffee generated \$175 million in exports in 2001 (down from \$262 million in 2000), which was 60% of export earnings. Livestock production is also important, responsible for around 20% of export earnings.

The manufacturing sector, centered around Addis Ababa, produces construction materials, metal and chemical products, and basic consumer goods including food, beverages, leather, clothing and textiles. Over 90% of large-scale industry is state owned.

Ethiopia produces gold and has additional undeveloped deposits of platinum, marble, tantalite, copper, potash, salt, soda ash, zinc, nickel, and iron. Natural gas is found in the Ogaden.

To break the cycle of famine, the government has promoted extension services and fertilizers in the hope that farmers could realize their potential and poverty would be reduced. After the border war with Eritrea ended in 2000, however, bumper crops were offset by farmers' inability to find markets for their goods. The progress in the country's economic fortunes that began in the 1990s was largely quashed by the 1998–2000 war and a sharp decline in international coffee prices. Nonetheless, new building projects were due to begin in the early 2000s; dams, a new airport building, and a \$15 million sugar-processing factory numbered among them. Reforms are needed in the financial sector, telecommunications, land ownership, and a cumbersome bureaucracy. The World Bank granted Ethiopia \$450 million for postwar reconstruction, and the EU was an equally large contributor of development aid in 2003.

Economic growth was modest in 2002 (only 1.2%), and negative in 2003 (-3.8%), but by 2004 the economy recovered expanding at a whopping 11.6%; for 2005 the GDP growth rate is expected to be 5.7%. The yoyo effect that has plagued the Ethiopian economy is largely due to the finicky weather patterns—droughts in late 2002 led to the economic recess of 2003, whereas normal

weather patterns in late 2003 helped the economy recover in 2004. The inflation rate fluctuated in previous years (with the economy), growing from 1.5% in 2002, to 17.8% in 2003, and down to 3.2% in 2004.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Ethiopia's gross domestic product (GDP) was estimated at \$59.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$800. The annual growth rate of GDP was estimated at 6.5%. The average inflation rate in 2005 was 11.6%. It was estimated that agriculture accounted for 40.1% of GDP, industry 12.7%, and services 47.2%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$46 million or about \$1 per capita and accounted for approximately 0.7% of GDP. Foreign aid receipts amounted to \$1,504 million or about \$22 per capita and accounted for approximately 22.8% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Ethiopia totaled \$5 billion or about \$73 per capita based on a GDP of \$6.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003, household consumption grew at an average annual rate of 5.1%. It was estimated that in 2004 about 50% of the population had incomes below the poverty line.

## 21 LABOR

In the latest years for which data was available, government estimates in 1998 indicated that about 26 million Ethiopians were economically active. This figure is subject to fluctuation because of the seasonal nature of much of the activity. In 1999, about 85% of the total were engaged in agriculture and livestock raising. In 1997, about 34,570 persons were classified as unemployed.

The 1993 Labor Law provides workers with the right to form and join unions and engage in collective bargaining. This right however, excludes many categories of employment, including teachers and civil servants. The right of workers to strike (and the employer's right to lockout) is also somewhat restricted. Both sides must seek conciliation efforts, provide 10 days' notice and give reasons for the strike or lockout. The government may refer labor disputes to arbitration, which is binding on the parties. As of 2005, about 300,000 workers were members of a union. Estimates by labor experts indicate that over 90% of union members were covered by collective bargaining agreements in that same year.

The legal minimum age for employment is 14, with special provisions for these workers up to age 18. However, child labor is widespread, in both rural and urban areas. As of 2005, Ethiopia did not have a national minimum wage rate, although some public enterprises and government institutions had set their own minimum wage rates. For that same year, employees in the public sector had a minimum wage of \$23 per month, while those in the insurance and banking sector had a rate of \$27 per month. In neither case were these wage rates sufficient to provide a decent

standard of living to a worker and family. The standard legal work-week was 48 hours with a 24 hour rest period. In addition there was premium pay for overtime, while compulsory and/or excessive overtime was prohibited.

## 2<sup>2</sup> AGRICULTURE

It has been estimated that nearly 70% of Ethiopia's land mass is cultivable, yet only 12% of the land is under cultivation and permanent crops. Agricultural and pastoral pursuits supported over 80% of the population and formed 42% of the GDP in 2003. Subsistence farming and livestock grazing, both inefficient, are the rule. Field crops account for 40% of gross agricultural output, cash crops for 20%, and livestock for the rest.

The coffee variety known as arabica may have originated in Ethiopia, and the word coffee is derived from Kaffa (Kefa), the region in the southwest that is still the largest coffee-producing area of the country. Coffee is the most valuable cash export crop, accounting for 10% of foreign exchange earnings. Coffee production was an estimated 260,000 tons in 2004, the highest in Africa. Qat, the leaves from a shrub that are used to make tea and which have a mild narcotic effect, is another important cash export crop.

The most commonly produced cereal is teff (*Eragrostis abyssinica*), which is used to make the Ethiopian unleavened bread called injera. Corn and barley are the next most important grains, with an annual gross production of at least 1 million tons each. Sorghum, wheat, millet, peas, beans, lentils, and oilseeds are produced in substantial quantities; sugarcane and cotton are also grown. Production in 2004 included corn, 2,744,000 tons; wheat, 1,618,000 tons; sorghum, 1,784,000 tons; barley, 1,087,000 tons; dry beans, 175,000 tons; potatoes, 400,000 tons; yams, 310,000 tons; millet, 305,000 tons; and sugarcane, 2,454,000 tons.

