Costa Rican residents can own and deal in gold, own foreign securities and foreign currencies, maintain foreign bank balances, import and export national bank notes, and import goods from abroad, but they must repatriate export earnings. Costa Ricans traditionally put their savings into real property rather than securities, but on several occasions during the 1960s and 1970s, the government successfully floated bond issues within the country. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.2 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$6.1 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 28.75%.

Stock sales and foreign currency transactions are handled by the Bolsa Nacional de Valores in San José. The Superintendency of Financial Markets (SUGEVAL) is in charge of the stock exchange.

### 3<sup>4</sup> INSURANCE

Only the government's National Insurance Institute (Instituto Nacional de Seguros—INS), founded in 1924, may write insurance in Costa Rica. It handles all types of insurance, the most important being life, fire, automobile, and workers' compensation. One of the more popular features of life insurance policies is that the holder may borrow up to the full face value of the policy after paying premiums for only two years. In 1996, the insurance monopoly was reformed to allow private agents to sell policies, while the INS continued to hold all underwriting rights. The INS does, however, reinsure its risks with private, foreign insurers. In 2003, the value of all direct premiums written totaled \$318 million, of which nonlife premiums accounted for \$290 million. In 2002, the INS' gross written nonlife premiums (including personal accident) totaled \$313.5 million.

### 3<sup>5</sup> PUBLIC FINANCE

The central government budget is passed upon by the Legislative Assembly. Municipal budgets are of minor importance, and local

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

government funds are mainly grants from the national government. The financial range of the public sector extends to a large number of publicly owned entities. Interest costs on the accumulated government debt consume a huge 16.8% of the government's revenues. Approximately 42% of the 2001 national budget was financed by public borrowing.

The US Central Intelligence Agency (CIA) estimated that in 2005 Costa Rica's central government took in revenues of approximately us\$2.7 billion and had expenditures of us\$3.1 billion. Revenues minus expenditures totaled approximately -us\$473 million. Public debt in 2005 amounted to 56.2% of GDP. Total external debt was us\$3.633 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in colones were c1,579.4 billion and expenditures were c1,691 billion. The value of revenues in US dollars was us\$3.97 million and expenditures us\$4.24 million, based on a market exchange rate for 2003 of us\$1 = c398.66 as reported by the IMF. Government outlays by function were as follows: general public services, 22.2%; public order and safety, 7.5%; economic affairs, 9.7%; health, 20.9%; recreation, culture, and religion, 0.8%; education, 21.6%; and social protection, 17.3%.

**36 TAXATION**

Indirect taxes, such as import duties, contribute about three-quarters of government revenues.

Both individuals and businesses residing in Costa Rica are subject to income tax only on income derived from sources within the country. The corporate tax rate is 30%. Incentives are available for new industries and for engaging in the export of non-traditional products. Personal income taxes range from 10–25% for employed persons and 10–20% for self-employed persons. The personal exemption level is equal to only 80% of Costa Rica's average income, and the threshold for the highest tax rate is less than four times the average. The main indirect tax is Costa Rica's value-

added tax (VAT) introduced in January 1975 at a standard rate of 10%, which was reduced to 8% during the 1990s, and then raised to 13% in 2001. Items exempted from the VAT include inputs for dwelling construction, food, medicines, educational supplies and books. Electric power to homes is subject to a 5% rate. There is also a property tax, a franchise tax, a real estate transfer tax, and a selective-consumption tax levied on luxury items, with rates ranging from 10–75%.

**37 CUSTOMS AND DUTIES**

Initially, the import tariff was primarily for revenue raising purposes, but in 1954 it was increased to protect Costa Rican industry. In 1962, tariffs were raised so high that they virtually prohibited foreign competition in certain fields. Import duties usually included a specific duty on the gross weight in kilograms and ad valorem duties of varying percentages of the CIF (cost, insurance, and freight) value of the imported goods.

Since Costa Rica's entry into GATT, tariffs have been lowered. As of 2002, customs duties range from 1–15%. However, food tariffs were between 14% and 19%. Import duties on raw materials, bulk grains, and oilseeds were reduced to 1% in 1996. Capital goods and most finished products have a tariff of 1% and 10–15% respectively. There is a 13% value-added tax (VAT). Excise taxes range from 5–75%, applying to about half of all products imported. For example, arms and munitions are taxed at 75%; costume jewelry, fireworks, and whiskey at 50%; wine and beer at 40%.

Costa Rica has a bilateral free trade agreement with Mexico and was planning future agreements in 1999 with Dominican Republic, Panama, Chile, and Trinidad and Tobago. Costa Rica is also a member of the Central American Common Market (CACM) with El Salvador, Guatemala, Honduras, and Nicaragua. The CACM has a common external tariff of 5–20% for most products.

**38 FOREIGN INVESTMENT**

Foreign investment, which is welcomed in Costa Rica, is concentrated in manufacturing (45%) and agriculture (25%, mainly banana and coffee interests). Other investments are placed in the railways, tobacco, communications, airlines, government bonds, and real estate. The United States, Costa Rica's major foreign investor (78% in 1998), has interests chiefly in computer chip manufacturing, agriculture, petroleum refining, and distribution, utilities, cement, and fertilizers. The continued high level of trade with the United States has been conducive to private foreign investment, especially in export industries. Investment incentives include constitutional equal treatment guarantees and free trade zones. Foreign direct investment in Costa Rica in 1998 was \$530 million, or 5% of GDP.

Liberalization of Costa Rica's trade and investment regimes, resolution of the internal debt problem, and passage of legislation expanding private sector investment in energy, telecommunications, roads, ports, and airports have boosted opportunities for foreign and local investors and increase Costa Rica's prosperity. In 1998, the Public Concessions Law defined the ways in which foreigners could invest in Costa Rica's public sector. Still, in the energy sector, foreign ownership may not exceed 65%, and a long list of activities are reserved for the state. The government had no privatization programs in 1999, but in 2000 investment was pro-

moted by the government in the electricity and telecommunications parastatals.

Costa Rica has sought to widen its economic and diplomatic ties, including outside the region. Costa Rica has maintained connections with the United States, the EU, along with the other Central American states, through periodic ministerial consultations. The country is a founding member of the WTO and has actively participated in the follow-up to the Summit of the Americas to bring about the Free Trade Area of the Americas by the year 2005.

In 2003, total capital inflows reached \$587 million, down from \$662 million in 2002, but up from \$454 million in 2001. The United States' stock of foreign investment decreased by \$75 million in 2003, reaching \$1.6 billion. In August 2004, Costa Rica (together with El Salvador, Guatemala, Honduras, Nicaragua, and the Dominican Republic) signed a free trade agreement with the United States. Through this agreement, Costa Rica has committed itself to open up two sectors that are currently state monopolies—telecommunications and insurance. Costa Rica is also a beneficiary of the US Caribbean Basin Trade Partnership Act (CBTPA).

### **3<sup>9</sup> ECONOMIC DEVELOPMENT**

Despite trying to remain neutral, Costa Rica was affected adversely by regional political turmoil in the late 1970s and the 1980s. Instability in neighboring Nicaragua and Panama discouraged new investment and tourism in Costa Rica. Many displaced Nicaraguans and Salvadorans sought refuge in Costa Rica, further burdening the country's educational and health facilities. An oil shock and debt crisis also made economic recovery difficult.

Following an economic crisis in the early 1980s, Costa Rica made significant progress toward macroeconomic stability, structural adjustment, and growth through increasingly diversified exports. Gross domestic product (GDP) growth averaged 4% from 1988 to 1998. Nontraditional exports and tourism have increased rapidly and account for almost 60% of foreign currency earnings. Impressive growth after 1998 was recorded, in part due to the investments of the Intel Corporation. Although that and other North American corporations remain crucial to the success of the economy, since 2000, growth slowed to around 2%, unemployment remained at 6%, and inflation remained at 10%.

The government faced a large budget deficit in 2002 (it was 6% of GDP, up from 3.8% in 2001); 42% of the 2001 national budget was financed by public borrowing. The public debt was 52% of GDP in 2002. In 2000, an effort to privatize the telecommunications sector failed, and important economic sectors remain controlled by large public enterprises. The government in 2003 planned to implement tax reform to broaden the tax base, and to improve the condition of the financial system. Costa Rica is a supporter of the Free Trade Area of the Americas.

In 2005, the economy expanded at an overall slower pace than in 2004. This deceleration was reflected in all sectors of the economy, save agriculture and utilities. Government spending also went down, holding down growth in government consumption. Domestic demand was sluggish, with the exception of fixed investment. The fastest-growing sectors were transport and communications.

### **4<sup>0</sup> SOCIAL DEVELOPMENT**

A national social insurance and mandatory private insurance system provides old age, disability and survivorship benefits for employed persons. There is also a voluntary program for the self-employed. All employed persons have coverage for sickness and maternity cash benefits, and all residents get medical care. A family allowance program provides pensions for persons, employed or not, that are not covered under the national social insurance system. The social security program is compulsory for all employees under 65 years of age. Pensions are generally set at 60% of average earnings during the last five years of coverage.

The government is taking action to protect women against domestic violence and abuse, including passing laws and providing services to victims. Domestic abuse is considered a major society problem. Women have equal rights under the law. The Law for the Promotion of the Social Equality of Women further obligates the government to promote political, economic, social, and cultural equality. Although women remain underrepresented in senior government positions, progress has been made. The law stipulates that women receive equal pay for equal work, but men usually have higher earnings. The Women's Council and the Women's Delegation, two government agencies, act as advisors and advocates for women who have suffered abuse or harassment. Child prostitution remains prevalent. However, the government is committed to children's rights and adequately funds public education and medical care.

Prisons are overcrowded, but conditions are generally considered to be humane. The judicial process tends to be slow, resulting in some lengthy pretrial detentions. Human rights are respected by the government.

### **4<sup>1</sup> HEALTH**

Health standards have steadily improved in Costa Rica. The infant mortality rate, 166.7 per 1,000 live births in 1927, was 62.3 in 1968 and 9.95 in 2005. The decreases in mortality rates were attributed to improvements in sanitary and medical facilities under the national health program administered by the Ministry of Health. The fertility rate was 3.1 in 1994, a 1.3% yearly reduction since 1984, and was reduced further to 2.5 as of 2000. The use of contraceptives is one of the highest in Latin America and the Caribbean. In the mid-1990s, 75% of married females aged 15–49 were using a form of contraception. During 2005, life expectancy at birth was an average of 76.84 years.

Hospitals are located in the principal cities and about 95% of the hospital beds are in urban areas. In 2004, Costa Rica had an estimated 172 physicians, 245 nurses, 42 dentists, and 34 pharmacists per 100,000 people.

Health services for the rural population are generally inadequate and the refugee problem has severely taxed urban services. However, there are sanitary units and dispensaries to care for the health needs of the poor. During the 1980s, the greatest health problem was protein-calorie malnutrition, particularly among infants and children. Diseases of the circulatory system are the leading cause of death. Almost 100% of the population had access to safe water. Costa Rica immunized children up to one year old as follows: diphtheria, pertussis, and tetanus, 91%; measles, 99%; po-

lio, 93%; and tuberculosis, 91%. The incidence of tuberculosis was 17 per 100,000 in 1999.

The HIV/AIDS prevalence was 0.60 per 100 adults in 2003. As of 2004, there were approximately 1,200 people living with HIV/AIDS in the country. There were an estimated 900 deaths from AIDS in 2003.

## 42 HOUSING

In 2004, there were approximately 1,082,662 housing units in the country. About 646,806 (59.7%) were detached houses. About 74% of all dwellings were owner occupied. About 84.5% of all dwellings were listed in good or average condition and 88% were listed as having access to all basic services.

Sources for housing mortgages include private funds, the Central Bank, the Social Security Fund, and the national banking system. In 2002, the cost of building a home was about \$315 to \$540 per square meter. The National Institute of Housing and Urban Affairs, established in 1954, administers a national low-cost housing program.

In 1986, the National Bamboo Project was launched as a way to introduce new building technology aimed at preventing deforestation throughout the country. The project focuses on the use of bamboo for building material in indigenous housing projects. In 1995, FUNBAMBU (The Bamboo Foundation) was established to take over the program. To date, at least 3,000 low-cost homes have been built through this program and about 200 hectares of bamboo have been cultivated for future use. FUNBAMBU plans to build another 1,500 homes per year, about 6% of all housing construction per year.

## 43 EDUCATION

Primary education lasts for six years followed by three years of secondary education. Either a two-year academic course of study or a three-year technical course of study follows. Primary and secondary education is free, and primary-school attendance is compulsory.

Primary school enrollment in 2003 was estimated at about 90% of age-eligible students. The same year, secondary school enrollment was about 53% of age-eligible students. It is estimated that about 94% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 23:1 in 2003; the ratio for secondary school was about 19:1.

The country has 39 universities, including an open university. The University of Costa Rica (founded in 1843) is supported by the government. The Open University (1977) in San José operates 28 regional centers for all students who apply. There are also the Autonomous University of Central America (1976) in San José and the National Autonomous University of Heredia (1973), among others. In 2003, about 19% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 95.8%, with fairly even rates for men and women.

As of 2003, public expenditure on education was estimated at 5.1% of GDP, or 22.4% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Library at San José, founded in 1888, is a reference library that contained about 255,000 volumes in 2002. Other im-

portant libraries in San José are the National Archives, with 8,500 volumes, and the library of the University of Costa Rica, which contains about 439,000 volumes. The Inter-American Institute of Agricultural Sciences, in Turrialba, has a library of over 90,000 volumes. The Legislative Assembly maintains a library of 35,000 volumes and the Indigenous Museum (1890) holds 40,000 volumes. The Tropical Science Center in San José sponsors the L.R. Holdridge Documentation and Information Center, which specializes in research materials on nature conservation and management.

The National Museum of Costa Rica in San José, founded in 1887, is a general museum with collections of pre-Columbian, colonial, republican, and religious art, a herbarium, and bird displays. The Museum of Costa Rican Art was founded at San José in 1977. There are several other art museums in the capital as well, including the Indigenous Museum, the Museum of Pre-Columbian Gold, and the Museum of Jade.

## 45 MEDIA

Costa Rican telephone, telegraph, and radio systems are owned and operated by both governmental and private firms. In 2003, there were an estimated 251 mainline telephones for every 1,000 people; about 15,800 people were on a waiting list for telephone service installation. The same year, there were approximately 111 mobile phones in use for every 1,000 people.

There were 65 AM and 51 FM radio stations in 2002. The same year, there were 20 television stations in Costa Rica. Many stations are privately owned. The Commission on Control and Rating of Public Performances has the authority to restrict radio and television broadcasts, as well as films and live theater productions that may contain violent or explicitly sexual content. In 2003, there were an estimated 816 radios for every 1,000 people. The number of televisions was unavailable in the same survey.

The major daily newspapers, all published in San José, (with 2004 circulations except as noted) include *Diario Extra*, an independent morning paper (120,000); *La Nación*, an independent morning paper (125,000); *La República*, an independent morning journal (60,000 in 2002); *Al Día*, an independent morning paper (65,000); and *La Prensa Libre*, an independent evening paper (56,000). There are several periodicals and magazines available, the most popular of which is the general interest weekly *Esta Semana*, with a 1995 circulation of 27,000.

Freedom of speech and the press is guaranteed by the constitution and observed in practice. Print and electronic media are largely privately owned.

## 46 ORGANIZATIONS

Consumer cooperatives purchase, sell, and distribute goods among the membership. The cooperative credit societies procure loans for agriculture, stock raising, and industrial development, and cooperative housing associations provide low-cost housing facilities. There are chambers of commerce and of industry in San José. In addition, there are about 50 employers' and industrial organizations, including the National Coffee Chamber. An unusual organization, combining features found in credit unions, company unions, and building and loan societies, is the Movimiento Sol-

idarista, which advocates harmony between employers and workers. Professional associations are also available.

The Central American Health Institute is a multinational organization based in San José. There are also several organizations concerned with environmental issues and conservation. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present.

National women's organizations include the Association of University Women, The Center of Feminist Information and Action, and the National Institute of Women. There are two major student unions, the Federation of University Students of Costa Rica (FEUCR) and The Nation Federation of University Students (FEUNA). The Association of Guides and Scouts of Costa Rica and the YMCA are also active youth organizations. There are several sports organizations representing a variety of interests, such as taekwondo, badminton, tennis, and football (soccer), to name a few. There is an active organization of the Special Olympics.

Costa Rica has chapters of Amnesty International, the Society of St. Vincent de Paul, and the Red Cross. A national organization, the Arias Foundation for Peace and Human Progress, is based in San José. The Arias Foundation works to build peace and justice in Central America and operates the Center for Peace and Reconciliation, the Center for Human Progress, and the Center for Organized Participation. The Commission for the Defense of Human Rights in Central America and the Inter-American Institute of Human Rights are multinational groups based in San José.

#### **47 TOURISM, TRAVEL, AND RECREATION**

Popular tourist sights in San José are the National Museum, National Theater, and the Central Bank's gold exhibition. Other attractions include the Irazú and Poás volcanoes, brief jungle excursions, and the Pacific beaches. Popular recreations are bird-watching, mountain climbing, swimming, water-skiing, and deep-sea fishing. Football (soccer) is the national sport; there are matches every Sunday morning in San José from May through October. Horseback riding is widely available.

Visitors to Costa Rica must have passports and an onward/return ticket. In 2003, Costa Rica received 1,238,692 tourists, of whom 82% were from the United States. There were 35,003 hotel rooms that year. Tourism receipts reached \$1.4 billion.

In 2005, the US Department of State estimated the daily cost of staying in Costa Rica at \$171.

#### **48 FAMOUS COSTA RICANS**

José María Castro was Costa Rica's first president (1847–49, 1866–68). Juan Rafael Mora Porras, the second president of the republic

(1849–59), successfully defended the country against the invasion of US military adventurer William Walker. General Tomás Guardia (1832–82) led a revolt against the government in 1870, became a dictator, and in 1871 introduced the constitution that remained in force until 1949. José Figueres Ferrer (1906–90), president during 1953–58 and 1970–74, is regarded as the father of the present constitution. Oscar Arias Sánchez (b.1940), president 1986–90 and elected again in 2005, won the Nobel Prize for peace in 1987 for his plan to bring peace to Central America. Ricardo Fernández Guardia (1867–1950) is regarded as Costa Rica's greatest historian. Joaquín García Monge (1881–1958) founded the literary review *Repertorio Americano*. Maribel Guardia (b.1960) is a Costa Rican singer, actress, and model famous throughout Latin America.

#### **49 DEPENDENCIES**

Cocos Island—26 sq km (10 sq mi), about 480 km (300 mi) off the Pacific coast, at 5°32'N and 87°2'W—is under Costa Rican sovereignty. It is mainly jungle, with a maximum elevation of 850 m (2,788 ft). There is no permanent population, but the island is popular with transient treasure hunters. Cocos Island has two harbors and is of strategic importance because of its position along the western approach to the Panama Canal.

# CUBA

Republic of Cuba  
*República de Cuba*

**CAPITAL:** Havana (La Habana)

**FLAG:** The flag consists of five alternating blue and white horizontal stripes penetrated from the hoist side by a red triangle containing a white five-pointed star.

**ANTHEM:** *Himno de Bayamo* (*Hymn of Bayamo*), beginning “Al combate corred bayameses” (“March to the battle, people of Bayamo”).

**MONETARY UNIT:** The Cuban peso (c\$) of 100 centavos is a paper currency with one exchange rate. There are coins of 1, 2, 3, 5, 20, 40, and 100 centavos and notes of 1, 3, 5, 10, 20, 50, and 100 pesos. c\$1 = us\$1.07527 (or us\$1 = c\$0.93) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but older Spanish units and the imperial system are still employed. The standard unit of land measure is the *caballería* (13.4 hectares/133.1 acres).

**HOLIDAYS:** Day of the Revolution, Liberation Day, 1 January; Labor Day, 1 May; Anniversary of the Revolution, 25–27 July; Proclamation of Yara, 10 October. Celebration of religious holidays falling during the workweek was prohibited by a 1972 law.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of Cuba consists of one large island and several small ones situated on the northern rim of the Caribbean Sea, about 160 km (100 mi) south of Florida. With an area of 110,860 sq km (42,803 sq mi), it extends 1,223 km (760 mi) E–W and about 89 km (55 mi) N–S. Cuba is the largest country in the Caribbean, accounting for more than one-half of West Indian land area. Comparatively, the area occupied by Cuba is slightly smaller than the state of Pennsylvania. It is separated from Florida by the Straits of Florida, from the Bahamas and Jamaica by various channels, from Haiti by the Windward Passage, and from Mexico by the Yucatán Channel and the Gulf of Mexico. Cuba’s total coastline is 3,735 km (2,316 mi). The largest offshore island, the Isle of Youth (Isla de la Juventud), formerly known as the Isle of Pines (Isla de Pinos), lies southwest of the main island and has an area of 2,200 sq km (849 sq mi); the other islands have a combined area of 3,715 sq km (1,434 sq mi).

Cuba’s capital city, Havana, is located on its north coast.

## <sup>2</sup>TOPOGRAPHY

Cuba’s spectacular natural beauty has earned it the name Pearl of the Antilles. The coastline is marked by bays, reefs, keys, and islets. Along the southern coast are long stretches of lowlands and swamps, including the great Zapata Swamp (Ciénaga de Zapata). Slightly more than half the island consists of flat or rolling terrain, and the remainder is hilly or mountainous, with mountains covering about a quarter of its total area. In general, eastern Cuba is dominated by the Sierra Maestra, culminating in Pico Real del Turquino (2,005 m/6,578 ft); around Camagüey are rolling plains and low mountains; central Cuba contains the Trinidad (Escambray) Mountains in addition to flat or rolling land; and the west is

dominated by the Sierra de los Órganos. The largest river, the Cauto, flows westward for 249 km (155 mi) north of the Sierra Maestra but is little used for commercial navigation purposes.

## <sup>3</sup>CLIMATE

Except in the mountains, the climate of Cuba is semitropical or temperate. The average minimum temperature is 21°C (70°F), the average maximum 27°C (81°F). The mean temperature at Havana is about 25°C (77°F). The trade winds and sea breezes make coastal areas more habitable than temperature alone would indicate. Cuba has a rainy season from May to October. The mountain areas have an average precipitation of more than 180 cm (70 in); most of the lowland area has from 90 to 140 cm (35–55 in) annually; and the area around Guantánamo Bay has less than 65 cm (26 in). Droughts are common. Cuba’s eastern coast is often hit by hurricanes from August to October, resulting in great economic loss.

## <sup>4</sup>FLORA AND FAUNA

Cuba has a flora of striking richness, with the total number of native flowering species estimated at nearly 6,000. The mountainous areas are covered by tropical forest, but Cuba is essentially a palm-studded grassland. The royal palm, reaching heights of 15–23 m (50–75 ft), is the national tree. Pines like those in the southeastern United States grow on the slopes of the Sierra de los Órganos and on the Isla de Juventud (Isle of Youth). The lower coastal areas, especially in the south, have mangrove swamps. There is a small area around Guantánamo Bay where desert plants grow.

Only small animals inhabit Cuba. These include tropical bats, rodents, birds, and many species of reptiles and insects. As of

2002, there were at least 31 species of mammals and 86 species of birds throughout the country.

## 5 ENVIRONMENT

The Cuban government has formed several agencies to protect the environment. Among them are the National Parks Service, the National Commission of Environmental Protection and Rational Use of Natural Resources (1977), the National Environmental Education Program, the Academy of Sciences of Cuba, and the National Commission for the Protection of the Environment and for Conservation of Natural Resources. In 2003, about 69% of the land was protected by the government. There are two natural UNESCO World Heritage Sites and six Ramsar wetland sites.

As of 2000, Cuba's most pressing environmental problems were deforestation and the preservation of its wildlife. The government has sponsored a successful reforestation program aimed at replacing forests that had gradually decreased to a total of 17% of the land area by the mid-1990s. In 2000, about 21% of the total land area was forested.

Another major environmental problem is the pollution of Havana Bay. In 1994, Cuba had the seventh-largest mangrove area in the world. Altogether, 51% of the country's renewable water sources are used for agricultural purposes. About 95% of Cuba's city dwellers and 77% of its rural people have pure drinking water. In 1996 Cuban industries emitted 31.1 million metric tons of industrial carbon dioxide.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 11 types of mammals, 18 species of birds, 7 types of reptiles, 47 species of amphibians, 23 species of fish, 3 species of invertebrates, and 163 species of plants. Endangered species in Cuba include the Cuban solenodon, four species of hutia (dwarf, Cabela's, large-eared, and little earth), two species of crocodile (American and Cuban), and the Cuban tree boa. The ivory-billed woodpecker, Cuban red macaw, Caribbean monk seal, and Torre's cave rat have become extinct.

## 6 POPULATION

The population of Cuba in 2005 was estimated by the United Nations (UN) at 11,275,000, which placed it at number 72 in population among the 193 nations of the world. In 2005, approximately 10% of the population was over 65 years of age, with another 21% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.4%, a rate the government viewed as satisfactory. To inhibit further growth, the government has put restrictions on migration to Havana. The projected population for the year 2025 was 11,824,000. The population density was 102 per sq km (263 per sq mi).

The UN estimated that 76% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.44%. The capital city, Havana (La Habana), had a population of 2,189,000 in that year, accounting for about 20% of the total population. Other important cities and their estimated populations are Santiago de Cuba (554,400), Camagüey (354,400), Holguín (319,300), Guantánamo (274,300), and Santa Clara (251,800).

## 7 MIGRATION

Before independence, there was a large migration from Spain; the 1899 census reported 129,000 Spanish-born persons living in Cuba. The 1953 census reported about 150,000 persons of foreign birth, of whom 74,000 were Spaniards. From 1959 through 1978, Cuba's net loss from migration, according to official estimates, was 582,742; US figures indicate that during the same period a total of 669,151 Cubans arrived in the United States.

During the 1960s, Cuban emigrants were predominantly of the upper and middle classes, but in the 1970s emigrants were urban blue-collar workers and other less-educated and less-wealthy Cubans. The flow of emigrants declined in the late 1970s, but beginning in April 1980, Cubans were allowed to depart from Mariel harbor; by the end of September, when the harbor was closed, some 125,000 Cubans in small boats (the "freedom flotilla") had landed in the United States. Of that number, 2,746 were classified as "excludable aliens" and were being held in prisons or mental institutions. According to an agreement of December 1984, Cuba agreed to accept the 2,746 back; repatriation began in February 1985, but in May, Cuba suspended the agreement. By the mid-1980s, well over 500,000 Cuban exiles were living in the Miami, Florida, area. In 1990 there were 751,000 Cuban-born persons in the United States. Large numbers have also settled in Puerto Rico, Spain, and Mexico.

Since 1979, the Cuban government has been providing education to a number of students from developing countries. Due to events making return to their homelands difficult, many have become refugees. Sporadically, Cuba receives groups of Haitians who generally return to their homeland voluntarily. Between 1991 and 1994, the United Nations High Commissioner for Refugees (UNHCR) worked with the government to protect and assist more than 1,500 Haitians during a temporary stay in Cuba. In 1995, Cuba was harboring 1,500 refugees from the Western Sahara; in 1999, the government was still working with UNHCR to return them to their country of first asylum. In 2000 there was a total of 82,000 migrants living in Cuba. UNHCR assisted a total of 802 people in Cuba in 2004; 795 were refugees, 5 were asylum seekers, and 2 were returned refugees.

The Economic Commission for Latin America and the Caribbean estimated that remittances to Cuba in 2000 amounted to \$750 million, 90% from Cubans living in the United States. By 2003, remittances to Cuba were \$1.2 billion. In 2004, the United States revised its regulations restricting cash remittances to Cuba by restricting remittances to members of the remitter's immediate family. In addition, the amount of remittance that an authorized traveler may carry was reduced from \$3000 to \$300. The Cuban government takes 20% of US remittances.

In 2004, 11,821 Cubans sought asylum in the United States. The net migration rate for Cuba in 2005 was estimated as -1.58 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

About 51% of the total Cuban population are described as mulattos. Whites (primarily of Spanish descent) make up about 37% of

LOCATION: 74°8' to 84°57' W; 19°49' to 23°17' N. TERRITORIAL SEA LIMIT: 12 miles.

the total; blacks account for 11%; and Chinese for 1%. Virtually the entire population is native-born Cuban.

## <sup>9</sup> LANGUAGES

Spanish is the national language of Cuba.

## <sup>10</sup> RELIGIONS

The Roman Catholic Church has never been as influential in Cuba as in other Latin American countries. In the 1950s, approximately 85% of all Cubans were nominally Roman Catholic, but the Church itself conceded that only about 10% were active members. From the early 1980s into the 1990s, Roman Catholics represented about 40% of the population. A 2004 report indicated that only about 40–45% of the population were nominally Catholic. Some sources indicate that a large number of the population adhere to varying degrees of syncretic Afro-Caribbean, such as Santería. The Baptists are believed to be the largest Protestant denomination. Other denominations include Jehovah's Witnesses, Methodists, Episcopalians, the Assembly of God, and Presbyterians. There is a very small Jewish population.

Fidel Castro originally established an atheist state in accordance with the beliefs of the Communist Party. As a result, his govern-

ment has closed more than 400 Catholic schools, claiming that they taught dangerous beliefs, and the number of people who attend churches has diminished during Castro's reign since many churches are closely monitored by the state and church members face harassment. In 1992, the constitution was amended to label the state as secular rather than atheist. However, according to a 2004 report, Christian churches, particularly the Catholic Church, have still been viewed suspiciously by members of the Communist Party who have claimed that the organizations are undermining public policies and laws. Separate religious schools are forbidden, though churches can provide religious instruction to their members.

There are 22 denominations that are members of the Cuban Council of Churches. Membership in the Council means that the religion is officially recognized by the government and so is shown a higher degree of tolerance by the government. All registered denominations must report to the Ministry of Interior's Office of Religious Affairs. Nonregistered groups face various degrees of government harassment and repression.

## <sup>11</sup> TRANSPORTATION

In 2002, Cuba had about 60,858 km (37,817 mi) of roads, of which 29,820 km (18,530 mi) were paved, including 638 km (396 mi) of

expressways. The first-class Central Highway extends for 1,223 km (760 mi) from Pinar del Río to Guantánamo, connecting all major cities. An extensive truck and bus network transports passengers and freight. In 2003, there were 184,980 registered motor vehicles, of which 210,300 were passenger vehicles.

Nationalized railways connect the east and west extremities of the island by 4,807 km (2,986 mi) of standard-gauge track, of which 140 km (87 mi) were electrified as of 2004. In addition, large sugar estates have 7,162 km (4,451 mi) of lines of various gauges.

Cuba first began to develop a merchant marine under the revolutionary government. The USSR had supplied oceangoing vessels and fishing boats and, in the mid-1960s, built a huge fishing port in Havana Bay to service Cuban and Soviet vessels. By 2005, the Cuban merchant fleet had 15 vessels of at least 1,000 GRT, totaling 54,818 GRT. Cuba's major ports—Havana, Cienfuegos, Mariel, Santiago de Cuba, Nuevitas, and Matanzas—are serviced mainly by ships of the former Soviet republics, with ships from Spain, the United Kingdom, and Eastern Europe making up the bulk of the remainder. Cuba also has 240 km (140 mi) of navigable inland waterways.

In 2004 there were an estimated 170 airports, 78 of which had paved runways as of 2005. The principal airport is José Martí at Havana. There are daily flights between Havana and the major Cuban cities, and weekly flights to Spain, Mexico, Moscow, Prague, and Jamaica. Cubana Airlines is the national air carrier. The number of air passengers increased from 140,000 in 1960 to 1,117,000 in 1997. However, by 2003 passenger traffic declined to around 611,000. Between 1975 and 1980, airports at Havana and Camagüey were renovated, and new airports were built at Bayamo, Manzanillo, and Las Tunas.

## 12 HISTORY

Cuba was originally inhabited by about 50,000 Ciboney and Taíno Amerindians who are related to the Arawak peoples; they were hunter-gatherer and agricultural societies. Christopher Columbus made the European discovery of Cuba in 1492 on his first voyage to the Americas. Many died from disease and maltreatment soon after. The African slave trade began about 1523 as the Amerindian population declined, and grew thereafter, especially with the development of coffee and sugar on the island. During the early colonial years, Cuba served primarily as an embarkation point for such explorers as Hernán Cortés and Hernando de Soto. As treasure began to flow out of Mexico, Havana became a last port of call and a target for French and English pirates. In 1762, the English captured Havana, holding Cuba for almost a year. It was ceded to Spain in exchange for Florida territory in the Treaty of Paris (1763). Spanish rule was harsh, and intermittent rebellions over the next century all ended in failure.

Cuba's first important independence movement came in 1868, when Carlos Manuel de Céspedes, a wealthy planter, freed his slaves and called for a revolution against Spain. For the next 10 years, guerrillas (*mambises*), mainly in eastern Cuba, fought in vain against the Spanish colonial government and army. Although eventually subdued, Céspedes is nevertheless viewed as the father of Cuban independence. A second hero was added in the 1890s when poet and journalist José Martí founded the Cuban Revolutionary Party during exile in the United States. The call to arms (*Grito de Baire*) on 24 February 1895 initiated a new war. After

landing with a group of recruits gathered from throughout the region, Martí was killed at Dos Ríos, in eastern Cuba. The Spanish had the insurrection under control within a year.

In the end, the Cubans had to rely on the United States to defeat the Spanish. Anti-Spanish sentiment, fueled by US newspapers, erupted after the battleship *Maine* mysteriously blew up in Havana harbor on 15 February 1898. The United States declared war on Spain on 25 April, and in a few months, the Spanish-American War was over. The Treaty of Paris (10 December 1898), established Cuban independence. During the interim period 1899–1902, the US army occupied Cuba. It instituted a program that brought about the eradication of yellow fever, but it was more fundamentally concerned with the establishment of US political and commercial dominance over the island.

On 21 February 1901, a constitution was adopted, and Cuba was nominally a free nation. But the United States insisted that Cuba include in its constitution the Platt Amendment, which gave the United States the right to intervene in Cuban affairs and maintain a naval base at Guantánamo.

For the next 30 years, Cuba lived through a succession of governments, constitutional and otherwise, all under the watchful eye of the United States. American companies owned or controlled about half of Cuba's cultivated land, its utilities and mines, and other natural resources. The US Marines intervened in 1906–9, in 1912, and again in 1920. The period culminated in the brutal dictatorship of Gerardo Machado y Morales (1925–33).

Cuba entered another unstable phase in 1933. A nationalist uprising chased Machado from office. After the United States attempted to install a regime, a "sergeants' revolt" headed by 32-year-old Fulgencio Batista y Zaldívar assumed power and named Ramón Grau San Martín provisional president. Grau, a physician and university professor noted for his nationalist zeal, was never recognized by the United States, and his regime lasted only four months. From 1934 until 1940, Batista ruled through a series of puppet presidents. During these years, Batista made two major contributions to Cuba. In 1934, President Franklin D. Roosevelt allowed Cuba to abrogate the Platt Amendment, although the United States did retain its naval base at Guantánamo Bay. Batista also allowed the drafting of a new constitution, passed in 1940, under which he became president. In 1944, Batista permitted Grau San Martín, now his political enemy, to take office. The eight years of rule by Grau and his ally, Carlos Prío Socarrás, were ineffective and corrupt, and in 1952, a reform party was expected to win the election.

That election was subverted, however, on 10 March 1952, when Batista seized power in a military coup. During the seven years of Batista's second administration, he used increasingly savage suppressive measures to keep himself in office. Under the Batista regime, the United States dominated the economy, social services suffered, poverty, and illiteracy were widespread, and the bureaucracy was flagrantly corrupt. It was at this point that Fidel Castro came on the scene.

Castro's insurrection began inauspiciously on 26 July 1953 with an abortive raid on the Moncada Army Barracks in Santiago de Cuba. Captured, jailed, and then exiled, Castro collected supporters in Mexico, and in 1956 landed in Cuba. Routed by Batista's troops, Castro escaped into the Sierra Maestra mountains with a mere dozen supporters. The force never grew to more than a few

thousand, but clever use of guerrilla tactics evened the score with Batista's poorly trained army. Moreover, there was almost no popular support for Batista, and in 1958 the United States ended its military aid to the falling government. On 1 January 1959, the Batista regime collapsed, and Batista and many of his supporters fled the country. Castro's 26th of July Movement took control of the government, and began to rule by decree. The revolutionary government confiscated property that had been dishonestly acquired, instituted large-scale land reforms, and sought to solve Cuba's desperate financial and economic problems by means of a bold revolutionary program.

After June 1960, Cuban-US relations deteriorated at an accelerated pace. Largely in retaliation for the nationalization of about \$2 billion in US-owned property in Cuba, the United States severed diplomatic relations with the Castro government. Tensions increased when the revolutionary regime nationalized US oil refinery companies after they refused to process Soviet crude oil. The United States response was to eliminate Cuba's sugar quota. In April 1961, a group of 1,500 Cuban exiles—financed, trained, organized, and equipped by the CIA—invaded Cuba at the Bay of Pigs on the southern coast. The brigade was defeated within 72 hours, and the 1,200 surviving invaders were captured. They were eventually released after US officials and private sources arranged for a ransom of \$50 million in food and medical supplies.

However, the United States did continue its attempt, through the OAS and other international forums, to isolate Cuba politically and economically from Latin America and the rest of the non-Communist world. All Latin American governments were pressured to break off diplomatic relations with Cuba. Castro responded with an attempt to destabilize certain Central and South American governments. Inspired by the Sierra Maestra campaign, guerrilla movements became active throughout the region, often with Cuban support. However, by 1967, when Ché Guevara (an Argentinean collaborator of Castro), was killed in Bolivia, these movements had collapsed. The United States was only slightly more successful in its campaign of isolation. The OAS suspended Cuba in 1962, but in July 1975 passed the "freedom of action" resolution allowing countries to deal with Cuba as they pleased. Meanwhile, Communist influence was growing in the Cuban government. Castro declared Cuba to be a Socialist country in late 1960, and the following year declared himself to be a Marxist-Leninist and a part of the Socialist world. All major means of production, distribution, communication, and services were nationalized. Soviet-style planning was introduced in 1962, and Cuba's trade and other relations turned from West to East. In October 1962, US planes photographed Soviet long-range-missile installations in Cuba. The United States blockaded Cuba until the USSR agreed to withdraw the missiles, in exchange for a US government pledge to launch no more offensive operations against the island.

During the Carter administration, there were moves to normalize relations with Cuba. In 1977, the United States and Cuba resumed diplomatic contacts (but not full relations) and concluded fishing and maritime rights agreements. However, the advent of the Reagan administration brought increased tensions between the two countries. Citing Cuban involvement in Angola, Ethiopia, Nicaragua, and Grenada, the United States took up a more intransigent stance toward Cuba.

Domestically, Castro's administration has had its successes and failures. A strong social welfare system, including free health care and subsidized housing, was implemented in the 1960s and 1970s. However, an attempt to produce 10 million metric tons of sugar by 1970 seriously crippled the island's economy. Other mismanaged projects have led to economic stagnation or chaos. Cubans live frugally under a highly controlled system of rationing.

Cuba was dealt a serious blow in the late 1980s with the collapse of the Soviet Union, which meant a cutoff of economic and military aid on which Cuba had come to rely heavily over the years. The USSR had been Cuba's most important trading partner and provided the major market for Cuban sugar. The few consumer goods the USSR had supplied in the past were no longer available.

Most Cubans that fled since Castro came to power settled in southern Florida, and many have had hope of returning to a Castro-free Cuba. There have been sporadic attempts to reunite families broken up by the emigration, but political circumstances often curtail these programs. For example, in February 1985 the repatriation of 2,746 "undesirables" from the United States began, but after Radio Martí (sponsored by Voice of America) began broadcasting in Spanish in May 1985, Cuba abrogated the agreement.

Just as the Cuban economy began to show signs of a rebound from the collapse of the Soviet Union, the United States tightened its embargo with the Cuban Democracy Act of 1992. This led to another wave of emigration in 1994, as thousands of Cubans left the island on rafts and other small vessels bound for Florida. To stem this tide of illegal immigration, the United States in 1995 reached an agreement with Cuba under which the United States would admit 20,000 Cuban immigrants per year. Cuba, in turn, was to take steps to prevent future "boat lifts."

US-Cuba relations deteriorated further, and Cuba's weakened economy was hampered anew in 1996 when the US Congress passed the Helms-Burton Act, another embargo-strengthening measure. The act met with harsh international criticism, and Canada and the World Trade Organization moved to fortify trade ties with the Castro government as a rebuff to the United States. Prior to the passage of Helms-Burton, Cuba had renewed its crackdown on the pro-democracy movement. In February 1996, Cuban air force planes shot down two civilian aircraft over international waters, killing the four persons aboard. The planes had left the United States carrying computer and medical supplies.

In late 1999 and early 2000, tensions between Cuba and the United States returned to the international spotlight with the highly publicized custody dispute surrounding Elian Gonzalez, a six-year-old Cuban boy who was the sole survivor of an attempted boat crossing to the United States in which his mother and 10 other Cuban refugees drowned. The dispute between the boy's father in Cuba and his expatriate relatives in Florida, who wanted him to stay in the United States, became a rallying point for both the Castro regime in Cuba and the anti-Castro Cuban community in southern Florida.

Despite its acquiescence starting in the 1990s to some economic reforms, dollar transactions and limited self-employment in agriculture, crafts and vending, the Castro regime retains its commitment to socialism. Its economy, still recovering from the collapse of the Soviet Union, has been buoyed by increased tourism, mining, and cigar and fish exports. But economic growth has not

translated into an improved quality of life for most Cubans, and Castro has continued to blame poverty and harsh living conditions on the US embargo. After the United States declared war on terrorism, Castro accused Washington of planning to invade the island; he has increased his prosecution of political opponents. Critics observed that, during the time that world attention was focused on the US invasion of Iraq, Castro took the opportunity to increase pressure on opposition by executing political dissidents.

In January 2003 Cuba held its third direct election for the National Assembly. Participation was limited to a “yes” or “no” vote for a list of candidates approved by the Communist Party. A month later, the Assembly appointed Fidel Castro chairman of the Council of State for five more years. As of 2005, Castro had ruled Cuba for 46 years, the longest tenure in recent Latin American history.

In the period leading up to the 2004 US presidential elections, the United States limited cash transfers to Cuba and reduced the number of trips Cuban-Americans could make to visit family in Cuba. Since then, Castro rolled back many of the self-employment freedoms and forbid previously accepted US dollars, making the only accepted currency for foreigners the Cuban convertible peso. Further discouraging the use of US currency, the exchange rate for euros and Canadian dollars was more favorable. However, the island’s dual economy continued. Criminal penalties for possession of foreign currency (repealed in 1993) were not reinstated. Cubans were able to continue to hold dollars in cash and in bank accounts.

### **13 GOVERNMENT**

After he became premier on 16 February 1959, Fidel Castro was the effective source of governmental power. The juridical basis for this power rested on the Fundamental Law of the Revolution, which was promulgated on 8 February 1959 and was based on Cuba’s 1940 constitution. To regularize government functions, a 10-member Executive Committee, with Castro as premier, was formed on 24 November 1972.

A new constitution, first published on 10 April 1975, then approved by the first congress of the Cuban Communist party in December, and ratified by a 97.7% vote in a special referendum in February 1976, established the National Assembly of People’s Power as the supreme state organ. The deputies, originally elected by municipal assemblies and directly elected in national elections since 1993, serve five-year terms. The National Assembly elects the Council of State, whose president is both head of state and head of government. There are six vice presidents in the Council of State, and 23 other members.

In January 2003, the third direct election to the National Assembly took place; all 601 candidates approved by the Communist Party received more than the required 50% of the vote necessary for election to the Assembly. One month later, the Assembly re-elected Castro as president of the state council. He remains the key figure in domestic and foreign policy making. The constitution recognizes the Communist party as the “highest leading force of the society and of the state,” which effectively outlaws other political parties.

Suffrage is universal for citizens age 16 and over, excluding those who have applied for permanent emigration.

### **14 POLITICAL PARTIES**

Fidel Castro came to power through a coalition group known as the 26th of July Movement. Along with it, in 1959, the Student Revolutionary Directorate (Directorio Revolucionario Estudiantil) and the Communist Party (Partido Socialista Popular—PSP) were permitted to function.

Castro’s relationship with the PSP was at first uneasy. The PSP condemned his early attempts at insurrection as “putschism,” and did not support the 26th of July Movement until it had reached its final stages in 1958. After June 1959, Castro began to refer to anti-Communists as counterrevolutionaries, and used the PSP as an organizational base and as a link to the USSR. In December 1961, Castro declared his complete allegiance to Marxism-Leninism.

By 1962, the 26th of July Movement, the Student Revolutionary Directorate, and the PSP had merged into the Integrated Revolutionary Organization (Organización Revolucionaria Integrada), which, in turn, gave way to the United Party of the Socialist Revolution (Partido Unido de la Revolución Socialista) and, in 1965, to the Cuban Communist Party (Partido Comunista Cubano—PCC).

On 17 December 1975, the PCC convened its first congress, which ratified a 13-member Politburo; Fidel Castro was reelected first secretary of the PCC. The second congress of the PCC took place in December 1980. The third congress, in February and November-December 1986, witnessed a massive personnel change when one-third of the 225-member Central Committee and 10 of 24 Politburo members were replaced, with Fidel Castro reelected first secretary. The Young Communist League and the José Martí Pioneer Organization for children up to 15 years of age are mass political organizations closely affiliated with the PCC. As of 2005, the PCC remained Cuba’s only authorized political party.

However, political dissidence continued to occur in Cuba. Members of unauthorized groups such as the Dissident Liberal Party, the Cuban Orthodox Renovation Party, the Independent Option Movement and others have faced prosecution and harassment. The Ladies in White Movement is comprised of the mothers, wives, and daughters of political prisoners in Cuba. The Varela Project is a proposal from the populace to amend the Cuban constitution to include changes such as free speech, free enterprise, amnesty to political prisoners, and electoral reform.

### **15 LOCAL GOVERNMENT**

The country is divided into 14 provinces and 169 municipalities. The Isla de la Juventud is a special municipality. The 1976 constitution provides for a system of municipal assemblies to be elected for 2-year terms by direct universal suffrage at age 16. Municipal assemblies choose delegates to provincial assemblies and deputies to the National Assembly. The most recent municipal elections were held in April 2005.

### **16 JUDICIAL SYSTEM**

The 1976 constitution established the People’s Supreme Court, consisting of a president, vice president, and other judges, as the highest judicial tribunal. All members of the court are elected by the National Assembly, as are the attorney general and deputy attorneys general. Through its Governing Council, the court proposes laws, issues regulations, and makes decisions that must be

implemented by the people's courts, whose judges are elected by the municipal assemblies. There are also seven regional courts of appeal, as well as district courts with civil and criminal jurisdiction. Military tribunals assume jurisdiction for certain counter-revolutionary cases.

Although the constitution provides for an independent judiciary, the courts are subordinate to the National Assembly and the Council of State.

There are no jury trials. Most trials are public. The legal system is based on Spanish and American law influenced by communist legal theory.

## 17 ARMED FORCES

Total armed strength in 2005 came to 49,000 active duty personnel, with 39,000 reservists. The Army had an estimated 38,000 personnel, whose equipment included around 900 main battle tanks, an undisclosed number of light tanks, reconnaissance and armored infantry fighting vehicles, an estimated 700 armored personnel carriers and over 1,715 artillery pieces. The navy had an estimated 3,000 personnel including more than 550 Naval Infantry members. Major naval units included five patrol/coastal vessels and six mine warfare ships. The air force had around 8,000 personnel and 125 combat capable aircraft, of which only 25 are known to be operable. The service also has around 40 attack helicopters. Paramilitary forces included 20,000 State Security troops, 6,500 border guards, 50,000 Civil Defense Force members, the 70,000-member Youth Labor Army, and the million-member Territorial Militia. Cuba's key military ally and supporter for decades, Russia had cut off nearly all military assistance by 1993. In 2004, defense spending was estimated at \$1.3 billion.

The US maintains a naval base at Guantánamo Bay in southeastern Cuba, under a 1934 leasing treaty. The US government considers the base to be of some strategic and training significance in the Caribbean and has refused to give it up, despite demands by the Castro regime that it do so. About 2,000 military personnel are stationed at Guantánamo.

## 18 INTERNATIONAL COOPERATION

Cuba is a member of the United Nations, having joined on 24 October 1945; it belongs to ECLAC and several specialized agencies, such as the FAO, IAEA, IFAD, ILO, UNESCO, UNIDO, and WHO. Cuba is a part of the ACP Group, G-77, the Latin American Economic System (LAES), the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and the Latin American Integration Association (LAI). Cuba's charter membership in the OAS was suspended at the second Punta del Este meeting, in February 1962, through US initiative. The isolation of Cuba from the inter-American community was made almost complete when, at Caracas, on 26 July 1964, the OAS voted 15–4 for mandatory termination of all trade with the Castro government. Cuba has been very active in the Nonaligned Movement, and held its chairmanship between 1979 and 1983. The nation is also part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, Cuba is part of the Antarctic treaty, the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Proto-

col, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Traditionally, one of the world's leading cane sugar producers, Cuba has been primarily an agricultural nation. Sugar was the leading earner of foreign exchange until 1992, when tourism revenues outstripped sugar revenues. Agriculture's contribution to GDP has decreased from 24% in 1965 to 10% in 1985, to 7% in 2000. Manufacturing increased from 23% of GDP in 1965 to 36% by 1985. In 2000, the contribution of the industrial sector fell to 34.5% as services, including tourism, became more dominant.

After 1959, the revolutionary government, following policies espoused by Ernesto "Che" Guevara, attempted to liberalize the sugar economy in order to achieve agricultural diversification and industrialization. When this policy proved disastrous to the sugar crop, Castro reversed the Guevara program in 1962 and announced a goal of 10-million-ton crop by 1970. Despite a severe drought in 1968–69, Cuba did achieve a record 7.6-million-ton output of refined sugar in 1970. Efforts to diversify foreign trade during the early 1970s were aided by record high prices for sugar. Between 1971 and 1975, the Cuban economy grew by about 10% annually, and moderate growth averaging about 4.4% per year continued through most of the 1980s. The special relationship with the Soviet Union, whereby it supplied Cuba with oil below market prices and bought its sugar at above market prices, insulated the Cuban economy from the vagaries of the two oil shocks of the 1970s and the Third World debt crisis of the early 1980s. However, commercial agreements with Argentina, Canada, Spain, France, the United Kingdom, Italy, and Germany indicated Cuba's keen desire to move away from nearly exclusive reliance on the Socialist countries for both imports and exports. Trade with the then-USSR and other CMEA members, nevertheless, made up the bulk of Cuba's foreign commerce, and Soviet aid remained essential to the economy.

From 1981 to 1985, Cuba's GDP growth averaged 7.3% due mainly to increased sugar production. In 1986 and 1987, however, GDP growth dropped to approximately 1.7% due mainly to the collapse of oil prices, a depressed world sugar market, prolonged drought in Cuba, and the fall in the value of the dollar. The situation worsened when the Soviet bloc collapsed in 1989, eliminating its assistance and subsidized markets. Cuban GDP fell 35% between 1989 and 1993. The Castro government restricted public expenditure and in 1993–94 introduced a series of market-oriented reforms. It legalized the dollar, allowed trading with market economies and developed new sources of foreign currency. The government placed special emphasis on the promotion of foreign investment and the development of sugar and tourism. About 150 occupations were opened up for self-employment. The economy began to expand again in 1994, and by 1996 GDP growth was at 7.8%. Tourism established new records in 1996, with arrivals increasing by 35% to 1,001,739, and gross revenues rising by 18% to \$1.3 billion. The number of self-employed rose to over 200,000, but after income taxes were introduced, fell to an estimated 100,000 by 2001. By the end of 2000, nearly 400 joint ventures with foreign companies had been established representing a total investment of \$4.2–4.5 billion.

In 1997, growth fell to 2.5% and then to 1.2% in 1998. Annual inflation was almost nonexistent in 1998, down from 19.0% in 1995. Growth increased to 6.2% in 1999 and 5.6% in 2000 as tourist arrivals rose to 1.7 million in 2000, and gross receipts to about \$1.9 billion. In 2001, in the context of a global economic slowdown, the aftermath of the 11 September 2001 terrorist attacks in the United States, and a devastating hurricane in November, tourist arrivals increased only marginally and gross receipts remained unchanged. Tourism was estimated to have declined in 2002.

In 2002, the government introduced a comprehensive restructuring of the sugar sector. Over half of Cuba's 156 mills were to be closed, leaving only the 71 most efficient. 100,000 of the 400,000 employed in the mills were to be retrained for other jobs. More rice and other crops were to be grown. Sugar production, at 8 million tons a year in 1989, had fallen to 3.2 million tons a year by 2003.

Between 75–90% of adult Cubans are employed by the state in relatively low-paying jobs. However, education, medical care, housing, and other public services are free or highly subsidized, and there are no taxes on public jobs. Although there has been an increasing infusion of dollars and other hard currencies into the economy, the society still faces a painful transition out of its isolated socialism.

In 2004, the economy expanded by 4.2%, up from 2.9% in 2003; in 2005, the GDP growth rate was estimated at an impressive 8.0%, while the GDP per capita, at purchasing power parity, was \$3,300. The standard of living in Cuba continues to hover at levels lower than before the downturn of the 1990s. The inflation rate was insignificant in 2003 and 2004, but by 2005 it was estimated to have risen to 4.2%. As a result, the government strengthened its control over inflowing currencies (which are mainly provided by tourism, remittances, and trade).

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Cuba's gross domestic product (GDP) was estimated at \$37.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$3,300. The annual growth rate of GDP was estimated at 5.2%. It was estimated that agriculture accounted for 5.5% of GDP, industry 26.1%, and services 68.4%.

## 21 LABOR

As of 2005, Cuba's workforce was estimated at 4.6 million, of which the nonstate sector accounted for 22% and the state sector 78%. In 2004, the Cuban workforce by occupation was distributed as follows: industry 14.4%; agriculture 21.2%; and services 64.4%. The unemployment rate in 2005 was estimated at 1.9%. However, underemployment is a chronic problem, and has been exacerbated by the idling of thousands of industrial workers whose jobs rely on foreign imports. Labor has been shifted to agriculture to compensate for fuel and machinery shortages affecting food and production.

All Cuban workers belong to a trade union, under the central control of the Confederation of Cuban Workers (CUTC), which is

affiliated with the Communist-oriented World Federation of Trade Unions. Independent unions are explicitly prohibited. Those who attempt to engage in independent union activities face government persecution and harassment. Strikes and collective bargaining are not legally permitted.

The minimum wage varies, depending on the type of employment. As of 2005, the average monthly wage was \$9. The minimum wage is supplemented by social security consisting of free medical care and education, and subsidized housing and food. However, a worker must still earn significantly more than minimum wage to support a family. The eight-hour workday, a weekly rest period, an annual paid vacation of one month, and workers' compensation are guaranteed by the constitution. The standard work week is 44 hours, with shorter workdays for hazardous occupations. Although the legal minimum working age is 17, the employment of minors 15 and 16 years of age is permitted as a way to offset labor shortages or to obtain training. Teenagers can only work 7 hours per day or 40 hours per week or only on holidays.

## 22 AGRICULTURE

The state owns about 3 million hectares (7.4 million acres) of arable land, and 750,000 hectares (1.8 million) of permanent crops. About 13.1% of the economically active population was engaged in the agricultural sector in 2003. An agrarian reform law of June 1959 made the government proprietor of all land in Cuba, created the National Institute of Agrarian Reform (INRA) as administrator, and set a general limit of 30 caballerías (400 hectares/990 acres) of farmland to be held by any one owner. A second agrarian reform, of October 1963, expropriated medium-size private holdings; there remained about 170,000 small private farms, with average holdings of over 16 hectares (40 acres). By 1985 there were 1,378 farm cooperatives. Almost a third of cultivated land is irrigated.

Sugarcane, Cuba's most vital crop and its largest export, is grown throughout the island, but mainly in the eastern half. The government regulates sugar production and prices. Sugar output reached 7.6 million tons in 1970, but that fell short of the 10 million tons projected. Subsequent targets were lowered, and the output was 7.9 million tons in 1979, 6.7 million in 1980 (when crop disease reduced production), 8 million in 1985, and 3.5 million in 1999. In 2004, exports of raw sugar amounted to 1.9 million tons, valued at \$348.8 million. Cuba has pioneered the introduction of mechanical cane harvesters, and by 2002 there were 7,400 harvester-threshers (up from 5,717 in the early 1980s). Cuba and Russia signed several finance and investment accords in 1992 and 1993 whereby Russia will supply fuel, spare parts, fertilizer, and herbicide in exchange for Cuba's sugar harvest, with Russia annually importing a minimum of two million tons of Cuban sugar. The sugar industry also has diversified into exporting molasses, ethyl alcohol, rum and liquor, bagasse chipboard, torula yeast, dextran, and furfural. Tobacco, the second most important crop, is grown on small farms requiring intensive cultivation. In the late 1970s, the average annual production was about 35,000 tons, but crop disease in 1979 resulted in a drop in production to 8,200 tons in 1980; production was 34,494 tons in 2004. Other crops in 2004 included (in tons) oranges, 490,000; lemons and limes, 26,000; grapefruit, 225,000; rice, 610,000; plantains, 790,000; bananas, 310,000; potatoes, 300,000; sweet potatoes, 490,000; and coffee,

12,900. Other Cuban products with export potential include mangoes, pineapples, ginger, papayas, and seeds.

### 23 ANIMAL HUSBANDRY

In the state sector, milk production in 2004 amounted to 610,700 tons (up from 431,000 during 1989–91) and egg production reached 79,000 tons (120,000 tons during 1989–91). Livestock in 2004 included an estimated 4,050,000 head of cattle, 1.7 million hogs, 400,000 horses, 3.2 million sheep, 425,000 goats, and 18.4 million chickens. The populations of most livestock species have declined since 1990, as a result of input shortages from the worsening economy. Honey production in 2004 was an estimated 7,200 tons, the highest in the Caribbean.

### 24 FISHING

The territorial waters of Cuba support more than 500 varieties of edible fish. The catch in 2003 was 68,420 tons, compared with 244,673 tons in 1986. Tuna, lobster, and shellfish are the main species caught. The Cuban Fishing Fleet, a government enterprise, supervises the industry.

The former USSR aided in the construction of a fishing port in Havana. Seafood exports are an important source of foreign exchange; in 2003, fish and fish products exports amounted to \$64.4 million.

### 25 FORESTRY

Much of the natural forest cover was removed in colonial times, and cutting between the end of World War I and the late 1950s reduced Cuba's woodland to about 14% of the total area and led to soil erosion. Between 1959 and 1985, about 1.8 billion seedlings were planted, including eucalyptus, pine, majagua, mahogany, cedar, and casuarina. State forests cover 2,348,000 hectares (5,802,000 acres), or about 21.4% of the total land area. Roundwood production in 2003 amounted to 2.6 million cu m (93 million cu ft), with 69% used for fuel.

### 26 MINING

Nickel was Cuba's leading mineral commodity, second to sugar in export earnings. The country produced 74,018 metric tons of mined nickel in 2003, up from 71,342 metric tons in 2002. Cuba's nickel reserves were the world's fourth-largest and the reserves base was the largest. Recent changes in investment and mining laws have increased foreign trade. Production has been boosted by a joint venture formed in 1994 between Sherritt International of Canada, and the Cuban government. Nickel deposits and plants were located in eastern Cuba at Nicaro, Moa, and Punta Gorda, all in Holguín Province. Production of cobalt (oxide, oxide sinter, sulfide, and ammoniacal liquor precipitate), a by-product of nickel operations, totaled 3,982 metric tons in 2004. In 2004, Cuba also produced ammonia, chromite, gold, gypsum, salt from seawater (180,000 metric tons), and silica sand. Production of copper has declined substantially from pre-Revolutionary times.

### 27 ENERGY AND POWER

Cuba is the second-largest producer of electric power in the Caribbean region, exceeded only by Puerto Rico. In 2002, Cuba's electrical generating capacity stood at 4.411 million kW, of which 4.354 million kW, was dedicated to conventional thermal sources and

0.057 million kW to hydropower. Output in 2002 stood at 14.771 billion kWh, with 13.920 kWh produced by fossil fuels, 0.105 billion kWh generated by hydropower, and 0.746 billion kWh generated by geothermal or other sources. Demand for electric power in 2002 totaled 13.737 billion kWh.

Cuba has the second-largest proven hydrocarbon reserves in the Caribbean area, surpassed only by those of Trinidad and Tobago. In 2005, according to the Oil and Gas Journal, Cuba's proven reserves of oil stood at 750 million barrels. Over the previous two decades the production of crude oil has risen noticeably, going from 16,000 barrels per day in 1984 to 67,000 barrels per day in 2004. The majority of the country's production is centered in the northern Matanzas province. However, the oil produced is a sour, heavy type of crude that requires special processing. There is interest in offshore production, and it has been reported by industry analysts that Cuba's offshore basins may hold at least 1.6 billion barrels of crude oil. Cuba has a refining capacity, consisting of four facilities operated by state-owned Cubapetroleo (Cupet) totaling 301,000 barrels per day, as of July 2005.

Cuba's consumption of oil in 2004 amounted to 211,000 barrels per day, far outpacing the country's production capabilities. While Cuba has had to import the difference, it has also taken measures to offset the cost of imported oil. In 2000, Cuba signed a five-year agreement to import crude oil and refined oil products from Venezuela, paying for the oil via a barter arrangement that has seen Cuban teachers and doctors sent to Venezuela to promote literacy and provide medical help to Venezuela's poor. In addition Cuba has offered offshore exploration rights in its territorial waters in the Gulf of Mexico to international oil companies. Among them are two Canadian companies—Sherritt International; and Pebercan—both of which are producing oil in conjunction with Cupet, under joint venture agreements.

Cuba had proven natural gas reserves of 2,500 billion cu ft in 2005, according to the Oil and Gas Journal. Gross natural gas production in 2002 amounted to 19.42 billion cu ft, with 3.53 billion cu ft vented or flared and 15.89 billion cu ft marketed. Dry production and consumption for 2002 each stood at 12.36 billion cu ft.

Cuba has no known coal production so the country must import what it uses. In 2002, Cuba imported a total of 44,000 tons of coal and related products, which consisted of 29,000 tons of hard coal and 15,000 tons of coke. Coal product demand in that year amounted to 30,000 tons, with 14,000 tons stockpiled.

### 28 INDUSTRY

All Cuban industrial production was nationalized by March 1968. Industry accounts for approximately 35% of GDP.

Cuba had 156 sugar mills in 1985, and at that time, about 10% of exports from the then-USSR to Cuba consisted of machinery for the sugar industry. Other food processing plants produced cheese, butter, yogurt, ice cream, wheat flour, pasta, preserved fruits and vegetables, alcoholic beverages, and soft drinks. Light industry comprises textiles, shoes, soap, toothpaste, and corrugated cardboard boxes. Other industries are petroleum products (Cuba has four oil refineries with a total production capacity of 301,000 barrels per day), tobacco, chemicals, construction, cement, agricultural machinery, nickel, and steel production. In the mid-1990s, tourism surpassed sugar processing as the main source of foreign

exchange, although the government in 2002 announced plans to implement a “comprehensive transformation” of the sugar industry, including the closing of almost half the existing sugar mills. Although 1.7 million tourists visited the country in 2000, bringing in \$1.9 billion, the global economic slowdown in 2001 and the 11 September 2001 terrorist attacks on the United States negatively impacted Cuba’s tourism industry.

In 2005, industry accounted for 26.1% of the GDP and it employed 14.4% of the labor force. The industrial production growth rate in the same year was 3.5%, less than the overall GDP growth rate. Services were by far the largest economic engine, with a 68.4% share of the economy, and the largest employer, with 64.4% of the labor force engaged in this sector. Agriculture was the smallest economic sector (5.5% of the GDP), but a significant employer (21.2% of the work force). Financing from abroad has contributed to positive developments in the mining, oil, and construction sectors.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

In 2002, total expenditures for research and development (R&D) amounted to 189.6 million Cuban pesos, or 0.62% of GDP. Of that amount in 2002, 60% came from government sources, with 35% from business and 5% from foreign sources. For that same year, there were 2,510 technicians and 538 researchers per million people that were engaged in R&D. High technology exports in 2002 totaled \$48 million, or 29% of manufactured exports.

The Academy of Sciences of Cuba, founded in 1962, is Cuba’s principal scientific institution; it, as well as the Ministry of Agriculture, operates numerous research centers throughout Cuba. Institutions offering higher education in science and engineering include the University of Havana (founded in 1928), the University of Oriente at Santiago de Cuba (founded in 1947), the Central University of Las Villas in Villa Clara (founded in 1952), the University of Camagüey (founded in 1967), and the University Center of Pinar del Río (founded in 1972). In 1987–97, science and engineering students accounted for 16% of college and university enrollments.

## 3<sup>0</sup> DOMESTIC TRADE

Havana is Cuba’s commercial center. Provincial capitals are marketing and distribution centers of lesser importance. Camaguey is a cattle and sugar center, Santa Clara lies in the tobacco belt, and Santiago is a major seaport and mining city. Holguín has been transformed into a major agricultural and industrial center.

By May 1960, the National Institute of Agrarian Reform was operating about 2,000 “people stores” (*tiendas del pueblo*), and by the end of 1962 all retail and wholesale businesses dealing in consumer essentials had been nationalized. In 1984 there were 27,301 retail establishments in Cuba. As of 2002, there were only about 200,000 independent farmers and only 100,000 private business owners. These private businesses are strictly controlled by the government.

Due to the US-organized trade boycott and the inability of production in the then-USSR and Cuba to meet Cuban demands, rationing was applied to many consumer goods in the 1960s and 1970s. By the mid-1980s, rationing had been reduced and accounted for about 25% of individual consumption. Allocation of major consumer items after 1971 was by the “just class” principle,

with the best workers receiving priority. The availability of basic consumer items increased noticeably after 1980, when the small-holder’s free market (*mercado libre campesino*) was introduced. Under this system, small-scale private producers and cooperatives could sell their surplus commodities directly to consumers once their quotas had been filled. However, the peasant markets were abolished in May 1986, allegedly because they led to widespread speculation and profiteering. It has been estimated that nearly 40% of the domestic economy operates in the “informal” sector, or black market.

Between \$800 million and \$1 billion per year is added to the domestic economy in the form of remittances from expatriates. Much of this comes from families residing in the United States, who are permitted to send a total of \$1,200 per year. The Cuban government acquires these funds by allowing consumers to purchase products in state-run “dollar stores.”

## 3<sup>1</sup> FOREIGN TRADE

Cuba has established or reestablished trade relations with many countries in Latin America, the Caribbean, Africa, Asia, and Europe. The sudden rupture of trade with the former Soviet Union and the Eastern bloc nations in 1989 after 30 years of interrelationship caused severe trauma to the Cuban economy. However, there remains a clear political will on the part of the former Soviet republics to maintain economic relations with Cuba with a certain degree of preference. Nevertheless, Cuba has diversified its trading partners in recent years.

Almost half of Cuba’s commodity export market (53%) is taken up by sugar and honey, representing 5.7% of the world’s export sales in these commodities. Nickel is the second most lucrative exported commodity (23%), followed by fish (6.8%). Other exports include tobacco (5.6%) and medicinal and pharmaceutical products (2.8%). Primary imports include petroleum, food, machinery, and chemicals.

In 2005, exports reached \$2.4 billion (FOB—Free on Board), while imports grew to \$6.9 billion (FOB). In 2004, the bulk of exports went to the Netherlands (22.7%), Canada (20.6%), China (7.7%), Russia (7.5%), Spain (6.4%), and Venezuela (4.4%). Imports mainly came from Spain (14.7%), Venezuela (13.5%), the

United States (11%), China (8.9%), Canada (6.4%), Italy (6.2%), and Mexico (4.9%).

### **3<sup>2</sup> BALANCE OF PAYMENTS**

Since the United States stopped trading with Cuba in 1963, Cuba's dollar reserves have dropped to virtually nothing, and most trade is conducted through barter agreements. In 1997, Cuba's debt to the former Soviet Union was estimated at \$20 billion. With the demise of the USSR, Cuba has focused on trading with market-oriented countries in order to increase foreign currency reserves, notably by promoting sugar exports and foreign investment in industry. Remittances from Cuban workers in the United States (totaling approximately \$800 million annually), tourism dollars, and foreign aid help to cover the trade deficit.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Cuba's exports was \$1.8 billion while imports totaled \$4.8 billion resulting in a trade deficit of \$3 billion.

Exports of goods reached \$2.2 billion in 2004, up from \$1.7 billion in 2003. Imports increased from \$4.6 billion in 2003, to \$5.3 billion in 2004. The resource balance was consequently negative in both years, deteriorating from -\$2.9 billion in 2003, to -\$3.1 billion in 2004. The current account balance followed a similar path, worsening from -\$130 million in 2003, to -\$177 million in 2004. Foreign exchange reserves (including gold) reached \$2.5 billion in 2005, covering less than five months of imports.

### **3<sup>3</sup> BANKING AND SECURITIES**

All banks in Cuba were nationalized in 1960. The National Bank of Cuba, established in 1948, was restructured in 1967. Commercial banks include Banco Financiero Internacional (1984). Savings banks include Banco Popular del Ahorro. A number of foreign banks offer limited services in Cuba. The Grupo Nuevo Banco was set up in 1996.

There are no securities exchanges.

Hard-currency reserves have been depleted by import growth in excess of export growth. In the domestic economy, the attempt to reduce enterprise subsidies caused an increase in demand for working capital that the state was unable to meet. A combination of price and direct rationing systems is operating.

### **3<sup>4</sup> INSURANCE**

All insurance enterprises were nationalized by January 1964. Although insurance never accounted for more than 1% of national income, new opportunities began to emerge throughout the insurance sector as a result of the changes in economic structure. Seven insurance companies and two reinsurers had offices in Cuba in 1997. They concentrated on freight insurance, but there was interest in development and diversification.

Cuba's domestic state insurance company, Esen, appeared to be preparing to compete with foreign companies in the domestic market in 1997. It launched a major marketing drive with an expanded sales force of 3,500 to persuade Cubans to take out new personal insurance policies. Apparently, they were having some success, despite the lack of a private insurance tradition. The volume of premiums was 30% higher in 1995 than in 1990. New products include not only travel and medical insurance, but also pensions and life insurance policies. In 1997, a new insurance law

was passed to permit the establishment of private insurers to compete with the state-owned companies. Although limited foreign penetration into the Cuban market will help to develop the sector, the authorities will continue to foster the development of Cuban insurers before the sector is fully opened. Private insurance schemes will not replace state social security provision.

Third-party automobile liability for foreign residents (including diplomats) and for vehicles carrying either freight or people are compulsory.

### **3<sup>5</sup> PUBLIC FINANCE**

Under the Economic Management System, developed during the 1970s and approved by the PCC Congress in 1975, state committees for statistics and finances have been established, and formal state budgets, abandoned in 1967, have been reintroduced. State revenues come from the nationalized enterprises, income tax, social security contributions, and foreign aid.

The US Central Intelligence Agency (CIA) estimated that in 2005 Cuba's central government took in revenues of approximately \$22.1 billion and had expenditures of \$23.6 billion. Revenues minus expenditures totaled approximately -\$1.5 billion. Total external debt was \$13.1 billion.

### **3<sup>6</sup> TAXATION**

A 1962 tax code instituted a sharply progressive income tax as well as a surface transport tax, property transfer tax, documents tax, consumer goods tax, and a tax on capital invested abroad.

### **3<sup>7</sup> CUSTOMS AND DUTIES**

Cuba's average weighted tariff in 1997 (the most recent year the World Bank could gather statistics) was 8.1%. However, Cuba also maintains significant nontariff barriers to trade. Required government inspection of imports and corrupt customs officials are among the worst factors.

### **3<sup>8</sup> FOREIGN INVESTMENT**

In February 1960, Fidel Castro announced that foreign investment in Cuba would be accepted only if delivered to the government to be used as it saw fit. The enterprises in which this capital would be invested were to be "national enterprises," so that Cuba would not be dependent on foreigners. Any new foreign investments were to be controlled by the Central Planning Board. From mid-1960s, US holdings in Cuba were systematically seized, partly for political reasons and partly because US corporations refused to accept Cuba's terms of nationalism. Some of the investments of other foreign nationals were left operating under stringent governmental regulation.

Between 1960 and the early 1970s, foreign investment activities were restricted to limited technical and economic assistance from East European countries and the then-USSR, with which Cuba concluded over 40 cooperation agreements between 1963 and 1983. Limited investments from the noncommunist world were sought with some success in the mid-1970s. In 1982, in a further effort to attract investors from Western Europe, Canada, and Japan, Cuba passed its first foreign investment law, permitting foreign companies to form joint ventures with the Cuban government, but to own no more than 49% of the stock. In 1985, how-

ever, direct investment in Cuba by OECD countries totaled only \$200,000.

Since 1990, the Cuban government has seen the necessity to open its recessed economy to foreign investment, either via joint ventures or other forms of association. In 1992, Cuba further intensified its efforts to attract foreign investment in several key areas of its economy, including sugar, tourism, textiles, tobacco, pharmaceuticals, nickel, and shipping. In 1995, full repatriation of profits and 100% foreign ownership was allowed in Cuba.

As of 1998, there were 322 joint ventures in force, with partners from over fifty different countries. In addition, many foreign contracts were being sought for oil drilling. The annual inflow of foreign direct investment (FDI) into the more liberalized Cuba reached a peak of \$15.2 million in 1998. FDI inflow dropped, to \$9 million in 2000 and further, to \$4.6 million in 2001. Principal sources of foreign investment include Canada, Spain, France, Italy, the Netherlands, and Latin America.

In April 2002, after President Hugo Chavez of Venezuela was returned to power, oil shipments to Cuba on concessional terms were cut off. In April 2003, there appeared to be a decisive shift away from further opening of the economy as the Castro regime rounded up dissidents and executed by firing squad three men who attempted to hijack a passenger ferry to take them to Florida, accusing the US Mission Chief of trying to organize political opposition to the regime.

### 39 ECONOMIC DEVELOPMENT

Until 1959, the Cuban government followed a policy of free enterprise; government ownership was largely limited to local utilities. When the Castro government came to power in 1959, it proceeded to create a centrally planned economy. By means of nationalization and expropriation, all producer industries, mines, refineries, communications, and export-import concerns were brought under government control by 1968.

Planning in the 1960s vacillated on the question of whether Cuba should concentrate on the production of sugar, on industrialization, or on a balance between the two. After 1963, sugar predominated. But the effort that went into the 1970 harvest diverted enormous resources from other sectors of the economy. At the same time, there was growing absenteeism and low productivity in the labor force, attributed to the policy of eliminating material incentives. Under the Economic Management System, pay was again tied to production though the introduction of a system akin to piecework.

The 1975–80 development plan, approved by at the PCC Congress in December 1975, set specific production goals for Cuban industry and projected an overall economic growth rate of 6% annually; it was announced in 1980 that the actual growth rate was 4%. The 1981–85 plan introduced new incentive schemes and gave more freedom to market forces; it also eased restrictive hiring regulation. One of the major aims of the plan was to increase industry's share of gross social product to 50%, but industry accounted for only 45.3% in 1985. The 1986–90 plan envisioned a 5% annual growth and aimed particularly at an increase in exports. In December 1986, 28 austerity measures were approved by the National Assembly, including increases in transport and electricity prices and rationing of kerosene.

Under several finance and investment accords signed by Cuba and Russia in 1992 and 1993, Russia agreed to supply fuel, tires, and spare parts for mechanical harvesters and other vehicles, in addition to fertilizers and herbicides, all for Cuba's sugar harvest. In addition, Russia agreed to import a minimum of 2 million tons of Cuban sugar. Russia also agreed to extend a \$350 million credit to Cuba to complete and further develop a number of oil, energy, and nickel mining projects that had previously been backed by the Soviet Union.

Since 1998, Cuba has sat as an observer at International Monetary Fund (IMF)/World Bank meetings. Cuba's economic planners predicted a 1.5% growth rate for 2003, as tourism declined following the 11 September 2001 terrorist attacks on the United States, sugar prices were low, hurricanes damaged the island, and external financing was lacking. The Central Bank reported a \$12.2 billion hard-currency foreign debt by late 2002. Unemployment stands at approximately 12%, but close to 30% of workers have been displaced or underemployed. Castro in 2003 replaced at least five officials in economy-related government positions in an effort to combat a faltering economy. Cubans increasingly turn to the black market for food, clothing, and household goods. Cuba continued to apply timid market reforms while actively seeking foreign investment. Economic growth in the late 1990s came from an expansion of manufacturing, tourism, mining, and services. Other positive factors included the improved tourist industry and a sharp recovery of the cigar industry. Indeed, during the 1990s, tourism replaced sugar exports as Cuba's primary source of foreign exchange. The creation of a new Central Bank completed financial sector reforms begun in 1995. These reflected the increased role of the private sector in financial transactions. In 2000, the Cuban economy continued its growth through the generous investment of foreign countries, but the US trade embargo held fast in the face of opposition from key US political leaders.

The main impediment to growth in 1990s Cuba was the restricted access to external financing. As a response, in 2005 the government strengthened its control over capital flows—especially from tourism, oil, mining, and construction. New trade agreements and investment commitments from China and Venezuela will likely give a boost to the Cuban economy in the years to come. Positive developments in the tourism, nickel, and oil sectors will also contribute to the overall growth trend. However, if President Hugo Chavez were to lose power in Venezuela or if the Chinese economy were to face a downturn, Cuba would suffer the repercussions.

### 40 SOCIAL DEVELOPMENT

A single system of social security covering almost all workers and protecting them against the risks of old age, disability, and survivorship was enacted in 1963. Contributions to pension programs are made by employers (10% of earnings for self-employed persons), with the government making up the deficit. These contributions also fund maternity, sickness, and work-injury programs. Pensions are set at a rate of 50% of average earnings. The national health care system covers all citizens. The Maternity Law provides up to one year of maternity leave.

The Family Code proscribes all sex discrimination. Women receive equal access to education and are found in most professions. Legislation provides for the equal rights of illegitimate and legitimate children, and specifies the obligations of parents. Crime is

not reported in the media, and there are no reliable data regarding the prevalence of violence against women and domestic abuse. Prostitution is legal for those over 17 years of age, but the government has been curtailing activity to combat the perception that sex tourism is endorsed.

Human rights activists have been targeted for arbitrary arrest and detention. Prison conditions are harsh: medical care is inadequate and abusive treatment is not uncommon. The government does not allow international organizations to operate in the country.

#### 4<sup>1</sup> HEALTH

Sanitation is generally good and health conditions greatly improved after the 1959 revolution. However, with the dissolution of the Soviet Union, Cuba no longer receives the same level of foreign support and has fallen behind in many of its social services. In spite of this, in 1993 100% of the population was reported to have access to health care. In 2000, 95% of the population had access to safe drinking water and 95% had adequate sanitation.

Infant mortality declined from more than 60 per 1,000 live births before 1959 to 6.33 in 2005. About 8% of babies born in 1999 were considered low birth weight. Approximately 79% of married women (ages 15 to 49) used contraception. The government claims to have eradicated malaria, diphtheria, poliomyelitis, tuberculosis, and tetanus. Children up to one year of age were immunized as follows: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 99%; polio, 97%; and measles, 99%.

Life expectancy was an average of 77.23 years in 2005. Major causes of death were circulatory system diseases, cancer, injuries, and infectious diseases. There were 15 reported cases of tuberculosis per 100,000 in 2001. The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 3,300 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

As of 2004, there were an estimated 591 physicians, 744 nurses, and 87 dentists per 100,000 people. Medical services are now more widely distributed in rural as well as urban areas. All doctors are obliged to work for the rural medical service in needy areas for two years after graduation. All health services are provided free of charge. Health care expenditure was estimated at 6.1% of GDP.

#### 4<sup>2</sup> HOUSING

Within the past few years decades, Cuban housing has begun to catch up to population demand. Nearly 1.3 million housing units were built between 1959 and 1993. In the 1980s, over half of all housing units were detached houses. The remainder were apartments, palm huts called *hohios*, and *cuarterias*, housing units in buildings composed of a number of detached rooms where occupants share some or all facilities. More than half of all dwellings were concrete and brick, about one-third were solid wood, and a smaller number were constructed with palm planks. Water was piped indoors to roughly half of all homes and outside to one-fifth; about half had private bath facilities.

Housing conditions have generally improved over the past few years. By 1998, about 87% of urban dwellings were graded as good or fair, as were 68% of rural dwellings. From 1998–2001, some 800,212 housing conservation and rehabilitation projects were

completed; about 51% were initiated by the government and 49% by residents.

Though most dwellings are built by the state, there are a few cooperative and individual concerns represented in the market. Habitat-Cuba, a nongovernment organization, has been working with local architects and low-income families to provide quality, low-cost housing. Part of this program involves using indigenous and more easily renewable materials for construction, such as clay and bamboo.

#### 4<sup>3</sup> EDUCATION

Education has been a high priority of the Castro government. In 1959 there were at least one million illiterates and many more were only semiliterate. An extensive literacy campaign was inaugurated in 1961, when 100,000 teachers went out into the countryside.

Education is free and compulsory for six years (6–11 years of age) of primary school. Basic secondary studies last for three years, after which students may then choose to pursue a three-year course of university prep studies or a three-year technical school course. The addition of agricultural and technical programs to the secondary-school curriculum was an innovation of the Castro government; the work-study principle is now integral to Cuban secondary education. Students in urban secondary schools must spend at least seven weeks annually in rural labor. The first junior high schools, based on the work-study concept, were introduced in 1968. Catholic parochial schools were nationalized in 1961.

In 2001, nearly all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 95.7% of age-eligible students. The same year, secondary school enrollment was about 86% of age-eligible students. It is estimated that about 94% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 11:1 in 2003; the ratio for secondary school was about 12:1.

Cuba has five universities: the University of Havana (founded 1728), Oriente University at Santiago de Cuba (1947), the University of Las Villas at Santa Clara (1952), University of Camagüey (1974), and the University of Pinar Del-Rio. Workers' improvement courses (*superación obrera*), to raise adults to the sixth-grade level, and technical training schools (*mínimo técnico*), to develop unskilled workers' potentials and retrain other workers for new jobs, were instituted after 1961. Special worker-farmer schools prepare workers and peasants for enrollment at the universities and for skilled positions in industrial and agricultural enterprises. In 2003, about 34% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 99.8%.

As of 2003, public expenditure on education was estimated at 9% of GDP, or 18.7% of total government expenditures.

#### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The José Martí National Library in Havana, founded in 1901, had a collection of two million volumes in 2002. Besides acting as the National Library, it provides lending, reference, and children's services to the public. Other sizable collections in Havana are found at the Havana University Library (203,000 volumes), the Library of the Institute of Literature and Linguistics (1 million), the José An-

tonio Echevarría Library of the House of the Americas (150,000), and the University of the East in Santiago (535,000 volumes).

Although libraries of private institutions disappeared in the 1960s and many collections were transferred to the National Library, the number of special and research libraries increased, especially with the creation of many departments of the Academy of Sciences. A national library network was established by the Department of Libraries of the National Cultural Council.

The National Museum of Fine Arts in Havana contains classical and modern art from around the world as well as Cuban art from the colonial period to the present day. The Colonial Municipal Museum and the Felipe Poey Natural History Museum in Havana, the Bacardi Municipal Museum in Santiago, the Oscar Rojas Museum in Cárdenas, and the Ignacio Agramonte Museum in Camagüey are also noteworthy. There is a Naval Museum at Cienfuegos and a Museum of Archaeology in Sancti Spiritus.

#### 45 MEDIA

All telephone service is free; about 95% of the telephones are automatic. In 2003, there were an estimated 51 mainline telephones for every 1,000 people. The same year, there were approximately two mobile phones in use for every 1,000 people.

As of 1999 there were 150 AM and 5 FM radio broadcasting stations and 58 television stations operating throughout the country. All stations are owned and operated by the government. In 2003, there were an estimated 185 radios and 251 television sets for every 1,000 people. The same year, there were 31.8 personal computers for every 1,000 people and 11 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

Like the radio and television stations, the press is entirely controlled and owned by the government. Cuba's major newspapers are all published in Havana and include *Granma*, established in 1965 (with an estimated 2002 circulation of 400,000) as the official organ of the Communist party. The party also publishes weekly editions in Spanish, English, and French. The weekly *Juventud Rebelde* is the publication of the Union of Young Communists, and had a 2002 circulation of 250,000.

Magazines published in Havana include *Bohemia* (weekly, 20,000, general articles and news) and *Mujeres* (monthly, 250,000, women's-interest news). *Prensa Latina*, the Cuban wire service, covers international affairs and distributes its coverage throughout Latin America.

The constitution states that print and electronic media are state property and cannot be made private. Media operate under strict guidelines and reflect government views. The government is said to intimidate journalists through the penal system and the threatening of jobs.

#### 46 ORGANIZATIONS

Most of the leading mass organizations in Cuba were founded shortly after the revolution. The Committees for the Defense of the Revolution were founded on 28 September 1960 to combat counterrevolutionary activities. The Federation of Cuban Women was established 23 August 1960. The National Association of Small Farmers, the leading peasants' organization, was established 17 May 1961; in 1989 it had 167,461 members, both private farmers and members of cooperatives. The Confederation of Cuban

Workers, the principal trade union federation, antedates the revolution. Founded in 1939, it had a total membership of 3,060,838 workers in 1990.

The Union of Young Communists of Cuba (UJC), founded in 1962, has reported over 500,000 members. The Federation of Cuban University Students (FEU), founded in 1922, consists of students from all major universities, colleges, and secondary schools. There are a number of sports organizations in the country and an active organization of the Special Olympics.

There are national chapters of the Red Cross Society and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Before 1959, tourism, especially from the United States, was a major source of revenue. Foreign tourism declined in the 1960s, and Cuba's ornate and expensive hotels were used mainly by visiting delegations of workers and students. Renewed emphasis on international tourism characterized the 1976–80 development plan, under which 25 new hotels were opened. The Cuban government actively promotes tourism as a means of offsetting the financial decline brought on by the collapse of the Soviet bloc.

Among Cuba's attractions are fine beaches; magnificent coral reefs, especially around the Isle of Youth; and historic sites in Old Havana (where some buildings date from the 17th century), Trinidad, and Santiago de Cuba. Passports and visas are required for nationals of countries that do not have visa-free agreements with Cuba. In June 1992, Cuba was admitted to the Caribbean Tourism Organization.

There were 1,905,682 foreign visitors who arrived in Cuba in 2003. Hotel rooms numbered 43,696 with 84,200 beds and a 62% occupancy rate. Tourism receipts reached \$1.8 billion.

In 2004, the US Department of State estimated the cost of staying in Havana at \$167 per day, and in Guantánamo Bay, \$78 per day.

#### 48 FAMOUS CUBANS

José Martí (1853–95), poet, journalist, and patriot, was the moving spirit behind the revolution that liberated Cuba from Spain. Antonio Maceo (1848–96), the mulatto general known as the "Titan of Bronze," became famous both as a guerrilla fighter and as an uncompromising advocate of independence. Carlos J. Finlay (1833–1915) gained lasting recognition for his theory regarding the transmission of yellow fever.

Cuban literature is most famous for its poetry and essays. The influential Afro-Cuban tradition has been explored by Cuban scholars, most notably by Fernando Ortiz (1881–1916), jurist and ethnographer. Another leading writer was José Antonio Saco (1797–1879), author of a six-volume history of slavery. Ernesto Lecuona (1896–1963) was a composer of popular music, and Juan José Sicre (1898–1974) is Cuba's outstanding sculptor.

The major heroes of the revolution against Batista are Fidel Castro Ruz (b.1926); his brother, Gen. Raúl Castro Ruz (b.1931); Argentine-born Ernesto "Che" Guevara (1928–67), who was killed while engaged in revolutionary activities in Bolivia; and Camilo Cienfuegos (d.1959). Cubans notable in literature include poet Nicolás Guillén (1902–89) and playwright and novelist Alejo Carpentier y Valmont (1904–80). Cuban-American writer Cristina Garcia (b.1958), made her debut as a novelist with *Dream-*

*ing in Cuban* (1992); she was a Guggenheim Fellow. Alicia Alonso (b.1921), a noted ballerina, founded the National Ballet of Cuba.

#### 49 DEPENDENCIES

Cuba has no territories or colonies.

# DOMINICA

Commonwealth of Dominica

*Dominica*

**CAPITAL:** Roseau

**FLAG:** On a green background appears a cross composed of yellow, black, and white stripes; in the center is a red disk with 10 yellow-bordered green stars surrounding a parrot.

**ANTHEM:** *Isle of Beauty, Isle of Splendor.*

**MONETARY UNIT:** The East Caribbean dollar (EC\$) of 100 cents is the national currency. There are coins of 1, 2, 5, 10, and 25, and 1 dollar, and notes of 5, 10, 20, and 100 East Caribbean dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7; as of 2004).

**WEIGHTS AND MEASURES:** The metric system is being introduced, but imperial measures remain in common use.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; CARICOM Day, 2 July; Bank Holiday, 1st Monday in August; National Days, 3–4 November; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Carnival, Good Friday, Easter Monday, and Whitmonday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Although usually classified as one of the Windward Islands, Dominica, located between Guadeloupe to the N and Martinique to the S, marks the midpoint of the Lesser Antilles. To the E lies the Atlantic Ocean, to the W the Caribbean Sea. The island has an area of 754 sq km (291 sq mi) and is 47 km (29 mi) long by 26 km (16 mi) wide, with a coastline of 148 km (92 mi). Comparatively, the area occupied by Dominica is slightly more than four times the size of Washington, D.C.

Dominica's capital city, Roseau, is located on the southwest coast of the island.

## <sup>2</sup> TOPOGRAPHY

The most rugged island of the Lesser Antilles, Dominica is a mass of peaks, ridges, and ravines. Several mountains are over 1,200 m (4,000 ft), of which the highest is Morne Diablatins, with an altitude of 1,447 m (4,747 ft). The whole land mass is of recent volcanic formation, and the mountain peaks are cones of volcanoes with lava craters and small lakes of boiling water. The largest of these is Boiling Lake near Roseau, which is the second-largest thermally active lake in the world. The coastal rim of the island is a thin strip limited by the mountainsides, which extend directly down to the shore.

## <sup>3</sup> CLIMATE

The climate of Dominica is mildly tropical; in the winter months the temperature averages 25°C (77° F); in the summer, 28°C (82° F). The spring months are the driest; the heaviest rains fall during late summer. The average yearly rainfall ranges from about 191 cm (75 in) on the drier Caribbean coast to 508 cm (200 in) in moun-

tainous inland areas. Destructive hurricanes coming in from the Atlantic Ocean can be expected during the late summer months.

## <sup>4</sup> FLORA AND FAUNA

Since few plantations could be established on Dominica's rugged terrain, the island is still covered with forests, some of which have never been cut except by the destructive winds of a hurricane. On one 4-hectare (10-acre) plot in the rain forest, as many as 60 species of trees may be identified. Some of the most common are cha-taignier, gommier, carapite, breadfruit, white cedar, and laurier.

There are no large wild animals, but the agouti and maniocou can be found. Some 135 species of birds inhabit Dominica. The coastal waters abound in fish.

## <sup>5</sup> ENVIRONMENT

As a member of the Organization of Eastern Caribbean States (OECS) formed in 1981, Dominica shares environmental problems common to the area's island countries. Water shortages are among the most significant. Other areas of concern are pollution from chemicals used in farming and untreated sewage. The nation's forests are endangered by the expansion of farming activities. Hurricanes are the most destructive natural threat to the environment.

Pollution of the nation's coastal waters threatens the tourist trade in the area. Two extensive areas have been set aside as nature reserves. The southern reserve, which constitutes Morne Trois Pitons National Park, is a natural UNESCO World Heritage Site that covers an area of 6,500 hectares (16,100 acres). In it are the nesting places of the red-necked and imperial parrots, both endangered species of Dominica.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammal, 4 species of birds, 4 types of reptiles, 2 species of amphibians, 11 species of fish, and 11 species of plants. The tundra peregrine falcon and the green sea and hawksbill turtles are classified as endangered.

## 6 POPULATION

The population of Dominica in 2005 was estimated by the United Nations (UN) at 70,000, which placed it at number 184 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 28% of the population under 15 years of age. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.8%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 78,000. The population density was 93 per sq km (242 per sq mi), one of the lowest in the West Indies.

The UN estimated that 71% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.67%. The capital city, Roseau, had a population of 27,000 in that year.

AIDS was the leading cause of death among people ages 15–44 in the Eastern Caribbean region.

## 7 MIGRATION

There are no restrictions on foreign travel, emigration, or repatriation. In 2005 the net migration rate was estimated as -11.6 migrants per 1,000 population. The number of migrants living in Dominica in 2000 was 4,000, close to 5% of the total population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The vast majority of Dominicans are descendants of African slaves brought to the island in the 17th and 18th centuries. Some of the population are of mixed descent and a small minority are of European origin. Dominica is the only island of the Caribbean on which descendants of the native Carib population still make up a community of significant size. Isolation and the establishment of a 1,500-hectare (3,700-acre) reserve have enabled the Caribs, who number about 3,000 people, to preserve their identity.

## 9 LANGUAGES

English is the official language of Dominica. Nearly all Dominicans also speak a French patois, based on a mixture of African and French grammar and consisting mostly of French words, with some English and Spanish borrowings. Some islanders speak French as their first language.

## 10 RELIGIONS

About 61% of the population are Roman Catholic. Evangelical churches have a membership that accounts for about 18% of the population. About 6% of the people are Seventh-Day Adventists and 3.7% are Methodists. Other minority groups include Anglicans, Jehovah's Witnesses, Muslims, Baha'is, Rastafarians, Bap-

tists, Nazarenes, and Brethren Christians. About 6% of the population does not claim any religious affiliation.

Religious freedom for all faiths is provided for in the constitution and this right is generally respected in practice. All religious groups must register with the government to receive nonprofit status. Certain Christian holidays are observed as national holidays. The Dominica Christian Council and the Dominica Association of Evangelical Churches offer opportunities for interreligious dialogue on religious and social matters.

## 11 TRANSPORTATION

A paved road circles the northern two-thirds of the island, connecting the two main towns, Roseau and Portsmouth, with Melville Hall Airport in the northeast. Much of the road system was severely damaged by a 1979 hurricane; reconstruction averages about 16 km (10 mi) a year. There were about 780 km (485 mi) of roadways in 2002, of which 390 km (242 mi) were paved. There are 2,770 passenger cars and 2,830 commercial motor vehicles on the island. A deepwater harbor has been completed near Roseau on Woodbridge Bay, and both Roseau and Portsmouth also receive ships. As of 2005, Dominica's merchant marine consisted of 32 ships of 1,000 GRT or over, for a total of 13,771 GRT. Dominica Air Transport and other small airlines connect the main airport with Martinique, Guadeloupe, Antigua, and Barbados. In 2004 there were two airports, both with paved runways, one is a 760-m (2,500-ft) airstrip at Canefield, about 5 km (3 mi) north of Roseau.

## 12 HISTORY

The first island sighted by Christopher Columbus on his second voyage to the New World was Dominica at which he arrived Sunday (*dies dominica*), 3 November 1493. Carib Indians, whose ancestors originally had come from the Orinoco Basin in South America and, during the 14th century, had driven out the indigenous Arawaks, inhabited the island. The Caribs resisted conquest and the Spaniards soon lost interest in the island, which had no apparent mineral wealth.

In 1635, France claimed Dominica, and French missionaries visited the island seven years later, but strong Indian resistance to further contact prevented either the French or the English from settling there. In 1660, England and France declared Dominica a neutral island and left it to the Caribs. Within 30 years, however, Europeans began to settle on the island, and in 1727 the French took formal possession. Under the Treaty of Paris in 1763, however, France ceded the island to Great Britain, which then developed fortifications for its defense. French colonists established coffee plantations during the nearly forty years they held the island. The British introduced sugar production later, but the large slave plantations that characterized other West Indian islands never developed on Dominica. When Great Britain abolished slavery in the West Indies in 1834, 14,175 Dominican slaves obtained their freedom.

Dominica became the first and only British Caribbean colony to have a black-controlled legislature in the 19th century, but blacks lost most of their political power when the British government, acceding to the wishes of Dominican planters, diluted the strength of the Legislative Assembly and, in 1896, reduced Dominica to

a crown colony. Great Britain governed Dominica as part of the Leeward Islands from 1871 until 1939, and in 1940 transferred governance to the Windward Islands administration. From 1958 to 1962, the island belonged to the Federation of the West Indies. Dominica became an associated state of the Commonwealth of Nations in 1967 and on 3 November 1978 became an independent republic.

In its first years of independence, Dominica had several problems. Hurricanes, especially Hurricane David in 1979, brought great destruction to the island, but the corrupt, tyrannical administration of Premier Patrick John led to numerous severe difficulties. Dominicans ousted John in June 1979, and, after a year of interim rule, Mary Eugenia Charles became prime minister in July 1980.

Charles, the first female prime minister in the Caribbean, remained in office for 15 years. (She died at the age of 86 on 6 September 2005.) Her Dominica Freedom Party received parliamentary majorities in 1985 and 1990, partly because of an improved economic picture. Charles fully supported and sent a token force to participate in the US-led intervention of the island of Grenada in October 1983.

In the early 1990s, controversy flared over the practice of granting “economic citizenship” to Asian nationals who invested \$35,000 or more in the country. In response, the government implemented stiffer requirements, including licenses, waiting periods, and additional financial outlays.

Prime Minister Charles’s DFP lost its majority in the 1995 elections, and Edison James, leader of the United Workers’ Party, formed a new government. Under James, Dominica’s economy improved, but charges of corruption concerning the continued sale of Dominican citizenship to foreigners, allegedly including gangsters and smugglers, seriously undermined his credibility. In the election held in January 2000, the UWP narrowly won a plurality of votes over the DLP and DFP. In 2000–04, UWP’s Pierre Charles was prime minister.

In 2002, Pierre Charles told the Caribbean Development Bank that Dominica faced economic and financial collapse. Revenue from exports and tourism was down, and Charles cited the effects of globalization as one of the causes of Dominica’s economic troubles. Charles died in office at the age of 49 in January 2004. Education Minister Roosevelt Skerrit succeeded him as prime minister. In November 2004, an earthquake damaged buildings on the north side of the island, and Prime Minister Skerrit estimated the damages would rise in the millions of dollars. Skerrit and the governing DLP won the general elections held in May 2005.

### 13 GOVERNMENT

Under the independence constitution of 3 November 1978, Dominica has a unicameral parliament, the House of Assembly, with 21 members elected by universal adult suffrage (at age 18) and 9 appointed members (5 named on the advice of the prime minister, 4 on the advice of the leader of the opposition). The term of the Assembly is five years. The prime minister and leader of the opposition nominate the president, though Parliament officially elects

LOCATION: 15° N; 16° W. TOTAL COASTLINE: 148 kilometers (92 miles). TERRITORIAL SEA LIMIT: 12 miles.

the head of state, who in turn appoints the prime minister and cabinet from the majority party in the assembly.

### 14 POLITICAL PARTIES

Dominica’s major political parties are the Dominica Freedom Party (DFP), the Dominica Labour Party (DLP), and the United Workers’ Party (UWP). The DFP held power from 1980 to 1995, led by Eugenia Charles, the first woman prime minister in the Caribbean region. (Party leadership was transferred to Brian Alleyne

in 1993, but Charles remained prime minister.) The UWP dominated the 1995 elections, winning 11 of the 21 elected seats in the National Assembly. (The DFP and DLP, led by Rosie Douglas, each won 5.) Following the elections, UWP leader Edison James became prime minister. The DLP won 10 of the 21 elected seats in the 2000 election and formed a coalition government with the DFP, then led by Pierre Charles, which captured two seats. In the 2005 general election, the DLP won 52.08% of the vote (12 seats), the UWP won 43.6% of the vote (8 seats), and the DFP won 3.15% of the vote. An independent held the remaining seat in the House of Assembly. Roosevelt Skerrit, who had been chosen prime minister after the death of Pierre Charles in 2004, remained prime minister.

### **15 LOCAL GOVERNMENT**

In contrast to other English-speaking islands in the Caribbean, Dominica has a well-developed local government system. There are 37 village councils, made up of both elected and appointed members. Both Roseau and Portsmouth have town councils, and Canefield has an urban council. There is a Carib Council which governs the Carib territory, set aside for indigenous peoples. There are also 10 parishes, which are administrative divisions for the national government.

### **16 JUDICIAL SYSTEM**

Dominica's judicial process derives from English common law and statutory acts of the House of Assembly. The courts of first instance are the four magistrates' courts; at the second level is the Court of Summary Jurisdiction. The highest court is the Eastern Caribbean Supreme Court, based in St. Lucia, and one of its six judges must reside in Dominica and preside over the Court of Summary Jurisdiction. In exceptional cases prior to 2003, appeals were carried to the Judicial Committee of the Privy Council in the United Kingdom.

On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). The court was officially inaugurated in April 2005, in Port-of-Spain, Trinidad and Tobago. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

The law provides for public trial before an independent, impartial court. Criminal defendants have the right to legal counsel, and to appeal.

### **17 ARMED FORCES**

A police force of 300 is in charge of law and order. Dominica, along with Antigua and Barbuda, Grenada, St. Kitts and Nevis, St. Lucia, and St. Vincent and the Grenadines, is a member of the Regional Security System, established in 1985. Defense from foreign attack would come from the United States or United Kingdom.

### **18 INTERNATIONAL COOPERATION**

Dominica became a member of the United Nations on 18 December 1978 and belongs ECLAC and several specialized agencies, such as the FAO, IMF, ILO, UNESCO, WHO, and the World Bank. Dominica is also a member of the WTO, OAS, the Caribbean Development Bank, the Commonwealth of Nations, G-77, CARICOM, the ACP Group, the OECS, the Association of Carib-

bean States (ACS), and the Alliance of Small Island States (AOSIS). The nation is an observer in the Nonaligned Movement and a member of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In environmental cooperation, Dominica is part of the Basel Convention, Conventions on Biological Diversity and Whaling, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change and Desertification.

### **19 ECONOMY**

Bananas and other agriculture dominate Dominica's economy, and nearly one-third of the labor force works in agriculture. This sector, however, is highly vulnerable to weather conditions and to external events that affect commodity prices. With the decline of banana exports, GDP growth began declining and in the late 1980s, average annual GDP growth was 5.5%; in the early 1990s, about 3.5%, and from 1996 to 1999, 2.5%. In 2000, GDP stagnated and in 2001 there was a contraction of about 4.5% as adverse weather, a drop in tourism, and reduced export demand added to the effects of declining banana production. From 1998 to 2000, banana exports fell 24.6%, and then in the global slowdown of 2001, fell another 35.4%.

In response to decreasing European Union (EU) banana trade preferences, the government has diversified the agricultural sector, with the export of small quantities of citrus fruits and vegetables and the introduction of coffee, patchouli, aloe vera, cut flowers, and exotic fruits such as mangos, guavas, and papayas. Dominica also has had some success increasing its manufactured exports, primarily soap. Furthermore, Dominica recently entered the offshore financial services market.

Dominica is mostly volcanic and has few beaches; therefore, tourism has developed more slowly than on neighboring islands. Nevertheless, Dominica does have the highest mountain peak in the Caribbean. Rain forests, freshwater lakes, over 200 rivers, hot springs, waterfalls, and diving spots make it an attractive ecotourism destination. Cruise ship stopovers have increased following the development of modern docking and waterfront facilities in the capital. However, development of the tourism industry remains difficult because of the rugged coastline and the absence of an international airport.

The government is promoting industrial development involving agro-processing and light industry, and hopes to build an airport with greater accessibility. After the government began a comprehensive restructuring of the economy in 2003, the 2004 GDP growth rate was reported at 3.5%. The country nearly had a financial crisis in 2003 and 2004, but it has managed to stabilize its debt and fiscal deficits using some difficult reform measures, earning the praise of international financial institutions (IFIs).

### **20 INCOME**

The US Central Intelligence Agency (CIA) reports that in 2005 Dominica's gross domestic product (GDP) was estimated at \$384.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,500. The annual growth rate of GDP was estimated at -1%. The average inflation

rate in 2001 was 1%. It was estimated that agriculture accounted for 18% of GDP, industry 24%, and services 58%.

It was estimated that in 2002 about 30% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

The labor force in 2002 (the latest year for which data was available) was estimated at 25,000. About 40% of the labor force was employed in agriculture, 32% in industry and commerce, and 28% in services. Unemployment was officially 23% in 2002.

Unions have the right to strike, organize, and engage in collective bargaining. As of 2005, unions represented about 33% of the workforce, with approximately 50% of all government employees belonging to unions as that same year. Essential services are prohibited from striking and this includes the coconut, citrus, and banana industries, as well as the port service that supports them.

The standard work week is 40 hours over 5 days. However, excessive overtime is not prohibited. The minimum wage is set by the government and varies from sector to sector. Last revised in 1989, the average wage was between US\$.74 per hour and US\$1.11 per hour in 2005 for most workers. These wages are not sufficient to support a family, although most workers earn more than the minimum. The minimum working age is 15 and this is generally observed without government enforcement. Children between the ages of 12 and 14 were permitted to work in certain family businesses such as farming. Occupational safety and health standards for adults and children are generally enforced by the government, and most employers comply with them.

## 2<sup>2</sup> AGRICULTURE

About 26.7% of the total land area is arable. Agricultural production was on the decline even before the 1979 hurricane disaster. The main crop of Dominica is bananas, output of which had fallen to 29,700 tons in 1978. As a result of Hurricane David, production hit a low of 15,700 tons in 1979. Agriculture suffered a further blow from Hurricane Allen in August 1980. However, after outside financial support began to rehabilitate the sector, production rose to 27,800 tons in 1981 and totaled 29,000 tons in 2004.

Agriculture accounts for about 18% of GDP and employs about 40% of the labor force. Agricultural exports amounted to \$15.3 million in 2004. Most crops are produced on small farms, the 9,000 owners of which are banded together in about 10 cooperatives; there are also several large farms that produce mostly bananas for export. Coconuts and citrus fruits are grown in commercial quantities. Production for 2004 included coconuts, 11,500 tons; grapefruit, 17,000 tons; lemons and limes, 1,020 tons; and oranges, 7,200 tons. Fruits and vegetables are produced mostly for local consumption.

## 2<sup>3</sup> ANIMAL HUSBANDRY

There are about 2,000 hectares (4,900 acres) of pastureland, comprising 2.7% of the total land area. The island does not produce sufficient meat, poultry, or eggs for local consumption. In 2004 there were an estimated 13,400 head of cattle, 9,700 goats, 7,600 sheep, and 5,000 hogs. In 2004, production of meat totaled 1,364 tons; and milk, 6,100 tons.

## 2<sup>4</sup> FISHING

Before Hurricane David in 1979, some 2,000 persons earned a living fishing in coastal waters, producing about 1,000 tons of fish a year and meeting only about one-third of the local demand. The hurricane destroyed almost all of the island's 470 fishing boats; afterward, only about a dozen vessels could be reconstructed for use. In 2003, the catch was 1,103 tons, up from 552 tons in 1991.

## 2<sup>5</sup> FORESTRY

Dominica has the potential for a lumber industry. Some 46,000 hectares (114,000 acres) are classified as forest, representing 61% of the total land area. In 1962, Canadian experts produced a study indicating that over a 40-year period the island could produce a yearly output of 22,000 cu m (800,000 cu ft) of lumber. Before Hurricane David in 1979, annual output had reached about 7,500 cu m (265,000 cu ft). There are some 280 hectares (700 acres) of government land allocated to commercial forestry and about 100 hectares (240 acres) of forestland in private hands. Commercially valuable woods include mahogany, blue and red mahoe, and teak.

## 2<sup>6</sup> MINING

Dominica had no significant or recorded production of minerals in 2003, although small amounts of pumice are exported. What production there is of clay, limestone, volcanic ash, and sand and gravel is primarily for the domestic construction industry.

## 2<sup>7</sup> ENERGY AND POWER

Dominica's energy and power sector is marked by a complete lack of any proven reserves of oil, natural gas, or coal, nor does it possess any refining capacity. As a result, the country is entirely dependent upon imports to meet its consumption of fossil fuels. However, the country does have access to hydropower, which makes up a large portion of the nation's electric power generating capacity and production.

In 2002, Dominica imported an average of 820 barrels per day of refined oil products, the largest of which were gasoline at 470 barrels per day, and distillates, at 250 barrels per day. Liquefied natural gas imports for that year stood at 60 barrels per day, with kerosene and residual fuel oils each at 20 barrels per day.

Dominica's electric power sector is solely managed by a private utility the Dominica Electricity Service (Domlec). According to Domlec's 2002 annual report, the company had an installed capacity of 20,440 kW, of which diesel fueled generation accounted for 12,840 kW and hydropower at 7,600 kW. However, the Energy Information Administration (EIA) for that year placed the country's generating capacity at 19,000 kW, with hydropower and conventional thermal capacity at 8,000 kW and 11,000 kW, respectively. In addition, the company's hydropower capacity can drop sharply during a very dry season. According to Domlec's 2002 annual report, installed hydropower capacity could fall to as much as 32,000 kW. In 2002, the CIA reported that Dominica's output and consumption of electrical power was 68.41 million kWh and 63.62 kWh, respectively, while the EIA placed production and consumption of electrical power at 65 million kWh and 61 million kWh, respectively. Domlec's annual report for 2002 placed total electric power output at 80.1 million kWh.

In April 2004, Commonwealth Development Corporation (London, UK) sold its 72% stake in Domlec to WRB Enterprises (Tampa, Florida).

## 2<sup>8</sup> INDUSTRY

Dominica has only light industry and most of it is connected with the processing of agricultural products. Industrial establishments include a plant for processing coconuts into oil and copra for export, four plants to process limes and other citrus fruits, two bottling plants, two distilleries, four small apparel plants, and four small furniture factories. Dominica exports water to its Caribbean neighbors; shoes, cement blocks, furniture, soap and toiletries are also exported. Home industries produce some leather work, ceramics, and straw products. Wood products, including furniture, are produced from local timber. Portsmouth is the main boat-building center.

Since the 1990s, the small manufacturing sector has been expanding at a modest pace, including electronics assembly, rum, candles, and paints. Industry accounted for 24% of GDP in 2004. While services account for 58% of GDP it only hires 28% of the labor force (with comparison to agriculture, which hires 40%)

The Dominican economy has high poverty (30%), high unemployment (23%), and a low per capita GDP (us\$5,400). The Dominican economy has been hurt by problems in the banana industry. The entire economy suffers when weather conditions damage the banana crop, or when the price of bananas falls. The European Union has phased out preferred access of bananas to its markets, causing banana demand to fall. In response, the Dominican government privatized the banana industry.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Late in 1980, Dominica created a Council for Science and Technology, under the Ministry of Education. The Caribbean Agricultural Research Development Institute has been active in more than a half-dozen projects.

## 3<sup>0</sup> DOMESTIC TRADE

Local produce markets exist in all the small villages and towns. About 40% of the work force is employed in agriculture and many foods and manufactured goods have to be imported.

The island has sought to develop preserves of its unique flora and fauna to attract tourists.

The tourism industry has reoriented many artisan jobs, such as in the fishing industry; the Dominica fleet has increased from only 913 vessels in 1994 to more than 1100 in 2000. However tourism overall has been slow to develop because of poor transport and the lack of hotel facilities and good beaches. Commercial activity is concentrated in the morning hours, since tropical rains impede afternoon travel.

## 3<sup>1</sup> FOREIGN TRADE

Dominica is well known for its exports of bananas, which reflect over a quarter of the country's commodity export revenues. Soap and cleaning products account for almost a third of exports (29%). Other exports include vegetables (3.7%), paint (3.1%), and perfume (13.7%). Exports accounted for \$41.2 million in 2004 (main-

ly bananas, citrus fruits, soap, and cocoa). The major markets are CARICOM, 61%; the European Union, 18%; and the United States, 3%. On the other hand, imports reached \$145 million in 2004, mainly of machinery and equipment, foodstuffs, manufactured articles, and cement. The major suppliers are the United States 35%, CARICOM 29%, EU 13% and Japan 5%.

Dominica is a beneficiary of the US Caribbean Basin Initiative, which grants duty-free entry into the United States for many goods. In 2004, exports totaled \$41 million, with 3% going to the United States. Dominica also belongs to the predominantly English-speaking Caribbean Community and Common Market (CARICOM), the CARICOM Single Market and Economy (CSME), and the Organization of Eastern Caribbean States (OECS). Dominica and the other countries of the Organization of Eastern Caribbean

States (OECS) were scheduled to join the Caribbean Single Market and Economy (CSME) in June 2006.

In 2004 Dominica cut diplomatic relations with Taiwan in favor of ties with mainland China. China agreed to give aid worth more than \$100 million over five years.

### 32 BALANCE OF PAYMENTS

The increasingly unfavorable balance of trade produces a current account deficit and boosts the foreign debt. Recurrent hurricanes and other natural disasters, such as an earthquake that caused millions in damages in November 2004, have added to the debt burden. Dominica hopes to be able to offset the trade deficit with tourism revenues.

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Dominica's exports was \$74 million while imports totaled \$234 million resulting in a trade deficit of approximately \$150 million, increasing yearly.

### 33 BANKING AND SECURITIES

The principal national banks are the National Commercial and Development Bank of Dominica and the Dominica Agricultural Industrial and Development (AID) Bank. Private commercial banks include Barclays (UK), the Royal Bank of Canada, and the Banque Française Commerciale. Dominica is a member of the Eastern Caribbean Central Bank, which issues a common currency. Dominica has no stock market, and is considered an offshore tax haven for international companies. It guarantees a 20-year tax exemption. The International Monetary Fund reported that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$39.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$204.1 million.

### 34 INSURANCE

Representatives of British, Canadian, and US insurance companies do business in Dominica.

### 35 PUBLIC FINANCE

Operating revenues come mostly from customs duties, excise taxes, and other taxes and fees for government services. The leading areas of expenditure are education, health, public services, housing, and defense.

The US Central Intelligence Agency (CIA) estimated that in 2001 Dominica's central government took in revenues of approximately \$73.9 million and had expenditures of \$84.4 million. Revenues minus expenditures totaled approximately -\$10.5 million. Total external debt was \$161.5 million.

### 36 TAXATION

Taxes levied by the Dominican government include a progressive personal income tax ranging from 0–40%; a business income tax of 35%; social security taxes; a 3% gross receipts tax on retail sales; and taxes on land transfers and land-value appreciation. There is no capital gains tax except the land-value appreciation tax.

### 37 CUSTOMS AND DUTIES

Specific import duties apply to food and ad valorem duties apply to other items. The government levies export duties on principal agricultural products; the charge is heavy on rum and cigarettes but lighter on bananas and coconuts. Under a 1992 Caribbean Community agreement, Dominica eliminated import licensing. Dominica adopted CARICOM's common external tariff, which ranges up to 35%. Additional duties are applied to cigarettes, rum and motor vehicles.

### 38 FOREIGN INVESTMENT

The amount of foreign investment in Dominica is limited, largely because the island lacks the infrastructure to support an industrialization program. Investment increased in the early 1990s under the Charles government, particularly in agriculture. The marketing of banana production is monopolized by European multinational corporations. Tax holidays and import-duty exemptions are offered as investment incentives. The area near the Canefield airstrip is an industrial estate and export processing zone. The government agency for industrial development has had some success attracting capital investment funds for the island. The introduction of an offshore financial industry may also attract investment, as well as increased tourism. Other investment incentives include repatriation of profits, alien landholding license fees, factory building/industrial estates, and residence/work permits.

Foreign direct investment (FDI) inflows peaked in 1997 at \$21 million before falling to \$6.1 million in 1998. FDI inflows recovered to \$18 million in 1999 and averaged about \$13 million a year in 2000 and 2001. By 2003 there was a decent increase in FDI of up to \$17 million, but FDI as a percentage of GDP continues to decrease.

### 39 ECONOMIC DEVELOPMENT

Similar to its Eastern Caribbean neighbors, the main priority of Dominica's foreign relations is economic development. Dominica seeks to foster private enterprise.

Dominica's government until recently has been sensitive about market liberalization. In 1986, for example, it created an export-import agency and announced a land-reform program, both to stimulate agriculture. Under the latter, the government purchased 800 hectares (2,000 acres) of land in prime growing areas and then guaranteed a minimum holding with security of tenure, as well as services and equipment, to small farmers and landless farm workers. As of 1994, the government encouraged agriculture expansion through a diversification program, which was aimed at improving the marketing of products and providing income guarantees for farmers who are in the process of diversifying into new crops. There was still serious concern about the implications of the restructuring of formerly protected European markets.

In August 2002, Dominica negotiated a one-year \$4.3 million Stand-By Arrangement with the IMF and immediately the government implemented a 4% Stabilization Levy tax to tackle the financial crisis. Further economic austerity measures were taken while massive protests followed. But by 2003 the government began a comprehensive restructuring of the economy, which included elimination of price controls, privatization of the state banana

company, and tax increases—to address Dominica's economic crisis and to meet IMF targets.

The main problem has been that the small island's economy is dependent on agriculture and thus is highly vulnerable to climatic conditions. Development of the tourist industry remains difficult because of the rugged coastline and the lack of an international airport (though the government bought land for the construction of an airport in 1999). There has been much debate over proposals to build an airport capable of handling large jet aircraft because there is concern that an increase in tourist arrivals, as well as the promotion of eco-tourism, would damage the island's finely balanced environment.

Besides tourism, the government has attempted to diversify the economy and inspire confidence in investors and the population. For example, for a time the offshore business sector of Dominica was included on a list of countries deemed to be noncooperative in the fight against money-laundering. The government subsequently tightened up banking rules and set up a financial intelligence unit. Other positive events have been the establishment of diplomatic ties with the People's Republic of China in March 2004 and the announcement by Prime Minister Skerrit in June that year that the Stabilization Levy had ended. In early 2005 a boost to the economy was given by the shooting of the feature film *Pirates of the Caribbean*.

#### **40 SOCIAL DEVELOPMENT**

Until the early 1980s, a high rate of unemployment, a markedly high rate of emigration, and very limited resources hindered the development of social service programs in Dominica. A social insurance system covers all workers from 14–60 years of age, including apprentices. Under this plan, both workers and employers contribute specific amounts to a government fund, which provides pensions for workers reaching retirement age, compensation for workers who become incapacitated, and survivor benefits. There are also sickness and maternity benefits. The social security system is funded by worker contributions of 3% of earnings (7% self-employed) and a 7% employer payroll tax. Retirement is set at age 60.

Domestic violence is prevalent. A hotline manned by volunteers is available for battered women, and the Welfare Department often helps them find temporary quarters. Apart from the constitution, there is no specific legislation in force to protect women from sex discrimination. Property ownership is given to the "head of household" which is generally male. When a man dies without a will his wife cannot inherit the property. Many women in rural areas face considerably difficulty in meeting basic needs. Children's rights are generally protected, and education is free and compulsory.

Indigenous Carib minorities face minimal discrimination, and most live on a 3,700-acre reservation set aside for them by the government in 1903. Human rights are generally respected in Dominica. However, instances of excessive police force have been reported, and prison conditions are poor.

#### **41 HEALTH**

In 2004 there were an estimated 49 physicians, 415 nurses, and 6 dentists per 100,000 people. The one general hospital on Dominica is in Roseau, the 195-bed Princess Margaret Hospital. There are

7 health centers and 44 clinics scattered across the island. Serious tropical diseases such as yaws and malaria have been eradicated, but owing to the high humidity and rainy conditions, tuberculosis and other respiratory diseases continue to be a problem. Intestinal parasites afflict particularly those in the early years of life. Only 7% of newborns were low birth weight. In 2005, the infant mortality rate was estimated at 14.15 per 1,000 live births. Average life expectancy for that year was 74.65 years. Approximately 99% of the country's children were immunized against measles and the same percentage for DPT, tuberculosis, and polio. There were no cases of polio or measles reported on the island.

#### **42 HOUSING**

Hurricane David in 1979 destroyed the homes of over four-fifths of the population. Under an emergency housing program, construction supplies were brought into the island, and shelters were built for most of the population. Most of all dwellings are detached houses. In 1993, at least 71% were owner occupied. Most houses are built through the private sector, with individuals financing their own homes. Over half of all housing units were wooden, while smaller percentages were either concrete or wood and concrete.

Since the mid-1990s, the nation has participated in a reconstruction program focusing on techniques for hurricane retrofitting. Through the Cooperative Housing Foundation, eligible residents can obtain loans to aid in the upgrade of their homes.

#### **43 EDUCATION**

Education is compulsory between the ages of 5 and 16. Technical and vocational studies offer practical training in technical and electrical engineering, auto mechanics, plumbing, general business, construction, and agriculture. Transportation to secondary schools is a problem for students in rural areas.

Primary school enrollment in 2003 was estimated at about 81% of age-eligible students; 83% for boys and 79% for girls. The same year, secondary school enrollment was about 92% of age-eligible students; 86% for boys and 98% for girls. It is estimated that about 91% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 19:1 in 2003; the ratio for secondary school was about 17:1. In 2003, private schools accounted for about 28% of primary school enrollment and 32% of secondary enrollment.

Higher educational facilities include a teacher training institute, a technical college, a nursing school, and a local center maintained by the University of the West Indies. In higher-level institutions, there were 34 teaching staff and 484 students in 1993. The adult literacy rate was estimated at about 94% in 2003.

As of 2003, public expenditure on education was estimated at 5% of GDP.

#### **44 LIBRARIES AND MUSEUMS**

A national library system of about 50,000 volumes includes a Main Library in Roseau and branches in Portsmouth, Grand Bay, and Marigot. There is also a mobile library unit for rural areas. The Roseau Museum highlights the island's cultural and natural history.

#### 45 MEDIA

In 2002, there were 23,700 mainline telephones in use, with an additional 9,400 cellular phones throughout the country. In 1997 there were 703 radios and 81 television sets per 1,000 population. As of 2004, there were 2 AM and 4 FM radio stations and one (cable) television station. Dominicans also receive TV and radio broadcasts from neighboring islands. In 2002, there were about 12,500 Internet subscribers in the country. Two weekly newspapers are published in Roseau, the *Chronicle* (circulation in 2002, 2,500) and the government-published *Official Gazette* (550), among other journals and periodicals.

The constitution provides for the right of free expression, and the government is said to respect free speech and a free press. Independent print and electronic media operate without restrictions by the government authorities.

#### 46 ORGANIZATIONS

There are many cooperatives and credit unions in Dominica. A chamber of commerce and a small Rotary Club also function. There is a Dominica Employers' Federation in Roseau. The Dominica National Development Corp. promotes both industry and tourism. The Association of Eastern Caribbean Manufacturers is a multinational union based in Djibouti. There are unions, such as the Waterfront and Allied Workers' Union, and professional associations, such as the Dominica Association of Teachers.

The Dominica National Council of Women and the Women's Bureau are umbrella organizations supporting a variety of national women's groups. Youth organizations include the Young Freedom Movement, the Scout Association of Dominica, Girl Guides, and YWCA. Sports associations are active for several different pastimes, including tennis, track and field, and squash.

Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. There is a national chapter of the Red Cross Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

Dominica's tourism industry has developed slower than that of neighboring Caribbean islands. However, the growth of ecotour-

ism has helped make tourism a staple in the economy. The principal attraction is the rugged natural beauty of its volcanic peaks, forests, lakes, waterfalls, and over 365 rivers. Day trips to Dominica from Barbados, Guadeloupe, and Martinique have gained increasing popularity. Cricket is the national sport.

Citizens of the United States and Canada may enter the country with proof of citizenship; other foreign visitors must have a valid passport. All tourists must have an onward/return ticket. A certificate of vaccination against yellow fever is required if traveling from an infected area.

In 2003, there were 72,948 tourists who visited Dominica, of whom 83% came from the Americas. The US Department of State estimated the average stay in Dominica at us\$182 per day.

#### 48 FAMOUS DOMINICANS

Maria Eugenia Charles (1919–2005), cofounder of the Dominica Freedom Party, became prime minister in 1980. She served until 1995, and was the first female prime minister in the Caribbean. Edison Chenfil James (b.1943) was prime minister from 1995 until 2000. Pierre Charles (1954–2004) was prime minister from 2000–2004. Roosevelt Skerrit (b.1972) succeeded him.

#### 49 DEPENDENCIES

Dominica has no territories or colonies.

# DOMINICAN REPUBLIC

Dominican Republic  
*República Dominicana*

**CAPITAL:** Santo Domingo

**FLAG:** The national flag, adopted in 1844, consists of a white cross superimposed on a field of four rectangles, the upper left and lower right in blue, the upper right and lower left in red.

**ANTHEM:** *Himno Nacional*, beginning “Quisqueyanos valientes, alcemos nuestro canto” (“Valiant Dominicans, let us raise our song”).

**MONETARY UNIT:** The Dominican peso (RD\$) of 100 centavos is a paper currency. There are coins of 1, 5, 10, 25, and 50 centavos and 1 peso, and notes of 1, 5, 10, 20, 50, 100, 500, and 1,000 pesos. RD\$1 = US\$0.03287 (or US\$1 = RD\$30.42) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but US and Spanish weights are widely used in commercial transactions.

**HOLIDAYS:** New Year’s Day, 1 January; Epiphany, 6 January; Altigracia Day, 21 January; Duarte Day, 26 January; Independence Day, 27 February; Labor Day, 1 May; Restoration of Independence, 16 August; Day of Our Lady of Las Mercedes, 24 September; All Saints’ Day, 1 November; Christmas, 25 December. Movable religious holidays include Good Friday and Corpus Christi.

**TIME:** Eastern Daylight Savings Time is maintained throughout the year; 8 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Dominican Republic occupies the eastern two-thirds of the island of Hispaniola (Española) and includes the islands of Beata, Catalina, Saona, Alto Velo, and Catalinita in the Caribbean Sea, and several islets in the Atlantic Ocean. It has an area of 48,730 sq km (18,815 sq mi), with a length of 386 km (240 mi) E–W, extending from Cape Engaño to the Haitian border, and a width of 261 km (162 mi) N–S, extending from Cape Isabela to Cape Beata. Comparatively, the area occupied by the Dominican Republic is slightly more than twice the size of the state of New Hampshire. Bounded on the N by the Atlantic Ocean, on the E by the Mona Passage (which separates it from Puerto Rico), on the S by the Caribbean Sea, and on the W by Haiti, the Dominican Republic has a total boundary length of 1,648 km (890 mi), of which only 360 km (194 mi) is the length of the land boundary with Haiti.

The Dominican Republic’s capital city, Santo Domingo, is located on its southern coast.

## <sup>2</sup>TOPOGRAPHY

The Dominican Republic is generally mountainous, with deserts in the extreme western regions. The principal mountain range, the Central Cordillera, running from east to west and extensively pine-forested, bisects the republic. Between the Central Cordillera and the Northern Cordillera (and their associated plains) lies the famous Cibao (La Vega Real) Valley (225 km/140 mi long, with an average width of 23 km/14 mi), noted for the excellent quality of its soil. Fertile valleys also abound in the central and eastern areas. The country contains both the highest mountain in the West

Indies, Mt. Duarte (Pico Duarte, 3,175 m/10,417 ft), and the lowest-lying lake, Lake Enriquillo (46 m/151 ft below sea level). The Yaque del Norte, the Yaque del Sur, and the Yuna are the principal rivers.

## <sup>3</sup>CLIMATE

Climate and rainfall vary with region and altitude. Generally, however, average minimum and maximum temperatures range from 18–29°C (64–84°F) in the winter and from 23–35°C (73–95°F) in the summer. The coastal plain has an annual mean temperature of 26°C (79°F), while in the Central Cordillera the climate is temperate and the mean is 20°C (68°F). Rainfall varies from an annual average of 135 cm (53 in) in the eastern regions, with an extreme of 208 cm (82 in) in the northeast, to a mean of 43 cm (17 in) in the western areas. The rainy season generally extends from June to November and the dry season from December to May. The nation lies within the hurricane belt, and tropical storms constitute a major weather hazard.

## <sup>4</sup>FLORA AND FAUNA

Plants and animal life vary by region. Dense rain forests are common in the wetter areas; scrub woodland thrives along the drier slopes; and savanna vegetation is found on the open plains. Dominican mahogany and highly resinous pine trees grow in the high mountains. The rare hutia (a small rodent) and herds of wild boar are found in the mountainous areas. Ducks, doves, and several varieties of pigeons are seasonal visitors. Lake Enriquillo is the natural habitat of large flocks of flamingos. Spanish mackerel, mullet, bonito, and yellowtail snapper are found in the surround-

ing waters. As of 2002, there were at least 20 species of mammals, 79 species of birds, and over 5,600 species of plants throughout the country.

## 5 ENVIRONMENT

The main agencies responsible for environmental protection are the Department of National Parks and the Department of State for Agriculture. The Dominican Republic has environmental problems in the areas of deforestation, water supply, and soil erosion, the latter of which also damages the nation's coral reefs. United Nations (UN) sources report that, as of 1993, the nation was losing 20,000 hectares per year of its forest lands largely due to commercial interests. The felling of trees was prohibited in 1967 to remedy the ill effects of indiscriminate cutting by commercial producers and farmers and the destruction by fire of large stands of timber. However, many farmers continue to cut trees surreptitiously to make more land available for cultivation. Soil erosion results from a combination of rainfall and the use of land in mountainous areas. The country has 21 cu km of renewable water resources with 89% used for farming. About 97% of the population has access to pure drinking water. Water pollution results from the effects of mining along with industrial and agricultural sources.

In 2003, about 51.9% of the total land area was legally protected. Lago Enriquillo is a Ramsar wetland site. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 5 types of mammals, 16 species of birds, 10 types of reptiles, 31 species of amphibians, 10 species of fish, 2 species of invertebrates, and 30 species of plants. Endangered species in the Dominican Republic include the tundra peregrine falcon, Haitian solenodon, three species of sea turtle (green sea, hawksbill, and leatherback), and American crocodile. The imposter hutia, the Hispaniolan edible rat, and Marcano's solenodon have become extinct.

## 6 POPULATION

The population of Dominican Republic in 2005 was estimated by the United Nations (UN) at 8,862,000, which placed it at number 86 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 34% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.7%, a rate the government viewed as too high. The government was initiating programs to address the high rate of adolescent fertility. The projected population for the year 2025 was 11,038,000. The population density was 182 per sq km (471 per sq mi). The southern coastal plains and the Cibao Valley are the most densely populated areas of the country.

The UN estimated that 64% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.99%. The capital city, Santo Domingo, had a population of 1,865,000 in that year. Other important cities are Santiago de los Caballeros, La Romana, San Pedro de Macorís, San Francisco de Macorís, and Concepción de la Vega.

## 7 MIGRATION

Four overseas immigration movements took place 1930–60: approximately 5,000 refugees from the Spanish Civil War in the late

1930s; a Jewish refugee group, which arrived in 1940; a continuous flow of Japanese, mainly farmers, since 1950; and 600 Hungarian refugees invited by the government in 1957. These are dwarfed, however, by the influx of Haitians, some seasonal, others permanent.

An estimated 35,000 Haitians entered the Dominican Republic after the military coup that overthrew Haiti's president, Jean-Bertrand Aristide, in September 1991. By May 1997, 20,000 Haitians had returned to their homeland, voluntarily or by deportation. The majority of Haitian refugees live outside the capital, Santo Domingo. The Dominican Republic government initiated a program to deport illegal migrants back to Haiti. However, this program does not affect recognized refugees or asylum seekers, as they receive temporary residence permits. In October 2005, *Migration News* reported that estimates of the number of Haitians in the Dominican Republic in 2005 ranged from 300,000 to 1.6 million. A census of Haitians was planned to determine how they obtained illegal Dominican identity cards. The Dominican Republic began to issue identity cards to 300,000 Dominicans living illegally in Puerto Rico.

Emigration became significant for the first time during the 1960s, when 93,300 Dominicans legally entered the United States; during 1971–80, the figure rose to 148,100, and during 1981–85, it was 104,800. In 1990 there were 357,000 Dominican-born people living in the United States, mostly along the eastern seaboard. This census total may have been an undercount, for estimates of the Dominican population in the United States ranged as high as 1,000,000, including 200,000 in Puerto Rico. The total of remittances in 2001 was \$1,982,000, or 9.3% of GDP. By the end of 2004, 99 Dominicans had applied to Canada for asylum.

The net migration rate estimated in 2005 was -3.2 migrants per 1,000 population, almost equivalent to the rate of -3.03 migrants per 1,000 population in 1999.

## 8 ETHNIC GROUPS

Ethnic divisions have been estimated at 16% European, 11% African, and 73% mixed. Descendants of early Spanish settlers and of black slaves from West Africa constitute the two main racial strains.

## 9 LANGUAGES

Spanish is the official language. Some English is spoken in the capital, and a Creole dialect is used along the Haitian border.

## 10 RELIGIONS

According to a 1997 population survey, professing Roman Catholics represented an estimated 68.1% of the population and Protestants, including Baptists, Jehovah's Witnesses, Methodists, Mormons, Seventh-Day Adventists, and others accounted for another 11%. However, the Catholic Church has claimed that their membership accounts for about 87% of the population and Evangelical Christians have claimed up to 25% of the population as members. As many as 20% of the population claims no religious affiliation whatsoever. It is believed that some Catholics may practice a combination of Catholicism and tradition Afro-Caribbean beliefs and customs. Other religions include Judaism, Islam, and Buddhism.

Religious freedom is protected by law, and there is no state religion. However, the Roman Catholic Church, which signed a con-

LOCATION: 17°36'22" to 19°56'9" N; 68°19'24" to 72°0'48" W. BOUNDARY LENGTHS: Total coastline, 1,288 kilometers (799 miles); Haiti, 275 kilometers (170 miles). TERRITORIAL SEA LIMIT: 6 miles.

cordat with the government in 1954, is extended special privileges not granted to other religions. Religious groups are required to register with the government for legal tax-exempt status. Roman Catholic marriages are the only religious marriages that are automatically recognized by the state. Civil unions are required for other faiths.

## 11 TRANSPORTATION

The national highway system is the dominant means of inland public transportation. Three main highways emanate from Santo Domingo: the Carretera Sánchez (connecting with Elias Piña on the Haitian border), the Carretera Mella (to Higüey in the extreme southeast), and the Carretera Duarte (to Monte Cristi on the northwest coast). In 2002 there were 12,600 km (7,830 mi) of roadways, of which 6,224 km (3,868 mi) were paved. In 2003, a total of 171,200 passenger cars and 207,000 commercial vehicles were licensed.

In 2004, the Dominican Republic had 1,743 km (1,084 mi) of standard and narrow gauge railroad. Of that total, 1,226 km (763

mi) were operated by sugar companies, and consisted of varying types of narrow gauge track. In that same year, there were 375 km (233 mi) of standard gauge track in operation, and another 142 km (88 mi) of narrow gauge railroad not affiliated with the sugar companies operated that year.

The Santo Domingo, Andrés, and Haina harbors, all in the Santo Domingo area, handle the vast majority of imports. Other large ports include Puerto Plata in the northwest; La Romana, Boca Chica, and San Pedro de Macoris in the southeast; and Barahona in the southwest. The Dominican merchant fleet had three cargo ship of 1,000 GRT or over, totaling 11,230 GRT in 2005.

In 2004, there were an estimated 31 airports, 13 of which had paved runways as of 2005. Dominicana de Aviación provides international service from Las Americas International Airport at Punta Caucedo, 29 km (18 mi) east of Santo Domingo. Cargo and mail service to the US mainland, Puerto Rico, and the US Virgin Islands is provided by Aerolíneas Argo. Alas del Caribe provides domestic passenger service, as does Aerovías Quisqueyanas. There are also six other international airports at Puerto Plata, Punt

Cana, Santiago, Samana, Barahona, a new airport in Santo Domingo, and La Romana. In 1997 (the latest year for which data is available), about 34,000 passengers were carried on regularly scheduled domestic and international flights.

## <sup>12</sup>HISTORY

The eastern part of the island of Hispaniola was originally known as Quisqueya, meaning “mother of all lands.” It was first settled by the nomadic and warlike Carib Amerindians and later by the agricultural and peace-loving Arawaks. Christopher Columbus made the European discovery of the island and claimed it for Spain in 1492. Santo Domingo, the oldest city in the New World, was founded four years later by Bartholomew Columbus, the explorer’s brother. By 1517, Hispaniola had become the springboard for Spanish conquest of the Caribbean and of the American mainland. As with other Caribbean islands, the Amerindian population dwindled, and was replaced by African slaves.

The importance of Hispaniola waned during the 16th and 17th centuries. In 1697, by the Treaty of Ryswick, Spain was forced to recognize French dominion over the western third of the island, an area now known as Haiti. In 1795, under the Treaty of Basel, Spain ceded to France the eastern two-thirds of the island, which by then had been renamed Santo Domingo. The island then came under the rule of the rebellious ex-slave Toussaint L’Ouverture. After Haiti received independence in 1804, the French retained the rest of the island until 1809. After a brief attempt at independence, the Dominicans fell under the control of Spain, which regained the eastern section of the island under the Treaty of Paris (1814).

In 1821, the Dominicans, led by José Muñoz de Cáceres, proclaimed their independence. The Dominicans sought to become part of Simón Bolívar’s newly independent Republic of Gran Colombia, but in 1822, the Haitians conquered the entire island. For 22 years, the Haitians ruled with an iron fist. A civil war in 1843 gave the Dominicans the opportunity to try again for independence, and, under Juan Pablo Duarte, they established the Dominican Republic as an independent state.

Between 1844 and 1916, the new republic alternated among personalist leaders, who sought foreign protection against Haiti. The most prominent among these were Pedro Santana and Buenaventura Baez, who dominated Dominican politics until 1882. Santana restored the Dominican Republic to the Spanish Empire during 1861–65. Baez in 1869 negotiated a treaty providing for US annexation, but the US Senate refused to ratify it.

After a 17-year dictatorship, the Dominican Republic entered a turbulent period characterized by general political instability and increasing debt to US interests. In 1905, US president Theodore Roosevelt appointed an American receiver of Dominican customs, and a subsequent treaty provided for repayment of the debt. This first application of the “Roosevelt Corollary” to the Monroe Doctrine was followed in 1916 by the US establishment of a military government under Marine Capt. H. S. Knapp. It ruled the Dominican Republic until 12 July 1924, when sovereignty was restored. US customs control continued until 1941.

In 1930, Rafael Leonidas Trujillo Molina was elected president. For the next 31 years, he ruled the Dominican Republic either directly or indirectly. Trujillo had himself reelected in 1934, 1940, and 1947, then arranged for his brother to become president in

1952 and 1957, and then installed Joaquín Balaguer in 1960. Under Trujillo, the Dominican Republic achieved some economic progress, removing its foreign debt. But Trujillo brutally suppressed fundamental human rights. Only one party was allowed, the press was totally controlled, and constant purges weeded out all but his most servile supporters. His most dubious achievements were a result of his own megalomania. In the capital city of Santo Domingo, which he renamed Ciudad Trujillo (Trujillo City), there were 1,870 monuments to Trujillo, who gave himself the title “The Benefactor of the Fatherland.” He also amassed a personal fortune estimated at \$900–\$1,500 million.

Trujillo was assassinated on 30 May 1961. In July 1961, the Balaguer cabinet resigned as street rioting broke out. The opposition agreed to an interim coalition government under Balaguer that September, with Rafael Trujillo, Jr., as head of the armed forces. In November, the United States sent warships just outside Dominican waters to prevent the armed forces chief and his two uncles from a staging a rumored coup. They went into exile immediately.

After rule by an interim Council of State, Juan Bosch of the Dominican Revolutionary Party was elected president in 1962. He assumed office in February 1963 but remained in power for only seven months, during which time very little of the promised social and economic reform could be accomplished. The military, which overthrew Bosch in September 1963, proceeded to install a three-man civilian junta, called the Triumvirate, which was in turn overthrown by the supporters of Juan Bosch in April 1965. With anarchy threatening—and, according to US allegations, Communists deeply involved in the pro-Bosch insurrection—the United States sent 23,000 troops into the Dominican Republic, ostensibly to protect the lives of US citizens. Within weeks, the OAS had set up an Inter-America Peace Force in the country. This controversial set of arrangements eventually brought order to the country. After the 1966 elections, all US and OAS troops left the island.

In the general elections of June 1966, Balaguer, returned from exile, campaigned vigorously throughout the country, while Bosch, his chief opponent, remained home, apparently fearful of an attempt on his life. Balaguer won with 57.2% of the vote. Four years later, Balaguer ran essentially without opposition, as most parties withdrew from the campaign in response to rising political violence.

Events in 1974 followed a similar pattern. Two days before the election, an opposition coalition announced their withdrawal from the contest. The opposition’s principal candidate, Silvestre Antonio Guzmán Fernández of the PRD (Dominican Revolutionary Party), called for general abstention from the election, charging Balaguer with fraudulent practices. Only one candidate—Adm. Luis Homero Lajara Burgos, a former chief of police under Trujillo—remained in the race. The results gave Balaguer an overwhelming majority, with 924,779 votes to Lajara Burgos’s 105,320.

Following the 1974 elections, the opposition coalition, an amalgam of widely divergent political elements, decided to disperse in anticipation of the 1978 campaign. Despite their lack of representation in the legislature and in municipal councils as a result of the election boycott, the major opposition parties, aided by a large degree of press freedom, remained active and vocal. In the 1978 elections, the main presidential candidates were Balaguer and the

PRD's Guzmán. Guzmán won with a 158,000-vote plurality, and his party gained a majority in the Chamber of Deputies. Numerous other parties, including the newly legalized Dominican Communist Party, participated in the elections. A right-wing military attempt to prevent Guzmán from assuming office was foiled, partly because of US government pressure.

During Guzmán's term, political prisoners were freed, press censorship was practically abolished, and political parties engaged in open activity. At the same time, however, there were mounting economic difficulties, aggravated by two hurricanes in 1979, which together left 1,300 people dead, 500 missing, and 100,000 homeless. In May 1982, a left-wing PRD senator, Salvador Jorge Blanco, was elected president. On 4 July, six weeks before his term was due to expire, Guzmán committed suicide, after several close associates were accused of fraud. Power was transferred peacefully to Vice President Jacobo Majluta Azar, and in August 1982, to Blanco.

Whatever plans President Blanco may have had were soon overtaken by the country's burgeoning foreign debt. Blanco turned to the IMF for assistance. The resultant restrictive economic policy raised production costs and reduced industrial output. A cut in the US sugar quota, as well as a generally low world price for the commodity, was a further blow to the economy.

In presidential elections held 16 May 1986, former president Joaquín Balaguer was returned to office with 857,942 votes (41.6%). Jacob Majluta Azar of the PRD took 814,716 votes (39.5%), and Juan Bosch of the PLD (Dominican Liberation Party) won 379,269 votes (18.4%). Balaguer embarked on an ambitious program of public works that created employment for nearly 100,000 people. But by 1988, inflation was on the rise, and the peso had become unstable. Nationwide strikes in 1989 suggested that the country was headed for further crisis.

In 1990, Balaguer stood for reelection, and won a narrow, hotly contested victory amid claims of fraud by the opposition. Officially, Balaguer received 35.7% of the vote to Juan Bosch's 34.4%. Balaguer was inaugurated, but immediately created controversy by suggesting a set of IMF-style liberal reforms. This brought national strikes in August and November of 1990, and demands for resignation. In the Chamber of Deputies, where Bosch's PLD held a plurality, Balaguer faced serious opposition.

The results of a large portion of the May 1994 presidential vote, won once again by Balaguer, were voided by the electoral board, and Balaguer agreed to shorten his term to two years, scheduling a new election for May 1996. In that contest, no candidate won a majority, but a second round of voting on 30 June produced a victory for Leonel Fernández of the PLD, who took office in August.

Although economic reforms introduced in late 1994 helped improve growth and lower inflation, unemployment remained high, spurring substantial emigration to the United States and Puerto Rico. In March and June 1995, riots occurred in response to unauthorized increases in public transportation fares. During his four years in office, Fernández successfully privatized several state-owned enterprises and utilities. The economy expanded at an average of 5% annually, unemployment fell, and inflation was low. Fernández successfully fought government corruption and consolidated democratic institutions. In spite of his popularity, however, he was constitutionally prevented from seeking reelection in the polling scheduled for May 2000. PRD's Rafael Hipólito Mejía

won the May 2000 election after PLD's Danilo Medina withdrew from the runoff. Mejía had obtained 49.5% of the vote in the first round and was expected to easily defeat Medina in the runoff. Mejía took office promising to increase social spending but vowing to maintain the macroeconomic policies adopted by Fernández that helped that country become one of the fastest growing nations in Latin America in the late 1990s. In July 2002, Joaquín Balaguer died at the age of 95.

Deadly clashes between police and protestors broke out in November 2003 during demonstrations held to protest higher prices and cuts in electricity. In January 2004, further protests took place, demonstrating against the government's economic policies; five people were killed.

In May 2004, Mejía admitted defeat in presidential elections that were won by Leonel Fernández with 57.1% of the vote. That month, severe flooding took place in the southwest and in parts of neighboring Haiti; more than 2,000 people died or disappeared. The next presidential election was scheduled for May 2008.

### 13 GOVERNMENT

The constitution of 28 November 1966 established a unitary republic consisting of 26 (later increased to 31) provinces and a single National District. The government is effectively controlled by the chief executive, a president directly elected for a four-year term and eligible for reelection. Cabinet ministers (called secretaries of state) are appointed by the president, who must be at least 30 years of age.

The National Congress consists of a Senate, composed of 32 members, and a 150-member Chamber of Deputies, apportioned on the basis of population. Members of the two houses are elected for four-year terms and must be at least 25 years of age. Bills for legislative action may be introduced by the president, by the National Congress, or by the Supreme Court. Voting is by universal suffrage of citizens 18 years or older, although younger citizens, if married, may also vote. Members of the armed forces and national police may not vote. Presidential and congressional elections are not held simultaneously.

### 14 POLITICAL PARTIES

Although the Dominican Republic has three major parties and more than ten minor parties, two men, Joaquín Balaguer Ricardo and Juan Bosch Gavino, dominated its political system for decades, but starting in 1996 a new cadre of politicians emerged.

Joaquín Balaguer, a former president under Trujillo, was elected to the presidency six times, the last time in 1994. He died in 2002. He founded the Social Christian Reform Party (Partido Reformista Social Cristiano—PRSC) while living in exile in New York in 1963. The party is tied to the Christian Democratic political movement, and relies principally on peasant and middle-class support. As of 2005, the PRSD held 1 of 32 Senate seats and 36 of 150 seats in the Chamber of Deputies.

Juan Bosch, who held the presidency for seven months in 1963, remained a major voice in Dominican politics into the 1990s. Bosch founded the Dominican Revolutionary Party (Partido Revolucionario Dominicano—PRD) in 1939. After withdrawing from the PRD, Bosch created his own party, the Dominican Liberation Party (Partido de la Liberación Dominicana—PLD) in 1973. In the second round of voting in the 1996 presidential elections, the

PLD's Leonel Fernández was elected president with just over 51% of the vote. In May 2004, Fernández defeated incumbent Rafael Hipólito Mejía and was returned to office as president with 57.1% of the vote.

The PRD continued on without Bosch, and with far more success than Bosch was ever able to achieve. The PRD won the presidential elections of 1978 and 1982, although it was unable to achieve a majority in either house of congress in 1982. Headed by Vicente Sanchez Baret, the PRD has an association with Socialist International, and a "Eurosociologist" ideological thrust of moderate economic and social change. The party draws support from landless peasants and urban workers. Rafael Hipólito Mejía emerged as the PRD leader and easily won the 2000 presidential election. The PRD went on to win the 2002 parliamentary elections with 41.9% of the vote. The PRD held 29 out of the 32 seats in the Senate and also commanded a majority control in the Chamber of Deputies with 73 out of the 150 seats. The next parliamentary elections were scheduled for May 2006.

The Independent Revolutionary Party (PRI) was the vehicle for Jacobo Majluta Azar, who served as president briefly in 1982. A former PRD member, Majluta received only 7% of the vote in 1990. As of 2006 the party held no seats in the Chamber of Deputies or the Senate.

## 15 LOCAL GOVERNMENT

The Dominican Republic is divided into 31 provinces and a National District, encompassing Santo Domingo. The provinces are further subdivided into municipal districts and municipalities. The president appoints the provincial governors. Municipal districts must have at least 5,000 inhabitants and produce sufficient revenue to finance their own administrative agencies. The municipalities and the National District are governed by mayors and municipal councils of at least five members, elected by popular vote.

## 16 JUDICIAL SYSTEM

The judicial system is headed by a Supreme Court with 16 judges, which rules on constitutional questions and serves in the last instance on appeals. Supreme Court judges are appointed by the National Judicial Council (consisting of the president, the leaders of both chambers of the National Congress, the president of the Supreme Court, and an opposition or nongoverning party member). The National Judicial Council appoints the judges of the lower courts and of the special courts. All judges are required to hold a law degree.

There are 31 provincial courts, as well as one court of first instance in the National District. The judicial system also includes one judge or court of justice for each of the country's 124 municipal districts, three courts of appeal, a court of accounts, and a land tribunal. There are also justices of the peace. The death penalty was abolished in 1924. Although the constitution provides for an independent judiciary, in practice the executive branch as well as public and private entities exert pressures on the courts. The constitution guarantees public trials, and indigent defendants have a right to a court-appointed attorney at state expense. Judicial reforms were being undertaken in the early 2000s.

Military courts try military personnel charged with extrajudicial killings.

## 17 ARMED FORCES

Active armed forces personnel in the Dominican Republic numbered 24,500 in 2005. The Army had 15,000 active personnel and was organized into six infantry brigades, one (each) armored, special forces, mountain infantry, artillery, engineer and Presidential Guard battalions. Equipment included 12 light tanks, 28 armored personnel carriers and over 56 artillery pieces. The Air Force has 5,500 personnel, whose equipment included 6 combat capable aircraft that consisted of fighter ground attack aircraft. The Navy had 4,000 personnel. Major naval units consisted of 15 coastal defense and 4 logistics/support ships. The country's paramilitary force consisted of the 15,000 member National Police. In 2005, the armed forces were allocated \$190 million.

## 18 INTERNATIONAL COOPERATION

The Dominican Republic is a charter member of the UN, having joined on 24 October 1945, and participates in the ECLAC, as well as other nonregional specialized agencies. The nation is also a member of the WTO, the ACP Group, G-77, the Inter-American Development Bank, the Latin American Economic System (LAES), the OAS, the Association of Caribbean States (ACS), and the Río Group. The country has observer status in CARICOM and the Latin American Integration Association (LAIA). In 2004, the Dominican Republic, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and the United States signed the US-Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force.

The Dominican Republic is a member of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and an observer in the Nonaligned Movement. The country is a signatory of the 1947 Río Treaty, an inter-American security agreement. In environmental cooperation, the Dominican Republic is part of the Basel Convention, the Convention on Biological Diversity, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Traditionally, the economy of the Dominican Republic was based primarily on agriculture, with sugar, coffee, and tobacco as the main export crops, but the services sector has become the largest employer (about 60% of the labor force), led by tourism. Between 1968 and 1974, the average annual growth of GDP was 10.5%. The improved political climate during that period stimulated public and private investment, both domestic and foreign, and the development of tourism. A sugar boom also contributed to rapid growth. During the second half of the 1970s, the growth rate slowed, in part because of rising oil prices and a weakening of the sugar market; damage from two 1979 hurricanes cost an estimated \$1 billion. The GDP declined by 2.2% in 1985, reflecting low world prices for the country's exports, declining US sugar quotas, and IMF-imposed austerity. Unemployment soared to 26%, and inflation reached 37.5% the same year. The economy recovered some-

what in 1986 and 1987, due to the government's capital spending program and an increase in foreign investment.

The Dominican Republic had one of the fastest growing economies in the world in the 1990s, owing much of its success to the adoption of sound macroeconomic policies in the early 1990s and greater opening to foreign investment. Although GDP declined in both 1990 and 1991, in 1992 real GDP increased by 7%. The high inflation prevailing in the late 1980s and early 1990s was finally tamed in 1993 as a result of an austerity program that brought the annual inflation rate from 53.9% in 1992 to only 4.6% in 1993. However, very tight monetary and fiscal policies caused the economy to decline by 1.7% in 1994. Boosted by the continuous expansion of tourism, mining, and the export processing zones, the annual average growth rate 1995–2001 was 7.7%, despite Hurricane Georges in September 1998, which left about 300 dead, hundreds of thousands homeless, and did an estimated \$1.3 billion worth of damage (8% of GDP). The rate of inflation fell from 14.3% in 1994 to 6% in 1999, but in 2000 had increased to 9%. Fiscal measures were introduced in 2001 to reduce the inflation rate in the booming economy, but this coincided with the decline in the external economy, and also became a factor in reducing the country's GDP growth rate to 2.7% in 2001, down from 7.6% in 2000 (the highest in Latin America).

In 2003, services accounted for over half of GDP (57.8%) and agriculture accounted for only 10.7%, down from about 20% in the mid-1990s. Tourism (the leading foreign exchange earner), telecommunications, and free-trade-zone manufacturing remain increasingly important industries. The Dominican Republic is among the top ten developing countries in terms of the amount of remittances received from abroad. In 2001 these totaled about \$2 billion, double the rate in the mid-1990s. The economy's other major engine of growth has been its free trade zones. In 2000, net exports from the free trade zones were \$1.7 billion, up from \$1.2 billion in 1997, whereas traditional exports had fallen to \$.97 billion from \$1 billion. Both sectors declined in 2002, and in 2003 growth turned negative in (-0.4%), mainly due to the effects of a major bank fraud and limited growth in the US economy. The Dominican Republic continued to go through difficult economic times due in large part to bank frauds discovered in 2003 in which losses totaled more than 20% of GDP. In 2004 the real growth rate was only 1.7%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reported that in 2005 the Dominican Republic's gross domestic product (GDP) was estimated at \$58.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$6,500. The annual growth rate of GDP was estimated at 4.1%. The average inflation rate in 2005 was 4.3%. It was estimated that agriculture accounted for 10.7% of GDP, industry 31.5%, and services 57.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.325 billion or about \$266 per capita and accounted for approximately 14.1% of GDP. Foreign aid re-

ceipts amounted to \$69 million and accounted for approximately 0.5% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Dominican Republic totaled \$11.98 billion or about \$1,371 per capita based on a GDP of \$16.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.1%. It was estimated that in 2002 about 25% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in 2002 (the latest year for which data was available) consisted of about 2.6 million persons. For that same year, 15.9% were engaged in agriculture, 21.1% in industry, and 63% in services and government. Unemployment is a persistent problem, affecting an estimated 17% of the workforce in 2005. Underemployment was also widespread.

The labor code provides comprehensive protection for workers, but as of 2005, only about 8% of the Dominican workforce was unionized. Employees in nonessential public services are provided with the right to strike. The labor code also specifies steps for union registration, entering into collective bargaining pacts, and calling strikes. While it is illegal for companies to dismiss union members and organizers, enforcement has been inconsistent and there have been reports of intimidation of union organizers and members.

The standard work week is set at 44 hours with an eight hour day. The law also provides for a rest time each week of 36 uninterrupted hours. The labor code prohibits employment of children under 14. However, economic and social conditions have forced many children to work to help support their families. The minimum wage was \$119 per month in the nation's free trade zones (FTZs) and \$164 per month outside the FTZs in 2005. However, these amounts were insufficient to support a worker and a family. Occupational health standards are not enforced and working conditions, especially on sugar plantations, can be particularly harsh.

## 22 AGRICULTURE

With almost 33% of the total land area suitable for crop production and about 17% of the labor force engaged in farming, agriculture remains the primary occupation, accounting for 11% of GDP in 2003. Value of agricultural output grew at an average annual rate of 7.1% during 1968–73, but since 1975 the sector has been hampered by droughts (1975, 1977, and 1979), hurricanes (in 1979 and 1980), and slumping world prices and quota allocations for sugar (since 1985). In 1999, agricultural production was 0.4% higher than during 1989–91. The fertile Cibao Valley is the main agricultural center. In 2003, arable land totaled 1,546,000 hectares (3,944,000 acres).

After Cuba, the Dominican Republic is the second-largest Caribbean producer of sugarcane, the nation's most important commercial crop. The State Sugar Council (Consejo Estatal de Azúcar—CEA) operates 12 sugar mills and accounts for more than half of total production. Other large producers are the privately owned Vicini, with three mills, and Gulf and Western, whose

largest mill is at La Romana. In 2004, sugarcane production was 5.2 million tons, down from an average of 7.1 million tons during 1989–1991. Output of sugar has declined since 1982, and land is gradually being taken out of sugar production and switched to food crops. Production of raw sugar rose from 636,000 tons in 1990 to 813,000 tons in 1997 but fell to 508,000 tons in 2004/05. The Dominican Republic has the largest single allocation of the US sugar import quota.

Another leading cash crop is coffee. Part of the crop was destroyed by hurricanes in 1979 and 1980, and 1979–80 production was only 670,000 bags (40,200 tons). Although production was usually about 57,000–59,000 tons annually in the 1980s, the acreage harvested declined from 157,000 hectares (388,000 acres) in the early 1980s to 139,000 hectares (363,000 acres) by the late 1990s, indicating a greater yield per acre. Coffee production in 2004 was estimated at 45,000 tons; exports of coffee in 2004 generated \$5.8 million. Cocoa and tobacco are also grown for export. In 2004, production of cocoa beans was 45,000 tons and of tobacco, 18,000 tons. Banana production in 2004 was 480,000 tons. Production of other crops in 2004 (in thousands of tons) included rice, 640; coconuts, 181; cassava, 105; tomatoes, 154; pulses, 69; dry beans, 26; eggplants, 7; and peanuts, 3.

Under a land reform program initiated in 1962, a total of 178,602 hectares (441,333 acres) had been distributed to 36,480 farmers by the end of 1977. The government encourages fuller use of the nation's arable land through extensive land-clearing and irrigation projects and diversification of crops. Some mechanization has taken place on the large plantations, but primitive techniques are generally used. In 1973, the first stage of the Integrated Agricultural and Livestock Development Plan was initiated, calling for an investment of \$38.1 million, to be financed by the IDB. The plan was designed to provide credit and technical aid to 45,000 small farmers, improve side roads, and study the country's water resources. The second stage of the plan, in the early 1980s, included extension of farm credits, reforestation, manpower training for irrigation projects, and reorganization of the Dominican Agrarian Institute.

Agricultural exports, mostly in the form of sugar, coffee, cocoa, tobacco, and cigars generated \$646 million in 2004, or 48.4% of total exports. The government and private sector are emphasizing diversification to nontraditional agricultural crops such as fresh fruits, vegetables, and flowers.

### 2<sup>3</sup> ANIMAL HUSBANDRY

In 2005, Dominican livestock included 190,000 goats and 123,000 sheep. There were also about 2.2 million head of cattle, 60% for beef and 40% for dairy. The hog population, decimated by African swine fever in the late 1970s, decreased from 400,000 in 1978 to 20,000 in 1979; by 2005, however, it had recovered to 580,000. Poultry is the main meat source because it is cheaper than beef or pork. Poultry production relies on imports of feed grain from the United States. In 2005, 185,000 tons of poultry meat were produced, along with 78,000 tons of beef and 690,000 tons of milk.

### 2<sup>4</sup> FISHING

Although the waters surrounding the Dominican Republic abound with fish, the fishing industry is comparatively undeveloped, and

fish for local consumption are imported. In 2003, the total marine catch was 17,490 tons, down from 19,048 tons in 1994. Marlin, barracuda, kingfish, mackerel, tuna, sailfish, and tarpon are found in the Monte Cristi Bank and Samaná Bay, which also supports bonito, snapper, and American grouper. The inland catch amounted to 4,161 tons in 2003.

### 2<sup>5</sup> FORESTRY

About 28.4% of the total land area consisted of forests and woodlands in 2000. Roundwood production in 2003 totaled 562,000 cu m (19.8 million cu ft). Virtually all the timber cut is for land clearing and fuel.

### 2<sup>6</sup> MINING

The Dominican Republic in 2003, was a regional producer of cement, steel, ferronickel, salt and gypsum, while the production of sand and gravel, limestone and marble were produced for the domestic market. Also, modest amounts of pectolite (larimar), amber, and limestone are produced by six artisanal mining associations. While, mining activity in the Dominican Republic has been centered on gold exploration as of 2003, there was no recorded gold production since 1999, when 651 kg were produced. In that same year, the production of gold and silver were suspended. Silver output in 1999 totaled 3,140 kg. Nickel production (mine output, laterite ore) in 2003 totaled 45,400 metric tons, up from 38,859 metric tons in 2002. The only nickel producer was Falconbridge Dominicana, an 85% Canadian-owned company.

The country was one of the few sources of amber in the Western Hemisphere. Salt Mountain, a 16 km block of almost solid salt west of Barahona, was the world's largest known salt deposit. There were also large deposits of gypsum near Salt Mountain, making the Dominican Republic one of three sources of gypsum in the Caribbean. In 2003, the country produced 230,632 metric tons of gypsum and 2,906,699 metric tons of hydraulic cement. Limestone, marble, and sand and gravel were also produced in 2003. Substantial lignite deposits were found in the early 1980s.

Production of bauxite, traditionally the principal mining product, ceased in 1992. The Aluminum Co. of America (Alcoa) mined bauxite between 1959 and 1983, when it turned its concession over to the state. Production in 1991 dropped 92% from the previous year, as a presidential decree suspended mining operations at the largest mine, in response to increasing fears of deforestation, although reforestation of mined areas was in progress.

### 2<sup>7</sup> ENERGY AND POWER

The Dominican Republic's energy and power sector is marked by a lack of oil, natural gas and coal. Therefore, the country is heavily dependent upon imports to satisfy its fossil fuel needs. Although the country does have a small refining capacity, imports far outweigh production.

In the electrical power sector, the Dominican Republic's capacity for 2002 has been placed at 2.968 billion kW, with the bulk, 2.486 billion kW generated by fossil fuels. Hydroelectric generating capacity takes up the remaining portion at 0.482 million kW. Electric power production in 2002 totaled 10.863 billion kWh, of which: 9.957 kWh came from conventional thermal sources; 0.869 kWh came from hydropower sources; and 0.037 billion kWh from

geothermal/other sources. Electric power consumption in 2002 stood at 10.103 billion kWh. The Dominican Electric Corp. (Corporación Dominicana de Electricidad) is responsible for all public production, sale, and distribution of energy. However, electrical power supply has been erratic. Power blackouts are frequent and can last up to 20 hours per day. Although the government has taken steps to remedy the power shortage, as of 2006, the reliability of the power supply remained a problem.

The Tavera Dam, with a capacity of 60,000 kW, was completed in 1972. The Sabana Yegua hydroelectric and irrigation complex, begun in 1974, opened in 1980. The Habo I coal-fired plant at Haina was inaugurated in 1984.

In 2002, crude oil imports totaled an average 39,500 barrels per day, with total oil product imports at 130,540 barrels per day. Distillate residual and gasoline imports were the top three refined products imported in that year at 29,880 barrels per day, 25,090 barrels per day and 18,670 barrels per day respectively. Consumption of refined oil products in 2002 stood at 126,150 barrels per day.

Under the terms of the San José Pact, the Dominican Republic buys oil at discount prices from Venezuela and Mexico. It imports liquefied natural gas (LNG) from Trinidad and Tobago. An LNG terminal that is part of a \$400 million project built by AES Andres became operational at the beginning of 2003, but the associated 300 MW power plant was not expected to be completed until the summer of 2003.

Imports of coal in 2002 came to 257,000 tons of hard coal.

## 28 INDUSTRY

Including the processing of sugar, food processing represents more than half of the total industrial production. Dominican agriculture was hit hard during the late 1990s by droughts in 1996 and 1997, and a hurricane in 1998, but little effect was seen on the manufacturing sector. The construction sector realized high growth after the arrival of Hurricane Georges in 1998, including in housing, commercial construction, and public works projects. Small plants produce powdered and condensed milk, ceramics, aluminum furniture and fittings, concrete blocks, pipes and tiles, air conditioners, barbed wire, and other products.

Since 1990, free assembly zones have contributed more than 3.5% of the GDP, although growth in the free trade zones decreased in 2001. The most active sectors in this industry were related to the processing of clothes and textiles, tobacco, electronics, and shoes. The Dominican Republic was the seventh-largest supplier of textiles to the United States after Mexico, Hong Kong, Taiwan, Indonesia, and South Korea at the end of 2001. However, lack of demand in the United States for textiles resulted in layoffs in that sector and domestic manufacturing experienced no growth in 2001. The Dominican Republic has two oil refineries, with a total production capacity in 2002 of 49,000 barrels per day.

Industry represents a 31% of GDP, mainly focused on sugar refining, pharmaceuticals, cement, light manufacturing, and construction.

## 29 SCIENCE AND TECHNOLOGY

The Dominican Medical Association and the Dominican Sugar Institute have their headquarters in Santo Domingo. Ten colleges

and universities offer degrees in engineering, basic sciences, medicine, and agriculture. In 1987–97, science and engineering students accounted for 35% of college and university enrollments.

## 30 DOMESTIC TRADE

Santo Domingo is the principal port and commercial center, while Santiago de los Caballeros is the market and distribution center for the Cibao Valley. Most importing and exporting firms are located in Santo Domingo. Importers ordinarily represent numerous foreign manufacturers.

Department stores and supermarkets are increasing in number, but most retail stores are specialty shops. Groceries, meat, and fish are sold in most cities through a large central market, by neighborhood stores, and by street vendors. Retail credit is granted by larger stores and automobile dealers.

The domestic economy has shifted to rely on the developing tourism, which accounts for about \$1.5 billion in annual earnings. Remittances from Dominicans living abroad are estimated to be about \$3 billion per year.

Much of the population still lives in rural areas—many as impoverished peasants or migrant workers, others as independent small-scale landowners, and a small minority as elite landowners. Moreover, rural life in the Cibao Valley generally diverges from that of the southeastern sugar plantations and other areas, and city life varies from the frenetic pace of Santo Domingo to the more relaxed, traditional character of Santiago and smaller towns.

## 31 FOREIGN TRADE

Numerous free trade zones make the Dominican Republic attractive to export-import businesses. After the passage of the 299 Law on 23 April 1969, the free zone sector started to develop in the Dominican Republic. The first to be installed was La Romana Free Zone, followed by San Pedro de Macorís Free Zone, which was created by law in 1971 and built in 1972. However, some FTZ businesses moved to Mexico after the North American Free Trade Agreement (NAFTA) between the United States, Canada, and Mexico, went into effect.

Clothing production brings in the majority of export revenues (32%), but the commodity market also supports the export of pig iron (7.8%), medical instruments (7.7%), sugar (5.6%), and electrical parts (5.1%). Dominican Republic imports include food, petroleum, cotton and fabrics, chemicals, and pharmaceuticals.

The Dominican Republic's most important trading partner is the United States (87% of export revenues); other markets include Canada, Western Europe, and Japan. The country exports free-trade-zone manufactured products (garments, footwear, etc.), nickel, sugar, coffee, cacao, and tobacco, and it imports foodstuffs, petroleum, industrial raw materials, and capital goods. On 5 August 2004, the Dominican Republic signed a Free Trade Agreement with the United States and five Central American countries to integrate into the US-Central American Free Trade Agreement.

## 32 BALANCE OF PAYMENTS

For more than 20 years prior to 1961, the Dominican Republic had no internal or external debt. In 1961, however, about US\$70 million was taken out of the country by the Trujillo family and others. Political instability induced further net outflows of private capital throughout the 1960s. The nation's current accounts posi-

tion worsened during the 1970s, as trade deficits grew. Declines in export earnings in the 1980s brought shortages of foreign exchange. Large increases in imports and a sharp drop in commodity exports pushed the merchandise trade deficit to over \$1.6 billion by the end of 1992, and \$1.4 billion in 1998. Tourism (now the country's largest foreign exchange earner), expatriate remittances, and earnings from the free trade zones help to finance the trade deficit. Foreign direct investment as of the early 2000s was likely to remain high.

In 2004 the purchasing power parity of the Dominican Republic's exports was \$5.2 billion while imports totaled \$8.9, resulting in a trade deficit of -\$3.7 million.

**3<sup>3</sup> BANKING AND SECURITIES**

The Central Bank of the Dominican Republic (Banco Central de la República Dominicana—BCRD) is the sole bank of issue. The state-owned Banco de Reservas, established in 1941, is the largest commercial bank in the country and acts as the fiscal agent and depository for the government. The Agricultural and the Industrial Credit Bank promotes the development of agriculture as well as industry by granting medium-term and long-term credit. The National Housing Bank (Banco Nacional de Vivienda) is a primary investor in low-cost housing. Other commercial banks include the Bank of Nova Scotia, Citibank, Banco Nacional de Credito, Banco Intercontinental (BANINTER), Banco Mercantil, Banco Osaka, Banco Global, Banco Hipotecario Dominicano (BHD), Banco Domingo del Progreso, Banco Popular Dominicano, and Banco Santa Cruz.

At the end of January 1996, the central bank tightened reserve requirements for lending based on new deposits and imposed limits on new lending to the commercial sector. The prime lending rate, which had fallen from 24% in December 1995 to 17% in 1996, was 18% in 1999. The exchange rate was devalued 9% in 1998, and continued to devalue through that year, but stabilized in

1999. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$7.9 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 13.47%.

Securities are traded on the Santo Domingo Securities Exchange, founded in 1991.

**3<sup>4</sup> INSURANCE**

Insurance firms are government-supervised and are required to furnish a bond to guarantee their obligations. Net premiums on life insurance are taxable, and the law requires that a certain proportion of the premiums collected must be invested locally. Workers' compensation and third-party automobile liability are compulsory insurance. The insurance market is regulated by the Superintendent of Insurance of the nation. In relation to the North American and European markets, the Dominican insurance industry has very low penetration and was among the lowest in Latin America, the result of relatively low per capita income and general lack of insurance awareness. In 2003, the value of all direct premiums written totaled \$400 million, with nonlife premiums accounting for \$368 million. Seguros Popular was the country's top nonlife and life insurer in 2003, with gross nonlife (including personal accident) and life insurance premiums written, totaling \$98.2 million and \$8.3 million, respectively.

**3<sup>5</sup> PUBLIC FINANCE**

Between 1968 and 1975, dependence on foreign loans and grants to finance the budget was substantially decreased, and by 1975 tax revenues amounted to about 12% of the GNP. In the late 1970s, this trend was reversed, with rising expenditures and increased assistance from abroad. Legislation was passed in 1997 to allow the privatization of state-owned enterprises, including public utilities,

the country's largest bank, an insurance company, and a number of factories. The government receives almost one-third of its revenues from taxes on imports, but the increasing use of the free trade zones diminishes indirect tax returns.

The US Central Intelligence Agency (CIA) estimated that in 2005 the Dominican Republic's central government took in revenues of approximately \$5.3 billion and had expenditures of \$5.4 billion. Revenues minus expenditures totaled approximately -\$163 million. Public debt in 2005 amounted to 51.4% of GDP. Total external debt was \$7.907 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues were RD\$70.158 billion and expenditures were RD\$70.874 billion. The value of revenues in US dollars was US\$3.770 billion and expenditures US\$3.637 billion, based on a market exchange rate for 2002 of US\$1 = RD\$18.610 as reported by the IMF. Government outlays by function were as follows: general public services, 14.0%; defense, 6.0%; public order and safety, 4.5%; economic affairs, 23.5%; environmental protection, 0.7%; housing and community amenities, 8.4%; health, 12.9%; education, 16.8%; and social protection, 9.4%.

### 36 TAXATION

Personal income tax rates in the Dominican Republic in 2002 were 15–25%. The personal exemption level was equal to 2.3 times the country's average income and the threshold for the highest income tax bracket was 5.8 times the average income (in contrast to 1985 when the highest bracket was 73% and the threshold was 413.5 times the average income). Since January 1995 business income has been taxed at a flat rate of 25%. The main indirect tax is the Dominican Republic's value-added tax (VAT) introduced in January 1983 with a standard rate of 16% as of 2005. Excise taxes are imposed on alcoholic beverages (25–45%), tobacco products (25–50%), nonalcoholic beverages, and petroleum products. There is also a technical education tax.

### 37 CUSTOMS AND DUTIES

The customs tariff is primarily a revenue-raising instrument, although it is occasionally used to protect local industry. In September 1990, a government decree simplified the tariff schedule to six categories, with seven tariff rates, ranging from 5–35%.

As of 2001, the maximum basic tariff rate stood at 20%, but there were also levied consumption taxes that generally range from 15–60% on “nonessential” goods. However, nonagricultural luxury goods such as perfumes, automobiles and jewelry are subject to additional consumption taxes that range from 15–80%, which are calculated on the CIF (cost, insurance, freight) price. There is also a 5% foreign exchange surcharge associated with import transactions. A 16% industrialized goods and services tax is also levied on processed agricultural and nonagricultural goods based upon the CIF price plus the amount paid for taxes and duties.

There are no free ports, but at least 19 industrial free zones have been established at locations including La Romana, San Pedro de Macoris, Santiago de los Caballeros, Baní, and Puerto Plata.

In 1998, the Dominican Republic helped to establish the Central American–Dominican Republic Free Trade Area (CADRFTA). The country also has an agreement with CARICOM and Western Hemisphere governments for a free trade area by 2005.

## 38 FOREIGN INVESTMENT

In August 1996, the Dominican congress passed the Multilateral Investment Guarantee Agreement (MIGA) and in September 1996, President Leonel Fernández signed the accord. The program was designed to encourage the flow of foreign private investment by mitigating political risks associated with a project. It also provides guarantees to foreign investors against the risk of transfer restriction, expropriation, and war and civil disturbance in the host country. In 1997, the government established the Office for Investment Promotion (OPI).

In 1998, foreign direct investment (FDI) inflows rose to nearly \$700 million, up from \$421 million in 1997 and then peaked at a record \$1.3 billion in 1999. For 2000 and 2001, average yearly FDI inflow was a little over \$1 billion. At the end of 2000, total FDI stocks were an estimated \$5.2 billion, up from \$2.9 billion at the end of 1998. In 1998, the tourist sector was the destination of 44.5% of FDI inflows, but in 1999, tourism accounted for only 20% while foreign investments in electricity became the single-largest destination for inward FDI, attracting 47.2%. In 2000, the tourist sector was the destination of 7.7% of FDI inflows, investments in electricity (29.5%), telecommunications (28.6%), and trade (16%) all ahead of it.

In 2000, the leading source of FDI was the United States (21%); other major sources in 2000 were Spain (20%), Canada (14%), and France (10%). Major foreign investors include GTE and Bank of Nova Scotia of Canada; Shell of Holland/England; and Central Romana, Philip Morris, Citibank, Esso, Texaco, and Colgate Palmolive of the United States.

The International Monetary Fund reported that foreign direct investment is permitted in all sectors except the disposal and storage of toxic, hazardous, or radioactive waste; activities that affect public health or the environment; and activities related to defense and security. Furthermore, it reported that both residents and nonresidents may hold foreign exchange accounts. Payments and transfers are subject to documentation requirements. Some capital transactions are subject to approval, documentation, or reporting requirements.

Foreign direct investment (FDI) was \$309 million in 2003; it was projected to be about \$100 million for 2004, much of it directed at the tourism sector, free trade zones, and telecommunication sector. The decision to privatize or “capitalize” ailing state enterprises (electricity, airport management, sugar) has attracted substantial foreign capital to these sectors.

## 39 ECONOMIC DEVELOPMENT

Caribbean Basin Initiative (CBI) and Generalized Systems of Preferences—government programs that allow the import of raw materials, equipment, and goods for re-export duty-free—benefit the economy. Tax exempt status for up to 20 years is also available. Duty-free access to the European common market was granted by joining the Lomé Convention in 1989, which also provides inexpensive financing for economic development projects. The addition of free trade zones greatly improved the level of industry in the country, but the NAFTA agreement transplanted some manufacturers to Mexico.

The 1998 hurricane caused at least \$1.2 billion in damage; analysts estimated that the Dominican Republic's emergency aid

would amount to 25% of its annual budget. The United States offered \$47 million, and the European Union (EU) offered \$50 million. Foreign aid may have successfully saved the small economy, and even improved it in 1999. Still, the state has a number of parastatals to privatize, and the fairly strict tariff regime has driven most investment capital into the free trade zones.

Rising foreign direct investment, particularly in the electricity, telecommunications, tourism, and free-trade zone sectors drove the average annual gross domestic product (GDP) growth rate from 2.25% in the early 1990s to 7.75% in the second half of the decade. Economic growth fell to 2.7% in 2001, however, in part due to the global economic downturn, and to the 11 September 2001 terrorist attacks on the United States. The unemployment rate rose that year, yet the inflation rate was reduced by half. The government maintained a strict fiscal policy, and tightened monetary policy in early 2002. There was a need for further social spending and investments in infrastructure, however.

Growth turned negative in 2003 with reduced tourism, a major bank fraud, and limited growth in the US economy (the source of about 85% of export revenues), but recovered in 2004 and 2005. Resumption of a badly needed IMF loan, slowed due to government repurchase of electrical power plants, was basic to the restoration of social and economic stability.

As of 2005, the Dominican Republic was a country on the mend following the 2003 banking scandal under former President Hipólito Mejía, when inflation spiked to 63% and GDP contracted by 0.4%. Since then, President Leonel Fernández has improved banking supervision, cut government spending, and introduced tax reforms. His administration passed tax reform and arranged a \$600 million IMF standby arrangement in March 2005 to ease the country's fiscal situation. Although the economy continued to grow at a respectable rate, inflation and unemployment remained the two biggest challenges. Other challenges include the continuous flow of undocumented Haitians seeking refuge and an inefficient legal system in which a lack of resources and personnel keeps rule-of-law reforms from expediting judicial processes. Additionally, a deteriorated electrical distribution system, partly sustained by subsidies, was subject to frequent outages that hurt industry and tourism. Finally, the end of global quotas on apparel exports might allow China to increase its share of sales to the United States, cutting into exports from the Dominican Republic. The DR-CAFTA agreement could help the Dominican Republic to overcome such changes in global markets, but increases in the competitiveness of the economy are required.

#### 40 SOCIAL DEVELOPMENT

A 2001 law created a three-part social security program to be implemented in stages until 2006. Individual accounts provide coverage for public and private sector workers, including Dominican citizens living abroad. The funding for old age, disability and survivorship programs comes from contributions from the insured and the government, with the bulk of responsibility on the employer. There is universal coverage for basic health care and pediatrics. Employers cover the total cost of workers' compensation. Family allowances are limited to unemployed single mothers with young children.

Women continue to have lower economic and social status than men. They are often paid less for similar work and occupy few top

leadership positions. Employers avoid hiring pregnant women, and some administer pregnancy tests to job applicants. Divorce is easily obtainable by either spouse and women can own property in their own name. Domestic violence and sexual harassment are common. The first shelter for battered women opened in 2004. Rape is a serious and grossly underreported problem.

Haitian immigrants, many of whom are low paid agricultural workers, face considerable discrimination. An estimated half million live under harsh conditions in special camps for sugarcane workers. Reports of mistreatment of Haitian migrant workers continue. Documented human rights violations include police brutality, arbitrary detention, and mistreatment of suspects in custody.

#### 41 HEALTH

In 2005, average life expectancy was 71.44 years; in the same year the infant mortality rate was 29.37 per 1,000 live births. The overall mortality was estimated at 4.7 per 1,000 people. Approximately 64% of women with partners (ages 15 to 49) used contraception.

Modern aqueducts, drainage systems, and garbage disposal plants have been constructed in the principal cities. The National Water Supply and Sewerage Institute was established in 1962 and the National Rural Water Service was formed in 1964. In 2000, an estimated 79% of the population had access to safe water, compared with 37% in 1970, and 71% had adequate sanitation. In 2000, however, approximately 11% of children under five years of age were considered to be malnourished and as of 1999, 14% of all births were low birth weight. As access to health care has improved, so has the under-5 mortality rate, which in 1996 was 56; in 1980 it was 94. In 1999, there were 135 cases of tuberculosis per 100,000 people.

The country immunizes over 80% of children up to one year of age against tuberculosis, diphtheria, pertussis, and tetanus, and polio. Major causes of death between 1990 and 1994 were: communicable diseases (27 per 100,000), malignant neoplasms (28 per 100,000), and injuries (30 per 100,000). As of 1999 total health care expenditure was estimated at 4.8% of GDP. Approximately 80% of the population has access to health care services. As of 2004, there were an estimated 188 physicians, 184 nurses, and 84 dentists per 100,000 people. The HIV/AIDS prevalence was 1.70 per 100 adults in 2003. As of 2004, there were approximately 88,000 people living with HIV/AIDS in the country. There were an estimated 7,900 deaths from AIDS in 2003.

#### 42 HOUSING

Rapid population growth and migration to urban areas have combined to create an increasingly serious housing shortage. Destructive hurricanes have not helped the situation either. The National Housing Institute and the National Housing Bank, both established in 1962, have been responsible for a great deal of construction, including about 10,000 homes during the period 1966–72. In the period 1975–78, construction activity slowed down, but a 1979 hurricane prompted a construction boom—not, however, to create new housing but to replace units that had been destroyed by the storms. The Guzmán government promoted the building of low-cost housing at a rate of about 6,000 units a year. President Jorge Blanco pledged in 1982 that 25,000 low-cost houses would be built annually during his administration and President

Balaguer, after he returned to office in 1986, also built low-cost housing, though at a far slower pace than announced.

Hurricane Georges in 1998 damaged about 170,000 homes or about 10% of the nation's entire housing stock. About 49,000 of these homes were completely destroyed. With assistance from foreign programs such as USAID, the government was able to complete 2,250 new homes and make repairs and utility upgrades to over 1,000 others.

At the 2002 census, there were about 2,445,315 dwellings in the country; this figure does not include institutionalized dwelling spaces. Most housing units are detached houses; accounting for 80% of all housing in the census. Concrete blocks, cement, and wood are the most frequently used construction materials for dwellings.

### 43 EDUCATION

The foremost educational objective in recent years has been the enrollment of the entire population in the 5–14 age range. Nine years of education is compulsory. Primary education lasts for six years. Students have two choices for secondary education. The traditional system covers a six-year course of study with two years of general education followed by a four-year track of academic, technical, vocational, or teacher-training studies. The reform system also covers six years, with four years of science based studies and two years of specialization.

In 2001, about 35% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 96% of age-eligible students. The same year, secondary school enrollment was about 36% of age-eligible students (30% for boys and 41% for girls). It is estimated that about 93% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 39:1 in 2003; the ratio for secondary school was about 31:1.

The state-run Autonomous University of Santo Domingo, founded in 1538 and the oldest in the hemisphere, has suffered from a lack of resources. There are four private universities, one technological institute, four colleges, and seven schools of art and music. In 2003, about 34% of the tertiary age population were enrolled in some type of higher education program (26% men and 43% women). The adult literacy rate for 2004 was estimated at about 87.7%.

As of 2003, public expenditure on education was estimated at 2.3% of GDP, or 12.4% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

There are about 130 libraries located throughout the country. The library of the University of Santo Domingo is the most important, with over 105,000 volumes. The Pedro Henríquez Ureña National Library, founded in Santo Domingo in 1970, had a collection of over 154,000 volumes in 2002. In general, public library collections are few and small, mostly containing only a few hundred books. Exceptions are the public libraries in Santo Domingo and Baní, with holdings of about 35,000 volumes and 38,000 volumes, respectively.

All of the leading museums are in and around Santo Domingo. The Museum of Dominican Man (formerly the National Museum) houses 19,000 pre-Columbian, colonial, and contemporary

exhibits relating to the country's history. The Gallery of Modern Art promotes the music, painting, sculpture, and poetry of both Dominican and foreign artists and writers. A new complex at the Plaza of Culture houses several museums, the National Library, and the National Theater. The Alcázar de Colón is the 16th-century home of the Columbus family; the reputed tomb of Christopher Columbus is in the Cathedral of Santa María la Menor. The Zoological and Botanical Garden in Santo Domingo is unique because of its natural setting and grottoes. Ponce de Leon's fort was declared a historic site in 1972 and is maintained as a museum.

### 45 MEDIA

The Dominican Telephone Co. operates the domestic telephone system, and the government controls domestic telegraph service. The larger cities have automatic telephone exchanges, and most of the telephones are on an automatic dial system. In 2003, there were an estimated 115 mainline telephones for every 1,000 people. The same year, there were approximately 271 mobile phones in use for every 1,000 people.

In 1998 there were 120 AM and 56 FM radio stations as well as about 25 television stations, of which the government-owned Radio-Televisión Dominicana is the most important. Many privately owned radio and TV stations broadcast differing political points of view, as do the many independent newspapers and periodicals. In 2000 there were 97 television sets for every 1,000 people. In 2003, there were about 181 radios for every 1,000 people. About 64 of every 1,000 people have access to the Internet as of 2003.

The newspapers of the Dominican Republic are rated by the Inter-American Press Association as among the freest in Latin America. The leading daily is *Listín Diario* (circulation 88,000 in 2004). Other papers of importance also published in the capital are *El Nacional* (circulation 45,000 in 2002), *Hoy* (40,000 in 2004), *Ultima Hora* (40,000 in 2004), and *El Caribe*, an independent morning daily (circulation 10,000 in 2004). Of the dailies published outside the capital, *La Información de Santiago* (circulation 15,000 in 2004) is the best known.

The legally provided freedom of speech and the press are said to be generally supported in practice by the government.

### 46 ORGANIZATIONS

Consumer associations, mainly for low-income groups, deal in basic foods such as rice, plantains, potatoes, and beans. The Confederation of Employers of the Dominican Republic and the National Council of Businessmen are the principal employers' organizations. There are chambers of commerce in Santo Domingo and other large towns. There are a couple of teachers' unions/associations as well as associations for a number of other professions.

The Asociación Médica Dominicana promotes research and education on health issues and works to establish common policies and standards in healthcare. There are also several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

The Dominican Revolutionary Youth, with membership of about 150,000, is the youth wing of the Dominican Revolutionary Party (PRD), which is affiliated to the Socialist International. The Federation of Dominican Students is the national students' union. The Dominican Scout Associations and the Girl Guides have active youth programs. There are also number of youth or-

ganizations with religious affiliations. Sports associations promote competition in a number of favorite pastimes, including squash, tennis, and taekwondo. National women's organizations include the Research Center for Feminist Action and You, Woman.

Volunteer service organizations, such as the Lions Clubs International, are also present. There are national chapters of the Red Cross Society, UNICEF, Habitat for Humanity, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Although the Dominican Republic offers fine beaches and historical sites as well as quality hotel facilities, it had no organized tourist industry to speak of until 1967, and received no more than 45,000 visitors per year. Increased political stability made the country more attractive to tourists, and by 1973 the number of foreign visitors had grown to 182,036. By 1997 the Dominican Republic had 38,585 hotel rooms with an occupancy rate of 76%, and tourism was a mainstay of its economy. In 2003 approximately 3,268,182 tourists arrived in the Dominican Republic. There were 56,378 hotel rooms with 140,945 beds and a 72% occupancy rate. The average length of stay was 9.5 nights.

Resort centers—La Romana, Puerto Plata, Samaná, and Playa Grande—are the main attraction. Baseball is the national sport. Other popular pastimes include basketball, boxing, tennis, golf, hunting, fishing, and scuba diving. The Juan Pablo Duarte Olympic Center is one of the best-equipped sports facilities in the Caribbean. Citizens of the United States and Canada are not required to carry a passport; they may purchase a tourist card upon entering the country. Other visitors require a valid passport, and may require visitor visas.

In 2004, the US Department of State estimated the daily cost of staying in Santo Domingo was \$189. Daily expenses in La Romana were \$267.

#### 48 FAMOUS DOMINICANS

Juan Pablo Duarte (1813–76), national hero of the Dominican Republic, was the leader of the famous “La Trinitaria,” along with Francisco del Rosario Sánchez (1817–61) and Ramón Matías Mella (1816–64), which proclaimed and won independence from Haiti in 1844. Emiliano Tejera (1841–1923) and Fernando Arturo de Merino (1833–1906), first archbishop of the Dominican Republic, were noted statesmen.

Rafael Leonidas Trujillo Molina (1891–1961) was the dominant figure in the political life of the country from 1930 until his assassination on 30 May 1961. He served four times as president and was commander-in-chief of the armed forces. Joaquín Balaguer

(1909–2002) was a prominent political figure in the Dominican Republic. Juan Bosch (1909–2001), founder of the leftist PRD and later of the PLD, served for seven months as president in 1963.

Juan Bautista Alfonseca (1810–75), the father of Dominican music, was the first composer to make use of Dominican folklore. José Reyes (1835–1905), musician and soldier, wrote the music for the national anthem. José de Jesús Ravelo (1876–1954) composed the oratorio *La Muerte de Cristo*, which has been performed yearly since 7 April 1939 at the Basílica de Santa María la Menor on Good Friday. Other prominent Dominican musicians are Juan Francisco García (1892–1974), Luis Emilio Mena (1895–1964), and Enrique de Marchena (1908–1988).

In sports, Juan Marichal (b.1937) achieved fame in the United States as a baseball pitcher, as has Pedro Martínez (b.1971). Sammy Sosa (b.1968), a star home-run hitter, won the National League Most Valuable Player Award in 1998. Outfielder and slugger Manny Ramírez (b.1972) won the 2004 World Series Most Valuable Player Award for leading the Boston Red Sox to its first World Series victory in 86 years.

#### 49 DEPENDENCIES

The Dominican Republic has no territories or colonies.

# ECUADOR

Republic of Ecuador  
*República del Ecuador*

**CAPITAL:** Quito

**FLAG:** The flag consists of three horizontal stripes, the yellow uppermost stripe being equal to the combined widths of the blue center stripe and the red lower stripe; coat of arms superimposed at center of the flag.

**ANTHEM:** *Salve, O Patria (Hail, O Fatherland).*

**MONETARY UNIT:** The sucre was replaced by the US dollar as the official currency as of March 2000 at a rate of 25,000 sucres for us\$1. The dollar (\$) of 100 cents is a paper currency with a floating rate. There are coins of 1, 5, 10, 25, and 50 cents and 1 dollar, and notes of 1, 2, 5, 10, 20, 50, and 100 dollars. Although issuance of higher notes ceased in 1969, a limited number of notes of 500, 1,000, 5,000, and 10,000 dollars remain in circulation. SUCRE1 = US\$0.00004 (or US\$1 = SUCRE25,000) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but local and old Spanish units also are used.

**HOLIDAYS:** New Year's Day, 1 January; Epiphany, 6 January; Labor Day, 1 May; Battle of Pichincha, 24 May; Simón Bolívar's Birthday, 24 July; Quito's Independence Day, 10 August; Guayaquil's Independence Day, 9 October; Columbus Day, 12 October; All Saints' Day, 1 November; All Souls' Day, 2 November; Cuenca's Independence Day, 3 November; Foundation of Quito, 6 December; Christmas Day, 25 December. Movable holidays include Carnival and Holy Week.