The agricultural sector suffered severe damage from the civil war and its aftermath. Forced recruitment into the military led to a shortage of farm labor. Reforms aimed at introducing market-based incentives have been implemented, including freeing agricultural marketing and farm labor hiring practices. Emergency provisions of seeds, fertilizer, and other inputs have also been vital in rebuilding Ethiopia's agriculture. Since 1999, however, the border war with Eritrea and reduced harvests have caused Ethiopia to rely heavily on food donations from international organizations in order to ward off starvation.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Ethiopia has the largest livestock population in Africa, and this subsector accounts for 40% of gross agricultural output. In normal years, animal husbandry provides a living for 75% of the population. The number of cattle (zebu type) was estimated at 38.5 million in 2005; about three-fifths of them primarily work animals. The country lacks facilities for fattening cattle brought in to slaughter, an adequate veterinary service, and breeding herds. Meat production was estimated at 606,500 tons in 2005. Milk production from cows was an estimated 1,500,000 tons in 2005; from sheep, 42,500 tons; and from goats, 17,250 tons. The number of sheep and goats was estimated at 17 million and 9.6 million, respectively, but periodic drought may have made the actual number much lower. The number of horses was estimated at 1,500,000,

mules at 325,000, donkeys at 3,800,000, and camels at 470,000. These were primarily pack animals.

Hides and skins constitute the country's second-largest export item and generally command high prices on the world market. In 2005, production of cattle hides was 65,100 tons; sheepskins, 10,800 tons; and goatskins, 16,100 tons. In 2005, Ethiopia produced 39,000 tons of honey, more than any other nation in Africa.

## 2<sup>4</sup> FISHING

With the secession of Eritrea, Ethiopia lost access to an estimated 1,011 km (628 mi) of Red Sea coastline. In 1992, the Ethiopian and provisional Eritrean governments agreed to make Assab a free port for Ethiopia. Most Ethiopians do not eat seafood; hunting and fishing accounts for only a tiny fraction of the GDP. The catch was 9,213 tons in 2003, up from 5,318 tons in 1994.

## 2<sup>5</sup> FORESTRY

In the 1930s, more than 30% of Ethiopia consisted of forests, but that total has fallen to 13%. *Boswellia* and species of *commiphora* produce gums used as the basis for frankincense and myrrh, respectively. A species of acacia is a source of gum arabic. Eucalyptus stands, introduced in the 19th century, are a valuable source of firewood, furniture, and poles. Roundwood production was an estimated 94 million cu m (3.3 billion cu ft) in 2003; all but 2.5 million cu m (87 million cu ft) was for fuel.

## 2<sup>6</sup> MINING

Ethiopia's main mineral export is gold, but the country has also been a producer of silver, tantalite, talc, soda ash, brick clay, feldspar, gemstones, diatomite, granite, anhydrite and gypsum, limestone, pumice, kaolin, salt, sand and scoria. The country also has metal deposits of manganese, iron ore, platinum and nickel. Despite this, little of Ethiopia's expected mineral potential has been exploited, although foreign investment was increasing. Gold mine output in 2003 was estimated at 5,300 kg, unchanged from 2002. Silver mine production in 2002 and 2003 each totaled 1,100 kg. Cement was the most important mineral industry in value and quantity. In 2003, hydraulic cement output totaled 1,200,000 metric tons, up from 900,000 metric tons the previous year. Substantial iron ore deposits were discovered in the Welega region in 1985. Other undeveloped resources included copper, semiprecious gemstones (agate, aquamarine, chalcedony, chrysoprase, emerald, garnet, jasper, obsidian, ruby, sapphire, spinel), molybdenum, mercury, palladium, rhodium, tungsten, zinc, apatite, bentonite, dolomite, potash, and quartz sand. Expected improvements in the general economic situation and the need to rebuild infrastructure were likely to increase demand for building materials and the viability of Eritrea's metals and industrial minerals deposits.

## 2<sup>7</sup> ENERGY AND POWER

Hydropower accounts for the bulk of Ethiopia's electric power generating capacity and output. In 2002, the country's generating capacity stood at 0.501 million kW, with hydropower accounting for 0.451 million kW, and conventional thermal at 0.050 million kW. Electricity production for that same year stood at 2.024 billion kWh, of which 2.003 billion kWh and 0.020 billion kWh came from hydroelectric and conventional thermal plants, re-

spectively. Electric power consumption in 2002 totaled 1.882 billion kWh. However, Ethiopia's heavy reliance upon hydropower to supply its electric power has made the country vulnerable to lengthy droughts.

Ethiopia has small reserves of oil and natural gas. As of 1 January 2003, the country's crude oil and natural gas reserves were placed at 0.428 million barrels and 880 billion cu ft, respectively. Ethiopia has no crude oil refining capacity and must import all refined petroleum products. Imports of refined petroleum products totaled 24,910 barrels per day, with consumption was an estimated 23,000 barrels per day in 2001. In 1997, due to high maintenance and operating costs, Eritrea and Ethiopia agreed to shut down their joint operations at the petroleum refinery at Assab and import refined petroleum products. In 2001, Ethiopia signed an agreement to import petroleum products from Sudan, which began in January 2003. Although Ethiopia has few proven hydrocarbon reserves, it is estimated to have considerable potential for oil and gas exploration.

## 28 INDUSTRY

While Ethiopia's industrial sector engages primarily in food processing, it also produces sugar, alcohol and soft drinks, cigarettes, cotton and textiles, footwear, soap, ethyl alcohol, and quicklime. Cement production is also significant. Industrial facilities are concentrated around Addis Ababa, depend heavily on agricultural inputs, and primarily serve the domestic market.