**TIME:** Mainland, 7 AM = noon GMT; Galápagos Islands, 6 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The fourth-smallest country in South America, Ecuador is located on the west coast of the continent and is crossed by the equator (the country gets its name from the Spanish word for "equator"). It has a length of 714 km (444 mi) N–S and a width of 658 km (409 mi) E–W. Ecuador borders Colombia on the N, Peru on the E and S, and the Pacific Ocean on the W, with a total boundary length of 4,247 km (2,639 mi), of which 2,237 km (1,398 mi) is coastline. (Ecuador has lost about two-thirds of the territory it once claimed to Colombia and Peru.)

The Galápagos Islands, a province of Ecuador with an area totaling 8,010 sq km (3,093 sq mi), are approximately 1,130 km (700 mi) off the coast on the equator at 89° to 92°W. The total area of the republic and its territory is estimated at 283,560 sq km (109,483 sq mi). Comparatively, the area occupied by Ecuador is slightly smaller than the state of Nevada. Ecuador also claims about 200,000 sq km (77,000 sq mi) of land awarded to Peru under the 1942 Protocol of Río de Janeiro. Armed hostilities flared along a still undemarcated stretch of the border in January 1981, but by 20 February, a 14-km (9-mi) demilitarized zone had been arranged along the disputed line. Official maps of Ecuador show the entire region as Ecuadoran territory. Ecuador's capital city, Quito, is located in the north central part of the country.

## <sup>2</sup>TOPOGRAPHY

Ecuador is characterized by three distinct regions: the coast; the highlands, or Sierra; and the eastern interior lowlands, or Oriente. The coast, except for a hilly area west of Guayaquil, is a low al-

luvial plain from 32 to 185 km (20 to 115 mi) wide, comprising about one-quarter of the national territory. It extends from sea level to the base of the Cordillera Real of the Andes, at an elevation of about 460 m (1,500 ft). The Guayas in the southwest and the Esmeraldas in the northwest form the principal river systems and serve as important arteries of transportation in their respective regions.

The highlands constitute another fourth of the country. This region is formed by two parallel ranges of the Andes, from 110 to 290 km (70 to 180 mi) wide, and the intervening narrow central plateau, nearly 640 km (400 mi) long. This inter-Andean plateau is divided into 10 basins at altitudes from 2,400 to 2,900 m (7,800 to 9,500 ft), some draining east and some west. The Andes are studded with massive snow-capped volcanoes, the highest of which are Chimborazo, 6,267 m (20,561 ft); Cotopaxi, 5,897 m (19,347 ft), the world's third-highest active volcano; Cayambe, 5,790 m (18,996 ft); Antisana, 5,705 m (18,717 ft); Altar, 5,320 m (17,454 ft); Iliniza, 5,266 m (17,277 ft); Sangay, 5,230 m (17,159 ft); and Tungurahua, 5,016 m (16,457 ft).

The Oriente, forming part of the upper Amazon Basin, begins at the base of the Andes at about 1,200 m (4,000 ft). The land at first drops quickly and is segmented by rushing torrents escaping from the cold highlands. At about 260 m (850 ft), the forests become almost level, and the streams suddenly widen into sluggish, meandering rivers as they begin their journey down the Amazon system to the Atlantic.

Ecuador is located on the South American Tectonic Plate, near the Nazca Plate that is off the western coast. As such, it is an area

of frequent, though usually moderate, seismic activity. One of the worst earthquakes in history occurred off the coast of Ecuador on 31 January 1906. An 8.8 magnitude quake triggered a tsunami that reached as far north as San Francisco and as far west as Japan. Between 500 and 1500 people were killed by the event. More recent quakes have been significantly less destructive. An earthquake of 5.7 magnitude occurred east of Quito on 9 November 2005.

### **3 CLIMATE**

The climate varies with the region. Most of the coast consists of wet, tropical forest, increasingly humid toward the north. The cold Humboldt Current (also called the Peruvian Current), which flows northward along the coast of Peru and then heads out into the Pacific off the coast of central Ecuador, limits the rainfall on a strip of the coast extending from as far north as the Bay of Caráquez and widening to include most of the coastal lowlands south of Guayaquil. In the Guayaquil area there are two seasons: a hot rainy period, lasting from January to May; and a cooler dry season, during the rest of the year, when sea breezes modify the equatorial heat. The tropical forests of the Oriente, east of the Andes, are more humid than the coast; there, temperatures are high, and rain falls all year round.

The climate of the central plateau is governed mainly by the altitude. The capital, Quito, at 2,850 m (9,350 ft), has perpetual spring, with an average temperature of 13°C (55°F) and about 127 cm (50 in) of rainfall annually. The highlands are cut by numerous deep valleys, which bring subtropical climates to within a few miles of the more temperate areas. Cold and wind increase as the slopes surrounding the central plateau ascend to form the páramo, or highland meadow. The higher areas rise to peaks above 5,200 m (17,000 ft) that are perpetually covered with snow.

### **4 FLORA AND FAUNA**

The arid savanna strip along about half of Ecuador's coast, with occasional low shrubs and isolated ceiba trees, contrasts sharply with the northern coast and the inner portion of the southern coast. In these humid regions, the typical dense growth of the tropical jungle abounds, extending as wet mossy forests up the Andean slopes to over 2,400 m (8,000 ft) in some places. Beyond the moisture barrier formed by the Western Cordillera, the high mountain slopes above 3,000 m (10,000 ft) are covered with wiry páramo grass and, in the northern province of Carchi, with a mulleinlike plant, the fraylejón (*espeletia*).

The highland valleys, at an altitude between 2,400 and 3,000 m (8,000 and 10,000 ft), support most of the temperate-zone plants; potatoes and corn, for example, have been raised there for thousands of years. There are few native trees in the highlands; eucalyptus was introduced in the 1860s and has been widely planted. The Oriente has little that is unique to tropical flora except for the delicious naranjilla, a small green orange used in making a conserve.

Ecuadoran forests support the usual smaller mammals, reptiles, and birds. In the highlands, the condor and a few other species of birds are found. There is relatively little wild game because of the density of the population and the intensive use of the land. The Amerindians still make some use of the llama in southern Ecuador. Throughout the highlands, Amerindians and some mestizos

raise cavies (guinea pigs) in their homes as an important source of meat.

As of 2002, there were at least 302 species of mammals, 640 species of birds, and over 19,300 species of plants throughout the country.

### **5 ENVIRONMENT**

Ecuador's major environmental problems are erosion in the highland areas; deforestation, especially in the Oriente; and water pollution. The Ecuadoran Institute of Water Resources estimated that the amount of arid land increased by 31.5% between 1954 and 1979, when 7.5% of the coastal lowland and Sierra were classified as arid. Between 1981 and 1985, 340,000 hectares (840,000 acres) of land were deforested annually. By the 1990s, Ecuador had lost over 30% of the original mangrove area, which covered over 117,000 hectares. From 1990–2000, the annual rate of deforestation was about 1.2%. In 2000, about 38% of the total land area was forested. It was estimated that, at current deforestation rates, coastal forests will be completely eliminated within 10 years and the Amazon forests will be gone within 40 years. Traditional farming practices have been blamed for most of these problems, but oil development has also played a role in the clearing of forests. A program for reforestation and maintenance of existing forests was initiated in 1979, but only 4,000 hectares (10,000 acres) were reforested annually during the early 1980s. Ecuador's principal environmental agency is the Ministry of Natural Resources and Energy. Land erosion is accelerated by deforestation.

Flooding and desertification are related problems which have damaged or eliminated valuable soil, particularly in the western coastal region. Water pollution is a problem due to the influx of domestic, industrial, and agricultural contaminants. The nation has 432 cu km of renewable water resources with 82% used for agricultural purposes. Some 92% of all urban dwellers and 77% of the rural population have access to pure drinking water.

In 2003, about 18% of the land area was legally protected. The Galápagos Islands and Sangay National Park are natural UNESCO World Heritage Sites. There are 11 Ramsar wetland sites. The expansion of Ecuador's population centers threatens its wildlife. Endangered species on the Ecuadoran mainland include the tundra peregrine falcon, yellow-tailed woolly monkey, five species of turtle (green sea, hawksbill, olive ridley, leatherback, and South American river), and three species of crocodile (spectacled caiman, black caiman, and American).

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 34 types of mammals, 69 species of birds, 10 types of reptiles, 163 species of amphibians, 12 species of fish, 48 types of mollusks, and 1,815 species of plants. Endangered species in the Galápagos Islands include the dark-rumped petrel, Galápagos dark-rumped petrel (a subspecies), black petrel, African ass, two species of turtle (green sea and hawksbill), and the Galápagos giant tortoise and 11 of its subspecies. A subspecies of Galápagos giant tortoise is extinct, and another may be. Darwin's Galápagos mouse, the Fernandina Galapagos mouse, Charles Island tortoise, and the Duncan Island tortoise have become extinct.

Ecuador's natural attractions could lead to increased tourism, benefiting the economy. However, environmental problems, including further endangerment of native plants and animals, could

be exacerbated without careful management of the areas attractive to tourists.

## 6 POPULATION

The population of Ecuador in 2005 was estimated by the United Nations (UN) at 13,032,000, which placed it at number 67 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 33% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.1%, a rate the government viewed as too high. The government incorporated family life education into the school curriculum in an attempt to address the high adolescent fertility rate. The projected population for the year 2025 was 17,473,000. The population density was 46 per sq km (119 per sq mi).

The UN estimated that 61% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.05%. The capital city, Quito, had a population of 1,451,000 in that year. Guayaquil, the major port, had 2,387,000 metropolitan inhabitants. Other large cities and their estimated populations were Cuenca (285,700), Machala (204,400), and Portoviejo (175,700).

## 7 MIGRATION

Ecuador has had no large-scale immigration since the colonial period, and emigrants have generally outnumbered newcomers. There was an influx of European refugees in the late 1930s. In 1959, a modest attempt was made to colonize the northern coastal province of Esmeraldas with Italian families. Within Ecuador, the largest migration is from rural areas to the cities, as urban employment opportunities widen. There is also a growing movement from the overpopulated highlands to the virgin lands of the Oriente and the coast.

At the end of 2004, there were around 16,281 persons who concerned the United Nations High Commissioner for Refugees (UNHCR) in Ecuador. Most of these people were living and working in the capital, Quito. Also in 2004, there were 8,450 refugees under UNHCR's program in Ecuador, mostly from Colombia and Peru; there were also 1,660 asylum seekers, also mainly from Colombia and Peru. The net migration rate estimated for Ecuador in 2005 was -6.07 migrants per 1,000 population. In 2003 worker remittances totaled \$1.5 billion. By 2005 about 12% of Ecuador's population had emigrated abroad, remitting almost \$2 billion year. About one-third emigrated to Spain and over 600,000 Ecuadorians were in the United States, most in the New York City area and many from Azuay and Canar provinces. The government views the migration rates as satisfactory.

## 8 ETHNIC GROUPS

The population of Ecuador is about 65% mestizo (mixed Amerindian and Spanish). About 25% are Amerindian, 7% are Spanish or others, and another 3% are black. There are only a few groups of unassimilated Amerindians on the coast, notably the Colorados and Cayapas. The blacks live mainly in the northern coastal province of Esmeraldas. The Amazon Basin is inhabited by many primitive tribes, including the Jívaros, once famous for their shrunken-

LOCATION: 1°26'30" N to 5°1' S; 75°11'44" to 81°1' W. BOUNDARY LENGTHS: Colombia, 590 kilometers (368 miles); Peru, 1,420 kilometers (887 miles); Pacific coastline, 2,237 kilometers (1,398 miles). TERRITORIAL SEA LIMIT: 200 miles.

head war trophies, and the Záparos, Aucas, Secoyas, and Cofanes. In the early 1980s, the tribes were organized in the Federación Shuar, which seeks to preserve their cultural identities.

## 9 LANGUAGES

The official language of Ecuador is Spanish, spoken by over 90% of the population. The Spanish of the coastal areas is similar to that of the other lowland areas of Latin America, maintaining something of the Andalusian characteristics, especially the dropping or slurring of the consonants represented by *s* and *d*. In the isolated highlands, a more precise Castilian pronunciation is found, but many words and even some of the singsong intonations of Quechua, the Amerindian language, have crept into the Spanish.

A small percentage of the total population speak only Quichua, a dialect of the Quechua language. Some speak Quichua in addition to Spanish. Quechua was imposed on the Amerindians of Ecuador by the conquering Incas in the 15th century, supplanting a number of unrelated languages. Remnants of these forgotten languages are retained in many modern place names. There has been little detailed study of the languages of the tribes of the Oriente.

## <sup>10</sup>RELIGIONS

Introduced by the Spaniards with the conquest in 1540, Roman Catholicism is by far the dominant religion. In fact, the Roman Catholic Church is considered to be one of the three pillars of society, along with the government and the military. According to 2005 estimates, over 95% of the population identified themselves as Roman Catholics. Some individuals combine customs and beliefs of traditional indigenous religions with their practice of Catholicism. Protestants, including Anglicans, Baptists, and Methodists, make up about 2% of the population. Other denominations include Lutherans, Jehovah's Witnesses, Mormons, Episcopalians, Presbyterians, Eastern Orthodox, and Rosicrucians. Buddhists, Baha'is, Hindus, Jews, Muslims, Scientologists, and the Unification Church have small communities. Animistic religions survive among the Amerindians of the Oriente. Itzachilatan is one Amerindian church. Some natives are followers of Inti, the Incan sun god. Freedom of worship is guaranteed by the constitution and this right is generally respected in practice.

## <sup>11</sup>TRANSPORTATION

The topography and climate of Ecuador have greatly hindered the development of adequate means of land transportation. In 2003 there were 43,197 km (26,843 mi) of highways, including 7,287 km (4,533 mi) of paved roads. The Pan American Highway (1,076 km/669 mi in Ecuador) extends the length of the highlands from Tulcán on the Colombian border to Loja in the south and on to Peru. In 1970, the five-nation Bolivarian Highway was undertaken, as were east-west routes linking the Oriente with the Sierra, and Guayaquil with its hinterland. The most important lateral route connecting the highlands and the coast runs from Latacunga, crossing a pass in the Cordillera Real over 3,650 m (12,000 ft) high, to Quevedo in the lowlands. In 2003, there were 529,359 passenger cars and 269,248 commercial vehicles.

Modern port facilities to serve Guayaquil were opened in 1963 on an estuary 10 km (6 mi) from the Guayas River. The Guayas River basin is important for transportation in the coastal provinces. Other international ports are Esmeraldas, Puerto Bolívar, and Manta; La Libertad and Balao can accommodate oil tankers. In 2005, Ecuador's merchant marine consisted of 31 ships of at least 1,000 GRT, with a total gross registered tonnage (GRT) of 241,403. As of 2003, Ecuador had 1,500 km (933 mi) of internal navigable waterways, but most are inaccessible.

Railways, all government owned, are of decreasing importance because of their poor condition and competition from highways. As of 2004, the nation's three railroad networks totaled 965 km (600 mi) of narrow gauge track, of which the most important line ran between Guayaquil and Quito. Floods in 1983 damaged much of the system, and by 1986 service had been restored on only some of the sections. The railway system has been largely inoperative for the last decade, following damage by a major earthquake.

Ecuador's rugged topography has hastened the growth of air travel. There were an estimated 205 airports and airfields in 2004. In 2005 a total of 85 had paved runways, and there was also one heliport. Those airports at Guayaquil (Simon Bolivar) and Quito (Mariscal Sucre) provide international service. In 2003, total scheduled airline traffic amounted to 8 million freight ton-km and around 1.123 million passengers were carried on scheduled do-

mestic and international airline flights. The government-run Ecuatoriana de Aviación provides service between Ecuador and the rest of Latin America.

## <sup>12</sup>HISTORY

Archaeological explorations indicate that the coastal regions of present-day Ecuador supported corn-cultivating communities as early as 4500 BC. In the first few centuries AD, the population was divided into dozens of small isolated tribes. By AD 1000, the highland groups had formed a loose federation, the Kingdom of Quito, but they were absorbed into the Inca Empire in the late 15th century. Atahualpa, son of the conquering Inca Huayna Capac and a Quito princess, later became emperor, but by then the Spanish forces under Francisco Pizarro were gaining a foothold on the coast.

Pizarro's pilot, Bartolomé Ruiz, the first European to see the Ecuadorian coast, arrived in 1526 on a scouting expedition. The actual conquest reached Ecuador in 1531. Except for a few emeralds, from which their first landing place took its name (the city and province of Esmeraldas), the Spanish found those shores valuable only as a stopping place on their way to the riches of the Incas in Peru. Sebastian de Belacázar, a lieutenant of Pizarro, extended Spanish dominion northward from Peru after the conquest of the Incas. He found the northern capital of the Inca Empire left in ashes by the retreating Amerindians, and on that site in 1534, he founded the city of San Francisco de Quito, later to become the capital of the republic.

The Spanish governed the region as the Audiencia of Quito, part of the Viceroyalty of Peru. Quito, in the cool highlands, was soon steeped in culture and rich in ornately decorated churches and monasteries. Guayaquil, the principal seaport, grew slowly because of its unhealthy tropical climate, and would not become a major city until much later. The Spanish colonial period was a time of ruthless exploitation of the Amerindians and bickering and bloodshed among the Spanish in the struggle for power and riches.

### Republic of Ecuador

The early stirrings of Ecuadorian independence were spread, in part, through the writings of the 18th-century satirist Francisco Javier Eugenio de Santa Cruz y Espejo. Abortive revolts against Spanish rule came in 1809 and in 1811. The decisive struggle began on 9 October 1820, with the proclamation of an independent Guayaquil. Finally, on 24 May 1822, with the Battle of Pinchincha, the Spanish were defeated. This victory unified the liberation movements of the continent. Simón Bolívar and José de San Martín met in Guayaquil in 1822 to consider the future of newly freed areas. Liberated Ecuador became part of Bolívar's dream, the Republic of Gran Colombia, consisting of modern Ecuador, Colombia, Venezuela, and Panama. In 1830, when this union collapsed, the traditional name Quito was dropped in favor of La República del Ecuador, "The Republic of the Equator."

The Republic's first president was Juan José Flores, one of Bolívar's aides. The 15-year period of Flores's domination was noted for iron-handed conservative rule. In 1832, he occupied the Galápagos Islands in a comic-opera invasion witnessed only by the giant tortoises native to the islands. Then, from 1845-60, Ecuador went through 11 presidents and juntas. The nation was split

between pro-clerical Conservatives and the more secular Liberals, and regional strongmen vied for power.

From 1860 to 1875, Ecuador was ruled by the fervently religious Conservative Gabriel García Moreno, Ecuador's first great statesman. He sought peace and consolidation for his torn country through a rigid, theocratic government. His administration granted special privileges to the Roman Catholic Church, even dedicating the Republic to "The Sacred Heart of Jesus" by act of congress in 1873. Beyond his religious zeal, García Moreno was also known for developing roads and public education, beginning the Guayaquil-Quito railway, and putting Ecuador on a firm financial footing. However, his relentless conservatism caused bitter strife, culminating in the dictator's assassination in 1875. In the ensuing period of confusion, the Conservatives were not able to carry on the program of García, nor could the opposition take command until the emergence of Gen. Eloy Alfaro, who ushered in the Radical Liberal era with the revolution of 1895. He and the succeeding Liberal presidents were able to counteract much of García's program. Church and state were carefully separated, and liberty of thought, worship, and the press was established. The Guayaquil-Quito railway was completed, uniting the coast and the highlands commercially.

The Liberal era continued until 1944, with numerous interludes of violence and crisis. The economy rose and fell with world prices on such commodities as cocoa. Territory was lost to Brazil in 1904, Colombia in 1916, and finally Peru in 1942. The border dispute with Peru, originating in the colonial period, came to a climax when Peru invaded Ecuador's southern and Oriente (Amazon Basin) provinces. The Río de Janeiro Protocol awarded to Peru the greater part of the Amazon Basin territory claimed by Ecuador.

In 1944 José María Velasco Ibarra came to power as a nationalist denouncing the Río agreement. Velasco, who had served as president during 1934–35, ruled for three years until he was sent into exile. After three ineffective presidents in less than one year, Galo Plaza Lasso (1948–52) was elected to the presidency. Plaza, later chief of the OAS, ruled for four years. In 1952, Velasco Ibarra returned to office for four years, and was again elected in 1960. In his inaugural address, Velasco formally renounced the Treaty of 1942, and embarked on an economic program of "growth through inflation."

By 1961, with Ecuadorian currency in a slump and consumers heavily taxed, the air force revolted and sent Velasco into exile, thus ending Ecuador's unprecedented streak of elected governments. Vice President Carlos Julio Arosemena Monroy assumed the presidency on 7 November 1961. Arosemena lasted less than two years, and in July 1963, he was arrested by the military for "drunkenness" (a charge that could have been substantiated throughout his presidency) and sent into exile.

#### **Military governments**

A four-man military junta headed by Capt. Ramón Castro Jijón took over and ruled until March 1966. Elections were scheduled and held in October 1966 for a constitutional assembly. Otto Arosemena Gómez, cousin of Arosemena Monroy, became provisional president. In 1968, new elections were held for the presidency, won yet again by Velasco. On 22 June 1970, following a fiscal crisis, Velasco suspended the 1967 constitution and assumed

dictatorial power. He dissolved Congress, reorganized the Supreme Court, and proceeded to rule by executive decree.

In June 1971, Velasco promised new presidential and congressional elections, which were scheduled for the following June. However, on 15 February 1972, Velasco was overthrown in a bloodless coup after he refused demands by senior army officers to postpone the elections. On the following day, Gen. Guillermo Rodríguez Lara was installed as head of a new military government. Velasco, deported to Panama, was granted asylum by Venezuela.

#### **Return to elected government**

The regime of General Rodríguez lasted for four years, and then he was ousted on 12 January 1976. A three-member Supreme Council assumed power and presidential elections took place in July 1978, but because none of the candidates received the required majority, a runoff election was held in April 1979. The winner was Jaime Roldós Aguilera, a populist running under the banner of the Concentration of Popular Forces. Christian Democrat Osvaldo Hurtado was made vice president. Both were inaugurated on 10 August 1979, the day Ecuador's current constitution went into effect. Roldós was killed in a plane crash on 24 May 1981, whereupon Hurtado became president until 1984.

Hurtado's term was marked by modest gains in the economy, but by 1984, a flagging economy, caused in part by widespread flooding, led to calls for change. The 1984 election was won by León Febres Cordero Rivadeneira, a conservative Social Christian who advocated a free-enterprise economic policy. Febres formed a coalition government and pressed his platform of reducing state intervention in the economy and making it more responsive to market forces. Just as it appeared that Febres's fiscal policies were about to bring widespread benefits to the populace, Ecuador was dealt two staggering blows: the 1986 plunge in world oil prices and a devastating earthquake in March 1987.

In presidential elections held 31 January 1988, Rodrigo Borja Cevallos of the Democratic Left (ID) Party and Abdalá Bucaram Ortiz of the Roldista Party (honoring ex-president Jaime Roldós) won the most votes in a field of 10 candidates. Borja won the runoff election, and took office along with a strong contingent in congress. The government made improvements in Ecuador's human rights record; however, economic troubles, particularly inflation, continued, and the ID lost half its congressional seats in midterm elections in 1990. In 1992, voters elected a conservative government, headed by President Sixto Durán-Ballén of the Republican Unity Party (PUR) and Vice President Alberto Dahik of the Conservative Party (CP). Durán-Ballén imposed severe economic measures to try to improve Ecuador's situation. These measures proved economically successful, but socially unpopular.

On 26 January 1995, the longstanding border dispute with Peru sprang to life once again when Ecuadorian troops attacked a Peruvian post. A full-fledged war began, which lasted until March 1, causing some 80 casualties and leaving 200 wounded. Although the war created further economic difficulties for Ecuador, it also stirred national pride and Durán-Ballén's popularity rose on the tide of fervent patriotism. By the fall of 1995, however, Durán-Ballén had once again fallen from favor due to charges of political corruption against himself and Vice President Alberto Dahik. Dahik fled the country, and Durán-Ballén served the remainder of his presidential term with little support.

In July 1996, Abdalá Bucaram was elected president. A showy and eccentric populist, Bucaram quickly alienated most of the political establishment. Bucaram had come to describe himself as “El Loco,” or the madman, and citizens began to believe that he was indeed crazy. On February 6, Congress declared Bucaram mentally incompetent, charged him with corruption, and ousted him from office. Bucaram was accused of absconding with \$100 million to \$300 million in public funds during his brief presidency. Vice President Rosalia Arteaga and Fabian Alarcon, leader of Congress, claimed the presidency. Bucaram finally fled to Panama, while Arteaga agreed to briefly become president until Congress could establish right of succession. Alarcon emerged as interim president, and held office until the next presidential election in 1998. Through most of the 1990s, Ecuador suffered double-digit inflation as high as 50–60% a year. By 1999, the economy had contracted by 7.5%, and over 62% of Ecuadorians lived in poverty. Many of the country’s Pacific Coast communities were battered by El Niño storms during early 1998, causing millions of dollars in damage.

Presidential elections were held in May 1998, with Harvard-educated Jamil Mahuad facing Alvaro Noboa, a banana tycoon and reputedly the richest man in the country. With promises for political stability and economic recovery, Mahuad prevailed at the polls and took office in July 1998. The next month, extensive constitutional reforms approved by a National Constituent Assembly took effect. Reforms gave unprecedented new rights to the country’s indigenous peoples, who had become more vocal about their rights during the 1990s.

In 1996, the leaders of 11 indigenous groups joined with women, ecologists, and human rights workers to found the Pachakutik (“change” or “revolution” in Quichua) political movement. Under this new political umbrella, native peoples urged massive social changes, and won several seats in Congress by 2000. By late 1999, native peoples had grown disenchanted with Mahuad. Amerindian leaders accused him of lacking sympathy for native peoples’ economic problems. Mahuad also had overseen a \$1.2 billion bailout of 18 corrupt banks. The financial scandal only widened after a jailed banker claimed he had given \$3.1 million to Mahuad’s presidential campaign. In the meantime, Mahuad was unable to bring the economy under control and was making political enemies. In May 1999, Mahuad and Peruvian president Alberto Fujimori formally ended their border dispute. Ecuador gained a small sliver of land and navigation rights on some Peruvian rivers. The peace accord was seen as a defeat within Ecuador, where the military resented its loss of power and resources and was embarrassed by territorial concessions to Peru.

In January 2000, Mahuad announced plans to replace the sucre, the national currency, with the US dollar to stabilize the economy and end chronic inflation. Indigenous groups grew angry at the plan because they believed they would lose their savings. The sucre had been pegged at about 8,000 per dollar only a year earlier, but now stood at 25,000 per dollar. On 21 January, thousands of indigenous peoples marched to protest “dollarization” of the economy and called for Mahuad’s ouster. With the aid of the military, they occupied the empty Congress building and Supreme Court. Mahuad fled the government palace. Gen. Carlos Mendoza took power and declared that a three-man junta would lead the country. The junta was composed of Antonio Vargas, leader of the

Confederation of Indigenous Nationalities of Ecuador, Carlos Solorzano, a former Supreme Court justice, and Col. Lucio Gutierrez. The junta only lasted a few hours. Under intense international pressure, the junta was dissolved. Congress named the 62-year-old vice president, Gustavo Noboa Bejarano, as president. Noboa, a respected former academic carried out the dollarization of the economy. By giving up its currency, Ecuador turned its monetary policy to the US Federal Reserve seeking to stabilize its economy.

In the October 2002 presidential elections, newcomer Lucio Gutiérrez ended first with slightly over 20% of the vote in a field of 11 presidential candidates. He went on to win the runoff election with 58.7%, easily defeating Alvaro Noboa, the candidate favored by the outgoing president. Gutiérrez had entered politics after he led a coup attempt in 2000 to oust president Mahuad. Gutiérrez assembled a loose coalition of smaller parties and indigenous groups and campaigned against established parties. Although he used a populist rhetoric to win the election, after his inauguration he has sought to reassure foreign investors and international lending institutions. He has maintained the economic policies of his predecessors and has softened his criticism of the dollarization initiative. After years of economic stagnation, the economy began to show signs of recovery in 2001 and continued during the first years of the Gutiérrez government. Yet, more than 70% of the population lived in poverty in 2002.

Political tensions increased in 2004 and Gutiérrez showed signs of losing control. Despite strong economic growth, unemployment and underemployment remained high and the cost of living, exacerbated by the dollarization scheme, continued to hurt the poor. Because political parties have focused on obstructing the president’s legislative initiatives and because Gutiérrez alienated support from former friendly legislators, the Gutiérrez government was widely deemed as ineffective. The failed effort by Gutiérrez to replace Supreme Court justices with friendlier faces was used by opponents to denounce Gutiérrez authoritarian tendencies. A former military coup plotter, Gutiérrez was often authoritarian and disrespectful of political opponents. Opposition against his government, fueled by opposition parties and built on popular discontent with economic policies, combined with Gutiérrez’s effort to undermine the Supreme Court were sufficient to provoke new protests against the government. Gutiérrez was forced to resign on 20 April 2005. Vice President Luis Alfredo Palacio, who had fallen out with Gutiérrez shortly after taking office, was appointed president. New presidential and parliamentary elections were scheduled for 26 November 2006.

The political challenges Ecuador faces are complex. The last three democratically elected presidents were forced to resign due to social protests or were removed from office by the legislature. The legislature became specialized on blocking presidential initiatives and weakening the executive. Yet, fragmented political parties failed to constitute themselves into a positive and constructive force. The political instability that has characterized Ecuador, even in good economic years, rendered the country’s democracy as ineffectual.

### 13 GOVERNMENT

Since 1860, Ecuador has had 17 different constitutions. The most recent constitution came into force in August 1998. The previous constitution was approved on 10 August 1979, in preparation for a

return from military to civilian rule. That document was amended in 1984 and again in 1996, but many Ecuadorians believed their needs were not reflected by that document. In 1998, a 70-member elected National Constituent Assembly rewrote the constitution. Unprecedented rights granted to native populations and blacks were among key reforms. The constitution gave them equal rights, additional rights that guaranteed their lands, protected their culture and customs. Native peoples were allowed to use their own languages and teach their children in their native languages at schools, although Spanish remained the official language of the nation. The constitution also emphasized unity in diversity. Eradicating poverty was a key component written into the new constitution, which also prohibits granting amnesty to human rights violators. The constitution also prohibits the death penalty.

The unicameral Chamber of Representatives (or Congress) consists of 100 members chosen for five-year terms by proportional representation from each of the country's 22 provinces. The chamber meets in full session for two months a year, leaving the rest of its business to four permanent committees. The president and vice president are elected for a four-year term, and are not allowed to seek consecutive terms. As is traditional in Ecuador, the president initiates the budget and appoints the cabinet, as well as provincial governors, many administrative employees, and diplomatic representatives. Under the 1998 constitutional reforms, the chamber may no longer remove cabinet ministers (it forced the finance minister out of office late in 1986, and ousted the president of Ecuador in February 1997), although the parliament has managed to oust two presidents since the constitution came into effect. The president also controls the armed forces and can declare a state of siege. Voting is compulsory for literate people aged 18 to 65, and optional for illiterates.

## 14 POLITICAL PARTIES

The constitution guarantees the right of democratic activities of political parties. A party must gain a minimum of 5% of the vote to remain in the electoral registry and retain its legal standing. The 1998 constitution also allows candidates without party affiliation or party backing to run for office. It also makes it the responsibility of the government to promote equal participation of men and women in politics. There are currently some 25 parties with parliamentary representation in Ecuador.

Two major parties played dominant roles prior to the 1960s. The Conservative Party (Partido Conservador—PC), which held sway during the first half of the republic's history, was the political representative for the Roman Catholic Church, and its support came from the large landowners of the highlands. The principal opposition, the Radical Liberal Party (Partido Liberal Radical—PLR), which rose to power in the revolution of 1895, was supported by businessmen and the newer city elite. It sought scrupulous separation of church and state, especially in public education, and called for the development of industry and the attraction of foreign capital.

Modern parties on the right include the Social Christian Party (PSC), the Republican Unity Party (PUR), and the Ecuadorian Conservative Party (PCE). On the left are the Democratic Left (ID), linked to the Social Democratic Movement; the Popular Democracy Party (DP) of former President Hurtado; the traditional

Ecuadorian Radical Liberal Party (PLRE); and the Radical Alfarista Front (FRA).

Ecuador's populist tradition has given rise to many parties, organized along highly personalist lines, such as the Roldista Party (PRE), formerly headed by Abdalá Bucaram, the Popular Revolutionary Action (APRE), and the Concentration of Popular Forces (CFP).

The far left in Ecuador has been beset by factionalism and governmental intrusion. In the 1920s, the original Socialist Party of Ecuador split into the Socialist Party and the Communist Party. Further splits occurred with the advent of the Cuban revolution. Currently, the Popular Democratic Movement (MPD), the Ecuadorian Socialist Party (PSE), and other parties vie for the non-Communist vote. Communists are divided between the Communist Party of Ecuador (PCE), which is identified as a pro-North Korean faction, and the Communist Party of Ecuador/Marxist-Leninist (PCMLE), which is identified as Maoist.

In the 1996 national elections, an indigenous electoral movement called Pachakutik (Quichua for "change") sponsored candidates for offices on the national, provincial, and local levels. Pachakutik candidates won eight seats in Congress as well as several mayoral positions in cities throughout the country. Their successes, although small on the overall national scale, increased the voice of indigenous peoples in Ecuadorian politics and prodded the traditional political parties to give more attention to long-neglected indigenous concerns. Lucio Gutiérrez allied with Pachakutik for the 2002 election and appointed some of that party's leaders to his cabinet. But the influence of the indigenous movement has been limited by Gutiérrez's personalist leadership and the party's limited political power resulting from its small parliamentary delegation. In fact, Gutiérrez's demise began when Pachakutik legislators withdrew their support from the government in 2004.

In the October 2002 elections, 14 different parties won seats in the legislature. The PSC remained as the largest party, but it only captured 24 seats in the 100-member chamber. Lucio Gutiérrez's parties captured less than 10 seats. The persistent problem of weak political parties and personalist leadership by populist politicians has worsened. Since 1996, three presidents could not finish their constitutional terms. Political parties are widely seen as fractional and obstructionist with little intraparty discipline and unpredicted interparty alliances. The next legislative elections were scheduled for October 2006.

## 15 LOCAL GOVERNMENT

The three levels of local government—province, canton, and parish—are controlled by the central government in a fundamentally unitary system. Ecuador has 20 continental provinces, plus the insular Galápagos Islands. The provincial governors, who are appointed by the president, are responsible to the interior ministry. Each province is divided into cantons, which in urban areas are administratively subordinate to the municipality with which they coincide. A municipal council is popularly elected and in turn elects its officers. In the larger towns, a mayor is popularly elected. The municipality is unique in that it lies somewhat outside the unitary pattern and is less subject to national control than are the other units of local government. The rural canton, of little importance in the sparsely populated Oriente and northern coast, is significant in the more developed regions of the highlands and

the coastal provinces of Guayas and Manabí. The highest official of the canton, the political chief, is appointed by the president on the recommendation of the provincial governor.

## 16 JUDICIAL SYSTEM

Traditionally, the judicial function has been carried out by five levels of tribunals. The parochial judge, the political lieutenant appointed by the president to supervise the affairs of the parish, handles only minor civil cases. Cantonal courts, at least one in each canton, try minor civil and criminal actions. Provincial courts handle all but a few of the criminal cases and the more serious civil and commercial suits. Superior courts handle appeals from the lower courts and have other administrative duties in the district; they may try original cases only if these relate to the affairs of their district. The Supreme Court has 31 justices and 3 alternates chosen by the National Chamber of Representatives for six-year periods.

Although citizens are afforded a wide range of freedoms and individual rights, there remain some shortcomings in the functioning of the judicial system, which is susceptible to political pressure. Police officers are tried only in closed session before police courts so that convictions for abuse or other violations are rare. Despite laws restricting arbitrary arrest and detention, such violations continue to occur in practice. Modernization of the court system began in 1993. In 1998, a new Judicial Council, with the power to administer the court system and discipline judges, began operations. In November of that year, the council's disciplinary committee fired two judges and two court employees for improperly releasing suspected drug traffickers. Because Ecuadorians continued to distrust the judicial system, reports of citizens taking the law into the own hands by lynching or burning criminal suspects continued into the year 2000.

Discontent with the judicial system, President Gutiérrez used repeated accusations of corruption to try to intervene with the Supreme Court. So far, efforts at reforming the judicial system have been primarily motivated by political short-term gains.

## 17 ARMED FORCES

In 2005 Ecuador's active armed forces personnel numbered 46,500, which were supported by 118,000 reservists. The Army numbered 50,000 personnel whose equipment included over 30 main battle tanks and 150 light tanks, over 90 reconnaissance vehicles, 130 armored personnel carriers, and more than 156 artillery pieces. The Navy consisted of 5,500 personnel including 1,700 Marines and 250 naval aviation personnel. Major naval units included 2 tactical submarines, 2 frigates, and 6 corvettes. The Air Force had 4,000 members and 22 combat capable aircraft that were made up of fighter ground attack aircraft. Paramilitary forces consisted of a 270-member Coast Guard. In 2005, Ecuador's defense budget totaled \$593 million.

## 18 INTERNATIONAL COOPERATION

Ecuador is a charter member of the United Nations, having joined on 21 October 1945; it belongs to ECLAC and several specialized agencies. Ecuador is also a member of the Inter-American Development Bank, G-77, the Latin American Economic System (LAES), the Latin American Integration Association (LAIA), Latin American Energy Organization, the Andean Community

of Nations, the OAS, and the Río Group. Ecuador received full membership in OPEC in 1973. The country holds associate status in Mercosur.

The country is part of the Nonaligned Movement and a signatory of the 1947 Río Treaty. Ecuador is also a part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In environmental cooperation, Ecuador is part of the Antarctic Treaty, the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law on Climate Change and Desertification.

## 19 ECONOMY

Ecuador is the world's leading exporter of bananas, and it also exports flowers, cocoa, coffee, tuna, and shrimp, and is developing export markets for other tropical fruits and vegetables. Tourism has become the country's third-largest earner of foreign exchange, after oil and remittances from expatriates. Since the 1970s Ecuador's economy has been dominated by oil, and vexed by indigenous opposition to the impacts of oil exploration and development. Ecuador's average annual GDP growth rate exceeded 9% in the 1970s, due largely to high oil prices. As oil prices fell in the early 1980s, debt began to increase. Furthermore, a major earthquake in 1987 interrupted oil production and exports. The average annual GDP growth rate between 1988 and 1998 was 2.9%. Growth stemmed mainly from increased petroleum production and expansionary fiscal policy.

The administration of President Ballén, elected in July 1992, raised petroleum derivatives taxes and electricity tariffs, while cutting public expenditures and freezing public sector employment. As a result, the 1992 public sector deficit fell from 7% to 2.8% in 1995. The inflation rate, which stood at 60% at the end of 1992, fell to 25% by 1995. Although the Ballén administration's reforms were relatively successful in stabilizing the economy and encouraging foreign investment, key sectors like petroleum, utilities, and aviation still experienced heavy government involvement.

The late 1990s brought a border dispute with Peru, shortages of electric power, and high interest rates that combined to restrain growth in the GDP. Large parastatals put off the interest of foreign investment. The growth rate was only 1% in 1998, the inflation rate soared to 43%, and government corruption was rampant. In 1999, the economy experienced a currency and banking crisis, a default on public debt, and soaring inflation, which reached 60% for the end of the year. Real GDP declined 6.3%, falling 8.2% on a per capita basis. In January 2000 the US dollar was adopted as legal tender, and in April the US dollar was adopted as Ecuador's legal currency in an effort to control inflation which soared to over 100%, ending the year at about 80%. Real GDP increased 2.8% in 2000 although only 0.9% on a per capita basis. In 2001 real GDP growth increased to 5.2% (3.2% on a per capita basis) and the inflation rate moderated to 22.4%. However, economic growth slowed again in 2002, a reflection mainly of internal inefficiencies in public administration and in the running of the state oil corporation. Real GDP grew an estimated 3% and only 1.1% on a per capita basis. End of period inflation, however, fell to 9%, the lowest level in decades. In March 2003 the IMF agreed to a one-year standby arrangement with Ecuador's new government designed to sup-

port measures to bring about macroeconomic stability beginning with a freeze on public sector wages. In December 2003 Ecuador's second pipeline, the \$1.3-billion, 500-km (312-mi) Oleoducto de Crudos Pesador (OCP) pipeline opened. The OCP pipeline when it reaches full capacity will about double Ecuador's oil transporting capacity, which is 400,000 barrels per day, the capacity of the country's only other oil pipeline. In June 2003 the old pipeline was ruptured briefly by mud slides caused by heavy rains mixed with ash from the volcanic eruption of El Reventador. The participants in the OCP consortium include EnCana (Canada, 31.4%); Repsol-YPF (Spain, 25.6%); Pecom Energia (Argentina, 4.1%), Occidental Petroleum (United States, 12.2%); and AGIP (Italy, 7.5%), with construction by the Ecuador company Techint. The project implies increased exploration and development of Ecuador's oil reserves in order to fill the new pipeline. A substantial portion of increased oil revenues were then slated to be applied to paying down the country's \$15 billion foreign debt.

While GDP growth in 2003 decreased to 2.7%, it jumped again to 6.9% in 2004, only to fall back to an estimated (Economist Intelligence Unit) 3% in 2005. However, since 2001 inflation has been steadily decreasing from a recorded 37.7% in 2001 to 2.4% in 2005.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Ecuador's gross domestic product (GDP) was estimated at \$52.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$3,900. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2005 was 2%. It was estimated that agriculture accounted for 7.4% of GDP, industry 31.8%, and services 60.8%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.545 billion or about \$119 per capita and accounted for approximately 5.7% of GDP. Foreign aid receipts amounted to \$176 million or about \$14 per capita and accounted for approximately 0.7% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Ecuador totaled \$18.47 billion or about \$1,421 per capita based on a GDP of \$27.2 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.3%. In 2001 it was estimated that approximately 26% of household consumption was spent on food, 15% on fuel, 13% on health care, and 10% on education. It was estimated that in 2001 about 45% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, there were an estimated 4.6 million employed wage earners in urban areas. As of 2003, agriculture accounted for 9.1%, followed by 21.7% in industry, and 69.2% in services. The unem-

ployment rate in 2005 officially stood at 11.2%, although the underemployment rate was estimated at 47%.

Although most workers in Ecuador have the right to organize and join a union, legal protections have been insufficient. In addition, members of the armed forces, the police, and most public sector employees are prevented from joining a union, engaging in collective bargaining, or striking. In 2005, only 2–3% of the nation's labor force was affiliated with a labor union. Of those, 25% were covered by a collective bargaining agreement. The right to strike is protected by law after a mandatory 10-day cooling off period.

The labor code provides for a 40-hour workweek and two consecutive rest days each week. Overtime is limited to 12 hours per week at premium pay rates. The legal minimum working age was set at 15 years for all types of work. Also, minors are limited to working six hours per day and five days per week. Minors are also prevented from working in environments where there are hazardous conditions (mines), among dangerous machinery, and where there are toxic or dangerous substances. In spite of these laws, child labor remains a significant problem as of 2005. The minimum monthly wage plus mandatory bonuses equaled about \$166 per month in 2005. However, this wage does not provide a satisfactory standard of living for a family, but most earn more than this proscribed amount. Health and safety standards are generally protected by the Labor Code.

## 22 AGRICULTURE

Although Ecuador's main economic activity has long been agriculture, only about 11% of the land is arable or under permanent crops, and another 18% is permanent pasture. Throughout the 1970s, agricultural development was neglected because of the emphasis on oil exploitation, and the sector showed negative rates of growth, declining by 5.4% in 1978, 2.8% in 1979, and 2% in 1980. During 1985–90, however, agriculture (along with fishing and forestry) showed an average annual increase of 4.8%. Agricultural production had an average annual growth of 1.7% during 1990–2000. But during 2002–04, crop production was down 2.8% from 1999–2001. Agriculture employed 25.9% of the labor force in 2000 and contributed 8% to GDP in 2003.

The land census of 1974, which covered a much larger area than the previous census of 1954, showed that during the intervening period the number of agricultural units had grown by 172,810. This increase was the result of agrarian reform and colonization, initiated in 1964. Ceilings imposed on the maximum size of holdings ranged from 800 hectares (2,000 acres) of arable land plus 1,000 hectares (2,500 acres) for pasture in the Sierra region to 2,500 hectares (6,200 acres) plus 1,000 hectares (2,500 acres) of pasture in the coastal region. The 1975 plans of the Ecuadorian Land Reform and Colonization Institute called for the redistribution of 80,000 hectares (198,000 acres) of land in the coastal region.

Traditionally, agricultural products have included bananas, coffee, tea, rice, sugar, beans, corn, potatoes, and tropical fruit. Exported products of more recent prominence include roses and carnations, strawberries, melons, asparagus, heart of palm, and tomatoes. The major crops of the highlands are corn, barley, wheat, kidney beans, potatoes, horsebeans, peas, and soybeans, all for domestic consumption. Agriculture on the coast is large-

ly oriented toward the export market. Increased acreage and improved yields, as well as the government's price-support program, have caused rapid growth in agriculture. Most of the cacao crop is produced on plantations of 60 hectares (150 acres) or larger, but the more important banana and coffee crops are grown mainly on small landholdings by independent farmers. Banana exports rose from less than 5% of total exports after World War II (1939–45) to 62.2% in 1958; in 1974, they were 10.8%, and in 2004, 13.3%. Ecuador is the world's leading banana exporter, selling almost 4.7 million tons abroad in 2004. Cacao became a valuable export in the mid-1970s, but low prices and declining harvests had a negative impact on revenues until the early 1980s, when they began to rise again. In 1978 and 1979, coffee brought high export earnings (\$281.2 million and \$263.1 million, respectively), but with lower world prices, coffee export earnings fell to \$106 million in 1981, despite an increase in production. Revenues rose steadily during the 1980s, reaching \$290 million in 1986, but fell to \$75 million in 1992. Coffee revenues in 2004 amounted to \$14.6 million.

Principal commodities in 2004 (in tons) were sugar, 5,400,000; bananas, 5,900,000; corn, 651,000; plantains, 652,000; palm oil, 261,000; potatoes, 400,000; cocoa beans, 88,000; and coffee, 83,000. The production of paddy rice reached one million tons in 2004.

The agricultural sector of the economy presents potential for further development and growth. Crops for domestic consumption, particularly rice, barley, maize, African palm, and potatoes, continue to show growth due to increased area planted and improved yields. Other segments likely to experience growth are nontraditional agricultural products such as flowers, fresh fruit, vegetables, and processed foods. The government's agricultural policy focuses on integration into the World Trade Organization, import tariffs, and the lack of credit in the agricultural sector.

### **2<sup>3</sup> ANIMAL HUSBANDRY**

The dairy industry is located in the most fertile valleys of the highland plateau from Ibarra to Riobamba, where irrigation is available. The beef cattle industry is an important part of the agricultural economy, as exports to Colombia and Peru have become more profitable; there were 4,951,300 head of cattle in 2005. Nearly all the sheep (2,550,000 in 2005) are in the highlands; most are raised by Amerindians and are pastured at over 2,700 m (9,000 ft). The wool is of poor quality. Hogs and goats, found throughout the country, are frequently diseased and poorly fed; in 2005 there were an estimated 1,949,000 hogs and 250,000 goats. The use of bananas as hog feed has made hog farming more attractive economically. Poultry production has been steadily growing—208,870 tons in 2005, up from an annual average of 69,000 tons during 1989–91. Beef production totaled 206,500 tons in 2005. Milk production in 2005 totaled 2,546,000 tons, and eggs, 75,000 tons.

### **2<sup>4</sup> FISHING**

In the waters around the Galápagos Islands, Ecuador has some of the world's richest fishing grounds, particularly for tuna. In the past, these waters were exploited mainly by foreign companies, but in recent years, Ecuadoran enterprises have participated more fully. Shifts in ocean currents can cause great variance in the annual catch. Ecuador is a leading producer of canned tuna. Shrimp farming occupies some 110,000 hectares (over 270,000 acres). Ec-

uador produces more shrimp than any other nation in the Americas, and exports more than 35,000 tons annually, mostly to the United States. Rainbow trout aquaculture is being developed in the Andean highlands. The total catch in 2003 was 465,084 tons, down from 1,003,380 tons in 1986. Exports of fish and fish products in 2005 totaled \$780.5 million.

Ecuador proclaimed sovereignty over its coastal waters to a limit of 200 km. In 1952, along with Peru and Chile, Ecuador signed the Declaration of Santiago (joined later by Colombia) to enforce these rights.

### **2<sup>5</sup> FORESTRY**

One of Ecuador's vast untapped resources is its forestland. Forests, half of which are government owned, cover 10,557,000 hectares (26,086,000 acres), or 38.1% of the total mainland area. During 1990–2000, the annual average rate of deforestation was 1.2%. The tropical forests contain more than 2,240 known species of trees. Some of the denuded highlands have been planted with eucalyptus trees, which prevent soil erosion and provide both fuel and rough lumber. Total roundwood production in 2003 was 6.3 million cu m (221 million cu ft). About 50% of the wood cut was burned as fuel.

Ecuador is the world's largest producer and exporter of balsa. Several varieties of hardwoods, including species of mahogany, are used in cabinetmaking. Other forest products having some importance are the fiber for Panama hats (toquilla palm), vegetable ivory (tagua palm), kapok (ceiba tree), quinine (cinchona bark), and rubber.

### **2<sup>6</sup> MINING**

Ecuador was heavily dependent on petroleum production, its leading industry and export commodity in 2003. The country had extensive but underdeveloped gold resources and other minerals. In 2001, Ecuador produced cadmium, copper, gold, lead, silver, zinc, cement, bentonite, common clay, kaolin, feldspar, crude gypsum, silica (glass sand), ferruginous sand, stone, sand and gravel (limestone, marble, pozzolan, pumice), salt, and sulfur. The country also contained known mineral resources of bismuth and tin. Production totals for 2003 included: gold, estimated at 3,020 kg, up from 2,750 kg in 2002; silver, 100 kg, up from 96 kg in 2002; kaolin, 9,330 metric tons, up from 8,483 metric tons in 2002; limestone, 6.28 million tons, down from 6.699 million tons in 2002; and marble, 292 metric tons, up from 265 metric tons in 2002. The slow pace of exploration and mining activities reflected low metal prices and recent political and economic uncertainties and disappointments.

### **2<sup>7</sup> ENERGY AND POWER**

In recent years, an increasingly important percentage of Ecuador's national income has come from the petroleum industry. With estimated proven oil reserves of 4.6 billion barrels, as of 1 January 2005, Ecuador has the third-largest oil reserves in South America, and is the continent's fifth-largest oil producer. Initially, this industry was slow in developing, and production actually declined from 2,849,000 barrels of crude oil in 1965 to a low of 1,354,000 barrels in 1971. Starting in the 1970s, however, output increased dramatically, from 28,579,000 barrels in 1972 to 77,052,000 barrels in 1981, and to 109,400,000 barrels in 1991. After Ecuador

withdrew from the Organization of the Petroleum Exporting Countries (OPEC) in 1992, the country's daily crude oil production rose from 321,000 barrels in 1992 to nearly 400,000 barrels by the end of 1995. Production in 2004 was estimated at 534,800 barrels per day, of which crude oil accounted for 528,200 barrels per day. Net oil exports in 2004 were estimated at 390,800 barrels per day. During the first 11 months of that year, oil exports to the United States totaled 226,000 barrels per day. Ecuador is only second to Venezuela as a source of oil imports for the United States. Petroecuador, the state oil agency, is the largest oil producer in Ecuador, controlling around 37% of the country's output.

The most productive oil fields are located in the northeast corner of Ecuador, with Occidental's Eden Yuturi the nation's largest oil field, which in the first half of 2004, produced more than 75,500 barrels per day. Ecuador has two major oil pipelines: the first, the 310-mile Sistema Oleducto Trans-Ecuatoriano (SOTE); and the 300-mile Oleducto de Crudos Pesados (OCP). The two pipelines can transport 400,000 barrels per day and 450,000 barrels per day, respectively. SOTE is frequently affected by natural disasters. In March 2004 oil shipments via SOTE were halted due to a landslide and in 1987, a large section of the pipeline was taken out by an earthquake, which cut Ecuador's oil output by more than 50% in that year. Ecuador has three oil refineries, with a combined capacity of 176,000 barrels per day, the largest of which, is the 100,000 barrel per day, Esmeraldas facility that is located on the Pacific coast.

Ecuador's proven reserves of natural gas are relatively small, estimated at 345 billion cu ft, as of 1 January 2005. Production and consumption of natural gas in 2002, is each estimated at 3.5 billion cu ft.

Although it is estimated that Ecuador had no consumption of coal in 2002, the country does have 26 million short tons of recoverable coal reserves.

Ecuador gets approximately 63% of its electric power from hydropower sources, with conventional thermal plants providing the remainder. However, the country's heavy reliance upon hydroelectric power has resulted in periodic power shortages during the dry season, which runs from October to March. In 1995, a serious drought affected hydroelectric generating capacity and daily blackouts became common. When drought struck again in 2001, the government declared an energy emergency, urging the public to conserve energy. More than 60% of the country's hydroelectric generating capacity comes from the Paute plant, located in the eastern part of the nation. In 2002, it is estimated that Ecuador had an installed generating capacity, electric power output, and consumption of: 3.3 GW; 11.5 billion kWh; and 10.8 billion kWh, respectively.

## 28 INDUSTRY

Ecuador enjoyed a period of prosperity in the 1970s, due in large part to a boom in oil. A decline in international oil prices, an earthquake in 1987, and political difficulties hampered industrial development during the 1980s. During 1988–98, manufacturing output increased by an annual average of 2.5% per year. According to official estimates, in 1998 manufacturing contributed an estimated 22% GDP, but achieved only minimal growth during that year, and negative growth in 1999. A default on external debt in 1999 resulted in a 70% depreciation of the currency which nega-

tively impacted the industrial sector. The subsequent dollarization and rise in oil prices in the early 2000s caused a rise in export revenue.

Ecuador had three oil refineries in 2002, with a production capacity of 176,000 barrels per day. The construction of the new Transandean Heavy Oil Pipeline (OCP, in Spanish) due for completion in 2003 slated the petroleum industry for further growth. The most promising sectors, outside of oil, are linked to agriculture and natural resources. In the agricultural sector, expansion has come from processed foods and nontraditional agricultural products, such as flowers and fresh tropical fruits (mango, babaco, and passion fruit) and vegetables (asparagus and heart of palm). Other major manufactured items include canned seafood, automobiles, processed coffee, and cocoa. In the early part of the decade, Ecuador was also increasing its production of automobiles. Other industries include textiles, chemicals, wood products, metal work, paper products, and plastics.

## 29 SCIENCE AND TECHNOLOGY

In 1996, Ecuador had 20 agricultural, medical, scientific, and technical learned societies and research institutes, most notably the General Directorate of Hydrocarbons, the Institute of Nuclear Sciences, the Ecuadoran Institute of Natural Sciences, and the National Institute of Agricultural Research, all in Quito; the Charles Darwin Research Station in the Galápagos Islands; and the Naval Oceanographic Institute in Guayaquil. Ecuador has 19 colleges and universities offering degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 27% of college and university enrollments.

In 1998 (the latest year for which the following data is available) Ecuador had 84 researchers and 73 technicians per million people engaged in research and development (R&D). In that same year, R&D spending totaled \$31.485 million, or 0.08% of GDP, of which 90.6% came from the government, with 8.9% and 0.5% coming from foreign sources and private nonprofit institutions, respectively. In 2002, high technology exports were valued at \$34 million, accounting for 7% of all manufactured exports.

## 30 DOMESTIC TRADE

The major commercial centers are Quito, Guayaquil, Cuenca, and Santo Domingo de los Colorados. Importers may have headquarters in these locations, with retail branches and warehouses throughout the country. Most buyers prefer to make retail purchases directly from the manufacturers.

Rural domestic trade among the *campesinos* (indigenous peoples) is limited by frequent deep levels of poverty and underdevelopment. The (mostly urban) middle class is relatively moderate in size, and suffered major declines in purchasing power during the 1980s and 1990s, when economic growth faltered. Unemployment and underemployment have stimulated the growth of informal domestic economic activity.

The nation's economy is primarily based on petroleum and agricultural exports. The industrial segment, including petroleum, food processing, textiles, paper and wood products, plastics, lumber, chemicals, and fishing, primarily supplies the domestic market.

In the mountains, businesses are generally open from 8 AM to 6 PM, with a two-hour midday break; lunch hours are longer along

the coast during the hottest months (December–April). Banks are usually open from 9 AM to 1:30 PM and from 2 to 6 PM during the week. Urban and suburban factories typically operated from 7 AM to 4 PM.

### 3<sup>1</sup> FOREIGN TRADE

Ecuador's trade balance is generally positive, due overwhelmingly to its oil exports. Ecuador's oil reserves and refineries account for slightly over half of the country's commodity exports. Agricultural exports include bananas and plantains, shellfish, coffee and cocoa, and fish. In 2000, the government raised the price of Ecuadorian petrol by 60% in order to forge an economic recovery. Ecuador exports about half of its petroleum to the United States, while the United States supplied 24.3% of Ecuador's imports in 2005. Ecuador's exports in 2005 were destined for the United States (55%), Colombia (6.3%), Germany (5.3%), Russia (4%), and South Korea (4%). Imports came from the United States, Colombia (13%), Brazil (6.9%), Venezuela (5.9%), and Japan (5.2%). Principal imports include raw materials, consumption goods, capital goods, fuel, and lubricants.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Ecuador's balance of payments showed repeated deficits on current accounts until the vast increases in petroleum exports during the 1970s; only in 1974 did the net balance finally register a surplus of \$26.7 million. International reserves rose steadily from \$57.3 million in 1967 to \$64.7 million in 1971, increased dramatically (with the rise in oil exports) from \$143.4 million in 1972 to \$1 billion by December 1980, and then dropped (as the oil market softened) to \$304 million at the end of 1982, but were up to \$500 million by 1987. In 1992, currency appreciation caused a narrowing in the trade surplus, which pushed down international reserves. In 1994, increased production in the petroleum, banana, construction, and manufacturing sectors generated growth of 4%, up from 3% the

year before, helping Ecuador post a merchandise trade surplus of \$435 million. The surplus, however, was offset by a deficit on the services account resulting in a current account deficit of \$807 million. Increased exports in 1995 were partially offset by increased military imports due to the conflict with Peru. The current account deficit in 1997 also showed an increase of military imports with a deficit of \$734 million (according to the US embassy in Ecuador). The 1998 peace agreement with Peru assuaged the balance of payments deficit, but by that time the flight of private capital due to the unstable political situation had precipitated a negative turn in the economy. Capital flight still remained a problem in the early 2000s, due to a difficult investment climate, a fragile banking system, and continued economic and political uncertainty.

External debt was approximately 80% of GDP in 2000 (at approximately \$14 billion in debt), an improvement over 1999 when the debt-to-GDP ratio was 100%, due in large measure to the depreciation of the sucre prior to dollarization. Though Ecuador's debt had risen to \$18.1 billion by 2005, the debt-to-GDP ratio had dropped to roughly 60%.

The International Monetary Fund (IMF) reported that in 2003 Ecuador had exports of goods totaling roughly \$6.2 billion and imports totaling roughly \$6.3 billion, making for a trade deficit of approximately \$72 million. The services credit totaled \$900 million and debit \$1.6 billion.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank of Ecuador, founded as a private bank in 1927, was declared an organ of the state in 1948 by the Monetary Board. The Central Bank issues and stabilizes currency, holds and manages foreign-exchange reserves, issues import and export permits, and regulates international transactions. The Monetary Board supervises government monetary, financial, and exchange policies. In 2002, there were 22 private banks operating in Ecuador. The five largest banks included Banco Popular, Filanbanco, Banco del Progreso, Banco del Pichincha, and Banco del Pacifico.

The government-owned National Development Bank (BNF) was founded in 1928 to provide credit for agricultural and industrial development. Other major government-owned financial institutions are the Bank of the State (BEDE), the National Finance Corporation (CFN), the Ecuadorian Housing Bank (BEV), and the Development Bank of Ecuador (BEDE).

On 1 December 1996, President Abdalá Bucaram anchored the fully convertible sucre to the dollar. In July 1997 the sucre was pegged at a fixed exchange rate of 4 new sucres (4,000 old sucres) per dollar. Bucaram was dismissed from the government for incompetence, and his plan was abandoned by the Alarcon government, which introduced a currency auction system to minimize fluctuations between the sucre and the dollar. The sucre depreciated by almost 200% in 1999. In 2000, President Mahuad decided to dollarize the economy at 25,000 sucres per dollar. He was also ousted in a coup d'état on an anti-dollarization platform, but the incumbent President Naboia went ahead with the plan anyway. IMF-backed recovery plans for 2001 included massive amounts of foreign assistance. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.9 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$4.9 billion. The

discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 16.44%.

Trading in securities is relatively minor. Ecuador has two stock exchanges, one in Quito and the other in Guayaquil, both established in 1969. Market capitalization of the Guayaquil Stock Exchange was \$2.581 billion in 2004, with a trading value of \$99 million. As of that same year, a total of 30 companies were listed on the Guayaquil Stock Exchange. Purchase and sale of government and some private securities are functions of the National Financial Corp., which, along with several hundred business people, owns the two stock exchanges. This autonomous agency, founded in 1964, deals in mortgage bonds issued by banks for agricultural and industrial development and in general seeks to mobilize funds for technical assistance to industry.

### 34 INSURANCE

The principal branches of insurance are fire, marine, and vehicular, with some growth in aviation and aircraft. Other branches, including life, are still undeveloped. Work-related injuries and imports are required to be insured.

Insurance is closely governed by legal provisions determining necessary reserves and security funds and requiring a percentage of investments in government securities. The Superintendency of Banks periodically examines insurance operations and authorizes the formation of new companies. In accordance with the General Insurance Law of 1965, all insurance companies must apply to the Bank Superintendency for authority to operate.

It has been proposed to privatize the management of pension funds in the state security system, the Instituto Ecuatoriano de Seguridad Social (IESS). This will be made possible by separating the IESS into three sectors: health, pensions, and rural social security. In 2003, the value of all direct premiums written totaled \$458 million, of which \$412 million were nonlife. Colonial was the country's top nonlife insurer, in 2003 with \$56.6 million gross premiums written. Pan American Life was the country's leading life insurer, with \$12.8 million of gross life premiums written in that same year.

### 35 PUBLIC FINANCE

The central government, 20 provincial and some 100 municipal governments, and a large number of decentralized autonomous agencies constitute the public sector of the Ecuadoran economy. Central government budgets in the late 1970s and early 1980s grew expansively from one year to the next, with oil being the key source of income. Economic reforms instituted in 1992 rose domestic fuel prices and utility rates, eliminated subsidies, and brought the government budget into balance. These changes helped eliminate the budget deficit by 1994. The government was able to maintain budgetary control in 1995 when faced with increased military expenditures because of the border conflict with Peru, with a deficit of only 1.4% of GDP. However, the 1996 balance ran a deficit of 3% due to increased public spending. A growing fiscal deficit in the late 1990s due to declining oil prices, El Niño damage, and the inefficiencies of the public sector, caused the removal of several political leaders. The extreme financial cri-

sis during 1999 and 2000 caused the total public debt to rise from 64% of GDP in 1997 to 116% of GDP in 1999.

The US Central Intelligence Agency (CIA) estimated that in 2005 Ecuador's central government took in revenues of approximately \$8.8 billion and had expenditures of \$8.1 billion. Revenues minus expenditures totaled approximately \$669 million. Public debt in 2005 amounted to 44.9% of GDP. Total external debt was \$17.01 billion.

### 36 TAXATION

Ecuador's tax structure includes an income tax, a 12% value-added tax (VAT), a stamp tax, a real estate tax, a transfer tax, municipal taxes, and inheritance and gift taxes.

As of 2005, the basic tax on corporate income was 25%. A reduced rate of 15% is available on the amount of profits that are reinvested. A withholding tax of 25% is also imposed upon certain payments made abroad. These include: royalty payments for technical assistance to nondomiciled companies and nonresident persons; payments to nonresident persons for services performed; payments made to nondomiciled firms for professional services performed abroad or occasional services performed in Ecuador. Dividends received as well as certain capital gains are not taxed. Personal income tax is assessed according to a progressive schedule ranging from 5–25%, up from a range of 0–15% in 2000. Additional rates and surcharges are applicable to certain classes of income. A stamp tax is levied on almost all commercial and legal documents. Estate, inheritance, and gift taxes vary according to the amount involved and the closeness of family relationship between donor and recipient. Municipal real estate taxes range from 0.3–2%. A special consumption tax is imposed on cigarettes, alcoholic beverages, soft drinks, motor vehicles, aircraft, helicopters, and ships.

### 37 CUSTOMS AND DUTIES

Import duties range from 0–20%, although there is a 35% duty applied to automobile imports. The average tariff rate is 13% ad valorem, as a result of Ecuador's accession to the World Trade Organization in 1996. Ecuador has a common external tariff (CET) with Colombia and Venezuela, ranging from 5% on raw materials and capital goods, 10% or 15% for intermediate goods, and 20% for consumer goods. A 12% VAT on imports based on CIF plus duty and all other taxes is placed on imports, with exemptions for agricultural inputs, petroleum development equipment, medicines, and books.

Ecuador is a member of the Andean Pact and the Latin American Integration Association (LAIA). Ecuador also has bilateral free trade agreements with Colombia, Bolivia, Venezuela, and Chile. All accord preferential duty treatment. Five free trade zones were established in 1991, including the Zona Franca de Esmeraldas, Zona Franca del Pacifico S.A., Zona Franca Centro Ecuatoriana CA, Zona Franca Manabi, and Parque Industrial de Cuenca CEM.

### 38 FOREIGN INVESTMENT

The government welcomes foreign investment and has substantially decreased regulatory barriers in recent years, though Ecuador's economy retains a considerable statist and protectionist orientation. As a member of the Andean Pact, Ecuador's foreign

investment policy is governed largely by the parameters of Andean Pact Decisions 291 and 292 of May 1991, which provide for equal treatment of foreign and domestic investors, and unrestricted remittance of profits overseas. As of 8 January 1993, foreign investment was allowed without previous authorization in virtually all sectors of the economy that were open to domestic private investment, with total repatriation permitted.

In 1997 the government passed a law on promoting foreign investment. Investment in telecommunications and electricity were opened in 2000, when the government announced plans to sell half of the rights in each sector. In 2001 a new mining law went into effect designed to spur increased foreign investment in Ecuador's considerable untapped mineral reserves. The law provides for 30-year, renewable concessions of up to 5,000 hectares (with no limit on the number of concessions per investor), with exploration and production covered by a single license and environmental regulation under a single, central authority. Licensing fees are called "conservation patents" and increase over the life of the concession. Concessions can be both transmitted (passed on to heirs) and transferred (rented, leased, or sold.) Four major mining companies were awarded concessions in 2002.

Foreign oil companies still have to work with PetroEcuador, the state oil company, which is judged to be sorely in need of foreign investment funds, particularly after the government default in 1999 and near-collapse of domestic banking system. In 2003, PetroEcuador's problems—production was 35% below the level in 1990—were under study by an international financial group headed by the IMF, which will doubtless prescribe more openness to foreign investment in the sector.

The annual average inflow of foreign direct investment (FDI) in Ecuador amounted to \$740.5 million in 1997 to 2000. In 2001 and 2002, the annual FDI inflow rose over 75% (to \$1.33 billion and \$1.28 billion, respectively), contrary to the worldwide trend of sharp decreases in inward FDI. Flows increased further in 2003, with the vast majority going to petroleum and mining. Major investors include the United States, Italy, Spain, and Argentina. Ecuador's good relations with the United States, plentiful natural resources, low wages and property costs, and membership in the Andean Community all serve to attract FDI. Detracting from these advantages, however, are the skills shortage, legal insecurity, and a small, infrastructurally underdeveloped business sector.

### 39 ECONOMIC DEVELOPMENT

In 1992–93, a major macroeconomic adjustment program was introduced, featuring a sizable currency devaluation (35%) and substantial increases in domestic fuel and electricity prices. Free trade agreements with Colombia, Venezuela, and Bolivia were signed, and new investment regulations were adopted to open up the economy to foreign investment and eliminate previous bureaucratic impediments. In April 1993, Ecuador qualified for Andean Trade Preference Act benefits, and became a member of the WTO in 1996.

High debt service obligations and external payments arrears to commercial banks impaired Ecuador's economic growth during the rest of the 1990s. The economy basically fell apart in 1999, despite aid throughout the decade from multilateral donors. In 2000, Ecuador accepted a \$600 million loan from the International Monetary Fund (IMF), IBRD, and the Andean Development

Corporation; while it rescheduled loan payments on \$600 million with the Paris Club. This was part of a total \$2 billion package from multilateral aid agencies to take place over a period of three years. In order to receive the money, the government was required to undertake a privatization program, and increase the price of petrol by 60%. Total external debt in 2001 reached \$14 billion, most of which was in default. The country adopted the US dollar as legal tender in 2000.

In March 2003, Ecuador negotiated a 13-month, \$205-million standby arrangement with the IMF. In 2002, economic growth was slow, due in part to tax cuts, a drop in oil output, large increases in a public wage bill, and a high-level corruption scandal. The government that took office in 2003 pledged to eliminate arrears, resolve remaining problems with closed banks, and modernize state-owned enterprises. Completion of a new Transandean Oil Pipeline was seen as a sign of potential output growth.

In 2004, Ecuador engaged in talks with Peru, Colombia, and the United States regarding a new free-trade agreement (to replace the 2002 Andean Trade Promotion and Drug Eradication Act—AT-PDEA—that was scheduled to expire in December 2006). As opposed to other nations in the region, the emphasis of economic policy in Ecuador continues to be on primary goods, and less on diversification of trade, making it vulnerable to terms-of-trade shocks. A lack of support for the proposed Hydrocarbons Law (concerning the privatization of the state-owned oil sector) led to its demise in July 2004, in general leading to one more failure to implement privatization fully in Ecuador. In the meantime, the high oil prices have helped Ecuador to accumulate foreign currency reserves from \$545 million in 2000 to \$849 in 2004.

### 40 SOCIAL DEVELOPMENT

Ecuador's social security program is administered through the Ecuadorian Social Security Institute. A 2001 law to overhaul the system has not yet been implemented. The government funds the Bono de Desarrollo Humano program, which provides assistance to the elderly and disabled. Old age pensions, disability and survivorship benefits are funded through employee and employer contributions, depending on the type of occupation. Unemployment benefits for public and private employees are provided by individual severance accounts and a social insurance program. There is a minimal family allowance for impoverished mothers with at least one child under 18 years of age.

Despite equal legal status, women have fewer educational and employment opportunities than men. There are fewer women in the professions, and salary discrimination is common. Social, economic, and cultural change is promoted by the Ecuadorian Women's Permanent National Forum. The Law Against Violence Affecting Women and Children criminalized domestic abused including psychological abuse. It also created family courts and gave authorities the power to remove an abusive spouse from the home. However, domestic abuse remained widespread in 2004.

Indigenous peoples in the Amazon area are increasingly demanding that the government take into account their interests before making decisions that affect their land. Human rights organizations reported cases of mistreatment of detainees and incommunicado detention. The judicial system is slow and pretrial detention may be lengthy.

## 41 HEALTH

Health facilities are largely concentrated in the towns and are both too expensive and too distant to be used by most of the highland Amerindian population. Hospitals are operated by agencies of the national government, the municipalities, and private organizations or persons. As of 2004, there were an estimated 148 physicians, 157 nurses, and 17 dentists per 100,000 people. Health care expenditure was estimated at 3.6% of GDP.

In 2002, the birthrate was an estimated 25.5 per 1,000 people. As of 2000, 66% of married women (ages 15 to 49) used contraception. The infant mortality rate in 2005 was 23.66 per 1,000 live births. Life expectancy that year was 76.21 years. In 1997, Ecuador immunized large numbers of children up to one year old as follows: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 76%; polio, 77%; and measles, 75%. The overall death rate was an estimated 5.4 per 1,000 people.

Malnutrition and infant mortality are the country's two basic health problems. Malaria is still a problem; 12,011 cases were reported in 1996. In 1999, there were 172 cases of tuberculosis per 100,000 people. In 1996, 40 cases of measles were reported. Cholera still persists; however, less than 1% of the 1,060 cases accounted for died of cholera in 1996. Other health problems are largely being controlled. Yellow fever was eliminated by the efforts of the Rockefeller Foundation. Two antituberculosis organizations have helped reduce the mortality from that disease, which earlier was responsible for one-fifth of the nation's deaths. In 2000, 71% of the population had access to safe drinking water and 59% had adequate sanitation.

The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 21,000 people living with HIV/AIDS in the country. There were an estimated 1,700 deaths from AIDS in 2003.

## 42 HOUSING

In 2001, there were about 3,456,103 housing units in the country. About 72% of all housing units were detached, single-family homes, 9% were apartments, and 4% were *ranchos* or *covachas*, dwellings of wood, stone, or brick covered with palm leaves, straw or other vegetation. About 20,085 dwellings were *choza*, temporary shacks or huts. Owners occupied 67%. About 18% of the population live in inadequate housing structures. Almost all rural homes and many city dwellings on the coast are made with split bamboo siding and a palm thatch or corrugated iron roof.

Over the past decade, the government has received substantial amounts of money from international organizations for projects focusing on low-income housing. A housing development bank, Banco de la Vivienda, was established in 1961.

## 43 EDUCATION

Education is free and compulsory from ages 6 to 15. Primary education is six years, followed by three years of basic secondary school. This is followed by a diversified secondary program with students opting for two or three years of study in humanities, science, or technology. A two year vocational program is also offered.

The academic year runs from October to July. The primary language of instruction is Spanish.

In 2001, about 73% of children were enrolled in some type of preschool program at age five. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 50% of age-eligible students. It is estimated that about 99% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 23:1 in 2000; the ratio for secondary school was about 12:1. In 2000, private schools accounted for about 22.7% of primary school enrollment and 24.6% of secondary enrollment.

The Central University of Ecuador dates from 1594. There are three Catholic universities, in Quito, Guayaquil, and Cuenca. The National Polytechnical School in Quito offers degrees in industrial science and mechanical engineering, while the Polytechnical School of the Littoral in Guayaquil provides training in naval and petroleum engineering and in the natural sciences. The adult literacy rate for 2004 was estimated at about 91%, with 92.3% for men and 89.7% for women.

The Ministry of Education is the principal authority for all educational programs except higher education, which is supervised by a national technical council. As of 2003, public expenditure on education was estimated at 1% of GDP, or 8% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The oldest and most important library in Ecuador is the Central University Library in Quito. It was founded in 1586 and has 170,000 volumes. Other important collections are maintained at the Cuenca University Library (more than 63,000 volumes) and at the National Library in Quito (over 70,000 volumes). Libraries are also maintained by the other universities; the municipalities of Quito, Guayaquil, Cuenca, and Riobamba; the Ecuadoran Culture House; the Central Bank of Ecuador (48,000 volumes); and other organizations, including the Ecuadoran Culture House, which holds the Laura de Crespo room of National Authors. The library of the Pontificia Universidad Católica del Ecuador in Quito contains about 119,854 books and serves as a depository library of the United Nations.

A number of museums in Ecuador preserve and display paintings, sculpture, coins, records, and artifacts of historic and scientific interest. One of Ecuador's best collections of Inca and pre-Inca objects is found in a privately owned museum near Cuenca. Quito has the National Museum and Archives, the Museum of Modern Art, the Archaeological Museum and Art Galleries of the Central Bank of Ecuador, the Jijón and Caamaño Archaeological and Historical Museum, and the museum of the Ecuadoran Culture House, as well as other smaller collections in schools and government agencies. There are municipal museums in many smaller cities, as well as ethnographic and historical museums.

## 45 MEDIA

Between the main cities and towns there are radiotelephone links. Quito is connected by telegraph with Colombia and Peru, and there are telephone and cable connections with all parts of the world. In 2003, there were an estimated 122 mainline telephones for every 1,000 people; about 14,500 people were on a waiting list

for telephone service installation. The same year, there were approximately 189 mobile phones in use for every 1,000 people.

Ecuador had 392 AM and 35 FM radio stations and 7 television stations as of 2001. In addition to the numerous local stations, there was one central government network, Radio Nacional del Ecuador. In 2003, there were an estimated 422 radios and 252 television sets for every 1,000 people. About 13.9 of every 1,000 people were cable subscribers. Also in 2003, there were 31.1 personal computers for every 1,000 people and 46 of every 1,000 people had access to the Internet. There were 38 secure Internet servers in the country in 2004.

In Quito, the leading newspapers, with their political tendencies and estimated daily circulations in 2004 as available, were: *El Comercio*, independent; *Hoy*, independent; *Últimas Noticias*, independent, 60,000; and *La Hora*, independent, 12,000. In Guayaquil, leading papers include *El Extra*, 380,000 (in 2004); *El Universo*, independent, 143,000; *La Segunda*, independent, 60,000; *Expreso*, independent, 60,000; and *El Telegrafo*, independent. In Cuenca, the conservative daily *El Mercurio* had a circulation of 18,000 in 2004.

The government requires all mass periodicals to participate in literacy and adult education campaigns. There is no censorship of newspapers or of radio and television stations, as ensured by Ecuador's constitution.

#### 46 ORGANIZATIONS

There are about seven chambers of commerce and industry and at least 10 employers' organizations. Workers' and business organizations include the National Association of Cocoa Exporters, Textile Industry Association of Ecuador, and the National Association of Coffee Exporters. Trade unions are not common.

The outstanding contemporary learned society is the Ecuadorian Academy, founded in 1875, and the second academy in Spanish America. It is a correspondent of the Royal Spanish Academy. The Ecuadorian Culture House prints works of contemporary Ecuadorian writers, encourages the investigation of scientific and social problems, and conducts discussions on cultural matters. The Andean Institute of Popular Arts, based in Ecuador, is a multinational organization that promotes interest and study in the arts through special programs and scholarships.

The Federacion Medica Ecuatoriana (Medical Federation of Ecuador) promotes research and education on health issues and works to establish common policies and standards in healthcare. There are also a number of associations dedicated to research and education for specific fields of medicine and particular diseases and conditions. Professional networking and educational associations exist for many other fields as well.

Fraternal organizations and service clubs in Ecuador include the Masons, Rotary clubs, and Lions clubs. The Scout Association of Ecuador and the Girl Guides have active programs. There is a Junior Chamber Program promoting leadership development for youth. Sports associations are active in supporting amateur competitions in a number of pastimes. Many social and charitable organizations are sponsored by the Roman Catholic Church.

The Charles Darwin Foundation for the Galápagos Isles, with multinational interest and membership, is based in Quito. Golondrinas Foundation is another environmental conservation organiza-

tion. The World Conservation Union has a regional office in Quito.

An organization called Ecuador Volunteer supports a number of service organizations throughout the country. The International Red Cross, Caritas, UNICEF, Habitat for Humanity, the Society of St. Vincent de Paul, and Amnesty International are active in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Ecuador's highlands, reached by air, by the spectacular railroad, or highway, are rich in natural beauty. Quito, the second-highest capital in the world, has modern hotels and transportation. Its churches and monasteries, with their delicately carved doors and altars, and an abundance of exquisite paintings and sculptures, make Quito, in the words of a 1979 UNESCO citation, a "cultural patrimony of mankind."

An important part of Ecuador's cultural life is the feria, or market day, which takes place weekly in many towns. The town of Otavalo, about 56 km (35 mi) north of Quito, is well-known for its colorful Saturday fairs. The Galápagos Islands, world-famous for their unusual wildlife, have become a popular site for ecotourism.

Tourism has experienced significant growth in Ecuador due to the natural attractions and architectural and historical sights. Further development of ecotourism must be carefully managed to avoid a negative impact on Ecuador's environment.

Tourists need a valid passport. Visas are only required for stays of over 90 days. Visitors need a yellow fever vaccination certificate if arriving from an infected area. Tourist facilities on the coast include modern resort hotels and fine beaches.

There were 760,766 tourists who arrived in Ecuador in 2003, about 55% from other countries in South America. That same year there were 38,237 hotel rooms with 86,466 beds. Tourism receipts totaled us\$408 million.

In 2005, the US Department of State estimated the daily cost of staying in Quito was us\$222. Expenses in Guayaquil were us\$172 per day.

#### 48 FAMOUS ECUADORANS

Ecuadorans claim Atahualpa (1500?–33), the last emperor of the Incas, as the first renowned figure in their country's history; during the civil war between him and his half-brother, Huáscar, his administration of the Inca empire was based in what is now Ecuador. The 16th-century Amerindian general Rumiñahui is remembered for his heroic resistance to Spanish conquest. During the colonial period, Quito produced notable artists and sculptors. Among these were Miguel de Santiago (d.1673) and the Amerindians Manuel Chile (Caspicara) and Pampite. Francisco Javier Eugenio de Santa Cruz y Espejo (1747–95), the national hero of Ecuador, inspired much of the independence movement through his political writings. Espejo advocated complete emancipation from Spain, autonomous government for each colony, and nationalization of the clergy. Although he did not live to take part in the War of Independence (he died in prison for his political activities), he was an important figure in its philosophical development.

Vicente Rocafuerte (1783–1847), an early president, made significant contributions to the development of the republic. Another president, Gabriel García Moreno (1821–75), was the first to achieve national consolidation; he also contributed to the literary

development of the nation. Juan Montalvo (1823–89) bitterly and brilliantly opposed conservatism in his essays and other works. Eloy Alfaro (1841–1912), another outstanding president, was noted for the honesty of his administration.

Among Ecuador's literary figures were Numa Pompilio Llona (1832–1907), a poet-philosopher, and Juan de León Mera (1832–94), a poet and novelist. Outstanding Ecuadorans of the 20th century include the poets Gonzalo Escudero (1903–71), Jorge Carrera Andrade (1903–78), César Dávila Andrade (1918–67), and Benjamín Carrión (1897–1979); the novelist Jorge Icaza (1906–78); the painter Oswaldo Guayasamin Calero (b.1919); José María Velasco Ibarra (1893–1979), who served five times as president of his country; and Galo Plaza Lasso (1906–87), a former president of Ecuador and of the OAS. Mike Judge (b.1962) is an animator, voice actor, writer, and producer for such US television series as *Beavis and Butt-head* and *King of the Hill*.

#### 49 DEPENDENCIES

Ecuador's only territory, administered as a province since 1973, is the Archipelago of Columbus (Archipiélago de Colón), more commonly known as the Galápagos Islands, after the Spanish name for the large land tortoise found there. The six largest islands of the group (with their earlier names in parentheses) are Isabela (Albemarle), Santa Cruz (Indefatigable), Santiago (San Salvador or James), Fernandina (Narborough), Floreana (Santa María or Charles), and San Cristóbal (Chatham). Lying on the equator, this cluster of 60-odd islands is scattered over nearly 60,000 sq km (23,000 sq mi) of ocean and has a total land area of 8,010 sq km (3,093 sq mi). The center of the group lies at about 90°w, some 1,130 km (700 mi) from the coast of Ecuador and about 1,600 km (1,000 mi) southwest of Panama.

Most of the islands are small and barren. The largest, Isabela, which is 121 km (75 mi) long and makes up half the land area of the group, has the highest volcano (now only slightly active), reaching 1,689 m (5,541 ft). The climate of these tropical islands is modified by the cold Humboldt Current, which keeps the mean annual temperature as low as 21°C (70°F). Desertlike low-lying areas contrast with mist-shrouded heights at 240 m (800 ft) and higher elevations that have considerable rainfall.

Charles Darwin visited the islands in 1835 during his voyage on the *Beagle*, and his observations there made an important contribution to the development of his theories of evolution and natural selection. The unique forms of plant and animal life found on the

various islands include 15 species of giant tortoise, considered to be the longest-lived creatures on earth, with a life span of about 150 years and a maximum weight of more than 225 kg (500 lb). In the mid-1980s, their number was estimated at 10,000. The Galápagos have 85 species of birds. In 1959, Ecuador declared the Galápagos a national park to prevent the extinction of the wildlife. The islands have since become one of the world's most noted focal points for naturalist studies and observations. About 21,000 visitors come to the islands each year.

Early Amerindian navigators, traveling on balsa rafts, frequently went to the Galápagos for the excellent fishing, but there is no evidence of any permanent settlement. Bishop Tomás de Berlanga of Panama landed at the Galápagos in 1535; he was the first of a series of Spaniards to visit the islands. In 1832, the first president of Ecuador, Juan José Flores, declared the islands a national territory. Several were used from time to time for penal colonies, but the practice was discontinued in 1959. The administrative seat is San Cristóbal. Only four of the islands are inhabited, and the estimated population numbers 6,000.

# EL SALVADOR

Republic of El Salvador  
*República de El Salvador*

**CAPITAL:** San Salvador

**FLAG:** The national flag consists of a white stripe between two horizontal blue stripes. The national coat of arms is centered in the white band.

**ANTHEM:** *Saludemos la Patria Orgullosos* (*Let us Proudly Hail the Fatherland*).

**MONETARY UNIT:** The US dollar became El Salvador's currency in 2001 replacing the colón.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some old Spanish measures also are used.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Independence Day, 15 September; Columbus Day, 12 October; All Souls' Day, 2 November; First Call for Independence, 5 November; Christmas, 25 December. Movable religious holidays include Good Friday, Holy Saturday, Easter Monday, and Corpus Christi; there is a movable secular holiday, the Festival (1st week in August).

**TIME:** 6 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

El Salvador, the smallest Central American country, has an area of 21,040 sq km (8,124 sq mi), extending 270 km (168 mi) WNW-ESE and 142 km (88 mi) N-S. Comparatively, the area occupied by El Salvador is slightly smaller than the state of Massachusetts. Bounded on the N and E by Honduras, on the S and SW by the Pacific Ocean, and on the NW by Guatemala, El Salvador has a total boundary length of 852 km (529 mi), of which 307 km (191 mi) is coastline. It is the only Central American country without a Caribbean coastline.

El Salvador's capital city, San Salvador, is located in the west central part of the country.

## <sup>2</sup> TOPOGRAPHY

El Salvador is a land of mountains and once-fertile upland plains. It is divided into three general topographic regions: (1) the hot, narrow Pacific coastal belt, 260 km (160 mi) long and 16–24 km (10–15 mi) wide; (2) the central plateau, at an altitude of about 610 m (2,000 ft), crossing from east to west, between two mountain ranges; and (3) the northern lowlands, formed by the wide Lempa River Valley, bounded by a high mountain range ascending to the Honduran border.

The central plateau, north of the Pacific coastal belt, is an area of valleys endowed with rich volcanic soil. This is the agricultural, industrial, and population center of the country; the capital, San Salvador (682 m/2,237 ft above sea level), is in this region. Almost surrounded by active volcanoes—Santa Ana (2,381 m/7,812 ft), San Vicente (2,173 m/7,129 ft), San Miguel (2,132 m/6,995 ft), San Salvador (1,967 m/6,453 ft), and Izalco (1,965 m/6,447 ft)—the region is a zone of recurrent earthquakes and volcanic activity; Izalco is known as the Lighthouse of the Pacific. El Salvador has sev-

eral lakes, the largest being Ilopango, Güija, and Coatepeque. The Lempa, the most important of some 150 rivers, rises in Guatemala and runs south into El Salvador, eventually reaching the Pacific.

## <sup>3</sup> CLIMATE

Located in the tropical zone, El Salvador has two distinct seasons: the dry season, from November to April, when light rains occur, and the wet season, from May to October, when the temporales, or heavy rains, fall. The coastal plain receives the heaviest rainfall. Some interior areas are relatively dry most of the year, necessitating irrigation and a selection of crops suited for arid land cultivation. The average annual rainfall is 182 cm (72 in). Temperatures vary with altitude, from the hot coastal lowlands to the semitropical central plateau; in general, the climate is warm, with an annual average maximum of 32°C (90°F) and an average minimum of 18°C (64°F). The average temperature at San Salvador is 22°C (72°F) in January and 23°C (73°F) in July.

## <sup>4</sup> FLORA AND FAUNA

Indigenous trees include the mangrove, rubber, dogwood, mahogany, cedar, and walnut; pine and oak are found in the northern mountainous region. Varieties of tropical fruit, numerous medicinal plants, and balsam, a medicinal gum, grow in the country. Native fauna (greatly reduced in past decades) includes varieties of monkey, jaguar, coyote, tapir, and armadillo, along with several kinds of parrots and various migratory birds. Fish, both freshwater and saltwater, turtles, iguanas, crocodiles, and alligators abound. Both venomous and nonvenomous snakes, the latter including the boa constrictor, are common in El Salvador.

As of 2002, there were at least 135 species of mammals, 141 species of birds, and over 2,900 species of plants throughout the country.

## 5 ENVIRONMENT

Because of heavy cutting, the forest resources of El Salvador had been reduced to about 5.8% of the total area by 2000. Forty-five percent of the wood taken from the forests has been used for fuel. Peasant farmers burn the small trees and other growth on the hillsides to plant corn and beans, thus hastening the erosion of the topsoil. Seventy-five percent of the land area in El Salvador is threatened by erosion and desertification at a rate of 20 tons per hectare per year. The government enacted forestry conservation measures in 1973, but they have had little effect on the rate of deforestation. Among the environmental consequences of forest depletion, in addition to loss of soil fertility, are diminution of groundwater resources and drastic loss of native flora and fauna.

Pollution is widespread and restrictions on waste disposal, including disposal of toxic waste, are lax. By 1993, 90% of El Salvador's rivers were polluted. Safe drinking water is available to 91% of the urban population and 68% of the rural dwellers. Forty-six percent of the nation's 18 cu km of renewable water sources is used for agricultural purposes.

There is no comprehensive national law controlling environmental protection, and the legislation that is on the books is poorly enforced. The National Environmental Protection Committee, established by decree in 1974, has had little impact. In 2003, about 0.4% of the total land area was legally protected. There are two Ramsar wetland sites.

The pollution of the environment in El Salvador is a serious threat to the survival of its plants and wildlife. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 2 types of mammals, 3 species of birds, 5 types of reptiles, 8 species of amphibians, 5 species of fish, 1 species of invertebrate, and 25 species of plants. Endangered species in El Salvador included the tundra peregrine falcon, four species of turtle (green sea, hawksbill, leatherback, and olive ridley), American crocodile, ocelot, spectacled caiman, jaguar, giant anteater, and Central American tapir.

## 6 POPULATION

The population of El Salvador in 2005 was estimated by the United Nations (UN) at 6,881,000, which placed it at number 98 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 33% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.0%, a rate the government viewed as too high. The projected population for the year 2025 was 9,052,000. The population density was 327 per sq km (847 per sq mi), which makes it the most densely populated country in Central America. Overpopulation is considered a major problem in El Salvador. A majority of the people live in the central plateau.

The UN estimated that 59% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.7% for 2000–2005. The capital city, San Salvador, had a population of 1,424,000 in that year. Other major cities and their estimated populations are Santa Ana (250,000) and San Miguel (245,428).

## 7 MIGRATION

Until the early 1980s, emigration and immigration were negligible in El Salvador, except for migration of Salvadorans seeking economic advantages in Honduras, a trend that inflamed tensions between the two nations and was an underlying cause of their 1969 war. At that time, 300,000 Salvadorans were estimated to have settled in Honduras; following the war, as many as 130,000 Salvadorans may have returned from Honduras. An estimated 550,000 people were displaced from their homes by warfare between 1979 and 1992.

While the United States granted temporary asylum to thousands of Salvadoran refugees under the administration of President Jimmy Carter (1977–81), the administration of President Ronald Reagan began returning them to El Salvador in 1981. Of the one million Salvadorans estimated to be in the United States in 1988, an estimated 550,000 had entered the country illegally, about 500,000 of them since 1979. Their remittances to their families in El Salvador were an important component of the stagnant economy, and their absence from the Salvadoran labor force kept local unemployment lower than it would otherwise have been. In 2002 worker remittances were 13.5% of GDP; in 2003 remittances amounted to \$2.2 billion. Where migration from rural to urban areas was once heavy, the pattern has changed as rural migrants bypass urban centers and migrate directly to the United States and Canada. Internal migration had also shifted significantly by 2004. The population of the peri-urban area around San Salvador more than doubled, while the population of the northern third of the country remained stagnant and the southeastern portion of El Salvador's population increased by more than 20%.

In 1989, Belize, Costa Rica, El Salvador, Guatemala, Honduras, Mexico, and Nicaragua adopted a five-year plan called CIREFCA to solve the problems of uprooted people. Between 1989 and 1994, this plan helped repatriate 30,000 Salvadorians to their homeland. Thousands more Salvadorans who decided not to go home were integrated into asylum countries. In 2000 there were 24,000 migrants living in El Salvador, including 100 refugees. By the end of 2004 only 1 person sought asylum in El Salvador, while 235 sought refuge. However, in that same year 127,941 Salvadorans applied for asylum in the United States and 415 in Canada. The net migration rate estimated for El Salvador in 2005 was -3.67 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The population of El Salvador is racially and culturally homogeneous, with about 90% mestizo (mixed European and Amerindian), 1% Amerindian (mainly the Pipil tribes), and 9% European.

## 9 LANGUAGES

The official language of the country is Spanish. A few Amerindians continue to speak Nahua.

## 10 RELIGIONS

About 57.1% of the population identify themselves as Roman Catholic; San Salvador is an archbishopric. About 21.2% of the population are members of various Protestant churches, with the

LOCATION: 13°9' to 14°26' N; 87°41' to 90°08' W. BOUNDARY LENGTHS: Honduras, 342 kilometers (212 miles); Pacific coastline, 307 kilometers (191 miles); Guatemala, 203 kilometers (126 miles). TERRITORIAL SEA LIMIT: 200 miles.

largest denominations being Baptists and Assemblies of God. There are also many active Protestant missions throughout the country. Approximately 2.3% of the populace are associated with other churches and religious groups, including the Church of Jesus Christ of Latter-Day Saints (Mormons), Seventh-Day Adventists, Jews, Muslims, and Amerindian tribal religionists, among others. As many as 16.8% of inhabitants have no religious affiliation whatsoever.

The constitution of 1962 guarantees religious freedom and exempts churches from property taxes. The constitution specifically recognizes the Roman Catholic Church, granting it legal status; however, it also provides that other churches may register for such status according to the Non-Profit Organizations and Foundations law. Certain Christian holidays are celebrated as public holidays.

## <sup>11</sup>TRANSPORTATION

As of 2002 there were 1,986 km (1,234 mi) of paved highways out of 10,029 km (6,232 mi) of roadway in El Salvador. The Pan American Highway links El Salvador with Guatemala in the northwest and Honduras in the southeast. The Cuscatlán Bridge, where the Pan American Highway crosses the Lempa River, was the main thoroughfare for travel between eastern and western El Salvador at the time of its destruction by guerrillas in January 1984. In

2003, registered passenger vehicles numbered about 67,500, and commercial vehicles numbered 98,250.

As of 2004, El Salvador's railroad mileage totaled 283 km (176 mi), down from 562 km (349 mi) in 2002, due to a lack of maintenance and general disuse. The entire rail system is narrow gauge and single track.

The country's three ports—La Unión/Cutuco, La Libertad, and Acajutla—are located on the Pacific coast. Acajutla was the only port in service and it only receives bulk goods. Finished goods arrive at Guatemalan or Honduran ports and are trucked into El Salvador. In 2002, El Salvador had no registered cargo ships. Inland waterway traffic is negligible, with only the Río Lempa partially navigable, as of 2004.

In 2004 there were an estimated 73 airports. In 2005 only four had paved runways, and there was also one heliport. El Salvador is linked with the entire Western Hemisphere, Europe, and the Far East through international air services provided by Transportes Aéreos Centroamericanos (TACA) and other transportation companies. The principal airport, El Salvador International, is near San Salvador. In 2003, about 2.966 million passengers were carried on scheduled domestic and international airline flights.

## <sup>12</sup>HISTORY

The Pipil Amerindians, a subgroup of the nomadic Nahuatl Amerindians, migrated from present-day Mexico to Central America

in about 3000 BC. The Pipil are believed to have organized their nation into two federated states comprised of smaller principalities in the 11th century, after the Mayan Empire that had held sway over the Nahuatl declined in the 9th century. They were an agricultural people, with a civilization comparable to the Aztecs, except that the Pipil had abolished human sacrifice. The Pipil also succeeded in building lasting urban centers that grew into current cities, such as Sonsonate and Ahuachapan. This fierce people—as well as two smaller groups, the Pocomans and the Lenca—lived in the area of present-day El Salvador met the Spanish conquistadors with significant resistance.

In 1524, Pedro de Alvarado, a Spanish conquistador sent by Hernán Cortés from Mexico, invaded El Salvador but was forced by Pipil resistance to retreat. After two additional attempts in 1525 and 1528, the Spanish eventually brought the Pipil under their control. When the conquistadors discovered the area's relative lack of precious metals, the Spanish monarch appropriated to Spanish settlers large tracts of land and the ability to collect tribute (forced payments) from the Amerindians under the terms of the *encomienda* system.

During the Spanish colonial period, San Salvador—founded by Alvarado—was one of six administrative regions of the captaincy general of Guatemala. This collective of Central American colonies declared their independence from Spain in 1821, but the first calls for liberation far preceded that date. At the La Merced church in San Salvador, Father José Matías Delgado cried out for independence on 5 November 1811, a day still commemorated as a national holiday in El Salvador. Following successful independence from Spain in 1821, Central America was annexed by the Mexican emperor, Agustín de Iturbide in 1822. When Iturbide was deposed a year later, the Central American states broke from Mexico to form a federation of El Salvador, Guatemala, Honduras, Nicaragua, and Costa Rica, which they named the United Provinces of Central America.

Perpetual conflict between liberals and conservatives forestalled any unification of the United Provinces of Central America into a national unit, as it crippled the legitimacy of the government and its capability to enact political, economic, and social reforms. El Salvador was particularly supportive of the liberals and the rule of liberal Honduran Francisco Morazan, as opposed to the conservative Guatemalan Rafael Carrera. Thus, when liberal forces fell to Carrera in March 1840, El Salvador declared its independence from the United Provinces of Central America shortly thereafter, in January 1841.

The republic of El Salvador was formally proclaimed on 25 January 1859. Turbulence, political instability, and frequent presidential changes characterized Salvadoran history during the second half of the 19th century. This period also saw the growth of coffee as El Salvador's leading product. The Salvadoran elite, known as the "14 families" or simply "the 14," created large coffee plantations, often on the land of displaced Indians. There followed a period of relative stability during 1900–30, but the seizure of power in 1931 by Gen. Maximiliano Hernández Martínez brought a period of constant military rule for almost 50 years. Hernández ruled for 13 years and presided over *la matanza*, a brutal suppression of a peasant uprising known in 1932, killing about 30,000 people. Few of the governments after Hernández tried to reduce the gap

between the landowners and the landless classes, and those that did were doomed to failure.

Landless Salvadorans found land available in neighboring Honduras. During the 1960s the influx of Salvadorans increased, provoking countermeasures from the Honduran government. Tensions rose between the two nations, and on 14 July 1969, they went to war for four days. The immediate occasion of the conflict was the Central American soccer championship between the two states, in which El Salvador won on a disputed referee's call, leading US journalists to dub it the "Soccer War." A total of 3,000–4,000 people on both sides were killed. After an OAS-sponsored cease-fire, the two sides worked out a peace settlement, which was signed on 30 October 1980. A leftover border dispute was settled by the International Court of Justice (ICJ) in 1992.

In 1972, the military candidate for president was opposed by José Napoleón Duarte of the Christian Democratic Party (PDC). Duarte was denied election by fraud and sent into exile. Pressure for reform came from the armed resistance from several leftist factions. In response, the right unleashed "death squads" to intimidate and eliminate any who attempted to introduce change to the country.

By the late 1970s, the situation had erupted into civil war. The guerrillas consolidated under the Farabundo Martí National Liberation Front (FMLN), and right-wing violence escalated. The military had not distinguished itself in its response to the violence, having engaged in widespread repression against suspected rebels. In 1979, a coup brought to power a set of reformist officers, who found common cause with such civilian leaders as Duarte. The junta liberalized the political system, setting legislative elections for 1982. It also nationalized banks and the coffee export trade, while launching an ambitious and controversial land-reform program. Attacked by both left and right, the junta was unable either to suppress left-wing guerrillas or to control its own security forces, which began their own vigilante campaigns even as the angry landowners hired "death squads" to suppress opposition among peasants, students, clergy, and other groups.

In December 1980, José Napoleón Duarte of the Christian Democratic Party was installed by the junta as president. Though he was El Salvador's first civilian head of state since 1931, human rights abuses and bloodshed persisted throughout his administration. In 1980, Archbishop Romero was assassinated while celebrating mass, spurring the guerrilla's launch of their unsuccessful "final offensive," in 1981. It is estimated that at least 62,000 people died between October 1979 and April 1987, most of whom were civilian noncombatants murdered by death squads and government security forces.

The junta headed by Duarte oversaw the drafting of a new constitution, adopted on 20 December 1983 by interim president Álvaro Alfredo Magaña and a constituent assembly that had been elected in March 1982. Following the 1984 election, Duarte became the first constitutionally elected president in over 50 years, after defeating Roberto D'Aubuisson of the National Republican Alliance (ARENA). D'Aubuisson was an extreme anticommunist accused of plotting against the government and supporting the death squads.

Despite Duarte's attempts at reform, charges of corruption, the ongoing civil war, and the economic dislocation brought on by his austerity measures, all led to Duarte's defeat by Alfredo Félix

Christiani Burkard in the 1989 elections. Many were concerned because Christiani's ARENA party was tied to former candidate D'Aubuisson.

Christiani allayed these fears, calling for direct dialogue between the government and the guerrillas. Despite a rocky negotiations process punctuated by military escalations, on 31 December 1991 the government and the FMLN signed the Chapultepec Accord formally ending the civil war. The accord called for reforms throughout the military, including the purge of officers linked to human rights abuses, and a reduction by 50% of the force. While the former has been a slow process, the latter goal was achieved ahead of schedule. A cease-fire took effect 1 February 1992, and held until 15 December 1992, when the FMLN officially laid down its arms.

ARENA was returned to power again when Calderón Sol won the presidential runoff election in 1994. Calderón's ambitious economic liberalization plan, his cutting tariffs, his privatizing of banks and pensions, and his attracting foreign investment resulted in healthy economic growth of 4–5% a year. Yet underemployment and low wages were persistent and were accompanied by an upswing in violent crime—from marauding bands robbing agricultural workers to organized gang activity preying on urban dwellers. Even the 1996 12-point government plan, which included investment in infrastructure and social services, couldn't convince the electorate to maintain its support of ARENA in the March 1997 parliamentary and local elections. FMLN significantly increased its share of seats in the legislature, as well as in local elections.

The ruling ARENA party managed to retain control of the presidency in the 1999 elections, with Francisco Flores winning 51.4% of the vote. In the March 2000 parliamentary election, however, FMLN became the strongest party in the Assembly, with more seats than ARENA. The FMLN maintained these seats in the March 2003 elections, but ARENA maintained its hold on the presidency when Elias Antonio Saca won the March 2004 presidential election. Despite a public outcry, Saca upheld amnesty laws protecting former officials, like himself, from prosecution for involvement in death-squad murders during the civil war.

Though the peace agreement officially ended the civil war in 1992, the country was still trying to grapple with justice in the region as of 2006. El Salvador has not been able to cope fully with the effects of the civil war; this process has been further hindered by a series of natural disasters that contributed to the socio-political and economic instability.

Hurricane Mitch struck in 1998, and a number of earthquakes occurred in 2001, leaving at least 1,200 people dead and more than one million others homeless. The financial toll, furthermore, was in the billions. In October 2005, the Ilimatepec (Santa Ana) volcano erupted, forcing thousands of people from their homes only days before Hurricane Stan hit, with its consequent flooding and deadly landslides.

### 13 GOVERNMENT

The constitution adopted on 20 November 1983 defines El Salvador as a republic. The constitution vests executive power in the president, who is to be elected by direct popular vote for a term of five years. The president, who must be native-born, over 30 years of age, the offspring of native-born parents, and a layperson, is not

eligible for immediate reelection. The president is commander-in-chief of the armed forces, enforces the laws, formulates an annual budget, draws up international treaties and conventions (which must be ratified by the National Assembly), appoints diplomatic and consular officials, and supervises the police. Every two years, the National Assembly elects three substitutes (*designados*), who can, in order of designation, assume the presidency when the president and vice president are not available.

Legislative power is exercised by a unicameral National Assembly composed of 84 deputies apportioned among the various departments according to population. Deputies are elected for a three-year term and must be at least 25 years of age. The Assembly levies taxes, contracts loans and arranges for their payment, regulates the money supply, approves the executive budget, ratifies treaties and conventions, declares war, and suspends or reestablishes constitutional guarantees in national emergencies. The deputies, the president's ministers, and the Supreme Court all may propose legislation. The Assembly approves legislation and is technically empowered to override a presidential veto by a two-thirds vote.

Universal male and female suffrage (over the age of 18) was inaugurated in 1950. However, voting in El Salvador has been a source of controversy. During the 1980s, the government made voting compulsory, while the guerrillas insisted the citizens should not collaborate with the system. Thus, the Salvadorans were confronted with a dilemma: vote, and face the wrath of the guerrillas, or refuse to vote, and immediately become suspected of leftist sympathy. At times, voting was not secret. Current practices include a more confidential and voluntary system.

### 14 POLITICAL PARTIES

The leading party of the right in El Salvador is the National Republican Alliance (Alianza Republicana Nacionalista—ARENA), organized in 1982 by Roberto D'Aubuisson. ARENA controlled the National Assembly until 1985, and its next leader, Alfredo Christiani, was elected to the presidency in 1989. Five years later, ARENA candidate Armando Calderón Sol became president. In the March 1997 parliamentary elections, ARENA's representation was reduced from 42 seats in the 84-member legislature to 28. In 1999, ARENA recovered and won the presidency again with 51.4% of the vote, but a year later its support fell to 36% in the National Assembly elections of March 2000. In March 2003, ARENA plummeted even further with 28% of the vote. However, in 2004, ARENA scored a victory when Elias Antonio Saca Gonzalez captured 57.7% of the vote, securing the fourth consecutive ARENA presidential win and extending his term for five years, until 2009. During the campaign, Saca stated his desire to work with other parties to tackle the violent street gangs, known as *maras*, and to make government more transparent. As one of the most pro-US governments in the hemisphere, Saca worked to promote economic ties with the United States through CAFTA and other similar free trade arrangements.

The Chapultepec Accords introduced a new force into El Salvador's electoral system: the Farabundo Martí National Liberation Front (Frente Farabundo Martí de Liberación Nacional—FMLN). Named for an insurgent leader of the 1930s, the FMLN was originally a paramilitary group in armed rebellion against the government. As part of the 1992 accords, the FMLN is now a legal par-

ty after having ceased its military operations. The FMLN-backed candidate, Ruben Zamora, was the runner-up in the 1994 presidential election, winning 24% of the vote. In the March 1997 legislative elections, the FMLN made significant gains, nearly doubling its representation in the Legislative Assembly, from 14 to 27 seats, and winning municipal elections in half the departmental capitals. In the March 2000 elections, the FMLN won 31 seats, shy of a majority but more than any other political party. In 2003, the FMLN increased its share of the vote to 34%, but did not win any additional seats in parliament. Expectations ran high that FMLN might secure the presidency in the 2004 elections, but its candidate, Schafik Handa, secured just 35.6% of the vote, more than 20% less than Saca.

The moderate Christian Democratic Party (Partido Demócrata Cristiano—PDC) was formed in 1960. For three decades, it was associated with its leader and founder, José Napoleón Duarte. Damaged by many splits over the years, and suffering after Duarte's unsuccessful presidency (1984–1989), the centrist PDC lost strength among the electorate. In the March 2000 National Assembly elections, it obtained 7.2% of the votes and 6 seats in the 84-member Assembly. In 2003, its share of the vote fell to 7.3% and it lost one seat. The National Conciliation Party (PCN), which was founded by the military in 1961, obtained 8.8% of the votes in the 2000 election and secured 13 seats, enough to give a majority to either ARENA or the FMLN. In 2003, it increased its vote to 13% and it secured 16 seats. Because of its ability to break the tie between the FMLN and ARENA, the PCN has gained an important negotiating role in Salvadorian politics.

In March 2003, the Centro Democrático Unido (United Democratic Centre, social-democratic) secured five seats in the National Assembly. The PDC and UDC's mutually endorsed presidential candidate, Hector Silva, secured only 3.9% of the vote in the March 2004 elections.

## 15 LOCAL GOVERNMENT

El Salvador is divided into 14 departments (*departamentos*), including Ahuachapan, Cabanas, Chalatenango, Cuscatlan, La Libertad, La Paz, La Union, Morazan, San Miguel, San Salvador, Santa Ana, San Vicente, Sonsonate, and Usulután. Each *departamento* has its own governor and alternate governor appointed by the executive power through the corresponding ministry. The country's 262 municipalities (cities, towns, and villages) are administered by mayors and municipal councils elected by popular vote. Traditionally independent in their local functions, municipalities may be limited in their activities by the departmental governor.

## 16 JUDICIAL SYSTEM

The court system includes justices of the peace, courts of the first instance, intermediate level appellate courts, and the Supreme Court (*Corte Suprema*) made up of 13 justices selected by the National Assembly. With the exception of justices of the peace, judges are appointed to renewable three-year terms. An 11-member National Council of the Judiciary, appointed by the National Assembly, is an independent body charged with screening judicial candidates for nomination.

According to the constitution, the Supreme Court is the court of last appeal; it passes on writs of habeas corpus, constitutionality of the laws, jurisdiction and administration of lower courts, and

appointment of justices below the appellate level. There are also special courts, appointed by the National Assembly, and military tribunals, selected by the Supreme Court. The 1995 legislation provides for oral trials and establishes family and juvenile courts. The 1996 criminal procedure code replaces a criminal system based on civil law with one in which oral argument is the norm.

Under the constitution, defendants have the right to a presumption of innocence, to representation by legal counsel, to be present in court, and to confront witnesses.

Foreign and international judicial systems also mattered to the future of justice in El Salvador. El Salvador accepts compulsory jurisdiction of the International Court of Justice with reservations. In 2002, US courts held two former Salvadoran army generals on trial for civil war atrocities and ordered them to pay the victims. Additionally, in March 2005, an OAS human rights court reopened an investigation into one of the worst massacres of the civil war—the 1981 massacre in El Mozote.

## 17 ARMED FORCES

In 2005, there were a total of 15,500 active personnel in El Salvador's armed forces, supported by 9,900 reservists. Military numbers had been reduced as prescribed by the peace accord ending the country's civil war. There were 13,850 members in the Army, 700 in the Navy, and an Air Force estimated at 950 personnel. The Army's primary equipment included 10 reconnaissance vehicles, 51 armored personnel carriers and over 600 artillery pieces. The Navy's major units consisted of 38 patrol/coastal vessels. The Air Force had 21 combat capable aircraft, including 5 fighter ground attack aircraft. Paramilitary forces consisted of the National Civilian Police, which numbered over 12,000. In 2005, the defense budget totaled \$106 million.

## 18 INTERNATIONAL COOPERATION

El Salvador is a founding member of the United Nations, having joined on 24 October 1945; it is part of the ECLAC and several specialized agencies, such as the FAO, IAEA, IFAD, IFC, ILO, IMF, UNESCO, UNIDO, WHO, and the World Bank. El Salvador is one of five members of the Central American Bank for Economic Integration (BCIE) and the Central American Common Market (CACM). It is also a member of the WTO, the Latin American Economic System (LAES), G-77, the Río Group, the Association of Caribbean States (ACS), and the OAS. The country has observer status in the Latin American Integration Association (LAIA). In 2004, El Salvador, the United States, Costa Rica, Guatemala, Honduras, Nicaragua, and the Dominican Republic signed the US–Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force.

The country is a signatory of the 1947 Río Treaty, an inter-American security agreement. In environmental cooperation, El Salvador is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change, and Desertification. El Salvador is also signatory to the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

Traditionally, the Salvadoran economy depended on a single agricultural export commodity. Shortly after independence, this product was indigo. When the market for indigo declined (due to replacement with artificial dyes), El Salvador moved to the cultivation and export of coffee in the mid-1800s. Earnings from coffee spurred cultivation of cotton and sugar, and later financed light manufacturing. The Central American Common Market (CACM) provided a previously absent market for the light manufactures and thus prompted that industry's growth throughout the 1960s. Coffee and sugar remained two of the four principal exports in 2005.

By the 1970s, El Salvador was the most industrialized nation in Central America, although the breakdown of CACM and a dozen years of civil war eroded that position. The change in GDP growth over the years from 1965–1978 and 1979–1982 illustrate the effects of civil conflict and disruption of coffee, sugar, and cotton production during the 1980s. From 1965–1978, GDP growth averaged about 4.3% annually. However, from 1979 to 1982, it declined by 23%. From 1983–1986, growth recovered modestly at an average annual rate of 1.5%.

The economy largely recovered from the civil strife of the 1980s. Agriculture (mostly coffee) is the foundation of El Salvador's economy, providing about two-thirds of the nation's exports and employing nearly one-third of its labor force. El Salvador enjoys one of the lowest levels of indebtedness in the region, with the bulk of foreign financing provided on a concessional basis.

The Crisitani administration, which came into power in 1989, began a comprehensive economic reform plan oriented toward a free market economy. A market-based currency exchange rate was adopted. Price controls were eliminated, as were the sugar, coffee, and cotton marketing monopolies. The nationalized banking system was largely privatized beginning in 1989. However, due to increased credit availability and public services prices, inflation doubled to around 20% in 1992.

Bolstered by peace, El Salvador's economy experienced brisk growth, with yearly GDP growth averaging 6.5% from 1990 to 1995. Inflation remained a problem, however, falling to 12% in 1993 and 8.9% in 1994, but rising to 11.4% in 1995. The latter increase was due in part to an increase in the VAT rate and one-off increases in charges for telephone, electricity, and water services. Unlike most of the Latin American economies, El Salvador was largely unaffected by the "Tequila Effect" following the Mexican peso devaluation in 1995 because of the government's solid macro-economic management and the economy's low external debt.

In 1996 economic growth slowed to 2.1% as the government sought to rein in inflation, which, through tight monetary and fiscal policies, achieved a then-record low for El Salvador of 7.4% for the year. Higher interest rates resulting in very expensive borrowing costs and pessimistic expectations combined to drive down domestic investment. Yet this did not hold back growth. In 1997, GDP growth rose to 4%, and inflation dipped to the low level of 2% where it stayed through 2000. The growth rate gravitated around that level, with a rate of 3.4% in 1998 and 4.9% in 1999. In 1999, inflation remained at 2%.

In 2000, however, the growth rate was reduced to 2% by the destructive impact of Hurricane Mitch. Inflation rose to 4.3%. Growth was further dampened (1.4%) in 2001 due to two earth-

quakes, as well as the US recession, global slowdown, and reduced investment activity following the 11 September 2001 terrorist attacks. Inflation declined to 3% in 2001. According to the Economist Intelligence Unit, real GDP growth in El Salvador averaged 1.9% from 2000 to 2004, and inflation averaged 2.9%.

By 2005, El Salvador had become one of the strongest economies in Central America, with a steady growth in GDP, an environment of macroeconomic stability, falling inflation rates, and increased exports from involvement in several free trade arrangements.

The Economist Intelligence Unit projected that GDP growth would remain positive (at approximately 2.5%) in 2006 due to increased consumption, investment and exports due to the launching of the Dominican Republic-Central American Free-Trade Agreement (DR-CAFTA). Inflation was projected to average 4.7%, accompanied by a worsening current-account deficit.

Despite these advances, GDP per capita was only half that of Brazil, Argentina, and Chile. A historic inequality in income distribution plagued the country wherein 45% of the income accrued by the richest fifth of the population and 5.6% by the poorest. In 2003, 36.1% of the population lived below the poverty line. Further, though the dollarization in 2001 made for some increased trade and investment opportunities, it also created an increase in prices without increases in wages, which eroded individuals' purchasing power (GDP per capital was \$4,900 in 2004). Natural disaster struck El Salvador once again at the end of 2005, as Tropical Storm Stan acted as another weight on the economy.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 El Salvador's gross domestic product (GDP) was estimated at \$33.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,100. The annual growth rate of GDP was estimated at 2%. The average inflation rate in 2005 was 4.7%. It was estimated that agriculture accounted for 9.8% of GDP, industry 30.3%, and services 60%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.122 billion or about \$325 per capita and accounted for approximately 14.2% of GDP. Foreign aid receipts amounted to \$192 million or about \$29 per capita and accounted for approximately 1.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in El Salvador totaled \$13.31 billion or about \$2,037 per capita based on a GDP of \$14.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.5%. It was estimated that in 2003 about 36.1% of the population had incomes below the poverty line.

## 21 LABOR

The civilian labor force was estimated at 2.81 million in 2005. As of 2003, agriculture accounted for 17.1% of the workforce, with 65.8% in services, and 17.1% in industry. Although unemploy-

ment in 2005 was estimated at 6.5%, much of the nation's workforce is underemployed.

Although workers have the right to organize a union without gaining prior authorization, the government and the courts continued to deny union applications for legal standing through the excessive use of formalities, effectively blocking union formation. Collective bargaining is limited to private sector employees and to those public employees in autonomous government agencies, such as the port authority and utilities. Technically, only private sector workers may strike, nevertheless, many public sector workers carry out strikes that are treated as legitimate. However, unions wishing to call a strike must meet a number of conditions if that strike is to be considered legal. These include: the collective bargaining agreement has to have expired; attempts at resolving differences must first go through a process of direct negotiations, mediation, and arbitration; and at least 51% of the affected workers must support the strike, including those who are not represented by the union. According to the Ministry of Labor, as of end 2005, only 9.1% of El Salvador's workforce were unionized.

The workweek is set at a maximum of 44 hours and six days. Bonus pay is required for overtime, and all full-time employees are required to get a weekly, paid eight-hour day of rest. Minimum pay rates are set by executive decree, and are based on recommendations from a committee made up of labor, business and government representatives. As of 2005, minimum daily wage rates were \$5.28 for service employees, \$5.16 for industrial workers, and \$5.04 for workers in the maquila plants. Those rates were set in 2003. Although the law prohibits employment for those under age 14, child labor remains a problem. Minors between the ages of 14 and 16 years are limited to six hours per day, with a maximum normal workweek at 34 hours. Workers in hazardous occupations must be at least 18 years of age.

## 2<sup>2</sup> AGRICULTURE

Arable land in 2003 consisted of 910,000 hectares (2,249,000 acres) planted with annual and permanent crops. Irrigation covered 4.9% of this area in 2003, half of it in the Sonsonate and Sensunapan region. In 2003, agriculture represented 9.8% of GDP and 17.1% of employment.

Coffee, El Salvador's major crop (30% of total agricultural output), is grown principally in the west and northwest at elevations of 460 to 1,520 m (1,500 to 5,000 ft). Primarily as a result of the civil war, coffee production declined in the 1980s. In June 1993, the Ministry of Economy certified the first shipment of organic coffee; the agrarian reform cooperative that produced the coffee had not used chemicals or pesticides for over four years. Production in 2004 amounted to 83,000 tons (down from 156,000 tons in 1990). Exports of coffee in 2004 amounted 80,744 tons, valued at \$123.4 million. The coffee industry is a major employer in El Salvador, generating about 82,000 jobs.

Sugar production fell between 1979 and 1981 but later recovered; cane production in 2004 was 5.3 million tons, and the sugar industry contributed \$37.6 million to the country's foreign exchange earnings in 2004. Sugar is the most important agricultural product after coffee, and is grown mostly by independent producers. Investment has increased, as has the area under cultivation (in contrast to the other two major export crops). The world price has, however, been in decline for several years, and this decline has

cut export earnings; the government secured a \$30.4 million loan from Venezuela to divert some production to gasohol.

Traditional grains grown in El Salvador include white corn, sorghum, rice, and edible beans. These crops make up the fundamental diet for most Salvadorans and are produced on virtually all small farms. Production amounts in 2004 included corn, 648,000 tons; sorghum, 148,000 tons; rice, 26,500 tons; and beans, 72,000 tons. An additional 441,660 tons of corn were imported in 2004 to meet local demand.

Land that was originally planted for cotton is now being used for sugarcane, pasture, and nontraditional crops. El Salvador has steadily shifted agricultural exports towards nontraditional items such as jalapeño peppers, marigold flowers, okra, and pineapples. Traditional coffee areas are also being absorbed by urbanization projects.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Cattle and hogs are the predominant livestock in El Salvador. Cattle are of the "criollo" type and are used for production of both meat and milk. The dairy sector continued to suffer from inefficient production methods, poor animal genetic quality, and diseases. There are over 100 slaughterhouses operating illegally and without sanitary control. The government has planned to rebuild the livestock sector through financial and technological assistance.

The poultry industry is one of El Salvador's most organized and efficient agri-businesses, divided into smaller family farms and large commercial operations. The poultry industry directly generates roughly 6,000 jobs (60% of which are in rural areas), with an additional 20,000 secondary jobs. Commercial production accounts for 80% of poultry meat and about 75% of egg production.

In 2005 there were 1,259,000 head of cattle. The hog population rose from 390,000 in 1950 to 560,000 in 1979 but then declined to 188,000 in 2005. Other livestock included 96,000 horses, 24,000 mules, 10,800 goats, and 13,209,000 chickens. In 2005, milk production was 412,602 tons. A total of 63,649 tons of eggs were produced during the same year.

## 2<sup>4</sup> FISHING

The fishing industry, which centers on shrimp, has undergone significant development since it first gained commercial importance in 1957. The best coastal fishing grounds are off the southeastern sector. Scaled fish include freshwater robalo, sea bass, mullet, mackerel, swordfish, and redmouth; a tuna industry has been operating since 1963. Total fish production was 36,541 tons in 2003, including 1,131 tons from aquaculture.

## 2<sup>5</sup> FORESTRY

Forests and woodlands covered 121,000 hectares (299,000 acres) in 2000, representing only 6% of the total land area. Virgin forests once covered 90% of El Salvador. Almost all of the lumber used in building and in other Salvadoran industries must be imported, mainly coming from neighboring Guatemala, Honduras, and Nicaragua. Roundwood production in 2003 was 4.5 million cu m (170 million cu ft). Forest products include dye woods and lumber, such as mahogany, walnut, and cedar, for furniture and cabinet work. El Salvador is the world's main source of balsam, a me-

dicinal gum; between Acajutla and La Libertad in the southwest is the so-called Balsam Coast, which supports a species of balsam tree unique to El Salvador. Imports of forest products in 2003 exceeded exports by \$148.3 million.

## 26 MINING

El Salvador, 90% of which is of volcanic origin geologically, is less well endowed with mineral resources than other Central American country. Mineral production contributed less than 1% to the GDP. The country has produced gold and silver in the past. As of 2003, there had been no recorded production of gold or silver since 2000. Recent activity has been limited to exploration, including at El Dorado, whose indicated resources were estimated at 25,536 kg of gold and 164,849 kg of silver. A 1,050 m diamond drill program on the Aldea Zapote project was completed in 2001. Industrial minerals, especially limestone mined for domestic cement plants, were the primary commodities of the industry. Marine salt output rose in 2003 totaling 31,366 metric tons, down from 31,552 metric tons in 2002. Gypsum output in 2003 was estimated at 5,600 metric tons, unchanged from 1999 through 2002. Copper, lead, zinc, and sands containing titanium and ilmenite were also found in El Salvador.

## 27 ENERGY AND POWER

El Salvador has no known exploitable reserves of fossil fuels. Thus, it must rely upon imports to meet its fossil fuel needs. However, El Salvador is the largest producer of geothermal generated energy in Central America, with two geothermal facilities, the 95 MW Ahuachapan and the 66 MW Berlin facilities, in operation as of October 2005. According to government statistics, in 2003, geothermal sources produced 0.97 billion kWh of electricity, or about 21.9% of the total amount of the electricity generated. In that same year, thermal and hydropower sources accounted for 37.5% and 33.1%, respectively of all power generated. In 2004, a total of 4.158 billion kWh of electricity was produced, with consumption at 4.45 billion kWh. Imports and exports of electricity in that year totaled 473 million kWh and 91 million kWh, respectively. In 2002, electric power generating capacity stood at 1.133 million kW.

Although El Salvador has no known reserves of oil, it is one of only three countries in Central America to operate a refinery. Located at Acajutla on the Pacific coast, the facility has a capacity of 22,000 barrels per day, according to the Oil and Gas Journal. In 2002, refinery output totaled 18,840 barrels per day. Oil product consumption for that year came to 39,010 barrels per day, with total petroleum imports at 45,710 barrels per day.

## 28 INDUSTRY

The leading industrial region is the department of San Salvador. Other industrial centers are La Libertad, Santa Ana, San Miguel, Usulután, and San Vicente. The industrial sector has been oriented largely to the domestic and Central American markets, though this is changing in light of recent free trade arrangements. There are coffee-processing plants, sugar mills, bakeries, plants making petroleum products, vegetable oils, fats, confectioneries, dairy products, tobacco, soap, candles, matches, shoes, furniture, light metals, cement, and organic fertilizers.

Manufacturing got a foothold in the economy in the 1950s and further grew as the CACM opened up regional markets in the

1960s. Large-scale industry was then introduced, relying mostly on imports of crude materials. In 1963, an oil refinery at Acajutla began processing Venezuelan crude oil; most of the output is consumed locally (in 2002, production capacity was 22,000 barrels per day). During the early 1970s, the greatest increase in value of manufacturing occurred in chemicals and textiles. Civil war during the 1980s hurt industrial production, with an average annual decline of 6% between 1977 and 1987.

Following the attainment of civil peace in the 1990s, the Salvadoran economy boomed. This growth was sustained by the recovery of the agricultural sector, and expansion of the construction and manufacturing sectors. Boosted by the rapid growth and development of its *maquila* (offshore assembly for re-export) zones, the economy became the most industrialized and best-performing in the Central American region. Maquila exports, as the primary export, are more important to El Salvador's economy than local manufactures. However, reliance on maquilas may prove to be a short-term growth prospect as lower production costs in China and Asia attract maquilas elsewhere. Where growth rates in the 1990s were around 45%, they fell to an average of 7% in 2000–04, and a 3% drop is expected for 2005. In May 2005, the garment-producer Charles Products transferred operations from El Salvador to Sri Lanka to take advantage of cheaper production costs that would make its products more competitive with those produced in China.

Growing at a rate of 4.5% in 2000, the manufacturing sector as a whole was one of the largest contributors to GDP, and, along with construction (which accounted for 4% of the GDP in 2004), led the economy in past years. Though growth in the sector slowed to 2.3% and 0.7% in 2003 and 2004 respectively, it still remained an important motor for economic growth from 2000–04. By 2004, manufactures accounted for 27% of El Salvador's total output.

Despite the growth in manufactures, the same basic problems persisted from decade to decade: the low purchasing power of the local population and the difficult financial and political situation of other Central American countries on which El Salvador depends for export markets. Nevertheless, El Salvador received substantial amounts of foreign direct investments in the industrial sector in 2001.

## 29 SCIENCE AND TECHNOLOGY

El Salvador has research institutes devoted to the study of seismology and geology, meteorology and hydrology, agriculture (including the Salvadoran Institute for the Study of Coffee), and medicine. The principal learned society in the country is the El Salvador Academy, headquartered in San Salvador. In the same city are museums devoted to natural history and zoology. Nine colleges and universities offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 59% of college and university enrollments.

In 1998, (the latest year for which the following data was available) research and development (R&D) expenditures totaled \$21.280 million, or 0.08% of GDP. Of that total, 51.9% came from the government, followed by foreign sources at 23.4%, higher education at 13.2%, private nonprofit institutions at 10.4%, and business at 1.2%. In 1998, El Salvador had 33 researchers per million people actively engaged in R&D. In 2002, high technology exports

were valued at \$44 million, accounting for 6% of manufactured exports.

### 3<sup>0</sup> DOMESTIC TRADE

San Salvador is the chief commercial and marketing center. However, following the end of the civil war, thousands of Salvadorans returned from the United States and made San Miguel and Santa Ana two of the most industrialized cities in Central America.

Food is generally produced in small, scattered plots in the vicinity of urban areas and taken to market by traders (mostly women), either on their heads or by pack animals. Residents of remote rural areas usually consume most of what they produce exchanging the remainder for other commodities. In urban areas, the business units are mainly small shops, while in rural regions, individual traders conduct their business at town marketplaces, where agricultural produce, meats, fruit, handicrafts, ceramics, and flowers are sold.

A 10% value added tax was established in 1992 and raised to 13% in 1995. This tax made up 52.3% of the governments total tax revenues in 2004.

The central bank estimated that nearly \$150 million per month, over \$1.9 billion per year (2001 est.) is added to the economy through remittances of expatriates, primarily those living in the United States. Such remittances reached a record high of \$2.5 billion in 2004 and accounted for 17.1% of GDP.

The usual business hours in the major cities are from 8 AM to noon and from 2 to 6 PM on weekdays and from 8 AM to noon on Saturday. Banking hours are from 9 to 11:30 AM and from 2:30 to 4 PM on weekdays, with a half day on Saturday.

### 3<sup>1</sup> FOREIGN TRADE

While coffee remains one of the four main exports, it has gone from making up one-half of the country's exports in 1988 to 3.8% in 2004. Maquilas and nontraditional goods comprised, respectively, 55.3% and 39.8% of the \$3.249 billion in exports in 2004. Sugar, shrimp, textiles, chemicals, and electricity comprised a portion of the remaining exports. The United States, Guatemala, and

Honduras absorbed, respectively, 65.5%, 11.8%, and 6.3% of El Salvador's exports in 2004.

El Salvador imports raw materials, consumer goods, capital goods, fuels, foodstuffs, petroleum, and electricity. In 2004, imports totaled \$5.968 billion. Imports emanated from the United States (46.3%), Guatemala (8.1%), and Mexico (6%).

One of the El Salvador's greatest weaknesses remained its trade deficit. In 2000, the value of imports was almost three times that of exports. In 2004, the current account balance was -\$880.5 million. The deficit is sustained in part by huge inflows of remittances from Salvadoran workers in the United States, estimated at 2.5 billion, 16% of the 2004 GDP.

El Salvador has sought to shrink its trade deficit and increase exports, especially of manufactured and nontraditional products, by creating new export industries through free trade zones. Fifteen of these zones already exist in El Salvador. Maquila industries have thus far been the largest beneficiaries, and have employed approximately 90,000. The Caribbean Basin Trade Partnership Act allows these goods to be sold duty-free in the United States.

Additionally, El Salvador has negotiated agreements to reduce trade and investment barriers through CAFTA. It has increased its exports to those countries with which it already has signed agreements—Mexico, Chile, the Dominican Republic, and Panama. Along with the other five Central American states, El Salvador is pushing for a customs union and the harmonization of customs duties.

### 3<sup>2</sup> BALANCE OF PAYMENTS

El Salvador's positive trade balances in the late 1970s changed into deficits after 1980. The main reasons for this development were declines in cotton, sugar, and coffee export earnings, civil war, and the virtual collapse of the CACM market. The US Central Intelligence Agency (CIA) reported that in 2004 El Salvador's exports were \$3.249 billion while imports totaled \$5.968 billion, resulting

in a trade deficit of \$880.5 million. Though the deficit was down from figures reported in 2001, it still remained uncomfortably high.

Capital inflow, principally in the form of remittances, transfers, donations, and credits from the United States, has helped cover the deficit. The government in 2000 expected remittances to grow at a rate of 5–6% from 2000 to 2002–04. However, with a low tax base and national savings, the economy can become vulnerable to fluctuations in such flows.

Though nontraditional and maquila exports were expected to grow by more than 15% each, maquila exports declined due to more competitive production conditions in China and other regions. This engendered, in part, projections that the current-account deficit would worsen in 2005–06.

### 33 BANKING AND SECURITIES

The Central Reserve Bank of El Salvador, established in 1934, was nationalized in 1961. It is the sole bank of issue and the fiscal agent for the government. The entire banking system was nationalized in March 1980, but was later privatized. By 1989, the financial system was practically broke; destroyed by mismanagement and political conflict. In 1991, as part of economic reforms, the government privatized six commercial banks and seven savings and loan institutions. In 1994, the government created the Banco Multisectorial de Inversiones (BMI) to promote private sector development. The Banking Law was modified in 1995 to encourage foreign banks to enter the country. There were 12 commercial banks in 2002. The International Monetary Fund reports that in 2000, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$6.1 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 6.93%.

A stock exchange was established in San Salvador in 1993, with five government issues of long-term bonds. In the first 12 months of activity, stock market transactions were nearly \$100 million; the rate of growth in 1993–95 was rapid, and by the end of 1995 transactions reached an estimated \$2.4 billion. The market trades almost exclusively in government bonds and short-term commercial paper, but private companies put shares on the market in the late 1990s.

### 34 INSURANCE

By 2000, El Salvador had at least 19 insurance companies in operation. The 1995 Insurance Law provided national treatment for foreign insurance firms. In 2003, there was \$350 million worth of direct premiums written, with nonlife premiums accounting for \$246 million. The country's top insurer in that same year was SISA Vida, with written premiums (life and nonlife) of \$44.4 million.

### 35 PUBLIC FINANCE

Most public revenues come from taxes, fees, and fines. Municipal taxes and fees are subject to approval by the Ministry of the Interior. Until the early 1980s, government fiscal operations had generally shown surpluses; these enabled the government to sustain a growing volume of capital expenditures, resulting in a higher

#### Public Finance – El Salvador (2003)

(In millions of colones, central government figures)

<b>Revenue and Grants</b>	<b>2,312.8</b>	<b>100.0%</b>
Tax revenue	1,679.1	72.6%
Social contributions	344.6	14.9%
Grants	17.9	0.8%
Other revenue	271.2	11.7%
<b>Expenditures</b>	<b>2,688.7</b>	<b>100.0%</b>
General public services	471.9	17.6%
Defense	91.1	3.4%
Public order and safety	306.6	11.4%

government share in total investments. Improved tax collection in 1998 resulted in approximately 56% of government revenues being attributed to the VAT. The use of the colón was phased out and the Central Bank was dissolved in 2003.

The US Central Intelligence Agency (CIA) estimated that in 2005 El Salvador's central government took in revenues of approximately \$2.8 billion and had expenditures of \$3.1 billion. Revenues minus expenditures totaled approximately -\$28.8 billion. Public debt in 2005 amounted to 45.8% of GDP. Total external debt was \$8.273 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in millions of colones were 2,312.8 and expenditures were 2,688.7. The value of revenues in millions of US dollars was \$264 and expenditures \$289, based on a market exchange rate for 2003 of 8.750 as reported by the IMF. Government outlays by function were as follows: general public services, 17.6%; defense, 3.4%; public order and safety, 11.4%; economic affairs, 10.2%; environmental protection, 0.2%; housing and community amenities, 7.9%; health, 13.3%; recreation, culture, and religion, 1.2%; education, 15.0%; and social protection, 14.2%.

### 36 TAXATION

Residents of El Salvador, whether citizens or not, are subject to progressive taxation on both domestic and foreign income ranging from 10–30%. Amounts received from insurance policies, interest on savings accounts, gifts, and inheritances are tax exempt. Taxes on corporate income are levied at 25% for amounts over the first \$75,000, which are exempt. Dividends are not taxable. The main indirect tax is the value-added tax (VAT) introduced in September 1992 at a standard rate of 10%. In 2003, the standard VAT rate was 13%. Excise taxes are assessed on alcoholic beverages and tobacco products. A 3% real estate transfer tax is imposed when

the real estate involved has a market value above \$250,000. There are no local taxes.

### 37 CUSTOMS AND DUTIES

According to the Heritage Foundation in 2000, El Salvador had the most open trade environment in Central America. El Salvador completed a tariff reduction program in 1999 and as a result has tariffs of 0% on capital goods, 0–5% on raw materials, 5–10% on intermediate goods, and up to 15% on final products. Some items, such as textiles, agricultural products, and vehicles receive higher tariffs of up to 40%.

### 38 FOREIGN INVESTMENT

The Salvadoran government has fostered foreign investment since the 1988 Foreign Investment and Promotion Law came into force. Incentives included unrestricted remittance and reinvestment of profits and, for firms located in the free zones, the government offers up to a 20-year income tax holiday and duty-free importation of materials needed for production.

The inflow of foreign direct investment (FDI) spiked in 1998 to over \$1 billion (up from only \$59 million in 1997), but then averaged about \$219 million a year 1999 to 2001. Contrary to the global trend, and due primarily to the international relief effort following the earthquake of January 2001, FDI inflow increased to El Salvador in 2001 and in 2002 rose to an estimated \$277.8 million, \$10 million above the year before. Major foreign investors included Coastal Technologies (power generation), Kimberly Clark (paper products), Texaco (fuel storage and distribution), Esso and Shell (petroleum refining), Bayer (pharmaceuticals), Sara Lee (clothing assembly), Xerox (sales), AIG (insurance), and British American Tobacco. El Salvador received approximately \$250 million in direct investments in 1999, the majority from the United States.

Over 300 US companies have a commercial presence or financial investment in El Salvador. Such opportunities came about through the US-supported privatization of the electrical and telecommunications markets.

PROESA, the national agency promoting foreign investment in El Salvador, has been boosted by the Multilateral Investment Guarantee Agency (MIGA). The guarantees that MIGA makes of Salvadoran manufacturing and financial sectors helps those sectors attract further investment.

### 39 ECONOMIC DEVELOPMENT

Prior to 1950, the government, with moderate success, followed a policy of stimulating national economic development indirectly by building roads, developing power facilities, establishing credit facilities, and extending tariff protection to some industries. The prosperity and advantageous international position of Salvadoran coffee masked the long-term need for further diversification.

During the 1950s, it became apparent that El Salvador's primary problems were the growing population and lack of uncultivated arable land. The government therefore embarked on a program to encourage intensification of agriculture and expansion of small industry. The National Council for Economic Planning and Coordination (CONAPLAN), established in 1962, drafted a comprehensive five year plan (1965–69) embodying general objectives

proclaimed by the government in line with the aims of the US-inspired Alliance for Progress. The objectives included an increase of the GNP; decrease in illiteracy; expansion of education, health, and housing programs; extension of social security benefits to areas not yet covered; and implementation of an integrated program of agrarian reform. The stimulus for the development program was to be provided by a small group of wealthy Salvadorans, with a minimum of government participation.

In early 1973, CONAPLAN drafted a development plan for 1973–77, concentrating on production, labor, and social welfare. The basic objectives of the plan were improvement in income distribution, employment, health, nutrition, housing, and education; stimulation of the agricultural, industrial, and construction sectors; acceleration of regional development; and export diversification. The plan called for adoption of a government-sponsored investment and financing program, institutional and financial reforms, and policies to stimulate private investment.

The economic reforms adopted in 1980 included a land redistribution program and nationalization of the banking system. After the civil war was over, the country received substantial influx of economic aid and private remittances. As part of the economic reform program, initiated in 1989 by newly elected President Christiani, the country's economy recuperated at a fair pace. After the signing of the Chapultepec Peace Accords in January 1992, El Salvador boosted business confidence and stimulated private investment.

In January 1986, a comprehensive stabilization program was announced. Among its most important measures were unification of the exchange rate at C5=\$1 (a 50% devaluation), raising of fuel prices and public transportation fares, imposition of price controls on consumer staples (food, medical supplies, and clothing), tariff hikes on nonessential imports, and a rise in commercial interest rates. Because of the continuing costs from the civil war, and also from a drought the program fell short of its objectives. Approximately \$2.2 billion were lost to infrastructure damage and foregone production opportunities from 1979–90 due to the civil war. However, since attacks ended and the peace accords were signed in 1992, investor confidence improved and foreign direct investment (FDI) increased.

In 1990, the International Monetary Fund (IMF) approved a standby agreement, which was followed by another one in January 1992 and another one in May 1993. The World Bank extended a \$75 million structural adjustment loan in 1991, and the Inter-American Development Bank provided additional sectoral adjustment financing. Aided by the government's economic reforms and the IMF and World Bank supported macroeconomic programs, the country's economy continued to prosper. The rising influx of private remittances, official transfer, and the return of local capital boosted domestic demand as well as construction activity, especially in transportation infrastructure and other public projects. The industrial sector also benefited from this upturn.

El Salvador's external debt decreased sharply in 1993, chiefly as a result of an agreement under which the United States forgave about \$461 million of official debt. Debt still stood at around \$2.4 billion in 1999, despite US forgiveness. In 1998, significant aid came from the World Bank for agricultural reform (\$40 million) and structural adjustment (\$52.5); from the Central American Bank for Economic Development (\$20 million) for road repair;

and from the Inter-American Development Bank (\$60 million) for poverty alleviation. Total non-US government aid reached \$600 million in 1998.

In 2001, El Salvador's external debt stood at \$4.9 billion. A damaging hurricane, earthquakes, and a decline in world coffee prices in the late 1990s and early 2000s slowed economic growth. The country adopted the US dollar as legal tender in 2001 upon approval of the "Monetary Integration." Colónes were no longer printed, and the Central Bank was dissolved in 2003. This meant that the government could no longer use monetary policy and had to focus attention on maintaining a disciplined fiscal policy. The government broadened the income tax base, by introducing a new tax code, and implemented new banking reform legislation. El Salvador still faced the difficult challenge of reducing poverty, in part by investing in infrastructure and social programs.

In 2004, El Salvador ratified the US-Central American Free Trade Agreement (CAFTA) that it had signed the previous year. It was the first Central American country to do so. El Salvador worked to encourage foreign investment, modernize tax systems and fiscal policies, and to pursue liberalization policies in an effort to open new export markets and balance its trade deficits. Once in place, CAFTA was expected to increase GDP of the signatories by 0.6% annually.

It was projected that the Salvadoran government would implement further tax reforms to raise fiscal revenue after the 2006 elections, to be implemented prior to the legislative elections in 2009.

#### 40 SOCIAL DEVELOPMENT

A mandatory private social insurance program replaced the government-sponsored program. Employees and employers each must contribute 7% of payroll for social insurance, and there is also a private insurance scheme. Old age, disability and survivorship is covered. Maternity and sickness benefits are provided by a social insurance program that is funded by employee and employer contributions, as well as a subsidy from the government. Maternity benefits are equal to 75% of wages for up to 12 weeks. Work injury insurance covers those in industry, commerce and public service; casual workers, domestic workers, and teachers are not covered.

Women have the same legal rights as men, but in practice they face discrimination in employment, salaries, education, and access to credit. Men often receive priority in hiring, and there have been reports of pregnancy tests for female job applicants. Domestic violence against women is pervasive. The incidence of child abandonment and abuse and the use of child labor appear to be on the increase. The government was working with the United Nations Children's Fund to improve the welfare of children.

Human rights violations include use of excessive force and extrajudicial killings by police. New criminal and sentencing codes decreased violations of due process. Lengthy pretrial detentions are common, and prison conditions remain harsh. Very few Salvadorians claim indigenous status; most have been assimilated into the general population. Indigenous groups live in poor rural areas. Most lack titles to their land and therefore lack the collateral necessary to access credit from a bank.

#### 41 HEALTH

Health standards have improved considerably since 1930. Average life expectancy in 2005 was 71.22 years. The infant mortality rate, 139.4 per 1,000 live births in 1930 to 1934, declined to 25.10 by 2005. The crude death rate, 23 per 1,000 in 1930 to 1934, dropped to an estimated 6.1 as of 2002. The fertility rate has dropped from 5.3 in 1980 to 3.1 in 2000. Malnutrition persisted in an estimated 23% of children under five as of 2000. However, immunization rates for children up to one year old were quite high in 1997: tuberculosis, 93%; diphtheria, pertussis, and tetanus, 97%; polio, 96%; and measles, 97%. The contraceptive prevalence for women was 60% as of 2000.

As of 2004, El Salvador had 127 physicians, 184 nurses, 56 dentists, and 31 pharmacists per 100,000 people. The Ministry of Public Health and Social Welfare coordinates mobile health brigades, professional medical delegations, field offices, clinics, laboratories, and dispensaries. UNICEF, the US Institute of Inter-American Affairs, the Rockefeller Foundation, and other foreign organizations assisted health campaigns. Health care expenditure was estimated at 7.2% of GDP.

The principal causes of death remain gastroenteritis, influenza, malaria, measles, pneumonia, and bronchitis, caused or complicated by malnutrition, bad sanitation, and poor housing. Major causes of death were noted as communicable diseases and maternal/perinatal cause, noncommunicable diseases, and injuries. In 2000, 74% of the population had access to safe drinking water and 83% had adequate sanitation. In 1999, there were 67 cases of tuberculosis per 100,000 people. There were 1,416 new cases of AIDS reported in 1996 and 2,798 cases of malaria in 1994. The HIV/AIDS prevalence was 0.70 per 100 adults in 2003. As of 2004, there were approximately 29,000 people living with HIV/AIDS in the country. There were an estimated 2,200 deaths from AIDS in 2003.

Much of the progress since the 1930s was undermined by the country's civil war, which overtaxed health care facilities while, in real terms, expenditures on health care declined. The National Medical School was shut down in 1980.

#### 42 HOUSING

Inadequate housing, most critically felt in cities and towns, is endemic throughout El Salvador. A 2005 report from Habitat for Humanity indicated a housing deficit of 630,000 homes. Housing problems have been exacerbated by the civil war, which has created hundreds of thousands of refugees. Earthquakes in 2001 damaged nearly 335,000 homes, about 25% of the total housing stock. In 2002, there were about 1,491,588 dwellings in the country. About 90% were single-family, detached homes.

More than half of all urban dwellings have earthen floors and adobe walls and many have straw roofs. Concrete and adobe are preferred building materials. In 2000, only about 74% of households had access to improved water sources and 83% had access to improved sanitation systems.

The government has received financial assistance from international and foreign organizations, such as USAID and the Inter-American Development Bank, for projects focused on repair and reconstruction of damaged housing, as well as new housing development. The Salvadorian Foundation for Development and Basic

Housing (FUNDASAL), which was established in 1968, continued to work on projects to improve the living conditions of low-income and poverty stricken residents. FUNDASAL has sponsored over 200 improvement projects and built over 25,000 homes.

### 4<sup>3</sup> EDUCATION

Primary education is free and compulsory through elementary school, and the public school system is government controlled. Enforcement of primary-school attendance is difficult, however, and truancy is high in rural areas. Primary education lasts for nine years, followed by three years of secondary education, with student choosing either a general studies or technical/vocational track. In 2000, an institutional reform process for education was initiated under a Basic Education Modernization Project, and the government was seeking international funding support for improvements in the quality and coverage of secondary education. The academic year runs from February to December. The primary language of instruction is Spanish.

In 2001, about 46% of children between the ages of four and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 90% of age-eligible students. The same year, secondary school enrollment was about 49% of age-eligible students. It is estimated that about 88.6% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 28:1 in 1995.

Twelve private and three public universities offer higher education. The University of El Salvador in San Salvador, authorized in 1841 and with enrollments averaging 30,000, was a base for antigovernment agitation during the 1970s. The university was stormed and ransacked by government troops on 26 June 1980; at least 50 students and the rector were killed; the university did not reopen for several years. In 2003, about 17% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 79.7%, with 82.4% for men and 77.1% for women.

As of 2003, public expenditure on education was estimated at 2.9% of GDP, or 20% of total government expenditures.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library in San Salvador is the largest in the country, with 150,000 volumes. The library at the University of El Salvador has 34,000 volumes. The Central American University José Simeón Cañas in San Salvador has 150,000 volumes. In addition, there are three governmental libraries attached to the ministries of Education, Economics, and Foreign Affairs and a few small private and college libraries. The Ministry of Education maintains a mobile library with a total of 25,000 volumes.

The David J. Guzmán National Museum in San Salvador, founded in 1883, is a general museum housing historical documents and pre-Columbian artifacts. The Natural History Museum of El Salvador was founded in 1976. The National Zoological Park in San Salvador, established in 1961, maintains a natural science museum. The Anthropological Museum of El Salvador and the Museum of Word and Image are also in San Salvador.

### 4<sup>5</sup> MEDIA

Ownership of domestic telephone and telegraph services has been transferred from the government to a semiautonomous agency.

In 2003, there were an estimated 116 mainline telephones for every 1,000 people; about 38,200 people were on a waiting list for telephone service installation. The same year, there were approximately 176 mobile phones in use for every 1,000 people.

As of 2001 there were 150 licensed radio stations and at least 11 commercial television stations, including the government-owned Radio Nacional. Radios in use increased from 398,000 in 1968 to about 2.75 million in 1995. In 2003, there were an estimated 481 radios and 233 television sets for every 1,000 people. The same year, there were 25.2 personal computers for every 1,000 people and 84 of every 1,000 people had access to the Internet. There were 35 secure Internet servers in the country in 2004.

The principal newspapers are published in San Salvador. They are, with 2004 circulations, *El Diario de Hoy*, 115,000; *La Prensa Gráfica*, 112,800; *El Mundo*, 58,000 (in 2002); and *Co Latino*, 15,000.

The constitution of El Salvador provides for freedom of expression, including that of speech and press, and the government is said to respect these rights in practice. Print and broadcast journalists are said to freely and regularly criticize the government without censure.

### 4<sup>6</sup> ORGANIZATIONS

Of prime importance is the Salvadoran Coffee Association, founded in 1930 to promote coffee production, distribution, and consumption; to improve quality; and to provide information and advice to growers. Its membership includes all native and foreign coffee growers in El Salvador, and it receives financial support from the government export tax on coffee. Other prominent management organizations include the National Coffee Institute, Chamber of Commerce and Industry, Salvadoran Association of Industrialists, Cattle Raisers' Association, El Salvador Sugar Cooperative, National Sugar Institute, Salvadoran Cotton Growers' Cooperative, and National Federation of Small Salvadoran Enterprises. In the early 1970s, the Salvadoran Communal Union was formed to improve peasant farming methods and to campaign for agrarian reform. In 1986, the union claimed 100,000 members.

There are youth organizations affiliated with religious institutions and political movements, as well as student unions at major universities. Scouting and Girl Guide programs are also active. There are several sports associations promoting amateur competitions in a variety of pastimes, such as tennis, badminton, taekwondo, squash, and baseball. The country also has an active program of the Special Olympics.

Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. There are national chapters of the Red Cross, Habitat for Humanity, the Society of St. Vincent de Paul, and Caritas.

### 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

El Salvador's best-known natural wonder is Izalco, an active volcano often referred to as the Lighthouse of the Pacific because its smoke and flames are a guide to ships. Noteworthy are the cathedrals and churches of San Salvador, Santa Ana, and Sonsonate; the parks, gardens, and architecture of San Miguel; and the colonial atmosphere of San Vicente. Archaeological ruins of pre-Columbian origin are found in many parts of the country. Among the most striking are those at Tazumal, near Santa Ana, which include

large pyramids and buildings with ancient carvings and inscriptions; there are more than 100 pyramid sites in El Salvador, many still unexcavated. The Pacific coast contains excellent beaches, and there is large-game fishing in the Gulf of Fonseca and in the ocean. Football (soccer) is the national sport. A valid passport is required for entry into El Salvador as well as a visa or a tourist card.

In 2003, there were 857,378 foreign visitors. The 4,578 hotel rooms with 9,156 beds had an occupancy rate of 51%. Visitors stayed an average of five nights. Tourism receipts totaled us \$514 million.

In 2005, the US Department of State estimated the cost of staying in San Salvador at us\$191 per day. Outside the capital, daily expenses were an estimated us\$91.

#### 48 FAMOUS SALVADORANS

The national hero of El Salvador is Father José Matías Delgado (1768–1833), who raised the first call for independence. A renowned political leader was Manuel José Arce (1786–1847), who fought against the Mexican empire of Iturbide and was the first president of the United Provinces of Central America. Gerardo Barrios Espinosa (1809–65) was a liberal president during the 19th century.

Prominent Salvadoran literary figures of the 19th century were Juan José Cañas (1826–1912), a poet and diplomat and the author of the Salvadoran national anthem, and Francisco E. Galindo (1850–1900), a poet and dramatist.

Writers of note in the 20th century included Alberto Masferrer (1865–1932), an essayist and poet; poet Roque Dalton (1935–1975); Juan Ramón Uriarte (1875–1927), an essayist and educator; and Salvador Salazar Arrué (1899–1975). Juan Francisco Cisneros (1823–78) was a nationally recognized painter.

Key figures in Salvadoran politics of the 1970s and 1980s were José Napoleón Duarte (1926–90) and Roberto D'Aubuisson Arrieta (1943–92). The assassinated Roman Catholic Archbishop Oscar Arnulfo Romero y Galdames (1917–80) was well known as a defender of human rights.

#### 49 DEPENDENCIES

El Salvador has no territories or colonies.

# FRENCH AMERICAN DEPENDENCIES

## FRENCH GUIANA

Located on the northeast coast of South America, and extending from 1°30' to 5°30' N and from 51°4' to 54°3' W, French Guiana (Guyane Française) has an Atlantic shoreline of about 320 km (200 mi) and a total area of some 91,000 sq km (35,000 sq mi). It is separated from Brazil by the Oyapock River in the E and the Tumuc-Humac Mountains in the S (440 km/273 mi); and from Suriname by the Maroni River (398 km/247 mi) on the W. Its length is about 400 km (250 mi) N-S, and its width is 300 km (190 mi) E-W. Several islands offshore are part of French Guiana including: the Îles du Salut (Devil's Island, Royale, and Saint-Joseph).

French Guiana consists of a small, low swampy coast called "terres basses," varying from 10 to 30 km (6-19 mi) in width, and a vast, partly unexplored interior, the "terres hautes," with grassy plateaus, equatorial forests (which cover 90% of the land area), and mountains. The mean annual temperature along the coast is 26°C (80°F) year-round. There is a rainy season from January to June; annual rainfall has a range of 350-400 cm (140-160 in). Average humidity is 85%. Endangered species in 2002 included the small-footed water rat, giant armadillo, giant otter, three species of turtle (South American river, olive ridley, and leatherback), and the black caiman.

The population was estimated at 195,506 in mid-2005. Four-fifths of the inhabitants live in the coastal lowlands, and about 55% of the total live in Cayenne, the capital city. About 66% of the population is either black or mixed-raced, 12% is white, 12% is either of East Indian, Chinese, or Amerindian origin, and 10% belongs to other ethnic origins. In the interior are six tribes of aboriginal Indians; descendants of fugitive black slaves from Dutch Guiana (now Suriname) have settled along the rivers. Roman Catholicism is the dominant religion. The official language is French.

Amerindian tribes inhabited the region from ancient times, but their numbers probably did not exceed 25,000 on the eve of European colonization. The land now known as French Guiana was first settled by Frenchmen in 1604 and was awarded to France by the Peace of Breda in 1667. Since 1946, it has been an overseas department, sending, in 1986, two deputies and one senator to the French parliament and one representative to the French Economic and Social Council. The old penal settlements to which French prisoners were once deported have been completely liquidated. Devil's Island, the most famous of the offshore penal colonies, operated from 1851 until 1951. French Guiana consists of Cayenne and St.-Laurent-du-Maroni, each of which has the status of an arrondissement. The French commissioner is assisted by a popularly elected 19-member general council and a 31-member regional council.

Arable land and labor both being scarce, agriculture in French Guiana is still in a primitive state. Trade is mainly with France. The territory's exports, mainly shrimp, timber, gold, rosewood essence, and clothing, totaled us\$155 million in 2002; imports to-

taled us\$625 million. Gold, which has been mined since 1853, and large deposits of bauxite are the chief mineral resources. The European Space Agency launches communications satellites from Kourou.

Education for French Guiana's children is compulsory and provided by the government. The Pasteur Institute, five hospitals, and other health units provide public health services. The infant mortality rate in 2005 was 12.07 deaths per 1,000 live births, down from 13.22 deaths per 1,000 live births in 2002.

## GUADELOUPE

The French overseas department of Guadeloupe, situated among the Lesser Antilles, extends 15°52' to 18°7' N, and 61° to 63°5' W. The length of Guadeloupe proper is 67 km (42 mi) E-W, and its width is 60 km (37 mi) N-S; its total coastline amounts to 656 km (408 mi). A narrow channel, Rivière Salée, divides Guadeloupe proper into two islands: Basse-Terre (848 sq km/327 sq mi) and Grande-Terre (585 sq km/226 sq mi). Outlying islands include Marie-Galante and La Désirade, and the Les Saintes and Petite Terre island groups, near the main islands; St. Barthélémy, about 120 km (75 mi) to the NW; and St. Martin, about 175 km (110 mi) to the NW, the northern two-thirds of it French, the southern third Dutch. Total area, including the outlying islands, is 1,780 sq km (687 sq mi). Basse-Terre is volcanic; its highest peak, La Soufrière (1,484 m/4,869 ft), erupted in the 18th and 19th centuries, and is still active. Annual rainfall ranges from 99 cm (39 in) on La Désirade to between 500 and 1,000 cm (200-400 in) on the mountains of Basse-Terre. Ferns, bamboo, mangrove, and tropical hardwoods are abundant. Endangered species include the Guadeloupe wren, green sea turtle, and leatherback turtle.

The estimated population in mid-2005 was 448,713. About 90% of the inhabitants are blacks or a mixture of blacks and descendants of Normans and Bretons who first settled the island in the 17th century. Some 95% of the people are Roman Catholic. French is the official language, but a Creole dialect is widely spoken.

Guadeloupe was first settled by Arawak Indians from Venezuela about AD 200. Carib Indians, also from Venezuela, overran this agricultural and fishing community around AD 1000. Discovered by Columbus in 1493 and occupied by the French in 1635, Guadeloupe has, except for short periods during the Napoleonic wars, been French ever since. In 1648, St. Martin was shared with the Dutch. Guadeloupe became an overseas department in 1946. It is represented in the French parliament by four deputies and two senators. Local administration is similar to that of regions and departments in metropolitan France. The appointed commissioner is assisted by a 42-member general council, elected by universal suffrage, and by a newly created regional council.

There are about 2,082 km (1,300 mi) of highways, of which about 1,752 km (1,089 mi) are paved. There are no railways except for privately owned plantation lines. Marine traffic is concen-

trated at Pointe-à-Pitre and Basse-Terre. Steamships connect Guadeloupe with other West Indian islands, with North and South America, and with France. Air France and other airlines serve the international airport at Pointe-à-Pitre.

Sugar has been replaced by bananas as the principal agricultural product. Other products include other tropical fruits and vegetables. About 63% of import and 60% of export trade is with France. In 1997, exports yielded us\$140 million; imports totaled us\$1.7 billion (the last figures available). Sugar refining and rum distilling are the traditional industries.

About 90% of the population is literate. Four teaching and research units—one for law and economics, one for liberal arts and the sciences, one for medicine, and one for the science and technology of physical and sporting activities—provide higher education at the Université Antilles-Guyane in Pointe-à-Pitre. Several hundred scholarship-holders study in French universities. The infant mortality rate was an estimated 8.6 deaths per 1,000 live births in 2005, down from 9.3 in 2002 and 17 in 1985.

**MARTINIQUE**

The island of Martinique is situated from 14°26' to 14°53' N and 61° W among the Lesser Antilles in the Caribbean Sea, between the islands of Dominica and St. Lucia. It has an area of 1,110 sq km (429 sq mi), with a length of 75 km (47 mi) SE-NW and a maximum width of 34 km (21 mi) NE-SW. Its total coastline is about 350 km (220 mi). Most of the island is mountainous. The two highest peaks, Pelée (1,397 m/4,583 ft) and Carbet (1,196 m/3,923 ft), are volcanoes. On 8 May 1902, Mt. Pelée erupted, completely destroying the city of St. Pierre and killing 30,000 inhabitants. About 25% of the land is wooded, with both European and tropical trees represented. Average temperature is about 26°C (80°F) and average annual rainfall about 190 cm (75 in).

The mid-2005 estimated population was 432,900. The population, composed mostly of descendants of black Africans, Carib Indians, and Europeans, is predominantly Roman Catholic. French is the official language, but a Creole dialect is widely spoken and English is understood in tourist areas.

There were reportedly 2,105 km (1,314 mi) of highway in 2000, and no railways. Steamer service connects Martinique with North and South America and France. Air France and other airlines provide air service from Lamentin Airport near Fort-de-France.

First inhabited by Carib Indians, Martinique was discovered by Columbus in 1502, and colonized by the French in 1635. Except for the periods 1762-63, 1793-1802, and 1809-15, the island has remained in French hands ever since. It is represented in the French parliament by four deputies and two senators.

Martinique's economy is agricultural. Sugarcane and bananas are the leading crops; pineapples, citrus fruit, mangoes, avocados, coffee, and cacao are also grown. Sugar refining, rum distilling, and fruit processing are the chief industries. Bananas, petroleum products, and rum are the principal exports; foodstuffs and oil are the main imports. In 1997, exports totaled us\$250 million; imports totaled us\$2 billion (the last figures available). Trade is mainly with France, which heavily subsidizes the budget. Tourism has become more important than agriculture as a source of foreign exchange.

Education is compulsory through the primary and secondary levels. There is a branch of the Universitaire Antilles- Guyana.

Martinique has 13 hospitals. The infant mortality rate in 2005 was estimated at 7.09 deaths per 1,000 live births, up from 6.76 per 1,000 live births in 1999, but down significantly from 14 in 1985. Life expectancy was 79.04 years in 2005, up from 78.56 years in 2002.

### ST. PIERRE AND MIQUELON

The French territorial collectivity of St. Pierre and Miquelon (Territoire des Îles Saint-Pierre et Miquelon) is an archipelago in the North Atlantic Ocean, between 46°45' and 47°10' N and 56°5' and 56°25' W, located about 24 km (15 mi) W of Burin Peninsula on the south coast of Newfoundland. It consists of three main islands, St. Pierre, Miquelon, and Langlade—the two latter linked by a low, sandy isthmus—and several small ones. The length of the group is 43 km (27 mi) N–S, and it measures 22 km (14 mi) E–W at its widest extent. The total area is 242 sq km (93 sq mi). The islands were the focus of a maritime boundary dispute between Canada and France, but in 1992 an arbitration panel awarded the islands an exclusive economic zone area of 12,348 sq km (4,768 sq mi) as a settlement. Although the archipelago is volcanic in origin, the highest point, Morne de la Grande Montagne, is only 393 m (1,289

ft). The temperature varies between an average daily low of –15°C (5°F) in winter and an average daily high of 22°C (72°F) in summer. The spring and autumn are very windy, and fogs are frequent throughout the year; annual precipitation averages 130 cm (51 in). Vegetation is scanty, except on Langlade, where several species of trees are found. Animal life includes seabirds, foxes, rabbits, and deer. The population in mid-2005 was estimated to be 7,012. Most of the people are descendants of Basque, Breton, and Norman settlers and are Roman Catholics.

The first permanent French settlement dates from 1604, and, except for several periods of British rule, the islands have remained French ever since. They became a French overseas territory in 1946, an overseas department in 1976, and a territorial collectivity in 1985. The economy has traditionally centered around fishing and by servicing the fishing fleets operating off the coast of Newfoundland, but the number of ships stopping at St. Pierre has been declining in recent years. Also affecting the economy are disputes with Canada over fishing quotas. The islands receive significant subsidies from France. Total exports in 2004 amounted to US\$7 million, while imports totaled US\$70 million, requiring heavy subsidies from France.

# GRENADA

*Grenada*

**CAPITAL:** St. George's

**FLAG:** The national flag consists of a red border surrounding a rectangle divided into two gold and two green triangles. There are seven yellow stars—three on the upper and three on the lower red border, and one large star at the apex of the four triangles—representing the six parishes and the island of Carriacou. A yellow nutmeg is represented on the hoist triangle.

**ANTHEM:** National anthem beginning "Hail Grenada, land of ours, we pledge ourselves to thee."

**MONETARY UNIT:** The East Caribbean dollar (EC\$) is a paper currency of 100 cents. There are coins of 1, 2, 5, 10, 25, and 50 cents, and 1 dollar, and notes of 5, 10, 20, and 100 East Caribbean dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7; as of 2004).

**WEIGHTS AND MEASURES:** The metric system is in use.

**HOLIDAYS:** New Year, 1–2 January; Independence Day, 7 February; Labor Day, 1 May; Thanksgiving, 25 October; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, and Emancipation Day, 1st Monday in August.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located about 160 km (100 mi) N of Trinidad and 109 km (68 mi) ssw of St. Vincent, Grenada, which includes the inhabited islands of Grenada, Carriacou, and Petite Martinique, has an area of 340 sq km (131 sq mi). Comparatively, the area occupied by Grenada is slightly less than twice the size of Washington, DC. Grenada island extends 34 km (21 mi) NE–SW and 19 km (12 mi) SE–NW, and has a coastline of 121 km (75 mi).

Grenada's capital city, Saint George's, is located on the island's southwestern coast.

## <sup>2</sup> TOPOGRAPHY

Volcanic in origin, Grenada is very hilly, with the highest peak, Mt. St. Catherine, in the Central Highlands, rising to 840 m (2,756 ft). The coastline is indented with many beaches and small bays. Several short streams cross the terrain. Lake Grand Etang is formed in the crater of a volcano at 530 m (1,740 ft) above sea level.

## <sup>3</sup> CLIMATE

The tropical climate is tempered by almost constant sea breezes; the prevailing wind is from the northeast. Temperatures range from 24–30°C (75–87°F). Annual rainfall varies from about 150 cm (60 in) in the northern and southern coastal belts to as much as 380 cm (150 in) in the Central Highlands. There is a wet season from June to December, but rain falls periodically throughout the year. Hurricanes are a natural hazard, particularly between June and November.

## <sup>4</sup> FLORA AND FAUNA

The Central Highlands support a wide variety of forest trees and many types of tropical flowers and shrubs grow throughout the

island. Characteristic wildlife includes the hummingbird, egret, dove, and wild pigeon; also to be found are armadillo, agouti, and monkeys.

## <sup>5</sup> ENVIRONMENT

As a member of the Organization of Eastern Caribbean States (OECS) formed in 1981, Grenada shares the advantages and disadvantages of island nations in the area. Water supply is limited and, in some areas, polluted by agricultural chemicals and sewage. Forests are threatened by the expansion of farming activities and the use of wood for fuel. The nation's coasts are affected by industrial pollution which threatens the nation's tourist trade. Environmental responsibilities are vested in the Ministry of Health and Housing.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammal, 2 species of birds, 4 types of reptiles, 1 species of amphibian, 12 species of fish, and 3 species of plants. Endangered species included the Grenada hook-billed kite, tundra peregrine falcon, the green sea and hawksbill turtles, the spectacled caiman, and the Orinoco crocodile.

## <sup>6</sup> POPULATION

The population of Grenada in 2005 was estimated by the United Nations (UN) at 101,000, which placed it at number 179 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 35% of the population under 15 years of age. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.2%, a rate the government viewed as too high. The projected

population for the year 2025 was 96,000. The population density was 297 per sq km (769 per sq mi).

In 2005, the UN estimated that 39% of the population lived in urban areas, principally St. George's, where the annual population growth rate was 1.34%. St. George's, which is the capital, had a population of 33,000 in that year.

## <sup>7</sup>MIGRATION

Grenadians have always emigrated, mainly to the United Kingdom and Canada. Emigration increased after the 1979 coup. As of 2004, Grenada hosted no refugees or asylum seekers. However, the country's lack of a national refugee law is a cause for concern as Grenada is likely to see an increase in the number of asylum seekers due to escalating extra-regional migration and migrant trafficking through the Caribbean. The total number of migrants in Grenada in 2000 was 8,000. However, after the terrorist attacks on the United States on 11 September 2001, Grenada and St. Vincent terminated their programs to sell passports to nonnationals. In 2005, the net migration rate was -13.25 migrants per 1,000 population. The government views the immigration level as satisfactory, but the emigration level as too high.

## <sup>8</sup>ETHNIC GROUPS

About 82% of the population are black, primarily the descendants of former African slaves. Those of mixed African and European origin account for about 13% of the population. Europeans and Asian Indians account for about 5%. A small number are Arawak/Carib Amerindians.

## <sup>9</sup>LANGUAGES

English is the official and common language. A French-African patois also is spoken.

## <sup>10</sup>RELIGIONS

According to 2004 reports, about 64% of the population were Roman Catholic. Other main groups included Anglicans (22%), Methodists (3%), and Seventh-Day Adventists (3%). Other Protestant denominations included Presbyterians, Church of God, Baptists, and Pentecostals. The Church of Jesus Christ of Latter-Day Saints (Mormons) and the Mennonites have small congregations. Minority religions are Islam and Baha'i. There were about 5,000 Rastafarians.

The constitution provides for freedom of religion and this right is generally respected in practice. Religious groups are required to register with the government. The Ministry of Ecclesiastical Relations, established in 2004, meets monthly to provide an open forum for leaders of all faiths. The Conference of Churches Grenada also serves as a forum for mutual understanding between religious organizations. The Christian Forum for Social Action is a group that addresses issues such as HIV/AIDS and drug use.

## <sup>11</sup>TRANSPORTATION

In 2002, Grenada's road system of 1,040 km (646 mi) included 638 km (396 mi) of paved roads. The country's major port is St. George's. A new international airport, Point Salines, built largely with Cuban assistance, and scheduled for completion in 1984, was repeatedly cited by the United States as posing a possible military threat to the Caribbean region. After the US-led invasion in 1983,

the airport was completed with funding mainly from the United States. Airline flights began in October 1984, and in 2001, the airport served 322,000 arriving and departing passengers. In 2004 there were three airports, all of which had paved runways. The smaller airports are at Pearls and on Carriacou.

## <sup>12</sup>HISTORY

Grenada was inhabited by Arawak Indians when first discovered on 15 August 1498 by Christopher Columbus, who named it *Concepción*. By the 18th century, the island was known as Grenada. The origin of that name is unknown, possibly a corruption of the Spanish city of Granada. A secure harbor (at St. George's) attracted traders and some French settlers during the 16th century. After a few failed French private ventures in 1650 and 1657, the French government annexed Grenada in 1674. The island remained under French control until 1762, when Admiral George Rodney captured it for Great Britain. The French regained Grenada in 1779, but the Versailles treaty of 1783 returned Grenada to Britain.

Sugar was Grenada's main product until the 19th century. At that time, the development of spices, especially nutmeg, coupled with the emancipation of slaves in 1834, led to a new economic base for the island. The economy flourished during the second half of the 19th century, and the cultivation of nutmeg, cloves, ginger, and cinnamon, earned Grenada the name *Isle of Spice*. Grenada's colonial status ended in 1958 when it joined the ill-fated Federation of the West Indies. In 1962, the federation dissolved, and in 1967, Grenada became an associated state of the United Kingdom.

On 28 February 1972, general elections resulted in the victory of Eric Matthew Gairy, who ran under the banner of the pro-independence Grenada United Labour Party (GULP). A constitutional conference was held in London during May 1973, and independence was set for the following February. Independence came on 7 February 1974, in spite of widespread strikes and demonstrations protesting Gairy's secret police force, actions that were supported by trade unions in neighboring Barbados and Trinidad and Tobago. Prime Minister Gairy ruled for five years.

On 13 March 1979, the opposition party, the New Jewel Movement, seized power, and Maurice Bishop became prime minister of the People's Revolutionary Government (PRG). Bishop suspended the constitution, jailed opposition leaders, and shut down independent newspapers. The PRG was drawn toward Cuba and its allies in the Caribbean region, as relations with the United States and some of Grenada's more conservative Caribbean neighbors deteriorated.

On 19 October 1983, in the course of a power struggle within the PRG, Bishop and several followers were shot to death, and a hard-line Marxist military council, headed by Gen. Hudson Austin, took over. Six days later, 6,000 US troops, accompanied by token forces from seven other Caribbean nations, invaded the island, ostensibly to protect the lives of American students there. Nearly all of the 700 Cubans then in Grenada were captured and expelled. In spite of the UN General Assembly's condemnation of the invasion, Gen. Austin was placed in detention, and the governor-general, Sir Paul Scoon, formed an interim government to prepare for elections. US combat troops were withdrawn in December 1983, but 300 support troops and 430 members of Caribbean forces remained on the island until September 1985.

Elections were held in December 1984, and Herbert Blaize and his New National Party (NNP) won 59% of the popular vote and 14 of the 15 House of Representatives seats. Prime Minister Blaize died in December 1989, and Ben Jones formed a government until the elections of 1990. Those elections elevated the National Democratic Congress (NDC) to majority status and Nicholas Brathwaite became prime minister. By 1993, ten years after the US invasion, tourist arrivals in Grenada had more than tripled, and the Point Salines airport, begun by the ousted Cubans and completed in 1984, was a modern facility servicing international flights.

In his 1994 budget, Brathwaite reintroduced the personal income tax, which had been abolished in 1986. Controversy over the tax helped carry the NNP to victory in the June 1995 election, and Keith Mitchell, who had promised to rescind the tax once again, became the new prime minister.

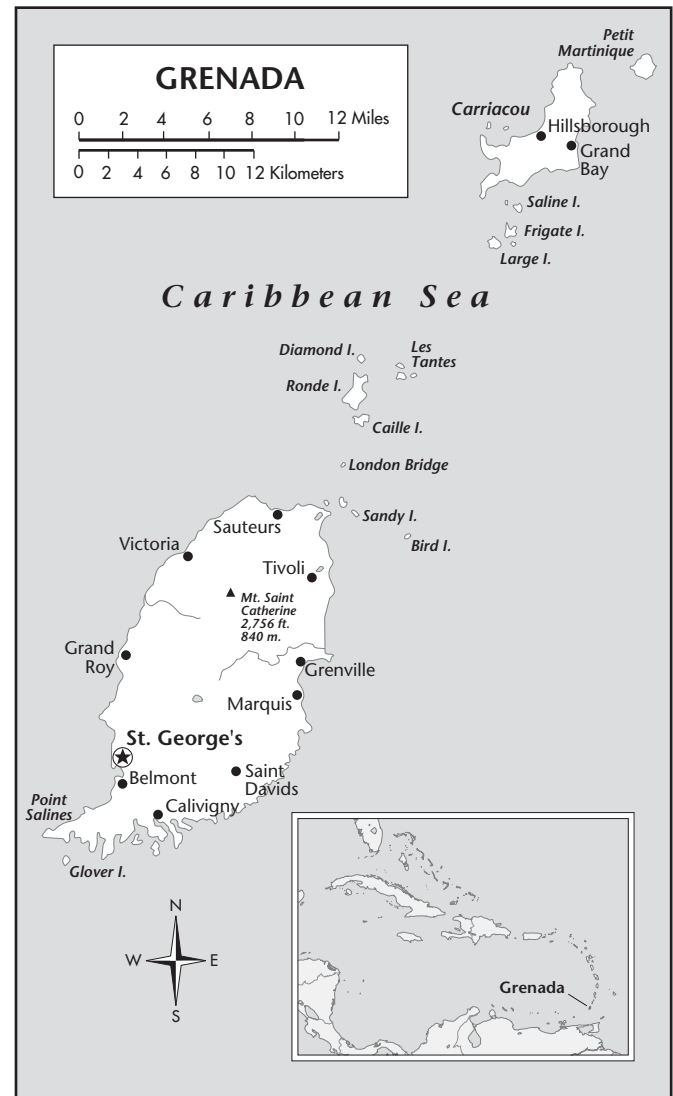

In November 1998, Mitchell's government lost its parliamentary majority when two members crossed over to the opposition, forcing early elections. In spite of allegations of government corruption, Mitchell's NNP swept the polling, winning all 15 seats in the House of Representatives in the January 1999 elections—the fourth peaceful electoral contest since the 1983 US intervention. Mitchell received credit for bolstering the country's economy and increasing foreign investment. In August 1998, Fidel Castro arrived in Grenada for his first state visit since 1983. Mitchell's government has pursued economic cooperation with Cuba, and Mitchell had visited Cuba the previous year. During the Castro visit, an economic agreement was signed by the two countries. In spite of steady economic growth and low inflation, the IMF issued a warning in 1999 about the state of Grenada's public finances, especially the nation's growing budget deficit, which was partially caused by tax cuts.

In the election of January 1999, the NNP once again won with an overwhelming 62.4% of the vote. Mitchell remained as prime minister and the NNP won all 15 seats in the parliament. In November 2003, the NNP narrowly edged out the National Democratic Congress (NDC), taking 8 seats in the House of Representatives to the NDC's 7. Mitchell remained prime minister.

In 2002, the country engaged in a major organic banana project in an effort to promote the industry; 150 acres were set aside for organic farming.

Hurricane Ivan devastated the island of Grenada in September 2004. Prime Minister Mitchell declared a national emergency; 90% of the country's buildings were damaged and the nutmeg crop was devastated. It was Grenada's worst hurricane in living memory. In July 2005, as Grenada was still recovering from Hurricane Ivan, Hurricane Emily destroyed crops and damaged homes across the island.

Grenada has taken serious steps to tackle the problem of money laundering, after reviewing its offshore banking sector. In 2001 Grenada was blacklisted by the Paris-based Financial Action Task Force for not doing enough to prevent money laundering, but in 2002 the group removed Grenada from its blacklist. In 2003, the US Treasury Department's financial crimes agency withdrew an advisory on Grenada as the country made efforts to clean up offshore banking.

LOCATION: 12°7' N and 61°40' W. COASTLINE: 121 kilometers (75 miles).  
TERRITORIAL SEA LIMIT: 12 miles.

### 13 GOVERNMENT

The independence constitution, effective in 1974 but suspended after the 1979 coup, was reinstated after the US invasion. It provides for a governor-general appointed by the British crown and for a parliamentary government comprising independent executive, legislative, and judicial branches. Under this constitution, the bicameral legislature consists of a Senate of 13 members, 10 of whom are appointed by the government and 3 by the leader of the opposition, and a 15-seat House of Representatives, members of which are popularly elected for five-year terms. The governor-general appoints as prime minister the majority leader of the House. The cabinet, which comprises the prime minister, four senior ministers, and four ministers of state, is the executive arm of the government and is responsible for making policy. In 1996, a portfolio for women's affairs was created.

## **14 POLITICAL PARTIES**

The New National Party (NNP), formed from a coalition of moderate parties and headed by Prime Minister Keith Mitchell, has been the majority party since the 1995 elections when it won 8 out of 15 seats in the House. In early elections called in January 1999, the party won 62% of the vote and all 15 House seats. The National Democratic Congress (NDC), a moderate party, took 5 of 15 seats in the House of Representatives in the 1995 elections but won no seats in 1999 (although garnering 25% of the vote).

The Grenada United Labour Party (GULP) was under the leadership of Sir Eric Gairy, who founded it in 1950, until Gairy's death in 1997. Right wing and populist in its approach, the group won no seats, but 12% of the vote, in the 1999 elections. The moderate National Party (NP), organized in 1989 by former Prime Minister Ben Jones, did not sponsor any candidates in 1999. On the left, the Maurice Bishop Patriotic Movement (MBPM) never won legislative representation, and it no longer exists as a party. Another party in existence as of 2005 was the People's Labor Movement (PLM), which is a combination of members of the original NDC and members of the MBPM.

Following the November 2003 elections, the NNP won 8 seats to the NDC's 7 seats.

## **15 LOCAL GOVERNMENT**

For administrative purposes, the main island is divided into six parishes and one dependency.

## **16 JUDICIAL SYSTEM**

Until it joined the Eastern Caribbean Supreme Court, the Grenada Supreme Court, in St. George's, consisted of a High Court of Justice and a two-tier Court of Appeals. The Court of Magisterial Appeals heard appeals from magistrates' courts, which exercised summary jurisdiction; the Itinerant Court of Appeal heard appeals from the High Court.

On joining the Organization of Eastern Caribbean States (OECS) in 1991, Grenada became subject to the jurisdiction of the Eastern Caribbean Supreme Court. Under the OECS system, until 2003 appeals were taken from this court to the Judicial Committee of Her Majesty's Privy Council in the United Kingdom. Grenada was among the eight nations (Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago) whose leaders met in Kingston on 9 June 2003 to ratify a treaty to establish the Caribbean Court of Justice (CCJ) to hear cases formerly taken to the Privy Council. The CCJ was officially inaugurated in April 2005, in Port-of-Spain, Trinidad and Tobago. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

The judiciary is independent. There are no military or political courts. The law provides for the right to a fair public trial, to a presumption of innocence, to remain silent, and to seek the advice of an attorney.

## **17 ARMED FORCES**

The Royal Grenada Police Force (RGPF), numbering 650 members, provides internal defense in Grenada. A special service unit of 80 and a 30-member coast guard is included in this security

force. The US Army and Coast Guard provide training and support to Grenada.

## **18 INTERNATIONAL COOPERATION**

Grenada became a member of the United Nations on 17 September 1974; it participates in the ECLAC and several UN specialized agencies, such as FAO, IFC, UNESCO, UNIDO, WHO, and the World Bank. Grenada is also a member of the ACP Group, the Commonwealth of Nations, the Caribbean Development Bank, G-77, the Latin American Economic System (LAES), the Alliance of Small Island States (AOSIS), OECS, the OAS, the Association of Caribbean States (ACS), and CARICOM.

Grenada is part of the Nonaligned Movement and the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). The nation is part of the Eastern Caribbean's Regional Security System (RSS). In environmental cooperation, Grenada is part of the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## **19 ECONOMY**

Grenada's economy is highly dependent on international trade and finance for its development. The economy is essentially agricultural and is centered on the traditional production of spices and tropical plants. Agriculture accounts for about 7.7% of GDP and 80% of exports and employs 24% of the labor force. Tourism is the leading foreign exchange earner (especially since the construction of the international airport in 1985) followed by agricultural exports. Manufacturing remains relatively undeveloped, but is growing due to a favorable private investment climate. The economy achieved an impressive average annual growth rate of 5.5% in 1986–91 but has slowed since 1992. In the late 1990s the offshore financial industry, begun to help develop Grenada's economy, grew by approximately 6.5% in 2001 despite the worldwide slowdown in tourism, while inflation remained under control at 2.8%.

The economy of Grenada, based primarily on services (tourism and education) and agricultural production (nutmeg and cocoa), was brought to a near standstill by Hurricane Ivan on 7 September 2004. Thirty-seven people were killed by the hurricane, and approximately 8,000–10,000 left homeless. Hurricane Ivan damaged or destroyed 90% of the buildings on the island, including some tourist facilities. Overall damage totaled as much as 2.5 times annual GDP. Reconstruction has proceeded quickly, but much work remains.

Despite initial high unemployment in the tourist and other sectors, urban Grenadines have benefited from post-hurricane job opportunities in the surging construction sector. Agricultural workers have not fared as well. Hurricane Ivan destroyed or significantly damaged a large percentage of Grenada's tree crops, and Hurricane Emily (14 July 2005) further damaged the sector. Thus, reconstruction from the devastation wreaked by Hurricane Ivan in September 2004 and Hurricane Emily in July 2005 is a major political issue for the present government.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Grenada's gross domestic product (GDP) was estimated at \$440.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,000. The annual growth rate of GDP was estimated at 2.5%. The average inflation rate in 2002 was 2.8%. It was estimated that agriculture accounted for 7.7% of GDP, industry 23.9%, and services 68.4%.

It was estimated that in 2000 about 32% of the population had incomes below the poverty line.

## 21 LABOR

In the latest years for which data was available, Grenada's labor force was estimated at 42,300 in 1996, and was distributed in 1999 as follows: agriculture 24%; industry 14%; and services 62%. In 2000 unemployment was estimated at 12.5%.

Approximately 25% of the labor force is unionized. There are several major trade unions in the country, including civil service unions. All major unions belong to one major federation, the Grenada Trade Unions Council (GTUC). The GTUC is somewhat connected to the government organizationally and receives subsidies from the government for its operating budget. Workers are free to strike and employees who claim to have been dismissed for union activism may seek redress through formal governmental procedures. Workers engage in collective bargaining.

In 2002, there were no minimum wage laws in effect. In general, wages do not provide a decent living for a family. The minimum working age is 18. This minimum age is respected and enforced in the formal economy, but enforcement is somewhat lax in the informal economy and agriculture. The constitution sets the maximum workweek at 40 hours. Health and safety standards are not regularly enforced.

## 22 AGRICULTURE

Numerous spices, fruits, and vegetables are grown in Grenada. The principal crops for export are nutmeg and mace, bananas, cocoa beans, and other fresh fruits and vegetables. Production in 2004 included bananas, 4,000 tons; cocoa, 1,000 tons; and avocados, 1,500 tons. Banana production decreased in the 1980s due to the appearance of Moko disease. There are small scattered plots of cotton, cloves, limes, nutmeg, cinnamon, and coffee. Both cotton and lime oil are produced on Carriacou. Food crops consist of yams, sweet potatoes, corn, peas, and beans. Grenada is especially known for its nutmeg production, earning it the nickname "Spice Island." In 1991, Grenada and Indonesia (the world's largest nutmeg producer) signed a cartel agreement which aims to constrict production, thereby driving up world prices for the spice. Nutmeg production in 2004 totaled 2,747 tons. In 2003, exports of agricultural products amounted to us\$12.9 million.

## 23 ANIMAL HUSBANDRY

There is very little dairy farming in Grenada. Most livestock is raised by individuals for their own use. In 2005 there were an esti-

mated 4,450 head of cattle, 20,400 sheep and goats, and 660 donkeys. Some 268,000 poultry were raised to supply local needs.

## 24 FISHING

Fishing is mostly coastal. The 2003 catch was 2,544 tons, predominantly tuna and scad.

## 25 FORESTRY

There are approximately 5,000 hectares (12,300 acres) of forest, about 75% of which is government owned. Since 1957, some 320 hectares (800 acres) of forest, primarily of Honduras mahogany, blue mahoe, and teak, have been introduced. The Forestry Development Corp. was established in 1979 to develop forest resources and woodworking industries. Imports of forestry products totaled \$5.2 million in 2004.

## 26 MINING

There were no reported mining operations in Grenada except for limestone, sand and gravel, and open-face red gravel deposits for the local construction industry.

## 27 ENERGY AND POWER

Grenada has no known reserves of oil, natural gas, or coal, and is thus dependent upon imports to supply its fossil fuel needs. In 2002, imports and consumption of refined petroleum oil products each totaled 1,740 barrels per day. There were no imports of natural gas or coal in 2002.

The government and the Commonwealth Development Corp. jointly operate a private company, Grenada Electricity Services, Ltd., for the supply and distribution of electricity throughout the island. In 2002, total electric generating plants capacity was placed at 0.042 million kW, with output that year at 0.149 billion kWh, all of which came from fossil fuels. Consumption of electricity that same year came to 0.139 billion kWh.

## 28 INDUSTRY

Industry is small scale, mainly producing consumer products for local use. Local firms produce food and beer, oils, soap (from copra), furniture, mattresses, clothing, and a number of other items. In 1996, Grenada expanded its production of flour, animal feed, chemicals, paints, and tobacco. Construction, textile production, and light assembly operations are other industrial sectors.

In 2003, industry accounted for 23.6% of GDP, while services accounted for 66.7% of GDP and agriculture for 9.7%.

Grenada's nutmeg industry, a major income earner for the country, was devastated in 2004 by Hurricane Ivan. The Commonwealth action plan has covered replanting, processing and development of nutmeg-based products, market and export promotion activities, and institutional changes; aid has focused on reviving the country's affected industry.

## 29 SCIENCE AND TECHNOLOGY

St. George's University School of Medicine was founded in 1976. A school of agriculture is located in Mirabeau. The Grenada Na-

tional Museum, at St. George's, maintains exhibits on technology and native fauna and flora.

### 3<sup>0</sup> DOMESTIC TRADE

There are meat, fish, fruit, and vegetable markets, in addition to other types of small retail shops, all over the island. St. George's is the import and merchandising center. A widespread network of cooperatives exists for the local distribution and sale of agricultural products. The nation relies heavily on imports for food and manufactured goods.

Firms in textile and garments industries, which have one of the lowest capital intensities among all types of companies, are large employers and foreign exchange earners due to their export-orientation. By contrast, firms in the ICT-enabled services bring in much more capital on average, but do not provide as much employment and are much more geared towards serving the domestic market.

### 3<sup>1</sup> FOREIGN TRADE

The Grenadian economy is highly import dependent, with imports accounting for 49% of GDP. The United States is the main source of imports (44%), followed by countries of the Caribbean Community (CARICOM) (20%). Virtually all exports are agricultural products, while the large flow of imports include motor vehicles and other consumer goods, fuels, and fertilizer. The spice trade supports Grenada with the largest percentage of commodity exports, including nutmeg, mace, and cardamom (47%). Other important exports include cocoa (4%), paper (11%), fish (10%), and flour (10%). Grenada's main exports go to Saint Lucia 12.7%, United States 12.2%, Antigua and Barbuda 8.7%, Netherlands 7.9%, Saint Kitts and Nevis 7.8%, Dominica 7.8%, Germany 7.1% and France 4.6%.

Grenada is a member of the Eastern Caribbean Currency Union (ECCU). The Eastern Caribbean Central Bank (ECCB) issues a common currency for all members of the ECCU. The ECCB also manages monetary policy, and regulates and supervises commercial banking activities in its member countries.

Grenada is also a member of the Caribbean Community and Common Market (CARICOM). Most goods can be imported into

Grenada under open general license, but some goods require specific licenses. Goods that are produced in the Eastern Caribbean receive additional protection; in May 1991, the CARICOM common external tariff (CET) was implemented. The CET aims to facilitate economic growth through intra-regional trade by offering duty-free trade among CARICOM members and duties on goods imported from outside CARICOM.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The adverse trade balance is generally offset by a flow of remittances from migrant groups abroad and by tourism. To illustrate, in 2005, Grenada received \$108.2 million in transfers (including remittances) compared to the \$30.4 million it exported (while it imported \$276 million worth of goods).

The US Department of State reported that in 2004 the total external debt outstanding was of \$415 million. The trade deficit grows yearly. In 2002, based on these figures, the debt to GDP ratio stood at 103% of GDP in 2002, climbing dramatically from the 2001 debt to GDP ratio of 67%. The 2002 ratios are very high both in relation to Grenada's economic history and in comparison to the debt-to-GDP ratios in other countries.

### 3<sup>3</sup> BANKING AND SECURITIES

Local financial institutions include the National Commercial Bank of Grenada, the Grenada Bank of Commerce, the Grenada Development Bank, and the Grenada Cooperative Bank. Foreign banks include Barclays Bank and the Bank of Nova Scotia. In 1992, Republic Bank Limited of Trinidad and Tobago bought 51% of the National Commercial Bank. There is no stock exchange.

Grenada is a member of the Organization of Eastern Caribbean States (OECS), and a member of the Eastern Caribbean Central Bank (ECCB), which is headquartered in St. Christopher and Nevis. Grenada's finances are bound by the ECCB's general guidelines on money supply and bank regulation and the currency is the Eastern Caribbean dollar, which is pegged to the US dollar at a constant exchange rate of EC\$2.70:\$1. The country is considered a tax haven for many US companies. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$78.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$430.6 million.