Since 1991, privatization of Ethiopia's industry has been a major objective of the government. In 1995, the government established the Ethiopian Privatization Agency to help privatize companies. By 1999, about 180 government enterprises had been privatized, including Pepsi-Cola and Coca-Cola bottling plants, the St. George Brewery, and the Lega Dembi Gold Mine. Other companies for sale included the Kenticha Tantalum Mine, the Calub Gas Company, and the Wonji-Shoa Sugar Factory, hotels, tanneries, textile mills, and garment factories.

Ethiopia has few proven oil and natural gas reserves, although the potential of these industries is seen as promising. Hydrocarbon exploration began in the Ogaden Basin in the 1920s, and in 1994, the World Bank approved a \$74 million loan to develop natural gas fields in the Ogaden Basin. As of 2002, there were plans to build an oil refinery.

One of the key components of Ethiopia's industrial success is its access to ports. Two-thirds of Ethiopia's goods passed through the Eritrean port of Assab prior to the 1998–2000 border war. Ethiopia subsequently shifted its trade to Djibouti, but Port Sudan and Berbera in Somaliland were targeted as future outlets for trade.

Industry made up 12.4% of the economy in 2004, and it employed only a fraction of the labor force; agriculture is by far the biggest employer and also the biggest contributor to the GDP (47%); services come in second with a 40.6% participation in the GDP. Whereas agricultural growth rates were influenced by the weather, industry has managed to register stable growth rates—5.8% in 2001–02, 4.6% in 2002–03, and 6.9% in 2003–04. Agriculture remained the country's main wealth producer.

## 29 SCIENCE AND TECHNOLOGY

Scientific societies and research institutes in Addis Ababa include the Association for the Advancement of Agricultural Sciences in

Africa, the Desert Locust Control Organization for Eastern Africa, the Ethiopian Mapping Authority, the Ethiopian Medical Association, the Ethiopian Institute of Geological Surveys, the Geophysical Observatory, the National Herbarium, the Institute of Agricultural Research, and the International Livestock Center for Africa. Another Institute of Agricultural Research is located in Sidamo. The University of Addis Ababa, founded in 1950, maintains faculties of science, technology, and medicine, a college of agriculture, and a school of pharmacy. The Alemaya University of Agriculture, founded in 1952, has faculties of agriculture and forestry and a division of natural and social sciences. Also in Ethiopia are the Jimma Junior College of Agriculture and the Polytechnic Institute at Bahir-Dar. In 1987–97, science and engineering students accounted for 26% of college and university enrollments.

## 30 DOMESTIC TRADE

Addis Ababa is the paramount commercial and distribution center. Most of the economy is monetary, but transactions are still conducted by barter in some of the more isolated rural sectors. Underdeveloped transportation systems prohibit domestic trade, particularly in agriculture. As of 2001, about 75% of all farms were more than half a day's walk from the nearest all-weather road. Even so, about 80% of the work force is employed in agriculture, which accounts for about 52% of the GDP. The 1999–2000 war with Eritrea and recurring droughts have severely effected the economy. Growth in the industrial sector has been further prohibited by the land tenure system, through which the government owns and leases all land.

In general, business hours are from 8:30 or 9 AM to 1 PM and from 2 PM to 5 or 6 PM, Mondays through Fridays. Shops are open until 8 PM. The national language, Amharic, is spoken along with English, the second official language. Credit cards are not widely accepted.

## 31 FOREIGN TRADE

Coffee exports generate more than half of Ethiopia's export returns (53%), but the country's coffee production only accounts for 2.2% of the world's coffee exports. Leather, animal hides, and skins also bring in export revenues (9.9%). Other agricultural products,

including vegetables, oil seeds, and cotton reflect the remainder of major exports (10%).

Ethiopia is heavily dependent on imported manufactures. Machinery, petroleum, and petroleum products represent the leading import items.

In 2004, exports reached \$563 million (FOB—free on board), while imports grew to \$2.1 billion (FOB). The bulk of exports went to Djibouti (13.3%), Germany (10%), Japan (8.4%), Saudi Arabia (5.6%), the United States (5.2%), the UAE (5%), and Italy (4.6%). Imports included food and live animals, petroleum and petroleum products, chemicals, machinery, motor vehicles, cereals, and textiles, and mainly came from Saudi Arabia (25.3%), the United States (5.8%), China (6.6%), and India (4.0%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Ethiopia's balance of payments has been significantly affected by weather conditions, terms of trade, and emergency drought relief efforts provided by the international community.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Ethiopia's exports was \$442 million while imports totaled \$1.54 billion resulting in a trade deficit of \$1.098 billion.

The International Monetary Fund (IMF) reported that in 2001 Ethiopia had exports of goods totaling \$433 million and imports totaling \$1.63 billion. The services credit totaled \$523 million and debit \$526 million.

Exports of goods and services reached \$1.5 billion in 2004, up from \$1.2 billion in 2003. Imports grew from \$2.4 billion in 2003, to \$3.2 billion in 2004. The resource balance was consequently negative in both years, reaching -\$1.3 billion in 2003, and -\$1.7 billion in 2004. The current account balance was also negative, deteriorating from -\$402 million in 2003, to -\$620 million in 2004. Foreign exchange reserves (including gold) grew to \$1.4 billion in 2004, covering more than five months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

All banking institutions were nationalized after the government's formal Declaration of Socialism on 20 December 1974. The country's three private commercial banks were placed under the management of the National Bank of Ethiopia (NBE) and, in 1981, under the state-owned Commercial Bank of Ethiopia (established in 1963), which had 170 branches and \$3 billion in total assets as of July 1999. It also holds \$1.4 in deposits. Other banks included the Agricultural and Industrial Development Bank and the Housing and Savings Bank. A proposal to deregulate the banking sector, giving greater autonomy to the NBE, was introduced by the Council of Ministers in September 1993. Legislation allowing for the establishment of private banks and insurance companies; but not the privatization of existing institutions, or the foreign ownership of such companies; was passed in January 1994. The first private bank, Awash International, started operations at the end of 1994, and had eight branches by 1999. Five other private banks have opened, including Dashen Bank, The Bank of Abyssinia, Wegagen Bank, NIB International, and United Bank. There are no securities exchanges, and Ethiopians are legally barred from acquiring or dealing in foreign securities. A private-sector initiative plans to establish a market for buying and selling company shares by 2000.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.8 billion.

### 3<sup>4</sup> INSURANCE

In January 1976, the 13 insurance companies operating in Ethiopia were nationalized and fused into an inclusive national insurance organization, the Ethiopian Insurance Corp. In 1994, the insurance industry was deregulated. Seven private insurance companies opened between 1994 and 1997: United, Africa, Nile, Nyala, Awash, National, and Global.

### 3<sup>5</sup> PUBLIC FINANCE

The Ethiopian fiscal year begins 8 July, in the Ethiopian month of Hamle. Ethiopia's public finances are under great budgetary pressure, as years of war and poverty have taken a heavy toll on the countryside, population, and infrastructure.

The US Central Intelligence Agency (CIA) estimated that in 2005 Ethiopia's central government took in revenues of approximately \$2.3 billion and had expenditures of \$2.8 billion. Revenues minus expenditures totaled approximately -\$542 million. Total external debt was \$2.9 billion.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, budgetary central government revenues were B9,707.3 million and expenditures were B12,993.7 million. The value of revenues in US dollars was us\$1,222 million and expenditures us\$1,689 million, based on a official exchange rate for 1999 of us\$1 = B7.9423 as reported by the IMF. Government outlays by function were as follows: general public services, 14.2%; defense, 33.0%; public order and safety, 4.3%; economic affairs, 29.2%; housing and community ameni-

ties, 2.0%; health, 4.9%; recreation, culture, and religion, 0.9%; education, 13.1%; and social protection, 1.6%.

**3<sup>6</sup> TAXATION**

Ethiopia has a standard corporate tax rate of 30%. However, companies in the mining industry (excluding oil shale, petroleum and natural gas) are taxed at rates of 35% for small-scale mining operations, and at 45% for large-scale mining operations. Income generated from petroleum, oil shale and natural gas operations are subject to the 30% rate. Capital gains derived from the sale of buildings in municipal areas that are used for a business are subject to a 15% tax. Gains from the sale of company shares are taxed at 30%. A 5% tax is levied on royalties paid to residents and non-residents, and a 2% ad valorem turnover tax on domestic sales. On 1 January 2003, Ethiopia replaced its sales tax with a value-added tax (VAT). As of 2005, the standard rate was 15%. Exempt from the VAT were food and pharmaceuticals.

**3<sup>7</sup> CUSTOMS AND DUTIES**

The primary purpose of the tariff system is to provide revenues rather than to protect Ethiopian industry or to prohibit the importation of certain commodities. However, there are restrictions on importing certain goods that compete with domestically produced goods. Excise tax brackets range from 10% for textiles to 100% for vehicles with engines larger than 1,800 cc. Taxes on imports are based on the cost, insurance and freight (CIF) value. Imports of certain agricultural and industrial tools and parts and many raw materials are duty-free.

**3<sup>8</sup> FOREIGN INVESTMENT**

Since May 1991, the climate for foreign investment has improved dramatically. Private investment policies are more liberal, commercial performance standards have been applied to public enterprises, tax and tariffs have been reformed, and the currency has been devalued by 58%. The devaluation was the policy action re-

quired for the rescheduling of Ethiopia's foreign debt in 1992. Foreign exchange is now auctioned.

In 1996, a revised investment proclamation was approved that created additional incentives for foreign investors. Major provisions included duty-free entry of most capital goods and a cut in the capital gains tax from 40 to 10%. In addition, the government opened a number of previously closed sectors of the economy to foreign investment, although financial services, large-scale power production, telecommunications, and other public utilities remain off limits. Official estimates are that as of June 1996, 52 foreign investors had been given licenses. In 1998, amendments to the 1996 investment proclamation allowed Ethiopian expatriates and permanent residents the ability to invest in industries that had previously been reserved for nationals only.

The inflow of foreign direct investment (FDI) peaked in 1997 at \$288.5 million and has declined sharply since. In 2000, FDI inflow was \$134 million and in 2001, grew to \$349 million. Subsequent years brought with them significant levels of capital inflow (\$255 million in 2002, \$465 million in 2003, and \$545 million in 2004), but not enough for a country the size of Ethiopia. At the end of 2004, total FDI stocks amounted to only \$2.5 billion.

**3<sup>9</sup> ECONOMIC DEVELOPMENT**

The policy of the Ethiopian government is to create the conditions necessary for sustained economic growth. Farmers have reacquired the economic freedom of price, of production, and of settlement. The government aspires to an agriculture-led industrialization and focuses its attention on food security, rural savings, and labor formation issues. The government holds all land and issues long-term leases to tenants. The 1996 economic reform plan promoted free markets and liberalized trade laws as essential to economic growth. Increased military expenditures during 1999 and 2000 largely due to the war with Eritrea threatened stability.

Ethiopia's per capita income is the second lowest in the world, according to the International Monetary Fund (IMF), at about \$100. In 2001, Ethiopia reached its decision point under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative, and was to receive \$1.9 billion in debt relief. Also in 2001, Ethiopia negotiated a three-year \$115 million Poverty Reduction and Growth Facility (PRGF) Arrangement with the IMF, due to expire in March 2004. Although there was a bumper crop in 2000–01, the prices of coffee and cereals fell in 2001–02, and agricultural output was lower. Since July 2002, a severe drought affected Ethiopia; over 15 million people in Ethiopia and Eritrea alone were at risk of starvation in 2003.