### 3<sup>4</sup> INSURANCE

There are a number of international firms (mainly UK, US, and Canadian) and some local interests doing business in Grenada. A full range of life and nonlife insurance is available. There were at least nine insurance companies operating in Grenada in 2000.

### 3<sup>5</sup> PUBLIC FINANCE

Main sources of revenue are export and import duties, income tax, estate duties, and various internal rates, licenses, and taxes. The 1986 Fiscal Reform Program replaced a number of taxes, including a personal income tax, with a VAT of 20% on certain consumer goods. In 1999, the government decided to double its expendi-

#### Principal Trading Partners – Grenada (2003)

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

tures on infrastructure projects, including airport expansion, the creation of a new port, and road construction.

The US Central Intelligence Agency (CIA) estimated that in 1997 Grenada's central government took in revenues of approximately \$85.8 million and had expenditures of \$102.1 million. Revenues minus expenditures totaled approximately -\$16.3 million. Total external debt was \$196 million.

### 36 TAXATION

Corporate taxes are levied on net profits at a rate of 30% on the first us\$50,000 and 40% on the remainder. A debt service levy is payable on salaries over us\$12,000 per year at a rate of 10%. VAT ranges from 5% on most services to 15% on locally manufactured products.

### 37 CUSTOMS AND DUTIES

All imports are subject to a general or preferential tariff, as well as a fixed package tax. Although Grenada is a member of the CARICOM community, it does not apply the group's common external tariff (CET). A 5% customs fee based on the value of cost, insurance, and freight (CIF) is applied to most goods. Import restrictions cover 45 product categories, including certain consumer goods, vehicles, and foods. Import licenses are required for 16 product categories that include appliances, foods, and beverages. A 20% consumption tax is levied on new cars. Capital equipment is exempt from tariffs.

### 38 FOREIGN INVESTMENT

Since independence, the government has sought to attract foreign investment for industrial development, especially the processing of local agricultural commodities for export. Grenada offers incentives competitive with other Caribbean nations and gives high priority to foreign investment that is either 100% foreign owned or joint venture with nationals.

There are no free trade zones in the country, but generous investment incentive packages are available, including a tax holiday of up to 15 years. There has been a considerable amount of foreign investment in the country's hotel sector. Most foreign investment during the 1990s came in the form of infrastructure construction projects related to the tourism industry.

In September 2001, Grenada was placed on the list of noncooperative countries in preventing money laundering by the OECD's Financial Action Task Force (FATF). After strengthening its anti-money laundering legislation and closing a number of banks, Grenada was removed from the list in February 2003.

In the period 1980–2000, FDI inflows as a percentage of GDP more than doubled, and registered an 11% annualized growth rate between 1997 and 1999. Since then, however, there has been virtually no growth in FDI inflows into Grenada. In 1998, the foreign direct investment (FDI) inflow into Grenada rose to \$48.7 million, up from \$33.5 million in 1996. Yearly FDI inflows stayed within this range from 1998 to 2001. FDI inflow in 2001 was \$34.2 million. As a result of the global economic downturn, the worldwide FDI flows halved between 2000–02. The most significant uncontrollable challenge relates to its small market size, with a population in the vicinity of 100,000, Grenada is unlikely to attract any foreign investment that is oriented to its domestic market.

## 39 ECONOMIC DEVELOPMENT

Increasing indebtedness threatens Grenada's macro-stability; foreign direct investment (FDI) inflows have stagnated in the last couple of years, and it continues to be constrained by the host issues related to the small size of its economy.

Import substitution was the focal point of the agricultural development plan. The PRG was committed to nationalizing agriculture and turned the large estates that had belonged to former Prime Minister Gairy into cooperative farms. Following the 1984 election, the Blaize government reversed the trend toward state control and embarked on an economic policy that encouraged private sector participation and modified the fiscal system to encourage economic growth. The establishment of the Industrial Development Corporation, and of the National Economic Council early in 1985, were essential components of the new policy, as was the privatization of 18 state enterprises. The tax structure was modified in 1986 to offer incentives to the private sector.

Tourism, the main foreign exchange earner, was adversely affected by the 11 September 2001 terrorist attacks on the United States. Large expenditures for infrastructure and tourism projects, and the global economic downturn in 2001, led to a decline in GDP by 3% in 2001. The government tried to expand its cargo ports to handle the growing volume of cargo, but in 2002 tropical storm Lili damaged crops and infrastructure. The International Monetary Fund (IMF) approved \$4 million in emergency assistance to Grenada.

The country took an even more serious blow in 2004 when Hurricane Ivan swept through, killing dozens of people, damaging 90% of the island's buildings, and devastating the nutmeg crop. After the extent of destruction by Hurricane Ivan was assessed in 2004, the UK Secretariat put together a three-year assistance package valued at ec\$5 million (almost \$2 million) from 2004 to 2007, aimed at helping Grenada rebuild its shattered economy. The package included technical support for rehabilitating infrastructure, principally in planning for and implementing the reconstruction of schools, public and historic buildings, and roads. Assistance was also provided to strengthen institutional support for the Ministry of Works, Communications, and Transport and capacity-building for national and external debt management. The development of a national export strategy to promote economic diversification and an emergency post-disaster scholarship and skills development program were also part of the assistance program.

The United States has been the leading donor since the hurricane, with an emergency program of about \$45 million aimed at repairing and rebuilding schools, health clinics, community centers, and housing; training several thousand Grenadines in construction and other fields; providing grants to private businesses to speed their recovery; and providing a variety of aid to help Grenada diversify its agriculture and tourism sectors. Other practical help has been the launching of a Trade Reference Center in 2005; the Center is sponsored by the Canada International Development Agency and has technical assistance from the OAS. This center is aimed at providing simple and friendly user access to regional and country specific information related to trade and trade negotiations.

Government policy has aimed toward sustained development of agriculture and tourism as the prime sectors of the economy,

with respect to both employment and foreign exchange earnings. The last decade has been a period of considerable development in Grenada. While the expansion of the tourist industry has proceeded rapidly, the island nation has taken great care to protect their magnificent natural environment. National Parks have been developed, and the protection of both the rain forest and the coral reefs continues to be a high priority. In 2003 a major organic banana project launched an effort to boost the industry; 150 acres were set aside for organic cultivation. Due to the hurricane devastation however, further assessment of the economy will be needed in the years to come.

#### **40 SOCIAL DEVELOPMENT**

A Social Insurance System provides old age, disability, survivor, health, and maternity benefits to all workers aged 16 to 59, including public employees. It is financed by wage contributions of 5% from employers and 4% from workers. The retirement age is 60 for both men and women, and pensions equal 30% of average earnings. Maternity benefits are payable for 12 weeks. Survivor pensions total 75% of the pension of the insured. A funeral grant is also provided. Workers' medical benefits are comprehensive, and include travel overseas if necessary.

Women often earn less than men, especially in lower paying jobs, although there is no official discrimination. Sexual harassment in the workplace is common. Domestic violence is addressed with laws carrying penalties including jail time, community service, fines, and restraining orders for perpetrators. Child abuse is also prevalent. Most cases of abuse, domestic violence, and rape go unreported.

Human rights organizations operate freely in Grenada. Flogging is a legal form of punishment, although it is rarely used in practice.

#### **41 HEALTH**

Grenada is divided into seven medical districts, each headed by a medical officer. Grenada General Hospital in St. George's and two other general hospitals (one on Carriacou and one in St. Andrews) have a combined total of 340 beds. Other hospital facilities include an 80-bed mental hospital (rebuilt after being severely damaged in the 1983 invasion) and a nursing home with 120 beds. There are 36 health centers, which provide primary care. In 2004, it was estimated that Grenada had 50 physicians, 368 nurses, and 20 midwives per 100,000 people.

As of 2005, the infant mortality rate was 14.62 per 1,000 live births, and life expectancy averaged 64.53 years. The total fertility rate was an estimated 2.5 children per woman during her childbearing years. Respective 2002 estimates for overall birth and death rates were 23 and 7.6 per 1,000 people. Approximately 92% of the country's children were immunized against measles. Malaria has virtually been eradicated and a program to eradicate yellow fever mosquito is making progress.

In 1996, there were 76 new cases of AIDS reported.

#### **42 HOUSING**

The housing situation in Grenada has been difficult to track for the past few years due to a cycle of losses, reconstructions, and new losses caused by severe hurricanes to the region. In 2004, Hurricane Ivan caused some type of damage to about 90% of the hous-

ing stock. Ten months later in 2005, Hurricane Emily, though less severe, caused damage to about 2,641 homes. A variety of international groups have offered assistance to the country in rebuilding and maintaining housing and infrastructure.

In the early 1980s, the latest point for which statistical information was available, some 90% of all dwellings were detached houses. Nearly 75% of all housing units were owner occupied, 14% were rented, and 9% were occupied rent free. The most common construction material for homes was wood (70%), followed by concrete (12%), and wood and brick combined (7%).

The Grenada Housing Authority is a government agency empowered to acquire land and construct low-income housing projects. All main population centers have generally been supplied with sewerage and piped-water facilities.

#### **43 EDUCATION**

Grenada's educational system is modeled largely on the British educational system. Education is free and compulsory for children between the ages of 5 and 16. Primary education lasts for seven years and secondary education for five years. In 2001, about 68% of children between the ages of three and four were enrolled in some type of preschool program. Primary school enrollment in 2001 was estimated at about 84% of age-eligible students; 89% for boys and 80% for girls. In 2003, secondary school enrollment was about 99% of age-eligible students. It is estimated that about 80% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 19:1 in 2003; the ratio for secondary school was about 20:1.

Postsecondary institutions include T.A. Marryshow Community College, Grenada National College, Technical and Vocational Institute, the Teacher Training College, and the Institute for Further Education. St. George's University Medical School, a private US institution founded in 1977, provides medical training for students from other countries, the majority from the United States. The adult literacy rate has been estimated at about 98%.

As of 2003, public expenditure on education was estimated at 5.1% of GDP, or 12.9% of total government expenditures.

#### **44 LIBRARIES AND MUSEUMS**

The Grenada Public Library system encompasses about 11 community branches. The main branch (also known as the Sheila Buckmire Memorial Library) serves as the national library and the national archives center; it is also the site of the administrative offices of the Department of Library Services, Ministry of Education. The St. George's University Medical School maintains a collection of 13,000 volumes. There is also a mobile library that visits the island's schools. The Grenada National Museum, founded in 1976, is located in St. George's and focuses on the history and archeology of the island.

#### **45 MEDIA**

A local automatic telephone system covers the island, with connections to Carriacou. In 2002, there were 33,500 mainline telephones and 7,600 mobile phones in use throughout the country.

Radio and television services are provided primarily by Radio Grenada and Grenada television. In 2004, there were seven radio stations and one television station. The Grenada Broadcasting Network (GBN) operates the primary stations. GBN is a privately

owned organization, but the government holds minority shares in the group. In 1997, there were 817 radios and 306 television sets in use per 1,000 population. In 2002, there were 15,000 Internet subscribers.

As of 2005, there were at least five weekly newspapers and several other newspapers published on an irregular schedule. The most popular weeklies are *The Grenada Informer* (1995 circulation, 5,000), *The Grenadian Voice* (3,500), and *The Grenada Guardian* (published by the United Labour Party).

The constitution provides for free speech and press, and the government is said to uphold these rights.

#### 46 ORGANIZATIONS

The Grenada Chamber of Industry and Commerce is in St. George's. The Grenada Employers' Federation assists in strengthening relations between business owners and employee unions. Other labor unions and organizations exist, such as the Grenada Co-operative Nutmeg Association and the Grenada Union of Teachers.

National youth organizations include the National Student Council of Grenada, The Scout Association of Grenada, and the Girl Guides Association. YMCA and YWCA organizations are also active. There are several sports associations promoting amateur competition in various pastimes. Volunteer service organizations, such as the Lions Clubs International and the Rotary Club, are also present. There are national chapters of the Red Cross Society and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism, although modest in relation to that of other Caribbean islands, was a major enterprise for Grenada before the 1979 coup and 1983 invasion. Since 1984, it has recovered rapidly, and the government is emphasizing development of the tourist infrastructure. There has also been substantial foreign investment in the hotel sector. Since 1989, American Airlines nonstop service to Grenada has boosted tourism significantly. In 2003, tourist arrivals numbered 142,355, a 7% increase from 2002. There were 1,758 hotel rooms with 3,844 beds that same year. The average length of stay was seven nights.

Tourism in Grenada offers the visitor a wide array of white sand beaches and excellent sailing. Two yacht harbors provide port and customs facilities. A valid passport is required for entry into Grenada, except for citizens of the United Kingdom, the United

States, and Canada, who only need two documents proving citizenship. Visas are not required by visitors from the United States, the United Kingdom, Canada, the British Commonwealth, Caribbean countries (except Cuba), most European countries, South Korea, and Japan. Evidence of vaccination against yellow fever is required if traveling from an infected country.

In 2005, the US Department of State estimated the daily cost of staying in Grenada at \$261 from April through December. The rest of the year was estimated at \$300 per day.

#### 48 FAMOUS GRENADIANS

Theophilus Albert Marryshow (1889–1958) is known throughout the British Caribbean as “the Father of Federation.” Eric Matthew Gairy (1922–1997), a labor leader, became the first prime minister of independent Grenada in 1974. Maurice Bishop (1944–83) ousted Gairy in 1979 and held power as prime minister until his assassination. After the US-led invasion, the task of choosing an interim government fell to the governor-general, Sir Paul Scoon (b.1935). Herbert A. Blaize (1919–89) was elected prime minister in 1984; he was Grenada's first chief minister (1957) and its first premier (1967). Keith Mitchell (b.1946) won election as prime minister in 1994, and was reelected in 1999 and 2003.

#### 49 DEPENDENCIES

Carriacou (34 sq km/13 sq mi), Petit Martinique, and several other islands of the Grenadines group are dependencies of Grenada.

# GUATEMALA

Republic of Guatemala  
*República de Guatemala*

**CAPITAL:** Guatemala City

**FLAG:** The national flag consists of a white vertical stripe between two blue vertical stripes with the coat of arms centered in the white band.

**ANTHEM:** *Himno Nacional*, beginning “Guatemala feliz” (“Happy Guatemala”).

**MONETARY UNIT:** The quetzal (Q) is a paper currency of 100 centavos. There are coins of 1, 5, 10, and 25 centavos, and notes of 50 centavos and 1, 5, 10, 20, 50, and 100 quetzales. Q1 = \$0.13072 (or \$1 = Q7.65) as of 2005. US notes are widely accepted.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some imperial and old Spanish units also are used.

**HOLIDAYS:** New Year’s Day, 1 January; Epiphany, 6 January; Labor Day, 1 May; Anniversary of the Revolution of 1871, 30 June; Independence Day, 15 September; Columbus Day, 12 October; Revolution Day, 20 October; All Saints’ Day, 1 November; Christmas, 25 December. Movable religious holidays include Holy Thursday, Good Friday, and Holy Saturday.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in Central America, Guatemala has an area of 108,890 sq km (42,043 sq mi), with a maximum length of 457 km (284 mi) NNW–SSE and a maximum width of 428 km (266 mi) ENE–WSW. Comparatively, the area occupied by Guatemala is slightly smaller than the state of Tennessee. It is bounded on the E by Belize, Amatique Bay, and the Caribbean Sea, on the SE by Honduras and El Salvador, on the S by the Pacific Ocean, and on the W and N by Mexico, with a total boundary length of 2,087 km (1,297 mi).

Guatemala has long laid claim to territory held by Belize (formerly known as British Honduras). In 1821, upon achieving independence, Guatemala considered itself the rightful inheritor of this former Spanish possession and continued to regard Belize as an administrative adjunct of Guatemala. In 1859, British rights to the area were defined in a treaty with Guatemala, but, alleging that the United Kingdom had not fulfilled its obligations, Guatemala subsequently refused to recognize the British title. In mid-1975, Guatemala demanded the cession of one-fourth of the territory of Belize as a condition for recognizing that country’s sovereignty.

When Belize did become independent in September 1981, Guatemala refused to recognize the new nation. In January 1983, the Guatemalan government announced that it would drop its sovereignty claim and would press instead for the cession of the southernmost fifth of Belize’s territory. Guatemala’s claim has been rejected not only by the United Kingdom and Belize but also by the UN General Assembly and, in November 1982, at the CARICOM heads of government conference. In mid-1986, Guatemala and the United Kingdom reestablished consular and commercial relations.

Guatemala’s capital city, Guatemala City, is located in the south central part of the country.

## <sup>2</sup>TOPOGRAPHY

A tropical plain averaging 48 km (30 mi) in width parallels the Pacific Ocean. From it, a piedmont region rises to altitudes from 90 to 1,370 m (300 to 4,500 ft). Above this region lies nearly two-thirds of the country, in an area stretching northwest and southwest and containing volcanic mountains, the highest of which is Mt. Tajumulco (4,211 m/13,816 ft). The larger towns and Lake Atitlán are located in basins at elevations of about 1,500 to 2,400 m (5,000 to 8,000 ft). To the north of the volcanic belt lie the continental divide and, still farther north, the Atlantic lowlands. Three deep river valleys—the Motagua, the Polochic, and the Sarstún—form the Caribbean lowlands and banana plantation area. North of it, occupying part of the peninsula of Yucatán, is the lowland forest of Petén, once the home of the Mayas. The largest lakes are Izabal, Petén Itza, and Atitlán.

Near the boundaries of the Cocos and Caribbean plates, Guatemala is in a geologically active region with frequent earthquakes and volcanic activity. Of some 30 volcanoes in Guatemala, six have erupted or been otherwise active in recent years. A catastrophic earthquake in February 1976 left nearly 23,000 dead, 70,000 injured, and 1 million people whose homes were partially or completely destroyed.

## <sup>3</sup>CLIMATE

Temperature varies with altitude. The average annual temperature on the coast ranges from 25 to 30°C (77 to 86°F); in the central highlands the average is 20°C (68°F), and in the higher mountains 15°C (59°F). In Guatemala City, the average January minimum is 11°C (52°F) and the maximum 23°C (73°F); the average minimum and maximum temperatures in July are, respectively, 16°C (61°F)

and 26°C (79°F). The rainy season extends from May to October inland and to December along the coast, and the dry season from November (or January) to April. Because of its consistently temperate climate, Guatemala has been called the “Land of Eternal Spring.”

On 4 October 2005, Hurricane Stan, a Category 1 hurricane, struck Guatemala’s Pacific coastal region, sending winds of 128 km/h (80 mi/h) along the coast below Guatemala City. The disaster caused landslides and mudslides, which destroyed many towns. Villages near the popular tourist area of Lake Atitlán suffered damage. Almost 1,000 died and hundreds lost their homes.

#### 4 FLORA AND FAUNA

Flowers of the temperate zone are found in great numbers. Of particular interest is the orchid family, which includes the white nun (*monja blanca*), the national flower. There is also an abundance of medicinal, industrial, and fibrous plants. Overall, there are more than 8,600 plant species throughout the country.

Indigenous fauna includes the armadillo, bear, coyote, deer, fox, jaguar, monkey, puma, tapir, and manatee. The national bird is the highland quetzal, the symbol of love of liberty, which reputedly dies in captivity. Lake Atitlán is the only place in the world where a rare flightless waterbird, the Atitlán (giant pied-billed) grebe, is found; this species, classified as endangered, has been protected by law since 1970. There are more than 900 other species of native and migratory birds. Reptiles, present in more than 204 species, include the bushmaster, fer-de-lance, water moccasin, and iguana.

#### 5 ENVIRONMENT

Guatemala’s main environmental problems are deforestation—over 50% of the nation’s forests have been destroyed since 1890—and consequent soil erosion. As recently as 1993, the nation obtained 90% of its energy from wood, losing 40,000–60,000 hectares of forest per year. Between 1965 and 1990, Guatemala also lost over 30% of its mangrove area, which totaled 16,000 hectares in the early 1990. From 1990–2000 the rate of deforestation was about 1.7% per year. In 2000, about 26.3% of the total land area was forested.

The nation’s water supply is at risk due to industrial and agricultural toxins. Guatemala has 27.8 cu mi of water with 74% used for agriculture and 17% used in farming activity.

United Nations sources show that environmental contamination is responsible for a significant number of deaths due to respiratory and digestive illnesses. Despite the establishment in 1975 of a ministerial commission charged with conserving and improving the human environment, coordination of antipollution efforts remains inadequate, and Guatemala still suffers from a lack of financial resources and well-trained personnel to implement environmental control programs.

In 2003, 20% of Guatemala’s total land area was protected. Tikal National Park is a UNESCO World Heritage Site and there are four Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 7 types of mammals, 10 species of birds, 10 types of reptiles, 74 species of amphibians, 14 species of fish, 2 species of invertebrates, and 85 species of plants. Endangered or extinct species in Guatemala included the

horned guan, Eskimo curlew, California least tern, green sea turtle, hawksbill turtle, olive ridley turtle, spectacled caiman, American crocodile, and Morelet’s crocodile.

#### 6 POPULATION

The population of Guatemala in 2005 was estimated by the United Nations (UN) at 12,701,000, which placed it at number 69 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.8%, a rate the government viewed as too high. Although the government implemented programs that provide access to subsidized contraception, only 31% of women used modern contraception and the fertility rate remained high at 4.9 births per woman. The projected population for the year 2025 was 19,962,000. The population density was 117 per sq km (302 per sq mi). Most of the population is concentrated in the southern third of the country.

The UN estimated that 39% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.27%. The capital city, Guatemala City, had a population of 951,000 in that year. Other large cities and their estimated populations are Quezaltenango, 250,000, and Escuintla, 68,000.

#### 7 MIGRATION

Because of persecution and civil war, Amerindian peasants began emigrating across the Mexican border in 1981. Under the CIRE-FCA plan (International Conference on Central American Refugees), 18,000 Guatemalans repatriated between 1989 and 1994. In 1995, 9,500 repatriated from Mexico, and in 1996, another 3,974 repatriated from Mexico. In 1997, there were still 40,000 in Mexico and Belize. Between 1984, when the first repatriation movements took place, and 1999, a total of 43,663 refugees had returned to more than 160 communities throughout Guatemala. The Guatemalan government spent some \$30 million on 36 farms purchased for collective returns. In 2004 there were 656 refugees, 4 asylum seekers, and 8 returned refugees. A population that remained of concern to the United Nations High Commissioner for Refugees (UNHCR) at the end of 2004 was 660 persons in Guatemala City.

In 2003 remittances were \$2 billion. In 2005, the net migration rate was -1.63 migrants per 1,000 population, down from 4.3 per 1,000 in 1990. The government views the migration levels as satisfactory.

#### 8 ETHNIC GROUPS

Guatemala has a larger proportion of Amerindians in its total population than any other country in Central America. In 2004, persons of mixed Amerindian and Spanish ancestry, called mestizos, constituted about 59.4% of the national total. Amerindians who have become assimilated and no longer adhere to a traditional Amerindian life-style are also called ladinos, but this term is sometimes used to refer to mestizos. There are at least 22 separate Mayan groups, each with its own language. The largest minority groups include the Quiché (9.1%), the Cakchiquel (8.4%), the Mam (7.9%), and the Q’equchi (6.3%). Other Mayan groups account for about 8.6% of the population. The Garifuna are de-

LOCATION: 13°42' to 18°30' N; 87°30' to 92°13' W. BOUNDARY LENGTHS: Belize, 266 kilometers (166 miles); Honduras, 256 kilometers (160 miles); El Salvador, 203 kilometers (126 miles); total coastline, 400 kilometers (250 miles); Mexico, 962 kilometers (595 miles). TERRITORIAL SEA LIMIT: 12 miles.

scendants of African slaves. The white population is estimated at less than 1% of the total.

## <sup>9</sup> LANGUAGES

Spanish, spoken by about 60% of the population, is the official and commercial language. Amerindians speak some 28 dialects in five main language groups: Quiché, Mam, Pocomam, and Chol—all of the Mayan language family—and Carib, Kekchi, Garifuna, Cakchiquel, and Xinca. Amerindian languages are spoken by about

40% of the populace. A 2003 Law of Languages mandates the use of Mayan languages in public sectors such as health, education, and justice.

## <sup>10</sup> RELIGIONS

Historically, Roman Catholicism is the predominant religion (between 50–60%), with an archbishopric at Guatemala City and bishoprics at Quetzaltenango, Verapaz, and Huehuetenango. Many inhabitants combine Catholic beliefs with traditional Mayan rites.

Protestants account for about 40% of the population. The largest Protestant denominations are the Full Gospel Church, the Assembly of God, the Church of God of the Central American Church, and the Prince of Peace Church. Other denominations represented are Presbyterians, Baptists, Lutherans, Episcopalians, the Church of Jesus Christ of Latter-Day Saints, and Jehovah's Witnesses. Minority groups and religions with small communities include Jews, Muslims, and followers of the Indian spiritual leader Sri Sathya Sai Baba.

A 1995 Agreement on the Identity and Rights of Indigenous Peoples was approved to provide freedom of practice and promote respect for the forms of spirituality practiced by the Maya, Garifuna, and Xinka groups. As of 2005, however, very little had been done to implement the agreement. Though there is no official religion, the constitution recognizes the Catholic Church as a distinct legal personality. Other religious groups must register with the government in order to make legal business transactions. Some tension exists between Christian groups and the indigenous Mayan religious groups. The Interreligious Dialogue and Foro Guatemala are groups that encourage tolerance and cooperation between indigenous and Christian faiths. The Ecumenical Forum for Peace and Reconciliation is a group of primarily Christian leaders who conduct public conferences and debates on a variety of social and political topics.

## <sup>11</sup>TRANSPORTATION

In 2002, the total length of Guatemala's road system was estimated at 13,856 km (8,610 mi), of which 4,370 km (2,715 mi) was paved, including 140 km (87 mi) of expressways. In 2003, there were approximately 127,800 passenger cars and 145,900 commercial vehicles registered. Two international highways cross Guatemala: the 824-km (512-mi) Franklin D. Roosevelt Highway (part of the Pan American Highway system) and the Pacific Highway. Guatemala Railways operates 90% of the nation's 884 km (549 mi) railroad system, all of it narrow-gauge.

Few of the rivers and lakes are important to commercial navigation. Of the 990 km (615 mi) only 260 km (161 mi) are navigable year round, an additional 730 km (454 mi) are only navigable during high water. Puerto Barrios and Santo Tomás on the Caribbean coast are Guatemala's chief ports. The Pacific coast ports are Champerico and San José. In 2002, Guatemala had no registered cargo ships.

There were an estimated 452 airports in 2004, but only 11 had paved runways as of 2005. La Aurora International Airport at Guatemala City, the first air terminal in Central America, serves aircraft of all sizes, including jumbo jets. The government-owned Aviateca has a monopoly on scheduled domestic service and also flies to other Central American countries, Jamaica, Mexico, and the United States. In 1998, (the latest year for which data was available) 508,000 passengers were carried on scheduled domestic and international flights.

## <sup>12</sup>HISTORY

Three distinct stages—Mayan indigenous, Spanish colonial, and modern republican—have left their mark on the history of Guatemala.

Guatemala includes much of the old Mayan civilization, which may date back as early as 300 BC. The classical Mayan period last-

ed from about AD 300 to 900 and featured highly developed architecture, painting, sculpture, music, mathematics (including the use of zero), a 365-day calendar, roads, and extensive trade. This great pre-Columbian civilization seems to have collapsed around AD 900, and by the 12th century, the Mayas had disintegrated into a number of separate Amerindian groups. The Amerindians offered resistance to the Spanish expedition sent by Hernán Cortés from Mexico and led by Pedro de Alvarado during 1523–24, but by the end of that time, their subjugation to Spain was virtually complete.

Alvarado founded the first Guatemalan capital, Santiago de los Caballeros de Guatemala, in 1524. Because of several earthquakes, the capital was moved a number of times until it became permanently established at Guatemala City in 1776. From 1524 until 1821, Guatemala (City and province) was the center of government for the captaincy-general of Guatemala, whose jurisdiction extended from Yucatán to Panama. Economically, this was mainly an agricultural and pastoral area in which Amerindian labor served a colonial landed aristocracy. The Roman Catholic religion and education regulated the social life of the capital. Spanish political and social institutions were added to Amerindian village life and customs, producing a hybrid culture.

In 1821, the captaincy-general won its independence from Spain. After a brief inclusion within the Mexican Empire of Agustín de Iturbide (1822–23), Guatemala, along with present-day Costa Rica, El Salvador, Honduras, and Nicaragua, formed the United Provinces of Central America in 1824. This federation endured until 1838–39, but was fragmented by liberal and conservative divides. Guatemala proclaimed its independence in 1839 under the military rule of the conservative Rafael Carrera, an illiterate dictator with imperial designs. Though the people went through three different pushes for independence, representative democracy was the exception from the mid-19th century until the mid-1980s. The country passed through dictatorships, military rule, insurgencies (in the 1960s), and coups.

After Carrera died (without reaching his dictatorial goals), Guatemala fell under a number of military governments. These included three notable administrations: Justo Rufino Barrios (1871–85), the "Reformer," who ruled through the transition from the colonial to the modern era; Manuel Estrada Cabrera (1898–1920), whose early encouragement of reform developed later into a push for increased power; and Jorge Ubico (1931–44), who continued, and elaborated upon, the programs begun by Barrios.

Guatemalan politics changed with the election of reform candidate Juan José Arévalo Bermejo in 1945. Arévalo's popularity marked one of the first mass-based movements in Guatemalan politics. In 1951, Jacobo Árbenz Guzmán was elected. Following Arévalo's approach to land reform, Árbenz expropriated holdings of the United Fruit Co., a US firm. The United States alleged communist influence within the Árbenz government, and began mobilizing opposition against him. In the summer of 1954, Col. Carlos Castillo Armas and an army of Guatemalan exiles, backed by the CIA, invaded Guatemala from Honduras and toppled Árbenz. Castillo took over, restored expropriated properties, and ruled by decree until he was assassinated by a presidential palace guard in July 1957.

After a period of confusion, Gen. Miguel Ydígoras Fuentes became president in January 1958. His administration was essential-

ly a military dictatorship, even though he claimed to follow democratic principles. He was particularly hard on his domestic critics, denouncing them as communists. He was equally bombastic on the international stage, denouncing the United States, quarreling with Mexico over fishing rights, and challenging the United Kingdom over Belize. He was also contemptuous of Fidel Castro, and allowed Guatemala to be a training area for the exiles in the abortive US invasion of the Bay of Pigs in April 1961.

In March 1963, Ydígoras was overthrown by Defense Minister Col. Enrique Peralta Azurdia, who declared a state of siege. For two years, Peralta ruled dictatorially, and continued to assert Guatemala's claims on Belize. In September 1965, the Peralta regime announced a new constitution and elections, and in March 1966, Dr. Julio César Méndez Montenegro was elected president. He was the first civilian president since Árbenz, and would be the last for some time. During his term, the army and right wing counter-terrorists proceeded to kill hundreds of guerrillas, who were believed to be sponsored by Cuba, and claimed destruction of the guerrilla organization by the end of 1967. Uprooted from the countryside, the guerrillas concentrated their efforts on the capital, where, in 1968, guerrillas assassinated US Ambassador John G. Mein.

Guatemala returned to military rule as Col. Carlos Arana Osorio was elected president in 1970. He instituted the country's first comprehensive development plan, but the plan was upset by guerrilla violence, which now engulfed the country. Ambassador Karl von Spreti of the Federal Republic of Germany (FRG) was murdered in April 1970 by leftists. Many prominent Guatemalans were killed or held for ransom. In response to the violence, Arana suspended civil liberties from November 1970 to November 1971. In 1974, Arana's candidate, Gen. Kjell Laugerud García, was confirmed by Congress as president, after an election marred by charges of fraud. Laugerud followed a centrist policy and obtained a measure of popular support. During his tenure, guerrilla violence decreased, and some political liberties were restored. The principal challenge to Laugerud's administration was the need to rebuild Guatemala after the catastrophic earthquake of February 1976.

A militant rightist, Gen. Fernando Romeo Lucas García, was elected president in 1978. As guerrilla violence continued, there was also an upsurge of activity by right wing "death squads," which, according to unofficial Guatemalan sources, committed over 3,250 murders in 1979 and even more during 1980. In addition, hundreds of Amerindians were reportedly massacred during antiguerrilla operations. The Carter administration objected to Guatemala's deteriorating human rights record, whereupon the military charged that communist influence had reached the White House.

In January 1981, the main guerrilla groups united and escalated while the government went into crisis. The elections of March 1982 were won by Laugerud's handpicked candidate, Gen. Angel Anibal Guevara. Three weeks later, a coup placed in power a "born-again" Protestant, Gen. José Efraín Ríos Montt. After his month-long amnesty offer to the guerrillas was rejected, he declared a state of siege in July, and the antiguerrilla campaign intensified. The government's counter-insurgency killed between 2,600 and 6,000 in 1982, and drove up to a million Guatemalans from their homes by the end of 1983. In March 1983, Ríos lifted the state of siege and announced that elections for a constituent

assembly would be held in July 1984. But Ríos, who had fought off some 10 coup attempts during his administration, was overthrown in August 1983.

The new government of Brig. Gen. Oscar Humberto Mejía Victores declared that the coup was undertaken to end "abuses by religious fanatics" and pledged continued efforts to eradicate the "virus of Marxism-Leninism." Elections for a constituent assembly were held, as promised, in July 1984. In May 1985, the assembly promulgated a constitution for a new government with an elected Congress. The general elections of November 1985 were followed by a runoff election in December. The overwhelming winner was Mario Vicio Cerezo Arévalo of the Guatemalan Christian Democratic Party (DCG). He also brought a majority into Congress. Political violence decreased under Cerezo, who withstood two attempted coups. But he was unable to make any progress on human rights in Guatemala, and was unwilling to risk prosecution of military personnel who had been the most serious violators. As the economy worsened, political instability increased, including violence.

The elections of 11 November 1990 necessitated a runoff election, which was won by Jorge Serrano of the Movement for Solidarity and Action (Movimiento para Acción y Solidaridad—MAS). Serrano's inauguration in January 1991 marked the first transition in memory from one elected civilian government to another. Serrano promised to negotiate with insurgents and bring to justice both corrupt former officials and human rights violators, but was deposed by the military after he declared a state of emergency and suspended the constitution on 25 May 1993. The military, in unusual service in defense of democracy, then allowed Congress to name Ramior de Serrano's successor. This unusual service of the military in defense of democracy led to the naming of Ramior de León Carpio as president on 5 June. De León, a human rights advocate, promised to bring to justice those responsible for the dismal state of human rights in Guatemala. He also proposed reductions in the military, which predictably were not well-received by the officer corps.

On 29 December 1996, under the government of Alvaro Arzu, the Guatemalan government signed a peace accord with the guerrilla Guatemalan National Revolutionary Unity. This signaled the end of Central America's longest-running guerrilla war, beginning with an informal cease-fire in March 1996, and the signing of the socioeconomic accord (which called for the government to raise its tax revenues from 8% to 12% of GDP and increase its spending in health, education, and housing). The last accord, signed in Mexico City in September 1996, called for legislative and judicial reforms. It also included a reassessment of the military's role, as the parties agreed to remove the army from public security functions and to annul the law that provided for the Civil Defense Patrols established in the 1980s to fight guerrillas in the highland villages.

In February 1999, the country's Historical Clarification Commission blamed the army for more than 90% of the deaths or disappearances of more than 200,000 Guatemalans during the 36-year civil war. In many instances, the army committed genocide against entire Mayan villages, the report concluded. The three-member commission blamed the United States government for supporting right wing regimes even though it knew about the atrocities being committed by the army. An earlier report by the Catholic

Church revealed similar findings. During a short visit to Guatemala in March 1999, US president Bill Clinton said his country had been wrong for supporting the Guatemalan army. He pledged to support the peace process. In May, the peace process suffered a setback when Guatemalans rejected 50 key constitutional reforms that would have diminished the role of the army and given protection and recognition to Amerindian languages and traditional customs, in a vote in which only about 20% of Guatemalans took part.

In November of 1999, a populist lawyer named Alfonso Portillo captured 47.8% of the vote in the presidential election. This vote was not enough to prevent a runoff election (held a month later), which was unsurprising as Portillo was a very controversial candidate. Portillo had fled Mexico in 1982 to avoid what he termed unfair prosecution for the killing (in self-defense) of two men in Guerrero. Further, he was also associated with former dictator Ríos Montt (whose 17-month regime in 1982–83 committed some of the worst atrocities against Amerindians) through membership in the conservative Guatemalan Republican Front (FRG). Ríos Montt, who had his eye set on the presidency in 2003, worked closely with Portillo as FRG's secretary general. Portillo built support with promises to reduce crime, one of the worst problems facing the nation after the war. Crime was rampant throughout the nation, with dramatic increases in murders, kidnappings, and armed robbery. Portillo also promised to aid the poor and curb unemployment, a message that did not go unheard in a nation where 64% of Guatemalans are unemployed or underemployed. In the December runoff election, Portillo captured 68.3% of the vote to win the presidency. His party captured 63 of 113 seats in Congress, while the conservative PAN won 37 seats. A leftist coalition captured nine seats.

Montt attempted to overturn a constitutional ban preventing former coup plotters from running for public office, but he failed to overturn the ban in 1999. It was widely speculated that, in the midst of meager economic growth, a 60% poverty rate, and increasing levels of crime and violence, Montt's tough-on-crime stance would be able to convince the Guatemalans to give him a second chance. However, Montt was defeated in the first round of voting, as he was only able to win 19.3% of the vote. The former Guatemala City mayor, Oscar Berger Perdomo won 54.1% of the vote as the Grand National Alliance (GAN) candidate. Alvarado Colom Caballeros, a center-left candidate of the National Unity for Hope (UNE) party, garnered 49.1% of the vote. Though there were fears that violence and fraud might mar the election, those fears were not realized. Berger Perdomo, a conservative backed by the business class, assumed office on 14 January 2004. Portillo, however, quickly fled Guatemala as news of a corruption scandal in the presidency grew. In October 2005, Guatemala requested that Mexico send Portillo back to face accusations of public funds misuse—specifically, a diversion of about \$16 million in military funds.

In his inaugural speech, Oscar Berger Perdomo committed to adherence to the 1996 Peace Accords. However, the UN Verification Mission in Guatemala (MINUGUA) reported that many of the fundamental reforms of the 1996 Peace Accords were not being realized due to persistent racism and social inequality. MINUGUA predicted that the persistence would lead to an engendered future social conflict, stunted economic development, and corro-

sion of democratic government. Violence against women, femicide, was also a growing problem in Guatemala, where 527 women, mostly poor, were reportedly raped and murdered in 2004.

Civil war, corruption, and instability are among the reported reasons that Guatemala maintained a 75% poverty rate in 2005. The effects of Hurricane Stan and its concomitant flooding and landslides, claimed thousands of lives in October 2005.

### 13 GOVERNMENT

Constitutionally, the Guatemalan government is defined as democratic and representative, and the new constitution that took effect on 14 January 1986 reaffirms that definition. Since the 1950s, however, civil disorder has often prompted the suspension of constitutional guarantees. In October, 1999, Congress approved constitutional reforms that ended the military's constitutional role in internal security except for limited periods and under civilian control.

Guatemala is a republic. The president, who must be a native-born lay person at least 40 years old, is elected by direct vote for a four-year term and may not be reelected. The constitution calls for a popularly elected vice president. The office of vice president provides a guarantee of presidential succession in case of the death or disability of the chief executive. There is a five-member court of constitutionality, which officially advises the president. Its members are appointed, one each by the Supreme Court, Congress, the president, the University of San Carlos, and the bar association. The president, who has broad powers, appoints and is assisted by a cabinet. The cabinet members traditionally resign at the end of each year so that the president may choose a new cabinet. The president, who is also commander-in-chief of the armed forces, appoints most military officers, the 22 governors, and other important public and diplomatic officials. Presidential duties include preserving public order, proposing laws, and making an annual presentation of the budget.

The unicameral National Congress has 113 members elected to four-year terms. Ninety-one members are elected from departmental constituencies, while 22 are elected by proportional representation. In districts with a population over 200,000, an additional deputy is elected to represent each additional 100,000 inhabitants or fraction exceeding 50,000. In addition, at-large representatives are elected by proportional representation from lists submitted by each political party. Under the constitution, Congress imposes taxes, enacts the national budget, declares war and makes peace, and ratifies treaties and conventions proposed by the president. Congress elects the president of the judiciary and judges of the Supreme Court and courts of appeals. The president may veto congressional bills, but Congress may override by a two-thirds vote. All public officials must declare the amount of their incomes and property holdings before assuming their posts and after they leave office.

Citizenship is acquired at the age of 18. Voting is obligatory for literate men and women 18 years of age and older and optional for nonliterate citizens.

### 14 POLITICAL PARTIES

Political power in Guatemala has been largely a matter of personal, rather than party, influence. Although parties have generally

developed along conservative or liberal lines, political periods are commonly identified with the names of important leaders.

Under President Carlos Castillo Armas (1954–57), the Guatemalan Communist Party and other leftist parties were dissolved, and all other parties were temporarily suspended. To prevent further party proliferation, the membership necessary for party certification was raised from 10,000 to 50,000 in 1963. Only three parties were able to meet this requirement in time for the March 1966 elections: the Revolutionary Party (Partido Revolucionario—PR), a center-left party, the conservative Institutional Democracy Party (Partido Institucional Democrático—PID), formed in 1965, and the militantly anticommunist National Liberation Movement (Movimiento de Liberación Nacional—MLN).

During the 1970s, these parties remained dominant. The MLN won the presidency in 1970, and an MLD-PID coalition took the 1974 election (which was ultimately decided in Congress), defeating Gen. José Efraín Ríos Montt, representing the leftist National Opposition Front, a coalition of the several parties, including the Christian Democrats (Partido de Democracia Cristiana Guatemalteca—DCG). In 1978, the PR and PID formed a center-right coalition. In the congressional voting, the MLN won 20 seats, the PID 17, the PR 14, the DCG 7, and other parties 3. In the presidential elections of March 1982, a coalition of the PR, PID, and the National Unity Front (Frente de Unidad Nacional—FUN), an extreme right wing party formed in 1977, won a plurality of 38.9% of the vote. Congress endorsed the PR-PID-FUN candidate, Gen. Ángel Aníbal Guevara, as president, but he was deposed in a coup later in March. All parties were suspended by the new ruler, Gen. Ríos, but political activity resumed in March 1983. In the 1980s, the Christian Democrats grew significantly, winning the 1985 presidential and congressional elections. In addition, a host of new parties entered the political arena. Many had hopeful names suggesting national reconciliation, moderation, and solutions to Guatemala's problems. Among these were the National Union of the Center (Unión del Centro Nacional—UCN), the Democratic Party for National Cooperation (Partido Democrático de Cooperación Nacional—PDCN), the Solidarity Action Movement (Movimiento para Acción y Solidaridad—MAS), the National Advancement Plan (Plan por el Adelantamiento Nacional), and the National Authentic Center (Centro Auténtico Nacional).

The left wing guerrilla movement is represented by the Guatemalan National Revolutionary Unity (Unidad Revolucionaria Nacional Guatemalteca—URNG). Founded in 1982, these groups consist of the Guerrilla Army of the Poor (Ejército Guerrillero de los Pobres—EGP), the Guatemalan Workers' (Communist) Party (Partido Guatemalteco del Trabajo—PGT), the Rebel Armed Forces (Fuerzas Armadas Rebeldes—FAR), and the Organization of the People in Arms (Organización del Pueblo en Armas—ORPA). During the 1999 elections, the leftists won nine seats in Congress. The main political parties in 1999 were the conservative Frente Republicano Guatemalteco and Partido de Avanzada Nacional; Frente had 63 seats in Congress and PAN had 37 seats.

In the November 2003 elections, the Grand National Alliance (GANNA) won 49 of the 140 seats in Congress; the FRG won 42 seats; the National Unity for Hope (UNE) won 33 seats; and PAN took 16. In the November and December 2003 presidential elections, Óscar Berger Perdomo of the Grand National Alliance won both the first and second rounds of voting to become president.

His opponent, Caballeros, won 49.1% of the vote. The next legislative and presidential elections were scheduled for November 2007.

## <sup>15</sup> LOCAL GOVERNMENT

Guatemala is divided into 22 departments, plus Guatemala City, each with a governor appointed by the president. Municipalities are governed by a mayor and independent municipal councils whose officials are popularly elected for two-year terms.

## <sup>16</sup> JUDICIAL SYSTEM

The Constitution of 1985 established an independent judiciary and a human rights ombudsman. Courts of ordinary jurisdiction are the nine-member Supreme Court, 10 courts of appeals, 33 civil courts of first instance, and 10 penal courts of first instance. There is also a Constitutional Court. Judges of the Supreme Court and courts of appeals are elected for four-year terms by the National Congress from lists prepared by active magistrates, the Bar Association, and law school deans. Judges of first instance are appointed by the Supreme Court. Courts of private jurisdiction deal separately with questions involving labor, administrative litigation, conflicts of jurisdiction, military affairs, and other matters. An independent tribunal and office of accounts supervises financial matters of the nation, the municipalities, and state-supported institutions, such as the National University.

In 1986, under Cerezo's civilian government, reforms were added in the effort to end political violence and establish rule of law. These included *amparo* (court ordered protection), new laws of habeas corpus, and a series of Supreme Court reforms to fight corruption and make the legal system more efficient. However, the government was criticized for still failing to investigate and prosecute human rights violations throughout the rest of Cerezo's term.

A new criminal procedural code affording stronger due process protections took effect in July 1994. Trials are public. Defendants have the rights to counsel, to be presumed innocent, and to be released on bail.

In 2001, there was some concern that intimidation would stop justice, specifically in regards to the prosecution of the Bishop Gerardi murder. In this trial, retired army and foreign intelligence chief Col. Disrael Lima and his son Capt. Byron Lima were charged for murder along with former member of the Presidential Guard (EMP) Ogdulio Villanueva, among others. Archbishop Gerardi was beat to death two days after the Restoration of Historical Memory (REMHI) report was released by the human rights office (ODHA) that he headed. The report blamed the military and paramilitary for Guatemala's 36-year long civil war and the majority of deaths that occurred during that time. The reopening of the trial in 2001 was met by a bomb attack against Judge Iris Yassmin Barrios the night before the reopening of the Gerardi trial. Several witnesses died suspiciously, and judicial officials, judges, and prosecutors backed out of participation in the case due to threats and surveillance.

In 2004, Guatemala's judiciary was still said to suffer from corruption, inefficiency, intimidation, and the de facto doling out of impunity, despite its legal independence. Furthermore, military courts retain control of military personnel who commit crimes

while on official business, thus disallowing civil courts to try human rights abuses by the military.

The consequently incomplete justice under the formal judicial system has been a reason that some citizens have taken justice into their own hands through the carrying out of *linchamientos* in vigilante groups that attack war criminals and others accused of war crimes. According to MINUGUA, an average of one lynching per week was carried out between April 1997 and May 1998, usually in rural areas lacking substantive police presence and where civil patrols had once been prevalent. Former patrollers, ironically, were often involved in the instigation of attacks.

Some outside courts have attempted to give justice where Guatemalan courts have had less progress. The Inter-American Court of Human Rights ordered that the state pay compensation to victims of human rights abuses committed by the state. In December, 2004, \$3.5 million was paid. The court found the state specifically responsible for the 1982 massacre of 268 people in Plan de Sanchez, Rabinal, and Baja Verapaz. The Constitutional Court, in 2005, also rejected the proposal to create a UN Commission for the Investigation of Illegal Bodies and Clandestine Security Apparatus, saying it would be unconstitutional and that alternative methods of protecting human rights from state aggression would be carried out. It also questioned the legality of Guatemala's accepting the jurisdiction of the Inter-American Court of Human Rights. An attorney with close ties to the military sought this ruling. Incidentally, Guatemala had not accepted compulsory ICJ jurisdiction, either, as of 2004.

The World Bank invested in a Judicial Reform Project aiming to create a more effective, accessible and credible judicial system that would improve consistency, equity, public trust, and confidence in its judging of the law.

## 17 ARMED FORCES

The Guatemalan national armed forces (29,200 active and 35,200 reservists in 2005) are combined for administrative purposes, with the Army providing logistical support to the Navy and Air Force. In 2005 the Army had 27,000 active personnel, while there were 1,500 in the Navy, and 700 in the Air Force. The Army's primary armament included 12 light tanks, 57 reconnaissance vehicles, and over 118 artillery pieces. The Navy's major units consisted of 31 coastal patrol craft and 1 amphibious landing craft. The Air Force had 10 combat capable aircraft, including 4 fighter ground attack aircraft, in addition to 21 utility helicopters. Paramilitary forces included a 19,000 member national police force, in addition to a 2,500 member Treasury Police force. The defense budget in 2005 totaled \$101 million. A decree promulgated in December 1983 authorized military service for women.

## 18 INTERNATIONAL COOPERATION

Guatemala is a charter member of the United Nations, having joined on 21 November 1945; it participates in ECLAC and several other UN specialized agencies, such as the FAO, ILO, IMF, UNESCO, UNIDO, WHO, and the World Bank. It is one of five members of the Central American Bank for Economic Integration (BCIE) and the Central American Common Market (CACM). The country also belongs to G-24, G-77, the Latin American Economic System (LAES), OAS, the Association of Caribbean States (ACS), and the Río Group. In 2004, Guatemala, the United States,

Costa Rica, El Salvador, Honduras, Nicaragua, and the Dominican Republic signed the US Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force. Guatemala has observer status in the Latin American Integration Association (LAIA). Guatemala was a founding member of the Central American Parliament (PARLACEN).

Guatemala is part of the Nonaligned Movement and is a signatory of the 1947 Río Treaty, an inter-American security agreement. The country is also part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In environmental cooperation, Guatemala is part of the Antarctic Treaty, the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification. Guatemala is also signatory to the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

Since the Spanish conquest, the economy of Guatemala has depended on the export of one or two agricultural products. During the colonial period, indigo and cochineal were the principal exports, but the market for them was wiped out by synthetic dyes in the 1860s. Cocoa and essential oils quickly filled the void. Coffee and bananas were introduced later, and in 1999, the chief exports were coffee, sugar, and bananas. Guatemala's economy, the largest in Central America, is dominated by the private sector, which generates nearly 90% of GDP. Since World War II, the government has encouraged light industrial production (such as tires, clothing, and pharmaceuticals). Nevertheless, in 1995, agricultural pursuits occupied 58% of the national labor force and accounted for some two-thirds of Guatemalan foreign exchange earnings. Living standards and personal income remain low, and no significant domestic market exists, except for subsistence crops. However, the agricultural-based structure of the economy has been changing slowly since about 1980, morphing into a country that is more services-based and focused on commerce and financial services. As of 2004, commerce was the largest sector in the economy, accounting for approximately 25% of GDP; agriculture comprised 22.8% of GDP. Manufacturing accounted for 12.6% of the GDP.

The economy boomed from 1971 through early 1974. Then, as a result of inflation (21.2% in 1973), the world energy crisis, and an annual population growth of 2.9%, the economic growth rate slowed from 7.6% for 1973 to 4.6% for 1974. During the second half of the 1970s, Guatemala's economic performance slowed further; during 1974–80, the average annual growth rate was 4.3%. By the early 1980s, the civil war, coupled with depressed world commodity prices, had led to decreases in export earnings and to foreign exchange shortages. The GDP dropped by 3.5% in 1982, the first decline in decades, and the GDP declined or was stagnant through 1986. The annual inflation rate, which averaged 11% during 1979–81, dropped to no more than 2% in 1982. It rose thereafter, reaching 31.5% in 1985 and about 40% in the first half of 1986.

In the 1990s the Guatemalan economy grew at a healthy pace, propelled by nontraditional exports and investment. Inflation was reduced through fiscal and monetary policies to an average of

12% in 1993. Economic growth accelerated to an estimated 5.0% in 1993 compared with 4.6% in 1992. In a sudden shift that was perceived as a recession by the private sector, GDP growth decelerated in 1996 to 3.1%. The slowdown reflected a combination of factors: windfall profits from coffee exports, a slowdown in most Central American countries causing a significant decline in Guatemalan exports, and a severe competition of domestic products by Mexican imports. In addition, domestic demand cooled off as private sector credit demand ran out of steam, and tax increases were designed to strengthen the fiscal situation ahead of the signing of the peace accords. Growth for 1997 had improved to 4% thanks to greater domestic and trade liberalization; despite Hurricane Mitch, which destroyed a large portion of the country's agricultural produce for the year, GDP growth reached 5% in 1998.

Real GDP growth remained steady throughout 2001–05, between 2–3%. Additionally, inflation remained under 10% for the 5-year period.

The US Central Intelligence Agency reported that Guatemala was still struggling with an appalling poverty rate—75% of the population lived beneath the poverty line as of 2004. The unemployment rate was estimated at 7.5% in 2003, and GDP per capita was estimated at \$4,200 in 2004. In 2004, there remained an estimated 250,000 internally displaced persons, indicative of the continued negative influence of prior conflict on the current economy.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Guatemala's gross domestic product (GDP) was estimated at \$62.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,300. The annual growth rate of GDP was estimated at 3.1%. The average inflation rate in 2005 was 9.1%. It was estimated that agriculture accounted for 22.8% of GDP, industry 19.1%, and services 58.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.147 billion or about \$175 per capita and accounted for approximately 8.7% of GDP. Foreign aid receipts amounted to \$247 million or about \$20 per capita and accounted for approximately 1.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Guatemala totaled \$22.25 billion or about \$1,809 per capita based on a GDP of \$24.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.0%. It was estimated that in 2004 about 75% of the population had incomes below the poverty line.

## 21 LABOR

In 2005 Guatemala's labor force was estimated at 3.76 million. As of 2002, it was divided among the following sectors: agriculture 38.7%; industry 20%; services 37.5%; with 3.9% in other unde-

financed occupations. As of 2003, the unemployment rate was estimated at 7.5%.

The trade union movement was born at the end of World War II. Directed in part by foreign communist labor leaders and cultivated by a sympathetic administration, the labor movement grew in the next 10 years to a force claiming nearly 500 unions with 100,000 members. With the overthrow of the Árbenz government in 1954, however, the unions were dissolved. After slow reorganization, the trade unions numbered about 110 by 1974, but in 1979 and 1980, trade union activity was severely restricted. In 1992, the Labor Code of 1947 was amended to facilitate freedom of association, to strengthen the rights of working women, to increase penalties for violations of labor laws, and to enhance the role of the Labor Ministry and the courts in enforcement. Approximately 2% of the workforce were union members in 2002. Unions are independent of government and political party domination, however retaliation against union participation is common. Workers dismissed for union activity have little legal or administrative redress. Workers have the right to strike, but it is weakened by legal restrictions and the force of tradition in a country where strikes were illegal until recently.

The workweek is statutorily recognized as being 44 hours long, but most workers work longer hours out of economic necessity. The minimum legal age to work is 14 but child labor remains a huge problem particularly in agriculture and in the informal economy. Hazardous conditions for child laborers are common especially in the fireworks industry. The minimum wage as of 2002 was \$3.57 per eight-hour day for industrial workers and \$3.24 per day for agricultural workers. There is routine noncompliance of the minimum wage law in the rural areas.

## 22 AGRICULTURE

In 2003, only about 18.9% of the total land area of Guatemala was used for the production of annual or perennial crops, although almost two-thirds is suitable for crop or pasture use. Agriculture contributes about 23% to GDP, makes up 48% of export earnings, and employs 46% of the labor force. The principal cash crops are coffee, sugar, bananas, and cotton, followed by hemp, essential oils, and cacao. Coffee is grown on highland plantations; most of the bananas are produced along the Atlantic coastal plain. Cash crop output in 2004 included 18,000,000 tons of sugarcane, 216,000 tons of coffee, 1,000 tons of cotton, and 1,000,000 tons of bananas. Subsistence crop production included 1,072,000 tons of corn and 97,000 tons of dry beans, along with rice, wheat, and fruits and vegetables. Nontraditional agricultural exports have greatly increased in recent years; such products include: lychee, rambutan, melon, papaya, mango, pineapple, broccoli, okra, snow peas, celery, cauliflower, asparagus, garlic, spices and nuts, and ornamental plants. Guatemala's trade deficit in agricultural products was \$454.5 million in 2004.

An agrarian reform law of 1952 provided for government expropriation of unused privately owned agricultural lands, with the exception of farms of 91 hectares (225 acres) or less and those up to 273 hectares (675 acres) if two-thirds of the acreage was under cultivation. By 1954/55, 24,836 hectares (61,371 acres) had been distributed to 10,359 farmers. The law of 1952 was supplemented by an agrarian reform law of 1956, which aimed to distribute state-owned farms (*fincas nacionales*) to landless peasants. From

1954 to 1962, the government distributed 17,346 land titles. In 1962, the National Agrarian Improvement Institute was created to provide assistance to the new landowners and to improve their living standards. The government requires plantation owners to set aside land for the raising of subsistence crops for their tenants. An agrarian credit bank provides loans to small farmers. Some of the land farmed by Amerindians is held in common by groups of families and is never sold.

### **2<sup>3</sup> ANIMAL HUSBANDRY**

Consumption of dairy products and meat is low, despite improvements in stock raising and dairying. The wool industry in the western highlands supplies the famed Guatemalan weavers. Hog and poultry production is ample for domestic consumption. In 2005, there were 2,540,000 head of cattle, 212,000 hogs, 260,000 sheep, 124,000 horses, and 27,000,000 chickens. Guatemala exports poultry, with 155,000 tons of poultry meat and 85,000 tons of eggs produced in 2005. Total cattle numbers continue to fall despite increased illegal imports from Honduras and a decline in illegal exports to Mexico. Depressed beef prices and rising production costs are the main causes of this trend.

### **2<sup>4</sup> FISHING**

Guatemalan waters are rich in fish, including shrimp, snapper, and tuna. The total catch in 2003 was 30,480 tons (up from 6,513 tons in 1991), about 32% of which came from inland waters.

### **2<sup>5</sup> FORESTRY**

Forests are among Guatemala's richest natural resources; they covered some 26% of the total land area in 2000. The forests in the Petén region yield cabinet woods, timber, extracts, oils, gums, and dyes. Mahogany, cedar, and balsam are important export products, and chicle for chewing gum is another important commodity. In 2004, 16.4 million cu m (579 million cu ft) of roundwood were produced, with 97% burned for fuel. Sawn wood production was 366,000 cu m (12.9 million cu ft) that year. Imports of forestry products exceeded exports by \$165.8 million in 2004.

### **2<sup>6</sup> MINING**

The principal commercial minerals were gold, iron ore, and lead. Production of antimony fell to zero in 1999–2001, from a high of 1,020 tons in 1997, when Guatemala ranked third in Latin America, behind Bolivia and Mexico. Gold, which was mined from the colonial period until the early 20th century, was no longer a major export item. An estimated 4,550 kg was produced in 2003, up from an estimated 4,500 kg in 2002. Rough marble, which ranged in color from white through green, was exported to Mexico and other nearby countries. Deposits of nickel have also been found at Marichaj and Sechol. Barite, bentonite, kaolin, other clays, feldspar, gypsum, iron ore, lime, pumice, salt, limestone, sand and gravel, and silica sand were also produced, primarily for domestic use. Reported deposits of copper, quartz, manganese, uranium, mica, and asbestos awaited exploitation.

### **2<sup>7</sup> ENERGY AND POWER**

Guatemala is the only oil producing country in Central America, but has no refining capacity. Therefore it must import all of its refined petroleum products. Most of the country's oil production

lies in its northern jungles along the Mexican border. According to the Oil and Gas Journal, Guatemala has proven oil reserves of 526 million barrels, as of October 2005. Since the end of the civil war in 1996, the government has been granting oil exploration concessions. In March of 2005, a new oil licensing round was initiated, the first since 1997. Two blocks, A6 and A7, with known proven reserves were offered, with two unexplored blocks, Piedras Blancas and Cotcal offered. Production averaged an estimated 19,800 barrels per day in 2004, of which almost all was exported to the United States. In 2002, oil exports totaled an estimated 3,104 barrels per day. Consumption of refined products totaled 64,560 barrels per day in that year. Guatemala has modest natural gas reserves of 1.543 billion cu m as of 1 January 2002, but no production.

Guatemala is Central America's largest producer and consumer of electricity. In 2002, electric power generating capacity came to 1.698 million kW, while total production in that year reached 6.808 billion kWh, of which: fossil fuels accounted for almost 60%; hydropower for 27%; and geothermal/other sources accounted for the rest. Electricity consumption in Guatemala grew at an annual rate of 8.1% from 1993 to 2003. In 2002, electric power demand totaled 5.76 billion kWh. The surplus power generated has made Guatemala a power exporter. In 2002, electric power exports totaled 4.40 million kWh, with imports at 55 million kWh.

### **2<sup>8</sup> INDUSTRY**

Manufacturing and construction accounted for a growing proportion of GDP in 2004. In that year, agriculture accounted for 22.7% of the GDP while industry accounted for 19.5% and services accounted for 57.9%. Guatemalan factories produce beverages, candles, cement, pharmaceuticals, chemicals, cigarettes, foodstuffs, furniture, matches, molasses, rubber goods, shirts, shoes, soap, sugar, textiles, and apparel. More recently established firms produce electrical machinery, refined petroleum products, metal furniture, instant coffee, pasteurized milk, plastic, plywood, aluminum and tires. Handmade woven and leather goods are sold to tourists and exported.

Most of the country's industrial enterprises operate on a very small scale. A small domestic market has traditionally limited Guatemala's industrial potential, although the CACM temporarily broadened the market for the country's exported manufactures. The value of Guatemala's exports more than tripled between 1972 and 1978. During the 1980s, however, the industrial sector declined, partly because of the collapse of the CACM but also because of a shortage of the foreign exchange necessary to purchase basic materials. In the mid-1980s, Guatemalan firms turned to export production as internal demand contracted. The 1986 devaluation of the quetzal raised the cost of imported industrial inputs. During the 1990s, the value added by manufacturing remained at a steady pace, except for during 1996. The manufacturing sector suffered from increased competition from Mexico, often unregistered and untaxed, while export to major neighboring markets was hampered in 1996 by the slowdown in Costa Rica and El Salvador.

In 2002, major manufactures included sugar, clothing and textiles, furniture, chemicals, petroleum, metals, and rubber. Heavy industry included a small steel mill located in Escuintla, and an oil refinery that had a capacity of 16,000 barrels per day. The

pharmaceutical industry shrank by 53% in 1998 because several manufacturing companies had moved their businesses to Mexico. Construction, very dynamic during the first half of the 1990s, was affected by falling demand in 1996 and 1997, but grew by about 25% annually in 1998 and 1999. Electricity generation and telephone services continued to grow strongly, while oil production, thanks to a very active development policy, increased by 250% between 1992 and 1998.

Maquila plants have comprised a growing proportion of the manufacturing sector, though they are not as heavy of a proportion as in Mexico, Honduras, or El Salvador. In 1994, maquilas in Guatemala employed 70,000; this number grew to 113,200 in 2004. As of December 2004, 222 maquila plans operated in Guatemala—65.3% were Korean-owned, 27% Guatemalan-owned, and 59.9% US-owned.

### 29 SCIENCE AND TECHNOLOGY

In 1987–97, total Guatemalan expenditures on research and development amounted to 0.2% of GDP, with 112 technicians and 104 scientists and engineers per million people engaged in research and development. The Academy of Medical, Physical, and Natural Sciences, headquartered in Guatemala City, dates from 1945. In 1996, Guatemala had learned societies devoted to natural history, pediatrics, and engineering, and research institutes concerned with nuclear energy, industry, and earth sciences. The Institute of Nutrition of Central America and Panama founded in 1949 and administered by the Pan American Health Bureau Organization and the World Health Organization, conducts research and disseminates scientific and technical information. Five universities offer degrees in basic and applied sciences. The National Museum of Natural History is located in Guatemala City.

In 2002, high technology exports by Guatemala totaled \$55 million, or 7% of the country's manufactured exports.

### 30 DOMESTIC TRADE

Outside the capital city, markets are held on appointed days, and local fairs are held annually. Traders bring their wares on large racks atop buses or by mule, herding animals ahead of them. Prices are not fixed. Although there are some modern, tourist-oriented shops, traditional methods of commerce, with modifications, also prevail in Guatemala City. Franchise stores are beginning to gain acceptance. In 2002, there were about 150 franchising companies with around 450 outlets nationwide. Business hours are weekdays, 8 AM to 6 PM; shops also open on Saturday mornings. Normal banking hours in Guatemala City are weekdays, 9 AM to 3 PM.

### 31 FOREIGN TRADE

The Guatemalan commodity export market is dominated by coffee, sugar, bananas, and oil. Other main exports are medicinal and pharmaceutical products, vegetables, and cardamom. Nontraditional exports, such as cut flowers, fruits and berries, shrimp, and textile assembly, are of growing importance to the Guatemalan economy.

Most exports go to the United States (55.3% in 2003); they also have increasingly gone to other Central American countries. Guatemala runs a trade surplus with the region, exporting mainly to El Salvador (10.5% of exports), but also to Honduras (7.1%) and Mexico (4.1%). As of 2003, Guatemala imported primarily from

the United States (comprising 33.1% of imports), Mexico (9.1%), and South Korea (8.8%). In 2004 Guatemala imported 34% of its imports from the United States, 8.1% from Mexico, 6.8% from South Korea, 6.6% from China, and 4.4% from Japan. Guatemala typically imports fuels, machinery and transport equipment, construction materials, grain, fertilizers, and electricity.

Guatemala signed the Central American Free-Trade Agreement (DR-CAFTA) on 10 March 2005.

### 32 BALANCE OF PAYMENTS

Guatemala generally finances its trade deficit through capital inflows. Capital flight caused by regional instability during the 1980s led to large deficits on the overall payments balance and brought foreign exchange reserves down from \$709.6 million at the end of 1978 to \$112.2 million at the end of 1982. In 1991 and 1992,

with inflation lowered, private capital inflows were large enough to offset public capital outflows and the current account deficit. As a result, foreign reserves expanded during the 1990s, growing by \$559 million. Foreign exchange reserves were over \$1 billion from 1997 into 1999. Exports increased by 7.2% in 1997 and by 20.7% in 1998. National income reports do not include the export value added by the textile assembly industry (as they are generally located in the Free Trade Zones), and remittances from Guatemalans living abroad, which help finance the trade deficit.

Guatemala's underdeveloped infrastructure is a hindrance to foreign investment and economic development. A disproportionate share of investment goes to the Guatemala City area, despite rehabilitation of the railway system and investment in highways, telephone service, and electricity.

The US Central Intelligence Agency (CIA) reported that in 2004 exports were approximately \$2.9 billion; imports were approximately \$7.1 billion, resulting in a trade deficit of approximately \$4.2 billion.

### 33 BANKING AND SECURITIES

The Bank of Guatemala (BANGUAT) is the central bank and the bank of issue. The Monetary Board, an independent body, determines the monetary policy of the country. Associated with the Bank of Guatemala are six other government institutions: The National Mortgage Credit Institute (the official government mortgage bank); two development banks, the National Bank of Agricultural Development and the National Housing Bank; and the National Finance Corp., organized in 1973 to lend funds to industry, tourism, and mining to provide technical assistance. BANGUAT intervenes in the foreign exchange market to prevent sharp deviation in the exchange rate. In 1998, the Central Bank spent over \$500 million to support the exchange rate, but the currency depreciated by 15% anyway that year.

As of 2002, the formal banking system consisted of 32 private commercial banks, three state banks, and several financial houses. Over 18 international banks are represented in one form or another. The five largest banks control approximately 45% of total assets. Several financial institutions collapsed in 1998 and 1999, prompting the government to bring banks into line with the Basel convention on minimum capital requirements. The government also hopes to make credit more available. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$6.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 10.6%.

When the Bank of Guatemala was established the Fund for the Regulation of the Bond Market was created to promote security issues. Nevertheless, Guatemalans still tend to prefer tangible investments, and there is no fully developed securities market. The National Stock Exchange of Guatemala (the Bolsa Nacional de Valores—BNV) opened in 1989 where shares from private companies in the country and other securities are traded. It is the largest of Guatemala's stock exchanges. The other two main exchanges, the Bolsa Nacional Global and the Bolsa Agrícola, merged to form the Corporación Bursatil in 1994. Three government bonds are

traded on the exchanges, including CENIVACUS, CERTIBONO, and CDP. The volume traded in 1999 was \$5.9 billion.

### 34 INSURANCE

In Guatemala, worker's compensation (the country's Social Security Plan) is compulsory, providing pension, disability pension, medical and hospital benefits, maternity benefits, and funeral expenses. In addition, the insurance market is entirely domestic, as foreign insurers are prohibited from issuing policies. Market rates, and the types of fire, auto, life, personal accident, and crime insurance are set by the superintendency. In 2003, the value of direct premiums written totaled \$271 million, with nonlife premiums accounting for \$222 million. The country's top nonlife insurer that same year was G&T, which had gross nonlife written premiums of \$55.2 million.

### 35 PUBLIC FINANCE

Fiscal policy loosened after the 1985 elections, but tax reforms in 1987 failed to generate additional income, and governmental expenditures continued to grow. By 1990, the public sector deficit was 4.7% of GDP. The Serrano administration transformed the deficit of 1990 to a slight surplus in 1991 and a virtually balanced budget in 1992. The consolidated public sector deficit amounted to 1.2% in 1991 and 1.0% in 1992. Guatemala's public sector is among Latin America's smallest, and the tax burden is one of the lightest, at about 8% of GDP. The budget deficit grew to 2.5% of GDP in 1998, from only 0.50% in 1997, forcing the government to reevaluate its taxation and customs practices. Continued privatization and trade liberalization should boost public finances.

The US Central Intelligence Agency (CIA) estimated that in 2005 Guatemala's central government took in revenues of approximately \$3.3 billion and had expenditures of \$4.0 billion. Revenues minus expenditures totaled approximately -\$667 million. Public debt in 2005 amounted to 26.9% of GDP. Total external debt was \$5.503 billion.

(...) data not available or not significant.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues in millions of quetzales were 21,694.4 and expenditures were 26,210.9. The value of revenues in millions of US dollars was \$2,732 and expenditures \$3,275, based on a market exchange rate for 2003 of 7.9408 as reported by the IMF. Government outlays by function were as follows: general public services, 22.2%; defense, 4.7%; public order and safety, 10.4%; economic affairs, 23.9%; environmental protection, 0.8%; housing and community amenities, 11.2%; health, 7.0%; recreation, culture, and religion, 1.5%; education, 17.6%; and social protection, 0.6%.

### 3<sup>6</sup> TAXATION

The corporate income tax rate in Guatemala is 31% of net income. However, companies operating there have a choice between two payment regimes: a general withholding regime, and an optional tax regime. Under the General regime, a monthly 5% tax on gross income is made. Under the optional regime, a quarterly payment at the 31% corporate rate is made on net taxable income. In addition, there is a 2.5% asset tax that is applied to the previous year's income or net assets. The asset tax is credited against the corporate income tax. An industrial development law provides tax exemptions for new industries. There is also a 3.5% tax on all foreign exchange transactions. Only income earned from Guatemalan sources is taxed. Capital gains, like the corporate income tax, offer two payment regimes: a general withholding regime; and an optional tax regime. Under the first, a 10% monthly withholding rate is applied, while under the second, a quarterly 31% rate is used. Dividends from resident companies are exempt from tax if the income tax was paid out of the income that was distributed as dividends by the distributing company. Otherwise a 10% withholding tax is applied.

The progressive personal income tax schedule has a top rate of 31%. Nonresidents pay a flat 31% rate, while income from employment and professional services is charged at the progressive rate. Other taxes include property taxes, and inheritance and gift taxes. Excise taxes are levied on beverages, cigars, tobacco, gasoline, vehicles, and airline tickets. Royalties are taxed at 31%.

Guatemala's main indirect tax is a 12% value-added tax (VAT) that is applied to most transactions. However, basic foodstuffs, sales of some low-cost housing and certain financial services are exempt. Exports are zero-rated.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Guatemala requires licenses for the importation of restricted goods, including pharmaceuticals, basic food grains, milk, coffee beans, and armaments. As a member of the Central American Common Market CACM, Guatemala adheres to a common tariff classification system as well as a common customs code and regulations. Duties are stated as both specific and ad valorem. Import duties are generally minimal, ranging from 5 to 15%. Imports of agricultural products that exceed the quota have higher rates. There is also a 12% value-added tax (VAT) that is collected at the port of entry.

### 3<sup>8</sup> FOREIGN INVESTMENT

There are no general requirements for local participation nor any restrictions on repatriation of capital. Guatemala's major diplo-

matic interests are regional security and, increasingly, regional development and economic integration. Guatemala participates in several regional groups, particularly those related to trade and environment. Foreign investor interest in Guatemala picked up with the signing of peace accords in 1996 and deregulation of the electric and telecommunications sectors. Structural reforms, such as the privatization program and trade liberalization measures, will add to investor appetite, but substantial investment in infrastructure and training the workforce is needed. As of the first quarter of 1997, the government had invited bids for 12 oil exploration and production contracts. Oil production increased by 250% between 1992 and 1998.

In 1998, Guatemala passed the Foreign Investment Law, reducing the barriers to foreign investment. But investment was still restricted to minority ownership of domestic airlines and ground transport. Incentives are available for the forestry, mining, tourism, and petroleum sectors. There are also eight free trade zones. The Foreign Investment Law had also removed limitations to foreign ownership of domestic airlines and ground transport companies in January 2004. There were also plans within the government to form mining legislation in 2005 that would encourage foreign investment.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Guatemala's economic development policy is to create rural employment through the provision of investment incentives. Such enticements include inexpensive financing by government institutions, free assistance and technical support, and preferential treatment to use government facilities and institutions for guidance. The government has initiated a number of programs aimed at liberalizing the economy and improving the investment climate. After the signing of the final peace accord in December 1996, Guatemala was well-positioned for rapid economic growth. Growth in the late 1990s was led by development of petroleum mining and refining.

The country's economy is commanded by the private sector which generates about 85% of GDP. The public sector is small and shrinking, with its business activities limited to transportation, and several development oriented institutions. Problems hindering economic growth include illiteracy and low levels of education; inadequate and underdeveloped capital markets; and lack of infrastructure, particularly in the transportation, communications, and electricity sectors. The distribution of income and wealth remains unequal. The wealthiest 10% of the population receives almost one-half of all income; the top 20% receives two-thirds of all income.

Tax reform was one government objective in 2003, as was reform of the financial services sector, liberalizing trade, and overhauling public finances. Drought and low coffee prices harmed the economy in 2001-02, and caused malnutrition among the poor in rural areas. In 2003, the International Monetary Fund (IMF) approved a nine-month, \$120-million Stand-By Arrangement to support Guatemala's economic program through March 2004. In 2003, the government was targeting the fiscal deficit, aiming to control inflation, and working toward putting into place a new legal framework for the financial sector. The country was also improving transparency in government, and working to strengthen governing structures themselves.

A tax reform was passed in June 2004 to supplement the rolled-over 2003 budget. Corporate income tax was changed, and excise duties on alcohol were levied. Further, a new corporate tax (the Impuesto Temporal de Apoyo a los Acuerdos de Paz—IETAAP) was made to support peace agreements. This replaced the agricultural and mercantile business tax (Impuesto sobre Empresas Mercantiles y Agropecuarias—IEMA) that was rejected by the Constitutional Court in January 2004 and left the government vulnerable to a shortfall in tax revenue if tax reform were not carried out.

In 2005, the IMF supported President Berger's economic policy program and declared that Guatemala was capable of dealing with potential balance of payments without a new Stand-By Arrangement. The Stand-By Arrangement that gave Guatemala a \$120-million credit line ended in 2004.

#### 40 SOCIAL DEVELOPMENT

A social insurance system covers all employees, including agricultural workers. Public employees are covered by a separate program. The pensions for old age, survivorship, and disability are funded by a small contribution from employees, larger contribution from employers, and 25% covered by the government. Retirement is set at age 60. Cash and medical benefits are provided for sickness and maternity for employees of firms with more than five workers. Free medical care is provided for those receiving pensions. A grant for funeral expenses is provided.

Despite legal equality, women are paid significantly less than their male counterparts and are generally employed in low-wage jobs. Some domestic laws also discriminate against women. Women can be charged with adultery, while men can only be charged with a lesser crime. Sexual violence, including domestic violence, is widespread, and most cases go unreported. However, the number of complaints for both rape and spousal abuse has risen in recent years due to the nationwide educational program that has encouraged women to seek help. The police have little training to assist victims of sexual crimes. Sexual harassment is not illegal.

The constitution provides that all persons are free and equal in dignity and rights, and that the government must protect the life, liberty, justice, security, and peace of all citizens. Due to inadequate resources and corruption, however, the government is unable to enforce these provisions.

#### 41 HEALTH

Guatemala's health care system consists of three sectors: public, private nonprofit, and private for-profit. Health coverage has been estimated to be low, with more than 40% of the population receiving no access to health care services. As of 2004, there were an estimated 89 physicians, 404 nurses, and 18 dentists per 100,000 people. Approximately 4.3% of GDP went to health expenditures. Among the chief causes of death are heart disease, intestinal parasites, bronchitis, influenza, and tuberculosis. Other major causes of death were perinatal conditions, intestinal infectious diseases, and nutritional deficiencies. Malnutrition, alcoholism, and inadequate sanitation and housing also pose serious health problems. Approximately 92% of the population had access to safe drinking water and 85% had adequate sanitation. Malaria rates are high. Guatemala does attempt to vaccinate its children and all routine vaccinations are paid for by the government. It is estimated that the poorest half of the population gets only 60% of the minimum

daily caloric requirement. Some steps have been taken to fortify foods with daily vitamin requirements. Currently, sugar is being fortified with vitamin A and wheat flour will be fortified with iron.

The total fertility rate was 4.6 in 2000, a dramatic reduction from 6.5 in 1980. By 2000 the maternal mortality rate had fallen to 55 deaths per 1,000 live births, down from 200 in 1990. In 2005, the infant mortality rate was 32 per 1,000 live births and the overall mortality rate was an estimated 6.7 per 1,000 people as of 2002. The average life expectancy was 69.06 years in 2005. From 1966 to 1992 there were about 140,000 war-related deaths.

The HIV/AIDS prevalence was 1.10 per 100 adults in 2003. As of 2004, there were approximately 78,000 people living with HIV/AIDS in the country. There were an estimated 5,800 deaths from AIDS in 2003.

Political violence and problems associated with poverty have left more than 200,000 Guatemalan children orphaned. Many suffer from psychological problems and malnutrition.

#### 42 HOUSING

Many of the nation's urban housing units and most of its rural dwellings have serious structural defects and lack electricity and potable water. In 2002, there were about 2,483,458 housing units in the country. Most dwellings were detached houses. Over 50% of all housing are owner occupied. About 24% of all houses are of adobe walls; 50% use concrete blocks. Metal sheeting is the most common material for roofing. Most apartment buildings are made of cement block. The housing need in 2005 stood at about 1.6 million houses and overcrowding, especially in rural area hut dwellings and urban rented rooms, was prevalent.

As of 1995, there were about 205 "squatter" settlements inhabited by homeless or displaced persons. In these settlements, shelters are made of wood, cardboard, or mud, with zinc sheet roofs. A public housing program is supervised by the National Housing Bank. The Ministry of Public Health and Welfare is charged with the improvement of rural dwellings.

#### 43 EDUCATION

Elementary education is free and compulsory for nine years although enforcement is lax in rural areas. Primary school covers six years of study, followed by three years of basic secondary school. Students may then choose a two-year diversified secondary program or a three-year technical school program.

In 2001, about 55% of children between the ages of five and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 87% of age-eligible students. The same year, secondary school enrollment was about 30% of age-eligible students. It is estimated that about 66.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 30:1 in 2003; the ratio for secondary school was about 14:1. In 2003, private schools accounted for about 12% of primary school enrollment and 74% of secondary enrollment.

Among Guatemala's six main universities, the Universidad de San Carlos, in Guatemala City, is the most important center of higher learning. The others include Universidad del Valle de Guatemala, Universidad Francisco Marroquin, Universidad Mariano

Galvez, Universidad Rafael Landívar, and Universidad Rural. In 2003, about 9% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 69.1%, with 75.4% for men and 63.3% for women.

As of 1995, public expenditure on education was estimated at 1.7% of GDP.

#### 44 LIBRARIES AND MUSEUMS

There are three notable libraries in Guatemala City. The National Library, with about over 350,000 volumes, has collections of Guatemalan and other Central American books and newspapers. The General Archives of Central America has a 100,000-item collection of documents for the three-century colonial period, when Guatemala was the administrative center for the Central American area. The library of the Geographical and Historical Academy of Guatemala (30,000 volumes) is of special value to researchers. The Central American Industrial Research Institute maintains the largest technical library in Central America (36,000 volumes). The Institute of Nutrition in Central American and Panama in Guatemala City maintains an important collection of public health documents. The University of San Carlos library has 205,000 volumes. There are about 64 public libraries that are supervised through the National Library. Another 29 public libraries are sponsored by the Bank of Guatemala.

The Museum of Archaeology and Ethnology (1948) in the capital has an excellent collection of Mayan artifacts, and the Colonial Museum in Antigua contains colonial paintings, woodcarvings, iron and leatherwork, and sculpture. Also in the capital are the National Museum of Fine Arts, the National Museum of History, the Museum of the National Palace, the Popol Vuh Archaeological Museum, and the Center for Conservation Studies, founded in 1981.

#### 45 MEDIA

Except for a few privately controlled facilities, the government owns and operates the postal, telephone, and telegraph services. The Guatemalan Telecommunications Enterprise provides international radiotelegraph and radiotelephone service. In 2003, there were an estimated 71 mainline telephones for every 1,000 people. The same year, there were approximately 131 mobile phones in use for every 1,000 people.

As of 2000 there were 130 AM and 487 FM radio stations. In 2001, four of the most prominent television stations were all owned by the same Mexican citizen, who has a political preference for the FRG. In 2003, there were an estimated 79 radios and 145 television sets for every 1,000 people. The same year, there were 14.4 personal computers for every 1,000 people and 33 of every 1,000 people had access to the Internet. There were 50 secure Internet servers in the country in 2004.

There were three major daily newspapers in 2004, all published in Guatemala City. They were (with orientation and 2004 circulations): *Prensa Libre* (moderate liberal, 110,000), *Siglo Veintiuno* (moderate, 56,000), and *La Hora* (moderate liberal, 18,000).

The constitution provides for free speech and a free press, though journalists admit that in certain cases fear of reprisals or government pressure leads to self-censorship.

#### 46 ORGANIZATIONS

Artisans', consumers', service, and savings and credit cooperatives are grouped in four federations. The major employers' organizations are the General Farmers' Association, the Chamber of Commerce, the Chamber of Industry, and the National Coffee Association.

The Academy of Geography and History of Guatemala promotes the study of Guatemalan history, geography, and culture. There are several associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

National youth organizations include the Association of University Students, associations of Boy Scouts and Girl Guides, youth rotary clubs, and Junior Achievement of Guatemala. Sports associations promote amateur competition in such pastimes as hiking, football (soccer), tae kwon do, and squash. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. The Red Cross and Habitat for Humanity are active in Guatemala.

#### 47 TOURISM, TRAVEL, AND RECREATION

All visitors need a passport and may need a visa depending on nationality. Tourism has rebounded since Guatemala's return to civilian rule in 1986. In 2003, approximately 880,223 tourists arrived in Guatemala. There were 17,519 hotel rooms in 2002 with 44,579 beds and an occupancy rate of 47%. Guatemala's main tourist attractions are the Mayan ruins, such as Tikal; the numerous colonial churches in Guatemala City, Antigua Guatemala, and other towns and villages; and the colorful markets and fiestas.

In 2005, the US Department of State estimated the daily expenses of staying in Guatemala City at \$200. Other areas were estimated at \$156 per day.

#### 48 FAMOUS GUATEMALANS

The *Rusticatio Mexicana*, by Rafael Landívar (1731–93), represents the height of colonial Guatemalan poetry. Outstanding figures of the romantic period were philologist Antonio José de Iri-sarri (1786–1868); José Batres y Montúfar (1809–44), the author of *Tradiciones de Guatemala* and many poetical works; and José Milla y Vidaurre (1822–82), a historian and novelist and the creator of the national peasant prototype, Juan Chapin. Justo Rufino Barrios (1835–85) became a national hero for his liberal, far-reaching reforms between 1871 and 1885. Enrique Gómez Carillo (1873–1927), a novelist and essayist, was perhaps better known to non-Spanish readers during his lifetime than any other Guatemalan author. Twentieth-century novelists include Rafael Arévalo Martínez (1884–1975), Carlos Wyld Ospina (1891–1956), and Flavio Herrera (1895–1968). The novelist and diplomat Miguel Ángel Asturias (1899–1974) was awarded the Nobel Prize for literature in 1967.

Mario Cardinal Casariego (b.Spain, 1909–83) became the first Central American cardinal in 1969. Among the better-known Guatemalan political personalities of the 20th century are Col. Jacobo Árbenz Guzmán (1913–71), president during 1951–54, and Gen. Miguel Ydígoras Fuentes (1896–1982), president during 1958–63. Alfonso Portillo Cabrera (b.1951) served as president from 2000 to 2004. Óscar Berger (b.1946) succeeded him. Rigoberta Menchú (b.1959) won the 1992 Nobel Peace Prize for

her campaign against human rights violations and for the rights of indigenous peoples.

#### **49 DEPENDENCIES**

Guatemala has no territories or colonies.

# GUYANA

Cooperative Republic of Guyana

**CAPITAL:** Georgetown

**FLAG:** A red triangle at the hoist extending to the flag's midpoint is bordered on two sides by a narrow black stripe; extending from this is a golden arrowhead pointing toward the fly and bordered on two sides by a narrow white stripe. Two green triangles make up the rest of the flag.

**ANTHEM:** Begins "Dear land of Guyana, of rivers and plains."

**MONETARY UNIT:** The Guyanese dollar (G\$) of 100 cents is a paper currency tied to the US dollar. There are coins of 1, 5, 10, 25, 50, and 100 cents, and notes of 1, 5, 10, 20, and 100 Guyanese dollars. G\$1 = US\$0.00498 (or US\$1 = G\$200.79) as of 2005.

**WEIGHTS AND MEASURES:** Guyana officially converted to the metric system in 1982, but imperial weights and measures are still in general use.

**HOLIDAYS:** New Year's Day, 1 January; Republic Day, 23 February; Labor Day, 1 May; Caribbean Day, 26 June; Freedom Day, 7 August; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, Phagwah, 'Id al-'Adha, Yaou-Mun-Nabi, and Dewali.

**TIME:** 9 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the northeast coast of South America, Guyana is the third-smallest country on the continent, with an area of 214,970 sq km (83,000 sq mi), extending 807 km (501 mi) N-S and 436 km (271 mi) E-W, including disputed areas. Comparatively, the area occupied by Guyana is slightly smaller than the state of Idaho. Bounded on the N by the Atlantic Ocean, on the E by Suriname, on the S and SW by Brazil, and on the NW by Venezuela, Guyana has a total boundary length of 2,921 km (1,815 mi) of which 459 km (285 mi) is coastline.

Neither Guyana's western border with Venezuela nor its eastern border with Suriname has been resolved. Venezuela claims all territory west of the Essequibo River, an area of more than 130,000 sq km (50,000 sq mi), or over three-fifths of Guyana. Suriname claims a largely uninhabited area of 15,000 sq km (5,800 sq mi) in the southeast, between two tributaries of the Corentyne River.

Guyana's capital city, Georgetown, is located on the country's Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

Guyana has three main natural regions: a low-lying coastal plain, extending for about 435 km (270 mi) and ranging from 16 to 64 km (10–40 mi) in width, much of which is below high-tide level and must be protected by sea walls and drainage canals; a region of heavily forested, rolling, hilly land, about 160 km (100 mi) in width, which contains most of the mineral wealth and comprises almost five-sixths of Guyana's land area; and in the south and west, a region of mountains and savannas. There are several large rivers, including the Essequibo (the longest at 966 km/600 mi), Demer-

ara, and Berbice, but few are navigable for any distance above the plains because of rapids and falls.

## <sup>3</sup> CLIMATE

The climate is subtropical and rainy. The average temperature at Georgetown is 27°C (81°F); there is little seasonal variation in temperature or in humidity, which averages 80–85%. Rainfall averages 229 cm (90 in) a year along the coast, falling in two wet seasons—May to July and November to January—and 165 cm (65 in) in the southwest, where there is a single wet season, extending from April through August.

## <sup>4</sup> FLORA AND FAUNA

The flora varies with the rainfall and soil composition. The coastal area, originally swamp and marsh with mangrove and associated vegetation, has long been cleared for farming. In inland areas of heavy rainfall there are extensive equatorial forests, with greenheart a major species; varieties of trees may number as many as 1,000. Local fauna includes locusts, moth borers, acoushi ants, bats, and other small mammals. There may be more than 675 species of birds. Northwestern coastal beaches are an important breeding ground for sea turtles.

## <sup>5</sup> ENVIRONMENT

Because over 80% of Guyana is still wilderness, the country has so far sustained little serious environmental damage. The air is clean, but water supplies are threatened by sewage and by agricultural and industrial chemicals. One potential problem for the nation's water supply is the pollution of its wells by salt water from the ocean. Guyana has 241 cu km of renewable water resources with 98% used for farming purposes. About 98% of the nation's city

dwellers and 91% of people living in the rural areas have access to safe drinking water. Since 1985, the nation has experienced an increase in diseases related to water and food consumption.

Kaieteur National Park is the only specifically designated conservation area. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 13 types of mammals, 3 species of birds, 6 types of reptiles, 6 species of amphibians, 13 species of fish, 1 species of invertebrate, and 23 species of plants. Endangered species in Guyana included the tundra peregrine falcon, the black caiman, and four species of turtle (green sea, hawksbill, olive ridley, and leatherback).

## **6** POPULATION

The population of Guyana in 2005 was estimated by the United Nations (UN) at 751,000, which placed it at number 157 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 28% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.3%, a rate the government viewed as satisfactory. Since 1995, the Guyana Responsible Parenthood Association has promoted programs in schools to educate adolescents about reproduction in an attempt to address the high fertility rates. The projected population for the year 2025 was 703,000. The population density was 3 per sq km (9 per sq mi), but density varies dramatically. More than 90% of the people live on 5% of the land along the Atlantic coast; the interior of the country is practically uninhabited.

The UN estimated that 36% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.35%. The capital city, Georgetown, had a population of 231,000 in that year. Linden had an estimated 60,000 inhabitants, and New Amsterdam had about 33,000.

## **7** MIGRATION

Although specific figures were not available, there was significant outward migration in the 1980s, creating shortages of skilled workers and managers. Unofficial estimates put the number at 10,000 to 30,000 a year in the late 1980s, chiefly persons of Asian Indian extraction. Their destinations were chiefly the United States and Canada. The migration rate of tertiary educated individuals in 1990 was 77.3%. According to 1999 estimates, about 50,000 Guyanese citizens live in the Venezuelan territory that borders Guyana and are fully integrated into the local population. Remittances in 2002 were \$100 million, 14.3% of GDP. In 2003, the Guyana government threatened to deport 80% of the 2,000 Brazilians in the mining industry as illegal workers. However, Guyana allows cultural workers, such as musicians, to come and go.

Guyana has traditionally had only a very small number of asylum seekers, mainly from Cuba and Angola. In 2005 the net migration rate was estimated as -7.51 migrants per 1,000 population, compared to -13.6 per 1,000 in 1990. The total number of migrants in Guyana in 2000 was 2,000. The government views the emigration level as too high.

## **8** ETHNIC GROUPS

Guyana's population is made up of five main ethnic groups: East Indians, Africans, Amerindians, Chinese, and Portuguese. An estimated 50% of the population is of East Indian descent and 36% of African descent. Those of Amerindian ancestry constitute 7%; all others account for an additional 7% of the population.

## **9** LANGUAGES

English is the official language and is used in government, the schools, the press, and commerce. Also spoken are Chinese, Portuguese, Amerindian languages, Creole, Hindi, Urdu, and a patois used mainly by those of African descent.

## **10** RELIGIONS

Christians make up approximately 50% of the total population, of whom about 30% are Anglicans, 25% are Roman Catholics, 25% are Pentecostals and Baptists, and 20% are Seventh-Day Adventists. There are smaller groups of Methodists, Presbyterians, Lutherans, Mormons, and Jehovah's Witnesses. Hindus make up some 35% of the population, and Muslims (Sunni and Shia) about 10%. There are small communities of Baha'is and Jews. It is believed that many people practice Rastafarianism and the traditional Caribbean religion known as Obeah, either exclusively or in conjunction with the practice of other faiths.

The constitution provides for freedom of religion and this right is generally respected in practice. All religious groups must register with the government in order to be formally recognized, but there is no other official monitoring of religious groups. Certain Christian, Muslim, and Hindu holidays are celebrated as public holidays.

## **11** TRANSPORTATION

As of 2001, Guyana had an estimated 187 km (116 mi) of standard and narrow gauge railroad track in service. The standard gauge line is 139 km (86 mi) in length, while the narrow gauge line is 48 km (30 mi) in length. Both lines are dedicated to the transport of ore and were originally built for the government-owned mining companies. The two government-owned passenger railway systems, however, have been scrapped: the Georgetown to New Amsterdam line in 1972, and the Georgetown to Parika line in 1974. Waterborne passenger and cargo service between these cities is carried out by a government-owned transport service via the Essequibo and Berbice rivers. Georgetown is the main port, while New Amsterdam accommodates coastal and small oceangoing vessels. Springlands, on the Corentyne River, is the main port for service with Suriname. In 2005, the merchant fleet had six ships of 1,000 GRT or more for a total of 7,475 GRT. As of 2004, Guyana had 1,077 km (670 mi) of navigable inter-waterways. Three rivers, the Berbice, Demerara, and the Essequibo are navigable by oceangoing vessels for 150 km, 100 km, and 80 km, respectively.

Roadways measured an estimated 7,970 km (4,953 mi) in 2002, of which only 590 km (367 mi) were paved. As of 2003, Guyana had about 28,000 passenger cars, and 13,000 commercial taxis, trucks, and buses. There were an estimated 49 airports in 2004, only 8 of which had paved runways as of 2005. Georgetown's Timehri International Airport is served by several international carriers. Guyana Airways Corp., a government company, oper-

ates domestic and international air service. In 2001 (the latest year for which data was available), 47,800 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The coastline was first charted by Spanish sailors in 1499, at which time the area was inhabited by Amerindians of the Arawak, Carib, and Warrau language groups. By 1746, the Dutch had established settlements on the Essequibo, Demerara, and Berbice rivers, and had withstood French and English attempts to capture and hold the area. The English occupied the settlements in 1796 and again in 1803, and gained formal possession at the Congress of Vienna in 1815. The three main settlements were united into the Colony of British Guiana in 1831. Slavery was abolished in 1834, and many blacks settled in cooperative villages or moved into the towns. Under pressure from planters, indentured servants were brought in from India to work on the sugar plantations. As a result, most of the sugar workers still are of Asian Indian origin, while the urban population is predominantly black. This division into ethnocultural groupings later became an important factor in Guyana's politics.

The change in British imperial policy after World War II was reflected in a new constitution introduced in 1953, providing for a bicameral legislature and universal adult suffrage. Elections were held in the same year. However, the British balked after the People's Progressive Party (PPP) captured 18 of the 24 elected seats. Six months after the elections, the United Kingdom suspended the constitution, charging Communist subversion of the British Guiana government. The colony was governed on an interim basis until 1957, when general elections again were held. Again, the PPP won, with 47.9% of the votes, and Cheddi Jagan, leader of the PPP, was named chief minister.

The colony was granted full internal self-government in 1961, following four years of continued economic and social progress. In elections held under a new constitution introduced that year, the PPP won 20 of the 35 seats in the newly established Legislative Assembly. In October 1961, Jagan, who had been named prime minister, went to Washington, DC, to ask US president John F. Kennedy for US aid. Classified documents released in the mid-1990s revealed that, following Jagan's visit, Kennedy gave the CIA orders to destabilize Jagan's government. Kennedy also urged Britain to withhold full independence from Guyana until Jagan was removed from power. Through covert operations, the CIA incited a general labor strike and racial violence between Jagan's Asian Indian followers and his opponents, mainly of African descent. British troops were called upon to restore order, but the situation did not calm until July.

In the elections of December 1964, the PPP again emerged as the strongest party, but due to US efforts to undermine its power, it was unable to form a government alone. As a result, the British governor called upon the leader of the People's National Congress (PNC), Forbes Burnham, to establish a government.

The following November, an independence conference held in London approved the present constitution, and on 26 May 1966, Guyana became a sovereign and independent nation. Guyana was proclaimed a cooperative republic on 23 February 1970, the 207th anniversary of a Guyanese slave revolt led by Cuffy, still a national

LOCATION: 1°12' to 8°34' N; 56°29' to 61°23' W. BOUNDARY LENGTHS: Atlantic coastline, 459 kilometers (285 miles); Suriname, 600 kilometers (372 miles); Brazil, 1,119 kilometers (694 miles); Venezuela, 743 kilometers (461 miles). TERRITORIAL SEA LIMIT: 12 miles.

hero. The PNC ruled as majority party between 1968 and 1992, although not without controversy.

Guyana became known to the US public in 1978 in the wake of the Jonestown massacre. The government of Guyana, in an attempt to colonize the nation's wilderness regions, had in 1977 allowed an American, James Warren "Jim" Jones, to establish the People's Temple commune at what became known as Jonestown, in the northwest. Many in the United States had become con-

cerned with developments in the commune, and US representative Leo J. Ryan had gone to Jonestown to investigate. He and four other US citizens were murdered at a nearby airstrip by Jones's followers. Then, on 18 November 1978, Jones and more than 900 of his followers committed suicide by drinking poisoned punch.

Between 1980 and 1985, relations between the PNC and opposition parties deteriorated sharply, as opposition parties charged harassment and fraud. The assassination in 1980 of Dr. Walter Rodney, a leading opposition figure, escalated the conflict. Under the administration of Forbes Burnham (1980–1985), human rights declined steadily. Burnham died in 1985 and was succeeded by first vice president and prime minister, Desmond Hoyte. The new president sought to improve Guyana's relations with non-Socialist nations, particularly the United States, and attempted the liberalization of the Guyanan economy.

However, by 1992 the country had grown tired of the PNC, and elected Cheddi Jagan of the PPP to the presidency in what was considered to be the first free and fair election since 1965. Jagan, who had been minority leader for years, received an impressive mandate with 53.4% of the vote, to 42.3% for the PNC. This translated to a solid 36 PPP seats in the National Assembly. Jagan had mellowed in the three decades since his ouster by the CIA, and in an ironic twist of history he was elected this time with the full support of the United States. Jagan served effectively as president until his death in March 1997 at age 78.

Under Jagan's administration, Guyana was able to consolidate its massive foreign debts and began to enjoy sustained economic growth. Jagan's widow, Janet Jagan, was elected to succeed him in general elections held on 15 December 1997, but the opposition PNC challenged the legitimacy of the election. In spite of a CARICOM audit that deemed the election fair, the opposition PNC, led by former prime minister, Hoyte, continued to protest the presidency of Jagan throughout the early months of 1998, and there were demonstrations and other forms of civil unrest, as well as a 55-day strike by civil servants. On 14 August, the 78-year-old, US-born Jagan, suffering from a heart condition, stepped down, naming as her successor finance minister Bharrat Jagdeo, who, at age 35, became one of the world's youngest heads of state. Jagdeo went on to lead the PPP into a new electoral victory in 1999 elections, with 53.1 % of the vote. Jagdeo was reelected as prime minister and his party commanded the support of 34 of the 65 elected members of the legislature.

Legislative elections were held in March 2001, and Jagdeo's PPP/C (People's Progressive Party/Civic) took 34 seats to the PNC's 27 (the remaining seats were won by smaller parties). Jagdeo was reelected prime minister.

In 2000, Suriname gunboats evicted an oil exploration rig from the area; Guyana had approved the exploration in the oil-rich disputed region. In June 2004, the UN set up a tribunal to try to resolve the long-standing maritime border dispute between Guyana and Suriname.

In January 2005, the government declared the capital of Georgetown to be a disaster zone, as severe flooding followed days of continuous rain. More than 30 people were killed, and the UN estimated the loss to the economy to be approximately \$500 million.

### **13 GOVERNMENT**

As of 23 February 1970, Guyana became a cooperative republic. Guyana's first president was elected by the National Assembly on 17 March 1970, and the post of governor-general was abolished. Proclamation of the cooperative republic also entailed the provision of mechanisms for the takeover of foreign enterprises. Guyana's basic parliamentary structure dates from the constitution negotiated prior to independence in 1966. Under a new constitution approved in 1980, the unicameral National Assembly consisted of 53 members elected by secret ballot under a system of proportional representation for a five-year term, plus 10 members elected by 10 regional councils, and 2 members elected by the National Congress of Democratic Organs. The latter, which was composed of deputies from local councils, together with the National Assembly, constituted the Supreme Congress of the People of Guyana, which could be summoned or dissolved by the executive president. This office, created by the 1980 constitution, was filled by the leader of the majority party as both chief of state and head of government.

Constitutional reform was undertaken after the 2001 elections. The National Congress of Democratic Organs was abolished. There are 65 elected members of parliament, 1 elected Speaker of the National Assembly, and 2 nonvoting members appointed by the president. Members serve five-year terms. The president appoints a cabinet including a prime minister.

The voting age and age of majority are 18 years, and suffrage is universal. However, electoral irregularity is the rule, rather than the exception. A British-led team of observers pronounced the 1980 vote "fraudulent in every respect." The 1992 election was considered by most observers to be the first fair poll since 1965. Boycotts both before and after elections have been frequent as a result of fraud charges, but the net effect of these boycotts has been to enhance the power of the majority party.

### **14 POLITICAL PARTIES**

Guyana's political parties are generally committed to socialism or some variant of it, but differ in the groups they represent and especially the ethnic groups that support them. A schism between the black and Asian Indian communities defines the major political division in the country.

In 1950, Cheddi Jagan and his wife organized the People's Progressive Party (PPP), which was anticolonial in nature, claimed to speak for the lower social classes, and cut across racial lines. Early in 1955, Forbes Burnham, who had been minister of education in Jagan's government, led a dissident PPP wing in the formation of the People's National Congress (PNC), which became the predominant political vehicle of Guyanese blacks, with Asian Indians remaining in the PPP. Until 1992, the PNC had dominated Guyana's politics since independence. It drew its members primarily from urban blacks, and was in the majority from its first government, formed after the 1964 elections, until 1992 when the PPP returned to power. The PNC ideologically defines itself as socialist, but stresses the importance of a mixed economy in which the private sector is encouraged.

The PPP had been the opposition party since the 1960s, after dominating Guyanan politics in the 1950s. Appealing to Asian Indian rice farmers and sugar workers, the PPP nevertheless claims

to be primarily an ideological party. Over the years, the PPP has taken an orthodox socialist position along the lines of international Communism. However, Jagan at times called for increased foreign investment, and introduced conservative economic measures during his tenure as premier in the early 1960s. PPP opposition has been both loyal and otherwise. After the 1973 elections, the PPP boycotted the National Assembly, charging electoral fraud. In 1976 the representatives took their seats. In the 1980s the party appeared to be waning, but the 1992 elections gave a boost to this long-standing party.

Because Guyana uses a proportional representation system, small parties are accommodated within the system. In preparation for the 1992 elections, Guyanan citizens formed nearly 20 new parties. One such group is the Working People's Alliance (WPA), a multi-ethnic independent party professing its own brand of Marxism. The WPA, founded in 1979, boycotted the 1980 elections on the grounds that they were bound to be rigged. In June 1980, its leader, Walter Rodney, was killed in a bomb blast. The party took one seat in the 1985 elections, and 2 seats in the 1992 elections. The United Force (TUF) was organized by Peter D'Aguilar, a wealthy brewer of Portuguese extraction, in the early 1960s. Its program, called economic dynamism, was based principally on close ties with the West, encouragement of foreign enterprise, and the acquisition of foreign loans. It helped the PNC form the first non-PPP government in Guyana in 1964, but in 1968 the PNC formed a government by itself. In 1973, TUF lost the four seats it had won in 1968. In 1980, TUF won two seats, which it held until 1992, when it lost one of the two.

The 1992 elections brought the PPP and Cheddi Jagan back to power. Jagan served as president until his death in March 1997. In the general elections of December 1997, his widow, Janet Jagan, was elected to succeed him, and the PPP remained in power with 36 seats, while the PNC held 26; the Alliance for Guyana, 1; the TUF, 1; and the Guyana Democratic Party, 1. However, following extended challenges by the PNC over the validity of the election, Jagan resigned the following August, naming finance minister Bharrat Jagdeo to succeed her. Jagdeo has remained as PPP leader and prime minister since then.

In the March 2001 elections, the PPP/C won 34 seats to the PNC's 27. Smaller parties took the remaining seats.

## 15 LOCAL GOVERNMENT

Guyana's system of local government was restructured after independence. Guyana is divided into 10 regions, each of which is administered by a chairman and council. City and village councils administer the local communities.

## 16 JUDICIAL SYSTEM

The Supreme Court of Judicature has two divisions: the High Court, which consists of the chief justice of the Supreme Court and any number of puisne justices and has both original and appellate jurisdiction; and the Court of Appeal (established 30 July 1966), which consists of a chancellor, the chief justice of the Supreme Court, and as many justices as the National Assembly may prescribe. The chancellor of the Court of Appeal is the country's chief judicial officer. Magistrates' courts exercise summary jurisdiction in lesser civil and criminal matters. The constitution of 1980 provides for an ombudsman to investigate governmental

wrongdoing. English common law is followed. Although there is an ombudsman, he lacks the authority to investigate allegations of police misconduct. There is no independent body charged with responsibility for pursuing complaints of police brutality or abuse.

In 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although a total of 14 nations were planning to use the court for appeals. Haiti had agreed to use the CCJ for resolution of trade disputes. The court was officially inaugurated in April 2005, in Port-of-Spain, Trinidad and Tobago. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

The constitution provides for an independent judiciary. Delays in judicial proceedings are caused by shortages of trained personnel and inadequate resources.

## 17 ARMED FORCES

The Combined Guyana Defense Force numbered 1,100 full-time officers and troops in 2005. Reserves consisted of 670 reservists and a paramilitary force, the Guyana Peoples Militia, which numbered 1,500. Army personnel numbered 900. Equipment included 9 reconnaissance vehicles and 54 artillery pieces. The Navy and the Air Force numbered 100 each. Operable naval units consisted of three patrol/coastal craft. The Air Force's equipment consisted of three transport aircraft and two utility helicopters. Paramilitary forces consisted of the Guyana People's Militia which had more than 1,500 members. The defense budget in 2005 totaled \$5.92 million.

## 18 INTERNATIONAL COOPERATION

Guyana became a member of the United Nations on 20 September 1966; it belongs to ECLAC and several specialized agencies of the United Nations, such as the FAO, ICAO, ILO, IMF, UNESCO, UNIDO, WHO, and the World Bank. Guyana served on the UN Security Council in 1975–76 and 1982–83. General Mohamed Shahabuddeen, a former vice president and deputy prime minister of Guyana, served on the International Court of Justice from 1987–96. Guyana is a member of the ACP Group, the Commonwealth of Nations, the Caribbean Development Bank, G-77, the Latin American Economic System (LAES), the OAS, the Río Group, the Alliance of Small Island States (AOSIS), the Organization of the Islamic Conference (OIC), the Association of Caribbean States (ACS), and CARICOM. Georgetown is home to offices of the European Union, the Inter-American Development Bank, the UN Development Program (UNDP), the WHO, and the OAS. The CARICOM Secretariat is also headquartered in Georgetown.

The nation is also a member of the Nonaligned Movement and participates in the Organization for the Prohibition of Chemical Weapons and the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In environmental cooperation, Guyana is part of the Basel Convention, the Convention on Biological Diversity, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Guyana's economy is dominated by the production and processing of primary commodities, of which sugar, gold, and bauxite are the most important. Much of the country is undeveloped, with more than 90% of the population and almost all of the agriculture concentrated in the narrow coastal plain. The interior is sparsely settled, and communications are poor. The bulk of the population is engaged in agriculture, either as laborers on sugar plantations or as peasant cultivators of rice. Although sugar and rice continued to be important export earners, bauxite and gold share comparable percentages of national exports. The government plays a direct role in the sugar industry; the nation's leading sugar producing company was nationalized in 1976.

Beginning in the late 1970s, Guyana's economy suffered a severe decline, attributable both to the increasingly high costs of imported oil and petroleum products (39% of Guyana's merchandise imports in 1983) and to sagging production and prices of Guyana's exports. In 1982 there were serious shortages of basic commodities, foreign exchange reserves dwindled, and Guyana was forced to reschedule its debts. In 1985, the IMF declared Guyana ineligible for further loans because of noncompliance with fund conditions and high arrears.

However, Guyana's economy improved dramatically under the Economic Recovery Program (ERP) launched by the government in April 1989. The program, which was designed with the assistance of International Monetary Fund (IMF) and World Bank officials; was supported by Canada, the United Kingdom, and the United States. It marked a drastic reversal in government policy away from a predominantly state-controlled, socialist economy towards a more open, free market system. The government reformed its monetary and fiscal policy establishing a free market in foreign currency, which was designed to stabilize the exchange rate and put an end to runaway inflation. The exchange rate remained stable at G\$125 to the dollar and inflation dropped from a 1989–91 annual average of 60–100% to only 14% in 1992. The growth rate reached 6% in 1991, after 15 years of decline. The government also eliminated price controls, removed import restrictions, promoted foreign investment, and divested itself of 15 of 41 state-owned enterprises by 1997.

Real GDP growth of 6.2% registered in 1997 marked the seventh consecutive year of strong recovery, with all of the key sectors demonstrating significant increases in production. Growth was particularly strong in the major export industries, including rice and sugar. Inflation had fallen to 4.2%. In July 1998, Guyana entered into a three-and-a-half-year arrangement with the IMF under a program which combined both the Enhanced Structural Adjustment Facility (ESAF) and the Poverty Reduction and Growth Facility (PRGF) with a credit line of about \$70 million. However, a severe drought and political turmoil due to the 1997 elections combined to produce a contraction of -1.7% in 1998. Real GDP grew a reported 3% in 1999, but as the pace of structural reform slackened, the currency appreciated, and the country's overall terms of trade weakened, inflation jumped to 8.7%, up from 4.7% in 1998. In May 1999 the country received some debt relief under the Highly Indebted Poor Country (HIPC) initiative mounting initially to \$92 million. In 2000, real GDP contracted 1.4% though inflation declined to 5.8%. In early 2001, the IMF suspended the ESAF/PRGF program with only 46% of the mon-

ey paid out due to slippages in the government's implementation of fiscal and structural reforms that sent the budget deficit soaring to 6.3% of GDP in 2000 and 7% of GDP in 2001, respectively, even after grants. Real GDP growth in 2001 was 1.4%, and inflation declined to 1.5%. In September 2002, Guyana entered into a new three-year arrangement under the IMF's PRGF supported by a credit line of \$73 million. The GDP was estimated to have grown 1.8% in 2002, with inflation at 4.3%.

In 2004, the GDP growth rate was 1.6%, up from -0.7% in the previous year; in 2005, the growth rate was expected to fall back, to 0.4%. The inflation rate, although fluctuating, remained under control—in 2004, it reached 4.6%, down from 6.0% in 2003. The growth in 2004 was mainly fueled by higher export earnings. The bauxite mining sector was scheduled for restructuring and privatization, which was expected to give an extra boost to the economy.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Guyana's gross domestic product (GDP) was estimated at \$3.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$3,900. The annual growth rate of GDP was estimated at 0.5%. The average inflation rate in 2005 was 5.5%. It was estimated that in 2005 agriculture accounted for 36.8% of GDP, industry 20.2%, and services 43%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$64 million or about \$83 per capita and accounted for approximately 8.6% of GDP.

## 21 LABOR

In the latest years for which data was available, Guyana's workforce in 2001 was estimated at 418,000. In 1997, agriculture accounted for 27.8% of the workforce, with industry at 22.6%, services at 47.9%, and undefined occupations at 1.7%. The reported unemployment figure in 2000 was 9.1%, but this is considered vastly understated. There is a severe shortage of skilled labor.

Workers are legally entitled to form and join unions, although in practice this has been slow to materialize. Union membership accounts for approximately 32% of workers, primarily concentrated in the public sector and state-owned industry. Strikes are permitted provided they are approved by union leadership and meet the requirements of the collective bargaining agreement.

No person under 14 is legally permitted to work outside a family business. Child labor regulations are not effectively enforced and child labor remains a prevalent concern. The minimum public-sector wage was us\$104 per month in 2002; there is no legally set minimum wage in the private sector. Hours of employment are set by various industries. Health and safety standards are established by the Factories Act but are not enforced due to lack of resources.

## 22 AGRICULTURE

Agriculture, the main economic activity, provides nearly half the total value of exports and a large part of domestic food needs. Because the narrow strip of rich, alluvial soil along the coast lies

in part below the high-tide mark of the sea and rivers, and because of heavy seasonal rainfall, agricultural expansion requires heavy expenditures for flood control, drainage, and irrigation. About 2.5% of the land is used for temporary and permanent crop production.

Guyana has two sugarcane harvests per year, and there are currently eight sugar mills in operation. About 90% of all cane is grown on land owned or leased by Guysuco, the government-owned sugar monopoly. Guysuco is managed under contract by the British firm Booker Tate. Independent farmers contribute only about 8% to total cane production. Guyana is not an efficient producer of sugar and cannot compete on the world market; it depends on preferential export markets for its sugar trade. Sugar production in 2004 was 3,000,000 tons, up from the 395,000 tons produced in 1971; sugar accounted for 29% of exports in 1980 and about 19% in 2004. Rice production in 2004 (501,500 tons) had more than doubled since 1991. Agricultural exports in 2004 totaled us\$189.8 million. Other crops, grown for domestic consumption include bananas, citrus, cassava, and yams.

### 23 ANIMAL HUSBANDRY

Livestock in 2005 included 110,000 head of cattle, 130,000 sheep, 79,000 goats, 13,000 hogs, and 20,000,000 chickens. Other important domestic animals are horses, mules, and donkeys. Extensive work is carried on to improve cattle productivity by importing breeding stock and providing artificial insemination and veterinary services.

### 24 FISHING

Efforts are being made to increase the fish catch in order to improve the local diet and reduce imports of fish. The catch was 60,304 tons in 2003. The principal species caught that year were Atlantic seabob (19,205 tons) and whitebelly prawn (2,218 tons). Fish exports amounted to us\$54.2 million in 2003. The Demerara Fish Port Complex, built near Georgetown with Japanese aid, includes a fish-processing plant and office facilities.

### 25 FORESTRY

Forests cover about 16,879,000 hectares (41,708,000 acres), or 79% of the total land area. Commercial exploitation, however, is confined to a relatively small section in the northeast. The government-operated timber plant buys lumber from private sawmills and processes it with a view to standardizing and raising the quality of timber for export. Only about 20% of the forest area is reasonably accessible for timber exploitation. Green-heart is the most important timber produced and exported. Timber production was about 1,158,000 cu m (40,900,000 million cu ft) in 2004. Exports of forestry products amounted to us\$29.4 million that year.

### 26 MINING

Guyana's primary mineral industries in 2003, were centered on bauxite, gold, diamonds, sand, and crushed stone. In 2003, production of bauxite totaled 1.7 million metric tons, up from 1.69 million metric tons in 2002. Mined gold production in 2003 totaled 12,170 kg, down from 13,581 kg in 2002. In 2003 about 8,400 kg of gold were produced by the Omai Mine. However gold output at the mine has been falling and exploration has failed to find new reserves. The mine was slated to cease operations. Diamond pro-

duction in 2003 was estimated at 250,000 carats, up from 248,436 carats in the previous year. Diamond production since 1999 increased 450%, allegedly due to the breakup of a Brazilian smuggling ring. Sand and crushed stone were also mined in 2003. The Guiana Shield region was well known for its undeveloped resources of copper, gold, iron ore, manganese, nickel, platinum, and uranium, and undeveloped resources of columbite and tantalite were also being investigated in Guyana.

### 27 ENERGY AND POWER

Guyana has no known proven reserves of oil, natural gas, coal, or any oil refining capacity. As a result the country must import whatever refined petroleum products or other fossil fuels it consumes. In 2002, imports and consumption of refined petroleum products each averaged 11,270 barrels per day. There were no imports or consumption of natural gas or coal in that year.

Guyana's electric power sector in 2002, was marked by the near total use of fossil fuels to provide electric power, although there is a very small hydroelectric sector. In 2002, electric power generating capacity totaled 0.305 million kW, with conventional thermal plants accounting for 0.300 million kW and hydropower 0.005 million kW. Total electric energy produced in 2002 was 0.808 billion kWh, of which 0.800 billion kWh came from fossil fuels and the rest from hydropower. Consumption of electricity in 2002 was 0.751 billion kWh. Frequent power failures have hampered production and thus impeded economic growth. The lack of reliable electricity in and around Georgetown has prompted many businesses to utilize imported small diesel-operated generators, further increasing total fuel demand.

### 28 INDUSTRY

Industry is limited chiefly to processing gold, bauxite, sugar, and rice for export and food and beverages for the local market. Gourmet food processing is increasingly gaining in importance, including the production of certain jams, jellies, sauces, spices, and fruit purees. Manufacturing accounted for about 11% of GDP in 1998, when output decreased by 8.9% over the previous year. Industry as a whole accounted for 32% of GDP in 2000.

In 1993 the government announced a policy move toward total privatization, joint ventures, public share offers, employee and management buyouts, and leased management contracts. The government has followed a serious program of privatization of key state enterprises, such as the telephone utility—80% of which is owned by the US Virgin Islands firm Atlantic Telenetwork. In 1996, a number of companies were offered for privatization, including the state-owned Guyana Electricity Corporation (GEC), Guyana Airways Corporation, the Linmine and Bermine bauxite mines, Guyana National Printers, Guyana Stores, the Guyana Pharmaceutical Corporation, Versailles Dairy Complex, and the Wauna Oil Palm Estate. The GEC was privatized in 1999. The government continued its hold on the state monopoly Guyana Sugar Corporation (Guysuco). Following privatization of the government-owned rice mills and the transfer of rice transactions to the common market for foreign currency, the rice industry recovered and its production increased. In 1999, rice output increased 7.6% and sugar production increased 25.8% over 1998. Due to the fact that much development of infrastructure was needed, the construction sector realized significant growth in the early 2000s. In

2002, breakfast cereals manufactured through the processing of rice were seen as potential exports.

The share of the industry in the GDP was 19.9% in 2004; agriculture contributed with 38.3% and also was the main employer in the country; services came in first with a 41.8% share in the GDP. The oil industry was expected to be an important income earner in future years, although explorations in western Guyana proved unfruitful in the past.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The University of Guyana, founded in 1963 at Georgetown, has faculties of agriculture, health sciences, technology, and natural sciences. The Guyana School of Agriculture Corporation was founded in 1963. The Inter-American Institute for Cooperation on Agriculture, founded in 1974 at Stabroek and operated by the Organization of American States, aims to stimulate and promote rural development as a means of achieving the general development and welfare of the population. The Pan-American Health Organization has maintained an office in Georgetown since 1949. The Guyana Zoo, an adjunct of the Guyana Museum in Georgetown, specializes in the display, care, and management of South American fauna.

## 3<sup>0</sup> DOMESTIC TRADE

Domestic trade is conducted largely through small retail shops and kiosks scattered throughout the settled areas, and by cooperatives. Franchising began to show signs of growth potential, primarily in the fast-food industry. There are also traditional informal markets for the sale of agricultural products. One of the poorest countries in the Western Hemisphere, the economy relies heavily on foreign aid and investment. Normal business hours are 8 AM to 4:30 PM, Monday–Friday. Banks are open from 8 AM to 12:30 PM and 3 to 5 PM weekdays.

## 3<sup>1</sup> FOREIGN TRADE

Leading exports are bauxite, sugar, rice, gold, shrimp, rum, timber, and molasses. In 1968, bauxite replaced sugar as Guyana's single most important export. From the 1970s to mid-1980s, however, world markets for Guyana's export commodities weakened

while oil import costs rose, leading to chronic trade deficits. As a result of Guyana's economic reform program, import restrictions have been removed, and import licenses are granted routinely by the Ministry of Trade, Tourism, and Industry.

Guyana's biggest exports are sugar (25%) and gold (24%). The mining industry also produces a large amount of bauxite/alumina exports (16%). Foodstuffs account for substantial amounts of commodity export percentages, including rice (11%), shrimp (2.3%), and rum (2.0%).

In 2004, exports reached \$570 million (FOB—Free on Board), while imports grew to \$650 million (FOB). The bulk of exports went to Canada (23.2%), the United States (19.2%), the United Kingdom (10.9%), Portugal (9%), Belgium (6.4%), and Jamaica (5.2%). Imports included manufactures, machinery, petroleum, and food, and mainly came from Trinidad and Tobago (24.8%), the United States (24.5%), Cuba (6.8%), and the United Kingdom (5.4%).

## 3<sup>2</sup> BALANCE OF PAYMENTS

Guyana generally runs a deficit on current accounts, which became increasingly severe in the 1980s. Since 1989, the government has sought a policy of a free market in foreign currency and the removal of import prohibitions. Still, over half of the annual budget went to debt servicing during the 1990s and early 2000s. In 1996, Guyana's debt with Paris Club creditors was reduced by 67%; bringing total external debt to us\$1.5 billion, or, slightly less than 100% of GDP. Guyana qualified for \$590 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) Initiative in 2000. As a result of its qualification for HIPC assistance, Guyana became eligible for a reduction of its multilateral debt for the first time. In 2002, Guyana negotiated a three-year \$73 million loan with the IMF.

The US Central Intelligence Agency (CIA) reported that in 2000 the purchasing power parity of Guyana's exports was \$505 million

while imports totaled \$585 million resulting in a trade deficit of \$80 million.

The International Monetary Fund (IMF) reported that in 1995 Guyana had exports of goods totaling \$496 million and imports totaling \$537 million. The services credit totaled \$134 million and debit \$172 million.

Exports of goods reached \$589 million in 2004, up from \$513 million in 2003. Imports grew from \$571 million in 2003, to \$647 million in 2004. The resource balance was consequently negative, reaching -\$58 million in both years. The current account balance was also negative, improving from -\$91 million in 2003 to -\$62 million in 2004. Foreign exchange reserves (excluding gold) grew to \$232 million in 2004, covering more than four months of imports.

### 33 BANKING AND SECURITIES

The Bank of Guyana is the central bank. In addition to the Bank of Guyana, seven commercial banks operate in the country. Three of them are foreign-owned, namely, Bank of Baroda, Bank of Nova Scotia, and The National Bank for Industry and Commerce (NIBC). In April 1994, the government sold its shares in the Guyana Bank for Trade and Industry (GBTI). In November 1994 the Demerara Bank (a private, domestic bank) and the Citizen's Bank started operations. Further liberalization of the financial sector occurred in April 1995 when Parliament approved the Financial Institutions Act of 1995. The new legislation aimed to tighten the supervisory and regulatory framework of the financial system. The NIBIC, one of Guyana's largest banks, was offered for privatization in 1996. By 2002, only one state-owned bank remained: the Guyana National Cooperative Bank (GNCB). The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$139.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$513.2 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 8.8%.

While a number of firms with publicly issued share capital are active, no large-scale securities market has developed.

### 34 INSURANCE

As of 1995, there were at least eight insurance companies operating in Guyana.

### 35 PUBLIC FINANCE

The budget follows the calendar year. Taxes finance the current account budget, with net surpluses or deficits being added to or subtracted from a general revenue balance. Nearly half of government revenue is derived from customs and excise receipts. Divestment of state enterprises, elimination of price controls and subsidies, and a reform of fiscal and monetary policy have led to debt restructuring and forgiveness. Nevertheless, in 1998, government expenditures were about 40% of GDP, and Guyana's debt reached 44% of GDP in 2000.

The US Central Intelligence Agency (CIA) estimated that in 2005 Guyana's central government took in revenues of approximately \$320.1 million and had expenditures of \$362.6 million.

Revenues minus expenditures totaled approximately -\$42.5 million. Total external debt was \$1.2 billion.

### 36 TAXATION

Income taxes are the major source of direct tax revenue. Personal income taxes are levied at a rate of 0%, 20%, and 33.33%. The corporate tax rate is 45% for commercial companies (generally nonmanufacturing companies) and 35% for all other companies. Other taxes include property tax and consumption tax on locally manufactured goods, a withholding tax of 20% is placed on dividends, interest and royalties. There are also stamp taxes. Local government authorities derive their revenues primarily from land, building, and service taxes. Tax evasion is a constant problem.

### 37 CUSTOMS AND DUTIES

Customs revenues are traditionally a main source of government income. Guyana uses the common external tariffs (CETs) of CARICOM. Intra-CARICOM trade is free of tariffs. The CET on imports is 5–20%. However, customs duties of 10–75% are also applied. Consumption taxes are also levied on imports, based on CIF (cost, insurance, and freight) value, but some items are exempted to encourage development. Export taxes range from 0.5% of value to 10%. There is an 80-acre gold export processing zone in Linden.

### 38 FOREIGN INVESTMENT

Investment by foreign firms accounted for the bulk of capital formation prior to the establishment of Guyana's cooperative republic in 1970. After Guyana became a cooperative republic, the government did little to attract foreign private investment. The Hoyte government, however, began efforts to obtain foreign investments for the rehabilitation of the bauxite industry and for oil prospecting and gold mining. New legislation to simplify foreign investment procedures was written in 1987.

The implementation of the Economic Recovery Program and the strong interest of the government in privatization attracted many foreign investors. In 1988, the government permitted foreign ownership of businesses operating in Guyana. In addition, the government was prepared to implement arrangements designed to facilitate investors' derivation of tax benefits in their home territories as well as tax credits in Guyana. Other investment incentives include: tax holidays, export allowances, accelerated depreciation, an export processing zone, and special provisions for agribusiness, mining, and tourism.

From 1997 to 2001, annual foreign direct investment (FDI) inflows to Guyana averaged \$54 million, with a high of \$67 million reached in 2000. For the period 1998 to 2000, Guyana's share of world FDI inflows was 2.2 times its share in world GDP. This was a marked improvement over the period 1988 to 1990 when Guyana's share of world inward FDI flows had been only 70% of its share in world GDP.

In 2002, \$16.6 million were invested in a poultry farm—one of the few large investments in Guyana, in recent years. For 2005, the government planned to privatize the country's Linmine bauxite operations, which would have translated into a dramatic increase in capital inflows in that year.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

A continuing theme of Guyanese economic development policy has been the attempt, without great success, to expand agriculture and to diversify the economy. A seven-year development program (1966–72) aimed to move the country's economy away from its heavy dependence on sugar, rice, and bauxite and to increase funds for scientific, vocational, and technical training and agricultural education. A key feature of the 1972–76 development plan was its emphasis on improving Guyana's health and housing standards.

A decisive change in economic orientation was marked by the proclamation on 23 February 1970 of a cooperative republic. The government embarked on a policy of cooperative socialism by nationalizing the bauxite industry, seeking a redistribution of national wealth, and fostering the establishment of cooperative enterprises for agricultural production, marketing, transportation, housing and construction, labor contracting, services, and consumer purchases. Within a decade, about 80% of the economy was in the public sector.

As economic conditions declined in the late 1970s and early 1980s, the government instituted such austerity measures as import restrictions, foreign exchange controls, cutbacks in planned government spending, and layoffs of government employees.

From 1953 through 1986, Guyana received US\$115.5 million in nonmilitary loans and grants. Multilateral assistance during the same period equaled US\$265.4 million, of which 42% came from the IDB and 30% from the IBRD. The 1985 declaration by the International Monetary Fund (IMF) that Guyana was ineligible to receive further assistance until outstanding debts with the fund had been repaid was an indication of how severe the nation's financial crisis had become. In 1983, the United States had vetoed aid from US and IDB sources, and late in 1985 a barter agreement with Trinidad and Tobago was suspended because of Guyana's failure to repay outstanding loans. As a result, the Hoyte government sought a rapprochement with international lending agencies: a delegation from the IMF, the World Bank, and the IDB visited Guyana late in 1986, and early in 1987 the Guyana dollar was devalued by 56%.

In the late 1990s, primarily as a result of economic reforms, agricultural output grew at a stable rate. Manufacturing output also grew because of improvements in electricity generation and distribution and improved incentives for private investments. These factors combined made continued recovery with real growth rates in excess of 5% per year possible until 1997. Drought and political instability threatened a decade of economic development.

The continuation of sound macroeconomic policies and public sector reform, together with multilateral and bilateral assistance, is crucial to sustaining growth. The fiscal situation was expected to continue improving in the short and medium term, largely as a result of increased current revenues. The inflation rate was likely to stay low, while the medium-term external position of Guyana was expected to remain clouded by the large external debt outstanding, so that the search for debt relief and preferred lending from international donors remained essential.

In 2000, Guyana became eligible for \$590 million in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) Initiative. In 2002, Guyana negotiated a three-year \$73 million Poverty Reduction and Growth Facility (PRGF)

Arrangement with the IMF, to support the government's economic reform program.

In 2005, the economy was expected to expand by only 2.5%, with most of the growth being fueled by higher investments in the public-works projects and in the sugar industry. The loss of gold production from the Omai gold mine was expected to be offset by a higher output in the bauxite-mining sector. Fisheries were expected to suffer as a result of rising fuel costs, and overfishing posed a series of problems for the future.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

A social insurance system covers almost all employed and self-employed persons between the ages of 16 and 59. Social welfare benefits include workers' compensation, maternity and health insurance, death benefits, disability, and old age pensions. Workers contributed 4.8% of earnings, and employers made a 7.2% payroll contribution. Retirement pensions are 40% of average weekly earnings, disability pensions are 30%, and survivor benefits are 50% of the payable old age or disability pension. Maternity benefits are available for 13 weeks. Work injury laws have been in place since 1916.

Violence against women, including domestic violence, remained widespread in 2004, crossing socio-economic and racial lines. There is still social stigma attached to victims of rape, therefore the incidents largely go unreported. There is no legal protection against sexual harassment in the workplace. The law protects women's property rights in common law marriages and divorce, although divorce by mutual consent remained illegal.

Tensions between citizens of African descent and those of South Asian origin continued. Also, the land rights of the Amerindian population remained an issue. Guyana continued to have serious human rights problems, including police abuses, pretrial detention, and poor prison conditions.

### 4<sup>1</sup> HEALTH

In 2004, there were 48 doctors, 229 nurses, and 4 dentists per 100,000 people. Some 90% of the population of Guyana had adequate sanitation and 65% had access to safe water in 1994–95. In 2005 the average life expectancy was estimated at 65.50 years and the total fertility rate at 2.1. In the same year infant mortality was an estimated 33.26 deaths per 1,000 live births. A high incidence of malaria was present in 1997, with 34,075 new cases. That year, malaria was the country's second leading cause of death. Of the 6,506 cholera cases in 1995, 565 died. The incidences of filariasis, enteric fever, helminthiasis, nutritional deficiencies, and venereal diseases still were significant. Yellow fever remains a constant threat. In 1997, 82% of Guyana's children were vaccinated against measles, roughly a 28% increase from 1988.

The HIV/AIDS prevalence was 2.50 per 100 adults in 2003. As of 2004, there were approximately 11,000 people living with HIV/AIDS in the country. There were an estimated 1,100 deaths from AIDS in 2003.

### 4<sup>2</sup> HOUSING

Housing is a critical problem, as is the lack of adequate water supplies and of effective waste disposal and sewage systems. Overcrowding exists in many areas, with families of four or more members often living in one-room homes. Urban development plans

have been prepared for Georgetown and New Amsterdam and a number of schemes, including the construction of low-cost rental housing, have been inaugurated. Loans are made through the Guyana Cooperative Mortgage Finance Bank, founded in 1973. To spur housing development, the government established the Guyana Housing Corp. in 1974. The government provides supervision by trained personnel for those willing to build their own homes. Housing is provided by some firms for their employees. Even so, housing shortages are prevalent and overcrowding and homelessness in urban areas is a great problem.

In the period 1996–2001, the government worked on programs for low-income housing. The result was the construction of about 91 settlements providing 50,000 housing units. The government has estimated that it must build 5,200 homes per year for at least 10 years to meet the national housing need.

Most housing units in the country are detached houses. Owners occupy over half of all dwellings. Most dwellings are wooden, with a smaller proportion made either of wood and concrete or concrete.

### 43 EDUCATION

Although educational standards are high, educational development has suffered from shortages of teachers and materials. School attendance is free and compulsory for eight years for children between the ages of 5 and 14. All schools in Guyana are public, as church and private schools were taken over by the government in 1976. Primary education lasts for six years. General secondary education (community high school) usually covers four years of study. Students will take an additional year to prepare for senior secondary school, which offers a two-year program ending with the Caribbean Advanced Proficiency Exam. The academic year runs from September to July.

Most children between the ages of four and five attend some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 75% of age-eligible students, 58% for boys and 92% for girls. It is estimated that about 99% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 27:1 in 2003; the ratio for secondary school was about 15:1.

The first students completed the one-year course at the Government Training College for Teachers in 1960. Teachers also are trained in the United Kingdom and at the University of the West Indies in Jamaica. The University of Guyana was established in 1963, and awarded its first degrees in 1967. The university has faculties in agriculture, the arts, health sciences, social sciences, education, and technology. The Kuru Kuru Cooperative College was established in 1970 to equip the Guyanese people both technically and philosophically for cooperative socialism and nation building. In 2003, about 6% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2003 was estimated at about 98.8%.

As of 2003, public expenditure on education was estimated at 8.4% of GDP, or 18.4% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

The National Library in Georgetown, with holdings of more than 198,000 volumes, also functions as a public library and has

37 branches. The site of the National Library was originally built in 1909 as the Public Free Library, with funding in part from the American industrialist Andrew Carnegie. The Guyana Society Library (formerly the Library of the Royal Agricultural and Commercial Society) is the oldest in the country and has a collection of rare books dealing with the Amerindians of Guyana. Other important libraries include the British Council Library, the Caribbean Community Secretariat, and the library of the US Information Agency. The University of Guyana, founded in 1963, maintains a library which has holdings of over 200,000 volumes.

The Guyana Museum in Georgetown has a collection of flora and fauna, archaeological findings, and examples of Amerindian arts and crafts. It also has an aquarium and a zoological and botanical park. The Walter Roth Museum of Anthropology is also found in Georgetown.

### 45 MEDIA

In 2002 there were 80,400 mainline telephones in use throughout the country with an additional 87,300 mobile phones. A public corporation runs the postal system. An international telex service was inaugurated in 1967. Overseas radiotelephone and cable services are provided by Cable and Wireless (W.I.), a private firm.

Broadcasting is carried on by the government-owned Guyana Broadcasting Corp. As of 2004, there was only one radio station and it was operated by the government. There were 13 television stations (only one of which was government-owned). In 1997 there were 817 radios and 306 television sets in use for every 1,000 people. In 2002, there were 125,000 Internet subscribers served by about 613 Internet hosts.

In 2004, there were three daily newspapers in Guyana, the *Starbroek News* (circulation 23,500 in 2002), which is an independent newspaper, *Kaieteur News* (also independent), and the *Guyana Chronicle* (23,000). *The Mirror* (circulation 25,000) is published twice a week by the People's Progressive Party.

The government is said to generally respect the constitutional provisions for freedom of speech and the press.

### 46 ORGANIZATIONS

Cooperative societies cover virtually every aspect of the economy. There is a chamber of commerce in Georgetown. Labor and industry organizations include the Guyana Manufacturers' Association and the Guyana Rice Producers' Association. There is a Guyana Consumers Association. Professional associations exist for teachers and lawyers.

There are a number of national youth organizations, including National Association of Youth and Students, the Progressive Youth Organization, Student Christian Movement of Guyana, the Trade Union Youth Movement of Guyana, Working Peoples Alliance Youth, and the Guyana United Youth Society. Scouting programs and YMCA/YWCA chapters are also active. There are several sports associations promoting amateur competition in a variety of pastimes.

Amnesty International, Habitat for Humanity, the Society of St. Vincent de Paul, UNICEF, and the Red Cross have active chapters within the country.

## 47 TOURISM, TRAVEL, AND RECREATION

Guyana's scenery varies from the flat marshy coastal plain to the savannas, plateaus, and mountains of the interior; the 226-m (740-ft) Kaieteur Falls, four times as high as Niagara, is the country's most outstanding scenic attraction. Tourist facilities are not very developed in Guyana, although there are hotels in Georgetown. Other attractions are the eco-resorts. Riding, hunting, fishing, and swimming are available in the southern savanna of the Rupununi. Cricket is the national sport.

All visitors are required to have a passport and an onward/return ticket. Visas are issued upon arrival for 30 days. In 2003, there were 100,911 foreign arrivals in Guyana, of whom 49% came from the United States.

In 2004, the US Department of State estimated the daily expenses for staying in Guyana at us\$196.

## 48 FAMOUS GUYANESE

Citizens of Guyana who have established literary reputations abroad include the novelists Edgar Mittelholzer (1909–65), Edward Ricardo Braithwaite (b.1920?), and the poet and novelist Jan Carew (b.1925). Linden Forbes Sampson Burnham (1923–85), former leader of the PNC, dominated Guyanese politics from 1964 until his death. Cheddi Berret Jagan, Jr. (1918–97), founder of the PPP, was chief minister from 1957 to 1961 and premier from 1961 to 1964, and was the main opposition leader after returning to office in 1992. Hugh Desmond Hoyte (b.1930) served as president from 1985 to 1992. From 1997–99, Cheddi Jagan's wife Janet Jagan

(b.1920) served as president; she resigned due to health reasons and was succeeded by Bharrat Jagdeo (b.1964).

## 49 DEPENDENCIES

Guyana has no territories or colonies.

# HAITI

Republic of Haiti  
*République d'Haïti*

**CAPITAL:** Port-au-Prince

**FLAG:** The upper half is blue, the lower half is red.

**ANTHEM:** *La Dessalinienne (Song of Dessalines)*.

**MONETARY UNIT:** The gourde (G) is a paper currency of 100 centimes. There are coins of 5, 10, 20, and 50 centimes and notes of 1, 2, 5, 10, 50, 100, 250, and 500 gourdes. Silver (5, 10, and 25 gourdes) and gold (20, 50, 100, 200, 1,000 gourdes) coins have also been minted. US paper currency also circulates freely throughout Haiti. G1 = \$0.02555 (or \$1 = G39.14) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is official for customs purposes, but French colonial units and US weights also are used.

**HOLIDAYS:** Independence and New Year's Day, 1 January; Forefathers Day, 2 January; Pan American Day, 14 April; Labor Day, 1 May; Flag and University Day, 18 May; National Sovereignty Day, 22 May; Assumption, 15 August; Anniversary of the Death of Dessalines, 17 October; UN Day, 24 October; All Saints' Day, 1 November; Commemoration of the Battle of Vertières and Armed Forces Day, 18 November; Discovery of Haiti, 5 December; Christmas, 25 December. Movable religious holidays include Carnival (three days before Ash Wednesday) and Good Friday.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Occupying the western third of the island of Hispaniola, Haiti has an area of 27,750 sq km (10,714 sq mi) including the islands of Tortuga (La Tortue), Gonâve, Les Cayemites, and Vache. Comparatively, the area occupied by Haiti is slightly smaller than the state of Maryland. Extending roughly 485 km (300 mi) ENE–WSW and 385 km (240 mi) SSE–NNW, Haiti is bounded on the N by the Atlantic Ocean, on the E by the Dominican Republic, on the S by the Caribbean Sea, and on the W by the Windward Passage and the Gulf of Gonâve, with a total land boundary length of 360 km (224 mi) and a coastline of 1,771 km (1,100 mi). Haiti claims Navassa Island, an uninhabited US possession about 50 km (31 mi) west of Hispaniola.

Haiti's capital city, Port-au-Prince is located on Hispaniola's west coast.

## <sup>2</sup>TOPOGRAPHY

The coastline of Haiti is irregular and forms a long southern peninsula and a shorter northern one, between which lies the Gulf of Gonâve. Rising from the coastal plains to a peak height at La Selle of 2,680 m (8,793 ft) and covering two-thirds of the interior, three principal mountain ranges stretch across the country; one runs east and west along the southern peninsula, while the others stretch northwestward across the mainland. Once-fertile plains run inland between the mountains: the Plaine du Nord, extending in the northeast to the Dominican border, and the Artibonite and Cul-de-Sac plains reaching west to the Gulf of Gonâve. Of the

many small rivers, the Artibonite, which empties into the Gulf of Gonâve, and L'Estère are navigable for some distance.

## <sup>3</sup>CLIMATE

The climate is tropical, with some variation depending on altitude. Port-au-Prince ranges in January from an average minimum of 23°C (73°F) to an average maximum of 31°C (88°F); in July, from 25–35°C (77–95°F). The rainfall pattern is varied, with rain heavier in some of the lowlands and on the northern and eastern slopes of the mountains. Port-au-Prince receives an average annual rainfall of 137 cm (54 in). There are two rainy seasons, April–June and October–November. Haiti is subject to periodic droughts and floods, made more severe by deforestation. Hurricanes are also a menace.

## <sup>4</sup>FLORA AND FAUNA

Tropical and semitropical plants and animals are characterized more by their variety than by their abundance. In the rain forest of the upper mountain ranges, pine and ferns as well as mahogany, cedar, rosewood, and sapin are found. Coffee, cacao, and coconut trees and native tropical fruits such as avocado, orange, lime, and mango grow wild.

Many species of insects abound, but there are no large mammals or poisonous snakes. Ducks, guinea hens, and four varieties of wild pigeons are plentiful. Egrets and flamingos live on the inland lakes. Reptile life includes three varieties of crocodile, numerous small lizards, and the rose boa. Tarpon, barracuda, kingfish, jack, and red snapper abound in the coastal waters.

As of 2002, there were at least 20 species of mammals, 62 species of birds, and over 5,200 species of plants throughout the country.

## 5 ENVIRONMENT

The virgin forests that once covered the entire country have now been reduced to 4% of the total land area. Deforestation has had a disastrous effect on soil fertility, because the steep hillsides on which so many Haitian farmers work are particularly susceptible to erosion. From 1990–2000, the rate of deforestation was about 5.7% per year. The nation loses 1.35 tons of soil per square kilometer yearly. Agricultural chemicals, such as DDT, are widely used in Haiti. These pollutants plus the use of oil with high lead content are a significant source of pollution. Not only has much of the topsoil been washed away, but the eroded slopes retain little rainfall and are vulnerable to flooding.

The chief impediment to reforestation is the fact that Haiti is so intensely cultivated that allocation of land for forests means a reduction in the land available for crop growing and grazing. Foreign organizations have attempted to alleviate these problems. In 1981, an \$8 million Agroforestry Outreach Project, funded primarily by the United States, helped farmers plant trees throughout Haiti—over 4.5 million seedlings by 1983. The government also agreed to set up the nation's first two national parks with funding from the US Agency for International Development. However, as of 2003, only 0.4% of Haiti's total land area was protected.

Water quality is also a serious environmental problem. Haiti has 13 cu km of renewable water resources with 94% used for farming activity. About 91% of the nation's city dwellers and 59% of the rural population have access to improved water sources.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 4 types of mammals, 15 species of birds, 9 types of reptiles, 46 species of amphibians, 12 species of fish, 5 species of invertebrates, and 208 species of plants. Endangered species in Haiti included the tundra peregrine falcon, Haitian solenodon, green sea turtle, hawksbill turtle, and American crocodile. At least 13 species have become extinct, including the Caribbean monk seal, impostor hutia, and the Haitian edible rat.

## 6 POPULATION

The population of Haiti in 2005 was estimated by the United Nations (UN) at 8,288,000, which placed it at number 91 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.9%, a rate the government viewed as too high. The government reinstated the Population Secretariat in 1997, which attempted to address the high fertility rate (4.5 births per woman); however, as of 2005 little progress had been made. The projected population for the year 2025 was 12,887,000. The population density was 299 per sq km (774 per sq mi).

The UN estimated that 36% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.95%. The capital city, Port-au-Prince, had a population

of 1,961,000 in that year. Other major cities and their estimated populations are Jacmel (216,600) and Les Cayes (214,606).

The prevalence of HIV/AIDS has had a significant impact on the population of Haiti. The UN estimated that 7.7% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Emigration from Haiti has been mainly to Cuba, other Caribbean states, Canada, and the United States; illegal emigration to the United States has been substantial since the 1960s. Between 1972 and 1981 more than 55,000 (perhaps as many as 100,000) Haitian “boat people” arrived in Florida. During 1981–85, some 43,312 Haitians were admitted legally to the United States. In September 1981, the US and Haitian governments agreed to work together to halt the flow of refugees, and these efforts apparently met with success. Over the next 10 years only 28 of the 22,716 Haitians intercepted at sea were admitted to the United States.

Several thousand Haitian migratory workers travel to the Dominican Republic each year during the cane-harvest season; many more change their residences permanently.

Following the 1991 coup (which overthrew President Jean-Bertrand Aristide) many Haitians left for the Dominican Republic, Jamaica, Suriname, Cuba, Panama, Honduras, Venezuela, Colombia, and Mexico. Between 1991–93, 43,000 Haitians tried to reach the United States by boat, but were interdicted and held at Guantanamo Bay, the US naval base in Cuba. In October 1994, soon after Aristide's return to power, Haitians began repatriating, and the United Nations High Commissioner for Refugees (UNHCR) helped repatriate 8,052 persons from various countries. From the United States, some 16,500 repatriated voluntarily. The UNHCR office in Haiti was closed in April 1996. After disputed legislative elections in 2000, Haiti was politically and economically paralyzed. In February 2004, Jean-Bertrand Aristide was forced to resign. Again, US troops arrived and the US warned Haitians that if intercepted on their way to Florida, they would be returned to Haiti, or be detained in Guantanamo. In 2004, 5,389 Haitians entered the United States as refugees.

In 2005, the net migration rate was estimated as -1.68 migrants per 1,000 population. The total number of migrants living in Haiti in 2000 was 26,000. The government viewed the emigration level as too high.

## 8 ETHNIC GROUPS

For the vast majority of Haiti's people, the African ethnic influence is dominant. About 95% of the inhabitants are of African descent; mulattos and whites make up the remaining 5% of the population.

## 9 LANGUAGES

The official languages of Haiti are French and Creole. French is only spoken by about 10–20% of the population. Virtually all the people speak Creole, a mixture of early 17th-century provincial French and African tongues, with infusions of English, Spanish, and Amerindian words. English is used in the capital and to a less-

er extent in the provincial cities, and along the Dominican border a Spanish Creole is spoken.

## 10 RELIGIONS

For many years Roman Catholicism was the official religion of Haiti. Its official status was repealed with the enactment of the 1987 constitution; however, neither the government nor the Vatican has renounced the 1860 Concordat that serves as a basis for relations between the two. Roman Catholicism retains a position of honor, but Haitians are guaranteed the freedom to practice all religions by the constitution.

Roman Catholics represent about 50–55% of the population. Most of the remainder belong to various Protestant denominations, the largest being the Baptist and Pentecostal churches. Other significant denominations include Methodists, Episcopalians, Jehovah's Witnesses, Mormons, Seventh-Day Adventists, and Orthodox Christians. Other religious groups include Jews, Muslims, Rastafarians, and Baha'is. Voodoo, a traditional religion that is partially derived from West African beliefs, is still widely practiced, often in tandem with Christianity. Voodoo became an officially recognized church in 2003 with the establishment of the *Eglise Voudou d'Ayiti* (the Voodoo Church of Haiti) and has had a growing attendance since then.

## 11 TRANSPORTATION

In 2002, Haiti had 4,160 km (2,585 mi) of roads, 1,011 km (628 mi) of which were paved. Farm-to-market roads are few, and most produce for the local market is transported by burro or carried on foot by women. In 1980, a new highway linking Port-au-Prince with Les Cayes was opened, and several road improvement projects have been completed; overall, however, road conditions continue to deteriorate because of flooding. There were some 34,800 passenger cars and 34,325 commercial vehicles in 2003. In that same year, Haiti had a ratio of 223.3 inhabitants per registered vehicle, the highest ratio of any country in the Western Hemisphere. Two railroad systems, the National Railroad of Haiti and the Cul-de-Sac Railroad, with a combined trackage of 301 km (187 mi), originally operated lines from Port-au-Prince to Verrettes and to Léogâne, and from Cap-Haïtien south to Bâton-Rouge. By 1982, however, most of the system had become inoperative; the 40 km (25 mi) of lines that remained in 1999 were being used only for sugarcane transport.

The commercial shipping fleet consists of a few hundred small sailing vessels engaged in coastal trade and a few motorized vessels of light tonnage. The island depends chiefly on foreign shipping. During the early 1980s, the IBRD sought to stimulate intercoastal trade by building port facilities at Jérémie, Port-au-Prince, and Port-de-Paix. Other ports and harbors include Cap-Haïtien, Gonaïves, Jacmel, Les Cayes, Miragoâne, and Saint-Marc.

In 2004 there were an estimated 13 airports, of which 4 had paved runways as of 2005. Domestic air service is supplied by the privately owned Air Haiti, which connects principal cities on regular scheduled flights. An international airport at Port-au-Prince opened in 1965; the other international airport is at Cap-Haïtien. Carriers serving Port-au-Prince are ALM, American Airlines, Air Canada, Canada 3000, Caribintair, Tropical Airways, Haiti International airlines, Air France, and COPA.

## 12 HISTORY

In 1492, Christopher Columbus made the European discovery of the island of Hispaniola and established a settlement near the present city of Cap-Haïtien. Within 25 years, the native Arawak, a peace-loving, agricultural people, were virtually annihilated by the Spanish settlers. Bishop Bartolomé de las Casas, a missionary to the Amerindians, who had originally come to Hispaniola as a planter in 1502, proposed that African slaves be imported for plantation labor. Starting after 1517 a forced migration of Africans gave Haiti its black population.

About 1625, French and English privateers and buccaneers, preying on Spanish Caribbean shipping, made the small island of Tortuga their base. The French soon also established a colonial presence on nearby mainland coasts and competed with the Spaniards. In the Treaty of Ryswick (1697), Spain ceded the western third of the island (Haiti) to the French. Under French rule it became one of the wealthiest of the Caribbean communities. This prosperity, stemming from forestry and sugar-related industries, came at a heavy cost in human misery and environmental degradation.

The French Revolution in 1789 outlawed slavery in France, which inspired Haiti's nearly half million black slaves to revolt. In a series of violent uprisings, slaves killed white planters and razed estates. Although they suffered cruel reprisals, they fought on under the direction of Toussaint L'Ouverture, an ex-slave who had risen to the rank of general in the French army. By 1801 Toussaint controlled the entire island, and promulgated a constitution, which abolished slavery. The emperor Napoleon did not accept this move, and sent 70 warships and 25,000 men to suppress the movement. Toussaint was captured, and died in a French prison.

Jean Jacques Dessalines, another black general who rose from the ranks, continued the struggle, and in 1803 the disease-decimated French army surrendered. On 1 January 1804, Dessalines proclaimed Haiti's independence. Dessalines, after assuming the title of emperor in 1804, was assassinated in 1806, and Haiti was divided into a northern monarchy and a southern republic. Under both regimes, the plantations were distributed among former slaves, and Haiti became a nation of small farmers. Haiti was reunited by Jean Pierre Boyer in 1820, and in 1822 the Haitian army conquered Santo Domingo (now the Dominican Republic). For 22 years there was one republic for the entire island. In 1844, however, one year after Boyer was overthrown, the Dominican Republic proclaimed its independence from Haiti. In 1849, the president of Haiti, Faustin Elie Soulouque, proclaimed himself Emperor Faustin I. He was dethroned by a revolution headed by Nicholas Fabre Geffrard, who reestablished the republic and became president. In 1860, Geffrard negotiated a concordat with the Holy See that established Roman Catholicism as the national religion, although freedom of worship was retained.

A long period of political instability between 1843 and 1915, during which time Haiti had 22 dictators, culminated in the assassination of President Vilbrun Guillaume Sam and was followed by US military occupation. The occupation, which lasted 19 years, terminated in 1934 during the administration of President Sténio Vincent (1930–41), who in 1935 proclaimed a new constitution.

After World War II, another period of political instability reached a peak in a 1950 coup d'état that brought Gen. Paul Magloire to power. Magloire's economic policies led to a serious de-

pression. In December 1956 a national sit-down strike, organized jointly by business, labor, and professional leaders, forced Magloire into exile. A period of chaos ensued in which seven governments attempted to establish control.

In a September 1957 election filled with irregularities, François Duvalier, a middle-class black physician known to his followers as Papa Doc, became president. He began to rule by decree in 1958, and in May 1961, he had himself elected for another six years. On 22 June 1964, Duvalier was formally elected president for life. Despite several attempted revolts, he consolidated his position, ruling largely through his security force, the Tontons Macoutes (“bogeymen”). Political opposition was ruthlessly suppressed, and thousands of suspected dissidents “disappeared.” Also murdered were some 3,000 supporters of Daniel Fignolé, leader of the Peasant Workers Movement (Mouvement Ouvrier Paysan) and Duvalier’s most effective opponent.

Political life under the Papa Doc regime was characterized by plots against the government and governmental counterterrorism, the latter was entrusted to the Tontons Macoutes and to other thugs known as *cagouleurs*. Opposition leaders went into hiding or exile. The Haitian Revolutionary Movement (Mouvement Révolutionnaire Haïtien), led by Haitian exiles Luc B. Innocent and Paul G. Argelin, began operations in Colombia in February 1961.

The National Democratic Union (Union Démocratique Nationale) was founded in Puerto Rico in April 1962 by former Ambassador Pierre Rigaud, with a branch in Venezuela organized by Paul Verna and an underground movement operating in Haiti. Invasions in 1964, 1969, and 1970 met with no success. Haitian exiles in New York, Montréal, Chicago, and Washington mounted an influential anti-Duvalier campaign during the 1960s. Throughout this period, no party operated openly in Haiti except the Duvalierist Party of National Unity (Parti de l’Unité Nationale).

On 22 January 1971, Duvalier named his son Jean-Claude to be his successor. Papa Doc died on 21 April 1971, and Jean-Claude, at the age of 19, became president for life the following day. The younger Duvalier sought to ease political tensions, encouraged tourism and foreign investment, and contributed to the beginnings of an economic revival. However, political arrests did not wholly cease, and there were severe economic reversals in the mid- and late-1970s.

In February 1979, elections to the National Assembly took place amid allegations of government fraud. Opposition groups were then arrested, tried, and convicted of subversion, but later released. In January and March 1982, two small exile groups tried unsuccessfully to overthrow the government by staging armed invasions. The first municipal elections of the Duvalier period were held in spring 1983. The voting resulted, for the most part, in victories for the government, partly because several opposition figures had been arrested during the campaign.

Jean-Claude proved to be an ineffectual leader and tensions mounted as the economy stagnated after 1980. When civil disorder began to break out in the mid-1980s, the president became increasingly reclusive. In February 1986, following a series of demonstrations and protests, Jean-Claude and his family fled to France, and the National Governing Council (Conseil National de Gouvernement—CNG), led by Lt. Gen. Henri Namphy, seized power. Namphy’s declared purpose was to provide a transition to a

democratically elected government. A constituent assembly, convened in October 1986, drafted a new constitution that was approved by referendum in March 1987.

Hopes for the restoration of democracy soon faded. The presidential election scheduled for November 1987 was postponed as gangs of thugs and soldiers killed at least 34 persons. The CNG attempted new elections and a new government, but those governments had no legitimacy at home or abroad. In December 1990 a Roman Catholic priest, Jean-Bertrand Aristide, was elected with 67.5% of the votes cast. The immediate aftermath of the CNG’s takeover was euphoric. Political prisoners were released and the dreaded Tontons Macoute (Duvalier’s clandestine secret police) were disbanded.

Aristide had an ideology, a sort of egalitarian Catholic doctrine, and a political coalition of 15 parties, the National Front for Change and Democracy (FNCD). But, he did not have the confidence of the military. Upset by his popularity and his foreign policy, which favored stronger hemispheric relations at the expense of US-Haitian relations, the military under Gen. Raoul Cédras ousted him in October 1991. From exile, Aristide did not relent, and appealed to international organizations for help. The UN and OAS forged an agreement between Cédras and Aristide to return Aristide to the presidency in October 1993, but the military balked. Aristide promptly appealed to the Clinton administration, even as he criticized US policy, and the Clinton administration responded with sanctions against the Haitian regime in May and June of 1994. However, the impasse persisted.

In September 1994, as a last resort, the Clinton administration secured international support for a military invasion of Haiti to force Cédras from power. A US invasion force was assembled and war seemed imminent. However, in the 11th hour, Clinton sent a special delegation, headed by former US president Jimmy Carter, to negotiate a peaceful solution to the crisis. As US fighter planes were about to take off for Haiti, the Carter team reached an agreement with Cédras and war was diverted. American forces peacefully took control of the country and, in October 1994, restored Aristide to power.

Returning to the country after a three-year absence, Aristide faced two major challenges: rescuing the country’s economy, which was in dire straits following the international embargo that had been imposed on it, and curbing the rampant violent street crime, gang activity, and vigilantism that had developed in the absence of an adequate justice system. To cope with the security vacuum created by the departure of the military regime, UN peace-keeping forces arrived in March of 1995.

In June 1995 elections for local and legislative office, though marred by mismanagement and requiring additional rounds of voting, remained free of state-sponsored violence and were generally regarded as a sign of success for the nation’s fledgling democracy. Although there was strong sentiment among many Haitians in favor of having Aristide remain in office beyond the end of his designated single term as president (most of which had been usurped by military rule), US support remained contingent on adhering to the terms of the 1987 constitution, which barred the president from seeking a second consecutive term. Aristide himself wavered about honoring this provision but ultimately stepped down, endorsing a close associate, René Préval, to succeed him in office. Préval was elected on 17 December 1995, with 88% of

LOCATION: 18°1'42" to 20°5'44" N; 71°38' to 74°28'45" W. BOUNDARY LENGTHS: Dominican Republic, 275 kilometers (171 miles); total coastline, 1,771 kilometers (1,098 miles). TERRITORIAL SEA LIMIT: 12 miles.

the vote. In February 1996 he took office, becoming Haiti's second democratically elected president in the country's 191-year history as an independent nation. The presence of both a UN peacekeeping force of over 1,000 and several hundred US troops was extended through November 1997. In July 1997 Haiti became a member of the Caribbean Community (CARICOM).

Even under relatively stable political conditions, Haiti's economic and security problems proved intractable. Poverty and unemployment—estimated at 80%—remained endemic. In May 1996 Préval agreed to economic reforms demanded by the International Monetary Fund, including privatization of state-owned enterprises, a measure previously resisted by his government. However, former president Aristide opposed the privatization plans and in

1997 formed a new political grouping of his own. After failing to win parliamentary approval for three nominees for prime minister in 1998, President Préval dissolved parliament in January 1999 and unilaterally appointed a new prime minister, provoking civil unrest in the streets. Through the rest of 1999 and into early 2000, Préval repeatedly postponed promised legislative elections, leaving the country without a fully operating government. A wave of violence escalated and eventually claimed the life of the country's most prominent radio journalist, Jean Leopold Dominique, who was murdered in April 2000.

In the presidential election held in November 2000, former president Aristide easily won the election with 91.8% of the vote. His party, the Fanmi Lavalas (FL—Lavalas Family), won 83 of the

93 seats in the National Assembly. After taking office in early 2001, Aristide was accused of developing a highly personalist and authoritarian government. He concentrated power in his own hands and failed to build and consolidate democratic institutions. The economy continued its downward spiral, with negative growth in 2001 and 2002 and more than 80% of Haitians living in poverty. In addition, international organizations expressed concern over the growing violence in the country and the little respect for human rights shown by the Aristide government. Rebellion, escalating in early 2003, coupled with international pressure, led to the resignation of Aristide on 29 February 2004, who then went into exile in South Africa. The same day, Boniface Alexandre, a Supreme Court justice, was sworn in as president of an interim government. The rebels, made up largely of personnel from the disbanded military, continued sporadic violence as UN forces attempted to control security by confiscating weapons; Aristide supporters also protested, sometimes in violent support for his return. Rebels almost began another attempt to oust the interim government, but money began flowing into the country again when loans and aid were released after about a four-year freeze. The interim government was able to make some payments to appease the rebels, who demanded that the military be reinstated with 10 years of back pay, but organizational hurdles twice postponed elections originally slated for October.

On 7 February 2006, general elections were held for the first time since Aristide was overthrown in 2004. Former President René Préval was declared the winner of the highly contested presidential election, with 51% of the vote. Préval was declared the winner after election officials agreed to discount thousands of blank ballots. Préval's supporters had taken to the streets, rejecting initial vote tallies, which would have led to a second round of voting. Préval took office on 14 May 2006.

### 13 GOVERNMENT

Under Article 197 of the 1964 constitution, François Duvalier was appointed president for life, with the stipulation that this article be approved in a nationwide plebiscite. On 14 June 1964, the voters were declared to have "almost unanimously" given their consent. He was granted power to dissolve the Legislative Assembly and the cabinet and to govern by decree in case of grave conflict. A constitutional amendment in January 1971 allowed the president to choose his successor. Jean-Claude Duvalier became president for life in April 1971 and was chief of state and head of government until early 1986.

The constitution adopted in March 1987 established a president elected to a five-year term as head of state and restricted to no more than two nonconsecutive terms in office. The head of government was to be the prime minister, appointed by the president from the party holding the majority in both houses of the legislature, which is made up of a 27-member Senate and a Chamber of Deputies with 83 members. Supporters of the Duvaliers were barred from holding political office for 10 years. Senators are elected for six years and deputies for four.

Since its passage, the constitution was suspended in June 1988 and reinstated in March 1989. The leaders of the coup of October 1991 claimed to be observing the constitution and Marc Bazin was named head of a caretaker government. But to all observers, nothing approaching a political system was present in Haiti until the

restoration of the democratically elected Aristide government in late 1994. Because of an agreement with the United States, Aristide was unable to seek a second consecutive term and endorsed René Préval to succeed him in office. Préval was elected on 17 December 1995 as the country's second democratically elected president. In 2000, Aristide was elected president again, marking the first time that a democratically elected president completed his term without interruption and handed power over to another democratically elected leader. In 2004, however, Aristide resigned following a violent uprising; he went into exile in South Africa. The country was thrown into chaos and UN peacekeepers arrived to provide security for the country. In February 2006, former President René Préval was elected with 51% of the vote in the first round.

### 14 POLITICAL PARTIES

From the mid-19th to the mid-20th century, two major political parties, the Liberals and the Nationalists, were predominant. The Liberals, composed mainly of the wealthier and better-educated mulatto minority, advocated legislative control of government, while the Nationalists, composed mainly of the lower- and middle-class black majority, favored a strong executive. The traditional mulatto hegemony, whose wealth was inherited from the departed French colonists, was ended by Duvalier, who used the mulattoes as scapegoats.

After Jean-Claude Duvalier became president in 1971, some political activity was allowed, but by 1982 most dissidents had again been silenced. In 1979, an opposition Haitian Christian Democratic Party (Parti Démocratique Chrétien d'Haïti—PDCH) was founded, but its leader, Sylvio Claude, was arrested in October 1980. In the 1979 legislative elections only one antigovernment candidate won a seat; he resigned in July 1981. The PDCH dropped out of the municipal election campaign in 1983 following the arrest of several party members on national security charges.

Dozens of parties emerged after the CNG ousted Jean-Claude Duvalier in February 1986, most prominently, the National Front for Change and Democracy (FNCD), which backed Jean-Bertrand Aristide in the 1990 elections, but from which he later disassociated himself. Other groups include the National Congress of Democratic Movements (CONACOM), the Rally of Progressive National Democrats (RDNP), the Revolutionary Progressive Nationalist Party (PANPRA), and the Movement for the Installation of Democracy in Haiti (MIDH), under former Prime Minister Marc Bazin.

By 1995 the dominant party, and the one associated with Aristide, was the Lavalas Political Platform, an alliance of the Lavalas Political Organization (OPL) and the Movement for the Organization of the Country (MOP). Backed by Aristide and Lavalas, René Préval was elected president in the December 1995 elections with 88% of the vote. In the mid-1995 legislative elections, all but one of the 18 vacated Senate seats were won by Lavalas candidates and the party also swept the election in the lower house, with 12 seats going to candidates of other groups, including independents. In 1997, former president Bertrand Aristide formally registered a new party—Fanmi Lavalas (FL—Lavalas Family)—which broke ranks with the existing Lavalas government before the 2000 elections. The legislative elections, initially scheduled for June 1999, were postponed repeatedly throughout the rest of 1999 and the first half of 2000. They were eventually held, together with the

presidential elections, in November 2000. The FL dominated the elections, which were boycotted by the opposition. Parliamentary elections were due to be held in 2003, but they were not. Large protests were held against Aristide's rule, which eventually turned into a rebellion which, along with international pressure, ousted him on 29 February 2004.

A first round of legislative elections was held on 7 February 2006, but only two deputies were elected. A second round of legislative elections was held on 21 April 2006. René Préval's alliance Front for Hope or L'ESPWA won 11 seats in the Senate. Other parties winning Senate seats included: Struggling People's Organization (OPL), 4; Fanmi Lavalas (FL), 3; Merging of Haitian Social Democratic Parties (FUSION), 3; Artibonite in Action (LAAA), 2; National Christian Union for the Reconstruction of Haiti (UNCRH), 2; Democratic Alliance (ALYANS) 1; For Us All (PONT), 1; 3 seats were subject to a run-off election. In the Chamber of Deputies, seats by party were: L'ESPWA 19; FUSION 15; ALYANS 10; OPL 8; FL 6; UNCRH 6; Mobilization for Haiti's Development (MPH), 4; Assembly of Progressive National Democrats (RDNP), 4; LAAA 3; Cooperative Action to Build Haiti (KONBA), 3; National Front for the Reconstruction of Haiti (FRN) 1; New Christian Movement for a New Haiti (MOCHRENHA), 1; Movement for National Reconstruction (MRN), 1; Heads Together (Tet-Ansanm), 1; Independent Movement for National Reconciliation (MIRN), 1; Justice for Peace and National Development (JPDN), 1; Union of Nationalist and Progressive Haitians (UNITE), 1; Liberal Party of Haiti (PLH), 1; 13 seats were subject to a run-off election by June 2006.

## 15 LOCAL GOVERNMENT

As of 1999, Haiti was divided into nine departments and subdivided into arrondissements and communes. Each department is headed by a prefect appointed by the central government. Under the constitution, a commune is headed by an elected mayor, whose powers are strictly circumscribed. Local government is limited and all taxes collected by the communes are paid directly into the national treasury. The first open municipal elections in 26 years took place in 1983. Local mayoral and council elections were held in December 1995. In January 1999 President René Préval began appointing mayors and other local officials because political violence and instability had resulted in the delay of local elections. Since taking office, President Aristide has replaced many of the mayors elected by Préval. By late 2002, most government officials and authorities were loyal to Aristide and his Fanmi Lavalas party. Opposition leaders were prevented from having power in local governments.

## 16 JUDICIAL SYSTEM

The judiciary consists of four levels: the Court of Cassation, courts of appeal, civil courts, and magistrates' courts. Judges of the Court of Cassation are appointed by the president for 10-year terms. Government prosecutors, appointed by the courts, act in both civil and criminal cases. There are also land, labor, and children's courts. Military courts function in both military and civilian cases when the constitution is suspended. The legal system is based upon the French Napoleonic Code.

Until 1995, the Haitian armed forces controlled law enforcement and public security even though the constitution called for

separation of the police and military. The 1987 constitution was put into effect in 1995. Although the constitution also calls for an independent judiciary, all judges since 1986 have been appointed and removed at the will of the government and political pressures affect the judiciary at all levels. The justices of peace issue warrants and adjudicate minor infractions. The Supreme Court deals with questions of procedure and constitutionality. Haiti accepts compulsory jurisdiction of the International Court of Justice. On 9 June 2003, a treaty was ratified to establish the Caribbean Court of Justice (CCJ), with the first session of the CCJ scheduled for November 2003. Although Haiti was not among the eight nations to officially approve the CCJ, it did agree to use the CCJ for resolution of trade disputes.

## 17 ARMED FORCES

In 1994, a civilian administration replaced the military government. The armed forces and police were disbanded and they were replaced with a National Police Force, which had an estimated 5,300 members. Since 1 June 2004 there have been no active armed forces, replaced instead, by a UN stabilization force, with 6,700 authorized personnel. A National Police Force of around 2,000 personnel remains operational. Security expenditures in 2000 (the latest year for which data was available) were \$50 million.

## 18 INTERNATIONAL COOPERATION

Haiti is a charter member of the United Nations, having joined on 24 October 1945; it is part of ECLAC and several specialized UN agencies, such as FAO, IAEA, ILO, IMF, IFC, UNESCO, UNIDO, WHO, and the World Bank. Haiti joined the WTO in 1996. The country is also a member of the ACP Group, G-77, the Inter-American development Bank, the Latin American Economic System (LAES), CARICOM, the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and the OAS.

During the 1991–94 period of de facto military rule, the UN Mission in Haiti (UNMIH) was formed (1993), with a total of 38 countries participating, to restore legitimate government and create a secure and stable political environment within the country. In 1994, the UN Security Council authorized deployment of a US-led multinational force to accomplish this task. From 1994–2001, other peacekeeping missions were established, including the United Nations Support Mission in Haiti (UNSMIH), the United Nations Transition Mission in Haiti (UNTMIH) and the United Nations Civilian Police Mission in Haiti (MIPONUH). The United Nations Stabilization Mission in Haiti (MINUSTAH) was established in 2004, at the resignation of Jean-Bertrand Aristide, to support the efforts of the transitional government. A total of 20 countries have offered support to MINUSTAH.

Haiti is a signatory of the 1947 Río Treaty, an inter-American security agreement. The nation also participates in the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and is a signatory to the Organization for the Prohibition of Chemical Weapons. In environmental protection, Haiti is part of the Convention on Biological Diversity, the London Convention, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

One of the richest colonial possessions based on its slave-operated sugar plantations, and site of the world's first successful slave revolt, Haiti is now one of the world's poorest countries, separated on the island of Hispanola from the prospering Dominican Republic by racial and linguistic divisions, and a river named Massacre. About 80% of the population lives in abject poverty, engaged mainly in subsistence agriculture. The economy is basically agricultural: coffee, mangoes, sugar, rice, corn, sorghum, and wood are the main products. Some cottage industries were developed in the mid 1940s, and in the late 1950s and early 1960s the mining sector, particularly bauxite and copper, grew to provide important export items. By the early 1980s, however, mining was losing its importance, and light export-oriented industry, based on cheap labor, was the main growing area. The informal market is growing including the black market transshipment of cocaine. In 2003, Haiti remains one of the 23 countries on the US government's list of major drug-producing or drug-transit countries.

Haiti has suffered a series of natural and political setbacks. Hurricanes have often destroyed substantial parts of the coffee and sugar crops. During 1960–70, the real GDP declined annually by 0.2%. The accession of Jean-Claude Duvalier in 1971 improved the economy, and between 1970 and 1979, the average annual growth of the GDP was 4%. The economy took a downward turn in the early 1980s, growing by only 0.90% between 1977 and 1987.

On 30 September 1991 a military coup headed by General Cedras deposed the democratically elected government of President Jean-Bertrand Aristide. The OAS and the United States imposed several economic sanctions following this military coup. The accumulated contraction in the economy from 1991–94 amounted to about 30%, leaving per capita income at about \$260. A UN-mediated agreement called for President Aristide's return to power, which occurred in 1994.

In 1995, GDP growth reached a recent high of 4.5% due mainly to public investment equal to 7.2% of GDP (compared to 0.6% in 1994). Inflation fell to 30.2%, down from 36.1% in 1994. In 1996, GDP growth moderated to 2.78% as inflation fell to 20%. From 1997 to 1999, annual GDP growth averaged 2.1% and inflation fell to single digits, 8.3% in 1998 and 9.9% in 1999. With extensions of credit under the IMF's Enhanced Structural Adjustment Facility (ESAF), the government initiated fiscal policy and structural reforms. After Aristide was voted out of office in 1996, the prime minister resigned in 1997, and the legislature broke up in 1999; all these factors contributed to a cessation of economic reforms. In 2000, violence, civil unrest and fraud that marred the presidential election and led donor countries to put a hold on about \$500 million of economic assistance, helped bring GDP growth down to a negligible 0.9% as inflation increased to 15.3%. A new agreement in November 2000 with the IMF was voted down by the legislature. In 2001, continued political unrest, the freezing of over \$1 billion in credits from international financial institutions, and the deterioration in the external economy following recession in the United States and the 11 September 2001 terrorist attacks brought on Haiti's first contraction since 1994 as GDP fell 1.1%. In 2002, the US government (George W. Bush administration) continued to block aid to Haiti on condition that political reforms, specific arrests, and disarmament would first have to be carried out, and sent assistance to the Dominican Republic to help their

military seal their border against Haitian refugees along the Massacre River.

Economic growth for 2002 was -0.9%, with inflation at 9.9%. Unemployment was an estimated 60%. In 2003 the GDP growth rate recovered slightly at 0.5%, but in 2004 it relapsed again, reaching -3.8%; in 2005 the economy was expected to expand by 2%. Inflation went out of control, reaching 39.3% in 2003, and 22.8% in 2004; it was expected to fall to 15% in 2005. Haiti suffers from lack of investments, and a severe trade deficit. In addition, civil conflict and natural disasters, in 2004, added to the problems of an already impoverished country. Foreign aid flows have started to pick up in past years that not at a pace that would offer immediate economic relief.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Haiti's gross domestic product (GDP) was estimated at \$12.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,600. The annual growth rate of GDP was estimated at 3.5%. The average inflation rate in 2005 was 13.3%. It was estimated that agriculture accounted for 30% of GDP, industry 20%, and services 50%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$811 million or about \$96 per capita and accounted for approximately 27.8% of GDP. Foreign aid receipts amounted to \$200 million or about \$24 per capita and accounted for approximately 6.9% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Haiti totaled \$2.69 billion or about \$316 per capita based on a GDP of \$2.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1980 to 1990 household consumption grew at an average annual rate of 0.9%. It was estimated that in 2003 about 80% of the population had incomes below the poverty line.

## 21 LABOR

In the latest years for which data was available, Haiti's labor force in 1998 was estimated at three million. Of that total, agriculture employed 66%; industry, 9%; and services, 25%. Unemployment and underemployment in Haiti is widespread. As of 2002, it was estimated that more than two-thirds of the country's labor force did not have formal employment of any kind.

Because the proportion of wage earners is relatively small, the labor movement is weak. In 2002, there were nine principal labor federations, representing about 5% of the total labor force. Unions are independent of the government and political parties, but they must register to achieve legal recognition. Strikes are permitted, but participation in strike activity is low. Collective bargaining does not occur.

The minimum age for employment is legally set at 15 years with the exception of domestic service. Child labor is not problematic in the formal sector due to job competition, however it remains prevalent in the informal economy. In industry and service orga-

nizations, the legal standard is an eight-hour day with a 48-hour week and 24-hour rest on Sunday. The legal daily minimum wage in 2002 was \$1.52, which does not provide a decent standard of living for a family. This only applies to the formal wage-earners, and does not apply to agricultural workers or the informal sector of the economy.

## 22 AGRICULTURE

With 62% of the laboring population deriving its living exclusively from the soil, farming is the mainstay of the Haitian economy. Although only about one-third of the country's land is considered suitable for cultivation because of the rugged terrain, 40% of the land was actually being used for crop and feed production and pasture in 2003. Nevertheless, population growth outstripped agricultural growth during the 1970s, and a drought in 1985 affected the production of such important staple crops as rice, maize, and beans. Consequently, foodstuffs have had to be imported in increasing quantity.

Production of coffee in 2004 totaled 28,000 tons, as compared with the record-high of 43,600 tons in 1962. Sugarcane is the second major cash crop, but production has been declining; in 1976, Haiti became a net importer of sugar. Sugarcane production in 2004 was 1,080,000 tons. Other agricultural production figures for the 2004 growing season (in thousands of tons) were bananas, 290; corn, 180; rice, 102; sorghum, 85; dry beans, 33; and cocoa beans, 4.4. Haitian agriculture is characterized by numerous small plots averaging slightly over one hectare (2.5 acres) per family, on which peasants grow most of their food crops and a few other crops for cash sale; few farms exceed 12 hectares (30 acres). Haiti employs an unusual form of farming called arboriculture. Combinations of fruit trees and various roots, particularly the manioc plant, the traditional Haitian bread staple, replace the grain culture of the usual subsistence-economy farming. Crops are cultivated with simple hand tools; the plow or animal power is only rarely employed, except on sugarcane plantations. Coffee is grown on humid mountain slopes, cotton on the semiarid plateaus and sea-level plains, and bananas as well as sugar on the irrigated plains, which covered about 57,000 hectares (140,800 acres) in 2004. Rice has become a basic staple for Haitians, but local production only meets a little more than 20% of demand.

## 23 ANIMAL HUSBANDRY

Stock raising is generally a supplementary activity on small farms. In 2005 there were 1,456,000 head of cattle, 1,000,000 hogs, 1,900,000 goats, 500,000 horses, 153,500 sheep, and 5,500,000 poultry. The hog population was decimated by African swine fever in 1979, and careful efforts at replacement have been unsuccessful. In the mid-1990s, the poultry industry contracted from over 100 commercial producers to less than 10. In addition to the embargo and political uncertainty, the industry is under competitive pressure of low cost poultry imports from the United States. Poultry production has not risen enough to fill the vacuum in the rural diet. Extension work directed by the Department of Agriculture's educational center at Damien has helped to stabilize animal husbandry. Poultry production slowly increased from about 6,000 tons per year in the mid-1990s to 8,400 tons by 2005. Native stock has been upgraded by the introduction of hogs and cattle from abroad, particularly the zebu, which does well in the hot, dry

plains. Two major stock-feeding centers operate at Port-au-Prince and Cap-Haïtien. Livestock products in 2005 included 99,893 tons of meat, 25,200 tons of goat's milk, 44,500 tons of cow's milk, and 5,050 tons of eggs.

## 24 FISHING

While the proximity of Haiti to the Windward Passage and the north-flowing currents off the Venezuelan coast place it in the path of major fish migrations, including tuna, marlin, bonito, and sardines, the commercial fishing industry is not developed. Reef fish, including giant grouper and rock lobster, are important food sources because deep-sea fishing is limited. Fisheries have been successfully developed in the small ponds and in the irrigation and drainage ditches of the Artibonite Plain. Carp and tertar, a native fish, are abundant, but lack of transport and other facilities limits this important food source to local consumption. The catch was estimated at 5,010 tons in 2003, including 200 tons of Caribbean spiny lobster and 300 tons of conch.

## 25 FORESTRY

Originally, Haiti was endowed with abundant forest resources. Excellent stands of pine were located in the mountain rain forests of La Hotte Massif and in the Massif du Nord. (Haitian pine is high in turpentine and rosin content, making it suitable for naval stores.) Major stands of mahogany grew in the Fer à Cheval region, and small stands occurred in the island's lower mountain ranges. Tropical oak, cedar, rosewood, and taverneaux also were widespread; hardwoods included lavan (mahogany), narra, tindalo, and ipil. The intensive use of the forests for fuel, both in colonial times and in the modern era, and the clearing of woodlands for agriculture resulted in a decline of Haiti's forestland from over 2.7 million hectares (6.7 million acres) before the coming of Columbus to about 88,000 hectares (217,000 acres) by 2000, the majority of which was privately owned. Such deforestation has created a problem with soil erosion. Reforestation efforts have been more ambitious in design than successful in execution. Haiti had an annual average deforestation rate of 5.7% during 1990–2000, the highest in the world. Of the estimated 2,231,000 cu m (78,784,000 cu ft) of wood cut in 2004, almost 89% was used for fuel.

## 26 MINING

The mining sector played a minor role in Haiti's economy. In 2003, mining was limited to sand, gravel, and marble. Cement was also produced in 2003. Asphalt, lime, and salt may also have been produced. The marble industry was being developed for export possibilities.

In 2003, cement production totaled 290,300 metric tons. Sand and gravel production that same year each totaled an estimated 450,000 and 2 million cu m, respectively. Marble output in 2003 was estimated at 131 cu m.

There were small, undeveloped deposits in northern Haiti of chromite, copper (both sedimentary and in veins, in the Massif du Nord), gold, iron ore, lead, manganese (in the Morne Macat section of the Massif du Nord), silver, sulfur, tin, and zinc. There were also bauxite deposits near Miragoâne, and deposits of antimony, gypsum, nickel, and porphyry. The Canadian company St. Genevieve Resources estimated that two small gold mines near Cap-Haïtien could yield at least \$100 million over 10 years. The Cana-

dian company KWG Resources, Inc. had two properties with gold and copper resources—Grand Bois and Morne Bossa.

All subsoil rights belonged to the state; private ownership of mining companies was permitted, and mineral exploration has generally been conducted by foreign enterprises. Private gold mining was permitted, but the metal had to be sold to the National Bank. Production of bauxite ceased with the 1985 closing of the Reynolds mine; production peaked at 613,000 tons in 1979, and exports were worth \$14.9 million in 1982. Copper mining was suspended in 1971, because it became unprofitable.

## 27 ENERGY AND POWER

Haiti has no known proven reserves of oil, natural gas, coal, or any oil refining capacity. As a result the country must import whatever refined petroleum products or fossil fuels it consumes. In 2002, imports and consumption of refined petroleum products averaged 11,610 barrels per day in 2002. There were no imports or consumption of natural gas or coal for that same year.

Haiti's electric power sector is marked by reliance upon fossil fuels and hydropower to generate electricity. In 2002, conventional thermal fueled generating capacity totaled 0.244 million kW, with hydropower accounting for 0.063 million kW and fossil fuel plants 0.181 million kW. Electric power production in that year totaled 0.609 billion kWh, with hydropower and conventional thermal accounting for 0.298 billion kWh and 0.311 kWh, respectively. Total power demand in 2002 totaled 0.566 billion kWh. Although power represented the government's top investment priority in the early 1970s, as of July 2005, the electricity supply remains erratic and inadequate. Most industrial plants have stand-by generators.

## 28 INDUSTRY

Industry has traditionally been primarily devoted to the processing of agricultural and forestry products, although the assembly of imported components for export to the United States and other markets has grown into a substantial industry. During 1970–78, the industrial sector grew by 8.3% annually; between 1977 and 1987, growth was null; and between 1988 and 1998 the sector declined by 3.1% annually. The parastatal flour refinery and cement factory were sold to foreign interests in 1999. The flour refinery had been out of service for five years before it began operations again in 1998. The cement factory was undergoing restructuring in 1999, and thus was closed. Since the flour refinery and cement factory were privatized in 1999, privatization has stalled. Other industries produce aluminum, enamelware, garments and hats, essential oils, plastic, soap, pharmaceuticals, and paint. A steel plant commenced operations in 1974, converting imported scrap into steel sections. Haitian plants assemble US-made components to create electronic devices, toys, and leather goods. In 1986, before the trade embargo, some 140 export assembly firms employed about 40,000 people. The figure was only 400 in 1994, but five years later 25,000 people were employed in such firms.

Industry grew by 6% annually in 1997 and 1998. However, a growing trade imbalance preempted a more robust recovery, and the global economic slowdown in the United States that began in 2001 negatively affected the Haitian economy. Construction has been consistently more dynamic than agriculture and manufacturing, which realized only moderate output increases.

Industry made up 20% of the economy in 2001, and it employed only 9% of the labor force; services represented 30% of the overall GDP, and employed 25% of the workforce; agriculture was the biggest employer, at 66%, and contributed with 30% to the overall GDP.

## 29 SCIENCE AND TECHNOLOGY

The National Council for Scientific Research, founded in 1963, coordinates scientific activities in Haiti, especially in the public health field. Four colleges and universities, including the University of Haiti, offer degrees in basic and applied sciences.

## 30 DOMESTIC TRADE

Port-au-Prince, a free port, is the commercial center of Haiti, with Cap-Haïtien second in importance. Most Haitian products are sold in regional markets, which meet on traditional established days, once or twice a week. The Croix-de-Bossales market in Port-au-Prince is the largest market in the country, handling about two-thirds of the food and manufactures used in the capital.

Imported goods usually are sold in small stalls (*boutiques*), but there are some modern supermarkets. Specialty goods and articles for the tourist trade are offered by merchants who are generally franchised to handle specific brands. Some larger franchised stores, including Sears, Radio Shack, NAPA Auto Parts, and Domino's Pizza, have found a market with the help of Haitian business managers. Although foreign imports, motion pictures, and soft drinks are advertised in newspapers, radio is the principal advertising medium.

Stores are generally open on weekdays from 8 AM to 5 PM in the winter, with some shops open until about 7 PM. In summer, closing time is set by law at 4 PM; on Saturdays, stores close at noon. Banks are open from 9 AM to 1 PM, Monday through Friday.

## 31 FOREIGN TRADE

Coffee has been supplanted as the main export by manufactured articles assembled in Haiti. The high deficit in the trade balance, with a marginal increase in exports and continued high import buoyancy in the late 1990s, reflects pent-up aggregate demand that is not satisfied by domestic production. Narrowing the trade deficit will therefore require a policy mix that prioritizes export-oriented productive sectors.

The light manufacture of clothes in Haiti accounts for the majority of commodity exports (56%). Other exports include essential oils (5.6%), coffee (5.4%), tropical fruits and vegetables (5.4%), and paper products (4.8%). Haiti's biggest export market is, by far, the United States.

In 2004, exports reached \$338 million (FOB—Free on Board), while imports grew to \$1.1 billion (FOB). The bulk of exports went to the United States (81.2%), the Dominican Republic (7.3%), and Canada (4.1%). Imports included food, manufactured goods, machinery and transport equipment, fuels, and raw materials, and mainly came from the United States (34.8%), the Netherlands Antilles (18%), Malaysia (5.1%), and Colombia (4.7%).

## 32 BALANCE OF PAYMENTS

Haiti's external trade position worsened from 1991 to 1994 following the imposition of the trade embargo. As all but humanitarian foreign aid was suspended during those years, balance of

payments deficits reflected the decline in net capital inflows. Once a constitutional government was returned to power in 1994, however, imports increased, due to high domestic demand. As a result of aid flows and remittances from Haitians living abroad, imports in the 1990s and into the early 2000s grew steadily. Haiti's ability to generate export revenue depends upon a revival of the assembly sector.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Haiti's exports was \$326.6 million while imports totaled \$977.5 million resulting in a trade deficit of \$650.9 million.

The International Monetary Fund (IMF) reported that in 1998 Haiti had exports of goods totaling \$299 million and imports totaling \$641 million. The services credit totaled \$180 million and debit \$381 million.

Exports of goods and services reached \$502 million in 2004, up from \$461 million in 2003. Imports grew from \$1.4 billion in 2003, to \$1.5 billion in 2004. The resource balance was consequently negative in both years, worsening from -\$939 million in 2003, to -\$953 million in 2004. The current account balance was also negative, slightly improving from -\$140 million in 2003, to -\$98 million in 2004.

**33 BANKING AND SECURITIES**

The national bank of the Republic of Haiti (Banque Nationale de la République d'Haiti-BRH), the sole bank of issue and government depository, was founded in 1880 and acquired from US interests in 1934 and became the fiscal agent of Haiti in 1947. As the nation's principal commercial bank, it participates in the national lottery, the national printing office and plant, the National Archives, banana development, the tobacco and sugar monopolies, the Agricultural and Industrial Development Institute, and

the Agricultural Credit Bureau; it is also a depositor with the IMF and IBRD.

The first private Haitian bank, the Bank of the Haitian Union, opened in 1973. In 2002, nine other commercial banks were in operation; including one of them Haitian (Banque Industrielle et Commerciale d'Haiti), one US (Citibank), and one Canadian (Bank of Nova Scotia). There are two state-owned banks, Banque Nationale de Crédit and Banque Populaire Haitienne. Other banks included Promobank, Unibank, Sogebank, Socabank, and Capital Bank. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$434.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.4 billion.

There is no securities exchange in Haiti. Trading in Haitian corporations that make public offerings of their bonds or equity shares is conducted on the New York over-the-counter market.

**34 INSURANCE**

Major world insurance companies maintain agencies or branches in Haiti, the most prominent being Sun Life of Canada, the first to enter into life insurance. The insurance classes covered are life, accident, sickness, fire, and motor.

**35 PUBLIC FINANCE**

In the mid to late 1990s, Haiti, under President Préval, undertook a program of economic reform. The agenda included trade liberalization, increasing fiscal responsibility, downsizing civil service, financial sector reform, and privatization of some state-owned enterprises. The privatization program stalled in 2001, a year in which GDP fell by 2.1% due to political uncertainty, low investment, a high budget deficit, and reduced capital inflow from abroad.

The US Central Intelligence Agency (CIA) estimated that in 2005 Haiti's central government took in revenues of approximately \$400 million and had expenditures of \$600.8 million. Revenues minus expenditures totaled approximately -\$200.8 million. Total external debt was \$1.3 billion.

**36 TAXATION**

Corporate and personal incomes are both taxed according to a progressive scale ranging from 10% to 35%. Since 1951, new corporations, if placed on the government's list of recommended new industries have benefited from special tax concessions, including customs duties exemption and a five-year corporate income tax exemption. The progressive income tax is the most important direct tax. The first band, 10%, implicitly exempts the first 20,000 gourde of income (about \$509) from taxation, and runs to 100,000 gourde (\$2,542). The 15% band covers the next increment of income to 250,000 gourde (\$6,360); the 25% band covers the next increment to 750,000 gourde (\$19,076), and the highest band, 30%, applies to all income above \$19,076. The highest property tax rate is reportedly 15%. Indirect taxes include a value-added tax

(VAT) with a 10% standard rate, raised from 7% in 1985. There are also numerous excise taxes at various rates.

### 37 CUSTOMS AND DUTIES

In February 1987, a new tariff structure replaced all remaining specific duties with ad valorem tariffs and introduced new rates of between zero and 15%, except for higher rates on rice, maize, millet, flour, and gasoline, and lower rates for sugar and cement. All imports are subject to a 10% VAT and 4% verification fee. Fuel imports are subject to various additional excise taxes.

Haiti was voted into CARICOM in July 1999 and is working towards full integration by 2006. The country is also a part of the Caribbean Basin Initiative (CBI), allowing duty-free entry of exports to the United States, and is a signatory to the Lomé Convention, allowing mostly free exporting to the European Union.