The economy recovered well in 2004 and continued to grow substantially in 2005, due to a good performance of the agriculture sector. Since weather patterns were stable and favorable in 2005, analysts expected 2006 to be another good year for the Ethiopian economy. However, rising oil prices were expected to tone down the positive effect of the weather. The fact that the government owns all of the land in the country, which it leases to interested tenants, means that economic growth is seriously hindered because entrepreneurs cannot use that land as collateral for loans.

**4<sup>0</sup> SOCIAL DEVELOPMENT**

Other than modest government allocations for pensions, labor and social welfare for public employees, Ethiopia has no compre-

hensive public welfare or social security programs. Retirement is set at age 55 for public employees. Retired employees receive 30% of their average monthly salary during the last three years of employment. Most of the population depends on subsistence agriculture in deprived rural areas and therefore falls outside the scope of this limited retirement system.

Women have traditionally been restricted to subordinate roles in society. In rural areas, women are burdened with most of the strenuous agricultural and domestic work, while in urban areas, women are limited in their job opportunities. The civil code discriminates against women in family law and property issues. Domestic abuse is pervasive; societal norms inhibit most women from seeking intervention from the authorities. However, in 2004 a court was created to try cases of sexual abuse. Young women are still abducted for the purpose of marriage. The majority of girls are subject to female genital mutilation.

Human rights abuses persist, including arbitrary arrests, lengthy pretrial detention, and mistreatment of prisoners. However, the government encourages international human rights groups to send observers.

#### 41 HEALTH

The availability of modern health services has been greatly extended since 1960, but these services still reach only a small portion of the population. Free medical care for the needy was introduced in 1977; however, in 1993, only 55% of the population had access to health care services. Ethiopia built a new hospital at Gore and a 500-bed hospital in Hārer was completed. The tuberculosis center in Addis Ababa was expanded and five new leprosariums were built in the provinces. Mental hospitals were built in Hārer and Asmera and the one in Addis Ababa was renovated. As of 2004, there were fewer than 3 physicians per 100,000 people, one of the lowest number of doctors per capita in the world. Additionally, there were only 19 nurses and 2 midwives per 100,000 people.

The wars, drought, political turmoil, and population pressures of the 1970s and early 1980s left their mark on the Ethiopian health situation. Between 1974 and 1992, there were 575,000 war-related deaths. Hundreds of thousands of Ethiopians died during a famine in 1973 and as many as one million may have died between 1983 and 1985. Only 4% of women used any form of contraception. The fertility rate in 2000 was 5.6. Average life expectancy in 2005 was estimated at only 48.83 years; infant mortality was estimated at 95.32 per 1,000 live births.

Widespread diseases include malaria, tuberculosis, syphilis, gonorrhea, leprosy, dysentery, and schistosomiasis. In 2000, 24% of the population had access to safe drinking water and 15% had adequate sanitation. In 1999, there were 373 reported cases of tuberculosis per 100,000 people. Ethiopia made an effort to vaccinate children up to one year old against tuberculosis, 90%; diphtheria, pertussis, and tetanus, 63%; polio, 64%; and measles, 52%. As of 2000, an estimated 51% of all children under five years old were moderately or severely malnourished. Public health care expenditures were estimated at 4.1% of GDP.

The HIV/AIDS prevalence was 4.40 per 100 adults in 2003. As of 2004, there were approximately 1,500,000 people living with HIV/AIDS in the country. There were an estimated 1,200 deaths

from AIDS in 2003. Ethiopia is one of several African countries in which female genital mutilation is performed. About 90% of all Ethiopian women undergo the ritual; no specific law in the country prohibits it.

#### 42 HOUSING

Except in Addis Ababa, Hārer, Dirē Dawa, and a few other urban centers, most houses are built of mud or mortar and have thatched or tin roofs. In the rural areas the traditional thatched hut (*tukul*) is still the most common dwelling. A 2005 Habitat for Humanity report indicated that about 85% of all houses are made with mud, sticks, and thatch. Only about 8% of all housing units are built with stone walls. Housing shortages and overcrowding were still major concerns as of 2005. Only about 27% of the population had access to safe drinking water and 10% had access to sanitation facilities. Homelessness is a big problem in urban areas; it has been estimated that 80% of the residents in Addis Ababa are homeless or in substandard housing. The housing deficit for urban areas alone has been estimated at over 699,000 units, about 42% of the total housing stock in the nation.

Housing development and finance are the joint responsibility of the Ministry of Housing and Urban Development and the Housing and Savings Bank, which was established in November 1975. The government has developed the Ethiopian Housing Cooperative to encourage Ethiopia emigrants to return and build homes.

#### 43 EDUCATION

After the 1974 revolution, emphasis was placed on increasing literacy in rural areas. Practical subjects were stressed, as was the teaching of socialism. Public education is compulsory and free at the primary level, which covers eight years of study. The first cycle of secondary studies covers an additional two years. After this, students may choose another two years of preparatory studies or three-year technical or vocational studies. The academic year runs from September to July.

Primary school enrollment in 2003 was estimated at about 47% of age-eligible students; 52% for boys and 42% for girls. The same year, secondary school enrollment was about 17% of age-eligible students; 21% for boys and 12% for girls. It is estimated that about 39% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 67:1 in 2003; the ratio for secondary school was about 48:1.

Addis Ababa University (formerly Haile Selassie I University) has extension centers in Alemaya, Gonder, Awasa, Bahir-Dar, and Debre Zeyit. The University of Asmara is a Roman Catholic institution. In 2003, about 2% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 41.5%, with 49.2% for men and 33.8% for women.

As of 2003, public expenditure on education was estimated at 4.6% of GDP, or 13.8% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Addis Ababa University Library contains 550,000 volumes. The National Library, established in 1944, holds 164,000 volumes. The Alemaya University of Agriculture in Dirē Dawa holds 47,000 volumes. The first children's library in Ethiopia opened in 2003 in Addis Ababa. Addis Ababa is also the site of the Ethiopia Public Information Center, a depository library of the World Bank.

Addis Ababa is home to the National Museum, which houses a general collection of regional archaeology, history, and art; the Ethnographic Museum at the Institute of Ethiopian Studies, which includes collections of religious art, musical instruments, and ancient coins; the archaeological museum; the Natural History Museum; the Museum at the Holy Trinity Church; and the War Museum. There are regional museums in Harar, Makale, Wollamo Sodo, and Yirgalem. Many provincial monasteries and churches, as well as municipal authorities, maintain collections of documents, art, and antiquities.

#### 45 MEDIA

All telephone and telegraph facilities are owned by the government and operated by the National Board of Telecommunications. The principal population centers are connected with Addis Ababa by telephone and radio circuits, and there is an earth-satellite station. In 2003, there were an estimated 6 mainline telephones for every 1,000 people; about 146,100 people were on a waiting list for telephone service installation. The same year, there was approximately 1 mobile phone in use for every 1,000 people.

Radio and television stations are run by the government. The Voice of Ethiopia radio service broadcasts mostly on AM in Amharic, but also in English, French, Arabic, and local languages. Ethiopian Television broadcasts about four hours daily. In 2001 there were eight radio stations and one television station. In 2003, there were an estimated 189 radios and 6 television sets for every 1,000 people. The same year, there were 2.2 personal computers for every 1,000 people and 1 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

The two major daily newspapers (with estimated 2002 circulations) are *Addis Zeman* (40,000; Amharic) and the *Ethiopian Herald* (37,000; English), both published by the government at Addis Ababa. There are also several weeklies published by the government. There were about 28 private Amharic-language weeklies and 1 independent Tigrinya-language weekly. Most independently owned newspapers are printed at government-owned presses.

All newspapers are strictly censored by the Ministry of Information and National Guidance. A 1992 Press Law, along with the constitution of Ethiopia, provide for free speech and a free press. The government is reported to use legal mechanisms to repress press rights in practice.

#### 46 ORGANIZATIONS

Since the 1974 revolution, peasants' and urban dwellers' associations, encouraged by the government, have been the chief voluntary societies. Ethiopia has a national chamber of commerce as

well as regional and local ones. Trade unions are encouraged and supported through the Confederation of Ethiopian Trade Unions. The African Economic Community has an office in Addis Ababa.

The Institute of Ethiopian Studies promotes interest and research in the nation's history and culture. The Association for Higher Education and Development is a multinational organization formed in 1999 to promote education in the country. The Ethiopian Medical Association promotes research and education on health issues and works to establish common policies and standards in health-care. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions, such as the Ethiopian Diabetes Association.

The Ethiopian Youth League is a primary organization promoting education and job training. The National Union of Eritrean Youth and Students serves as an umbrella organization that develops local youth groups interested in promoting traditional culture and values. The Ethiopian Scouts Association is also active. There are several sports associations throughout the country. Branches of the YMCA/YWCA are also active. The African Center for Women is a multinational organization encouraging women's participation in development programs and providing various educational and training programs.

There are national chapters of the Red Cross Society, the Society of St. Vincent de Paul, UNICEF, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

All visitors are required to have a valid passport and visa. Exit visas are required for visitors who stay more than 30 days. The chief tourist attractions are big-game hunting, early Christian monuments and monasteries, and the ancient capitals of Gonder and Aksum. There are seven national parks. In 2003, about 180,000 foreign visitors arrived in Ethiopia, a 15% increase from 2002. There were 3,497 hotel rooms with 5,419 beds and an occupancy rate of 60%. Tourism receipts totaled \$336 million. The average length of stay in Ethiopia was three nights.

In 2005, the US Department of State estimated the daily cost of staying in Addis Ababa at \$216.

#### 48 FAMOUS ETHIOPIANS

The most famous Ethiopian in national legend is Menelik I, the son of the Queen of Sheba and King Solomon, regarded as the founder of the Aksumite Empire. This tradition is contained in the *Kebra Negast*, or *Book of the Glory of Kings*. The most famous Christian saint of Ethiopia is Frumentius of Tyre (b. Phoenicia, d. 380?), the founder of the Ethiopian Church. The 15th-century composer Yared established the Deggua, or liturgical music, of the Ethiopian Church. A 13th-century monarch, Lalibela, is renowned for the construction of the great monolithic churches of Lasta (now called Lalibela). Emperor Amda-Seyon I (r. 1313–44) reestablished suzerainty over the Muslim kingdoms of the coastal lowland regions. During the reign of King Zar' a-Yāqob (1434–68), a ruler renowned for his excellent administration and deep religious faith, Ethiopian literature attained its greatest heights. Emperor Menelik II (1844–1913) is considered the founder of modern Ethiopia. Emperor Haile Selassie I (1891–1975) was not-

ed for his statesmanship and his introduction of many political, economic, and social reforms. Lt. Col. Mengistu Haile Mariam (b.1937) led the 1974 coup and was head of state from 1977 to 1991. Legesse ("Meles") Zenawi (b.1955) became prime minister in 1995.

#### **49 DEPENDENCIES**

Ethiopia has no territories or colonies.