### 38 FOREIGN INVESTMENT

The government welcomes foreign investment, granting important concessions to new industries not competing with local production. Such enterprises are exempt from import and export duties for the life of the enterprise and enjoy a full tax exception for the first five years of operation. Companies locating in the industrial park are entitled to tax exception for a further three years. For companies that locate outside the Port-au-Prince metropolitan area there is a 100% income tax exemption for 5 to 15 years with 15–20% of the income tax payable thereafter. Additionally, for export and import oriented business, there is an exemption without time limit from customs duties on imported machinery, equipment, raw materials, and accessories needed for production. Foreign capital enjoys equal status treatment with Haitian capital. The National Office for Investment Promotion is in charge of foreign investment.

Substantial foreign investment in Haiti began during World War II as a means of stimulating production of goods considered essential to the United States war effort. Agricultural development was financed largely by the US Export-Import Bank and the World Bank, supplemented with private foreign capital.

In October 1996, the IMF approved a \$131 million loan to Haiti. The credit, to be provided over a three-year period, is aimed at supporting a national economic reform program. The international donor community committed \$2 billion in concessional loans and grants to Haiti for the 1995–99 period, including \$390 million from the World Bank. Unfortunately, the political impasse of 2000 caused a freeze on international donations.

Foreign direct investment (FDI), since the lifting of the trade embargo in 1995, has increased only moderately. By 1998, annual FDI inflow to Haiti reached almost \$11 million, up from \$4.4 million in 1997, and in 1999, FDI inflow peaked at \$30 million. The disputed elections in 2000 and continuing political uncertainty helped bring FDI flows down to \$13.2 million in 2000 and less than \$3 million in 2001. In 2003, Haiti was one of 23 countries that remained on the US “majors” list of countries involved in illicit drug processing and/or illicit drug transit.

Most investment comes from petroleum companies (Texaco, Shell, Esso, and Elf). Other major foreign investors include American Airlines, American Rice Corporation, Citibank, Compagnie Tabac, Continental Grain, Seaboard Marine, and West-

ern Wireless, from the United States; and Royal Caribbean and Scotiabank.

### 39 ECONOMIC DEVELOPMENT

Although its annual national revenue covers basic necessities, the government supports development programs by encouraging loans and by requiring private enterprises to finance development projects. Aided by the United States and various international aid organizations, the government has supported the construction of tourist facilities, public works, and irrigation and the creation of monopolies in cement, sugar marketing, tobacco and lumbering.

The framework for economic policy in 1996 was determined mainly by the passage of a structural reform program and the agreement signed between the Central Bank and the Ministry of Finance to curtail financing of the fiscal deficit by the Central Bank. Passage of the structural reform program (which forms the basis for international financial support and includes Civil Service Reform and Modernization of Public Enterprises), proved slow and difficult. The Civil Service Reform prescribed the modalities for a reduction of the civil service by 7,500 employees over a period of 18 months. The Modernization of Public Enterprises program established a legal framework for private sector participation in the state-owned enterprises, in the form of either concession, management contract, and/or capitalization.

Macroeconomic stability, structural and institutional reforms, and poverty alleviation are still the main objectives in Haiti's agenda for the future. The administration has demonstrated its commitment through programs with the International Monetary Fund (IMF); the passage of laws pertaining to structural reforms; coordinated efforts with multilateral and national institutions to design the modernization of the state program; and continuation of programs for poverty alleviation such as the IMF's Poverty Reduction and Growth Facility (PRGF) Arrangement. In exchange for the IMF assistance, Haiti in 2003 pledged to reduce spending and stabilize its currency, moves that were expected to pave the way for other financial institutions to release suspended funds to the country (funds were suspended due to flawed legislative elections in 2000, and due to Haiti's state of arrears on its debts).

Haiti, the poorest country in the Western Hemisphere, experienced worsening economic and social conditions from 2001–03. About 80% of the population lives in abject poverty. Nearly 70% of all Haitians depend on the agriculture sector, which consists mainly of small-scale subsistence farming and employs about two-thirds of the economically active work force. The country has experienced only moderate job creation in recent years. Failure to reach agreement with multilateral lenders in late 1995 led to rising deficit spending, subsequently increasing inflation, and a drop in the value of the Haitian currency in the final months of 1995. Potential investors, both foreign and domestic, have been reluctant to risk their capital. The government will have to grapple with implementing necessary, although unpopular, economic reforms in order to obtain badly needed foreign aid and improve Haiti's ability to attract foreign capital if the Haitian economy is to gain momentum. Haiti will continue to depend heavily on foreign aid in the medium term.

Foreign aid flows have mainly targeted the garment assembly industry, and were doubled by remittances from abroad (which are estimated to represent over 20% of the country's GDP). The

economy was expected to expand by around 2% in 2005, a rate that is far from what is needed to improve the economic situation for the population that is living in abject poverty.

#### 40 SOCIAL DEVELOPMENT

A social welfare program covers employees of industrial, commercial, and agricultural firms funded equally from employee and employer contributions. The government funds any deficit. Retirement is set at age 55. Pensions are also available for survivors and disability. Work injury insurance is funded by the employer. Maternity benefits were first introduced in 1999. A funeral grant of one month's earnings is provided.

Women do not enjoy the same economic and social status as men. Women's rights groups reported in 2004 that rape and other abuses against women increased. The government provides no services for victims of sexual violence. Although the government signed the International Convention on the Rights of the Child, the abuse of children is widespread. Many children in Haiti are forced to work as domestic servants in the homes of middle and upper class families.

Haiti has an extremely poor human rights record.

#### 41 HEALTH

In general, sanitation facilities in Haiti are among the poorest in Latin America. Haiti lacks water in both quantity and quality, with only 46% of the urban population having access to safe water in 2000. City sewerage systems are inadequate and business and residential areas often make use of septic tanks. In 2000, only 28% of Haiti's population had access to adequate sanitation.

As of 2004, there were an estimated 25 physicians, 11 nurses, and 1 dentist per 100,000 people. Half the doctors are in Port-au-Prince and a fourth are in other principal towns, leaving a minimum of medical services for the rural population. In 1999, the government entered into an agreement with Cuba under which 120 Haitians are studying medicine in Cuba, while 500 Cuban health care professionals provide services to Haitians.

Malaria and yaws have been combated by the World Health Organization, while other health programs have been conducted by the Rockefeller Foundation and the American Sanitary Mission. Tuberculosis has long been a serious health problem; in 1999, there were about 361 reported cases of tuberculosis per 100,000 inhabitants. Malnutrition and gastrointestinal diseases are responsible for more than half of all deaths. Children may receive vaccinations, but the statistics are very low. Haiti's government did not pay for routine vaccines. Children were vaccinated against tuberculosis, 40%; diphtheria, pertussis, and tetanus, 35%; polio, 32%; and measles, 30%. Goiter was present in 12.4% of school-age children in 1996. Some 27% of children were underweight between 1989 and 1995.

Haiti has one of the highest HIV infection rates in the Americas. The HIV/AIDS prevalence was 5.60 per 100 adults in 2003. As of 2004, there were approximately 280,000 people living with HIV/AIDS in the country. There were an estimated 24,000 deaths from AIDS in 2003.

The fertility rate has declined from 6.3 in 1960 to 4.3 children per woman in 2000. An estimated 15% of all births were considered low birth weight. Haiti has the highest maternal mortality rate in the Americas, with 525 maternal deaths per 1,000 live

births. The infant mortality rate fell from 182 per 1,000 live births in 1960 to 73.45 in 2005 and the general mortality rate was estimated at 14.8 per 1,000 in 2002. During 2005, the average life expectancy was estimated at 52.92 years. The birth rate was an estimated 31.4 per 1,000 people in 2002. As of 2000, 28% of women (ages 15 to 49) used some form of contraception. Less than half the population had access to health care services. Total health care expenditure was estimated at 4.2% of GDP.

#### 42 HOUSING

Although housing projects have been constructed in Port-au-Prince and in Cap-Haïtien, there is an increasing shortage of low-cost housing. Migration to the major cities has compounded the urban housing problem. Natural disaster including cyclones, floods, droughts, and earthquake have had serious effects on the housing situation as well.

Outside the capital and some other cities, housing facilities are generally primitive and almost universally without sanitation. Wooden huts are the prevalent standard for the countryside. The average household includes about five or six people, often living on a two- or three-room dwelling. Over 40% of all homes have dirt floors. About 63% of the population do not have access to clean water or sanitary restroom facilities. The housing deficit has been estimated at one million homes and growing.

By presidential decree, the National Housing Office was established in 1966. Housing built in the 1970s in Port-au-Prince for about 18,000 people merely replaced demolished units. A new cooperative project, supervised by the National Housing Office and financed by UNDP, was initiated in 1979 in St. Martin, on the outskirts of Port-au-Prince. Housing construction is reported to have proceeded at a steady pace since that time. According to the latest available statistical information, total housing units numbered 890,000, with 6.1 people per dwelling.

#### 43 EDUCATION

Although 80% of the students speak Creole and have only rudimentary knowledge of French, educational programs are mostly conducted in French. The Office of National Literacy and Community Action has the major responsibility for literacy programs throughout the country. The adult literacy rate for 2004 was estimated at about 51.9%, with 53.8% for men and 50% for women. In 1990, public expenditure on education was estimated at 1.4% of GDP.

Education is compulsory for six years (ages 6 to 12). There are two systems of public education. In the traditional (French) system, primary school covers six years and secondary school covers seven years. In the reform system, there are nine years of primary school followed by three years of secondary school. At about age 15, some students may choose to attend a three-year technical school instead of following the classical or professional education tracks of the other systems. The academic year runs from October to June. Primary school enrollment in 1999 was estimated at about 81% of age-eligible students. The student-to-teacher ratio in 1999 was about 31:1 for primary schools.

The Université d'État d'Haïti (Port-au-Prince), dating from 1920, offers the following schools: administration and management, agronomy, economics, ethnology, law, medicine and pharmacy, science, and surveying. There are about two dozen other

universities in Haiti, including the Université Jacques Theodore Holly. There are also several vocational training centers and trade schools.

#### 44 LIBRARIES AND MUSEUMS

The library of the Brothers of St.-Louis de Gonzage, the finest in Haiti, includes bound newspaper collections covering the 19th and 20th centuries and many rare works of the colonial and republican eras. The Bibliothèque Nationale contains about 26,000 volumes. Le Petit Séminaire, a parochial college, has an excellent library. The government has a wealth of library material dating back to colonial Saint-Domingue in the National Archives and rare papers on the Napoleonic expedition in Haiti in the famous Rochambeau Collection. Private libraries, notably the Mangones Library in Pétienville, make important contributions to Haitian scholarship. There is a French Institute and an American Institute library in Port-au-Prince. The University of Haiti has an important agricultural collection.

The National Museum in Port-au-Prince dates from 1938. The Museum of the Haitian People, also in the capital, has anthropological and folklore collections, and the College of St. Pierre houses the Museum of Haitian Art, which opened in 1972. There is a historical and public affairs museum in the capital as well.

#### 45 MEDIA

The government owns and operates domestic telephone and telegraph communications. All America Radio and Cables, RCA Global Communications, and Western Union International provide international telephone and telegraph service. In 2003, there were an estimated 17 mainline telephones for every 1,000 people. The same year, there were approximately 38 mobile phones in use for every 1,000 people.

With low literacy rates and limited television broadcasting, radio is the most important medium for news and information. A 1997 law designates the government as the sole owner of the airwaves; however, the government provides broadcast leases to private operators. In 2004, there were about 307 licensed radio stations and at least 133 unlicensed stations. Most broadcast in French; some offer programming in Creole. In 2005, there were at least three television stations. Television Nationale d'Haiti is a government-owned cultural television station offering programs in Creole, French, and Spanish. Trans-America and PVS Antenne are private stations broadcasting in French. In 2003, there were an estimated 18 radios and 60 television sets for every 1,000 people. The same year, about 18 of every 1,000 people had access to the Internet. There were five secure Internet servers in the country in 2004.

The principal Haitian newspapers (all published in Port-au-Prince) are the three dailies, *Le Matin*, (2002 circulation, 5,000), *Le Nouvelliste* (6,000), and *L'Union* (7,000). *Le Moniteur*, the official gazette, is published three times a week.

The constitution guarantees free speech and a free press, and the government is said to uphold these freedoms with few exceptions.

#### 46 ORGANIZATIONS

Organizational activity in Haiti is limited. The Credit Cooperative of Les Cayes, the only cooperative of any significance, has main-

tained a sizable membership. There is a chamber of commerce in Port-au-Prince. The Center d'Art, an informal artists' cooperative founded in 1944, has exhibited Haitian artists locally and internationally. There are some professional associations in the country, such as the Association Médicale Haïtienne, which serves as both a physician network and an advocacy group for research and education in medicine and healthcare industries.

A national student movement is organized through the National Federation of Haitian Students. Boy Scouts and Girl Scouts programs are available, as are branches of the YMCA. There are some sports associations in the country representing a variety of pastimes.

There are branches of the Red Cross, Habitat for Humanity, Rotary, Lion's Club, and the Masonic Order.

#### 47 TOURISM, TRAVEL, AND RECREATION

Port-au-Prince is a free port for a variety of luxury items. Tourist attractions include white sand beaches, numerous colonial buildings in Port-au-Prince and other cities, and the early 19th-century Citadelle and Sans Souci Palace in Cap-Haïtien. Rapid divorces—granted in 24 to 48 hours—and casino gambling are among the attractions for US residents. Football (soccer) is the national sport, and cockfighting is very popular. Tourist resorts offer facilities for water sports and tennis.

For entry to Haiti, visitors must have a valid passport. A visa is not required for stays of up to 90 days. In the 1980s and 1990s, tourism was adversely affected by the island's generally depressed economy, political turbulence, and by the alleged link between Haitians and AIDS. The political and civil unrest in 2004 caused the tourism industry to suffer further.

In 2005, the US Department of State estimated the daily cost of staying in Port-au-Prince at \$235. Other areas were as low as \$129.

#### 48 FAMOUS HAITIANS

The national heroes of Haiti include Pierre Dominique Toussaint L'Ouverture (1743–1803), the Precursor; Jean Jacques Dessalines (1758–1806), who defeated Napoleon's army and proclaimed Haitian independence; Alexandre Sabès Pétiion (1770–1818), first president of the republic established in southern Haiti; and Henri Christophe (1767–1820), king of Haiti (1811–20), who built the famous Citadelle and Sans Souci Palace. François Duvalier ("Papa Doc," 1907–71), originally trained as a physician, was elected president in 1957 and in 1964 became president for life. His son Jean-Claude Duvalier (b.1951) inherited his father's title in 1971 but was ousted in 1986. Ertha Pascal-Trouillot (b.1943) was the first woman to hold the post of president of Haiti. She held the position for nearly a year, from 1990 to 1991. Jean-Bertrand Aristide (b.1953), a former Roman Catholic priest, succeeded her in 1991, and served again from 1994 to 1996, and then from 2001 to 2004, when he was overthrown in a popular rebellion.

John James Audubon (1785–1851), an artist and ornithologist, was born in Haiti. The writers Émeric Bergeaud (1818–58), Oswald Durand (1840–1906), Philippe Thoby-Marcelin (1904–75), Jacques Roumain (1907–44), and Jean Fernand Brierre (1909–92) have won international literary recognition. Noted poets include the dramatist Pierre Faubert (1803–68), Corolian Ardouin (1812–35), Alibée Féry (1819–96), and Charles-Seguy Villavaleix (1835–

1923). Haitian artists include the sculptor Edmond Laforestière (1837–1904); the primitive painter Héctor Hippolyte (1890–1948), leader of the Afro-Art Renaissance in the Caribbean; Wilson Bigaud (b.1931); and Jacques Enguerrand Gourge (1931–1996). Haitian composers include Occide Jeanty (1860–1936) and Justin Elie (1883–1931); Ludovic Lamothe (1882–1953) used voodoo music in his compositions.

#### 49 DEPENDENCIES

Haiti has no territories or colonies.

# HONDURAS

Republic of Honduras  
*República de Honduras*

**CAPITAL:** Tegucigalpa

**FLAG:** The national flag consists of a white horizontal stripe between two blue horizontal stripes, with five blue stars on the white stripe representing the five members of the former union of Central American provinces.

**ANTHEM:** *Himno Nacional*, beginning “Tu bandera es un lampo de cielo” (“Thy flag is a heavenly light”).

**MONETARY UNIT:** The lempira (L), also known as the peso, is a paper currency of 100 centavos. There are coins of 1, 2, 5, 10, 20, and 50 centavos, and notes of 1, 2, 5, 10, 20, 50, and 100 lempiras. L1 = \$0.05285 (or \$1 = L18.92) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard; some old Spanish measures are still used.

**HOLIDAYS:** New Year’s Day, 1 January; Day of the Americas, 14 April; Labor Day, 1 May; Independence Day, 15 September; Birthday of Francisco Morazán, 3 October; Columbus Day, 12 October; Army Day, 21 October; Christmas, 25 December. Movable religious holidays include Holy Thursday, Good Friday, and Holy Saturday.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in Central America, Honduras has a total area of 112,090 sq km (43,278 sq mi), with a length of 663 km (412 mi) ENE–WSW and 317 km (197 mi) NNW–SSE. Comparatively, the area occupied by Honduras is slightly larger than the state of Tennessee. It is bounded on the N and E by the Caribbean Sea, on the S by Nicaragua and the Gulf of Fonseca, on the SW by El Salvador, and on the W by Guatemala, with a total boundary length of 2,340 km (1,454 mi), of which 820 km (509 mi) is coastline.

Under the terms of an arbitration award made by Alfonso XIII of Spain in 1906, Honduras received a portion of the Mosquito Coast, or La Mosquitia, north and west of the Coco (Segovia) River. Citing Honduras’s failure to integrate the territory, Nicaragua renewed its claim to the entire Mosquito Coast in the 1950s and brought the case to the International Court of Justice (ICJ). In February 1957, Honduras created the new Department of Gracias a Dios, made up of the former Mosquitia territory. The ICJ determined in 1960 that Nicaragua was obligated to accept the 1906 arbitration ruling concerning that country’s boundary with Honduras. The judges ruled, by a vote of 14–1, that once a valid arbitration award was made in an international dispute, it became effective, and remained so, despite any lapse of time in carrying it out.

The two tiny Swan Islands (Islas del Cisne), lying at 17°23′ N and 83°56′ W in the west Caribbean Sea some 177 km (110 mi) NNE of Patuca Point, were officially ceded by the United States to Honduras on 20 November 1971. For administrative purposes, they are included under the Department of Islas de la Bahía, whose capital is Roatán on Roatán Island. The Swan Islands had been effectively

held by the United States, which asserted a claim in 1863 to exploit guano, and had housed a weather station and an aviation post.

The capital city of Honduras, Tegucigalpa, is located in the south central part of the country.

## <sup>2</sup> TOPOGRAPHY

Honduras is mountainous, with the exception of the northern Ulúa and Aguán river valleys on the Caribbean Sea and the southern coastal area. There are four main topographic regions: the eastern lowlands and lower mountain slopes, with 20% of the land area and no more than 5% of the population; the northern coastal plains and mountain slopes, with 13% of the land and about 20% of the population; the central highlands, with 65% of the area and 70% of the population; and the Pacific lowlands and their adjacent lower mountain slopes, with 2% of the area and 5% of the population.

The width of the Caribbean coastal plain varies from practically no shore to about 120 km (75 mi), and the coastal plain of the Gulf of Fonseca is generally narrow. The highest elevations are in the northwest (almost 3,000 m/10,000 ft) and in the south (over 2,400 m/8,000 ft). Many intermontane valleys, at elevations of 910 to 1,370 m (3,000 to 4,500 ft), are settled. The old capital city, Comayagua, lies in a deep rift that cuts the country from north to south. Tegucigalpa, the modern capital, is situated in the southern highlands at about 910 m (3,000 ft). There are two large rivers in the north, the Patuca and the Ulúa. Other important features include the Choluteca, Nacaome, and Goascorán rivers in the south, Lake Yojoa in the west, and Caratasca Lagoon in the northeast.

### **3 CLIMATE**

The northern Caribbean area and the southern coastal plain have a wet, tropical climate, but the interior is drier and cooler. Temperature varies with altitude. The coastal lowlands average 31°C (88°F); from 300 to 760 m (1,000 to 2,500 ft) above sea level the average is 29°C (84°F); and above 760 m (2,500 ft) the average temperature is 23°C (73°F). There are two seasons: a rainy period, from May through October, and a dry season, from November through April. Average annual rainfall varies from over 240 cm (95 in) along the northern coast to about 84 cm (33 in) around Tegucigalpa in the south. The northwest coast is vulnerable to hurricanes, of which the most destructive, Hurricane Fifi in September 1974, claimed some 12,000 lives, caused \$200 million in property damage, and devastated the banana plantations.

### **4 FLORA AND FAUNA**

Honduras has a rich and varied flora and fauna. Tropical trees, ferns, moss, and orchids abound, especially in the rain forest areas. Mammal life includes the anteater, armadillo, coyote, deer, fox, peccary, pocket gopher, porcupine, puma, tapir, and monkeys in several varieties. Fish and turtles are numerous in both freshwater and marine varieties. Among the reptiles are the bushmaster, coral snake, fer-de-lance, horned viper, rattlesnake, and whip snake, caiman, crocodile, and iguana. Birds include the black robin, hummingbird, macaw, nightingale, thrush, partridge, quail, quetzal, toucanet, wren, and many others. As of 2002, there were at least 173 species of mammals, 232 species of birds, and over 5,600 species of plants throughout the country.

### **5 ENVIRONMENT**

The major environmental problems are soil erosion and loss of soil fertility (in part because of traditional slash-and-burn cultivation) and rapid depletion of forests for lumber, firewood, and land cultivation. From 1990–95, the annual rate of deforestation was at about 2.34%. In 2000, about 48% of the total land area was forested.

Enforcement of antipollution laws has been weak, and Honduras also lacks an integrated economic development and land-use policy. Rivers and streams in Honduras are threatened by pollution from mining chemicals. The nation has 96 cu km of renewable water resources with 91% used in farming activities. About 99% of city dwellers and 82% of people living in rural areas have access to pure drinking water. Air pollution results from a lack of pollution control equipment for industries and automobiles. The Secretariat of Planning, Coordination, and Budget (Secretaría de Planificación, Coordinación, y Presupuesto—SECPLAN), the Ministry of Natural Resources, and several other agencies are vested with environmental responsibilities.

In 2003, 6.4% of the total land area in Honduras was protected. The Río Plátano Biosphere Reserve is a natural UNESCO World Heritage Site and there are six Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 10 types of mammals, 6 species of birds, 10 types of reptiles, 53 species of amphibians, 14 species of fish, 2 species of invertebrates, and 111 species of plants. Endangered or extinct species in Honduras included the tundra peregrine falcon, jaguar,

three species of turtle (green sea, hawksbill, and olive ridley), and three species of crocodile (spectacled caiman, American, and Morelet's). The Caribbean monk seal, the Lago Yojoa palm, and the Swan Island hutia have become extinct.

### **6 POPULATION**

The population of Honduras in 2005 was estimated by the United Nations (UN) at 7,212,000, which placed it at number 96 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.8%, a rate the government viewed as too high. Of particular concern was the high rate of adolescent pregnancy, with 50% of the population under 19 years of age. The projected population for the year 2025 was 10,700,000. The population density was 64 per sq km (167 per sq mi), with the majority of the population living in the western portion of the country.

The UN estimated that 47% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.99%. The capital city, Tegucigalpa, had a population of 1,007,000 in that year. San Pedro Sula, the second-largest city, had an estimated population of 486,000; La Ceiba, 250,000; and El Progreso, 115,000.

Honduras has the highest number of HIV/AIDS cases in Central America, with the rate of infection increasing rapidly among women and those under age 19. In 2003 Honduras began receiving monies from the Global Fund for Aids, Tuberculosis, and Malaria to address its HIV/AIDS situation.

### **7 MIGRATION**

Before 1969 there was a steady flow of immigrants from El Salvador. The steps taken by the Honduran government in 1969 to curb this influx were a contributing cause of the war with El Salvador during the same year. When the Sandinistas took over in Nicaragua in 1979, former National Guard members began to arrive in Honduras, and by 1983 there were 5,000–10,000 of them along the border. In addition, at least 25,000 Miskito Amerindians from Nicaragua and about 21,000 Salvadorans had fled to Honduras by the end of 1986. Many of them later returned. By the end of 1992 about 100,000 citizens of Central American nations had taken refuge in Honduras.

As a result of the Central American refugee problem of the 1990s, Honduras has adopted a restrictive policy toward refugees. There were very few refugees among the 44,000 migrants living in Honduras in 2000. In 2004 worker remittances were \$1,134 million. In 2005, the net migration rate was estimated as -1.95 migrants per 1,000 population. The government viewed the migration levels as satisfactory.

### **8 ETHNIC GROUPS**

The vast majority (90%) of the Honduran people are mestizo, a mixture of European and Amerindian. About 7% of the population is purely Amerindian, the largest proportion being in the Copán area near the Guatemalan border. Africans, about 2% of

LOCATION: 13° to 16° N; 83°10' to 89°20' W. BOUNDARY LENGTHS: Caribbean coastline, 591 kilometers (367 miles); Nicaragua, 922 kilometers (573 miles); Gulf of Fonseca (Gulfo de Fonseca) coastline, 74 kilometers (46 miles); El Salvador, 335 kilometers (208 miles); Guatemala, 248 kilometers (154 miles). TERRITORIAL SEA LIMIT: 12 miles.

the population, live mostly along the north coast. About 1% of the population is European, chiefly of Spanish origin.

## <sup>9</sup> LANGUAGES

The official language is Spanish. However, English is used widely, especially in northern Honduras. The more important Amerindian languages include Miskito, Zambo, Paya, and Xicaque.

## <sup>10</sup> RELIGIONS

The Roman Catholic Church reports a membership that comprises slightly more than 80% of the country's total population. However, according to estimates based on a 2002 poll of citizens 18 or older, only 63% of the population identify themselves as Roman Catholic. Approximately 23% report themselves to be evangelical Christians, and 14% designate themselves as belonging to other religious groups. The remainder were either "others" or provided no answer. The primary religious groups include Roman Catholics, Jews, Greek Orthodox, Episcopalians, Lutherans, Jehovah's Witnesses, Mennonites, the Church of Jesus Christ of Latter-Day Saints (Mormons), the Union Church, and about 300 evangelical Protestant churches (including the Abundant Life, Living Love,

and the Grand Commission church). There are small numbers of Muslims and Jews.

Religious freedom is guaranteed by the constitution of 1982. Though there is no state religion, many consult with the Roman Catholic Church and some Catholic leaders have been appointed to semiofficial commissions on key political and social issues. Certain Christian holidays are celebrated as public holidays.

## <sup>11</sup> TRANSPORTATION

In 2002 there were 13,603 km (8,461 mi) of highways, about 2,775 km (1,726 mi) of which were paved. Of the 112,300 registered vehicles in 2003, only 25,000 were passenger cars, while commercial vehicles totaled 87,300. The Pan American Highway virtually bypasses Honduras, entering from El Salvador and running to the eastern Nicaraguan border. The 362-km (225-mi) Inter-Ocean Highway is the only surface connection between the Pacific and the Caribbean that includes in its path both Tegucigalpa and San Pedro Sula. In 1971, a paved highway was opened between Tegucigalpa and San Pedro Sula and west to the Guatemalan border. Tegucigalpa is served by secondary roads to the north and east, while San Pedro Sula is connected both to the important Caribbean ports of Puerto Cortés, Tela, and Trujillo and to the western

Mayan shrine site of Copán. Road improvements near the Nicaraguan border were undertaken with US military aid beginning in 1983.

Rail service exists only in the north, connecting the industrial and banana-growing northeastern coastal zone with the principal ports and cities. As of 2004, National Railway of Honduras, owned and operated by the government, maintains all 699 km (435 mi) of narrow gauge track.

Four principal ports—Puerto Cortés, Tela, La Ceiba, and Puerto Castilla—serve the country on the Caribbean side. Another Caribbean port, Roatán, is offshore, in the Bay Islands, and Puerto de Henecán, on the Pacific coast, opened in 1979, replacing Amapala as a port facility, although the latter retains a naval base. La Ceiba and Tela are primarily banana-trade ports. Puerto Castilla (completed in 1980) serves the Olancho forestry project; and Puerto Cortés and Puerto de Henecán handle general traffic. River traffic is negligible, with only 465 km (289 mi) accessible and only to small craft, as of 2004. In 2005, the Honduran merchant fleet comprised 137 vessels of 1,000 GRT or more, totaling 598,600 GRT.

Air service is important in the transportation of passengers and cargo. In 2004 there were an estimated 115 airports in Honduras, 11 of which had paved runways as of 2005. The two principal airports are Ramon Villeda, at San Pedro Sula, and Toncontín, about 6.4 km (4 mi) from Tegucigalpa. Toncontín is served by Transportes Aéreos Nacionales de Honduras/Servicio Aéreo de Honduras (TAN/SAHSA), Líneas Aéreas Costarricenses (LACSA), Challenge, and TACA airlines and the domestic carrier Lineas Aéreas Nacionales (LANSA). TAN/SAHSA flies to the United States, Mexico, and other Central American countries and also provides domestic passenger service. In 2001, San Pedro Sula International Airport serviced 510,000 passengers on scheduled domestic and international flights.

## 12 HISTORY

Before the Spaniards entered the land now called Honduras, the region was inhabited by the war-like Lencas and Jicaques, Mexican Amerindian traders, and Paya hunters and fishermen. The Mayan ceremonial center at Copán in western Honduras flourished about the 8th century AD but was in ruins when Columbus reached the mainland on his fourth voyage in 1502. He named the region Honduras, meaning “depths.”

Colonization began in 1524 under Gil González de Ávila. In 1536, Pedro de Alvarado, who came from Guatemala at the bidding of Hernán Cortés in Mexico, founded San Pedro Sula, and another faction founded Comayagua in 1537. After the treacherous murder by the Spaniards of an Amerindian chieftain named Lempira in 1539, his followers were subjugated. In that year, Honduras was made part of the captaincy-general of Guatemala, and for most of the period until 1821, it was divided into two provinces, Comayagua and Tegucigalpa. Some silver was produced in the mines of Tegucigalpa, but the area was otherwise ignored by the Spanish empire.

Honduras joined other provinces of Central America in declaring independence from Spain in 1821. It came under the Mexican empire of Agustín de Iturbide in 1822–23. Honduras was a member of the United Provinces of Central America from 1824 to 1838. During that time, a liberal Honduran, Francisco Morazán,

became president and struggled unsuccessfully to hold the federation together. He was exiled in 1840 and assassinated in 1842.

After Honduras declared itself independent on 26 October 1838, conservatives and liberals fought for political control. From 1840 to 1876, conservative leaders held power either as presidents or as army leaders. The second half of the 19th century brought the development, by US companies, of banana growing in northern Honduras. During the administration of liberal president Marco Aurelio Soto (1876–83), there was a “golden age” in Honduran letters and education.

US corporate interests, especially the United Fruit Co. (now Chiquita Brands International Inc.) and military dictators, dominated Honduran economic life during the first half of the 20th century. Honduran politics was dominated by the conservative Gen. Tiburcio Carías Andino (1932–48). In 1948, his handpicked successor, Juan Manuel Gálvez, took office. Gálvez proved to be more than a mere puppet, but was conservative nonetheless. When the election of 1954 produced no presidential candidate with a majority vote, he transferred the presidency to the vice president, Julio Lozano Díaz, who governed for almost two years. After an abortive attempt to have himself elected president, Díaz was deposed in 1956 by high army officers, who set up a junta. Democratic elections were held in 1957, and José Ramón Villeda Morales of the Liberal Party was elected president.

In 1963, just before completing the final months of his six-year term, Villeda was turned out of office by a coup. The liberal government was succeeded by a conservative coalition of military, Nationalist Party, and Liberal Party leaders under an air force officer, Col. Oswaldo López Arellano. This government was legalized almost two years later by an elected constituent assembly, which adopted a new constitution and proclaimed López president in June 1965.

During López's second term, a bitter and destructive four-day war broke out in July 1969 between Honduras and El Salvador. Although the immediate cause of the war was animosity arising from a World Cup elimination-round soccer match between the two countries, the underlying causes were a long-standing border dispute and the long-term migration of some 300,000 Salvadorans in search of land, which the Honduran government made it illegal for Salvadoran immigrants to own. Salvadoran troops won the ground war, but Honduran planes controlled the air. Out of this stalemate and with the help of the OAS, a compromise cease-fire was arranged. In June 1970, the two nations accepted a seven-point peace plan, creating a “no-man's-land” demilitarized zone along their common frontier. In the fall of 1973, Honduras and El Salvador began bilateral talks to resolve their differences. Progress was slow, and it was not until October 1980 that Honduras and El Salvador signed a treaty settling the dispute.

In the 1970s, López and the military continued to dominate Honduran politics. A civilian, Ramón Ernesto Cruz Uclés, was elected president in 1971, but lasted only briefly. By 1972, General López was back in power. General López assumed the title of chief of state, and suspended the National Congress and all political party activities. It was later discovered that in 1974 officials in the López administration had accepted a \$1.25-million bribe from United Brands (formerly United Fruit and now Chiquita) in exchange for a 50% reduction in the banana tax. A Honduran investigative commission insisted on examining López's Swiss bank

account, and the scandal came to be known as “Bananagate” in the United States. Finally, in April 1974, López was overthrown by a group of lieutenant colonels.

This military group was something of a reformist group, seeking social reforms and the removal of the senior officer corps. Political activity continued to be banned following the coup of 1975. Meanwhile, a significant grassroots movement, the National Front of United Peasants, had come to the fore and was pressuring the successive military governments to enact a program of large-scale land redistribution.

There followed two more military governments led by Col. Juan Alberto Melgar Castro (1975–78) and Gen. Policarpo Paz García (1978–83). This period saw strong economic growth and the building of a modern infrastructure for Honduras. At the same time, there was a gradual movement toward the democratization of the system.

Elections to a constituent assembly took place in April 1980, followed by general elections in November 1981. Under a new constitution in 1982, Roberto Suazo Córdova of the Liberal Party became president. The armed forces retained broad powers, including veto power over cabinet appointments and responsibility for national security. The military continued to grow in response to domestic instability and the fighting in neighboring Nicaragua and El Salvador. By 1983, several thousand anti-Sandinista guerrillas (popularly known as “contras”) in Honduras were working for the overthrow of the Sandinista government, while the Honduran army, backed by the United States, was helping Salvadoran government forces in their fight against leftist guerrillas.

This stability became apparent in November 1985, when Hondurans elected José Simón Azcona Hoyo to the presidency in the first peaceful transfer of power between elected executives in half a century. Azcona was elected with only 27% of the vote, due to a peculiarity of Honduran electoral laws. Azcona attempted to distance himself from the United States in foreign policy and was critical of US contra policy. He signed the Central American peace plan outlined by President Oscar Arias Sánchez of Costa Rica; however, he did not move to close down contra bases as promised. The Suazo government worked closely with the United States on matters of domestic and foreign policy. US military presence in Honduras grew rapidly. Several joint military maneuvers took place during 1983–87, and the US CIA used Honduras during that time as a base for covert activities against the Sandinista regime. In exchange, the United States sent large amounts of economic aid to Honduras. Suazo also worked closely with the Honduran military, allowing it to pursue its anticommunist agenda freely. This arrangement led to an unprecedented political stabilization in Honduras.

In 1989, Rafael Leonardo Callejas of the National (conservative) Party was elected. With the Nicaraguan issue fading after the Sandinistas’ electoral loss, Callejas focused on domestic issues, applying a dose of both conservative economics and IMF austerity measures to the Honduran economy. Callejas moved to reduce the deficit and allow for a set of market adjustments, which in the short term produced a good deal of dislocation but led to higher rates of growth thereafter. Most significantly, Callejas maintained good relations with the military. In an unprecedented show of restraint, the military sat on the sidelines as voters went to the polls in November 1993.

The voters themselves showed a good deal of resentment toward the Callejas reforms. The Liberal Party returned to power in the person of Carlos Roberto Reina. While it was unlikely that its economic problems would be solved quickly, Honduras nevertheless had achieved a level of political stability that few could have anticipated in decades past. Reina, known for his support of human rights and clean government, called for a “moral revolution” to combat crime, poverty, and widespread corruption in both the public and private sectors. In late 1994, corruption charges were filed against former president Callejas and other top government officials. Reina also took steps to further reduce the influence of Honduras’s powerful military, most notably the abolition of the draft, including the notorious press-gang conscription by which young men were seized off the streets and forced into military service. The liberal administration also dismantled the military-controlled Public Security Forces (FUSEP), replacing them with a new civilian force.

Reina proved less successful in dealing with the economic problems of his nation, long considered the poorest in Central America. An already difficult situation was exacerbated by the 1994 drought that slashed production of hydroelectric power, creating an energy crisis that drove up food and fuel prices and caused chronic power outages. The struggle to improve economic conditions continued through 1996, with the government caught between an international financial community demanding tough structural reforms and a beleaguered population unwilling to tolerate the sacrifices entailed by such programs. In November of 1997, Carlos Roberto Flores of the Liberal Party won the presidential elections with 52.8%. His party also won 62 out of 128 seats in the unicameral National Assembly. But the fury of Hurricane Mitch in October 1998 destroyed Honduras’s economy and placed an even heavier burden on President Flores’ challenges. The subsequent economic crisis of 1999 further worsened the economic situation.

Discontent with the government helped opposition candidate Ricardo Maduro win the 2001 presidential election with 52.2% of the vote. His National Party also came ahead in the legislative election with 46% of the vote, but it only gained 61 seats in the 128-seat assembly, forcing Maduro to seek the support of the smaller centrist parties to pass his legislative initiatives. The economy has continued to perform poorly. More than 50% of Hondurans live in poverty. In March 2005, the Honduran Congress ratified the Central American Free Trade Agreement (CAFTA) with the United States.

Crime and violence are significant problems in Honduras. Youth gangs known as *maras* are thought to have tens of thousands of members, and use threats and violence to control poorer areas in the main urban centers. In December 2004, gang members massacred 28 bus passengers in the northern city of Chamelecon. At the same time, police officers have been implicated in high-profile crimes; in January 2001, the Honduran Committee for the Defense of Human Rights reported that more than 1,000 street children had been murdered in 2000 by death squads backed by the police. Also, former military and security personnel, along with right wing paramilitary groups, are thought to be behind the murder of members of indigenous minority rights groups.

Presidential and legislative elections were held on 27 November 2005. Although National Party presidential candidate Porfirio Lobo Sosa—who came in second place behind Liberal Party can-

didate José Manuel Zelaya Rosales—contested the results of the election, the National Party after 10 days conceded the election to Zelaya. Zelaya took 49.9% of the vote to Lobo's 46.2%. In the elections for the National Congress, the Liberal Party won 62 of 128 seats, with the National Party winning 55. The Democratic Unification Party won 5 seats, followed by the Christian Democratic Party with 4 and the Innovation and Unity Party-Social-Democracy with 2.

### 13 GOVERNMENT

The constitution of 1965, suspended following the 1972 coup, was superseded by a governing document adopted in November 1982 (amended in 1995). It defines Honduras as a democratic republic headed by a president who must be a native-born civilian. The president is elected by direct popular vote for a four-year term. The executive branch also includes a cabinet of 14 ministers. A constitutional change approved by the legislature in November 1982 deprived the president of the title of commander-in-chief of the armed forces, transferring that responsibility to the army chief of staff.

The 1982 constitution provides for the popular election of deputies to the unicameral National Congress, consisting of 128 deputies. The deputies, who are directly elected for four-year terms, must be natives or residents of the constituencies they represent. Voting is compulsory for all men and women 18 years of age and older.

### 14 POLITICAL PARTIES

The two major parties in Honduras are the Liberal Party (Partido Liberal—PL) and the National Party (Partido Nacional—PN). Both descend from the old Liberal and Conservative Parties from the 19th century. Although generally the National Party remains more conservative in nature, the two parties are very close ideologically.

The National Party was in power from 1932 to 1954 under Carías and Gálvez. In 1965, a PN-backed constituent assembly promulgated a new constitution, designated its membership as the National Congress for a six-year term, and proclaimed Gen. Oswaldo López Arellano as president. In the 1971 elections, the PN candidate, Gen. Ramón Ernesto Cruz, received about 52% of the vote and was elected president. Their most recent success came in 1989 when Rafael Leonardo Callejas became president. In the 1997 elections, its presidential candidate was Alba Gunera, the first woman to seek Honduras's presidency. She gained 42% of the vote. The National Party won 54 seats in the National Assembly in 1997, but it benefited from Ricardo Maduro's victory in 2001 and increased its parliamentary representation to 61 seats.

The Liberals rely on their following in urban areas and among the laboring classes and have had some successes over the last half-century. In 1957, José Ramón Villeda Morales was elected to the presidency, and governed until 1963, when he was removed by a coup. The next successes came in 1981 with the election of Suazo, and then in 1985 with the election of José Simón Azcona Hoyo, in 1993 with Carlos Roberto Reina and in 1997 with Carlos Flores, who became president with 52% of the vote. The Liberal Party also won 67 out of the 128 seats in the National Assembly, but its support fell in 2001 when it captured only 40.8% of the vote and clinched 55 seats.

Two minor parties occupy mildly leftist positions: the Christian Democratic Party, under Marco Orlandi, and the National Innovation and Unity Party, led by Olban Valladares. Each of those parties won three and four seats respectively in the National Assembly in 2001. In 1997, a Social Democratic party made its debut. The Partido de Innovación y Unidad-Social Democracia (Party for Innovation and Unity-Social Democracy) won five seats in the National Assembly in 1997 and four seats in 2001.

In the December 1996 primaries preceding the November 1997 presidential elections, the Liberal Party nominated Carlos Roberto Flores. Nora Gúnera de Melgar won the National Party nomination. Flores went on to win the election and his party won 62 of 128 seats in the National Assembly. In 2001, Ricardo Maduro became the National Party candidate and won the presidential election. His party captured 61 of the 128 seats in the Assembly.

In 2005, Liberal Party presidential candidate José Manuel Zelaya Rosales beat National Party candidate Porfirio Lobo Sosa. Zelaya took 49.9% of the vote to Lobo's 46.2%. In the elections for the National Congress, the Liberal Party won 62 of 128 seats, with the National Party winning 55. The Democratic Unification Party won 5 seats, followed by the Christian Democratic Party with 4 and the Innovation and Unity Party-Social-Democracy with 2.

### 15 LOCAL GOVERNMENT

Honduras is divided into 18 departments, each with a governor popularly elected for a two-year term. Departments are divided into municipalities (298 in 2005) governed by popularly elected councils. Localities with populations between 500 and 1,000 have a mayor, a legal representative, and a council member. A council member is added for each additional 1,000 residents, but the total is not to exceed seven. A special law governs the Central District of Tegucigalpa and Comayagüela.

Under the jurisdiction of the local government, municipal land is granted or lent to peasants in the district in sections known as *ejidos*. The *ejido* system is designed to aid landless peasants and has become an important function of local administration.

### 16 JUDICIAL SYSTEM

Judicial power is exercised by the nine-member Supreme Court (with seven substitutes) and courts of appeal, as well as by courts of first instance, justices of the peace, and courts of limited jurisdiction. The Supreme Court appoints the judges of the courts of appeal and the courts of first instance, who, in turn, appoint local justices of the peace. The justices of the Supreme Court are elected by the National Assembly and serve for seven-year terms. The Supreme Court has the power to declare laws unconstitutional.

There is a military court of first instance from which appeals can be taken to the civilian judicial system. In practice, the civilian courts are not independent. Because of underfunding and corruption, the formal resolution of legal disputes in courts is often the product of influence and political pressure.

The constitution provides for an independent judiciary and the right to a fair trial. A public defender program provides services to indigent defendants.

Honduras accepts the jurisdiction of the International Court of Justice with reservations.

## 17 ARMED FORCES

The Honduran military as of 2005 had an active force of 12,000 personnel with 60,000 registered as reservists. As of that year, there were 8,300 personnel in the Army, 2,300 in the Air Force, and 1,400 in the Navy, which included 830 Marines. The Army's major armament included 12 light tanks, 57 reconnaissance vehicles, and over 118 artillery pieces. Naval equipment consisted of 31 patrol/coastal vessels and one amphibious landing craft. The Air Force had 18 combat capable aircraft made up of 8 fighters and 10 operating fighter ground attack aircraft. Paramilitary forces consisted of an 8,000 member Public Security Force. The defense budget in 2005 was \$52.4 million.

## 18 INTERNATIONAL COOPERATION

Honduras is a charter member of the United Nations, having joined on 17 December 1945; it is part of ECLAC and serves in several specialized agencies, such as FAO, IFC, UNESCO, UNIDO, ILO, IMF, WHO, and the World Bank. Honduras served on the UN Security Council from 1995–96. It is one of five members of the Central American Bank for Economic Integration (BCIE) and the Central American Common Market (CACM). In 2004, Honduras, the United States, Costa Rica, El Salvador, Guatemala, Nicaragua, and the Dominican Republic signed the US–Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force.

Honduras is also part of G-77, the Latin American Economic System (LAES), the OAS, the Association of Caribbean States (ACS), and the Río Group. Honduras has observer status with the Latin American Integration Association (LAIA) and belongs to the Central American Parliament (PARLACEN), the Central American Integration System (SICA), and the Central American Security Commission (CASC). The country is a signatory of the 1947 Río Treaty, an inter-American security agreement.

Honduras is a member of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and is a signatory to the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, Honduras is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification. Honduras is also part of the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

Honduras is one of the poorest and least developed countries in Latin America. The economy has been based mostly on agriculture, and over a third of the labor force in 2001 were still involved in this sector. However, agriculture's contribution to the overall GDP fell from 27% in 1998 to 18% in 2000 mainly due to the damage done to export crops by Hurricane Mitch in October 1998. About 16% of the land is arable, located mostly along the coastal plains. Coffee and bananas account for 65% of total Honduran export revenues. The vast majority of banana holdings are controlled by two US companies, United Brands and Standard Fruit, and most other profitable agricultural enterprises are owned by a small

number of private citizens. With its economy enormously dependent on banana production, the country is vulnerable to weather and world market price variations. Honduras also has extensive forest, marine, and mineral resources, although widespread slash-and-burn agricultural methods continue to destroy forests. Hondurans, however, are becoming more concerned about protecting their environmental patrimony, in part because of the benefits of ecotourism.

In 1995, the Honduran economy rebounded from the severe recession experienced in 1994. Real GDP growth in 1995 was 3.6%. It was led by a solid expansion in agricultural production spurred by soaring world coffee prices, excellent basic grains harvests, and a resurrected banana industry as well as a growing maquila (Free Trade Zone of assembly plants) sector that employed 65,000 people by year's end. Honduras also received abundant rainfall which replenished the nation's dams and enabled the country to generate adequate hydroelectric energy, thus avoiding the drought-related power cuts which adversely affected economic performance in 1994. In 1996, Honduran GDP grew about 3.5%. However, inflation for 1996 reached 24.9%, well above the government's target of 16%. End of period inflation declined to 12.8% in 1997.

The economy, however, has still not recovered from the devastation left by Hurricane Mitch in late 1998, a Category Five Hurricane, rated the worst in 200 years, with winds reaching 200-mph and dumping unprecedented amounts of rain in their wake. The dead were officially counted at almost 6,000, but the total number buried in the mud slides will likely never be known. Hurricane Mitch destroyed 20–80% of the 1998 coffee and banana crops, and caused an estimated \$3 billion in damages, equal to half of the annual GDP. End of period inflation rose to 15.9%. In 1999 the Paris Club creditor countries extended a three-year moratorium on debt repayments by Honduras and wrote-off about two-thirds of its \$1.7 billion external debt contingent on the implementation of austerity, liberalization, and privatization program under the IMF's Poverty Reduction and Growth Facility (PRGF). In February 1999, a man-made disaster, a fire at the El Cajón hydroelectric plant, shut down 60% of the country's electricity until May. In all, GDP in 1999 fell 1.9% as the fall in production and export revenues was offset by increases in construction under the National Reconstruction and Transformation Plan presented by the government in May. Inflation was held to 10.9%, but the country's trade deficit, which had amounted to 10.7% of GDP in 1997, more than doubled as a proportion of GDP, to 23.8% in 1999.

In 2000, GDP growth rose to 5% as the reconstruction program continued, although the trade deficit remained high—21.1% of GDP. Inflation dipped slightly to 10.1% and Honduras qualified for debt forgiveness and restructuring under the Highly Indebted Poor Countries (HIPC) initiative which included adhering to a program of civil service reform that meant large layoffs in the public sector. Honduras joined Guatemala and El Salvador in a free trade agreement with Mexico, but ended up placing trade sanctions on Nicaragua over border and fishing rights disputes. In 2001, though reconstruction continued, Honduras was hit by a serious drought that helped reduce GDP growth to 3.5%. The trade deficit increased slightly as a percent of the GDP to 23% as exports were further depressed by a declining external demand. Inflation fell to 10%. In 2002, GDP grew about 1.4% and inflation fell to 7.7%, although the IMF withheld further disbursement of

debt relief under the HIPC because the targets under the PRGF program had not been sufficiently met. The trade deficit remained inordinately high, amounting to about 25% of GDP.

The economy expanded by 5.0% in 2004, up from 3.0% in 2003; in 2005, the GDP growth rate was estimated at 4.0%, while the GDP per capita, at purchasing power parity, reached \$2,900. The inflation rate was fairly stable and at 8.1% in 2004 it did not pose a major problem to the economy. The unemployment rate however, was, at 28%, very high and, together with the unequal distribution of income, represented one of the main concerns of the government. Honduras remains one of the poorest countries in the Western hemisphere and is dependent on the economy of the United States, its largest trading partner.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Honduras's gross domestic product (GDP) was estimated at \$20.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,900. The annual growth rate of GDP was estimated at 4%. The average inflation rate in 2005 was 9.2%. It was estimated that agriculture accounted for 12.7% of GDP, industry 31.2%, and services 56.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$867 million or about \$124 per capita and accounted for approximately 12.6% of GDP. Foreign aid receipts amounted to \$389 million or about \$56 per capita and accounted for approximately 5.7% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Honduras totaled \$5.13 billion or about \$736 per capita based on a GDP of \$6.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.1%. It was estimated that in 1993 about 53% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, the Honduran workforce totaled an estimated 2.54 million (excluding the armed forces). In 2002, agriculture accounted for 37.4% of the labor force, with services at 41.2%, and industry at 21.4%. The unemployment rate in 2005 was estimated at 28%.

Honduras did not have effective labor legislation until 1954. It joined the ILO in 1955 and subsequently adopted several labor codes, most notably that of 1959, which established the Ministry of Labor. The code also provided for union organization, collective bargaining, arbitration, social security, and fair labor standards. The principal labor organizations in 2002 were the Confederation of Honduran Workers (CTH), the General Workers' Central (CGT), and the Unitary Confederation of Honduran Workers (CUTH). Although retribution against union activity is prohibited by law, it frequently occurs. Only 14% of the workforce was unionized in 2002.

The law sets the maximum at an 8-hour day, a 44-hour week, and a 24-hour rest period each week. Because of high unemploy-

ment and a lack of government enforcement, however, these regulations are often not enforced. The labor code disallows children under 16 from working; however, in actuality, economic necessity and a lack of government enforcement mean that many children do work, especially on small farms in rural areas and as street vendors in cities. As of 2002, the daily minimum wage ranged from \$2.25 to \$4.08.

## 2<sup>2</sup> AGRICULTURE

Over 16% of the national territory is agriculturally productive; because of the uneconomical system of land use, much arable land has not been exploited. Agriculture is the primary sector of the economy, accounting for about 13% of GDP and 32% of employment in 2003. Farming methods are inefficient, and crop yields and qualities are low. The principal export crops are bananas and coffee; the major subsistence crops are corn, sorghum, beans, and rice. In 2002–04, crop production was 11% higher than during 1999–2001. The trade surplus in agricultural products totaled \$173.7 million in 2004. Crop production for 2004 included: sugarcane, 5,363,000 tons; bananas, 965,000 tons; sorghum, 52,500 tons; dry beans, 69,900 tons; rice, 29,100 tons.

Since 1972, agrarian reform has been an announced priority of the national government. In January 1975, plans were made for the distribution of 600,000 hectares (1,483,000 acres) of land among 100,000 families over a five-year period. The program was suspended in 1979 because of lack of funds and pressure from landowners; by that time, only about one-third of the goal had been met. The reform program was revived in the early 1980s, and in 1982, lands totaling 27,960 hectares (69,090 acres) were distributed to 4,000 peasant families. By 1986, however, land reform was at a virtual standstill; peasant groups, demanding immediate land distribution, staged "land invasions" and seized the offices of the National Agrarian Institute in San Pedro Sula. The agricultural modernization law eliminated subsidized credit to small farmers, while high commercial interest rates squeezed small farmers from the credit market.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Honduran consumption of milk and meat is traditionally low. However, pastures account for 13.8% of the total land area. Poor transportation facilities are a barrier to the development of stock raising and dairying, two potentially profitable economic activities. Honduras has nearly 100,000 livestock operations, mostly small or medium-sized producers. About 50% of all cattle ranches are 50 hectares (124 acres) or smaller, and 95% of all ranches have less than 100 head. In 2005, the cattle population was estimated at 2,500,000 head; hogs, 490,000; horses and mules, 250,600; and chickens, 18,700,000. That year, 1,761,950 tons of raw milk and 40,900 tons of eggs were produced. During 2002–04, livestock and poultry production had increased 6% since 1999–2001.

## 2<sup>4</sup> FISHING

There is commercial fishing in Puerto Cortés, and other areas are served by local fishermen. A small local company operates a cannery for the domestic market on the Gulf of Fonseca. There is a commercial fishing concern on the island of Guanaja, and a large refrigeration-factory ship is engaged in freezing shrimp and lobster near Caratasca. In 2003, the total catch was 30,835 tons.

Shrimp accounted for about 65% of the total catch, taken mostly from southern shrimp farms. Exports of fish products amounted to \$46.3 million in 2003.

## 25 FORESTRY

About 48% of Honduras is covered by forests, including stands of longleaf pine and such valuable hardwoods as cedar, ebony, mahogany, and walnut. Total roundwood production in 2004 amounted to 9.5 million cu m (335 million cu ft), and forest products exports were valued at \$43.1 million. The National Corporation for Forestry Development (Corporación Hondureña de Desarrollo Forestal), established in 1974, is charged with the overall preservation, exploitation, and exportation of Honduran forest resources. The privatization of government-owned woodlands is expected to intensify the use of forestry resources. A restriction on the export of raw wood also is causing growth in the woodworking industry for semifinished wood products.

## 26 MINING

The mineral resources of Honduras consisted of cadmium, cement, gold, gypsum, iron oxide pigments, lead, limestone, marble, pozzolan, rhyolite, salt, silver, and zinc, a leading export commodity. However, inadequate transportation continued to hamper full development of the country's mineral resources. In the mid-1990s, the El Mochito Mine, in Santa Bárbara, was the country's only large operating base metal mine. By the end of 2002, the mine's proven and probable reserves stood at 3.2 million tons at an average grade of 6.8% zinc, 1.9% lead, and 78 grams per ton of silver. Estimated and indicated reserves were placed at 4.3 million tons, with inferred reserves at 2.4 million tons. Lead and zinc concentrates from the mine contributed less than 2% to GDP, which grew 5% in 2001, with the completion of reconstruction from Hurricane Mitch. Under 0.3% of the Honduran labor force was employed in the mining sector.

In 2003, production of mined zinc was estimated at 46,500 metric tons, up from 46,339 metric tons in 2002. Lead mine output in 2003 was estimated at 8,000 metric tons. Silver and gold production in 2003 totaled 2,040 kg and 3,029 kg, respectively in 2003. Limestone output that same year was estimated at 1.23 million metric tons, unchanged from 2001 and 2002.

## 27 ENERGY AND POWER

Honduras has no known proven reserves of oil, natural gas, coal or refining capacity. Therefore, it must import all the refined petroleum products natural gas or coal that it consumes. However, it is nearly self-sufficient for its own electricity needs. In 2002, imports and consumption of refined oil products averaged 38,710 barrels per day and 38,340 barrels per day, respectively. Coal was also imported that year, amounting to 186,000 short tons of hard coal, of which consumption came to 155,000 short tons. There were no imports or consumption of natural gas in 2002.

Honduras's electric power sector is heavily reliant upon fossil fueled plants and hydropower. However, the country is facing increasing demand for electric power and the possibility of power shortages due to underperforming hydroelectric facilities. In 1998, for example, a drought induced by El Niño forced the government to declare an energy emergency. Since then, the government has sought to diversify its sources of electric power via the

construction of thermal power plants. In 2002, electric power generating capacity was 0.923 million kW, with hydropower accounting for 0.435 million kW and conventional thermal plants 0.488 million kW. In the same year, consumption of electricity totaled 3.371 billion kWh, while output came to 3.195 billion kWh, with hydropower accounting for 1.594 billion kWh, and 1.601 billion kWh from conventional thermal plants.

## 28 INDUSTRY

Industry as a whole supplied 32% of Honduras's GDP in 2000 and employed 21% of the work force. Manufacturing has traditionally been limited to small-scale light industry supplying domestic requirements.

Assembly plant operations developed in the 1970s, especially after a free-trade zone was established in Puerto Cortes in 1975. San Pedro Sula is the center for matches, cigars, cigarettes, cement, meatpacking, sugar, beer and soft drinks, fats and oils, processed foods, shoes, and candles. Tegucigalpa has plants for the manufacture of plastics, furniture, candles, cotton textiles, and leather. The country has also established a well-known apparel assembly industry in the maquiladora sector, which employed over 125,000 workers in 2001. As of 2002, Honduras was the second-largest exporter of maquiladora items to the US market.

Production in the manufacturing industry, mainly of nondurable goods, has realized significant growth in the late 1990s and into the 2000s. The largest growth has been seen in the construction sector, which rebounded after the destruction wrought by Hurricane Mitch in 1998. The electric, gas, and water sectors gained almost 9%. However, in 1999 a fire temporarily closed the Cajon hydroelectric plant that had supplied 40% of the country's electricity. The electronic distribution system was privatized in 2000.

The industrial production growth rate in 2003 was 7.7%, higher than the overall GDP growth rate, and an indicator that industry was an economic growth engine. In 2005, industry accounted for 31.2% of the GDP and it employed around 21% of the labor force. Services were by far the largest sector, with a 56.1% share of the economy, while agriculture was the smallest one, with a 12.7% share.

## 29 SCIENCE AND TECHNOLOGY

The Honduran Academy (founded in 1949), the Honduran Coffee Institute, and the National Agriculture Institute are all located in Tegucigalpa. The José Cecilio del Valle University (founded in 1978) has engineering and computer science departments, and the National Autonomous University of Honduras (founded in 1847) has faculties of medicine, pharmacy, dentistry, and engineering. The Pan-American Agricultural School (founded in 1942) has students from 20 Latin American countries. The National Museum in Tegucigalpa has natural history exhibits. In 1987–97, science and engineering students accounted for 24% of college and university enrollments.

In 2000, there were 74 researchers and 261 technicians per million people who were actively engaged in research and development (R&D) activities. For that same year, R&D spending by Honduras totaled \$8.346 million, or 0.05% of GDP. In 2002, high technology exports by Honduras totaled \$5 million, accounting for 2% of that country's manufactured exports.

### 3<sup>0</sup> DOMESTIC TRADE

The principal distribution centers include Puerto Cortes and San Pedro Sula, the latter of which is the commercial and industrial capital on the nation. Tegucigalpa is a leading center of retail trade. In major cities, shops are comparable to those in Central American towns. In the countryside, small markets and stores supply staple needs. As of 2002, there were about 55 foreign franchise companies present in the country. That number is expected to rise rapidly as local business managers become interested in franchise agreements. Foreign investment is encouraged, but in certain industries, the law requires that majority ownership be by Hondurans. The government maintains a certain degree of price management and controls over some items, including coffee, medicine, gasoline, milk, and sugar. A 12% sales tax applies to many goods and services, with the exception of staple food items and certain health and educational expenses.

Business hours are generally from 8 AM to noon and 1:30 or 2 to 5 or 6 PM on weekdays and 8 to 11 AM on Saturdays. Banks in Tegucigalpa are open from 9 AM to 3 PM, Monday through Friday.

### 3<sup>1</sup> FOREIGN TRADE

Honduras remains at the forefront of Central American economic integration efforts. In May 1992, Honduras signed several trade agreements with its neighbors, including Free Trade Agreements with Guatemala and El Salvador, and a Honduran/Salvadoran/Guatemalan Northern Triangle Accord, with the intent of accelerating regional integration. Honduras is also a member of the WTO and the CACM. Free trade agreements were under discussion with Chile, Panama, Mexico, the Andean Community, Taiwan, and the Dominican Republic in 1999.

The most important export from Honduras is coffee (33%), followed by printed matter (13%), and the cultivation of fruits and nuts (10%). Other major exports include shrimp and lobster (3.5%), wood and logging products, including paper (4.1%), and tobacco (2.4%).

In 2005, exports reached \$1.7 billion (FOB—Free on Board), while imports grew to \$4.1 billion (FOB). In 2004, the bulk of exports went to the United States (54.4%), El Salvador (8.1%), Germany (5.9%), and Guatemala (5.4%). Imports included manu-

factures and industrial raw materials, machinery and transport equipment, minerals and fuels, and food and animal products, and mainly came from the United States (37.5%), Guatemala (6.9%), Mexico (5.4%), Costa Rica (4.3%), and El Salvador (4%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Since 1973, trade balances have been negative. Investment income repatriated by foreign companies in Honduras is an endemic burden on the local economy. The Honduran authorities have generally adhered to the policies of fiscal and monetary restraint that were introduced early in 1959, following a period of exceptional strain on the country's international reserves. The fall in reserves resulted from a decline in income from the banana industry and reduced international prices for other major exports. Political instability in the region in the late 1970s to the mid-1980s, together with low commodity prices and high oil prices, had an adverse effect on the balance of payments. The 1990s brought a continuation of the negative trade balance (averaging 7% of GDP), especially after the increase of imports after Hurricane Mitch. However, increases in agricultural and clothes exports are forecast to improve the balance of payments situation. International reserves reached \$700 million in 1999 due, in part, to increased remittances from abroad, and international aid following the hurricane (\$300 million from the United States alone).

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Honduras's exports was \$2 billion while imports totaled \$2.7 billion, resulting in a trade deficit of \$700 million.

The International Monetary Fund (IMF) reported that in 2001 Honduras had exports of goods totaling \$1.93 billion and imports totaling \$2.81 billion. The services credit totaled \$481 million and debit \$653 million.

Exports of goods reached \$1.6 billion in 2004, up from \$1.4 billion in 2003. Imports increased from \$3.1 billion in 2003, to \$3.7

billion in 2004. The resource balance was consequently negative in both years, deteriorating from -\$1.7 billion in 2003, to -\$2.1 billion in 2004. The current account balance followed a similar path, worsening from -\$292 million in 2003, to -\$391 million in 2004. Foreign exchange reserves (including gold) reached \$2.2 billion in 2005, covering more than six months of imports.

### 33 BANKING AND SECURITIES

In 1950, the Central Bank of Honduras (Banco Central de Honduras), the sole bank of issue, was established to centralize national financial operations and to replace foreign currencies then in circulation. In 2002, there were 22 commercial banks in Honduras with an estimated \$3.4 billion in assets. In addition, there are some 150 nonbank financial institutions, many of them associated with the major banks. The Banco Atlántida, the most important commercial bank, accounts for over one-half of the total assets of private banks. US banks play a significant role in the commercial system: the Atlántida is affiliated with Chase Manhattan, and the second-largest commercial bank, the Banco de Honduras, is affiliated with Citibank of New York.

The government-controlled banks, including the National Development Bank, the National Agricultural Development Bank, and the Municipal Bank, provide credit for development projects. The National Development Bank extends agricultural and other credit—mainly to the tobacco, coffee, and livestock industries—and furnishes technical and financial assistance and other services to national economic interests. The Municipal Bank gives assistance at the local level.

In 1990, the Central Bank devalued the lempira and let it float freely until 1994, when a currency auction was created. The year of 1995 saw the Financial Sector Reform Law, which created a modern Banking Commission. Elements of Central Bank reforms in 1997 included the abolition of the government's right to borrow at below-market rates of interest. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$800.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.3 billion.

In 1990, a stock exchange opened in San Pedro Sula to raise short-term bond finance for local businesses.

### 34 INSURANCE

The oldest insurance company in Honduras is Honduras Savings (Ahorro Hondureño), established in 1917. Five other companies deal with life insurance and other types of policies. The number and the role of foreign companies in the insurance sector have decreased because of government incentives to domestic underwriters. In 2002, direct premiums written totaled \$190 million, of which the largest portion, \$142 million, was nonlife premiums. In 2003, the top nonlife insurer was Ahorro, with gross written nonlife premiums of \$19.3 million. In that same year, the country's leading life insurer was Palic, with gross written life insurance premiums of \$16.5 million.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimated that in 2005 Honduras's central government took in revenues of approximately

\$1.6 billion and had expenditures of \$1.9 billion. Revenues minus expenditures totaled approximately -\$245 million. Public debt in 2005 amounted to 70.5% of GDP. Total external debt was \$4.675 billion.

### 36 TAXATION

Personal income in Honduras is taxed according to a progressive schedule with rates running from 10–25%. In 2001, the personal exemption level equaled six times the average income in Honduras whereas the threshold for the 25% bracket was 36 times the average income (down from over 100 times the average in 1997). Social security taxes are also collected. No distinction is made for tax purposes between individuals and businesses. Agricultural activities and industries classified as “basic” receive favorable depreciation rates. The corporate tax rate is 25%, with a 5% solidarity tax added. Profits from branch operations are taxed at 15%. The main indirect tax is a value-added tax (VAT) with a standard rate of 12%. An increased rate of 15% is applied to some items. Excise taxes are imposed mainly on beer and cigarettes, but also on imported matches, soft drinks, imported sugar, and new motor vehicles. New industries are exempted from income and production taxes and import duties for up to 10 years.

District and municipal governments obtain their revenues from taxes on amusements and livestock consumption, and from permits, licenses, registrations, certifications, storage charges, transfers of real estate, and fines.

### 37 CUSTOMS AND DUTIES

Most imports from outside the CACM are subject to a common external tariff (CET) ranging from 0–20%. Duties are levied ad valorem over the cost, insurance, and freight (CIF) value of goods. Honduras also imposes a sales tax (12% on most goods, 15% for alcohol and tobacco) and consumption tax on selected imports: 20% on alcoholic beverages, 35% on motor vehicles, and 55% on cigarettes. Capital goods are admitted at a tariff rate of only 1%.

In June 1992, the Central Bank of Honduras eliminated the need for most import permits and foreign exchange authorizations.

### 38 FOREIGN INVESTMENT

Traditionally, the Honduran attitude toward foreign enterprise has been favorable. Foreign capital is treated in the same way as domestic capital; however, firms in the distribution, health services, telecommunications, fishing and hunting, mining, insurance and financial services, or lumber business must have 51% Honduran ownership. Honduran economic development has been powerfully influenced by foreign investment in agriculture, industry, commerce, and other economic sectors.

Since 1910, the Standard and Fruit and Steamship Co. and United Brands (formerly the United Fruit Company) have developed railroads, ports, plantations, cattle farms, lumber yards, breweries, electric power, housing, and education. All contracts, aside from commodity exports, were canceled on 15 September 1975; plans to convert banana-marketing operations into a joint venture fell through, however, and in 1976, the government instead expropriated large tracts of land from the banana producers. Mines have been developed by the New York and Honduras Rosario Mining Co.

In 1998, annual foreign direct investment (FDI) inflows into Honduras totaled almost \$100 million, down from \$128 million in 1997. Annual FDI inflows more than doubled from 1999 to 2001, averaging \$238 million.

The United States has historically been, and remains today, Honduras's largest investor, accounting for at least three-quarters FDI in Honduras. More than 100 American companies operate there. About 75% of those companies produce apparel, but the largest US investments in Honduras have been in the agribusiness sector. Other important sectors include petroleum products, marketing, electric power generation, banking, insurance, and tobacco.

US franchises have substantially increased their presence in recent years, mostly in the fast food sector. Other major investors include Japan, El Salvador, Korea, Hong Kong, and Taiwan. Total capital inflows reached \$198 million in 2003 (or 3.0% of the GDP), up from \$172 billion in 2002, but still far from the 2000 historical high of \$282 million.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

During the administration of President Callejas, between 1990 and 1993, economic policy was mostly based on neoliberal ideas. This included a move from an inward-oriented policy to an export-oriented one. In addition, privatization was deeply emphasized. During that period, GDP was characterized by consistent growth. At the same time the country's galloping inflation was reduced to single digits. Government corruption, however, prompted citizens to vote Callejas out of office.

The November 1993 elections gave birth to a new political era in Honduras. President Reina of the Liberal Party was expected to slow down the pace of market-oriented reforms, but to continue privatization. Strong growth in nontraditional exports and the prospects for an improvement in coffee prices helped to finance the current account deficit. The continuation of foreign aid and investment was essential to closing the Honduras trade gap.

Reforms in the late 1990s were focused on alleviating the lot of the poorest citizens in Honduras, and improving international competitiveness. Hurricane Mitch in 1998 damaged the economy (particularly banana exports), as did low world coffee prices in the early 2000s, and cold weather and heavy rains in 2002–03 harmed the harvest (coffee revenues were down to \$161 million in 2001, from \$340 million in 2000). The garment-manufacturing industry, the third-largest in the world, turned in a strong performance in early 2003. In 2000, Honduras became eligible under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) Initiative for \$900 million in debt service relief.

The economic growth of 2005 was mainly led by an increase in consumption and exports. However, consumption levels are expected to grow slower than the overall economic growth (despite a rise in remittances from abroad) due to the impact on wages of above-target inflation. Maquilas and tourism, as well as major public development projects, will likely benefit the economy in coming years, although they can also lead to high levels of indebtedness.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

The social insurance program covers accidents, illness, maternity, old age, occupational disease, unemployment, disability, death,

and other circumstances affecting the capacity to work. Social security services are furnished and administered by the Honduran Social Security Institute and financed by contributions from employees, employers, and the government. Workers contribute 1% of their earnings toward retirement, disability, and survivor insurance, while employers paid 2% of their payroll. Retirement is set at age 65 for men and age 60 for women. These programs exclude domestic, temporary and some agricultural workers. Workers' medical benefits include medical care and surgery, hospitalization and medications, and appliances.

Violence against women remains widespread although the penal code classifies domestic violence and sexual harassment as crimes. These laws are not effectively enforced. Cultural attitudes toward women limit career opportunities, and women mostly work in low status jobs. Women are treated equally under the law in divorce cases. There is a growing problem of child abuse, and trafficking in children continues.

The government's human rights record has improved since 1995, but serious abuses still occur, including torture and killing by the police. Human rights groups have challenged the existence of organized death squads.

### 4<sup>1</sup> HEALTH

Health conditions in Honduras are among the worst in the Western Hemisphere. There are an estimated 83 physicians, 25 nurses, and 1 dentist per 100,000 people. The Inter-American Cooperative Public Health Service, created in 1942 under the joint sponsorship of Honduras and the United States, has contributed to public health through malaria control, construction of water systems and sewage disposal plants, personnel training, and the establishment of a national tuberculosis sanatorium. US Peace Corps volunteers help train personnel for urban and rural clinics. Nearly 39% of children under five years of age were considered malnourished as of 2000. Honduras started fortifying sugar with vitamin A in 1996. Health care expenditure was relatively high, estimated at 8.6% of GDP.

Major causes of illness and death are diseases of the digestive tract, intestinal parasites, accidents, suicides, influenza, pneumonia, cancer, and infant diseases. Malnutrition, impure water, poor sewage disposal, and inadequate housing are the major health problems. In 2000, 90% of the population had access to safe drinking water and 77% had adequate sanitation. In 1995, there were 4,717 cases of cholera, of which 77 turned fatal. In 1995, there were 1,022 malaria cases per 100,000 people. Honduras has been hard hit by AIDS. The HIV/AIDS prevalence was 1.80 per 100 adults in 2003. As of 2004, there were approximately 63,000 people living with HIV/AIDS in the country. There were an estimated 4,100 deaths from AIDS in 2003. Immunization rates for children up to one year old were as follows: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 94%; polio, 93%; and measles, 89%. The government pays 79% of routine immunization bills. As of 2002, the birth rate was estimated at 31 per 1,000 people and the general mortality rate at 5 per 1,000 people. About 50% of married women (ages 15 to 49) were using contraception. In 2000 the total fertility rate was 3.9 children per mother during her childbearing years. The infant mortality rate in 2005 was 26.47 per 1,000 live births. Life expectancy in the same year was an average of 69.30 years.

## 4<sup>2</sup> HOUSING

Housing shortages and lack of access to basic utilities in existing housing units has been an ongoing problem throughout most of the country. In recent years, the government has initiated and participated in several programs focusing on low-income housing construction. These have included a \$30-million low-cost housing program sponsored by the Housing Finance Corp. and a \$19-million venture undertaken by the National Housing Institute.

As of 2000, about 90% of the population had access to improved water sources; 77% of the population had access to improved sanitation systems. As of the 2001 census, there were about 1,487,319 housing units in the nation. The vast majority of housing units are individual homes, about 66% of which are considered to be deficient. Many homes are simply made of cardboard or plastic structures that house from 4 to 10 people in a single room.

## 4<sup>3</sup> EDUCATION

Public education is free and compulsory for six years (ages 6 to 12). After these six years of primary education, students take three years of lower secondary school and two years of upper secondary school. In the upper level, students choose between literary or scientific tracks. Students may also choose to attend a three-year technical school at the upper level. The academic year runs from February to November.

In 2001, about 21% of children between the ages of four and six were enrolled in some type of preschool program. It is estimated that about 79% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2003. As of 1998, there were 169,430 students enrolled in secondary schools.

The major university is the National Autonomous University of Honduras, founded at Tegucigalpa in 1847, with branches at San Pedro Sula and La Ceiba. There are several other universities, as well as technical and agricultural schools. In 2001, about 15% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 80%.

As of 2003, public expenditure on education was estimated at 4% of GDP.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

Although the National Archive and Library of Honduras was established in 1880 to conserve and maintain the records of the republic, no great attention has been shown to government documents and other records in modern times. The National Archive and Library (40,000 volumes) includes land titles dating from 1580, historical documents dating from the 17th century, a newspaper collection from 1880 onward, a civil registry, and a collection of laws since 1880. The Ministry of Education has charge of the National Archive, as well as of other libraries and museums. The National University's library in Tegucigalpa contains over 200,000 volumes.

In Tegucigalpa, the National Museum exhibits historical and archeological works and the Miguel Paz Baraona Historical Museum highlights the personal effects of the national hero as well as the country's history. Also in Tegucigalpa are the National Art Gallery, the Museum of Natural History, and the Museum of Mil-

itary History. The Museum of Anthropology in San Pedro Sula covers regional history from 1500 bc to present day and houses an impressive collection of Mayan artifacts. The Mayan Museum of Sculpture is in Copan. A Colonial Museum in Comayagua contains a collection of religious art and artifacts.

## 4<sup>5</sup> MEDIA

The government owns and operates postal, telephone, and telegraph services. Tegucigalpa and San Pedro Sula are linked by a multiplex radio relay network. The Tropical Radio Co. provides international radiotelegraph and radiotelephone service. In 2003, there were an estimated 48 mainline telephones for every 1,000 people; about 342,200 people were on a waiting list for telephone service installation. The same year, there were approximately 49 mobile phones in use for every 1,000 people.

As of 1998, Honduras had 241 AM and 53 FM radio stations. In 1997, there were 11 television stations. In 2003, there were an estimated 411 radios and 119 television sets for every 1,000 people. About 21.6 of every 1,000 people were cable subscribers. Also in 2003, there were 13.6 personal computers for every 1,000 people and 25 of every 1,000 people had access to the Internet. There were 31 secure Internet servers in the country in 2004.

The country's principal newspapers (with 2004 circulation) were *El Herald* (30,000), *Tiempo* (30,000), and *La Tribuna* (20,000), all published in Tegucigalpa, and *La Prensa* (62,000), published in San Pedro Sula. *La Tribuna* is owned by President Flores.

The constitution provides for freedom of speech and press, and the government is said to generally respect these rights. The media itself, however, is said to be subject to a high degree of politicization and corruption.

## 4<sup>6</sup> ORGANIZATIONS

The Chamber of Commerce and Industries has its headquarters in Tegucigalpa; chambers of commerce also function in San Pedro Sula, La Ceiba, and other towns. Business and industry organizations include the Federation of Agricultural Producers and Exporters, the Honduran Manufacturers Association, and the Honduran Association of Sugar Producers. Various professional associations are also active.

The National Federation of University Students of Honduras is an active student movement. Other national youth organizations include scouting and YMCA/YWCA programs. There are several sports associations promoting amateur competition in such pastimes as tennis, football (soccer), badminton, tae kwon do, and baseball. There are also active branches of the Special Olympics.

Volunteer service organizations, such as the Lions Clubs International, are present. There are national chapters of the Red Cross, Habitat for Humanity, Caritas, and CARE.

## 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

The main tourist attraction is the restoration at Copán, the second-largest city of the ancient Mayan Empire. There are many beaches on the northern and southern coasts where there is vibrant underwater life. Fishing is popular in Trujillo Bay and Lake Yojoa. A valid passport is needed for entry, and all visitors need visas except for nationals of the United States, and of the countries

of Central and South America. Evidence of vaccination against yellow fever is required if traveling from an infected country.

Approximately 610,535 tourists visited Honduras in 2003, an 11% increase from 2002. About 57% of the visitors came from Central America. There were 18,590 hotel rooms with 26,897 beds that same year. The average length of stay was estimated at 10 nights. Gross tourism expenditures totaled \$341 million.

In 2004, the US Department of State estimated the cost of staying in Tegucigalpa at \$173 per day. Daily costs in San Pedro Sula were estimated at \$163 in 2002.

#### 48 FAMOUS HONDURANS

José Cecilio del Valle (1780–1834), a member of the French Academy of Sciences, was an intellectual, a political leader, and the author of the Central American declaration of independence. Francisco Morazán (1799–1842) was the last president of the United Provinces of Central America, which lasted from 1823 to 1839. Father José Trinidad Reyes (1797–1855) founded an institute in 1847 that became the National University. Outstanding literary figures were Marco Aurelio Soto (1846–1908), an essayist and liberal president; Ramón Rosa (1848–93), an essayist and biographer; Policarpo Bonilla (1858–1926), a politician and author of political works; Alberto Membreño (1859–1921), a philologist; Juan Ramón Molina (1875–1908), a modernist poet; Froilán Turcios (1875–1943), a novelist and writer of fantastic tales; Rafael Heliodoro Valle (1891–1959), a historian and biographer; and Ramón Amaya Amador (1916–1966), a journalist and left wing political

figure. Contemporary writers include Eduardo Bähr (b.1940), Roberto Sosa (b.1930), Amanda Castro (b.1962), Javier Abril Espinoza (b.1967), and Roberto Quesada (b.1962).

#### 49 DEPENDENCIES

Honduras has no territories or colonies.

# JAMAICA

**CAPITAL:** Kingston

**FLAG:** Two diagonal yellow gold bars forming a saltire divide the flag into four triangular panels. The two side panels are black, and the top and bottom panels are green.

**ANTHEM:** First line, "Eternal father, bless our land..."

**MONETARY UNIT:** The Jamaican dollar (J\$) of 100 cents was introduced on 8 September 1969. There are coins of 1, 5, 10, and 25 cents, and 1 dollar, and notes of 2, 5, 10, 20, 50, and 100 dollars. J\$1 = US\$0.01612 (or US\$1 = J\$62.04) as of 2005.

**WEIGHTS AND MEASURES:** Both metric and imperial weights and measures are used.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 23 May; Independence Day, 1st Monday in August; National Heroes' Day, 3rd Monday in October; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Ash Wednesday, Good Friday, and Easter Monday.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Jamaica is an island in the Caribbean Sea situated about 145 km (90 mi) s of Cuba. It has a total area of 10,990 sq km (4,243 sq mi) and extends, at maximum, 235 km (146 mi) N–S and 82 km (51 mi) E–W. Comparatively, the area occupied by Jamaica is slightly smaller than the state of Connecticut. The total coastline is 1,022 km (634 mi).

Jamaica's capital city, Kingston, is located on the country's southeastern coast.

## <sup>2</sup> TOPOGRAPHY

The greater part of Jamaica is a limestone plateau, with an average elevation of about 460 m (1,500 ft). The interior of the island is largely mountainous, and peaks of over 2,100 m (7,000 ft) are found in the Blue Mountains, which dominate the eastern part of the island; the highest point on the island is Blue Mountain Peak, at 2,256 m (7,402 ft) above sea level.

The coastal plains are largely alluvial, and the largest plains areas lie along the south coast. The island has numerous interior valleys. There are many rivers, but most are small, with rapids and falls that make navigation virtually impossible for any distance.

Some volcanic and seismic activity is present on the island in the form of lava cones and hot springs, some of the latter being radioactive. One of the worst earthquakes in history occurred at Port Royal (then the chief city in Jamaica) on 7 June 1692 when a large portion of the city literally sank below sea level through a series of three main quakes and several days of aftershocks; thousands of people were killed. A 1907 earthquake followed by a tidal wave destroyed the Kingston area and killed about 900 people. Lesser earthquakes, such as the 5.1 magnitude tremor felt throughout the country on 13 June 2005, have caused damage to homes and other building, but few injuries.

## <sup>3</sup> CLIMATE

The climate ranges from tropical at sea level to temperate in the uplands; there is relatively little seasonal variation in temperature. The average annual temperature in the coastal lowlands is 27°C (81°F); for the Blue Mountains, 13°C (55°F).

The island has a mean annual rainfall of 198 cm (78 in), with wide variations during the year between the north and south coasts. The northeast coast and the Blue Mountains receive up to 500 cm (200 in) of rain a year in places, while some parts of the south coast receive less than 75 cm (30 in), most of it falling between May and October. The rainy seasons are May to June and September to November. The period from late August to November has occasionally been marked by destructive hurricanes.

## <sup>4</sup> FLORA AND FAUNA

The original forest of Jamaica has been largely cut over, but in the areas of heavy rainfall along the north and northeast coasts there are stands of bamboo, ferns, ebony, mahogany, and rosewood. Cactus and similar dry-area plants are found along the south and southwest coastal area. Parts of the west and southwest consist of grassland, with scattered stands of trees.

The wild hog is one of the few native mammals, but there are many reptiles and lizards. Birds are abundant. Jamaican waters contain considerable resources of fresh- and saltwater fish. The chief varieties of saltwater fish are kingfish, jack, mackerel, whiting, bonito, and tuna; freshwater varieties include snook, jewfish, gray and black snapper, and mullet.

As of 2002, there were at least 24 species of mammals, 75 species of birds, and over 3,300 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

Among the government agencies charged with environmental responsibilities are the Ministry of Health and Environmental Con-

trol, the Ministry of Agriculture, and the Natural Resources Conservation Authority. The major environmental problems involve water quality and waste disposal. Jamaica has 9 cu km of renewable water resources with 77% used for agriculture and 7% used for industrial purposes. About 87% of the people living in rural areas and 98% of the city dwellers have access to pure drinking water. Coastal waters have been polluted by sewage, oil spills, and industrial wastes. Another major source of water pollution has been the mining of bauxite, which has contaminated the ground water with red-mud waste.

Another environmental problem for Jamaica is land erosion and deforestation. Forest and woodland decreased 1.5% annually between 1990 and 2000. Jamaica's coral reefs have also been damaged. Kingston has the waste disposal and vehicular pollution problems typical of a densely populated urban area.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 5 types of mammals, 12 species of birds, 8 types of reptiles, 17 species of amphibians, 12 species of fish, 5 species of invertebrates, and 208 species of plants. Endangered species in Jamaica included the tundra peregrine falcon, homerus swallowtail butterfly, green sea turtle, hawksbill turtle, and American crocodile. The Caribbean monk seal, Osborn's key mouse, and the Jamaica giant galliwasp have become extinct.

## 6 POPULATION

The population of Jamaica in 2005 was estimated by the United Nations (UN) at 2,666,000, which placed it at number 134 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 31% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.4%. The projected population for the year 2025 was 3,048,000. The population density was 242 per sq km (628 per sq mi), with most of the population residing in coastal regions.

The UN estimated that 52% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.23%. The capital city, Kingston, had a population of 575,000 in that year. Other leading cities (and their estimated populations) are Montego Bay (120,000), Spanish Town (about 92,383), and Portmore (90,138).

## 7 MIGRATION

Jamaica's net loss from emigration totaled 145,800 between 1891 and 1921; after a net gain of 25,800 during 1921–43, losses of 195,200 were recorded from 1943 to 1960, and 265,500 from 1960 through 1970. Until the United Kingdom introduced restrictions on immigration from Commonwealth countries in 1962, a large number of Jamaican workers emigrated to Great Britain. In 1964, in an effort to curb increasing migration, Jamaica passed the Foreign Nationals and Commonwealth Citizens (Employment) Act, providing Jamaicans with easier access to the island's employment market; however, domestic unemployment continued to plague Jamaica through the 1970s. During this period, Jamaica suffered from a "brain drain," losing perhaps as much as 40% of its middle class. From 1971 through 1980, 276,200 Jamaicans left the island, 142,000 for the United States. According to the 2000 US Census,

Jamaican ancestry in the United States was claimed by 736,513 people.

The great disparity between rural and urban income levels has contributed to the exodus of rural dwellers to the cities, where many of these migrants remain unemployed for lack of necessary skills. In this search for jobs, migration is so routine in Jamaica that the term "barrel children" has come to describe children whose parent have gone abroad for work and ship back necessities and goodies to their children in barrels. The US Department of State notes that 20,000 Jamaicans immigrate to the United States each year, settling mainly in New York, Miami, Chicago, and Hartford, Connecticut. In 2003, remittances to Jamaica were \$1.4 billion. In 2005, the net migration rate was estimated as -4.07 migrants per 1,000 population.

Jamaica is a transit point for migrants, including asylum seekers, trying to reach the United States. The total number of migrants living in Jamaica in 2000 was 13,000.

In 1999, Jamaica hosted 25 recognized refugees, most from Cuba, and had granted humanitarian status to a number of others. Asylum seekers continue to arrive from Cuba, Haiti, and other parts of the world. In 2002 six Haitians sought political asylum, having arrived by boat. Fearing their forcible return to Haiti, Amnesty International drew attention to their plight and their claims were fairly heard. In 2004, some 1,104 Jamaicans sought political asylum in Canada, the United Kingdom, and the United States.

## 8 ETHNIC GROUPS

About 97% of the population is of partial or total African descent. This population is comprised of blacks, mulattos, and black-East Indians or black-Chinese. Other ethnic groups include East Indians (1.3%), Chinese (0.2%), and Europeans. Nearly the whole population is native-born Jamaican. Black racial consciousness has been present in Jamaica at least since the beginnings of the Rastafarian sect, founded in 1930 and based on the ideas of Marcus Garvey.

## 9 LANGUAGES

Jamaica is an English-speaking country and British usage is followed in government and the schools. Creole is also often used.

## 10 RELIGIONS

There is freedom and equality of religion in Jamaica. Protestant churches are dominant, with various denominations comprising over 61% of the total population. The Church of God now claims the largest number of adherents, with 24% of the populace. Seventh-Day Adventists, with 11%, and Pentecostals, with 10%, are the next largest denominations. About 7% of the population are Baptist. The Church of England (Anglican), formerly the dominant religion in Jamaica, claims about 4%. Other denominations include Roman Catholics (2%), United Church (2%), Methodists (2%), Jehovah's Witnesses (2%), Moravians (1%), and Brethren (1%). Other religious groups, including Hindus, Jews, Muslims, and Rastafarians, as well as some spiritual cults, make up about 10% of the population. About 22% of the population claim no religious affiliation.

The Rastafarian movement continues to grow and is culturally influential in Jamaica and abroad. Rastas regard Africa (specifically Ethiopia) as Zion and consider their life outside Africa as an

exile or captivity; the use of marijuana, or ganja, plays an important role in the movement. The government officially recognized Rastafarianism as a religion in 2003.

## 11 TRANSPORTATION

Jamaica has an extensive system of roads; in 2002 there were 19,000 km (11,806 mi) of roads, including 13,433 km (8,347 mi) of paved roads. In 2003 there were 115,260 licensed passenger cars and 30,100 commercial vehicles on the island. Motorbus service, which has greatly facilitated travel, is operated by the government-owned Jamaica Omnibus Services Company.

The standard-gauge rail system totals 272 km (169 mi) of track. Of that total, 207 km (129 mi) which belonged to the government-owned Jamaica Railway Corp. (JRC) are no longer operational, as of 1992. The remaining track is privately owned and used to transport bauxite.

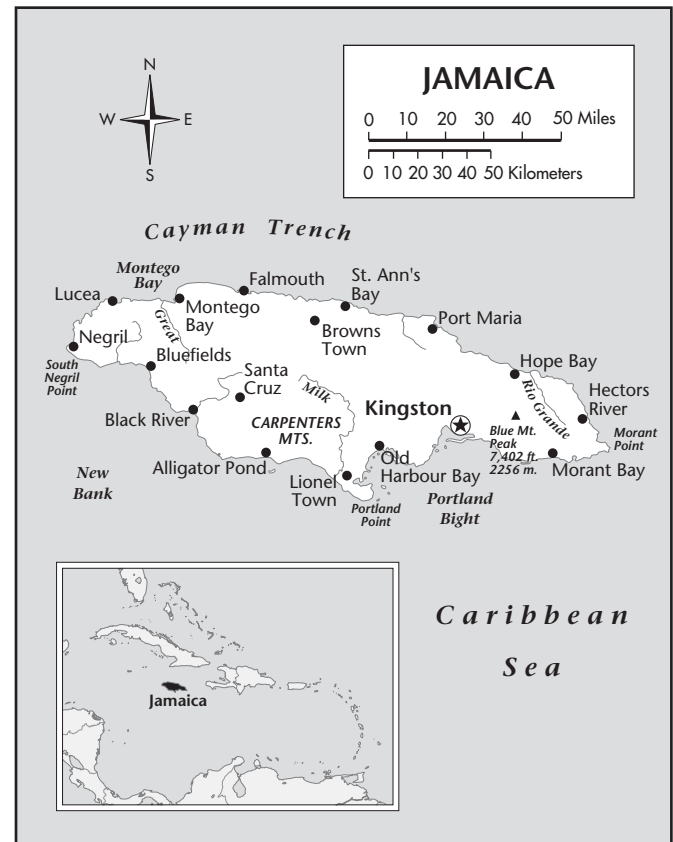

Kingston, the main port, handles nearly all of the country's foreign imports but only a small percentage of its exports, by weight. The remaining exports are shipped through 18 other ports, which tend to specialize in particular commodities: Montego Bay and Port Antonio in bananas and sugar, for instance, and Port Esquivel and Ocho Rios in bauxite. More than 30 shipping companies provide passenger and cargo service. The port facilities of Kingston harbor are among the most modern in the Caribbean. In 2005, Jamaica's merchant marine consisted of nine vessels of 1,000 GRT or more, for a total of 74,881 GRT.

Air service is the major means of passenger transport between Jamaica and outside areas. In 2004 there were an estimated 35 airports, 11 of which had paved runways as of 2005. Control of the two modern airports, Norman Manley International Airport (Kingston) and Sangster International Airport (Montego Bay), was assigned to the Airports Authority of Jamaica in 1974. About eleven airlines provide scheduled international air transportation. Air Jamaica, the national airline, operates internationally in association with British Airways and British West Indian Airways. The government owns a controlling interest in Air Jamaica and has also invested in a domestic air carrier, Trans Jamaican Airlines. In 2003 about 1.838 million passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Jamaica was discovered by Christopher Columbus in 1494 and was settled by the Spanish in the early 16th century. The Spanish used the island as a supply base and also established a few cattle ranches. The Arawaks, who had inhabited the island since about AD 1000, were gradually exterminated and replaced by African slaves. In 1655, the island was taken over by the English, and the Spanish were expelled five years later.

Spain formally ceded Jamaica to England in 1670 by the Treaty of Madrid. The island became a base for English privateers raiding the Spanish Main. A plantation economy was developed, and sugar, cocoa, and coffee became the basis of the island's economy. The abolition of the slave trade in 1807 and of slavery itself in 1834 upset Jamaica's plantation economy and society. The quarter million slaves were set free, and many became small farmers in the hill districts. Freed slaves were replaced by East Indian and Chinese contract workers.

LOCATION: 17°43' to 18°32' N; 76°11' to 78°21' W. TOTAL COASTLINE: 1,022 kilometers (634 miles). TERRITORIAL SEA LIMIT: 12 miles.

The economy suffered from two developments in mid-century: in 1846 the British rescinded favorable terms of trade for Jamaica, and the union blockade during the US Civil War limited commercial options for the island. Bankruptcies and abandonment of plantations followed, and dissension between the white planters and black laborers led to a crisis. An uprising by black freedmen at Morant Bay in 1865 began a struggle that necessitated the imposition of martial law. Parliament established a crown colony government in 1866, and Jamaica's new governor, Sir John Peter Grant, introduced new programs, which included development of banana cultivation, improvement of internal transportation, and reorganization of government administration. Advances in education, public health, and political representation pacified the island.

These measures did not resolve Jamaica's basic problems, stemming from wide economic and social disparities, and social unrest came to the surface whenever economic reverses beset the island. The depression of the 1930s, coupled with a blight on the banana crop, produced serious disruption and demands for political reform. A royal commission investigated the island's social and economic conditions and recommended self-government for Jamaica. A Jamaica legislative council committee concurred, and in 1944, Jamaica had its first election. The contenders in that election were two recently formed political parties, the People's National Party (PNP), led by Norman W. Manley, and the Jamaica Labour Party (JLP), founded by Manley's cousin, Sir Alexander Bustamante.

During the 1950s, the bauxite industry and the tourist trade assumed prominent roles in the economy. The economic gains from these enterprises did little to solve Jamaica's underlying economic problems. Jamaica joined with other British Caribbean colonies in 1958 to form the Federation of the West Indies, but in a referendum in 1961 a majority of Jamaicans voted for withdrawal from the federation. The governments of the United Kingdom and Jamaica accepted the decision of the electorate, and Jamaica became an independent state on 6 August 1962, with dominion status in the Commonwealth of Nations. The PNP had supported the federation concept, so the JLP became the independence party, and Bustamante became the nation's first prime minister.

The JLP held power through the 1960s. Donald Sangster became prime minister in 1965 and was succeeded by Hugh Shearer, also of the JLP, two years later. In February 1972, the PNP regained a majority in parliament, and the late Norman Manley's son, Michael, headed a new democratic socialist government.

Manley moved to nationalize various industries, and expanded Jamaica's programs in health and education. Manley placed price controls on a number of key products and provided consumer subsidies for others. Internationally, Manley established friendly relations with Cuba, which the United States decried. Deteriorating economic conditions led to recurrent violence in Kingston and elsewhere during the mid-1970s, discouraging tourism. By 1976, Jamaica was faced with declining exports, a critical shortage of foreign exchange and investment, an unemployment rate estimated at 30–40%, and rampant currency speculation.

The PNP nevertheless increased its parliamentary majority in the December elections that were held during a state of emergency. Tourism suffered another blow in January 1979 with three days of rioting in Kingston, at the height of the tourist season. Meanwhile, Manley quarreled with the IMF. The IMF responded to Jamaica's request for loan guarantees by conditioning acceptance on a set of austerity measures. Manley refused to initiate many of the market-oriented measures the IMF was demanding.

Manley called for elections in the fall of 1980. The campaign was marred by somewhere between 500 and 800 deaths, and was further inflamed by PNP claims that the CIA was attempting to destabilize its government. The opposition JLP won a landslide victory, and Edward Seaga became prime minister and minister of finance. He announced a conservative economic program that brought an immediate harvest of aid from the United States and the IMF. In October 1981, Jamaica broke off diplomatic relations with Cuba, and two years later it participated in the US-led invasion of Grenada.

In December 1983, Seaga called for elections, which the PNP boycotted, leaving the JLP with all 60 seats in the House of Representatives. Seaga then implemented an IMF plan of sharp austerity, pushing the economy into negative growth for two years. In May 1986, Seaga turned away from the IMF, announcing an expansionary budget. The JLP nevertheless suffered a sharp loss in July parish elections, with the PNP taking 12 of 13 municipalities. By January 1987, a new IMF agreement was in place, but their political position continued to slide.

The 1989 elections were a good deal less tumultuous than expected. The two parties reached an agreement to control their respective partisans, and election violence was minimal. The rhetoric was also considerably less inflammatory, as the PNP's Manley

ran as a more moderate candidate. Citing the deterioration of social services under Seaga, and promising to attract foreign capital, Manley was returned to the prime ministership as the PNP took a powerful 45-seat bloc in the House of Representatives. Manley reversed many of Seaga's policies, but by 1992, inflation was on the rise and the economy slowed. Unemployment hovered around 20%. Manley retired in 1992, leaving the government to Percival J. Patterson.

Patterson moved further to the right from Seaga, encouraging more market-oriented reforms. Within a year of taking office, he called for elections, in which violence erupted anew and 11 died in campaign-related killings. The PNP increased its parliamentary margin to 52–8, a small consolation for a government besieged by serious political, social, and economic problems.

Political violence resurged in 1996, following the establishment in 1995 of two new political parties, the Jamaica Labour Party and the rival National Democratic Movement. Clashes between party regulars in Kingston and Spanish Town led to 10 deaths in a six-month period. Vigilante killings in response to a high crime rate were also the norm in 1995 and 1996, with police reporting 22 such killings in that span.

In March 1997, former prime minister and PNP founder Michael Manley died. In the December elections that year, the PNP remained the dominant party. It was the first time a Jamaican political party had won a third consecutive legislative victory. The ruling party also swept local elections in September 1998. However, it presided over an increasingly troubled country, with continued economic contraction and an escalating crime wave, much of it attributable to rival gangs that had begun as armed militias created by the major political parties in the 1970s and later evolved into highly powerful organized crime networks engaged in international drug smuggling and other illicit activities. In the first half of 1999 alone, an estimated 500 Jamaicans had been killed in gang-related violence. In addition, rioting followed the announcement of a 30% gasoline tax increase in April. Export revenues driven down by low prices and high costs followed in a historically cyclical pattern, while tourism was hurt by the rising violence and harsh army tactics were used to curb the crime rate.

The PNP continued to dominate Jamaican politics. In the October 2002 elections, the PNP captured 52.2% of the vote, winning 34 seats in the 60-member Assembly. The prime minister was PNP leader Percival James Patterson. Violence continued with 971 murders in 2003 and 1,145 in 2004. England imposed policies such as halting death penalty executions intended to curb crime in 2002, and in 2003 introduced visa requirements for Jamaicans entering the United Kingdom.

In addition to social and economic hardships, on 10 September 2004 Jamaica was hit hard by Hurricane Ivan. Prime Minister Patterson declared a state of emergency in the interest of public safety, as the national public power and water supplies were forced to shut down. All sectors of the economy were badly affected; the southern parishes that are the breadbasket of the country suffered a double blow, as crops were also damaged during the passage of Hurricane Charley less than a month before. By 2005 protests over price increases, such as utilities and public transportation, continued, as well as general social unrest. In the midst of prevalent gang violence, Prime Minister Patterson announced that he would step down before the legal date of October 2007. Portia Simpson-

Miller was sworn in as the new prime minister on 30 March 2006, becoming the first woman to lead Jamaica's government.

Amidst the violence and poverty, the rural sections of the island, especially in and around the resort towns of Negril, Montego Bay, and Ocho Rios, remained quite safe. Furthermore, President Chavez from Venezuela made preferential agreements with Jamaica and a number of Caribbean nations to aid them with their fuel scarcity, helping boost the slowly progressing economy.

### 13 GOVERNMENT

The 1962 constitution provides for a governor-general appointed by the crown, a cabinet presided over by a prime minister, and a bicameral legislature.

The Senate, the upper house, consists of 21 members appointed by the governor-general, 13 on the advice of the prime minister and 8 on the advice of the leader of the opposition. The popularly elected House of Representatives consists of 60 members (increased from 53 in 1976). The House is by far the more important of the two. The governor-general appoints both the prime minister and the leader of the opposition. The normal term of office in parliament is five years, but elections can be called at any time. Suffrage is universal at age 18.

The cabinet consists of the prime minister and at least 11 additional ministers, appointed by the governor-general on the advice of the prime minister.

### 14 POLITICAL PARTIES

Two political parties, the Jamaica Labour Party (JLP) and the People's National Party (PNP), dominate Jamaican politics. Their fortunes have risen and fallen dramatically over the past thirty years. Both parties have held more than three-fourths of parliament. The JLP, founded in 1943 by Sir Alexander Bustamante, is the more conservative of the two parties. Its original political base was the Bustamante Industrial Trade Union, which Bustamante organized in 1938. The JLP held a parliamentary majority during the first 10 years of independence, and again from 1980–89 under Edward Seaga.

The PNP, founded by Norman W. Manley in 1938, held to a moderate socialist program and from its foundation sought responsible government and independence for Jamaica. The party formed its first government in 1972 under Michael Manley. In 1976, the PNP remained in power, increasing its majority by 10 seats in a house that had been enlarged by 7. After losing in 1980, the PNP refused to participate in the parliamentary elections called by Prime Minister Seaga for December 1983, two years ahead of schedule. The PNP draws much of its support from the National Workers' Union, Jamaica's largest trade union, and is primarily an urban, middle-class party that has moved toward the political center since its defeat in the 1980 elections. Both the JLP and PNP stand for a broad program of social reform and welfare and economic development with the participation of foreign capital. The PNP was returned to power in 1989. In 1992, its founder and longtime leader Michael Manley retired and was succeeded by Percival (P.J.) Patterson, who led the party to four consecutive parliamentary victories 1993–2002.

A third political party, the National Democratic Movement (NDM), was formed in October 1995 by Bruce Golding, who was the former chairman of the JLP, and who is now the main leader of

the opposition. In the 2002 elections the JLP gained power as the PNP fell from 50 seats in 1997 to 34. The JLP went from winning 10 seats in 1997 to clinching 26 seats in 2002. The next elections were scheduled for October 2007.

### 15 LOCAL GOVERNMENT

Local government is patterned on that of the United Kingdom and the unit of local government is the parish. Responsibility for local government is vested in 12 parish councils and the Kingston and St. Andrew Corporation, which represents the amalgamation of two parishes. Since 1947, all of the councils (called parochial boards until 1956) have been fully elective, although the members of the House of Representatives from each parish are ex-officio members of the councils. Elections are normally held every three years on the basis of universal adult suffrage.

Local government authorities are responsible for public health and sanitation, poor relief, water supply, minor roads, and markets and fire services. Revenues come largely from land taxes, supplemented by large grants from the central government.

### 16 JUDICIAL SYSTEM

The judicial system follows British practice, with some local variations. Cases may be brought in the first instance before a lay magistrate (justice of the peace), a magistrate, or a judge in the Supreme Court, according to the seriousness of the offense or the amount of property involved. The Supreme Court also has appellate jurisdiction. Final appeal rests with the seven-member Court of Appeals, appointed on the advice of the prime minister in consultation with the leader of the opposition. The attorney general, who need not be a member of parliament, is appointed by the governor-general on the advice of the prime minister.

The judiciary is independent but is overburdened and backlogged because of a lack of trained personnel. Recent increases in salaries, training programs for judicial personnel, and improvement in court facilities may eventually serve to improve efficiency and processing of cases. In 1995, to reduce the backlog of cases, the government initiated a night court, but little progress has been achieved almost eight years after the reform.

The constitution gives power to the Court of Appeals and the parliament to refer cases to the Judicial Committee of the Privy Council in the United Kingdom. However, Jamaica was among the eight nations (Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago) whose leaders met in Kingston on 9 June 2003 to ratify a treaty to establish the Caribbean Court of Justice (CCJ), which was inaugurated on 16 April 2005 in Port of Spain, Trinidad and Tobago. It has been established as an attempt to ensure autonomy of judicial determinations in the region in order to complete the process of independence, to inspire confidence, and to ensure voluntary compliance, freeing the justice system from political manipulation.

### 17 ARMED FORCES

The Jamaica Defense Force assumed responsibility for the defense of Jamaica following the withdrawal of British forces in 1962. The total defense force in 2005 numbered 2,830 active personnel with 953 reservists. The Army accounted for 2,500 personnel, the Coast

Guard 190, and the air wing 140. In 2005, the defense budget totaled \$57.5 million.

## 18 INTERNATIONAL COOPERATION

Jamaica was admitted to the United Nations on 18 September 1962 and is a member of ECLAC and several nonregional specialized agencies, including the FAO, IAEA, ILO, IMF, UNESCO, UNIDO, WHO, and the World Bank. Jamaica served on the UN Security Council from 2000–01. Although Jamaica remains a member of the Commonwealth of Nations, the country's political, social, and economic ties have shifted toward participation in Latin American, Caribbean, and third-world international organizations. International memberships includes the ACP Group, CARICOM, the Caribbean Development Bank, G-15, G-77, the Alliance of Small Island States (AOSIS), Latin American Economic System (LAES), the Association of Caribbean States (ACS), and OAS.

Jamaica is a member of the Nonaligned Movement and a part of the Organization for the Prohibition of Chemical Weapons and the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL).

In environmental cooperation, Jamaica is part of the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The structure of the Jamaican economy has undergone extensive changes since 1945, when it was primarily dependent on tropical agricultural products such as sugar, bananas, coffee, and cocoa. The island has since become one of the world's largest producers of bauxite, though the industry suffered severely in the 1980s from high local costs and low world prices. It has also developed into a major tourist center for North Americans. Since 1983, tourism has been Jamaica's primary foreign exchange earner.

The underlying weaknesses of Jamaica's economy (including unemployment, underemployment, and unequal distribution of income) have revealed themselves as the market for bauxite has weakened. During 1972–80, production and foreign sales of bauxite, sugar, and bananas declined; tourism dropped because of rising social unrest; investor confidence waned; and consumer prices (1975–81) increased by 325%. With the change of administration in both Jamaica and the United States during 1980–81, more than \$1 billion in IMF and other credits became available. This was enough to extricate the country from its immediate payments crisis, but weak growth continued through 1986, when per capita income was 5.6% less than in 1981.

This trend of declining growth performance continued in the 1990s as the country experienced negative growth, for the first time in nearly a decade, declining by 1.5% in 1996. Underlying this performance was a marked deterioration in manufacturing and construction which declined by 2% and 3%, respectively, and the surfacing of severe problems in the financial sector. Significant among industries showing decline was the apparel industry, second only to bauxite and aluminum in terms of export earnings, resulting in a 5% drop in apparel exports in January–October 1996, compared to the same period of 1995. This marked a reversal of the progress for this sector, which experienced 22% growth dur-

ing the same period of 1995. Competition from NAFTA caused many garment manufacturers to close, and thousands of workers to go jobless.

Following the financial crisis of 1995/96, the Jamaican government adopted tight money policies to bring down inflation, which had peaked at 80% in 1992. At 15.8% in 1995/96, inflation fell to 8.8% in 1997/98, and has remained in single digits since. However, 1997/98 was also the first of three consecutive years of contraction in part attributable to the government's financial stabilization policies. Real GDP decreased 0.4% in 1998/99 and 0.1% in 1999/2000, while inflation averaged 7.7% a year. In June 2000, the government agreed to a staff-monitored program (SMP) with the IMF for 2001/02 designed to reduce Jamaica's heavy debt servicing burden and increase the country's attractiveness for foreign investment. In 2000/01 growth returned at a weak level of 1.1%, and continued at the same low level in 2001/02 as export demand weakened and tourism declined in the global economic slowdown in 2001 and in the aftermath of the 11 September 2001 terrorist attacks in the United States. Remittances to Jamaica from expatriates accounted for 13.6% of GDP in 2001. In 2002 and 2003 Jamaica was one of 23 countries on the US government's "Majors" list for being certified as a major illicit drug producer and/or drug transit country.

In 2004, the GDP growth rate was 1.3%, down from 2.3% in 2003; the economy was expected to recover in 2005, and expand by 3.3%. Inflation was on an upward spiral, expected to grow to 14.3% in 2005, from 13.6% in 2004, and 10.3% in 2003. The unemployment rate seemed to have been brought under control at around 11%.

Civil unrest, fueled by gang violence and drug wars, as well as damages caused by Hurricane Ivan hampered the governments attempts of achieving fiscal discipline and economic growth in 2004.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Jamaica's gross domestic product (GDP) was estimated at \$11.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,300. The annual growth rate of GDP was estimated at 3.2%. The average inflation rate in 2005 was 14.9%. It was estimated that agriculture accounted for 4.9% of GDP, industry 33.8%, and services 61.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.398 billion or about \$529 per capita and accounted for approximately 18.6% of GDP. Foreign aid receipts amounted to \$3 million or about \$1 per capita and accounted for approximately 0.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Jamaica totaled \$5.98 billion or about \$2,264 per capita based on a GDP of \$7.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at

an average annual rate of 7.4%. In 2001 it was estimated that approximately 24% of household consumption was spent on food, 3% on fuel, 1% on health care, and 9% on education. It was estimated that in 2002 about 19.7% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

Jamaica's labor force in 2005 was estimated at 1.2 million. As of 2003, agriculture accounted for 20.1%, with industry at 16.6%, and the services sector at 63.4%. The nation's unemployment rate in 2005 was estimated at 11.5%.

The right to unionize is protected by law, and union membership accounted for 15% of those employed. The two major trade unions are closely identified with the country's two main political parties: the National Workers' Union with the PNP and the Bustamante Industrial Trade Union with the JLP. The Trade Union Congress is a third major union. The ability to strike is neither authorized nor prohibited by law and strikes do occur. The government rarely interferes with union organizing or bargaining efforts and it effectively enforces laws which prohibit discriminating against workers for their union activities.

Labor legislation covers such items as national insurance, employment of nationals, hours of work, minimum wages, employment of women and youths, apprenticeship, and welfare (workers' compensation and factory conditions). The industrial workweek is generally eight hours a day for five days with mandatory overtime pay for work in excess of eight hours. Hours in agriculture and some of the service industries vary, but are usually longer. The minimum wage was US\$30 per week in 2002, but most salaried workers earn more than the minimum.

## 2<sup>2</sup> AGRICULTURE

Jamaican agriculture accounts for about 7% of GDP, less than in most developing countries. Agriculture (together with forestry and fisheries) is the third-largest foreign exchange earner and the second-largest employer of labor. Attempts to offset the serious price and production problems of traditional agricultural exports by encouraging production of winter vegetables, fruits, and flowers have had limited success. Vegetable and melon production in 2004 amounted to 196,500 tons; principal varieties include pumpkin, carrot, cabbage, tomato, callaloo, and cucumber. Production of other crop groups (with leading varieties) in 2004 included: pulses (red peas, peanut, gungo peas), 5,050 tons; fruits (papaya, pineapple, watermelon), 464,404 tons; cereals (corn, rice), 1,105 tons; and roots and tubers (yams, potatoes, plantains), 212,500 tons.

Sugar, the leading export crop, is produced mainly on plantations organized around modern sugar factories that also buy cane from independent growers. Raw sugar production in 2004 was estimated at 181,042 tons, down from 290,000 tons in 1978.

Sugar is Jamaica's largest agricultural export, earning \$84.9 million in 2004. Sugar is also used for the production of molasses (78,884 tons in 2004) and rum (24.7 million liters in 2004). Banana production in 2004 was 1250,000 tons. Other major export crops in 2004 included cocoa, and coffee. Blue Mountain coffee, which is primarily exported to Japan, brings in some \$12 million annually in foreign exchange earnings. Jamaica also exports coconuts, pimientos, citrus fruits, ginger, tobacco, yams, papayas,

dasheens, peppers, and cut flowers. Jamaica exported \$266.2 million and imported \$438.4 million in agricultural products during 2004.

The island's food needs are met only in part by domestic production, and foodstuffs are a major import item. The main food crops, grown primarily by small cultivators, are sweet potatoes and yams, rice, potatoes, manioc, tomatoes, and beans. Jamaica is a major producer of marijuana, which, however, remains illegal. The government participates in a US-funded campaign to eradicate marijuana trading.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Livestock has long been important in Jamaica's agricultural life, providing both fertilizer and protein for the local diet. Despite increases in the livestock population and in the production of meat, milk, and poultry, increased demand has resulted in continued imports of livestock products. Livestock holdings in 2005 included some 430,000 head of cattle, 440,000 goats, and 85,000 hogs. Livestock products in 2005 included 102,900 tons of meat (80% poultry) and 28,500 tons of cow's milk.

## 2<sup>4</sup> FISHING

The fishing industry grew during the 1980s, primarily from the focus on inland fishing. Whereas the inland catch in 1982 was 129 tons, by 2003 it had risen to 3,013 tons. Nevertheless, imports exceeded exports by \$31.3 million in 2003 to meet domestic needs. The total catch in 2003 was 11,671 tons.

## 2<sup>5</sup> FORESTRY

By the late 1980s, only 185,000 hectares (457,000 acres) of Jamaica's original 1,000,000 hectares (2,500,000 acres) of forest remained. Roundwood production increased from 55,000 cu m (1.9 million cu ft) in 1981 to 220,000 cu m (7.8 million cu ft) in 1988 and to 852,500 cu m (30 million cu ft) in 2004. About 67% of the timber cut in 2004 was used as fuel wood. The Forestry Department began a reforestation program in 1963 that was scheduled to last for 30 years; the target was to plant 1,200 hectares (3,000 acres) of timber a year. During the 1990s, reforestation averaged 5,000 hectares (12,300 acres) a year.

## 2<sup>6</sup> MINING

Jamaica in 2003 was a leading producer of alumina, with 3.844 million tons, as well as of bauxite, with 13.444 million tons, gross weight dry equivalent. In 2003 Jamaica's alumina plants were operating at near full capacity. The country's bauxite ores were expected to last 100 years.

In 2003, Jamaica produced 248,558 metric tons of gypsum, up from 164,880 metric tons in 2002. Output of lime totaled 275,763 metric tons in 2003. Quality marble was found in the Blue Mountains, and silica sand, limestone, clays, salt, hydraulic cement, marl and fill, and sand and gravel were also exploited. Australia's Ausjam Mining began the first recorded gold-mining operation in Jamaica in 2000, at the Pennants gold mine, in Clarendon Parish. In 2003, the mine produced 277 kg of gold and 98 kg of silver. However, low ore grades and labor union demands forced Ausjam to close Pennants in December 2003.

## 27 ENERGY AND POWER

Jamaica has no coal deposits proven reserves of oil, or natural gas, and very little hydroelectric potential.

Electricity is the main source of power and is almost all generated by steam from oil-burning plants. In 2002, Jamaica's electric power generating capacity stood at 1.398 million kW, of which conventional thermal accounted for 1.398 million kW of capacity and hydropower at 0.023 million kW. The total amount of electricity generated by public and private sources in 2002 totaled 6.524 billion kWh, of which 6.334 billion kWh came from conventional thermal sources and 0.093 billion kWh came from hydroelectric sources. Geothermal and other sources accounted for 0.097 billion kWh. Consumption of electricity in 2002 came to 6.067 billion kWh. As of 2002, blackouts still occurred from lack of capacity. Some large enterprises, such as the bauxite companies, and the sugar estates generate their own electricity. In 2001, US-based Mirant Corporation acquired 80% of the Jamaica Public Service Company, which had been government owned.

In 2001, Jamaica stated its intention to start replacing fuel oil with natural gas as the primary energy source for its power plants and for the bauxite and alumina industry. Although Jamaica has made a few ventures into alternative sources of energy, these are still minor relative to overall demand.

In 2002, Jamaica's imports of refined and crude oil products averaged 67,860 barrels per day, with total demand for refined products averaging 67,780 barrels per day.

Imports and consumption of coal in 2002 each came to 97,000 short tons.

## 28 INDUSTRY

In 1996, the production of bauxite and aluminum, the leading export commodities, bounced back from a sharp decline in 1995, but the growth of earnings was dampened by soft conditions in aluminum markets. While bauxite and aluminum output grew by 8.9% and exports of ore and aluminum grew by 9.5%, the value added by mining and quarrying, which consists overwhelmingly of these products, grew by only 2%. In 2001, production of bauxite reached its highest level in 20 years. Alumina production fell by 1% that year, due to the 11 September 2001 terrorist attacks on the United States and the temporary closure of the JAMALCO Halse Hall aluminum plant due to workers' action in October 2001.

Construction was seen as a growth sector in 2002, as was food processing (particularly poultry meat production and condensed milk). Jamaica has an oil refinery with a production capacity of 34,000 barrels per day in 2002.

Industry made up 32.7% of the economy in 2004, and it employed 16.6% of the labor force; agriculture contributed only 6.1% to the economy, but it employed a fifth of the working population; services came in first with 61.3% and 63.4% respectively.

## 29 SCIENCE AND TECHNOLOGY

Learned societies include the Jamaica Institution of Engineers and the Medical Association of Jamaica, both in Kingston, and the Jamaican Association of Sugar Technologists, in Mandeville. Research institutions include the Caribbean Food and Nutrition Institute, in Kingston, and the Sugar Industry Research Institute, in Mandeville. The Scientific Research Council, located in Kingston

and founded in 1960, coordinates research efforts in Jamaica. The University of the West Indies, with a campus in Mona, has faculties of medical sciences and natural sciences. An agricultural college is located in Portland. The College of Arts, Science and Technology, founded in 1958, is located in Kingston, and the College of Agriculture, founded in 1982, is located in Portland. In 1986, the Scientific Research Council had 18 scientists and engineers and 15 technicians engaged in research and development (R&D). In 1987-97, science and engineering students accounted for 64% of college and university enrollments. In 2002, high technology exports were valued at \$1 million. For that same year, R&D spending totaled \$7.843 million, or 0.08% of GDP.

## 30 DOMESTIC TRADE

Imports normally account for about one third of the goods distributed and importing is in the hands of a relatively small number of firms. Competition is limited by the acquisition of import licenses and profit margins are high. Many importers function as wholesalers and also have retail outlets. Locally produced consumer goods often are marketed through the same firms.

Retail outlets range from supermarkets and department stores, in the urban areas, to small general stores and itinerant merchants, in the rural regions. Purchases tend to be made in small quantities. Newspapers, radio, and television are the main advertising media.

Shops open weekdays between 8 and 9 AM; large stores generally close at 4:30 or 5 PM, with an early closing one day a week. Food stores, drugstores, and family enterprises, however, often remain open until 9 PM or later. Most commercial establishments also have Saturday hours. They are generally closed on Sundays. Banks are normally open on weekdays from 9 AM to 2 PM.

## 31 FOREIGN TRADE

Since the discovery of bauxite deposits in the 1950s, Jamaica has become increasingly active in international trade and has gradually loosened its ties to the Commonwealth and increased commercial contacts with North America and the Caribbean. On the supply side, the Jamaican government is committed to attracting foreign investment; and on the demand side, Jamaica is a consumer

oriented country that produces very little of its major necessities. The United States supplies at least 50% of Jamaica's food needs, but two-thirds of all tourists come from the United States. Jamaica has never recorded a visible trade surplus. In February 1991, the government implemented the CARICOM Common External Tariff (CET), creating the first customs union in the Caribbean.

This island's most lucrative exports are alumina and bauxite (56%), while the garment industry comes second (11%). Sugar (6.4%), rum (4.4%), and fruits (bananas) and nuts (2.5%) are the important agricultural products.

In 2004, exports reached \$1.7 billion (FOB—Free on Board), while imports grew to \$3.6 billion (FOB). The bulk of exports went to the United States (17.4%), Canada (14.8%), France (13%), China (10.5%), the United Kingdom (8.7%), the Netherlands (7.5%), Norway (6%), and Germany (5.9%). Imports included food and other consumer goods, industrial supplies, fuel, parts and accessories of capital goods, machinery and transport equipment, and construction materials, and mainly came from the United States (38.7%), Trinidad and Tobago (13.2%), France (5.6%), and Japan (4.7%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Balance-of-payments deficits in the 1960s and early 1970s were directly related to the growth of the Jamaican economy and to increased imports of capital goods and raw materials. Later in the 1970s, however, the continued deficits were symptomatic of a weakened economy, declining exports, and the flight of capital. The payments picture brightened somewhat in the first half of the 1980s (despite rising debt payments and the downturn of bauxite exports), as income from tourism and remittances from Jamaicans abroad rose, while substantial international assistance enabled Jamaica to meet its payments obligations. In the 1990s, a favorable balance of payments was aided by increased tourism inflows, reduced capital outflows, significant improvement in the

agricultural sector, stability in the foreign exchange rate, and the improved economic strength of the United States, Jamaica's major trading partner. The 11 September 2001 terrorist attacks on the United States negatively impacted Jamaica's balance of payments situation, which had improved in 2000.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Jamaica's exports was \$1.6 billion while imports totaled \$3.1 billion resulting in a trade deficit of \$1.5 billion.

The International Monetary Fund (IMF) reported that in 2001 Jamaica had exports of goods totaling \$1.45 billion and imports totaling \$3.07 billion. The services credit totaled \$1.9 billion and debit \$1.52 billion.

Exports of goods and services reached \$1.6 billion in 2004, up from \$1.4 billion in 2003. Imports grew from \$3.3 billion in 2003 to \$3.5 billion in 2004. The resource balance was consequently negative in both years, hovering at around -\$1.9 billion. The current account balance was also negative, slightly improving from -\$773 million in 2003, to -\$509 million in 2004. Foreign exchange reserves (excluding gold) grew to \$1.8 billion in 2004, covering more than six months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Jamaica, the central bank, acts as the government's banker and is authorized to act as agent for the government in the management of the public debt. It also issues and redeems currency, administers Jamaica's external reserves, oversees private banks, and influences the volume and conditions of the supply of credit. Financial institutions in Jamaica in 2002 included 6 commercial banks, 11 merchant banks, 2 development banks, and 59 credit unions. The financial sector accounted for 15% of GDP in 2002. Total bank assets amounted to \$5.14 billion in 2001. Commercial banks include the Bank of Nova Scotia, Citibank, Union Bank, CIBC, National Commerce Bank, and Trafalgar Commercial Bank.

Various measures were introduced to restructure the liquidity profile of the banking system. In July 1992, in an attempt to reduce domestic credit and curb inflation, the minimum liquid assets ratio of the commercial banks was raised to 50% (it had been 20% in April 1991). The measure appeared to have been successful and the inflation rate fell until May 1993. However, the first half of 1994 saw a rise in the inflation rate, reflecting the government's price liberalization policies. This was contained by sustained tight monetary and fiscal policy. Reduced interest rates stimulated rapid growth in domestic credit, however, and in 1995 money supply grew by 38.5%.

Economic instability which emerged during 1995–96 brought into focus the relationship between the central bank and the government, and in particular, the destabilizing impact of the government's drawdown of its deposits. The government has since recommended that the central bank be given greater autonomy, and transferred its operational revenue and expenditure accounts from the central bank to commercial banks. It also froze the aggregate balance in the Bank of Jamaica at the September 1995 level in an attempt to minimize any expansionist effect of fiscal operations on money supply.

The lack of confidence in the financial sector was underlined in October 1996 when further rumors of a liquidity crisis led to a

run on Jamaica's fourth-largest financial institution, the Citizen's Bank. Despite the bank's relatively healthy assets position, hundreds of depositors were prompted to withdraw their assets over a three-day period. Following the announcement of record losses of \$24.6 million at the National Commercial Bank (NCB) group in the nine months prior to June 1996, it was confirmed that the National Security Bank (NSB) and Mutual Security Bank (MSB), both subsidiaries of the NCG group, were to merge their operations, thus creating the island's largest commercial bank. The extent of the drain upon public finances caused by the precarious state of the financial sector became clear in mid-February 1997, when it was reported that net advances by the Bank of Jamaica to financial institutions had risen by \$17.4 million in January alone. Several financial institutions had become dependent upon the government to solve their liquidity problems.

In January 1997, the government established the Financial Sector Adjustment Company (FINSAC) to rescue the ailing financial sector. By 1998, FINSAC had already spent \$2.3 billion on the restructuring project, with annual debt financing amounting to approximately \$170 million. In order to pay for its operations, FINSAC sold shares in the Canadian Imperial Bank of Commerce, and merged Citizens, Eagle, and Island Victoria commercial banks into one entity called Union Bank. Laws were instituted to improve the solvency of Jamaican banks. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.2 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.5 billion.

In September 1968 the Jamaican Stock Exchange was incorporated. Jamaica's security market merged with the stock markets in Barbados and Trinidad and Tobago in 1989. As of 2004, a total of 38 companies were listed on the Jamaica Stock Exchange (JSE), which had a market capitalization in the year of \$14.415 billion. In 2004, the JSE rose 66.7% from the previous year to 112,655.5.

### 3<sup>4</sup> INSURANCE

Insurance companies in Jamaica are regulated by law through the Office of the Superintendent of Insurance of the Ministry of Finance. Major life insurance companies operating in Jamaica in 2003 were Life of Jamaica, Scotia Life, and Blue Cross. General insurance companies included United General, NEM, Dyoll, and the Insurance Co. of the West Indies. In 2003, direct insurance premiums written totaled us\$410 million. In Jamaica, third-party auto liability and workers' compensation are compulsory.

### 3<sup>5</sup> PUBLIC FINANCE

Debt servicing accounts for about 62% of the fiscal budget, which limits economic expansion. Privatization of public entities has been one of the strategies used by the government to reduce the budget deficit. In 2001, the government raised \$3.6 billion in new sovereign debt in both local and international financial markets, and used it to meet its US dollar debt obligations, quell rampant liquidity in order to maintain the exchange rate, and partially fund that current year's budget deficit.

The US Central Intelligence Agency (CIA) estimated that in 2005 Jamaica's central government took in revenues of approximately us\$3.2 billion and had expenditures of us\$3.3 billion. Rev-

enues minus expenditures totaled approximately -us\$105 million. Public debt in 2005 amounted to 127.5% of GDP. Total external debt was us\$6.792 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues in millions of Jamaican dollars were 131,088 and expenditures were 185,422. The value of revenues in millions of US dollars was \$2,270 and expenditures \$3,160, based on a market exchange rate for 2003 of 57.741 as reported by the IMF. Government outlays by function were as follows: general public services, 58.0%; defense, 1.7%; public order and safety, 7.4%; economic affairs, 4.8%; environmental protection, 0.2%; housing and community amenities, 1.9%; health, 6.3%; education, 15.7%; and social protection, 2.5%.

### 3<sup>6</sup> TAXATION

In 2005, there was a single individual income tax rate of 25% on all income over \$120,432 (up from \$50,544 in 1996). Income tax deductions include allowances for social security, retirement fund contributions, and charitable contributions. Personal allowances and deductions for medical expenses, insurance premiums, and mortgage interest are no longer applicable.

There is a single 33.33% tax on all companies except building societies which pay 30%. Life insurance companies pay a 15% rate on investment income and a 3% rate on their premium income. Special depreciation allowances, income tax incentives, and other benefits are still available. Other direct taxes include a bauxite production levy, transfer taxes, stamp duties, travel tax, duties on estates, and motor vehicle licenses. Tax reductions and exemptions are offered as incentives to hotel and resort developers, and to export manufacturers. Jamaica does not levy a tax on capital gains.

The main indirect tax is Jamaica's General Consumption Tax (GCT) with a standard rate of 16.5% on most goods and services. A higher rate of 20% applies to telephone calls. Zero-rated or exempt items include foodstuffs, raw materials, capital goods, books,

and school uniforms. The government is seeking to narrow the scope of goods that are zero-rated or exempt from the GCT. Other indirect taxes include customs on betting, gambling and lotteries, and excise duties.

The main source of local revenue is a property tax based on the unimproved value of the land.

### 37 CUSTOMS AND DUTIES

The importance of customs duties as a major source of government income is declining and most imports are duty-free. The remaining duties on imports from non-CARICOM nations range from 0–20% under the CARICOM common external tariff (CET). In addition, a stamp duty is levied on motor vehicles, alcohol, and tobacco, in addition to a special consumption tax. Most imported items are subject to the 16.5% GCT and is based upon cost, insurance, freight (CIF) plus duty. Special rates or exemptions on dutiable imports apply to goods from members of CARICOM and signatories of the Lomé Convention.

Licenses are required for imports of certain durable and non-durable consumer goods. License applications are reviewed by the Trade Board. Most capital goods and raw materials do not require import licenses. Jamaica has three free trade zones: the Kingston Export Free Zone, the Montego Bay Export Free Zone, and Garmex.

### 38 FOREIGN INVESTMENT

Foreign investment in Jamaica has accounted for a large part of the capital formation of the post-1945 period. Until the early 1960s, new US and Canadian capital was invested heavily in the bauxite industry. Capital investment in bauxite and aluminum then tapered off, but investment increased in other industries as a result of a vigorous campaign by the government. Starting in 1972, however, capital investments in the private sector fell substantially. After 1980, the JLP government of Prime Minister Seaga had some success attracting foreign capital, but then the economic downturn of the mid-1980s again produced a decline in foreign investment. By early 1987, when 120 US companies operated in Jamaica, cumulative US investment, excluding the bauxite industry, was over \$1 billion. There are no statutory restrictions on sectors open to foreign investment, but in practice most service industries are reserved for Jamaicans.

Increased investment, particularly in the private sector, has been identified by the government as an essential factor in the strategy for reviving and sustaining the economy. Government has therefore continued and initiated actions that are intended to encourage investment in a number of areas such as those that generate foreign exchange, utilize domestic raw materials, and generate employment. The government offers a wide range of incentives, including tax holidays up to a maximum of 10 years and duty-free concessions on raw materials and capital goods for approved incentive periods. There are in existence several acts that provide major benefits for foreign investors, such as the Industrial Incentives Act, the Export Industries Encouragement Act, and the Hotel Incentives Act. Additionally, since the liberalization of exchange controls in September 1991, investors are free to repatriate without prior approval from the Bank of Jamaica.

The United States continues to play a leading role in foreign investment. In late 1996, a US firm acquired control of Jamaica's

only flour manufacturer, Jamaica Flour Mills, for \$35 million. In 1997, the Financial Sector Adjustment Company privatized a large number of companies in order to support the country's financial sector.

Annual foreign direct investment (FDI) inflows into Jamaica in 1999 reached \$523 million, more than double the inflow in 1997 of \$203 million, but then fell to \$471 million in 2000. In 2001, FDI inflow rose to \$722 million. In the period 1998 to 2000, Jamaica's share of world FDI inflows was almost twice its share of world GDP (170%).

Major sources of foreign investment have been, in order, the United States, Colombia, Canada, and the United Kingdom. About half of foreign investment has gone into agriculture, 20% into films, 8% into manufacturing, 7% into the garments and textiles industry, and 5% each into tourism and information processing.

### 39 ECONOMIC DEVELOPMENT

Since assuming office in 1992, Prime Minister Patterson has consolidated the market-oriented reforms initiated by his predecessor, Michael Manley, to make Jamaica a regional leader in economic reform. Patterson has eliminated most price controls, streamlined tax schedules, and privatized government enterprises. Tight monetary and fiscal policies under an International Monetary Fund (IMF) program have helped slow inflation and stabilize the exchange rate, but, as a result, economic growth has slowed and unemployment remains high. Jamaica's medium-term prospects depend largely on its ability to continue to attract foreign capital and limit speculation against the Jamaican dollar.

Inevitably, the contraction of economic output impacted adversely on the employment situation. The reduced performance of the traditionally labor-intensive apparel industry contributed significantly to rising unemployment as some 7,000 jobs, amounting to 25% of the employment in the industry, were lost. Along with job losses in the financial sector and other sectors, 1996 witnessed overall losses of employment amounting to 10% of the labor force and rising unemployment above the 20% mark. The unemployment rate was 16% in 2000. Problems in the financial sector continued in the new millennium, disturbing economic development.

Inflation fell from 25% in 1995 to 7% in 2001. Low levels of investment have hampered economic development. The government offers an extensive array of incentives to investors, however, including tax holidays and duty-free access for machinery and raw materials imported for certain enterprises. The government aims to encourage economic growth by stimulating growth in tourism, pursuing increased privatization, restructuring the financial sector, and lowering interest rates. The 11 September 2001 terrorist attacks on the United States and heavy floods that November and in May 2002 hurt the tourist industry in 2002–03. Government expenditures for tourist promotion, flood relief, and wages resulted in a less-than-expected lowering of the public debt. In 2002, the public debt stood at 129% of GDP. The government's monetary policy was tight in 2002, to keep inflation in single digits. The government put forth efforts to fight crime, improve infrastructure, and strengthen the competitiveness of the economy.

The Jamaican economy has failed to recover as quickly as expected from the floods produced by Hurricane Ivan in 2004. In addition, poor weather conditions in 2005 have negatively im-

pacted the agriculture sector and seriously decreased tourist numbers. At the same time, the mining industry has suffered capacity constraints. The economy is expected to recover in 2006 however, due to investments in the tourist industry and in mining. Remittances from abroad will encourage private consumption, which will most likely lead to an increase in imports.

#### 40 SOCIAL DEVELOPMENT

A social insurance system was first put in place in 1958 for sugar workers, and has been most recently updated in 2003 covering all employed and self-employed workers. Benefits are available for old age and disability, healthcare and maternity, workers' compensation, widows' and widowers' pensions, and grants. The program is financed by contributions from employers and employees. The government contributes as an employer. Maternity benefits amount to the minimum weekly wage for eight weeks. Workers' medical benefits include all necessary medical, surgical and rehabilitative treatment.

Jamaican women are guaranteed full equality under the constitution and the Employment Act, but cultural traditions, economic discrimination, and workplace sexual harassment prevent them from achieving it. Violence against women is widespread. The domestic violence law provides for restraining orders and other measures to combat spousal abuses. The government is committed to improving children's welfare. However, children are often forced to work due to economic hardship.

While Jamaica's human rights record has improved in recent years, serious abuses continue to occur. A major problem is lack of police accountability for human rights violations. Prison conditions are poor, but are open to inspection by international human rights organizations. Crime is a serious social problem.

#### 41 HEALTH

The central government has traditionally provided most medical services in Jamaica through the Ministry of Health. The National Health Services Act of 1997 authorized the decentralization of the health care system through the creation of regional health authorities and the restructuring of the national Ministry of Health. In 1996, the island had 364 government-operated primary health centers offering five levels of service. There are 23 public and nine small private hospitals. There were an estimated 85 physicians, 165 nurses, and 8 dentists per 100,000 people in 2004. Health care expenditure was estimated at 5.5% of GDP.

The government conducts a broad public health program, involving epidemic control, health education, industrial health protection, and campaigns against tuberculosis, venereal diseases, yaws, and malaria. These programs have brought about a significant decrease in the death rate. As of 2002 the death rate was estimated at 5.5 per 1,000 people. The infant mortality rate was 16.33 per 1,000 live births in 2005. Tuberculosis, hookworm, and venereal diseases remain the most prevalent diseases. Approximately 7% of Jamaica's children under five years old were considered malnourished and an estimated 11% of births were low birth weight. In 2000, 71% of the population had access to safe drinking water and 84% had adequate sanitation. Life expectancy averaged 73.33 years in 2005. The maternal mortality rate was 120 per 100,000 live births in 1998.

The HIV/AIDS prevalence was 1.20 per 100 adults in 2003. As of 2004, there were approximately 22,000 people living with HIV/AIDS in the country. There were an estimated 900 deaths from AIDS in 2003.

Heterosexual transmission predominates.

#### 42 HOUSING

Housing is one of the government's most pressing problems. While middle- and upper-income housing is comparable to that in neighboring areas of North America, facilities for low-income groups are poor by any standard. The problem has been aggravated by constant migration from the rural areas to the cities, causing the growth of urban slums. Most new urban housing is built of cinder block and steel on the peripheries of the cities. Rural housing is primarily built of wood and roofed with zinc sheeting. Squatter settlements surround the major cities of Jamaica. According to the 2001 census figures, there were 723,343 occupied private dwellings with an average of 3.6 people per household. About 137,900 housing units were added from 1991–2001.

#### 43 EDUCATION

Education is compulsory for six years of primary education. At the secondary level, there are two stages, one of three years and one of two. After this, students may enter a two-year program known as sixth form, which leads to completion of the Caribbean Examinations Council Secondary Education Certificate. In 2001, about 87% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 95% of age-eligible students. The same year, secondary school enrollment was about 75% of age-eligible students. The student-to-teacher ratio for primary school was at about 30:1 in 2003.

The University of the West Indies, founded in 1948 as the University College of the West Indies, achieved full university status in 1962 and serves all British Commonwealth Caribbean territories. There are faculties of arts, natural sciences, education, general studies, medicine, law, library studies, management studies, public administration, and social work at Jamaica's Mona campus; arts, natural sciences, social sciences, agriculture, engineering, international relations, and management studies at St. Augustine in Trinidad; and arts and natural sciences in Barbados. Higher technical education is provided at the College of Arts, Science, and Technology. Jamaica also has a school of agriculture, several teacher-training colleges and community colleges, and an automotive training school. In 2003, about 17% of the tertiary age population were enrolled in some type of higher education program, with 10% for men and 25% for women.

The Jamaica Movement for the Advancement of Literacy Foundation, known as JAMAL (formerly the National Literacy Board), has reached more than 100,000 students since its founding in 1972. The adult literacy rate for 2004 was estimated at about 87.6%, with 83.8% for men and 91.4% for women. As of 2003, public expenditure on education was estimated at 4.9% of GDP, or 9.5% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Jamaica Library Service provides free public library programs throughout the island and assists the Ministry of Education in sup-

plying books to primary-school libraries. The book stock of the Public Library Service totals about 2,666,000 volumes, 1,473,000 in schools and 1,193,000 in parish libraries. There are nearly 700 service points, including parish and branch libraries, book centers, and 14 bookmobiles. There are 507,000 volumes at the Mona campus of the University of the West Indies. The National Library in Kingston was established in 1979 and holds over 46,000 books, as well as collections of maps, newspapers, manuscripts, photographs, posters, and calendars.

The Institute of Jamaica, in Kingston, has a notable collection of artifacts and materials relating to the West Indies, as well as a museum and exhibition galleries focusing on natural history, military, and maritime studies. The National Gallery of Art, the African-Caribbean Institute, and Jamaica Memory Bank are also part of the Institute of Jamaica. There is a museum celebrating the life, music, and accomplishments of Bob Marley in Kingston, while Spanish Town houses the Jamaican's People's Museum of Craft and Technology and the Old Kings House Archaeological Museum. There is a botanical garden and zoo at Hope, on the outskirts of Kingston.

#### 45 MEDIA

The Post and Telegraphs Department provides daily postal deliveries to all parts of the island and operates Jamaica's internal telegraph service. Jamaica International Telecommunications (JAMINTEL) provides five major international services: telephone, telegraph, television, telex, and leased circuits. Telephone service is provided by the privately owned Jamaica Telephone Co. All telephone exchanges are automatic. In 2003, there were an estimated 170 mainline telephones for every 1,000 people; about 168,000 people were on a waiting list for telephone service installation. The same year, there were approximately 535 mobile phones in use for every 1,000 people.

Jamaica has two major broadcasting companies. The Radio Jamaica Limited broadcasts 24 hours a day over both AM and FM bands; it also owns an extensive wire network. Television Jamaica Limited, with similar transmitting facilities, broadcasts FM radio and television programs. Both are privately owned. As of 2001 there were 13 radio station and 3 television stations. In 2003, there were an estimated 795 radios and 374 television sets for every 1,000 people. The same year, there were 53.9 personal computers for every 1,000 people and 228 of every 1,000 people had access to the Internet. There were 24 secure Internet servers in the country in 2004.

As of 2002, there were four daily newspapers, all privately owned. The morning *Jamaica Gleaner* (circulation about 259,000 in 2002) and the evening *Daily Star* (circulation 49,500) are published by the Gleaner Co., which also publishes the *Sunday Gleaner* (est. 950,000) and the *Thursday Star* (60,000), an overseas weekly. There are also a number of weeklies and monthlies, and in addition, several papers are published by religious groups.

The constitution of Jamaica provides for free expression, including the rights of free speech and press, and the government is said to respect these rights in practice.

#### 46 ORGANIZATIONS

The producers of the main export crops are organized into associations, and there are also organizations of small farmers. The

Jamaica Agricultural Society, founded in 1895, is concerned with agricultural and rural development and works closely with the government. The cooperative movement has grown rapidly since World War II. All cooperatives must register with the government and are subject to supervision. Savings and credit groups are the most numerous, followed by marketing organizations. Consumer cooperatives have had little success. Outside the agricultural sector, the chambers of commerce have long been the most important business groups.

Societies and associations for the study and advancement of various branches of science and medicine have developed. These include the Medical Association of Jamaica and the Science Research Council. There are several other professional associations as well.

A wide variety of national youth organizations are active, including the Girl Guides Association, Jamaican Guild of Undergraduate Students, Jamaica Youth for Christ, Jamaica Environmental Youth Network, League of Young Socialists of Jamaica, National Council of YMCA's of Jamaica, Peoples National Party Youth Organization, Scout Association of Jamaica, 4-H clubs, Student Christian Movement of Jamaica, and the Workers Party of Jamaica Youth League. There are a number of sports associations and clubs throughout the country.

International organizations with active chapters include Amnesty International, the Society of St. Vincent de Paul, Habitat for Humanity, the Salvation Army, the Red Cross, and UNITAS of Jamaica.

#### 47 TOURISM, TRAVEL, AND RECREATION

Jamaica is firmly established as a center for tourists, mainly from North America. Greatly expanded air facilities linking Jamaica to the United States, Canada, and Europe were mainly responsible for the increase in tourism during the 1960s. Rising fuel costs and a weak international economy, as well as intermittent political unrest, contributed to a slowdown in the growth rate of the industry in the 1970s; between 1980 and 1986, however, the number of tourists increased by 68%, and tourism has continued to grow since early 2000. Some 1,350,285 tourists visited the island of Jamaica in 2003, about 79% of whom came from North America. The 20,827 hotel rooms with 43,909 beds had a 58% occupancy rate. The average length of stay was six nights.

Major tourist areas are the resort centers of Montego Bay and Ocho Rios. Cricket is the national sport, and excellent golf and water-sports facilities are available. All visitors are required to have a valid passport and some countries require a visa. Citizens of the United States, Canada, and other Commonwealth countries may stay up to six months with other valid identification. All visitors must have an onward/return ticket and proof of sufficient funds for their stay.

The US Department of State estimated the 2005 daily expenses for staying in Jamaica at US\$223.

#### 48 FAMOUS JAMAICANS

Names associated with Jamaica's early history are those of Europeans or of little-known figures such as Cudjoe, chief of the Maroons, who led his people in guerrilla warfare against the English in the 18th century. George William Gordon (1820–65), hanged by the British as a traitor, was an advocate of more humane treatment

for blacks. Jamaica-born Marcus Garvey (1887–1940), who went to the United States in 1916, achieved fame as the founder of the ill-fated United Negro Improvement Association. In the mid-20th century, Jamaicans whose names have become known abroad have been largely political and literary figures. Sir (William) Alexander Bustamante (1894–1977), trade unionist, political leader, and former prime minister of Jamaica, and his cousin and political adversary, Norman Washington Manley (1893–1969), a Rhodes scholar and noted attorney, were leading political figures. More recently, Norman Manley's son Michael (1923–97), prime minister during 1972–80, and Edward Seaga (b.US, 1930), prime minister from 1980–89, have dominated Jamaica's political life. P.J. Patterson (b.1935) was prime minister from 1992–2006. Portia Simpson-Miller (b.1945) succeeded him in March 2006. The novelists Roger Mais (1905–55), Vic Reid (1913–87), and John Hearne (1926–94) built reputations in England, and the poet Claude McKay (1890–1948) played an important role in the black literary renaissance in the United States. Performer and composer Robert Nesta ("Bob") Marley (1945–81) became internationally famous and was instrumental in popularizing reggae music outside Jamaica.

#### 4<sup>9</sup> DEPENDENCIES

Jamaica has no territories or colonies.

# MEXICO

United Mexican States  
*Estados Unidos Mexicanos*

**CAPITAL:** Mexico City (México)

**FLAG:** The national flag is a tricolor of green, white, and red vertical stripes; at the center of the white stripe, in brown and green, is an eagle with a snake in its beak, perched on a cactus.

**ANTHEM:** *Mexicanos, al grito de guerra (Mexicans, to the Cry of War).*

**MONETARY UNIT:** The peso (₱) is a paper currency of 100 centavos. There are coins of 1, 5, 10, 20, 50, 100, 500, 1,000, and 5,000 pesos and notes of 2,000, 5,000, 10,000, 20,000, 50,000, and 100,000 pesos. As of 1 January 1993, a new unit of currency (the new peso) was issued, worth 1,000 of the pesos that were used until 31 December 1992. ₱1 = \$0.09116 (or \$1 = ₱10.97) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some old Spanish units are still in use.

**HOLIDAYS:** New Year's Day, 1 January; Constitution Day, 5 February; Birthday of Benito Juárez, 21 March; Labor Day, 1 May; Anniversary of the Battle of Puebla (1862), 5 May; Opening of Congress and Presidential Address to the Nation, 1 September; Independence Day, 16 September; Columbus Day, 12 October; Revolution Day (1910), 20 November; Christmas, 25 December. Movable religious holidays include Holy Thursday, Good Friday, and Holy Saturday. All Souls' Day, 2 November, and Our Lady of Guadalupe Day, 12 December, are not statutory holidays but are widely celebrated.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated south of the United States on the North American continent, Mexico has an area of 1,972,550 sq km (761,606 sq mi), including many uninhabited islands off the E and W coasts, which have a combined area of 5,073 sq km (1,959 sq mi). Comparatively, the area occupied by Mexico is slightly less than three times the size of the state of Texas. Mexico extends about 3,200 km (2,000 mi) SSE–NNW and 1,060 km (660 mi) ENE–WSW. Bordered on the N by the United States, on the E by the Gulf of Mexico (including the Bay of Campeche), the Caribbean Sea, Belize, and Guatemala and on the S and W by the Pacific Ocean, Mexico has a total land boundary length of 4,353 km (2,704 mi) and a coastline of 9,330 km (5,797 mi).

Mexico's capital city, Mexico City, is located in the south central part of the country.

## <sup>2</sup>TOPOGRAPHY

Mexico's dominant geographic feature is the great highland central plateau, which occupies most of the width of the country, extending from the US border to the Isthmus of Tehuantepec. It averages 1,219 m (4,000 ft) in elevation in the north to over 2,438 m (8,000 ft) in the central part of the country. The plateau is enclosed by two high cordilleras (mountain chains), the Sierra Madre Oriental on the east and the Sierra Madre Occidental on the west, each separated from the coast by lowland plains. The ranges rise to over 3,000 m (10,000 ft), and some volcanic peaks exceed 5,000 m (16,400 ft); Pico de Orizaba, or Citlaltépetl (5,700 m/18,702 ft), Popocatepetl (5,452 m/17,887 ft), and Ixtaccíhuatl (5,286 m/17,342 ft) are the highest. The plateau falls to the low Isthmus

of Tehuantepec and then rises again to Chiapas Highland to the south. The lowlands of Tabasco, Campeche, and Yucatán lie north and east of Chiapas.

There are no important inland waterways. Except for the Río Grande (known as the Río Bravo del Norte in Mexico), which extends for about 2,100 km (1,300 m) of the boundary with the United States, and the Papaloapan, an important source of waterpower, the other rivers are short; they are the Lerma, Santiago, Usumacinta (part of the boundary with Guatemala), Grijalva, Balsas, Pánuco, and the Soto la Marina. The largest lake in Mexico is Lake Chapala, in Jalisco State, covering about 1,686 sq km (651 sq mi).

Located along the boundaries of the North American, Cocos, and Pacific tectonic plates, Mexico is part of the "Ring of Fire," a band of seismically active lands that surround the Pacific Ocean. One of the strongest earthquakes in history occurred in Michoacán on 19 September 1985. The 8.0 magnitude quake triggered deadly landslides and a tsunami with wave heights of up to 3 meters. The official death count was reported as about 9,500 people, with an additional 30,000 reported injuries. Another 8.0 magnitude quake occurred near the coast of Jalisco on 9 October 1995; though it was recorded as the largest earthquake of the year worldwide, only about 49 deaths were reported. A 7.6 magnitude earthquake in Colima on 22 January 2003 left about 29 dead, 300 injured, and 10,000 homeless.

## <sup>3</sup>CLIMATE

The climate varies according to altitude and rainfall. The tropical and subtropical zone (tierra caliente), ranging from sea level to about 900 m (3,000 ft), consists of the coastal plains, the Yuca-

tán Peninsula, and the lower areas of southern Mexico. These areas have a mean temperature of 25–27°C (77–81°F), with a minimum of 16°C (61°F) and a maximum of almost 49°C (120°F). The temperate zone (tierra templada), at elevations of 900–1,800 m (3,000–6,000 ft), has a temperate-to-warm climate and a mean temperature of 21°C (70°F). Mexico City and most other important population centers are in the cool zone (tierra fría), starting at about 1,800 m (6,000 ft), with a mean annual temperature of 17°C (63°F). The highest mountain peaks are always covered with snow.

Most of Mexico is deficient in rainfall, but two coastal belts covering about 12% of the total area—from Tampico south along the Gulf of Mexico and from the state of Colima south along the Pacific—receive an average of from 99–300 cm (39–118 in) per year. Annual rainfall may exceed 500 cm (200 in) in Tabasco and Chiapas, while in parts of Baja California, virtually no rain falls. Precipitation is adequate in central Mexico except at altitudes above 1,800 m (6,000 ft), while the northern states are semidesert or desert. Most of the country receives its heaviest rainfall during the summer months.

#### **4 FLORA AND FAUNA**

Plant and animal life differs sharply with Mexico's varied climate and topography. The coastal plains are covered with a tropical rain forest, which merges into subtropical and temperate growth as the plateau is ascended. In the northern states there is a dry steppe vegetation, with desert flora over much of the area. Oaks and conifers are found in mixed forest regions along the mountain slopes. The Yucatán Peninsula has a scrubby vegetation.

Among the wild animals are the armadillo, tapir, opossum, puma, jaguar, bear, and several species of monkey, deer, and boar. Poisonous snakes and harmful insects are found. In the coastal marshes, malarial mosquitoes pose a problem. The only remaining elephant seals in the world are on Guadalupe Island west of Baja California. As of 2002, there were at least 491 species of mammals, 440 species of birds, and over 26,000 species of plants throughout the country.

#### **5 ENVIRONMENT**

One of Mexico's most widespread environmental problems is soil erosion; slash-and-burn agricultural practices, especially in the tropical zones, have also contributed to deforestation. Mexico loses its forest at a rate of about 1.1% annually due to agricultural and industrial expansion. Mexico has the fourth most extensive mangrove area in the world, covering approximately one million hectares. Mexico City, located more than 2,250 m (7,400 ft) above sea level and surrounded by mountains, has chronic smog, aggravated by the presence in the metropolitan region of thousands of factories, more than two million motor vehicles, and by open burning of garbage by slum dwellers.

Cities along the US-Mexican border also suffer from serious air pollution. In 1996, Mexico's level of industrial carbon dioxide emissions totaled 348.1 million metric tons. In 2000, total carbon dioxide emissions was at 424 million metric tons. Transportation vehicles are responsible for about 76% of the air pollution.

Water pollution results from the combined impact of industrial, agricultural, and public waste. Mexico's cities have produced over 12.9 million tons of solid waste per year along with about 164 mil-

lion tons of industrial waste. Mexico has 409 cu km of renewable water resources. In the north, fresh water resources are scarce and polluted; in the central southeast region they are frequently inaccessible and of poor quality. About 72% of the nation's rural dwellers have pure drinking water.

An environmental protection statute adopted in 1971 has not been widely enforced; however, SEDUE, which was created in 1982, is fostering a more coherent approach to environmental issues. In 2003, about 10% of the total land area was protected. Mexico has three natural UNESCO World Heritage Sites and 58 Ramsar wetland sites. The Secretariat for Urban Development and Ecology (SEDUE) has the principal environmental responsibility.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 72 types of mammals, 57 species of birds, 21 types of reptiles, 190 species of amphibians, 106 species of fish, 5 types of mollusks, 36 species of other invertebrates, and 261 species of plants. Endangered species in Mexico include the volcano rabbit, Mexican grizzly bear (possibly extinct), Lower California pronghorn, Sonoran pronghorn, imperial woodpecker, southern bald eagle, American peregrine falcon, whooping crane, light-footed clapper rail, California least tern, maroon-fronted parrot, ridge-nosed rattlesnake, five species of turtle (green sea, hawksbill, Kemp's ridley, olive ridley, and leatherback), two species of crocodile (American and Morelet's), and totoaba. At least 30 species have become extinct, including the Mexican dace, Durango shiner, Tlaloc's leopard frog, and the Caribbean monk seal.

#### **6 POPULATION**

The population of Mexico in 2005 was estimated by the United Nations (UN) at 107,029,000, which placed it at number 11 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 31% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.9%, a rate the government viewed as too high. The projected population for the year 2025 was 129,381,000. The population density was 55 per sq km (142 per sq mi).

The UN estimated that 75% of the population lived in urban areas in 2005 (with 32% of the population concentrated in 14 urban areas), and that urban areas were growing at an annual rate of 1.62%. The capital city, Mexico City (México), had a population of 18,660,000 in that year. Other major cities and their estimated populations were Guadalajara, 3,905,000; Monterrey, 3,517,000; Toluca, 1,987,000; Puebla, 1,888,000; Tijuana, 1,570,000; Ciudad Juárez, 1,469,000; León, 1,438,000; Torreón, 1,057,000; San Luis Potosí, 927,000; and the Federal District, 500,000.

#### **7 MIGRATION**

As of 2000, the US Census Bureau estimated that 18,382,291 persons of Mexican ancestry were living in the United States, up from 8,740,000 in 1980. Formerly, under an agreement between the United States and Mexico, there was a large annual movement of Mexican agricultural laborers (braceros) into the United States. The United States has since banned such border crossings, and the 1986 Immigration Act imposed stiff penalties on employers who hire illegal aliens. Nevertheless, hundreds of thousands of illegal

LOCATION: 14°32' to 32°43' N; 86°42' to 118°22' W. BOUNDARY LENGTHS: US, 3,326 kilometers (2,067 miles); Gulf of Mexico and Caribbean coastline, 2,070 kilometers (1,286 miles); Belize, 251 kilometers (156 miles); Guatemala, 871 kilometers (541 miles); Pacific coastline (including Baja California), 7,339 kilometers (4,560 miles). TERRITORIAL SEA LIMIT: 12 miles.

crossings still take place annually. According to *Migration Information Source*, in 2000 more than 1.6 million people were apprehended at the US-Mexico border. Bilateral attempts to deal with migration issues disappeared after 11 September 2001. In 2004, US President George W. Bush proposed a temporary worker program, acknowledging the US economy's demand for migrants. However, these proposals held no special relationship to Mexico-US relations, nor a means for immigrants to earn US residence. The pertinence to Mexican migration is that of the estimated 6.3 million unauthorized foreigners in the United States, about 57% are Mexicans. In January 2005 the Mexican government published a guide for Mexican immigrants to enter the United States safely. In that same year President Bush supported immigration reform by improving border security and then legalizing unauthorized foreigners in the United States. Also, in that same year, the Real ID Act established national standards for drivers' licenses, requiring legal residence in the United States within three years of application.

In the 1970s, there was substantial internal migration to the frontier areas, especially to the northern border states, to Quin-

tana Roo and Guerrero in the south, and to government colonization projects such as Papaloapan, Veracruz, where the construction of irrigation, flood control, and hydroelectric projects attracted many people. Most notable, however, is the migration of rural inhabitants to Mexico's already overcrowded cities, creating huge urban slums, especially in Mexico City. Guadalajara and Monterrey, although growing rapidly, are attempting to use Mexico City's experience to plan urban and industrial growth. The great disparity between rural-zone, low-income, marginal groups producing only for their own consumption and highly developed urban and industrial sectors has produced acute social problems. Mexico remains a country of destination for Central American migrants and a country of transit for the considerable mixed migratory movement toward the North.

Mexico has long had a liberal asylum policy; the most famous exile in Mexico was probably Leon Trotsky, a revolutionary exiled from the USSR in 1929 who lived in Mexico City from 1937 until his assassination in 1940. In the 1930s and 1940s, Spanish republican refugees in the tens of thousands settled in Mexico, as did thousands of refugees from World War II. In the 1970s and 1980s,

many victims of Latin American military regimes fled to Mexico. By the end of 1993, the number of persons from Guatemala, El Salvador, and other Central American countries living in Mexico was about 400,000, not counting 45,000 Guatemalan refugees living in camps. Over 13,000 Guatemalans repatriated in 1995 and 1996. In 2004 there were 161 asylum seekers in Mexico. In the same year 3,400 Mexicans sought asylum in Canada and 15,431 in the United States.

By 30 June 1999, 42,652 Guatemalan refugees had returned to Guatemala from Mexico. At that time, about 22,500 Guatemalan refugees remained in the southeastern states of Campeche (7,100), Quintana Roo (2,900), and Chiapas (12,500). These refugees were in the process of gaining full legal and socioeconomic integration under the Mexican government's Migratory Stabilization Plan, enacted in August 1996. Nearly 2,200 refugees in Campeche and Quintana Roo had already been naturalized in 1999; another 1,800 applications for naturalization were being processed.

As of 2004, Mexico was host to some 4,343 refugees, arriving from Latin American countries, Central Asia, the Middle East, and Africa. Most were in urban areas. In addition, there were 12,000 internally displaced persons mainly in the eastern Chiapas region; there as a result of the government's suppression in 1994 of the Zapatista uprising. In November 2004, the Mexico Declaration and Plan of Action to Strengthen the International Protection of Refugees in Latin America was adopted by the governments of the region.

Mexico is the country where the greatest number of US citizens, estimated as 200,000, live outside the United States. This may be due to the growing economic and business interdependence of the two countries under the North American Free Trade Agreement (NAFTA), and also that Mexico is considered an excellent choice for retirees. The official figures for foreign-born citizens in Mexico are 493,000 (since 2004), with a majority (86.9%) of these born in the United States (with the exception of Chiapas, where the majority of immigrants are from Central America).

In 2005, the net migration rate was an estimated -4.57 migrants per 1,000 population. In 2004, Mexico ranked second among the countries of the world in the amount of remittances from migrant workers, \$17 billion up from about \$6 billion in 2000.

## **8** ETHNIC GROUPS

The people of Mexico are mostly mestizos, a mixture of indigenous Amerindian and Spanish heritage. There are small numbers of persons of other European heritages, and small numbers of blacks are found in Veracruz and Acapulco. At last estimates, about 60% of the population was mestizo, 30% pure Amerindian, 9% pure white, and 1% other. Amerindian influence on Mexican cultural, economic, and political life is very strong.

## **9** LANGUAGES

Spanish, the official language, is spoken by nearly the entire population, thus giving Mexico the world's largest Spanish-speaking community; more Mexicans speak Spanish than Spaniards. Only a small number of inhabitants, about 1% of the population according to last estimate, speak only indigenous Amerindian languages or dialects. A larger percentage, some 7.5% at last estimate, speak some Amerindian language. There are at least 31 different Amer-

indian language groups, the principal languages being Nahuatl, Maya, Zapotec, Otomi, and Mixtec.

## **10** RELIGIONS

According to the 2000 census, about 88% of the Mexican population were at least nominally affiliated with the Roman Catholic Church and about 6% were Protestant. Protestant denominations represented include Presbyterians, Jehovah's Witnesses, Seventh-Day Adventists, Mormons, Lutherans, Methodists, Baptists, and Anglicans. There are small Greek and Russian Orthodox communities. There are also small numbers of Jews, Buddhists, and Muslims. While professing the Roman Catholic faith, a number of indigenous people include strong pre-Hispanic Mayan elements in their religion.

Roman Catholicism has increased greatly in activity since the 1940s; there have been religious processions and considerable construction of new churches in major cities. The bitter anticlericalism of the Mexican Revolution, of the 1917 constitution, and of the administration of President Plutarco Elias Calles (1924–28) had lessened by the 1960s. However, the constitution still stipulates that members of the clergy are prohibited from holding public offices. In 1992, full diplomatic relations with the Vatican were established.

Following an amendment to the constitution adopted in 1991, ecclesiastical corporations now have legal rights and can acquire property. All church buildings, including schools, however, remain national property. Priests now have political rights, and religious control over both public and private education prohibited earlier under the 1917 constitution has been restored. Religious groups must register with the Director of Religious Affairs (DAR) of the Federal Secretariat of Government. The DAR is also responsible for promoting and enforcing rules of religious tolerance. Certain Christian holidays are recognized as national holidays.

## **11** TRANSPORTATION

The local, state, and federal Mexican road system amounted to 349,038 km (217,102 mi) in 2003, of which 116,928 km (72,729 mi) were paved, including 6,979 km (4,341 mi) of expressways. Most roads are engineered for year-round service. In 2003 there were 19,846,100 registered vehicles, including 13,600,100 passenger cars and 6,246,000 commercial vehicles.

The country's major railroad system is the National Railway of Mexico. In 2004, the total route length was 17,634 km (10,968 mi) all standard gauge, and consisted of six integrated lines. A railway improvement program was carried out during 1975–79, but in the mid-1980s, the network was still in disrepair. The Mexico City subway system, totaling 120 km (75 mi), suffers from overcrowding. The system's technology, however, is being exported to other developing countries.

Mexico's 2,900 km (1,802 mi) of inland waterways and lakes, while navigable, are not important for transportation, but ocean and coastal shipping is significant. Of Mexico's 102 ocean ports, the most important are Tampico and Veracruz, on the Gulf of Mexico; Mazatlan and Manzanillo, on the Pacific coast; and Guayamas, on the Gulf of California. These five ports together handle about 80% of total general cargo tonnage for Mexico. Most Mexican ships are operated by the government-owned Maritime Transport of Mexico. The merchant marine in 2005 had 57 vessels of 1,000 GRT or

more, totaling 649,389 GRT. The oil tanker fleet, owned and operated by Mexican Petroleum (Petróleos Mexicanos-PEMEX), the government oil monopoly, included 26 tankers.

Air transportation in Mexico has developed rapidly. In 2004 there were an estimated 1,833 airports and airfields. As of 2005, a total of 227 had permanent-surface runways, and there was also one heliport. Principal airports include Juan N. Alvarez at Acapulco, Cancun International at Cancun, Cozumel International at Cozumel, Miguel Hidalgo at Guadalajara, Gen. R. Buelna at Mazatlan, Manuel C. Rejon at Merida, Benito Juarez at Mexico City, Gral. Escobedo at Monterrey, and G. Diaz Ordaz at Puerto Vallarta. Mexican commercial aircraft carried about 20.688 million passengers on scheduled domestic and international flights in 2003. The main airline company is the newly privatized Aeroméxico.

## 12 HISTORY

The land now known as Mexico was inhabited by many of the most advanced Amerindian cultures of the ancient Americas. The Mayan civilization in the Yucatán Peninsula began about 2500 BC, flourished about AD 300–900, and then declined until its conquest by the Spanish. The Mayas had a well-developed calendar and a concept of zero; skillful in the construction of stone buildings and the carving of stone monuments, they built great cities at Chichen Itzá, Mayapán, Uxmal, and many other sites. About 1200–400 BC the Olmecs had a civilization with its center at La Venta, featuring giant carved stone heads and the first use of pyramids for worship among the Amerindians. In the early 10th century AD the Toltecs, under Ce Acatl Topiltzin, founded their capital of Tollan (now Tula) and made the Nahuatl culture predominant in the Valley of Mexico until the early 13th century. At that time, the Aztecs, another Nahuatl tribe, gained control.

The Aztec Empire, with its capital at Tenochtitlán (now Mexico City), founded in 1325, was essentially a confederation of allied and tributary communities. Skilled in architecture, engineering, mathematics, weaving, and metalworking, the Aztecs had a powerful priesthood and a complex pantheon dominated by the sun god and war god Huitzilopochtli, to whom prisoners captured from other tribes were sacrificed.

The empire was at its height in 1519, when the Spanish conquistadores, under Hernán Cortés, having set out from Cuba, landed at modern Veracruz; with superior weapons and the complicity of local chieftains, the Spaniards had conquered Mexico by 1521. First, Cortés imprisoned the emperor Montezuma II, who was wounded by stoning when he was released in an attempt to quell an uprising against the Spanish. Then Montezuma's nephew, Guatemotzin, drove the Spanish from Tenochtitlán on 30 June 1520, now called "la noche triste" ("the sad night"), during which Montezuma died, probably at the hands of the Spaniards. Eventually, Cortés returned to Tenochtitlán and defeated Guatemotzin.

The Spaniards brought Roman Catholicism to Mexico, imposed their legal and economic system on the country, and enslaved many of the inhabitants. The combination of Spanish oppression and the smallpox, influenza, and measles the conquistadores brought with them reduced the Amerindian population from an estimated 5 million in 1500 to 3.5 million a century later; not until late in the 18th century did Mexico match its pre-Columbian population. Gradually, the Spaniards extended their territory south-

ward, to include, for a time, the captaincy-general of Guatemala, and northward as far as California, Nevada, and Colorado.

Spain ruled Mexico as the viceroyalty of New Spain for three centuries. Continued political abuses and Amerindian enslavement combined with the Napoleonic invasion of Spain in 1807 and consequential political uncertainty to produce a movement for independence. In 1810, a revolt against Spain was initiated by a priest, Miguel Hidalgo y Costilla, and a captain, Ignacio José Allende. Both were captured and shot by loyalists in 1811, but the revolt continued through another priest, José María Morelos y Pavón, who proclaimed Mexico an independent republic in 1813. Morelos and his followers were defeated and he was shot in 1815, but a swing toward liberalism in Spain in 1820 altered the political picture, leading Mexico's conservative oligarchy to favor independence as a way of preserving its power. In 1821, under the leadership of a rebel, Vicente Guerrero, and a former loyalist, Agustín de Iturbide, independence was again proclaimed and this time secured. Iturbide proclaimed himself emperor in 1822 but was deposed in 1823, when a republic was established; when he returned in the following year, he was captured and shot.

In the next 25 years, there were at least 30 changes of government. Gen. Antonio López de Santa Anna, who had participated in the overthrow of Iturbide, became the dominant figure in the 1830s and 1840s and attempted to centralize the new government. Texas gained its independence from Mexico in 1836 as a result of the defeat of Santa Anna at San Jacinto; in 1845, after a period as the Republic of Texas, it joined the United States. Mexico lost the subsequent war with the United States (1846–48), which began over a dispute about the border of Texas; under the Treaty of Guadalupe Hidalgo, Mexico recognized the Río Grande as the boundary of Texas and ceded half its territory (much of the present western United States) in return for \$45 million. In 1853, the United States purchased a small portion of land from Mexico for another \$10 million, which was widely regarded as further compensation for the land lost in the war.

A reform government was established in 1855 after a revolt against Santa Anna, and a new liberal constitution was adopted in 1857. Included in the reforms were laws abolishing military and clerical immunities. Article 27 prohibited corporations from holding land, and Article 123 established federal authority in matters of worship and religious discipline. Benito Juárez, the leader of the reform movement, became president in 1858. In 1861, during a period of civil strife, French troops under Emperor Napoleon III intervened in Mexico, ostensibly because Mexico had not paid its debts; in 1863, they captured Mexico City and installed Archduke Maximilian of Austria as emperor, with his Belgian wife, Carlota, as empress. After the French troops withdrew in 1866, partly because the United States protested their presence and partly because Napoleon needed them in France, forces loyal to Benito Juárez and led by José de la Cruz Porfirio Díaz regained control of the country. Maximilian was executed and the republic restored in 1867; Carlota, who had returned to Europe to plead with Napoleon to protect her husband, was driven mad by his death.

Díaz twice ran for president, in 1867 and 1871, each time leading an abortive military uprising after his electoral defeat. Finally, in 1876, Díaz seized power and assumed the presidency, a position he held (except for 1880–84, when a subordinate exercised nominal power) until 1911. Under his dictatorship, Mexico modern-

ized by opening its doors to foreign investors and managers. At the same time, the so-called Pax Porfiriana meant suppression of all dissent, by persuasion or by force, and a complete lack of concern with improving the life of the Mexican peasant; an elite corps of mounted police, the *Rurales*, held the rural areas in check. As the president's aging circle of associates, called *Científicos* (Scientists), clung tenaciously to power, resentment among the middle classes and the peasantry continued to grow.

After Díaz was once again reelected to the presidency in 1910, the Mexican Revolution erupted. This revolution, which by 1917 had claimed perhaps one million lives, was, on the one hand, a protest by middle-class political liberals against the stultifying Díaz regime and, on the other, a massive popular rebellion of land-hungry peasants. The interests of these two groups sometimes coincided but more often clashed, accounting for the turmoil and confusion of those years. The spark that touched off the revolution was the proclamation on 5 October 1910 of the Plan of San Luis Potosí, in which the liberal politician Francisco Indalecio Madero, who had lost the vote to Díaz, called for nullification of the election. Riots in Mexico City forced Díaz to resign and leave the country in 1911, and Madero was elected president later in that year. Meanwhile, popular revolts led by Emiliano Zapata and Pancho Villa, who refused to submit to Madero's authority, led the country into chaos. Madero, accused by the Zapatistas of not giving land to the peasants, was ousted and murdered in 1913 by Gen. Victoriano Huerta, who had conspired with the rebels.

When Huerta, a corrupt dictator, was driven from power by Venustiano Carranza and Álvaro Obregón in July 1914, a full-scale civil war broke out. This phase of the revolution ended in February 1917, when a new constitution was proclaimed; this nationalistic, anticlerical document, considered by some to be the world's first socialist constitution, embodied the principle of the one-term presidency in order to prevent the recurrence of a Díaz-type dictatorship. Article 3 established government rather than church control over schools; Article 27 provided for public ownership of land, water, and minerals; and Article 123 ensured basic labor rights.

Carranza was elected president in 1917, but for the next decade Mexico was still beset by political instability and fighting between various revolutionary groups. Most of the revolutionary leaders met with violent deaths. Zapata, still regarded by many as a revolutionary hero, was assassinated in 1919, and both Carranza and Obregón (who was president during 1920–24) lost their lives in military coups.

Political stability at last came to Mexico with the formation in 1929 of an official government party that incorporated most of the social groups that had participated in the revolution; it has been known since 1945 as the Institutional Revolutionary Party (*Partido Revolucionario Institucional*—PRI). Although its main pillars were, at least in theory, the peasants, workers, and other popular movements, it has also been closely allied with business since the 1940s. The most outstanding political leader of the post-1929 era was Lázaro Cárdenas, president during 1934–40, who sought with some success to realize the social goals of the revolution. His reforms included massive land redistribution, establishment of labor unions with strong bargaining positions, extension of education to remote areas of the country, and in 1938, the expropriation of foreign petroleum holdings, mostly US-owned. A compensa-

tion agreement with the United States was reached in 1944, when the two nations were World War II allies.

The postwar years have been marked by political stability, economic expansion, and the rise of the middle classes, but also by general neglect of the poorest segments of the population. One serious political disturbance came in 1968, the year the Summer Olympics were held in Mexico City, when the army and police clashed with students protesting political repression and human rights abuses. The number of students shot and killed has never been revealed. Yet, for many Mexicans, the murder of the students marked the unraveling of the authoritarian PRI, which could no longer hold on to power without resorting to extreme violence.

An economic boom during the late 1970s, brought about by huge oil export earnings, benefited a small percentage of the people, but millions of peasants continued to be only slightly better off than in 1910. Declining world oil prices in 1981 led to a severe financial crisis in 1982, a year of presidential elections. Mexico's new president, Miguel de la Madrid Hurtado, immediately introduced a series of austerity measures and promised a crackdown on corruption, which has long been a problem in Mexico. After the arrest of two government officials for misuse of public funds and fraud, the anticorruption drive appeared to languish; furthermore, public resentment of austerity increased. In 1985, when the PRI was accused of electoral malpractice in local and congressional elections, resentment boiled over in violent public protest. In October 1987, the PRI named Carlos Salinas de Gortari, a 39-year-old economist, as its candidate to succeed President de la Madrid. In September 1993, changes in federal electoral law—including an autonomous Federal Electoral Institute—were designed to make future elections more tamperproof. More transparent elections made it easier for more Mexicans to believe in their electoral system.

Mexico City was devastated by a major earthquake in September 1985. The official death toll was 7,000, although unofficial estimates were as high as 20,000; in addition, 300,000 were left homeless. There was widespread protest over the fact that many of the buildings destroyed had been built in violation of construction regulations and claims that foreign emergency aid had been misappropriated by the government.

In August 1992, formal negotiations regarding the North American Free Trade Agreement were concluded, whereby Mexico would join the United States and Canada in the elimination of trade barriers, the promotion of fair competition, and increased investment opportunities. NAFTA went into effect on 1 January 1994.

In January 1994, within hours after the NAFTA agreement went into effect, a primarily Amerindian group calling itself the Zapatista Army of National Liberation resorted to an armed uprising against the government. They initially took control of four municipalities in the State of Chiapas to protest what they regarded as government failure to effectively deal with regional social and economic problems. Two months after the Zapatista uprising, the nation witnessed its first high-level political assassination in over 60 years when PRI presidential candidate Luis Donaldo Colosio was murdered in Tijuana. His replacement, Ernesto Zedillo, was elected at the end of the year in a closely monitored campaign.

The devaluation of the peso in late December of 1994 threw the nation into economic turmoil, triggering its worst recession

in over half a century. Over a million Mexicans lost their jobs, and the country's gross domestic product plummeted 10.5% in the first months of 1995. The United States responded to its neighbor's distress with a multimillion-dollar bailout that averted even worse damage to the economy.

The discontent bred by this economic crisis, together with continued high levels of poverty, rising crime and corruption, and political instability, led in 1997 to a rejection of Mexico's nearly 70-year-old system of one-party rule. In June of that year, the PRI lost its majority in the lower house of the National Congress, its control superseded by the combined power of the leftist Party of the Democratic Revolution (PRD) and the conservative National Action Party (PAN), as well as two smaller parties. The PRD obtained one of its most important victories in Mexico City, where former presidential candidate Cuauhtémoc Cardenas Solórzano was elected mayor. Both parties, especially the PAN, went on to win important gubernatorial seats throughout the country.

Traditionally, the president selected his successor from the PRI ranks, a practice known as the *dedazo*, which means pointing the presidential finger at the new candidate. But in 1999, Zedillo said there would be no *dedazo*, and replaced the practice with a presidential primary, which was won by party loyalist Francisco Labastida Ochoa. Leading to the 2 July presidential election, Labastida was facing increasing competition from PAN candidate Vicente Fox Quesada. A former Coca-Cola executive and governor of Guanajuato, Fox was gaining a wide following by openly attacking the PRI, even discussing sensitive issues that others would not touch, including the PRI's connections to illegal drug trafficking. In the meantime, Cardenas, who resigned as mayor of Mexico City in September 1999, was losing support in his third try at the presidency.

On 2 July 2000, after over seven decades of PRI rule, Fox was elected president in an upsetting victory over Labastida. Although he did not receive a majority of the votes, Fox won by a 7% margin. The vote was the cleanest in Mexico's history, passing standards of freedom and fairness, as well as remaining peaceful. Fox drew support from beyond his conservative PAN party, indicating voter support for his commitment to tackling government corruption and economic reform. Yet, by mid-2003, Fox's tenure had proven a disappointment. The president lost popularity after his two most symbolic legislative initiatives failed to pass the divided congress. First, the president failed to solve the indigenous revolt in Chiapas. Despite an effort to pass legislation championed by the Zapatista Army, Fox's own PAN party killed the initiative. Second, a tax reform aimed at increasing government revenues to beef up social spending was also significantly scaled back by the PRI and PRD opposition. President Fox's ambitious legislative and government agendas moved slowly and many Mexicans disapproved of the gridlock between the executive and the divided congress. Yet, the 2003 midterm parliamentary elections did not drastically change the composition of congress. Thus, President Fox was unable to push his reform package forward and will likely leave the presidency having fulfilled very few of his electoral promises.

The presidential elections, scheduled for 2 July 2006, were likely to reflect once again the three-way divide in the Mexican electorate. Former Mexico City mayor Andrés Manuel López Obrador stood as favorite to win with a plurality of votes. PAN's Felipe Calderón promised continuity of the good policies implemented

by President Fox but needed to fight against the perception that Fox did not fulfill all of his electoral promises. PRI candidate Roberto Madrazo Pintado hoped to recapture the presidency for his party, but accusations of corruption and other scandals that have hurt the party were expected to play against his chances. In any event, the election was likely result in a divided congress and, thus, whoever was elected president would need to work with opposition parties to advance his agenda. Ever since the PRI lost control of the presidency, politics in Mexico have been characterized by gridlock. No single party has achieved commanding control of the executive and legislative branches, and obstructionist politics have dominated relations between the president and congress.

### 13 GOVERNMENT

Mexico is a federal republic consisting of 31 states and the Federal District. Its basic political institutions are defined in the constitution of 1917.

The president, elected for a six-year term (by universal adult suffrage beginning at age 18) and forever ineligible for reelection, appoints the attorney-general and a cabinet, which may vary in number. Although the constitution established separation of powers, in practice the Mexican chief executive traditionally dominated the legislative and judicial branches. Since the president is head of state, head of government, and commander-in-chief of the armed forces, and since the PRI enjoyed a clear majority in congress from 1934 to 1997, it was said that the only limit placed on the power of a president of Mexico is that of time—six years in office. Yet, as the PRI lost control of congress in 1997 and lost the presidency in 2000, real separation of powers has emerged under the 1917 constitution. Congress has become more powerful, although it has in practice used the power to obstruct, rather than influence, the executive's agenda. With the approval of congress, the president may intervene in the states, restricting their independence; also, under congressional authorization, he has certain legislative authority, especially in the regulation and development of commerce and industry. There is no vice president. If the president dies or is removed from office, congress is constitutionally empowered to elect a provisional president.

The bicameral congress, also elected by direct universal suffrage, is composed of a Senate (*Cámara de Senadores*), expanded from 64 to 128 members in 1994 (four from each state and four from the Federal District), and a Chamber of Deputies (*Cámara de Diputados*) made up of 500 members. Three hundred single-member districts represent each 250,000 people or fraction above 100,000, with a minimum of two districts in each state; 200 members are allocated by proportional representation. No party is allowed to have more than 60% of the seats in the Chamber of Deputies. Senators are elected for six years (half the Senate is elected every three years) and deputies for three years, and both groups are ineligible for immediate reelection. All legislators have alternates who temporarily occupy their posts when they make use of their constitutional prerogative to request a leave of absence. The congress may legislate on all matters pertaining to the national government and the Federal District.

### 14 POLITICAL PARTIES

From 1929 to 1997, the majority party and the only political group to gain national significance was the Institutional Revolution-

ary Party (Partido Revolucionario Institucional—PRI), formerly called the National Revolutionary Party (Partido Nacional Revolucionario) and the Party of the Mexican Revolution (Partido de la Revolución Mexicana). Three large pressure groups operate within the PRI: labor, the peasantry, and the “popular” sector (such as bureaucrats, teachers, and small business people). In 1997, for the first time in nearly 70 years, the PRI failed to retain a majority of seats in the 500-member lower house of congress, the Chamber of Deputies.

Of the major opposition parties, Party of the Democratic Revolution (PRD) advocates active government intervention in economic matters and questions close relations with the United States. The PRD has also voiced concerns about negative side effects of free trade policies. The PRD formed in 1991 and has gained electoral strength in urban areas, particularly Mexico City, whose local government elections it has dominated.

The conservative National Action Party (PAN) favors a reduced government role in the economy, backs close ties with the United States, and is closely linked to the Catholic Church. Vicente Fox, of the conservative PAN party, was elected on 2 July 2000, becoming the first non-PRI president in 70 years. That year, PAN also became the largest party in the 500-member Chamber of Deputies, with 223 seats. In the Senate, the PRI won 60 seats in the 128-member Chamber. The PRD won 53 seats in the Chamber and 17 in the Senate. Thus, no party holds majority control on either chamber of the Mexican congress. Yet, in the 2003 midterm elections, the PRI won a plurality of votes and secured 224 seats, just short of a majority. The PAN ended up in second place with 153 seats and the PRD obtained 95 seats.

## 15 LOCAL GOVERNMENT

Twenty-nine states of Mexico were created as administrative divisions by the constitution of 1917, which grants them those powers not expressly vested in the federal government; Mexico's two remaining territories, Baja California Sur and Quintana Roo, achieved statehood on 9 October 1974, raising the total to 31. Each state has a constitution, a governor elected for six years, and a unicameral legislature, with representatives elected by district vote in proportion to population. An ordinary session of the legislature is held annually, and extraordinary sessions may be called by the governor or the permanent committee. Bills may be introduced by legislators, by the governor, by the state supreme court, and by municipalities (a unit comparable to a US county). In addition to the 31 states, there is also one federal district comprising Mexico City, whose governor serves as a member of the cabinet. Many state services are supported by federal subsidies.

The principal unit of state government is the municipality. Mexico's 2,378 municipalities are governed by municipal presidents and municipal councils. State governors generally select the nominees for the municipal elections. Municipal budgets are approved by the respective state governors. During the seven decades of PRI rule, some local government elections were competitive. Until 1997, the president appointed the mayor of Mexico City. Political reforms allowed the first open elections in 1997. PRD candidate Cuauhtémoc Cardenas Solórzano was elected mayor. When he resigned to run for the presidency in 1999, Rosario Robles Berlanga became the first woman mayor of Mexico City. In 2000, PRD's Andrés Manuel López Obrador became the second democratically

ly elected mayor of Mexico City. López Obrador's popularity as mayor has made him a prime candidate for the 2006 presidential election.

## 16 JUDICIAL SYSTEM

Mexico's judiciary, both federal and state, has been a separate branch of government since independence. Federal courts include the Supreme Court, with 11 justices; 32 circuit tribunals, and 98 district courts, with one judge each. Special courts include a fiscal tribunal and boards of conciliation and arbitration.

Supreme Court magistrates are appointed for 15-year terms by the president, with the approval of the Senate, and can be removed only by a guilty verdict after impeachment. The other justices are appointed for six years by the Supreme Court magistrates. The Supreme Court has both original and appellate jurisdiction in four divisions: administrative, civil, labor, and penal. Circuit courts hear appeals from the district courts.

The jury system is not commonly used in Mexico, but judicial protection is provided by the Writ of Amparo, which allows a person convicted in the court of a local judge to appeal to a federal judge. Capital punishment, except in the army for crimes against national security, was abolished by the penal code of 1 January 1930.

Although the judiciary is constitutionally independent and judges are appointed for life (unless dismissed for cause), there have been charges that judges are sometimes partial to the executive. Low pay and high caseloads contribute to a susceptibility to corruption in the judicial system. In unprecedented moves in 1993, the government issued an arrest warrant for obstructing justice and for bribery against a former Supreme Court Justice and three federal judges were dismissed for obstructing justice.

In 1995, congress passed a judicial reform law. The judicial reform law provides for a competitive examination for selecting most lower and appellate federal court judges and law secretaries. The Supreme Court has the authority to strike down a law for unconstitutionality. The judicial reform law provides that the Supreme Court may declare a law unconstitutional when one-third of the congress, one-third of a state congress, or the Attorney General asks the Supreme Court to review the constitutionality of the law.

The judicial trial system is based on the Napoleonic Code and consists of a series of fact-gathering hearings. The record of the proceeding is not available to the public.

After the 2000 presidential election and the end of PRI control of the presidency, the Supreme Court and the judicial power in general has shown signs of greater autonomy and more independence from the elected authorities. The judiciary has consolidated as an independent power of the Mexican state.

## 17 ARMED FORCES

In 2005, Mexico's armed forces had 192,770 active personnel, with reserves numbering 300,000. The Army had 144,000 personnel. Equipment included 264 reconnaissance vehicles, over 862 armored personnel carriers, and 1,774 artillery pieces. The Navy, including its naval aviation arm and Marines, had 37,000 personnel. Naval vessels included 1 destroyer, 10 frigates, and 109 patrol/coastal vessels. The Air Force had 11,770 personnel operating 107 combat capable aircraft, including 10 fighters and 17 fight-

er ground attack aircraft. The service also had 43 support and 71 utility helicopters. Paramilitary forces included an estimated 11,000 Federal Representative Police backed by a reserve rural defense militia of 14,000. The defense budget in 2005 totaled \$3.09 billion.

## 18 INTERNATIONAL COOPERATION

Mexico is a charter member of the United Nations, having joined on 7 November 1945, and participates ECLAC and several nonregional specialized agencies, such as FAO, IAEA, the World Bank, UNESCO, UNHCR, ILO, and the WHO. The country held a seat on the UN Security Council from 2002–03. Mexico is a member of APEC, the Caribbean Development Bank, the European Bank for Reconstruction and Development, G-3, G-6, G-11, G-15, G-19, G-24, The Inter-American Development Bank, the Latin American Economic System (LAES), the Latin American Integration Association (LAIA), the OAS, the OECD, the Association of Caribbean States (ACS), and the Río Group. The country holds observer status in the Council of Europe.

Mexico, which for many years was the only Latin American nation to recognize Fidel Castro's Cuba, has based its foreign policy on the principles of nonintervention and self-determination of peoples, which it helped incorporate into the charter of the OAS in 1948 (Articles 15–17). In 1993, Mexico signed the North American Free Trade Agreement (NAFTA), creating a free-trade zone comprising the United States, Mexico, and Canada. The agreement was ratified by all three governments in 1993 and took effect the following year.

In environmental cooperation, Mexico is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Traditionally, Mexico's economy has been predominantly agricultural, but by 2004 the primary sector contributed only 4% of the GDP and employed less than a fifth of the labor force. The secondary sector—industry—contributed 27.2% of GDP and employed 24% of the labor force. Services is the largest sector, accounting for 68.9% of GDP and employing 58% of the work force. Mexico both exports a substantial amount of agricultural products (10% of exports) and imports substantial amounts (10% of imports) Mexico is self-sufficient in most fruits and vegetables and in beans, rice, and sugar, and it is approaching self-sufficiency in meat and dairy products. Marginal subsistence, however, is still the lot of much of Mexico's rural population. In 2003, the CIA estimated that 40% of the population were living below the poverty line. While this is an improvement on over 50% in the early 1980s, population growth means that this constitutes an increase in absolute numbers. Further, the government of Mexico's estimate for 2002 is that 54% of the population is lacking security in basic necessities. On the other hand, in 2002 it was estimated that 35.6% of the country's wealth was concentrated in the top 10% of population; the lowest 10% of the population had 1.6% of the wealth.

A great mining nation, Mexico is the world's leading producer of silver and is well endowed with sulfur, copper, manganese,

iron ore, lead, and zinc. Since the 1920s, Mexico has been one of world's leading oil producers. From 1973 to 1982 (i.e., from the first oil shock to the Mexican default marking the onset of the Third World debt crisis) oil production increased at 50% a year and accounted for about 75% of exports. By 2002, manufacturers had long ago overtaken oil as the main economic driver: oil made up only about 10% of exports, while 80% were manufactured products, half from the maquiladora sector of assembly plants. The maquilas are plants which import semifinished goods from the United States, taking advantage both of low Mexican wages and of laws that allow the goods to be imported, processed, and re-exported free of tariff charges. The maquiladoras, however, were also in decline by 2005 due to competition from lower-wage countries and the progressive lowering of all Mexico's tariffs under the NAFTA agreement. While some moved to the southern states of Mexico, where wages were lower, others moved their operations abroad.

Led by the oil boom, from 1978 to 1981 the Mexican GDP increased by an annual rate of 8% and the government embarked on an ambitious public spending program, financed to a great extent by external borrowing in the petro-dollar market. The ambitions slammed up against a wall of falling oil prices, world-wide recession, and increasingly tight money in 1981. By August 1982, Mexico found itself unable to service its spiraling external debt. The annual inflation rate, which had hovered around 30% during 1979–81, reached almost 100% in 1982.

In December 1987, the Pact for Stability and Economic Growth (PECE) was implemented. The PECE was a series of price and wage restraint agreements between government, labor, and the private sector, which combined austere fiscal and monetary restraints with price/wage controls and freer trade possibilities. The PECE helped curb inflation to 51.6% in 1988 without incurring a recession. Gradual recovery saw the inflation rate fall to 20% in 1991, 11.9% in 1992, and to around 10% in 1993.

As the price of debt rescheduling and the maintenance of international credit worthiness, the government was brought to adopt a program of economic liberalization and privatization that culminated in the North American Free Trade Agreement (NAFTA). This agreement went into effect on 1 January 1994 and opened the domestic market to foreign trade by a phased elimination of trade barriers between Mexico, the United States, and Canada over the next 15 years. The same day, the Zapatista National Liberation Army (EZLN) led an uprising in Chiapas. That year, 1994, turned out to be a politically and economically tumultuous year for Mexico. First, the PRI candidate in the presidential race had been assassinated by old economic nationalists within the party. Second, a speculative boom in lending by US banks and businesses seeking new markets in Mexico generated an unsustainable run-up of external short-term debt. The Zedillo government sought to lance the debt by devaluing the peso in December. Then, following the devaluation, even more rapid withdrawal of foreign capital threatened to sink the peso further and to spread throughout Latin America and beyond.

In January 1995, the Clinton administration organized an international assistance package which provided \$50 billion in loans (including \$20 billion in loan guarantees from the United States). As a measure of its sincerity, the Mexican government put its oil revenues up as collateral for the loans. Also with an eye to restor-

ing its international creditworthiness, the government only used about half of the credits made available, and paid back those it did use ahead of schedule. The Mexican GDP contracted 6.9% in 1995, but by 1996 growth expanded 4.2%. By 1997, growth had increased to 6.8%. Ironically, the depreciation of the peso aided recovery by making Mexican goods less expensive and thus more competitive on world markets, and the net effect of NAFTA has been a trade deficit with Mexico, reaching \$29 billion in 2001, up \$5.3 billion from 2000. Nevertheless, the promise of the Mexican market has been kept. US exports to Mexico grew from \$46 billion in 1995 to \$112 billion in 2000, more than double the value of US exports to the EU and making Mexico the second-largest trading partner of the United States (after Canada).

Inflation and external debt remained serious problems for the economy, threatening stability. In 1997 the government adopted the National Program for Development Finance (PRONAFIDE) which outlined the government's economic policy framework for the period 1997 to 2000. It supported further privatization and deregulation of the economy. Inflation, at 20.6% in 1997, decreased steadily to 5% (est.) in 2002. External debt as a percent of GDP fell from 37% in 1997 to 24.9% in 2002, and the external debt to exports ratio fell from 113.6% to 85.9% during the same period. However, GDP growth also moderated, to 4.9% in 1998 and 3.7% in 1999, due mainly to the spreading effects of the Asian financial crisis of 1997, the Russian debt default of 1998, and the Brazilian currency crisis of 1999. In 2000, however, as Vicente Fox was elected as the first non-PRI president in 71 years, the GDP rose a sharp 6.6%.