# FRENCH AFRICAN DEPENDENCIES

## MAYOTTE

Mayotte, the southernmost of four main islands in the Comoros Archipelago, with an area of 374 sq km (144 sq mi), lies in the Mozambique Channel about 480 km (300 mi) NW of Madagascar, at 12°49' S and 45°17' E. Mayotte is surrounded by a coral reef, which encloses the islets of M'Zambourou (Grand Terre) and Pamanzi. Beyond the island's coastal plain, a plateau reaches heights of 660 m (2,165 ft). The average daily high is 32° C (90° F); the average low is 17° C (63° F). Average annual precipitation is about 124 cm (49 in). The population was estimated at 193,633 in mid-2005; about 97% of the population was Muslim. Vanilla, ylang-ylang (perfume essence), coffee, and copra are among the leading agricultural products. Mayotte has a newly-created lobster and shrimp industry.

The island of Mayotte was originally ceded to France by its Malagasy ruler in 1843. Together with the other Comoro Islands, which became French colonies in 1912, it was attached to the French overseas territory of Madagascar until 1946, when the islands were given separate status within the French Republic. Mayotte is the only island in the Comoro chain that, by popular vote, chose to retain its link with France instead of joining an independent Comoro Islands state. This choice, indicated in the referendum of 22 December 1974, was confirmed in a separate referendum for Mayotte, conducted on 8 February 1976, when 99.4% favored remaining within France. The French vetoed a UN Security Council resolution of 7 February 1976 declaring the referendum "aggression" against the sovereignty and territorial integrity of the Comoros, which continues to claim the island. On 11 April, in a further referendum, 97.5% of those casting valid ballots (80% of the ballots were blank or declared invalid) voted for abandonment of the status of overseas territory; the vote was interpreted as indicating that Mayotte wished to become a French overseas department. The UN General Assembly called for incorporation of Mayotte within the Comoros on 21 October. Special status as a French "territorial collectivity," allowing for Mayotte eventually to become either an overseas department or independent, was conferred by the French government on 1 December 1976 and, as of 2006, was still in effect. France maintains a naval base at Dzaoudzi. Elections were held in March 2004, with the next scheduled for 2007. The Mahoran Popular Movement (Mouvement Populaire Mahorais—MPM) favors French departmental status. Mayotte is represented by one deputy in the French national assembly; in the elections held 16 June 2002, the deputy represented the UMP-RPR party. Mayotte also elects one member to the French senate; the elections are held every six years, with the next scheduled for September 2007.

## RÉUNION

Réunion, about 675 km (420 mi) E of Madagascar in the Indian Ocean, is the largest island in the Mascarene Archipelago. Réunion lies between 20°52' and 21°22' S and between 55°13' and 55°50' E, is 55 km (34 mi) long and 53 km (33 mi) wide, and has a coastline of 207 km (129 mi). It has an area of 2,510 sq km (969 sq mi).

Volcanic in origin, Réunion is mountainous, with 10 peaks—one of them, Piton de la Fournaise, still an active volcano—rising above 2,600 m (8,500 ft). The highest, Piton des Neiges, has an altitude of 3,069 m (10,066 ft). Rosewood, ebony, ironwood, and other tropical hardwoods are represented in the forests near the coast. Torrential rivers are numerous. The mean annual temperature is 23° C (73° F) at sea level, but the climate, generally tropical, varies with orientation and altitude. The east coast receives almost daily precipitation, totaling some 350 cm (140 in) annually, but on the north coast, annual rainfall is only about half that. Cyclones, which threaten from December to April, have devastated Réunion several times. The tropical cyclone monitoring center at Saint-Denis serves the entire Indian Ocean area. Sea fauna is rich and varied.

The population was estimated to be 776,948 in mid-2005. One-fourth of the islanders are of French origin, including those in the military; Réunion is the headquarters for French military forces in the Indian Ocean area. The vast majority of the population is Roman Catholic, with the remainder practicing Hinduism, Islam, or Buddhism.

There are about 2,724 km (1,703 mi) of roads, about 1,300 km (810 mi) of which were paved as of 2002. Only the sugar plantations have functioning rail service. Pointe des Galets is the chief port, Saint-Pierre the main fishing port. Air France maintains a service from Gillot-Sud Airfield, near Saint-Denis, to Madagascar, and there are regular steamer services.

Réunion had 300,000 main telephone lines and 489,800 mobile cellular telephones in service in 2002. As of 2001, there were 35 television stations, 2 AM, and 55 FM radio stations. There were 150,000 Internet users as of 2002. The newspapers *Journal de l'Île de la Réunion*, *Quotidien de la Réunion*, and *Témoignages* are published daily.

At the time of its discovery on 9 February 1513 by the Portuguese explorer Pedro de Mascarenhas, Réunion was uninhabited. A few French colonists came in the 16th century to Bourbon Island, as it was then known. It was settled by the French as a penal colony in the early 17th century, and in 1665, it became an outpost of the French East India Company. Coffee and, after 1800, sugarcane, helped make the colony relatively prosperous. French immigration continued from the 17th to the 19th century, supplemented by influxes of Negroes, Malays, Indochinese, Chinese, and

Malabar Indians. The island received its present name in 1793. With the mid-19th century came a decline in Réunion's prosperity: slavery was abolished in 1848, and the opening of the Suez Canal in 1869 cost the island its importance as a stopover on the East Indies route.

An overseas department of France since 1946, and elevated to regional status in 1973, Réunion is represented in the French parliament by five deputies and three senators. Local administration is patterned on that of metropolitan France. There are a regional council of 45 elected members and a general council of 49. Elections were held in 2004; the next elections were scheduled for 2010.