By 2000, Mexico had, thus, improved its macroeconomy, such that Moody's and Fitch IBCA, in March 2000 and January 2002 respectively, issued investment-grade ratings for its sovereign debt. Recovery was cut somewhat short in 2001, as Mexico imported the US recession and slowdown, which carried over into 2002. The economy contracted 0.3% in 2001, and grew at only an estimated 0.9% in 2002. In 2003 and 2004, growth picked up at respective rates of 1.4 and 4.4%. The Economist Intelligence Unit estimated real GDP growth to be 3.0% in 2005, and reported the unemployment rate to be gravitating around 3.8% in 2004 and 2005. Inflation decreased steadily from 6.4% in 2001 to 5% in 2002 and hovered between 4 and 5% from 2003–05. However, damage to agriculture from Hurricane Stan, which hit the southern states of Mexico in fall 2005, is likely to cause inflationary pressures. Even so, the GDP is expected to stay afloat, despite the damage to production, because of reconstruction investment estimated at \$2.3 billion. The funds will likely be drawn from the extra oil revenue that resulted from heightened oil prices.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Mexico's gross domestic product (GDP) was estimated at \$1.1 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$10,000. The annual growth rate of GDP was estimated at 3%. The average inflation

rate in 2005 was 4.1%. It was estimated that agriculture accounted for 4% of GDP, industry 26.5%, and services 69.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$14.595 billion or about \$143 per capita and accounted for approximately 2.3% of GDP. Foreign aid receipts amounted to \$103 million or about \$1 per capita and accounted for approximately 0.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Mexico totaled \$433.06 billion or about \$4,246 per capita based on a GDP of \$639.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.8%. In 2001 it was estimated that approximately 30% of household consumption was spent on food, 4% on fuel, 2% on health care, and 7% on education. It was estimated that in 2003 about 40% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in Mexico numbered an estimated 37.38 million in 2005. As of 2003, the services sector accounted for 58% of those employed, with industry accounting for 24%, and agriculture the remaining 18%. Underemployment, Mexico's major labor problem, affected mainly those engaged in agriculture. Although unemployment was put at an estimated 3.6% in 2005, around 25% of the country's workforce may be classified as underemployed.

As of 2005, approximately 25% of the labor force in the formal economy was unionized. As of that same year, Mexican workers were free to organize and join unions, bargain collectively, and engage in strikes. However, independent unions must register with the government and strikes must be preceded with advance notice and some brief mediation.

Under the federal labor law, every employee is entitled to one paid day of rest after every six days of work, seven paid holidays, and at least six days of vacation after a year of employment and at least eight days after two years. An annual bonus equal to 15 days' pay is required to be paid to all employees before Christmas, and vacation pay carries a 25% premium. The workday is generally eight hours, six days per week. Double or triple pay must be paid for overtime, depending on how many overtime hours are accumulated. Compulsory overtime is prohibited. Children as young as 14 may work, but with severe restrictions as to the conditions and hours of employment, and only with parental consent. Child labor provisions are well-enforced among medium and large companies, but many children work in smaller companies, in agriculture, or in the informal economy, usually in family enterprises, where enforcement is spotty and in the informal sector, almost nonexistent.

The national minimum wage rate varies by geographical area. In 2005, the minimum wage in southeast Veracruz State was \$4.23 per day, while in Mexico City, it was \$4.36 per day. These rates do not provide a worker and family with a decent standard of living, and only a small portion of workers in the formal economy earn the minimum wage. Many workers earn less, while those employed by prosperous industrial enterprises can earn three to four

times more. Employers are required by law to observe health and safety regulations.

## 22 AGRICULTURE

Agriculture's contribution to GDP fell from 15.1% in 1960 to 10.7% in 1970 and 4% in 2003—yet agriculture employs about 22% of the labor force. Only about 14% of Mexico's total land area is suitable for cultivation, and only 6% is cultivated with permanent crops; over 6.3 million hectares (15.6 million acres) are irrigated.

In 1960, Mexico became self-sufficient for the first time in corn; it continues to be self-sufficient in beans, rice, sugar, and most fruits and vegetables, and fluctuates between being either a net importer or self-sufficient with wheat and corn. During the late 1960s, Mexico almost tripled the investment allocated for agriculture. The government continues to protect agriculture and to ensure domestic consumption through import and export duties and controls. The government supports the prices of corn, wheat, beans, and fresh eggs and then sells these and other farm products at minimal prices through retail stores operated by the National Corporation for Public Subsidies. In 1977, the government introduced a new program called the Mexican Alimentary System, seeking to foster food production through subsidized credit, cheap raw materials, guaranteed prices, and crop insurance. Because of a record harvest in 1981, the agricultural sector grew by 6% overall. The program was terminated in December 1982 because of what the government called its limited contribution to rural welfare and incomes. In response to increasing pressure from Mexican producers to protect agriculture, in 2002 the government announced a series of measures to make Mexican agriculture more competitive.

In 2004, the principal crops' production totals (in tons) were as follows: sugarcane, 45,126,000; corn, 20,000,000; sorghum, 6,300,000; wheat, 2,500,000; dry beans, 1,400,000; soybeans, 75,700; rice, 191,500; and barley, 1,109,000. Principal exports are coffee, cotton, fresh fruit, sugar, tobacco, and tomatoes. In 2004, the value of agricultural exports amounted to \$9,879 million, and agricultural imports totaled \$13,439 million.

At the time of the Mexican Revolution, an estimated 830 landowners held 97% of the land. The principles of land reform were incorporated into Article 27 of the constitution of 1917, which provided for division of large landholdings into small farms, communally owned by villages, known as ejidos (one individual may only own 100 hectares/247 acres of irrigated land). Much of the arable land has been expropriated for the establishment of ejidos. The Agrarian Reform Law of April 1972 formally recognizes two types of landholdings, private and ejidal (in the form of lifetime land grants, which cannot be disposed of by sale or transfer). The proportion of ejidal-owned land rose from 7.5% in 1930 to 26.3% in 1960 and 47% in 1970. By 1986, 61.1% of the farm population belonged to the ejidal system, but the system yielded only about 33% of total agricultural output, and an estimated four million peasants remained landless. Beginning in the late 1970s, the government sought to group together ejidal holdings into larger collectives to increase production.

## 23 ANIMAL HUSBANDRY

More than one-third of the total land area is suitable for pasture. Livestock produced in the central, southern, and southeastern

states are mostly native breeds of general-purpose cattle; in the northern and northwestern states, Herefords and other improved breeds are raised for export, mainly to the United States.

In 2005, the livestock population was estimated at 31.5 million head of cattle, 14.6 million hogs, 9 million goats, 6.8 million sheep, 6.26 million horses (third in the world), 3.26 million donkeys, 3.28 million mules, and 425 million chickens. Output of livestock products in 2005 included 9,873,000 tons of cows' milk, 154,000 tons of goats' milk, 1,543,000 tons of beef and veal, 2,225,000 tons of poultry meat, 1,058,000 tons of pork, and 1,906,000 tons of eggs. In 1996, cattle inventories declined due to lower birth rates of calves, high slaughter rates, and increased exports. One of the worst droughts in decades in northern Mexico (combined with unfavorable weather in southern Mexico) was also responsible for the decline in livestock inventories.

## 24 FISHING

Mexico's principal commercial catches are shrimp, sardines, bass, pike, abalone, Spanish mackerel, and red snapper. Coastal fishing is important. The 2003 catch was 1,553,925 tons. The leading species caught by volume that year were California pilchard, 620,000 tons; yellowfin tuna, 165,767 tons; jumbo flying squid, 100,000 tons; and tilapia, 61,771 tons.

The fishing industry is largely handled by cooperative societies, which are granted monopolies on the most valuable species of fish. Most fish processed in Mexico's canneries are consumed domestically. Ensenada, in Baja California, is Mexico's most important fisheries center. It produces most of the canned fish and virtually all of Mexico's abalone and spiny lobster exports. Mexico's first fisheries college, the Higher Institute of Marine Sciences, is located in Ensenada. In 2003, Mexico's exports of fish products were valued at over \$634.5 million.

## 25 FORESTRY

About 84.57 million hectares (209 million acres) are classified as forestland, 60% tropical and subtropical forests, and 40% temperate and cold climate forests. Palms are found at elevations up to 500 m (1,600 ft), while mahogany, cedar, primavera, and sapote are found from 500–1,000 m (1,600–3,300 ft). Stands of oak, copal, and pine grow from 1,000–1,500 m (3,300–4,900 ft), and conifers predominate in higher elevations. Mexico has 72 species of pine, more than any other country; pine accounts for over 80% of annual forestry production. About 90% of Mexico's forestry production comes from temperate forests, which are mainly found in the states of Chihuahua, Durango, Jalisco, Michoacán, Oaxaca, Chiapas, and Guerrero. Tropical forests account for only 10% of forestry production, and exist in the states of Chiapas, Quintana Roo, Yucatan, Campeche, Tabasco, and Oaxaca.

Mexico's forestry policy is designed to protect and renew these resources, so that forests may fulfill their soil-protection functions and timber reserves may be exploited rationally and productively. Only about 30% of all forests are exploited, mostly in Chihuahua, Durango, and Michoacán. Timber is often located in mountainous regions with rough terrain and few all-season roads. As a result, wood production costs are 35–40% higher than the world average. Moreover, most roundwood comes from ejido (communally owned) forests; this system has greatly inhibited the development of an integrated forest industry. Mexico's ability to supply

its own wood products needs are severely restricted by the limited timber available. Roundwood production in 2004 was estimated at 45.7 million cu m (1.6 billion cu ft) by the FAO; forestry imports exceeded exports by \$2.2 billion. Over 90% of the hardwood demand is for the manufacture of furniture.

There are also many other useful products found in Mexico's forests other than wood. Annual forestry production also includes an estimated 100,000 tons of resins, fibers, oils, waxes, and gums. The indigenous peoples living in Mexico's rain forests are estimated to utilize up to 1,500 species of tropical plants to manufacture 3,000 different products such as medicines, construction and domestic materials, dyes, and poisons. Mexico's National Autonomous University estimated the rate of annual forest loss during 1976–2000 was 0.25% for temperate forests, 0.76% for tropical forests, and 0.33% for semiarid forests, for a total average annual loss of around 545,000 hectares (1,347,000 acres).

## 26 MINING

Mexico's globally significant mineral sector in 2003 was dominated by hydrocarbons. However, the country ranked first in the production of bismuth (with around 24% of the world's refined total), and was the world's second-largest producer of silver and celestite (strontium mineral; 35% of world output). The country was also a major supplier of cadmium, cement, copper, fluor spar, gold, gypsum, manganese ore (metal content), molybdenum, salt, steel, sulfur, and mine zinc. Mexico is the second-largest producer of steel in Latin America.

The total value of nonfuel minerals produced was \$4.61 billion in 2003, slightly under 2002's revised total of \$4.68 billion. Metals contributed 45% of the total (\$2.06 billion), while industrial minerals accounted for \$2.55 billion or 55%. Of the latter, sand and gravel was the highest value commodity (excluding natural gas and oil) at \$842.5 million. Among metals, copper production in 2003 was first, accounting for \$578 million. Total exports in 2003 were valued at \$164.9 billion, with nonfuel minerals accounting for \$3.1 billion. Metal exports totaled \$2.7 billion. About 80% of Mexico's mineral exports went to the United States in 2003.

Silver output in 2003 was 2,568,877 kg (metal content of ore). Peñoles mined 59% of Mexico's silver. Its Fresnillo/Proaño mine, in Zacatecas, produced over 995,000 kg. Peñoles also produced almost all of the country's refined silver, and mined 58% of its lead and 57% of its zinc. Grupo Mexico mined 33% of Mexico's zinc in 2003. In 2003, Mexico produced 20,406 kg of mined gold. As with silver, Peñoles was Mexico's largest gold producer with 52% of the total. Copper output in 2003 (by cementation, concentration, and leaching) was 355,653 metric tons. Mined bismuth output that same year totaled 1,064 metric tons. Celestite output in 2003 totaled 130,329 metric tons, while fluor spar (acid grade and metallurgical grade), production 756,000 tons. Iron ore (gross weight) output in 2003 totaled 11.265 million tons, while cadmium mine production in that year, totaled 1,616 metric tons. Barite production in 2003 totaled 287,451 metric tons, while lead mine output that same year came to 139,348 metric tons. In 2003, Mexico also produced antimony; mercury; tin; natural abrasives (comprising mostly pumice stone and emery, a granular, impure variety of corundum); clays (bentonite, common clay, fuller's earth, and kaolin); diatomite; feldspar; hydrated lime and quicklime; magnesite and magnesia; mica; nitrogen; perlite; phosphate rock; so-

dium compounds; stone, sand, and gravel (including common calcite, dolomite, limestone, marble, quartzite, and glass sand [silica]); talc; and wollastonite. No tungsten was produced from 2000 through 2003. Although vermiculite was not produced from 1998 through 2001, 300 metric tons was produced in 2002 and 312 metric tons in 2003.

Mexico had 15% of the world's graphite reserves (3.1 million tons) and 13% of silver reserves (37,000 tons). The country also ranked among the highest in reserves of cadmium (35,000 tons), mercury (5,000 tons), and selenium (4,000 tons). Lead reserves totaled 1 million tons; zinc reserves, 6 million tons; molybdenum, 90,000 tons; copper, 14 million tons; and manganese, 4 million tons. Sulfur was found in the salt domes of the Isthmus of Tehuantepec—reserves of all forms amounted to 75 million tons. An area in Baja California potentially rich in gold, silver, copper, lead, and zinc was discovered by a sensor on the US space shuttle *Columbia* in 1981. Northern Mexico dominated the production of minerals. Metallic deposits were mostly in the Sierra Madre ranges; copper, gold, and manganese were mined mainly in the northwest (Sonora produced more than 80% of the nation's copper and received three-quarters of foreign investment); lead, zinc, and silver in central Mexico (Zacatecas was the principal state for silver, and Chihuahua was the leader in lead and zinc); and coal and petroleum in the east. Employment in the mineral sector totaled 220,100 in 2000, including 58,400 in metal mining, 57,200 in iron and steel, and 46,500 in nonmetallic minerals.

Under the constitution, minerals were part of the national patrimony. Nearly all formerly state-owned mines had been privatized by 1997. Although low prices for base metals (except copper) and precious metals have hurt the industry, the North American Free Trade Agreement (NAFTA) was expected to have a significant role in attracting foreign investment to the mineral sector. Amendments in 1996 to the 1992 Mining Law removed many of the restrictions regarding the participation of private and foreign companies, permitting direct investment with up to 100% ownership of equity in exploration works and activities, and allowing up to 100% foreign participation in production. Further revisions in 1999 were geared to increase participation of the private sector, and competitiveness of mining companies in the country.

## 27 ENERGY AND POWER

Mexico, according to most analysts, has the third-highest proven reserves of crude oil in the Western Hemisphere, following Venezuela and the United States. The country also contains deposits of natural gas that gives it the sixth-largest proven reserves of natural gas in the Western Hemisphere. Mexico also has recoverable deposits of coal.

As of 1 January 2004, Mexico is estimated to have proven oil reserves of 15.7 billion barrels, with production in 2003 estimated at 3.8 million barrels per day, of which 3.37 million barrels per day was crude oil. Domestic consumption of oil in 2003 was estimated at 2.02 million barrels per day. Net oil exports that same year were estimated at 1.78 million barrels per day. Crude oil refining capacity, as of 1 January 2004, was estimated at 1.73 million barrels per day. Although the government restricts exploration and exploitation of petroleum deposits, some foreign and private exploratory drilling has been permitted. Oil exploration and production is managed by state-owned Petroleos Mexicanos (Pemex), which

was split into four subsidiaries in 1992. While Pemex maintains exclusive rights to oil output and exploration in Mexico, the nation's hydrocarbon reserves are owned by Mexico, not Pemex.

According to the Oil and Gas Journal, Mexico's proven reserves of natural gas were estimated, as of 1 January 2004, to be 15 trillion cu ft. In 2002, natural gas output was estimated at 1.33 trillion cu ft, mostly from offshore sources. However, Mexico's demand for natural gas outstripped production in 2002. Net imports of natural gas that year came to 0.27 trillion cu ft.

Mexico, in 2001, had an estimated 1.3 billion short tons of recoverable coal reserves. In 2002, Mexico's production of coal came to an estimated 12.1 million short tons, while demand that year came to an estimated 13.8 million short tons, making Mexico a net importer of coal, which amounted to 1.7 million short tons.

Total electric power generating capacity came to an estimated 42.3 GW, as of 2002. The amount of electricity produced in 2002 was an estimated 198.6 billion kWh, of which 81% came from conventional thermal plants, and 12% from hydroelectric sources. Nuclear generating output came to 4.5%, with 2.5% from other, alternative sources. The possibilities for geothermal electrical production are extensive, with over 100 thermal springs available for exploitation.

## 28 INDUSTRY

Mexico has one of the best-developed manufacturing sectors in Latin America. The manufacturing sector surpassed agriculture's contribution to GDP as far back as the early 1950s. Government support of industry, via import substitution industrialization, resulted in sharp increases to satisfy increased domestic demand for manufacturing output from the 1950s through the 1970s.

In the 1980s, the Mexican government retreated from its position of dominance over the economy, and the private sector was given an expanded role. Manufacturing output increased on average by 2.3% per year during the 1980s and by 3.9% annually during 1988–98. In 1998, manufacturing contributed an estimated 22.1% to GDP, and had a growth rate of 7.4%. In 2004, industry as a whole accounted for about 27% of GDP and the industrial production growth rate was estimated to be 3.8%.

Major industrial centers are Mexico City, Guadalajara, Monterrey, Cidua Juárez, and Tijuana. Mexico City is an attractive venue for manufacturing due to its skilled work force, low distribution costs, large consumer market, and closeness to political decision makers and the nexus of Mexico's communications system. The principal manufacturing industries include food and beverages, tobacco, chemicals, iron and steel, petroleum, textiles, clothing, and motor vehicles, consumer durables, and tourism. Other industries include footwear, metalworking, furniture, and other wood products.

Manufacturing has been focused around the reexport processing industry, carried out by *maquiladoras* that have traditionally been located near the US border and owned by a foreign corporation, but have recently moved operations southward to take advantage of lower production costs. The *maquiladoras* contract to assemble or process imported goods brought in from the United States and then reexport them duty free. In 2002, there were some 3,200 *maquiladora* factories. Baja had the most export industries in 2001, at over 1,300; other leading states included Sonora, and Tijuana, which hosts the majority of electronic-related assembly

plants. However, the *maquiladora* industry was in crisis in 2003, with Mexico losing nearly 600 *maquiladoras* in 2001–02, mostly in electronics and apparel. During that period, 250,000 jobs were lost, which amounted to 15% of the *maquila* workforce. China was Mexico's chief rival in the industry. (China's hourly wage is 40 US cents, compared to approximately \$1.20 in Mexico, making it hard for Mexico to compete on the world market for reexports.) As of 2005, this continued to be a concern for the Mexican economy.

The construction sector has great potential, as major improvements in basic infrastructure—including roads, highways, railways, ports, and the airport network—are carried out.

## 29 SCIENCE AND TECHNOLOGY

The National Academy of Science, founded in 1884, is the principal scientific organization. Among Mexico's 36 scientific and technological learned societies and 26 scientific research institutes, the natural sciences and medicine predominate. Especially well known is the International Maize and Wheat Improvement Center, founded in Mexico City in 1966; its director, Norman Ernest Borlaug, received the Nobel Peace Prize in 1970 for his work in advancing the "green revolution." More than 60 universities and colleges in Mexico offer courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 32% of college and university enrollments. In 2002, of all bachelor's degrees awarded, 23.6% were in the sciences (natural, mathematics and computers, engineering).

The primary science and technology policymaking body is the National Council for Science and Technology, a decentralized public body created in 1970 composed of researchers, scientists, academicians, and government officials. They formulate, study, evaluate, and execute national science and technology policies. In 1989, the Consultative Council on Sciences was created to advise directly the President of Mexico on science and technology. In 2002, Mexico's expenditures on research and development (R&D) totaled \$3,859.637 billion, or 0.43% of GDP. Of that amount, 61% came from government sources, while 30.6% came from the business sector. Higher education accounted for 7.1%, while nonprofit institutions and foreign sources accounted for 0.3% and 1%, respectively. In that same year, Mexico had 274 researchers and 98 technicians that were engaged in R&D per million people. High technology exports in 2002 totaled \$28.939 billion or 21% of manufactured exports.

## 30 DOMESTIC TRADE

Mexico City is the commercial hub of the country and is the principal distribution point for all types of commodities. Other large cities, such as Guadalajara, Monterrey, and Puebla, serve as distribution points for their respective regions. Regional marketing is dominated by the open market, with its small stalls or shops, where business is transacted on an individual bargaining basis. There are also chain stores, supermarkets, department stores (some selling by mail), and a government-operated chain of more than 2,000 discount-priced food and clothing stores.

Although most sales are for cash, the use of consumer credit is increasingly extensive, especially for automobiles, furniture, household appliances, and other expensive items. A 10–15% value-added tax applies to most imported products. Products are ad-

vertised through newspapers, radio, television, outdoor signs, and motion picture shorts and slides.

In 1999, the federal government mandated that businesses should keep operational hours between 8 AM and 6 PM. However, most establishments continue to keep traditional work and operation hours, which can vary by region. These traditional hours are from 9 or 9:30 AM to 7 PM, Monday through Friday, with one or two hours for lunch. Some offices in Mexico City have kept hours from about 10 AM to 9 PM, with a two-hour lunch. Banks are open from 9 AM to 1:30 PM.

### 3<sup>1</sup> FOREIGN TRADE

Mexico is one of the most trade-dependent countries in the world, and is especially connected to the United States, which buys about 88% of its exports, which include electronics, motor vehicle parts, and chemicals. Since the start of NAFTA in 1994, Mexico has increased its trade with the United States and Canada three-fold. It has also been a member of free trade agreements with Guatemala, Honduras, El Salvador, and the European Free Trade Area since 2001. More than 90% of Mexico's trade, then, is under free trade agreements. For this reason, Mexico participates actively in the World Trade Organization (WTO), and hosted the WTO Ministerial Meeting in Cancun in September 2003.

Not including exports from the maquiladoras, some of the most important general export commodities from Mexico are crude oil and automobiles. Mexico also exports 9.5% of the world's vegetables. The main destinations of Mexico's exports in 2004 were the United States (87.5%), Canada (1.8%), Japan (1.1%), and Spain (1.0%).

The main origins of Mexico's imports in 2004 were the United States (56.3%), China (3.8%), Germany (3.6%), and South Korea (3.0%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Mexico's balance of payments, in deficit throughout much of the 1960s, turned favorable in the 1970s, as inflows of foreign funds rose fast enough to offset the worsening visible trade balance. However, during the 1980s a steep rise in imports due to trade liberalization led to a growing imbalance. Mexico's external position had so deteriorated by 1986 that the IMF and World Bank coordinated a financial rescue package of \$12 billion and commercial banks agreed to reschedule \$44 billion in foreign debt; an innovative feature of the agreement was that repayment was effectively tied to Mexico's oil export earnings. Mexico began running a current account deficit in 1988, that remained through the 1990s. Following the 1994 devaluation of the peso, international lenders provided \$40 billion in economic aid, half from the United States. This influx of capital resulted in bringing the current account deficit to less than 1% of GDP in 1995, from at least 7% in 1994.

The International Monetary Fund (IMF) reported that in 2001 Mexico had exports of goods totaling \$158.4 billion and imports totaling \$168.4 billion. The services credit totaled \$12.7 billion and debit \$17.2 billion.

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Mexico's exports was \$184 billion while imports totaled \$90 billion resulting in a trade deficit of \$94 billion. The current account balance was estimated at -\$4.113 billion. Banco de Mexico, however, reported the current account def-

icit to be -\$7.4 billion and projected the deficit would continue, approximating -\$9.0 billion in 2005.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Mexico (established 1925), in which the government owns 51% of the capital stock, is also the central bank and bank of issue. Together with the National Banking and Insurance Commission and the Secretariat of Finance, it supervises commercial, savings, trust, mortgage, capitalization, and investment institutions. National institutions for economic development extend agricultural and long-term industrial credit and finance and develop public works, international trade, cooperatives, and the motion picture industry; they also operate savings accounts. The National Financing Agency (founded in 1934) acts as a financing and

investing corporation; it also regulates the Mexican stock market and long-term credits.

There are a number of state development banks, including Nacional Financiera (Nafin, mainly for small and medium-sized businesses), Banco Nacional de Comercio Exterior (Bancomext, foreign trade), Banco Nacional de Obras y Servicios Públicos (Banobras, public works and services), Financiera Azucarera (sugar industry), Banco Nacional de Comercio Interior, and Banco Nacional de Crédito Rural. Nafin and Bancomext are by far the most important.

In September 1982, in order to stop the flight of capital, the government nationalized all 57 private banks; their combined assets were estimated at \$48.7 billion. After the inauguration of President de la Madrid in December 1982, it was announced that 34% of the shares of the nationalized banks would be sold to bank workers and users and to federal, state, and municipal agencies. No single shareholder would be allowed to purchase more than 1% of the stock, and the federal government would retain a 66% controlling interest. The government had consolidated the commercial banking system into 19 financial institutions by the end of 1986. In November 1986 the government introduced a plan that would privatize 18 of Mexico's 19 state owned commercial banks. The sale of the banks began in 1987. In 1990 the government began allowing foreigners to buy up to 30% of the state's banks. By July 1992 the banking system was completely private. The only foreign bank permitted to operate within Mexico as of 1993 was Citibank; another 100 foreign banks had representatives in Mexico, however.

The 1990s brought fundamental change to the financial sector. Apart from liberalization of interest rates and credit terms and the elimination of obligatory lending to the public sector, there was the creation of new financial instruments and institutions. At the end of 1994, there were around 50 commercial banks in operation compared with just 19 two years earlier. The newly privatized commercial banks had problems almost from the outset. The principal cause was poor asset quality which manifested itself in an increasingly serious burden of nonperforming loans.

Faced with the prospect of a wholesale banking collapse, the government came up with a succession of different measures to deal with the problem of bad debts. There had been a scheme to enable bank loans to be rescheduled using index-linked *Unidades de Inversión* (UDIs) and a program of support for bank debtors (*Apoyo a Deudores*, ADE) designed to help as many as eight million people reschedule debts of up to \$26,000. In May 1996, the government announced a further scheme to help mortgage debtors under which it was to assume 30% of monthly payments due during the year, the proportion falling progressively to 5% over 10 years.

Apart from providing relief for debtors, the government also set up a program to enable banks to meet capital and loan loss provisions (*Programa Temporal de Capitalización Temporal*), as well as a fund (*Fondo Bancario de Protección de Ahorro-Fobaproa*) to take over banks' bad debts in exchange for new capital injections by shareholders. Nevertheless, it has had to step in and take control of a number of institutions. The reserve package cost the government a considerable sum. However, it limited the damage by selling off banks in its control, mainly to foreign investors. Foreign investors also helped to capitalize banks which were in private hands. By 1999, there were \$61 billion of unpaid debts that

the Mexican government had bought from banks in order to keep them from collapsing, adding to the public debt. These bank loans equaled 20% of GDP in 1999.

In mid-March 1997, after two years of preparation, the government introduced measures to curb money laundering. Anywhere between \$4 billion and \$30 billion of drug money is laundered in Mexico every year. Starting in 1998, banks, brokerages, and large foreign exchange houses had to report all cash transactions involving \$10,000 or more to the central bank. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$56.5 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$138.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 12.89%.

The National Securities Commission (founded in 1946) supervises stock transactions. The Stock Exchange of Mexico (Bolsa Mexicana de Valores), the largest stock exchange in Latin America, was organized in its present form in 1933. It lists the stocks of the most important industrial companies, as well as a few mining stocks. Two smaller exchanges at Monterrey and Guadalajara were absorbed in 1976 by the Mexico City exchange. Trading on the exchange increased tenfold between 1976 and 1981, but dropped thereafter with the prolonged recession. It recovered to its 1979 level by 1986 and rose 124% in 1987 despite a spectacular crash in October and November of that year tied to the Wall Street's crash. The greatest part of the trading is in fixed-interest, high-yield bonds and bank deposit paper. Under new rules, which came into force in November 1989, foreigners are allowed to purchase almost any stock through a "neutral" trust, although as of 1997 they still did not have voting rights. In 1992, the market behaved erratically, largely because of sensitivity to the political and economic situation in the United States and uncertainty about NAFTA.

In 1996, the recovery in the stock market strengthened as the economy began to pull out of recession, inflation and interest rates fell, and the currency held steady. As confidence grew, so foreign investment flowed back into the market. By mid-year, the total value of foreign investment in the stock exchange was \$33.8 billion compared with \$27.8 billion at the end of 1995, \$34.4 billion at the end of 1994, and \$54.6 billion at the end of 1993. As of 2004, a total of 152 companies were listed on the Stock Exchange of Mexico, which had a market capitalization \$171.940 billion. In 2004, the IPC Index rose 46.9% from the previous year to 12,917.9.

### 3<sup>4</sup> INSURANCE

Since 1935, all life, fire, marine, automobile, agriculture, accident and health, and other insurance companies have been Mexican operated. Insurance companies must be authorized by the National Banking and Insurance Commission. In recent years, regulation has changed from rates and forms to solvency requirements. The effect of this change has been to increase product and price competition to the advantage of the consumer. The Mexican market has been divided into general and life insurers (including composites) and surety companies for purposes of regulation and government oversight. At year-end 1995, there were approximately 55 insurers, including three mutuals, two reinsurers, and two government companies. In addition, there were approximately 20

surety organizations with a total premium volume exceeding \$115 million. Government companies provide the compulsory workers' compensation insurance, which is a part of the social security scheme.

The Mexican insurance market is characterized by a relatively small number of insurers, with the top five insurers enjoying 70% of the market in terms of premiums. Thereafter, the size of insurers drops very rapidly. During 1996, two of the top five insurance organizations were expected to complete a merger, with the resulting company having 30% of the 1995 market. With the liberalization of the insurance market, a number of foreign insurance organizations have established or strengthened their presence in Mexico. In 2003, the value of direct insurance premiums written in Mexico totaled \$10.920 billion, of which nonlife premiums accounted for \$6.690 billion. As of 2003, Mexico's top nonlife insurer was ING Comercial America, which had gross written nonlife premiums (includes personal accident; figures adjusted for inflation) of \$1,481.1 million, while the leading life insurer, Metlife Mexico, had gross written life insurance premiums of \$1,598.1 million in that same year. Market penetration when compared to North America and Europe, is especially low for life insurance products.

Employee benefits (Social Security) are compulsory.

### 3<sup>5</sup> PUBLIC FINANCE

Major sources of revenue are income taxes, a VAT, and public enterprise revenues. Among regular government departments, education receives the largest budget allocation, but outlays for debt service, subsidies to federal enterprises, and capital expenditures for highways, irrigation, and hydroelectric projects have exceeded regular departmental expenditures in recent years. The public-sector deficit usually increases sharply in the last year of a presidential term as the outgoing administration strives to complete its public works program. During the 1960s, government revenues rose at a faster rate than GDP, with revenues from income taxes (including surcharges) increasing by 170% in the 1960–69 peri-

od. Budgets in the 1970s and early and mid-1980s continued to show current-account "surpluses," or minimal apparent deficits; the fact that borrowings and transfers are built into the budget structure masked the true magnitude of annual deficits. In the late 1970s and the early 1980s, real budget deficits increased substantially, reaching nearly 18% of the GDP by 1982. By slashing public spending, the government was able to bring the deficit down to 8.9% of the GDP in 1983 and 7.1% in 1984, but the collapse of the world oil price sent it up to 16.3% in 1986. By the early 1990s, however, public finances were strengthening, and a surplus was recorded in 1992, equivalent to about 1.5% of GDP. Public revenues policy in 1992 sought to widen the tax base and simplify and enforce tax administration. At the same time, public expenditures have been reoriented to provide basic infrastructure and services. In 1997 and 1998 there was a current account deficit equaling 0.70% and 1.3% respectively.

The US Central Intelligence Agency (CIA) estimated that in 2005 Mexico's central government took in revenues of approximately \$173.2 billion and had expenditures of \$175.4 billion. Revenues minus expenditures totaled approximately -\$2.2 billion. Public debt in 2005 amounted to 21.2% of GDP. Total external debt was \$174.3 billion.

The International Monetary Fund (IMF) reported that in 2000, the most recent year for which it had data, central government revenues in millions of pesos were 810,620 and expenditures were 875,775. The value of revenues in millions of US dollars was \$85,729 and expenditures \$101,425, based on a market exchange rate for 2000 of 9.4556 as reported by the IMF. Government outlays by function were as follows: general public services, 38.4%; defense, 3.0%; public order and safety, 2.7%; economic affairs, 8.1%; housing and community amenities, 6.9%; health, 5.0%; recreation, culture, and religion, 0.6%; education, 24.7%; and social protection, 20.1%.

### 3<sup>6</sup> TAXATION

The main sources of tax revenue in Mexico are the income tax, the value-added tax (VAT), and local levies on real property. The federal government also imposes excise taxes on alcohol and cigarettes, as well as production taxes on mining.

A new income tax law, effective 1 January 1987, retained the 1981 division of taxpayers into four groups: resident corporations; resident individuals; nonresident corporations and individuals taxed only on their Mexican-source income; and nonprofit organizations, which, though paying no taxes, are still required to file annual returns. The tax reforms of 2001 extended the requirements for reporting income to the Hacienda (the term for Mexico's tax agency) as a condition for maintaining various income tax exemptions on income from dividends, capital gains, gifts and inheritances.

As of 2005, Mexico imposed a corporate income tax of 30%, which generally aggregates all income categories into a single taxable income figure. However, in 2006, the standard corporate rate will be cut to 29% and to 28% for 2007 and beyond. A 1.8% tax on fixed assets is deductible from corporate income tax. Except for gains from sale of stock on the Mexican stock exchange, capital gains are taxed at the same rate as other corporate income. Dividend payments by Mexican companies to nonresidents are not subject to any withholding. Branches of the foreign companies

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

have the same tax obligations as domestic companies. Interest income is taxed at rates of 10%, 21%, and 30%. Royalty income from patents and trademarks are subject to a withholding tax of 30%, while royalties derived from intellectual and technical assistance are subject to a 25% withholding tax. Payments made to so-called tax havens are subjected to a withholding tax of 40%.

As of 1 January 2005, Mexico had a progressive individual income tax with a top rate of 30%. Several types of deductions are available, including lump-sum standard deductions, for housing expenses, property taxes paid, etc., but the specific mix in determining taxable income differs from region to region. The 3% Substitute Tax on Salary Credits (ISCAS) introduced in 2002 was raised to 4% for 2003. Though the tax reforms of 2001 allow state governments to impose an income tax up to 3%, as of 2003 none had a state income tax. Gifts less than about \$1,700 (calculated as the equivalent of three annual minimum wages) are tax-exempt as are gifts between spouse and linear descendants (although such gifts over one million pesos—about \$95,000—must be reported to the Hacienda to maintain the tax exemption).

The main indirect tax is Mexico's value-added tax (VAT), in effect since 1980, which has a current standard rate of 15% on most goods and services, except in border zones in which a 10% VAT applies. Medicine and food products are zero-rated. VAT-exempt goods and services include sales of animals, vegetables, and fruit for other than industrial use; sales of tractors, fertilizers, and pesticides; rentals of agricultural machinery; international freight; international air passenger service, prepaid cellular phone service, radio paging and beeper services, the sale of natural gas for car fuel, and imports and exports in Strategic Bonded Warehouse facilities. A 5% luxury tax on a rather arbitrary collection of goods (luxury cars, jet skis, salmon, golf, horseback riding, but not yachts, lobster, scuba diving or skydiving) was abolished in 2003. Though the tax reforms of 2001 give the states leeway to impose sales taxes up to 3%, none are reported to have done so as of 2005.

### 37 CUSTOMS AND DUTIES

Mexico, a member of NAFTA since 1994, also has free trade agreements with 32 countries and regions, among them the European Union, EFTA, Israel, and 10 nations in Latin America. The agreement with the European Union is roughly the same as the specifications afforded in the NAFTA treaty. Mexico has also implemented "Sectoral Promotion Programs (PROSEC)" that reduce tariffs for goods imported from countries with most-favored nation status by up to 5% on a wide range of manufacturing inputs. In doing so, Mexico has allowed East Asian products to be increasingly competitive with US or Canadian products in Mexican markets, undermining the efficacy of NAFTA.

Since mid-1985, Mexico has undertaken a major liberalization of its trade restrictions, departing from the import-substitution approach that had been followed since the 1940s. In the second half of 1985, the need for many import licenses was abolished and Mexico joined GATT in July 1986. Until June 1985, a license was required for 4,513 of the 8,077 items on the import tariff schedule. Trade protected in this manner represented 75% of total import value. By 1991, less than 2% of all imports (14% of total import value) were subject to licensing requirements, and in 1999 there were hardly any licensing requirements. Businesses may receive

reductions of up to 100% on duties for certain industrial imports in Mexico's free trade zones.

Mexico gives preferential treatment to some imports from the 10 other member nations of the Latin American Integration Association. The North American Free Trade Agreement (NAFTA) entered into force on 1 January 1994. It further lowered tariffs on US and Canadian goods to 0–10%. Under NAFTA, tariffs were phased out in 2005, however, many US goods already enter Mexico duty-free. There is also a value-added tax (IVA) of 10–15% (depending on the destination within the country) on most sales transactions. As of 2005, Mexican tariffs on cars, and light and heavy trucks originating in the United States or Canada, can enter duty-free. However, Canadian and US vehicles that do not meet the rules of origin as contained in NAFTA are subject to a 20% tariff, as are those vehicles from other countries.

### 38 FOREIGN INVESTMENT

Old federal law was aimed at attracting foreign investment without placing the nation "at the mercy of interests that are not those of Mexico and its citizens." Under the Foreign Investment Law of 1973, capital profits and dividends could be transferred to and from Mexico and the inflow of foreign funds was encouraged by allowing foreigners to make bank deposits without revealing the identity of the depositors. The current Foreign Investment Law of 1973 preceded the launch of the first phases of the implementation of the NAFTA agreement in January 1994 and opened the economy to further foreign investment. Investment in high technology and export-oriented industries is particularly welcome. About 95% of foreign investment transactions do not require official approval. The National Foreign Investment Commission rules on cases requiring government approval.

Annual foreign direct investment (FDI) in Mexico ranged from \$12 billion to \$14.7 billion from 1997 to 2000 and then soared to \$24.7 billion in 2001. In 2002, FDI inflow fell to \$13.6 billion and in the first quarter of 2003 was 2.7% below the first quarter of 2002, at \$2.6 billion. Foreign investment in 2004 was valued at \$24.5 billion, \$17.4 billion of which was FDI (the rest was portfolio investment).

Foreign portfolio investment as indicated by the total market capitalization of companies listed on the Mexican Stock Market reached a peak in 1993 at \$200.7 billion. By 2001, market capitalization had fallen to \$126 billion. In 2002, Mexican securities held by US investors totaled \$47.6 billion, with \$26.4 billion in equity shares, \$21.2 billion, in long-term debt, and about \$132 million in short-term debt.

The United States is the leading source of direct foreign investment in Mexico, reaching 86.3% in 2000, up from 55% to 66% in previous years. In 2001, there were many large foreign investments in the financial services sector, including a purchase by Citigroup of majority control in Banamex for \$12.5 billion. In 2002, FDI from the United States was 26.7% of the total, at \$3.6 billion. The European Union and EU countries account for most of the rest. From 2004–05, the foreign participation in total market capitalization was approximately 44%, according to the Economist Intelligence Unit. The US Department of State reported that, from 2000–04, the United States spent \$35,234 million out of the total FDI inflow of \$83,373 million. Manufacturing and Financial

received the most investment, respectively receiving \$5,750 and \$4,802 million in FDI.

Mexico's Foreign Investment Law identifies 704 activities, 656 of which allow 100% foreign ownership. Ten activities are reserved for the Mexican State, and five for Mexican nationals. Thirteen activities require approval by the National Foreign Investment Commission for 100% foreign ownership, and 18 activities have ceilings of 49% for foreign investment. Sectors reserved for the state, in whole or in part, include petroleum, petrochemicals, telegraphic and radio telegraphic services, radioactive materials, electric power, nuclear energy, money printing, postal service, airports, and control of ports and heliports. Sectors reserved for Mexican citizens include retail sales of gasoline, noncable radio and television services, credit unions and banks, professional and technical services, and domestic transport. Land and water within 100 km (62 mi) of Mexico's borders or 50 km (31 mi) of the coastline may not be foreign owned.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

The government encourages local industry by giving financial support, customs protection, and tax exemption to approved or new enterprises. The National Financing Agency has supported new industries by purchasing their stock and then reselling it to the public when the firm is established. The executive branch of government may set ceiling prices on foodstuffs, drugs, and other basic necessities, such as workers' rents. Modern Mexican economic policy derives in principle from the constitution of 1917, which, in Article 27, proclaims national ownership of subsoil rights, provides for expropriation of property needed for national purposes, and provides for the breaking up of large estates and the establishment of village communal landholdings (*ejidos*). The property of foreign oil companies was expropriated in 1938, and production, refining, and distribution were placed under the government-controlled PEMEX. The government also nationalized the railway and banking systems, owns most electric power plants, and partly owns some industrial establishments. Majority Mexican ownership was required in virtually all sectors until early 1984, when restrictions on foreign investment were relaxed somewhat.

Major development projects in the 1970s included an attempt to increase agricultural productivity, modernization of the nation's railroads, expansion of the fishing fleet, and resettlement of some 50,000 families from the northern states to the southern states Campeche, Yucatán, and Quintana Roo.

When the exploitation of huge oil deposits began in the mid-1970s, the Mexican government embarked on an expansionist economic policy, which included an ambitious public-spending program financed to a great degree by foreign borrowing. A 17-point development program announced in 1978 created about three million new jobs by 1981, but it was not fully implemented because of the drop in world oil prices and the subsequent financial crisis. The crisis reached its climax in August 1982, when the government suspended all payments of foreign debt principal and had to resort to emergency credits to avoid default.

New credits from the International Monetary Fund (IMF) were conditional upon Mexico's acceptance of an austerity program that entailed reduction of the budget deficit from 17.9% of the gross domestic product (GDP) in 1982 to 8.5% in 1983. Other austerity

measures included tax increases, increases in the prices of controlled commodities, such as bread and salt, and steps to decrease tax evasion and reduce inflation. The de la Madrid administration simultaneously pursued policies to reduce the inflated value of the peso and to generate massive trade surpluses; indicative of their effectiveness were the 1983 and 1984 surpluses, over \$13 billion in each year. The government, moreover, pursued rescheduling of its foreign debt, winning agreements in 1983 (\$14 billion) and 1986 (\$43.7 billion). In 1985 and 1986, however, the earthquake and the fall in world oil prices undermined the recovery; export revenues plunged, and inflation soared. The 1986 rescheduling was conditional upon Mexico's agreement to increase development of the export sector and encourage efficient import-substitution policies, as well as foreign investment.

Since Mexico joined GATT in 1986, trade barriers were eliminated and tariffs reduced. Privatizations since 1989 include: the telephone company, Telmex; Mexico's 18 commercial banks; the airlines, Aeromexico and Mexicana; two large copper mines, Cananea and Mexicana de Cobre; and two large steel companies, Sicartsa and AHMSA. Privatizations have produced large one-time revenues for the government, while simultaneously reducing the government's role in the economy thus garnering savings by reducing its transfers to inefficient enterprises. Furthermore, these new profit-making private sector companies have widened the tax base.

The North American Free Trade Agreement (NAFTA), ratified in 1992 and implemented in 1994, culminated several years of trade liberalization efforts begun in 1986. NAFTA's goal is the creation of a market of 360 million consumers with \$6 trillion in annual output. Tariffs on most industrial and agricultural goods are to be eliminated or phased out within 15 years. NAFTA trading benefits are only given to goods produced wholly or principally in NAFTA countries. NAFTA eliminates trade barriers and investment restrictions on participating countries' autos, trucks, buses, and auto parts within 10 years. NAFTA proposed to safeguard domestic agricultural production of the dairy, egg, poultry, and sugar sectors. NAFTA opens up foreign investment possibilities in the Mexican energy sector. NAFTA has provisions for the textiles and services sectors, banking, investment, and intellectual property rights. Labor and environmental impacts are also addressed. Mexico established free trade agreements with Venezuela and Colombia as a member of the Group of Three, and with several other Central American nations. Mexico signed a free trade agreement with Chile in 1991.

The 1994–95 Mexican financial crisis demanded the government undertake major policies of economic management and reform. A buoyant financial market and large inflows of capital preceded the crisis. Capital inflow to Mexico between 1990 and 1994 amounted to \$104 billion—20% of total capital flows to developing countries during that period. Mexico's external current account deficit widened, there was a rapid growth in bank credit to the private sector, international interest rates were rising, and the country maintained an exchange rate peg. Mexico floated the peso in December 1994; the currency was attacked by speculative investors, which led to a drastic devaluation. The financial system was also very weak, and there was a massive outflow of capital from the country. After the crisis broke, the government realized major structural changes would need to be taken, and interna-

tional financial support would be needed. The US government, the IMF, World Bank, and the Inter-American Development Bank provided emergency funds, to prevent the crisis from spreading to other countries. The Mexican economy began to recover in 1996.

In 1999, the IMF approved a 17-month, \$4,123-million Stand-By Arrangement with Mexico to support the government's economic reform program. In 2000, Mexico repaid all of its obligations to the IMF. The country in the early 2000s was a recipient of large amounts of foreign direct investment, the largest recipient of FDI in Latin America in 2000 (22.5 billion). The Mexican economy weakened in 2001–02, however, marked by weak domestic demand. In 2002, the government was following an economic program (PRONAFIDE) aimed toward strengthening the country's fiscal position, enhancing competitiveness and stimulating productivity. The government was aiming for a reduction of the fiscal deficit and public debt by 2006. Although the government realized it had to maintain spending constraints, it still increased social expenditures in an effort to combat poverty. The government in 2003 was considering tax reform, opening up the telecommunications sector to more competition, and, most controversial, allowing for private investment in energy. As of 2004, the government was working to privatize port operations in order to increase trade development. At the time, Tampico and Veracruz were Mexico's primary seaports.

#### 40 SOCIAL DEVELOPMENT

The social security system includes old age pensions, disability, medical, and work injury benefits. The system covers all workers, and consists of both social insurance and a private insurance scheme. Pensions are financed by contributions from employees, employers, and the government. Retirement is set at age 65, and benefits are determined by length of employment. Insurance for occupational accidents is financed by employer contributions, and provides for 100% of earnings for temporary disability, and 70% of salary for those permanently disabled. Insured workers and their families receive medical and maternity benefits. A funeral grant is provided. Child care is available to dependent children of poor women, widowers, and divorced working men.

An amendment to the 1917 constitution states that men and women are equal before the law, however in practice this was not respected. Women continue to earn less than men, and are concentrated in lower paying jobs. Women can own property and file for divorce. Domestic violence is widespread and is vastly underreported. It was estimated in 2004 that 47% of women experienced at least one incident of physical or emotional abuse. Organizations and women's groups are working to counter the view that spousal abuse is a private matter and normal behavior. Sexual tourism is a problem, especially in the resort areas of the country.

Indigenous peoples have full protection under the law, but in practice they face discrimination and experience economic hardship. Numerous nongovernmental organizations in Mexico are working to protect and promote the rights of indigenous peoples. The human rights of citizens are generally respected, although there are continued reports of extrajudicial killings, torture, illegal arrests, and arbitrary detention. Narcotics related killings have increased in recent years.

#### 41 HEALTH

Mexico has made slow but measurable progress in public health. The Health Sector Reform Program, launched in 1995, has aimed at reorganizing the healthcare system to expand coverage and increase efficiency of services. In 2004 there were an estimated 171 physicians, 221 nurses, and 10 dentists per 100,000 people. Total health care expenditure was estimated at 5.3% of GDP. In 2000, 86% of the population had access to safe drinking water and 73% had adequate sanitation.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 22.36 and 4.99 per 1,000 people. About 65% of the married women (ages 15 to 49) were using contraception. The infant mortality rate, which was 101.7 per 1,000 live births in 1948, was reduced to 20.91 by 2005. Average life expectancy, meanwhile, rose from 32.4 years in 1930 to 57.6 in 1965; by 2005, average life expectancy was estimated at 75.19 years. Maternal mortality was 55 per 100,000 live births.

Cholera, yellow fever, plague, and smallpox have been virtually eliminated, and typhus has been controlled. Permanent campaigns are waged against malaria, poliomyelitis, skin diseases, tuberculosis, leprosy, onchocerciasis, and serious childhood diseases. Immunization rates for children up to one year of age were as follows: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 93%; polio, 94%; and measles, 84%. Major causes of death were communicable diseases, neoplasms, injuries and circulatory diseases.

Since 1995, the number of new AIDS cases reported each year has stabilized. The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 160,000 people living with HIV/AIDS in the country. There were an estimated 5,000 deaths from AIDS in 2003.

#### 42 HOUSING

Government agencies that have fostered the development of low-income housing include the Fund for Housing Operations and Bank Discounts, the National Public Works and Services Bank, the Housing Credit Guarantee and Support Fund, and the Comisión Nacional de Fomento a la Vivienda (CONAFOVI). In 1974, the National Workers' Housing Fund Institute (Instituto del Fondo Nacional de la Vivienda para los Trabajadores—INFONAVIT) was created to provide housing for workers. With funds provided by employers (equal to 5% of the total salary of each worker), INFONAVIT makes direct loans to employees and provides short-term loans to finance the construction of approved multi-unit projects, which are then sold to employees covered by the program.

Government efforts have fallen short of eradicating Mexico's housing shortage, which had been exacerbated by accelerated population growth in the 1980s. The government allocated us\$1.93 billion in 1989 to build 250,000 low-cost housing units, and expected to receive an additional us\$700 million from the World Bank to build more. The 1990 National Housing Plan predicted a shortage of 6.1 million homes, to be felt most severely in the outskirts of urban areas, including Mexico City, Guadalajara, Monterrey, and cities in the northern states.

In 2000, there were about 21,954,733 housing units; in 2004 the stock was estimated at about 24 million units. About 85% are detached homes. Most dwellings are privately owned; about 84%

have running water and 78% have access to sewage services. The average household had about 4.4 members. About 50% of all new housing (about 300,000 units per year) is self-built by low-income households. However, much of this is informal housing with inadequate structure and a lack of public utilities.

### 43 EDUCATION

Except in the Federal District, where education is administered by the federal government, schools are controlled by the states. As of the 2004/05 academic year, 10 years of schooling are compulsory and free, beginning with one year of preschool at about age five. Primary school then covers six years of study. Secondary school studies generally last for three years. Secondary students may choose a general education program, a technical school program, or a vocational school program.

In 2001, about 76% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 63% of age-eligible students. It is estimated that about 99% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 27:1 in 2003; the ratio for secondary school was about 17:1.

Major universities include the National Autonomous University (founded in 1551), the National Polytechnic Institute, and Iberoamericana University (private), all in Mexico City, and Guadalajara University, the Autonomous University of Guadalajara, and the Autonomous University of Nuevo León. In each state there are other state and private institutions. In 2002, there were 1550 institutions of higher education nationwide; 606 were public and 944 were private. In 2003, about 22% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 90.3%, with 92% for men and 88.7% for women.

The government provides extracurricular education through cultural and motorized missions, community-development brigades, reading rooms, and special centers for workers' training, art education, social work, and primary education. As of 2003, public expenditure on education was estimated at 5.3% of GDP, or 24.3% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

The Mexican public library system has over 4,800 branches holding in total over 20 million volumes and servicing about 72 million registered library users. The National Library, now affiliated with the National University of Mexico, has about three million volumes. Other important collections include the Library of Mexico, the Library of the Secretary of the Treasury, and the Central Library of the National Autonomous University in Mexico City. In total, there are over 1,000 libraries affiliated with institutions of higher education.

The National Museum of Anthropology in Mexico City, founded in 1825, has over 600,000 anthropological, ethnological, and archaeological exhibits and a library of 300,000 volumes. Among its exhibits are the famous Aztec calendar stone and a 137-ton figure of Tlaloc, the god of rain. The National Historical Museum, attached to the National Institute of Anthropology and History,

has more than 150,000 objects ranging in date from the Spanish conquest to the constitution of 1917. The National Museum of Art exhibits Mexican art from 17th century to present, while several other art museums exhibit the works of leading European artists, including the Museum of Modern Art and the Museum of Popular Art. Also in Mexico City is the Frida Kahlo Museum in the former home of Frida Kahlo and Diego Rivera, featuring the works of the former, considered to be Mexico's finest artist. (There is another museum featuring Rivera's work in Guanajuato.) Many public buildings in Guadalajara and elsewhere display murals by famous Mexican painters.

### 45 MEDIA

National and international telegraphic service is furnished by the government-owned National Telegraph Co. The government also owns and operates the international radiotelegraph and radiotelephone facilities. A privately owned telephone company provides supplemental facilities in outlying areas. The largest utility is the government-owned Telephones of Mexico. In 2003, there were an estimated 158 mainline telephones for every 1,000 people. The same year, there were approximately 291 mobile phones in use for every 1,000 people. The national microwave network, now complete, cost more than P650 million; facilities by 1968 included the central telecommunications tower in the Federal District and a land station for artificial satellite communications at Tulancingo, Hidalgo, with one of the largest antennas in the world. The network serves most of the country's larger cities.

Broadcast media is primarily under private ownership and operation. Televisa and TV Azteca are the two primary television broadcasters, accounting for about 90% of the broadcast market in 2004. The federal government owned two television stations. There were also several regional stations supported in part by the various state governments. As of 2003 there were 850 AM and 545 FM radio television stations and over 200 television stations. In 2003, there were an estimated 330 radios and 282 television sets for every 1,000 people. About 24.3 of every 1,000 people were cable subscribers. Also in 2003, there were 82 personal computers for every 1,000 people and 118 of every 1,000 people had access to the Internet. There were 634 secure Internet servers in the country in 2004.

Leading newspapers in Mexico City (with their estimated average daily circulations in 2004) include: *La Prensa* (275,000), *El Universal* (170,000), *Esto* (150,000), *Reforma* (126,000), *El Universal Grafico* (105,000), *Ovaciones* (50,000), *El Financiero* (40,000), *Tribuna* (40,000), and *La Jornada* (35,000). Leading newspapers in Monterrey in 2004 included *El Norte* (133,872), *Metro* (62,000), and *El Porvenir* (60,000). There are two major daily papers in Tampico, *El Sol de Tampico* (77,000 in 2004) and *El Heraldo de Tampico* (54,000). *El Mexicano* in Tijuana had a 2004 daily circulation of 48,000 (a significant decrease from 80,000 in 2002), while *El Sol de Tijuana* distributed 50,000 daily papers. Guadalajara has four major papers, including: *El Occidental* (49,400), *El Informador* (46,000 in 2004), *El Sol de Guadalajara* (NA), and *Ocho Columnas* (40,000). The English language paper *The News* is distributed out of Mexico City, reporting a circulation of 30,000 in 2004.

Freedom of the press is guaranteed by law and to a large extent exercised in practice. However, by controlling the supply of newsprint and by providing advertising, indirect subsidies, and out-

right payoffs to the press, the government exerts an indirect form of press censorship.

#### 46 ORGANIZATIONS

The Mexican government supervises and promotes producer and consumer cooperatives, which are exempt from profits and dividends taxes, and are given customs protection. Producer cooperatives are active in agriculture, fishing, forestry, and mining. Consumer cooperatives buy, sell, and distribute clothing, foodstuffs, and household articles.

Chambers of commerce and of industry are located in most cities, and merchants and manufacturers are required to join either or both. Headquarters for the Confederation of National Chambers of Commerce and the Confederation of Industrial Chambers are in Mexico City. The principal employers' organization is the Employers' Confederation of the Mexican Republic, which dates from 1929. There are several trade unions and associations for particular occupations; specialized unions include the Federation of Coffee Organizations, the Mexican Association of Gifts, and the Decorative Goods and Folk Art Producers. Professional associations also exist for a variety of occupations and fields.

Cultural and educational organizations include the Academia Mexicana de la Historia, Academia Mexicana de la Lengua, and Instituto Nacional de Bellas Artes. The National Academy of Sciences and the National Council for Science and Technology are major supporters of scientific research and education. There are several other associations dedicated to research and education for specific fields of medicine and particular diseases and conditions, such as the Mexican League Against Epilepsy.

National youth organizations include the University Student Council, the Scouts Association of Mexico, Girl Guides, the Conference of Political Youth Organizations in Latin America, Junior Chamber, and YMCA/YWCA. Sports associations and clubs are popular in Mexico and many national groups are affiliated with international associations, such as the World Boxing Council, which is based in Mexico City.

Environmental groups include Conservation Mexico and a national chapter of Greenpeace.

Kinal Antzetik is an organization focusing on improving the health and welfare of women, particularly those of indigenous groups, and promoting equal rights and social justice. Centro Mujeres is a similar community health organization for women. Other social action groups include the Mexican Society for Women's Rights and the Mexican Commission for the Defense and Promotion of Human Rights. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. Several national service groups network through the Mexican Association of Volunteers. International organizations with chapters in Mexico include the Red Cross, Habitat for Humanity, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Mexico's tourist attractions range from modern seaside resort areas, such as Tijuana, Acapulco, Puerto Vallarta, Punta Ixtapa/Zihuatanejo, Cozumel, and Cancún, to the Mayan ruins of Chiapas State and the Aztec monuments of the south-central regions. Mexico City, combining notable features from the Aztec, colonial, and modern periods, is itself an important tourist mecca. Veneration

of the patron saints plays an important role in Mexican life, and the calendar is full of feast days (fiestas). These predominantly Roman Catholic celebrations include many ancient Amerindian rites and customs and, invariably, bands of mariachi musicians playing Mexican folk songs. Tourists from the United States and Canada are not required to have a visa for stays of up to 30 days, but must have photo identification, proof of citizenship, and a tourist card. All other visitors must have a valid passport and a visa.

Mexico was host in 1968 to the Summer Olympics and in 1970. The 1986 World Cup football (soccer) championship was also held in Mexico; the World Cup helped tourism recover from the effects of the earthquake, which kept many visitors away in 1985 and 1986. Mexico's most popular sports are baseball, soccer, jai-alai, swimming, and volleyball. Bullfights are a leading spectator sport; the Mexico City arena, seating 50,000, is one of the largest in the world, and there are about 35 other arenas throughout the country.

There were 18,665,384 tourists who visited Mexico in 2003, of whom 94% came from the United States. Hotel rooms numbered 496,292 with 992,584 beds and an occupancy rate of 48%. The average length of stay that year was three nights. Tourist expenditure receipts totaled \$10.1 billion.

The cost of traveling in Mexico varies considerably from city to city. According to the 2005 US Department of State estimates, daily expenses in Mexico City were \$285; in Nogales, \$193; in Cozumel, \$230; in Cancún, \$294; and in Tijuana, \$187.

#### 48 FAMOUS MEXICANS

The founder of Spanish Mexico was Hernán Cortés (1485–1547), a daring and clever Spanish conquistador. One of the great heroes in Mexican history is Guatemotzin (Cuauhtémoc, 1495?–1525), the last emperor of the Aztecs, who fought the Spanish after the death of his uncle, Montezuma II (Moctezuma or Motecuhzoma, 1480?–1520). Bartolomé de las Casas (1474–1566) and Junípero (Miguel José) Serra (1713–84) were Spanish-born missionaries who tried to improve the conditions of the Amerindians in the colonial period. Two heroes of the War of Independence were the liberal priests Miguel Hidalgo y Costilla (1753–1811) and José María Morelos y Pavón (1765–1815). The first 25 years of independence were dominated first by Manuel Félix Fernández, known as Guadalupe Victoria (1786?–1843), and then by Antonio López de Santa Anna (1794–1876). Austrian-born Maximilian (Ferdinand Maximilian Josef, 1832–67) and Belgian-born Carlota (Marie Charlotte Amélie Augustine Victoire Clémentine Léopoldine, 1840–1927) were emperor and empress from 1864 to 1867, ruling on behalf of the emperor of France. Benito Juárez (1806–72), the great leader of the liberal revolution, attempted to introduce a program of national reform. The dictator José de la Cruz Porfirio Díaz (1830–1915) dominated Mexico from 1876 to 1911. He was overthrown largely through the efforts of Francisco Indalecio Madero (1873–1913), called the Father of the Revolution. Revolutionary generals and politicians included Venustiano Carranza (1859–1920) and Álvaro Obregón (1880–1928). Two other revolutionary leaders—Doroteo Arango, known as Pancho Villa (1877?–1923), and Emiliano Zapata (1879?–1919)—achieved almost legendary status. The foremost political leader after the revolution was Lázaro Cárdenas (1895–1970). Luis Echeverría Álvarez (b.1922), who held the presidency during 1970–76, made Mexico

one of the leading countries of the developing world in international forums. Miguel de la Madrid Hurtado (b.1934) was president from 1982–88. Carlos Salinas de Gortari (b.1948) was president from 1988–1994. Ernesto Zedillo Ponce de León (b.1951) was president from 1994–2000. Vicente Fox Quesada (b.1942) was elected president in the 2000 election; he became the first president elected from an opposition party since Francisco Madero in 1910, breaking the 70-year reign of the PRI. The diplomat Alfonso García Robles (1911–91) shared the 1982 Nobel Peace Prize for his work on behalf of disarmament.

Painters Diego Rivera (1883–1957), José Clemente Orozco (1883–1949), and David Alfaro Siqueiros (1898–1974) are renowned for their murals. Frida Kahlo (1907–1954) is known for her self-portraits. The Spaniards Bernal Díaz del Castillo (1496?–1590?) and Bernardino de Sahagun (1499?–1590) wrote historical accounts of the Spanish conquest. Mexican-born Juan Ruiz de Alarcón y Mendoza (1580?–1639) became a playwright in Spain. Juana Inés de la Cruz (1651–95), a nun, was a poet and proponent of women's rights. Outstanding novelists include José Joaquín Fernández de Lizardi (1776–1827), author of *El periquillo sarniento*; Mariano Azuela (1873–1952), author of *Los de abajo*; Martín Luis Guzmán (1887–1976), author of *El águila y la serpiente*; and Gregorio López y Fuentes (1897–1966), author of *El indio*. Well-known contemporary authors include Agustín Yáñez (1904–80), Octavio Paz (1914–1998), Juan Rulfo (1918–86), and Carlos Fuentes (b.1928). Poets include Salvador Díaz Mirón (1853–1928), Manuel Gutiérrez Nájera (1859–95), and Amado Nervo (1870–1919). The outstanding figure in recent Mexican literary life is the diplomat, dramatist, poet, essayist, and critic Alfonso Reyes (1889–1959). Anthropologist Carlos Castaneda (b.Brazil, 1931–1998) was widely known for his studies of mysticism among the Yaqui Amerindians. Well-known Mexican composers include Manuel Ponce (1882–1948), Silvestre Revueltas (1899–1940), Carlos Chávez (1899–1978), and Agustín Lara (1900–70). Significant figures in the motion picture industry are the comedian Cantinflas (Mario Moreno, 1911–93), Mexican-born actor Anthony Rudolph Oaxaca Quinn (1916–2001), and directors Emilio Fernández (1904–86) and Spanish-born Luis Buñuel (1900–83). Oscar-nominated Salma Hayek (b.1966) is considered to be one of Latin America's most successful actresses in Hollywood; she portrayed Frida Kahlo in the 2002 film *Frida*, which she co-produced.

Notable Mexican sports figures include Fernando Valenzuela, (b.1960), a pitcher for the Los Angeles Dodgers who won the Cy Young Award as a rookie. "Beto" or "Bobby" Avila (1924–2004), second baseman for the Cleveland Indians (1949–58); catch-

er Gerónimo Gil (b.1975); pitcher Esteban Loaiza (b.1971); and pitcher Oliver Pérez (b.1981) have all made their mark in Major League Baseball.

## 49 DEPENDENCIES

Mexico has no territories or colonies.

# NETHERLANDS AMERICAN DEPENDENCIES

## NETHERLANDS ANTILLES

The five islands of the Netherlands Antilles are divided geographically into two groups: the Leeward Islands (Benedenwindse Eilanden) and the Windward Islands (Bovenwindse Eilanden). The Windward group, off the north coast of South America, comprises the islands of Curaçao, with an area of 444 sq km (171 sq mi), and Bonaire, 288 sq km (111 sq mi). Aruba, another Windward island, seceded from the Netherlands Antilles in 1986. The Leeward group, more than 800 km (500 mi) to the northeast, consists of the southern part of St. Martin (Sint Maarten), 34 sq km (13 sq mi); Saba, 13 sq km (5 sq mi); and Sint Eustatius, 21 sq km (8 sq mi). The islands total 800 sq km (309 sq mi).

All the Windward Islands have volcanic bases, partly covered with coral reefs; they are semiarid and flat, with little vegetation. The Leeward Islands are more mountainous and receive enough rainfall to enable crops and vegetation to flourish. Saba, the most fertile, is an extinct volcano with luxuriant vegetation in its crater, on its sides, and leading down to the sea. Temperatures average between 25° and 31°C (77° and 88°F); annual rainfall averages 107 cm (42 in) on the Windward Islands and 51 cm (20 in) on the Leeward Islands. The entire population of the Netherlands Antilles was estimated at 219,958 in mid-2005. Most of the inhabitants were born on the islands. Persons of mixed African origins account for 85% of the population, but over 40 ethnicities are represented, including Dutch, Surinamese, British, Latin Americans, French West Indians, Carib Amerindians, and US emigrants.

The official language is Dutch. Papiamentu, a lingua franca evolved from Dutch and English with an admixture of French, Spanish, Portuguese, Arawak, and African words, is also common, principally in the Leeward Islands. English is spoken, mainly in the Windward Islands. Spanish is also widely spoken. Roman Catholicism has the most adherents on the Leeward Islands and Saba, but Protestantism is dominant on St. Martin and Sint Eustatius.

Buses, private automobiles operating as small buses on fixed routes, and taxicabs provide the only public transportation. There are no rivers or railroads. Each island has a good all-weather road system. The most important port is on Curaçao, where there is a natural harbor at Willemstad. Airline connections to nearby islands and countries are provided by Royal Dutch Airlines (Koninklijke Luchtvaart Maatschappij—KLM) and other international carriers.

The European discovery of the Windward Islands was made by Columbus in 1493, and that of the Leeward Islands (including Aruba) by a young Spanish nobleman, Alonso de Ojeda, who sailed with Amerigo Vespucci in 1499; hence the claim went to Spain. The Dutch fleet captured the Windward Islands in 1632 and the Leeward Islands in 1634. Peter Stuyvesant was the first governor. In 1648, St. Martin was peacefully divided between the Netherlands and France; this division still exists. During the colonial

period, Curaçao was the center of the Caribbean slave trade. For a period during the Napoleonic wars (1807–15), Great Britain had control over the islands. Slavery was abolished in 1863.

Under a 1954 statute, the Netherlands Antilles is a component of the Kingdom of the Netherlands, with autonomy in internal affairs. A governor, appointed by and representing the crown, heads the government, with a Council of Ministers as the executive body. The ministers are responsible to the Staten, a 22-member legislature (14 from Curaçao, 3 each from Bonaire and St. Martin, and 1 each from Saba and Sint Eustatius). Members are elected by general suffrage of Dutch nationals aged 18 or older. A 1951 regulation established autonomy in local affairs for each of the then-existing island communities—Aruba, Curaçao, Bonaire, and the Leeward Islands—with responsibilities divided between an elected island council, an executive council, and a lieutenant-governor. By agreements made in 1983, St. Martin, Saba, and Sint Eustatius have separate representation in the Staten, elect their own separate councils, and have their own lieutenant-governors and executive councils. Cases are tried in a court of first instance and on appeal in the Joint High Court of Justice, with justices appointed by the crown. Defense is the responsibility of the Netherlands; a naval contingent is permanently stationed in the islands, and military service is compulsory.

The prosperity of Curaçao is inseparably linked with its oil refineries. These were built there, beginning in 1918, chiefly because of the favorable location of the islands, their good natural ports and cheap labor, and the political stability of the territory. Tankers bring crude oil from Venezuela. The economic significance of the refineries is great, not only because of their output, but also because they provide employment and stimulate other economic activities, such as shipbuilding, metal industries, shipping, air traffic, and commerce in general. The government controls the price of basic foodstuffs and participates in the setting of rates to be charged for transportation and by privately owned utilities.

The currency unit is the Netherlands Antilles guilder, or florin (NAf) of 100 cents; NAf1 = \$0.55866 (or \$1 = roughly NAf1.79). The GDP for 2003 was estimated at us\$2.45 billion, or us\$11,400 per capita. The unemployment rate was 15.6% in 2002, and 60–70% of the work force was organized in labor unions. The principal agricultural products are sorghum, orange peel, aloes, groundnuts, yams, divi-divi, and some assorted vegetables. Curaçao's favorable position at the crossing of many sea-lanes has stimulated commerce since the earliest days of European settlement. Transit trade benefits from Curaçao's improved harbors; Willemstad is a free port, as are the islands of Saba and Sint Eustatius. In 2004, exports were estimated at us\$2.076 billion and imports at us\$4.383 billion. Refined petroleum products are exported to the Netherlands and other countries from a refinery on Curaçao. Petroleum shipments dominate the country's foreign trade. In 2004, primary export partners included: the United States (20.4%), Panama

Numerous commercial banks and several savings and loan institutions that also handle financial matters. Tax treaties with the United States have encouraged US individuals and businesses to shelter their funds in the islands.

In addition to nursery schools, primary schools, and secondary schools located on the islands, the University of the Netherlands Antilles is found on Curaçao; all schools are government-supported. The language of instruction is Dutch in the Leeward Islands, except in the International School, where classes are taught in English; English is also used in the Windward Islands. The literacy rate was 96.7% in 2003.

All the islands have cable, radiotelegraph, or radiotelephone connections with one another and, via the central exchange at Curaçao, with international systems. There are 8 AM, 19 FM, and 3 TV stations on the islands. Broadcasts are in Papiamentu, Dutch, Spanish, and English. There are 2,000 Internet users. Newspapers include *La Prensa*, the *Bonaire Reporter*, *Vigilante*, *Extra*, *Antilliaans Dagblad*, the *Daily Herald* and *Amigoe*, along with several weekly and monthly periodicals.

Tourism is a significant source of revenue. Annually, some 470,000 cruise passengers visit the islands; total visitors to the islands amount to over 1,000,000.

**ARUBA**

The island of Aruba is located off the north coast of South America, nw of Curaçao. It has an area of 193 sq km (75 sq mi). The land is basically flat and is renowned for its white-sand beaches. The temperature is almost constant at 27°C (81°F); the annual rainfall averages 60 cm (24 in). The mid-2005 population was estimated at 71,566. The official language is Dutch, but Papiamentu, English, and Spanish are also spoken. The religion of the majority is Roman Catholic.

There are no rivers or railways. The road system connects all major cities. There are three deepwater harbors, at San Nicolas, Oranjestad, and Barcadera. Airline connections are provided by Royal Dutch Airlines (Koninklijke Luchtvaart Maatschappij—KLM) and other international carriers.

In March 1983, at the Hague, the governments of the Netherlands and Netherlands Antilles agreed to grant Aruba the status of a separate state. On 1 January 1986, Aruba seceded from the Netherlands Antilles, becoming a separate member of the kingdom. In 1990, Aruba requested and received from the Netherlands a cancellation of the agreement that would have granted independence in 1996.

The head of government is a governor appointed by and representing the crown. A Council of Ministers, led by a prime minister, has executive power. The ministers are responsible to the Staten, a legislative body of 21 members elected by universal adult suffrage for four-year terms. Cases are tried in a court of first instance and on appeal in the Common Court of Justice of Aruba, with justices appointed by the crown. Defense is the responsibility of the Netherlands; a naval contingent is stationed on the island, and military service is compulsory.

The two principal sources of revenue for the island are tourism and oil refining. Coastal Aruba Refining Co., produces asphalt,

(11.2%), Guatemala (8.8%), Haiti (7.1%), the Bahamas (5.6%), and Honduras (4.2%). The primary import partners were: Venezuela (51.1%), the United States (21.9%), and the Netherlands (5%).

The Bank of the Netherlands Antilles (Bank van de Nederlandse Antillen) issues currency, holds official reserves, regulates the banking system, and acts as the central foreign exchange bank.

diesel fuel, feedstock for other refineries, kerosene, and residual fuel oil at the Lago refinery. Since the refinery reopened in 1993, economic growth has surged, as the refinery provides a major source of employment and foreign exchange earnings. The currency unit is the Aruban florin (Af) of 100 cents, with a fixed exchange rate of Af1 = \$0.5587 (or \$1 = Af1.79) since 1986. The GDP for 2002 was us\$1.94 billion, or us\$28,000 per capita. The unemployment rate was 0.6% in 2003, leading to a large number of unfilled job vacancies despite recent sharp increases in wage rates.

In 2004, Aruban exports were valued at us\$80 million (mostly refined petroleum products), and imports at us\$875 million. The United States and the EU are Aruba's major trading partners.

There is a Central Bank of Aruba, and there are other commercial banks.

Medical care is entirely subsidized by the government; there is a modern hospital. The literacy rate is high (97%). There are 2 AM and 16 FM commercial radio stations and one television station in Aruba. There are 24,000 Internet users. There is one daily newspaper published in Dutch, one in English, and 1 in Papiamentu. There were an estimated 37,100 main telephones on the island in 2002; 53,000 mobile cellular telephones are also in use.

Tourism is the major source of revenue. Over 500,000 tourists annually visit the island, with about half coming from the United States.

# NICARAGUA

Republic of Nicaragua  
*República de Nicaragua*

**CAPITAL:** Managua

**FLAG:** The national flag consists of a white horizontal stripe between two stripes of cobalt blue, with the national coat of arms centered in the white band.

**ANTHEM:** *Salve a ti, Nicaragua (Hail to You, Nicaragua).*

**MONETARY UNIT:** The gold córdoba (c\$) is a paper currency of 100 centavos. There are coins of 5, 10, 25, and 50 centavos and 1 and 5 córdobas, and notes of 1, 2, 5, 10, 20, 50, 100, 500, 1,000, 5,000, 10,000, 20,000, 50,000, 100,000, 200,000, 500,000, 1,000,000, 5,000,000, and 10,000,000 córdobas. c\$1 = us\$0.59701 (or us\$1 = c\$1.675) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local units also are used.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Liberation Day (Revolution of 1979), 19 July; Battle of San Jacinto, 14 September; Independence Day, 15 September; All Saints' Day, 1 November; Christmas, 25 December. Movable religious holidays include Holy Thursday and Good Friday.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Nicaragua, the largest of the Central American countries, has an area of 129,494 sq km (49,998 sq mi), which includes the area covered by the waters of Lake Nicaragua (about 8,000 sq km/3,089 sq mi) and Lake Managua (about 1,025 sq km/396 sq mi). Comparatively, the area occupied by Nicaragua is slightly smaller than the state of New York. The country has a length of 472 km (293 mi) N–S and a width of 478 km (297 mi) W–E. Bounded on the N by Honduras, on the E by the Caribbean Sea, on the S by Costa Rica, and on the W by the Pacific Ocean, Nicaragua has a total boundary length of 2,141 km (1,330 mi), of which 910 km (565 mi) is coastline.

In 1980, Nicaragua unilaterally abrogated its 1928 treaty with Colombia, confirming that nation's sovereignty over the Caribbean archipelago of San Andrés and Providencia, about 190 km (120 mi) off the Nicaraguan coast. Nicaragua also disputes the Treaty of Quita Sueño, ratified by the US Senate in July 1981, according to which Colombia received the uninhabited islands of Quita Sueño Bank, Roncador Cay, and Serrana Bank.

Nicaragua's capital city, Managua, is located in the southwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

The Caribbean coast, known as the Mosquito (or Miskito) Coast or Mosquitia, consists of low, flat, wet, tropical forest, extending into pine savannas 80–160 km (50–100 mi) inland. The coastal lowland rises to a plateau covering about one-third of the total area. This plateau is broken by mountain ranges extending eastward from the main cordillera to within 64–80 km (40–50 mi) of the Caribbean coast. The mountainous central area forms a trian-

gular wedge pointed southeast, rising at its highest to some 2,000 m (6,600 ft).

The plains and lake region, in a long, narrow structural depression running northwest to southeast along the isthmus, contains a belt of volcanoes rising to 1,500 m (5,000 ft) and extending from the Gulf of Fonseca to Lake Nicaragua. In this region is located Lake Managua, at 41 m (136 ft) above sea level, which drains through the Tipitapa Channel into Lake Nicaragua, at 32 m (106 ft) above sea level, which, in turn, drains through the San Juan River eastward into the Caribbean. Lake Nicaragua is about 160 km (100 mi) long and 65 km (40 mi) wide at the widest point, while Lake Managua is 52 km (33 mi) long by 25 km (16 mi) wide.

The principal waterways are the Coco (or Segovia) River, navigable up to 240 km (150 mi) inland from the eastern Mosquito Coast, and the San Juan, navigable to within a few miles of the Caribbean, where a series of rapids halts transportation.

Nicaragua lies in an earthquake zone where hundreds of minor tremors, shocks, and earthquakes occur each year. More severe earthquakes have occurred periodically. Some of these are centered off the coast of Nicaragua, such as the 6.9 magnitude earthquake on 9 October 2003 and the 6.6 magnitude quake of 2 July 2005.

## <sup>3</sup>CLIMATE

Except in the central highlands, the climate is warm and humid. Average humidity in Managua in June, the most humid month, is 84%; in April, the driest month, 62%. The mean temperature, varying according to altitude, is between 20° and 30°C (68° and 86°F). In Managua, monthly average temperatures range from a minimum of 23°C (73°F) and a maximum of 30°C (86°F) in January to a minimum of 26°C (79°F) and a maximum of 31°C (88°F) in

July. There are two seasons: a wet season, from May to December, and a dry season, from January through April. Rainfall, however, varies according to region, and the rainy season in the eastern area may extend 9 or even 12 months. Average annual rainfall along the Mosquito Coast reaches 254–635 cm (100–250 in) as a result of the easterly trade winds blowing in from the Caribbean; the highlands also have heavy rainfall. Managua receives 114 cm (45 in), while the Pacific coast averages over 102 cm (40 in) a year.

#### 4 FLORA AND FAUNA

The central highlands region has extensive forests of oak and pine on the slopes, but lower valley elevations show damage from fire and agricultural activities. The largest pine savanna in the rainy tropics stands on the lowlands behind the Mosquito Coast. The wet and humid Caribbean coastal plain has an abundance of tropical forest, with wild rubber, cedar, ebony, mahogany, and rosewood attracting some exploitation.

Wildlife includes the puma, deer, monkey, armadillo, alligator, parrot, macaw, peccary, and several species of snakes (some poisonous). Lake Nicaragua contains the only freshwater sharks in the world, owing to a prehistoric geological movement that separated the lake from the Pacific Ocean, gradually changing the ocean water into fresh water.

As of 2002, there were at least 200 species of mammals, 215 species of birds, and over 7,500 species of plants throughout the country.

#### 5 ENVIRONMENT

Nicaragua's major environmental problems are soil erosion, caused in part by cultivation of annual crops on steep slopes, and depletion of upland pine forests for lumber, fuel, and human settlement. The nation lost an average of 3% of its forest and woodland each year between 1990 and 2000. One contributing factor is the use of wood for fuel. Excessive or ineffective use of pesticides to control malaria, along with widespread agricultural use, has resulted in some environmental contamination.

Industrial pollutants have contaminated the lakes and rivers. The nation has 190 cu km of renewable water resource, with 84% of annual withdrawals used for farming and 2% in industrial activity. As of 2002, 93% of Nicaragua's city dwellers and 65% of its rural population have access to improved water sources. Dumping of sewage and chemical wastes has made Lake Managua unsuitable for swimming, fishing, or drinking. Primary responsibility for resource conservation is vested in the Nicaraguan Institute of Natural Resources and Environment (Instituto Nicaragüense de Recursos Naturales y del Ambiente—IRENA), established in October 1979.

In 2003, 17.8% of the total land area was protected, including eight Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 6 types of mammals, 8 species of birds, 8 types of reptiles, 10 species of amphibians, 17 species of fish, 2 types of mollusks, and 39 species of plants. Threatened species in Nicaragua include the tundra peregrine falcon, four species of turtle (green sea, hawksbill, leatherback, and olive ridley), the spectacled caiman, and the American crocodile.

#### 6 POPULATION

The population of Nicaragua in 2005 was estimated by the United Nations (UN) at 5,774,000, which placed it at number 105 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.7%, among the highest in the region. The projected population for the year 2025 was 8,318,000. The population density was 44 per sq km (115 per sq mi).

The UN estimated that 59% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.91%. The capital city, Managua, had a population of 1,098,000 in that year. Other major cities and their estimated populations are Granada 450,439; León, 145,000; Chinandega, 133,700; Esteli, 119,000; Masaya, 118,000; Matagalpa, 109,100; Chichigalpa, 97,387; Tipitapa, 67,925; and Juigalpa, 54,700.

#### 7 MIGRATION

During the 1980s, Nicaragua hosted more than 10,000 refugees, mainly from El Salvador and Guatemala. Most have since repatriated. Those who chose to remain have been naturalized or granted permanent resident status.

After the Sandinista takeover in 1979, thousands of Nicaraguans left the country. It was estimated in 1987 that 24,000 had fled to Honduras, 16,000 to Costa Rica, and over 200,000 to the United States, chiefly to Florida. After the defeat of the Sandinistas in the 1990 elections, some 200,000 Nicaraguans returned from abroad. Under the CIREFCA plan, during the period 1989–94, 70,000 Nicaraguans repatriated. In 2002 worker remittances were 29% of GDP. Worker remittances in 2004 amounted to \$810 million, or 10.8% of GDP. In 2005, the net migration rate was -1.19 migrants per 1,000 population. The government viewed the migration levels as satisfactory.

#### 8 ETHNIC GROUPS

The Nicaraguan population is basically mestizo, a mixture of white and Amerindian. There are no census data on racial composition, but estimates place the mestizo component at 69% and the white population at 17%; blacks account for 9% and Amerindians for the remaining 5%.

Traditionally, the Atlantic littoral has been inhabited mainly by blacks from Jamaica, Belize, and various present and former British possessions in the Caribbean. The more densely populated Pacific coast highland has long been basically mestizo in composition. Most Amerindian groups in Nicaragua have been assimilated, but Miskito Amerindians, as well as Sumus, make their traditional homes on the Mosquito Coast and neighboring areas. The Garifuna and Rama are other indigenous groups with a somewhat significant number of people.

#### 9 LANGUAGES

Spanish is the official language and is spoken by the overwhelming majority of the population. Some Nahuatl and other Amerindian

LOCATION: 10° to 15° N; 83° to 87° W. BOUNDARY LENGTHS: Honduras, 922 kilometers (573 miles); Caribbean and Pacific coastline, 910 kilometers (565 miles); Costa Rica, 309 kilometers (192 miles). TERRITORIAL SEA LIMIT: 200 miles.

words and phrases are in common use. English is often spoken as a second language at professional levels.

## 10 RELIGIONS

Roman Catholicism is the predominant religion, claiming about 72.9% of the population. Approximately 15.1% of the populace are members of evangelical Protestant churches. Another 1.5% are members of the Moravian Church, and 0.1% belong to the Episcopal Church. An additional 1.9% claim membership in other churches or religious groups, which include Mormons, Amish, Mennonites, and Jehovah's Witnesses; 8.5% profess no religion or are atheistic. There are small communities of Jews, Muslims, Unification Church members, Baha'is, and members in the Church of Scientology. Amerindian tribal religionists and spiritists also

practice, usually combining elements of Christianity and African religions.

Nicaragua does not have a state religion; however, the Roman Catholic Church seems to have significant political influence in the country. The political party Partidon Camino Cistiano (Christian Path Party) was formed by evangelicals. Churches register with the government for legal recognition in much the same process as other nongovernmental groups. Certain Catholic holidays are recognized as national holidays.

## 11 TRANSPORTATION

Main transportation arteries are concentrated in the more densely populated Pacific region. The national road network in 2002 totaled 18,712 km (11,639 mi), of which 2,126 km (1,322 mi) were

paved. The Inter-American Highway from Honduras to Costa Rica was completed in 1972. The Pacific Highway begins in Granada and passes through Managua, León, and Chinandega to Corinto. In 2003 there were 64,650 passenger cars and 99,350 commercial vehicles registered.

Pacific Railways of Nicaragua, government-owned with a length of 373 km (231 mi), was shut down in 1993. As of 2004, there were only 6 km (3.7 mi) of narrow gauge railway in operation, mostly for carrying passengers from Chichigalpa to Ingenio San Antonio.

The Naviera Nicaragüense provides regular services to Central America, the United States, and Europe. As of 2005 Nicaragua had no merchant fleet. Corinto is Nicaragua's only natural harbor on the Pacific coast and the major port, handling about 60% of all waterborne trade. Other ports include Puerto Sandino and San Juan del Sur on the Pacific and Puerto Cabezas on the Atlantic coast. A deepwater port at El Bluff/Bluefields on the Atlantic allows ships from Europe, Africa, and the Caribbean to deliver goods to Nicaragua without passing through the Panama Canal. Inland waterways total 2,220 km (1,380 mi), including Lake Nicaragua, Lake Managua and the San Juan River.

Air transportation is important because of limited road and railway facilities. In 2004, there were an estimated 176 airports, only 11 of which had paved runways as of 2005. A state-owned airline, Aerolíneas de Nicaragua (AERONICA), provides services to El Salvador, Costa Rica, Panama, and Mexico. The principal airport is Augusto Sandino, an international terminal at Las Mercedes, near Managua. In 2000 (the latest year for which data is available), 61,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Nicaragua derives its name from that of the Amerindian chief Nicarao who once ruled the region. The first European contact came with Columbus in 1502. At that time the northern part of the country was inhabited by the Sumo Amerindians, the eastern region by the Miskitos, and the region around Lakes Nicaragua and Managua by agricultural tribes.

The first Spanish settlements in Nicaragua were founded by the conquistador Gil González de Ávila in 1522. The cities of Granada and León were founded in 1524 by Francisco Hernández de Córdoba. During the next 300 years—most of the colonial period—Nicaragua was ruled as part of the captaincy-general of Guatemala. The independence of the five provinces of Central America, including Nicaragua, was proclaimed on 15 September 1821. After a brief period under the Mexican empire of Augustín de Iturbide (1822–23), Nicaragua joined the United Provinces of Central America. Nicaragua declared its independence from the United Provinces on 30 April 1838, and a new constitution was adopted.

Nicaragua did not immediately consolidate as a nation. The Spanish had never entirely subdued Nicaragua, and the Mosquito Coast at the time of independence was an Amerindian and British enclave, especially around the Bluefields area. Britain occupied the Mosquito Coast during the 1820s and 1830s, and maintained a significant presence thereafter. Beyond that, Nicaragua was torn apart by a bitter struggle between liberals, based in León, and conservatives, based in Granada.

Yet another factor impeding Nicaragua's development was constant foreign intervention focusing on the trade route through the country. Commodore Cornelius Vanderbilt competed with the British for control of the transisthmian traffic, a rivalry settled by the Clayton-Bulwer Treaty of 1850. In 1853, liberals led by Máximo Jérez and Francisco Castellón revolted and invited the US military adventurer William Walker to help their rebellion. Walker invaded Nicaragua in 1855, capturing Granada and suppressing Jérez, and had himself elected president in 1856. He lasted only one year, and was captured and executed in Honduras in 1860. Conservatives seized control in 1863 and ruled until 1893.

The 30-year conservative reign brought increases in coffee and banana production. Liberals successfully revolted in 1893, making José Santos Zelaya dictator for 16 years. In this time, he incorporated most of the Mosquito territory into Nicaragua, developed railroads and lake transportation, enlarged the coffee plantations, and stirred up revolts among his Central American neighbors. In 1901, by the Hay-Pauncefote Treaty, Great Britain gave the United States the undisputed right to build a Central American canal.

After Zelaya was deposed in a conservative revolt in 1909, US influence on Nicaragua grew steadily until 1933, often at the behest of Conservative requests for help.

The United States placed an American agent in the customhouse in 1911, and US banks extended considerable credit to the bankrupt treasury. US marines and warships arrived in 1912 to support President Adolfo Díaz. US forces remained active in Nicaraguan politics and administered the country directly or through handpicked rulers until August 1925. During this period, the Bryan-Chamorro Treaty of 1914 allowed the United States to build a canal across Nicaragua. After the marines withdrew, the liberals revolted against the US-backed conservative government of Diego Manuel Chamorro and established a government on the Mosquito Coast. The marines returned in 1926 to reimpose Díaz and supervised the electoral victor of the liberal José María Moncada, with whom the conservatives had made peace, in 1928. However, the guerrilla hero General Augusto César Sandino had begun organizing resistance to the marine occupation force in 1927, and fought the US troops to a standstill. With the inauguration of US president Franklin D. Roosevelt's "good neighbor" policy in 1933, the marines were pulled out for the last time. But the marines left a legacy, having built the Nicaraguan National Guard, headed by Anastasio ("Tacho") Somoza García.

In 1934, the liberal Juan B. Sacasa was elected to office. In the same year, however, officers of the National Guard shot Sandino, leaving them unchallenged in Nicaragua, and paving the way for Somoza's overthrow of Sacasa three years later. The Somoza family would rule Nicaragua directly or indirectly for the next 42 years. Somoza made constitutional changes as necessary to prolong his term until he retired in 1947. He returned in 1950, and was assassinated in 1956. Tacho's son, Luis Somoza Debayle, had been president of congress, and immediately became president under the constitution. The next year, he was elected by a rather suspicious 89% of the vote. Though a law was passed in 1962 that prohibited relatives within four generations from immediately succeeding Luis Somoza as president, his younger brother Anastasio Somoza Debayle would become president in 1967 (after the brief presidencies of René Schick Gutiérrez and Lorenzo Guerrero of the National Liberation Party). Though Anastasio's term in office

was due to end in May 1972, he had worked out an agreement by March 1971 that allowed him to stand for reelection in 1974, ruling in the interim with a three-man coalition government. Anastasio and his triumvirate drew up a new constitution, signed by the triumvirate and the cabinet on 3 April 1971. Then, after declaring nine opposition parties illegal, Somoza easily won the September 1974 elections.

While Somoza consolidated his hold on Nicaragua, the Sandinista National Liberation Front (Frente Sandinista de Liberación Nacional—FSLN) began to agitate against his rule. At first the group was small and confined to the foothill and mountain regions of Nicaragua. But domestic opposition to Somoza mounted, driven by the family's monopolistic and corrupt economic practices. One powerful example of the corruption was the disappearance of half the US relief aid extended to Nicaragua after a devastating 1972 earthquake. Most of the rebuilding of Managua was done by Somoza-controlled firms on Somoza's land. Throughout the 1970s, Somoza's opposition grew and US support began to dissipate.

In December 1974, guerrillas kidnapped 13 prominent political personalities, including several members of the Somoza family. The group secured a ransom of US\$1 million and the release of 14 political prisoners. Somoza responded by declaring a martial law and unleashed the National Guard. The Guard's repressive tactics created even more enemies of the Somoza regime. Repression continued throughout the 1970s, and climaxed in January 1978 with the assassination of Pedro Joaquín Chamorro, editor and publisher of the opposition newspaper *La Prensa*. The assassins were never found, but most felt that Somoza and the National Guard were behind the killing of this moderate leader from a prominent family. By 1979, loss of support from the Catholic Church and the business community left Somoza without domestic allies. He had become isolated diplomatically, and after the administration of US president Jimmy Carter cut off military aid, his ability to remain in power further weakened. In May 1979, the Sandinistas launched a final offensive. By July, the FSLN overthrew Somoza, who fled the country and was assassinated on 17 September 1980 in Asunción, Paraguay. By this time, an estimated 30,000–50,000 people had died during the fighting.

The Sandinistas engaged in an ambitious program to develop Nicaragua under semi-socialist lines, giving priority to healthcare, improved literacy rates, and land reform. To achieve these ends, they nationalized Somoza's land and commercial interests, initiated agrarian reform, and announced a series of literacy and public health campaigns. Politically, they professed democratic ideals, but delivered only sporadically. A Statute on Rights and Guarantees was adopted, but elections were postponed. As antigovernment activity increased in response to government control of production and distribution, the government became increasingly authoritarian, as reflected by the proclamation of a state of emergency from 1982–87, censorship (particularly felt by *La Prensa*), and the dissolution of the National Guard. In 1982, a number of former guard members and Somoza supporters ("Somocistas") joined into an anti-Sandinista, counter-revolutionary group of "contras." They were aided by the administration of US president Ronald Reagan, which had also cut off Nicaragua's aid in April 1981 and introduced a trade embargo in response to Nicaragua's support of leftist guerrillas in El Salvador. Though the Sandinistas

made overtures to please the United States by pulling 2,200 advisors out of Cuba, the United States continued to support over 12,000 contras' operating out of Honduras and Costa Rica with aid channeled through the CIA and directed toward guerrilla-style offensives that disrupted Nicaragua's agriculture and oil supplies.

Daniel Ortega emerged as the leader of the Sandinistas in the 1984 presidential elections. However, in that election, the major opposition groups withdrew from the election, making it a rather hollow victory. Internationally, the Sandinistas made some gains. In 1986, the World Court ruled that the United States had violated international law by mining the harbors in Nicaragua. Though the United States refused to recognize the decision, the Congress proved more reluctant to fund the Nicaraguan resistance. In 1986, it was revealed that US government funds derived from covert arms sales to Iran had been secretly diverted to provide aid to the contras in violation of a US congressional ban on such aid.

On the domestic scene, the Sandinistas were less successful due to their failure to improve socioeconomic conditions; attempts to pin the economic woes on the civil war fell on deaf ears as the economic situation worsened. The inflation rate skyrocketed in 1988 and reserves dwindled. Price controls had led to serious shortages in basic foodstuffs. Lacking any capital for investment, the situation was becoming hopeless. Still, the Sandinistas continued to seek negotiated settlements for their internal strife. In 1986, they signed an accord with leaders of the Miskito Amerindians, granting autonomy to their region. In August 1987 Nicaragua signed the Arias peace plan for Central America. Nicaragua promised guarantees of democratic rights, and a reduction of hostilities with the contras, including a cease-fire, a reduction in the armed forces, repatriation or resettlement of refugees, and amnesty for the rebels. In exchange, the Nicaraguans were to receive guarantees of nonintervention by outside powers, and a further \$9 million from the United States and aid from other countries, tied to the holding of free elections in 1990.

The 1990 elections had a surprise winner—Violeta Chamorro. Heading a 10-party alliance called the National Opposition Union (UNO), Chamorro received 54% of the vote to Daniel Ortega's 41%. UNO also took a majority in the National Assembly. Chamorro moved to liberalize the Nicaraguan economy, but found it sluggish. Austerity measures led to dislocations and political disquiet. The United States delivered miniscule amounts of economic aid, to the disappointment of hopeful Nicaraguans. Nevertheless, Chamorro's government succeeded in driving down hyperinflation that had reached 13,500% to an acceptable single-digit level and in obtaining relief of much of the country's \$10 billion foreign debt. Stable economic growth of around 4% from 1994–96 was achieved.

Politically, Chamorro's situation was tenuous. With the Sandinistas still in control of the military, Chamorro had a difficult time achieving a reduction in force. Sandinista organizations and syndicates remained, often striking against the Chamorro government. Meanwhile, the resettlement and repatriation of the contras moved slowly. Some former contras took to the field again, resuming their previous attacks on civilian installations. Chamorro's own coalition, UNO, proved shaky, withdrawing support from her government in 1993 after she attempted to call for new elections. The beleaguered government persisted, but by 1994 the outlook

for further progress in unifying the country and implementing democratic and free-market reforms was bleak.

The prospect of a peaceful political transition in the politically polarized country were considered so shaky that international observers were called in for the October 1996 elections, as they had been in 1990. Although the results were later contested due to allegations of corruption, and some irregularities found, the elections proceeded peacefully and without incident. With 80% of the electorate voting, Arnoldo Alemán, the conservative former mayor of Managua and leader of the Liberal Constitutionalist Party (PLC), defeated Sandinista leader Daniel Ortega, with each garnering, respectively, 51% and 38% of the vote. The Liberal Party took 41 of the 93 seats in the Chamber of Deputies, while the Sandinistas took 38; the remaining seats were won by leftist and conservative groups.

President Arnoldo Alemán Lacayo and Vice President Enrique Bolaños Geyer were inaugurated into office on 10 January 1997. Alemán, who had close ties to right-wing groups and American entrepreneurs, worked to instill economic reforms focused on economic growth in an effort to establish Nicaragua's market economy. Throughout Alemán's term, the GDP steadily increased. Despite the legacy of the civil war and years of financial mismanagement, growth continued until 1998, when it was dampened by Hurricane Mitch. The hurricane devastated Nicaragua and Honduras, leaving Nicaragua, already the poorest country in Central America, with \$1 billion worth of damage. Worst hit was the agricultural sector, which the country depends on for the majority of its exports. By 1999, Alemán was forced to deal with a trade deficit approaching \$900 million. However, despite the destruction caused by Hurricane Mitch, Nicaragua's economy continued to grow slightly, possibly due in part to aid, debt relief, and free market reforms.

Alemán and Daniel Ortega (the Sandinista former president) were charged with involvement in scandals during Alemán's presidential term that made these surprising bedfellows come together in PLC-FSLN talks. In 1998, Daniel Ortega faced accusations from his stepdaughter of sexual abuse dating back to her childhood. Meanwhile, Alemán faced charges that the presidential plane he had been using was actually reported stolen in the United States and that it had been used throughout Central America and Colombia to carry cocaine. Both Ortega and Alemán denied all charges against them, but worked together to create a PLC-FSLN political pact that protected them from scrutiny. This limited the substantive democracy in Nicaragua. These scandals, as well as border disputes, growing poverty, and migration issues all continued to be challenges throughout the rest of Alemán's term.

Enrique Bolaños won the 2001 presidential elections with 56.3% of the vote. Daniel Ortega, the Sandinista leader, came second with 42.3%. Surprising supporters and observers, Bolaños quickly moved to support a judicial corruption investigation against Alemán and to break up the PLC-FSLN alliance. In August 2001, the Bolaños administration brought indictments against Alemán officials. Alemán was personally indicted in August 2002. In December 2002, Alemán was denied his parliamentary immunity, which then forced him to serve 20 years in prison when he was found guilty of corruption and money laundering in December 2003. Yet, from prison Alemán maintained control of the PLC, which kept Bolaños from making further political progress. In

2004, the FSLN and PLC renewed the political pact and worked to extend the powers of the legislature and limit those of the executive. In response to these threats to democracy, Bolaños threatened to declare a state of emergency in January 2005, promoting the UN's involvement via the National Dialogue forum, intended to avert a possible political crisis. In March 2005, the Central American Court of Justice (Corte Centroamericana de Justicia – CCJ), ruled the constitutional reforms being sought by the PLC-FSLN-dominated legislature violated the principle of separation of powers. However, the PLC-FSLN also captured Nicaragua's Supreme Court and could use it to refuse the CCJ's jurisdiction and proceed with the constitutional amendments, despite the ruling. As of June 2005, the Organization of American States was also failing in its effort to mediate negotiations between the political leaders.

During Bolaños's term, the economy expanded slowly, but the president sought to generate further growth by increasing the country's exports and liberating the national economy. Although the country possesses few comparative advantages for economic development, President Bolaños set the goal of incorporating his country into the world economy to reduce poverty and boost employment. As of 2006, experts were predicting that the ratification of the Dominican Republic-Central American Free-Trade Agreement (DR-CAFTA) would boost Nicaraguan exports and energize its economy.

## 13 GOVERNMENT

Although constitutionally defined as a democracy, Nicaragua was ruled by the Somoza family from 1934–79; they did not hesitate to suppress political opponents with violence. The last of the constitutions promulgated during the Somoza period, effective 3 April 1974, provided for a bicameral congress, a president elected for a six-year term, and guaranteed political rights. After the FSLN took power as the Government of National Reconstruction in July 1979, this constitution was abrogated and congress dissolved. From July 1979 until November 1984, executive power was vested in a junta composed of five members (three members after April 1980).

The 1984 electoral reforms created an executive branch with a president elected for a six-year term by popular vote and assisted by a vice president and a cabinet. (The presidential term was shortened to five years in 1995.) Legislative power is vested in a 93-member unicameral National Constituent Assembly elected under a system of proportional representation for six-year terms. The electoral process in Nicaragua is said to be one of the most complicated in the Americas as it forces voters to select candidates for the office of president, National Assembly posts, and local municipalities from a vast number of political parties. Further, vote counting is still a tedious, manual process.

As of 2006 the Sandinista constitution of 1987 was in effect; it provides for a democratic system in which elections are held every six years and there is an executive, National Assembly (legislature), judiciary, and electoral council (Consejo Supremo Electoral—CSE). It also called for two new levels of elected government—municipal councils (131 in 1987; 153 as of 2006), and the two autonomous Atlantic coast regional councils.

## 14 POLITICAL PARTIES

Nicaragua's traditional two parties were the National Liberal Party (Partido Liberal Nacionalista—PLN) and the Nicaraguan Conservative Party (Partido Conservador Nicaragüense—PCN). The PLN favored separation of church and state, some social legislation, no foreign interference in the political process, and limited land reform. It was supported by government employees, the National Guard, and large segments of the middle and lower classes. The PCN desired government cooperation with the Catholic Church (but also advocated freedom of religion), less government interference in private business, and a regressive tax structure.

When the leftist Sandinista National Liberation Front (FSLN), which was founded in 1962, came to power in July 1979, all political parties except those favoring a return to Somoza rule were permitted. Since the Somozas had all been liberals, the PLN was specifically banned.

Under the Sandinistas, Nicaragua's governing political coalition, the Patriotic Front for the Revolution (Frente Patriótico para la Revolución—FPR), formed in 1980, consisted of the FSLN, the Independent Liberal Party (Partido Liberal Independiente—PLI), the Popular Social Christian Party (Partido Popular Social Cristiano—PPSC), and the Moscow-oriented Nicaraguan Socialist Party (Partido Socialista Nicaragüense—PSN). Opposition parties included the Conservative Democratic Party (Partido Conservador Democrático—PCD), the Nicaraguan Social Christian Party (Partido Social Cristiano Nicaragüense—PSCN), and the Social Democratic Party (Partido Social Demócrata—PSD).

The National Opposition Union (UNO), under which Violeta Chamorro was elected president in 1990, was a 10-party coalition that included both the Conservatives and the Liberals, as well as several parties formerly aligned with the Sandinistas, including the PLI and the PSD. The PLI was also the party of Vice President Virgilio Godoy. Others included the Christian Democratic Union (UDC), the National Democratic Movement (MDN), the National Action Party (PAN), and the Neo-Liberal Party (PALI). President Arnoldo Alemán's Liberal Alliance, a conservative group that supported the Somoza dictatorship, also supported the National Opposition Union (UNO) candidate and President Violeta Chamorro during her six-year reign. Alemán's support diminished when Chamorro failed to control the UNO coalition; Alemán thus switched to the Liberal Party to launch his presidential campaign in 1996. The disbanded UNO party forced Chamorro to link with the Sandinistas in congress to maintain control of her office; she thus maintained the Sandinista control over the Revolutionary Army. Alemán's main purpose as the National Liberal Party representative was to overturn Chamorro and try to reverse some of the economic policies of her regime.

By the mid-1990s, the UNO coalition had disbanded. Nicaragua had numerous parties ranging across the political spectrum, although the country was dominated by two principal opposed groups—the Liberal Constitutionalist Party (PLC), a right-wing successor to the traditional liberal party, and, on the left, the still-active FSLN. In the October 1996 presidential election, Arnoldo Alemán, former mayor of Managua and leader of the PLC, was elected with 51% of the vote, supported by a coalition of parties and factions called the Liberal Alliance (AL). Daniel Ortega, the FSLN candidate, won 38% of the vote, with the rest going to candidates from smaller parties. In the legislative elections, 42 of the 93

seats in the National Assembly were won by the National Alliance, with the FSLN winning 36, and the remaining 15 going to candidates from nine other parties. These included the Christian Way (Camino Cristiano), the Conservative Party of Nicaragua (PCN), the center-right Nicaraguan Resistance Party (PRN), the center-left Sandinista Renovation Movement (MRS), and the center-right Independent Liberal party (PLI). Altogether, 24 political parties and popular organizations participated in the 1996 elections.

Alemán and Ortega collaborated in bringing about a PLC-FSLN political pact in 2000 that increased their political influence and reduced their vulnerability to investigation by putting the two major political parties in control of important institutions that combat corruption and could change the election rules to deter smaller parties from challenging PLC-FSLN dominance. Illustrative of this damper on democracy, only one other party was able to register to contest the elections in 2000 and 2001.

In the 2001 parliamentary elections, held concurrently with the presidential election, the PLC won 53.7% of the vote, clinching 47 seats in the 93-member Assembly. The Sandinistas gained 43 seats and the remaining seats went to the Conservative Party of Nicaragua. The 2001 elections witnessed the consolidation of Nicaragua as a two-party system, with an overwhelming majority of votes going to the rightwing PCN and the leftwing Sandinistas.

The Economist Intelligence Unit projected that the prevailing dynamic of party politics in 2006 improved Ortega's chances of winning the presidency. This was because his only opponent in FSLN, Herty Lewites, would likely be barred from running, and the right-wing vote would be split, allowing Ortega to garner enough to win in the election scheduled for November 2006.

## 15 LOCAL GOVERNMENT

In July 1982, the nation's departments were consolidated into six regions and three special zones, each to be administered by an official directly responsible to the central government. However, under the Chamorro government, Nicaragua returned to the old system, with fifteen departments and two autonomous regions along the Atlantic coast.

Local elections for mayoralities accompany national elections.

## 16 JUDICIAL SYSTEM

Constitutionally, Nicaragua's Supreme Court is an independent branch of the government. However, selection of its 16 members (who serve five-year terms) is proscribed by politics, in that selection is limited to a list submitted by the president and political parties to the National Assembly. The court appoints judges to the lower courts. The selection of magistrates (who decide the Supreme Court's president and vice-president) has been historically political, making de facto judicial independence from executive and legislative pressures unlikely.

The Supreme Court has administrative, criminal, civil, and constitutional matters divisions. The judicial system consists of both civilian and military courts. Military courts investigate, prosecute, and try crimes committed by or against the police or armed forces. Therefore, the military courts have jurisdiction over citizens involved in security-related offenses. In a controversial 1993 decision, a military court exercised jurisdiction to convict a former member of the EPS (Sandinista Popular Army).

In 2004, it was legislated that the judicial career system should be based on merit. This is partly in response to a public lack of confidence in the training or fairness of judges. In 2006 the Economist Intelligence Unit warned that “corruption and influence-peddling in the judicial branch puts foreign investors at a sharp disadvantage in any litigation or dispute, and legal security for business in general is among the lowest in Latin America.”

## 17 ARMED FORCES

In 2005 Nicaragua's armed forces numbered 14,000 active personnel. The Army had around 12,000 personnel equipped with over 127 main battle tanks, 10 light tanks, and 800 artillery pieces. The Navy had approximately 800 active personnel, operating 5 patrol/coastal vessels, and 2 mine warfare ships. The Air Force had 1,200 personnel, with 16 support helicopters but no combat aircraft. Nicaragua's defense budget in 2005 totaled \$34.7 million.

## 18 INTERNATIONAL COOPERATION

Nicaragua is a charter member of the United Nations, having joined on 24 October 1945; it belongs to the ECLAC and several non-regional specialized agencies, such as the FAO, ICAO, ICFTU, the World Bank, UNESCO, UNHCR, UNIDO, ILO, and the WHO. Nicaragua is a member of G-77, the Inter-American Development Bank, the Latin American Economic System (LAES), OAS, the Association of Caribbean States (ACS), and the Río Group. It is one of five members of the Central American Bank for Economic Integration (BCIE) and the Central American Common Market (CACM). The country also participates in the Central American Parliament (PARLACEN). In 2004, Nicaragua, the United States, Costa Rica, El Salvador, Guatemala, Honduras, and the Dominican Republic signed the US–Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force.

Nicaragua is part of the Nonaligned Movement and a signatory of the 1947 Río Treaty, an inter-American security agreement. It is also a part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, Nicaragua is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification. The nation is also part of the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

Nicaragua has long had, in effect, two economies: an export segment, producing mainly cotton, meat, coffee, and sugar, and a subsistence segment, tying a majority of both urban and rural Nicaraguans to an impoverished existence. Nicaragua has been one of the poorest countries in the western hemisphere, partially due to enormous external debt, low per-capita income, massive unemployment, and one of the most unequal income distributions in the world. Some 50% of the population lived below the poverty line. The 10% of the population with the lowest income consumed 1.2% of GDP, whereas 10% of the population with the highest in-

come consumed 45% of GDP. As of 2004, per capita GDP was \$2,300.

Agriculture and forestry remain mainstays of the Nicaraguan economy, employing about 30.5% of the labor force, but the services sector is increasingly important, employing about 52.2% of the labor force. Industry employs 17.3% of the labor force. Agriculture, industry, and services comprise 20.7%, 24.7%, and 54.6% of the GDP.

During 1960–64, the GDP increased by an annual average of 8.1%, the highest rate in Latin America. Annual growth ranged from 4–6% during 1965–73, largely because of favorable world prices for Nicaraguan commodities. The 1972 earthquake that struck Managua caused material losses estimated at \$845 million, but the agricultural sector was left largely unscathed.

The civil war of the late 1970s disrupted the economy. Infrastructure was destroyed in the war and a US blockade was put in place against Nicaragua, resulting in the near-collapse of the economy. In 1978, the GDP fell by 7.9%; and in 1979, the year of the Sandinista takeover, by 25%. Under the Sandinista regime 80% of the economy was nationalized. Massive public spending resulted in a GDP growth of 10.4% in 1980 and 7% in 1981. However, because of floods in May 1982, a weak international market for export crops, the virtual collapse of the CACM, direct and indirect economic pressure from the US government, and disruption by the *contras*, the economy suffered a GDP decline of 1.4% in 1982. Because of shortages, rationing of soap, flour, and cooking oil was introduced in 1982. In 1983, high world prices and a bumper harvest boosted GDP growth to 4.6%, but decline set in again from 1984 to 1986. Across this three year period, GDP declined 6.7%, and on a per capita basis, with population growth averaging 3.4% a year, the decline was 16.3%. The average annual inflation rate during 1980 to 1984 was about 35%, but in 1985 this inflation jumped to 219.5%. In 1986 the United States imposed a formal trade embargo on Nicaragua, and inflation (as measured by consumer prices) soared for the rest of the decade: 681.6% in 1986; 912% in 1987; 14,316% in 1988; 4,770% in 1989; and 12,338% in 2000.

In response to both domestic and international pressure, the Sandinista regime entered into negotiations with the Nicaraguan Resistance and agreed to nationwide elections in February 1990. The candidate of the National Opposition Union (UNO), Violeta Barrios de Chamorro, whose campaign received financial support from the United States, won the election. She took over a country with a controlled economy, uncontrolled inflation, and debt outstanding at 508% of GDP. During President Chamorro's nearly seven years in office, her government achieved major progress toward consolidating democratic institutions, advancing national reconciliation, stabilizing the economy, privatizing state-owned enterprises, and reducing human rights violations.

Nicaragua began free market reforms in 1991. Despite some setbacks, it made dramatic progress, privatizing 351 state enterprises, reducing inflation from 775% in 1990 to 12.4% in 1994 to 7.3% in 1997. Foreign debt had risen 638.4% as Nicaragua was given renewed access to IMF funding, but by 1997, this ratio had declined to 296.7% of GDP. The GDP continued to contract from 1991 to 1993, but 1994–97 GDP growth averaged 4.35%. As a result of the strong decline in foreign debt, the country's current account balance declined as a percentage of GDP from 60.0% in

1992 to 30.3% in 1997. In addition, the government's budget deficit in 1997 stood at 9.7% of GDP (before grants), down considerably from 20.3% in 1990. The election of Arnaldo Alemán in 1996 served to continue the social and economic reforms. (This trend was undermined somewhat when, in December 2002, Alemán was indicted for diverting \$100 million of state funds for his own and others' personal enrichment during his term in office.)

Damage caused by Hurricane Mitch in 1998 reduced the GDP to 4% for that year, and shot inflation up to 18.5%, but an in-pouring of foreign assistance and activity on reconstruction projects pushed GDP growth to 7.4% in 1999 (the highest since 1982), while inflation fell to a new low of 7.2% by the end of the year. Growth continued in 2000, up 4.3% with inflation at 9%. However, in 2001, the global slowdown, and, in particular, a glut on the coffee market, drought, and lower demand in the United States for textiles and other manufactured goods from Nicaragua, reduced growth to 2%. Inflation was at 7.3% that year.

From 2001–05, the real GDP growth rate fluctuated from year to year, while the inflation rate dipped briefly in 2002 and continued steadily upward through 2005. In 2002, real GDP growth was 0.8% and inflation was 3.7%. The years 2003 and 2004 saw an increase in both GDP growth (2.3% and 5.1%, respectively) and inflation (5.3% and 8.5%, respectively). It was projected that GDP growth would fall to approximately 3.6% in 2005, and that inflation would continue to rise to approximately 10.1%. External debt was \$4.573 billion, approximately one-third of the \$12.34 billion of GDP for that year.

## 20 INCOME

The US Central Intelligence Agency (CIA) reported that in 2005 Nicaragua's gross domestic product (GDP) was estimated at \$16.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,800. The annual growth rate of GDP was estimated at 3.5%. The average inflation rate in 2005 was 10.1%. It was estimated that agriculture accounted for 16.8% of GDP, industry 27.6%, and services 55.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$439 million or about \$80 per capita and accounted for approximately 10.6% of GDP. Foreign aid receipts amounted to \$833 million or about \$152 per capita and accounted for approximately 21.0% of the gross national income (GNI).

The World Bank reported that in 2003, household consumption in Nicaragua totaled \$2.99 billion or about \$546 per capita based on a GDP of \$4.1 billion, measured in current dollars rather than PPP. Household consumption included expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated during 1990–2003, household consumption grew at an average annual rate of 3.7%. It was estimated that in 2001 about 50% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Nicaragua's workforce was estimated at 2.17 million. As of 2003, the labor force was estimated to have been distributed as follows: services 52.2%; agriculture 30.5%; and industry 17.3%. As

of 2005, unemployment was estimated at 6.4%, although 46.5% of the workforce is said to be underemployed.

Nicaragua became a member of the ILO in 1919, withdrew in 1938, and rejoined in 1957. The former labor code, effective January 1945, was patterned on Mexican labor legislation. In establishing and protecting the rights of workers, emphasis was placed on law rather than collective bargaining. A labor code, effective as of 1996, allows all public and private-sector employees to form and join unions and legally recognizes cooperatives, as well as the right to strike. However, administrative requirements make it difficult for a union to engage in a legal strike. As of 2001, approximately 15% of the labor force was organized.

Children may not work until the age of 14 but this regulation is not effectively enforced and many children work in agriculture and in cities as urban street-peddlers. The maximum legal workweek is 48 hours, with one day of rest per week. The minimum wage varies from sector to sector throughout the formal economy. In 2001, the monthly minimum wage was \$47 in agriculture, \$118 in construction, and \$75 in manufacturing. This does not provide a family with a decent standard of living. The legal workweek is set at 48 hours with one day of rest. The labor code attempts to bring work conditions up to the international standard.

## 22 AGRICULTURE

Nicaragua's economy is predominantly agricultural. Arable land amounted to 2,161,000 hectares (5,340,000 acres), or about 17.8% of the total land area. Some 61,000 hectares (150,700 acres) were under irrigation in 2003. The harvest season begins in November and lasts through January; during the rest of the year, most rural laborers are unemployed. Plantings begin in May immediately before the wet season.

The main agricultural exports are coffee, cotton, sugar, and bananas. Nontraditional exports are growing and include: honeydew melons, cantaloupe, sesame seed, onions, baby corn, asparagus, artichokes, and cut flowers. Sorghum, cacao, yucca, tobacco, plantains, and various other fruits and vegetables are produced on a smaller scale for the local markets. Bananas were once nearly totally decimated by Panama disease. By the late 1960s, however, production had begun a slow recovery, reaching 135,000 tons in 1992 (up from 29,000 tons in 1970). Banana production in 2004, however, was just 61,000 tons. Cottonseed production has expanded from virtually zero prior to 1950 to 105,700 tons in 1985, before returning to 1,860 tons by 2004. During the 1980s, coffee was severely threatened by contra activities; production of 71,000 tons in 2004 was an improvement over the 28,000 tons produced in 1990. In 2004, 4,090,000 tons of sugarcane were produced. Major food crops in that year were corn, 522,000 tons; rice, 242,000 tons; sorghum, 114,000 tons; and beans, 224,000 tons.

During the Somoza era, most of the titled land was held by large landowners (with farms of 140 hectares/346 acres or more), who owned some 60% of the land while representing only 5% of the farming population. About 36% of the farm population controlled individual holdings of less than 3.5 hectares (8.6 acres). The Sandinista government expropriated almost one million hectares (2.5 million acres) of land, of which over two-thirds became state farms and 280,000 hectares (692,000 acres) were turned into peasant cooperatives. Agriculture was severely disrupted in 1979–80 because of the revolution, but by 1981 it had recuperated. In May

1982, severe floods caused damages estimated at \$180 million; the withdrawal of the Standard Fruit Co. in the following October caused losses of \$400,000 per week in foreign exchange earnings. Bad weather continued to plague the sector through 1984. An estimated 450,000 hectares (1,111,500 acres) of land were redistributed in 1985. From 1983 to 1987, the *contras* sought to destabilize Nicaraguan agriculture by damaging agricultural machinery, destroying crop storage sheds, and intimidating farm workers. After eight years of steady decline, the agricultural sector grew by a modest 1–2% in 1992. During 1990–2000 agricultural output grew by a yearly average of 5.7%. During 2002–04, output was up another 6.5% from 1999–2001. In 2004, the agricultural trade surplus was \$210.8 million.

### 23 ANIMAL HUSBANDRY

Nicaragua, the second-largest cattle-raising country of Central America (after Honduras), had 3.5 million head of dairy and beef cattle in 2005. There were also 268,000 horses, 123,000 hogs, and 57,000 mules and donkeys. Total beef production in 2005 was 152,000 tons. Meat exports, perennially one of Nicaragua's most important trade commodities, were valued at \$23 million in 1981 but fell to \$7 million by 1987. By 2004, meat exports had recovered, to \$111.2 million. The primary markets for Nicaraguan beef are the United States, El Salvador, and Puerto Rico. In 1990, Nicaragua access to the US beef products market was restored, and since then the livestock industry has been a profitable business and a key economic indicator for the country. Milk production in 2005 totaled 612,945 tons.

### 24 FISHING

Commercial fishing in the lakes and rivers and along the seacoasts is limited. In 2003, the total catch amounted to 22,331 tons, over 97% of which came from marine waters. About 80% of the marine catch comes from the Atlantic coast. Shrimp and lobster catches in 2003 amounted to 10,753 and 3,922 tons, respectively. Exports of shrimp and lobster expanded after the 1960s and by 1980 had reached an export value of \$25.9 million. In 2003, exports of fish products reached \$67.6 million. Commercial fishing was trying to diversify its catch to include more red snapper, grouper, and flounder.

After the Sandinistas took over, the fishing industry was nationalized. The fishing port at San Juan del Sur was expanded in the early 1980s to service the tuna fleet. In late 1991, the government privatized the Atlantic seafood packaging plants, causing seafood production to rise.

### 25 FORESTRY

About 38.6% of Nicaragua is forested. The country has four distinct forest zones: deciduous hardwood, mountain pine, lowland pine, and evergreen hardwood. Nicaragua's largest remaining timber resources, in the evergreen hardwood zone, are largely inaccessible. Nicaragua is the southernmost area of natural North American pine lands. The most well-known cloud forest in Nicaragua is Selva Negra (Black Forest), in the Matagalpa region. In 2004, roundwood production totaled 5,999,000 cu m (212 million

cu ft), with 98% burned as fuel wood. Sawn wood production was about 45,000 cu m (1.6 million cu ft) that year.

### 26 MINING

Gold, a leading export commodity, underwent a resurgence in the 1990s. After a long period of low production, gold output almost tripled in the late 1990s, from 1,500 kg in 1996 to 4,450 in 1999. In 2003, output was 3,029 kg. Gold and silver mines were in León, Chontales, and Zelaya departments. Mineral production for 2003 included silver, 2,040 kg, down from 2,198 kg in 2002; marine salt, 31,320 metric tons, up from 29,710 metric tons in 2002; and crude gypsum and anhydrite, 30,642 metric tons, up from 28,153 metric tons in 2002. Bentonite, lime, limestone, sand and gravel, and crushed stone were also produced. Deposits of iron, copper, lead, antimony, and zinc have been uncovered.

In the mid-20th century, Nicaragua ranked roughly 15th in the world in gold production, and the development of gold mining was emphasized during the Sandinista era, when the entire mining industry was nationalized. Gold exports reached \$39.9 million in 1980, fell to \$15 million in 1982, and were suspended through 1985. The *Corporación Nicaragüense de Minas* (INMINE), a subsidiary of the government holding company, controlled most of the country's mineral exploration and production. In 2001, the congress passed a Mining Code despite opposition from small-scale miners and environmentalists, who argued the law would unduly benefit multinational companies and lead to environmental damage; Congress was investigating ways to protect the interests of small-scale miners, and the law made submission of environmental impact statements mandatory. In 1997, the ban on new concessions was lifted.

### 27 ENERGY AND POWER

Although Nicaragua has no proven reserves of oil, natural gas, or coal, the country is one of only three nations in Central America (the others are Costa Rica and El Salvador) to operate an oil refinery.

Nicaragua imported all of the petroleum products it used in 2003. Imports that year averaged 27,950 barrels per day. In 2002, imports averaged 26,030 barrels per day, of which, an average of 16,560 barrels per day was crude oil. Demand for refined petroleum products averaged 25,770 barrels per day in 2003, up from 2002's average of 25,410 barrels per day. Nicaragua's refinery is the smallest of the three operated in Central America. Located in Managua, the facility has a capacity of 20,000 barrels per day. However, refined petroleum output in 2002 averaged only 17,010 barrels daily.

Nicaragua had no recorded imports or consumption of natural gas or coal in 2002.

The majority of the electric power generated in Nicaragua came from conventional thermal sources. Production of electricity in 2002 totaled 2.514 billion kWh, of which 78.2% came from fossil fuels, 11.9% from hydropower, and the rest from other renewable sources. Consumption of electricity in 2002 was 2.4p billion kWh. In 2002, Nicaragua had a total generating capacity of 0.641 million kW, of which approximately 16% was hydroelectric and 11.9% was geothermal.

## 28 INDUSTRY

Nicaraguan industry expanded during the 1970s but was severely disrupted by the civil war and nationalization in 1979. In 1980, the manufacturing sector began to recuperate, and modest growth continued through 1984. In 1985, however, net output again declined, by an estimated 5%. In the mid-1980s, there were still many state enterprises, some of them created by nationalization; in 1985, the government announced plans for a mixed economy. All state monopolies except for public utilities were eliminated; price controls were ended; and more than 300 state enterprises were privatized after 1990.

In 2000, the industrial sector contributed approximately 23% to the GDP and employed approximately 15% of the labor force. The industrial production growth rate in 2000 was 4.4%. In 2004, the industrial sector contributed 24.7% to the GDP and employed about 17.3% of the labor force. Among the most important industries are processed food, chemicals, metal products, textiles, clothing, petroleum refining and distribution, beverages, shoes, and wood. Nicaragua has one oil refinery, with a production capacity of 20,000 barrels per day. The services sector has become the major player in the country's economy since the reforms instituted by the Chamorro government. Services account for 52.2% of GDP and include commerce, financial services, transportation, energy and construction. The services and industrial sector share of GDP and the labor force has been growing as the shares in agriculture have decreased.

The construction sector rebounded after the destruction wrought by Hurricane Mitch in 1998, but slowed in 2000. The building of shopping centers and hotels, the industrial production of meat and poultry, and the development of transportation and communications were all growth sectors as of the early 2000s. Manufacturing in free trade zones rose 22.9% in 2000 to \$250 million in 2005. Manufacturing overall accounted for around 20% of GDP.

## 29 SCIENCE AND TECHNOLOGY

Among Nicaragua's scientific learned societies and research institutes are the Geophysical Observatory, founded in 1980, the Ni-

caraguan Society of Psychiatry and Psychology, founded in 1962, and the National Center of Agricultural Information and Documentation, founded in 1984. Part of the Ministry of Agriculture, all three institutes are in Managua. Nicaragua has six universities and colleges offering degrees in agricultural studies and other scientific studies. In 1987–97, science and engineering students accounted for 33% of college and university enrollments. The National Museum of Nicaragua, founded in 1896 in Managua, has exhibits concerning archaeology, ceramics, zoology, botany, and geology.

As of 2002 total research and development (R&D) expenditures amounted to \$6.011 million, or 0.05% of GDP. In that same year, there were 50 researchers and 39 technicians engaged in R&D per million people. High technology exports in 2002 totaled \$6 million or 5% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Managua is the principal trading and distribution center and all importers and exporters have offices there. Exporters, except those concerned with cotton, coffee or lumber, are usually importers also. Managua has a variety of retail establishments, including department stores and numerous general stores; many small shops are in private homes. Managua also has a central market to which merchants come daily with all types of produce and domestic and imported consumer goods. Retail sales are mainly for cash. Price controls apply to pharmaceuticals, sugar, domestically produced soft drinks, national cigarettes, and liquefied natural gas.

The usual business hours are from 8 AM to noon and from 2:30 to 5:30 PM, Monday through Friday, with a half-day on Saturday. Banking hours are from 8:30 AM to noon and from 2 to 4 PM on weekdays; from 8:30 to 11:30 AM on Saturday.

## 31 FOREIGN TRADE

Nicaragua's total trade volume grew considerably during the 1970s because of the country's membership in the CACM and because of worldwide inflation. Following the Sandinista revolution and the virtual collapse of the CACM because of political instability in the region, Nicaragua's imports and exports fell by more than half from 1976 to 1985.

By 1986, Latin America and EC member countries, particularly Germany, accounted for the bulk of Nicaragua's trade volume; the Communist bloc had filled the breach opened by the shutting down of US commerce. The Chamorro government changed Nicaragua's trading partners as it reduced trade barriers in 1991. The government issued export promotion incentives with special tax benefits for products sold outside Central America. The Communist bloc was discarded in favor of the United States and South American countries, but Germany remained an important partner. By the Law of Free Trade Zones, Nicaragua waived all duties for imports used in the free zones. The result was widespread availability of US goods in several newly established Managua supermarkets.

One of the key engines of economic growth has been production for export. Although traditional products such as coffee, meat, and sugar continue to lead the list of Nicaraguan exports, the fastest growth was in nontraditional exports: maquila goods

### Principal Trading Partners – Nicaragua (2003)

(In millions of US dollars)

Country	Exports	Imports	Balance
World	584.5	1,835.8	-1,251.3

(apparel), bananas, gold, seafood, and agricultural products such as sesame, melons, and onions.

The most important commodity export from Nicaragua is coffee (28%), followed by shellfish (19%) and meat (9.4%). Other exports include sugar (5.8%), oil seeds (5.2%), and gold (3.6%).

Money spent on principal imports well outweighed money earned from exports in 2004. Nicaragua spent \$733.8 million on consumer goods, \$646.1 million on intermediate goods, \$404.6 million on capital goods, and \$425.9 million on oil and derivatives. This contrasts with exports: \$126.8 million earned from coffee, \$110.4 million from beef, \$80.5 million from shrimp and lobster, and \$36.8 million from sugar.

In 2004, Nicaragua's exports were absorbed by the United States (64.8%), El Salvador (7%), and Mexico (3.6%). In the same year, 22.6% of imports came from the United States, 8.5% from Costa Rica, 8.4% from Venezuela, 6.8% from Guatemala, 5.8% from Mexico, 4.9% from El Salvador, and 4.5% from South Korea. Exports totaled approximately \$750 million and imports totaled approximately \$2.02 billion, resulting in a substantial trade deficit of \$1.27 billion.

Nicaragua has been reducing trade barriers and working towards integration with its Central American neighbors, the United States and the Dominican Republic in the Dominican Republic-Central American Free-Trade Agreement (DR-CAFTA). The DR-CAFTA was expected to take effect in 2006, but ratification had not yet been accomplished by midyear. Nicaragua has a free trade agreement with Mexico and trade links with Taiwan.

### 3<sup>2</sup> BALANCE OF PAYMENTS

An adverse balance of trade with Nicaragua's major trading partners is the major factor in its deficit. Incoming capital in the form of public and private loans, as well as foreign capital investment and tourism, traditionally offset amortization and interest payments abroad. (The tourist industry has grown substantially in re-

cent years and has become the third-largest source of foreign exchange.) The current account balance sustained a deficit averaging 30% of GDP throughout the 1990s.

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Nicaragua's exports was \$750 million while imports totaled \$2.02 billion, resulting in a continued substantial trade deficit.

### 3<sup>3</sup> BANKING AND SECURITIES

The banking system, nationalized in July 1979, is under the supervision of the comptroller general. The National Bank of Nicaragua, established in 1912, has been government-owned since 1940. In 1979, the bank was reorganized to become the National Development Bank. The Central Bank of Nicaragua (Banco Central de Nicaragua), established in 1961, is the bank of issue and also handles all foreign exchange transactions. As of 1979, deposits in foreign banks were prohibited, but in May 1985, the establishment of private exchange houses was permitted. In 1990, legislation was passed that allowed for the establishment of private banks. There are no state-owned commercial banks in Nicaragua.

By 2002, there were at least seven private banks operating, after several mergers in the first few years of the new millennium. Three banks closed in 2000, and another was absorbed into another bank the following year. Banco de la Producción (BANPRO) assumed the performing loans in INTERBANK's portfolio, while the Central Bank took over control of the nonperforming loans. Banco de Finanzas (BDF) assumed BANCAFE's good loans in a similar deal. Also, Primer Banco Inmobiliario (PRIBANCO) merged with BANPRO, and Banco Mercantil (BAMER) merged with Banco de Crédito Centroamericano (BANCENTRO). The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$338.7 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.1 billion.

A small stock market began operations in the late 1990s.

### 3<sup>4</sup> INSURANCE

In 1979, the Nicaraguan Institute of Insurance and Reinsurance took over all domestic insurance companies. There were five domestic insurance companies operating in 2000, including the government-owned Iniser; Seguros America, Seguros Centroamericanos, Seguros Metropolitana, and Seguros Pacificano. All private insurance companies were majority owned by Nicaraguan banks.

### 3<sup>5</sup> PUBLIC FINANCE

Since the mid-1960s, government spending has consistently exceeded revenues. During the Sandinista regime, detailed public finance budgets were not a priority. The government budget deficit shrank from 18% of GDP in 1987 to 4% in 1998, while government revenues consistently reflected almost one-third of GDP. Nicaragua reached the decision point under the Heavily Indebted Poor Countries (HIPC) debt relief initiative in late 2000.

The US Central Intelligence Agency (CIA) estimated that in 2005 Nicaragua's central government took in revenues of approximately \$1.1 billion and had expenditures of \$1.3 billion. Revenues minus expenditures totaled approximately -\$224 million. Public

debt in 2005 amounted to 100.3% of GDP. Total external debt was \$4.054 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in córdobas were c\$15,893 million and expenditures were c\$16,559 million. The value of revenues in US dollars was us\$1,053 million, based on a principal exchange rate for 2003 of us\$1 = c\$15.10 as reported by the IMF.

**36 TAXATION**

As of 2005, the standard corporate income tax rate was 30%. Capital gains are treated as ordinary income and are taxed at the corporate rate. Dividends are subject to a 10.5% withholding rate, but if distributed by an entity that has already paid income tax, the dividends are not considered taxable income. Interest and royalties are subject to withholding taxes of 22.5% and 21%, respectively. However, income received from motion pictures and radio and television shows are subject to a 9% withholding rate.

The individual income tax ranged from 10–25%. The main indirect tax is Nicaragua's value-added tax (VAT), introduced in January 1975 with a standard rate of 6%. As of 2005, the standard rate had risen to 15%. Basic necessities were zero-rated such as water and power, as well as exports and some imports. Exempted from VAT were finance, petroleum products, publications and medicines. Other taxes included a luxury tax; a 1% municipal tax levied on sales; and a 1% real estate tax on 80% of assessed value.

**37 CUSTOMS AND DUTIES**

In 1990, the government's liberalized import schedule allowed private sector imports for the first time in 11 years. Import licenses are only required for the import of sugar. Nicaragua follows the CACM common import tariff schedule with rates ranging from 5–15%. Duties are set on an ad valorem basis, and there are specific consumption (usually less than 15%) and sales taxes (15%). However, a small number of agricultural products are subject to

higher rates, among them are chicken parts and rice. A VAT of 15% is placed upon most items based upon the item's CIF (cost, insurance and freight) value plus the duty. Agricultural raw materials are exempt. An industrial free zone operates at Las Mercedes near the Managua international airport.

Nicaragua has free trade agreements with Mexico and the Dominican Republic; and is a member of the Central American Common Market (CACM). The country is also a Caribbean Basin Initiative beneficiary.

**38 FOREIGN INVESTMENT**

Until the 1979 revolution, Nicaragua encouraged private investment. Virtually no restrictions were imposed on the remittance of profits or the repatriation of capital. The economic and political climate for foreign investors in the 1980s was bleak, despite the claim that the Sandinista government was prepared to offer more favorable investment terms (including 100% foreign ownership and repatriation of profits) than the Somoza government had provided. As of 1984, direct US investment in Nicaragua had stopped completely. However, in the 1990s Nicaragua began free market reforms, privatized over 350 state enterprises, decreased inflation from 13,500% to 5.3%, and cut foreign debt in half.

Under the New Foreign Investment Law, the government of Nicaragua has concentrated most of its efforts on the expansion and promotion of foreign and national investment. This law, among other things, guarantees the repatriation of invested capital and generated capital. Also, it allows for 100% foreign ownership in all areas. Foreign private capital inflows doubled from \$97 million in 1996 to \$184 million in 1998 and peaked at \$300 million in 1999. For the period 1998–2000, Nicaragua's share of world FDI inflows was over three times its share of world GDP. In the global slowdown in 2001, FDI inflows to Nicaragua fell to \$132 million in 2001, and then to an estimated \$95 million in 2002. Most of the FDI during those years was invested in cellular communications, maquila operations, and tourist projects.

About 25 US companies, wholly or partly owned subsidiaries, do business in Nicaragua. The largest investments are in the energy, communications, manufacturing, fisheries, and shrimp farming sectors. In addition to those sectors, opportunities for further investment abound in tourism, construction, services, mining, and agriculture.

Foreign investment in commercial establishments in Nicaragua has been on the rise. Modern shopping malls have been built by investors from Taiwan and El Salvador, and supermarkets have been built by Costa Rican investors. US fast-food franchises have prospered and car sales from Asia have proliferated since 1999. However, formal commerce growth potential is limited by low income levels. Furthermore, property disputes, a corrupt judiciary, political unease, and a low-skilled workforce are all factors that serve to discourage further investment in Nicaragua.

**39 ECONOMIC DEVELOPMENT**

The Somoza government's 1975–79 National Reconstruction and Development Plan had as its major objective the improvement in living conditions through increased employment, continuing reconstruction of Managua, reduction in the economy's dependence on the external sector, acceleration of regional development, and

strengthening of the country's role in CACM. The plan was disrupted by the civil strife in the late 1970s.

After the 1979 revolution, the government nationalized banking, insurance, mining, fishing, forestry, and a number of industrial plants. Although the government officially favored a mixed economy, in practice the private sector took second place in a development strategy that focused on public investment and control.

In response to the macroeconomic problems that arose in 1992, a series of measures were adopted by the Chamorro administration aimed at consolidating the stabilization process, increasing the competitiveness of exports and establishing a base for the promotion of growth. However, long-term success at attracting investment, creating jobs, and reducing poverty depends on its ability to comply with International Monetary Fund (IMF) programs, resolve the thousands of Sandinista-era property confiscation cases, and open its economy to foreign trade.

In 1999 the Alemán government was faced with poverty (over 70%), unemployment and underemployment (over 50%), one of the highest per capita debt ratios in the world (\$6 billion), and one of the highest population growth rates of the hemisphere (2.8%). Alemán signed an IMF Structural Adjustment Program for Nicaragua that aimed at cutting the fiscal deficit, continuing liberalization, and maintaining monetary stability.

Nicaragua received at least \$2.5 billion for reconstruction in the aftermath of Hurricane Mitch, debt deferral until 2001, and debt forgiveness through the Highly Indebted Poor Countries (HIPC) Initiative. In December 2002, the IMF approved a three-year \$129 million Poverty Reduction and Growth Facility (PRGF) Arrangement for Nicaragua. However, in 2003, the IMF threatened to sever financial assistance to the country in the midst of a budget dispute between President Enrique Bolaños and the National Assembly. Bolaños had submitted his 2003 budget—in accordance with IMF criteria—to the National Assembly, which revised it, violating terms of the agreement with the IMF. The IMF also stipulated the government would have to sell off state-owned hydroelectric dams and the hydroelectric company, and 51% of the shares in the national telephone company, ENITEL. In 2002, the government began privatizing management of water systems. Despite the IMF threats to cut its aid to the country, Nicaragua still received \$541.8 million in total foreign aid in 2003.

The Bolaños administration undertook macroeconomic policies that contributed to 5.1% growth in GDP in 2004. With increased tax collection and less public spending, fiscal deficits declined. Yet, unemployment and underemployment remain high at 12.2% and 35.4%, respectively. Foreign aid (donations and debt relief) comprised 42% of Nicaragua's GDP in 2004. In 2005, G-8 finance ministers agreed to forgive Nicaragua's foreign debt due to its HIPC classification. While debt relief under the HIPC program of the World Bank will continue, the debt relief by the G-8 countries was dependent upon Nicaragua's putting a PRGF (Poverty Reduction and Growth Facility) back in place. It was hoped that involvement in Dominican Republic-Central American Free-Trade Agreement (DR-CAFTA) would attract foreign, provide jobs, and spur steady economic development and growth.

## 40 SOCIAL DEVELOPMENT

A system of mandatory individual accounts replaced the social insurance system in 2004. All working persons are covered. These programs are financed by a 6% of payroll contribution from employers and a 4% of earnings contribution from employees. Retirement is set at age 60 for most workers. Employers cover the entire cost of work injury insurance. Medical care is provided to treat work injuries and occupational diseases. Family allowances vary depending on earnings and the age of the children.

There is no official discrimination against women and a number of women hold government positions. However, women continue to suffer de facto sex discrimination in many segments of society. They tend to hold traditionally low-paid jobs in the health, education, and textile sectors while occupying few management positions in the private sector. Sexual harassment in the workplace is prevalent despite laws designed to protect women. Domestic and sexual violence are common, and the perpetrators are seldom prosecuted. Dire economic circumstances force many children to work to contribute to household income. Many children work for low wages on banana or coffee plantations, while in urban areas, children often work as vendors in the streets.

Human rights abuses have been on the decline but there are continued reports of the mistreatment of detainees, although torture is punishable by law.

## 41 HEALTH

As of 2004, there were an estimated 164 physicians and 107 nurses per 100,000 people. Total health care expenditure was estimated at 12.5 % of GDP. Approximately 79% of the population had access to safe drinking water and 84% had adequate sanitation.

Slow progress in health care was made from the 1960s through the 1980s, as the crude death rate dropped from 19 per 1,000 people in 1960 to an estimated 4.8 in 2002. During 2005, the infant mortality rate was 29.11 per 1,000 live births and average life expectancy was 70.33 years. The maternal mortality rate was 150 per 100,000 live births. The fertility rate was 3.5 births per woman in 2000; 44% of married women (ages 15 to 49) used some form of contraception.

Malnutrition and anemia remain common, as do poliomyelitis, goiter, and intestinal parasitic infections (a leading cause of death). The prevalence of child malnutrition was 25% of children under five. The goiter rate was 4.3 per 100 school-age children. Immunization rates for children up to one year old were as follows: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 94%; polio, 99%; and measles, 94%.

The HIV/AIDS prevalence was 0.20 per 100 adults in 2003. As of 2004, there were approximately 6,400 people living with HIV/AIDS in the country. Common diseases reported in Nicaragua were malaria, cholera, and tuberculosis.

## 42 HOUSING

Both urban and rural dwellers suffer from a dire lack of adequate housing. As a result of the 1972 earthquake, approximately 53,000 residential units were destroyed or seriously damaged in the Managua area. The Sandinistas launched housing-construction and tree-planting programs, but were hampered by a shortage of hard

currency to pay for the construction equipment required. Hurricane Mitch in 1998 also destroyed thousands of dwellings.

At the last census in 1995, there were only about 751,637 dwellings to serve over 4.3 million people. Most dwellings are detached houses. Many rural residents live in *ranchos* or *cuartes* (private units with some common facilities). Estimates in 2005 indicated that there was a housing deficit of over 500,000 dwellings and that about 3.75 million people were living in substandard housing.

### 4<sup>3</sup> EDUCATION

Primary and secondary education is free and compulsory for 6 years between the ages of 6 and 12. Basic secondary education covers three years of study, after which students may continue in a two-year diversified secondary program or a three-year technical school program. The academic year runs from March to December.

In 2001, about 26% of children between the ages of three and six were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 85% of age-eligible students. The same year, secondary school enrollment was about 39% of age-eligible students; 36% for boys and 42% for girls. It is estimated that about 74.6% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 35:1 in 2003; the ratio for secondary school was about 34:1. In 2003, private schools accounted for about 15.5% of primary school enrollment and 29% of secondary enrollment.

The National Autonomous University of Nicaragua offers instruction in 10 faculties: medicine, law and social sciences, dentistry, chemistry, and humanities in León; and agriculture, education, economics, physical and mathematical sciences, and humanities in Managua. The Central American University, affiliated with Georgetown University, opened in Managua in 1961, and the privately controlled Polytechnic University of Nicaragua, also in Managua, attained university status in 1977. Some others include the Central American Institute for Business Management, affiliated with the Harvard Business School; the University of Mobile, affiliated with Mobile College, Alabama; Nicaraguan Catholic University; and the National Engineering University. There were a total of 14 universities in Nicaragua in 1998. In 2003, about 18% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 76.7%.

As of 2003, public expenditure on education was estimated at 3.1% of GDP, or 15% of total government expenditures.

### 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library in Managua is the largest library in the country, holding a collection of 120,000 volumes. The National Autonomous University of Nicaragua in León holds the largest university collection with 36,700 volumes. Nicaragua has about 13 branch public libraries holding a total of 187,000 volumes. The largest branch is in León, and holds 32,000 volumes. There is a Central American Institute in Managua with 39,000 volumes focusing on the social and economic conditions of the region.

The National Museum, founded in 1896 and featuring archaeology and history, is in Managua at the National Palace, which houses the National Library and the National Archives as well. There is

an archeological museum in Granada and three provincial historical and archeological museums.

### 4<sup>5</sup> MEDIA

Postal, telegraph, and telephone facilities are government-owned. Since 1990, TELCOR, the national communications company, has invested over \$100 million on upgrading its facilities. Telephone service is limited to the heavily populated west coast and, except for Managua (where there is an automatic dial system), is inadequate. In 2003, there were an estimated 37 mainline telephones for every 1,000 people. The same year, there were approximately 85 mobile phones in use for every 1,000 people.

In 2004, there were 210 chartered radio stations in the country, 52 AM stations and 158 FM. The Voice of Nicaragua is the primary government station. There were 10 television stations based in Managua and 63 cable television franchises. In 2003, there were an estimated 270 radios and 123 television sets for every 1,000 people. The same year, there were 27.9 personal computers for every 1,000 people and 17 of every 1,000 people had access to the Internet. There were 17 secure Internet servers in the country in 2004.

There were two major daily newspapers in 2004 including, *La Prensa*, with a circulation of 37,000, and *El Nuevo Diario*, circulation 30,000. *La Prensa*, a harsh critic of Somoza rule and of the Sandinista regime, was closed in 1986 but, in accordance with the Arias peace plan, was allowed to resume publication in 1987. Press censorship ended with the departure of the Sandinista government. *Confidencial* is a popular weekly.

The constitution provides for freedom of speech and the press, and the government is said to be supportive of these rights in practice. The privately owned print media and the broadcast media openly discuss diverse viewpoints without government interference.

### 4<sup>6</sup> ORGANIZATIONS

Three cooperative organizations for cotton growers, shoemakers, and leather workers operate in the country. Of the four employers' associations, the most important was the Higher Council of Private Enterprise (Conejos Superior de la Empresa Privada—COSEP). The Nicaragua Chamber of Commerce is in Managua. The Augusto Cesar Sandino Foundation offers technical and methodological assistance to grassroots organizations for local development.

National youth organizations include the Union Nacional de Estudiantes de Nicaragua, Juventud Sandinista 19 de Julio, the Scout Association of Nicaragua, Girl Guides, and chapters of YMCA/YWCA. There are several sports associations active within the country. Fundacion Puntos de Encuentro is a national women's organization.

Volunteer service organizations, such as the Lions Clubs International, are also present. There are national chapters of the Red Cross, the Society of St. Vincent de Paul, UNICEF, and Habitat for Humanity.

### 4<sup>7</sup> TOURISM, TRAVEL, AND RECREATION

Although Nicaragua has beaches on two oceans, magnificent mountain and tropical scenery, and the two largest lakes in Central America, a decade of military conflict retarded the development of the tourist industry. The government, however, has made the development of its tourism industry a top priority. Foreign na-

tionals must possess a passport valid for at least six months after entry. Tourist cards instead of visas are used for travelers from most countries. Baseball is the national sport. Basketball, cock-fighting, bullfighting, golfing, and water sports are also popular.

In 2003, about 526,000 foreign visitors arrived in Nicaragua. Hotel rooms numbered 4,418 with 7,669 beds and an average stay of two nights. Tourism expenditure receipts totaled \$155 million.

In 2002, the US Department of State estimated the daily cost for food, hotel, and other expenses in Managua at \$176.

#### 48 FAMOUS NICARAGUANS

International literary fame came to Nicaragua with the publication of *Azul*, a collection of lyric poetry and short stories by Rubén Darío (Félix Rubén García-Sarmiento, 1867–1916). Born in Meta-pa (renamed Ciudad Darío in his honor), Darío created a new literary style in Spanish, exemplified by “art for art’s sake” and a revelry in the senses. Miguel Larreynaga (1771–1845) was an outstanding figure during the colonial period and later an ardent independence leader, teacher, jurist, and author. Santiago Arguëllo (1872–1940) was a noted poet and educator. Three modern poets are Fray Azarías Pallais (1885–1954), Alfonso Cortés (1893–1963), and Salomón de la Selva (1893–1959). Luis Abraham Delgado (1887–1961), a writer, educator, and musical conductor, was also Nicaragua’s leading composer.

The Somoza family, which ruled Nicaragua 1934–79, included Anastasio Somoza García (1896–1956), president during 1937–47 and again during 1950–56; his oldest son, Luis Somoza Debayle (1922–67), president during 1956–63; and a younger son, Anastasio Somoza Debayle (1925–80), president during 1967–72 and again from 1974–79 revolution. The Sandinistas, who overthrew the Somoza dynasty, take their name from the nationalist Gen. Augusto César Sandino (1895–1934). José Daniel Ortega Saavedra (b.1945) emerged as the leading figure in the junta that governed Nicaragua from 1979 to 1990.

#### 49 DEPENDENCIES

Nicaragua has no territories or colonies.

# PANAMA

Republic of Panama  
*República de Panamá*

**CAPITAL:** Panama City

**FLAG:** The national flag is divided into quarters. The upper quarter next to the staff is white with a blue star; the upper outer quarter is red; the lower quarter next to the staff is blue; and the lower outer quarter is white with a red star.

**ANTHEM:** *Himno Nacional*, beginning “Alcanzamos por fin la victoria” (“We reach victory at last”).

**MONETARY UNIT:** The balboa (B) of 100 centésimos is the national unit of account. Panama issues no paper money, and US notes are legal tender. Panama mints coins of 0.05, 0.10, 0.25, 0.50, 1 and 5 balboas which are interchangeable with US coins. B1 = \$1.00000 (or \$1 = B1) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is official, but British, US, and old Spanish units also are used.

**HOLIDAYS:** New Year’s Day, 1 January; Martyrs’ Day, 9 January; Labor Day, 1 May; National Revolution Day, 11 October; National Anthem Day, 1 November; All Souls’ Day, 2 November; Independence from Colombia, 3 November; Flag Day, 4 November; Independence Day (Colón only), 5 November; First Call of Independence, 10 November; Independence from Spain, 28 November; Mother’s Day and Immaculate Conception, 8 December; Christmas, 25 December. Movable religious holidays are Shrove Tuesday and Good Friday.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of Panama, situated on the Isthmus of Panama, has an area of 78,200 sq km (30,193 sq mi). Comparatively, the area occupied by Panama is slightly smaller than the state of South Carolina. The Canal Zone (1,432 sq km/553 sq mi), over which the United States formerly exercised sovereignty, on 1 October 1979 was incorporated into Panama, with the United States retaining responsibility for operation of the Panama Canal and the use of land in the zone for maintenance of the canal until the year 2000.

Panama extends 772 km (480 mi) E–W and 185 km (115 mi) N–S. Bordered on the N by the Caribbean Sea, on the E by Colombia, on the S by the Pacific Ocean, and on the W by Costa Rica, Panama has a total boundary length of 555 km (345 mi), of which 2,490 km (1,547 mi) is coastline.

Panama’s capital city, Panama City, is located where the Panama Canal meets the Gulf of Panama.

## <sup>2</sup>TOPOGRAPHY

Panama is a country of heavily forested hills and mountain ranges. The two principal ranges are in the eastern and western sections of the country, and a third, minor range extends southward along the Pacific coast into Colombia. The eastern Cordillera de San Blas parallels the Caribbean coastline, while the Serranía de Tabasará ascends westward, culminating in the Barú volcano (3,475 m/11,401 ft), formerly known as Chiriquí. Between these ranges, the land breaks into high plateaus, ridges, and valleys. The Panama Canal utilizes a gap in these ranges that runs northwest to southeast and averages only 87 m (285 ft) in altitude.

Panama has more than 300 rivers, most of which flow into the Pacific, with only the Tuira River in Darién Province of any com-

mercial importance. Both coasts of the isthmus have deep bays, but the Gulf of Panama is especially well provided with deepwater anchorages. Panama also has more than 1,600 islands, including the Amerindian-inhabited San Blas Islands in the Caribbean (366) and the Pearls Archipelago (Archipiélago de las Perlas) in the Gulf of Panama (over 100). Its largest island is the penal colony Coiba, which is south of the Gulf of Chiriquí.

Panama rests upon the Caribbean Tectonic Plate near its convergence with the Cocos, Nazca, and South American plates. The same motion of these plates, which created the Isthmus of Panama, continues to cause frequent tremors and earthquakes in the region; most of these are of low magnitude and cause little damage.

## <sup>3</sup>CLIMATE

Panama is tropical, but temperatures vary according to location and altitude. The annual average temperature on both coasts is 29°C (81°F), and it ranges from 10° to 19°C (50 to 66°F) at various mountain elevations. There is little seasonal change in temperature, with warm days and cool nights throughout the year. Humidity is quite high, however, averaging 80%. Rainfall averages 178 cm (70 in) in Panama City and 328 cm (129 in) in Colón. The period of lightest rainfall is from January to March.

## <sup>4</sup>FLORA AND FAUNA

Most of Panama is a thick rain forest, with occasional patches of savanna or prairie. On the wet Caribbean coast, the forest is evergreen, while on the drier Pacific side the forest is semi-deciduous. Species of flowering plants total over 9,900 and include the national flower, the Holy Ghost orchid. Mammals inhabiting the

isthmus are the anteater, armadillo, bat, coati, deer, opossum, peccary, raccoon, tapir, and many varieties of monkey. Reptiles, especially alligators, are numerous along the coasts. Bird life is rich and varies according to the presence of migratory species. Fish abound, with the Pacific coast being a favored region for sport fishing. As of 2002, there were at least 218 species of mammals and 302 species of birds throughout the country.

## 5 ENVIRONMENT

Soil erosion and deforestation are among Panama's most significant environmental concerns. Soil erosion is occurring at a rate of 2,000 tons per year. During 1990–2000, the annual average rate of deforestation was 1.6%. Air pollution is also a problem in urban centers due to emissions from industry and transportation. In 2000, the total of carbon dioxide emissions was at 6.3 million metric tons. Pesticides, sewage, and pollution from the oil industry cause much of the pollution.

Agencies with environmental responsibilities include the Ministry of Health and Ministry of Rural Development. The Smithsonian Tropical Research Institute, in Balboa, conducts studies on the conservation of natural resources.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 17 types of mammals, 20 species of birds, 7 types of reptiles, 52 species of amphibians, 17 species of fish, 2 species of invertebrates, and 195 species of plants. Endangered species include the red-backed squirrel monkey, tundra peregrine falcon, spectacled caiman, American crocodile, and four species of sea turtle (green sea, hawksbill, olive ridley, and leatherback).

## 6 POPULATION

The population of Panama in 2005 was estimated by the United Nations (UN) at 3,232,000, which placed it at number 130 in population among the 193 nations of the world. In 2005, approximately 6% of the population was over 65 years of age, with another 29% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.8%, a rate the government viewed as too high; it was addressing the relatively high fertility rate with family life and sexuality education programs in primary and secondary schools. The projected population for the year 2025 was 4,239,000. The population density was 43 per sq km (111 per sq mi).

The UN estimated that 62% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.31%. The capital city, Panama City (Panamá), had a population of 930,000 in that year. Other major cities and their estimated populations include Colón, 187,705; and David, 112,000.

## 7 MIGRATION

Immigration and emigration have been roughly in balance in recent years. In the 1990s, there were 61,400 foreign-born persons in Panama, of which 13,644 were Colombians. In 1999, the United Nations High Commissioner for Refugees (UNHCR) urged Panamanian authorities to take a more flexible approach toward Colombians who arrived after February 1998 and were under a Temporary Protection plan. The total number of migrants in the country in 2000 was 82,000. In 2004 worker remittances were \$231

million. In 2004 there were 1,608 refugees in Panama and 271 asylum seekers. In 2005, the net migration rate was an estimated -0.86 migrants per 1,000 population. The government viewed the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The racial and cultural composition of Panama is highly diverse. According to recent estimates, about 70% of the inhabitants are mestizo (mixed Amerindian and white) or mulatto (mixed white and black); 14% are Amerindian and mixed (West Indian); 10% are white (mostly Europeans); and 6% are Amerindian. There is also a Chinese community of about 150,000. The indigenous tribes include the Embera-Wounaan, Ngobe-Bugle, and the Kona, all of which reside in tribal-led reservations within the country. The Bri-Bri and the Naso are smaller tribes found near the Costa Rica border.

## 9 LANGUAGES

Spanish, the official language of Panama, is spoken by over 90% of the people, but English is a common second language, spoken by most Panamanian professionals and businesspeople. The Amerindians use their own languages. Many Panamanians are bilingual.

## 10 RELIGIONS

At the last census in 1998, an estimated 82% of the people were Roman Catholic; 10% were evangelicals; and 3% were unaffiliated with any religious group. More recent, but unofficial, estimates suggest that the Catholic population is declining in favor of the evangelicals, which may account for up to 20% of the population. Mainstream Protestant groups include Lutherans, Southern Baptists, and Methodists (United Methodist and the Methodist Church of the Caribbean and the Americas). There are small groups of Latter-Day Saints (Mormons), Seventh-Day Adventists, Jehovah's Witnesses, Episcopalians, and other Christians. Buddhists, Jews, Muslims, and Baha'is also had small communities. Panama is home to one of the world's seven Baha'i Houses of Worship.

Although Roman Catholicism is recognized by the constitution of 1972 as the majority religion, it is not designated as an official religion of state and religious freedom, as well as separation of church and state, are guaranteed. The Panamanian Ecumenical Committee is a nongovernmental group that encourages interfaith dialogue and charitable service.

## 11 TRANSPORTATION

Motor vehicles transport most agricultural products. In 2002, there were 11,592 km (7,203 mi) of roads, of which about 4,079 km (2,534 mi) were paved, including 30 km (19 mi) of expressways. The principal highway is the National (or Central) Highway—the Panamanian section of the Pan American Highway—which runs from the Costa Rican border, via Panama City and Chepo, to the Colombian border. The 80-km (50-mi) Trans-Isthmian Highway links Colón and Panama City. Panama's rugged terrain impedes highway development, and there are few good roads in the republic's eastern sections. In 2003 there were 266,900 registered passenger cars and 171,800 commercial vehicles.

As of 2004, there were a total of 355 km (220 mi) of standard and narrow gauge railway lines, all government-run. Of that to-

tal, narrow gauge accounted for 279 km (174 mi). The Panama Railroad parallels the canal for 77 km (48 mi) between Colón and Panama City. Other lines connect Pedregal, David, Puerto Armuelles, and Boquete and unify Bocas del Toro Province.

In 2005, the Panamanian merchant marine registered 5,005 ships of 1,000 GRT or more, totaling 122,960,929 GRT. Most of the ships are foreign-owned but are registered as Panamanian because fees are low and labor laws lenient. International shipping passes almost entirely through the canal ports of Cristóbal, which serves Colón, and Balboa, which serves Panama City.

Panama is a crossroads for air travel within the Americas. As of 2004, there were an estimated 105 airports, 47 of which had paved runways as of 2005. The most widely used domestic airline is Compañía Panameña de Aviación (COPA), which also flies throughout Central America. Air Panama International serves passenger traffic to the United States and South America. Internacional de Aviación (INAI) is an international passenger and cargo carrier. Panama has two international airports: the largest, Tocumen International Airport is in Panama City; the smaller, Omar Torrijos International Airport, is 19 km (12 mi) east of Panama City. In 2003, about 1.264 million passengers were carried on scheduled domestic and international airline flights.

The Panama Canal traverses the isthmus and is 82 km (51 mi) in length from deepwater to deepwater and is part of the nation's 800 km (497 mi) of navigable internal waterways. The great technical feat involved in constructing the canal was to cut through the mountains that span the region, dam the Chagres Lake, and then design and build the three sets of double locks that raise and lower ships the 26 m (85 ft) between lake and sea levels. The first passage through the canal was completed by the S.S. *Ancon* on 15 August 1914. As of 1 October 1979 when the US-Panama treaties went into effect, the canal was administered by the joint Panama Canal Commission, on which the United States had majority representation through the end of 1989. The United States turned over complete control of the canal to Panama on 31 December 1999. The canal takes ships of up to 67,000 tons. An oil pipeline across the isthmus was opened in 1982 to carry Alaskan oil. Its capacity is 830,000 barrels per day. The Bridge of the Americas across the canal at the Pacific entrance unites eastern and western Panama as well as the northern and southern sections of the Pan American Highway. Panama, the United States, and Japan have commissioned a \$20-million study to search for alternatives to the canal. The feasibility of building a new canal at sea level was to be examined. Alternatively, the Panama Canal Commission has indicated its intention to increase the width of the Gaillard Cut (Corte Culebra), since larger ships are restricted to one-way daylight passage due to the narrowness. Panama also plans to consolidate the ports of Balboa on the Pacific and Cristóbal on the Caribbean into a single container terminal system.

## 12 HISTORY

The isthmian region was an area of economic transshipment long before Europeans explored it. It was also the converging point of several significant Amerindian cultures. Mayan, Aztec, Chibcha, and Caribs had indirect and direct contact with the area. The first European to explore Panama was the Spaniard Rodrigo de Bastidas in 1501. In 1502, Columbus claimed the region for Spain. In 1513, Vasco Nuñez de Balboa led soldiers across the isthmus and

made the European discovery of the Pacific Ocean. Despite strong resistance by the Cuna Amerindians, the settlements of Nombre de Dios, San Sebastián, and, later, Portobelo were established on the Caribbean coast, while Panama City was founded on the Pacific coast. In 1567, Panama was made part of the viceroyalty of Peru. English buccaneers, notably Sir Francis Drake in the 16th century and Henry Morgan in the 17th, contested Spanish hegemony in Panama, burning and looting its ports, including Panama City in 1671.

From the 16th until the mid-18th century, the isthmus was a strategic link in Spanish trade with the west coast of South America, especially the viceregal capital of Lima. In 1740, the isthmus was placed under the jurisdiction of the newly recreated viceroyalty of New Granada.

Panama declared its independence from Spain in 1821 and joined the Republic of Gran Colombia, a short-lived union of Colombia, Venezuela, and Ecuador, founded in 1819. In 1826, it was the seat of the Pan American Conference called by the liberator, Simón Bolívar. When Gran Colombia was dissolved in 1829–30, Panama still remained part of Colombia. Secessionist revolts took place in 1830 and 1831, and during 1840–41.

The discovery of gold in California in 1848 brought the isthmus into prominence as a canal site linking the Atlantic and Pacific oceans. After the French failed to build one in the 1880s, they sold those rights to the United States for \$40 million. The United States then negotiated the Hay-Herrán Treaty with Colombia in 1903. After Colombia refused to ratify the treaty, Panama seceded from Colombia and, backed by US naval forces, declared its independence on 3 November 1903. Panama then signed a canal agreement with the United States and received a lump sum of \$10 million and an annual rent of \$250,000. The Hay-Bunau-Varilla Treaty (1903) granted the United States in perpetuity an 8-km (5-mi) strip of land on either side of the canal and permitted the United States to intervene to protect Panamanian independence, to defend the canal, and to maintain order in the cities of Panama and Colón and in the Canal Zone.

The United States intervened to establish order in 1908—while the canal was under construction—and, after the canal had opened to traffic, in 1917 and again in 1918. In 1936, however, the United States adopted a policy of nonintervention, and in 1955, the annuity was raised to \$1,930,000.

During the postwar decades, the question of sovereignty over the Canal Zone was a persistent irritant in Panamanian politics. On 9 January 1964, riots broke out in the Canal Zone as Panamanians protested US neglect of a 1962 joint Panama-US flag-flying agreement. On the following day, Panama suspended relations with the United States and demanded complete revision of the Canal Zone treaty. Thereafter, Panama sought sovereignty over the Canal Zone and the elimination of the concept of perpetuity on any future arrangement. Diplomatic relations were restored in April, but negotiations went slowly thereafter.

The Panamanian government turned to dictatorship in October 1968, when National Guard Brig. Gen. Omar Torrijos Herrera deposed the elected president and established a dictatorship.

Final agreement on the future of the canal and the Canal Zone came on 7 September 1977, when Gen. Torrijos and US president Jimmy Carter signed two documents at OAS headquarters in Washington, DC. The first document, the Panama Canal Treaty,

abrogated the 1903 Hay-Bunau-Varilla accord, recognized Panama's sovereignty over the Canal Zone (which ceased to exist as of 1 October 1979), and granted the United States rights to operate, maintain, and manage the canal through 31 December 1999, when ownership of the canal itself would revert to Panama. Panama would receive a fixed annuity of \$10 million and a subsidy of \$0.30 (to be adjusted periodically for inflation) for every ton of cargo that passed through the canal, plus up to \$10 million annually from operating surpluses. The second document, the so-called Neutrality Treaty, guaranteed the neutrality of the canal for "peaceful transit by the vessels of all nations" in time of both peace and war. An additional provision added in October denied the United States the right of intervention into Panamanian affairs. The treaties were ratified by plebiscite in Panama on 23 October 1977 and, after prolonged debate and extensive amendment, by the US Senate in March and April 1978. When both treaties came into force in 1979, about 60% of the former Canal Zone's total area immediately came under Panama's direct control, including 11 of 14 military bases, the Panama City-Colón railway, and ports at both ends of the canal.

The Torrijos regime was populist, with a wide appeal to the neglected lower and lower middle classes of Panama. Moreover, Torrijos established nationalist credentials by standing up to the United States and demanding recognition of Panama's positions on the Canal Zone. Torrijos resigned as head of government in 1978 but continued to rule behind the scenes as National Guard commander until his death in a plane crash on 31 July 1981. Over the next few years, the National Guard, now renamed the Panama Defense Forces (PDF), came under the influence of Gen. Manuel Noriega.

On the civilian side, Aristedes Royo was elected president by the Assembly in October 1978, and was later forced out of office in July 1982. His successor was the vice president, Ricardo de la Escriella, who resigned in February 1984, just three months before scheduled presidential elections. In those elections, the economist and former World Bank official Nicolás Ardito Barletta, the military's approved candidate, won a close victory over former president Arnulfo Arias Madrid (running for the fifth time), in an election marked by voting irregularities and fraud. Barletta soon lost the confidence of the military and was forced out in September 1985. Vice President Eric Arturo Delvalle assumed power.

By 1987, Noriega had been accused by close associates and the United States of falsifying the 1984 election results, plotting the deaths of prominent opposition leaders and Gen. Torrijos, drug trafficking, giving aid to the Colombian radical group M-19 and Salvadoran rebels, and providing intelligence and restricted US technology to Cuba. Opposition forces, including the Roman Catholic Church, intensified and the government responded by banning public protest. The US Senate approved legislation cutting off aid to Panama in December 1987. In February 1988, following indictments of Noriega in US courts for drug trafficking, President Delvalle announced Noriega's dismissal. Noriega refused to step down, and the Legislative Assembly voted to remove Delvalle from office and replace him with Manuel Solís Palma, the minister of education. Delvalle went into hiding, and Panama entered a two-year period of instability and conflict.

Noriega also had problems within the PDF. Dissident military leaders, with either tacit or direct US approval, attempted coups in March 1988 and in October 1989. Unable to rely on the loy-

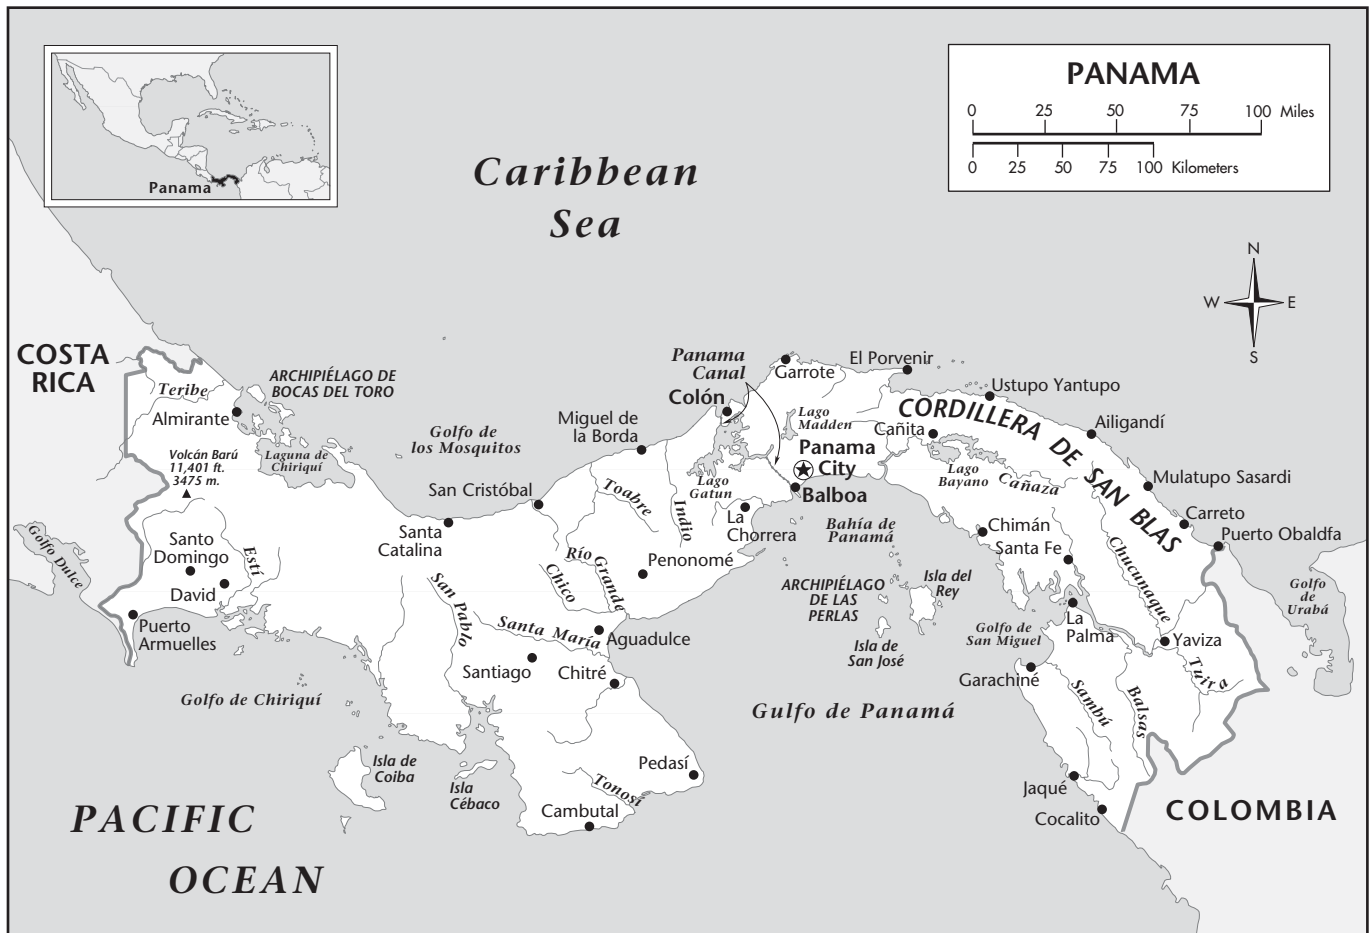

alty of the PDF, Noriega created his own paramilitary force, called the "Dignity Battalions," which were nothing more than freelance thugs called in at the dictator's whim. Domestically, Noriega suffered from a lack of support. In March 1987, a general strike occurred for several weeks. Emboldened by US efforts to remove Noriega, opposition forces coalesced, even as the government became more repressive. In elections held in May 1989, opposition candidates scored overwhelming victories, forcing Noriega to annul the elections and rely on intimidation and force.

Finally, the United States was engaged in a series of moves calculated to bring down the Noriega regime, which eventually led to a showdown. In March 1988, President Ronald Reagan suspended preferential trade conditions and withheld canal-use payments. In April, Reagan froze US-held Panamanian assets and suspended all private payments to Panama. Negotiations to allow Noriega to step down dissolved in May, when Noriega refused to abide by an agreement between the United States and Noriega's assistants. The administration of President George H. W. Bush continued pressure on Noriega, but itself came under criticism for its inability to resolve the problem. Finally, in December 1989, Noriega played his final card, declaring war on the United States and ordering attacks on US military personnel.

President George H. W. Bush responded quickly, ordering the US military into Panama. The troops remained for a week, delayed when Noriega sought sanctuary in the residence of the Papal Nuncio. Noriega surrendered and was returned to the United States for trial. Immediately, the Panamanian Electoral Tribunal declared the 1989 elections valid and confirmed the results. Guillermo Endara became president, Ricardo Arias Calderón first vice president, and Guillermo "Billy" Ford second vice president. Legislative elections were confirmed for most Legislative Assembly seats, and in January 1991 a special election filled the remaining seats.

Under President Endara, Panama made some strides toward economic recovery, but these were only impressive because the situation under Noriega had become so desperate. Politically, Endara lacked nationalist credentials, especially since he was installed by US military might. His administration was widely criticized for the continuing poor economic conditions.

In May 1994, a new president, Ernesto Pérez Balladares, was elected in the country's first free and fair elections since 1968. His opponent, Mireya Moscoso, entered political life in 1964 when she worked on the campaign of Arnulfo Arias, whom she eventually married. After Arias's death in 1988, Moscoso returned to Panama, where she formed the Arnulfista party, named for Arnulfo Arias. Balladares's Democratic Revolutionary Party (PRD) was closely associated with the Noriega dictatorship but the new president identified himself with the populist Torrijos regime. The years of Pérez Balladares's rule were characterized by a multiparty cabinet that included several members who publicly denounced former dictator Manuel Noriega. Pérez Balladares set in motion various economic reforms and continued close collaboration with the United States to implement treaties regarding the eventual turnover of the Panama Canal to Panamanian rule (which occurred 31 December 1999). A law ratified in 1997 created the Canal Authority to administer the Canal after the United States relinquished control. Though Pérez Balladares worked to pass a referendum to allow his reelection, it failed.

LOCATION: 7°12'9" to 9°37' 57" N; 77°9'24" to 83°3'7" W. BOUNDARY LENGTHS: Caribbean coastline, 963 kilometers (596 miles); Colombia, 225 kilometers (140 miles); Pacific coastline, 1,527 kilometers (950 miles); Costa Rica, 330 kilometers (206 miles). TERRITORIAL SEA LIMIT: 200 miles.

Presidential campaigns ensued. The PRD, with its majority in congress, campaigned fiercely with its candidate Martin Torrijos Espino, son of the late dictator. The main opposition was the Arnulfista Party. Its candidate, Mireya Moscoso (who is the widow of Arias) swept the elections on 2 May 1999. Moscoso thus became the first woman to take the office. After having run in 1994 and lost to Pérez Balladères), Moscoso defeated Torrijos in what was considered a fair election: 75% of the country's 2.7 million citizens voted. Moscoso took office on 1 September 1999.

As the end of the decade neared, the country prepared for the withdrawal of the US military on 31 December 1999, under the terms of the Panama Canal Treaty. Moscoso officiated, with former US president Jimmy Carter, at the formal ceremony where the United States relinquished power over the Canal. The Panama Canal was officially handed over to Panamanian rule on 31 December 1999; this marked an end to 80 years of US occupation. Though the accompanying ceremony took place a week prior to the historic date due to potential complications with millennium celebrations, the significance was nonetheless grand. The ceremony included King Juan Carlos of Spain and several Latin American leaders. Carter, who began the process to grant Panama control over the waterway more than 20 years prior under a treaty with then-president General Omar Torrijos, signed over the United States rule. President Bill Clinton declined invitations to attend

the ceremony. The celebrations that ensued were overshadowed somewhat by concerns from US conservative politicians that the canal will not be secure in Panamanian hands. However, President Clinton pledged continued collaboration with Panama to ensure the canal's security.

In 2004, on a strong "zero tolerance" anticorruption platform that called for increased transparency, Martin Torrijos won the presidency, and his PRD party won a majority in the National Assembly over the Panameñista (formerly Arnulfista) party. After his inauguration in September of that year, he created a broad coalition of labor, religious, and civil society, as well as government leaders to form the Anti-Corruption Council to crack down on the corruption endemic to previous administrations.

Since regaining control of the canal, Panama has experienced difficulties turning the canal into an engine for economic growth. The economy expanded by less than 3% in 2001 and 2002, but GDP increased to approximately 4% in 2004 and 6% in 2005. Despite being the country with the highest per capita income in Central America, roughly 40% of Panamanians live in poverty.

### 13 GOVERNMENT

Under the constitution of 1972, Panama is a republic in which the president, assisted by a cabinet, exercises executive power. Reforms adopted in April 1983 changed the election of the president

from an absolute majority of the National Assembly of Municipal Representatives to a direct popular vote, and a second vice president was added. The president and the two vice presidents must be at least 35 years of age and native Panamanians; they serve for five years and are not eligible for immediate reelection. For the 2009 national elections the executive branch will be reduced to including only one vice president. The constitution was ratified to reflect these changes in 2004.

Legislative power is vested in the unicameral Legislative Assembly, which replaced the National Assembly of Municipal Representatives in 1984. The 78 members are elected for five-year terms by direct popular vote. However, as per the 2004 constitutional changes, assembly membership will be capped at 71 representatives for the 2009 elections. Regular sessions are from 11 October–11 November annually, and special sessions may be called by the president. Suffrage is universal for Panamanians 18 years of age or over. The next national elections were scheduled to take place 3 May 2009.

The 1972 constitution conferred extraordinary decision-making powers upon the commander of the Panama Defense Forces (PDF), who was allowed to participate in sessions of all executive and legislative organs, to direct foreign policy, to appoint Supreme Court magistrates, and to appoint and remove ministers of state, among other responsibilities.

The PDF was subsequently converted into a civilian group called the Public Forces. Following a purge of PDF senior officials, the Public Forces were placed under the cabinet-level Minister of Government and Justice.

## 14 POLITICAL PARTIES

Personalities rather than ideological platforms tend to be the dominating force in Panamanian politics. The traditional political parties were the Liberals and the Conservatives, and their differences lay initially in the issue of church and state power. More recently, parties tended to be coalitions of the many splinter groups that had formed around local leaders. Military interventions frequently led to the banning of political parties. Such interruptions have led to an extremely splintered party system, which held together only insofar as they opposed the military regimes.

The coalition that came to power in 1990 consisted of President Endara's Arnulfista Party, led by Dr. Arnulfo Escalona, the National Liberal Republican Movement (MOLIRENA), led by second vice president Guillermo Ford; and the Christian Democratic Party (PDC), led by first vice president Ricardo Arias. Subsequently, Arias broke from the coalition, and the PDC, which held a plurality of seats in the Legislative Assembly, became the leader of the opposition.

With the election of Ernesto Pérez Balladares to the presidency in May 1994, the Democratic Revolutionary Party (PRD), which had been closely linked to the country's former military regime, was returned to power, as part of a coalition that also included the Liberal Republican Party (PLR) and the Labor Party (PALA). This coalition gained effective control of the National Assembly as well as the executive branch.

Although the PRD was defeated with the election of Mireya Moscoso in 1999, in 2004 the PRD came back with a victory fueled by a much-awaited anticorruption campaign, and a coalition with the Popular Party (PP). The other six constituted political

parties are the former Arnulfista party of the Partido Panameñista (PA), MOLIRENA, Democratic Change (CD), Solidarity Party (PS), National Liberal Party (PLN), and the Liberal Party (PL).

## 15 LOCAL GOVERNMENT

Panama is divided into nine administrative provinces, each headed by a governor appointed by the president, and one Amerindian territory. The provinces are subdivided into 67 municipal districts, each of which is governed by a mayor and a municipal council of at least five members, including all that district's representatives in the National Assembly. There are 511 municipal subdistricts in all.

## 16 JUDICIAL SYSTEM

Judicial authority rests with the Supreme Court, composed of nine magistrates and nine alternates, all appointed by the president (subject to approval by the Legislative Assembly) for 10-year terms. The Supreme Court magistrates appoint judges of the superior courts who in turn appoint circuit court judges in their respective jurisdictions. There are four superior courts, eighteen circuit courts (one civil and one criminal court for each province), and at least one municipal court in each district.

At the local level, two types of administrative judges—*corregidores* and night (or police) judges—who hear minor civil and criminal cases involving sentences under one year. Appointed by the municipal mayors, these judges are similar to Justices of the Peace. Their proceedings are not subject to the Code of Criminal Procedure and defendants lack procedural safeguards afforded in the regular courts.

The constitution guarantees a right to counsel for persons charged with crimes and requires the provision of public defenders for indigent criminal defendants. Trial by jury is afforded in some circumstances.

The 1996 amendment to the constitution abolished the standing military and contains a provision for the temporary formation of a "special police force" to protect the borders. The Judicial Technical Police perform criminal investigations in support of public prosecutors. The constitution also provides for an independent judiciary; however, the judiciary is susceptible to corruption.

The legal system is based on the civil law system. Panama accepts the compulsory jurisdiction of the International Court of Justice with reservation.

## 17 ARMED FORCES

The Panamanian Defense Force disappeared with the US intervention in 1989. The National Police Force numbers approximately 11,800 members, supported by a maritime service (estimated at 400 with 39 patrol boats) and an air service (400 staff, 12 aircraft, and 34 utility helicopters). In 2005, Panama's defense budget totaled \$158 million.

## 18 INTERNATIONAL COOPERATION

Panama is a charter member of the United Nations, having joined on 13 November 1945, and participates in ECLAC and several nonregional specialized agencies, such as the FAO, IAEA, the World Bank, the IFC, UNESCO, UNIDO, and the WHO. Panama is also a member of the Inter-American Development Bank, G-77, the Latin American Economic System (LAES), the Latin Ameri-

can Integration Association (LAIA), the OAS, the Association of Caribbean States (ACS), and the Río Group. Panama is also a part of the Central American Parliament (PARLACEN). The nation is part of the Nonaligned Movement.

In environmental cooperation, Panama is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change and Desertification. The nation is also a part of the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

Panama depends largely on its privileged geographical position: the economy is based on a well-developed services sector, including the Panama Canal, banking, insurance, government, the trans-Panamanian oil pipeline, and the Colón Free Zone. The Panama Canal and the monetary regime anchored in the use of the US dollar as legal tender spurred the rapid development of the service economy which offset markedly unfavorable terms of trade. The unique monetary system played a significant role in the creation of an International Banking Center and the Colón Free Zone.

Whereas many countries were characterized by a growing protectionism in the late 1940s, Panama launched the Colón Free Zone (the world's largest free zone, with Hong Kong as the largest free port). Panama also earned substantial rents through the construction of the trans-Panamanian oil pipeline and by the licensing of the Panamanian flag to merchant ships from around the world.

The economy generated annual growth of more than 6% during the period 1950–81. However, economic growth stagnated to 1.9% annually over 1977–87, caused by the aftermath of the second oil shock and the debt crisis. In the early 1990s, Panama rebounded from an excruciating recession brought about by a US embargo and subsequent military invasion. The US objective was the capture of General Manuel Noriega, who had installed puppet governments and was responsible for an increase in drug trafficking and money laundering. After Noriega was captured, extradited and condemned at a Miami federal court, Guillermo Endara assumed office. Nevertheless, his administration was widely criticized for not fulfilling Panamanians' hope for a rapid and bountiful recovery.

In May 1994, Armando Perez Balladares was elected president. The economy continued to grow, but at a slower pace during the first half of the 1990s. Panama's main engines of economic growth (the Panama Canal, the Colón Free Zone, and International Banking Center) continued to lose competitiveness in the context of an open economy throughout the world. The Balladares administration responded in 1996 with a solid program of economic reforms. These included the privatization of two seaports (Cristóbal and Balboa), the promulgation of an antimonopoly law, the renegotiating of foreign debt with commercial banks, the privatization of the electricity and water companies, and a banking reform law. These economic reforms were accompanied with the recovery of the majority of traditional sectors, with the exception of the construction sector.

Between 1988 and 1998, the economy grew at 5% annually. In 1999, Mireya Moscoso was elected to the presidency. She did not intend to privatize the few remaining state enterprises, and wanted to raise protectionist tariffs to help local farmers, but membership in the WTO forbade this action. In December 1999, in accordance with the 1977 Panama Canal Treaty, the Panama Canal and all American bases were returned to the Panamanian government, comprising 364,000 acres and estimated to be worth \$4 billion. Real GDP growth fell to 3.2% in 1999 (down from 4.4% in 1998) and then to 2.5% in 2000. A major cause of the slowdown was a decline in foreign direct investment (FDI), which had run at about \$1.3 billion in 1997 and 1998, but fell to \$.65 billion in 1999 and \$.60 billion in 2000. Real GDP growth fell to 2.5% in 2000.

In 2001, growth declined further as declining export demand and a dramatic drop in tourism following the 11 September 2001 terrorist attacks on the United States were added to declining domestic demand. Real GDP annual growth fell to 0.3% in 2001, and is estimated to have reached only 1.2% in 2002. Inflation has been held in control, falling from 1.5% in 1999 to 0.3% in 2001, and estimated at 0.8% for 2002. Unemployment remains in double digits, reaching 14.4% in 2001. In 2001 Panama was removed from both the United States and the OECD lists of noncooperating countries on money laundering, having been certified as compliant with 23 of 25 Basel Core Principles by the IMF Offshore Financial Center Module II assessment in August 2001. However, in 2002 and 2003, Panama remained one of 23 countries on the US list of major illicit drug producing and/or drug transit countries.

The economy expanded by 7.6% in 2004, up from 4.3% in 2003; in 2005, the GDP growth rate was estimated at 5.5%, while the GDP per capita, at purchasing power parity, reached \$7,300. Most of this growth has been fueled by export-oriented services, and the construction boom, which in turn were backed up by tax incentives. The inflation rate was fairly stable and at 0.2% in 2004 it did not pose a major problem to the economy. The unemployment rate was modest in 2005 (8.7%), and as such was not a key concern for the government.

## 20 INCOME

The US Central Intelligence Agency (CIA) reported that in 2005 Panama's gross domestic product (GDP) was estimated at \$22.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$7,300. The annual growth rate of GDP was estimated at 4.3%. The average inflation rate in 2005 was 2.5%. It was estimated that agriculture accounted for 7.6% of GDP, industry 17.9%, and services 74.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$85 million or about \$28 per capita and accounted for approximately 0.7% of GDP. Foreign aid receipts amounted to \$30 million or about \$10 per capita and accounted for approximately 0.3% of the gross national income (GNI).

The World Bank reported that in 2003 household consumption in Panama totaled \$8.07 billion or about \$2,703 per capita based on a GDP of \$12.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods

and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.9%. In 2001 it was estimated that approximately 22% of household consumption was spent on food, 18% on fuel, 14% on health care, and 4% on education. It was estimated that in 1999 about 37% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Panama's workforce was estimated at 1.39 million. As of 2003, the services sector accounted for 65.2% of the labor force, with 17.51% in agriculture, 17.2% in industry, and 0.1% in undefined occupations. Panama's workforce is marked by an abundance of unskilled laborers, but a shortage of skilled workers. The unemployment rate rose from 11.8% in 1985 to 17% in 1990, and then declined to 13% by 2000. In 2005, the unemployment rate was estimated at 8.7%.

In 1999, Panama had over 250 unions with about 80,000 private sector members, organized into 48 federations and 7 confederations. The province of Panama is where more than two-thirds of the total number of unions are found. About 10% of the workforce was unionized as of 2001. The Confederation of Workers of the Republic of Panama, formed in 1963, is an affiliate of the ICF-TU, and the National Center of Panamerican Workers is affiliated with the WFTU. Strikes are permitted, and collective bargaining is widely practiced.

The law provides for an eight-hour day, a six-day week, minimum wages, a month's vacation with pay, maternity benefits and equal pay for women, and restrictions on the employment of minors. The minimum wage ranged from \$0.80 to \$1.50 per hour in 2001. All employees are entitled to a one-month annual bonus in three equal installments, two of which the worker receives directly and one of which is paid into the Social Security Fund. The law prohibits children under the age of 14 from working, but child labor continues to be widespread.

## 2<sup>2</sup> AGRICULTURE

About 9.3% of the total land area was classified as arable in 2003. Farming methods are primitive, and productivity is low. The best lands are held by large owners. Agriculture contributes about 7% to GDP and accounted for 34% of exports in 2004.

Panama is self-sufficient in bananas, sugar, rice, corn, and coffee, but imports large quantities of other foods. Bananas are the leading export product and the banana industry is an important source of rural employment; exports were valued at \$108.2 million in 2004, about half destined for the German market. In 2004, crop production (in tons) included sugarcane, 1,650,000; bananas, 525,000; rice, 296,000; corn, 80,000; and coffee, 8,700.

## 2<sup>3</sup> ANIMAL HUSBANDRY

The Panamanian livestock industry produces sufficient meat to supply domestic demand and provides hides for export. Most cattle and hogs are tended by small herders, and dairy farming has expanded in recent years. In 2005 there were 1,600,000 head of cattle, 272,000 hogs, and about 14 million chickens. Milk production in 2005 was reported at 187,000 tons. Panama imports a sub-

stantial amount of its dairy needs (powdered milk, butterfat, and cheese), primarily from New Zealand.

## 2<sup>4</sup> FISHING

The offshore waters of Panama abound in fish and seafood, and fisheries are a significant sector of the national economy. There is freshwater fishing in the Chiriquí River and deep-sea fishing along the Pacific and Caribbean coasts for amberjack, barracuda, bonito, corbina, dolphinfish, mackerel, pompano, red snapper, sailfish, sea bass, and tuna.

In 2006, the fish catch totaled 229,652 tons, as compared with 131,514 tons in 1986. The main commercial species caught that year were Pacific anchoveta (78,618 tons), Pacific thread herring (55,730 tons), yellowfin tuna (28,694 tons), and skipjack tuna (11,474 tons). Exports of fish products were valued at nearly \$412.3 million in 2003.

## 2<sup>5</sup> FORESTRY

Forests cover about 39% of the country's area but have been largely unexploited because of a lack of transportation facilities. Nearly all forestland is government-owned. Hardwood, particularly mahogany, is produced for export in Darién and along the Pacific coast in Veraguas. Abacá fiber, which is obtained in Bocas del Toro and is used in the making of marine cordage, is a valuable forest product. Approximately 30% of Panama's natural forests are still unused. The average annual deforestation rate was 1.6% during 1990–2000. In order to protect and preserve native forests, the National Association for the Conservation of Nature has begun a vast reforestation program. Production of roundwood was 1,372,000 cu m (48.4 million cu ft) in 2004, 89% used as fuel wood.

## 2<sup>6</sup> MINING

Panama had a small-to-moderate mineral sector, with known deposits of copper, manganese, iron, asbestos, gold, and silver. Construction materials were a leading industry, including cement, clays, lime, limestone, and sand and gravel. There was no recorded gold or silver production from 2000 through 2003, nor was there any copper output that year. Salt, produced by evaporation of seawater at Aguadulce, was a major mineral product. Output was in 2003 was estimated at 23,000 metric tons. Cement production in 2003 was estimated at 770,000 metric tons in 2003.

## 2<sup>7</sup> ENERGY AND POWER

Panama has no proven reserves of oil, natural gas, or coal, nor any oil-refining capacity. As a result, the country is totally dependent upon imports to meet its fossil fuel needs.

In 2002, Panama's petroleum imports, including crude oil, averaged 88,980 barrels per day, of which 28,000 barrels per day consisted of crude oil. Demand for refined oil products averaged 76,580 barrels per day. Refinery output that year averaged 19,790 barrels per day. However, in that same year, Panama closed its sole refinery. As a result, the country must import all of its refined petroleum products.

There were no recorded imports of natural gas in 2002, although Panama did import 50,000 tons of hard coal that year.

Panama had a total installed electric capacity of 1,260,000 kW in 2002, of which conventional thermal facilities accounted for 51.3% of capacity, with hydroelectric dedicated capacity account-

ing for the rest. Production of electric power that year totaled 5.162 billion kWh, of which 34.4% was from fossil fuels, 65.2% from hydropower, and the rest from other renewable sources. Consumption of electricity in 2002 was 4.786 billion kWh.

## 28 INDUSTRY

The performance of Panama's industry as a whole was negative during the 1980s, but garnered a 7% growth rate during the 1990s. Construction, manufacturing, mining, and utilities together accounted for 17% of GDP in 2000, but industrial activity decreased by 1.5% that year. The government and the private sector have invested large amounts in the construction of ports, roads, and bridges. Thus, the production of construction-related materials and finished wood products have all risen considerably in recent years. Construction activity itself rose 7.5% in 2000.

Limited by a small domestic market, Panamanian manufacturing represents around 8% of GDP. Growth in production reached an average 1.1% annually between 1978 and 1988, rising to 5.4% between 1988 and 1998 due to an import-substitution high tariff regime that ended in 1998. Manufacturing of mainly nondurable goods consists principally of food-processing plants and firms for the production of: alcoholic beverages, sugar, ceramics, tropical clothing, cigarettes, hats, furniture, shoes, soap, and edible oils. Other manufactured products include clothing, chemicals, cement, and construction products for domestic consumption.

Panama has potential to further develop its mining industry. The country has one oil refinery with a production capacity of 60,000 barrels per day. The government's privatization program was largely complete as of 2002.

The industrial production growth rate in 2005 year was 3.5%, lower than the overall GDP growth rate and an indicator that industry was not an economic growth engine. In 2005, industry accounted for 17.9% of the GDP and was bested by services—which comprised 74.5% of the economy; agriculture was the smallest economic sector although it employed more people than the industrial sector. Panama currently suffers from a shortage of skilled labor, but has an oversupply of unskilled labor.

## 29 SCIENCE AND TECHNOLOGY

Although the shipping technology of the Panama Canal is owned and operated by the United States, technicians from the United States who operated the canal's facilities were replaced gradually by Panamanian personnel before the canal was officially turned over to Panama. The National Academy of Sciences of Panama (founded in 1942) advises the government on scientific matters, and the National Research Center (1976) coordinates scientific and technological research. The Smithsonian Institution has had a tropical research institute in Balboa since 1923. The University of Panama, founded in 1935 in Panama City, has faculties of agriculture, medicine, sciences, dentistry, nursing, and pharmacy. Santa María La Antigua University, founded in 1965 at El Doradom Panama, has a department of technology and natural science. The Technological University of Panama, founded in 1984 at El Dorado, has colleges of civil, mechanical, industrial, electrical, and computer-science engineering. The Nautical School of Panama, founded in 1959 at Patilla, offers courses in nautical engineering. In 1987–97, science and engineering students accounted for 29% of college and university enrollments. The Museum of Natural Sci-

ences, founded in Panama in 1975, is concerned with natural history and the fauna of Panama and other countries.

In 2001, spending by Panama on research and development (R&D) totaled \$68.432 million or 0.37% of GDP. Of that amount, foreign sources accounted for the largest portion (55.1%), followed by the government sector (32.8%). Business accounted for 10.2%, with higher education and nonprofit organizations at 0.6% and 1.2%, respectively. In that same year, Panama had 95 researchers and 213 technicians engaged in R&D per million people. In 2002, Panama's high technology exports totaled \$1 million, or 1% of its manufactured exports.

## 30 DOMESTIC TRADE

About 65% of the total national sales of consumer goods occurs in Panama City. The cities of David, Colón, Santiago, and Chitre sponsor nearly all of the rest. Marketing and distribution are generally on a small scale, with direct merchant-to-customer sales. Some wholesalers also act as retailers. Many shops in Panama City and Colón sell both native handicrafts and imported goods. Luxury items are generally untaxed in order to attract tourist sales. There are also US-style variety stores. In rural districts, agricultural products and meat are sold at markets. A 5% value-added tax (VAT) applies to most goods and services.

The usual business hours are 8 AM to 5 PM, Monday through Friday; and 8 AM to noon on Saturday. Government offices are open weekdays from 8:30 AM to 4:30 PM, Monday through Friday. Banking hours in Panamanian urban centers are generally from 8:00 AM to 3 PM, Monday through Friday, and most banks are open on Saturdays from 9 AM to 12 noon.

## 31 FOREIGN TRADE

The leading agricultural export—mainly controlled by foreigners—is bananas, followed by shrimp. The decline in exports of almost 11% from 1997 to 1998 can be explained by quotas imposed on banana exports by the EU (bananas represent nearly one-fifth of all exports). Light industry exports (clothing and manufacturing textiles) have been increasing due to the free trade zone; but competition from Mexico starting in 1996 and the reduction of protective tariffs in 1998 stunted growth. All of Panama's main ex-

port commodities are foods, including bananas (19%), fish (18%), shrimp (10%), sugar (2.6%), and coffee (2.1%).

In 2005, exports reached \$7.4 billion (FOB—free on board), while imports grew to \$8.7 billion (FOB). In 2004, the bulk of exports went to the United States (50.5%), Sweden (6.6%), Spain (5.1%), the Netherlands (4.4%), and Costa Rica (4.2%). Imports included capital, food products, and petroleum products, and mainly came from the United States (33.3%), Netherlands Antilles (8.1%), Japan (6%), Costa Rica (5.7%), Mexico (4.6%), and Colombia (4.2%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Panama's adverse balance of trade is largely made up by invisible foreign exchange earnings from sales of goods and services in the Colón Free Trade Zone and from the Panama Canal. Nonetheless, Panama has had one of the highest amounts of goods and services export earnings in the region, relative to GDP. A strong services sector and foreign direct and financial investments have usually offset large merchandise trade deficits. In addition, Panama's debt traditionally trades with less volatility and a lower risk premium than most other Latin American issues.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Panama's exports was \$5.9 billion while imports totaled \$6.7 billion resulting in a trade deficit of \$800 million.

The International Monetary Fund (IMF) reported that in 2001 Panama had exports of goods totaling \$5.88 billion and imports totaling \$6.71 billion. The services credit totaled \$1.82 billion and debit \$1.14 billion.

Exports of goods reached \$8.8 billion in 2004, up from \$7.6 in 2003. Imports increased from \$7.4 billion in 2003 to \$8.4 billion in 2004. The resource balance was consequently positive in both years, improving from \$171 million in 2003 to \$395 million in 2004. The current account balance was negative however, reach-

ing -\$408 million in 2003, and -\$274 million in 2004. Foreign exchange reserves (including gold) reached \$1.1 billion in 2004, covering more less than two months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

Panama was considered the most important international banking center in Latin America in the late 1980s. In 1970, 28 banks operated in Panama's international banking center; by 1987 there were 120, with assets of nearly \$39 billion. Liberalized banking regulations and use of the dollar made Panama one of Latin America's major offshore banking centers.

Since 1983, the year of the onset of Latin America's financial crisis, the Panamanian banking sector has contracted, both in number of banks and total assets. In 2001 there were about 85 banks in Panama, holding \$38 billion in total assets. Fifty of the banks in Panama have general licenses, 25 banks have offshore licenses, eight foreign banks have representative offices, and two banks are government owned. The National Bank of Panama (Banco Nacional de Panamá—BNP), founded in 1904, is the principal official (but not central) bank and also transacts general banking business. Banking activities are supervised by the National Banking Commission (Comisión Bancaria Nacional—CBN).

The balboa is fully convertible with the dollar at a fixed rate of 1:1. The government cannot, therefore, implement a monetary policy. Most monetary developments are exogenously determined by the balance of payments.

Panama's banking center has allegedly been the main money-laundering point for proceeds from international drug-trafficking. In March 1994, it was decreed that persons entering Panama had to declare money or financial instruments in excess of \$10,000. For deposits and withdrawals in excess of this amount from local banking institutions, a form had to be completed, providing details about the person carrying out the transaction. In 1998, a banking law was enacted in order to modernize the banking system and increase government supervision. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$9.4 billion.

Panama's international stock exchange, the Bolsa de Valores de Panama, began operations in June 1990. In 2003, there were a total of 94 listed companies. Companies rarely issue stock on the stock market and investment is small because of a 10% withholding tax. Panama's Central de Custodia de Valores (Panaclear) began operations in November 1996. A rating agency began operations in early 1997.

### 3<sup>4</sup> INSURANCE

There were about 41 national insurance companies in Panama in 1997. Domestic companies include the General Insurance Co., the International Insurance Co., and the International Life Insurance Co. For a firm to qualify as a national insurance company, 51% of the capital must be Panamanian. In Panama, third-party automobile liability and workers' compensation are compulsory insurance. Only the government provides workers' compensation, as it is a part of the social security scheme. All firms must be approved by the Superintendency of Insurance. In 2003, the value of all di-

rect insurance premiums written totaled \$388 million, of which nonlife premiums accounted for \$261 million. Panama's top non-life insurer in 2003 was ASSA, which had gross written nonlife premiums of \$44.8 million, while the nation's leading life insurer, Aseguradora Mundial had gross written life insurance premiums of \$48.1 million.

**35 PUBLIC FINANCE**

Panama does not issue its own currency; US dollar notes circulate as the paper currency. Panama's local currency, the balboa, established in 1904, is issued only in coins. One balboa equals one US dollar.

The US Central Intelligence Agency (CIA) estimated that in 2005 Panama's central government took in revenues of approximately \$3.4 billion and had expenditures of \$3.9 billion. Revenues minus expenditures totaled approximately -\$533 million. Public debt in 2005 amounted to 73.2% of GDP. Total external debt was \$9.859 billion.

The International Monetary Fund (IMF) reported that in 2001, the most recent year for which it had data, central government revenues in millions of US dollars were 3,041 and expenditures were 2,934.4. Government outlays by function were as follows: general public services, 27.5%; public order and safety, 6.7%; economic affairs, 6.0%; housing and community amenities, 3.7%; health, 18.0%; recreation, culture, and religion, 1.3%; education, 16.2%; and social protection, 20.6%.

**36 TAXATION**

As of 2005, Panama's corporate tax rate stood at a flat rate of 30%. However, companies not declaring any dividends during the tax year are subject to a minimum dividend tax of 4% of taxable income, minus the income tax. For companies registered in Panama's tax-free processing zones (TFPZs), which are modeled after the long-standing Colón Free Trade Zone (CFTZ), a much-vaunted 0% rate is applied on all profits arising outside of Panama. The

0% corporate tax rate goes with an exemption from all export and import duties on reexports. Companies in TFPZs have tax liability only for sales within Panama's fiscal jurisdiction which, by statute, can make up no more than 40% of their business. Capital gains are generally taxed as income and at the corporate rate. Interest income and royalties are subject to withholding taxes of 15% and 30%, respectively.

Personal income tax in Panama, as of 2005, was taxed according to a progressive schedule that has a top rate of 30%. Dividends received by individuals are subject to a 10% withholding tax on nominative shares, and 20% if issued to the bearer. There are targeted deductions for mortgage interest, loans to pay school fees, medical expenses, health insurance, and donations to charity among others that reduce taxable income for individuals. Gift taxes depend on the amount, unless the gift was between linear descendants, in which case, the gift is tax-exempt.

The main indirect tax is Panama's value-added tax (VAT) with a standard rate of 5%, and a reduced rate of 0% applied to basic foodstuffs, trade and medical services. Tobacco-related products are subject to a 15% excise tax, with alcohol subject to a 10% rate. Other levies include license fees, stamp and education taxes, and property taxes. Property improvements are tax-exempt for the first five years.

**37 CUSTOMS AND DUTIES**

Panama imposes tariffs ranging of 0–15% on most manufactured goods. A 3% rate is applied to industrial equipment, industrial production inputs and raw materials. Agricultural inputs, agricultural machinery and agricultural chemicals pay no import duties. However, automobiles are subject to a 15–20% duty, while dairy products and rice are subject to duties of 40% and 50%, respectively. There is also a 5% value-added tax (VAT) on imports.

Panama has a free port in the Colón Free Trade Zone, the world's second-largest free trade zone, where foreign goods enter without going through customs. Goods may be stored, assembled, processed, or repackaged for sale or shipment to another country free of duty. Panama is a part of the Caribbean Basin Initiative and has bilateral preferential trade agreements with Costa Rica, El Salvador, Honduras, Guatemala, Nicaragua, and the Dominican Republic. The country also has special arrangements with Mexico, Colombia, and Chile.

**38 FOREIGN INVESTMENT**

Increased private sector investment and inflows from lending agencies should offset lower public expenditure and help to stimulate economic growth. The government sold the electricity generation and distribution utilities in 1996. In addition, the government partially sold the telephone company. The United Kingdom's Cable and Wireless bought a 49% stake in INTEL, the national telecommunications monopoly. Privatization of the state water utility was put on hold in 1998 due to violent protests. Other parastatal sales included the transisthmian railroad, both canal ports, two sugar companies, a casino, a cement company, a fruit company, and a horse racetrack.

The government encourages industrialization by granting special tax concessions to new enterprises and imposing protective duties on competing foreign manufacturers. The Industrial Development Bank, equivalent to the US Small Business Adminis-

tration, promotes small industries and facilitates credit on a long-term basis. A 1986 law on industrial incentives grants industrial investors a wide range of benefits, the foremost of which is tax exceptions that vary according to whether all or part of the output is earmarked for the export or domestic market.

In 1997 and 1998, annual inflows of foreign direct investment (FDI) peaked at almost \$1.3 billion a year. Total FDI reached 40% of GDP in 1998. In 1999, as sovereignty over the canal was transferred from the United States to Panama, FDI flows declined by more than half, to \$652 million in 1999, \$603 million in 2000, and \$513 million in 2001. Major investors include the United States, the United Kingdom, Mexico, and Taiwan. The majority of foreign investments in Panama are in the transport, storage, services, and communication sectors.

In 2003, total capital inflows reached \$792 million (or 5.72% of the GDP), up from \$98.6 million in 2002. Most of the investments went to Colón Free Zone businesses and banks.

### 39 ECONOMIC DEVELOPMENT

The Panamanian economy is the most stable and among the most prosperous in the region. But the economy is highly segmented between its dynamic, internationally oriented service sector and the domestically oriented sector, which is beset with policy-induced rigidities and low productivity. About 14% of the labor force is unemployed despite the preponderance of services in the economy, low growth of the economically active population and relatively slow rural-urban migration. The protected poor performance of the economy has impeded job creation and contributed to high poverty levels and income inequality.

Despite Panama's relatively high per capita income, distribution of the wealth is highly skewed and had become progressively more evident in the 1990s. In 1979, the poorest 20% of the population received 4% of income; in the early 1990s that share had plunged to 2%, leaving Panama with one of the most unequal distributions in the hemisphere. The government's strategy for mitigating poverty and inequality rests primarily on reviving sustainable growth; its economic program emphasizes reforms that will mitigate the bias against employment creation (unemployment surpassed 14% in 2002), increase agricultural productivity, and reduce the high cost of the basic consumption basket.

In 2000, the International Monetary Fund (IMF) approved a 21-month, \$85.5-million Stand-By Arrangement with Panama, to support the government's economic reform program. Economic growth slowed in the early 2000s, due in part to the global economic downturn, and weak domestic demand that resulted from the completion of large investment projects and a decline in bank credit to the private sector. The government in 2002 invested in infrastructure projects and strengthened the banking system.

The economy expanded at healthy rates in 2005, due to strong world trade growth, and good performance in the primary sectors. By 2006 and 2007 this trend was expected to dampen following a slower world trade growth.

### 40 SOCIAL DEVELOPMENT

The Social Security Fund, established by the government in 1941, provides medical service and hospitalization, maternity care, pensions for disability or old age, and funeral benefits. Retirement is

set at age 62 for men and age 57 for women. This program is financed by an alcohol tax, in addition to employee and employer contributions. Employed women receive 14 weeks of maternity leave at 100% pay. Compulsory workers' compensation legislation covers employees in the public and private sectors. This program is funded entirely by employer contributions.

Despite constitutional equality, women generally do not enjoy the same opportunities as men. While Panama has a relatively high rate of female enrollment in higher education, many female graduates are still forced to take low-paying jobs. Women's wages are, on average, 30% lower than those of men. Women also face sexual harassment in the workplace, although it is prohibited by the Labor Code. Domestic violence remains a widespread problem. Convictions for domestic abuse are rare; victims generally choose counseling over prosecution. The Ministry of Women, Youth, Family, and Childhood was established to focus national attention on social issues affecting women and families. In 2004, child labor and trafficking in children continued.

Indigenous peoples in Panama are increasingly demanding more participation in decisions that affect their land. Semiautonomous status has been given to some tribal groups. Despite these provisions, many indigenous groups feel that existing reserves are too small. Human rights abuses include prolonged pretrial detention, poor prison conditions, and internal prison violence.

### 41 HEALTH

Public health services are directed by the Ministry of Health, whose programs include free health examinations and medical care for the needy, health education, sanitation inspection, hospital and clinic construction, and nutrition services. Health care expenditure was estimated at 7.3 % of GDP.

In 2004, Panama had 168 physicians, 48 dentists, and 152 nurses per 100,000 people. In 2000 there were close to 2,000 beds in public hospitals at the national, regional, and municipal levels.

Proceeds from a national lottery support state hospitals, asylums, and public welfare. Assistance has been received from such organizations as the World Health Organization, the US Institute of Inter-American Affairs, the Pan American Sanitary Bureau, the Institute of Nutrition of Central America and Panama, and UNICEF.

During the first two decades of the 20th century, when the Panama Canal was being built, the major health threats were yellow fever, malaria, smallpox, typhoid, dysentery, and intestinal parasites. Through the efforts of Col. William Crawford Gorgas, a US military surgeon and sanitary officer, malaria was controlled and the yellow fever mosquito was virtually eliminated. In the early 2000s, the principal causes of death were cancer, heart disease, cerebrovascular disease, pneumonia and bronchopneumonia, enteritis, and diarrhea.

Col. Gorgas pioneered in providing Panama City and Colón with water and sewer systems; in some areas of Panama, poor sanitation, inadequate housing, and malnutrition still constitute health hazards. In 2000, 87% of the population had access to safe drinking water and 94% had adequate sanitation. However, in the same year, 18% of children under five years old were considered malnourished. The government of Panama is currently increasing distribution of vitamin A capsules to populations with high risk of vitamin A deficiency, mostly the Indians in the western region

of Panama. Immunization rates for children up to one year old were: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 95%; polio, 99%; and measles, 92%. Polio, measles, and neonatal tetanus were at extremely low numbers during 1994. Goiter was present in 13.2% of school-age children.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 18.6 and 5 per 1,000 people. The infant mortality rate in 2005 was 16.73 per 1,000 live births. Maternal mortality was 70 per 1,000 live births in 1998. Average life expectancy in 2005 was 75 years.

The HIV/AIDS prevalence was 0.90 per 100 adults in 2003. As of 2003, there were approximately 16,000 people living with HIV/AIDS in the country. AIDS and pneumonia were the only communicable diseases among the ten leading causes of death in Panama.

## 42 HOUSING

Housing in urban areas has been a permanent problem since US construction in the Canal Zone brought a great influx of migrant laborers into Colón and Panama City. The government-established Bank of Urbanization and Rehabilitation began to build low-cost housing in 1944, and by 1950, it had built more than 1,500 units to house 8,000 people near Panama City. A 1973 housing law, designed to encourage low-income housing construction, banned evictions, froze all rents for three years, and required banks to commit half their domestic reserves to loans in support of housing construction projects. By the early 1980s, however, the shortage of low-income housing remained acute, particularly in Colón. A construction boom in the early 1980s was mainly confined to infrastructure projects and office space.

In 2000, there were 793,732 dwellings units nationwide with an average of 3.6 people per dwelling. Though most homes are made of brick, stone, or concrete blocks, about 4% of the total housing stock was made of straw and thatch.

## 43 EDUCATION

Education is free for children ages 6 through 15. Primary school covers the first six years of compulsory studies. Secondary education has two stages, each lasting three years. At secondary, vocational, and university levels, fees may be charged for the development of libraries and laboratories. The academic year runs from April to December.

In 2001, about 50% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 63% of age-eligible students. It is estimated that about 97.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 24:1 in 2003; the ratio for secondary school was about 16:1. In 2003, private schools accounted for about 10% of primary school enrollment and 14.5% of secondary enrollment.

The leading institution of higher education, the state-run University of Panama, was founded in Panama City in 1935. A Catholic university, Santa María la Antigua, was inaugurated in May 1965, with an initial enrollment of 233. In 2003, about 43% of the tertiary age population were enrolled in some type of higher edu-

cation program; (32% for men and 55% for women). The adult literacy rate for 2004 was estimated at about 91%.

As of 2003, public expenditure on education was estimated at 4.5% of GDP, or 7.7% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

The National Library of Panama, located in Panama City, was founded in 1892 as Biblioteca Colón and reorganized as the National Library in 1942. It is a branch of the Ministry of Education's public library system and has over 200,000 volumes. There are more than 40 other public libraries and branches. The National Archives, established in 1924, contain historical documents, books, and maps, as well as administrative papers of government agencies and a judicial section with court records. The Biblioteca Pública Morales has 280,000 volumes, while the Simón Bolívar Library at the University of Panama has holdings of over 267,000 volumes. The Smithsonian Tropical Research Institute in Balboa has 44,000 volumes.

The Instituto Panameño de Arte, founded in 1964, displays excellent collections of pre-Columbian art. Newer museums in Panama City include the Museum of Nationhood (dedicated in 1974); the Museum of Colonial Religious Art (1974); the Museum of the History of Panama (1977), which exhibits documents and objects of historical value; and the Museum of Panamanian Man (1976), with archaeological, ethnographic, and folkloric displays. Panama City also hosts the Museum of Contemporary Art, the Afro-Antillean Museum, the Museum of Natural Sciences, the Postal Museum, and the Anthropological Museum Reina Torres de Arauz. The Museum of History and Tradition of Penonome is in Cocle.

## 45 MEDIA

The Instituto Nacional de Telecomunicaciones (INTEL) operates Panama's telephone and telegraph systems. In 2003, there were an estimated 122 mainline telephones for every 1,000 people. The same year, there were approximately 268 mobile phones in use for every 1,000 people. Telegraph cables link Panama to the United States, to Central and South America, and to Europe.

In 2004, there was one government-owned educational television station. The same year, there were 8 television stations and 120 radio stations that were privately or institutionally owned. In 2003, there were an estimated 300 radios and 191 television sets for every 1,000 people. The same year, there were 38.3 personal computers for every 1,000 people and 62 of every 1,000 people had access to the Internet. There were 149 secure Internet servers in the country in 2004.

There were five major daily newspapers in 2004. With their estimated circulations, they were: *El Siglo*, 42,000; *Crítica Libre*, 40,000; *La Prensa*, 40,000; *La Estrella de Panama*, NA; and *El Panama America*, 40,000. The constitution provides for freedom of speech and the press, and the government is said to respect these rights in practice.

## 46 ORGANIZATIONS

The cooperative movement in Panama is limited. Producers' organizations are small, local, uncoordinated groups concerned mainly with practical education in techniques to improve production. The Chamber of Commerce, Industry, and Agriculture is in Pan-

ama City. There are some professional associations, including the National Medical Association.

National youth organizations include the Student Federation of Panama, the National Scout Association of Panama, and the YMCA. There are several sports associations organizing amateur competitions for such pastimes as baseball, tennis, squash, and track and field.

There are several associations dedicated to research and education in health and medicine, including the National Cancer Association and branches of Planned Parenthood. The Panama Association of University Women promotes career and education opportunities for women. Kiwanis and Lion's Clubs have programs in the country. There are national chapters of the Red Cross, UNICEF, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Travel facilities within Panama are good; Panama City and Colón are only one hour apart by road or rail. In addition to the Panama Canal itself, tourist attractions include Panama City, beach resorts in the Pearls Archipelago and San Blas Islands, the ruins of Portobelo, and the resort of El Valle in the mountains. Water sports, tennis, golf, and horse racing are popular. Nature treks and historic tours also attract visitors to Panama. Citizens of the United States and Canada need only a valid passport and tourist card to enter Panama. Other foreign nationals are required to have a valid passport, and either a visa or tourist card; both card and visa are valid for up to 90 days.

The government encourages tourism through the Panamanian Tourist Bureau. In 2003, about 534,000 tourists arrived in Panama, with about 88% of travelers from the Americas. That year there were 16,766 hotel rooms with 33,532 beds and an occupancy rate of 44%. The average length of stay per visit was two nights.

In 2005, the US Department of State estimated the daily cost of staying in Panama City and Colón at \$186.

#### 48 FAMOUS PANAMANIAN

Outstanding political figures of the 19th century include Tomás Herrera (1804–54), the national hero who led the first republican movement, and Justo Arosemena (1817–96), a writer and nationalist. The international lawyer Ricardo J. Alfaro (1882–1971) and the rector of the University of Panama, Octavio Méndez Pereira (1887–1954), were well-known Panamanian nationalists. The

most important political leader of the 20th century was Omar Torrijos Herrera (1929–81), who ruled Panama from 1969 until his death and successfully negotiated the Panama Canal treaties of 1979 with the United States.

Important poets were Tomás del Espíritu Santo (1834–62), nationalist Amelia Denis de Icaza (1836–1910), Federico Escobar (1861–1912), Darío Herrera (1870–1914), and Ricardo Miró (1888–1940). Panamanian-born José Benjamin Quintero (1924–1999) was a noted stage director in the United States. Narciso Garay (1876–1953) founded the National Conservatory of Music and served as a foreign minister. Harmodio Arias (1886–1962) was the prominent owner of the newspaper *El Panamá-América*. Leading Panamanian painters include Epifanio Garay (1849–1903), Roberto Lewis (1874–1949), Sebastián Villalaz (1879–1919), and Humberto Ivaldi (1909–47). Noteworthy among Panamanian athletes is the former world light- and welter-weight boxing champion Roberto Durán (b.1951); the former baseball star Rod (Rodney) Carew (b.1945) is also of Panamanian birth.

#### 49 DEPENDENCIES

Panama has no territories or colonies.

# PARAGUAY

Republic of Paraguay  
*República del Paraguay*

**CAPITAL:** Asunción

**FLAG:** The national flag, officially adopted in 1842, is a tricolor of red, white, and blue horizontal stripes. The national coat of arms appears in the center of the white stripe on the obverse, and the Treasury seal in the same position on the reverse.

**ANTHEM:** *Himno Nacional*, beginning “Paraguayos, república o muerte” (“Paraguayans, republic or death”).

**MONETARY UNIT:** The guaraní (G) is a paper currency of 100 céntimos. There are notes of 1, 5, 10, 50, 100, 500, 1,000, 5,000, and 10,000 guaraníes. G1 = \$0.00016 (or \$1 = G6,158.47) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; San Blas Day, 3 February; National Defense Day, 1 March; Labor Day, 1 May; Independence Days, 14–15 May; Peace Day, 12 June; Founding of Asunción, 15 August; Constitution Day, 25 August; Victory Day (Battle of Boquerón), 29 September; Columbus Day, 12 October; All Saints’ Day, 1 November; Our Lady of Caacupé, 8 December; Christmas, 25 December. Movable religious holidays are Holy Thursday, Good Friday, and Corpus Christi.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

One of South America’s two landlocked countries, Paraguay has a total area of 406,750 sq km (157,047 sq mi). Comparatively, the area occupied by Paraguay is slightly smaller than the state of California. The western 246,925 sq km (95,338 sq mi) of the country constitute a dry, sparsely populated region known as the Chaco, while the remaining 159,827 sq km (61,709 sq mi) lie in the more verdant east. Paraguay extends 992 km (616 mi) SSE–NNW and 491 km (305 mi) ENE–WSW. Bounded on the NE and E by Brazil, on the SE, S, and W by Argentina, and on the NW and N by Bolivia, Paraguay has a total boundary length of 3,920 km (2,436 mi).

Paraguay’s capital city, Asunción, is located in the southwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

The eastern part of Paraguay contains luxuriant hills, meadows, and forests. The western three-fifths is a waterless prairie covered with dry grass and sparsely dotted with shadeless trees. The southward-flowing Paraguay River, the nation’s most important waterway, divides the two sections; this river, which for a long time was Paraguay’s principal contact with the outside world, rises in southwestern Brazil and extends for a total length of 2,549 km (1,584 mi). The Pilcomayo River, which rises in the mountains of southern Bolivia and extends about 1,600 km (1,000 mi), flows south-east, forming the southwestern border between Argentina and Paraguay, and joins the Paraguay near Asunción.

The eastern sector of Paraguay comprises the western part of the great Paraná Plateau, varying from 300 to 610 m (1,000 to 2,000 ft) in altitude. The Paraná River—called Upper (Alto) Paraná in Paraguay—flows southward from south-central Brazil through the center of the plateau, dropping in the Guairá Falls at the easternmost point in the Paraguay-Brazil frontier. Between the Guairá

Falls and the confluence with the Paraguay River at the southwestern tip of the country, the Paraná passes through a deep canyon that forms the eastern and southern frontier with Argentina.

Just west of the plateau is an area of gently rounded hills descending to the low plains that stretch westward to the Paraguay River. These hills occur in two series, one extending northward to the Paraguay River just north of Concepción, and the other meeting the river at Asunción. The remaining territory east of the Paraguay River is composed of lowland plain, much of it subject to annual floods.

West of the Paraguay River is the Chaco, part of the larger Gran Chaco, which includes portions of Argentina, Bolivia, and Brazil. The Gran Chaco, a vast alluvial plain composed of unconsolidated sands and clays, is crossed by the Pilcomayo and Bermejo rivers, but over much of the area there are no surface streams. The water table, however, is only a few feet below the surface, and patches of alkali frequently appear during the long dry season. In many places the groundwater is salty.

## <sup>3</sup>CLIMATE

Two-thirds of Paraguay is within the temperate zone, one-third in the tropical zone. The climate varies from mild to subtropical. During the winter months (roughly May through August), the temperature range is 16–21°C (60–70°F); nights are occasionally colder. During the summer (October through March), the temperature range is 25–38°C (77–100°F), with extremes of 43°C (109°F) and above in the west. Paraguay is open to dry, cold polar winds from the south and to hot, humid north winds from southwestern Brazil; sudden sharp drops in temperatures are not uncommon. Rainfall averages about 152 cm (60 in) a year along the eastern frontier with Brazil, gradually diminishing toward the west to an average of 127 cm (50 in) along the Paraguay River and

76 cm (30 in) in the Chaco. Asunción has an annual average of about 130 cm (50 in), which is moderate for its latitude. There is no definite rainy season, although violent thunderstorms sometimes occur in the summer.

#### 4 FLORA AND FAUNA

The vegetation, like the rainfall, is concentrated in the Paraná Plateau and diminishes toward the west. Tall broadleaf trees, some evergreen and some deciduous, cover eastern Paraguay, thinning out on the red sandy soils of the hilly perimeter. Scrub woodland and palm also dot the sandy plateau areas. Between the semideciduous forest and the Paraguay River, the vegetation is mostly the savanna type mixed with scattered palms. In contrast, the Chaco supports primarily deciduous scrub woodlands, luxuriant along the Paraguay River but becoming more and more xerophytic as the rainfall decreases toward the west.

The eastern forests abound in hardwoods, including indigenous varieties such as urunday, cedron, curupay, and lapacho. Softwoods are scarce. In the northern Chaco, along the Paraguay River, there are scattered stands of quebracho and many large, spreading trees, such as the ceiba. Medicinal herbs, shrubs, and trees abound, as well as some dyewoods. Yerba maté, a holly popularly used in tea, grows wild in the northeast.

Animals found in Paraguay include the jaguar (especially numerous in the Chaco), wild boar, capybara, deer, armadillo, ant-eater, fox, brown wolf, carpincho, and tapir. Paraguay abounds with crocodiles along its watercourses, and the boa constrictor thrives in the west. The carnivorous piranha is common.

As of 2002, there were at least 305 species of mammals, 233 species of birds, and over 7,800 species of plants throughout the country.

#### 5 ENVIRONMENT

Agencies responsible for environmental protection include the National Environmental Health Service, the Ministry of Public Health, and the Ministry of Public Works and Communications.

Nearly all forests are privately owned and little was done to develop a national forest policy until the establishment in 1973 of the National Forest Service. Paraguay's forests are currently threatened by the expansion of agriculture. At most recent estimate, about a third of the nation's forest and woodland area has been lost. The absence of trees contributes to the loss of soil through erosion.

Water pollution is also a problem. Its sources include industrial pollutants and sewage. The nation has 94 cu km of renewable water resources with 78% of the annual withdrawal used to support farming and 7% used for industrial purposes. Only about 62% of the rural people have access to improved water sources. Some of Paraguay's cities have no facilities for waste collection.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 11 types of mammals, 27 species of birds, 2 types of reptiles, and 10 species of plants. Threatened species include the black-fronted piping guan, black caiman, spectacled caiman, and broad-nosed caiman. The glaucous macaw has become extinct.

#### 6 POPULATION

The population of Paraguay in 2005 was estimated by the United Nations (UN) at 6,158,000, which placed it at number 100 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 32% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.7%, a rate the government viewed as too high. The projected population for the year 2025 was 8,565,000. The overall population density was 15 per sq km (39 per sq mi), but over 98% of the population is located in the eastern two-fifths of the country; the vast western Chaco region is virtually uninhabited.

The UN estimated that 54% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.25%. The capital city, Asunción, had a population of 1,639,000 in that year. Other leading cities and their estimated populations include Ciudad del Este, 239,000; Pedro Juan Encarnación, 72,300; Caballero, 66,400; Concepción, 62,000; and Pilar, 26,352.

#### 7 MIGRATION

Emigration was a problem historically for Paraguay. During 1955–70, some 650,000 Paraguayans emigrated, mainly to Argentina, Uruguay, or Brazil. Much of the labor force of agricultural regions in Argentine border provinces is made up of Paraguayan nationals. The greatest exodus occurred after the 1947 civil war, but in the 1960s there were new waves of political emigration.

Immigration to Paraguay was limited to a few thousand Europeans during the 19th century. A major attempt by the Paraguayan government to encourage new settlers led to negotiations with Japan in 1959 for the immigration of 85,000 Japanese by 1990, but only about 8,000 arrived. An immigration agreement was signed with the Republic of Korea (ROK) in 1966. In 1985, the immigrant population totaled 199,500; the leading immigrant groups were Germans, Japanese, Koreans, Chinese, Brazilians, and Argentines. It was believed, however, that the actual number of Brazilians was 300,000–350,000. The number of migrants residing in Paraguay in 2000 was 203,000. The net migration rate in 2005 was an estimated -0.08 migrants per 1,000 population. Worker remittances in 2004 amounted to \$506 million. The government views the migration levels as satisfactory.

#### 8 ETHNIC GROUPS

About 95% of the population is mestizo, principally a mixture of Spanish and Guaraní Amerindian. The others are pure Amerindian (1–3%), black, or of European or Asian immigrant stock. The Guaraní Amerindians, belonging to the Tupi-Guaraní linguistic group, had spread throughout a large area of South America east of the Andes before the Spaniards arrived. Within Paraguay, extensive intermarriage between the races resulted in almost complete assimilation.

#### 9 LANGUAGES

Paraguay is a bilingual nation. Spanish, the dominant language, is taught in the schools and is spoken by slightly more than half of the people. However, the great majority of Paraguayans speak Guaraní, an Amerindian language that evolved from the southern

LOCATION: 19°17' to 27°30' s; 54°30' to 62°28' w. BOUNDARY LENGTHS: Brazil, 1,290 kilometers (806 miles); Argentina, 1,880 kilometers (1,170 miles); Bolivia, 750 kilometers (460 miles).

dialect of the Tupi-Guaraní group. It is also the language of widely esteemed literature, drama, and popular music. Both Spanish and Guaraní are official languages.

## 10 RELIGIONS

Roman Catholicism is the dominant religion, accounting for about 90% of the total population. The remaining 10% consisted of mainline Protestant, evangelical Christian, Jewish, Mormon,

Muslim, and Baha'i groups. There are also substantial Mennonite communities, whose practitioners originally came to the country in several waves between 1880 and 1950 in order to avoid religious persecution.

The constitution provides for freedom of conscience and recognizes no official religion. Religious groups must register through the Ministry of Education and Culture. Certain Catholic holidays are recognized as national holidays.

## 1<sup>1</sup> TRANSPORTATION

Inadequate transportation facilities have been a major impediment to Paraguay's development. For a long time, some 3,100 km (1,925 mi) of domestic waterways provided the chief means of transportation, with most vessels owned by Argentine interests. Hampered by the high costs and slow service of Argentine riverboats transporting cargo to and from Buenos Aires, the Paraguayan government put its own fleet of riverboats in operation. This remedy, however, did not solve the underlying problems of Paraguayan transport. Drought conditions frequently affect navigation, and while the Paraguay is open to river traffic as far as Concepción (about 290 km/180 mi north of Asunción), passage is sometimes hazardous to vessels of even medium draft. The inland waterways and the Río de la Plata handle more than half of Paraguay's foreign trade with Argentina, Brazil, Chile, Europe, Japan, and the United States.

Asunción, the chief port, and Concepción can accommodate oceangoing vessels. In 2005, Paraguay had 21 merchant vessels of 1,000 GRT or more, totaling 31,667 GRT. In addition, Paraguay has been given free port privileges at Santos and Paranaguá, Brazil. More than 90% of Paraguay's foreign trade passes to Asunción through ports in Argentina and Uruguay.

Road construction is another critical focus of development. In 2001, highways totaled an estimated 29,901 km (18,580 mi). Of these roads, however, only 3,067 km (1,906 mi) were paved. Two major road projects of the 1960s were the Friendship Bridge on the Brazilian border in the Iguazu Falls area, inaugurated in 1961, and the 770-km (480-mi) all-weather Trans-Chaco Road, which extends from Asunción to Bolivia. The Friendship Bridge permits highway travel from Asunción to the Brazilian Atlantic port of Paranaguá. A bridge over the Paraguay River, linking the western and eastern parts of the country, was inaugurated in 1978. All-weather roads connecting Asunción with Buenos Aires and Puerto Presidente Stroessner with Paranaguá have also been completed. In 2003, there were 81,837 passenger cars and 80,400 commercial vehicles in use.

In 1961, the 441-km (274-mi) British-owned Paraguayan Central Railroad was sold to Paraguay for \$560,000. It was subsequently renamed Ferrocarril Presidente Carlos Antonio López Railroad. There is a direct line between Asunción and Buenos Aires. Altogether as of 2004 there were some 441 km (274 mi) of standard gauge trackage, excluding narrow gauge industrial lines in the Chaco.

In 2004, there were an estimated 878 airports and airfields, only 12 of which had paved runways as of 2005. S. Pettrossi is the principal airport at Asunción. Paraguayan Air Lines (Líneas Aéreas Paraguayas—LAP) provides both domestic and international service. Three carriers provide domestic service. In 2003, about 313,000 passengers were carried on scheduled domestic and international airline flights.

## 1<sup>2</sup> HISTORY

The original inhabitants of present-day Paraguay were Guaraní Amerindians of the Tupi-Guaraní language family. As many as 150,000 Amerindians may have been living in Paraguay at the time of the earliest European contacts. The first European known to have explored Paraguay was the Italian Sebastian Cabot, sail-

ing from 1526 to 1530 in the service of Spain. The first permanent Spanish settlement, Nuestra Señora de la Asunción (Our Lady of the Assumption, present-day Asunción), was founded at the confluence of the Paraguay and Pilcomayo rivers on Assumption Day, 15 August 1537.

Paraguay's next two centuries were dominated by Jesuit missionaries, whose efforts to protect the Amerindians from Portuguese slave traders and Spanish colonists resulted in one of the most remarkable social experiments in the New World. Shortly after the founding of Asunción, missionary efforts began. The priests organized Guaraní families in mission villages (*reducciones*) designed as self-sufficient communes. Amerindians were taught trades, improved methods of cultivation, and the fine arts, as well as religion. Above all, they were protected from exploitation by the Spanish colonists. As the settlements prospered and grew in number to around 30 (with over 100,000 Amerindians), the jealousy of the colonists sparked a campaign to discredit the Jesuits. Eventually, the king of Spain became convinced that the order was trying to set up a private kingdom in the New World, and in 1767, he expelled the Jesuits from the New World. Once they had left, the *reducciones* disappeared. As for the Spanish colony at Asunción, it dominated the area of the Río de la Plata throughout this period. However, in 1776, when Buenos Aires became the capital of the new viceroyalty of La Plata, Asunción was reduced to an outpost.

In achieving independence, Paraguay first had to fight the forces of Argentina. Buenos Aires called on Paraguay in 1810 to follow its lead in a virtual declaration of independence. Paraguay declared independence from Spain but rejected the leadership of Buenos Aires. An Argentine expedition was decisively defeated, and Paraguay completed its move toward independence by deposing the last of its royal governors in 1811.

Since then, Paraguay has been dominated by dictatorships or near-dictatorships. The first and most famous of the dictators was José Gaspar Rodríguez de Francia (known as "El Supremo"), originally a member of the five-man junta elected in 1811 to govern the newly independent nation. He was granted full dictatorial powers for three years in 1814 and thereafter had the term extended for life. Francia attempted to cut Paraguay off from all contact with the outside world. Commerce was suspended, foreigners were expelled, relations with the papacy were broken off, and an anticlerical campaign was begun. All criticism was stifled, and a widespread spy network was developed. However, at the same time, Francia was honest and tireless in his devotion to his personal concept of the country's welfare. Francia governed until his death in 1840. Today, he is regarded as Paraguay's "founding father."

The next dictator was Carlos Antonio López. López loosened the ties of dictatorship only slightly, but reversed Francia's paranoid isolationism. He reestablished communications with the outside world and normalized relations with the papacy. López encouraged road and railway building, improved education somewhat, and became the largest landowner and the richest man in Paraguay. He made his son Francisco Solano López commander-in-chief of the army, thereby ensuring the younger López's succession to power in 1862, when the elder López died.

During his dictatorship, Francisco Solano López provoked quarrels with Argentina, Brazil, and Uruguay, who allied and attacked Paraguay. The War of the Triple Alliance (1865–70), sometimes

called the Paraguayan War, was the bloodiest in Latin American history. López, who fancied himself a Latin Napoleon, drafted virtually every male in Paraguay over the age of 12, with no upper age limit, and insisted that his troops never surrender. The war was a disaster for Paraguay, which lost two-thirds of all its adult males, including López himself. Paraguay's population fell from about 600,000 to about 250,000. The war also cost Paraguay 142,000 sq km (55,000 sq mi) of territory, its economic well-being, and its pride.

For the next 50 years, Paraguay stagnated economically. The male population was replaced by an influx of immigrants from Italy, Spain, Germany, and Argentina. Politically, there was a succession of leaders, alternating between the Colorado and Liberal parties. Then, a long-smoldering feud with Bolivia broke into open warfare (1932–35) after oil was discovered in the Chaco, a desolate area known as the “green hell.” Although outnumbered three-to-one, the Paraguayans had higher morale, were brilliantly led, and were better adapted to the climate of the region. Moreover, they regarded the conflict as a national undertaking to avenge the defeat of 1870. Paraguayans conquered three-fourths of the disputed territory, most of which they retained following the peace settlement of 1938.

Although President Eusebio Ayala emerged victorious from the Chaco War, he did not last long. The war produced a set of heroes, all of whom had great ambitions. One such man, Col. Rafael Franco, took power in February 1936. In 1939, after two more coups, Gen. José Felix Estigarribia, commander-in-chief during the Chaco War, was elected president. Estigarribia was killed in an airplane crash only a year later, and Gen. Higinio Morínigo, the minister of war, was appointed president by the cabinet. Through World War II, Morínigo received large amounts of aid from the United States, even though he allowed widespread Axis activity in the country. Meanwhile, he dealt harshly with domestic critics.

Morínigo retired in 1948, but was unable to find a successor. After a one-year period of instability, Federico Chávez seized control, and ruled from 1949 until 1954. In May 1954, Gen. Alfredo Stroessner, commander-in-chief of the armed forces, used his cavalry to seize power. He had himself elected president as the candidate of the Colorado Party, and then was reelected in another single-slate election in 1958, although he did permit the Liberal Party to hold its first convention in many years. With help from the United States, he brought financial stability to an economy racked by runaway inflation, but he used terrorist methods in silencing all opposition. Exiles who invaded Paraguay simultaneously from Argentina and Brazil in December 1959 were easily routed. Six other small invasions during 1960 were also repulsed. Stroessner won a third presidential term in February 1963, despite the constitutional stipulation that a president could be reelected only once. In August 1967, a constitutional convention approved a new governing document that not only provided for a bicameral legislature but also established the legal means for Stroessner to run for reelection. Stroessner did so in 1968, 1973, 1978, 1983, and 1988, all with only token opposition permitted. On 17 September 1980, the exiled former dictator of Nicaragua, Anastasio Somoza Debayle, who had been granted asylum by the Stroessner government, was assassinated in Asunción, and Paraguay broke off relations with Nicaragua.

During the 1980s, Stroessner relaxed his hold on Paraguay. The state of siege, which had been renewed every three months since 1959 (with a partial suspension from February 1978 to September 1980), was allowed to lapse in April 1987. Opponents of the regime gave credit for the ending of the state of siege to the United States, which had kept pressure on the Stroessner administration. However, allegations of widespread human rights abuses continued to be made. In April 1987, Domingo Laíno, an opposition leader exiled in December 1982 who had tried unsuccessfully to enter the country on five earlier occasions, was allowed to return to Paraguay. Part of this liberalization may have been in response to mounting criticism from the Roman Catholic Church, whose position moved closer to that of the various dissident groups.

On 3 February 1989 Stroessner's 35-year dictatorship came to an end at the hand of Gen. Andrés Rodríguez, second in command of the Paraguayan military. Immediately after the coup, Rodríguez announced that elections would be held in May. With only three months to prepare, little opposition beyond Domingo Laíno was mounted, and Rodríguez won easily with 75.8% of the vote. There followed an immediate easing of restrictions on free speech and organization. Labor unions were recognized and opposition parties allowed to operate freely. Rodríguez promised and delivered elections in 1993. In those elections, Colorado candidate Juan Carlos Wasmosy was elected to the presidency, the first time a civilian had become president through popular election since 1954. Paraguay had experienced an unprecedented transfer of political power through a constitution from one elected government to another. Wasmosy began to push for economic liberalization, including the sale of state-owned enterprises, but it was unclear whether the military was willing to support such measures.

In April 1996, General Lino Cesar Oviedo staged a brief rebellion when asked by Wasmosy to resign his post as army commander, but a coup was averted and Oviedo was eventually acquitted of charges of armed insurrection. Oviedo, now a civilian, has become the leader of an opposing faction of Wasmosy's Colorado Party. Other than Oviedo's short-lived rebellion, however, no serious threats to Wasmosy's economic and political reforms have been offered. In fact, the more democratic environment was tested and proven in 1993 by the first general labor strike in 35 years. Although the government responded with some force to this first strike, subsequent strikes have been met with a much gentler governmental hand. Unfortunately, the economy itself has been slow to respond to the new reforms. In the 1990s, Paraguay experienced 0% economic growth.

In the 1998 presidential elections, Raúl Cubas of the Colorado Party became president with 55.3% of the vote, but a year later he had to resign after the assassination of Vice President Luis Argaña. Cubas was closely associated with General Oviedo and the latter was linked to the political assassination. Upon Cubas' resignation, the president of the Senate, Luis González Macchi, was sworn in as president. Cubas sought exile in Brazil and Oviedo sought refuge in Argentina. González was correctly considered as a caretaker until new elections were held in 2003.

On 27 April 2003, Colorado Party candidate Oscar Duarte won the presidential election with 37.1% of the vote. Duarte promised to fight corruption in his party and the country. He sought to distance himself from former Colorado Party leaders and sought to portray himself as a modernizer and democratizing leader that

would open Paraguay to the world economy. Yet, his tenure had been rather modest in accomplishments. Duarte's party commanded support from 37 of the 80 members of the Chamber of Deputies and from 16 of the 45 members of the Senate. Thus, in order to advance his legislative initiative, he had to seek support from minority parties. Because he promised to fight corruption and promote transparency, it was difficult to bargain with corruption-prone parties. Moreover, because he failed to command majority control of congress, many of his anticorruption initiatives failed to materialize. The economy grew due primarily to a strong growth in Brazil, Paraguay's most important trade partner. Yet, government reform did not follow suit. The country remained somewhat isolated from the world and failed to seize trade opportunities. Poverty remained high and despite the good intentions, Duarte's tenure did not deliver on many of the promises made during the campaign. Yet Duarte helped consolidate democratic order and brought about stability which was threatened under the Cubas government.

### 13 GOVERNMENT

Under the constitution of 25 August 1967, Paraguay was a republic, with substantial powers conferred on the executive. The Constituent Assembly revised the constitution on 20 June 1992, but kept most of the structure from the previous document, while limiting many of the powers Stroessner used during his administration. The judicial system was also slated for overhaul.

The president is directly elected for a five-year term. The president is commander-in-chief of the military forces and conducts foreign relations. He appoints the 11-member cabinet, most administrators, and justices of the Supreme Court. He is advised by the Council of State, consisting of the cabinet ministers, the president of the National University, the archbishop of Asunción, the president of the Central Bank, and representatives of other sectors and the military.

The 1967 constitution provided for a bicameral legislature, consisting of the 45-member Senate and the 80-member Chamber of Deputies. Representatives must be at least 25 years of age and are elected for five-year terms. Voting is by secret ballot and is compulsory for all citizens ages 18–60. Women were first allowed to vote in 1963.

### 14 POLITICAL PARTIES

Since the end of the War of the Triple Alliance, two parties have dominated politics—the National Republican Association (Asociación Nacional Republicana), generally known as the Colorado Party, and the Liberal Party. Both parties have exemplified the uncompromising nature of Paraguayan politics and used their position to stifle the opposition. Consequently, changes of administration have been effected principally by armed revolt.

The Colorado Party governed from its founding in 1887 until 1904, and again after 1947. Conservative and nationalistic, the Colorados split during the 1950s into two factions: the “officialist” Colorados supported the Stroessner dictatorship, while the People's Colorado Movement (Movimiento Popular Colorado—MOPOCO) styled itself a supporter of “representative democracy.” Most of the MOPOCO leadership chose exile in 1959. In the 1980s the Colorados became even more divided. Three groups emerged: a “militant” pro-Stroessner faction; “traditionalists,” pushing for

Stroessner to step down; and a reformist “ethical” faction, which is interested in cleaning up government corruption.

The 1989 coup was engineered by a leader of the “traditionalist” faction. Wasmosy, the first freely elected civilian president who took office in 1993, was more reformist in his approach. Raúl Cubas was elected party president in 1998. He ran against his fellow party member Wasmosy and was supported by Gen. Lino Oviedo, who had attempted a military coup against Wasmosy in 1995. After the assassination of Colorado Party vice president Luis Argaña in 1999, Cubas had to resign. Senate president Luis González, also from the Colorado Party, became president. González faced accusations of corruption but an effort to impeach him failed in 2002. Even with the hefty parliamentary majority—45 out of 80 seats in the Chamber and 24 out of 45 seats in the Senate—the Colorados remained badly split and in disrepair until 2003. That year, the Colorado Party only won 37 seats in the Chamber and 16 seats in the Senate, falling short of a majority control in either chamber.

The Liberal Party, like the Colorados, appeared in 1887. They seized power in 1904 and governed until 1936. Banned in 1942, the Liberals were reconstituted during the 1960s. There has never been a recognizable ideological distinction between the Liberals and Colorados, but the two parties are similar in their disunity. Liberals had, by 1982, split into three factions: the Authentic Radical Liberal Party (Partido Liberal Radical Auténtico—PLRA), the Liberal Teeté Party (Partido Liberal Teeté—PLT), and the Radical Liberal Party (Partido Liberal Radical—PLR). After 1989, the PLRA and the PLR reemerged to compete for votes, with the PLRA considerably stronger. The PLRA, led by Domingo Laíno, was the largest opposition party in 1996. In the 1998 presidential and parliamentary elections Laíno obtained 43.9% of the vote and his party secured 27 out of 80 seats in the Chamber of Deputies and 13 out of 45 seats in the Senate. The 2003 presidential candidate, Julio César Franco, obtained a disappointing 24% of the vote, and the Liberal Party secured 21 seats in the Chamber and 12 seats in the Senate.

A number of short-lived parties have formed. The National Encounter Party (PEN), which appealed to the urban middle class, consisted of an alliance of several smaller parties and civic organizations. The PEN won eight seats in the Senate and nine seats in the Chamber of Deputies in the 1993 elections. But in 2003, it failed to win seats in either chamber. In 2003, three smaller parties—the populist Movement Fatherland of the Best, the conservative National Union of Ethical Citizens, and the left-wing Party for a Country of Solidarity—also won 10, 10, and 2 seats respectively in the Chamber and 8, 7, and 2 seats respectively in the Senate.

Electoral reform has purged the voter rolls of the deceased (who usually “voted” for Colorado Party members), made voting more than once in an election a punishable crime, and established a tribunal to oversee the electoral process. These reforms appear to be working, as evidenced by fair municipal elections in 1996 and presidential and parliamentary elections in 1998 and 2003.

### 15 LOCAL GOVERNMENT

Paraguay is divided into 17 departments, which are subdivided into districts, which, in turn, comprise municipalities (the minimum requirement for a municipality is 3,000 persons) and rural districts (*partidos*). A governor, elected by popular vote, runs each department. Municipal government is exercised through a

municipal board, chosen by direct election, and an executive department. In the principal cities and capitals, the executive department is headed by a mayor appointed by the minister of the interior; in other localities, the mayor is appointed by the presidents of the municipal boards. Police chiefs are appointed by the central government.

## 16 JUDICIAL SYSTEM

The five-judge Supreme Court exercises both original and appellate jurisdiction. There are four appellate tribunals: civil/commercial, criminal, labor, and juvenile. There are special appellate chambers for civil and commercial cases and criminal cases. Each rural district (*partido*) has a judge appointed by the central government to settle local disputes and to try accused persons and sentence those found guilty. Federal judges and magistrates are appointed by the executive for a term of five years coinciding with the presidential term, so that the judges of the Supreme Court and lesser tribunals are always named by the president in power. The Council of State must approve the appointment of members of the Supreme Court and may remove them by impeachment. Justices of the peace deal with minor cases. The judicial system has been modernized and has been identified as the main tool to end widespread corruption historically associated with the government bureaucracy. Because Paraguay has been historically considered a safe haven for smuggling of goods (with Argentina and Brazil being the final destinations), an independent and powerful judiciary is deemed essential to instill the rule of law in trade and commerce in Paraguay.

The 1992 constitution provides for selection of judges by an independent body working with the congress and the executive. As of 1997 based on recommendations from the Magistrates Council, the Supreme Court nominated 215 lower court judges and magistrates. There is also a military court system for the armed forces. The judicial system is based on civil law, mainly influenced by French and Argentine codes.

## 17 ARMED FORCES

Paraguay's armed forces in 2005 amounted to 10,300 active personnel, and was supported by some 164,500 reservists. The Army numbered 7,600, and whose equipment included 12 main battle tanks and 5 light tanks, all of World War Two vintage. The Navy of 1,400 included 900 Marines and 100 naval aviation personnel. Major naval units included 28 patrol/coastal vessels and 2 amphibious landing craft. The Air Force had 1,100 active personnel with 10 combat capable, including 4 fighter ground attack aircraft. It had no armed helicopters. The country's paramilitary force consisted of the 14,800-member Special Police Service. Paraguay had compulsory military service of one year for all males 18 years of age. The defense budget in 2005 totaled \$57.6 million.

## 18 INTERNATIONAL COOPERATION

Paraguay is a charter member of the United Nations, having joined on 24 October 1945; it participates in ECLAC and several nonregional specialized agencies, such as the IAEA, the World Bank, ICFTU, ILO, IMF, UNESCO, UNIDO, and the WHO. Paraguay is also a member of the South American Community of Nations, G-77, the Inter-American development Bank, the Latin American

Economic System (LAES), the Latin American Integration Association (LAIA), Mercosur, the OAS, and the Río Group.

Paraguay has offered support to UN missions and operations in Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 1999). The country is a signatory of the 1947 Río Treaty, an inter-American security agreement. Paraguay belongs to the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, Paraguay is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Landlocked Paraguay has a limited economy based predominantly on agriculture (cotton and soy), livestock production, forestry, and the basic processing of materials. The country has vast hydroelectric resources, including the world's largest hydroelectric generation facility built and operated jointly with Brazil (Itaipú Dam), but it lacks significant mineral or petroleum resources. Partnering with Brazil on the Itaipú, with Argentina on the Yacyreta, and operating the Acaray dam on the Acaray River, allows Paraguay to generate all of the country's electrical power from hydroelectric plants, and even export the remaining to neighboring countries. The relative importance of agriculture has declined, and the value of services has risen; however, cattle raising remains a key economic activity. The large informal sector consists mainly of the reexport of consumer goods from Asia and the United States to neighboring countries, and of the many small street vendors and businesses that provide services.

Paraguay suffered for years from runaway inflation. The International Monetary Fund (IMF) joined with the US government in 1957 to provide stabilization loans which enabled Paraguay to establish a free exchange system and to accelerate the pace of public investment. During the 1960s, inflation ranged between 2% and 3%, but the rate increased during the following decade to 28.2% in 1979. The rate was estimated to be 30–40% through the 1980s, fueled by rapid expansion of the money supply.

During the 1980s, construction of the Itaipú hydroelectric project (which was finished in 1982) stimulated Paraguay's economic expansion. At the end of the Itaipú building boom, currency devaluations in Argentina and Brazil (and thus the relative overvaluation of the guaraní), and declining international market prices for Paraguay's agricultural products led to an economic slowdown that was exacerbated by the impact of adverse weather on the agricultural sector.

An economic reform package instituted in the early 1990s included judicial reform, a macroeconomic stabilization program featuring fiscal austerity, liberalization of the exchange rate, and efforts to privatize state-owned enterprises. But the banking crisis of 1995 required a government bailout and sent shock waves through the economy, causing a sharp drop in commercial sales. Progress on the reforms continued in 1996 but at a slow pace due to stiff political opposition. Reforms were all but abandoned in 1997 and 1998. The economy grew at a rate of 2.7% between 1988 and 1998, but GDP contracted by 0.4% in 1998, when the financial

crisis was aggravated by El Niño crop damage. Inflation was at 7% in 1997, but rose to 14.6% in 1998, mainly because of the impact of the Brazilian currency devaluation, which led to a devaluation of the local currency, Paraguay's third banking crisis since 1995.

Similar to many Latin American countries during the 1980s and 1990s, Paraguay experienced small contractions alternating with slow growth; however, in 2002, the contraction in real GDP was estimated at 4.4% as the political situation became increasingly unstable. Unemployment rose to 16% in 1999, to 18% in 2000, and to 25% in 2001. An estimated 65% of the population was living below the poverty line in 2001. The integration into Mercosur (Southern Cone Common Market), did not bring the hoped-for benefits of increased foreign investment and increased exports, primarily because of the melt-down of the Argentinean economy in 2001 and 2002.

The election of President Duarte Frutos in August 2003 stabilized the situation. Aided by a firmer exchange rate and perhaps a greater confidence in the economic policy of the Duarte administration, the economy rebounded from 2003 to 2005, posting modest growth each year. Paraguay's real GDP in 2004 of \$7.98 billion (in 1994 dollars) represented an increase of 3.9% from 2003 (IMF data using the prior base year of 1982 shows real GDP growth of 2.9% in 2004). Official foreign debt rose slightly in 2005, to \$2.35 billion, but inflation dropped to 2.8%, down from 9.3% in 2003, the lowest rate since 1970. However, given the importance of the informal sector, accurate economic measures are difficult to obtain.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reported that in 2005 Paraguay's gross domestic product (GDP) was estimated at \$30.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,900. The annual growth rate of GDP was estimated at 3.3%. The average inflation rate in 2005 was 7.5%. It was estimated that agriculture accounted for 27.5% of GDP, industry 24%, and services 48.5%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$222 million or about \$39 per capita and accounted for approximately 3.7% of GDP. Foreign aid receipts amounted to \$51 million or about \$9 per capita and accounted for approximately 0.8% of the gross national income (GNI).

The World Bank reported that in 2003 household consumption in Paraguay totaled \$5.29 billion or about \$937 per capita based on a GDP of \$6.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.8%. It was estimated that in 2005 about 32% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Paraguay's labor force totaled an estimated 2.68 million. As of 2003, agriculture accounted for 31.5% of the workforce, with 15.8% in the industrial sector and 52.7% in the ser-

vices sector. In 2005, it was estimated that 16% of the labor force was unemployed.

The constitution provides Paraguayans in both the public and private sector the freedom to form and join unions without government interference. The constitution also protects fundamental worker rights, including the right of association. There also are provisions for antidiscrimination, employment tenure, severance pay, collective bargaining, and the right to strike. As of 2001, 15% of the labor force (about 121,000 workers) belonged to unions, which numbered approximately 1,600.

Labor laws provide for a maximum workweek of 48 hours for day work and 42 for night work, with one day of rest. The law also provides for an annual bonus of one month's salary. The minimum wage was \$170 per month in 2001 for the private sector; the public sector has no mandated minimum. It is estimated that 50% of workers earn less than the minimum amount. The minimum working age is 15, although minors as young as 12 may work in family enterprises. In reality these provisions are not effectively enforced and thousands of children work both on farms and in urban areas.

## 2<sup>2</sup> AGRICULTURE

Cultivation utilizes about 7.9% of Paraguay's total land area. The total area under cultivation rose from 245,636 hectares (606,976 acres) in 1940–41 to an estimated 3,136,000 hectares (7,749,000 acres) in 2003. Primary agriculture accounts for 20% of GDP and about 35% of employment. The principal areas of cultivation are in the clearings around Asunción and Encarnación. Arable land outside these regions is sparsely settled, and inhabitants there rely principally on livestock and forestry for a living.

The two most widely cultivated crops are manioc (cassava) and corn, which, with meat, are the staples of the Paraguayan diet. Cotton, tobacco, and sugarcane are among the leading cash and export crops. A national wheat program increased production from 7,000 tons in 1965 to 23,000 tons in 1973, 55,000 tons in 1981, and 715,000 tons in 2004, eliminating the need for wheat imports. Enough beans, lentils, sweet potatoes, peanuts, coffee, and fruits are grown for home use, and slightly more than enough rice. Crops yielding edible oils are widely grown, and yerba maté is cultivated on plantations. Production of principal crops for 2004 (in tons) included sugarcane, 3,637,000; manioc, 5,500,000; soybeans, 3,583,000; corn, 1,120,000; yerba maté, 115,000; cotton, 109,000; and tobacco, 16,500. In 2004, Paraguay exported \$1.35 billion in agricultural products, 68% of total exports.

## 2<sup>3</sup> ANIMAL HUSBANDRY

During the 1960s and 1970s, the meat-packing industry developed appreciably, with meat and related products constituting Paraguay's most important single export. Since the late 1970s, however, market conditions for beef exports have deteriorated, and the value of exported meat products has declined significantly. Exports of livestock and livestock products typically account for 7% of total exports and in some years comprise as much as 14%. In 2004, meat exports amounted to \$159.7 million. About 70–80% of beef exports are sent to Mercosur countries.

In 2005, livestock totaled 9,622,000 head of cattle, 1,600,000 hogs, 500,000 sheep, and 360,000 horses. There were also an estimated 17 million chickens that year. Beef production was about

215,000 tons. Other livestock products in 2005 included 372,400 tons of cow's milk and 100,000 tons of eggs.

## 24 FISHING

Paraguay has no appreciable fishing industry, and the consumption of fresh fish is low. The country has potential resources for fisheries, however. Dorado weighing up to 18 kg (40 lb) are caught in the Upper Paraná River, and the Paraguay River yields salmon, surubi, pacú, boga, and mandi. The catch was 25,000 tons in 2003.

## 25 FORESTRY

Although forest resources are immense, exploitation is limited by lack of roads and mechanized transport facilities. About 59% of Paraguay's total land area consists of forest (23.4 million hectares/57.7 million acres in 2000). However, much of that lies in the western Chaco, the forest resources of which have never been exploited. Roundwood cuttings totaled 9.99 million cu m (352.6 million cu ft) in 2004, with 60% used for fuel wood.

Exportation of logs was banned in 1973 in order to encourage the domestic lumber industry; forest products earned \$37.5 million on the export market during 2004.

The chief forest products are quebracho, various cabinet and other tropical hardwoods, and oil of petitgrain. Quebracho, the source of the tannin used by the leather-tanning industry, is the wood of the greatest commercial importance. Paraguay is the world's largest producer of petitgrain oil, a perfume base distilled from the leaves and shoots of the bitter orange tree. Since wood and charcoal are the only fuels produced in Paraguay, about two-thirds of all wood cut is used for burning.

## 26 MINING

Paraguay's mining potential has been restricted by limited exploration, inadequate infrastructure, large fiscal and trade deficits, scarcity of foreign exchange, and limited private investment, and the reforms deemed necessary to alleviate the country's economic stagnation were impeded by political uncertainty. The mineral industry in 2003 accounted for less than 1% of GDP, and was focused on the production of cement, and the extraction of industrial minerals such as clays, gypsum, kaolin, limestone, marble, ocher, ornamental stone, silica sands, and pryophyllite soapstone talc. No minerals were among the country's top export commodities. Production for 2003 included an estimated 66,600 metric tons of kaolin and an estimated 16,300 metric tons of limestone for cement and lime. In 2003, Paraguay also produced lime, rock, dimension stone, other stone, and hydraulic cement. In addition, sandstone, mica, copper, and salt have been exploited modestly in recent years.

There were small deposits of iron ore, and a few mines were worked before 1865, but there was no evidence, until recently, of any metallic mineral deposits of commercial value. Lateritic iron ore deposits along the Paraná River near Encarnación were estimated at 300 million tons with 35% iron. Manganese deposits were known to exist near the Guairá Falls. Excellent limestone, found in large quantities along the Paraguay River north of Concepción, was quarried for the cement industry. There were also known deposits of azurite, barite, lignite, malachite, peat, pyrite, pyrolusite, and uranium. Under Paraguayan law, all mineral rights

belong to the government, which has sought to encourage mining development by the privatization of some state-owned companies. A diamond-drilling and igneous exploration program begun in 1997 was completed, and there was ongoing exploration throughout the country by foreign companies.

## 27 ENERGY AND POWER

Paraguay has no known proven reserves of oil or natural gas. However, it is a major exporter of hydroelectric power.

Hydroelectric power accounts for nearly all of the country's electric power capacity. In 2002, electric power generating capacity totaled 7.416 million kW, of which hydroelectric capacity accounted for 7.410 million kW, with the remaining capacity dedicated to conventional thermal generation. Electric power output in 2002 totaled 47.774 billion kWh, of which hydroelectric plants generated 47.730 billion kWh. Geothermal/other sources generated 0.030 billion kWh, and conventional thermal sources 0.14 billion kWh. However, domestic demand for electric power totaled only 2.660 billion kWh. Exports of electric power that year came to 41.770 billion kWh.

Although Paraguay has no reserves of oil, it does have a modest crude oil refining capacity. As of 1 January 2004, the country's refining capacity was estimated at 7,500 barrels per day. Crude oil imports in 2002 averaged 2,020 barrels per day, while imports of all petroleum products, averaged 25,340 barrels per day, for that year. Demand for refined petroleum products in 2002, averaged 25,050 barrels per day.

## 28 INDUSTRY

Paraguay is one of the least industrialized countries in South America. Because of the limited quantities of proven mineral reserves, there is mining only of limestone, gypsum, and clays, mostly for the building trade. Manufacturing is generally small-scale and directed toward processing agricultural products. The principal industry of Paraguay is farming; agriculture accounted for 24.1% of GDP in 2004. The leading agricultural products are cotton, sugarcane, corn, soybeans, potatoes, bananas, oranges, wheat, beans, tobacco, mandioca (yucca), and yerba maté (Paraguayan tea, which is very popular among country residents). Livestock breeding is also a major occupation, and the most favored areas are located at the Chaco and southern oriental region. Forestry is also important to the economy, while tourism plays a minor role. Most visitors are from Brazil and Argentina, demonstrating the strong economic ties with those countries.

Processing of agricultural, animal, and forestry products, mainly for export, and small-scale manufacture of consumer goods for local needs are of greatest importance. Most manufacturing is done in the Asunción area; some plants, however, are near the source of their respective raw materials. Import-substitution industries encouraged by the government include petroleum refining, foodstuffs, wood processing, and chemicals. The re-export of imported consumer goods to neighboring countries is a recent economic development. Maquila assembly operations began in 2000, with the export of leather car seats to France. Manufacturing accounted for 14.5% of GDP in 2004.

Industries include two cement plants, at Vallemí and Itapucumi, and a Paraguayan-Brazilian steel mill at Villa Hayes. Food-processing plants include slaughterhouses; flour mills; sugar mills;

oil mills producing cottonseed and peanut oils for domestic consumption, as well as castor, tung, cocoa, and palm oils for export; related industries that process the by-products of oil extraction; and mills that produce yerba maté. There are numerous sawmills. A considerable but decreasing number of hides are also produced for export. Although there is a considerable textile industry, imports still run high.

### 2<sup>9</sup> SCIENCE AND TECHNOLOGY

In 1993, there were eight scientific and technological research institutes and learned societies in Paraguay, all of them located in Asunción. Notable among them are the Paraguayan Scientific Society, founded in 1921, and the South American Union of Engineers' Associations, established in 1935. The Nuestra Señora de la Asunción Catholic University, founded in 1960 at Asunción, has a faculty of science and technology. The National University of Asunción, founded in 1889, has faculties of medicine, dentistry, chemistry, exact and natural sciences, physical sciences and mathematics, veterinary sciences, and agricultural engineering. The Higher School of Philosophy, Sciences and Education, also in Asunción, was founded in 1944. In 1987–97, science and engineering students accounted for 20% of college and university enrollments.

In 2002, Paraguay's expenditures on research and development (R&D) totaled \$24.852 million, or 0.10% of GDP. Of that amount, 63.1% came from government sources, followed by 21.8% from foreign investors. Higher education accounted for 12.7% and private nonprofit groups accounted for 2.3%. In that same year there were 83 researchers and 118 technicians that were engaged in R&D per million people. High technology exports in 2002 totaled \$7 million, or 3% of the country's manufactured exports.

### 3<sup>0</sup> DOMESTIC TRADE

Offices that deal with foreign concerns and most important retail establishments are in Asunción, the only significant commercial center. Most retail trade is in small shops dealing in a limited variety of goods.

Legislation in 1961 provided for governmental and private commercial credit companies to aid in the development of agricultural, livestock, and industrial activities. Consumer credit facilities have been expanding. Many of the larger Asunción stores offer installment credit.

Most commercial activity is focused on reexport of items from Asia and the United States to Argentina and Brazil. Much of this activity takes place through an underground market system, which some business groups claim is just as large as Paraguay's formal economy. The informal sector features thousands of small enterprises and urban street vendors, along with reexports of select imported consumer goods (electronics, whiskeys, perfumes, cigarettes, and office equipment).

### 3<sup>1</sup> FOREIGN TRADE

Paraguay's foreign trade is typical for an agricultural country, but the re-export trade on the black market is the country's largest foreign exchange earner. Over a third of Paraguay's reported commodity export returns comes from oil seeds (34%), while another

9.1% comes from cotton. Other exports include meat (8.3%), leather (6.0%), wood and plywood (5.5%), and vegetable oil (4.8%).

The main imports are machinery, petroleum and petroleum products, chemicals, automobiles and buses, principally from Brazil and the United States. Bilateral European Union-Paraguay trade represented 10.8% of GDP in 2004, with imports decreasing and exports increasing as a percentage of GDP for the last five years.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Paraguay's exports was \$2.2 billion while imports totaled \$2.7 billion resulting in a trade deficit of \$500 million. The International Monetary Fund (IMF) reported that in 2001 Paraguay had exports of goods totaling \$2.41 billion

and imports totaling \$2.95 billion. The services credit totaled \$580 million and debit \$410 million.

Paraguay presently maintains a balance-of-payments surplus. It runs a deficit in the trade of goods, but a large surplus in services, reflecting large exports of electricity from Paraguay's two large hydroelectric dams shared with Brazil and Argentina. In 2004, official foreign exchange reserves increased almost 50% from 2002.

### 33 BANKING AND SECURITIES

The Central Bank of Paraguay (BCP) was founded in 1952 as a state-owned, autonomous agency charged with establishing the government's monetary credit and exchange policies. Recommendations in early 1961 by an economic mission of the IDB and IBRD led to the establishment of the National Development Bank to provide an effective source of medium- and long-term agricultural and industrial credits. Savings and loan institutions are regulated by the superintendent of banks. There are two state-owned banks, some locally owned banks, and nine foreign banks. Foreign-owned banks account for 86% of total deposits and 83% of all loans, and the two largest banks—Banco de Asunción and Citibank—are foreign-owned.

In 1995, there were 35 banks operating in Paraguay, 9 of which had opened since 1990. During the same period the number of finance companies nearly doubled, to 68. The increase in the number of banks and finance companies, out of all proportion to the size of the economy, was generally believed to be related to the rapid increase in "hot money" flows through Paraguay associated with drug smuggling. In late 1995, the Central Bank announced a freeze on the opening of new banks and finance companies on the grounds that the local market was saturated. In the same year, a currency crisis caused the collapse of ten institutions, requiring \$400 million in government subsidies. The 1996 Banking Law strengthened supervision of the banking system; in 1997 Banco Union was liquidated, as were two of the largest public banks due to poor performance. There are now 40 finance companies. The International Monetary Fund (IMF) reported that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$668.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 13.45%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 20%.

Paraguay's first stock market began trading in October 1993. There are 60 local companies traded on the exchange. All companies have a minimum paid-up capital of \$50,000. However, the tradition of family ownership and almost universal practice of "double accounting" for tax evasion purposes places limits on the growth of a capital market. In 1998, the stock market handled approximately \$10–15 million per a month in transactions.

### 34 INSURANCE

All insurance business in Paraguay is regulated by the government through the superintendent of banks. Foreign companies are permitted to operate in the country, but are under stringent requirements calling for the investment of capital and reserves. In 1995, there were 40 insurance companies operating in Paraguay. Work-

### Public Finance – Paraguay (2003)

(In billions of guaraníes, budgetary central government figures)

Revenue and Grants	6,065.6	100.0%
Tax revenue	3,676.4	60.6%
Social contributions	369.4	6.1%

ers' compensation and public transport liability are both compulsory insurances in Paraguay, with the government providing workers' compensation as a part of the social security scheme.

### 35 PUBLIC FINANCE

The Paraguayan government depends upon import duties for revenue, especially from the reexport trade. The government is the largest employer, and the budget represents 40% of GDP. The majority of the budget (80%) goes to public employee salaries, 15% to servicing the foreign debt, and 5% for investment.

The US Central Intelligence Agency (CIA) estimated that in 2005 Paraguay's central government took in revenues of approximately \$1.3 billion and had expenditures of \$1.3 billion. Revenues minus expenditures totaled approximately -\$36 million. Public debt in 2005 amounted to 36.1% of GDP. Total external debt was \$3.535 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues in guaraníes were G6,065.6 billion and expenditures were G6,299.8 billion. The value of revenues in US dollars was US\$1 million, based on a market exchange rate for 2003 of US\$1 = G6,424.3 as reported by the IMF.

### 36 TAXATION

In 2005 the basic corporate tax rate was 30%, but there are a number of exceptions. Reinvested income and investment in reforestation are taxed at 10%, and stock exchange companies are taxed at a reduced rate of 15% until 2008. In addition, the corporate rate was scheduled to be cut to 20% in 2006 and to 10% in 2007 and beyond. Capital gains on all assets are taxed at 30%, but in tandem with the corporate rate, was to be reduced to 20% in 2006 and to 10% in 2007. In 2005, dividends to resident shareholders were not taxed, but dividends paid to nonresident shareholders were subject to a 5% withholding tax. However, in 2006 the withholding tax rate on dividends paid abroad to nonresidents was scheduled

to increase to 15%. In 2007, and onward, dividends paid to residents and nonresidents will be 5% and 15%, respectively. Branches of foreign companies established in Paraguay, apart from the maquila, free zone, and investment incentives regimes, are subject to a 35% corporate income tax rate for 2005 and 2006, which was slated to drop to 30% in 2007. There is a license tax payable by all persons and entities engaged in permanent forms of business.

Paraguay only directly taxes "high-level" executives on their income, but this may be handled through the corporation tax if the company only deducts the amount of executive salaries held to be tax-exempt under the law. If the company deducts all executives' salaries, individual executives are subject to income tax. Social security taxes total 25.5% of payroll, with 16.5% from the employer and 9% from the employee. All land and buildings are also subject to an annual property tax proportional to the fiscal valuation of real estate.

The main indirect tax is Paraguay's value-added tax (VAT) with a standard rate of 10%.

### **37 CUSTOMS AND DUTIES**

In general, Paraguayan customs duties have been viewed as a source of revenue and a means of conserving foreign exchange, with relatively few of the high duties being intended as protection for manufactured products. Tariff rates, under the Mercosur common external tariff (CET) agreement, range from 0% for raw materials to 20% for automobiles. Import duties are specific, ad valorem, or both. Import pressures are such that the government has not kept a tight control on the purchase of nonessentials. In 2005, Paraguay imposed consumption taxes of 5% on imported luxury items such as perfumes, toilet waters, cosmetics, precious and semiprecious stones and on watches, arms, ammunition and parts. A 1% rate will be applied to certain consumer appliances and electronic products. Toys, games, and musical instruments (and parts) will be zero-rated.

Paraguay has free port privileges in Brazil at Paranaguá, Santos, and Río Grande do Sul; in Argentina at Buenos Aires and Rosario; in Chile at Antogagasta; and in Uruguay in Montevideo and Nueva Palmira. Most trade is done through the Brazilian ports.

### **38 FOREIGN INVESTMENT**

Paraguay's economy historically has been dominated by foreign interests, in particular by those of wealthy Argentineans, Britons, and Brazilians. Nevertheless, the Paraguayan government has encouraged foreign investment in recent years, as a means of developing the country. Foreign direct investment (FDI) inflows into Paraguay were approximately \$100 million per year in 1993 and 1994. By 1997, FDI inflow had increased to \$230 million, peaking at \$336 million in 1998. FDI inflows fell sharply in 1999 to only \$66 million amid the political violence and chaos that ensued after President Cubas released General Lino Oviedo from prison. FDI inflows increased to \$95 million in 2000, and to \$152 million in 2001. During the period of August 2003 through July 2004 the Paraguayan government approved foreign investment projects worth \$45.2 million, which represented 29% of all investment projects, foreign and national, approved during that period.

Government efforts to attract foreign investment through privatization have progressed slowly because of political opposition and uncertainty about the transparency of the process. Politi-

cal realities impede the process even further, as the large state-run companies most attractive to foreign buyers (such as telecommunications, water/sewage, and electrical companies) employ thousands of potential voters and are outlets for political patronage. The telephone and utilities company were in the process of being privatized before the government suspended the process in June 2002, after bowing to political pressure. In 2004, Congress tried to reverse legislation that prohibited privatization but discontinued its efforts in the face of public demonstrations against privatization.

Currently, the United States has the largest foreign investment in Paraguay, with a total of US investments in Paraguay exceeding \$440 million. Foreign investment was strongly concentrated in the services sector, mainly cellular telephones and hotels.

Foreign investment laws are among the most liberal in Latin America. Private property has historically been respected in Paraguay but despite the incentives, private investment has been insufficient to maintain a sustainable pace of growth.

### **39 ECONOMIC DEVELOPMENT**

Paraguay has sought to develop closer economic ties with Brazil, the United States, and Western European nations, largely to reduce the country's dependence on trade with Argentina.

Economic planning is the responsibility of the Technical Planning Secretariat for Economic and Social Development, established in 1962. The first national plan covered 1965–66; the second, 1967–68. The third plan, a medium-term, five-year program for 1969–73, was replaced by a 1972–77 development scheme calling for a 26% increase in public investment in agriculture. Regional development, also given high priority, was to be accomplished through Paraguay's utilization of its water resources in the Itaipú hydroelectric project; a parallel development program for the Alto Paraná region was retarded by delays in the Yacyretá power project. The 1977–81 development plan aimed to achieve a more equitable distribution of social resources. A plan announced in September 1986 provided for comprehensive reform in exchange rates and in investment and fiscal policies. Government economic reforms during the 1990s were generally subsumed by opposition parties. Reforms in 1999 centered on a diversification of the economy, away from the re-exportation business, and on fighting corruption, which the government's comptroller office estimated to have cost \$2.3 billion in 1997.

Foreign debt rose in early 2003 to \$2.28 billion, inflation rose to 14.6%, and the currency lost over 50% of its value against the US dollar in 2002. In the early 2000s, the country's economy was marked by slow economic growth, increasing unemployment, and rising poverty rates. Paraguay was in arrears with the World Bank and the Inter-American Development Bank in 2003. That year the IMF encouraged the country to revive its privatization program and to strengthen the banking system.

Macroeconomic performance has improved significantly under the Duarte administration, with inflation falling significantly, and the government clearing its arrears with international creditors. Unemployment remains stubbornly high and the living standard of most households has not improved. However, the administration has placed a strong emphasis on participating in international institutions and has used diplomacy to promote the opening of international markets to Paraguayan products. To curb corruption,

the president identified respected apolitical officials to head the ministries of finance and industry. The ministry of industry has created a transparent, internet-based government procurement system that has won the praise of the private sector. Six Supreme Court justices were selected with input from civil society and public hearings in the congress, both a first for Paraguay.

#### 40 SOCIAL DEVELOPMENT

All employed persons are covered by the social insurance system, first established in 1943, and most recently updated in 1992. The program is funded by a contribution of 9% of earnings from employees and a contribution of 14% of payroll by employers, and a contribution of 1.5% of earnings by the government. The program provides for free medical, surgical, and hospital care (not always available) for the worker and dependents, maternity care and cash benefits, sickness and accident benefits, retirement pensions for people ages 55–59, and funeral benefits. Coverage for work injury is also available for all employees including domestic servants and teachers.

Although women have full legal rights, in practice they face discrimination in education and employment, and their literacy rates are much lower than those of men. Domestic violence and sexual harassment remain serious problems for women and have been targeted as key issues by both the government and nongovernmental organizations. Spousal abuse is common and punishable only by a fine. The majority of women face harassment in the workplace. As of 2004, women had a higher illiteracy rate than men. The secretariat of women's affairs sponsors programs to increase opportunities for women.

Human rights abuses include arbitrary arrest and detention, corruption in the judiciary, and poor prison conditions. Discrimination against indigenous people continues.

#### 41 HEALTH

Hospital and medical facilities are generally concentrated in Asunción and other towns. There were an estimated 117 physicians, 36 dentists, and 20 nurses per 100,000 people in 2004. Total health care expenditure was estimated at 5.2% of GDP.

Average life expectancy in 2005 was 74.89 years; the infant mortality rate averaged 25.63 per 1,000 live births. As of 2003, the crude birth rate and overall mortality rate were estimated at, respectively, 30.5 and 4.7 per 1,000 people. Maternal mortality was 190 per 100,000 live births. More than half of the married women ages 15–44 used contraceptives. The principal causes of death are bacillary dysentery and other intestinal diseases, heart disease, pneumonia, and cancer. Approximately 79% of the population had access to safe drinking water and 95% had adequate sanitation. Immunization rates for children up to one year old were: tuberculosis, 87%; diphtheria, pertussis, and tetanus, 82%; polio, 82%; and measles, 60%. About 26% of children under five years old were considered malnourished.

There were an estimated 600 deaths from AIDS in 2003. The HIV/AIDS prevalence was 0.50 per 100 adults in 2003. As of 2004, there were approximately 1,500 people living with HIV/AIDS in the country.

#### 42 HOUSING

As of 1998, the country continued to face serious housing shortages with a cumulative deficit of about 350,000 dwelling units. About 30% of the population live with overcrowded conditions; the average number of people per dwelling is 4.6. A majority of housing units lack basic utilities. At the 2002 census, there were about 1.1 million housing units.

A government agency, the Paraguayan Housing and Urban Institute, was created in 1964 with an IBRD loan of \$3.4 million to aid in the construction of living units for low-income families. In 1973, a National Housing Bank was established to finance low-income housing development.

#### 43 EDUCATION

Elementary education is compulsory and free for 9 years, usually for children ages 6–14 (ages 9–14 in rural areas). Primary education lasts for nine years followed by three years of secondary or professional school. The academic year runs from March to November.

In 2001, about 30% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 89% of age-eligible students. The same year, secondary school enrollment was about 51% of age-eligible students. It is estimated that about 92.8% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 27:1 in 2003; the ratio for secondary school was about 12:1.

The National University of Paraguay is located in Asunción, the capital city. Nuestra Señora de la Asunción Catholic University, a private institution, was founded in 1960. There are at least 12 other universities within the country. In 2003, about 27% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 91.6%.

As of 2003, public expenditure on education was estimated at 4.4% of GDP, or 11.4% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

Paraguay's modest cultural life is centered in Asunción, which has the nation's principal libraries and museums. The National Library and Archives, established in 1869, are located in Asunción and hold 44,000 volumes. The National University of Asunción holds 26,100 volumes, and the Natural and Ethnographic History Museum, also in Asunción, holds 30,000 volumes. The Centro Cultural Paraguayo-Americano has a 12,000-volume library with both Spanish and English titles and includes one of the country's most complete collections of Paraguayan works.

Asunción is the site of 13 historical, scientific, and art museums. Prominent art museums include the National Museum of Fine Arts and Antiquities; the Andrés Barbero Ethnographic Museum, devoted to Amerindian art; the Julián de la Herrería Ceramics and Fine Arts Museum; and the Museum of Modern Art of the Ministry of Education. There is an historic house museum in Yaguaron.

## 45 MEDIA

In 2003, there were an estimated 46 mainline telephones for every 1,000 people. The same year, there were approximately 299 mobile phones in use for every 1,000 people.

Radio Nacional del Paraguay is the primary state-owned station. Other stations for radio and television are privately owned. In 2000, there were 218 television sets for every 1,000 people. In 2003, there were 188 radios for every 1,000 people. The same year, there were 34.6 personal computers for every 1,000 people and 20 of every 1,000 people had access to the Internet. There were nine secure Internet servers in the country in 2004.

Newspaper readership in Paraguay is among the lowest in Latin America. There were four major daily papers in circulation in 2004. The circulation of *Ultima Hora*, founded in 1973, was 40,000 in 2004. *Noticias* had a circulation of 50,000 in 2004 and *ABC Color* had a circulation of 35,000 (down from 75,000 in 2002). *Diario Popular* began publication in 1967; circulation figures in 2004 were unavailable.

As of 2006, the constitutionally guaranteed freedom of speech and the press is said to be respected by the government to a greater degree than any time in the country's recent history. An increasing amount of the media is independently owned.

## 46 ORGANIZATIONS

Several chambers of commerce promote local and international trade. Active trade associations include the Federation of Production, Industry, and Commerce, an importers' association, and various organizations of particular trades. Professional associations are also active, particularly in the field of healthcare.

The Paraguayan Athenaeum sponsors lectures, concerts, and recitals, as well as courses in foreign languages, art, and music. The Paraguayan-American Cultural Center and the Argentine-Paraguayan Institute are important binational centers. Paraguay has an Academy of Language and several organizations devoted primarily to Guaraní culture, including the Academy of Guaraní Culture and the Indian Association of Paraguay.

Other organizations include the Women's Center and the Youth Athenaeum. The Paraguay Association of Scouts and Guides, Junior Chamber, and the YMCA/YWCA are also active. Sports associations offer programs for all ages and there are active organizations of the Special Olympics.

Amnesty International, Caritas, Habitat for Humanity, and the Red Cross have national chapters.

## 47 TOURISM, TRAVEL, AND RECREATION

The monuments, museums, and parks of Asunción are the main tourist attractions. Also of interest are the Amerindian markets in and around the capital; at the famous market of Itauguá about 30 km (18 mi) from Asunción, the makers of ñandutí lace sell their wares. Other popular tourist attractions include the world famous Iguazu Falls at Paraguay's borders with Brazil and Argentina, the San Bernardino resort, on Lake Ypacarai, and the modern boom town of Ciudad del Este (formerly Puerto Presidente Stroessner). Football (soccer) is Paraguay's national sport, with some 30 clubs

in Asunción alone. Tennis, horse racing, boxing, basketball, and rugby football are also popular.

Foreign tourists entering Paraguay are required to present a valid passport and visa. Visitors may be required to show proof of vaccinations against yellow fever. Strong precautions are recommended against typhoid and malaria.

In 2003, there were 268,175 tourist arrivals in Paraguay, of whom 66% came from Argentina. Tourist receipts totaled \$81 million. That year there were 4,899 rooms in hotels and other facilities with 10,565 beds and a 38% occupancy rate. The average length of stay was 2.5 nights.

In 2004, the US Department of State estimated the daily cost of staying in Asunción at \$153; in Encarnación, \$47; and in Ciudad del Este, \$122.

## 48 FAMOUS PARAGUAYANS

Paraguay acclaims—despite their reputations as dictators—the first three leaders of the independent nation: José Gaspar Rodríguez de Francia (El Supremo, 1761?–1840), his nephew Carlos Antonio López (1790–1862), and the latter's son Francisco Solano López (El Mariscal, 1827–70). Of nearly equal prominence is José Félix Estigarribia (1888–1940), president and Chaco War commander. Manuel Gondra (1872–1927), twice president of Paraguay, was a literary critic, educator, and diplomat. Eusebio Ayala (1875–1942), another president, was an authority on political economy and international law. Alfredo Stroessner (b.1912) was president of Paraguay from 1954 to 1989.

Leading writers include Juan Silvano Godoi (1850–1926), Manuel Domínguez (1869–1935), Pablo Max Ynsfrán (1894–1972), Justo Pastor Benítez (1895–1962), former president Juan Natalicio González (1897–1966), Gabriel Casaccia (1907–80), Augusto Roa Bastos (1917–2005), and Hugo Rodríguez Alcalá (b.1917). Pablo Alborno (1877–1958) and Juan Domínguez Samudio (1878–1936) were noted artists, while in music, José Asunción Flores (1904–1972) is best known.

## 49 DEPENDENCIES

Paraguay has no territories or colonies.

# PERU

Republic of Peru  
*República del Perú*

**CAPITAL:** Lima

**FLAG:** The national flag consists of red, white, and red vertical stripes.

**ANTHEM:** *Himno Nacional*, beginning “Somos libres, seámoslo siempre” (“We are free; let us remain so forever”).

**MONETARY UNIT:** The nuevo sol (ML), a paper currency of 100 céntimos, replaced the inti on 1 July 1991 at a rate of 11,000,000 = ML1, but, in practice, both currencies are circulating. There are coins of 1, 5, 10, 20, and 50 céntimos and 1 nuevo sol, and notes of 10, 20, 50, and 100 nuevos soles and 10,000, 50,000, 100,000, 500,000, 1,000,000, and 5,000,000 intis. ML1 = \$0.30395 (or \$1 = ML3.29) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; Day of the Peasant, half-day, 24 June; Day of St. Peter and St. Paul, 29 June; Independence Days, 28–29 July; Santa Rosa de Lima (patroness of Peru), 30 August; Battle of Anzamos, 8 October; All Saints’ Day, 1 November; Immaculate Conception, 8 December; Christmas, 25 December. Movable holidays include Holy Thursday and Good Friday.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Peru is South America’s third-largest country, with an area of 1,285,220 sq km (496,226 sq mi), extending about 1,287 km (800 mi) SE–NW and 563 km (350 mi) NE–SW. Comparatively, the area occupied by Peru is slightly smaller than the state of Alaska. It is bounded on the N by Ecuador and Colombia, on the E by Brazil and Bolivia, on the S by Chile, and on the W by the Pacific Ocean, with a total land boundary length of 5,536 km (3,440 mi) and a coastline of 2,414 km (1,500 mi).

Various offshore islands, chiefly the Chincha Islands off Pisco in southern Peru, are uninhabited, but at least 21 of these are important to the Peruvian economy and are protected by the government’s guano monopoly.

Peru’s capital city, Lima, is located on the Pacific coast.

## <sup>2</sup>TOPOGRAPHY

Peru is divided into three contrasting topographical regions: the coast (costa), the highlands (sierra), and the eastern rain forests (selva). The coastline is a narrow ribbon of desert plain from 16 to 160 km (10 to 100 mi) broad. It is scored by 50 rivers, which water some 40 oases. Only a few of these rivers, which have their source in the Andean snowbanks, reach the sea in all seasons. Although the coastal region constitutes only 12% of the national territory, it contains the ports and chief cities of Peru.

Inland, the low costa rises through the steep wastes of the high costa (760–2,000 m/ 2,500–6,500 ft), then ascends abruptly to the western cordillera (Cordillera Occidental) of the Andes, which, with its ridge of towering peaks, runs parallel to the coast and forms the Peruvian continental divide. The less regular Cordillera Central and Cordillera Oriental merge in central Peru with the Cordillera Occidental. They branch off to the southeast, meeting

a transverse range that becomes a crescent of peaks forming the drainage basin of the 8,288 sq km (3,200 sq mi) Lake Titicaca, the highest large navigable lake in the world (about 3,810 m/12,500 ft high), which is bisected by the Peruvian-Bolivian border. Of the 10 Peruvian peaks that rise above 5,800 m (19,000 ft), Huascarán, 6,768 m (22,205 ft), is the highest.

The intermontane basins, deep-gashed canyons, and high treeless plateaus (punas) of the Andes form the sierra and constitute 27% of the country’s surface. The most important rivers draining the Andes on the Atlantic watershed, such as the Marañón, Hualaga, and Ucayali, flow north or south and eventually east to form the Amazon Basin. The selva covers 61% of Peru and consists of the low selva (the Amazon rain forest) and the high selva, a steeply sloping transition zone about 100–160 km (60–100 mi) wide between the sierra and the rain forest.

Peru lies near the boundary of the Nazca and South American Tectonic Plates, which is a seismically active area. An 8.4 magnitude earthquake occurred near the coastal region on 23 June 2001, triggering a tsunami that affected parts of Chile and Bolivia. Over 100 people were killed by the event and over 2,600 more were injured. It was recorded as the largest earthquake of the year worldwide. One of the countries most devastating quakes on record occurred in May 1970 when a 7.9 magnitude earthquake killed 66,000 people.

## <sup>3</sup>CLIMATE

Although Peru’s seaboard is situated well within the tropical zone, it does not display an equatorial climate; average temperatures range from 21°C (70°F) in January to 10°C (50°F) in June at Lima, on the coast. At Cuzco, in the sierra, the range is only from 12°C (54°F) to 9°C (48°F), while at Iquitos, in the Amazon region, the

temperature averages about 32°C (90°F) all year round. The cold south–north Humboldt (or Peruvian) Current cools the ocean breezes, producing a sea mist with the inshore winds on the coastal plain. Only during the winter, from May to October, does this sea mist (garúa) condense into about 5 cm (2 in) of rain.

Latitude has less effect upon the climate of the sierra than altitude. The rainy season in the Andes extends from October to April, the reverse of the coastal climate. Temperatures vary more from day to night than seasonally. The snow line ranges from 4,700 to 5,800 m (15,500 to 19,000 ft). In the eastern rain forest, precipitation is heavy, from 190 to 320 cm (75 to 125 in) annually; rain falls almost continuously between October and April.

A warm Pacific west-to-east current called El Niño appears near the Peruvian coast every four to ten years around Christmastime (the name is a reference to the Christ child), occasionally causing serious weather disturbances.

#### 4 FLORA AND FAUNA

Peru's several climates and contrasting surface features have produced a rich diversity of flora and fauna. Where the coastal desert is not barren of life, there are sparse xerophytic shrub, cactus, and algarroba, and a few palm oases along the perennially flowing rivers from the Andes. Where the sea mist (garúa) strikes against the rising slopes between 800 and 1,400 m (2,600 and 4,600 ft), a dense belt of lomas, flowering plants, and grasses (important for grazing) grows. Perennial shrubs, candelabra cacti, and intermontane pepper trees account for much of the western slope vegetation in the higher altitudes and forests of eucalyptus have been planted.

High-altitude vegetation varies from region to region, depending on the direction and intensity of sunlight. Tola grows in profusion at 3,400 m (11,000 ft) in the southern volcanic regions; bunch puna grasses may be found at 3,700 m (12,000 ft). On the brow (ceja) of the eastern slopes, mountain tall grass and sparse sierra cactus and low shrub give way at 900 m (3,000 ft) to rain forests and subtropical vegetation. As the eastern slopes descend, glaciers are remarkably close to tropical vegetation.

The 601,000 sq km (232,000 sq mi) of eastern selva, with 18 rivers and 200 tributaries, contain the dense flora of the Amazon basin. Such native plants as sarsaparilla, barbasco, cinchona, coca, ipecac, vanilla, leche caspi, and curare have become commercially important, as well as the wild rubber tree, mahogany, and other tropical woods.

For centuries, vast colonies of pelicans, gannets, and cormorants have fed on the schools of anchovies that graze the rich sea pastures of the Humboldt Current and have deposited their excrement on the islands to accumulate, undisturbed by weather, in great quantities of guano. This natural fertilizer was used by the pre-Inca peoples, who carried it on their backs to the sierra. Forgotten during the days of colonial gold greed, guano attracted the attention of scientists in 1849, when its rich nitrogen content was analyzed as 14–17%. For 40 years thereafter, Peru paid many of its bills by exporting guano to exhausted croplands of Europe. Guano has since been largely replaced in the international market by synthetic fertilizers.

The rich marine plant life off the Peruvian coast attracts a wealth of marine fauna, the most important of which are anchoveta, tuna, whale, swordfish, and marlin. Characteristic of the Andes are the

great condor, ducks, and other wild fowl. The vizcacha, a mountain rodent, and the chinchilla are well known, as is the puma, or mountain lion. Peru is famous for its American members of the camel family—the llama, alpaca, huarizo, and guanaco—all typical grazing animals of the highlands. The humid forests and savannas of eastern Peru contain almost half the country's species of fauna, including parrots, monkeys, sloths, alligators, paiche fish, piranhas, and boa constrictors, all common to the Amazon Basin.

As of 2002, there were at least 460 species of mammals, 695 species of birds, and over 17,000 species of plants throughout the country.

#### 5 ENVIRONMENT

Peru's principal environmental problems are air pollution, water pollution, soil erosion and pollution, and deforestation. Air pollution is a problem, especially in Lima, due to industrial and vehicle emissions. Carbon dioxide emissions from industrial sources totaled 26.1 million metric tons in 1996. In 2000, the total of carbon dioxide emissions was at 29.5 million metric tons.

Water pollution is another of Peru's environmental concerns. Its sources are industrial waste, sewage, and oil-related waste. The nation has 1,616 cu km of renewable water resources with 86% of the annual withdrawal used to support farming and 7% used for industrial activity. Only 87% of city dwellers and 66% of the rural population have access to improved water sources. Soil erosion has resulted from overgrazing on the slopes of the costa and sierra.

The National Office for the Evaluation of Natural Resources is the principal policymaking body for resource development, while the General Department of the Environment, part of the Ministry of Health, deals with control of pollution problems; water, forest, and wildlife resources are the province of the Ministry of Agriculture. Numerous environmental protection measures have been passed, but enforcement is lax and hampered by inefficient management and scarce fiscal resources. A major environmental challenge for Peru in the 1980s had been opening the selva for agricultural development without doing irreparable harm to the ecology of the Amazon Basin.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 46 types of mammals, 94 species of birds, 6 types of reptiles, 78 species of amphibians, 8 species of fish, 2 species of invertebrates, and 274 species of plants. Threatened species included the yellow-tailed woolly monkey, black spider monkey, puna rhea, tundra peregrine falcon, white-winged guan, arrau, green sea turtle, hawksbill turtle, olive ridley turtle, leatherback turtle, spectacled caiman, black caiman, Orinoco crocodile, and American crocodile. The red-throated wood rail has become extinct.

#### 6 POPULATION

The population of Peru in 2005 was estimated by the United Nations (UN) at 27,947,000, which placed it at number 40 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 32% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual

LOCATION: 0°1' to 18°20'S; 68°39' to 81°19' W. BOUNDARY LENGTHS: Ecuador, 1,420 kilometers (880 miles); Colombia, 2,900 kilometers (1,800 miles); Brazil, 1,560 kilometers (975 miles); Bolivia, 900 kilometers (560 miles); Chile, 160 kilometers (100 miles); Pacific coastline, 2,414 kilometers (1,497 miles). TERRITORIAL SEA LIMIT: 200 miles.

population rate of change for 2005–10 was expected to be 1.6%, a rate the government viewed as too high. The projected population for the year 2025 was 35,725,000. The overall population density was 22 per sq km (56 per sq mi), with some 53% of the inhabitants living in the coastal region; 36% living in the Andean sierra; and 11% living in the eastern rain forest.

The UN estimated that 73% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of

1.86%. The capital city, Lima, had a population of 7,899,000 in that year. Other important cities are Trujillo, Arequipa, and Chiclayo.

## 7 MIGRATION

In the 1860s and 1870s, the Peruvian government imported Chinese laborers to mine guano deposits, build railroads, and work on cotton plantations. Since then, Peru has not attracted large numbers of immigrants, although there are Japanese as well as Chinese

enclaves in the coastal cities. In 1991, some 377,485 Peruvians left the country, and 309,136 returned. The United States was the leading country of destination (38%), with Chile second. In 1999, Peru continued to produce more refugees than it received, due particularly to human rights violations. As of 2004, there were 766 refugees recognized by the United Nations High Commissioner for Refugees (UNHCR), and 232 asylum seekers, the latter mainly from Colombia. In that same year, 1,593 Peruvians sought asylum in Canada, Ecuador, and the United States.

For decades, the government encouraged the movement of people into the empty areas of the eastern Andean slopes (the high selva) in order to bring the eastern provinces into the national economic mainstream. Since the 1950s, however, the main trend has been in the reverse, from the sierra to the coastal cities. Lima has received the bulk of rural migrants, and by the mid-1990s the metropolitan area of Lima supported nearly one-third of the total national population.

The total number of migrants living in Peru in 2000 was 46,000. In 2004, remittances were \$1.3 billion, 5% of GDP. In 2005, the net migration rate was an estimated -1.0 migrants per 1,000 population. The government views the migration levels as satisfactory.

## <sup>8</sup>ETHNIC GROUPS

According to the latest estimates, about 45% of the inhabitants are Amerindian, 37% are mestizo (of mixed Amerindian and Spanish or other European ancestry), 15% are white, and 3% are black, Asian, or other. Small groups of Germans, Italians, and Swiss are important in commerce, finance, and industry. Chinese and Japanese operate small businesses, and some Japanese have been successful in agriculture.

Of the 4–7 million sierra Amerindians under Inca domination, fewer than one million were left when the first colonial census was taken in 1777. A failing food supply and new diseases, such as smallpox, scarlet fever, and measles, were lethal to the young. Despite continuing disease and poverty found among the Amerindians today, they have increased to more than eight million. The main groups are the Quechua- and Aymará-speaking tribes, but there are also some other small tribes in the highlands. Peru's lowland forest Amerindians were never subjugated by Incas or by Spaniards and continue to be fishermen, hunters, and foragers.

In the mid-1980s, at least 225,000 rain forest Indians were grouped in 37 tribes. A 20-year plan announced in 1968 called for the full social, economic, and political integration of Peru's Amerindian population. Nevertheless, in the 1980s, sociocultural distinctions based on ethnic background were endemic to Peruvian society, with whites (especially the criollos, those of early Spanish descent) at the top of the hierarchy, mestizos and cholos (acculturated Amerindians) below them, and monolingual Quechua- or Aymará-speaking Amerindians at the bottom.

## <sup>9</sup>LANGUAGES

Spanish is spoken, as in all Latin America, without the use of the sound represented by *th* in *thing* characteristic of Castilian. The majority of the population speaks only Spanish. At least seven million Amerindians, as well as many mestizos, speak Quechua, the native tongue of the Inca peoples, the use of which was outlawed following an Amerindian revolt in 1780. A decree of 27 May 1975 granted Quechua the status of an official language,

along with Spanish. Some words in modern English usage derived from Quechua are *alpaca*, *condor*, *pampa*, *coca*, *guano*, *Inca*, *llama*, *guanaco*, *vicuña*, *puma*, and *quinine*. Aymará is spoken by at least 700,000 people, especially in the department of Puno and around Lake Titicaca, and various other languages are spoken by tribal groups in the Amazon Basin.

## <sup>10</sup>RELIGIONS

Although about 80% of the population is nominally Roman Catholic, it has been estimated that only about 15% of all Catholics actively participate in religious services. The practice of Catholicism in Peru is often imbued with Amerindian elements. Between 7% and 12% of the populations are Protestants, including evangelical Christians (Lutherans, Calvinists, Anglicans, Methodists, Baptists, Presbyterians, Pentecostals, members of the Assemblies of God, the Christian Missionary Alliance, The Evangelical Church of Peru, and the Church of God) and non-evangelical Christians (Mormons, Seventh-Day Adventists, and Jehovah's Witnesses). Approximately 2.5% of the populace are members of other religions, including Jews, Muslims, Buddhists, and Shintoists. Atheists and agnostics account for 1.4%.

The constitution guarantees religious freedom, but it also recognizes the Roman Catholic Church as an "important element in the historical, cultural, and moral development" of the country. A 1980 concordat signed with the Vatican grants special recognition, and preferential treatment, to the Catholic Church as well.

## <sup>11</sup>TRANSPORTATION

The system of highways that was the key to the unification of the Inca Empire was not preserved by the Spanish conquerors. The lack of an adequate transportation system is still a major obstacle to economic integration and development.

As of 2004, Peru's railroad system consisted of 3,462 km (2,153 mi) of standard and narrow gauge railway lines. Of that total, the standard gauge accounts for 2,962 km (1,842 mi). Nationalized in 1972, the system is subject to landslides and guerrilla attacks. Operation of the system was given in concession in July 1999, for 30 years, to two companies: Ferrovias Central Andina S. A. (central railway); and Ferrocarril Transandino S. A. (south and southeast railways). The two principal railway systems, the Central and Southern railways, were built during the second half of the 19th century and were at one time owned and operated by British interests. The Central Railway, the world's highest standard-gauge railroad, connects Lima-Callao with the central sierra. The Southern Railway links Arequipa and Cuzco with the ports of Mollendo and Matarani and runs to Puno on Lake Titicaca, where steamers provide cross-lake connections with Bolivia. The Tacna-Arica Railway, totaling 62 km (39 mi) and linking Peru with Chile, is also a part of the nationalized system.

In 2002, of the estimated 72,900 km (45,300 mi) of existing roads, only 8,700 km (5,406 mi) were paved. The nation's highways are deteriorating, especially in the mountains, where landslides and guerrilla attacks often occur. The two primary routes are the 3,000 km (1,864 mi) north-south Pan American Highway, connecting Peru with Ecuador, Bolivia, and Chile, and the Trans-Andean Highway, which runs about 800 km (500 mi) from Callao to Pucallpa, an inland port on the Ucayali River. The 2,500-km (1,550-mi) Jungle Edge Highway, or Carretera Marginal de la Sel-

va, spans most of Peru along the eastern slopes of the Andes and through the selva. In 2003, there were 346,300 automobiles and 234,800 commercial vehicles. About 60% of inland freight and 90% of all passengers are carried by road.

The Amazon River with its tributaries, such as the Marañón and the Ucayali, provides a network of waterways for eastern Peru. Atlantic Ocean vessels go 3,700 km (2,300 mi) up the Amazon to Iquitos and, at high water, to Pucallpa. As of 2004, there were 8,808 km (5,473 mi) of waterways, of which 8,600 km (5,349 mi) consist of tributaries of the Amazon River and 208 km (129 mi) on Lake Titicaca. Peru has 11 deepwater ports and in 2005 its merchant fleet consisted of four vessels of 1,000 GRT or more, totaling 13,666 GRT. Only Peruvian ships may engage in coastal shipping. Callao, Peru's chief port, and Salaverry, Pisco, and Ilo have been expanded.

Much of Peru would be inaccessible without air transport. In 2004 there were an estimated 234 airports. In 2005, a total of 54 had paved runways, and there was also one heliport. The two principal airports are Col. Fco. Secada at Iquitos and Jorge Chavez at Lima. Faucett Airlines is the older of the two main domestic air carriers, which serve 40 airports and landing fields. The recently privatized Aeroperú, created in May 1973, provides both domestic and international services. In 2003, about 2.233 million passengers were carried on scheduled domestic and international flights. The Peruvian Air Force also operates some commercial freight and passenger flights in rain forest areas.

## 12 HISTORY

Archaeological evidence indicates that Peru has been inhabited for at least 12,000 years. Perhaps as early as 6,000 years ago, the first primitive farmers appeared. Between 500 BC and AD 1000 at least five separate civilizations developed. The Paracas, on the southern coast, produced elaborately embroidered textiles and performed brain surgeries, in Spanish “*trepanaciones craneanas*.” The Chavin, in the highlands, were noted for their great carved stone monoliths. The Mochica, on the north coast, produced realistic pottery figures of human beings and animals. The Nazca in the south were noted for the giant figures of animals in the ground that can be seen only from the sky. The Chimú were the most developed of these groups.

The Quechua Empire, whose emperors had the title Sapa Inca, was established in the 13th century. During the next 300 years, the extraordinary empire of the Incas, with its capital at Cuzco, spread its spiritual and temporal power to northern Ecuador, middle Chile, and the Argentine plains. By means of a system of paved highways, the small Cuzco hierarchy communicated its interests to a population of 8–12 million. The intensive agriculture of scarcely tillable lands, held in common and controlled by the state, created a disciplined economy. The *ayllu*, a kinship group that also constituted an agrarian community, was the basic unit of the Inca Empire, economically and spiritually. The Incas were sun worshipers and embalmed their dead. Their highly developed civilization used a calendar and a decimal system of counting and advanced architecture, but never developed a wheel.

Francisco Pizarro's small band of Spaniards arrived in 1532, shortly after a civil war between the Inca half-brothers Huáscar and Atahualpa. The empire collapsed in 1533. Lima was established in 1535 and promptly became the opulent center of the Viceroyalty

of Peru. It held jurisdiction over all Spanish South America except Venezuela. The Spanish imperial economy, with its huge land grants given by the crown and its tribute-collecting *encomiendas*, brought vast wealth and a new aristocracy to Peru. To Spain, Peru was a gold bank. Mines were exploited, and overworked Indians perished by the millions as food supplies declined.

Peru remained a Spanish stronghold into the 19th century, with modest internal agitation for independence. One notable exception was the abortive revolt led by a mestizo known as Tupac Amaru II in 1780. Otherwise, Peruvian royalists helped the crown suppress uprisings in Peru and elsewhere. In the end, Peru was liberated by outsiders—José de San Martín of Argentina and Simón Bolívar of Venezuela. San Martín landed on Peruvian shores in 1820 and on 28 July 1821 proclaimed Peru's independence. The royalists were not quelled, however, until the Spaniards were defeated by forces under Bolívar at the battle of Junín and under Antonio José de Sucre at Ayacucho in 1824. The victory at Ayacucho on 9 December put an end to Spanish domination on the South American continent, although the Spanish flag did not cease to fly over Peru until 1826.

Between 1826 and 1908, Peruvian presidents ruled an unstable republic plagued by rivalries between military chieftains (*caudillos*) and by a rigid class system. Marshal Ramón Castilla, president from 1845 to 1851 and from 1855 to 1862, abolished Amerindian tributes and introduced progressive measures. Between the 1850s and the mid-1880s, Peru experienced an economic boom financed by sales of guano to Europe. A program of road building was implemented, and an American entrepreneur, Henry Meiggs, was hired by the government to build a railroad network in the Andes. In 1866, a Spanish attempt to regain possession of Peru was frustrated off the port of Callao. An 1871 armistice was followed in 1879 by the formal recognition of Peruvian independence by Spain. The War of the Pacific (1879–84) followed, in which Chile vanquished the forces of Peru and Bolivia and occupied Lima from 1881 to 1883. Under the Treaty of Ancón, signed in October 1883, and subsequent agreements, Peru was forced to give up the nitrate-rich provinces of Tarapacá and Arica.

Peru entered the 20th century with a constitutional democratic government and a stable economy. This period of moderate reform came to an end in 1919, when a businessman, Augusto Leguía y Salcedo, who had served as constitutionally elected president during 1908–12, took power in a military coup and began to modernize the country along capitalistic lines. It was in opposition to Leguía's dictatorship, which had the backing of US bankers, that a Peruvian intellectual, Víctor Raúl Haya de la Torre, founded the leftist political party “American Popular Revolutionary Alliance” (APRA). In 1930, after the worldwide depression reached Peru, Leguía was overthrown by Luis M. Sánchez-Cerro, who became Peru's constitutional president in 1931 after an election which the Apristas (the followers of APRA) denounced as fraudulent. An Aprista uprising in 1932 was followed by the assassination of Sánchez-Cerro in April 1933, but the military and its conservative allies maneuvered successfully to keep APRA out of power. Manuel Prado y Ugarteche served as president during World War II, a period which also brought the eruption of a border war with Ecuador in 1941. The 1942 Protocol of Río de Janeiro, which resolved the conflict on terms favorable to Peru, was subsequently repudiated by Ecuador.

In 1945, Prado permitted free elections and legalized APRA. Haya de la Torre and the Apristas supported José Luis Bustamante y Rivera, who won the elections, and APRA (while changing its name to the People's Party) received a majority in congress. In 1948, military leaders charged the president with being too lenient with the Apristas and dividing the armed forces. A coup led by Gen. Manuel A. Odría ousted Bustamante, and APRA was again outlawed. Several hundred Apristas were jailed, while others went into exile. In January 1949, Haya de la Torre found refuge in the Colombian embassy, where he lived for the next five years. Under the rule of Odría and his military board of governors, the Peruvian economy flourished. Odría announced his retirement in 1956, and promoted his own candidate for the presidency. In a free election, the opposition candidate, former President Prado (tacitly supported by the outlawed APRA) returned to office.

Peru under the Prado regime was characterized by deep-rooted social unrest and political tension. Prado himself faded into the background, allowing Premier Pedro Beltrán to rule. Beltrán's economic moves stabilized Peru's financial picture, but the political problems remained. The election of 1962 was a three-way race between Haya de la Torre; Odría, back from retirement; and Fernando Belaúnde Terry, leader of the Popular Action Party (AP). Although Haya de la Torre got the most votes, he did not receive the constitutionally required one-third of the votes cast. The parties then went into negotiations, and a deal was struck giving Odría the presidency with an APRA cabinet. The military thereupon intervened, annulled the vote, and suspended the newly elected congress. The governing junta then announced new elections for July 1963, and the same candidates ran. This time, Belaúnde received 39% of the votes cast to become president.

Belaúnde embarked on a program of agrarian reform, as well as tax incentives to promote manufacturing. However, he was caught in a crossfire between the Odristas, who considered him a radical, and the Apristas, who believed he was not doing enough. Belaúnde's AP formed a coalition with the Christian Democratic Party to control the senate, but APRA and the Odría National Union controlled the Chamber of Deputies. On top of all this, Belaúnde had to deal with two separate leftist insurgencies in Peru's highlands. As Peru approached new presidential elections, the AP began to quarrel, and opposition parties continued to sabotage Belaúnde's programs. Then a scandal concerning the granting of oil concessions to the International Petroleum Co., a subsidiary of Standard Oil of New Jersey, rocked the government. A military junta exiled Belaúnde on 3 October 1968 in a bloodless coup.

In 1969, the military government, under the presidency of Gen. Juan Velasco Alvarado, began enacting a series of social and economic reforms. This time, they did not worry about opposition, ruling instead by decree. By 1974 they had converted private landholdings into agricultural cooperatives, nationalized a number of basic industries, and had mandated profit-sharing schemes for industrial workers. The military also reached out to Peru's long-neglected Amerindian population, making Tupac Amaru a national symbol, and recognizing Quechua as an official national language.

In August 1975, Velasco, whose health and political fortunes had both declined, was removed from office in a bloodless coup and replaced by Gen. Francisco Morales Bermúdez Cerruti, formerly his prime minister. The new regime moved to liberalize the

system, declaring a general amnesty for post-1968 political exiles and the legalization of some previously banned publications. They subsequently announced a return to civilian government and the creation of a "fully participatory social democracy." Some state-controlled enterprises were sold and worker-participation programs were scaled down. A Constituent Assembly was elected, and under the leadership of the perennial candidate Haya de la Torre they drew up a new constitution in 1979. New elections were held in 1980, and the AP and Belaúnde returned to power.

Belaúnde's second term was even less a success than his first. Adverse weather conditions and the world recession accompanied ill-conceived policies that led to triple-digit inflation. Austerity programs caused increased rates of unemployment and currency problems pinched the Peruvian middle-class. Perhaps most disturbing of all, a small Maoist guerrilla group, Sendero Luminoso (Shining Path) was operating openly in the Andes, especially around Ayacucho. Despite passage of an antiterrorist law in 1981, terrorist activities intensified. The AP's tenuous hold on the government was slipping. The AP won only 15% of the vote in the 1983 municipal elections. By 1985, with Peru on the brink of an economic collapse, the AP received a mere 7% of the vote.

The election of 1985 was historic in two ways: it was the first peaceful transfer of power in 40 years, and it brought the first president from APRA since the party's founding in 1928. Alán García Pérez, secretary-general of APRA, won with 53% of the vote and brought with him an APRA majority in both houses. The new president pursued populist economic policies aimed at controlling inflation, stimulating the economy, and limiting external debt repayments. To get inflation under control, García established a strict set of price controls, dropping inflation precipitously. Salaries were then allowed to increase, which led to a dramatic surge in the production of industrial and consumer goods. García also announced that external debt service would be set at 10% of export earnings, when several times that amount would have been required to keep up with interest payments alone.

While initially successful, these programs eventually ran aground. The IMF, a constant target of García, declared Peru ineligible for any further borrowing because of the size of Peru's external debt. After its initial boom, industrial production began to sag. Food shortages became common as suppliers refused to produce with artificially low prices. By 1990, inflation had climbed to four-digit levels.

García had some success in dealing with Peru's democratic left, but the militant left was another story. By increasing the stridency of his rhetoric, especially against the United States, García was able to capture leftist votes, seriously damaging the power of the United Left (Izquierda Unida—IU). However, Sendero escalated its attacks, coming down out of the mountains and striking at urban and suburban targets around Lima and Callao. In addition, the Tupac Amaru Revolutionary Movement (MRTA) merged with the Movement of the Revolutionary Left (MIR), and struck with increasing intensity. Although García had promised to get the military under control, it was soon clear that he could not function without them, and authorized a set of brutal counter-insurgent campaigns.

By 1990, Peruvians began to cast about for someone to deliver the country from its economic and social woes. Neither APRA nor the AP had any credibility left. In a surprise, Alberto Fujimori, the

son of Japanese immigrants, defeated conservative novelist Mario Vargas Llosa by 57% to 34%. Other candidates totaled a little over 9%. Fujimori immediately imposed a draconian set of austerity measures designed to curb inflation, which he had promised not to do during his candidacy. These measures caused a great deal of economic dislocation, but did reduce inflation to pre-1988 levels.

Fujimori moved aggressively to combat Sendero and the MRTA-MIR. He organized and armed rural peasants to counter the increased guerrilla presence, and gave the military a broad mandate to crack down on the insurgents. The capture of Abimaél Guzmán, leader of Sendero Luminoso, was hailed as a major blow against the movement, but the violence continued. Human rights continued to deteriorate, and the military became stronger.

Domestic opposition increased as Fujimori became increasingly isolated politically. Then, in April 1992, Fujimori shut down Congress and refused to recognize any judicial decisions. The autogolpe ("self-coup") received widespread popular approval and, most significantly, the military supported Fujimori's moves. In 1992, elections were held to create a Constituent Assembly charged with making constitutional reforms, including allowing Fujimori to run for a second five-year term in 1995. Both APRA and AP refused to participate, and Fujimori's New Majority/Change 90 party took a majority of seats. With full executive powers and a legislature full of supporters, Fujimori was able to enact whatever reforms he deemed necessary to improve Peru's economic and social situations.

A border war with Ecuador in early 1995 (in which both sides claimed victory) boosted Fujimori's popularity to a level that enabled him to win his unprecedented second-consecutive presidential election by a landslide, roundly defeating former UN secretary general Javier Perez de Cuellar. In May 1999, Fujimori and Ecuadorian President Jamil Mahuad formally ended the border dispute that dated from 1941. The accord gave Ecuador a small piece of Peruvian territory and navigation rights on some Peruvian rivers. In Ecuador, the peace treaty was considered a capitulation, turning the army against Mahuad.

Fujimori continued to rule by martial law, and took decisive steps to end terrorist opposition and violence in Peru. In 1996, the second-highest leader of Sendero, Elizabeth Cardenas Huayta, was arrested. The Tupac Amaru rebel movement was decimated in April 1997 when military commandos stormed the Japanese Embassy, where the rebels had been holding hostages since December 1996, and killed all 14 of the Tupac Amaru guerrillas who had carried out the siege (one hostage died in the raid, from a heart attack as a result of a gunshot wound).

Although the success of the embassy raid and the end of the hostage crisis at first raised Fujimori's popularity, it soon began to decline as Peruvians wearied of Fujimori's strong-arm tactics. Government attacks on the press and on certain members of the business community created a mounting dissatisfaction with the Fujimori regime. When Fujimori fired three Constitutional Tribunal judges for rejecting his claim to a third consecutive presidential term, Peruvians' tolerance was pushed beyond its breaking point and protests erupted. Continuing widespread poverty (despite recent years of economic growth), coupled with governmental abuses of power and violence eroded Fujimori's popular support. As the April 2000 elections came near, Fujimori at first remained silent on whether he would seek a third term. However,

political maneuvering by his supporters had ensured that no viable candidate would rise to face him.

Opposition parties were weak and divided. Former President Alan García, who had fled the country in 1992 and faced corruption charges, became a possible candidate. Fujimori's supporters in congress quickly approved a law banning any former officeholder facing criminal charges from running for election. But Fujimori did remain vulnerable; a two-year recession and widespread unemployment had left one of every two Peruvians living in poverty by mid-1999. Fujimori also was under a great deal of international pressure to rectify undemocratic conduct. In June 1999, members of the US House of Representatives said they were concerned at the "erosion of democracy and the rule of law" in Peru. A Senate subcommittee said it should be consulted before the White House gave any more American intelligence to Peru. Later that year, the Inter-American Court of Human Rights rejected Peru's bid to withdraw from its jurisdiction, saying it would continue to summon Peruvian officials to declare on reported abuses.

Within weeks of the April 2000 elections, Fujimori seemed all but certain of winning the presidency for a third term. Yet, a virtual unknown had suddenly become a viable candidate, winning support from throughout the country. Alejandro Toledo, a 54-year-old business school professor, was soon ahead of other challengers trying to defeat Fujimori. Toledo had a modest upbringing. His father was a bricklayer, and his mother sold fish at a street market. Of indigenous ancestry, Toledo quickly gained an important following in Peru's Amerindian communities, where Fujimori had found support. The election was held on 9 April, with several international organizations monitoring polling stations.

It soon became clear that Fujimori's supporters were trying to steal the election. There were unexplained delays in revealing the results, and widespread reports of voter fraud. The United States, the Organization of American States, the Atlanta-based Carter Center, and several other international organizations monitoring the election agreed that widespread fraud had tainted the elections and demanded a second presidential election between Fujimori and Toledo. Tens of thousands of Peruvians marched in peaceful protests demanding a second round. The other presidential candidates backed Toledo. Three days after the election, the electoral office said Fujimori had obtained 49.8% of the vote, not enough to capture the 50% plus one he needed to avoid a second round. Toledo received 40.3% of the vote.

The political crisis resulting from the rigged election became uncontrollable after Fujimori's chief advisor, Vladimiro Montesinos, was shown nationwide in a video, which he had produced, bribing an opposition congressman to join with Fujimori in September 2000. Dissenting politicians had leaked the tape to the media and with the knowledge that hundreds of similar tapes existed, Montesinos fled the country to Panama, which did not grant him political asylum. Montesinos then returned to Peru, but his whereabouts were unknown. Fujimori enacted a far-fetched search for the runaway Montesinos, but in the process Montesinos escaped by yacht to Costa Rica and later Venezuela. In a last hope to stabilize the political environment, Fujimori offered to hold new presidential elections in April 2001 in which he would not run. However, such gestures did not prevent the deepening of the institutional crisis and in an official APEC meeting in November, Fujimori flew to Japan and resigned via facsimile. He remained in

exile in Japan, and the Japanese government subsequently recognized him as a Japanese citizen. Congress impeached Fujimori, judging him “morally unfit to govern” and selected congressman Valentin Paniagua to be the president of the interim government (after the sitting vice president also resigned). During Paniagua’s presidency, Montesinos was found and extradited to Peru, and political calm was restored for a brief period.

A new presidential election was held in April 2001. Alejandro Toledo came in first with 36.5% of the vote, but he was forced into a runoff with former president Alan García (25.8%) who had returned to the country after Fujimori’s resignation. Toledo went on to win the runoff with 53.1% of the vote. But García’s impressive 46.9% transformed the former discredited president into a powerful actor in Peruvian politics.

Toledo became the first Peruvian of indigenous heritage to become president. Yet, his popularity and support during the first months of his administration began to fall as accusations of corruption and moral improprieties tainted his presidency. After failing to keep his campaign’s main promise to create jobs for all Peruvians within 90 days after his inauguration, protests and national strikes plagued the country as people demanded better services and wages, as well as less corruption. No real advancement in the economy was perceived, and further resentment was sparked by criminal acts of Toledo’s family and symbolic acts of government, such as increasing the president’s salary and attempting to increase the sales tax twice in one year. Security declined as crowds in poorer areas took the law in their own hands, even lynching corrupt local bureaucrats or criminals. Toledo’s efforts to prosecute those responsible for corruption and human rights violations during the Fujimori government also distracted him from the urgent social and economic challenges facing his country.

During his tenure, Toledo suffered from dismal approval ratings, ranging in the single digits. Politically, his party quickly crumbled, with many key followers leaving or beginning new parties. The political turmoil brought by his style of leadership led him to change presidents of congress five times, in vain attempts to appease the opposition and Peruvian citizens. His ineffectual leadership and the lack of discipline within his political party also hindered the process of democratic restoration in Peru.

### 13 GOVERNMENT

Prior to the military coup in 1968, Peru was governed under the constitution of 1933, which declared Peru to be a republic with a centralized form of government. Legislative powers were vested in a Senate and a Chamber of Deputies, of variable number. Both senators and deputies served their electoral districts for a period of six years. Under the constitution, executive power was held by the president, who, with two vice presidents, was elected for a six-year term, with a minimum of one-third of the vote, but could not be reelected until an intervening term had passed. Voting was obligatory for all literate Peruvian citizens aged 21 to 60.

The military leaders who seized control of the government in 1968 immediately disbanded the bicameral Congress. For the following decade, Peru was ruled by a military junta consisting of the president and the commanders of the three armed forces. The return to civilian rule began with the election of a Constituent Assembly in June 1978 and the promulgation of a new constitution

on 12 July 1979. Presidential elections were held in May 1980, and Peru’s first civilian government in 12 years took office in July.

After the *autogolpe* in 1992, the constitution was suspended. A new Constituent Assembly was elected and a new constitution was written. For the most part, all the major elements of the 1979 constitution were preserved, but presidents were allowed to run for one immediate reelection. Under the 1979 constitution, the president was popularly elected for a five-year term and could not be reelected to a consecutive term. The winning candidate had to win at least 50% of the vote or face a runoff election against the second-place candidate. The National Congress consisted of a 60-member Senate and a 180-member Chamber of Deputies. All elected legislators had five-year terms. The 1979 constitution eliminated literacy as a qualification for voting and made suffrage universal at age 18. In addition, there are more than 160 locally elected government councils.

### 14 POLITICAL PARTIES

Throughout most of Peru’s modern political history, personalities and power politics have counted for more than party platforms. There are nevertheless several parties with origins at least as far back as the 1950s.

The American Popular Revolutionary Alliance (*Alianza Popular Revolucionaria Americana*—APRA) was begun in 1924 by Víctor Raúl Haya de la Torre as a movement of and for Latin American workers. The five planks in its original platform were opposition to “Yankee imperialism,” internationalization of the Panama Canal, industrialization, land reform, and solidarity among the world’s oppressed. Controlling most of unionized labor, APRA was anti-Communist and anti-imperialist. Outlawed in 1931 and again in 1948, APRA was legalized in 1956. APRA has been historically opposed to the military, and political conditions in Peru from the 1930s until the mid-1980s have been dominated by hostility between APRA and armed forces leaders. After the death of Haya de la Torre in 1979, APRA was weakened by internal dissension. By 1985, new leadership and the failure of the Belaúnde government allowed APRA its first experience in power. Yet, the economic crisis experienced during the Alan García government severely hurt the party. Lack of leadership within APRA also hindered that party electorally. After Fujimori’s demise, APRA reemerged as a strong and unified party. In the 2001 presidential and parliamentary elections, APRA obtained 20% of the vote (26 seats in the 120-member chamber), consolidating its position as the second-largest and the most disciplined party in Peru.

The Popular Action Party (*Partido de Acción Popular*, or AP) was founded in 1956. Originally a reform party, it competed with APRA for the support of those favoring change in Peru. After an impressive campaign in 1956, the AP won the presidency in 1963, thanks to the military’s hatred of APRA. In the 1980 presidential election, Belaúnde received 45.4% of the votes cast, compared with 27.4% for APRA candidate Armando Villanueva del Campo. After Belaúnde’s tenure, AP has lost electoral appeal. In the most recent election, AP only obtained 4% of the vote and three seats in the chamber.

After the dissolution of congress by the 1968 military coup, political parties continued to exist, although they were denied any role in government until the late 1970s. Ideologically, the military

rulers between 1968 and 1980 reflected both strong socialist and nationalist principles.

The left has undergone a number of changes, partly as a result of military intervention, and most recently has been undermined by the activities of leftist guerrillas. The Peruvian Communist Party (Partido Comunista Peruano) was formed in 1929. Outlawed in 1948, it changed its name to the Revolutionary Labor Party (Partido Obrero Revolucionario—POR), which split in the 1980s into a number of small factions. The United Left (Izquierda Unida—IU), which formed to support the candidacy of Alfonso Barrantes Lingán, took 21.3% of the 1985 ballot. Barrantes was mayor of Lima until APRA unseated him in 1986, whereupon Barrantes resigned as IU president and the coalition dissolved.

The largest active guerrilla party is Sendero Luminoso (Shining Path), a Maoist group founded in 1964. Its founder, Abimael Guzmán, a former college professor, was captured by the government and is still imprisoned. Sendero's strength is concentrated around Ayacucho, in the sierra southeast of Lima. Its program includes not only attacks on bridges, power lines, and urban centers but also attempts to organize highland peasants. Sendero collects tribute from peasants in exchange for protection and encourages peasants not to sell their food crops to the cities.

A smaller group, the Tupac Amaru Revolutionary Movement (Movimiento Revolucionario Tupac Amaru—MRTA), merged with the Movement of the Revolutionary Left (MIR) to form a group that has been increasingly active. The MRTA-MIR is more urban-oriented and follows a more orthodox Marxist line than the eccentric Sendero.

President Alberto Fujimori came to office in 1990 as an independent, calling his party Change 90-New Majority. In the 1995 elections, Fujimori was reelected in a landslide victory and his party took 67 of the 120 congressional seats, giving it a clear majority (the next-highest number of seats, 17, went to the Union for Peru party, led by former UN secretary general Javier Perez de Cuellar who came in second in the presidential election).

Current president Alejandro Toledo also formed his own party before the 2001 election. Peru Posible was formed in 2001 around the then-popular figure of Toledo. With 26.3% of the vote, it captured 45 seats in the Assembly. But Peru Posible has shown little party discipline and it is unlikely that the party will survive beyond Toledo's own political career.

By 2005 the Popular Christian Party (Partido Popular Cristiano—PPC), aligned with former Prime Minister Antero Flores Arao, led in the political arena against Fujimori's newly named party Si Cumple and APRA which came in second and third. However, with growing discontent with the more traditional political parties, several new options emerged. Business leaders from the manufacturing conglomerate commonly known as Gamarra created their own political party named Solución Nacional. Another political party growing from the small and medium business sector is Proyecto Pais and Somos Peru, started by the former Mayor of Lima Alejandro Andrade. For the 2006 elections, 28 candidates were formally registered. Because political parties represent small constituencies and have uncertain political futures, the prospect of party politics remains uncertain.

## <sup>15</sup> LOCAL GOVERNMENT

In March 1987, President García promulgated a regionalization law that would replace the nation's 24 departments (and the constitutional province of Callao) with 12 regions having economic and administrative autonomy. Each region was to have an assembly of provincial mayors, directly elected members, and representatives of various institutions. However, due to inadequate funding and an uncertain political picture, these regions did not function and existed alongside the departmental structure, which was never dismantled. The 148 provincial subdivisions remained intact.

The 1979 constitution confirmed the legal status of about 5,000 Indian communities. The first local elections since 1966 took place in November 1980 and occur at three-year intervals. The 1993 constitution reaffirmed those indigenous rights and divided the country into 25 departments.

## <sup>16</sup> JUDICIAL SYSTEM

The Peruvian legal system is based generally on the Napoleonic Code. The 1993 constitution guarantees the independence of the judiciary. Peru's highest judicial body, the 16-member Supreme Court, sits at Lima and has national jurisdiction. The nine-member Court of Constitutional Guarantees has jurisdiction in human rights cases. Superior courts, sitting in the departmental capitals, hear appeals from the provincial courts of first instance, which are divided into civil, penal, and special chambers. Judges are proposed by the National Justice Council, nominated by the president, and confirmed by the Senate; they serve permanently until age 70. Justices of the Peace hear misdemeanor cases and minor civil cases.

The 1993 constitution abolished the death penalty (except for treason in time of war) and limited the jurisdiction of military tribunals; it also established the Public Ministry, including an independent attorney general, to serve as judicial ombudsman. Despite such reforms, the Peruvian judicial system still suffers from overcrowded prisons and complex trial procedures. Many accused persons (especially those accused of drug trafficking or terrorism) may spend months or even years in prison before they are brought to trial.

Although the judicial branch has never attained true independence, provisions of the 1993 constitution establish a new system for naming judges which may lead to greater judicial autonomy in the future. The 1993 constitution also provides for a human rights ombudsman (the Office of the Defender of the People), a Tribunal of Constitutional Guarantees empowered to rule on the constitutionality of legislation and government actions, a National Judiciary Council, and a Judicial Academy to train judges and prosecutors. The Tribunal of Constitutional Guarantees has seven members; three of them are in some way associated with the president or his party. To declare a law unconstitutional, at least six of the judges must agree.

## <sup>17</sup> ARMED FORCES

Peru's armed forces in 2005 totaled 80,000 active personnel, supported by 188,000 reservists. The Army numbered 40,000 members, whose equipment included 275 main battle tanks and 110 light tanks. The Navy had 25,000 active personnel including 4,000 Marines, 1,000 Coast Guard members, and 800 naval aviation per-

sonnel. The Air Force numbered 15,000 personnel, with 89 combat capable aircraft, including 18 fighters, over 73 fight ground attack aircraft, and 16 attack helicopters. The Navy operated 6 tactical submarines, 1 cruiser, 4 frigates, and 13 patrol/coastal vessels. About 77,000 paramilitary troops comprise the national police force. The defense budget in 2005 totaled \$1.08 billion.

## 18 INTERNATIONAL COOPERATION

Peru is a charter member of the United Nations, having joined on 31 October 1945; it belongs to ECLAC and several nonregional specialized agencies, such as the FAO, IAEA, the World Bank, ILO, IMF, UNESCO, UNIDO, and the WHO. Peru is a member of the WTO, APEC, the South American Community of Nations, the Arab Bank for Economic Development in Africa, the Andean Community of Nations, G-15, G-24, G-77, the Inter-American Development Bank, the Latin American Economic System (LAES), the Latin American Integration Association (LAIA), the OAS, and the Rio Group.

Peru is part of the Nonaligned Movement and a signatory of the 1947 Rio Treaty, an inter-American security agreement. The government has supported UN missions and operations in Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 1999). The country belongs to the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, Peru is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Since World War II, the Peruvian economy has developed rapidly, exhibiting a rate of growth that has been among the highest in Latin America. The strength of Peru's economy lies in the diversity of its natural resources. Silver and gold were the prized commodities of colonial Peru. In more recent times, lead, copper, zinc, iron ore, and since the late 1960s, petroleum have become important export earners. Fishing, including the production of fish meal, has become a major undertaking. Agriculture, which occupies about 4.9% of the work force, is sharply divided between two sectors: small-scale farming, producing food crops for subsistence and the domestic market, and export-oriented production.

Policies from 1960 to 1990 were aimed at social reform, but worsened and perpetuated poverty. Repeated experiments in social engineering created economic and institutional uncertainty and a prolonged decline in governance. Government spending grew steadily in the 1980s—until it collapsed in 1989—but spending in the production of public services fell. As a result, there was a steady degradation of the civil service and the provision of public goods that undermined productivity, fostered anarchy and public turmoil, and, ultimately, made poverty reduction impossible.

By 1990 per capita income was below that of 1966; political violence was claiming 3,000 lives each year; tax collections were less than 5% of GDP; and prices had increased by a factor of 27 million over three decades. In fact, Peru's economy had all but collapsed.

It was the finale of 30 years of misguided policies, economic mismanagement, and since 1980, rampant and escalating terrorism.

Since 1990 and the Fujimori regime, the government has pursued a bold reform agenda. It has strengthened the authority of the state throughout the country, defeating terrorism and fighting drug trafficking. It liberalized interest rates, the exchange rate, and international capital flows. It established the independence of the central bank and eliminated credit from the central bank to the government. It increased competition by opening the economy to trade with the rest of the world and eliminating public monopolies and price controls. It improved labor market efficiency by addressing tenure regulations and establishing more flexible terms for probationary periods and fixed-term contracts. It facilitated private ownership of land and developed a vast privatization program. It eliminated the state monopoly in social security and established the framework for a private pension fund system. And it eliminated public development banks and state intervention in the allocation of credit.

Since the reform program, Peru has enjoyed macroeconomic success, but the reforms have done little to alleviate poverty. Between 1993 and 1996, Peru's economy grew by 32%, in part due to the privatization of state companies; but thousands of Peruvians lost their jobs as a result. The rate of inflation fell steadily as a result of stringent monetary and fiscal measures. It dropped from over 7,650% in 1990 to about 40% in 1993; and 4% in 2000, one of the lowest inflation rates in Latin America. The Peruvian economy grew by 7.3% in 1997, but in 1998 and 1999 growth slowed to an estimated 1.8% and 3.8% respectively. A combination of El Niño weather that hurt the fishing and agricultural industries, and the Asian financial crisis which depressed metal prices, contributed to the Peruvian economic downturn. Growth for 2000 was forecast at over 5%.

In 2004, the economy expanded by 4.8%, up from 4.0% in 2003, but down from 4.9% in 2002; in 2005, the GDP growth rate was estimated at 4.7%. These steady growth rates contrasted with the erratic development patterns displayed by Peru in previous years. The country's overdependence on minerals and metals makes its economy susceptible to world market price fluctuations. Inflation has been fairly stable, and at 2.1% in 2005 it did not pose any major problems to the economy. In the same year, the unemployment rate has reached 8.4%, and while it is not endemic, it remained a matter of concern to policy makers.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Peru's gross domestic product (GDP) was estimated at \$168.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$6,000. The annual growth rate of GDP was estimated at 5.6%. The average inflation rate in 2005 was 2.1%. It was estimated that agriculture accounted for 8% of GDP, industry 27%, and services 65%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$860 million or about \$32 per capita and accounted for approximately 1.4% of GDP. Foreign aid receipts

amounted to \$500 million or about \$18 per capita and accounted for approximately 0.9% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Peru totaled \$43.00 billion or about \$1,587 per capita based on a GDP of \$60.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.5%. In 2001 it was estimated that approximately 26% of household consumption was spent on food, 17% on fuel, 13% on health care, and 5% on education. It was estimated that in 2003 about 54% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Peru's labor force was estimated at 9.06 million. As of 2001 (the latest year for which data was available), 9% of the population was employed in agriculture, 18% in industry, and 73% in the services sector. In 2005, the unemployment rate in metropolitan Lima was estimated at 8.7%. However, there was widespread underemployment across the country as a whole.

About 5% of the total labor force was unionized in 2001. Although unions have played an important role in Peruvian politics in recent decades, membership has declined as the informal labor sector grows. Begun in 1944 under Communist domination, the Workers' Confederation of Peru was reorganized in 1956 as the national central labor organization, now known as the Peruvian Revolutionary Workers' Center (Central de Trabajadores de la Revolución Peruana—CTRP). In 1980, this organization was incorporated into the Democratic Trade Union Front, which also includes the Communist-led General Confederation of Peruvian Workers, the National Workers' Confederation, and the APRA-affiliated General Confederation of Peruvian Workers (Confederación General de Trabajadores Peruanos—CGTP), which dates from 1944. In 1999, the CGTP called a one-day general strike, supported by 400,000 transit workers and other public-sector employees that paralyzed normal activity in Peru's major cities.

An eight-hour day and a 48-hour week are the maximum in Peru, with a weekly day of rest mandated. Legislation has been uneven, but the law requires in most cases that employers create healthy and safe working conditions. Dangerous and night work are regulated. The civil code prohibits labor by minors under 14; nevertheless, a recent study indicated that 8% of the workforce was between the ages of 8 and 16. Peru's labor stability laws provide that after three months of employment a worker may be dismissed only for a "serious offense." As of 2002, the minimum wage was \$128 a month.

## 2<sup>2</sup> AGRICULTURE

Only 4.3 million hectares (10.6 million acres), or 3.4% of the total land, was under cultivation in 2003. The area of available agricultural land per capita is one of the lowest in the nonindustrialized world. The major portion of the coastal farmland is devoted to the raising of export crops, while the sierra and the selva are used primarily for the production of food for domestic consumption. In various communities, the Inca system of cooperative labor and

land use still remains; fields are communally planted and harvested, and the produce or the profits divided.

The Agrarian Reform Law (ARL) of 1969 profoundly affected the whole of Peruvian agriculture. By 1973, most of Peru, except for the rain forest on the eastern side of the Andes, was brought under the reform program. Large private landholdings were abolished. Contrary to the expectations of farm workers, however, the appropriated land was not redistributed in small individual parcels. The large estates expropriated by the government were instead reorganized into cooperatives that maintained their administrative unity and were often incorporated into still larger units, known as social-interest agricultural societies, through which they were linked on a cooperative basis. By 1980, the expropriation and redistribution of land were largely complete. Out of the nine million hectares (22.2 million acres) of cropland and pasture originally expropriated, 8.8 million hectares (21.7 million acres) were allocated to 379,000 families. In addition, 2.9 million hectares (7.2 million acres) reverted to the state, and 1.1 million hectares (2.7 million acres) were distributed to 10,706 families in the selva. The bulk of land went to cooperatives, and only about 43,000 families received land, totaling 683,000 hectares (1,688,000 acres), in the form of private holdings. The government justified this program by arguing that the supply of arable land in inhabited zones of Peru is so small that equal distribution of the land would permit an allotment of less than 0.5 hectares (1.2 acres) per rural inhabitant; that community ownership of land accords with Peruvian traditions, especially the proto-socialist Inca heritage; and that improved equipment and technique are more easily implemented in larger enterprises. As it turned out, inadequate distribution systems and lack of technical expertise limited the productivity of the cooperatives, and by 1981, about 80% of them were operating at a loss. The free market policies of President Fujimori played an important role in Peruvian agriculture during the 1990s, virtually undoing the expropriative and redistributive policies of the ARL. In 1996, the Land Tenure Law was instituted, which was a step toward allowing land to be titled and used as collateral. The Water Law no longer ties water usage with land area, and mandates that farmers must pay for their use of water. Water is an extremely expensive commodity in the coastal valleys.

Peru's agriculture is highly diversified but not well integrated. In an irrigated section of the coastal desert lowlands, more than 1,195,000 hectares (2,953,000 acres) are cultivated with cotton, sugar, rice, soybeans, pulses, fruits, tobacco, and flowers. Modern methods are widely used in this area, and as a result, output has risen at a much faster rate than population growth. The sierra, in contrast, is relatively dormant, its lands being inferior or impractical to till. The selva contributes cocoa, fruits and nuts, tea, coffee, tobacco, and forest products.

In the 1980s, a combination of weak financing, heavy overseas borrowing, poor pricing policy, bad weather, and outmoded equipment contributed to a serious deterioration in the performance of the sugar industry. In 1996, the sugar industry's twelve collective farms were forced to change their management and ownership structure. Most had been inefficient, overloaded with administrative workers, and together owed the government \$250 million in back taxes and social security payments. Some of the collective farms began to sell portions of their capital to the private sector. Staples are potatoes and corn, grown throughout Peru, but with

very low yields. The leading commercial crops are rice, cotton, sugar, and barley. The principal agricultural deficiencies—wheat, livestock and meat, animal and vegetable fats, and oils—are covered by imports. Production of major crops (in thousands of tons) in 2004 included rice, 1,816; corn, 1,180; coffee, 145; wheat, 168; and beans, 83. Sugarcane and potato production in 2004 amounted to 7.9 million tons and 3 million tons, respectively.

Cultivation for illicit purposes of the coca leaf (the source of cocaine), which has long been used habitually and ritually by Andean Amerindians, has been a problem recognized by the Peruvian government and by the International Narcotics Control Board since the 1980s. The US government estimated there were 31,150 hectares (76,970 acres) of managed coca in 2003 (67% growing in the Upper Huallaga and the Apurimac valleys), the lowest level of coca cultivation in Peru since 1986. The total cocaine economy in Peru may amount to \$1.2–2.4 billion annually (2–4% of Peru's GDP). Nearly all of the wealth derived from the cocaine economy accrues to narcotics traffickers and other criminal elements.

### 2<sup>3</sup> ANIMAL HUSBANDRY

The cattle, sheep, hogs, goats, horses, and poultry brought by the Spaniards to Peru were strange to the Amerindians, whose only domestic animals were the hunting dog and the American members of the camel family—the llama, alpaca, and their hybrids—which served as carriers and for food, clothing, and fuel. Only recently domesticated, the vicuña is protected by law, and limited quantities of its fine fleece are marketed. Most Amerindians of the southern highlands are herders.

The southern Andes contain the major cattle ranges. Brown Swiss, zebu, and Holstein have been imported, and agronomists are crossbreeding stock to attain herds of greater weight or of more milk on less feed. Although 16.9 million hectares (41.7 million acres), or 13% of Peru's land area, are permanent natural pasture and meadow, areas suitable for dairy cattle are few. In 2005, the livestock population included 14,009,000 sheep, 5,100,000 head of cattle, 2,900,000 hogs, and 2,000,000 goats. Living at altitudes of 10,000 ft above sea level, Peru has an estimated three million alpacas, or 80% of the world's alpaca population. There are also about 150,000 vicuñas, up from 5,000 in the 1960s. Production of alpaca hair fiber amounts to about 4,000 tons per year. Livestock output in 2005 included 152,000 tons of beef, 90,000 tons of pork, 34,000 tons of mutton, 650,000 tons of poultry, 180,000 tons of eggs, and 1,311,000 tons of milk.

### 2<sup>4</sup> FISHING

Commercial deep-sea fishing off of Peru's coastal belt of over 3,000 km (1,860 mi), is a major enterprise. Peruvian waters normally abound with marketable fish: bonito, mackerel, drum, sea bass, tuna, swordfish, anchoveta, herring, shad, skipjack, yellowfin, pompano, and shark. More than 50 species are caught commercially. There are over 40 fishing ports on the Peruvian coast, Paita and Callao being the most important centers.

The Peruvian fishing industry, primarily based on the export of fish meal, used in poultry feed, is among the largest in the world. Fish meal production in 2004/05 was 1.5 million tons; fish oil, 210,000 tons. Only 90 of the 110 fish meal plants on Peru's coast were operating in 2004. Peru's fishing sector led the world during the mid-1960s, although production since then has fluctuated

radically. In the 1970s, overfishing nearly led to the disappearance of the anchovy resource. The fish meal and fish-processing industry is managed by Pescaperú, which was founded in 1973.

The key to Peru's fishing industry in any given year is the presence or absence of El Niño; this warm ocean current displaces the normally cool waters deep in the Pacific, thereby killing the microorganisms upon which other marine life depends. The recurrence of El Niño causes the disappearance of anchoveta and a sharp fall in the catch of other species. The average annual catch during 1991–2000 was 8,515,000 tons. The total catch in 2003 was 6,089,660 tons, second highest in the world after China. That total included 5,347,187 tons of anchoveta, and 217,734 tons of Chilean jack mackerel. Exports of fish products in 2003 amounted to \$1.03 billion, with fish meal accounting for 72%. The major export markets are China, Germany, Japan, and Taiwan.

To suppress invasion of their rich fishing grounds by foreign powers, Peru made formal agreements with Chile and Ecuador to extend the rights to their coastal waters out to 200 nautical mi. Violations of the proclaimed sovereignty by Argentine and US fishing fleets in 1952 and 1954 gave rise to shooting incidents. Since then, US fishing boats have occasionally been seized and fined or required to purchase fishing licenses; after eight US tuna boats were taken in November 1979, the United States retaliated by imposing a temporary embargo on Peruvian tuna.

### 2<sup>5</sup> FORESTRY

About 51% of Peru's land area, or approximately 65.2 million hectares (161.1 million acres), is covered by tropical rain forests. Most of Peru's exploitable timberlands lie on the eastern slopes of the Andes and in the Amazon Basin; the arid Pacific watershed cannot support forestlands. The trees of commercial importance on the coastal plain are amarillo, hualtaco, and algarroba (cut for railway ties and for charcoal fuel). Lumber from planted eucalyptus is used locally in the sierra for ties and for props by the mining industry. Eastern Peru, however, with its abundance of rain, consists of approximately 70 million hectares (173 million acres) of forestland (more than half the country's area), most of it uncut. A precise indication of Peru's volume of standing timber has never been ascertained. The selva contains Peru's only coniferous stand, where ulcumano is logged. Cedar, mahogany, moena, tornillo, and congona (broadleaf hardwoods) are also logged. The rain forests of the Amazon lowlands contain cedar, mahogany, rubber (wild and plantation), and leche caspi (a chewing-gum base). Commercially important are tagua nuts, balata, coca, fibers, and a wide range of medicinal plants.

Lumbering is conducted chiefly in the selva, where Pucallpa and Iquitos are the main sawmill centers. Mahogany is now the principal lumber export product, sent mainly to the United States and Europe; mahogany and Spanish cedar trees supply about half of Peru's lumber output, which falls far short of the nation's needs. In 2004, production of roundwood totaled 10,486,000 cu m (370 million cu ft).

### 2<sup>6</sup> MINING

The mining of metals was Peru's leading industry in 2003. Among the minerals exported in that year were gold, copper, zinc, lead, silver, tin, and iron. In 2003, the country's mining industry accounted for \$4.6 billion or more than 51% of total export revenues,

which came to \$9 billion in that year. Peru was the second-largest producer of silver, after Mexico, the third-largest producer of zinc, after China and Australia, and the fourth-largest producer of lead, after Australia, China, and the United States. Peru's zinc output represented 12% of world concentrate output, almost 62% of Latin America's concentrate, and 29% of refined zinc. Other leading industries were cement, steel, and metal fabrication in 2003.

Gold output (from mines and placers) was about 172,000 kg in 2003, up from 157,530 kg in 2002. Of that total, 159,770 kg came from mines. Reserves (metal content) totaled 3.5 million tons, excluding placer deposits. The southeastern Andes had well-known gold placers on the Inambari River and its tributaries. Placer gold production, which accounted for about 14% of total gold output, was concentrated in the Inca and the Mariategui regions, and gold was also recovered from placers in rivers and streams throughout the jungle.

Copper mine output in 2003 (metal content) was 842,578 metric tons, down slightly from 844,553 metric tons in 2002. The country's copper reserves totaled 57.4 million tons (metal content). Southern Peru Copper Corp. (SPCC) remained the largest copper producer, with a total output of 326,900 metric tons of copper metal from its mine operations at the Cuajone open pits and its solvent extraction and electrowinning cathode plant at Toquepala. Peru's second-largest copper producer, Compañía Minera Antamina S.A., owned the \$2.3 billion copper-zinc Antamina megaproject (Huari, Ancash Department), which could become the world's third-largest producer of zinc (163,000 tons per year) and seventh-largest producer of copper (272,000 tons per year). The project included the Antamina open pit and concentrator, a 302-km slurry pipeline, port facilities in Huarney, and a new access road, power line, and town site. The new mine had a capacity of 275,000 tons per year; the concentrator, 70,000 tons per day. Antamina's revised proven and probable ore reserves were 559 million metric tons at a grade of 1.24% copper, 1.03% zinc, 13.71 grams per ton of silver, and 0.029% molybdenum, or 1.8% equivalent copper.

Zinc mine output (metal content) was 1,372,790 metric tons in 2003, up from 1,232,997 metric tons in 2002. Mined lead output was 308,874 metric tons in 2003, up from 305,651 metric tons in 2002. Cía Minera Volcán S.A. (CMA) was Peru's largest private producer of zinc. CMA had operations in the Yauli mining district and the Paragsha property, in Cerro de Pasco. Total reserves of zinc (metal content) amounted to 16 million tons; lead, 3.5 million tons.

In 2003 Peru produced 2,921 metric tons of mined silver (metal content), up from 2,870 metric tons in 2002. Medium-sized companies accounted for three-quarters of production. Reserves totaled 36 million tons (metal content).

Production of iron ore and concentrate (gross weight) was 5,239,000 tons in 2003, up from 4,594,000 tons in 2002. Shougang Hierro Perú S.A., a subsidiary of China's Shougang Corp., continued to be Peru's sole iron ore producer. Iron ore reserves (metal content) totaled 830 million tons. Exploitation of iron ore, centered in southern Peru, was exclusively for export until the steel mills at Chimbote began operations in 1958.

The metals antimony, white arsenic, bismuth, indium, manganese, molybdenum, and tin were extracted in various parts of

Peru. No cadmium or chromium was mined in 1998–2001, or in 2003, nor was any tungsten mined in 1999–2001, or 2003.

Of the 30 industrial minerals mined commercially in Peru, the most important were salt, gypsum, marble, and limestone. Peru also produced barite, bentonite, boron materials (borates), hydraulic cement, chalk, common clay, fire clay, diatomite, dolomite, feldspar, flagstone, granite, kaolin, lime, nitrogen, onyx, phosphate rock, pyrophyllite, quartz, quartzite, sand and gravel (including silica sand), marl shell, slate, sulfur, talc, and travertine. Minero Perú had proven reserves of 550 million tons of phosphate rock at its Bayóvar Project, in the Sechura Desert. The Bayóvar Project had tremendous export opportunities to the Asia-Pacific region via the port of Paita.

Peru has long been famous for the wealth of its mines, some of which have been worked extensively for more than 300 years. Through modern techniques and equipment, a vast potential of diverse marketable minerals was gradually becoming available from previously inaccessible regions. Because many of the richest mines were found in the central Andes, often above 4,300 m, their operations have been wholly dependent on the Andean Indians' adaptation to working at high altitudes. Copper, iron, lead, and zinc were mined chiefly in the central Andes, where all refining was done at La Oroya, the metallurgical center.

The government no longer had exclusive control over exploration, mining, smelting, and refining of metals and fuel minerals, although, in principle, all mineral and geothermal resources belonged to the government. The role of the government has been limited to that of a regulator, promoter, and overseer. Individuals and private companies were allowed to hold mining permits. As of 2001, the government has privatized 90% of its assets in mining, a greater rate than in any other sector, with some mining tenders still pending, and several mining prospects waiting to be privatized, which could generate \$2.14 billion. The promotion of domestic and foreign private investment via a sweeping privatization process and the formation of joint ventures started off at a vigorous pace in 1991 and has continued at a slower pace. Private firms, most of which were controlled by local interests, dominated medium- and small-sized mining operations. More than 100 foreign mining companies have been established in Peru since 1990. Of the \$10.02 billion of foreign direct investment in 2001, \$3.32 billion was in the minerals sector, \$1.67 billion of it in mining. In 2001, \$1.4 billion worth of mine and facility expansions were completed, and \$2.6 billion worth of mine projects were completed. In addition, \$3.3 billion of investment were projected for mine projects with feasibility studies, and \$1.3 billion were expected in projects with advanced exploration work. The state was expecting Minero Perú's projects pending privatization to generate \$2.1 billion of investment. Mining, energy, telecommunications, and related industries were the most attractive sectors of the Peruvian economy. Privatization of Centromín, Electrop Perú S.A., Minero Perú, Petro Perú, and the banking sector was expected to continue to generate investments in every sector of the economy, particularly in the mining and energy sectors. Future foreign investments in the minerals sector were projected to be \$17 billion, the largest amount of capital committed to date, with \$9.1 billion expected in the mining sector for the 2001–2009 period.

Peru was facing political upheavals, and the mining industry was increasingly on the defensive. Development of MYSAs's Cerro

Quilish gold deposit was stilled by the city of Cajamarca to protect its major watershed. The citizen group Coordinadora Nacional de Comunidades Afectadas por la Minería (Conacami) indicated that it had the right to participate and to be consulted on mineral policies that involved communities affected by mining operations.

The junta that came to power in 1968 pursued a steady program of nationalization. In 1971, state mining rights were assigned to the government enterprise *Mínero Perú*. The General Mining Law of 1992 made legal procedures to obtain mining rights easier, and amendments in 1996 guaranteed protections to mining ventures and contracts. These laws have ensured more favorable exploration and production contract terms for investors. Within the framework of four 1990s laws promoting investment in mining and natural resources and dealing with foreign and private investment, more than 250 domestic "Stability and Guarantee" contracts have been signed since 1993.

## 27 ENERGY AND POWER

Peru, as of 1 January 2005, had proven oil reserves of 253 million barrels, a crude oil refining capacity of 192,950 barrels per day, and proven natural gas reserves of 8.7 trillion cu ft.

Oil production in 2004, was estimated at 94,120 barrels per day, with crude oil production accounting for 79,900 barrels per day. However, domestic oil demand averaged an estimated 161,000 barrels per day in 2004, making Peru a net oil importer. Net oil imports in 2004 averaged an estimated 66,880 barrels per day.

Natural gas production and domestic demand in 2002 were each estimated at 15.5 billion cu ft. However, Peru's Camisea project, when it does come fully on-stream, is seen as making Peru a net exporter of natural gas. September 2004 marked the first full month of production for the Camisea field, producing 3.68 billion cu ft of natural gas.

Peru's electric power generating capacity in 2002 totaled 5.912 million kW, of which hydroelectric capacity came to 2.965 million kW and conventional thermal capacity accounted for 2.940 million kW. Geothermal/other capacity accounted for 0.007 million kW. Electric power output in 2002 totaled 21.749 billion kWh, with hydroelectric generation providing the largest share at 17.860 billion kWh. Conventional thermal sources provided 3.705 billion kWh, and geothermal/other 0.184 billion kWh. Demand for electric power in 2002 totaled 20.227 billion kWh.

## 28 INDUSTRY

Manufacturing in Peru began with the establishment of consumer goods industries, which still dominate the sector. Smelting and refining are among Peru's most important industrial enterprises. As part of a long-term industrial program through hydroelectric power development, the Chimbote steel mills began to function in 1958; by 1965, capacity reached 350,000 ingot tons. A number of foundries, cement plants, automobile assembly plants, and installations producing sulfuric acid and other industrial chemicals have also come into operation. The expansion of the fish meal industry necessitated the construction of new plants as well as the establishment of many subsidiary industries: boatyards, repair and maintenance installations, and factories for the production of tinplate and cans, paper, jute bags, and nylon fishnet. Once a ma-

ior guano exporter, Peru now produces synthetic fertilizers high in nitrogen and related industrial chemicals.

The country's sustained economic growth has been the result of a well diversified economic base. In 1996, the most dynamic area was agriculture, with crop production rising by 7% due to substantial increases in industrial crops like cotton, soy bean, tea, and asparagus. Other industries showing important growth during the late 1990s were the mining of metals, petroleum, and construction. In 1998, it was estimated that an average of 11 new oil wells would be drilled per year until 2003, but in 1999 oil exploration slowed when a couple of dry wells were drilled. There are five oil refineries operating in Peru, with a production capacity of 182,000 barrels per day. In 2000, a concession was signed to develop the 13 trillion cubic foot (Tcf) Camisea natural gas field, and the development of this field may lead to the establishment of a natural gas market in Peru. Growth in construction during 1998 skyrocketed by 12%, with projects related to the repair of an estimated \$1 billion in El Niño damage, and road building projects. Revenues from manufacturing production fell by 3%, however, because of low agricultural production and low world metals prices. By 2003, the economy was recovering. Textile production was an increasingly important sector, as was the production of leather goods, shoes, and the Alpaca and Vicuna sectors. In 2003, it was expected that 150,000 new jobs would be created in textile manufacturing.

The industrial production growth rate in 2005 was 6.6%, higher than the overall GDP growth rate, and an indicator that industry was an economic growth engine. In 2005, industry accounted for 27% of the GDP and it employed less than 20% of the labor force. Services were by far the largest sector, with a 65% share of the economy, while agriculture was the smallest one, with an 8% share.

## 29 SCIENCE AND TECHNOLOGY

The Lima Academy of Exact, Physical, and Natural Sciences was founded in 1939. In 1996, Peru had 18 other scientific and technological learned societies and 15 scientific and technological research institutes. The Natural History Museum of the National University of San Marcos, founded in 1918, and the Geological Museum of the National University of Engineering are both located in Lima. In 1996, Peru had 34 universities that offered courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 34% of college and university enrollments. According to the Industrial Law of 1982, enterprises may invest up to 10% of their income tax-free in research and development (R&D) projects approved by the National Council of Science and Technology and carried out by the national universities.

In the period 1990–2001 there were 233 scientists and engineers and 1 technician engaged in research and development (R&D) per million people. In 2002 spending on R&D totaled \$138.196 million, or 0.10% of GDP. High technology exports in that same year totaled \$24 million, or 2% of the country's manufactured exports.

## 30 DOMESTIC TRADE

A disproportionate amount of Peru's purchasing power is concentrated in the Lima-Callao area, where selling practices increasingly follow the pattern of more commercially developed Western countries. In the highlands, where more than 60% of the population lives, retailing is done at the market level. Only about 17% of

Peruvians shop in supermarkets. The fiesta day, or weekly market, for the Andes Amerindian is an important social commercial affair, where objects made at home are bartered. Barter is also the method of exchange among the first Amerindians of the Amazon Basin. Cooperative retail outlets have been established in the large mining concerns and agricultural estates. Installment sales are increasing on vehicles, refrigerators, television sets, and agricultural and industrial equipment. Franchising has grown slowly in recent years, with US-based companies predominating. Direct market for services has become popular as well. An 18% value-added tax applies to most imported goods.

Shops and some businesses are open from 10:00 AM to 1 PM, and 4 to 8 PM, Monday through Saturday. Banks transact public business from 8:30 AM to 4:00 PM. Business hours are normally 9 AM to 5:30 PM, Monday through Friday. In the provinces, openings and closing are usually one hour earlier.

### 31 FOREIGN TRADE

In general, Peru exports raw materials and imports capital goods and manufactures. The United States is Peru's largest trading partner, and exports include mineral fuel oil, refined silver and jewelry, lead ore, and concentrated coffee. Main imports from the United States include cereals, refined oil, machinery parts, chemicals, and electrical machinery.

Peru's major export commodities are gold (17%), copper and its ores (15%), animal feed (13%), and zinc (8.3%). Other exports include refined petroleum products (4.0%), coffee (3.3%), refined silver (2.6%), and lead (2.4%).

In 2005, exports reached \$16 billion (FOB—Free on Board), while imports grew to \$12 billion (FOB). In 2004, the bulk of exports went to the United States (29.5%), China (9.9%), the United Kingdom (9%), Chile (5.1%), and Japan (4.4%). Imports included intermediate goods, capital goods, and consumer goods, and mainly came from the United States (30.3%), Spain (11.5%), Chile (7.2%), Brazil (5.4%), and Colombia (5.2%).

### 32 BALANCE OF PAYMENTS

Peru's export earnings depend heavily on world market prices in metals and fish meal. Peru maintained a favorable balance of trade from 1966 to 1973; but a surge in the price of oil imports, a decline in world copper prices, and a drop in fishing exports reversed this trend. The trade balance began to improve in 1976 and 1977, but rising interest payments kept current accounts at a loss. An austerity program was adopted in 1978; by the end of the year, Peru had reduced the deficit on current accounts, thanks in part to IMF loans. The surplus rose in 1979 and 1980 because of an extremely favorable trade performance and an additional infusion of public-sector capital. During the 1980s, however, Peru's export position was negatively affected by the worldwide recession and by lower world mineral prices, resulting in a negative trade balance, which, together with rising interest payments on the foreign debt to the IMF, led once again to an overall payments deficit. During 1990, Peru experienced a trade and capital surplus, but a deficit in the current account. Exports fell, while imports grew largely due to overvalued exchange and because government subsidies promoting exports were eliminated. With the reforms of the Fujimori government during the 1990s, trade liberalization more than doubled the overall trade volume during the decade. Unfor-

tunately, the current account balance remained low; between 1992 and 1999 the balance of payments deficit was over 5% of GDP. In 2002, the IMF approved a two-year \$316 million standby agreement with Peru.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Peru's exports was \$7.3 billion while imports totaled \$7.4 billion resulting in a trade deficit of \$100 million.

The International Monetary Fund (IMF) reported that in 2001 Peru had exports of goods totaling \$7.11 billion and imports totaling \$7.2 billion. The services credit totaled \$1.5 billion and debit \$2.3 billion.

Exports of goods and services reached \$15 billion in 2004, up from \$11 billion in 2003. Imports increased from \$11 billion in 2003 to \$13 billion in 2004. The resource balance was consequent-

ly slightly negative in 2003 (-\$18 million), and positive in 2004 (\$2 billion). The current account balance followed a similar path, improving from -\$935 million in 2003 to -\$10 million in 2004. Foreign exchange reserves (including gold) grew to \$12.7 billion in 2005, covering more than a year of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Reserve Bank, the sole bank of issue, was established in Lima in 1931 to succeed the old Reserve Bank. Also created in 1931 was the Superintendency of Banks and Insurance, an agency of the Ministry of Finance, which defines procedure and obligations of banking institutions and has control of all banks. The government-owned National Bank (Banco de la Nación) not only acts as the government's tax collector and financial agent, but also is Peru's largest commercial bank. Another government agency, the Caja de Ahorros, provides secured loans to low-income borrowers. The government-owned development bank is COFIDE. There are 15 commercial banks in Peru.

Peru's banking sector has grown rapidly as a result of the economic recovery and capital inflows into the financial system. A decade ago, in 1987, the president of Peru was contemplating nationalizing the entire system. Shortly after his election, Mr. Fujimori decreed the abolition of the state's development and mortgage credit banks. Today, only COFIDE offers state-regulated development assistance, but as a second-tier bank channeling funds from other institutions and without the powers to raise financing on its own account. Along with the subsidized state development banks, a host of savings and loans cooperatives have disappeared, victims of financial mismanagement, hyperinflation, and embezzlement. With them went the savings of many lower and middle-class Peruvians, who have been left with a distrust of the financial system.

Financial operations and assets remain concentrated: four banks account for over 60% of all loans, and almost three-quarters of all deposits in the system. During 1997, commercial bank loan portfolios grew by approximately one-third. Total assets of the banking system amounted to \$18.8 billion in 2001. Peru is severely underbanked. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$6.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$17.4 billion. That year, the discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 14%.

The privately owned Lima Stock Exchange (Bolsa de Valores de Lima—BVL) regulates the sale of listed securities. Securities exchanges actually began in Lima in 1860, but the stock exchange in its current form was founded in 1971. There was a long bull run in 1992 as the economy stabilized after the coup and progress towards pacification was made. After falling by 27% in 1999 and 34% in 2000, the dollar value of the index dropped only 2.6% in 2001. At the end of 2001, 207 companies were listed on the BVL, and the market capitalization was \$11.1 billion. As of 2004, there were 194 companies listed on the BVL, which had a market capitalization of \$20.115 billion. In 2004, the IGBVL Index rose 52.4% from the previous year to 3,710.4.

### 3<sup>4</sup> INSURANCE

Insurance companies are controlled through the Superintendency of Banks and Insurance of the Ministry of Finance. According to a law of 1952, branches controlled by foreign insurance companies may not be established in Peru, although foreign insurers may operate through Peruvian subsidiaries in which they hold only minority interest. A majority of stockholders and directors of locally incorporated stock companies must be Peruvian nationals. The National Bank assumes exclusive control of all foreign reinsurance operations, as well as the writing of export credit insurance. In 2003, a total of \$873 million in direct premiums were written, with \$507 million of the total comprised of nonlife and \$366 million of the total was life insurance. For that same year, Peru's top nonlife insurer was Rimac Internacional, which had gross written nonlife premiums of \$174.5 million, while the country's leading life insurer, El Pacifico Vida, had gross written life insurance premiums of \$94 million. Worker's compensation and employees' life insurance are compulsory.

### 3<sup>5</sup> PUBLIC FINANCE

The central government publishes an annual budget representing the government's consolidated accounts (including budgetary and extrabudgetary transactions). Indirect taxes, including import and export duties, constitute the major source of government revenues. In the early 1970s, the number of state enterprises increased rapidly, which led to increased public-sector spending. As the revenues from state enterprises lagged behind expenditures, the budget deficit increased to about 10% of GDP during 1975–77, as compared to 1.7% during 1970–72. As a result of a fiscal stabilization program, the deficit was reduced to 6.5% of GDP in 1978, and to 2.5% in 1985. In 1990, the Fujimori administration began to pursue tighter fiscal policies and attempted to avoid domestic financing of the deficit. The consolidated public sector deficit, which in 1990 was 6.5% of GDP, fell to 2.5% by 1992, despite the suspension of most foreign financing after the 5 April 1992 coup.

(...) data not available or not significant.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The IMF program allowed a foreign-financed deficit of 2.9% of GDP in 1993 for increased social sector spending and investment in infrastructure. However, with lower than expected foreign financing and tax collection, the deficit that could be maintained while meeting the public sector external debt obligations was only equivalent to about 2% of GDP. The privatization of state enterprises fattened the government's coffers between 1992 and 2000. The budget deficit for 2000 was 2.5% of GDP due to a rise in public sector wages of 16%, and lower-than-expected revenues from privatization that year.

The US Central Intelligence Agency (CIA) estimated that in 2005 Peru's central government took in revenues of approximately \$21.8 billion and had expenditures of \$22.4 billion. Revenues minus expenditures totaled approximately -\$600 million. Public debt in 2005 amounted to 41.8% of GDP. Total external debt was \$30.18 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in millions of nuevos soles were 34,742 and expenditures were 38,542. The value of revenues in millions of US dollars was \$9,988 and expenditures \$6,645, based on a market exchange rate for 2003 of 3.4785 as reported by the IMF. Government outlays by function were as follows: housing and community amenities, 0.4%; health, 12.6%; education, 6.7%; and social protection, 40.2%.

### 36 TAXATION

The basic corporate tax rate is 30%. However, incentives are available to investments made in mining, oil and gas licensing, and services contracts, for investments in manufacturing located in jungle areas, in tax-free zones, and in border areas. Capital gains are generally taxed as income at the corporate rate. Also, a special regime for small businesses and for some low-income companies imposes a monthly income of 2.5%. There is also a 4.1% tax on the distribution of dividends to nonresidents and individuals. However, dividend payments are not taxed if they are made between resident companies. Foreign dividends are part of taxable income. Branches of foreign companies are subject to the same taxes as Peruvian companies.

The personal income tax is charged at progressive rates of 15%, 21%, and 30%. Various deductions and allowances reduce the individual's taxable income. 20% of the salary and wages paid by a company to its employees is tax-exempt.

The main consumption tax is Peru's value-added tax (VAT) with a standard rate of 19%, of which 2% goes to the local level as a municipal promotion tax. Exports of goods, services, and chattels are exempt for VAT. Other taxes include excise, social security, healthcare pension fund, and profit-sharing taxes.

### 37 CUSTOMS AND DUTIES

Import licenses are not required on most products. Ad valorem duties are levied at 4% (on 23% of products), 12% (on 45% of products), or 7% (on 15% of products, especially textiles, footwear, and some agricultural products) of CIF value (cost, insurance, and freight). The remaining items are assessed duties rang-

ing from 17–20%. Tariffs range from a total of 4–20%, averaging 11.6%.

Export processing free zones offer investors exemptions from customs duties for imports and exports. Peru does not adhere to the common external tariff of the Andean Community, but is a member of the group, which opened a free trade zone with MERCOSUR in 2000.

### 38 FOREIGN INVESTMENT

The British were the first to gain prominence as investors in Peru, when they took power of the railways in payment of debt to Peruvian bondholders in 1890. They developed oil fields and a long distance telephone and cable service. In the mid-1950s, Swiss, German, and Canadian interests became active in the transportation and communication services. Private US interests ventured capital and technical aid to all sectors, especially the oil and mining industries. The fishing industry from the beginning was fostered by the United States. Private companies operated tuna fleets in Peruvian waters, as well as canneries.

Between 1959 and 1961, following passages of industrial development laws and the signing of an investment guarantee treaty with the United States, under which private US investors could obtain federal risk insurance against currency inconvertibility, total foreign investment almost doubled, rising from \$686 million to \$1,274 million. US investments continued their rapid growth rate until the 1968 coup, after which Peru's military rulers pursued a nationalist course, characterized by selective expropriation of foreign-held interests in sectors such as mining, finance, and infrastructure. In addition, a variety of strictures were placed on the uses of foreign capital, as well as on the relative proportion of foreign-to-local control. US-linked firms were the hardest struck by these measures, causing a strain in relations. In February 1974, a US-Peruvian agreement provided a compensation schedule for properties taken over during 1968–73. At the end of 1973, the US investment column stood at \$793 million, less than half of the total a decade earlier. Private investments in the 1970s continued to lag, although some new funding was being advanced in mining and petroleum. From 1977 through 1980, net direct capital investment totaled only \$177 million, or less than the total for 1981 (\$263 million), the first year after the restoration of civilian rule. In 1984 and 1985, after the economic slump, net direct investment was \$89 million and \$53 million, respectively.

After 1980, the official attitude toward foreign investment changed substantially. The 1979 constitution guarantees protection of private property, whether Peruvian or foreign, and permits foreign jurisdiction for international financial contracts. The agency responsible for foreign investment is the National Commission of Foreign Investment and Technology (Comite Nacional de Inversion Extranjera y Tecnologia, or CONITE). In late 1986, the Andean Group relaxed its regulations on foreign investment; this change was expected to benefit Peru. About 1,000 foreign companies were represented in Peru in the 1980s, either directly or through subsidiaries or affiliates.

The trade and investment climate in Peru improved significantly after President Fujimori assumed office in July 1990. Foreign investor confidence in Peru should be maintained with Fujimori as the key element in sustaining capital inflows. The Foreign Investment Promotion Law and the Framework Law for Private Invest-

ment Growth outlined the government's support for privatization and foreign investment in 1991. From 1991 to 1997, privatization sales totaled over \$7 billion, most of which came from foreign investors. There are no restrictions on remittances, but there is a mandatory affirmative action program for Peruvian employees. Activities in export processing zones are tax and customs duty exempt for 15 years.

In 1998, total foreign direct investment (FDI) stock totaled about \$7.3 billion. FDI inflow to Peru in 1998 was over \$1.8 billion, up from nearly \$1.7 billion in 1997, and then peaked at \$2.3 billion in 1999. Due mainly to political turmoil and uncertainty in the country, FDI flows to Peru fell to \$681 million in 2000. In 2001, FDI flows increased to \$1.1 billion, and in 2002 were approximately \$2 billion. The major sources of FDI have been Spain (particularly in telecommunications), the United States, and the United Kingdom (in the energy and industry and mining sectors). Cumulative FDI as of 2002 was over \$10 billion.

In 2004, the stock of FDI was \$12.6 billion, up from \$12.46 in 2003. Most of the investments went to communications (29%), industry (14.7%), finance (14.7%), mining (13.5%), and energy (13%). In June 2004, PetroPeru was excluded from the privatization list by a congress law, and it was authorized to conduct exploration and production activities. A series of major mining and energy projects (the Camisea natural-gas field being one of the most important ones), were likely to attract important investors from abroad.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

After World War II, President Odría discontinued import licensing and certain price controls and enacted the Mining Code of 1950, the Petroleum Law of 1952, and the Electrical Industry Law of 1955, all with a view to reassuring sources of foreign and domestic capital of reasonable taxation and an adequate rate of earnings under liberal exploitation concessions. Given this stimulus to capital ventures, the economy expanded, and new exports, such as iron and coal, were developed.

After the coup of 1968, Peru's military rulers sought a profound restructuring of the country's economic life. The overall objectives were the establishment of effective state control of natural resources; redistribution of foreign participation; creation of manageable balance among governmental, private, and foreign sectors; and redistribution of productive sources more broadly throughout the population. Nationalization, coupled with a redistribution of ownership and management authority in major enterprises, was the cornerstone of the new policy from its incipient stages in 1968 through 1975. A five year plan was announced in December 1968, emphasizing a reorientation from an agricultural to an industrial economy and stressing the expropriation of large estates, with redistribution of land to peasants in the sierra. In early 1969, tax and credit incentives for the formation of cooperatives and the consolidation of smaller landholding were enacted. In nonagricultural sectors, the government began, in 1969, selective nationalization of major foreign holding in the mining, petroleum, and infrastructure sectors. In several areas, a government presence was asserted through the creation of state-owned commercial enterprises, the most notable of which included Induperu, in industry; Mineroperu, in mining; Pescaperu, in fishing; Petroperu, in petroleum; En-

telperu, in telecommunications; and COFIDE (Corporacion Financiera de Desarrollo), in investment.

Industrial enterprises in general were required to adopt profit-sharing and co-ownership schemes for their employees. Although strict limits were placed on foreign participation in Peruvian industry, such investments were not ruled out in principle, and in 1974, the government acted to guarantee fair settlement for US holdings expropriated during 1968–73.

In the mid-1970s, the regime began to moderate the rigid price control system instituted in its formative years. The prices of petroleum and basic consumer goods were increased, while wage increases were fixed and agricultural subsidies removed. In September 1975, the sol was devalued and financial controls were imposed to help stem inflation (reaching 40% in 1975) and to ease the trade imbalance. The Tupac Amaru Development Plan, announced in 1977, limited the structural reforms of the Inca Plan, calling for economic decentralization and encouragement of foreign investment.

In the late 1970s, a number of state-controlled enterprises were sold, and worker participation was curtailed. The civilian leaders who came to power in 1980 sought to reduce government participation in the economy and to improve the efficiency of state enterprises. Import tariffs and export taxes were reduced, and a new investment program for 1980–85 emphasized power and irrigation projects and the construction of housing and health care facilities. These attempts to revitalize the economy were hampered by the worldwide recession and by the soft market of Peru's commodity exports. In response, the García Administration reverted to an interventionist policy, imposing import controls and regulating foreign-exchange availability, as well as influencing the financial sector by threatening to nationalize the banks.

On 28 July 1974, the government announced its Inca Plan (which may actually have been drawn up before the 1969 coup), a master plan that envisioned eventual transformation of all economic entities along prescribed socialist lines. Three types of enterprises were to be permitted to operate in Peru: state-owned enterprises, worker-owned collectives (industrial communities), and social-property companies (entities managed by workers but financed by the state).

In late 1975, the Central Bank set up a line of credit to aid the formation of social-property companies through the National Fund for Social Property. The Agrarian Bank, which had been created in July, was authorized to handle the credit requirements of the reorganized agricultural sector, as well as to ease the transformation of cooperatives and farmers' associations, many of which had existed for only a few years, into social-property entities. The order of priorities for industry placed basic industries—notably steel, nonferrous metals, chemicals, fertilizers, cement, and paper—at high rung, followed by manufacturers of capital good, such as machine tools, and industrial research. Reinvestment of profits was stressed throughout.

The decade of the 1990s, with an administration in favor of a market economy, attracted more investment into Peru's economy. With foreign capital flowing, Peru was poised for economic recovery. Privatization and the rapidly growing economy were providing the government with funds to spend on infrastructure and social programs.

In August of 1990, the government implemented an economic program based on (1) an economic stabilization plan, (2) a structural reform program and (3) a set of initiatives aimed at reintegrating the Peruvian economy into the international economic system. As a direct result economic growth in the 1990s was quite strong.

The economic stabilization plan focused on achieving an inflation rate comparable to international levels, and to foster an environment favorable for savings, investment and sustained economic growth. The plan was based on strict fiscal discipline in accordance with an austere monetary policy. The inflation rate was about 6% in 1999. Structural reforms resulted in capital amounting to \$7 billion between 1991 and 1999, resulting in a massive inflow of foreign investment. The reinsertion of Peru into the international financial system, beginning in 1991, was intended to restore normal relations between the country and its international creditors. Peru normalized its relations with multilateral bodies, the Paris Club, and with commercial banks.

Upon being elected in 2001, President Toledo implemented an economic recovery program, to revive an economy that had stagnated from 1998–2001. He took measures to revive the privatization program and to attract investment. The production, refining, and distribution of coca engages approximately 200,000 Peruvians, but the government has taken steps to curtail the narcotics industry. These include promoting alternative development programs in coca-growing areas, in order to convince coca farmers not to grow the crop.

In 2002, the International Monetary Fund (IMF) approved a two-year \$347 million Stand-By Arrangement with Peru, to support the government's plans for economic recovery and a lowered rate of inflation.

The consistent economic growth was likely to continue in 2006 and 2007, although at more moderate rates. The growth was expected to be fueled by higher consumption rates, which in turn would be positively influenced by consumer confidence and employment growth in export-oriented industries. A series of planned public development projects were expected to trigger a boom in the construction industry, which would also be reflected in the overall growth pattern of the country.

#### 40 SOCIAL DEVELOPMENT

A modern system of social security (referred to as SNP) has evolved from initial legislation provided in the 1936 constitution. Coverage and benefits were substantially broadened after the 1968 coup. Workers were entitled to receive benefits covering disability, medical attention, hospitalization, maternity, old age, retirement, and widows and orphans. In 1991, the government introduced a new system of individualized capitalization through private pensions (SPP), which exists along side the national social security system.

Social insurance is compulsory for all employees up to the age of 60. The national social security and pension funds (SNP) are endowed by 13% of employee earnings, with the balance of funds supplied by the government. The private system is funded entirely by contributions from employees amounting to 10% of earnings. Sickness and maternity benefits are funded by 9% of employer payroll, with a special credit for employers who use the newer pri-

ivate system. Working mothers are entitled to maternity leave of 90 days at 100% pay. A funeral grant is provided.

Women are often kept from leadership roles in the public and private sectors by the force of tradition, although they are equal under the constitution. A government-supported program to provide credit to female entrepreneurs encourages women to pursue ventures. Racial and sexual discrimination are specifically prohibited by law in hiring, but in practice it continued to occur. Sexual harassment continued despite new legislation adopted in 2003. Domestic abuse and violence against women is a widespread problem which is exacerbated by insensitivity on the part of authorities, although there are some special police stations staffed by women to assist female victims of violence.

Human rights violations have been committed by the government and terrorist groups. There are restrictions on freedom of speech and of the press. Prison conditions are poor and the physical abuse of prisoners is common. The native population of the Amazon region continued to suffer discrimination.

#### 41 HEALTH

Although Peru has made significant advances toward reducing epidemic disease, improving sanitation, and expanding medical facilities, much remained to be done. Approximately 77% of the population had access to safe drinking water and 76% had adequate sanitation. Health services are concentrated around metropolitan Lima. A health care plan initiated in 1981 called for the establishment of 100 health centers in rural areas and shantytowns. The central administration of all health services lies with the Ministry of Health. A General Health Law enacted in 1997 restructured and reformed the health care sector. As of 2004, there were an estimated 117 physicians, 67 nurses, and 11 dentists per 100,000 people. Total health care expenditure was estimated at 6.2% of GDP.

The infant mortality rate in 2005 was estimated at 31.94 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 23.3 and 5.8 per 1,000 people. Maternal mortality was high at 265 per 100,000 live births. Some 69% of married women used contraception during 2000. Average life expectancy in 2005 was estimated at 69.53 years.

Leading causes of death included acute respiratory infections, intestinal infectious diseases, circulatory system and cardiovascular disease, and tuberculosis. Serious vitamin A deficiency was documented in 22% of children ages four and under and an estimated 48% of all children aged six to nine suffering from malnutrition. Goiter rates in school-age children were high.

Peru has repeatedly reported the highest number of yellow fever cases in the Americas. Other common diseases included malaria and tuberculosis. Immunization rates for children up to one year old were: tuberculosis, 98%; diphtheria, pertussis, and tetanus, 98%; polio, 97%; and measles, 95%.

The HIV/AIDS prevalence was 0.50 per 100 adults in 2003. As of 2004, there were approximately 82,000 people living with HIV/AIDS in the country. There were an estimated 4,200 deaths from AIDS in 2003.

#### 42 HOUSING

Successive governments since the 1950s have recognized the importance of slum clearance and public housing programs in com-

bating disease and high mortality rates. Most housing development programs carried out by the government and by private enterprise have been in the Lima area. In Lima and other towns, several “neighborhoods” (*unidades vecinales*) have been completed through government efforts since the early 1960s. Each such housing complex is designed to be a self-sufficient community. A typical neighborhood is built to house 6,000 persons at moderate rentals.

One of the revolutionary government’s early decrees gave the Housing Bank control over financing low-cost housing. Construction grew rapidly during 1970–73, to the point of depleting local cement supplies.

In 2002, there were about 6 million dwelling units nationwide. About 88.7% of all units were single-family detached houses. Rapid urbanization has resulted in housing shortages in urban areas. Shanty towns called *pueblos jóvenes* have developed in these areas as families build temporary structures out of straw mats, scrap wood, and other disposable materials.

### 43 EDUCATION

The government has been responsible for public education since 1905; free secondary education began in 1946, but with far too few public schools to meet the need. In March 1972, new education legislation enhanced the central authority of the Ministry of Education, granting the government control over all teaching appointments in the public schools and increasing its authority over the private sector. The legislation provided for adult literacy instruction and instituted the concept of a fully staffed six-grade “nuclear” school to serve the rural population. The 1972 law also established Quechua and Aymará as languages of instruction for non-Spanish-speaking Amerindians, especially in the lowest grades.

Education is compulsory for 12 years, including one year of preprimary education. Primary school covers six years and is followed by two years of general secondary school. Students then attend either a three-year general academic secondary school (studying either arts or sciences) or a three-year technical school. Students planning to enter university may take an additional year of preparatory studies, but this is not an entry requirement. The academic year runs from April to December.

In 2001, about 50% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 69% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 25:1 in 2003; the ratio for secondary school was about 19:1. In 2003, private schools accounted for about 13.7% of primary school enrollment and 17.3% of secondary enrollment.

There is a national university in virtually every major city; the oldest is the National University of San Marcos of Lima, originally founded in 1551. The National University of Engineering and the National University of Agriculture are specialized governmental institutions. The University of San Cristóbal de Huamanga in Ayacucho, founded in the 17th century, was reopened in 1960 and offers mainly technical training. Peru’s hard-pressed universities can accept only a fraction of each year’s applicants. As of 2005, the government was in the process of organizing a university for the

indigenous people of the Northern Amazon region. This school would offer course in such fields as forestry management and medicinal plants, with classes conducted in indigenous languages. In 2003, about 32% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 87.7%, with 93.5% for men and 82.1% for women.

As of 2003, public expenditure on education was estimated at 3% of GDP, or 17.1% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

The National Library in Lima, with 736,000 volumes, is the largest in Peru. More than 450,000 volumes may be found in the various libraries of the University of San Marcos. The library at the National University of San Agustín at Arequipa contains over 430,000 volumes. The library at the Pontifical Library has over 350,000 items. There are nearly 200 public libraries in Peru, the largest of them in Callao, Arequipa, and Lima.

Peru has endeavored to restore and maintain the aesthetic and historical evidences of its pre-Columbian and colonial civilizations in more than 250 public and private museums. The City Hall in Lima contains a full record of the city’s official acts since its founding. The Cathedral of Lima, with its silver-covered altars and carved stalls, contains priceless historical, and religious relics. A chapel near the entrance contains the alleged remains of Francisco Pizarro. Two colonial residences, the Palacio Torre Tagle and the Quinta de Presa, have been maintained to exhibit antiques and to serve as examples of the architecture of traditional Lima. There is no law protecting old houses, however, and many have been removed to make way for new downtown buildings. Some have been privately restored, such as the headquarters of the Association of Amateur Artists, the Institute Riva Agüero, the Associated Electrical Companies, the Bullfight Museum, and the Oquendo Mansion. In the Quinta de Presa is a museum with the possessions of the actress La Perricholi, the famous favorite of the 18th-century Viceroy Amat.

At Pueblo Libre in Lima are the National Museum of Archaeology and Anthropology, with exhibits of pre-Columbian civilizations, and the Museum of the Republic, a historical museum. The Rafael Larco Herrera Museum in Lima (housing the former collection of the Chiclín plantation near Trujillo) is a private museum with a vast collection of notable antiquities from the pre-Inca Chimú culture. The University of Trujillo has a museum with specimens of early Peruvian cultures. Lima’s Museum of Art exhibits Peru’s national art from the pre-Columbian era to the contemporary period. There are regional museums throughout the country, including the Frederico Galvez Durand Archeological Museum in Huancayo featuring artifacts from the Nazca peoples.

### 45 MEDIA

Peru’s major telecommunications systems were developed privately by Swedish, US, and Swiss enterprises. In 1970, however, the government nationalized the Lima Telephone Co. and announced plans to take over the entire telecommunications system through its wholly owned company Entelperú. A joint Peruvian-Chilean firm operates a system in southern Peru and Arica, Chile. In 2003, there were an estimated 67 mainline telephones for every 1,000 people; about 33,000 people were on a waiting list for telephone

service installation. The same year, there were approximately 106 mobile phones in use for every 1,000 people. The government's Bureau of Mails and Telecommunications operates the domestic telegraph system, using radio to reach communities not served by land lines.

In 2004, there were 65 radio stations and 2 news channels on 2 commercial cable systems in the Lima area. There are many privately owned provincial stations. The government owns only one radio station and one television network. In 2003, there were an estimated 269 radios and 172 television sets for every 1,000 people. About 16.6 of every 1,000 people were cable subscribers. Also in 2003, there were 43 personal computers for every 1,000 people and 104 of every 1,000 people had access to the Internet. There were 129 secure Internet servers in the country in 2004.

The leading Lima dailies—among them *El Comercio* (2004 circulation 120,000), *Ojo* (40,000), and *Expreso* (50,000)—are the most important newspapers and are flown daily to provincial towns. Other major papers from Lima include *Aja* (120,000), *El Bocon* (90,000), and *La Republica* (50,000). The official government paper is *El Peruano* (27,000), a daily gazette in which laws, decrees, and brief government announcements are published. Special-interest periodicals are published by learned societies, agricultural groups, and business associations.