The GDP was estimated at us\$4.802 billion in 2005, or us\$6,200 per capita. Sugarcane, vanilla, tobacco, tropical fruit, vegetables, and corn are the primary agricultural products. Sugarcane is an important crop, accounting for up to 85% of exports. In addition to sugar, rum and molasses, perfume essences, and lobster are among the exports. Manufactured goods, food, beverages, tobacco, machinery and transportation equipment, raw materials, and petroleum products are the main imports.

The monetary unit is the euro. Approximately three-quarters of exports and two-thirds of imports are traded with France. Exports totaled \$214 million in 1997; imports totaled \$2.5 billion (the last figures available).

The infant mortality rate was 7.78 deaths per 1,000 live births in 2005, up from 6.9 per 1,000 live births in 1999, but still an improvement over the rate 13 per 1,000 live births in the mid-1980s. The Université de la Réunion is in Saint-Denis.

In 1968, certain islands that had previously been administered from Madagascar, and later by the French Southern and Antarctic Territories, were placed under the direct administration of the commissioner residing in Saint-Denis. Europa Island (22°21' S and 40°21' E), in the Mozambique Channel about 340 km (210 mi) west of Madagascar, is heavily wooded and has a meteorological station and airstrip. Bassas da India (21°27' S and 39°45' E), in the Mozambique Channel, is a volcanic rock 2.4 m (8 ft) high, surrounded by reefs, which disappears under the waves at high tide. Juan de Nova (also known as Saint-Christophe, at 17°3' S and 42°43' E), also in the Mozambique Channel, about 145 km (90 mi) west of Madagascar, is exploited for its guano and other fertilizers. The Glorioso Islands (Îles Glorieuses), in the Indian Ocean 213 km (132 mi) northwest of Madagascar, at about 11°34' S and 47°17' E, consist of Grande Glorieuse, the Île du Lyse, and three tiny islets—the Roches Vertes; principal products are coconuts, corn, turtles, and guano. Tromelin Island (15°53' S and 54°31' E) has an important meteorological station.

# GABON

Gabonese Republic  
*République Gabonaise*

**CAPITAL:** Libreville

**FLAG:** The flag is a tricolor of green, golden yellow, and royal blue horizontal stripes.

**ANTHEM:** *La Concorde (Harmony)*.

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr), which was originally pegged to the French franc, has been pegged to the euro since January 1999 with a rate of 655.957 CFA francs to 1 euro. The CFA franc is issued in coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs, and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00192 (or \$1 = CFA Fr521.74) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Day of Renewal, 12 March; Labor Day, 1 May; Africa Freedom Day, 25 May; Assumption, 15 August; Independence Day, 17 August; All Saints' Day, 1 November; Christmas, 25 December. Movable religious holidays include Easter Monday, Ascension, Pentecost Monday, 'Id al-Fitr, and 'Id al-'Adha'.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the west coast of Africa and straddling the equator, Gabon has an area of 267,667 sq km (103,347 sq mi), extending 717 km (446 mi) NNE–SSW and 644 km (400 mi) ESE–WNW. Comparatively, the area occupied by Gabon is slightly smaller than the state of Colorado. It is bordered on the N by Cameroon, on the E and S by the Republic of the Congo (ROC), on the W by the Atlantic Ocean, and on the NW by Equatorial Guinea, with a total boundary length of 3,436 km (2,135 mi), of which 885 km (550 mi) is coastline.

Gabon's capital city, Libreville, is located on the country's northwestern coast.

## <sup>2</sup>TOPOGRAPHY

Rising from the coastal lowlands, which range in width from 30–200 km (20–125 mi), is a band more than 96 km (60 mi) wide forming a rocky escarpment, which ranges in height from 450–600 m (1,480–1,970 ft). This plateau covers the north and east and most of the south. Rivers descending from the interior have carved deep channels in the face of the escarpment, dividing it into distinct blocks, such as the Crystal Mountains (Monts de Cristal) and the Chaillu Massif. There are mountains in various parts of Gabon, the highest peak being Mt. Iboundji (1,575 m/5,167 ft). The northern coastline is deeply indented with bays, estuaries, and deltas as far south as the mouth of the Ogooué River, forming excellent natural shelters. Farther south, the coast becomes more precipitous, but there are also coastal areas bordered by lagoons and mangrove swamps. Virtually the entire territory is contained in the basin of the Ogooué River, which is about 1,100 km (690 mi) long and navigable for about 400 km (250 mi). Its two major

tributaries are the Ivindo and the Ngounié, which are navigable for 80–160 km (50–100 mi) into the interior.

## <sup>3</sup>CLIMATE

Gabon has the moist, hot climate typical of tropical regions. The hottest month is January, with an average high at Libreville of 31°C (88°F) and an average low of 23°C (73°F). Average July temperatures in the capital range between 20° and 28°C (68° and 82°F). From June to September there is virtually no rain but high humidity; there is occasional rain in December and January. During the remaining months, rainfall is heavy. The excessive rainfall is caused by the condensation of moist air resulting from the meeting, directly off the coast, of the cold Benguela Current from the south and the warm Guinea Current from the north. At Libreville, the average annual rainfall is more than 254 cm (100 in). Farther north on the coast, it is 381 cm (150 in).

## <sup>4</sup>FLORA AND FAUNA

Plant growth is rapid and dense. About 85% of the country is covered by heavy rain forest. The dense green of the vegetation never changes, since the more than 6,000 species of plants flower and lose their leaves continuously throughout the year according to species. Tree growth is especially rapid; in the more sparsely forested areas, the trees tower as high as 60 m (200 ft), and the trunks are thickly entwined with vines. There are about 300 species of trees. In the coastal regions, marine plants abound, and wide expanses are covered with tall papyrus grass.