During the period of military rule between 1968 and 1980, the press in Peru was under strict government control. The law provided severe penalties for criticizing government officials and required newspapers to publish reports from the president and cabinet ministers. When civilian rule returned in 1980, the press was returned to private control. However, freedom of the press was again restricted during the political crackdown by President Fujimori in April 1992, and journalists have been arrested by the government. As of 1999, journalists were subject to harassment and intimidation, and practiced self-censorship. The government is said also to exert control over the media through the purchasing of advertising to promote government views and pro-government opinion.

## 46 ORGANIZATIONS

The national Society of Industries, founded in 1896, coordinates the branches of organized industry. The Office of Small Industry and the Institute for the Development of Manual Arts were established in 1946 to revive the weaving and spinning skills of Incas and to coordinate the handicraft workers in textile and other industries, such as gold and silver crafts. Numerous chambers of commerce continued to function.

Of Peru's many learned societies, perhaps the most important is the Academia Peruana, affiliated with the Royal Spanish Academy of Madrid. Others include the Peru Association for the Advancement of Science and the Geographic Society of Lima. There are several professional associations dedicated to research and education for specific fields of medicine and particular diseases and conditions.

National youth organizations include the National Association of Scouts and Guides, the Federation of Peruvian Students, Junior Chamber, and YMCA/YWCA, as well as a number of religious youth groups. Sports associations offer encouragement for amateur competition in such pastimes as badminton, squash, and track and field.

The Latin American and Caribbean Committee for the Defense of Women's Rights has an office in Lima. International organizations with national chapters include Amnesty International, UNICEF, the Society of St. Vincent de Paul, Habitat for Humanity, CARE Peru, and the Red Cross.

## 47 TOURISM, TRAVEL, AND RECREATION

As part of a program to encourage foreign tourism, the government has built and manages, through its Peruvian Hotel Co., several hotels or inns and a variety of tourist services. To help increase foreign exchange earnings from tourism, Peru consolidated all government agencies dealing with tourism into an autonomous corporation in 1964. The Fund for the Promotion of Tourism was established in 1979.

Tourists, as well as scholars, are especially drawn to the wealth of archaeological remains on the coast and in the sierra. Chan Chan, the center of the Chimú civilization, stands in adobe ruins near Trujillo. The ruins of the 9th-century coastal city of Pachacamac are just south of Lima. Inca ruins may be seen at Cuzco, Sacahuamán (on the northern edge of Cuzco), Ollantaytambo, and Machu Picchu, as well as on Lake Titicaca islands.

The northern coastal waters are famous for big-game fishing, and the abundant resources of the sierra waters are maintained by fish culture stations. Lakes and streams have been stocked with trout throughout Peru. In Lake Titicaca, trout average 10 kg (22 lb); trout weighing as much as 21 kg (46 lb) have been caught. Other tourist attractions include beaches and water sports; several state parks offer mountain climbing, cross-country skiing, and white-water rafting. The most popular sports are football (soccer), baseball, basketball, and bullfighting. Fiestas, especially the annual celebrations of patron saints, include both Catholic and Indian rites; bands of musicians, or conjuntos, are an important part of each fiesta.

There were 933,643 visitors who arrived in Peru in 2003, of whom 67% came from the Americas. Hotel rooms numbered 123,252 with 213,829 beds. The average length of stay was two nights. A US passport is required along with an onward/return ticket. Visas are only required for visitors from Cuba, Iran, Iraq, Kuwait, Bulgaria, Russia, Pakistan, India, and China. The presence of yellow fever in the area may require a certificate of vaccinations against the disease.

In 2004, the US Department of State estimated the daily cost of staying in Lima at \$215; in Cuzco, \$204; and in Paracas, \$158.

## 48 FAMOUS PERUVIANS

The Inca Huayna Capac (1450?–1525) reigned from 1487 and extended the Inca Empire, encouraging public works and fine arts. On his death he left the empire to his two sons, Huáscar (1495?–1533) and Atahualpa (1500?–1533); Huáscar was executed by his half-brother, and Atahualpa, the last of the great Incas, was executed by the Spanish conquistador Francisco Pizarro (1470?–1541). Acknowledged as America's first great writer, Garcilaso de la Vega (El Inca, 1539?–1616), son of a Spanish conquistador and an Inca princess, preserved in his *Royal Commentaries of the Incas* authentic descriptions of this ancestral empire and its traditions. Manuel de Amat (fl. 18th century), viceroy from 1762 to 1776, was a patron of the colonial theater and of the famous actress Micaela Villegas, known as La Perricholi. Tupac Amaru II (José Gabriel

Condorcanqui, 1742–81), partly descended from the Incas, led a revolt against Spanish rule in 1780 in which he was defeated, captured, and executed.

Dr. José Hipólito Unnúa (1758–1833), a statesman and scientist, founded Lima's medical school in 1808 and reformed Peruvian education. The hero of the War of Independence, Mariano Melgar (1792–1815), was also a poet and composer whose regional songs (*yaravís*) are still popular. Marshal Ramón Castilla (1797–1867) distinguished himself in two great presidential terms (1845–51, 1855–62), introducing railways and the telegraph, emancipating the slaves, abolishing Amerindian tribute, modernizing Lima, and developing the important guano industry. Ricardo Palma (1833–1919) is considered Peru's greatest literary figure; a critic, historian, and storyteller, he originated the genre called *tradicción*, and wrote the 10-volume *Tradiciones Peruanas*. José María Valle-Riestra (1858–1925) was an important composer.

In the modern era, the work of an erudite Amerindian, Julio Tello (1880–1947), became internationally known in archaeological circles. Jorge Chávez (1887–1910) made the first solo flight across the Alps in 1910. Santos Chocano (1875–1934), César Vallejo (1895–1938), and José María Eguren (1882–1942) are considered Peru's finest modern poets. Established prose writers are Víctor Andrés Belaúnde (1883–1966), Jorge Basadre (1903–80), and Ciro Alegría (1909–67); the novelist Mario Vargas Llosa (b.1936) was the first Latin American president of PEN, an international writers' organization. Peru's best-known contemporary painter is Fernando de Szyszlo (b.1925). Other noted Peruvians include Ventura García Calderón (1866–1959), a writer; José Sabogal (1888–1956), a painter; Honorio Delgado (1892–1969), a scientist; and José Carlos Mariátegui (1895–1930), a political essayist. Yma Sumac (b.1928) is an internationally known singer.

Víctor Raúl Haya de la Torre (1895–1979) originated APRA in 1924 as a Latin American workers' movement; it became Peru's most significant political force. Gen. Juan Velasco Alvarado (1910–77), who led the military coup of 1968, ruled as president of Peru until his own ouster by a bloodless coup in 1975. Gen. Francisco Morales Bermúdez Cerruti (b.1921), president during 1975–80, prepared the country for a return to civilian rule. Fernando Belaúnde Terry (1913–2002), founder of the Popular Action Party, served as president during 1963–68 and again during 1980–85. Alán García Pérez (b.1949) was elected president in 1985. Alberto

Fujimori (b.1938), was president from 1990 to 2000: once out of office, Interpol issued an international arrest warrant for Fujimori on charges including crimes against humanity, murder, and kidnapping, and President Alejandro Toledo (b.1946) lodged an extradition request with the Japanese government (where Fujimori had fled) in 2003. In 1982, Javier Pérez de Cuéllar (b.1920) became secretary-general of the UN.

#### 49 DEPENDENCIES

Peru has no territories or colonies.

# ST. KITTS AND NEVIS

Federation of Saint Kitts and Nevis

**CAPITAL:** Basseterre

**FLAG:** Two thin diagonal yellow bands flanking a wide black diagonal band separate a green triangle at the hoist from a red triangle at the fly. On the black band are two white five-pointed stars.

**ANTHEM:** *National Anthem*, beginning "O land of beauty."

**MONETARY UNIT:** The East Caribbean dollar (EC\$) of 100 cents is the national currency. There are coins of 1, 2, 5, 10, and 25 cents and 1 East Caribbean dollar, and notes of 5, 10, 20, and 100 East Caribbean dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7) as of 2004.

**WEIGHTS AND MEASURES:** The imperial system is used.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1st Monday in May; Bank Holiday, 1st Monday in August; Independence Day, 19 September; Prince of Wales's Birthday, 14 November; Christmas, 25 December; Boxing Day, 26 December; Carnival, 30 December. Movable religious holidays include Good Friday and Whitmonday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

St. Kitts lies about 8 km (5 mi) SE of the Netherlands Antilles and 72 km (45 mi) NW of Antigua, in the Leeward Islands. It is 37 km (23 mi) long and 8 km (5 mi) across at its widest point, with a total area of 261 sq km (101 sq mi). Comparatively, the area occupied by St. Kitts and Nevis is slightly more than 1.5 times the size of Washington, DC. Nevis lies about 3.2 km (2 mi) SE of St. Kitts, across a channel called the Narrows; it is 13 km (8 mi) long and 10 km (6 mi) wide, with a land area of 93 sq km (36 sq mi). Together the islands have a coastline of 135 km (84 mi).

The capital city, Basseterre, is located on St. Kitts.

## <sup>2</sup> TOPOGRAPHY

St. Kitts and Nevis are of volcanic origin. In the northwest of St. Kitts is Mt. Liamuiga (also called Mt. Misery), a dormant volcano that is the island's highest peak at 1,156 m (3,792 ft); to the south and west of Mt. Liamuiga are 210-m (700-ft) cliffs that drop straight to the sea. On the southern arm of the island lies the Great Salt Pond. The island of Nevis could be considered to be one large dormant volcano. Nevis's highest elevation is the central peak of Mt. Nevis, at 985 m (3,232 ft); it is usually capped in clouds. There is a black sand beach on the northwest coast.

The islands are located on the Caribbean tectonic plate at the boundary of the North American Plate; the subduction of the Atlantic Plate beneath the Caribbean Plate was responsible for the formation of the islands and continues to cause earthquakes in the surrounding region.

## <sup>3</sup> CLIMATE

Temperatures range from 26°C (79°F) to 32°C (89°F) all year long. Northeast tradewinds are constant. Rain usually falls between

May and November, averaging 109 cm (43 in) a year. High humidity characterizes the summer months. Hurricane season runs from late summer to early fall.

## <sup>4</sup> FLORA AND FAUNA

The upper slopes of Mt. Nevis are well wooded; coconut palms, poincianas, and palmettos are profuse. Lemon trees, bougainvillea, hibiscus, and tamarind are common on both islands. Swamps and marshes on the southern peninsula of St. Kitts feature red and white mangroves. There are some black-faced vervet monkeys on Monkey Hill in St. Kitts. Coral reefs off the coast serve as a habitat for such marine life as sea turtles, barracuda, eels, and rays.

## <sup>5</sup> ENVIRONMENT

Deforestation, erosion, and water pollution are among the most significant environmental problems in St. Kitts and Nevis. Deforestation has affected the nation's wildlife population and contributed to soil erosion. The erosion of the soil produces silt, which affects the living environment for marine life on the coral reefs.

Water pollution results from uncontrolled dumping of sewage into the nation's waters. Another contributing factor is pollution from cruise ships which support the nation's tourist trade. In an effort to establish a framework for the regulation of environmental issues, the government has introduced legislation. The National Conservation and Environmental Protection Act, along with the Letter Act, are aimed at monitoring the nation's most pressing environmental concerns.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammal, 2 species of birds, 3 types of reptiles, 11 species of fish, and 2 species of plants. Threat-

ened species in the country included the red-bellied racer, green turtle, leatherback turtle, and the hawksbill turtle.

## 6 POPULATION

The population of St. Kitts and Nevis in 2005 was estimated by the United Nations (UN) at 48,000, which placed it at number 186 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 28% of the population under 15 years of age. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.0%, a rate the government viewed as too high. The projected population for the year 2025 was 57,000. The overall population density was 133 per sq km (345 per sq mi), with the density on the island of St. Kitts twice that of Nevis.

The UN estimated that 33% of the population lived in urban areas in 2005, and that the population in urban areas was declining at an annual rate of -0.42%. The capital city, Basseterre, had a population of 13,000 in that year. Charlestown is the largest urban settlement on Nevis.

## 7 MIGRATION

There is less emigration in the current period than there was during the mid-20th century, largely because the economy enjoys almost full employment during the tourist and harvest seasons. During the off-season, some people migrate to other islands in search of work. The total number of migrants was 4,000 in 2000. In 2005, the net migration rate was -5.9 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

About 96% of the population are of black African descent. Only about 5% of the population are mulatto, 3% Indo-Pakistani, and 1.5% European.

## 9 LANGUAGES

English, sprinkled with local expressions, is the universal language.

## 10 RELIGIONS

Christianity is the dominant religion. The Anglican Church, the largest church on the island, claims about 50% of the population. About 25% are Roman Catholics. Other Christian groups are Methodists, Moravians, Seventh-Day Adventists, Mormons, and Jehovah's Witnesses. There are small communities of Rastafarians and Baha'is. Religious freedom is guaranteed by the constitution. Certain Christian holidays are recognized as national holidays. The St. Kitts Christian Council is a nongovernment group that promotes interfaith understanding.

## 11 TRANSPORTATION

As of 2004, a light, narrow-gauge railway of 50 km (31 mi) on St. Kitts was operated by the government to transport sugarcane from fields to factory and processed sugar to the pier at Rawlins Bay. In 2002, there were 320 km (199 mi) of roads on the islands, of which 136 km (85 mi) were paved; the main roads circle each island. Basseterre and Charlestown are the principal ports. A state-run motorboat service is maintained between St. Kitts and Nevis. In

2004 there were two airports, both with paved runways. Golden Rock International Airport is a modern facility serving Basseterre; several small airlines fly to a landing strip at Newcastle, on Nevis.

## 12 HISTORY

Arawak Indians, followed by Caribs, were the earliest known inhabitants of the islands. Discovered by Columbus in 1493 and named St. Christopher, St. Kitts was the first of the British West Indies to be settled. Sir Thomas Warner established a settlement on St. Kitts in 1623, later leading colonial expeditions to Nevis in 1628 and Antigua in 1632. For a short while during this period there were French settlements at both ends of St. Kitts, and the French settlers cooperated with the British to repel a Spanish invasion. By the 1660s there were some 4,000 Europeans engaged in the sugar trade, based on a plantation system with slaves imported from Africa. The French gained control in 1664 but lost it to the British in 1713, under the Peace of Utrecht. The French besieged the British garrison in the Brimstone Hill fortress in 1782 and once more gained control of the island, but the Treaty of Versailles (1783) returned St. Kitts again to Britain. By the late 18th century, the thermal baths at Charlestown, Nevis, attracted thousands of international tourists. Although the slaves were emancipated in 1834, many of the ex-slaves continued to work on the sugar plantations, so the sugar-based economy did not decline as rapidly as elsewhere in the West Indies.

St. Kitts, Nevis, and Anguilla (the most northerly island of the Leeward chain) incorporated with the British Virgin Islands in 1816. The territorial unit of St. Kitts-Nevis-Anguilla became part of the Leeward Islands Federation in 1871 and belonged to the Federation of the West Indies from 1958 to 1962. In 1967, the three islands became an associated state with full internal autonomy under a new constitution. After the Anguilla islanders rebelled in 1969, British paratroopers intervened, and Anguilla seceded in 1971, an arrangement formally recognized on 19 December 1980.

There have been regular general elections in St. Kitts and Nevis since 1971. A 1982 white paper on independence provoked stormy debate over the form of the constitution, spilling over into civil unrest in 1982 and 1983. St. Kitts and Nevis became an independent federated state within the Commonwealth on 19 September 1983. Under the arrangement, Nevis developed its own legislature and gained the power to secede from the federation. Elections in June 1984 produced a clear majority for the People's Action Movement/Nevis Reformation Party coalition.

In the 21 March 1989 elections, 11 of 14 members of the National Assembly were elected, six from the People's Action Movement Party (PAM), two from St. Kitts and Nevis Labor Party (SKNLP), two from the Nevis Reformation Party (NRP), and one from the Concerned Citizens Movement (CCM). In the 29 November 1993 elections, no major party won the most seats and no coalition government emerged. The governor-general invited a minority government to form. In response, the Labour Party demonstrated, which led to serious disturbances, causing a 21-day state of emergency in December 1993.

In June 1996, Nevis premier Vance Amory announced plans for Nevis to secede from the federation as detailed in the constitution. Elections for the Nevis Island Assembly held in February 1997 returned Amory to power. The CCM retained its three seats, and the

NRP held its two seats. Nevis's assembly voted unanimously for secession in 1997. However, a referendum on succession in July 1998 was unsuccessful when it failed to gain the approval of two-thirds of the electorate (61.8% in favor).

The 3 July 1995 elections gave the SKNLP seven seats; PAM kept one seat; NRP, one seat; and the CCM, two seats. Denzil L. Douglas, leader of the SKNLP, became prime minister. Elections in March 2000 resulted in SKNLP winning all eight seats in St. Kitts, returning Douglas for a second five-year term as prime minister. The CCM retained two seats in Nevis, and NRP kept one seat. The PAM won no seats.

Elections were held in October 2004. The SKNLP won 7 seats, the CCM, 2; the NRP, 1; and the PAM, 1. Douglas began a third term as prime minister. Douglas has stated that any differences between Nevis and St. Kitts should be resolved through constitutional reform, rather than by a referendum on secession.

In March 2005, the government decided to close the 300-year old sugar industry after the 2005 harvest. The sugar industry had long been ailing. However, tourism and the offshore financial industry are growing. By 2003, Nevis had approximately 17,000 offshore businesses operating under strict secrecy laws; this made the islands attractive to drug traffickers and money launderers. St. Kitts and Nevis enacted new laws to try to crack down on the problem.

### 13 GOVERNMENT

St. Kitts and Nevis is a federation of the two constituent islands. Under the constitution passed at independence in 1983, the British monarch is head of state and is represented by a governor-general, who is required to act upon the advice of the cabinet, and a deputy governor-general for Nevis.

The nation is governed under a parliamentary system, with legislative power vested in the unicameral House of Assembly, consisting of the speaker, three senators (two appointed on the advice of the prime minister and one on the advice of the leader of the opposition), and 11 elected members elected from each of 11 constituencies for up to five years. The cabinet, collectively responsible to the Assembly, consists of the prime minister (who must be able to command the support of a legislative majority), the attorney general (ex officio), and other ministers. The prime minister could call for an early election if the people request it in a voted referendum, though it has yet to happen. The Nevis Island Assembly and the Nevis Island Administration (headed by the British monarch represented by the deputy governor-general) operate similarly to the federation government.

Suffrage is universal for all citizens 18 or older.

### 14 POLITICAL PARTIES

There are four political parties that have held seats in the House of Assembly. Although the Labour Party (now the St. Kitts and Nevis Labour Party—SKNLP) dominated the political scene from the 1950s until 1980, it was supplanted after independence by the People's Action Movement. The PAM won 6 seats, a clear majority, in both 1984 and 1989. The Labour Party held 2 seats in 1984 and 1989. The Nevis Reformation Party, founded in 1970, took 3 seats in 1984 and 2 seats in 1989, all of which were from constituencies on Nevis. The Concerned Citizen's Movement took 1 Nevisian seat in 1989. In 1993, the SKNLP and PAM each had 4 seats. CCM

LOCATION: 17°10' to 17°20' N; 62°24' to 62°45' W. TOTAL COASTLINE: 135 kilometers (84 miles). TERRITORIAL SEA LIMIT: 12 miles.

took 2 seats and the NRP took 1 seat. In 1995, the SKNLP won 7 seats, the PAM, 1 seat, and the CCM, 2 seats. In 2000, the SKNLP won all 8 seats from St. Kitts. The CCM held its 2 seats, and the NRP held its 1 seat. In 2004, the SKNLP won 7 seats, the CCM, 2; the NRP, 1; and the PAM, 1.

### 15 LOCAL GOVERNMENT

There are nine parishes in St. Kitts: St. George Basseterre, St. Peter Basseterre, St. Mary Cayon, Christ Church Nichola Town, St. John Capisterre, St. Paul Capisterre, St. Anne Sandy Point, St. Thomas Middle Island, and Trinity Palmetto Point. Nevis has five parishes: St. Paul Charlestown, St. John Figtree, St. George Gingerland, St. James Windward, and St. Thomas Lowland. Under the 1983 constitution, Nevis has its own legislative assembly and the right to secede under certain conditions.

### 16 JUDICIAL SYSTEM

The Eastern Caribbean Supreme Court, established on St. Lucia, administers the judicial system, which is based on English common law and statutory acts of the House of Assembly. A judge of the Court is responsible for St. Kitts and Nevis and presides over the Court of Summary Jurisdiction. Magistrates' courts deal with petty criminal and civil cases. The attorney general is the govern-

ment's principal legal adviser. An appeal may be taken to the organization of Eastern Caribbean States Court of Appeal; until 2003, final appeals were taken to the Judicial Committee of the Privy Council in the United Kingdom. St. Kitts and Nevis was among the nations joining together to form the Caribbean Court of Justice (CCJ) to hear cases formerly taken to the Privy Council. The court was officially inaugurated in April 2005. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

There are no military or political courts.

The judiciary has a reputation for independence and integrity. The system provides legal assistance to indigent criminal defendants.

## 17 ARMED FORCES

St. Kitts and Nevis participates in the Eastern Caribbean Regional Security System created jointly with Antigua and Barbuda, Dominica, Grenada, St. Lucia, and St. Vincent and the Grenadines in 1985.

## 18 INTERNATIONAL COOPERATION

St. Kitts and Nevis became a member of the United Nations on 23 September 1983; it belongs to ECLAC and several nonregional specialized agencies, such as, the FAO, the World Bank, ILO, UNSECO, UNIDO, and the WHO. The country is a member of the ACP Group, the WTO, the Commonwealth of Nations, CARICOM, the Caribbean Development Bank, G-77, the Alliance of Small Island States (AOSIS), the OAS, the Association of Caribbean States (ACS), and OECS. The headquarters for the Eastern Caribbean Central Bank is in St. Kitts.

St. Kitts and Nevis is also a part of the Eastern Caribbean Regional Security System (RSS), the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL), and the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, the country is part of the Basel Convention, Conventions on Biological Diversity and Whaling, CITES, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Before 1987, the economy was based on agriculture, particularly on sugar, which generated over half of export revenues. The government closed down the sugar industry following the 2005 harvest after decades of losses at the state-owned sugar company. To compensate for the loss of the sugar industry, the government is embarking upon new ways to diversify the agricultural and other sectors of the economy. During the 1990s, tourism and related industries became the most important source of revenue in St. Kitts and Nevis. The country still produces sea island cotton, peanuts, vegetables, and coconuts, but the more than 400,000 visitors per year are the most important sources of jobs and earnings. The government has been making efforts to expand tourism and to improve local food production (the country imports most of its food needs). The country has had success with the development of its light manufacturing industries—mainly garments and electronics assembly, data entry, the expansion of non-sugar agricultural production and tourism. The average annual GDP between 1988 and

1998 was 4.8%. In 2004, the GDP growth rate stood at 5.1%. Inflation remains tame, at an annual average just below 2%.

Decreasing world prices hurt the sugarcane industry in the recent past, as have natural disasters like Hurricane Georges in 1998. Faced with the prospect of declining tourism after the 11 September 2001 terrorist attacks on the United States, Prime Minister Douglas offered a free one-week vacation in St. Kitts to all the firefighters and police in New York City and Washington, DC.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 St. Kitts and Nevis's gross domestic product (GDP) was estimated at \$339.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$8,800. The annual growth rate of GDP was estimated at -1.9%. The average inflation rate in 2001 was 1.7%. It was estimated that agriculture accounted for 3.5% of GDP, industry 25.8%, and services 70.7%.

Approximately 33% of household consumption was spent on food, 11% on fuel, 5% on health care, and 13% on education.

## 21 LABOR

In the latest years for which data was available, the labor force in 1995 was estimated at 18,172. Manufacturing employed 31% and services 69%. The unemployment rate was estimated at 4.5% in 1997.

The St. Kitts and Nevis Trades and Labor Union, established in 1940, is associated with the Labor Party and is the major workers' labor organization. The sugar industry and civil service are the largest employers, with tourism gaining importance, especially on Nevis. Unions have the right to organize and bargain collectively. The right to strike is not codified by law but is well established and respected.

The minimum working age is 12 years and this is effectively enforced. The government sets and enforces basic worker health and safety laws. The minimum wage varies by job classification and skill level of the wage earner. In 2001, it was us\$67.42 per week for a full-time domestic worker and us\$166.10 per week for a skilled worker. The workweek is generally set at five days with 40 hours. The law provides a two-week annual vacation.

## 22 AGRICULTURE

Of the islands' total land area, about 22% is devoted to crops. The principal agricultural product of St. Kitts is sugarcane; peanuts are now the second crop. On Nevis, sea island cotton and coconuts are the major commodities. Sweet potatoes, onions, tomatoes, cabbages, carrots, and breadfruit are grown for local consumption on both islands, mostly by individual smallholders. In 2004, agricultural products accounted for about 35.2% of total imports by value and 19.6% of exports; the government has embarked on a program to substitute for food imports.

Sugar estate lands were nationalized in 1975, and the sugar factory was purchased by the government the following year. The output of raw sugar slumped between 1986 and 1989, and as a result the government entered into a management agreement with Booke and Tate of Great Britain in August 1991; a World Bank

loan of us\$1.9 million was utilized to provide financial stability. Sugar production in 2004 was estimated at 193,000 tons.

### 23 ANIMAL HUSBANDRY

Pasture areas are small, covering some 5.6% of the islands. Pango-la and Bermuda grasses provide the bulk of the fodder. Estimates of livestock in 2005 were sheep, 12,500; goats, 16,000; cattle, 4,800 head; and pigs, 2,000.

### 24 FISHING

Fishing is a traditional occupation that has not expanded to any great extent; the catch in 2003 was 370 tons (down from 620 tons in 1990). Some exports (primarily lobsters) are made to the Netherlands Antilles and Puerto Rico; fisheries exports totaled us\$267,000 in 2003.

### 25 FORESTRY

Both islands have small stands of virgin tropical forest, with palms, poincianas, and palmettos. About 11% of the land area consists of forests. Imports of forest products nearly reached us\$1.8 million in 2004.

### 26 MINING

The mining sector played a minor role in St. Kitts and Nevis. Raking of salt, the country's fourth-leading industry, was done from time to time. Local quarrying of some materials was used to supplement the construction industry. In 2001, output for sand and gravel was 215,000 metric tons (estimated), up from 50,389 metric tons in 1996; crushed stone output was 121,270 metric tons.

### 27 ENERGY AND POWER

Total electric power generating capacity in 2002 was 20,000 kW. Electricity production in 2002 was 106 million kWh, entirely from conventional thermal sources. Consumption of electricity in 2002 was 98 million kWh. St. Kitts and Nevis have no fossil fuels, and all petroleum products must be imported. Imports and consumption of refined petroleum products in 2002 averaged 710 barrels per day, the largest portion at 370 barrels per day were distillates. There were no imports of natural gas or coal in 2002.

### 28 INDUSTRY

Industry accounted for 26% of GDP in 2001. The principal manufacturing plant and largest industrial employer until 2006 was the St. Kitts Sugar Manufacturing Corp., a government enterprise; it ground and processed sugarcane for export. The government shut down the company after the 2005 harvest due to decades of losses. A brewery on St. Kitts makes beer for local consumption, and cotton is ginned and baled on Nevis. Electronic plants produce switches, calculators, car radios, and pocket radios. Other industries are clothing and shoe manufacturing.

The manufacturing suffered a decline in 1998 due to Hurricane Georges. As a result of diversification and expansion, St. Kitts and Nevis has transformed small electronics plants into the largest electronics assembly industry in the Eastern Caribbean. Its apparel assembly industry has also become very successful in recent years.

There are four major industrial sites in St. Kitts and Nevis: C. A. Paul Southwell Industrial Park, Bourkes Industrial Estate, Canada Industrial Estate, and Prospect Industrial Estate. Porte Zante is the main seaport.

### 29 SCIENCE AND TECHNOLOGY

St. Kitts and Nevis is dependent on outside resources both for industrial technology and for advanced scientific and technical education. The government is currently developing postsecondary education; a technical school was in operation in 1987.

### 30 DOMESTIC TRADE

Basseterre, on St. Kitts, and Charlestown, on Nevis, are the primary commercial centers of the islands. Once based almost exclusively on sugar production and exports, the economy has shifted over the years to focus on services, particularly related to tourism. The government continues to work on investment incentive programs to encourage both domestic and foreign business investors.

General business is conducted from 8 AM to 4 or 4:30 PM, Monday through Friday. Normal banking hours are 8 AM to 2 PM, Monday through Thursday, and from 8 AM to 4 PM on Fridays.

### 31 FOREIGN TRADE

The government of St. Kitts and Nevis has expanded trade incentives in recent years. Doing business in the country is virtually tax free. However, American businesses' use of tax havens such as St. Kitts and Nevis has been called into question in recent years.

Most exports in 2004 went to the United States (57.5%), followed by Canada (9%), Portugal (8.3%), and the United Kingdom (6.7%). About two-thirds of the sugar crop until 2006 was exported to the United States. Other exports include machinery, electronics, food, and beverages.

The majority of imports in 2004 came from the Ukraine (44.7%), the United States (22.1%), Trinidad and Tobago (8.8%), and the United Kingdom (6.2%).

### 32 BALANCE OF PAYMENTS

Earnings from tourism and overseas remittances largely offset the trade deficit. From 1988 to 1990, the current account deficit in-

creased from 21% of GDP to nearly 35% of GDP, but went down to about 20% in 1998. The 11 September 2001 terrorist attacks on the United States negatively impacted the St. Kitts and Nevis tourism industry.

In 2005, the value of exports was estimated at us\$70 million, and the value of imports at us\$405 million.

**33 BANKING AND SECURITIES**

St. Kitts and Nevis has a relatively simple system of public and private financial institutions, which the government wishes to expand. As a member of the Organization of Eastern Caribbean States (OECS), it has as its central monetary authority the Eastern Caribbean Central Bank (ECCB), headquartered in Basseterre. The Eastern Caribbean Home Mortgage Bank is also located in St. Kitts and Nevis.

The two islands had eight banks in 2000, including both foreign and domestic concerns. Barclays Bank, the Royal Bank of Canada, and the Bank of Nova Scotia represent foreign interests, whereas domestic interests include the St. Kitts and Nevis National Bank, the Development Bank of St. Kitts and Nevis, and the Nevis Co-operative Bank. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$42.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$305.9 million.

Securities transactions on international exchanges are performed by the banks.

**34 INSURANCE**

International, regional, and local insurance companies or agents offer life and property insurance. There are five insurance companies in St. Kitts and Nevis, including Barbados Mutual Life and Assurance Society, British American Insurance, Colonial Life In-

urance (Trinidad), St. Kitts and Nevis Insurance, and National Caribbean Insurance.

**35 PUBLIC FINANCE**

The US Central Intelligence Agency (CIA) estimated that in 2003 St. Kitts and Nevis's central government took in revenues of approximately \$89.7 million and had expenditures of \$128.2 million. Revenues minus expenditures totaled approximately -\$38.5 million. Total external debt was \$171 million.

**36 TAXATION**

There is no personal income tax for residents of St. Kitts and Nevis. Corporations are taxed at the rate of 38% of income, but the Fiscal Incentives Act offers generous development and tax concessions. Profit remittances are taxed at a 10% rate; there is also a land tax and a house tax. There is a capital gains tax of 20%.

**37 CUSTOMS AND DUTIES**

St. Kitts and Nevis is bound by the common external tariff of CARICOM and requires an import license for certain durable and nondurable products. CARICOM members have reduced rates to a maximum of 20%. Tariff rates for pharmaceuticals and medicines used to treat infectious diseases are subject to a 10% tariff. Automobiles are subject to a 70% rate. There are no value-added or sales taxes.

**38 FOREIGN INVESTMENT**

Like most Caribbean microstates, St. Kitts and Nevis has an investment incentives program. Joint ventures and labor-incentive industries are especially welcome. Official development assistance and resource flows from commercial sources totaled us\$25 million in 1997.

Foreign investment incentives include the following: a tax holiday of up to 15 years; tax rebates of up to 5 years; and exemption from customs duties on machinery deemed necessary to establish and update an enterprise.

Annual foreign direct investment (FDI) rose steadily from us\$19.7 million in 1997 to a peak of us\$96.2 million in 2000. In 2001, FDI inflow was us\$82.9 million. Significant new investment in the tourism industry, including a 648-room Marriott hotel and convention center that opened in December 2002, as well as other planned resort projects, are designed to improve economic performance. Net FDI inflows were projected to equal 15.5% of GDP in 2005.

**39 ECONOMIC DEVELOPMENT**

The government until 2006 attempted to halt the decline of the sugar industry by restructuring the sector, and encouraged agricultural diversification and the establishment of small industrial enclaves linked to the international export market. However, following the 2005 harvest, the government shut down the sugar industry after decades of losses. Four industrial estates have been developed. The tourist industry has received considerable government support. The Development and Finance Corporation is the principal development agency.

The country's plans continue to be aimed at diversifying the economy. Construction projects in the private and public sector are expected to contribute substantially to the moderate eco-

conomic growth that St. Kitts and Nevis should experience in the near future. Hurricanes in 1998–99 caused widespread damage, but due to spending on post-hurricane reconstruction and repair, gross domestic product (GDP) growth was strong in the early and mid-2000s. The 11 September 2001 terrorist attacks on the United States adversely impacted the tourism industry in the short-term. The telecommunications sector has been liberalized, and a Financial Intelligence Unit was set up in the offshore sector.

#### 40 SOCIAL DEVELOPMENT

A dual social insurance and social assistance system provides coverage for old age, disability, and survivorship. Qualifying conditions for receiving an old-age pension include an age of 62 and 500 weeks of paid contributions. The government funds the system. Sickness and maternity benefits have been in place since 1996, covering all employed and self-employed persons. Work injury provisions are funded solely by employer contributions.

Although there is no overt discrimination against women, tradition prevents women from achieving higher levels of employment. The Department of Gender Affairs was created by the government to promote women's rights and provide counseling for abused women. A special police unit works closely with the Ministry to investigate domestic violence and rape cases. There is a special training program to educate police and school guidance counselors in dealing with domestic violence, sex crimes, and child abuse. Most of the provisions of the UN Convention on the Rights of the Child have been incorporated into domestic law.

Human rights are generally well respected, although prison conditions are poor. Facilities are overcrowded, and in the past these conditions led to prison riots.

#### 41 HEALTH

In 2004, there were an estimated 118 physicians, 498 nurses, and 18 dentists per 100,000 people. Total health care expenditure was estimated at 3.1% of GDP.

Hygienic education is the primary concern of the Central Board of Health. The infant mortality rate was an estimated 14.49 per 1,000 people in 2005. Average life expectancy in the same year was 72.15 years. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 18.6 and 9 per 1,000 people. AIDS is present but not considered a major problem. Polio and measles appeared to be absent from these islands.

#### 42 HOUSING

The government has placed emphasis on planned housing development in order to conserve agricultural lands. The Central Housing Authority began a program of low-cost home construction in 1977. The water supply, which comes from mountain springs and deep wells, is controlled by the Water Department. In the early 1980s, roughly four-fifths of all dwellings were detached houses, with apartments and commercial buildings making up most of the remainder. Over half of all dwellings were owner occupied and about one-third were rented privately; the remainder were occupied rent free or rented from the government. The most common

construction materials for housing were wood (50%), wood and concrete combined (25%), and concrete (20%).

In 1998, Hurricane Georges damaged 85% of the housing stock. In response, the government joined with USAID and the OAS to create a Housing Sector Recovery Plan which was meant to create a plan of action for repair and upgrading of existing housing, so that these structures might be better suited to withstand future storms. The government has also supported a number of other housing development plans sponsored in part by foreign investors, including the 2002 projects of the KOMLA Group of Companies of Guadeloupe and the CLICO Group of Barbados. These projects were community plans which included shopping locations, a medical center, recreation and park areas, as well as two- and three-bedroom homes. The same year, the Minister of Housing announced plans of the St. Kitts and Nevis Labor Party Administration to build 1,000 low-income homes in 2003 with an investment of EC\$45 million. The Labor Party built 1,200 homes in 2000.

The CARIFESTA Housing Programme is an ongoing project of the government for construction and funding of new housing. In 2000, 130 two- and three-bedroom homes were constructed through the program. In 2002, the CARIFESTA Revolving Fund was established to offer loans of up to EC\$80,000 to individual landowners hoping to build their own homes.

#### 43 EDUCATION

Schooling is compulsory for students between the ages of 5 and 16. Primary school covers a course of seven years, followed by five years of high school and, for those who choose to attend, two years of senior high school. Charlestown Secondary School is the only school on Nevis that offers the full seven years of secondary education. On St. Kitts, students wishing to complete the final two years of secondary school attend Clarence Fitzroy Bryant College of Further Education. The academic year runs from September to July.

Most children attend some type of preschool program between the ages of three and four. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students and nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 17:1 in 2003; the ratio for secondary school was about 10:1.

The Clarence Fitzroy Bryant College of Further Education is the only state institution of higher learning. Most programs offered cover the first year of general university programs. There is also a local extension site of the University of the West Indies. There are six private institutions. The adult literacy rate has been estimated at about 97%.

As of 2003, public expenditure on education was estimated at 3.2% of GDP, or 7.9% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Charles A. Halbert Library Public Library has a central library at Basseterre and four branch locations on St. Kitts. The Nevis Public Library Service consists of the Nevis Central Public Library, the St. George's Branch Library, and three school libraries. There are mobile library services on both St. Kitts and Nevis. The National Museum is located in the Old Treasury Building at Basseterre. The

Museum of Nevis History is in Charlestown, as is Nelson Museum, which preserves memorabilia of Lord Horatio Nelson.

#### 45 MEDIA

The telephone system is operated by the government, while international cable and wireless services are operated privately. In 2002, there were 23,500 mainline phones and 5,000 mobile phones in use nationwide.

ZIZ Radio and Television is owned and operated by the government. The Voice of Nevis is an AM radio station. WinnFM is a private commercial station. Radio broadcasting began in 1961, and television broadcasting in 1972. In 2004, there were 3 AM and 3 FM radio stations and 1 television station. In 1997 there were 575 radios and 273 television sets in use per 1,000 population. In 2002, there were 10,000 Internet subscribers. In 2003, there were 53 Internet hosts.

In 2004, there were four independent weekly newspapers and one independent daily, as well as papers published by the major political parties. *Sun St. Kitts/Nevis* is the daily. *The Labour Spokesman*, founded in 1957, is published twice weekly and had a 2002 circulation of 6,000. The *Democrat*, which is published weekly, had a circulation of 3,500.

The constitution provides for freedom of speech and the press, and the government is said to generally respect these rights. However, because the government owns the only radio and TV stations, these media are said to inadequately cover opposition rallies and other events.

#### 46 ORGANIZATIONS

The St. Kitts and Nevis Chamber of Commerce has its headquarters in Basseterre, and the Nevis Cotton Growers' Association has its office in Charlestown. The primary labor union is the St. Kitts Trades and Labour Union, which is associated with the St. Kitts and Nevis Labour Party.

National youth organizations include Boy Scouts of Saint Kitts and Nevis, New Reformation Party Youth Movement, Young Labor, Young Pamites, and YMCA/YWCA. There are a variety of sports associations, many associated with the St. Kitts and Nevis Olympic Association.

Many US charitable organizations have operations in the islands, including the 4-H Foundation, Planned Parenthood, Heifer Project International, Operation Crossroads Africa, and Project Concern. Volunteer service organizations, such as the Lions Clubs

and Kiwanis International, are also present. There is a national chapter of the Red Cross Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

The chief historic attraction on St. Kitts is Brimstone Hill fortress. The UNESCO World Heritage Site towers 230 m (750 ft) above the Caribbean, took 100 years to build, and is partially restored. Beautiful beaches and the Georgian architecture of Basseterre also attract tourists. Nevis has many beaches and relic plantations and a quaint atmosphere reminiscent of the 18th century. Popular spectator sports are golf, bird watching, snorkeling, and parasailing.

Visitors from the United States and Canada only need proof of citizenship to enter the island. Nationals of all other countries need a valid passport, and citizens of 96 countries do not need a visa. An onward/return ticket and proof of sufficient funds may be required. The government has dredged the main harbor on St. Kitts to accommodate cruise ships.

In 2002, approximately 67,531 tourists arrived on the islands. Over half of these visitors were from the United States.

The cost of traveling in St. Kitts and Nevis varies according to the season. Between December and April, estimated daily expenses are approximately us\$272, and us\$235 the rest of the year.

#### 48 FAMOUS KITTSIANS AND NEVISIANS

Sir Thomas Warner (d.1649) established the first colony on each island. US statesman Alexander Hamilton (1757–1804) was born in Charlestown.

#### 49 DEPENDENCIES

St. Kitts and Nevis has no territories or colonies.

# ST. LUCIA

**CAPITAL:** Castries

**FLAG:** On a blue background is a yellow triangle surmounted by a black arrowhead whose outer edges are bordered in white.

**ANTHEM:** *Sons and Daughters of St. Lucia.*

**MONETARY UNIT:** The East Caribbean dollar (EC\$) of 100 cents is the national currency. There are coins of 1, 2, 5, 10, and 25 cents and 1 dollar, and notes of 5, 10, 20, and 100 East Caribbean dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7) as of 2004.

**WEIGHTS AND MEASURES:** The metric system has been introduced, but imperial measures are still commonly employed.

**HOLIDAYS:** New Year's Day, 1 January; Carnival, 8–9 February; Independence Day, 22 February; Labor Day, 1 May; Queen's Official Birthday, 5 June; Bank Holiday, 1st Monday in August; Thanksgiving Day, 1st Monday in October; St. Lucia Day, 13 December; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, Whitmonday, and Corpus Christi.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The Caribbean island of St. Lucia, part of the Windward Islands group of the Lesser Antilles, is 43 km (27 mi) N–S by 23 km (14 mi) E–W and has a total area of 616 sq km (238 sq mi). Comparatively, the area occupied by St. Lucia is slightly less than 3.5 times the size of Washington, DC. Situated between Martinique to the N and St. Vincent to the SW, St. Lucia has a total coastline of 158 km (98 mi). The Maria islands, located off the southeast coast of the main island, are kept as a natural reserve. The capital city, Castries, is located on St. Lucia's northwest coast.

## <sup>2</sup> TOPOGRAPHY

St. Lucia is a volcanic island, the younger part of which is the mountainous southern half, and the older the hilly but more nearly level northern half. The highest mountain, Mt. Gimie, rises 950 m (3,117 ft) above sea level. Better known are the two peaks on the southern coast, Gros Piton (798 m/2,619 ft) and Petit Piton (750 m/2,461 ft), which together form one of the scenic highlights of the West Indies. The lowlands and valleys of the island have fertile soil and are irrigated by many streams. The island has beautiful beaches, some with black volcanic sand. The two major ports are located at Castries, in the northwest, and Vieux Fort, by Cape Moule à Chique at the southern tip of the island. Cap Point marks the northern tip of St. Lucia.

St. Lucia lies along the Caribbean Tectonic Plate, a location of moderate seismic activity. Volcanic activity is evident through the bubbling mud and gasses emitted from sulfur springs near the crater of Soufrière.

## <sup>3</sup> CLIMATE

The average yearly temperature on St. Lucia is 27°C (80°F); the warmest month is usually September, and the coolest January. The

average rainfall at sea level is 231 cm (91 in) a year; on the mountain peaks, more than 380 cm (150 in). Like the rest of the West Indies, St. Lucia is vulnerable to hurricanes, which hit the Caribbean in the late summer months.

## <sup>4</sup> FLORA AND FAUNA

Tropical sunlight, heavy rainfall, and fertile soil combine to produce an abundance of tropical flora, including hibiscus, poinciana, frangipani, orchids, jasmine, and bougainvillea. The higher mountain slopes support a dense rain forest. Common tree species include palm, bamboo, breadfruit, mangoes, coconut, and pawpaw. There are no large mammals on St. Lucia. Bats are common and there are several species of small snakes. The central highlands provide nesting places for many birds, including flycatchers, hummingbirds, pigeons, and about a hundred other species. The surrounding sea contains extensive coral reefs supporting lobster, turtle, and conch, as well as an abundance of fish.

## <sup>5</sup> ENVIRONMENT

Densely populated, St. Lucia has been shorn of much of its protective woodland by agricultural and commercial interests, except for limited areas in the south-central rain forest. The loss of forest cover contributes to the erosion of the soil, particularly in the drier, northern part of the island. The nation does not have the financial resources to develop an adequate water purification system and the population is at risk from contamination of the water supply by agricultural chemicals and sewage.

The Mankoté Mangrove and Savannes Bay have been designated as Ramsar wetland sites and the Pitons Management Area was designated as a natural UNESCO World Heritage Site (2004). Population pressure prevents the government from expanding the area of protected lands. Principal responsibility for the environment is

vested in the Ministry of Agriculture's Lands, Fisheries, and Cooperatives Forestry Division and the National Trust Fund. Excessive use of herbicides and pesticides threaten the wildlife population in St. Lucia and the eastern Caribbean states in general.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 2 types of mammals, 5 species of birds, 6 types of reptiles, 10 species of fish, and 6 species of plants. Threatened species include the red cedar, American mahogany, the St. Lucia parrot, the great white shark, the St. Lucia racer, and St. Lucia white-breasted thrasher. The St. Lucia giant rice rat has become extinct.

## 6 POPULATION

The population of St. Lucia in 2005 was estimated by the United Nations (UN) at 163,000, which placed it at number 174 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 30% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.0%; the government viewed the fertility rate, at 2.8 births per woman, as too high. The projected population for the year 2025 was 209,000. The population density was 263 per sq km (681 per sq mi).

The UN estimated that 30% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.23%. The capital city, Castries, had a population of 14,000 in that year.

## 7 MIGRATION

Emigration has provided an escape valve for population pressure. Neighbors such as Trinidad, Guyana, and the French Caribbean islands have received the bulk of emigrants from St. Lucia, with lesser numbers going to the United Kingdom, Canada, and the United States. The number of migrants in 2000 was 8,000. In 2005, the net migration rate was -2.19 migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

It is estimated that 90% of the population are of African descent, being descendants of slaves brought into the country in the 17th and 18th centuries. About 6% are of a mixed origin and 3% are East Indian. Approximately 1% of the population is of European descent.

## 9 LANGUAGES

English is the official language of St. Lucia. However, only about 80% of the population speak it. Language outreach programs are seeking to integrate these people into the mainstream of society. Almost all the islanders also speak a French patois based on a mixture of African and French grammar and a vocabulary of mostly French with some English and Spanish words.

## 10 RELIGIONS

The vast majority of the population is Christian. About 67% of the residents are Roman Catholic, though only about 40% of all

Catholics are active members. There is a substantial Protestant community comprised of Anglicans, Pentecostals, Seventh-Day Adventists, Baptists, Jehovah's Witnesses, and Methodists. There are small communities of Hindus, and Muslims, as well as small groups of Rastafarians and Baha'is. The constitution guarantees freedom of religion. The St. Lucia Christian Council, an interfaith group of Roman Catholics and mainline Protestants, has a close relationship with the government. Certain Christian holidays are recognized as national holidays.

## 11 TRANSPORTATION

St. Lucia, as of 2004, had two airports. Direct flights to New York, Miami, Toronto, London, and Frankfurt operate out of Hewanorra International Airport, on the southern tip of the island at Vieux-Fort. The smaller Vigie Airport, located near Castries, is used for flights to and from neighboring Caribbean islands. St. Lucia has two important ports: Castries, in the north, with a cargo-handling capacity of 365,000 tons per year; and Vieux Fort, at the southern tip of the island, from which ferries link St. Lucia with St. Vincent and the Grenadines.

All of the island's towns, villages, and main residential areas were linked by 1,210 km (752 mi) of all-purpose roads in 2002, of which 63 km (39 mi) were paved. Motor vehicles numbered 12,157 in 1995, including 11,399 passenger cars and 758 commercial vehicles.

## 12 HISTORY

Arawak and Carib Amerindians were the earliest known inhabitants of what is now St. Lucia. There is no hard evidence for the folklore that Columbus sighted St. Lucia on St. Lucy's Day in 1498, but in keeping with the tradition, 13 December is still celebrated as the date of the island's discovery.

The islands were not settled until the mid-17th century because the Caribs defended the islands successfully for years. The French settled the islands, but the natural harbor at Castries brought English interest. The island changed hands between the British and the French no fewer than 14 times, until in 1814, the British took permanent possession. In 1838, St. Lucia came under the administration of the Windward Islands government set up by Great Britain.

Unlike other islands in the area, sugar did not monopolize commerce on St. Lucia. Instead, it was one product among many others including tobacco, ginger, and cotton. Small farms rather than large plantations continued to dominate agricultural production into the 20th century. A total of 10,328 slaves were freed when slavery was abolished in 1834. To replace the slave labor, East Indian indentured workers were brought to the island during the late 1800s.

St. Lucia has a democratic tradition which began in 1924 when a few elected positions were added to the appointed legislative council. St. Lucia became an associated state with full internal self-government in 1967 and on 22 February 1979 became an independent member of the Commonwealth.

The first three years of independence were marked by political turmoil and civil strife, as leaders of rival political parties fought bitterly. In 1982, the conservative United Workers' Party (UWP) won 14 of 17 seats in the House of Assembly. Party leader and

Prime Minister John Compton, who had been premier of the island since 1964, became prime minister at independence.

The UWP dominance was eroded in 1987, when the party won only nine seats. Prime Minister Compton called for new elections almost immediately, but received the same result. In 1992, the UWP increased its majority to 11 seats, as the St. Lucia Labour Party (SLP) won 6 seats. The SLP, which had been out of office for 15 years, won the April 1997 elections in a landslide, and its leader, Kenny Anthony, replaced Compton as prime minister.

St. Lucia suffered back-to-back tropical storms in 1994 and 1995 that caused losses of about 65% and 20% of each of those years' banana crops, respectively. In the late 1990s, the country's heavy reliance on bananas posed an additional economic threat as the United States challenged the preferential treatment accorded by several European nations to their former colonies in the Caribbean. In February 1999, a ruling by the World Trade Organization allowed the United States to impose trade penalties on Europe in response to these banana import policies. St. Lucia joined with its Caribbean neighbors in lobbying against the ruling.

In the December 2001 election, Anthony's SLP won with 54% of the vote, securing 14 of the 17 seats in the Assembly. The opposition UWP obtained 36.6% of the vote, but only captured three seats.

In 2002, Tropical Storm Lili destroyed about half of the banana crop; entire plantations were destroyed in some areas. St. Lucia is promoting the growth of mangos and avocados to lessen dependence upon the banana industry, but bananas still make up about one-third of export earnings.

In July 2003, parliament amended the constitution to replace the oath of allegiance to the British monarch with a pledge of loyalty to St. Lucians.

### 13 GOVERNMENT

St. Lucia became independent in 1979. Under its constitution, the British monarch continues to be the titular head of government, appointing, upon recommendation of the local leaders, a governor-general to represent the crown. Executive power is effectively exercised by the prime minister and cabinet. There is a bicameral parliament consisting of a Senate with 11 members and a House of Assembly with 17 representatives. The House of Assembly has the important legislative functions. The Senate is an appointed body with little political power. Six of the members of the Senate are appointed on the advice of the prime minister, three are appointed on the advice of the opposition leader, and two are appointed after consultation with religious, economic, and social groups.

Members of the lower house are elected for a maximum period of five years. Suffrage on St. Lucia has been universal for those 18 and older since 1951, before St. Lucia achieved independence.

Under the constitution, the government could call for elections at any time. Under the current schedule, elections are held by secret ballot and at least every five years.

### 14 POLITICAL PARTIES

After sweeping the 1997 parliamentary elections by gaining 16 out of 17 seats, the left-of-center St. Lucia Labour Party (SLP), led by Kenny Anthony, became the majority party, ending 15 years of dominance by the United Workers' Party (UWP). The SLP re-

LOCATION: 13°53' N; 60°58' W. TOTAL COASTLINE: 158 kilometers (98 miles).  
TERRITORIAL SEA LIMIT: 12 miles.

gained control of the Assembly in the 2001 election, with more than 54% of the vote. Following the UWP's electoral defeat in 1997, its leader, Vaughan Lewis, resigned, and former leader and Prime Minister John Compton, resumed leadership of the party in its new role of opposition party. As of 2005, the leader of the UWP was Dr. Morella Joseph. The UWP was the party in power at the time of independence, lost power in 1979, and regained it in 1982. It is by reputation the more conservative party. The next elections

were scheduled for December 2006.

The National Alliance (NA), under the leadership of Jon Odum, has no representation. It is an offshoot of the SLP. The St. Lucia Freedom Party (SFP) is led by Martinus François. Sou Tout Apwe Fete Fini (STAFF) is led by Christopher Hunte.

## 15 LOCAL GOVERNMENT

St. Lucia is divided into 11 administrative regions. Local governments are elected by popular vote.

## 16 JUDICIAL SYSTEM

The legal system is based on English common law and “Code Napoleon.” The highest judicial body was the Privy Council of the United Kingdom. Both common law and statute law govern St. Lucia. The lowest court is the district or magistrate’s court, above which is the Court of Summary Jurisdiction. Seated in Castries, the Eastern Caribbean Supreme Court (known as the West Indies Associated States Supreme Court upon its founding in 1967, and as the Supreme Court of Grenada and the West Indies Associated States from 1974 until 1979) has jurisdiction in St. Lucia, Anguilla, Antigua and Barbuda, the British Virgin Islands, Dominica, Grenada, Montserrat, St. Kitts and Nevis, and St. Vincent and the Grenadines. It consists of the High Court and the Court of Appeal. Prior to 2003, in exceptional cases, appeals were carried to the UK Privy Council. On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although 14 nations were planning to use the court for appeals. Haiti had agreed to use the CCJ for resolution of trade disputes. The court was officially inaugurated in April 2005. As of 2005, however, the court’s jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

The constitution guarantees a public trial before an independent and impartial court. Legal counsel is afforded to indigent defendants in cases involving capital punishment.

## 17 ARMED FORCES

As of 2000 there were no armed forces other than those of the police force and coast guard. The Eastern Caribbean Regional Security System, formed in 1985, includes Antigua and Barbuda, Barbados, Dominica, Grenada, Jamaica, St. Kitts and Nevis, and St. Vincent and the Grenadines, as well as St. Lucia, and provides for joint coast-guard operations, military exercises, and disaster contingency plans.

## 18 INTERNATIONAL COOPERATION

St. Lucia became a member of the United Nations on 12 September 1979; it is a member of ECLAC and several nonregional specialized agencies, such as the FAO, the World Bank, ILO, IFC, UNESCO, UNIDO, UNCTAD, and the WHO. St. Lucia is a member of the WTO, the ACP Group, the Commonwealth of Nations, CARICOM, the Caribbean Development Bank, G-77, the OAS, the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and OECS. St. Lucia is a member of the

Nonaligned Movement, the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL), and the Organization for the Prohibition of Chemical Weapons. In environmental cooperation, the country is part of the Basel Convention, Conventions on Biological Diversity and Whaling, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

As did many Caribbean producers, St. Lucia’s agricultural products benefited from preferred access to European markets; the country was the leading producer of bananas in the Windward Islands group. The industry is now in a terminal decline, due to competition from lower-cost Latin American banana producers and reduced European Union trade preferences. The country is encouraging farmers to plant crops such as cocoa, mangos, and avocados to diversify its agricultural production and to provide jobs for displaced banana workers. Tourism, with direct flights from Europe and North America, has recently become an important economic activity. St. Lucia’s manufacturing sector has grown steadily, with the construction of many light manufacturing and assembly plants that produce for local or export markets.

Though foreign investment in manufacturing and information processing in recent years has increased St. Lucia’s industrial base, the economy remains vulnerable due to its heavy dependence on banana production, which is subject to periodic droughts and tropical storms. Indeed, the destructive effect of Tropical Storm Iris in mid-1995 caused the loss of 20% of the year’s banana crop, and the agriculture sector recorded its sixth year of decline in 1998. In 2001, GDP growth at current prices was 2%, but in 2002 contracted 4% due to a combination of adverse factors: the global economic slowdown, declining export demand, and a sharp fall-off of tourism after the 11 September 2001 terrorist attacks in the United States. Inflation remained subdued at 2.3% for both years.

Tourism was booming in 2004, showing a solid recovery from recession that followed the 11 September 2001 terrorist attacks on the United States. The latest estimates from the World Bank show that the annual growth rate recorded in 2004 was 3.6%, with agriculture accounting for 4.5% of GDP, manufacturing 5.4% of GDP, and tourism 48% of GDP (direct and indirect impact).

However, it is estimated that up to 40% of the banana crop was destroyed when Hurricane Ivan made its way through the Eastern Caribbean in September 2004. The economy is highly susceptible to external macroeconomic shocks, magnified by an undiversified production and export base and exacerbated by natural disasters that have a serious economic impact on banana and cocoa crops.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 St. Lucia’s gross domestic product (GDP) was estimated at \$866.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,400. The annual growth rate of GDP was estimated at 3.3%. The average inflation

rate in 2001 was 3%. It was estimated that agriculture accounted for 7% of GDP, industry 20%, and services 73%.

Approximately 40% of household consumption was spent on food, 11% on fuel, 4% on health care, and 17% on education.

## 21 LABOR

In 2001 (the latest year for which data was available), the labor force was estimated at 43,800. In 2002 (the latest year for which data was available), an estimated 21.7% of the workforce was engaged in agriculture, with 53.6% in services, and the remaining 24.7% in commerce, manufacturing and industry. Unemployment in 2003 was estimated at 20%.

As of 2001, unions in St. Lucia represented about 20% of the workforce. The largest trade union grouping, the Industrial Solidarity Pact, includes the National Workers' Union, the St. Lucia Civil Service Association, the Prison Officers' Association, and the St. Lucia Teachers' Union. The law protects the right to unionize, strike, and bargain collectively.

The law provides for a minimum working age of 14. Occupational safety and health regulations are regularly enforced. There is no national legislated workweek, although the common practice is to work 40 hours a week spread over five days. Special legislation covers hours which shop assistants, agricultural workers, domestics, and young industrial employees work. There is a minimum wage for office clerks only, which was us\$300 per month in 2001.

## 22 AGRICULTURE

Agriculture accounts for about 8% of GDP. The production of bananas, St. Lucia's most important crop, fluctuates as a result of climatic conditions and plant disease; it has gone from a low of 32,000 tons in 1975 to 160,000 tons in 1990 (48% of the Windward Islands' banana production that year) to 120,000 tons in 2004. Almost the entire production is exported. The second most important crop is coconuts, exported as oil and copra; about 14,000 tons of coconuts were produced in 2004. The production of vegetables and fruits for local consumption increased steadily since 1979, as the government sought to achieve self-sufficiency in tomatoes, onions, carrots, cabbages, and breadfruit. In 2004, the value of exported agricultural products amounted to us\$34.6 million, down from us\$85.7 million in 1990.

## 23 ANIMAL HUSBANDRY

Production in almost every category of animal husbandry is insufficient to satisfy local demand. There are only 12,400 head of cattle on the island, mostly grazing in the middle altitudes of the central mountain region; milk production covers only about 25% of local demand. There were also an estimated 12,500 sheep, 10,000 pigs, and 9,800 goats on the island in 2005. St. Lucia has attained self-sufficiency in pork and egg production. Egg production was about 482 tons in 2005.

## 24 FISHING

The establishment of the St. Lucia Fish Market Corp. in 1985, with a us\$2.5-million grant from Canada, provided local fishermen with processing, storage, and marketing facilities, enabling St. Lucia to become self-sufficient in fresh fish production. In 2003, the

total catch was 1,466 tons. Dolphinfish, wahoo, and blackfin tuna accounted for 286, 169, and 169 tons, respectively, in 2003.

## 25 FORESTRY

A small timber industry processes mahogany, pine, and blue mahoe; expansion of cultivation is planned at the rate of 40 hectares (100 acres) annually. About 15% of total available land consists of forest and woodlands. Legislation is in force to protect against deforestation; during 1990–2000 deforestation continued at an annual average of 4.9%. Imports of forest products amounted to us\$11.7 million in 2004.

## 26 MINING

Mining played a minor role in St. Lucia's economy. Gravel and sand pits and pumice quarries supplied the island's construction sector.

## 27 ENERGY AND POWER

St. Lucia Electricity Services is responsible for the generation and supply of electricity throughout the island. In 2002, total capacity was 66,000 kW. Electrical production in 2002 was 269 million kWh, produced entirely from conventional thermal sources. Consumption of electricity in 2002 was 250 million kWh. St. Lucia's requirements are met through an island-wide grid serviced by two main diesel generation centers, which utilize oil imported from Venezuela and Trinidad and Tobago. The Sulfur Springs in Soufrière on the west coast have been confirmed as a source of geothermal energy, with a potential generating capacity of 10 MW.

With no reserves of oil, natural gas, or coal, nor any refining capacity, St. Lucia must import all the petroleum products it consumes. In 2002, imports and consumption of refined oil products each averaged 2,500 barrels per day; of that amount, distillates and gasoline accounted for the bulk of the imports at 1,270 barrels per day and 1,050 barrels per day, respectively.

## 28 INDUSTRY

St. Lucia's manufacturing sector is the largest and most diversified in the Windward Islands, with many light manufacturing or assembly plants producing apparel, electronic components, plastic products, and paper and cardboard boxes. Agricultural manufacturing includes lime and coconut processing.

Recently, the government has devoted its efforts to the improvement of economic activity as well as development of the major export markets. With the formation of the Eastern Caribbean Stated Export Development Agency (ECSEDA) in 1990, the performance of local manufacturers was expected to be significantly enhanced in the future. Several industrial estates and free trade zones were established during the 1990s, including a free zone for goods distribution that opened in 2000. The site included 11 factory-style warehouses and one administration center. Many large-scale industrial projects were funded by foreign investors in 2000, including port reconstruction, housing construction, a national stadium, banana trade subsidies, and a fisheries industry upgrade. In addition to private investors, the government has focused on capital projects that have increased growth in the construction sector.

St. Lucia's tourism industry has grown steadily in the last 20 years and has increasing appeal as an eco-destination due to de-

lightly unspoiled natural resources, which bode well for the future. Several investors have planned new tourism projects for the island, including a large hotel and resort in the southern part of the island.

## 29 SCIENCE AND TECHNOLOGY

The government of St. Lucia has established a Science and Technology Division within the government's Central Planning Unit (CPU). As of 1987, three scientists were employed with the CPU. The Windward Islands Banana Growers' Association (WINBAN) maintains a research laboratory in St. Lucia serving the needs of banana growers in the region. The St. Lucia National Trust, headquartered in Castries, is responsible for the wildlife, seabirds, rare plants, and geology on Pigeon, Fregate, and Maria islands. In 1984, total expenditures on research and development amounted to US\$12 million. As of 1999 (the latest year for which data is available) there were 237 technicians and 74 scientists and engineers engaged in research and development.

## 30 DOMESTIC TRADE

Castries is the economic center of the island. Local produce markets, selling domestically produced goods, are found in all the small villages and towns. They are usually most active in the early morning hours to avoid the midday heat and the afternoon tropical showers. As of 2002, about 73% of the GDP was attributed to service industries.

The Caribbean Development Bank Poverty Assessment Report mentions that 30% of the labor force participants from the poorest strata of St. Lucia were engaged in informal sector activity, mostly due to the high unemployment rate.

## 31 FOREIGN TRADE

The economy of St. Lucia is highly dependent on foreign trade. Agriculture is the major export earner. Duty exemption and tax credits are implemented for trade inducements, nevertheless, some traders complain of the country's protectionist attitude towards selected goods.

St. Lucia benefits from duty free access for manufactured goods to the EU market and preferential arrangements for bananas. The

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

European Union (EU) accounts for approximately 50% of exports and 17% of imports. In 2003, St. Lucia's imports from the EU amounted to €44 million, while exports from St. Lucia to the EU Member States reached €24 million.

In 2004 St. Lucia exported \$81 million in bananas, cocoa, vegetables, fruits, other agricultural products, oils and fats, and manufactured goods. Major export markets were the United Kingdom (27%), United States (13%), Trinidad and Tobago (12%), and Barbados (8%), while imports rose to \$383 million for food, fuel, manufactured goods, machinery, and transport equipment; major suppliers are the United States (40%), Trinidad and Tobago (16%), the United Kingdom (9%), and Japan (4%).

## 32 BALANCE OF PAYMENTS

St. Lucia has had a negative balance of trade every year since independence; this annual deficit has been counterbalanced in part by inflows from tourism and direct investment. However, the 11 September 2001 terrorist attacks on the United States negatively impacted St. Lucia's tourism industry.

The external current account deficit, which had declined in 2001 to 5.75% of GDP as imports fell sharply, is estimated to have increased to 8.5% in 2002 mainly due to a decline in proceeds from services. These deficits have been more than covered by capital inflows including public sector borrowing and private capital. Reflecting the government borrowing, public and publicly guaranteed external debt rose rapidly in recent years (from an average of 23.5% of GDP in 1998–99 to about 31% at the end of 2001), and is estimated to have increased to 38.5% of GDP at the end of 2002. It is not surprising then that World Bank estimates for 2004 report that St. Lucia's trade deficit is more than \$300 million.

## 33 BANKING AND SECURITIES

In early 1981, the government-owned St. Lucia National Bank and the St. Lucia Development Bank were opened. There were eight

commercial banks as of 2000, including the St. Lucia Cooperative Bank, the Bank of Nova Scotia, Barclays, CIBC Caribbean, Caribbean Banking Corporation, the Republic Bank, and the Royal Bank of Canada. St. Lucia is a member of the Eastern Caribbean Central Bank, which is responsible for the administration of the country's monetary policies, the regulation of exchange control, and supervision of commercial banks and other financial institutions for the islands belonging to the Organization of Eastern Caribbean States. The Central Bank has special arrangements for discounting loans made by commercial banks to productive sectors, such as tourism, agriculture, and manufacturing. The interest rates are normally below the commercial banks' lending rates. In 1999, the St. Lucia National Commercial Bank offered public shares for the first time, receiving investment of over us\$11 million. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$115.4 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$502.9 million.

### 34 INSURANCE

As of 1997, there were at least 18 companies registered to transact insurance business in St. Lucia.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimated that in 2000 St. Lucia's central government took in revenues of approximately \$141.2 million and had expenditures of \$146.7 million. Revenues minus expenditures totaled approximately -\$5.5 million. Total external debt was \$214 million.

### 36 TAXATION

Individual income tax rates in St. Lucia range from 10–30%. There are no local taxes on income. Resident corporations and branches of foreign companies are taxed at the same flat rate of 33.33%. There are no other corporate taxes. Hotel companies and other industries receive a tax holiday of up to 15 years in St. Lucia.

### 37 CUSTOMS AND DUTIES

Duties on imported goods such as alcoholic beverages, motor vehicles, cigarettes, and gasoline and oil continue to be major sources of government income. Most imports except those from CARICOM nations are subject to import duties, which consist of a customs duty, a consumption tax, and a service charge. The CARICOM common external tariff ranges up to a maximum of 20%. To facilitate industrial development, the government has in specific cases negotiated the complete elimination of both import and export duties. In 2000, the government implemented a consumption tax retooling that involved a rebate of 20% for electronics producers, 40% for most other small manufactures, and 60% on the production of food and beverages.

### 38 FOREIGN INVESTMENT

Firms based in Canada, the United States, the United Kingdom and other EC members, Venezuela, Hong Kong, and the Republic of Korea are the principal investors in St. Lucia. Two free-trade

zones operate on the island, and a free zone for goods distribution was opened in 2000.

The government, through the St. Lucia National Development Corporation, set up five industrial zones in order to attract foreign investment in manufacturing and assembly operations. A Data Entry Park was built to attract information processing operations. Development incentives are available in the form of tax concessions of up to 15 years in industries prescribed as beneficial to St. Lucia, namely in the manufacturing and tourism industries.

In 1996, St. Lucia was granted a us\$955 thousand loan from the Caribbean Development Bank (CDB). The money was used to partly finance a project to help poor households in rural districts diversify agricultural production in order to decrease dependence on the banana industry. The banana industry was highly subsidized during 1999 and 2000 by the EU through the Banana Industry Trust Company, despite the need for diversification. Other investment in 2000 came from the Japanese government to encourage growth of the fishing industry, and from the Chinese government in construction and manufacturing.

In 1990 FDI was 5.85% of GDP, rose to 8.04% in 2000, but slowed in 2003 to 4.63% of GDP. Annual foreign direct investment (FDI) inflow was approximately \$50 million in 1997, but rose to an average of about \$83 million in 1998 and 1999. In 2000 and 2001, average annual FDI inflow was about \$50 million. All sectors of the economy have benefited from infrastructure improvements in roads, communications, water supply, sewerage, and port facilities. These improvements, combined with a stable political environment and educated work force, have attracted foreign investors in several different sectors. Although St. Lucia enjoys a steady flow of investment in tourism, the single most significant foreign investment is Hess Oil's large petroleum storage and transshipment terminal. In addition, the Caribbean Development Bank funded an extensive airport expansion project.

### 39 ECONOMIC DEVELOPMENT

Historically, the major thrust of foreign affairs for St. Lucia has been economic development. Since the establishment the National Development Corp. in 1971, St. Lucia has succeeded in diversifying its economy. St. Lucia has the most highly developed infrastructure of all the Windward Islands, with an international airport, a highway system that connects the important coastal and agricultural areas with the political and commercial centers, and a fully automated telephone system with direct dialing to most parts of the world.

At the end of 1996, the Lewis government unveiled a job-creating budget aimed at boosting his party's flagging fortunes. A us\$242 million package devoted us\$136 million to current expenditure and us\$104 million to capital items. With the unemployment rate standing at 25%, the prime minister pledged to create 10,000 jobs by the end of the 1997–98 fiscal year. The 2.9% gross domestic product growth of 1998 was a marked improvement from previous years, which averaged below 2%. Unemployment was down to about 15% in 1999, and the government had plans to spend half of its budget on capital projects to foster the growing economy.

In view of the European Union's announced phase-out of preferred access to its markets of Windward Island bananas by 2006, an attempt is being made to diversify production by encourag-

ing the establishment of tree crops such as mangos and avocados. With the banana production's considerable fall in recent years, tourism now sustains the economy—St. Lucia is the number one tourist destination among Eastern Caribbean Currency Union (ECCU) members. The government in 2003 was focusing public investment on projects aimed at growth led by the private sector and at reducing poverty. Furthermore, recently St. Lucia added small computer-driven information technology and financial services as development objectives.

The government is seeking balanced international relations with emphasis on mutual economic cooperation and trade and investment. It seeks to conduct its foreign policy chiefly through its membership in the OECS. For example, St. Lucia participated, along with 14 other Caribbean nations, in a summit with President Clinton in Bridgetown, Barbados in May 1997. The summit, which was the first-ever meeting in the region between US and Caribbean heads of government, strengthened the basis for regional cooperation. US assistance is primarily channeled through multilateral agencies such as the World Bank and the USAID satellite office in Bridgetown, Barbados.

#### 40 SOCIAL DEVELOPMENT

The National Insurance program provides all workers from age 16 to 60 with old age, disability, survivor, sickness, and maternity coverage, as well as workers' compensation. The program is financed by 5% contributions from employers and employees, with the government financing the program for civil servants. Retirement pensions begin at age 60, provided that 10 years of contributions have been made. Maternity benefits are 65% of average salary for the preceding seven months, plus a cash grant.

There are no legal restrictions on the rights of women, but social discrimination is not uncommon. The Minister for Women's Affairs promotes and protects the rights of women, and addresses employment discrimination complaints. Violence against women remains a serious problem but is addressed by the government with programs and training. The St. Lucia Crisis Center in Castries and a second facility in Vieux Fort monitor abuse and act as advisors and advocates for women on a number of issues.

Human rights are generally well respected in St. Lucia, although there were reports of mistreatment of prisoners and generally poor prison conditions.

#### 41 HEALTH

There were two general hospitals, one psychiatric hospital, and two district hospitals on St. Lucia. The main hospital, with over 200 beds, is located in Castries. In addition, there are 34 health centers scattered throughout the island. In 2004, there were an estimated 518 doctors and 229 nurses per 100,000 people. Total health care expenditure was estimated at 4.3% of GDP.

Malnutrition and intestinal difficulties are the main health problems. Tuberculosis, once widespread, has been brought under control. The total fertility rate was 3.1 children born to a woman during her childbearing years. The average life expectancy was 73.61 years in 2005. That year the infant mortality rate was 13.53 per 1,000 live births.

#### 42 HOUSING

According to the 2001 census, there were 52,664 dwelling units nationwide. About 80% of these were private, single-family detached homes. About 41% of all dwellings were built of concrete block; 39% were built of wood. That year, 47.2% of all households were linked to a septic system; 35.3% still made use of pit latrines. About 86% had access to electricity for lighting and 58.4% were linked to a public water system. Nearly 75% of all dwellings were owner occupied. About 34% of the housing stock was built in the period 1980–95; about 14.8% was built before 1970. The average household had 3.3 members.

#### 43 EDUCATION

Elementary schooling lasts for seven years, followed by three years of lower secondary education and another two years of upper secondary education. About 65% of children between the ages of three and four attend some type of preschool program. Primary school enrollment in 2003 was estimated at about 99% of age-eligible students. The same year, secondary school enrollment was about 76% of age-eligible students; 68% for boys and 85% for girls. It is estimated that nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 22:1 in 2003; the ratio for secondary school was about 16:1.

An education complex in Castries maintains a teacher-training center, a technical school, a secretarial training center, and a branch of the University of the West Indies. The Sir Arthur Lewis Community College is to be upgraded into a full-fledged campus of the University of the West Indies. In 1996, institutions of higher learning had 157 teaching staff and 2,760 students. The adult literacy rate for 2004 was estimated at about 90%.

As of 2003, public expenditure on education was estimated at 7.7% of GDP, or 21.3% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The government provides free library service. The Central Library of St. Lucia with 106,000 volumes is located in Castries; at least 17 smaller public libraries are located in villages throughout the island. St. Lucia has a historical and natural history museum on Pigeon Island, founded in 1994. Le Pavillon Royal Museum in Castries contains artifacts and displays on the history of the government.

#### 45 MEDIA

The telephone system is fully automatic. In 2002, there were 51,100 mainline phones and 14,300 mobile phones in use nationwide. In 2004, there were three radio stations and three television stations; one of each were owned by the government. In 1997 there were 668 radios and 167 TV sets in use per 1,000 population. Television programs consist of some local programming, videotapes, and live broadcasts originating in Barbados; television transmissions from Martinique are also received.

In 2005, there were six main newspapers in the country. *The Voice of St. Lucia* and the *St. Lucia Star* (10,000 circulation in 2002) appear three times a week. The *Crusader* (2002 circulation, 4,000) is published on Saturday. *The Mirror*, *The Vanguard*, and *One Caribbean* are also published once a week.

The government is said to generally respect constitutionally provided free speech and free press, though occasionally it has shown open hostility toward both the print media and radio. Newspapers, radio, and television carry a wide spectrum of opinion, including that which is directly critical of the government.

#### 46 ORGANIZATIONS

The St. Lucia Chamber of Commerce, Industry, and Agriculture meets in Castries. Other business organizations include the St. Lucia Hotel and Tourism Association, the Saint Lucia Industrial and Small Business Association, and the St. Lucia Manufacturing Association. Professional associations, such as the St. Lucia Teachers Union, are also active.

The St. Lucia Historical Society and the Folk Research Center promote the study and development of national culture. National youth organizations include the Boy Scouts and Girl Guides of St. Lucia, Caribbean Youth Conference, Progressive Labor Party Youth, and United Workers Party Youth. Sports associations promote amateur competition for athletes of all ages. Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. There are also national chapters of the Red Cross and Planned Parenthood.

#### 47 TOURISM, TRAVEL, AND RECREATION

Dramatic tropical scenery, beautiful beaches, and excellent water-sports facilities are St. Lucia's principal tourist attractions. Of special interest are the Piton Mountains and the Sulphur Springs (the world's only drive-in volcano). Popular sports include football (soccer), volleyball, tennis, and cricket. All foreign nationals must carry a passport. Visas are required for all but visitors from the United States, Commonwealth countries, or where there is

an agreement between St. Lucia and the home country. Tourists come by air directly from Europe, Canada, and the United States, and on cruise ships sailing through the West Indies out of North American and European ports.

There were 276,948 tourist arrivals in St. Lucia in 2003. In that year there were 3,749 rooms available and 6,748 beds. The hotel occupancy rate was 62%. The average length of stay was 10 days.

#### 48 FAMOUS SAINT LUCIANS

John G. M. Compton (b.1926), trained as a barrister and one of the founders of the United Workers' Party, was prime minister from 1982–96. Dr. Kenny Davis Anthony, (b.1951) became prime minister in 1997. The writer Derek Walcott (b.1930) is best known for his epic autobiographical poem *Another Life*.

#### 49 DEPENDENCIES

St. Lucia has no territories or colonies.

# ST. VINCENT AND THE GRENADINES

**CAPITAL:** Kingstown

**FLAG:** Three vertical bands of blue, yellow, and green; centered on the yellow band are three green diamonds arranged in a v-pattern.

**ANTHEM:** *National Anthem*, beginning “St. Vincent! Land so beautiful.”

**MONETARY UNIT:** The East Caribbean dollar (EC\$) of 100 cents is the national currency. There are coins of 1, 2, 5, 10, and 25 cents and 1 dollar, and notes of 5, 10, 20, and 100 East Caribbean dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7) as of 2004.

**WEIGHTS AND MEASURES:** The imperial measures are used.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; CARICOM Day, 5 July; Carnival, 6 July; Bank Holiday, 1st Monday in August; Independence Day, 27 October; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, and Whitmonday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Located in the Windward Islands group of the Lesser Antilles, St. Vincent and the Grenadines is 34 km (21 mi) sw of St. Lucia and about 160 km (100 mi) w of Barbados. Scattered between St. Vincent and Grenada to the sw are more than 100 small islands called the Grenadines, half of which belong to St. Vincent and the other half to Grenada. The Grenadines belonging to St. Vincent include Union Island, Mayreau, Canouan, Mustique, Bequia, and many other uninhabited cays, rocks, and reefs. The land area of St. Vincent island is 344 sq km (133 sq mi). Bequia, the largest of the Grenadines belonging to St. Vincent, has an area of 18 sq km (7 sq mi). The total land area of the country is 389 sq km (150 sq mi). Comparatively, the area occupied by St. Vincent and the Grenadines is slightly less than twice the size of Washington, DC.

The capital city, Kingstown, is located on the southeast coast of the island of St. Vincent.

## <sup>2</sup> TOPOGRAPHY

St. Vincent is a rugged island of volcanic formation, and the Grenadines are formed by a volcanic ridge running north–south between St. Vincent and Grenada. The highest peak on St. Vincent is Soufrière, an active volcano with an altitude of 1,234 m (4,048 ft); it has a crater lake 1.6 km (1 mi) wide. In the center of the island, Richmond Peak rises to a height of 1,079 m (3,539 ft). Only 5% of the island’s surface has slopes of less than 5°. The low-lying Grenadines have wide beaches and shallow bays and harbors, but most have no source of freshwater except rainfall. The highest point in

the Grenadines is Mt. Tobai on Union Island, with an altitude of 308 m (1,010 ft).

## <sup>3</sup> CLIMATE

The islands enjoy a pleasant tropical climate all year round, with a yearly average temperature of 26°C (79°F). The warmest month is September, with an average temperature of 27°C (81°F); the coolest is January, with an average temperature of 25°C (77°F). The average yearly rainfall on St. Vincent is 231 cm (91 in), but in the mountainous areas the average rainfall is more than 380 cm (150 in) a year. May or June through December is the rainy season.

## <sup>4</sup> FLORA AND FAUNA

The shallow waters of the Grenadines abound with marine life. Lobsters, conch, fish of all varieties, and turtles can be found in such areas as the Tobago Cays, which lie north of Prune (Palm) Island. Whales are frequently sighted off Petit Nevis, and large iguanas can be found on some of the waterless rocks and cays.

In Kingstown, on St. Vincent, there is a famous botanical garden where the breadfruit tree was introduced to the West Indies from South Pacific islands in 1793. Some of the many birds found in St. Vincent are the Caribbean eleania, the trembler, the bananaquit, and the Antillean crested hummingbird.

## <sup>5</sup> ENVIRONMENT

The principal recurrent threat to the environment comes from the Soufrière volcano, which erupted violently on 7 May 1902, destroying much of northern St. Vincent and claiming 1,565 lives. After another eruption, on 13 April 1979, the volcano remained active for weeks, spewing over much of the island a pall of volca-

nic ash, which covered mountains, forests, and plantation fields. Forests are threatened by farming development and use of wood for commercial purposes.

Pollution from pleasure yachts and other sources has seriously affected the eastern shorelines of all the major islands of the Grenadines. In Bequia's Admiralty Bay, the pollution is so severe that swimming is dangerous. The main contributing factors are toxic chemicals used in farming and sewage. Fresh water resources are also limited. The nation's tourist trade increases the need for water even more. The nation's coast is particularly vulnerable to pollution from industrial sources.

The central highlands of St. Vincent have been set aside as a natural preservation area for nesting of the St. Vincent parrot, the St. Vincent wren, and the St. Vincent solitaire, all endangered or rare species. In the Grenadines, the hawksbill, green sea, and leatherback turtles have been declared endangered. The Tobago Cays have been proposed as a nature preserve, but aside from a few sites on Union Island there are no protected areas in the Grenadines belonging to St. Vincent. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 2 types of mammals, 2 species of birds, 4 types of reptiles, 1 species of amphibian, 11 species of fish, and 4 species of plants. Threatened species included the guaiac tree, the great white shark, the St. Vincent black snake, and several species of whales and dolphins.

## <sup>6</sup>POPULATION

The population of St. Vincent and the Grenadines in 2005 was estimated by the United Nations (UN) at 111,000, which placed it at number 176 in population among the 193 nations of the world. In 2005, approximately 6% of the population was over 65 years of age, with another 30% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.1%, a rate the government viewed as too high. The projected population for the year 2025 was 117,000. The overall population density was 285 per sq km (737 per sq mi), with the majority of the population living on St. Vincent, which is the main island. The Grenadines are sparsely populated; many of the islands are uninhabited.

The UN estimated that 55% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.97%. The capital city, Kingstown, had a population of 29,000 in that year.

## <sup>7</sup>MIGRATION

Although no reliable statistics are available, emigration is known to take place to Trinidad, Guyana, Guadeloupe, and Martinique. In the past, the United Kingdom and the United States also accepted substantial numbers of migrants, and Canada is still receiving arrivals from the islands. The number of migrants was estimated to be 8,000 in 2001. In 2005, the net migration rate was -7.61 per 1,000 population. The government views the migration levels as satisfactory.

## <sup>8</sup>ETHNIC GROUPS

About 66% of the islanders are descendants of African slaves. About 19% of the population is of mixed origin. Of the mixed

group, about 1,000 persons, identified as Black Caribs, descend from the intermingling of Amerindians and Africans that occurred before European colonization. In the second half of the 19th century, about 2,472 indentured laborers were brought to St. Vincent from Asia; their descendants, making up about 6% of the current population, are known as East Indians. About 2% of the people are Carib Amerindians.

## <sup>9</sup>LANGUAGES

English is the official language of St. Vincent and the Grenadines. Some islanders speak a French patois, representing a mixture of African and French grammar, with a vocabulary drawing mostly upon French, along with some English and a few Spanish words. A few islanders speak French as their first language.

## <sup>10</sup>RELIGIONS

Christianity is the dominant religion of the islands. The largest denomination is the Anglican Church, with about 24,000 members. The Methodist Church has about 4,500 registered members, but up to 12,000 people have claimed some affiliation with this denomination. About 11,000 citizens are Roman Catholic and another 11,000 are Seventh-Day Adventist. The Pentecostal Assembly of the West Indies has about 20 congregations in the country; other Pentecostal denominations are present. There are small communities of Baha'is, Hindus, and Muslims. There is also a group of Rastafarians, some of whom claim discrimination by local police because their religion endorses the use of marijuana, which is illegal in the country. Religious freedom is guaranteed by the constitution. The Christian Council of Churches promotes interfaith understanding and maintains a close relationship with the government.

## <sup>11</sup>TRANSPORTATION

St. Vincent is on the main air routes of the Caribbean, with direct flights to Trinidad and Barbados as well as the other islands to the north. In 2004 there were an estimated six airports and airfields, five of which had paved runways (as of 2005). The international airport is located on the southern tip of the island, near Kingstown; one of the much smaller airports is located on the east coast, north of Georgetown. Small airports are also located on Union, Canouan, and Mustique islands. In 1991, the construction industry and the infrastructure were given a minor boost with the government's announcement of an us\$18.5 million airport improvement and road construction and upgrading program.

All of the Grenadines have excellent harbors served by a ferry service operating out of Kingstown. Wharf facilities were enlarged in the early 1980s, with financial support from the United States, to include a deepwater pier. In 2005, the merchant fleet comprised 657 ships of 1,000 GRT or more, totaling 7,967,418 GRT. Although the main road of St. Vincent, going down the east coast and up the west coast, does not encircle the island, it does connect all the main towns with the capital. As of 2002, the islands had about 829 km (516 mi) of roads, of which 580 km (361 mi) were paved. About 8,110 vehicles were registered in 1995, including 4,935 passenger cars. There is approximately one vehicle for every 15 residents.

## 12 HISTORY

The Arawak Amerindians, who migrated from South America, are the earliest known inhabitants of St. Vincent and the Grenadines. Subsequently, the Caribs took control of the islands and were there when Christopher Columbus reached St. Vincent on 22 January 1498.

St. Vincent was one of the last of the West Indies to be settled. Left to the Carib Amerindians by British and French agreement in 1660, the island continued to have a sizable Amerindian population until the first quarter of the 18th century. One of the results of this isolation from European influence was the evolution of the Black Caribs, who descend from the intermarriage of runaway or shipwrecked slaves with the Amerindians. The island was taken formally by the British in 1763, who ruled thereafter, except from 1779 to 1783 when it was in the hands of the French.

The island changed its ethnic character during the next century. When the Black Caribs and the remaining Amerindians rebelled against the British in 1795 at French instigation, most of the defeated insurgents were removed to the Bay of Honduras. Those who remained were decimated by an eruption of Soufrière in 1812. They were supplanted by African slaves, who were freed in 1834, Madeiran Portuguese, who immigrated in 1848 because of a labor shortage, and Asian indentured laborers who arrived in the latter half of the 19th century.

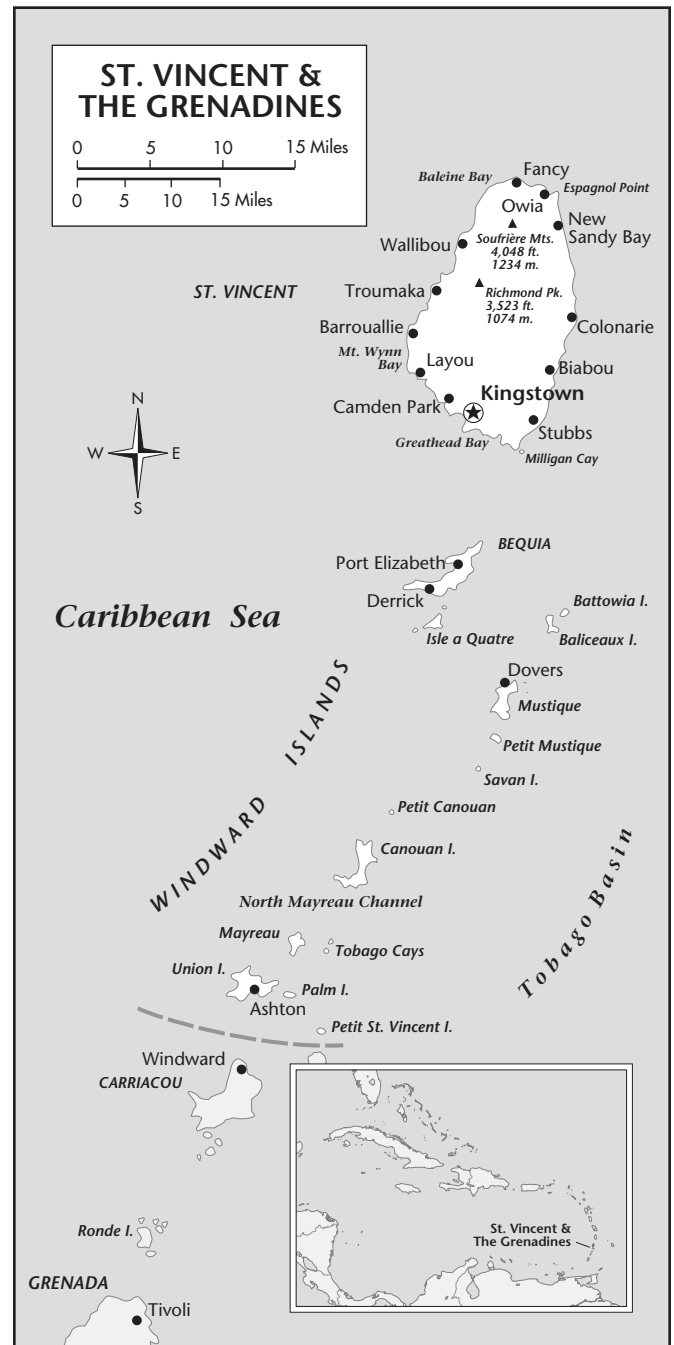

St. Vincent was administered as a crown colony within the Windward Islands group from 1833 until 1960, when it became a separate administrative unit linked with the Federation of the West Indies. The federation fell apart in 1962, and after lengthy discussion, St. Vincent became a self-governing state in association with the United Kingdom seven years later. On 27 October 1979, St. Vincent and the Grenadines achieved full independence as a member of the Commonwealth.

During the first months of independence, the young nation faced a rebellion on Union Island, its southernmost constituent, by a group of Rastafarians attempting to secede. The revolt was put down with military support from neighboring Barbados. In the end, 1 person was killed and 40 arrested. Otherwise, the political system has had few disruptions. The government at independence under the St. Vincent Labor Party gave way to the New Democratic Party (NDP) in 1984, with the NDP renewing its government in 1989.

In 1990, leaders of St. Vincent and the Grenadines, Dominica, Grenada, and St. Lucia formed the Regional Constituent Assembly to plan for a limited union. However, these talks were halted after 1995 because the parties in power changed in several of the countries. In the February 1994 election, the NDP won its third consecutive term in office. The NDP captured 12 seats in the House of Assembly and the Unity Labor Party (ULP) won three seats.

The NDP retained its parliamentary majority by only one vote in early elections held in June 1998, winning 8 seats as opposed to 7 won by the opposition ULP led by Vincent Beache. But in 2001, the ULP led by Ralph Gonsalves won the election with 56.7% of the vote and secured 12 of the 15 elected seats in the 21-member Assembly.

In spite of efforts at diversification, bananas remained the most important sector of the country's economy. However, the banana industry, like those of other Caribbean island nations, suffered serious blows in past years.

LOCATION: St. Vincent—13°6' to 14°35' N; 61°6' to 61°20' W. TOTAL COASTLINE: 84 kilometers (52 miles). TERRITORIAL SEA LIMIT: 12 miles.

In 2003, St. Vincent and the Grenadines was admitted to the Non-Aligned Movement of developing nations. That year, the country was also removed from the Paris-based Financial Action Task Force's list of nations deemed uncooperative in the fight against money laundering.

## 13 GOVERNMENT

When the nation became independent in 1979, it kept the then British monarch as the nominal head of government, represented by a governor-general. The governor-general appoints the leader

of the majority party to be prime minister. The cabinet is appointed by the governor-general on the advice of the prime minister. Executive power is in the hands of the prime minister and cabinet, who are members of the majority party in the legislature. The legislature is unicameral, a 21-seat House of Assembly. The House of Assembly consists of representatives elected from each of 15 constituencies for a maximum of five years, plus 6 senators appointed by the governor-general.

#### 14 POLITICAL PARTIES

There are two major parties and four minor parties on the islands. The majority party is the New Democratic Party (NDP). Founded in 1975, the party had, after 1984, held a parliamentary majority. In the elections of June 1998, the NDP's majority slipped from 12 to 8 out of 15 seats, giving it only a one-seat margin over the opposition SVLP.

The St. Vincent Unity Labour Party (ULP) was founded in 1955 and was in power at independence and governed the nation, under Robert Milton Cato, until the July 1984 elections. Under the leadership of party leader, Ralph Gonsalves, the ULP won the 2001 parliamentary election with 12 out of 15 seats. The ULP also won the 2005 election, winning 55.26% of the vote (12 seats) to the NDP's 44.68% (3 seats). The next elections were to be held in 2010.

#### 15 LOCAL GOVERNMENT

In an attempt to decentralize the government, this small nation has been subdivided into six parishes.

#### 16 JUDICIAL SYSTEM

The islands are divided into three judicial districts; there are 11 courts within the three districts. Appeals may be carried to the East Caribbean Supreme Court, based in St. Lucia, and made up of the Court of Appeal and the High Court. Prior to 2003, in exceptional cases, appeals were carried to the Judicial Committee of the Privy Council in the United Kingdom. On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although 14 nations were planning to use the court for appeals. Haiti had agreed to use the CCJ for resolution of trade disputes. The court was officially inaugurated in April 2005. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

The constitution guarantees a public trial before an independent and impartial court. Legal counsel is afforded to indigent defendants in cases involving capital punishment. There are no separate security or military courts.

#### 17 ARMED FORCES

There are no armed forces except those of the police force and coast guard. The Eastern Caribbean Regional Security System, which includes Antigua and Barbuda, Barbados, Dominica, Grenada, Jamaica, St. Kitts and Nevis, and St. Lucia, as well as St. Vin-

cent and the Grenadines, provides for joint coast guard operations, military exercises, and disaster contingency plans.

#### 18 INTERNATIONAL COOPERATION

St. Vincent and the Grenadines became a member of the United Nations on 16 September 1980 and belongs to the ECLAC and several nonregional specialized agencies, such as the FAO, ILO, UNCTAD, UNSECSO, the World Bank, and the WHO. The nation is a member of the WTO, the ACP Group, CARICOM, the Caribbean Development Bank, G-77, the OAS, the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and the OECS. It is also part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons.

In environmental cooperation, St. Vincent and the Grenadines is part of the Basel Convention, Conventions on Biological Diversity and Whaling, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

#### 19 ECONOMY

Agriculture is the mainstay of the economy of St. Vincent and the Grenadines, with bananas as the primary cash crop. Vegetable production for export grew significantly in the mid-1980s, as the market for arrowroot declined. Revenues from banana exports fell after 1990, but EU support after 1998 helped the industry. Tourism is particularly important in the Grenadines, where yachting is a principal pastime. Some of the smaller cays have been wholly acquired by private interests and developed into resorts for European and North American visitors. Some industrial development has begun in St. Vincent, but the government has been relatively unsuccessful at introducing new industries, and high unemployment rates continued. The continuing dependence on a single crop represents the biggest obstacle to economic development; tropical storms frequently disturb agricultural production. Dependence upon the tourism industry is also risky, as witnessed by the low numbers of arrivals following the 11 September 2001 terrorist attacks on the United States. About 160,000 tourists arrived in the country in 2004.

Although private sector activity was weak in the mid-2000s, growth was supported by a rebound in agricultural production and expansionary fiscal policies, including large public sector investments. Following stagnation in 2001, a moderate recovery began in 2002–03. The GDP growth rate reached 5.4% in 2004.

#### 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 St. Vincent and the Grenadines's gross domestic product (GDP) was estimated at \$342.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,900. The annual growth rate of GDP was estimated at 0.7%. The average inflation rate in 2001 was -0.4%. It was estimated that

agriculture accounted for 10% of GDP, industry 26%, and services 64%.

Approximately 27% of household consumption was spent on food, 8% on fuel, 2% on health care, and 13% on education. It was estimated that for the same period private consumption grew at an annual rate of 7%.

## 21 LABOR

As of 1991, the labor force totaled an estimated 41,680 persons. As of 2001, the services sector accounted for 60.7% of those employed, with 15.4% in agriculture, 19.7% engaged in industry, and 4.2% in undefined occupations. In 2001 the unemployment rate was estimated at 15%.

One of the first authentic labor unions in the West Indies was formed in St. Vincent in 1935, during the Great Depression. From this initial Workingman's Association, the labor movement in St. Vincent has developed unions for agricultural workers, dockworkers, civil servants, and teachers. There is some poaching of members among competing trade unions, and the labor movement is gradually losing support. While workers have the right to form unions and strike, employers are not compelled to recognize a union or bargain collectively with them. Many employers do try to maintain good relations with their workers though, and strikes are rare. St. Vincent and the Grenadines joined the International Labor Organization in 1999.

The minimum working age is 16 and this is enforced by the government and respected by employers. Some children under 16 do work on family-owned banana plantations. There is no statutory workweek, but most workweeks are 40 hours long in practice. The minimum wage varies by economic sector and level of employee skill. As of 2002, the minimum wage for agricultural workers was us\$6.74 per day (not including shelter) and us\$7.49 per day for industrial workers.

## 22 AGRICULTURE

About half of St. Vincent is devoted to crop growing. Agricultural products accounted for 60% of exports in 2004. Real growth in agriculture was averaging 6.7% annually. Bananas constitute the main crop; vegetables, coconut, spices, and sugar are also important. Banana production was adversely affected by the eruption of Soufrière, which reduced exports from 30,414 tons in 1978 to 22,692 tons in 1979. Further damage was done by two hurricanes in 1979 and 1980; in the latter year, some 95% of the crop was destroyed. Production rebounded during 1981, and 83,000 tons were produced in 1982; in 2004, 45,000 tons were produced. Other crops in 2004 included coconuts, 21,500 tons; sugarcane, 18,000 tons; sweet potatoes, 1,200 tons; and plantains, 3,500 tons. Most of the agricultural products are grown on small farms; quality control is sometimes a problem, particularly in the production of bananas. There are approximately 5,000 banana growers on the island.

## 23 ANIMAL HUSBANDRY

Estimates of the livestock population in 2005 include 12,000 sheep, 9,150 hogs, 5,000 head of cattle, 7,200 goats, and 125,000 poultry

of all types. The island of St. Vincent does not produce enough meat, poultry, eggs, and milk to satisfy local demand.

## 24 FISHING

At one time, St. Vincent and Bequia were the centers for a thriving whaling industry, but only 21 humpback whales were captured from 1970 to 2003. Since the New Kingston Fish Market opened in the late 1980s, the fish catch rapidly increased. In 2003, the total catch amounted to 4,782 tons, up from 921 tons in 1996. However, fisheries exports declined from us\$1,960,300 in 1990 to us\$551,000 in 2003. Technical assistance and training to fisherman and fisheries staff was being sponsored by the Canadian Fisheries Development Project.

## 25 FORESTRY

There is virtually no commercial forestry, although 36% of the land consists of forests and woodlands. Some local timber is used for residential and boat construction. Imports of forest products amounted to almost us\$18.5 million in 2004.

## 26 MINING

Mining played a minor role in the economy of St. Vincent and the Grenadines. Some sand was extracted for local construction projects, and on some of the smaller and drier Grenadines, salt was produced on a small scale for local consumption.

## 27 ENERGY AND POWER

The electric power facilities of St. Vincent and the Grenadines were being expanded and improved to meet the growing industrial demand. In 2002, total power generation amounted to 91 million kWh, of which 72.5% was from fossil fuels and 27.5% from hydropower. Consumption of electricity in the same year was 85 million kWh. Total installed capacity in 2002 was 23,000 kW.

St. Vincent and the Grenadines had no reserves of natural gas, oil, or coal, nor any refining capacity. All fossil fuel needs are met by imports of refined oil products. In 2002, imports and consumption of refined oil products each averaged 1,300 barrels per day. Of that amount, distillates and gasoline accounted for the majority. Distillate imports averaged 690 barrels per day, while gasoline accounted for 440 barrels per day.

## 28 INDUSTRY

A substantial amount of industrial activity centers on the processing of agricultural products. Because of depression in the sugar industry, sugar-processing facilities established in 1981–82 were shut down in 1985; in the same year, a beer factory began production. Nonagricultural industries include several garment factories, a furniture factory, an electronics plant, and a corrugated cardboard box plant. Manufacturing accounted for 6.1% of GDP in 2001, and industrial activity as a whole contributed 26% to GDP in 2001.

The tourism industry lagged in the 1990s because of difficult transportation access and the lack of white sand beaches on the main islands. However, the government put more emphasis than ever on the promotion of the country as an upscale tourist destination. A new airport on Union Island was opened in 1993. A year earlier, a new airport, financed by a grant from the EC (now EU),

opened on the island of Bequia. In 1996, a new cruise ship and berths came on line.

The 2003 budget called for the establishment of two business parks at Diamond and Campden Park; 178,000 sq ft of factory space had been created at Campden Park Estate by 2006, and plans were ongoing for the development of the Diamond Industrial Estate. The government also announced the reintroduction of a new product development and processing facility.

## 29 SCIENCE AND TECHNOLOGY

St. Vincent seeks scientific expertise to deal with problems associated with its main agricultural products, especially bananas. The computer industry in the United States and Europe has opened up a new demand for paper; with proper processing, arrowroot might be able to compete in this new market, but so far the technology is lacking. Experimentation on arrowroot waste as a source of biogas has also been undertaken. A National Council for Science and Technology was created late in 1981. St. Vincent also has an Appropriate Technology Center, established in 1982. In 2002, there were 21 researchers and 110 technicians actively engaged in research and development.

## 30 DOMESTIC TRADE

Kingstown is the main commercial distribution center. Agriculture has traditionally formed the basis of the local economy, but tourism has become much more important as a sector of the economy. Local produce markets exist in all the Grenadines and in the small villages on St. Vincent. Government offices on St. Vincent are open on weekdays from 8 AM to noon and from 1 to 4:15 PM. On Saturday afternoons, most shops are closed. Supermarkets and shopping centers, however, are generally open from 8 AM to 8 PM.

## 31 FOREIGN TRADE

St. Vincent and the Grenadines is highly dependent on foreign trade. From the agricultural sector, bananas (50%) and vegetables are major foreign exchange earners. Other exports include yachts, eddoes and dasheen (taro), arrowroot starch, and tennis racquets.

In 2000 the country's imports were distributed among the following categories: consumer goods, 18.0%; food, 25.8%; fuels, 9.6%; industrial supplies, 28.8%; machinery, 10.3%; and transportation, 7.5%.

About half of exports go to other Caribbean islands, and over one-third of imports come from the United States. The principal export partners in 2004 were: the United Kingdom (33.5%), Barbados (13.1%), St. Lucia (11.5%), Trinidad and Tobago (9.9%), Antigua and Barbuda (8.3%), the United States (5.3%), Grenada (5.3%), and Dominica (4.1%). The principal import partners were: the United States (37.5%), Trinidad and Tobago (21.3%), and the United Kingdom (10.5%).

## 32 BALANCE OF PAYMENTS

St. Vincent and the Grenadines has had an unfavorable balance of trade since the 1950s. Income from tourism, investments, and development assistance makes up the balance. However, the tourism industry suffered as a result of the 11 September 2001 terrorist at-

tacks on the United States, but began to rebound in 2002–03, with tourism arrivals reaching 160,000 in 2004.

In 2004, the value of exports was estimated at us\$37 million, and imports were valued at us\$225 million.

## 33 BANKING AND SECURITIES

In the late 1980s, the nation's largest financial institution was the state-run National Commercial Bank, and various branches of Canadian banks were prominent in Kingstown. Commercial banks include Bank of Nova Scotia, Barclays, CIBC, Development Corp., First St. Vincent Bank, New Bank, Owens Bank, St. Vincent Cooperative Bank, and Republic Bank. The government has established arrangements for offshore banking corporations, with direct connections to Swiss banking facilities. The International Monetary Fund reports that in 2001, currency and demand deposits—an ag-

gregate commonly known as M1—were equal to \$95.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$278.0 million.

There is no securities exchange, except for the common CARICOM exchange.

### 34 INSURANCE

Local insurance companies are limited in scope and importance. Representatives of insurance corporations based in the United Kingdom, Canada, and the United States operate on St. Vincent.

### 35 PUBLIC FINANCE

Most of the government's income comes from customs duties and taxes. The leading categories of expenditures are education, public works, and health.

The US Central Intelligence Agency (CIA) estimated that in 2000 St. Vincent and the Grenadines's central government took in revenues of approximately us\$94.6 million and had expenditures of us\$85.8 million. Revenues minus expenditures totaled approximately us\$8.8 million. Total external debt was us\$167.2 million.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, general government revenues in millions of East Caribbean dollars were 377.7 and expenditures were 327.6. The value of revenues in millions of US dollars was \$140 and expenditures \$120, based on an official exchange rate for 2003 of 2.7000 as reported by the IMF. Government outlays by function were as follows: general public services, 36.8%; public order and safety, 8.6%; economic affairs, 11.1%; environmental protection, 1.3%; housing and community amenities, 1.6%; health, 12.7%; recreation, culture, and religion, 0.2%; education, 17.5%; and social protection, 10.1%.

### 36 TAXATION

The government of St. Vincent and the Grenadines levies a progressive personal income tax (ranging from 10–55%), a corporate tax of 45% of net income, inheritance taxes, and a social security contribution of 2.5% of gross salary up to a maximum of us\$41.75 per month.

### 37 CUSTOMS AND DUTIES

By far the most important customs revenues are from import duties. There is a duty on exported goods, but the revenue earned is relatively small. By agreement with certain private corporations, the government waives customs duties on specific items in order to stimulate industrial development. Under an October 1992 CARICOM agreement, St. Vincent and the Grenadines has eliminated import licensing. St. Vincent has adopted CARICOM's common external tariff (CET), which ranges from 0–20%.

### 38 FOREIGN INVESTMENT

The government has encouraged foreign investment by establishing industrial estates, including both factories and homes for laborers, as well as by offering favorable tax conditions for the investors. Investment benefits include tax holidays, repatriation of profits, duty free concessions, and consumption tax exemptions. Tax holidays vary between 10 and 15 years (the nominal corpora-

tion tax rate is 40%). In 2004, the NIPI (National Investment Promotion Inc.) was created to act as a catalyst to stimulate local and foreign direct investment in all productive sectors, and to facilitate the expansion of the export sector with a view toward stimulating job growth and wider economic development. At its inauguration, the NIPI placed special emphasis on agroprocessing, light manufacturing, and hotel development.

A large multinational company handles the marketing of most banana production, and a US firm has established a children's garment factory. The government has allowed the sale of some small islands in the Grenadines, notably Mustique, owned by a Scotsman, and Prune, bought by a US family and now called Palm Island by its entrepreneur owner. Petit St. Vincent and much of Canouan are being developed by the government for tourism.

St. Vincent is still eager to receive foreign investment, while providing special incentives and credit tailored to the needs of the investors. St. Vincent is eligible for trade benefits under Caribbean (Canada), the Caribbean Basin Initiative (CBI), and the Lomé Convention (Europe—although these have been challenged by the WTO).

The government is targeting offshore services as a means of diversification away from bananas and tourism. The Offshore Finance Authority was set up in 1996 to regulate bank and company registration, and the island is to be marketed in Puerto Rico, London, Hong Kong, New York, and Miami.

Annual foreign direct investment (FDI) inflow peaked at \$92.5 million and \$89 million in 1997 and 1998, respectively, but has since declined. FDI inflow was \$56 million in 1999; \$28 billion in 2000; and \$35.7 million in 2001. In 2003, FDI reached 10.14% of GDP, below the level of 1995 (11.48%), but above the rate in 2000 (8.67%).

As of 2006, St. Vincent and the Grenadines was attracting investment in the following sectors: tourism, construction, international financial services, banking and insurance, telecommunications, and manufacturing.

### 39 ECONOMIC DEVELOPMENT

A 1982 loan from the Caribbean Development Bank was designed to stimulate and redirect agricultural production, support the tourist industry, and contribute to the creation of the infrastructure necessary for industrial development. Loans and government incentives have since focused on supporting the banana trade, improving infrastructure, and stimulating tourism.

A severe drought in 2001 and the effects of the downturn in the global economy and the 11 September 2001 terrorist attacks on the United States adversely affected the economy. Construction later rebounded as public sector projects were implemented. Public sector debt rose to 80% of gross domestic product (GDP) in 2004, up from 72% in 2002, and 67% in 2001. Reducing poverty remained a central priority of the government, as was reform of the tax system. The government was also taking steps to combat money laundering and drug trafficking—St. Vincent is a large producer of marijuana, and has been used as a transshipment point for illegal narcotics from South America.

### 40 SOCIAL DEVELOPMENT

In 1986, legislation established a social security system, replacing the provident fund that had been in existence since 1970. Workers contribute 2.5% of earnings, while employers pay 3.5% of payroll distributions. Benefits are provided for old age, disability, death, sickness, and maternity, and have been expanded to cover the self-employed. Employers fund a compulsory workers' compensation program. The worker is eligible for a pension at age 60, or earlier if incapacitated. Maternity benefits are provided at a rate of 65% of average earnings for a period of 13 weeks. Workers' medical benefits include medical, surgical, and hospital treatments, as well as medicine, appliances, and transportation.

St. Vincent also has an extensive program of community development, which stimulates the formation of cooperatives and self-help programs in the rural communities. A national family planning program has been introduced as part of the government's maternal and child welfare services.

The minimum wage law mandates that women receive equal pay for equal work. Violence against women remains a serious problem, although the government is increasing attention to the issue. A domestic violence law establishes a family court to handle cases of spousal abuse, and consequently more women are coming forward with complaints. The penalty for rape is usually 10 or more years in prison.

Human rights are generally respected. Problems include the use of physical force to extract confessions and inadequate prison conditions.

### 41 HEALTH

Kingstown's general hospital, with 209 beds, was the country's only government-run acute care hospital. There were five rural hospitals, including one located on the east coast of St. Vincent, the second on the west coast, and the third on Bequia. There are also hospitals for the aged and a 120-bed Mental Health Center. Approximately 38 outpatient clinics provide medical care to 9 health

districts throughout the nation. In 2004, there were an estimated 88 physicians, 239 nurses, and 5 dentists per 100,000 people.

The fertility rate was 2.4 children per woman. Gastrointestinal diseases continued to be a problem, although they are less so than in the past. Circulatory system diseases accounted for about 42% of all deaths, cancer for 16%, and external causes for 6.7%. The immunization rates for a child under one were as follows: diphtheria, pertussis and tetanus, 99%, measles, 99%, polio, 99%, and tuberculosis, 98%.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 17.5 and 6.1 per 1,000 people. Infant mortality in 2005 was estimated at 14.78 per 1,000 live births. Life expectancy at birth was 73.62 years.

### 42 HOUSING

Among other efforts to eliminate substandard housing conditions, the government has undertaken housing renewal projects in both rural and urban areas and has sought to provide housing for workers on industrial estates. Another government program supplies building materials at low cost to working people. A majority of dwellings were detached houses; apartments accounted for less than 10%. In the same period, over half of all housing units were owner occupied, with smaller percentages either rented or occupied rent free. Dwellings were constructed primarily of either wood or concrete, with a smaller number constructed of both wood and concrete, or stone.

### 43 EDUCATION

Primary education lasts for seven years, followed by five years of secondary education. The government-assisted School for Children with Special Needs serves handicapped students. Primary school enrollment in 2003 was estimated at about 90% of age-eligible students. The same year, secondary school enrollment was about 58% of age-eligible students; 56% for boys and 61% for girls. It is estimated that about 77.5% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 18:1 in 2003; the ratio for secondary school was about 22:1. In 2003, private schools accounted for about 4.7% of primary school enrollment and 33.2% of secondary enrollment.

At the postsecondary level there is a teachers' training college, affiliated with the University of the West Indies, and a technical college. Adult education classes are offered by the Ministry of Education. Vocational training is available through the Department of Public Works, and agricultural training is offered by the Ministry of Agriculture. In 1989, students at the university and all higher-level institutions numbered 677 with 96 teaching staff. Nearly 68% of these higher-level students were women. The adult literacy rate has been estimated at about 96%.

As of 2003, public expenditure on education was estimated at 10% of GDP, or 20.3% of total government expenditures.

### 44 LIBRARIES AND MUSEUMS

The government maintains a free public library system with 260,000 volumes. The main public library system is Kingstown Library Services; the central library is located in Kingstown and there are about 18 public library branches located throughout the country. The National Archives of St. Vincent and the Grenadines was established in 1990 and is open to the public, as is the Nation-

al Documentation Centre (est. 1982); both are located in Kingstown. The small National Museum in Kingstown houses ancient Indian clay pottery. The Botanical Garden in Kingstown is open to the public.

#### 45 MEDIA

The internal telephone system of St. Vincent and the Grenadines, fully automatic, is operated by Cable and Wireless Ltd. (West Indies), which also provides telegraph, telex, and international telephone services. In 2002, there were 27,300 mainline phones and 10,000 mobile phones in use throughout the country.

In 2004, there were two privately owned radio stations and one partially government-funded radio station. There were also one government-operated television station and two private television stations. In 1997 there were 627 radios and 170 television sets per 1,000 population. In 2002, there were 7,000 Internet subscribers. In 2003, there were four Internet hosts.

In 2005, there were four major newspapers: *The Herald* (daily), *The News*, (weekly), *Searchlight* (weekly), and *The Vincentian* (weekly). These were all privately owned. There are also several small political publications. Constitutionally provided free speech and free press are respected by the government, with no reports of interference or censorship.

#### 46 ORGANIZATIONS

A chamber of commerce meets in Kingstown. Among the important commercial organizations is the St. Vincent Hotel Association. A civil liberties organization, Saint Vincent and the Grenadines Human Rights Association, was founded in 1986. National youth organizations include the Boy Scouts and Girl Scouts Association of Saint Vincent and the Grenadines, Caribbean Federation of Youth, Young Democrats of Saint Vincent and the Grenadines, and YMCA/YWCA. There are sports associations prompting amateur competition for athletes of all ages. There is a national chapter of the Red Cross Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism is oriented toward yachting, with havens located on most of the Grenadines and also at Young Island, off the southern tip of

St. Vincent. Posh resorts have been created on many of the smaller Grenadines, with villas and cottages built alongside small private beaches. The many cathedrals, gardens, and forts also attract tourists. All foreign nationals must present a valid passport except those of the United Kingdom, the United States, and Canada who may instead use proof of citizenship. All visitors are required to have an onward/return ticket. Visas are required for nationals of Jordan, Syria, the Dominican Republic, Lebanon, Iraq, Iran, and Nigeria.

In 2003, there were a total of 1,680 hotel rooms with 3,360 beds. The number of tourist arrivals totaled 78,535 that year. According to US Department of State estimates, the daily cost of staying in St. Vincent was us\$213 between December and April, and us\$196 the rest of the year.

#### 48 FAMOUS SAINT VINCENTIANS

Robert Milton Cato (1915–97), prime minister from independence until 1984, was one of the founders of the SVLP. James Fitz-Allen Mitchell (b.1931), prime minister from 1984–2000, was one of the founders of the NDP. Sir Fred Albert Phillips (b.1918) is a specialist on constitutional and international law.

#### 49 DEPENDENCIES

St. Vincent and the Grenadines has no territories or colonies.

# SURINAME

Republic of Suriname  
*Republiek Suriname*

**CAPITAL:** Paramaribo

**FLAG:** A yellow star is at the center of five stripes: a broad red band in the middle, two white bands, and a green stripe at the top and bottom.

**ANTHEM:** The *Surinaams Volkslied* (*National Anthem*) begins “God zij met ons Suriname” (“God be with our Suriname”).

**MONETARY UNIT:** The Suriname guilder (Sf) is a paper currency of 100 cents. There are coins of 1, 5, 10, and 25 cents, and notes of 5, 10, 25, 100, and 500 guilders. Sf1 = \$0.00037 (or \$1 = Sf2700) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year’s Day, 1 January; Revolution Day, 25 February; Labor Day, 1 May; National Union Day, 1 July; Independence Day, 25 November; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Holi Phagwah, Good Friday, Easter Monday, and ‘Id al-Fitr.

**TIME:** 8:30 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the northeast coast of South America, Suriname is the smallest independent country on the continent, with a total area of 163,270 sq km (63,039 sq mi). Comparatively, the area occupied by Suriname is slightly larger than the state of Georgia. The nation has an extension of 662 km (411 mi) NE–SW and 487 km (303 mi) SE–NW. Suriname is bordered on the N by the Atlantic Ocean, on the E by French Guiana, on the S by Brazil, and on the W by Guyana, with a total boundary length of 2,093 km (1,301 mi), of which 386 km (239 mi) is coastline. Suriname also claims about 15,000 sq km (5,800 sq mi) of southeastern Guyana and some 5,000 sq km (1,900 sq mi) of southwestern French Guiana.

Suriname’s capital city, Paramaribo, is located on the Atlantic coast.

## <sup>2</sup> TOPOGRAPHY

Suriname is composed of thick forests, unexplored mountains, and swampy plains. Several geologically old rivers, including the Maroni in the east and the Courantyne, flow northward to the Atlantic Ocean from the southern highlands near the Brazilian border; there, numerous rapids and waterfalls bar boat passage.

The coastal plain is flat and sometimes as much as 1.5 m (5 ft) below sea level, necessitating a system of sea defenses. The soils of the coastal plain are relatively fertile. A forest belt, 48–72 km (30–45 mi) wide, lies to the south, interspersed with grassy savannas. Farther south are dense forest and higher ground.

## <sup>3</sup> CLIMATE

The climate is tropical and moist. Daytime temperatures range from 28–32°C (82–90°F). At night the temperature drops as low as 21°C (70°F) because of the moderating influence of the northeast trade winds, which blow in from the sea all year. The annual rainfall in Paramaribo is about 230 cm (90 in). May to August is

the main rainy season, with a lesser rainy season from November to February.

## <sup>4</sup> FLORA AND FAUNA

Dominated by rain forest, Suriname contains many flowers but is most famous for water lilies and orchids. Tropical shrubs include hibiscus, bougainvillea, and oleander. There are at least 180 species of mammals. Among the reptiles are the tortoise, iguana, caiman, and numerous snakes. Tropical birds abound, especially the white egret.

## <sup>5</sup> ENVIRONMENT

In general, Suriname’s environment and wildlife are protected from the destructive influences that threaten the majority of the world’s nations. However, deforestation is becoming a concern, as foreign interests obtain timber concessions from the government. Pollutants from the country’s mining industry affect the purity of the water. Salinization of the water supply is becoming a problem for the coastal areas.

Suriname’s eight nature reserves are managed by the Foundation for Nature Preservation, founded in 1969. The Suriname Wildlife Rangers Club, consisting mainly of students 15–20 years old, assists in various nature preservation activities. National responsibility for environmental matters is vested in the Ministry of Health and Environment and the Ministry of Natural Resources and Energy. In the late 1990s, the Central Suriname Wilderness Nature reservation was created to set aside about 10% of the total land area as protected land; this site became a UNESCO World Heritage Site in 2000.

Due to the preservation of Suriname’s tropical rain forest, the nation’s wildlife flourishes. Even so, according to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 12 types

of mammals, 6 types of reptiles, 2 species of amphibians, 12 species of fish, and 27 species of plants. Threatened species in Suriname included the brazil nut tree, red cedar, the tundra peregrine falcon, five species of turtle (South American river, green sea, hawksbill, olive ridley, and leatherback), the Caribbean manatee, and the spectacled caiman.

## 6 POPULATION

The population of Suriname in 2005 was estimated by the United Nations (UN) at 447,000, which placed it at number 164 in population among the 193 nations of the world. In 2005, approximately 6% of the population was over 65 years of age, with another 29% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.4%, a rate the government viewed as satisfactory. The government incorporates population planning into its comprehensive development policies. The projected population for the year 2025 was 480,000. The population density was 3 per sq km (7 per sq mi).

The UN estimated that 74% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.32%. The capital city, Paramaribo, had a population of 253,000 in that year.

## 7 MIGRATION

About 90,000 Surinamese resided in the Netherlands by the mid-1970s, and the number had reached some 200,000 by 1985. Emigration was about 12,000 per year in the early 1970s, but it accelerated as the date of independence approached and again after the coup of February 1980. An estimated 8,000 Surinamese fled to neighboring French Guiana by 1987, seeking refuge from a guerrilla conflict raging in the northeast. Democracy was restored in 1987, and a repatriation movement began in 1988. In 1991, the refugees still living in French Guiana took part in that year's elections. Repatriation was completed with the return of most refugees by the end of 1993. In 2004 there were 100 refugees and no asylum seekers. In 2005, the net migration rate was an estimated -8.78 migrants per 1,000 population. The government views both the immigration and emigration levels as too high. Worker remittances were \$12.9 million in 2002.

## 8 ETHNIC GROUPS

Suriname has one of the most cosmopolitan populations in the world. The largest ethnic group is the Hindustani (also known locally as "East Indians"), whose ancestors emigrated from northern India in the latter part of the 19th century, with 37% of the total population. Ranking a close second is the Creole community (mixed white and black), with 31%. The Javanese constitute about 15%. "Maroons," whose African ancestors were brought to the country in the 17th and 18th centuries as slaves but escaped to the interior lands, make up 10%. Amerindians, Suriname's original inhabitants, form 2% of the population and include the Arawak, Carib, and Warrau groups along the riverbanks and coastal plains, and Trios, Akurios, and Wyanas along the upper reaches of

the rivers. Chinese account for 2% of the populace; whites for 1%; and other groups for the remaining 2%.

## 9 LANGUAGES

The official language is Dutch, but English is widely spoken, and the local people use a lingua franca known as Sranang-Tongo or Takki-Takki, a mixture of Dutch, African, and other languages. Hindustani (a dialect of Hindi), Javanese, and several Chinese, Amerindian, and African languages and dialects are also spoken.

## 10 RELIGIONS

Religious freedom is guaranteed by the constitution, and there is no state or dominant religion. According to government statistics, 40% of the population is Christian. Approximately 18% are Roman Catholic, 15% are Moravian, and 7% are of other denominations, including Lutheran, Dutch Reformed, Methodist, Baptist, and the Evangelical churches. Hinduism is practiced by about 27% of the inhabitants and Islam by about 22%. Indigenous tribal religionists make up around 8% of the populace. About 3% claim no religious affiliation at all. There are about 150 Jews in the country and a small number of Baha'is and Buddhists.

Political parties are often dominated by a particular ethnic and religious affiliation. For instance, members of the Creole National Party of Suriname are primarily Moravian and members of the Javanese Pertjaja Party are primarily Muslim. Certain Christian, Muslim, and Hindu holidays are celebrated as national holidays. The constitution provides for religious freedom.

## 11 TRANSPORTATION

Suriname, as of 2003, had 1,200 km (746 mi) of navigable waterways, most of which can handle vessels with a draft of up to 7 m. A ferry service across the Corantijn River to Guyana began operating in 1990. As of 2005, the country had only one merchant ship of 1,000 GRT or more, a cargo vessel, totaling 1,078 GRT. There are 166 km (103 mi) of single-track railway, 86 km (53 mi) government owned and the rest industrial. Paramaribo can be reached from any town or village on the coastal plain by good all-weather roads. In 1999, the first of two new bridges connecting the country from East to West along the coast was opened. As of 2002, there were 4,492 km (2,794 mi) of roadways, of which 1,168 km (726 mi) were paved. State-owned and private companies operate regular bus services, both local and long distance. In 2003, there were 65,400 passenger cars and 27,000 commercial vehicles. Total number of airports stood at an estimated 46 in 2004, only 5 of which had paved runways as of 2005. Zanderij International Airport near Paramaribo can handle jet aircraft, and there are small airstrips throughout the interior. The government-owned Suriname Airways offers regularly scheduled service to the Netherlands and Curaçao. In 2001 (the latest year for which data was available) it carried 202,900 passengers.

Military operations involving the Jungle Commando and the national army badly damaged Albina and the road connecting Moengo to the eastern border. Overall lack of proper maintenance on roads, canals, and port facilities has resulted in a degraded infrastructure and higher local transportation costs.

## 12 HISTORY

Spaniards came to Suriname in the 16th century in search of gold, but did not stay when they found none. The first large-scale colonization took place under Lord Francis Willoughby, the English governor of Barbados, who sent an expedition to Suriname in 1650 under Anthony Rowse. In 1660, the British crown granted Willoughby official rights, and it became a flourishing agricultural colony. Settlers included English colonists, African slaves, and Jewish immigrants from the Netherlands, Italy, and Brazil. In the Peace of Breda between England and the United Netherlands in 1667, Suriname became a Dutch colony.

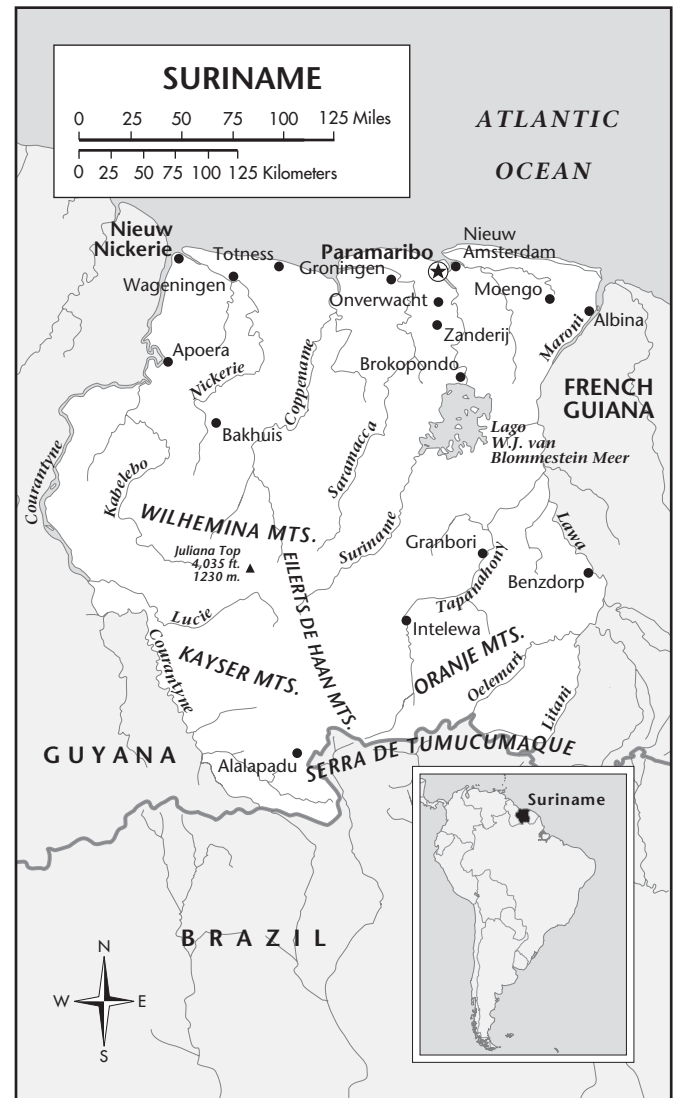

The English held Suriname again between 1799 and 1802 and from 1804 to 1816, when the Dutch resumed control over the colony under the Treaty of Paris. With the final abolition of slavery in 1863, workers were imported from India, Java, and China. In 1954, a new Dutch statute provided for full autonomy for Suriname, except in foreign affairs and defense. A commission was set up on 5 January 1972 to prepare alternatives to the existing legal framework. In May 1974, the terms for Suriname's independence were agreed on, and Suriname became an independent country on 25 November 1975.

For five years, Suriname was a parliamentary republic under Prime Minister Henk Arron. On 25 February 1980, the government was overthrown in a military coup led by Désiré Bouterse. Parliament was dissolved and the constitution suspended, and in 1981 the new government declared itself a Socialist republic. Relations with the United States became strained as the Bouterse government moved closer to Cuba. In December 1982, as a result of the government's execution of 15 political opponents, the Netherlands and the United States suspended all aid to Suriname.

The military and Bouterse continued to rule through a succession of nominally civilian governments. Still, pressure mounted for a return to genuine civilian rule. A separate challenge to the government came from a guerrilla movement under the leadership of Ronny Brunswijk. The Surinamese Liberation Army (SLA), also known as the Maroon or Bush Negro insurgency, began operating in the northeast in July 1986. It struck various economic targets, including the Suriname Aluminum Company. The government responded with repression, killing civilians suspected of supporting the insurgency.

The military allowed for elections on 25 November 1987. An anti-Bouterse coalition, the Front for Democracy, won 80% of the vote and 40 of the 51 seats in the newly constituted National Assembly, but a new appointive State Council, rather than the elective National Assembly, was given law-making authority. The new president, Ramsewak Shankar, remained in office from 25 January 1988 until 24 December 1990, when the military once again took over. International pressure mounted, and the military soon relented, allowing for elections on 25 May 1991. Again, an antimilitary coalition, called the New Front (NF), swept the election. The leader of the coalition, Ronald Venetiaan, was chosen president on 6 September 1991. Bouterse was forced to resign his post as army commander in 1992, but he retained his political influence by becoming president of the National Democratic Party (NDP).

Although Venetiaan managed to remain in office throughout his five-year term, severe economic difficulties leading to increased poverty for the majority of Suriname's citizens caused his popular support to decline. In the May 1996 elections, NDP can-

LOCATION: 2° to 6° N; 54° to 58° W. BOUNDARY LENGTHS: Atlantic coastline, 386 kilometers (228 miles); French Guiana, 510 kilometers (318 miles); Brazil, 597 kilometers (373 miles); Guyana, 600 kilometers (382 miles).

TERRITORIAL SEA LIMIT: 12 miles.

didate Jules Wijdenbosch was elected president, effectively returning Bouterse—as NDP president—to power. Nevertheless, these elections marked the first time in independent Suriname's history that power passed peacefully from one democratically elected government to another.

Wijdenbosch did not prove to be a popular president. His close association with Bouterse hurt him, both at home and abroad, as did the failure of his administration to improve Suriname's faltering economy, which continued to struggle with high inflation and unemployment, a major budget deficit, and the virtual collapse of its currency. A plan to privatize the oil and banana industries met with widespread protests culminating in a five-day general strike in the first part of June 1999. By the end of that month, popular discontent with the government had become so strong that Wijdenbosch called for early elections (which took months to arrange but still took place earlier than the normally scheduled date in 2001). In the meantime, Bouterse, sought by human rights

groups for abuses during his time in power, was tried in absentia in the Netherlands for cocaine trafficking and convicted in July 1999.

The opposition New Front coalition, supported by former president Venetiaan, swept the May 2000 elections, winning 32 of the 51 contested parliamentary seats, just short of the two-thirds majority needed to select a new president. The Democratic National Platform 2000 of President Wijdenbosch sustained a staggering loss, winning only three seats, while Millennium Combination, a separate party formed by Bouterse, won 10 seats.

General elections were held in May 2005, and the New Front coalition won 23 seats to the NDP's 15. The People's Alliance for Progress coalition (VVP) won 5 seats, the A-Combinatie coalition won 5, and the Alternative-1 coalition (A-1) took 3 seats in the National Assembly. The NDP contested the results of the election. Venetiaan was reelected president in August after months of political deadlock; the regional People's National Assembly had to choose the president. The next elections were scheduled for May 2010.

In June 2004, the UN set up a tribunal to try to resolve the long-standing maritime border dispute between Guyana and Suriname. In 2000, Suriname gunboats evicted an oil exploration rig from the area; Guyana had approved the exploration in the oil-rich disputed region.

### **13 GOVERNMENT**

Between 1954 and 1975, Suriname was administered by a governor appointed by and representing the Dutch crown, with a cabinet appointed by the governor and an elected parliament (Staten van Suriname). Under the constitution adopted on 21 November 1975 by parliament, Suriname is a republic. However, that constitution, which provided for a unicameral, 39-member parliament directly elected for a four-year term by universal suffrage, was suspended on 15 August 1980 and parliament was dissolved. Bouterse then ruled through a series of appointed governments, whose members represented the military, industry, trade unions, business, and political parties. In September 1987, a popular referendum approved a new constitution, which is still in effect.

The constitution provides for a unicameral 51-member National Assembly directly elected for a five-year term. The executive branch consists of the president, vice president, and prime minister, all selected by the legislature. There is also a cabinet and an appointed Council of State. The judicial system is ineffective and in need of reform.

### **14 POLITICAL PARTIES**

Suriname's political parties tend to represent particular ethnic groups. The National Party of Suriname (NPS), led by President Ronald Venetiaan, draws support from the Creole population. The Progressive Reform Party (VHP) is East Indian and the Party of National Unity and Solidarity, formerly the Indonesian Peasant's Party (KTPI) is more tied in name to its constituency. All three parties allied in the coalition National Front for Democracy in 1987 to defeat Bouterse's National Democratic Party (NDP). In 1991, these three parties and the Suriname Labor Party (SPA) formed the New Front (NF) and won a solid victory, gaining 30 of 51 Assembly seats, while Bouterse's NDP took 10 seats. Another coalition formed during the 1991 elections was called Democratic

Alternative '91. It included four nonethnic parties representing a variety of white-collar concerns. They took 9 of the remaining 11 seats in the Assembly, with the other 2 going to minor parties.

After four years as an opposition party, following the 1996 elections, the New Front regained its parliamentary majority in early elections called for May 2000, winning a total of 32 seats (Suriname National Party, 14; Progressive Reform Party, 9; the Javan Pertjajah Luhur party, 7; Suriname Labor Party, 2) to 10 for Bouterse's Millennium Combination and only 3 for President Wijdenbosch's Democratic National Platform 2000.

The New Front coalition suffered a significant setback in the May 2005 elections, due to widespread dissatisfaction with the state of the economy and a public perception that the NF had done little for the country. The NF won 23 seats to the NDP's 15. The People's Alliance for Progress coalition (VVP) won 5 seats, the A-Combinatie coalition won 5, and the Alternative-1 coalition (A-1) took 3 seats in the National Assembly. The NDP contested the results of the election. Ronald Venetiaan was reelected president in August 2005 after months of political deadlock; the regional People's National Assembly had to choose the president.

### **15 LOCAL GOVERNMENT**

The republic is divided into 10 districts, which include the urban district of Paramaribo. Administration is centralized and there are no recognized municipalities.

### **16 JUDICIAL SYSTEM**

The Constitution provides the right to a fair public trial before a single judge, the right to counsel, and the right to appeal. There is a Supreme Court (Court of Justice) whose members are nominated for life, and there are three Cantonal Courts. In 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although 14 nations were planning to use the court for appeals. The court was officially inaugurated in April 2005, in Port-of-Spain, Trinidad and Tobago. As of 2005, however, the court's jurisdiction was limited to the CARICOM states of Barbados and Guyana. The CCJ heard its first case in August 2005.

Military personnel fall under military jurisdiction and are generally not subject to civilian criminal law. Military courts follow the same procedural rules as do the civil courts with military trials held before a judge and two military personnel.

The 1987 constitution calls for the establishment of an independent constitutional court. However, as of 2005, this body had not yet been established by the government.

### **17 ARMED FORCES**

The Suriname National Army consists of army, air force, and naval components, with the strength of 1,840 in 2005 (Army 1,400, Navy 240, and Air Force 160). The Army included one infantry battalion, one mechanized cavalry squadron, and one military police battalion. The Navy mans 3 patrol craft, while the Air Force's

major units include 7 combat capable aircraft, 4 transports, and 3 utility helicopters. The defense budget was \$7.7 million in 2005.

## 18 INTERNATIONAL COOPERATION

Suriname was admitted to the United Nations on 4 December 1975; it is part of ECLAC and several nonregional specialized agencies, such as the FAO, UNCTAD, UNESCO, UNIDO, the World Bank, and the WHO. Suriname is also a member of the ACP Group, CARICOM, G-77, the South American Community of Nations (CSN), the Alliance of Small Island States (AOSIS), the Islamic Development Bank, the Association of Caribbean States (ACS), the Inter-American Development Bank, the Latin American Economic System (LAES), the Organization of the Islamic Conference (OIC), OAS, and the WTO.

Suriname is part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons. The nation is also a member of the Nonaligned Movement. In environmental cooperation, Suriname is part of the Amazonian Pact, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The bauxite and alumina industries traditionally set the pace for Suriname's economy, accounting for about 15% of GDP and 70% of exports. Two companies, Suriname Aluminum Co. (Suralco), a wholly-owned Alcoa subsidiary, and Billiton, owned by Royal Dutch/Shell, account for about one-third of government revenue and employ nearly 4,000 workers. In 2002, Alcoa and BHP Billiton signed a letter of intent as the basis for new joint ventures between the companies, in which Alcoa will assume 55% of all bauxite mining in West Suriname. The government and the companies are looking into cost-effective ways to develop new mines, as the major mining sites at Moengo and Lelydorp are maturing. Other proven reserves exist in the country and are projected to last until 2045. The opening of the Gross Rosbel gold mine is expected to boost exports and GDP growth.

Although agriculture is the chief means of subsistence and second-largest employer after the government; plantation agriculture is the weakest sector of the economy, with the notable exception of rice growing. Suriname is self-sufficient in rice, and exports large amounts; however, Suriname is a net food importer. Imports account for more than 80% of consumption. Agricultural products accounted for only 13% of GDP in 2001, with rice, bananas, palm kernels, coconuts, plantains, and peanuts as the principal crops.

In February 1987, guerrilla destruction of electricity pylons to the bauxite mines closed the industry while repairs were made. The collapse of world prices for bauxite in 1987 was another severe blow for the economy. Despite high expectations, the civilian government inaugurated in early 1988 proved unable to address the country's considerable economic problems and was overthrown by the military on 24 December 1990. A year later, civilian government, under the leadership of President Ronald Venetiaan, came back to power. Next to bauxite, foreign aid is the mainstay of the country's economy. Suriname was once a colony of the Netherlands, and thus the Dutch government continues to provide eco-

nomie aid. When Suriname's economic and political problems escalated, the Netherlands suspended aid between 1982 and 1991, and in 1997. Aid was resumed, from both the Netherlands and the United States, once reforms were initiated.

The new government inherited a formidable array of economic problems. In 1992, real GDP fell by 5% and average inflation accelerated to 44%, compared to 26% in 1991. Foreign exchange reserves had reached a record low, unemployment was high, and the climate for foreign investment was bad. The government implemented a structural adjustment program (SAP), which included the legalization of the parallel foreign exchange market, reduced government spending, privatization of key sectors of the economy, and revision of the country's investment code. By 1994, the inflation rate had reached over 400%, but thereafter the SAP kicked in and reduced inflation to less than 1% in 1996. In 1997, relations with the Netherlands soured when Suriname ended the SAP and replaced it with an ambiguous National Reconstruction Plan, and the government failed to implement necessary austerity measures. Inflation reached almost 21% in 1999, and growth had slowed to 2%. By 2005, the GDP real growth rate was estimated at 4%. The inflation rate in 2004 stood at 9%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Suriname's gross domestic product (GDP) was estimated at \$2.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$4,700. The annual growth rate of GDP was estimated at 4%. The average inflation rate in 2005 was 9.5%. It was estimated that agriculture accounted for 13% of GDP, industry 22%, and services 65%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$21 million or about \$48 per capita and accounted for approximately 2.1% of GDP.

It was estimated that in 2002 about 70% of the population had incomes below the poverty line.

## 21 LABOR

In 2003, Suriname's workforce numbered 104,000. As of 1996 (the latest year for which data was available), about 70% were engaged in services, 8.3% in manufacturing, 17% in commerce, 5.9% in agriculture, and 7.8% in transport and communications. In 2000 the unemployment rate was 17%.

Suriname has numerous small unions, representing individual workplaces or enterprises, organized into six union federations. Among them are the General Confederation of Trade Unions, sometimes called the Moederbond (Mother Union); the Progressive Workers Organization, whose members are predominantly from the commercial and banking sectors; the Centrale 47, which includes bauxite and sugar unions; and the Central Organization for Civil Service Employees. Nearly 60% of the workforce is organized and about one-half are covered by collective bargaining agreements. Workers, with the exception of civil servants, are freely allowed to strike and do so often. Antiunion discrimination is illegal.

The minimum working age is 14 but this is not sufficiently enforced and many children work, especially in the informal sector. There is no set minimum wage. The lowest wage for civil servants was \$100 per month in 2002. The standard workweek is 45 hours and time worked in excess of that requires overtime pay.

## 22 AGRICULTURE

The chief crops are rice, sugar, plantains and bananas, citrus fruits, coffee, coconuts, and palm oil, in addition to staple food crops. With the exception of rice, the main export crop, plantation agriculture has suffered the consequences of absentee ownership. Rice production was 95,000 tons in 2004. Sugar production dropped so substantially in the 1980s that imports were required to meet local demand. Under union pressure, the government in early 1987 agreed to a national sugar plan to improve machinery and housing, and to create employment. Production of sugarcane in 2004 was 120,000 tons; of bananas, 43,000 tons; of plantains, 11,800 tons; of oranges, 13,000 tons; and of coconuts, 9,000 tons.

Since its creation in 1945, the Commission for the Application of Mechanized Techniques to Agriculture in Suriname has worked to reactivate several old plantations and bring new land under cultivation. The successful control of diseases and pests, introduction of water storage and irrigation schemes, and the development of new quick-growing varieties of rice have also increased total agricultural production.

## 23 ANIMAL HUSBANDRY

Livestock numbers are relatively small, since breeding is done primarily by small farmers who own only a few animals each. The government has tried to reduce the import of eggs, dairy products, and meat by undertaking projects to cross Dutch and local breeds of cattle and poultry. Estimated livestock numbers in 2005 included 137,000 head of cattle, 24,500 hogs, 7,100 goats, 7,700 sheep, and 3.8 million chickens.

## 24 FISHING

Fishing has become increasingly important, both on inland waterways and at sea. The chief commercial catch is shrimp, which is exported. In 2003, the freshwater catch was 250 tons, and marine landings amounted to 28,107 tons. Shrimp production totaled 1,650 tons that year. The Fisheries Service, founded in 1947, has worked to develop the fishing industry. Exports of fish and fish products in 2003 amounted to nearly \$4.6 million. Japan is the largest market for Surinamese shrimp.

## 25 FORESTRY

Approximately 90.5% of Suriname is covered by tropical rain forest, but existing forest resources have scarcely been touched. Initial exploitation has been confined to the more accessible strips along the riverbanks. The Suriname Forestry Service, under an FAO technical assistance program, has undertaken to survey and open up the forests for commercial use. Roundwood production was about 207,000 cu m (7.3 million cu ft) in 2004. In August 1992, a peace agreement between the central government and insurgent groups from the interior (where timber is found) was

signed. Since the fighting ended, logging has increased. The trade deficit in forest products was \$2 million for 2004.

## 26 MINING

Suriname was one of the world's largest producers of bauxite, and alumina. The bauxite industry in 2003, accounted for at least 15% of Suriname's gross domestic product (GDP) of an estimated \$2.5 billion and around 70% of foreign exchange earnings in that year. Mineral production by Suriname is centered on alumina, bauxite, gold, and oil. In 2003, 4.215 million metric tons (gross weight) of bauxite was mined, up from 4.002 million metric tons in 2002. Suriname's bauxite industry has suffered in recent years from a weak market, foreign competition, and the effects of the guerrilla war, but mines with higher-grade bauxite were replacing older depleted mines. The alumina industry, however, was threatened by the deterioration of the international alumina market. Suriname's privately owned multinational companies mined the bauxite and processed alumina and aluminum. The Suriname Aluminum Company (SURALCO) has estimated bauxite reserves at 575 million tons.

Official gold mine output has been put at 300 kg annually, from 1999 through 2003. Gold has been mined in south and east Suriname since the second half of the 19th century. In addition, the government estimated as much as 30,000 kg of unrecorded production in alluvial deposits, much of it by people from Brazil. Most of the nearly 40,000 Brazilians living in Suriname arrived during the past several years in search of gold. More than 15,000 people (Suriname's population was estimated at 435,449 in 2003) were employed in the gold industry. The government expressed concern about the damage to the environment caused by illegal miners' use of mercury. Gold was produced by numerous small operators and sold to the government. Gold concessions were negotiated with N.V. Grassalco, the state-owned gold company. The Gross Rosebel gold property, south of Paramaribo, was the most advanced gold development. In 2003, Suriname also produced hydraulic cement, common clays, gravel, common sand, and crushed and broken stone. Suriname also had resources of chromium, clay, copper, diamond, iron ore, manganese, nickel, platinum, and tin.

## 27 ENERGY AND POWER

Suriname, with only limited reserves of oil and no proven reserves of natural gas or coal is heavily reliant upon imports to meet its hydrocarbon needs.

Suriname in 2004 had proven oil reserves of only 99 million barrels, and no proven reserves of natural gas or coal. In that year, the production and consumption of oil was estimated to average 12,000 barrels per day and 14,000 barrels per day, respectively. Although imports in 2003 averaged 1,644 barrels per day, the country did manage to see oil exports of 1,370 barrels per day. There were no imports or demand for natural gas in 2004.

Suriname's electric power generating capacity in 2002 totaled 0.389 million kW, of which 0.200 million kW of capacity was dedicated to conventional thermal plants. Hydropower capacity accounted for 0.189 million kW. Electric power output in 2002 amounted to 1.984 billion kWh, of which 1.500 million kWh came from hydroelectric sources and 0.484 billion kWh came from fossil fuel-burning plants. Demand for electricity in 2002 totaled 1.845 billion kWh.

## 28 INDUSTRY

The major industries are bauxite and gold mining, alumina and aluminum production, lumber, and food processing. Industry accounted for 22% of GDP in 2001.

The bauxite industry, which accounts for about 15% of GDP and 70% of export revenue, has developed into a complex of factories, workshops, power stations, laboratories, hospitals, recreational facilities, residential areas, and sports grounds. Depressed world prices for bauxite and alumina in the recent past have reduced the industry's development. In 2005, Suriname Aluminum (Suralco), a wholly-owned Alcoa subsidiary, announced it had completed the 250,000-metric-ton-per-year expansion of its alumina refinery in Paranam. The facility now has a capacity of 2.2 million metric tons per year of alumina. Suralco and an affiliate of BHP Billiton own 55% and 45%, respectively, of the Paranam facility.

The long-term future of the mining industry depends on the companies' ability to keep production costs low and competitive, the availability of financing to exploit new reserves, and on the consolidation of peace in the country's interior. Because mineral rights are still vested in the state, exploration rights are granted by the government. The Canadian company Golden Star started mining for gold in Suriname in 1992. Proven and probable oil reserves in Suriname are estimated at 166 billion barrels. The State Oil Company of Suriname, or Staatsolie, produced 12,000 barrels per day in 2005. Staatsolie is actively seeking international joint venture partners. Suriname has one oil refinery.

## 29 SCIENCE AND TECHNOLOGY

Research centers and scientific societies in Suriname include the Center for Agricultural Research in Suriname (founded in 1965), Geological Mining Service (founded in 1943), and the Agricultural Experiment Station of the Ministry of Agriculture, Animal Husbandry, and Fisheries (founded in 1903), all in Paramaribo. The University of Suriname, founded in 1968 at Paramaribo, has faculties of medicine and technology.

## 30 DOMESTIC TRADE

There are a few supermarkets and department stores, but most urban trade is conducted in small shops. Most trade in rural areas is conducted in open markets. A few American fast-food franchises have opened in the country in recent years. Price controls are applied to a number of goods. Credit cards are not widely accepted.

The ITIFAS trade fair, held in October, serves as an annual showcase for Surinamese products. Suri-Flora, held every April, is a major exhibition for horticulture and agriculture.

Business hours are Monday through Friday, 7:30 AM to 4:30 PM and from 7:30 AM to 12:30 PM on Saturdays. Banks are open weekdays from 7:30 AM to 2 or 3 PM.

## 31 FOREIGN TRADE

In 2005, exports of alumina accounted for more than 70% of export earnings. Other exports include gold, rice, shrimp, wood products, and bananas. On the black market, Suriname is a large exporter of cocaine, especially to the Netherlands.

The US is Suriname's most important trading partner, although Norway is Suriname's largest export market. In 2004, Suriname's

primary export partners were: Norway (29.4%), the United States (15.2%), Canada (12.5%), Belgium (10.3%), France (8.4%), and the United Arab Emirates (6.2%). That year, Suriname's principal import partners were: the United States (26.2%), the Netherlands (19.3%), Trinidad and Tobago (13.5%), Japan (6.6%), China (4.6%), and Brazil (4.2%).

## 32 BALANCE OF PAYMENTS

Suriname runs a persistent deficit on current accounts, which has generally been offset by development aid, mainly from the Netherlands, Belgium, and the EU. Remittances from some 200,000 Surinamese expatriates in the Netherlands are not apparent in the balance of payments because they are usually exchanged in the parallel market. In 1989, lower profitability in the bauxite sector led to a decline in remittances which was not offset by invest-

ment inflows, resulting in the first capital account surplus in many years. Foreign exchange reserves grew by 110%; from \$10 million in 1989 to \$21 million in 1990. Unfortunately, these reserves were squandered by the interim government during its nine-month rule and had fallen close to zero by July 1993. Suriname had a surplus of \$66 million by 1996, but this figure declined to \$25 million in 1997 and a deficit in 1998 due to a lack of development aid. Alumina accounts for 70% of export earnings. Suriname's external debt stood at \$321 million in 2002. Brazil and China are the largest debt holders. In 2004, the value of Suriname's exports was estimated at \$881 million, and imports were valued at \$750 million.

### **33 BANKING AND SECURITIES**

Since 1 April 1957, the Central Bank of Suriname has acted as the bank of issue. Other banks include the ABN-Amro (Dutch), De Surinaamsche Bank (majority-owned by the ABN-Amro), and Hakrinbank.

In 1998, the exchange rate separated into multiple rates, leading to a 40% currency devaluation in January 1999. According to the government, cocaine sold by Surinamese shippers was confiscated by Dutch authorities, causing a currency flow problem. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$181.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$263.5 million.

### **34 INSURANCE**

Both Dutch and foreign insurance companies operate in Suriname.

### **35 PUBLIC FINANCE**

For years the Suriname budget operated with a deficit. Government revenues increased somewhat following the introduction of a new bauxite levy in 1974. During the 1980s, however, the military regime in power increased government intervention and participation in the economy, causing public employment and budget deficits to soar. The return to civilian government in 1991 enticed the Dutch government to resume its development aid program, which amounted to \$200 million by 1996. Reforms enacted included the reduction of deficit spending, the renunciation of monetary creation as a means of financing deficits, and the deregulation of trade and business licensing systems. The Netherlands halted development aid in 1997, but resumed it again 1998. As of 2005, the Netherlands' government agreed to continue providing aid to Suriname.

The US Central Intelligence Agency (CIA) estimated that in 2003 Suriname's central government took in revenues of approximately \$400 million and had expenditures of \$440 million. Revenues minus expenditures totaled approximately -\$40 million. Total external debt was \$321 million.

### **36 TAXATION**

Direct taxes provide only a small portion of governmental revenues and payments have been in arrears for years. By far the greatest tax sources are the bauxite-related industries. Companies are taxed on the sum of all net profits. The standard corporate income tax rate is 36%. Capital gains are taxed at the corporate rate, while dividends are subject to a withholding tax of 25%. There is no tax

on interest or royalty income. All the operating costs of a company are tax deductible, at set rates for certain equipment. The main indirect tax is Suriname's value-added tax (VAT). As of 1 December 2002, the basic rate for goods was raised from 8% to 10%, and the basic rate for services, from 7% to 8%. Staple foods are exempt from VAT.

### **37 CUSTOMS AND DUTIES**

Suriname became a full member of CARICOM in 1995, and as of 2005, its tariffs were in accordance with the CARICOM Common External Tariff duties. Imported goods are subject to a turnover tax of 10%, with an 8% rate for services. Pharmaceutical products used to treat infectious diseases are admitted duty and tax free. Other pharmaceutical products are subject to a tax of 15%. Luxury goods such as weapons and ammunition, dishwashers, and motorcycles are subject to a 25% luxury tax. Cigarettes and tobacco are subject to an excise tax of 100%. Spirits are taxed at 45%, while beer and other alcoholic beverages are subject to a tax of 30% and 10%, respectively. Excise taxes are based upon the CIF (cost, insurance, freight) value plus the duty, excluding the turnover tax. There are no free trade zones.

### **38 FOREIGN INVESTMENT**

By 2006, Suriname had updated its investment code, and slow progress was being made on eliminating disincentives to foreign investment. Bureaucratic delays are rife, however. Economic and business relations with the United States are very important to this nation. US firms operating in Suriname include Suralco, the bauxite company, Exxon, Texaco, IBM, and the insurance firm, Alico. In addition, Suriname is highly dependent on relations with the Dutch government.

Foreign investment during the 1990s included gold mining by the Canadian company Golden Star, and Japanese shrimp farming by the company Sujafi.

In terms of its success in attracting foreign direct investment (FDI), Suriname was at the bottom of the list of 140 countries surveyed by UNCTAD for 1988–90 and 1998–2000. During the five years from 1997 to 2001, reverse divestment exceeded the inflow of new FDI every year except 1998, when net FDI inflow amounted to \$9.1 million. Divestment was -\$9.2 million in 1997, and reached -\$61.5 million in 1999 and -\$148 million in 2000. In 2001, net divestment of FDI in Suriname was -\$66.9 million. The investment climate improved over the 2003–04 period.

As of 2006, the government was planning to privatize the state-owned banana company, and to liberalize the telecommunications sector. The top corporate tax rate is 36%.

### **39 ECONOMIC DEVELOPMENT**

In wholesale, retail, and foreign trade, the government has been highly interventionist. Quota restrictions or outright bans on many imported items considered nonessential or in competition with local products have been announced. The government forced price rollbacks on domestic items and imposed price controls on essential imports, resulting in some shortages.

Although the government has been Socialist in principle since 1981, it refrained from nationalizing key industries, although it did increase its participation in them. The Action Program announced by the government in 1982 called for the encouragement of small-scale industry, establishment of industrial parks, devel-

opment of rural electrification and water supply projects, liberalization of land distribution, and worker participation in management of government enterprises.

In 1975, the Netherlands promised Suriname \$110 million annually in grants and loans, for a period of 10–15 years. This aid program and \$1.5 million in aid authorized by the United States in September 1982 were suspended following the killings of prominent Surinamese in December 1982. In 1983, Brazil and Suriname reached agreement on a trade and aid package, reportedly underwritten by the United States. By 1986, Suriname had signed trade agreements with several countries, among them the Netherlands.

As of 1994, Suriname was undergoing a comprehensive structural adjustment program (SAP). This program, recommended by the EC (now EU), was designed to establish the conditions for sustained growth of output and employment with relative stability of prices, a viable balance of payments, and protection of the low-income population. However, only minimal progress toward restructuring was initially accomplished. Enacting the full SAP in its proper sequence was hoped to improve the prospects for the Surinamese economy and living conditions into the new millennium. However, the SAP was abandoned in 1996 in favor of a National Reconstruction Plan.

In 2000, the Netherlands announced their aid package would be disbursed by sectoral priorities, as opposed to individual projects. The government was not in favor of this approach, but began to cooperate. Suriname's economic situation deteriorated from 1996 to 2001. Inflation grew from 0.5% at the end of 1996 to 113% at the end of 1999, in part due to loose governmental fiscal policies, and a soaring parallel market for foreign exchange. This, along with an unstable exchange rate, and falling real incomes, led to a political crisis. The new government elected in 2000 devalued the official exchange rate by 88%, raised tariffs on water and electricity, and eliminated the subsidy on gasoline. The inflation rate had fallen to 22% in 2002, and a new law was enacted, placing a 60% ceiling on the ratio of total government debt to gross domestic product (GDP). The large fiscal deficit had been eliminated, the exchange rate was stabilized, and investor and donor confidence was reviving.

As of 2006, the economic situation and investment climate had improved. Suriname is faced with the decision to follow responsible monetary and fiscal policies and to introduce structural reforms to liberalize markets and promote competition. The 2005 presidential elections were won once again by Ronald Venetiaan, who raised taxes and attempted to control spending. The Dutch government in 2005 agreed to restart the flow of aid, which will allow Suriname to access international development financing, but the Dutch planned to phase out financing over the following five years. The government is open to plans to further develop the bauxite and gold mining sectors. The opening of the Gross Rosbel gold mine is expected to boost exports and GDP growth. An on-shore oil drilling program is underway, and prospects look good. In 2004, offshore oil drilling was aided by an exploration agreement signed by the state oil company (Staatsolie) with Repsol and Mearsk. In 2004, the government introduced a new currency, the Surinamese dollar, to replace the guilder.

#### 40 SOCIAL DEVELOPMENT

Organized welfare programs are conducted largely by private initiative, through ethnic or religious associations. However, the gov-

ernment has begun to establish a social welfare system designed eventually to include a free national health service.

Women have full legal rights under the law, but discrimination in hiring and salary practices persists. Opportunities for women remain limited as a result of traditional attitudes that encourage women to stay at home. This attitude is especially prevalent in rural areas. As of 2004, the government has not made specific efforts to combat economic inequality. Spousal abuse and other forms of violence against women are widespread social problems, and the government has not addressed these issues.

Amerindians in Suriname have traditionally played only a limited role in decisions affecting their land and culture. Although Suriname's human rights record has improved, some abuses continue to be committed. These include the mistreatment of detainees, the abuse of prisoners, and overcrowding of jails. Pretrial detainees still constitute a large percentage of all prisoners. Non-governmental organizations are permitted to monitor the conditions of prisons.

#### 41 HEALTH

Suriname's largest hospital is the Academic Hospital, which had 402 beds and has the country's only emergency unit. Other hospitals included the 227-bed Diakonessen Hospital, 75-bed Nickerie Hospital, and the Military Hospital. The 280-bed Psychiatric Hospital provided mental health care. In 2004, there were an estimated 45 doctors per 100,000 people. Safe water was available to 89% of the population. Health care expenditures totaled 5% of GDP.

In 2002, Suriname's estimated birth rate was 20 per 1,000 people. The infant mortality rate was estimated at 23.57 per 1,000 live births in 2005. Average life expectancy was estimated at 68.96 years and the total fertility rate at 2.4 children per woman. The mortality rate for children under five years of age was 8.7 per 1,000. Overall mortality was 5.7 per 1,000 in 2002. The immunization rates for a child under one were as follows: diphtheria, pertussis, and tetanus, 85%; polio, 81%; and measles, 81%.

Tuberculosis, malaria, and syphilis, once the chief causes of death, have been controlled. The HIV/AIDS prevalence was 1.70 per 100 adults in 2003. As of 2004, there were approximately 5,200 people living with HIV/AIDS in the country. There were an estimated 500 deaths from AIDS in 2003.

#### 42 HOUSING

Housing programs are supervised by the Department of Social Affairs. As of 1 July 1980 there were 68,141 inhabited houses in Suriname and 8,208 huts; 82.3% of living quarters had electricity. Between 1988 and 1990, 82% of the urban and 94% of the rural population had access to a public water supply, while 64% of urban dwellers and 36% of rural dwellers had sanitation services. As of late 2005, the results of the 2004 population and housing census had not yet been published. However, a Habitat for Humanity report indicated that the housing deficit stood at about 20,000 units. The country has about 90,000 households.

#### 43 EDUCATION

Education is compulsory for all children ages 6 through 16. While primary education lasts for six years, secondary education has two phases—four years followed by three years. Free primary educa-

tion is offered by the government and by Roman Catholic and Protestant mission schools. The official school language is Dutch.

In 2001, about 96% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 97% of age-eligible students. The same year, secondary school enrollment was about 64% of age-eligible students; 54% for boys and 74% for girls. It is estimated that about 74% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 20:1 in 2003; the ratio for secondary school was about 15:1. In 2003, private schools accounted for about 47.8% of primary school enrollment and 21.3% of secondary enrollment.

Higher education is provided by five teacher-training colleges, five technical schools, the Academy for Higher Art and Culture, and the University of Suriname, with its Law School and a Medical Science Institute. The Polytechnic College of Suriname was established in 1994. There is also a dental school and a nursing school. Higher education is free of charge to citizens. The adult literacy rate for 2004 was estimated at about 88%, with 92.3% for men and 84.1% for women.

#### 44 LIBRARIES AND MUSEUMS

The main public library is at the Stichting Cultureel Centrum in Paramaribo, with 850,000 volumes, seven branches, and two bookmobiles. The Anton de Kom University in Paramaribo has 51,000 volumes and serves as a depository library for the United Nations. The library of parliament is also in Paramaribo. The Suriname Museum and the Natural History Museum are in Paramaribo. There is an open-air museum in Nieuw Amsterdam, with historical exhibits based at an 18th century fort.

#### 45 MEDIA

Nearly all the towns and villages have telephone connections. In 2003, there were 79,800 mainline phones and 168,100 mobile phones in use throughout the country. In 2004, there were 14 television stations and 25 radio stations. Two television stations and two radio stations were publicly owned. Broadcasts are available in Dutch, English, Hindi, Portuguese, Spanish, and some local languages. In 1997, 668 radios and 137 television receivers were in use for every 1,000 people. In 2002, there were 20,000 Internet users. There were 18 Internet hosts in 2003.

There were two privately owned daily newspapers in 2005: the Dutch-language *De Ware Tijd* (circulation 10,000 in 2002) and *De West* (circulation 15,000 in 2002). The constitution provides for freedom of speech and of the press, and the government is said to generally respect these rights.

#### 46 ORGANIZATIONS

The Chamber of Commerce and Industry is located in Paramaribo.

Youth organizations in Suriname include the YWCA/YWCA, Girl Scouts, and Boy Scouts. The Bouterse government established the National Women's Organization and the Suriname Youth Union. There are several sports associations in the country representing such pastimes as tennis, tae kwon do, weightlifting, bad-

minton, and football (soccer); many sports associations are affiliated with international counterparts.

Volunteer service organizations, such as the Lions Clubs and Kiwanis International, are also present. The Father Ahlbrinck Foundation promotes development programs for the Amerindian and Bush Negro communities in central Suriname. The National Forum of Nongovernmental Organizations Against Poverty and for Sustainable Development was formed in 1992. There are national chapters of the Red Cross Society and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism is a growing industry in Suriname. The government is the main support encouraging ecotourism and increasing tourism facilities. Sports are the primary source of recreation, with football (soccer), basketball, and cricket being the most popular. Visitors also fish in the Suriname and Saramacca Rivers. The brilliant flora and fauna are shown off on dugout canoe jungle trips, and Paramaribo is becoming more popular with its wooden architecture and market.

A vaccination certificate against yellow fever is required if traveling from an infected country. All visitors must have a valid passport and onward/return ticket. Visas are required for all foreign nationals except citizens of Brazil, Chile, Costa Rica, Gambia, Israel, Japan, Malaysia, Netherlands Antilles, Philippines, Singapore, South Korea, Switzerland, Venezuela, and citizens of the Caribbean Community (CARICOM)

In 2004, the US Department of State estimated the daily cost of staying in Suriname at \$183.

#### 48 FAMOUS SURINAMESE

Lt. Col. Désiré ("Dési") Bouterse (b.1945) led the coup of February 1980, and is perhaps the most controversial figure in the history of independent Suriname.

#### 49 DEPENDENCIES

Suriname has no territories or colonies.

# TRINIDAD AND TOBAGO

Republic of Trinidad and Tobago

**CAPITAL:** Port-of-Spain

**FLAG:** On a red field, a black diagonal stripe with a narrow white border on either side extends from top left to bottom right.

**ANTHEM:** Begins, "Forged from the love of liberty, in the fires of hope and prayer."

**MONETARY UNIT:** The Trinidad and Tobago dollar (TT\$) is a paper currency of 100 cents. There are coins of 1, 5, 10, 25, and 50 cents, and 1 dollar, and notes of 1, 5, 10, 20, and 100 dollars. TT\$1 = US\$0.15949 (US\$1 = TT\$6.27) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is official, but some imperial weights and measures are still used.

**HOLIDAYS:** New Year's Day, 1 January; Carnival, 14–15 February; Emancipation Day, 1st Monday in August; Independence Day, 31 August; Republic Day, 24 September; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Carnival, Good Friday, Easter Monday, Whitmonday, Corpus Christi, 'Id al-Fitr, and Dewali.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated off the northeast coast of South America at the extreme southern end of the Lesser Antilles, the islands of Trinidad and Tobago cover an area of 5,128 sq km (1,981 sq mi). Comparatively, the area occupied by Trinidad and Tobago is slightly smaller than the state of Delaware. Trinidad, the main island, rectangular in shape, has an area of 4,828 sq km (1,863 sq mi), extending 143 km (89 mi) N–S and 61 km (38 mi) E–W. Cigar-shaped Tobago, 31 km (19 mi) northeast of Trinidad, has an area of 300 sq km (116 sq mi), a length of 42 km (26 mi) NE–SW, and an average width of 12 km (7.5 mi) NW–SE. Sixteen small islands are found off the coasts. The Atlantic Ocean is to the E and the Caribbean Sea to the W. Venezuela lies only 11 km (7 mi) SW across the shallow Gulf of Paria.

Trinidad and Tobago have a coastline length of 362 km (225 mi). The capital city of Trinidad and Tobago, Port-of-Spain, is located on Trinidad's Gulf of Paria coast.

## <sup>2</sup> TOPOGRAPHY

Trinidad is geologically part of South America and its topography is similar to that of the adjoining Orinoco section of Venezuela. Three hill ranges, trending east–west, cross the island roughly through the northern, central, and southern parts, respectively. The Northern Range, a continuation of the mountains of the Paria Peninsula of Venezuela, is the most extensive and rugged of the three and has peaks rising above 900 m (3,000 ft). The highest peaks on Trinidad are El Cerro del Aripo (940 m/3,084 ft) and El Tucuche (936 m/3,071 ft). Hills in the Central Range rise just over 300 m (1,000 ft). Those in the Southern Range are somewhat lower. In between these hill ranges is level or gently rolling flatland, dissected by small streams flowing from the hills. Extensive swamp areas, some of them mangrove, are found along the east,

south, and west coasts. Trinidad has the world's largest natural asphalt bog, the 46-hectare (114-acre) Pitch Lake, on the southwestern coast.

Tobago is geologically part of the Lesser Antilles, and its topography, generally more irregular and rugged than Trinidad's, resembles that of Grenada, St. Vincent, and other volcanic islands to the north. A central volcanic hill core rising to over 550 m (1,800 ft) fills most of the island and reaches the sea in many places. Patches of a narrow coastal plain are scattered here and there; much of the island's limited level land is concentrated in its southwestern tip.

## <sup>3</sup> CLIMATE

There is little variation in temperature conditions through the year. The mean annual temperature for the entire nation is 21°C (70°F). In Port-of-Spain the annual average is 25°C (77°F), with an average minimum of 20°C (68°F) and an average maximum of 30°C (86°F) in January; the July range is 23–31°C (73–88°F). Increasing elevation in Trinidad's Northern Range causes a corresponding decrease in temperature. Nights are generally cool.

In the northern and central hill areas and on Tobago, annual rainfall exceeds 250 cm (98.4 in) and probably exceeds 380 cm (150 in) in specific areas. Most hilly sections receive 200 cm (80 in) or more, while in the lowlands the average drops below 165 cm (65 in) and in certain sections below 125 cm (50 in). There is a relatively dry season from about January to May and a wet season from June to December. The dry period is not, however, a season of drought, for rain still falls every few days in most areas.

## <sup>4</sup> FLORA AND FAUNA

The plant and animal life of Trinidad, like the geology of the island, resembles that of neighboring Venezuela. Tobago, by contrast, shows in its flora and fauna its connection with the volcanic Lesser Antillean arc. There are distinct altitudinal variations

in indigenous plant life on both islands. The natural vegetation includes wild flowers, many flowering shrubs and trees, palms, giant aroids, and large broad-leaved varieties. Natural animal life includes a few species of mammals, monkeys among them, and many reptiles and birds. As of 2002, there were at least 100 species of mammals, 131 species of birds, and over 2,250 species of plants throughout the country.

## 5 ENVIRONMENT

Among environmental problems, pollution from oil spills is the most serious. Water pollution is also caused by mining by-products, pesticides, fertilizers, sewage, and saltwater. Soil erosion has occurred, in part, because of the clearing of land for farming. Environmental responsibility is vested in the Ministry of Energy and Natural Resources. In 1989, the Ministry of the Environment and National Service was formed to regulate the nation's treatment of its natural environment.

On the west coast of Trinidad is the Caroni Bird Sanctuary, famed for its marshland and mangroves, where flocks of scarlet ibis roost. Little Tobago is reputed to be the only place aside from New Guinea where the bird of paradise lives in the wild. The nation has three Ramsar wetland sites. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 1 type of mammal, 2 species of birds, 5 types of reptiles, 9 species of amphibians, 15 species of fish, and 1 species of plant. Endangered species on Trinidad include the Trinidad piping guan, tundra peregrine falcon, loggerhead turtle, and red siskin.

## 6 POPULATION

The population of Trinidad and Tobago in 2005 was estimated by the United Nations (UN) at 1,305,000, which placed it at number 148 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 21% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 1,343,000. The overall population density was 254 per sq km (659 per sq mi), but the majority of the population resides on the island of Trinidad.

An almost continuous urban area extends from Port-of-Spain eastward to Tunapuna, westward, and northward into the Northern Range. About one-third of the population lives in Port-of-Spain or its suburbs or within 16 km (10 mi) of them. The UN estimated that 74% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.77%. The capital city, Port-of-Spain, had a population of 55,000 in that year. The second most important town is San Fernando, with a population of 55,419. The remainder of Trinidad and virtually all of Tobago are sparsely settled. Scarborough, the main town of Tobago, has a population of approximately 4,500.

## 7 MIGRATION

Lack of opportunity has encouraged the migration of numbers of people to the United Kingdom, the United States, and occasionally to other places abroad. In 1990 there were 119,000 people in the United States who had been born in Trinidad and Tobago, up

from 66,000 in 1980. This movement, however, has been counterbalanced by immigration from other islands in the Lesser Antilles, mainly from Grenada and St. Vincent, where lack of opportunity is far more critical. Some of this immigration has been legal, some not. Migration from Tobago to Trinidad is common. The number of migrants in 2000 was 41,000. Worker remittances in 2001 were \$40.9 million.

As of 2004 Trinidad and Tobago did not host any refugees or asylum seekers. However, the lack of a national refugee law is a cause for concern as Trinidad and Tobago are likely to experience increased numbers of asylum seekers due to increased extra-regional migration and migrant trafficking through the Caribbean. In 2005, the net migration rate was estimated as -10.87 migrants per 1,000 population.

## 8 ETHNIC GROUPS

The population is mainly comprised of Afro Trinidadians (the descendants of former black slaves), Indo Trinidadians (East Indians originally brought to the island as contract laborers from northern India), whites, and Chinese, many of whom are racially and culturally intermixed. The total population according to the 2000 census is about 40% Indo Trinidadian, 37.5% Afro Trinidadian, 20.5% mixed, 1.2% other, and about 0.8% unspecified.

While African and East Indians on Trinidad are economically interdependent, each community retains its cultural individuality: this is a life that has been called coexistence without assimilation. Inter-marriage is rare, and facial and other bodily characteristics still separate the two groups, as do occupation, diet, religion, residence, agricultural landscape, sometimes dress, and often politics. Africans are dominant in the urban areas, in the oil fields, in the poorer agricultural areas of the north, east, and southeast, and on Tobago. East Indians are dominant in the best agricultural regions. Although outnumbered in Port-of-Spain and San Fernando, urban East Indians are apt to be economically better off than the urban Africans and tend to be highly involved in commerce, industry, and the professions.

## 9 LANGUAGES

English is the official language; an English patois, characterized by numerous foreign words and the special pronunciations of the islands, is understood everywhere. Here and there, a French patois and Spanish are used. In rural village areas, notably in the southern part of Trinidad, East Indians, especially of the older generation, use Hindi and, less frequently, Urdu, Tamil, and Telegu.

## 10 RELIGIONS

Christian churches are found on both islands; Hindu temples and Muslim mosques in the recognizable architectural styles of southern Asia are found on Trinidad. According to official statistics last taken in 2000, the population was roughly 26% Roman Catholic, 24.6% Protestant, 22.5% Hindu, and 5.8% Muslim. Primary Protestant denominations include Anglican, Pentecostal, Seventh-Day Adventist, Presbyterian, Baptist, and Methodist. Other Christian groups, such as Jehovah's Witnesses and Mormons, are also represented. A small number of people are believed to practice traditional Caribbean religions in conjunction with other faiths, including the Shouter Baptists and the Orisha. About 1.9% of the

population were atheists. There are small groups who practice other faiths, including Baha'is, Rastafarians, Buddhists, and Jews.

Complete freedom and equality are enjoyed by all religious groups. Certain Christian, Hindu, and Muslim holidays are celebrated as national holidays. The Inter-Religious Organization is a nongovernmental group that promotes interfaith dialogue and understanding and sponsors activities of public outreach. The government maintains a good relationship with this organization and supports many of its activities.

## 11 TRANSPORTATION

In 2002, there were 8,320 km (5,170 mi) of roads, of which 4,252 km (2,642 mi) were paved. The more densely settled sections of both islands are served by reasonably adequate roads, but large sections of Tobago either have no motorable roads or are connected by narrow, tortuous, and poorly surfaced ones. In 2003, registered motor vehicles included 297,020 passenger cars and 38,275 commercial vehicles. The Public Service Transport Corp. is responsible for road transport. Trinidad's lone remaining railway, from Port-of-Spain to San Juan, was closed down in 1968.

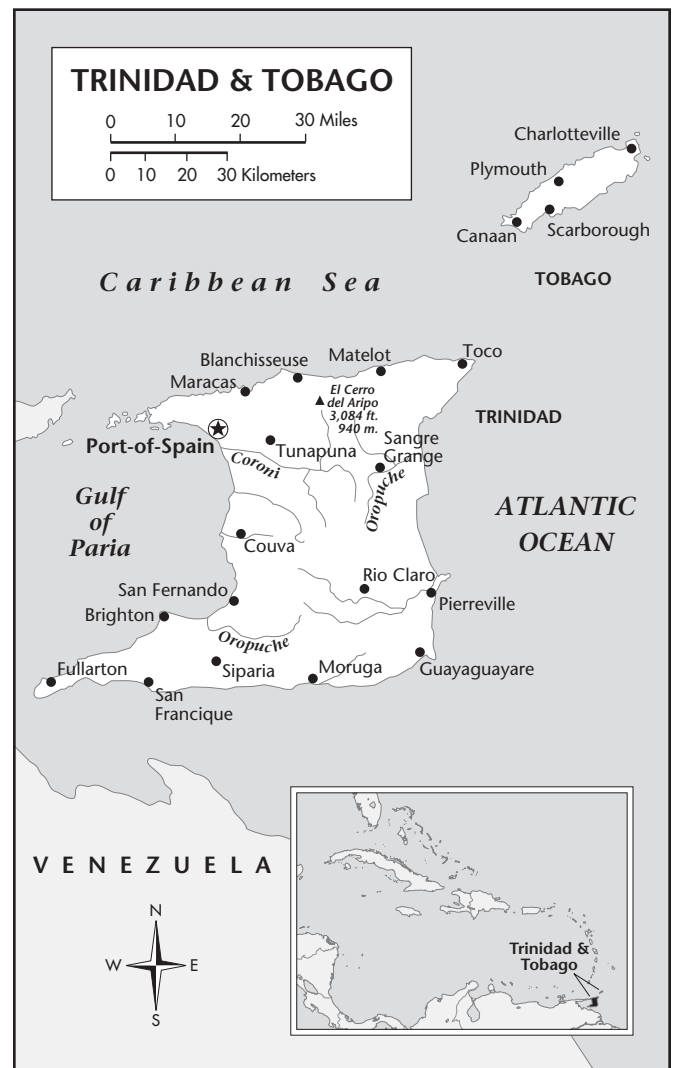

The largest port installation for passengers and cargo is at Port-of-Spain. Brighton is an important port for oil and asphalt loading, and there are also oil terminals at Chaguaramas, Pointe-à-Pierre, and Point Fortin. A deep-water port at Point Lisas accommodates energy-based industries at the Point Lisas industrial estate. Numerous steamship lines regularly schedule freight and passenger services from Europe and the Americas. Regularly scheduled coastal vessels connect Port-of-Spain with Scarborough. The main shipping line is the West Indies Shipping Service. In 2005, Trinidad and Tobago had six merchant ships of 1,000 GRT or more, with a total of 7,178 GRT.

Air facilities are concentrated at Piarco International Airport, about 26 km (16 mi) southeast of Port-of-Spain. There is a secondary main airport at Crown Point, on the western tip of Tobago. In 2004, there were six airports and airfields, three of which had paved runways as of 2005. Trinidad and Tobago Airways—owned by the government and formed by the merger of British West Indian Airways (BWIA) International and Trinidad and Tobago Air Services in 1980—operates domestic, regional, and international services. In 2003, about 1.084 million passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Arawak Indians inhabited what they knew as the "Land of the Hummingbird" before the arrival on 31 July 1498 of Christopher Columbus, who called the island La Trinidad, or "The Trinity." The Spanish took little interest in the island and did not appoint a governor until 1532. Thereafter, Spanish colonists gradually came, but skirmishes with local Amerindians and raids by other Europeans, including Sir Walter Raleigh, made it difficult for the Spanish to obtain a foothold there. During the early European period, the island acted as a supply and transshipment center for Spanish traders and fortune seekers in South America. In time, colonists established plantations and imported slave labor from West Africa.

In 1797, a British expedition from Martinique captured Trinidad, which Spain ceded formally to Great Britain in 1802 by the Treaty of Amiens, and Trinidad became a crown colony. During the late Spanish period and through most of the 19th century, sug-

LOCATION: 10°2' to 11°21' N; 60°30' to 61°56' W. TOTAL COASTLINE: 470 kilometers (292 miles). TERRITORIAL SEA LIMIT: 12 miles.

ar dominated as the island's main agricultural product. The emancipation of slaves in 1834 brought severe labor shortages, and between 1845 and 1917, the colonial government brought in more than 150,000 contract workers, mostly Hindus and some Muslims from India, to replace the slaves. With added labor supplies and new techniques, the cocoa industry thrived, and by the late 19th century cocoa had joined sugar as a major export crop. The discovery of petroleum in south Trinidad in 1910 led to its addition as an important export, and since then it has assumed central economic importance, complemented beginning in the late 1990s by increasing natural gas exports.

Columbus also discovered Tobago in 1498 and it too received little attention from Europeans for many years. British from Barbados first colonized the island in 1616, but the local Carib Indians soon drove this group out. Other colonists followed shortly, however, and during the next 200 years the island changed hands many times among the Dutch, French, and British. Finally, in 1814, the British crown gained possession, which it maintained for a century and a half. The British first ruled Tobago as a sepa-

rate colony, but during much of the 19th century administered the island from the Windward Islands government. It became a crown colony in 1877 and in 1888 was amalgamated with Trinidad under the name of Trinidad and Tobago.

In 1958, Jamaica, Barbados, and the British Windward and Leeward Islands formed the Federation of the West Indies. Arguments over distributive issues soon undermined the federal idea: Jamaica withdrew in 1961, followed closely by Trinidad and Tobago. On 31 August 1962, Trinidad and Tobago became independent but retained membership in the (British) Commonwealth. Eric Williams, the founder of the People's National Movement (PNM), became prime minister in 1961 and was regularly reelected until his death in 1981. Williams survived an attempted coup by "Black Power" elements as well as army supporters in 1970. In 1976, Trinidad and Tobago declared itself a republic, and a president replaced the British monarch as chief of state. In 1980, Tobago attained a degree of self-government when it was granted its own House of Assembly.

Trinidad and Tobago's politics has been marked by intense competition between the main ethnic groups—African and East Indian. Each group represents about 40% of the population (persons of mixed, European, Chinese, and Syrian-Lebanese origin comprise the other 20 percent). The PNM held on to power after the death of Eric Williams, but was ousted in 1986 by an alliance of African, Indian, and mixed groups melded into the National Alliance for Reconstruction (NAR). A.N.R. Robinson, leader of the NAR, became prime minister. However, the alliance soon fell apart, and the Indian faction went on to form the United National Congress (UNC). As the economy entered into a difficult period of structural adjustment, dissatisfaction with the government grew. In July 1990, a black Muslim group, the Jamaat-al-Muslimeen, laid siege to the parliament in a failed coup that killed 25 and destroyed a large swath of the capital Port-of-Spain. In 1991, a reconstructed PNM returned to power under younger leadership. In 1995 Prime Minister Patrick Manning called early elections, hoping to increase his parliamentary majority. Instead, the PNM was replaced by the country's first Indian government led by Basdeo Panday. In turn, this government's tenure was plagued by rising corruption and crime. Although the UNC was reelected in 2000, intraparty divisions reduced its parliamentary majority and led to the calling of fresh elections in 2001. That election resulted in a stalemate. The president then selected the PNM's Manning as prime minister. Elections held in 2002 confirmed the PNM's majority.

Economically, the country emerged from structural adjustment in the 1990s and both the UNC and PNM governments moved firmly ahead in courting foreign investment, dismantling trade barriers, and privatizing the economy. Highly industrialized Trinidad ranks in the top 50 countries in terms of oil reserves and the top third in terms of proven natural gas reserves. The country's external linkages are broad, but focused particularly on the United States and the regional Caribbean Community, as well as deepening linkages with Latin America.

### 13 GOVERNMENT

Historically, active participation in government by the nonwhite (black and East Indian) population began in 1925, when for the first time elected representatives were included in the otherwise

appointed Legislative Council that ruled the colony. Over the years the proportion of elected members increased and a fully electoral self-government came in December 1961. In 1976, Trinidad and Tobago amended its 1961 constitution. The 1976 draft preserved the bicameral legislature but replaced the crown-appointed governor-general with a ceremonial president chosen by parliament. In 1976 as well, suffrage was lowered to the age of 18.

The House of Representatives is the more important of the two houses. Its 36 members are elected for five-year terms, but new elections can be called by the prime minister or by the House itself in a vote of "no confidence" in the cabinet. The party with a majority of seats in the House forms the government. The Senate consists of 31 members, all appointed by the president, 16 on the advice of the prime minister, 6 on the advice of the leader of the opposition, and 9 discretionary, based on consultation with various religious, economic, and social groups.

The head of the government is the prime minister, who is leader of the majority party. Cabinet ministers are appointed primarily from the House of Representatives by the president, acting on the prime minister's recommendations. George Maxwell Richards was elected president in 2003 with 43% of the votes and Patrick Manning was appointed prime minister in 2001. The next presidential elections were to be held in 2008.

Calls for constitutional reform have intensified over the years. One of the issues that calls out for attention was the authoritarian control exercised by prime ministers under the current system, which is based on Britain's Westminster model. Moreover, the winner-take-all system does not allow for representation of groups that may be large in number but concentrated geographically. Finally, with a few exceptions, minor parties have been unable to play an effective role.

### 14 POLITICAL PARTIES

The People's National Movement (PNM), formed in 1956 by Eric Williams, brought order to an individual-based political system that had hitherto operated in Trinidad and Tobago. Given the party's strong support among the black masses, the opposition coalesced around an Indian-based party, the Democratic Labor Party (DLP). However, the DLP had no success in elections. In fact, as a result of a split in both the ruling and opposition parties and the ensuing boycott by the opposition of the elections, the PNM won all 36 seats in the House of Representatives in an election in 1970. Two members of the PNM who defected in 1972 eventually formed a token opposition.

In the 1976 elections, the PNM won with 24 seats. However, the DLP's successor, the United Labour Front (ULF), a trade union-based party with an East Indian base in the sugar belt, won 10 seats, enough to become an effective opposition. The Democratic Action Congress (DAC), formed by the Tobago-based breakaway PNM faction, won the remaining two seats representing Tobago.

In the election of 1981, despite the loss of its leader, the PNM continued its dominance with 26 seats. The opposition ULF, the DAC, and the small Tapia House Movement formed a coalition party, the Trinidad and Tobago National Alliance (TTNA), and won 10 seats. A separate party, the Organization for National Reconstruction (ONR), founded in 1980, drew enough support from the business elite and Creole groups to win 22.3% of the vote but

no seats. This election was also contested, albeit unsuccessfully, by the National Joint Action Committee (NJAC), a Black Power group entering conventional politics for the first time.

In 1986, the opposition ONR-TTNA unified to form the National Alliance for Reconstruction (NAR). The NAR swept to power with 33 seats to the PNM's three. Two years later, factionalization and racial antagonisms led to the dismissal of the leader of the ULF and two of his supporters. These went on to form the United National Congress (UNC). In 1991, the PNM returned to office, winning 21 of 36 seats. The NAR received 2 (Tobago) seats, and the UNC 13. In 1995, the UNC and PNM won 17 seats each, allowing the UNC to come to power in a coalition with the NAR which had again won its 2 Tobago seats. A new era in the country's electoral politics had clearly arrived, with no ethnic group expected to gain strong majorities. Basdeo Panday then appointed former prime minister and NAR leader A.N.R. Robinson to the presidency. During this time, the UNC also benefited from the defection of two PNM members. The party went on to win 19 seats in 2000 (and the PNM 16, NAR 1), but not long after, tensions increased between the prime minister and his formerly close ally the attorney general. The latter and two UNC members left the government, forcing fresh elections in 2001. As many had predicted, a stalemate resulted when the UNC and PNM each won 18 seats. In this case, however, in a controversial move, the president selected the PNM's Manning as prime minister. A year later, in 2002, the PNM consolidated its power by winning 20 seats to the UNC's 16 seats. The next legislative elections were to be held October 2007.

A large number of small parties have been established over the years, but none has been successful in gaining power. The NAR began life as a broader unit but became a small party that held no seats in parliament as of 2005. The Tobago-based DAC whose support was crucial for the NAR, left its partner in 2004. The DAC continued to have a fairly strong support base in Tobago. Overall the fate of third parties is linked to the outcome of the debate on constitutional reform that was ongoing as of 2006.

## **15 LOCAL GOVERNMENT**

Elections are held every four years (usually about two years after a general election) for representatives to nine regional corporations, two city corporations (the main cities of Port-of-Spain and San Fernando), and three boroughs. The city and boroughs elect a mayor and city council. In addition, elections are held every four years for the House of Assembly in Tobago, which was established in 1980. Contention has historically existed between Tobago and Trinidad on issues such as the division of financial responsibilities, taxes and spending. The unpopularity of the central government's policies were reflected in the strong showing of the Tobago-based DAC party in elections to the House of Assembly between 1980 and 2004. The DAC and its successor the NAR went from controlling 8 out of 12 seats in the Assembly in 1980 to winning 11 in every other until 1996. (The PNM won the remaining seat(s) but an independent also won a seat in 1996.) It was only in 2004, with the PNM solidly back in control in Trinidad and a popular Tobagonian leading the party's efforts in the Assembly election, that the PNM won 8 seats to the NAR's 4. The new PNM hold was consolidated in 2005 when it gained 11 out of the 12 seats, with

the re-formed DAC confined to only one. Governmental relations between the two islands have improved.

## **16 JUDICIAL SYSTEM**

The judicial system follows common law and is modeled after the United Kingdom, with some local variations. The Supreme Court of Judicature consists of the High Court of Justice and the Court of Appeal. The former includes a chief justice and 10 puisne judges. Its jurisdiction and its practices and procedures follow closely those of the High Court of Justice in England. Civil actions and proceedings are usually heard by only one High Court judge but may be tried by a jury of nine members. A High Court judge with a jury of 9–12 members tries criminal offences. The Court of Appeal consists of the chief justice and three other justices. Minor offenses are handled by district courts, including traffic courts. The judicial system also includes the Industrial Court and Tax Appeal Board, and a system of magistrate courts. All criminal cases are first sent to a magistrate's court. Appeals may be made to the Court of Appeal and until recently, up to the Judicial Committee of the Privy Council in the United Kingdom. Since 1970, however, the Caribbean countries had been considering the establishment of a regional court that would replace the Privy Council. In 2003, this Court of Justice (CCJ) was officially ratified, and in April 2005, the court was finally launched in Trinidad and Tobago where it is headquartered. Trinidad and Tobago was still completing arrangements to allow recourse to the court. The court will have both appeal jurisdiction and original jurisdiction (in which it will apply international law).

The judiciary is independent of the other branches and free from outside interference. Criminal defendants are presumed innocent and are afforded the right to representation by counsel. In practice, the civil and criminal dockets are badly backlogged due to inadequate resources and inefficiency.

In an ongoing dispute about using the death penalty, the government of Trinidad and Tobago withdrew as a party to the American Convention on Human Rights but remained obligated until May 1999 to the Organization of American States to afford all of the rights set out within the American Declaration. In June 1999 the government carried out nine executions, the first to take place in the country in five years. Trinidad and Tobago also withdrew from the UN Optional Protocol of the International Convention on Civil and Political Rights, tried to rejoin with an appropriate reservation in place concerning the death penalty, but was forced after widespread criticism to withdraw again in 2000.

## **17 ARMED FORCES**

The Trinidad and Tobago Defense Force numbered an estimated 2,700 in 2005. The Army, which numbered 2,000 members, consisted of two infantry battalions, one special forces unit and one support battalion. The coast guard of 700 operated 12 patrol and coastal combatants, and had an air wing of 50 personnel. Under lend-lease agreements with the United Kingdom signed early in 1941, the United States acquired several Caribbean bases, including one on Trinidad, on a 99-year lease. After local agitation over a number of years, Trinidad reclaimed the last remaining for-

eign base in June 1967. The defense budget in 2005 totaled \$32 million.

## 18 INTERNATIONAL COOPERATION

Trinidad and Tobago became a member of the United Nations on 18 September 1962; it belongs to ECLAC and several nonregional specialized agencies, such as the FAO, UNESCO, UNIDO, the World Bank, ILO, and the WHO. The country is also a member of the ACP Group, the Commonwealth of Nations, CARICOM, the Caribbean Development Bank, G-24, G-77, the Inter-American Development Bank, the Latin American Economic System (LAES), the WTO, the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and the OAS. Trinidad and Tobago is part of the Nonaligned Movement and serves as part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL).

In the area of environmental protection and cooperation, Trinidad and Tobago is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Trinidad and Tobago is a twin island state with an economy oriented toward trade and tourism. The larger island, Trinidad, is more heavily industrialized and is dominated by the oil and gas sector, although agriculture, tourism, manufacturing and construction also make significant contributions. Tobago is dominated by tourism and agriculture. The country cannot feed itself and must look abroad not only for its food staples, but also for the bulk of the manufactured goods. Import payments are met by the export of petroleum and products, invisible exports, tourism, and the transshipment trade. Specialized tropical crops are produced for export, but exploitation of petroleum reserves and refining of local and imported oils and their subsequent export are the dominant factors of the country's economy.

Although by far the most prosperous of Caribbean nations, the country's high degree of dependence on oil revenues has made it exceedingly vulnerable to falling oil prices. Over the past three decades, its economic fortunes have followed the world price of oil closely. Oil revenue windfall after 1973 brought unprecedented prosperity. However, this prosperity was not sustained when oil prices began to fall in 1982. Only after a further steep decline in the price of oil in 1986 did the government face the challenge of a fundamental adjustment in economic policy and initiate a program supported by the World Bank and the IMF. The country began the difficult transition from an oil dependent, public sector dominated economy, to a more diversified, market-oriented, private sector-led one.

After a decade of almost uninterrupted economic decline, growth returned in 1995, when real GDP increased 2.4%. Growth accelerated from 3–5% in the middle of the decade to an average of 5.17% by 1998 to 2000. Trinidad and Tobago continues to experience real GDP growth as a result of economic reforms, tight monetary policy, fiscal responsibility, and high oil prices. In 2003 the country experienced a real GDP growth rate of 13.2%, followed by 6.2% growth in 2004. The economy's performance is at-

tributable to energy-related investments, growth in the nonenergy sector (manufactured exports, domestic construction, offshore financial services) and sound macroeconomic policies. The government's stabilization policies yielded results with a fall in the annual inflation rate from double digits—13.3% in 1993—to a range of between 3.5% and 5.6% by 1996 to 2002. A surge in imports related to a boom in the hydrocarbons sector helped raise the current account deficit to an average of 10.25% of GDP in 1997 and 1998, but by 2000, this had been transformed into a current account surplus equal to almost 5% of GDP.

The global slowdown in 2001 and the world-wide declines in tourism and foreign investment after the 11 September 2001 terrorist attacks in the United States did not seriously impact economic growth in Trinidad and Tobago, as it did in the rest of the English-speaking Caribbean nations.

Long-term growth looks promising as Trinidad and Tobago further develops its oil and gas resources and the industries dependent on natural gas, including petrochemicals, fertilizers, iron/steel, and aluminum. Additional growth potential also exists in financial services, telecommunications, and transport. Strong growth in Trinidad and Tobago over the past few years has led to trade surpluses, even with high import levels due to industrial expansion and increased consumer demand. Unemployment, which was 12.1% in 2001, had fallen to 8.4% by 2004. Inflation, however, has begun to worsen with prices rising at an annualized rate of 7.34% in March 2005, as opposed to 5.6% in December 2004.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Trinidad and Tobago's gross domestic product (GDP) was estimated at \$13.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$12,700. The annual growth rate of GDP was estimated at 6.5%. The average inflation rate in 2005 was 6.8%. It was estimated that agriculture accounted for 0.7% of GDP, industry 57%, and services 42.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$79 million or about \$60 per capita and accounted for approximately 0.8% of GDP. Foreign aid receipts amounted to -\$2 million or about -\$2 per capita and accounted for approximately 0.0% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Trinidad and Tobago totaled \$6.49 billion or about \$4,945 per capita based on a GDP of \$10.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.9%. In 2001 it was estimated that approximately 20% of household consumption was spent on food, 23% on fuel, 5% on health care, and 13% on education. It was estimated that in 1992 about 21% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Trinidad and Tobago's workforce was estimated at 620,000 persons. As of 2002 (the latest year for which data was available), agriculture accounted for 6.9% of the nation's labor force, with 64.4% engaged in services, 28.4% in industry, and 0.2% in undefined occupations. Unemployment in 2005 was estimated at 8%.

The principal national labor federation is the Trinidad and Tobago Labor Congress. Of nonaffiliated unions, the largest is the National Union of Government and Federated Workers. As of 2002, an estimated 25–30% of the workforce was organized into 19 labor unions. The right to strike is provided by law with the exception of those employed in essential services. There is little protective labor legislation; work rules are subject to labor-management negotiation.

A minimum wage of us\$1.10 per hour was established in 1998, but it is considered insufficient to support a family. Children between the ages of 12 and 14 may work in family businesses. The normal workday is eight to nine hours, five days a week. Vacation periods vary from two to five weeks a year, depending on length of service. There is no organized exploitation of children, but they do occasionally serve in the informal economy such as working as street vendors.

## 22 AGRICULTURE

About 24% of the total land area was arable in 2003, most of it on Trinidad. There are two distinct types of agricultural operations—the large estate or plantation that is managed by a specialist and employs large numbers of laborers, and the small farm cultivated by the owner (or tenant) and family. The small farms grow mainly for the home market. Crops include corn, rice, peas, beans, potatoes, other vegetables, and a wide variety of fruits. Lowland rice is grown almost entirely by Indian farmers. The large estates are interested mainly in commercial export crops, although the small farmers also grow some export crops. Agriculture accounted for only 1% of GDP in 2003. During the 1970s and early 1980s, agriculture's traditional labor force was lured away by the booming energy sector, with foreign exchange plentiful enough to import food. By the late 1980s, however, this trend was being reversed.

The value of crops grown for the domestic market is believed to be considerably greater than that of the export crops. Sugar, the main commercial crop, is grown on a few large company-owned estates and by thousands of small farmers; modern methods allow the estates to produce about two-thirds of the sugar crop. Normally, 80% or more of the islands' production is exported. In 2004, sugarcane production was 680,000 tons. The second major export crop, cocoa, is cultivated in the hill sections of both Trinidad and Tobago. Estates produce considerably more cocoa than smallholdings, owing to better agricultural practices and to the fact that small farmers intercrop bananas, coffee, and other crops with cocoa. Cocoa production has been in decline since 1970; the output in 2004 was 1,300 tons. Coffee is grown in much the same hill areas as cocoa, and there is about the same proportion of estate-grown to small-farmer-grown coffee. Both cocoa and coffee have been described as sick industries because of inefficiency, crop disease, and uncertain world market conditions. In 2004, coffee production was 540 tons, down from 2,361 tons in 1985.

Some 90 acres (36 hectares) of ornamental flowers are also cultivated for export. Rice, citrus, corn, cassava, peanuts, and pigeon peas are now being grown to diversify agricultural output.

## 23 ANIMAL HUSBANDRY

Livestock plays only an incidental role in the agricultural pattern. The water buffalo, adept at turning heavy, water-laden soils, has been brought from India by Indian farmers and is the major draft animal in rice cultivation and probably the most productive animal in the country. Cattle are kept by some small farmers, but the best stock is that on estates and government farms or in large dairies. Poor animals and poor breeding and feeding methods keep meat and milk quantity and quality low and prices high. Trinidad and Tobago relies heavily on dairy imports from Europe to satisfy domestic demand.

In 2005, the livestock population included an estimated 28,200,000 poultry, 29,000 head of cattle, 59,300 goats, 43,000 hogs, 3,400 sheep, and 5,700 water buffalo. Animals slaughtered at abattoirs run by the government and by municipalities yielded an estimated 57,600 tons of poultry meat, and 2,900 tons of pork in 2005.

## 24 FISHING

The fishing industry has great potential, but current production does not begin to meet local demands, and large quantities of fish must be imported. Shrimp and mackerel make up one-third of the total annual catch, with shrimp the leading fisheries export. In 2003, Trinidad and Tobago exported \$10 million in fish and fish products, up from \$2.4 million in 1990. In 1986, the Archipelagic Waters and Exclusive Economic Zone Act defined the sovereign fishing jurisdiction around the nation, which has created new opportunities for marine fishing off the east coast of Trinidad. The harvest in 2003 was about 9,747 tons, up from 3,730 tons in 1986.

## 25 FORESTRY

Approximately 50.5%, or 259,000 hectares (640,000 acres), of the land was forested in 2000. Roughly four-fifths of the forestland is government owned or administered; however, much of the state forestland is in hill areas, inaccessible for exploitation. Several dozen small sawmills are in operation. Roundwood production in 2004 was about 94,800 cu m (3.3 million cu ft), 36% used for fuel.

## 26 MINING

Trinidad and Tobago had the largest supply of natural asphalt, and became the second-largest exporter of ammonia, behind Russia. The island's famous Pitch Lake, a 46-hectare deposit of oozing black asphalt, has been mined commercially since the 19th century. The annual yield has declined, from an average of 200,000 metric tons in the 1960s, to 18,100 metric tons in 1996 and 9,900 metric tons in 2000. Since 2001, natural asphalt output has hovered around 16,200 metric tons. In 2003, natural asphalt output was estimated at 16,200 metric tons. In 2003, the country produced 3.529 million metric tons of anhydrous ammonia, up from 3,258,619 metric tons in 2002. Iron ore deposits of commercial value were reported to have been discovered in Trinidad's Northern Range. Quarrying operations on the islands in 2003 produced 850,000 tons of limestone, down from 851,000 tons in 2002, and

765,000 metric tons of hydraulic cement, up from 743,700 metric tons in 2002.

## 27 ENERGY AND POWER

Trinidad and Tobago is among only three countries in the Caribbean region (Cuba and the Barbados are the others) to have significant oil and natural gas reserves, with Trinidad and Tobago accounting for the bulk.

According to the Oil and Gas Journal, these three countries had combined proven crude oil reserves of 1.74 billion barrels and 28.4 trillion cu ft of natural gas in 2005. Of the three, Trinidad and Tobago had proven crude oil and natural gas reserves of 990 million barrels and 25,887 million cu ft, respectively. Total oil production in 2004 for Trinidad and Tobago averaged 165,000 barrels per day, of which 131,000 barrels per day consisted of crude oil. In 2002, total oil product output averaged 137,480 barrels per day, with demand averaging 28,320 barrels per day. Although output exceeded demand, Trinidad and Tobago averaged imports of 95,180 barrels per day, with crude oil imports accounting for an average of 91,280 barrels per day. Much of these imports that year were re-exported. Exports in that year averaged 204,410 barrels per day. Refined oil output in 2002 averaged 147,540 barrels per day.

In 2003, Trinidad and Tobago produced an estimated 25 billion cu m of natural gas. Domestic demand that year came to an estimated 13.76 billion cu m, with exports totaling an estimated 11.79 billion cu m. All the natural gas produced is used domestically. Trinidad and Tobago is the largest supplier of liquefied natural gas (LNG) to the United States, and one of the world's largest exporters of LNG in the world.

Electric power generating capacity in 2002 for Trinidad and Tobago totaled 1.417 million kW, all of it dedicated to conventional thermal fuels. In that same year, electric power output totaled 5.747 billion kWh, with 99.5% generated by fossil fuel burning plants. The remainder comes from other alternative sources. A submarine cable provides Tobago with electricity from Trinidad.

## 28 INDUSTRY

The industrial sector of the economy is dominated by the capital-intensive petroleum industry. Industry accounted for approximately 57% of the GDP, agriculture 0.7%, and services for 42.3% in 2004. Trinidad and Tobago had essentially an agricultural economy up to the beginning of the twentieth century when sugar production played a dominant role and the cultivation of cocoa, coconuts, and coffee played lesser parts. The socioeconomic characteristics of Caribbean agriculture are well defined and include an aging farming population, excessive dependence on export markets, absence of marketing and processing capability, and both tariff and nontariff barriers. These influence the incomes generated by agriculture and hence the investment in agricultural development. Long-established industries are those processing raw materials of the farm, forest and sea; foremost are sugar, molasses, and rum, followed by fish, lumber, fats and oils, and stock feed. Manufacturing products include matches, angostura bitters, soap, confectionery, and clay products. Newer industries include petroleum refining, petrochemicals, concrete products, canned citrus,

bottled drinks, glass, drugs, chemicals, clothing, building materials, and metal goods.

The most important industrial center is found at the port at Point Lisas. Many new industrial plants have been established under the benefits of the country's New Companies Act (1997). The manufacturing sector has contributed a substantial share of the GDP since the 1970s. After the establishment of the free zone program in 1993, manufacturing investment soared. Caroni Inc., the government-owned sugar company and the largest employer on Trinidad, undertook a major revitalization project in 1998.

The petroleum sector, which more than doubled its growth rate to 1.8% in 1996, fell to 1.1% in 1997 due to a continuation of declining oil production. Rising prices in the early 2000s caused the petroleum sector to remain stable, however. Diversification of the petrochemicals industry and investments in other heavy industry and manufacturing may broaden the export base; but hydrocarbons will continue to provide at least 25% of foreign exchange earnings. Trinidad and Tobago's sole oil refinery had a production capacity of 160,000 barrels per day in 2002. As of 2002, the natural gas sector was expanding, with huge discoveries adding to the country's 80 trillion cubic feet (Tcf) gas base. The Atlantic LNG plant was due to expand over a four-year period, creating the largest single and sustained increment in growth in the country. The LNG plant began operations in the 1990s as the government attempted to increase oil exploration and production by giving contracts to US companies. It was one of the most ambitious projects, with British Gas (26% ownership) and Spain's Repsol (10%) joining two US companies—Amoco, with the largest stake (34%) and Cabot (10%).

Trinidad and Tobago has made a transition from an oil-based economy to one based on natural gas. In 2004, natural gas production averaged 2.9 trillion cubic feet per day (tcf/d), an increase of 12.9% from 2003. The petrochemical sector, including plants producing methanol, ammonia, urea, and natural gas liquids, has continued to grow in line with natural gas production, which continues to expand and should meet the needs of new industrial plants coming on line in the next few years.

The nonenergy sector grew at a slower pace in 2004. Output in this sector increased by a modest 3.8% in 2003 and 2.9% in 2004 with the impetus coming from the manufacturing and services sectors. The rate of growth in the manufacturing sector was 6.6% in 2004, thanks to the food, beverages and tobacco, and assembly-type industries. The service sector grew by 2.9%, led by construction. The construction sector growth was due mainly to government investment in housing and infrastructure, and ongoing projects in the energy sector. Performance in the agriculture sector has been weak and declined by 20.2% in 2004. The decline in output resulted largely from the shrinking and restructuring of the sugar industry.

## 29 SCIENCE AND TECHNOLOGY

Among the research centers and learned societies of Trinidad and Tobago are the Commonwealth Institute of Biological Control, the Agricultural Society of Trinidad and Tobago, the Tobago District Agricultural Society, the Pharmaceutical Society of Trinidad and Tobago, and the Sugar Manufacture Association of Trinidad and Tobago. The University of the West Indies has a campus in St. Augustine (founded in 1948) with faculties of agriculture, engi-

neering, medical sciences, and natural sciences. In 1987–97, science and engineering students accounted for 58% of college and university enrollments. Research and development (R&D) expenditures in 2001 totaled \$11.806 million, or 0.10% of GDP. In 1997 (the latest year for which the following data was available), government sources accounted for the largest portion of R&D spending at 48.2%, followed by business at 34.5%, and higher education at 17.3%. In that year total R&D spending came to \$12.549 million, or 0.14% of GDP. In 2001, there were 393 researchers engaged in research and development per million people. High technology exports in 2002 were valued at \$75 million, or 3% of the country's manufactured exports.

### 30 DOMESTIC TRADE

Trinidad and Tobago's wholesale trade is highly organized and highly competitive; much of it is controlled by a few managing agencies located in Port-of-Spain. These agencies are direct importers in bulk and have exclusive wholesale rights for sales in the islands, and often in other Caribbean nations and territories. Imports are of extreme importance, for example, the food service companies in Trinidad and Tobago buy 80% of their food and beverage products from local importers and only 15% from local manufacturers; they import the remaining 5% directly from US suppliers.

In small communities, rural areas, on Tobago, and in less developed parts of Port-of-Spain and San Fernando, a general retail store carries a wide variety of commodities. Many of these stores are family enterprises and most are small. Local and foreign franchises are fairly common, particularly in the fast-food industry. Price controls have been placed on sugar, schoolbooks, and pharmaceuticals. A value-added tax of 15% applies to most goods and services.

### 31 FOREIGN TRADE

Trinidad and Tobago is highly import-dependent, with the United States supplying about 50% of total imports since 1997. The foreign trade of Trinidad and Tobago is very large for a country of its size, a fact attributable mainly to its petroleum processing industry. The economy's prosperity is thus tied closely to trade, which,

in turn, is closely linked to the price and demand structure of the world petroleum market.

Trinidad and Tobago is the fifth-largest exporter of liquefied natural gas in the world. Trinidad and Tobago's main sources of commodity export income are refined petroleum products (39%), crude petroleum (27%), and natural and manufactured gas (26%). Other exports include ammonia (8.4%) and iron and steel (5.7%).

Up to 1992, the government prohibited the importation of some manufactured products without a license. The government replaced this list with supplemental tariffs, which coupled with the CARICOM Common External Tariff (CET), reached nearly 100%. These supplemental tariffs were reduced to CET levels by 1995, alleviating high prices on foreign goods. By 1996, quantitative restrictions were eliminated, as were surcharges and stamp duties on nonagricultural goods. As the most industrialized and second-largest country in the English-speaking Caribbean, Trinidad and Tobago has taken a leading role in the Caribbean Community and Common Market (CARICOM), and strongly supports CARICOM economic integration efforts. CARICOM members are working to establish a Single Market and Economy (CSME). Trinidad and Tobago and two other CARICOM members have made strides with the scheduled launching of the first phases of CSME by 2006.

The Free Zones Act of 1988 (last amended in 1997) established the Trinidad & Tobago Free Zones Company to promote export development and foreign investment projects in a bureaucracy-free, duty-free, and tax-free environment. One multiple user and ten single user zones are currently in operation. Free Zone enterprises may be established in any part of the country. Free Zone activities that qualify for approval include manufacturing for export, international trading in products, services for export and development, and management of free zones.

### 32 BALANCE OF PAYMENTS

The debt service ratio, 15.4% in 1997, fell to as low as 3.7% in 2001 and was a moderate 4.7% in 2004. Between 1974 and 1981, largely because of the huge increase in the value of petroleum exports, Trinidad and Tobago's payments balance was favorable. With the weakening of the market for the country's petroleum and oil refinery products in 1982, however, a deficit was recorded for the first time since the early 1970s. Foreign exchange reserves, which had reached \$3.3 billion in 1981, were depleted rapidly through the 1980s, as expenditures reduced revenues (caused by lower oil prices). By 1988, foreign exchange reserves had plummeted to -\$5.7 million, forcing the government to reschedule its commercial and official debt. During the 1990s, Trinidad ran a balance of payments surplus from 1992 until 1997 due to a rise in foreign direct investment, but ran a deficit after 1997 because of low oil prices, and high industrial imports. The country's balance of payments subsequently improved, in part spurred by increases in world oil prices. Trinidad's balance of payments surplus stood at \$441 million in 2000.

In the second quarter of 1998, Trinidad and Tobago completed repayment of a us\$335 million International Monetary Fund loan and enjoys excellent relations with the international financial institutions. Its major lender is the Inter-American Development Bank (IDB). Since 1997, Trinidad's external debt has declined each year as has its debt service ratio. There has, however, been

a slight increase in domestic debt as the government has increasingly looked internally for financing. Public sector debt declined by about 4%, to 56% of GDP as of the end of 2003; and the public sector external debt declined by 3%, to about 15% of GDP at the end of 2003; most of the external debt was long-term and from commercial creditors. The lower total debt burden has allowed the government more flexibility in lowering import duties and trade barriers, benefiting especially US exports.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Trinidad and Tobago's exports was \$4.1 billion, while imports totaled \$3.5 billion, resulting in a trade surplus of \$600 million. In 2004, World Bank data showed a positive balance of payments of approximately \$1 billion.

**3<sup>3</sup> BANKING AND SECURITIES**

The Central Bank of Trinidad and Tobago (established 1964) is the central regulatory institution and the sole bank of issue. The commercial banking business is well established and is operated chiefly by Canadian, British, and American interests. Monetary and fiscal developments have been closely linked with the fortunes of the oil industry.

There are six commercial banks operating in Trinidad and Tobago, with assets of over \$25 billion. In 1997, bank CEOs formed a Banking Association. The largest is Republic Bank, formerly Barclays. Other commercial banks include the Bank of Nova Scotia, Citibank, First Citizens Bank, Intercommercial Bank, and Royal Bank of Trinidad and Tobago. The Bank of Baroda, India's second-largest bank, and the Bank of India, the third-largest, have both expressed interest in entering the Trinidadian market. Offshore banking services were begun in the late 1990s by Republic Bank.

Workers and farmers make use of the Government Savings Bank offices. There are numerous agricultural credit societies, most of which are financed by the government's Agricultural Credit Bank. Credit unions are also common. The Trinidad and Tobago Devel-

opment Finance Co., jointly owned by the government and the private sector, offers medium- and long-term financing to industry. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$4.0 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 13%.

Since about 1948, limited liability companies with publicly issued share capital have become increasingly important. The West Indies Stock Exchange (succeeded by West Indies Stock Brokers, Ltd.) opened a branch in Port-of-Spain in 1964. The brokerage organization became a member of the Jamaica Stock Exchange in December 1970. The Trinidad and Tobago Stock Exchange began operating in 1981. In 2001, it listed 31 companies, had a trading value of \$174 million, and a total market capitalization of \$5 billion. As of 2004, a total of 37 companies were listed on the Trinidad and Tobago Stock Exchange, which had a market capitalization of \$17.051 billion. In that same year, the TTSE Index rose 54.8% from the previous year to 1,074.6.

**3<sup>4</sup> INSURANCE**

Insurance firms include branches of UK and US companies and a few local companies. Their operations are highly competitive. A government-owned reinsurance company has been in operation since 1979. The Colonial Life Insurance Co. is the largest life insurance company in Trinidad, with gross written life insurance premiums of \$469.9 million in 2003. In that same year, CHIC was the largest nonlife insurer, with gross written nonlife premiums of \$42 million. The value of all direct insurance premiums written in 2003 totaled \$510 million, of which life insurance premiums accounted for \$548 million. The National Insurance Board of Trinidad, which operates like Social Security, was established in 1972 by the government.

**3<sup>5</sup> PUBLIC FINANCE**

The budget deficit were first registered in the early 1980, and continued until 1990. In 1988, the government began an adjustment program, which included currency devaluation, debt reschedulings, and the adoption of an austere budget that included public service wage reductions and decreased transfers to state enterprises. These reforms resulted in an improved budget by 1994 which lasted until 1998, when expanded infrastructure and industrial projects drained revenues.

The US Central Intelligence Agency (CIA) estimated that in 2005 Trinidad and Tobago's central government took in revenues of approximately \$4.5 billion and had expenditures of \$4 billion. Revenues minus expenditures totaled approximately \$440 million. Public debt in 2005 amounted to 41.4% of GDP. Total external debt was \$2.986 billion.

**3<sup>6</sup> TAXATION**

Important sources of taxation are income taxes, a motor vehicle tax (25–30%), license duties, property and building taxes, customs

and excise duties (including purchase taxes), and petroleum royalties and concessions.

The individual income tax is calculated on net chargeable income, from 28% up to \$50,000; and 35% thereafter. A value-added tax (VAT), with a standard rate of 15% in 2005, is levied on most goods and services. Services performed outside Trinidad and Tobago are zero-rated, and medicines are exempted for VAT.

The basic corporate tax rate is 30%. This rate is increased to 35% for petroleum companies, with a supplemental petroleum tax. Capital gains derived from assets held for more than 12 months are generally not taxed. However, gains derived from the sale of assets held less than 12 months are subject to the corporate tax rate. Dividends paid to nonresident companies and individuals are subject to a 15% withholding tax. However, a lower 10% rate is applied if the distributing company is 50% or more held by a resident corporation. Dividends paid by a resident company to another resident company are exempt from the tax. Interest and royalty payments are each subject to a 20% withholding tax.

### 37 CUSTOMS AND DUTIES

Customs and duties are a significant source of government revenue. Most imported articles are subject to import duties, as well as a stamp tax, an import surcharge, a 15% VAT, and excise taxes on petroleum products, tobacco, and alcoholic beverages that are sold locally. Trinidad and Tobago applies the CARICOM common external tariff to most goods. The rates are 0–20%. Banned items include animals that have died in transit, used or second-hand animal blankets, saddle cloths, felting or pads, firearms, explosives, and seditious publications.

Free trade zones (FTZs) were authorized by law in 1988; the first FTZ was established in the Point Lisas Industrial Estate. Trinidad and Tobago is a member of CARICOM, a signatory to the Lomé Convention, and has special trade agreements with Venezuela, the United Kingdom, Ireland, France, and the United States. The country benefits from the Caribbean Basin Initiative (CBI), which allows duty-free entry of many products into the United States.

### 38 FOREIGN INVESTMENT

The Government of Trinidad and Tobago (GOTT) actively encourages foreign direct investment in almost all sectors. In 2004, the US-based Heritage Foundation's economic freedom index rated Trinidad and Tobago fifth in Latin America and the Caribbean and 36th out of 155 countries. Foreign investment in Trinidad and Tobago, particularly from British, Canadian, US, and Dutch sources, has played a major role in the development of all major manufacturing and processing industries, as well as most large agricultural enterprises. Several private banking institutions have provided development loans through the Industrial Development Corporation, established by the government in 1959 to act as a liaison between investors and various government departments.

Starting in 1970, the government required foreign investment in Trinidad and Tobago to be conducted in a joint venture basis, with majority domestic participation most often in a 60:40 ratio. In the 1980s the economy became mired in stagflation. The government launched a campaign of reforms emphasizing fiscal and monetary discipline, export-led growth, and encouragement of private sector and foreign investment. Under the current investment regime there are for the most part no restrictions or disincentives

to investment. The Free Zones (FTZs) Act of 1988, as amended in 1997, established the framework of duty-free, tax-free, and bureaucracy-free investment environments. In 2002, there were three multiple-user and eleven single-user FTZs in operation or under construction. In May 2001, the government passed new telecommunications legislation establishing a new telecommunications authority, opening the way for liberalization of the sector. As of 2003, however, the telecommunications sector remained the only one closed to new foreign investment in key areas.

Oil and gas exploration continues to attract inflows of foreign capital, boosting economic growth and strengthening public finances. The United States is the major investor, followed by the United Kingdom, Canada, Germany, India, and Norway. Inflows of almost \$4 billion in foreign investment between 1997 and 2000 strengthened the balance of payments and permitted the relaxation of policies. US investments have been mainly in hydrocarbons and petrochemicals, while Canada has investments in ammonia/urea, Germany in methanol and iron, India in iron and steel, and Norway in ammonia. A boom in natural gas investment, including pipelines for the delivery of liquefied natural gas (LNG), was under way in 2002 and 2003.

The investment climate is good. Since 1992, almost all investment barriers have been eliminated. Investment is screened only for eligibility for government incentives and assessment of its environmental impact. Both tax and nontax incentives may be negotiated. The government has a double taxation agreement, a bilateral investment treaty, and an intellectual property rights agreement with the United States. (The bilateral investment treaty granted national treatment and other benefits to US investors; it came into force on 26 December 1996.) US investment in Trinidad and Tobago exceeds \$1 billion. Total foreign direct investment has averaged \$700 million annually over the last decade. Among recent and ongoing investment projects are several involving US firms, like ISG and ALCOA, and resorts built by Marriott and Hyatt.

### 39 ECONOMIC DEVELOPMENT

To diversify the economy and raise the national standard of living, foreign capital and technical assistance are actively solicited. Major incentives are duty-free imports of equipment and raw materials, income tax holidays, accelerated depreciation allowances, unlimited carryover of losses, and repatriation of capital and profits. To encourage diversification toward non-oil/gas sectors, the government has undertaken comprehensive reforms in the trade and exchange rate regimes, and the investment environment. A major downsizing and refocusing of the public sector with an extensive program of divestment and reduction of public employment has occurred.

Nonetheless, the country remains largely an oil economy even though oil reserves are being depleted. While the natural gas sector will benefit the economy in the future, it will not solve the country's most crucial economic problems. Only by diversifying into more labor intensive export industries and services will Trinidad and Tobago generate employment and growth and minimize its external vulnerability. The key ingredients for development are a buildup of reserves consistent with the maintenance of a competitive exchange rate; the use of monetary policy to contain inflation and sterilize reserve accumulation; and the strengthening of fiscal balances to reduce government debt and lower interest rates.

Trinidad and Tobago experienced strong growth in the early 2000s, after eight years of economic decline in the 1990s. The debt service ratio fell, as did unemployment. The government invested heavily in public sector physical and educational infrastructure projects in the early 2000s. Improvements in water and electricity supply were being undertaken.

Recognizing the role that energy plays in the economic life of Trinidad and Tobago, where it was the source of 37% of governmental revenues in 2004, the government is seeking to diversify the economy to reduce dependence on the energy sector and to achieve self-sustaining growth. The diversification strategy focuses on six main sectors: traditional manufacturing; new technology-based industrial sector; tourism; financial services; agriculture; and small business. Corruption has traditionally appeared to be moderate, and has not seriously undermined government or business operations.

#### 40 SOCIAL DEVELOPMENT

All employees aged 16 through 64 are required to become members of the National Insurance System. Employers contribute 5.6% of payroll, according to 12 wage classes, and employees normally contribute 2.8% of earnings. The program covers employed persons, including agricultural and domestic workers. In addition, a social insurance scheme is funded by the government and extends benefits to those with limited means. The system provides old age, retirement, and disability pensions; maternity, sickness, and survivors' benefits; and funeral grants. Retirement is between the ages of 60 and 65. Maternity benefits are at 60% of average earnings for a maximum of 13 weeks, and there is also a maternity grant. A compulsory system of workers' compensation for injury is also in place.

The constitution mandates human rights and freedoms to all citizens regardless of sex. Women are active in the labor force, but few rise to senior management positions. There is no law that mandates equal pay for equal work. The law does not address sexual harassment and it remains a problem. Violence against women and domestic abuse continue to be major issues for women although the government and media are addressing the problem. The law has been strengthened to protect women and assist victims of abuse.

Human rights organizations operate freely. Poor prison conditions and lengthy pretrial detention remain a problem.

#### 41 HEALTH

Government health facilities include general hospitals in Port-of-Spain and San Fernando, small district hospitals, several major health centers, dental service centers, a mental hospital, and a nurses' training school. As of 2004, there were an estimated 79 physicians, 287 nurses, and 8 dentists per 100,000 people.

The general health of the population has been improving; substantial decreases have been recorded in the death rates for malaria, tuberculosis, typhoid, and syphilis. Immunization rates for children up to one year old were diphtheria, pertussis, and tetanus, 90%; polio, 81%; and measles, 88%. Improvements in sanitation have reaped impressive health benefits. Approximately 86% of the population had access to safe drinking water and 88% had adequate sanitation. As a result, reported cases of dysentery and hookworm have declined dramatically.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 13.7 and 8.8 per 1,000 people. Average life expectancy was 66.73 years in 2005 and infant mortality was 25.81 per 1,000 live births. Maternal mortality was 75 per 1,000 live births.

As of 2004, there were approximately 29,000 people living with HIV/AIDS in the country. There were an estimated 19,000 deaths from AIDS in 2003. The HIV/AIDS prevalence was 3.20 per 100 adults in 2003.

#### 42 HOUSING

A typical rural home for a large family consists of one to three rooms plus an outside kitchen. Slums and tenements are typical of urban life since there is an acute shortage of adequate housing. At the 2000 census, the housing stock was counted at 300,844. About 77.5% of all dwellings were single-family detached homes, 13% were flats or apartments, and 3% were two-family detached homes. About 76% of all housing was owner occupied. At least 18,200 dwellings were listed as squatter homes. A little over 60% of all households had access to indoor piped water; another 8.8% had access to piped water within a yard.

The Ministry of Housing and Settlements has developed a five-year plan for 2001–06 to promote housing construction, land development, and the upgrade of squatter sites. One goal of the plan is to build 30,000 new housing units within the five years. The Ministry also hopes to upgrade 2,000 squatter dwellings per year.

#### 43 EDUCATION

Many schools are run jointly by the state and religious bodies. Education is free at primary and secondary levels and compulsory for six years. Elementary education lasts for seven years, followed by five years of secondary education. There are two types of secondary school systems. The traditional system offers a general five-year secondary program followed by two years of preparatory studies (sixth form). The new system offers a program that consists of three years of junior high, two years of senior high, and two years of sixth form, with more diverse course options available to students. Technical and vocational programs are also available at the secondary level. The academic year runs from August to May.

In 2001, about 63% of children between the ages of three and four were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 91% of age-eligible students. The same year, secondary school enrollment was about 72% of age-eligible students. It is estimated that about 91% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 19:1 in 2003; the ratio for secondary school was also about 19:1. In 2003, private schools accounted for about 28.5% of primary school enrollment and 28% of secondary enrollment.

At the postsecondary level, government technical vocational schools and teachers colleges are free for qualified students. There are four small, government-run technical colleges, five teachers colleges, and two polytechnic institutes. The University of the West Indies has a faculty of engineering, arts, and agriculture at its Trinidad campus. John F. Kennedy College, a liberal arts school outside Port-of-Spain built with a US\$30-million grant from the Agency for International Development (AID), has teaching facilities.

ties for about 600 students. The Trinidad and Tobago Hotel School offers courses for the hotel, catering, and travel industries. The Eastern Caribbean Institute of Agriculture and Forestry is located in St. Augustine. In 2003, it was estimated that about 9% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 98.5%.

As of 2003, public expenditure on education was estimated at 4.3% of GDP, or 13.4% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library, opened in 2003 in Port-of-Spain, houses 442,000 volumes, with special sections for young adults and children. The National Library and Information System Authority is also responsible for the management of the nation's public libraries, with 21 locations on Trinidad and 3 locations on Tobago. There are mobile services on each island. The Port-of-Spain Public Library has 70,000 volumes. In San Fernando, the Carnegie Free Library functions as regional headquarters for rural library services to the south. The University of the West Indies main library in St. Augustine has more than 395,000 volumes. There are over 600 school libraries that are supported by the national system.

The National Museum and Art Gallery is located in Port-of-Spain, as is the Royal Victoria Institute Museum (1892), a general museum featuring local flora and fauna, crafts of the indigenous people, and a sampling of moon dust. The Trinidad childhood home of Nobel-winning author V.S. Naipaul was scheduled to become a museum.

#### 45 MEDIA

Postal and internal telegraph services throughout the islands are operated by the government. In 2003, there were an estimated 250 mainline telephones for every 1,000 people. The same year, there were approximately 278 mobile phones in use for every 1,000 people. Commercial cable communication and radiotelephone services are maintained between Trinidad and all major countries of the world.

There were 4 AM and 18 FM radio stations, and 4 television stations in 2004. The public National Broadcasting Service closed in 2005, ending service of two television stations and four radio stations. There were, however, plans to launch a new public broadcaster in the form of the state-owned Caribbean News Media Network. In 2003, there were an estimated 534 radios and 345 television sets for every 1,000 people. The same year, there were 79.5 personal computers for every 1,000 people and 106 of every 1,000 people had access to the Internet. There were 15 secure Internet servers in the country in 2004.

There were four daily newspapers in 2002. The *Trinidad Guardian*, a morning and Sunday paper, had an average daily circulation of 46,760. The *Trinidad Express*, published daily and Sunday, had a daily circulation of 51,000. *Newsday*, also published daily and Sunday, had a daily circulation of 25,000. *Trinidad Evening News*, published daily, had a circulation of 33,770.

Freedom of the press is both constitutionally guaranteed and respected in practice.

#### 46 ORGANIZATIONS

Producers of agricultural crops for export are organized into associations for solving common problems, as well as for social

purposes. Among these are the Cocoa Planters Association, Co-operative Citrus Growers Association, and Sugar Manufacturers Association. Professional and trade associations are many and varied and include the Law Society, Medical Board, Petroleum Association, Shipping Association, and Trinidad Chamber of Commerce. The multinational Caribbean Association of Industry and Commerce and the Caribbean Employers Confederation are located in Trinidad and Tobago. The Caribbean office of the International Labour Organization is located in Port-of-Spain, as is the base office of the Association of Caribbean States.

Cultural and educational organizations include the Festival Center for the Creative Arts and the Caribbean Academy of Sciences. Scouting and YMCA/YWCA programs are available for youth. Sports associations are popular for amateur athletes of all ages; several sports clubs are associated with the national Olympic Committee.

Social action groups include the Network of NGOs of Trinidad and Tobago for the Advancement of Women and the Caribbean Women's Association. There are national chapters of the Red Cross Society and the Society of St. Vincent de Paul.

#### 47 TOURISM, TRAVEL, AND RECREATION

Outstanding tourist attractions include the mountainous areas, beaches, and reefs on both islands. Entertainment includes calypso and steel band music, both of which originated in Trinidad. Festive events include Carnival, held annually on the two days before Ash Wednesday; the Muslim festival of Hosay, which begins 10 days after the new moon in the month of Muharram; and the Hindu festival of lights, Divali, which occurs in October or November. Cricket and football (soccer) are the most popular sports.

The government offers fiscal and other incentives for the development of hotels and other tourist facilities. In 2003, there were 409,069 visitors who arrived in Trinidad and Tobago, of whom 80% came from the Americas. Hotel rooms numbered 5,378, and tourism expenditure receipts totaled \$402 million in 2002. Passports are required, and must be valid for at least six months after leaving Trinidad and Tobago. All nationals must have an entry visa except those of the Commonwealth Countries, the European Economic Community countries (EEC), the United States, Finland, Iceland, Venezuela, Norway, Sweden, and holders of Organization of American States (OAS) passports.

In 2005, the US Department of State estimated the daily cost of staying in Port-of-Spain at us\$215; in Tobago daily costs were seasonal and averaged between us\$440 from April through December to us\$215 the rest of the year.

#### 48 FAMOUS TRINIDADIANS AND TOBAGONIANS

Eric Eustace Williams (1911–81), the main political figure of his time and the leader of Trinidad and Tobago's major political party, was instrumental in his country's achievement of independence in 1962; he was prime minister from 1961 until his death. His successor was George Michael Chambers (1928–1997). A.N.R. Robinson (b.1926) served as prime minister from 1986–1991, and as president from 1997–2003. Patrick Manning (b.1946) served as prime minister between 1991 and 1995 and since 2001. George Maxwell Richards (b.1931) became president in 2003. Notable

writers include Samuel Selvon (1923–1994) and V.S. (Vidiadhar Surajprasad) Naipaul (b.1932).

#### **49 DEPENDENCIES**

Trinidad and Tobago has no territories or colonies.

# UNITED KINGDOM AMERICAN DEPENDENCIES

## BERMUDA

Bermuda is a colony consisting of some 300 coral islands (20 of them inhabited), situated in the Atlantic Ocean, 933 km (580 mi) east of Cape Hatteras (US) at 32°19' N and 64°35' W. Their total area is about 54 sq km (21 sq mi). The United States leases a 5.8-sq-km (2.2-sq-mi) area of land reclaimed from the sea for military purposes. The largest island, Bermuda (sometimes called Main) Island, is about 23 km (14 mi) long and has an average width of 1.6 km (1 mi). The islands are mostly flat and rocky, with luxuriant semitropical vegetation. Because Bermuda lies in the Gulf Stream, the climate is generally mild and humid, with a mean annual temperature of 21°C (70°F) and average rainfall of 147 cm (48 in). The resident civilian population in mid-2005 was 65,365 of which about 55% was black and 34% white (mainly of English or Portuguese descent), and 11% other.

Almost all of the 450 km (281 mi) of roads are surfaced. Public transportation is largely by bus. Hamilton, the capital, has a deep-water harbor. Kindley Field, near St. George, the former capital, is Bermuda's international airport.

The oldest British colony, the islands were uninhabited when discovered in 1503 by the Spaniard Juan de Bermúdez. Bermuda was first settled by a group of British colonists under Sir George Somers, who were wrecked there while en route to Virginia in 1609. Bermuda was acquired from a chartered company by the crown in 1684. Under the 1968 constitution, the governor, representing the sovereign, is advised by a cabinet of legislators appointed at the recommendation of the prime minister. The bicameral legislature consists of an appointed Senate of 11 members and a 36-member House of Assembly (elected by universal suffrage). The Bermuda dollar of 100 cents is pegged to the US dollar, which circulates freely.

Tourism is the islands' largest employer, providing about half the total national income and two-thirds of foreign exchange. Bermuda does not impose income or corporate taxes which has led to a substantial offshore financial sector. A failed referendum on independence in late 1995 was partially attributed to concerns that independence would drive away foreign firms. Also important to the economy are goods and services supplied to the UK and US armed forces stationed in Bermuda. Light industries produce pharmaceuticals and essences, brass electrical contacts, and cut flowers for export. Per capita GDP in 2003 was \$36,000, among the highest in the world. In August 1995, Hurricane Felix inflicted \$2.5 million in damages to Bermuda.

The chief imports are food, textiles, furniture, motor vehicles, and fuel. The United States is Bermuda's primary supplier; the major export partner is the EU. Visible trade balances are unfavorable, although trade in invisibles, primarily tourism and international business, more than offsets the commodity trade deficit. Exports in 2004 were estimated at \$1.469 billion; imports, \$8.078 million. There is a free port at Ireland Island.

Medical services are private. King Edward VII Hospital receives government support. Education is compulsory between the ages of 5 and 16. Bermuda College provides post-secondary vocational courses and an associate degree program.

In 2002 there were 56,000 main telephone lines and in 2003 there were 37,873 mobile cellular phones in use on the island. There are four commercial television stations. There were five AM and three FM radio stations in 2004. There were 34,500 Internet users in 2003. There is one daily newspaper, the *Royal Gazette*.

## BRITISH ANTARCTIC TERRITORY

Created on 3 March 1962 from former Falkland Islands dependencies, the British Antarctic Territory (BAT) lies south of 60° S and between 20° and 80° W, and consists of the South Shetlands, 4,662 sq km (1,800 sq mi); the South Orkneys, 622 sq km (240 sq mi); and Graham Land on the Antarctic continent. The territory is governed by a UK-appointed high commissioner, who also serves as governor of the Falklands. Three British Antarctic Survey stations are inhabited year-round: Signy on the South Orkneys, Rothera on Adelaide Island, and Halley V on moving ice along the Caird coast. Their personnel varies from 50 in the winter to 150 during the summer. The territory overlaps other claims on Antarctica by Argentina and Chile.

## BRITISH VIRGIN ISLANDS

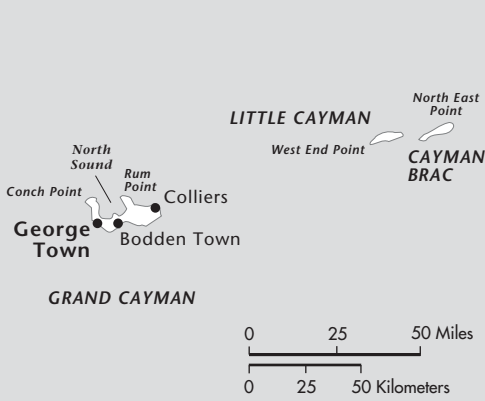

The British Virgin Islands consist of some 50 Caribbean islands and islets, totaling 153 sq km (59 sq mi), at about 18°25' N and 64°30' W. Until 1 July 1956, they were administered as part of the Leeward Islands. The mid-2005 population was estimated at 22,643, with 83% of African descent, and the remainder of white, Indian, Asian, or mixed descent. About 40% of the population consists of immigrants from St. Kitts and Nevis or from St. Vincent and the Grenadines. Road Town (metropolitan population estimated at 19,000 in 2005) on the island of Tortola is the capital. The climate is pleasantly subtropical. At least 177 km (110 mi) of roads were paved as of 2002. There are several airstrips on the islands.

Under the constitution of 1968, as revised in 1977, the government is headed by a British-appointed administrator, who is assisted by an Executive Council and a Legislative Council of 13 members.

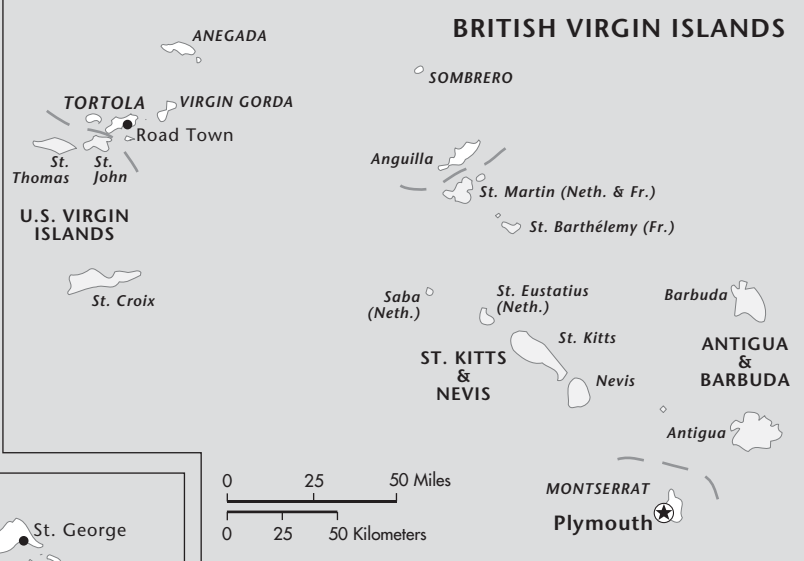

The economy is interdependent with that of the US Virgin Islands, which lie to the west. The US dollar is the legal currency. Livestock raising, farming, and fishing are the principal economic activities. Light industries include distilleries for alcoholic beverages, a concrete block factory, boat building, and handicrafts. Offshore financial services have also become a prominent part of the economy. Imports come predominantly from the US Virgin Islands, Puerto Rico, or the United States, and include building materials, automobiles, foodstuffs, and machinery. The over-

BRITISH VIRGIN ISLANDS

BERMUDA

FALKLAND ISLANDS

BRITISH ANTARCTIC TERRITORY

whelmingly adverse balance of trade is offset by remittances from migrant workers and an expanding tourist industry. Tourism accounts for about 45% of the islands' annual income; in 1998 there were an estimated 350,000 visitors, mainly from the United States. The tourism industry suffered in 2002 as a result of the sluggish US economy. Principal export partners include the Virgin Islands (US), Puerto Rico, and the United States. Per capita GDP was \$38,500 in 2004.

The infant mortality rate—18.05 per 1,000 live births in 2005—has been reduced from 78.9 per 1,000 live births in 1960.

Primary education is provided by the state and is compulsory from the age of 5 up to the age of 17. Scholarships are available for students to attend a university in the Caribbean, the United States, or the United Kingdom. The sole newspaper, the *Island Sun*, is published weekly.

## CAYMAN ISLANDS

The three low-lying Cayman Islands—Grand Cayman, Little Cayman, and Cayman Brac, with a total area of 262 sq km (101 sq mi)—are situated between 79°44' and 81°27' W and 19°15' and 19°45' N, about 290 km (180 mi) WNW of Jamaica, of which they were formerly a dependency. Grand Cayman, flat, rockbound, and protected by coral reefs, is about 32 km (20 mi) long and 6–11 km (4–7 mi) broad; George Town, on Grand Cayman, is the capital and chief town. The other two islands are about 145 km (90 mi) to the NE. The mid-2005 population was estimated at 44,270, about 90% of whom resided on Grand Cayman. Cayman Airways is the main air carrier; the principal international airport is on Grand Cayman.

The islands were discovered in 1503 by Columbus, who named them Las Tortugas, from the turtles with which the surrounding seas abound. They were never occupied by Spaniards and were colonized from Jamaica by the British. They were a dependency of Jamaica until 1959, but severed all constitutional links with Jamaica when the latter became independent in 1962.

The 1972 constitution empowers the crown-appointed governor to make laws with the advice and consent of the Legislative Assembly. The Executive Council consists of 4 members chosen by the Assembly from among its 15 elected members, and 3 Assembly members appointed to the Council by the governor. The Legislative Assembly includes 3 ex officio members, 15 elected members, and the governor. Elections, in which all adult British residents may vote, are held every four years. Local administration is in the hands of justices of the peace and vestrymen.

The Cayman Islands dollar (CI\$) is linked to the US dollar at the rate of CI\$1 = US\$1.227 (or US\$1 = CI\$0.828). Customs, duties, license and company fees, and postage and stamp taxes are the principal source of government revenue. The absence of taxes on income, capital gains, real estate, and inheritances attracts overseas investors to the region; international financial services and tourism have become principal sectors of the economy. As of 1998, 40,000 companies were registered in the Caymans, including 600 bank and trust companies. Tourism has grown rapidly: in 1997, 1.2 million people visited the islands, about half of whom were from the United States. Tourism accounts for about 70% of GDP and 75% of foreign exchange earnings. Although the soil is fertile and there is some farming, the agricultural sector re-

mains small; the catching of turtles, sharks, and sponges also provides some employment. In 1999, total exports were valued at \$1.2 million, while imports amounted to \$457.4 million. Remittances from Caymanian seamen serving on foreign ships contribute to the economy as well. The government-owned Cayman Turtle Farm, unique in the world, produces turtle meat for local consumption; exports have waned in recent years due to restrictions by the Convention on International Trade of Endangered Species of Wild Fauna and Flora.

The islands have 2 hospitals with a total 142 beds. Education is compulsory between the ages of 4 and 16, and provided cost-free for Caymanians. The population is 98% literate.

## FALKLAND ISLANDS

The Falkland Islands (Islas Malvinas), a British crown colony in the South Atlantic, lie some 772 km (480 mi) northeast of Cape Horn, between 51° and 53° S and 57° and 62° W, and have an area of 12,173 sq km (4,700 sq mi). The two main islands, East Falkland and West Falkland, consist chiefly of hilly moorlands. The population (estimated at 2,967 in mid-2005) is almost exclusively of British origin. Stanley, on East Falkland, the capital and only town, has about 1,000 inhabitants. There are no railways and few surfaced roads beyond the vicinity of Stanley. Shipping service to and from the islands is slight. There is internal air service but no international service.

The Falklands were sighted in 1592 by John Davis, an English navigator. The French founded the first colony on East Falkland, in 1764, transferring it two years later to Spain, which renamed it Soledad. The British took possession of West Falkland in 1765. Both islands were eventually abandoned. In 1820, Argentina (then the United Provinces of La Plata) colonized East Falkland. British troops occupied the islands in 1832–33, but Argentina has continued to dispute Britain's claim to the Falklands. On 2 April 1982, Argentine troops invaded the islands, precipitating a conflict with the British that cost over 1,000 lives. The United Kingdom recaptured the islands on 14 June, and as of 2006, 1,177 British soldiers remained in the Falklands.

Under a new constitution which came into effect in October 1985, the colony is administered by an appointed governor, with an Executive Council of 5 members: 3 chosen by the 10-member Legislative Council, and 2 ex officio members, the chief executive and the financial secretary. The currency unit is the Falkland pound (£), which is equal to the pound sterling.

There is no commercial agriculture. Most households in Stanley and the outlying areas grow their own vegetables. Sheep farming, the traditional industry, is directed primarily to the production of wool, hides, and skins, and the manufacture of tallow. Most commodities needed by the territory and its dependencies are imported. In 1987, the government began selling fishing licenses, which generate about \$40 million per year, with squid representing about 75% of the catch. Trade is principally with the United Kingdom. Tourism is growing, with 30,000 tourists visiting the islands in 2001.

All medical services are public. The 28-bed King Edward VII Memorial Hospital is run by four physicians and a military field surgical team (one surgeon and an anesthetist). Education is free and compulsory for children from 5 to 16 years of age. Students

unable to attend the schools in Stanley are taught by traveling teachers and by radio and correspondence.

Dependencies include South Georgia and the South Sandwich Islands, some 1,300 km (800 mi) E of the Falklands, with an area of 4,092 sq km (1,580 sq mi). Whaling and sealing are the main industries.

## LEEWARD ISLANDS

The Leeward Islands, part of the Lesser Antilles island chain, lie east and south of Puerto Rico and north of the Windward group. Of the four territorial units that constitute the Leeward Islands, two—Antigua and Barbuda, and St. Kitts and Nevis—are independent nations covered elsewhere in this volume. The other two—Anguilla and Montserrat—retained the status of UK dependencies as of 2006.

## ANGUILLA

Anguilla, the most northerly of the Leeward chain, lies at approximately 18° N and 63° W, and has an area of 90 sq km (35 sq mi). The island is long, flat, dry, and covered with scrub; its rolling hills reach a peak elevation of 65 m (213 ft) above sea level. The average annual temperature is 27°C (81°F), with July–October being the hottest period and December–February the coolest. Rainfall averages 89 cm (35 in) a year, but there is considerable variation both from season to season and from year to year. The hurricane season, marked by occasional thunderstorms and sudden squalls, lasts from July to October.

The population was estimated at 13,254 in mid-2005. Most Anguillians are of African descent, with an admixture of European (especially Irish) ancestry. The population is overwhelmingly Christian: Anglicans (29%) and Methodists (23.9%) predominate, but there are also Seventh-Day Adventist, Baptist, Roman Catholic, and other congregations. English is the official language, spoken in a distinctive island patois. Anguilla has no official capital, but The Valley serves as an administrative center. Anguilla had about 105 km (65 mi) of roads, 65 km (41 mi) of them paved as of 2002. Road Bay is the main harbor, and there is daily ferry service between Blowing Point and the French-Dutch island of St. Martin (Sint Maarten), about 8 km (5 mi) away. Air service to and from Wallblake Airport is provided by the privately owned Air Anguilla and two other interisland airways.

Although sighted by Columbus in 1496, Anguilla was not settled by Europeans until 1650, when British colonists arrived from St. Kitts. From 1671, Anguilla was governed as part of the Leeward Islands, and between 1871 and 1956 the island formed (with St. Kitts and, from 1882, Nevis) part of the Leeward Islands Federation. All the Leeward Islands were consolidated into a single territory in 1956 and, as such, were incorporated into the Federation of the West Indies two years later. With the breakup of the West Indies Federation in 1962, St. Kitts–Nevis–Anguilla reverted to colonial status. On 17 February 1967, St. Kitts–Nevis–Anguilla acquired self-government within the newly formed West Indies Associated States. After Anguilla declared its independence of the Associated States in 1969, some 300 British paratroopers temporarily took command of the island. On 10 February 1976, the United Kingdom recognized Anguilla's status as a dependency distinct from St. Kitts and Nevis, which achieved independence in 1983.

Under the Anguilla Constitution Order of 1982, the crown is represented by a governor, who presides over an appointed Executive Council and an elected 11-member House of Assembly. The Executive Council consists of the chief minister, three other ministers selected by the governor from among the members of the House of Assembly, and the attorney general and permanent secretary for finance, who serve *ex officio* both on the council and in the legislature. The governor also appoints two members of the House of Assembly, the remaining seven being elected to five-year terms by universal adult suffrage. In the election of February 2005, the Anguilla United Front (a coalition of the Anguilla Democratic Party and the Anguilla National Alliance) won 4 seats, the Anguilla Strategic Alternative won 2, and the Anguilla United Movement won 1. Justice is administered by a magistrate's court, a Court of Appeal, and a High Court, whose sitting judge is provided by the Eastern Caribbean Supreme Court on St. Lucia.

The mainstays of the economy are luxury tourism, offshore banking, lobster fishing, and remittances from abroad. Salt is extracted by evaporation from two briny ponds, and live lobsters are exported to neighboring islands. Tourism, construction, and a developing offshore banking sector have become the most prominent economic sectors in recent years. The East Caribbean dollar (EC\$) is the official currency. The GDP was estimated at \$112 million in 2002, or \$7,500 per capita. The economy, especially tourism, suffered damage from Hurricane Luis in 1995.

Education is provided by the state and is compulsory between the ages of 5 and 17 years. The government maintains six primary schools and one secondary school; total school enrollment exceeds 2,200. Princess Alexandra Hospital offers limited services. International telephone, telegraph, and telex services are available. Various radio stations are available, including the government-run Radio Anguilla. Caribbean Beacon Radio, NBR (New Beginning Radio), and VOC (Voice of Creation) are religious stations; Kool FM and HBR (Heartbeat Radio) offer music and news.

Dependencies of Anguilla include numerous offshore islets and cays, as well as Sombrero Island (5 sq km/2 sq mi), about 56 km (35 mi) to the northwest.

## MONTSERRAT

Situated at 16°45' N and 62°10' W, Montserrat has an area of 103 sq km (40 sq mi). The island, which lies between Nevis and Guadeloupe, about 43 km (27 mi) southeast of Antigua, has a mountainous terrain, with two peaks rising higher than 900 m (3,000 ft). Montserrat is wholly volcanic in origin, and there are seven active volcanoes. Mean temperatures range from a minimum of 23°C (73°F) to a maximum of 31°C (88°F); June–November, the hurricane season, is the warmest time of the year, and December–March is the coolest. There is no clearly defined rainy season, although rainfall tends to be more abundant during the second half of the year; the annual average is 157 cm (62 in).

In mid-2005, an estimated 9,341 people lived on the island, down from 12,853 in 1998. After the island's volcano became active in 1995, an estimated 8,000 refugees left the island. Since then, the British government has developed three contingency plans concerning the population, depending on the amount of the volcano's destruction: moving the southern population to the north; total evacuation to neighboring islands (Antigua and Barbuda and

Guadeloupe); and permanent settlement elsewhere should the island become uninhabitable. When destructive pyroclastic lava flows came in mid-1997, much of Montserrat's population was evacuated to the northern tip of the island, and about half of the population left the island.

Most residents of Montserrat are of African ancestry. Anglicans, Methodists, Roman Catholics, and Pentecostals make up the great majority of the population. English, the official language, is spoken in an island patois. Montserrat has about 269 km (168 mi) of highways, about 203 km (127 mi) of which are paved. Blackburne Airport, about 15 km (9 mi) from the capital, opened to traffic in 1967 but was covered by pyroclastic material from the volcano and became impossible to use. In 2005, an airport at Gerald's opened. Montserrat Aviation Services, in cooperation with WinAir, maintains regular flights to and from Antigua, Nevis, and St. Kitts.

Christopher Columbus, who sighted the island in November 1493, gave it the name Montserrat because its rugged terrain reminded him of the site of the Abbey of Montserrat in the Spanish highlands near Barcelona. English and Irish colonists from St. Kitts settled on the island in 1632, and the first African slaves arrived 32 years later. Throughout the 18th century, the British and French warred for possession of Montserrat, which was finally confirmed as a British possession by the Treaty of Versailles (1783). By the early 19th century, Montserrat had a plantation economy, but the abolition of slavery in 1834, the elimination of the apprentice system, the declining market for sugar, and a series of natural disasters brought the downfall of the sugar estates. In the mid-19th century, Joseph Sturge of Birmingham, England, organized a company that bought up the abandoned estates, planted them with limes (a product for which Montserrat is still famous), and sold plots of land to small farmers. From 1871 to 1956, Montserrat formed part of the Federation of the Leeward Islands, and after two years as a separate colony it became part of the Federation of the West Indies (1958–62). Since the breakup of the Federation, Montserrat has been separately administered, under a constitution effective 1 January 1960.

The crown is represented by an appointed governor, who presides over an Executive Council structured like that of Anguilla. There is also a Legislative Council which, like Anguilla's, includes two appointed members. In 2001, the number of elected members of the legislature was expanded from seven to nine; the attorney general and financial secretary serve as ex-officio members. Suffrage is universal at age 18. The legislators serve terms of up to five years. In elections held in April 2001, the New People's Liberation Movement, led by John A. Osborne, won seven seats and the National Progressive Democratic Party led by Reuben T. Meade won two seats. Montserrat's judicial system consists of a magistrate's court and a Court of Summary Jurisdiction; appeals are to the Eastern Caribbean Supreme Court on St. Lucia.

Prior to the resumption of volcanic activity in the mid-1990s, tourism accounted for about one-fourth of the annual GDP; the island had some 17,000 visitors in 1992. Important crops include cabbages, carrots, cucumbers, tomatoes, onions, and peppers. Exports include electronic components, plastic bags, apparel, hot peppers, live plants, and cattle. Montserrat uses the East Caribbean dollar. In 2002, GDP was us\$29 million. Exports in 2001 were us\$700,000; imports, chiefly of machinery and transporta-

tion equipment, foodstuffs, manufactured goods, fuels, lubricants, and related materials totaled some us\$17 million.

The principal health facility was Plymouth's 65-bed Glendon Hospital, maintained by the government; it was destroyed by the volcano activity of the mid-1990s, and hospital services were relocated to St. John's in the north, which has a bed capacity of 30. Provisions for social welfare include a family planning association and an old people's welfare association. Free dental care is provided by the government for all schoolchildren, elderly persons, and expectant or nursing mothers. Education is free and compulsory up to age 14. As of 2006, radio service was provided by the public station Radio Montserrat, which broadcasts on FM, having lost its AM transmitter to volcanic activity. There is a cable TV provider. There are two weekly newspapers, the *Montserrat Times* and the *Montserrat Reporter*.

## TURKS AND CAICOS ISLANDS

Archaeological expeditions have found Arawak implements and utensils on Turks and Caicos Islands. When Juan Ponce de León arrived in 1512, Lucayan Indians had come to inhabit the islands. There is some speculation that Columbus may have made his landfall on Grand Turk or East Caicos on his first voyage of discovery in 1492. The first settlements were by Bermudians, who established solar salt pans in the 1670s. Bahamian, Bermudan, Spanish, French, and British rivalry over the prospering salt trade resulted in numerous invasions and evictions through the first half of the 18th century. In 1787, Loyalists fleeing the American Revolution established settlements and cotton and sisal plantations on several of the larger Caicos Islands. Ten years later, the islands came under the jurisdiction of the Bahamas colonial government. Slavery was abolished in 1834. In 1848, the Turks and Caicos islanders were granted a charter of separation from the Bahamas after they complained of Bahamian taxes on their salt industry.

From 1848 to 1873, the islands were largely self-governing, under the supervision of the governor of Jamaica. Following the decline of the salt industry, the islands became a Jamaican dependency until 1958, when they joined the Federation of the West Indies. When the federation dissolved and Jamaica achieved independence in 1962, Turks and Caicos became a crown colony administered by the British Colonial Office and a local council of elected and appointed members. In 1965, the governor of the Bahamas was also appointed governor of Turks and Caicos, but with the advent of Bahamian independence in 1973, a separate governor was appointed. A new constitution maintaining the status of crown colony and providing for ministerial government was introduced in September 1976. Although independence for Turks and Caicos in 1982 had been agreed upon in principle in 1979, a change in government brought a reversal in policy. The islands are still a crown colony.

The islands were shaken by scandals in the mid-1980s. In March 1985, Chief Minister Norman B. Saunders and two other ministers were arrested in Florida on drug charges and later convicted and sentenced to prison. In July 1986, a commission of inquiry found that Chief Minister Nathaniel Francis and two other ministers had been guilty of "unconstitutional behavior, political discrimination, and administrative malpractice." The governor thereupon ended ministerial government in July 1986 and, with four

members of the former Executive Council, formed an Advisory Council to govern until new elections. The islands have returned to their previous form of government, and remain a dependent territory of the United Kingdom.

Situated in the Atlantic Ocean *se* of the Bahamas, *e* of Cuba, and *n* of Hispaniola, the Turks and Caicos Islands consist of two island groups separated by the Turks Island Passage, 35 km (22 mi) across and about 2,100 m (7,000 ft) deep. The Turks group comprises two inhabited islands, Grand Turk and Salt Cay, six uninhabited cays, and numerous rocks surrounded by a roughly triangular reef bank. The Caicos group encompasses six principal islands (North Caicos, Middle Caicos, East Caicos, South Caicos, West Caicos, and Providenciales), plus numerous rocky islets, all surrounded by the Caicos Bank, a triangular shoal. The total land area of the Turks and Caicos Islands is 430 sq km (166 sq mi), with extensions of about 120 km (75 mi) *e-w* and 80 km (50 mi) *n-s*. Comparatively, the area occupied by the Turks and Caicos Islands is slightly less than 2.5 times the size of Washington, DC. The Turks and Caicos Islands have a coastline length of 389 km (242 mi). The capital city, Grand Turk, is in the Turks Islands.

The Turks Islands are low and flat, and surrounded by reefs, sunken coral heads, and boilers. The land mass is limestone, well weathered with pockets of soil; the coastlines are indented with shallow creeks and mangrove swamps. The Caicos Bank is a triangular shoal about 93 km (58 mi) long on its northern side and 90

km (56 mi) long on its eastern and western sides. The highest elevation is only 50 m (163 ft) above sea level on Providenciales. On the north coast of Middle Caicos (which is also known as Grand Caicos) are limestone cave formations.

Days are sunny and dry and nights are cool and clear throughout the year. Temperatures on the islands range from a low of 16°C (61°F) to a high of 32°C (90°F), with the hottest period generally occurring between April and November. There are almost constant tradewinds from the east. Rainfall averages 53 cm (21 in) per year, and hurricanes are a frequent occurrence. Major hurricanes struck the islands in 1866, 1873, 1888, 1908, 1926, 1928, 1945, 1960, and 1985.

The ground cover is scrubby and stunted tropical vegetation, with sea oats, mangrove, casuarina, and palmetto. There is little natural wildlife other than birds and butterflies. West Caicos island is especially noted as a sanctuary for birds, and Penniston, Gibb, and Round cays are known for their extensive varieties of butterflies. Spiny lobster, conch, clams, bonefish, snapper, grouper, and turtle are plentiful.

Fresh water is a scarce commodity, and most islanders rely on private cisterns. Underground water is present on North and Middle Caicos, but surface water collected in ponds after rainfall becomes brackish. There have been some complaints of actual or potential ecological damage resulting from the expansion of tourist facilities on Providenciales. The government has identified the absence of environmental education as a potential problem for the preservation of the nation's natural heritage in the future. By 1992, the government had developed legislation that would create 12 national parks, 8 nature reserves, 5 sanctuaries, and 9 historic sites.

The population of the Turks and Caicos Islands in 2005 was estimated at 20,556. In the 1990s, most people were living on Grand Turk, South Caicos, and North Caicos islands. The birthrate in 2005 was 22.23 per 1,000 population and a death rate of 4.28.

It was estimated that 72% of the population lived in urban areas in 2000. The capital, Grand Turk, has an estimated population of 4,000. Cockburn Harbour is the major town on South Caicos.

About 90% of the population is of black African descent, the remainder being of mixed, European, or North American origin. The official and universal language of the Turks and Caicos Islands is English, interspersed with a number of local colloquialisms. Most islanders are Christian; the main denominations are Baptist (40%), Methodist (16%), Anglican (18%), and Church of God (12%). Other Protestant groups and the Roman Catholic Church are also represented.

There are about 121 km (75 mi) of roads on the islands. The main roads on Grand Turk and South Caicos are paved. Some secondary roads are surfaced with scale from the salinas (salt ponds); otherwise, the roads are merely dirt and sand tracks.

The main seaports are at Grand Turk, Cockburn Harbour on South Caicos, Providenciales, and Salt Cay. An offshore registry program with the United Kingdom enables British merchant ships to register with the Turks and Caicos Islands in order to cut crew costs while enabling the vessels to fly the Red Ensign of the United Kingdom. There are eight airports, six with paved runways, and two with small unpaved landing strips.

Tourism and lobster fishing have replaced salt raking as the main economic activity of the islands, which are very poor. Fishing and subsistence farming are the principal occupations; under-

employment and unemployment are estimated at over 40%. Important sources of income include tourism and offshore financial services. The closing of the last US military base in 1983 resulted in the loss of rental payments that accounted for 10% of government revenue. Most of the retail trade on the islands consist of imported goods. Tourism has been boosted by the advent of service by American Airlines, US Airways, British Airways, Delta Airlines, and Air Canada, and new hotel, resort and casino openings. Visitors are attracted by the beautiful beaches and by opportunities for snorkeling, diving, and sport fishing. The windmills and salinas on Salt Cay and the 19th-century architecture on Grand Turk, along with horse carriages, provide a quaint setting.

Most food for domestic consumption is imported; there is some subsistence farming—mainly corn, cassava, citrus, and beans—on the Caicos Islands. Major sources of government revenue include fees from offshore financial activities and customs receipts as the Islands rely on imports for nearly all consumption and capital goods.

A modern cottage hospital (36 beds) and an outpatient and dental clinic are located on Grand Turk, and there are health clinics on all of the islands. Extensive medical services are also available on Providenciales. The infant mortality rate was 15.67 deaths per 1,000 live births in 2005, down from 21.11 deaths per live births in 1999 and from 25 per 1,000 live births in 1993.

# UNITED STATES

United States of America

**CAPITAL:** Washington, DC (District of Columbia)

**FLAG:** The flag consists of 13 alternate stripes, 7 red and 6 white; these represent the 13 original colonies. Fifty 5-pointed white stars, representing the present number of states in the Union, are placed in 9 horizontal rows alternately of 6 and 5 against a blue field in the upper left corner of the flag.

**ANTHEM:** *The Star-Spangled Banner.*

**MONETARY UNIT:** The dollar (\$) of 100 cents is a paper currency with a floating rate. There are coins of 1, 5, 10, 25, and 50 cents and 1 dollar, and notes of 1, 2, 5, 10, 20, 50, and 100 dollars. Although issuance of higher notes ceased in 1969, a limited number of notes of 500, 1,000, 5,000, and 10,000 dollars remain in circulation.

**WEIGHTS AND MEASURES:** The imperial system is in common use; however, the use of metrics in industry is increasing, and the metric system is taught in public schools throughout the United States. Common avoirdupois units in use are the avoirdupois pound of 16 ounces or 454 grams; the long ton of 2,240 pounds or 35,840 ounces; and the short ton, more commonly used, of 2,000 pounds or 32,000 ounces. (Unless otherwise indicated, all measures given in tons are in short tons.) Liquid measures: 1 gallon = 231 cubic inches = 4 quarts = 8 pints. Dry measures: 1 bushel = 4 pecks = 32 dry quarts = 64 dry pints. Linear measures: 1 foot = 12 inches; 1 statute mile = 1,760 yards = 5,280 feet. Metric equivalent: 1 meter = 39.37 inches.

**HOLIDAYS:** New Year's Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents' Day, 3rd Monday in February; Memorial or Decoration Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Election Day, 1st Tuesday after the 1st Monday in November; Veterans or Armistice Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas, 25 December.

**TIME:** Eastern, 7 AM = noon GMT; Central, 6 AM = noon GMT; Mountain, 5 AM = noon GMT; Pacific (includes the Alaska panhandle), 4 AM = noon GMT; Yukon, 3 AM = noon GMT; Alaska and Hawaii, 2 AM = noon GMT; western Alaska, 1 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Located in the Western Hemisphere on the continent of North America, the United States is the fourth-largest country in the world. Its total area, including Alaska and Hawaii, is 9,629,091 sq km (3,717,813 sq mi). The conterminous United States extends 4,662 km (2,897 mi) ENE–WSW and 4,583 km (2,848 mi) SSE–NNW. It is bordered on the N by Canada, on the E by the Atlantic Ocean, on the S by the Gulf of Mexico and Mexico, and on the W by the Pacific Ocean, with a total boundary length of 17,563 km (10,913 mi). Alaska, the 49th state, extends 3,639 km (2,261 mi) E–W and 2,185 km (1,358 mi) N–S. It is bounded on the N by the Arctic Ocean and Beaufort Sea, on the E by Canada, on the S by the Gulf of Alaska, Pacific Ocean and Bering Sea, and on the W by the Bering Sea, Bering Strait, Chukchi Sea, and Arctic Ocean, with a total land boundary of 12,034 km (7,593 mi) and a coastline of 19,924 km (12,380 mi). The 50th state, Hawaii, consists of islands in the Pacific Ocean extending 2,536 km (1,576 mi) N–S and 2,293 km (1,425 mi) E–W, with a general coastline of 1,207 km (750 mi).

The nation's capital, Washington, DC, is located on the mid-Atlantic coast.

## <sup>2</sup>TOPOGRAPHY

Although the northern New England coast is rocky, along the rest of the eastern seaboard the Atlantic Coastal Plain rises gradually from the shoreline. Narrow in the north, the plain widens to about 320 km (200 mi) in the south and in Georgia merges with the Gulf Coastal Plain that borders the Gulf of Mexico and extends through Mexico as far as the Yucatán. West of the Atlantic Coastal Plain is the Piedmont Plateau, bounded by the Appalachian Mountains. The Appalachians, which extend from southwest Maine into central Alabama—with special names in some areas—are old mountains, largely eroded away, with rounded contours and forested, as a rule, to the top. Few of their summits rise much above 1,100 m (3,500 ft), although the highest, Mt. Mitchell in North Carolina, reaches 2,037 m (6,684 ft).

Between the Appalachians and the Rocky Mountains, more than 1,600 km (1,000 mi) to the west, lies the vast interior plain of the United States. Running south through the center of this plain and draining almost two-thirds of the area of the continental United States is the Mississippi River. Waters starting from the source of the Missouri, the longest of its tributaries, travel almost 6,450 km (4,000 mi) to the Gulf of Mexico.

The eastern reaches of the great interior plain are bounded on the north by the Great Lakes, which are thought to contain about half the world's total supply of fresh water. Under US jurisdiction are 57,441 sq km (22,178 sq mi) of Lake Michigan, 54,696 sq km (21,118 sq mi) of Lake Superior, 23,245 sq km (8,975 sq mi) of Lake Huron, 12,955 sq km (5,002 sq mi) of Lake Erie, and 7,855 sq km (3,033 sq mi) of Lake Ontario. The five lakes are accessible to oceangoing vessels from the Atlantic via the St. Lawrence Seaway. The basins of the Great Lakes were formed by the glacial ice cap that moved down over large parts of North America some 25,000 years ago. The glaciers also determined the direction of flow of the Missouri River and, it is believed, were responsible for carrying soil from what is now Canada down into the central agricultural basin of the United States.

The great interior plain consists of two major subregions: the fertile Central Plains, extending from the Appalachian highlands to a line drawn approximately 480 km (300 mi) west of the Mississippi, broken by the Ozark Plateau; and the more arid Great Plains, extending from that line to the foothills of the Rocky Mountains. Although they appear flat, the Great Plains rise gradually from about 460 m (1,500 ft) to more than 1,500 m (5,000 ft) at their western extremity.

The Continental Divide, the Atlantic-Pacific watershed, runs along the crest of the Rocky Mountains. The Rockies and the ranges to the west are parts of the great system of young, rugged mountains, shaped like a gigantic spinal column, that runs along western North, Central, and South America from Alaska to Tierra del Fuego, Chile. In the continental United States, the series of western ranges, most of them paralleling the Pacific coast, are the Sierra Nevada, the Coast Ranges, the Cascade Range, and the Tehachapi and San Bernardino mountains. Between the Rockies and the Sierra Nevada-Cascade mountain barrier to the west lies the Great Basin, a group of vast arid plateaus containing most of the desert areas of the United States, in the south eroded by deep canyons.

The coastal plains along the Pacific are narrow, and in many places the mountains plunge directly into the sea. The most extensive lowland near the west coast is the Great Valley of California, lying between the Sierra Nevada and the Coast Ranges. There are 71 peaks in these western ranges of the continental United States that rise to an altitude of 4,267 m (14,000 ft) or more, Mt. Whitney in California at 4,418 m (14,494 ft) being the highest. The greatest rivers of the Far West are the Colorado in the south, flowing into the Gulf of California, and the Columbia in the northwest, flowing to the Pacific. Each is more than 1,900 km (1,200 mi) long; both have been intensively developed to generate electric power, and both are important sources of irrigation.

Separated from the continental United States by Canadian territory, the state of Alaska occupies the extreme northwest portion of the North American continent. A series of precipitous mountain ranges separates the heavily indented Pacific coast on the south from Alaska's broad central basin, through which the Yukon River flows from Canada in the east to the Bering Sea in the west. The central basin is bounded on the north by the Brooks Range, which slopes down gradually to the Arctic Ocean. The Alaskan Peninsula and the Aleutian Islands, sweeping west far out to sea, consist of a chain of volcanoes, many still active.

The state of Hawaii consists of a group of Pacific islands formed by volcanoes rising sharply from the ocean floor. The highest of these volcanoes, Mauna Loa, at 4,168 m (13,675 ft), is located on the largest of the islands, Hawaii, and is still active.

The lowest point in the United States is Death Valley in California, 86 m (282 ft) below sea level. At 6,194 m (20,320 ft), Mt. McKinley in Alaska is the highest peak in North America. These topographic extremes suggest the geological instability of the Pacific Coast region, which is part of the "Ring of Fire," a seismically active band surrounding the Pacific Ocean. Major earthquakes destroyed San Francisco in 1906 and Anchorage, Alaska, in 1964, and the San Andreas Fault in California still causes frequent earth tremors. In 2004, there were 3,550 earthquakes documented by the US Geological Survey National Earthquake Information Center. Washington State's Mt. St. Helens erupted in 1980, spewing volcanic ash over much of the Northwest.

### 3 CLIMATE

The eastern continental region is well watered, with annual rainfall generally in excess of 100 cm (40 in). It includes all of the Atlantic seaboard and southeastern states and extends west to cover Indiana, southern Illinois, most of Missouri, Arkansas, Louisiana, and easternmost Texas. The eastern seaboard is affected primarily by the masses of air moving from west to east across the continent rather than by air moving in from the Atlantic. Hence its climate is basically continental rather than maritime. The Midwestern and Atlantic seaboard states experience hot summers and cold winters; spring and autumn are clearly defined periods of climatic transition. Only Florida, with the Gulf of Mexico lying to its west, experiences moderate differences between summer and winter temperatures. Mean annual temperatures vary considerably between north and south: Boston, MA, 11°C (51°F); New York City, NY, 13°C (55°F); Charlotte, NC, 16°C (61°F); Miami, FL, 24°C (76°F).

The Gulf and South Atlantic states are often hit by severe tropical storms originating in the Caribbean in late summer and early autumn. In the past few years, the number of hurricanes and their severity have measurably increased. From 1970-94, there were about three hurricanes per year. From 1995 to 2003, there were a total of 32 major hurricanes with sustained winds of 111 miles per hour or greater.

In 2005 there were a record-breaking 23 named Atlantic hurricanes, three of which caused severe damage to the Gulf Coast region. On 25 August 2005, Hurricane Katrina hit Florida as a category 1 hurricane. By 29 August, the storm developed into a category 4 hurricane that made landfall in southern Louisiana. Several levees protecting the low-lying city of New Orleans broke, flooding the entire region under waters that rose over the rooftops of homes. Over 1,000 were killed by the storm. Over 500,000 people were left homeless and without jobs.

One month later, Hurricane Rita swept first into Florida and continued to make landfall between Sabine Pass, Texas, and Johnson's Bayou, Louisiana, on 24 September 2005 as a category 3 hurricane. Before reaching land, however, the storm had peaked as a category 5 hurricane that was placed on record as the strongest measured hurricane to ever have entered the Gulf of Mexico and the fourth most intense hurricane ever in the Atlantic Basin. Over 100 people were killed.

Hurricane Wilma followed on 24 October when it made landfall north of Everglades City in Florida as a category 3 hurricane. There were about 22 deaths in the United States from Wilma; however, the storm also hit Cuba, Haiti, Jamaica, and Mexico, reaching a death toll of at least 25 people from those countries combined.

The prairie lands lying to the west constitute a subhumid region. Precipitation usually exceeds evaporation by only a small amount; hence the region experiences drought more often than excessive rainfall. Dryness generally increases from east to west. The average midwinter temperature in the extreme north—Minnesota and North Dakota—is about  $-13^{\circ}\text{C}$  ( $9^{\circ}\text{F}$ ) or less, while the average July temperature is  $18^{\circ}\text{C}$  ( $65^{\circ}\text{F}$ ). In the Texas prairie region to the south, January temperatures average  $10\text{--}13^{\circ}\text{C}$  ( $50\text{--}55^{\circ}\text{F}$ ) and July temperatures  $27\text{--}29^{\circ}\text{C}$  ( $80\text{--}85^{\circ}\text{F}$ ). Rainfall along the western border of the prairie region is as low as 46 cm (18 in) per year in the north and 64 cm (25 in) in the south. Precipitation is greatest in the early summer—a matter of great importance to agriculture, particularly in the growing of grain crops. In dry years, the prevailing winds may carry the topsoil eastward (particularly from the southern region) for hundreds of miles in clouds that obscure the sun.

The Great Plains constitute a semiarid climatic region. Rainfall in the southern plains averages about 50 cm (20 in) per year and in the northern plains about 25 cm (10 in), but extreme year-to-year variations are common. The tropical air masses that move northward across the plains originate on the fairly high plateaus of Mexico and contain little water vapor. Periods as long as 120 days without rain have been experienced in this region. The rains that do occur are often violent, and a third of the total annual rainfall may be recorded in a single day at certain weather stations. The contrast between summer and winter temperatures is extreme throughout the Great Plains. Maximum summer temperatures of over  $43^{\circ}\text{C}$  ( $110^{\circ}\text{F}$ ) have been recorded in the northern as well as in the southern plains. From the Texas panhandle north, blizzards are common in the winter, and tornadoes at other seasons. The average minimum temperature for January in Duluth, Minnesota, is  $-19^{\circ}\text{C}$  ( $-3^{\circ}\text{F}$ ).

The higher reaches of the Rockies and the mountains paralleling the Pacific coast to the west are characterized by a typical alpine climate. Precipitation as a rule is heavier on the western slopes of the ranges. The great intermontane arid region of the West shows considerable climatic variation between its northern and southern portions. In New Mexico, Arizona, and southeastern California, the greatest precipitation occurs in July, August, and September, mean annual rainfall ranging from 8 cm (3 in) in Yuma, Ariz., to 76 cm (30 in) in the mountains of northern Arizona and New Mexico. Phoenix has a mean annual temperature of  $22^{\circ}\text{C}$  ( $71^{\circ}\text{F}$ ), rising to  $33^{\circ}\text{C}$  ( $92^{\circ}\text{F}$ ) in July and falling to  $11^{\circ}\text{C}$  ( $52^{\circ}\text{F}$ ) in January. North of the Utah-Arizona line, the summer months usually are very dry; maximum precipitation occurs in the winter and early spring. In the desert valleys west of Great Salt Lake, mean annual precipitation adds up to only 10 cm (4 in). Although the northern plateaus are generally arid, some of the mountainous areas of central Washington and Idaho receive at least 152 cm (60 in) of rain per year. Throughout the intermontane region, the uneven availability of water is the principal factor shaping the habitat.

The Pacific coast, separated by tall mountain barriers from the severe continental climate to the east, is a region of mild winters

and moderately warm, dry summers. Its climate is basically maritime, the westerly winds from the Pacific Ocean moderating the extremes of both winter and summer temperatures. Los Angeles in the south has an average temperature of  $13^{\circ}\text{C}$  ( $56^{\circ}\text{F}$ ) in January and  $21^{\circ}\text{C}$  ( $69^{\circ}\text{F}$ ) in July; Seattle in the north has an average temperature of  $4^{\circ}\text{C}$  ( $39^{\circ}\text{F}$ ) in January and  $18^{\circ}\text{C}$  ( $65^{\circ}\text{F}$ ) in July. Precipitation in general increases along the coast from south to north, extremes ranging from an annual average of 4.52 cm (1.78 in) at Death Valley in California (the lowest in the United States) to more than 356 cm (140 in) in Washington's Olympic Mountains.

Climatic conditions vary considerably in the vastness of Alaska. In the fogbound Aleutians and in the coastal panhandle strip that extends southeastward along the Gulf of Alaska and includes the capital, Juneau, a relatively moderate maritime climate prevails. The interior is characterized by short, hot summers and long, bitterly cold winters, and in the region bordering the Arctic Ocean a polar climate prevails, the soil hundreds of feet below the surface remaining frozen the year round. Although snowy in winter, continental Alaska is relatively dry.

Hawaii has a remarkably mild and stable climate with only slight seasonal variations in temperature, as a result of northeast ocean winds. The mean January temperature in Honolulu is  $23^{\circ}\text{C}$  ( $73^{\circ}\text{F}$ ); the mean July temperature  $27^{\circ}\text{C}$  ( $80^{\circ}\text{F}$ ). Rainfall is moderate—about 71 cm (28 in) per year—but much greater in the mountains; Mt. Waialeale on Kauai has a mean annual rainfall of 1,168 cm (460 in), highest in the world.

The lowest temperature recorded in the United States was  $-62^{\circ}\text{C}$  ( $-79.8^{\circ}\text{F}$ ) at Prospect Creek Camp, Alaska, on 23 January 1971; the highest,  $57^{\circ}\text{C}$  ( $134^{\circ}\text{F}$ ) at Greenland Ranch, in Death Valley, California, on 10 July 1913. The record annual rainfall is 1,878 cm (739 in) recorded at Kukui, Maui in 1982; the previous record for a one-year period was 1,468 cm (578 in) recorded at Fuu Kukui, Maui, in 1950.

#### **4 FLORA AND FAUNA**

At least 7,000 species and subspecies of indigenous US flora have been categorized. The eastern forests contain a mixture of softwoods and hardwoods that includes pine, oak, maple, spruce, beech, birch, hemlock, walnut, gum, and hickory. The central hardwood forest, which originally stretched unbroken from Cape Cod to Texas and northwest to Minnesota—still an important timber source—supports oak, hickory, ash, maple, and walnut. Pine, hickory, tupelo, pecan, gum, birch, and sycamore are found in the southern forest that stretches along the Gulf coast into the eastern half of Texas. The Pacific forest is the most spectacular of all because of its enormous redwoods and Douglas firs. In the southwest are saguaro (giant cactus), yucca, candlewood, and the Joshua tree.

The central grasslands lie in the interior of the continent, where the moisture is not sufficient to support the growth of large forests. The tall grassland or prairie (now almost entirely under cultivation) lies to the east of the 100th meridian. To the west of this line, where rainfall is frequently less than 50 cm (20 in) per year, is the short grassland. Mesquite grass covers parts of west Texas, southern New Mexico, and Arizona. Short grass may be found in the highlands of the latter two states, while tall grass covers large portions of the coastal regions of Texas and Louisiana and occurs in some parts of Mississippi, Alabama, and Florida. The Pacific

grassland includes northern Idaho, the higher plateaus of eastern Washington and Oregon, and the mountain valleys of California.

The intermontane region of the Western Cordillera is for the most part covered with desert shrubs. Sagebrush predominates in the northern part of this area, creosote in the southern, with saltbrush near the Great Salt Lake and in Death Valley.

The lower slopes of the mountains running up to the coastline of Alaska are covered with coniferous forests as far north as the Seward Peninsula. The central part of the Yukon Basin is also a region of softwood forests. The rest of Alaska is heath or tundra. Hawaii has extensive forests of bamboo and ferns. Sugarcane and pineapple, although not native to the islands, now cover a large portion of the cultivated land.

Small trees and shrubs common to most of the United States include hackberry, hawthorn, serviceberry, blackberry, wild cherry, dogwood, and snowberry. Wildflowers bloom in all areas, from the seldom-seen blossoms of rare desert cacti to the hardiest alpine species. Wildflowers include forget-me-not, fringed and closed gentians, jack-in-the-pulpit, black-eyed Susan, columbine, and common dandelion, along with numerous varieties of aster, orchid, lady's slipper, and wild rose.

An estimated 428 species of mammals characterize the animal life of the continental United States. Among the larger game animals are the white-tailed deer, moose, pronghorn antelope, bighorn sheep, mountain goat, black bear, and grizzly bear. The Alaskan brown bear often reaches a weight of 1,200–1,400 lbs. Some 25 important furbearers are common, including the muskrat, red and gray foxes, mink, raccoon, beaver, opossum, striped skunk, woodchuck, common cottontail, snowshoe hare, and various squirrels. Human encroachment has transformed the mammalian habitat over the last two centuries. The American buffalo (bison), millions of which once roamed the plains, is now found only on select reserves. Other mammals, such as the elk and gray wolf, have been restricted to much smaller ranges.

Year-round and migratory birds abound. Loons, wild ducks, and wild geese are found in lake country; terns, gulls, sandpipers, herons, and other seabirds live along the coasts. Wrens, thrushes, owls, hummingbirds, sparrows, woodpeckers, swallows, chickadees, vireos, warblers, and finches appear in profusion, along with the robin, common crow, cardinal, Baltimore oriole, eastern and western meadowlarks, and various blackbirds. Wild turkey, ruffed grouse, and ring-necked pheasant (introduced from Europe) are popular game birds. There are at least 508 species of birds found throughout the country.

Lakes, rivers, and streams teem with trout, bass, perch, muskellunge, carp, catfish, and pike; sea bass, cod, snapper, and flounder are abundant along the coasts, along with such shellfish as lobster, shrimp, clams, oysters, and mussels. Garter, pine, and milk snakes are found in most regions. Four poisonous snakes survive, of which the rattlesnake is the most common. Alligators appear in southern waterways and the Gila monster makes its home in the Southwest.

Laws and lists designed to protect threatened and endangered flora and fauna have been adopted throughout the United States. Generally, each species listed as protected by the federal government is also protected by the states, but some states may list species not included on federal lists or on the lists of neighboring states. Conversely, a species threatened throughout most of the

United States may be abundant in one or two states. As of November 2005, the US Fish and Wildlife Service listed 997 endangered US species (up from 751 listed in 1996), including 68 species of mammals, 77 birds, 74 fish, and 599 plants; and 275 threatened species (209 in 1996), including 11 species of mammals, 13 birds, 42 fish, and 146 plants. The agency listed another 520 endangered and 46 threatened foreign species by international agreement.

Threatened species, likely to become endangered if trends continued, included such plants as Lee pincushion cactus. Among the endangered floral species (in imminent danger of extinction in the wild) are the Virginia round-leaf birch, San Clemente Island broom, Texas wild-rice, Furbish lousewort, Truckee barberberry, Sneed pincushion cactus, spineless hedgehog cactus, Knowlton cactus, persistent trillium, dwarf bear-poppy, and small whorled pogonia.

Endangered mammals included the red wolf, black-footed ferret, jaguar, key deer, northern swift fox, San Joaquin kit fox, jaguar, jaguarundi, Florida manatee, ocelot, Florida panther, Utah prairie dog, Sonoran pronghorn, and numerous whale species. Endangered species of rodents included the Delmarva Peninsula fox squirrel, beach mouse, salt-marsh harvest mouse, 7 species of bat (Virginia and Ozark big-eared Sanborn's and Mexican long-nosed, Hawaiian hoary, Indiana, and gray), and the Morro Ba, Fresno, Stephens', and Tipton Kangaroo rats and rice rat.

Endangered species of birds included the California condor, bald eagle, three species of falcon (American peregrine, tundra peregrine, and northern aplomado), Eskimo curlew, two species of crane (whooping and Mississippi sandhill), three species of warbler (Kirtland's, Bachman's, and golden-cheeked), dusky seaside sparrow, light-footed clapper rail, least tern, San Clemente loggerhead shrike, bald eagle (endangered in most states, but only threatened in the Northwest and the Great Lakes region), Hawaii creeper, Everglade kite, California clapper rail, and red-cockaded woodpecker. Endangered amphibians included four species of salamander (Santa Cruz long-toed, Shenandoah, desert slender, and Texas blind), Houston and Wyoming toad, and six species of turtle (green sea, hawksbill, Kemp's ridley, Plymouth and Alabama red-bellied, and leatherback). Endangered reptiles included the American crocodile, (blunt nosed leopard and island night), and San Francisco garter snake.

Aquatic species included the shortnose sturgeon, Gila trout, 8 species of chub (humpback, Pahranaagat, Yaqui, Mohave tui, Owens tui, bonytail, Virgin River, and Borax lake), Colorado River squawfish, five species of dace (Kendall Warm Springs, and Clover Valley, Independence Valley, Moapa and Ash Meadows speckled), Modoc sucker, cui-ui, Smoky and Scioto madtom, 7 species of pupfish (Leon Springs, Gila Desert, Ash Meadows Amargosa, Warm Springs, Owens, Devil's Hole, and Comanche Springs), Pahrump killifish, 4 species of gambusia (San Marcos, Pecos, Amistad, Big Bend, and Clear Creek), 6 species of darter (fountain, watercress, Okaloosa, boulder, Maryland, and amber), totoaba, and 32 species of mussel and pearly mussel. Also classified as endangered were 2 species of earthworm (Washington giant and Oregon giant), the Socorro isopod, San Francisco forktail damselfly, Ohio emerald dragonfly, 3 species of beetle (Kretschmarr Cave, Tooth Cave, and giant carrion), Belkin's dune tabanid fly, and 10 species of butterfly (Schaus' swallowtail, lotis, mission, El Segundo, and Palos Verde

LOCATION: Conterminous US: 66°57' to 124°44' w; 24°33' to 49°23' n. Alaska: 130° w to 172°28' e; 51° to 71°23' n. Hawaii: 154°48' to 178°22' w 18°55' to 28°25' n. BOUNDARY LENGTHS: Conterminous US: Canada, 6,416 kilometers (3,987 miles); Atlantic Ocean, 3,330 kilometers (2,069 miles); Gulf of Mexico coastline, 2,625 kilometers (1,631 miles); Mexico, 3,111 kilometers (1,933 miles); Pacific coastline, 2,081 kilometers (1,293 miles). Alaska: Arctic Ocean coastline, 1,706 kilometers (1,060 miles); Canada, 2,475 kilometers (1,538 miles); Pacific coastline, including the Bering Sea and Strait and Chukchi coastlines, 8,980 kilometers (5,580 miles). Hawaii: coastline, 1,207 kilometers (750 miles).

blue, Mitchell's satyr, Uncompahgre fritillary, Lange's metalmark, San Bruno elfin, and Smith's blue).

Endangered plants in the United States included: aster, cactus, pea, mustard, mint, mallow, bellflower and pink family, snapdrag-

on, and buckwheat. Several species on the federal list of endangered and threatened wildlife and plants are found only in Hawaii. Endangered bird species in Hawaii included the Hawaiian dark-rumped petrel, Hawaiian gallinule, Hawaiian crow, three

species of thrush (Kauai, Molokai, and puaiuhi), Kauai 'o'o, Kauai nukupu'u, Kauai 'alialoa, 'akiapola'au, Maui'akepa, Molokai creeper, Oahu creeper, palila, and 'o'u.

Species formerly listed as threatened or endangered that have been removed from the list included (with delisting year and reason) American alligator (1987, recovered); coastal cutthroat trout (2000, taxonomic revision); Bahama swallowtail butterfly (1984, amendment); gray whale (1994, recovered); brown pelican (1984, recovered); Rydberg milk-vetch (1987, new information); Lloyd's hedgehog cactus (1999, taxonomic revision), and Columbian white-tailed Douglas County Deer (2003, recovered).

There are at least 250 species of plants and animals that have become extinct, including the Wyoming toad, the Central Valley grasshopper, Labrador duck, Carolina parakeet, Hawaiian crow, chestnut moth, and the Franklin tree.

## 5 ENVIRONMENT

The Council on Environmental Quality, an advisory body contained within the Executive Office of the President, was established by the National Environmental Policy Act of 1969, which mandated an assessment of environmental impact for every federally funded project. The Environmental Protection Agency (EPA), created in 1970, is an independent body with primary regulatory responsibility in the fields of air and noise pollution, water and waste management, and control of toxic substances. Other federal agencies with environmental responsibilities are the Forest Service and Soil Conservation Service within the Department of Agriculture, the Fish and Wildlife Service and the National Park Service within the Department of the Interior, the Department of Energy, and the Nuclear Regulatory Commission. In addition to the 1969 legislation, landmark federal laws protecting the environment include the Clean Air Act Amendments of 1970 and 1990, controlling automobile and electric utility emissions; the Water Pollution Act of 1972, setting clean-water criteria for fishing and swimming; and the Endangered Species Act of 1973, protecting wildlife near extinction.

A measure enacted in December 1980 established a \$1.6-billion "Superfund," financed largely by excise taxes on chemical companies, to clean up toxic waste dumps such as the one in the Love Canal district of Niagara Falls, NY. In 2005, there were 1,238 hazardous waste sites on the Superfund's national priority list.

The most influential environmental lobbies include the Sierra Club (founded in 1892; 700,000 members in 2003) and its legal arm, the Sierra Club Legal Defense Fund. Large conservation groups include the National Wildlife Federation (1936; over 4,000,000), the National Audubon Society (1905; 600,000), and the Nature Conservancy (1917; 1,000,000). Greenpeace USA (founded in 1979) has gained international attention by seeking to disrupt hunts for whales and seals.

Among the environmental movement's most notable successes have been the inauguration (and mandating in some states) of recycling programs; the banning in the United States of the insecticide dichlorodiphenyltrichloroethane (DDT); the successful fight against construction of a supersonic transport (SST); and the protection of more than 40 million hectares (100 million acres) of Alaska lands (after a fruitless fight to halt construction of the trans-Alaska pipeline); and the gradual elimination of chlorofluorocarbon (CFC) production by 2000. In March 2003, the US Sen-

ate narrowly voted to reject a Bush administration plan to begin oil exploration in the 19 million acre (7.7 million hectare) Arctic National Wildlife Refuge (ANWR). In 2003, about 25.9% of the total land area was protected. The United States has 12 natural UNESCO World Heritage Sites and 22 Ramsar wetland sites. Yellowstone National Park, founded in 1872, was the first national park established worldwide.

Outstanding problems include acid rain (precipitation contaminated by fossil fuel wastes); inadequate facilities for solid waste disposal; air pollution from industrial emissions (the United States leads the world in carbon dioxide emissions from the burning of fossil fuels); the contamination of homes by radon, a radioactive gas that is produced by the decay of underground deposits of radium and can cause cancer; runoffs of agricultural pesticides, pollutants deadly to fishing streams and very difficult to regulate; continued dumping of raw or partially treated sewage from major cities into US waterways; falling water tables in many western states; the decrease in arable land because of depletion, erosion, and urbanization; the need for reclamation of strip-mined lands and for regulation of present and future strip mining; and the expansion of the US nuclear industry in the absence of a fully satisfactory technique for the handling and permanent disposal of radioactive wastes.

## 6 POPULATION

The population of United States in 2005 was estimated by the United Nations (UN) at 296,483,000, which placed it at number 3 in population among the 193 nations of the world. In 2005, approximately 12% of the population was over 65 years of age, with another 21% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.6%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 349,419,000. The population density was 31 per sq km (80 per sq mi), with major population concentrations are along the northeast Atlantic coast and the southwest Pacific coast. The population is most dense between New York City and Washington, DC.

At the time of the first federal census, in 1790, the population of the United States was 3,929,214. Between 1800 and 1850, the population almost quadrupled; between 1850 and 1900, it tripled; and between 1900 and 1950, it almost doubled. During the 1960s and 1970s, however, the growth rate slowed steadily, declining from 2.9% annually in 1960 to 2% in 1969 and to less than 1% from the 1980s through 2000. The population has aged: the median age of the population increased from 16.7 years in 1820 to 22.9 years in 1900 and to 36.5 years in 2006.

Suburbs have absorbed most of the shift in population distribution since 1950. The UN estimated that 79% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.33%. The capital city, Washington, DC (District of Columbia), had a population of 4,098,000 in that year. Other major metropolitan areas and their estimated populations include: New York, 18,498,000; Los Angeles, 12,146,000; Chicago, 8,711,000; Dallas, 4,612,000; Houston, 4,283,000; Philadelphia, 5,325,000; San Diego, 2,818,000; and Phoenix, 3,393,000. Major cities can be found throughout the United States.

## 7 MIGRATION

Between 1840 and 1930, some 37 million immigrants, the overwhelming majority of them Europeans, arrived in the United States. Immigration reached its peak in the first decade of the 20th century, when nearly 9 million came. Following the end of World War I, the tradition of almost unlimited immigration was abandoned, and through the National Origins Act of 1924, a quota system was established as the basis of a carefully restricted policy of immigration. Under the McCarran Act of 1952, one-sixth of 1% of the number of inhabitants from each European nation residing in the continental United States as of 1920 could be admitted annually. In practice, this system favored nations of northern and western Europe, with the United Kingdom, Germany, and Ireland being the chief beneficiaries. The quota system was radically reformed in 1965, under a new law that established an annual ceiling of 170,000 for Eastern Hemisphere immigrants and 120,000 for entrants from the Western Hemisphere; in October 1978, these limits were replaced by a worldwide limit of 290,000, which was lowered to 270,000 by 1981. A major 1990 overhaul set a total annual ceiling of 700,000 (675,000 beginning in fiscal 1995), of which 480,000 would be family sponsored and 140,000 employment based. The 1996 Immigration Reform Law addressed concerns about illegal immigration and border enforcement. The 1996 Welfare Reform Law revised legal and illegal immigrants' access to different forms of public assistance, and raised the standards for US residents who sponsor immigrants. The 2000 H-1B Visa Legislation increased temporary immigration visas for high-tech workers. In 2004, President Bush proposed a fair and secure immigration reform with a new temporary worker program.

In 2002, 1,063,732 immigrants entered the United States, of whom 416,860 were subject to the numerical limits. Some 342,099 immigrants in 2002 were from Asia, 404,437 were from North America, 74,506 were from South America, 174,209 from Europe, 60,269 from Africa, and 5,557 from Oceania. A direct result of the immigration law revisions has been a sharp rise in the influx of Asians (primarily Chinese, Filipinos, Indians, Japanese, and Koreans), of whom 2,738,157 entered the country during 1981–90, as compared with 153,249 during the entire decade of the 1950s. Most immigrants in 2002 came from Mexico (219,380).

Since 1961, the federal government supported and financed the Cuban Refugee Program; in 1995, new accords were agreed to by the two countries. More than 500,000 Cubans were living in southern Florida by 1980, when another 125,000 Cuban refugees arrived; by 1990, 4% of Florida's population was of Cuban descent. Some 169,322 Cubans arrived from 1991–2000, and 27,520 arrived in 2002. Between 1975 and 1978, following the defeat of the US-backed Saigon (Vietnam) government, several hundred thousand Vietnamese refugees came to the United States. Under the Refugee Act of 1980, a ceiling for the number of admissible refugees is set annually; in fiscal 2002, the ceiling for refugees was 70,000. Since Puerto Ricans are American citizens, no special authorization is required for their admission to the continental United States. The population of refugees, resettled refugees, and asylum seekers with pending claims was estimated at 5,250,954 in June 2003, a 34% increase over June 2002. During the same year, the newly-formed Bureau of Citizenship and Immigration Services (BCIS—formerly the Immigration and Naturalization Service or INS) received 66,577 applications for asylum, a decline of 36%

from 2002. In 2004, the United States hosted 684,564 persons of concern to the United Nations High Commissioner for Refugees (UNHCR), 420,854 refugees, and 263,710 asylum seekers. For that year, the United States was the fifth-largest asylum country. UNHCR reports the United States as the leading destination of refugees, accounting for 63% of all resettlement worldwide.

Large numbers of aliens—mainly from Latin America, especially Mexico—have illegally established residence in the United States after entering the country as tourists, students, or temporary visitors engaged in work or business. In November 1986, Congress passed a bill allowing illegal aliens who had lived and worked in the United States since 1982 the opportunity to become permanent residents. By the end of fiscal year 1992, 2,650,000 of a potential 2,760,000 eligible for permanent residence under this bill had attained that status. In 1996 the number of illegal alien residents was estimated at five million, of which two million were believed to be in California. As of 2002, an estimated 33.1 million immigrants (legal and illegal) lived in the United States. Of this total, the Census Bureau estimated in 2000 that 8–9 million of them were illegal alien residents. In 2004, there were 36 million foreign-born US residents, almost 30% were unauthorized, or some 10.3 million foreigners. Of these, 57% are unauthorized Mexicans. Foreign-born persons are 11% of the US population, and 14% of US workers.

As of 2006, there were three major immigration-related agencies in the United States: the Department of Homeland Security; the US Customs and Border Protection (CBP) agency, which apprehends foreigners; and Immigration and Customs Enforcement (ICE), which is responsible for enforcement of immigration laws within the United States, together with identifying and removing unauthorized foreigners, and those ordered removed.

The major migratory trends within the United States have been a general westward movement during the 19th century; a long-term movement from farms and other rural settlements to metropolitan areas, which showed signs of reversing in some states during the 1970s; an exodus of southern blacks to the cities of the North and Midwest, especially after World War I; a shift of whites from central cities to surrounding suburbs since World War II; and, also during the post-World War II period, a massive shift from the North and East to the Sunbelt region of the South and Southwest.

In 2005, the net migration rate was estimated as 3.31 migrants per 1,000 population.

## 8 ETHNIC GROUPS

The majority of the population of the United States is of European origin, with the largest groups having primary ancestry traceable to the United Kingdom, Germany, and Ireland; many Americans report multiple ancestries. According to 2004 American Community Survey estimates, about 75.6% of the total population are white, 12.1% are blacks and African Americans, and 4.2% are Asian. Native Americans (including Alaskan Natives) account for about 0.8% of the total population. About 1.8% of the population claim a mixed ancestry of two or more races. About 11.9% of all US citizens are foreign-born, with the largest numbers of people coming from Latin America (17,973,287) and Asia (9,254,705).

Some Native American societies survived the initial warfare with land-hungry white settlers and retained their tribal cultures.

Their survival, however, has been on the fringes of North American society, especially as a result of the implementation of a national policy of resettling Native American tribes on reservations. In 2004, estimates place the number of Native Americans (including Alaska Natives) at 2,151,322. The number of those who claim mixed Native American and white racial backgrounds is estimated at 1,370,675; the 2004 estimate for mixed Native American and African American ancestry was 204,832. The largest single tribal grouping is the Cherokee, with about 331,491 people. The Navajo account for about 230,401 people, the Chippewa for 92,041 people, and the Sioux for 67,666 people. Groups of Native Americans are found most numerous in the southwestern states of Oklahoma, Arizona, New Mexico, and California. The 1960s and 1970s saw successful court fights by Native Americans in Alaska, Maine, South Dakota, and other states to regain tribal lands or to receive cash settlements for lands taken from them in violation of treaties during the 1800s.

The black and African American population in 2004 was estimated at 34,772,381, with the majority still residing in the South, the region that absorbed most of the slaves brought from Africa in the 18th and 19th centuries. About 1,141,232 people claimed mixed black and white ethnicity. Two important regional migrations of blacks have taken place: (1) a "Great Migration" to the North, commencing in 1915, and (2) a small but then unprecedented westward movement beginning about 1940. Both migrations were fostered by wartime demands for labor and by postwar job opportunities in northern and western urban centers. More than three out of four black Americans live in metropolitan areas, notably in Washington, DC, Atlanta, Chicago, Detroit, New Orleans, Newark, Baltimore, and New York City, which had the largest number of black residents. Large-scale federal programs to ensure equality for African Americans in voting rights, public education, employment, and housing were initiated after the historic 1954 Supreme Court ruling that barred racial segregation in public schools. By 1966, however, in the midst of growing and increasingly violent expressions of dissatisfaction by black residents of northern cities and southern rural areas, the federal Civil Rights Commission reported that integration programs were lagging. Throughout the 1960s, 1970s, and 1980s, the unemployment rate among nonwhites in the United States was at least double that for whites, and school integration proceeded slowly, especially outside the South.

Also included in the US population are a substantial number of persons whose lineage can be traced to Asian and Pacific nationalities, chiefly Chinese, Filipino, Japanese, Indian, Korean, and Vietnamese. The Chinese population is highly urbanized and concentrated particularly in cities of over 100,000 population, mostly on the West Coast and in New York City. According to 2004 estimates, there are over 2.8 million Chinese in the United States. Asian Indians are the next largest group of Asians with over 2.2 million people in 2004. About 2.1 million people are Filipino. The Japanese population has risen steadily from a level of 72,157 in 1910 to about 832,039 in 2004. Hawaii has been the most popular magnet of Japanese emigration. Most Japanese in California were farmers until the outbreak of World War II, when they were interned and deprived of their landholdings; after the war, most entered the professions and other urban occupations.

Hispanics or Latinos make up about 14% of the population according to 2004 estimates. It is important to note, however, that the designation of Hispanic or Latino applies to those who are of Latin American descent; these individuals may also belong to white, Asian, or black racial groups. Although Mexicans in the 21st century were still concentrated in the Southwest, they have settled throughout the United States; there are over 25 million Mexicans in the country. Spanish-speaking Puerto Ricans, who often represent an amalgam of racial strains, have largely settled in the New York metropolitan area, where they partake in considerable measure of the hardships and problems experienced by other immigrant groups in the process of settling in the United States; there are about 3.8 million Puerto Ricans in the country. Since 1959, many Cubans have settled in Florida and other eastern states. As of 2004, there are about 1.4 million Cubans in the United States.

## <sup>9</sup>LANGUAGES

The primary language of the United States is English, enriched by words borrowed from the languages of Indians and immigrants, predominantly European. Very early English borrowed from neighboring French speakers such words as *shivaree*, *butte*, *levee*, and *prairie*; from German, *sauerkraut*, *smearcase*, and *cranberry*; from Dutch, *stoop*, *spook*, and *cookie*; and from Spanish, *tornado*, *corral*, *ranch*, and *canyon*. From various West African languages, blacks have given English *jazz*, *voodoo*, and *okra*. According to 2004 estimates of primary languages spoken at home, about 81% of the population speak English only.

When European settlement began, Native Americans living north of Mexico spoke about 300 different languages now held to belong to 58 different language families. Only two such families have contributed noticeably to the American vocabulary: Algonkian in the Northeast and Aztec-Tanoan in the Southwest. From Algonkian languages, directly or sometimes through Canadian French, English has taken such words as *moose*, *skunk*, *caribou*, *opossum*, *woodchuck*, and *raccoon* for New World animals; *hickory*, *squash*, and *tamarack* for New World flora; and *succotash*, *hominny*, *mackinaw*, *moccasin*, *tomahawk*, *toboggan*, and *totem* for various cultural items. From Nahuatl, the language of the Aztecs, terms such as *tomato*, *mesquite*, *coyote*, *chili*, *tamale*, *chocolate*, and *ocelot* have entered English, largely by way of Spanish. A bare handful of words come from other Native American language groups, such as *tepee* from Dakota Siouan, *catalpa* from Creek, *sequoia* from Cherokee, *hogan* from Navaho, and *sockeye* from Salish, as well as *cayuse* from Chinook.

Professional dialect research, initiated in Germany in 1878 and in France in 1902, did not begin in the United States until 1931, in connection with the *Linguistic Atlas of New England* (1939–43). This kind of research, requiring trained field-workers to interview representative informants in their homes, subsequently was extended to the entire Atlantic Coast, the north-central states, the upper Midwest, the Pacific Coast, the Gulf states, and Oklahoma. The New England atlas, the *Linguistic Atlas of the Upper Midwest* (1973–76), and the first two fascicles of the *Linguistic Atlas of the Middle and South Atlantic States* (1980) have been published, along with three volumes based on Atlantic Coast field materials. Also published are atlases of the north-central states, the Gulf states, and Oklahoma. In other areas, individual dialect researchers have

produced more specialized studies. The definitive work on dialect speech, the American Dialect Society's monumental *Dictionary of American Regional English*, began publication in 1985.

Dialect studies confirm that standard English is not uniform throughout the country. Major regional variations reflect patterns of colonial settlement, dialect features from England having dominated particular areas along the Atlantic Coast and then spread westward along the three main migration routes through the Appalachian system. Dialectologists recognize three main dialects—Northern, Midland, and Southern—each with subdivisions related to the effect of mountain ranges and rivers and railroads on population movement.

The Northern dialect is that of New England and its derivative settlements in New York; the northern parts of Ohio, Indiana, Illinois, and Iowa; and Michigan, Wisconsin, northeastern South Dakota, and North Dakota. A major subdivision is that of New England east of the Connecticut River, an area noted typically by the loss of /r/ after a vowel, and by the pronunciation of *can't*, *dance*, *half*, and *bath* with a vowel more like that in *father* than that in *fat*. Generally, however, Northern speech has a strong /r/ after a vowel, the same vowel in *can't* and *cat*, a conspicuous contrast between *cot* and *caught*, the /s/ sound in *greasy*, *creek* rhyming with *pick*, and *with* ending with the same consonant sound as at the end of *breath*.

Midland speech extends in a wide band across the United States: there are two main subdivisions, North Midland and South Midland. North Midland speech extends westward from New Jersey, Delaware, and Pennsylvania into Ohio, Illinois, southern Iowa, and northern Missouri. Its speakers generally end *with* with the consonant sound that begins the word *thin*, pronounce *cot* and *caught* alike, and say *cow* and *down* as /caow/ and /daown/. South Midland speech was carried by the Scotch-Irish from Pennsylvania down the Shenandoah Valley into the southern Appalachians, where it acquired many Southern speech features before it spread westward into Kentucky, Tennessee, southern Missouri, Arkansas, and northeast Texas. Its speakers are likely to say *plum peach* rather than *clingstone peach* and *snake doctor* rather than *dragonfly*.

Southern speech typically, though not always, lacks the consonant /r/ after a vowel, lengthens the first part of the diphthong in *write* so that to Northern ears it sounds almost like *rat*, and diphthongizes the vowels in *bed* and *hit* so that they sound like /beuhd/ and /hiuht/. *Horse* and *hoarse* do not sound alike, and *creek* rhymes with *mee*k. *Corn bread* is *corn pone*, and *you-all* is standard for the plural.

In the western part of the United States, migration routes so crossed and intermingled that no neat dialect boundaries can be drawn, although there are a few rather clear population pockets.

Spanish is spoken by a sizable minority in the United States; according to 2004 estimates, about 11.4% of the population speak Spanish as the primary language of their household. The majority of Spanish speakers live in the Southwest, Florida, and eastern urban centers. Refugee immigration since the 1950s has greatly increased the number of foreign-language speakers from Latin America and Asia.

Educational problems raised by the presence of large blocs of non-English speakers led to the passage in 1976 of the Bilingual Educational Act, enabling children to study basic courses in their first language while they learn English. A related school problem

is that of black English, a Southern dialect variant that is the vernacular of many black students now in northern schools.

## 10 RELIGIONS

US religious traditions are predominantly Judeo-Christian and most Americans identify themselves as Protestants (of various denominations), Roman Catholics, or Jews. As of 2000, over 141 million Americans reported affiliation with a religious group. The single largest Christian denomination is the Roman Catholic Church, with membership in 2004 estimated at 66.4 million. Immigration from Ireland, Italy, Eastern Europe, French Canada, and the Caribbean accounts for the predominance of Roman Catholicism in the Northeast, Northwest, and some parts of the Great Lakes region, while Hispanic traditions and more recent immigration from Mexico and other Latin American countries account for the historical importance of Roman Catholicism in California and throughout most of the sunbelt. More than any other US religious body, the Roman Catholic Church maintains an extensive network of parochial schools.

Jewish immigrants settled first in the Northeast, where the largest Jewish population remains; at last estimates, about 6.1 million Jews lived in the United States. According to data from 1995, there were about 3.7 million Muslims in the country. About 1.8 million people were Buddhist and 795,000 were Hindu. Approximately 874,000 people were proclaimed atheists.

Over 94 million persons in the United States report affiliation with a Protestant denomination. Baptists predominate below the Mason-Dixon line and west to Texas. By far the nation's largest Protestant group is the Southern Baptist Convention, which has about 16.2 million members; the American Baptist Churches in the USA claim some 1.4 million members. A concentration of Methodist groups extends westward in a band from Delaware to eastern Colorado; the largest of these groups, the United Methodist Church has about 8.2 million members. A related group, the African Methodist Episcopal Church, has about 2.5 million members. Lutheran denominations, reflecting in part the patterns of German and Scandinavian settlement, are most highly concentrated in the north-central states, especially Minnesota and the Dakotas. Two Lutheran synods, the Lutheran Church in America and the American Lutheran Church, merged in 1987 to form the Evangelical Lutheran Church in America, with more than 5 million adherents in 2004. In June 1983, the two major Presbyterian churches, the northern-based United Presbyterian Church in the USA and the southern-based Presbyterian Church in the United States, formally merged as the Presbyterian Church (USA), ending a division that began with the Civil War. This group claimed 3.4 million adherents in 2004. Other prominent Protestant denominations and their estimated adherents (2004) include the Episcopal Church, 2,334,000, and the United Church of Christ, 1,331,000.

A number of Orthodox Christian denominations are represented in the United States, established by immigrants hoping to maintain their language and culture in a new world. The largest group of Orthodox belongs to the Greek Orthodox Archdiocese of America, which has about 1.5 million members.

A number of religious groups, which now have a worldwide presence, originated in the United States. One such group, the Church of Jesus Christ of Latter-Day Saints (Mormons), was or-

ganized in New York in 1830 by Joseph Smith, Jr., who claimed to receive a revelation concerning an ancient American prophet named Mormon. The group migrated westward, in part to escape persecution, and has played a leading role in the political, economic, and religious life of Utah; Salt Lake City is the headquarters for the church. As of 2004, there are about 5.4 million members of the Church of Jesus Christ of Latter-Day Saints. The Jehovah's Witnesses were established by Charles Taze Russell in Pittsburgh, Pennsylvania, in 1872. They believe that Biblical prophecies are being fulfilled through world events and that the kingdom of God will be established on earth at the end of the great war described in the Bible. In 2004, there were about one million members in the United States.

The Church of Christ Scientist was established by Mary Baker Eddy (1821–1910) through her book *Science and Health with Key to the Scriptures*. A primary belief of the group is that physical injury and illness might be healed through the power of prayer and the correction of false beliefs. The Mother Church is located in Boston, Massachusetts. Christian Scientists have over 1,000 congregations in the nation. The Seventh-Day Adventists were also established in the United States by William Miller, a preacher who believed that the second coming of Christ would occur between 1843 and 1844. Though his prediction did not come true, many of his followers continued to embrace other practices such as worship on Saturday, vegetarianism, and a focus on preparation for the second coming. In 2004, the Seventh-Day Adventist Church had 919,000 members in the United States.

## 11 TRANSPORTATION

Railroads have lost not only the largest share of intercity freight traffic, their chief source of revenue, but passenger traffic as well. Despite an attempt to revive passenger transport through the development of a national network (Amtrak) in the 1970s, the rail sector has continued to experience heavy losses and declining revenues. In 1998 there were nine Class I rail companies in the United States, down from 13 in 1994, with a total of 178,222 employees and operating revenues of \$32.2 billion. In 2003 there were 227,736 km (141,424 mi) of railway, all standard gauge. In 2000, Amtrak carried 84.1 million passengers.

The most conspicuous form of transportation is the automobile, and the extent and quality of the United States road-transport system are without parallel in the world. Over 226.06 million vehicles—a record number—were registered in 2003, including more than 130.8 million passenger cars and over 95.3 million commercial vehicles. In 2000, there were some 4,346,068 motorcycles registered.

The United States has a vast network of public roads, whose total length as of 2003 was 6,393,603 km (3,976,821 mi), of which, 4,180,053 km (2,599,993 mi) were paved, including 74,406 km (46,281 mi) of expressways. The United States also has 41,009 km (25,483 mi) of navigable inland channels, exclusive of the Great Lakes. Of that total, 19,312 km (12,012 mi) are still in commercial use, as of 2004.

Major ocean ports or port areas are New York, the Delaware River areas (Philadelphia), the Chesapeake Bay area (Baltimore, Norfolk, Newport News), New Orleans, Houston, and the San Francisco Bay area. The inland port of Duluth on Lake Superior handles more freight than all but the top-ranking ocean ports. The importance of this port, along with those of Chicago and Detroit,

was enhanced with the opening in 1959 of the St. Lawrence Seaway. Waterborne freight consists primarily of bulk commodities such as petroleum and its products, coal and coke, iron ore and steel, sand, gravel and stone, grains, and lumber. The US merchant marine industry has been decreasing gradually since the 1950s. In 2005, the United States had a merchant shipping fleet of 486 vessels of 1,000 GRT or more, with a combined GRT of 12,436,658.

In 2004, the United States had an estimated 14,857 airports. In 2005 a total of 5,120 had paved runways, and there were also 153 heliports. Principal airports include Hartsfield at Atlanta; Logan International at Boston; O'Hare International at Chicago; Dallas-Fort Worth at Dallas; Detroit Metropolitan; Honolulu International; Houston Intercontinental; Los Angeles International; John F. Kennedy, La Guardia, and Newark International at or near New York; Philadelphia International; Orlando International; Miami International; San Francisco International; L. Munoz Marin at San Juan; Seattle-Tacoma at Seattle; and Dulles International at Virginia. Revenue passengers carried by the airlines in 1940 totaled 2.7 million. By 2003, the figure was estimated at 588.997 million for US domestic and international carriers, along with freight traffic estimated at 34,206 million freight ton-km.

## 12 HISTORY

The first Americans—distant ancestors of the Native Americans—probably crossed the Bering Strait from Asia at least 12,000 years ago. By the time Christopher Columbus came to the New World in 1492 there were probably no more than two million Native Americans living in the land that was to become the United States.

Following exploration of the American coasts by English, Portuguese, Spanish, Dutch, and French sea captains from the late 15th century onward, European settlements sprang up in the latter part of the 16th century. The Spanish established the first permanent settlement at St. Augustine in the future state of Florida in 1565, and another in New Mexico in 1599. During the early 17th century, the English founded Jamestown in Virginia Colony (1607) and Plymouth Colony in present-day Massachusetts (1620). The Dutch established settlements at Ft. Orange (now Albany, N.Y.) in 1624, New Amsterdam (now New York City) in 1626, and at Bergen (now part of Jersey City, N.J.) in 1660; they conquered New Sweden—the Swedish colony in Delaware and New Jersey—in 1655. Nine years later, however, the English seized this New Netherland Colony and subsequently monopolized settlement of the East Coast except for Florida, where Spanish rule prevailed until 1821. In the Southwest, California, Arizona, New Mexico, and Texas also were part of the Spanish empire until the 19th century. Meanwhile, in the Great Lakes area south of present-day Canada, France set up a few trading posts and settlements but never established effective control; New Orleans was one of the few areas of the United States where France pursued an active colonial policy.

From the founding of Jamestown to the outbreak of the American Revolution more than 150 years later, the British government administered its American colonies within the context of mercantilism: the colonies existed primarily for the economic benefit of the empire. Great Britain valued its American colonies especially for their tobacco, lumber, indigo, rice, furs, fish, grain, and naval stores, relying particularly in the southern colonies on black slave labor.

The colonies enjoyed a large measure of internal self-government until the end of the French and Indian War (1745–63), which resulted in the loss of French Canada to the British. To prevent further troubles with the Native Americans, the British government in 1763 prohibited the American colonists from settling beyond the Appalachian Mountains. Heavy debts forced London to decree that the colonists should assume the costs of their own defense, and the British government enacted a series of revenue measures to provide funds for that purpose. But soon, the colonists began to insist that they could be taxed only with their consent and the struggle grew to become one of local versus imperial authority.

Widening cultural and intellectual differences also served to divide the colonies and the mother country. Life on the edge of the civilized world had brought about changes in the colonists' attitudes and outlook, emphasizing their remoteness from English life. In view of the long tradition of virtual self-government in the colonies, strict enforcement of imperial regulations and British efforts to curtail the power of colonial legislatures presaged inevitable conflict between the colonies and the mother country. When citizens of Massachusetts, protesting the tax on tea, dumped a shipload of tea belonging to the East India Company into Boston harbor in 1773, the British felt compelled to act in defense of their authority as well as in defense of private property. Punitive measures—referred to as the Intolerable Acts by the colonists—struck at the foundations of self-government.

In response, the First Continental Congress, composed of delegates from 12 of the 13 colonies—Georgia was not represented—met in Philadelphia in September 1774, and proposed a general boycott of English goods, together with the organizing of a militia. British troops marched to Concord, Massachusetts, on 19 April 1775 and destroyed the supplies that the colonists had assembled there. American “minutemen” assembled on the nearby Lexington green and fired “the shot heard round the world,” although no one knows who actually fired the first shot that morning. The British soldiers withdrew and fought their way back to Boston.

Voices in favor of conciliation were raised in the Second Continental Congress that assembled in Philadelphia on 10 May 1775, this time including Georgia; but with news of the Restraining Act (30 March 1775), which denied the colonies the right to trade with countries outside the British Empire, all hopes for peace vanished. George Washington was appointed commander in chief of the new American army, and on 4 July 1776, the 13 American colonies adopted the Declaration of Independence, justifying the right of revolution by the theory of natural rights.

British and American forces met in their first organized encounter near Boston on 17 June 1775. Numerous battles up and down the coast followed. The British seized and held the principal cities but were unable to inflict a decisive defeat on Washington's troops. The entry of France into the war on the American side eventually tipped the balance. On 19 October 1781, the British commander, Cornwallis, cut off from reinforcements by the French fleet on one side and besieged by French and American forces on the other, surrendered his army at Yorktown, Virginia. American independence was acknowledged by the British in a treaty of peace signed in Paris on 3 September 1783.

The first constitution uniting the 13 original states—the Articles of Confederation—reflected all the suspicions that Americans en-

tertained about a strong central government. Congress was denied power to raise taxes or regulate commerce, and many of the powers it was authorized to exercise required the approval of a minimum of nine states. Dissatisfaction with the Articles of Confederation was aggravated by the hardships of a postwar depression, and in 1787—the same year that Congress passed the Northwest Ordinance, providing for the organization of new territories and states on the frontier—a convention assembled in Philadelphia to revise the articles. The convention adopted an altogether new constitution, the present Constitution of the United States, which greatly increased the powers of the central government at the expense of the states. This document was ratified by the states with the understanding that it would be amended to include a bill of rights guaranteeing certain fundamental freedoms. These freedoms—including the rights of free speech, press, and assembly, freedom from unreasonable search and seizure, and the right to a speedy and public trial by an impartial jury—are assured by the first 10 amendments to the constitution, adopted on 5 December 1791; the constitution did, however, recognize slavery, and did not provide for universal suffrage. On 30 April 1789, George Washington was inaugurated as the first president of the United States.

During Washington's administration, the credit of the new nation was bolstered by acts providing for a revenue tariff and an excise tax; opposition to the excise on whiskey sparked the Whiskey Rebellion, suppressed on Washington's orders in 1794. Alexander Hamilton's proposals for funding the domestic and foreign debt and permitting the national government to assume the debts of the states were also implemented. Hamilton, the secretary of the treasury, also created the first national bank, and was the founder of the Federalist Party. Opposition to the bank as well as to the rest of the Hamiltonian program, which tended to favor north-eastern commercial and business interests, led to the formation of an anti-Federalist party, the Democratic-Republicans, led by Thomas Jefferson.

The Federalist Party, to which Washington belonged, regarded the French Revolution as a threat to security and property; the Democratic-Republicans, while condemning the violence of the revolutionists, hailed the overthrow of the French monarchy as a blow to tyranny. The split of the nation's leadership into rival camps was the first manifestation of the two-party system, which has since been the dominant characteristic of the US political scene (Jefferson's party should not be confused with the modern Republican Party, formed in 1854).

The 1800 election brought the defeat of Federalist president John Adams, Washington's successor, by Jefferson; a key factor in Adam's loss was the unpopularity of the Alien and Sedition Acts (1798), Federalist-sponsored measures that had abridged certain freedoms guaranteed in the Bill of Rights. In 1803, Jefferson achieved the purchase from France of the Louisiana Territory, including all the present territory of the United States west of the Mississippi drained by that river and its tributaries; exploration and mapping of the new territory, notably through the expeditions of Meriwether Lewis and William Clark, began almost immediately. Under Chief Justice John Marshall, the US Supreme Court, in the landmark case of *Marbury v. Madison*, established the principle of federal supremacy in conflicts with the states and enunciated the doctrine of judicial review.

During Jefferson's second term in office, the United States became involved in a protracted struggle between Britain and Napoleonic France. Seizures of US ships and the impressment of US seamen by the British navy led the administration to pass the Embargo Act of 1807, under which no US ships were to put out to sea. After the act was repealed in 1809, ship seizures and impressment of seamen by the British continued, and were the ostensible reasons for the declaration of war on Britain in 1812 during the administration of James Madison. An underlying cause of the War of 1812, however, was land-hungry Westerners' coveting of southern Canada as potential US territory.

The war was largely a standoff. A few surprising US naval victories countered British successes on land. The Treaty of Ghent (24 December 1814), which ended the war, made no mention of impressment and provided for no territorial changes. The occasion for further maritime conflict with Britain, however, disappeared with the defeat of Napoleon in 1815.

Now the nation became occupied primarily with domestic problems and westward expansion. Because the United States had been cut off from its normal sources of manufactured goods in Great Britain during the war, textiles and other industries developed and prospered in New England. To protect these infant industries, Congress adopted a high-tariff policy in 1816.

Three events of the late 1810s and the 1820s were of considerable importance for the future of the country. The federal government in 1817 began a policy of forcibly resettling the Native Americans (Indians), already decimated by war and disease, in what later became known as Indian Territory (now Oklahoma); those Native Americans not forced to move were restricted to reservations. The Missouri Compromise (1820) was an attempt to find a nationally acceptable solution to the volatile dispute over the extension of black slavery to new territories. It provided for admission of Missouri into the Union as a slave state but banned slavery in territories to the west that lay north of 36°30'. As a result of the establishment of independent Latin American republics and threats by France and Spain to reestablish colonial rule, President James Monroe in 1823 asserted that the Western Hemisphere was closed to further colonization by European powers. The Monroe Doctrine declared that any effort by such powers to recover territories whose independence the United States had recognized would be regarded as an unfriendly act.

From the 1820s to the outbreak of the Civil War, the growth of manufacturing continued, mainly in the North, and was accelerated by inventions and technological advances. Farming expanded with westward migration. The South discovered that its future lay in the cultivation of cotton. The cotton gin, invented by Eli Whitney in 1793, greatly simplified the problems of production; the growth of the textile industry in New England and Great Britain assured a firm market for cotton. Hence, during the first half of the 19th century, the South remained a fundamentally agrarian society based increasingly on a one-crop economy. Large numbers of field hands were required for cotton cultivation, and black slavery became solidly entrenched in the southern economy.

The construction of roads and canals paralleled the country's growth and economic expansion. The successful completion of the Erie Canal (1825), linking the Great Lakes with the Atlantic, ushered in a canal-building boom. Railroad building began in earnest in the 1830s, and by 1840, about 5,300 km (3,300 mi) of track

had been laid. The development of the telegraph a few years later gave the nation the beginnings of a modern telecommunications network. As a result of the establishment of the factory system, a laboring class appeared in the North by the 1830s, bringing with it the earliest unionization efforts.

Western states admitted into the Union following the War of 1812 provided for free white male suffrage without property qualifications and helped spark a democratic revolution. As eastern states began to broaden the franchise, mass appeal became an important requisite for political candidates. The election to the presidency in 1928 of Andrew Jackson, a military hero and Indian fighter from Tennessee, was no doubt a result of this widening of the democratic process. By this time, the United States consisted of 24 states and had a population of nearly 13 million.

The relentless westward thrust of the United States population ultimately involved the United States in foreign conflict. In 1836, US settlers in Texas revolted against Mexican rule and established an independent republic. Texas was admitted to the Union as a state in 1845, and relations between Mexico and the United States steadily worsened. A dispute arose over the southern boundary of Texas, and a Mexican attack on a US patrol in May 1846 gave President James K. Polk a pretext to declare war. After a rapid advance, US forces captured Mexico City, and on 2 February 1848, Mexico formally gave up the unequal fight by signing the Treaty of Guadalupe Hidalgo, providing for the cession of California and the territory of New Mexico to the United States. With the Gadsden Purchase of 1853, the United States acquired from Mexico for \$10 million large strips of land forming the balance of southern Arizona and New Mexico. A dispute with Britain over the Oregon Territory was settled in 1846 by a treaty that established the 49th parallel as the boundary with Canada. Thenceforth the United States was to be a Pacific as well as an Atlantic power.

Westward expansion exacerbated the issue of slavery in the territories. By 1840, abolition of slavery constituted a fundamental aspect of a movement for moral reform, which also encompassed women's rights, universal education, alleviation of working class hardships, and temperance. In 1849, a year after the discovery of gold had precipitated a rush of new settlers to California, that territory (whose constitution prohibited slavery) demanded admission to the Union. A compromise engineered in Congress by Senator Henry Clay in 1850 provided for California's admission as a free state in return for various concessions to the South. But enmities dividing North and South could not be silenced. The issue of slavery in the territories came to a head with the Kansas-Nebraska Act of 1854, which repealed the Missouri Compromise and left the question of slavery in those territories to be decided by the settlers themselves. The ensuing conflicts in Kansas between northern and southern settlers earned the territory the name "bleeding Kansas."

In 1860, the Democratic Party, split along northern and southern lines, offered two presidential candidates. The new Republican Party, organized in 1854 and opposed to the expansion of slavery, nominated Abraham Lincoln. Owing to the defection in Democratic ranks, Lincoln was able to carry the election in the electoral college, although he did not obtain a majority of the popular vote. To ardent supporters of slavery, Lincoln's election provided a reason for immediate secession. Between December 1860 and February 1861, the seven states of the Deep South—South Caro-

lina, Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas—withdrew from the Union and formed a separate government, known as the Confederate States of America, under the presidency of Jefferson Davis. The secessionists soon began to confiscate federal property in the South. On 12 April 1861, the Confederates opened fire on Ft. Sumter in the harbor of Charleston, South Carolina, and thus precipitated the US Civil War. Following the outbreak of hostilities, Arkansas, North Carolina, Virginia, and Tennessee joined the Confederacy.

For the next four years, war raged between the Confederate and Union forces, largely in southern territories. An estimated 360,000 men in the Union forces died of various causes, including 110,000 killed in battle. Confederate dead were estimated at 250,000, including 94,000 killed in battle. The North, with great superiority in manpower and resources, finally prevailed. A Confederate invasion of the North was repulsed at the battle of Gettysburg, Pennsylvania, in July 1863; a Union army took Atlanta, Georgia in September 1864; and Confederate forces evacuated Richmond, Virginia the Confederate capital, in early April 1865. With much of the South in Union hands, Confederate Gen. Robert E. Lee surrendered to Gen. Ulysses S. Grant at Appomattox Courthouse in Virginia on 9 April.

The outcome of the war brought great changes in US life. Lincoln's Emancipation Proclamation of 1863 was the initial step in freeing some four million black slaves; their liberation was completed soon after the war's end by amendments to the Constitution. Lincoln's plan for the reconstruction of the rebellious states was compassionate, but only five days after Lee's surrender, Lincoln was assassinated by John Wilkes Booth as part of a conspiracy in which US Secretary of State William H. Seward was seriously wounded.

During the Reconstruction era (1865–77), the defeated South was governed by Union Army commanders, and the resultant bitterness of southerners toward northern Republican rule, which enfranchised blacks, persisted for years afterward. Vice President Andrew Johnson, who succeeded Lincoln as president, tried to carry out Lincoln's conciliatory policies but was opposed by radical Republican leaders in Congress who demanded harsher treatment of the South. On the pretext that he had failed to carry out an act of Congress, the House of Representatives voted to impeach Johnson in 1868, but the Senate failed by one vote to convict him and remove him from office. It was during Johnson's presidency that Secretary of State Seward negotiated the purchase of Alaska (which attained statehood in 1959) from Russia for \$7.2 million.

The efforts of southern whites to regain political control of their states led to the formation of terrorist organizations like the Ku Klux Klan, which employed violence to prevent blacks from voting. By the end of the Reconstruction era, whites had reestablished their political domination over blacks in the southern states and had begun to enforce patterns of segregation in education and social organization that were to last for nearly a century.

In many southern states, the decades following the Civil War were ones of economic devastation, in which rural whites as well as blacks were reduced to sharecropper status. Outside the South, however, a great period of economic expansion began. Transcontinental railroads were constructed, corporate enterprise spurred ahead, and the remaining western frontier lands were rapidly occupied and settled. The age of big business tycoons dawned. As

heavy manufacturing developed, Pittsburgh, Chicago, and New York emerged as the nation's great industrial centers. The Knights of Labor, founded in 1869, engaged in numerous strikes, and violent conflicts between strikers and strikebreakers were common. The American Federation of Labor, founded in 1886, established a nationwide system of craft unionism that remained dominant for many decades. During this period, too, the woman's rights movement organized actively to secure the vote (although woman's suffrage was not enacted nationally until 1920), and groups outraged by the depletion of forests and wildlife in the West pressed for the conservation of natural resources.

During the latter half of the 19th century, the acceleration of westward expansion made room for millions of immigrants from Europe. The country's population grew to more than 76 million by 1900. As homesteaders, prospectors, and other settlers tamed the frontier, the federal government forced Indians west of the Mississippi to cede vast tracts of land to the whites, precipitating a series of wars with various tribes. By 1890, only 250,000 Indians remained in the United States, virtually all of them residing on reservations.

The 1890s marked the closing of the United States frontier for settlement and the beginning of US overseas expansion. By 1892, Hawaiian sugar planters of US origin had become strong enough to bring about the downfall of the native queen and to establish a republic, which in 1898, at its own request, was annexed as a territory by the United States. The sympathies of the United States with the Cuban nationalists who were battling for independence from Spain were aroused by a lurid press and by expansionist elements. A series of events climaxed by the sinking of the USS *Maine* in Havana harbor finally forced a reluctant President William McKinley to declare war on Spain on 25 April 1898. US forces overwhelmed those of Spain in Cuba, and as a result of the Spanish-American War, the United States added to its territories the Philippines, Guam, and Puerto Rico. A newly independent Cuba was drawn into the United States orbit as a virtual protectorate through the 1950s. Many eminent citizens saw these new departures into imperialism as a betrayal of the time-honored US doctrine of government by the consent of the governed.

With the marked expansion of big business came increasing protests against the oppressive policies of large corporations and their dominant role in the public life of the nation. A demand emerged for strict control of monopolistic business practice through the enforcement of antitrust laws. Two US presidents, Theodore Roosevelt (1901–09), a Republican and Woodrow Wilson (1913–21), a Democrat, approved of the general movement for reform, which came to be called progressivism. Roosevelt developed a considerable reputation as a trustbuster, while Wilson's program, known as the New Freedom, called for reform of tariffs, business procedures, and banking. During Roosevelt's first term, the United States leased the Panama Canal Zone and started construction of a 68-km (42-mi) canal, completed in 1914.

US involvement in World War I marked the country's active emergence as one of the great powers of the world. When war broke out in 1914 between Germany, Austria-Hungary, and Turkey on one side and Britain, France, and Russia on the other, sentiment in the United States was strongly opposed to participation in the conflict, although a large segment of the American people sympathized with the British and the French. While both sides

violated US maritime rights on the high seas, the Germans, enmeshed in a British blockade, resorted to unrestricted submarine warfare. On 6 April 1917, Congress declared war on Germany. Through a national draft of all able-bodied men between the ages of 18 and 45, some four million US soldiers were trained, of whom more than two million were sent overseas to France. By late 1917, when US troops began to take part in the fighting on the western front, the European armies were approaching exhaustion, and US intervention may well have been decisive in ensuring the eventual victory of the Allies. In a series of great battles in which US soldiers took an increasingly major part, the German forces were rolled back in the west, and in the autumn of 1918 were compelled to sue for peace. Fighting ended with the armistice of 11 November 1918. President Wilson played an active role in drawing up the 1919 Versailles peace treaty, which embodied his dream of establishing a League of Nations to preserve the peace, but the isolationist bloc in the Senate was able to prevent US ratification of the treaty.

In the 1920s, the United States had little enthusiasm left for crusades, either for democracy abroad or for reform at home; a rare instance of idealism in action was the Kellogg-Briand Pact (1928), an antiwar accord negotiated on behalf of the United States by Secretary of State Frank B. Kellogg. In general, however, the philosophy of the Republican administrations from 1921 to 1933 was expressed in the aphorism “the business of America is business,” and the 1920s saw a great business boom. The years 1923–24 also witnessed the unraveling of the Teapot Dome scandal: the revelation that President Warren G. Harding’s secretary of the interior, Albert B. Fall, had secretly leased federal oil reserves in California and Wyoming to private oil companies in return for gifts and loans.

The great stock market crash of October 1929 ushered in the most serious and most prolonged economic depression the country had ever known. By 1933, an estimated 12 million men and women were out of work; personal savings were wiped out on a vast scale through a disastrous series of corporate bankruptcies and bank failures. Relief for the unemployed was left to private charities and local governments, which were incapable of handling the enormous task.

The inauguration of the successful Democratic presidential candidate, Franklin D. Roosevelt, in March 1933 ushered in a new era of US history, in which the federal government was to assume a much more prominent role in the nation’s economic affairs. Proposing to give the country a “New Deal,” Roosevelt accepted national responsibility for alleviating the hardships of unemployment; relief measures were instituted, work projects were established, the deficit spending was accepted in preference to ignoring public distress. The federal Social Security program was inaugurated, as were various measures designed to stimulate and develop the economy through federal intervention. Unions were strengthened through the National Labor Relations Act, which established the right of employees’ organizations to bargain collectively with employers. Union membership increased rapidly, and the dominance of the American Federation of Labor was challenged by the newly formed Congress of Industrial Organizations, which organized workers along industrial lines.

The depression of the 1930s was worldwide, and certain nations attempted to counter economic stagnation by building large

military establishments and embarking on foreign adventures. Following German, Italian, and Japanese aggression, World War II broke out in Europe during September 1939. In 1940, Roosevelt, disregarding a tradition dating back to Washington that no president should serve more than two terms, ran again for reelection. He easily defeated his Republican opponent, Wendell Willkie, who, along with Roosevelt, advocated increased rearmament and all possible aid to victims of aggression. The United States was brought actively into the war by the Japanese attack on the Pearl Harbor naval base in Hawaii on 7 December 1941. The forces of Germany, Italy, and Japan were now arrayed over a vast theater of war against those of the United States and the British Commonwealth; in Europe, Germany was locked in a bloody struggle with the Soviet Union. US forces waged war across the vast expanses of the Pacific, in Africa, in Asia, and in Europe. Italy surrendered in 1943; Germany was successfully invaded in 1944 and conquered in May 1945; and after the United States dropped the world’s first atomic bombs on Hiroshima and Nagasaki, the Japanese capitulated in August. The Philippines became an independent republic soon after the war, but the United States retained most of its other Pacific possessions, with Hawaii becoming the 50th state in 1959.

Roosevelt, who had been elected to a fourth term in 1944, died in April 1945 and was succeeded by Harry S Truman, his vice president. Under the Truman administration, the United States became an active member of the new world organization, the United Nations. The Truman administration embarked on large-scale programs of military aid and economic support to check the expansion of communism. Aid to Greece and Turkey in 1948 and the Marshall Plan, a program designed to accelerate the economic recovery of Western Europe, were outstanding features of US postwar foreign policy. The North Atlantic Treaty (1949) established a defensive alliance among a number of West European nations and the United States. Truman’s Point Four program gave technical and scientific aid to developing nations. When, following the North Korean attack on South Korea on 25 June 1950, the UN Security Council resolved that members of the UN should proceed to the aid of South Korea, US naval, air, and ground forces were immediately dispatched by President Truman. An undeclared war ensued, which eventually was brought to a halt by an armistice signed on 27 June 1953.

In 1952, Dwight D. Eisenhower, supreme commander of Allied forces in Europe during World War II, was elected president on the Republican ticket, thereby bringing to an end 20 years of Democratic presidential leadership. In foreign affairs, the Eisenhower administration continued the Truman policy of containing the USSR and threatened “massive retaliation” in the event of Soviet aggression, thus heightening the Cold War between the world’s two great nuclear powers. Although Republican domestic policies were more conservative than those of the Democrats, the Eisenhower administration extended certain major social and economic programs of the Roosevelt and Truman administrations, notably Social Security and public housing. The early years of the Eisenhower administration were marked by agitation (arising in 1950) over charges of Communist and other allegedly subversive activities in the United States—a phenomenon known as McCarthyism, after Republican Senator Joseph R. McCarthy of Wisconsin, who aroused much controversy with unsubstantiated allegations that Communists had penetrated the US government,

especially the Army and the Department of State. Even those who personally opposed McCarthy lent their support to the imposition of loyalty oaths and the blacklisting of persons with left-wing backgrounds.

A major event of the Eisenhower years was the US Supreme Court's decision in *Brown v. Board of Education of Topeka* (1954) outlawing segregation of whites and blacks in public schools. In the aftermath of this ruling, desegregation proceeded slowly and painfully. In the early 1960s, sit-ins, "freedom rides," and similar expressions of nonviolent resistance by blacks and their sympathizers led to a lessening of segregation practices in public facilities. Under Chief Justice Earl Warren, the high court in 1962 mandated the reapportionment of state and federal legislative districts according to a "one person, one vote" formula. It also broadly extended the rights of defendants in criminal trials to include the provision of a defense lawyer at public expense for an accused person unable to afford one, and established the duty of police to advise an accused person of his or her legal rights immediately upon arrest.

In the early 1960s, during the administration of Eisenhower's Democratic successor, John F. Kennedy, the Cold War heated up as Cuba, under the regime of Fidel Castro, aligned itself with the Soviet Union. Attempts by anti-Communist Cuban exiles to invade their homeland in the spring of 1961 failed despite US aid. In October 1962, President Kennedy successfully forced a showdown with the Soviet Union over Cuba in demanding the withdrawal of Soviet-supplied "offensive weapons"—missiles—from the nearby island. On 22 November 1963, President Kennedy was assassinated while riding in a motorcade through Dallas, Texas; hours later, Vice President Lyndon B. Johnson was inaugurated president. In the November 1964 elections, Johnson overwhelmingly defeated his Republican opponent, Barry M. Goldwater, and embarked on a vigorous program of social legislation unprecedented since Roosevelt's New Deal. His "Great Society" program sought to ensure black Americans' rights in voting and public housing, to give the underprivileged job training, and to provide persons 65 and over with hospitalization and other medical benefits (Medicare). Measures ensuring equal opportunity for minority groups may have contributed to the growth of the woman's rights movement in the late 1960s. This same period also saw the growth of a powerful environmental protection movement.

US military and economic aid to anti-Communist forces in Vietnam, which had its beginnings during the Truman administration (while Vietnam was still part of French Indochina) and was increased gradually by presidents Eisenhower and Kennedy, escalated in 1965. In that year, President Johnson sent US combat troops to South Vietnam and ordered US bombing raids on North Vietnam, after Congress (in the Gulf of Tonkin Resolution of 1964) had given him practically carte blanche authority to wage war in that region. By the end of 1968, American forces in Vietnam numbered 536,100 men, but US military might was unable to defeat the Vietnamese guerrillas, and the American people were badly split over continuing the undeclared (and, some thought, ill-advised or even immoral) war, with its high price in casualties and materiel. Reacting to widespread dissatisfaction with his Vietnam policies, Johnson withdrew in March 1968 from the upcoming presidential race, and in November, Republican Richard M. Nixon, who had been the vice president under Eisenhower,

was elected president. Thus, the Johnson years—which had begun with the new hopes of a Great Society but had soured with a rising tide of racial violence in US cities and the assassinations of civil rights leader Martin Luther King, Jr., and US senator Robert F. Kennedy, among others—drew to a close.

President Nixon gradually withdrew US ground troops from Vietnam but expanded aerial bombardment throughout Indochina, and the increasingly unpopular and costly war continued for four more years before a cease-fire—negotiated by Nixon's national security adviser, Henry Kissinger—was finally signed on 27 January 1973 and the last US soldiers were withdrawn. The most protracted conflict in American history had resulted in 46,163 US combat deaths and 303,654 wounded soldiers, and had cost the US government \$112 billion in military allocations. Two years later, the South Vietnamese army collapsed, and the North Vietnamese Communist regime united the country.

In 1972, during the last year of his first administration, Nixon initiated the normalization of relations—ruptured in 1949—with the People's Republic of China and signed a strategic arms limitation agreement with the Soviet Union as part of a Nixon-Kissinger policy of pursuing détente with both major Communist powers. (Earlier, in July 1969, American technology had achieved a national triumph by landing the first astronaut on the moon.) The Nixon administration sought to muster a "silent majority" in support of its Indochina policies and its conservative social outlook in domestic affairs. The most momentous domestic development, however, was the Watergate scandal, which began on 17 June 1972 with the arrest of five men associated with Nixon's reelection campaign, during a break-in at Democratic Party headquarters in the Watergate office building in Washington, DC. Although Nixon was reelected in 1972, subsequent disclosures by the press and by a Senate investigating committee revealed a complex pattern of political "dirty tricks" and illegal domestic surveillance throughout his first term. The president's apparent attempts to obstruct justice by helping his aides cover up the scandal were confirmed by tape recordings (made by Nixon himself) of his private conversations, which the Supreme Court ordered him to release for use as evidence in criminal proceedings. The House voted to begin impeachment proceedings, and in late July 1974, its Judiciary Committee approved three articles of impeachment. On 9 August, Nixon became the first president to resign the office. The following year, Nixon's top aides and former attorney general, John N. Mitchell, were convicted of obstruction and were subsequently sentenced to prison.

Nixon's successor was Gerald R. Ford, who in October 1973 had been appointed to succeed Vice President Spiro T. Agnew when Agnew resigned following his plea of *nolo contendere* to charges that he had evaded paying income tax on moneys he had received from contractors while governor of Maryland. Less than a month after taking office, President Ford granted a full pardon to Nixon for any crimes he may have committed as president. In August 1974, Ford nominated Nelson A. Rockefeller as vice president (he was not confirmed until December), thus giving the country the first instance of a nonelected president and an appointed vice president serving simultaneously. Ford's pardon of Nixon, as well as continued inflation and unemployment, probably contributed to his narrow defeat by a Georgia Democrat, Jimmy Carter, in 1976.

President Carter's forthright championing of human rights—though consistent with the Helsinki accords, the “final act” of the Conference on Security and Cooperation in Europe, signed by the United States and 34 other nations in July 1974—contributed to strained relations with the USSR and with some US allies. During 1978–79, the president concluded and secured Senate passage of treaties ending US sovereignty over the Panama Canal Zone. His major accomplishment in foreign affairs, however, was his role in mediating a peace agreement between Israel and Egypt, signed at the camp David, Md., retreat in September 1978. Domestically, the Carter administration initiated a national energy program to reduce US dependence on foreign oil by cutting gasoline and oil consumption and by encouraging the development of alternative energy resources. But the continuing decline of the economy because of double-digit inflation and high unemployment caused his popularity to wane, and confusing shifts in economic policy (coupled with a lack of clear goals in foreign affairs) characterized his administration during 1979 and 1980; a prolonged quarrel with Iran over more than 50 US hostages seized in Tehrān on 4 November 1979 contributed to public doubts about his presidency. Exactly a year after the hostages were taken, former California Governor Ronald Reagan defeated Carter in an election that saw the Republican Party score major gains throughout the United States. The hostages were released on 20 January 1981, the day of Reagan's inauguration.

Reagan, who survived a chest wound from an assassination attempt in Washington, DC, in 1981, used his popularity to push through significant policy changes. He succeeded in enacting income tax cuts of 25%, reducing the maximum tax rate on unearned income from 70% to 50%, and accelerating depreciation allowances for businesses. At the same time, he more than doubled the military budget, in constant 1985 dollars, between 1980 and 1989. Vowing to reduce domestic spending, Reagan cut benefits for the working poor, reduced allocations for food stamps and Aid to Families With Dependent Children by 13%, and decreased grants for the education of disadvantaged children. He slashed the budget of the Environmental Protection Agency and instituted a flat rate reimbursement system for the treatment of Medicare patients with particular illnesses, replacing a more flexible arrangement in which hospitals had been reimbursed for “reasonable charges.”

Reagan's appointment of Sandra Day O'Connor as the first woman justice of the Supreme Court was widely praised and won unanimous confirmation from the Senate. However, some of his other high-level choices were extremely controversial—none more so than that of his secretary of the interior, James G. Watt, who finally resigned on October 1983. To direct foreign affairs, Reagan named Alexander M. Haig, Jr., former NATO supreme commander for Europe, to the post of secretary of state; Haig, who clashed frequently with other administration officials, resigned in June 1982 and was replaced by George P. Shultz. In framing his foreign and defense policy, Reagan insisted on a military buildup as a precondition for arms-control talks with the USSR. His administration sent money and advisers to help the government of El Salvador in its war against leftist rebels, and US advisers were also sent to Honduras, reportedly to aid groups of Nicaraguans trying to overthrow the Sandinista government in their country. Troops were also dispatched to Lebanon in September 1982, as part of

a multinational peacekeeping force in Beirut, and to Grenada in October 1983 to oust a leftist government there.

Reelected in 1984, President Reagan embarked on his second term with a legislative agenda that included reduction of federal budget deficits (which had mounted rapidly during his first term in office), further cuts in domestic spending, and reform of the federal tax code. In military affairs, Reagan persuaded Congress to fund on a modest scale his Strategic Defense Initiative, commonly known as Star Wars, a highly complex and extremely costly space-based antimissile system. In 1987, the downing of an aircraft carrying arms to Nicaragua led to the disclosure that a group of National Security Council members had secretly diverted \$48 million that the federal government had received in payment from Iran for American arms to rebel forces in Nicaragua. The disclosure prompted the resignation of two of the leaders of the group, Vice Admiral John Poindexter and Lieutenant Colonel Oliver North, as well as investigations by House and Senate committees and a special prosecutor, Lawrence Walsh. The congressional investigations found no conclusive evidence that Reagan had authorized or known of the diversion. Yet they noted that because Reagan had approved of the sale of arms to Iran and had encouraged his staff to assist Nicaraguan rebels despite the prohibition of such assistance by Congress, “the President created or at least tolerated an environment where those who did know of the diversion believed with certainty that they were carrying out the President's policies.”

Reagan was succeeded in 1988 by his vice president, George H.W. Bush. Benefiting from a prolonged economic expansion, Bush handily defeated Michael Dukakis, governor of Massachusetts and a liberal Democrat. On domestic issues, Bush sought to maintain policies introduced by the Reagan administration. His few legislative initiatives included the passage of legislation establishing strict regulations of air pollution, providing subsidies for child care, and protecting the rights of the disabled. Abroad, Bush showed more confidence and energy. While he responded cautiously to revolutions in Eastern Europe and the Soviet Union, he used his personal relationships with foreign leaders to bring about comprehensive peace talks between Israel and its Arab neighbors, to encourage a peaceful unification of Germany, and to negotiate broad and substantial arms cuts with the Russians. Bush reacted to Iraq's invasion of Kuwait in 1990 by sending 400,000 soldiers to form the basis of a multinational coalition, which he assembled and which destroyed Iraq's main force within seven months. This conflict became known as the Gulf War.

One of the biggest crises that the Bush administration encountered was the collapse of the savings and loan industry in the late eighties. Thrift institutions were required by law to pay low interest rates for deposits and long-term loans. The creation of money market funds for the small investor in the eighties which paid higher rates of return than savings accounts prompted depositors to withdraw their money from banks and invest it in the higher yielding mutual funds. To finance the withdrawals, banks began selling assets at a loss. The deregulation of the savings and loan industry, combined with the increase in federal deposit insurance from \$40,000 to \$100,000 per account, encouraged many desperate savings institutions to invest in high-risk real-estate ventures, for which no state supervision or regulation existed. When the majority of such ventures predictably failed, the federal govern-

ment found itself compelled by law to rescue the thrifts. It is estimated that this will cost to taxpayers \$345 billion, in settlements that will continue through 2029.

In his bid for reelection in 1992, Bush faced not only Democratic nominee Bill Clinton, governor of Arkansas, but also third-party candidate Ross Perot, a Dallas billionaire who had made his fortune in the computer industry. In contrast to Bush's first run for the presidency, when the nation had enjoyed an unusually long period of economic expansion, the economy in 1992 was just beginning to recover from a recession. Although data released the following year indicated that a healthy rebound had already begun in 1992, the public perceived the economy during election year as weak. Clinton took advantage of this perception in his campaign, focusing on the financial concerns of what he called "the forgotten middle class." He also took a more centrist position on many issues than more traditional Democrats, promising fiscal responsibility and economic growth. Clinton defeated Bush, winning 43% of the vote to Bush's 38%. Perot garnered 18% of the vote.

At its outset, Clinton's presidency was plagued by numerous setbacks, most notably the failure of his controversial health care reform plan, drawn up under the leadership of first lady Hillary Rodham Clinton. Major accomplishments included the passage, by a narrow margin, of a deficit-reduction bill calling for tax increases and spending cuts and Congressional approval of the North American Free Trade Agreement, which removed or reduced tariffs on most goods moving across the borders of the United States, Canada, and Mexico. Although supporters and critics agreed that the treaty would create or eliminate relatively few jobs—two hundred thousand—the accord prompted heated debate. Labor strenuously opposed the agreement, seeing it as accelerating the flight of factory jobs to countries with low labor costs such as Mexico, the third-largest trading partner of the United States. Business, on the other hand, lobbied heavily for the treaty, arguing that it would create new markets for American goods and insisting that competition from Mexico would benefit the American economy.

By the fall of 1994, many American workers, still confronting stagnating wages, benefits, and living standards, had yet to feel the effects of the nation's recovery from the recession of 1990–91. The resulting disillusionment with the actions of the Clinton administration and the Democrat-controlled Congress, combined with the widespread climate of social conservatism resulting from a perceived erosion of traditional moral values led to an overwhelming upset by the Republican party in the 1994 midterm elections. The GOP gained control of both houses of Congress for the first time in over 40 years, also winning 11 gubernatorial races, for control of a total of 30 governorships nationwide. The Republican agenda—increased defense spending and cuts in taxes, social programs, and farm subsidies—had been popularized under the label "Contract with America," the title of a manifesto circulated during the campaign.

The ensuing confrontation between the nation's Democratic president and Republican-controlled Congress came to a head at the end of 1995, when Congress responded to presidential vetoes of appropriations and budget bills by refusing to pass stop gap spending measures, resulting in major shutdowns of the federal government in November and December. The following summer, however, the president and Congress joined forces to reform the welfare system through a bill replacing Aid to Families with De-

pendent Children with block grants through which welfare funding would largely become the province of the states.

The nation's economic recovery gained strength as the decade advanced, with healthy growth, falling unemployment, and moderate interest and inflation levels. Public confidence in the economy was reflected in a bull market on the stock exchange, which gained 60% between 1995 and 1997. Bolstered by a favorable economy at home and peace abroad, Clinton's faltering popularity rebounded and in 1996 he became the first Democratic president elected to a second term since Franklin D. Roosevelt in 1936, defeating the Republican candidate, former Senate majority leader Robert Dole, and Independent Ross Perot, whose electoral support was greatly reduced from its 1992 level. The Republicans retained control of both houses of Congress. In 1997, President Clinton signed into law a bipartisan budget plan designed to balance the federal budget by 2002 for the first time since 1969, through a combination of tax and spending cuts. In 1998–99, the federal government experienced two straight years of budget surpluses.

In 1998, special prosecutor Kenneth Starr submitted a report to Congress that resulted in the House of Representatives passing four articles of impeachment against President Clinton. In the subsequent trial in the Senate, the articles were defeated.

Regulation of the three large financial industries underwent significant change in late 1999. The Gramm-Leach-Bliley Act (also known as the Financial Modernization Act) was passed by Congress in November 1999. It cleared the way for banks, insurance companies, and securities companies to sell each other's services and to engage in merger and acquisition activity. Prior to the Act's passage, activities of the banking, insurance and securities industries were strictly limited by the Glass Steagall Act of 1933, which Gramm-Leach-Bliley repealed.

Health care issues received significant attention in 2000. On 23 November 1998, 46 states and the District of Columbia together reached a settlement with the large US tobacco companies over compensation for smoking-related healthcare costs incurred by the states. Payments to the states, totaling \$206 billion, were scheduled to be made over 25 years beginning in 1999. Most states passed Patients' Rights legislation, and all 50 states and the District of Columbia passed Children's Health Insurance Programs (CHIP) legislation to provide health care to children in low-income families.

The ongoing strong economy continued through the late 1990s and into 2000. Economic expansion set a record for longevity, and—except for higher gasoline prices during summer 2000, stemming from higher crude oil prices—inflation continued to be relatively low. By 2000, there was additional evidence that productivity growth had improved substantially since the mid-1990s, boosting living standards while helping to hold down increases in costs and prices despite very tight labor markets.

In 2000, Hispanics replaced African Americans as the largest minority group in the United States. (Hispanics numbered 35.3 million in 2000, or 12.5% of the population, compared with 34.7 million blacks, or 12.3% of the population.)

The 2000 presidential election was one of the closest in US history, pitting Democratic vice president Al Gore against Republican Party candidate George W. Bush, son of former president George H. W. Bush. The vote count in Florida became the determining factor in the 7 November election, as each candidate need-

ed to obtain the state's 25 electoral college votes in order to capture the 270 needed to win the presidency. When in the early hours of 8 November Bush appeared to have won the state's 25 votes, Gore called Bush to concede the election. He soon retracted the concession, however, after the extremely thin margin of victory triggered an automatic recount of the vote in Florida. The Democrats subsequently mounted a series of legal challenges to the vote count in Florida, which favored Bush. Eventually, the US Supreme Court, in *Bush v. Gore*, was summoned to rule on the election. On 12 December 2000, the Court, divided 5–4, reversed the Florida state supreme court decision that had ordered new recounts called for by Al Gore. George W. Bush was declared president. Gore had won the popular vote, however, capturing 48.4% of votes cast to Bush's 47.9%.

Once inaugurated, Bush called education his top priority, stating that “no child should be left behind” in America. He affirmed support for Medicare and Social Security, and called for pay and benefit increases for the military. He called upon charities and faith-based community groups to aid the disadvantaged. Bush announced a \$1.6 trillion tax cut plan (subsequently reduced to \$1.35 trillion) in his first State of the Union Address as an economic stimulus package designed to respond to an economy that had begun to falter. He called for research and development of a missile-defense program, and warned of the threat of international terrorism.

The threat of international terrorism was made all too real on 11 September 2001, when 19 hijackers crashed 4 passenger aircraft into the North and South towers of the World Trade Center, the Pentagon, and a field in Stony Creek Township in Pennsylvania. The World Trade Center towers were destroyed. Approximately 3,000 people were confirmed or reported dead as a result of all four 11 September 2001 attacks. The terrorist organization al-Qaeda, led by Saudi-born Osama bin Laden, was believed to be responsible for the attacks, and a manhunt for bin Laden began.

On 7 October 2001, the United States and Britain launched air strikes against known terrorist training camps and military installations within Afghanistan, ruled by the Taliban regime that supported the al-Qaeda organization. The air strikes were supported by leaders of the European Union and Russia, as well as other nations. By December 2001, the Taliban were defeated, and Afghan leader Hamid Karzai was chosen to lead an interim administration for the country. Remnants of al-Qaeda still remained in Afghanistan and the surrounding region, and a year after the 2001 offensive more than 10,000 US soldiers remained in Afghanistan to suppress efforts by either the Taliban or al-Qaeda to regroup. As of 2005, Allied soldiers continued to come under periodic attack in Afghanistan.

As a response to the 11 September 2001 terrorist attacks, the US Congress that October approved the USA Patriot Act, proposed by the Bush administration. The act gave the government greater powers to detain suspected terrorists (or also immigrants), to counter money-laundering, and increase surveillance by domestic law enforcement and international intelligence agencies. Critics claimed the law did not provide for the system of checks and balances that safeguard civil liberties in the United States.

Beginning in late 2001, corporate America suffered a crisis of confidence. In December 2001, the energy giant Enron Corporation declared bankruptcy after massive false accounting practices

came to light. Eclipsing the Enron scandal, telecommunications giant WorldCom in June 2002 disclosed that it had hid \$3.8 billion in expenses over 15 months. The fraud led to WorldCom's bankruptcy, the largest in US history (the company had \$107 billion in assets).

In his January 2002 State of the Union Address, President Bush announced that Iran, Iraq, and North Korea constituted an “axis of evil,” sponsoring terrorism and threatening the United States and its allies with weapons of mass destruction. Throughout 2002, the United States pressed its case against Iraq, stating that the Iraqi regime had to disarm itself of weapons of mass destruction. In November 2002, the UN Security Council passed Resolution 1441, calling upon Iraq to disarm itself of any chemical, biological, or nuclear weapons it might possess and to allow for the immediate return of weapons inspectors (they had been expelled in 1998). UN and IAEA (International Atomic Energy Agency) weapons inspectors returned to Iraq, but the United States and the United Kingdom expressed dissatisfaction with their progress, and indicated military force might be necessary to remove the Iraqi regime, led by Saddam Hussein. France and Russia, permanent members of the UN Security Council, and Germany, a nonpermanent member, in particular, opposed the use of military force. The disagreement caused a diplomatic rift in the West that was slow to repair.

After diplomatic efforts at conflict resolution failed by March 2003, the United States, on 19 March, launched air strikes against targets in Baghdad and war began. On 9 April, Baghdad fell to US forces, and work began on restoring basic services to the Iraqi population, including providing safe drinking water, electricity, and sanitation. On 1 May, President Bush declared major combat operations had been completed. Iraqi dictator Saddam Hussein was captured by US forces on 13 December 2003 and placed in custody.

In May 2004, the Abu Ghraib scandal erupted. Photographs of US soldiers engaged in acts of abuse—including physical, sexual, and psychological—against Iraqi prisoners being held at the Abu Ghraib military prison outside Baghdad were made public. The fact that the prison had been a place of torture and execution under Saddam Hussein's rule made the abuse seem even more degrading. Seven US suspects were named for carrying out the abuse; most were given prison sentences on charges ranging from conspiracy to assault, but some thought higher-ranking officials, including Secretary of Defense Donald Rumsfeld, should resign as well.

US forces increasingly became the targets of attacks in Iraq as an insurgency against the US military presence began. By late 2005, nearly 1,900 US soldiers had been killed since major combat operations were declared over on 1 May 2003. Some 138,000 US troops remained in Iraq in late 2005, and that number was expected to increase as a referendum on a new Iraqi constitution in October 2005 and national elections in December 2005 were to be held.

The 2004 presidential election was held on 2 November. President George W. Bush and Vice President Dick Cheney defeated Democratic challengers John F. Kerry and John R. Edwards. Bush received approximately 3 million more popular votes than Kerry, and won the electoral vote 286 to 251. (One electoral vote went to John Edwards when an elector pledged to Kerry voted for “John Edwards” instead.) The vote in Ohio was the deciding factor, and

upon conceding Ohio, Kerry conceded the election. The campaign was run on such issues as terrorism, the War in Iraq, the economy, and to a lesser extent issues of morality and values—antigay marriage measures were on the ballots in 11 states, and all passed.

In August 2005, Hurricane Katrina landed on the Gulf Coast of the United States, in what was one of the worst natural disasters in US history. The city of New Orleans, Louisiana, was evacuated, but some 150,000 people were unable to leave before the storm hit. A day after the storm appeared to have bypassed the city's center, levees were breached by the storm surge and water submerged the metropolis. Rescuers initially ignored the bodies of the dead in the search to find the living. Those unable to leave the city were sheltered in the Louisiana Superdome and New Orleans Convention Center; air conditioning, electricity, and running water failed, making for unsanitary and uncomfortable conditions. They were later transferred to other shelters, including the Houston Astrodome. Looting, shootings, and carjackings exacerbated already devastating conditions. The costs of the hurricane and flooding were exceedingly high in terms of both loss of life and economic damage: more than 1,000 people died and damages were estimated to reach \$200 billion. Katrina had global economic consequences, as imports, exports, and oil supplies—including production, importation, and refining—were disrupted. The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security, and President Bush were criticized in varying degrees for their lack of adequate response to the disaster. FEMA director Michael D. Brown resigned his position amid the furor. Race and class issues also came to the fore, as the majority of New Orleans residents unable to evacuate the city and affected by the catastrophe were poor and African American.

### 13 GOVERNMENT

The Constitution of the United States, signed in 1787, is the nation's governing document. In the first 10 amendments to the Constitution, ratified in 1791 and known as the Bill of Rights, the federal government is denied the power to infringe on rights generally regarded as fundamental to the civil liberties of the people. These amendments prohibit the establishment of a state religion and the abridgment of freedom of speech, press, and the right to assemble. They protect all persons against unreasonable searches and seizures, guarantee trial by jury, and prohibit excessive bail and cruel and unusual punishments. No person may be required to testify against himself, nor may he be deprived of life, liberty, or property without due process of law. The 13th Amendment (1865) banned slavery; the 15th (1870) protected the freed slaves' right to vote; and the 19th (1920) guaranteed the franchise to women. In all, there have been 27 amendments, the last of which, proposed in 1789 but ratified in 1992, denied the variation of the compensation of Senators and Representatives until an election intervened. The Equal Rights Amendment (ERA), approved by Congress in 1972, would have mandated equality between the sexes; only 35 of the required 38 states had ratified the ERA by the time the ratification deadline expired on 30 June 1982.

The United States has a federal form of government, with the distribution of powers between the federal government and the states constitutionally defined. The legislative powers of the federal government are vested in Congress, which consists of the House of Representatives and the Senate. There are 435 members

of the House of Representatives. Each state is allotted a number of representatives in proportion to its population as determined by the decennial census. Representatives are elected for two-year terms in every even-numbered year. A representative must be at least 25 years old, must be a resident of the state represented, and must have been a citizen of the United States for at least seven years. The Senate consists of two senators from each state, elected for six-year terms. Senators must be at least 30 years old, must be residents of the states from which they are elected, and must have been citizens of the United States for at least nine years. One-third of the Senate is elected in every even-numbered year.

Congress legislates on matters of taxation, borrowing, regulation of international and interstate commerce, formulation of rules of naturalization, bankruptcy, coinage, weights and measures, post offices and post roads, courts inferior to the Supreme Court, provision for the armed forces, among many other matters. A broad interpretation of the "necessary and proper" clause of the Constitution has widened considerably the scope of congressional legislation based on the enumerated powers.

A bill that is passed by both houses of Congress in the same form is submitted to the president, who may sign it or veto it. If the president chooses to veto the bill, it is returned to the house in which it originated with the reasons for the veto. The bill may become law despite the president's veto if it is passed again by a two-thirds vote in both houses. A bill becomes law without the president's signature if retained for 10 days while Congress is in session. After Congress adjourns, if the president does not sign a bill within 10 days, an automatic veto ensues.

The president must be "a natural born citizen" at least 35 years old, and must have been a resident of the United States for 14 years. Under the 22nd Amendment to the Constitution, adopted in 1951, a president may not be elected more than twice. Each state is allotted a number of electors based on its combined total of US senators and representatives, and, technically, it is these electors who, constituted as the electoral college, cast their vote for president, with all of the state's electoral votes customarily going to the candidate who won the largest share of the popular vote of the state (the District of Columbia also has three electors, making a total of 538 votes). Thus, the candidate who wins the greatest share of the popular vote throughout the United States may, in rare cases, fail to win a majority of the electoral vote. If no candidate gains a majority in the electoral college, the choice passes to the House of Representatives.

The vice president, elected at the same time and on the same ballot as the president, serves as ex officio president of the Senate. The vice president assumes the power and duties of the presidency on the president's removal from office or as a result of the president's death, resignation, or inability to perform his duties. In the case of a vacancy in the vice presidency, the president nominates a successor, who must be approved by a majority in both houses of Congress. The Congress has the power to determine the line of presidential succession in case of the death or disability of both the president and vice president.

Under the Constitution, the president is enjoined to "take care that the laws be faithfully executed." In reality, the president has a considerable amount of leeway in determining to what extent a law is or is not enforced. Congress's only recourse is impeachment, to which it has resorted only three times, in proceedings

against presidents Andrew Johnson, Richard Nixon, and Bill Clinton. Both the president and the vice president are removable from office after impeachment by the House and conviction at a Senate trial for “treason, bribery, or other high crimes and misdemeanors.” The president has the power to grant reprieves and pardons for offenses against the United States except in cases of impeachment.

The president nominates and “by and with the advice and consent of the Senate” appoints ambassadors, public ministers, consuls, and all federal judges, including the justices of the Supreme Court. As commander in chief, the president is ultimately responsible for the disposition of the land, naval, and air forces, but the power to declare war belongs to Congress. The president conducts foreign relations and makes treaties with the advice and consent of the Senate. No treaty is binding unless it wins the approval of two-thirds of the Senate. The president’s independence is also limited by the House of Representatives, where all money bills originate.

The president also appoints as his cabinet, subject to Senate confirmation, the secretaries who head the departments of the executive branch. As of 2005, the executive branch included the following cabinet departments: Agriculture (created in 1862), Commerce (1913), Defense (1947), Education (1980), Energy (1977), Health and Human Services (1980), Housing and Urban Development (1965), Interior (1849), Justice (1870), Labor (1913), State (1789), Transportation (1966), Treasury (1789), Veterans’ Affairs (1989), and Homeland Security (2002). The Department of Defense—headquartered in the Pentagon, the world’s largest office building—also administers the various branches of the military: Air Force, Army, Navy, defense agencies, and joint-service schools. The Department of Justice administers the Federal Bureau of Investigation, which originated in 1908; the Central Intelligence Agency (1947) is under the aegis of the executive office. Among the several hundred quasi-independent agencies are the Federal Reserve System (1913), serving as the nation’s central bank, and the major regulatory bodies, notably the Environmental Protection Agency (1970), Federal Communications Commission (1934), Federal Power Commission (1920), Federal Trade Commission (1914), and Interstate Commerce Commission (1887).

Regulations for voting are determined by the individual states for federal as well as for local offices, and requirements vary from state to state. In the past, various southern states used literacy tests, poll taxes, “grandfather” clauses, and other methods to disfranchise black voters, but Supreme Court decisions and congressional measures, including the Voting Rights Act of 1965, more than doubled the number of black registrants in Deep South states between 1964 and 1992. In 1960, only 29.1% of the black voting-age population was registered to vote; by the mid-1990s, that percentage had risen to over 65%.

As of the November 2004 presidential election, there were over 16 million registered African American voters (64.4% of those African Americans eligible to vote). The number of registered Hispanic voters increased from 2.5 million in 1972 to 9 million in 2004 (34.3% of eligible Hispanic voters). Sixty-four percent of eligible voters cast ballots in the 2004 presidential election, up from 60% in 2000. Voter registration was reported to be 72% nationwide. The next presidential election was to be held November 2008.

## <sup>14</sup>POLITICAL PARTIES

Two major parties, Democratic and Republican, have dominated national, state, and local politics since 1860. These parties are made up of clusters of small autonomous local groups primarily concerned with local politics and the election of local candidates to office. Within each party, such groups frequently differ drastically in policies and beliefs on many issues, but once every four years, they successfully bury their differences and rally around a candidate for the presidency. Minority parties have been formed at various periods in US political history, but most have generally allied with one of the two major parties, and none has achieved sustained national prominence. The most successful minority party in recent decades—that of Texas billionaire Ross Perot in 1992—was little more than a protest vote. Various extreme groups on the right and left, including a small US Communist Party, have had little political significance on a national scale; in 1980, the Libertarian Party became the first minor party since 1916 to appear on the ballot in all 50 states. The Green Party increased its showing in the 2000 election, with presidential candidate Ralph Nader winning 2.7% of the vote. Independent candidates have won state and local office, but no candidate has won the presidency without major party backing.

Traditionally, the Republican Party is more solicitous of business interests and gets greater support from business than does the Democratic Party. A majority of blue-collar workers, by contrast, have generally supported the Democratic Party, which favors more lenient labor laws, particularly as they affect labor unions; the Republican Party often (though not always) supports legislation that restricts the power of labor unions. Republicans favor the enhancement of the private sector of the economy, while Democrats generally urge the cause of greater government participation and regulatory authority, especially at the federal level.

Within both parties there are sharp differences on a great many issues; for example, northeastern Democrats in the past almost uniformly favored strong federal civil rights legislation, which was anathema to the Deep South; eastern Republicans in foreign policy are internationalist-minded, while Midwesterners of the same party constituted from 1910 through 1940 the hard core of isolationist sentiment in the country. More recently, “conservative” headings have been adopted by members of both parties who emphasize decentralized government power, strengthened private enterprise, and a strong US military posture overseas, while the designation “liberal” has been applied to those favoring an increased federal government role in economic and social affairs, disengagement from foreign military commitments, and safeguards for civil liberties.

President Nixon’s resignation and the accompanying scandal surrounding the Republican Party hierarchy had a telling, if predictable, effect on party morale, as indicated by Republican losses in the 1974 and 1976 elections. The latent consequences of the Vietnam and Watergate years appeared to take their toll on both parties, however, in growing apathy toward politics and mistrust of politicians among the electorate. Ronald Reagan’s successful 1980 presidential bid cut into traditional Democratic strongholds throughout the United States, as Republicans won control of the US Senate and eroded state and local Democratic majorities. On the strength of an economic recovery, President Reagan won reelection in November 1984, carrying 49 of 50 states (with a com-

bined total of 525 electoral votes) and 58.8% of the popular vote; the Republicans retained control of the Senate, but the Democrats held on to the House. Benefiting from a six-year expansion of the economy, Republican George H.W. Bush won 54% of the vote in 1988. As Reagan had, Bush successfully penetrated traditionally Democratic regions. He carried every state in the South as well as the industrial states of the North.

Bush's approval rating reached a high of 91% in March of 1991 in the wake of the Persian Gulf War. By July of 1992, however, that rating had plummeted to 25%, in part because Bush appeared to be disengaged from domestic issues, particularly the 1991 recession. Bill Clinton, governor of Arkansas and twenty years younger than Bush, presented himself to the electorate as a "New Democrat." He took more moderate positions than traditional New Deal Democrats, including calling for a middle-class tax cut, welfare reform, national service, and such traditionally Republican goals as getting tough on crime. The presidential race took on an unpredictable dimension with the entrance of Independent Ross Perot, a Texas billionaire. Perot, who attacked the budget deficit and called for shared sacrifice, withdrew from the race in July and then re-entered it in October. Clinton won the election with 43% of the vote, Bush received 38%, and Perot captured 18%, more than any third-party presidential candidate since Theodore Roosevelt in 1912. As of 1992, Democrats enjoyed a large advantage over Republicans in voter registration, held both houses of congress, had a majority of state governorships, and controlled most state legislative bodies. In 1996 Bill Clinton became the first Democratic president since Franklin Roosevelt to be elected to a second term, with 49% of the popular vote to 41% for Republican Bob Dole, and 8% for Ross Perot, who ran as a Reform Party candidate. Republicans retained control of the House and Senate.

Aided by a growing climate of conservatism on moral issues and popular discontent with the pace of economic recovery from the recent recession, the Republicans accomplished an historic upset in the 1994 midterm elections, gaining control of both houses of Congress for the first time since 1952. They gained 52 seats in the House, for a majority of 230–204, and 8 seats in the Senate, for a majority that came to 53–47 once Democrat Richard Shelby of Alabama changed parties shortly after the election. The Republicans also increased their power at the state level, winning 11 governorships, for a national total of 30. The number of state legislatures under Republican control increased from 8 to 19, with 18 controlled by the Democrats and 12 under split control. After the 1998 election, the Republican majority had eroded slightly in the House, with the 106th Congress including 223 Republicans, 210 Democrats, and 2 Independents; the Senate included 55 Republicans and 45 Democrats.

The major candidates in the 2000 presidential election were Republican George W. Bush, son of former president George H.W. Bush; his vice presidential running mate was Dick Cheney. The Democratic candidate was Vice President Al Gore, Jr. (Clinton administration 1992–2000). Gore chose Joseph Lieberman, senator from Connecticut, as his running mate. Lieberman, an Orthodox Jew, became the first Jew to run for national office. Following the contested presidential election of 2000, George W. Bush emerged as president following a ruling by the US Supreme Court. Gore won the popular vote, with 48.4%, to 47.9% for Bush, but Bush won the electoral college vote, 271–266, with one blank vote in the

electoral college cast. Sectional and demographic differences were evident in the 2000 election, with the Northeast, parts of the Midwest, the Pacific states, and most urban areas voting Democratic, and the South, West, and rural communities voting Republican.

Following the November 2002 mid-term elections, Republicans held 229 of 435 seats in the House of Representatives, and there were 205 Democrats and 1 independent in the House. The Republicans held an extremely thin margin in the Senate, of 51 seats, to the Democrats' 48. There was one independent in the Senate, former Republican Jim Jeffords. Following the election, Nancy Pelosi became the Democratic majority leader in the House of Representatives, the first woman to head either party in Congress. As a result of the 2002 election, there were 60 women, 37 African Americans, and 22 Hispanics in the House of Representatives, and 14 women in the Senate. There were no African American or Hispanic senators following the 2002 election.

The 2004 presidential election was won by incumbent George W. Bush and his running mate Dick Cheney. They defeated Democrats John F. Kerry and John Edwards. Bush received 286 electoral votes, Kerry 251, and Edwards 1 when an elector wrote the name "John Edwards" in on the electoral ballot. Bush received a majority of the popular vote—50.73%, to Kerry's 48.27%—or three million more votes than Kerry. Voter turnout was the highest since 1968, at 64%. The composition of the 109th Congress after the 2004 election was as follows: 55 Republicans, 44 Democrats, and 1 Independent in the Senate, and 232 Republicans, 202 Democrats, and 1 independent in the House of Representatives. The next elections for the Senate and House of Representatives were to be held November 2006.

The 1984 election marked a turning point for women in national politics. Geraldine A. Ferraro, a Democrat, became the first female vice presidential nominee of a major US political party; no woman has ever captured a major-party presidential nomination. In the 109th Congress (2005–06), 14 women served in the US Senate, and 68 women held seats in the US House of Representatives (including delegates).

The 1984 presidential candidacy of Jesse L. Jackson, election, the first African American ever to win a plurality in a statewide presidential preference primary, likewise marked the emergence of African Americans as a political force, especially within the Democratic Party. In 1992 an African American woman, Democrat Carol Moseley Braun of Illinois, won election to the Senate, becoming the first black senator; Moseley Braun lost her reelection bid in 1998. She was a candidate for president in 2004.

There were 42 African Americans in the House of Representatives and one in the Senate in the 109th Congress. Twenty-six Hispanics were serving in the House and two in the Senate, a record number. Eight members of Congress were of Asian/Hawaiian/or other Pacific Islander ethnicity, six in the House of Representatives and two in the Senate. There was one Native American in the House. (These numbers include delegates.)

## 15 LOCAL GOVERNMENT

Governmental units within each state comprise counties, municipalities, and such special districts as those for water, sanitation, highways, and parks and recreation. There are more than 3,000 counties in the United States; more than 19,000 municipalities, including cities, villages, towns, and boroughs; nearly 15,000 school

districts; and at least 31,000 special districts. Additional townships, authorities, commissions, and boards make up the rest of the nearly 85,000 local governmental units.

The 50 states are autonomous within their own spheres of government, and their autonomy is defined in broad terms by the 10th Amendment to the US Constitution, which reserves to the states such powers as are not granted to the federal government and not denied to the states. The states may not, among other restrictions, issue paper money, conduct foreign relations, impair the obligations of contracts, or establish a government that is not republican in form. Subsequent amendments to the Constitution and many Supreme Court decisions added to the restrictions placed on the states. The 13th Amendment prohibited the states from legalizing the ownership of one person by another (slavery); the 14th Amendment deprived the states of their power to determine qualifications for citizenship; the 15th Amendment prohibited the states from denying the right to vote because of race, color, or previous condition of servitude; and the 19th, from denying the vote to women.

Since the Civil War, the functions of the state have expanded. Local business—that is, business not involved in foreign or interstate commerce—is regulated by the state. The states create subordinate governmental bodies such as counties, cities, towns, villages, and boroughs, whose charters they either issue or, where home rule is permitted, approve. States regulate employment of children and women in industry, and enact safety laws to prevent industrial accidents. Unemployment insurance is a state function, as are education, public health, highway construction and safety, operation of a state highway patrol, and various kinds of personal relief. The state and local governments still are primarily responsible for providing public assistance, despite the large part the federal government plays in financing welfare.

Each state is headed by an elected governor. State legislatures are bicameral except Nebraska's, which has been unicameral since 1934. Generally, the upper house is called the senate, and the lower house the house of representatives or the assembly. Bills must be passed by both houses, and the governor has a suspensive veto, which usually may be overridden by a two-thirds vote.

The number, population, and geographic extent of the more than 3,000 counties in the United States—including the analogous units called boroughs in Alaska and parishes in Louisiana—show no uniformity from state to state. The county is the most conspicuous unit of rural local government and has a variety of powers, including location and repair of highways, county poor relief, determination of voting precincts and of polling places, and organization of school and road districts. City governments, usually headed by a mayor or city manager, have the power to levy taxes; to borrow; to pass, amend, and repeal local ordinances; and to grant franchises for public service corporations. Township government through an annual town meeting is an important New England tradition.

From the 1960s into the 21st century, a number of large cities began to suffer severe fiscal crises brought on by a combination of factors. Loss of tax revenues stemmed from the migration of middle-class residents to the suburbs and the flight of many small and large firms seeking to avoid the usually higher costs of doing business in urban areas. Low-income groups, many of them unskilled blacks and Hispanic migrants, came to constitute large segments

of city populations, placing added burdens on locally funded welfare, medical, housing, and other services without providing the commensurate tax base for additional revenues.

## <sup>16</sup>JUDICIAL SYSTEM

The Supreme Court, established by the US Constitution, is the nation's highest judicial body, consisting of the chief justice of the United States and eight associate justices. All justices are appointed by the president with the advice and consent of the Senate. Appointments are for life "during good behavior," otherwise terminating only by resignation or impeachment and conviction.

The original jurisdiction of the Supreme Court is relatively narrow; as an appellate court, it is open to appeal from decisions of federal district courts, circuit courts of appeals, and the highest courts in the states, although it may dismiss an appeal if it sees fit to do so. The Supreme Court, by means of a writ of certiorari, may call up a case from a district court for review. Regardless of how cases reach it, the Court enforces a kind of unity on the decisions of the lower courts. It also exercises the power of judicial review, determining the constitutionality of state laws, state constitutions, congressional statutes, and federal regulations, but only when these are specifically challenged.

The Constitution empowers Congress to establish all federal courts inferior to the Supreme Court. On the lowest level and handling the greatest proportion of federal cases are the district courts—including one each in Puerto Rico, Guam, the Virgin Islands, the Northern Mariana Islands, and the District of Columbia—where all offenses against the laws of the United States are tried. Civil actions that involve cases arising under treaties and laws of the United States and under the Constitution, where the amount in dispute is greater than \$5,000, also fall within the jurisdiction of the district courts. District courts have no appellate jurisdiction; their decisions may be carried to the courts of appeals, organized into 13 circuits. These courts also hear appeals from decisions made by administrative commissions. For most cases, this is usually the last stage of appeal, except where the court rules that a statute of a state conflicts with the Constitution of the United States, with federal law, or with a treaty. Special federal courts include the Court of Claims, Court of Customs and Patent Appeals, and Tax Court.

State courts operate independently of the federal judiciary. Most states adhere to a court system that begins on the lowest level with a justice of the peace and includes courts of general trial jurisdiction, appellate courts, and, at the apex of the system, a state supreme court. The court of trial jurisdiction, sometimes called the county or superior court, has both original and appellate jurisdiction; all criminal cases (except those of a petty kind) and some civil cases are tried in this court. The state's highest court, like the Supreme Court of the United States, interprets the constitution and the laws of the state.

The grand jury is a body of from 13 to 24 persons that brings indictments against individuals suspected of having violated the law. Initially, evidence is presented to it by either a justice of the peace or a prosecuting county or district attorney. The trial or petit jury of 12 persons is used in trials of common law, both criminal and civil, except where the right to a jury trial is waived by consent of all parties at law. It judges the facts of the case, while the court is concerned exclusively with questions of law. The US accepts the

compulsory jurisdiction of the International Court of Justice with reservations.

## 17 ARMED FORCES

The armed forces of the United States of America in 2005 numbered 1.473 million on active duty and 1.29 million in the Ready Reserve, a category of participation that allows regular training with pay and extended active duty periods for training. Membership in all US armed forces is voluntary and has been since 1973 when conscription expired as the Vietnam war was winding down. The active duty force includes 196,100 women, who serve in all grades and all occupational specialties except direct ground combat units and some aviation billets.

In the 1990s, the armed forces reduced their personnel numbers and force structure because of the diminished threat of a nuclear war with the former Soviet Union or a major conflict in central Europe. Despite the interlude of the Gulf War, 1990–91, the force reductions continued throughout the decade, forcing some restructuring of the active duty forces, with emphasis on rapid deployment to deter or fight major regional conflicts much like the Gulf War, in Korea, elsewhere in the Middle East, or Latin America (e.g. Cuba). The conventional force debate centered on whether the United States could or should maintain forces to fight two regional conflicts simultaneously. In the spring of 1999, the United States took part in the NATO air campaign in response to the crisis in Kosovo, and the ensuing US participation in peacekeeping operations in the region brought with it the prospect of another long-term overseas deployment.

For the purposes of administration, personnel management, logistics, and training, the traditional four military services in the Department of Defense remain central to strategic planning. The US Army numbers 502,000 soldiers on active duty, and are deployed into 10 divisions (two armored, four mechanized infantry, two light infantry, one air assault and one airborne), as well as into various armored cavalry, aviation, artillery, signals, psychological operations, ranger, Special Forces, civil affairs and air defense units. Army missions involving special operations are given to Special Forces groups, an airborne ranger regiment, an aviation group, and a psychological warfare group, with civil affairs and communications support units. The Army had 7,620 main battle tanks, 6,719 infantry fighting vehicles, 14,900 armored personnel carriers, 6,530 towed or self-propelled artillery pieces, some 268 fixed wing aircraft, and 4,431 armed and transport helicopters. The Army National Guard (355,900) emphasizes the preparation of combat units up to division size for major regional conflicts, while the Army Reserve (351,350) prepares individuals to fill active units or provide combat support or service support/technical/medical units upon mobilization. In addition, the National Guard retains a residual state role in suppressing civil disturbances and providing disaster relief.

The US Navy had 376,750 active personnel. The service has seen its role shift from nuclear strategic deterrence and control of sea routes to Europe and Asia, to the projection of naval power from the sea. Naval task forces normally combine three combat elements: air, surface, and subsurface. The Navy had up to 80 nuclear-powered submarines, that consisted of 16 strategic ballistic missile (SSBN) and 64 tactical/attack (SSGN and SSN) submarines. The latter ships can launch cruise missiles at land targets.

As of 2005, naval aviation was centered on 12 carriers (nine nuclear-powered) and 11 carrier aircraft wings, which included armed ASW helicopters and armed long-range ASW patrol aircraft, as well as a large fleet of communications and support aircraft. The Navy controlled 983 combat capable fixed wing aircraft and 608 helicopters of all types. Naval aviation reserves provided additional wings for carrier deployment. The surface force included 27 cruisers (22 with advanced anti-air suites), 49 destroyers, 30 frigates, 38 amphibious ships, 26 mine warfare ships, and 21 patrol and coastal combatants. More ships are kept in ready reserve or were manned by surface line reserve units. The fleet support force also included specialized ships for global logistics that are not base-dependent.

The Marine Corps, a separate branch of the Navy, was organized into three active divisions and three aircraft wings of the Fleet Marine Force, which also included three Force Service Support groups and special operations and antiterrorism units. The Marine Corps (173,350; 11,311 reservists) emphasized amphibious landings but trained for a wide-range of contingency employments. The Marines had 344 combat capable fixed wing aircraft, 304 helicopters of all types, 403 main battle tanks, 1,311 amphibious armored vehicles, and about 1,511 artillery pieces (926 towed).

As of 2005, the US Air Force had 379,500 active personnel, and was focused on becoming rapidly deployable rather than US-based. Almost all its aircraft are now dedicated to nonstrategic roles in support of forward deployed ground and naval forces. The Air Force stressed the missions of air superiority and interdiction with complementary operations in electronic warfare and reconnaissance, but it also included 29 transport squadrons. Air Force personnel manage the US radar and satellite early-warning and intelligence effort. The Air Force Reserve and Air National Guard (roughly 183,200 active reserves) provided a wide range of flying and support units, and its flying squadrons had demonstrated exceptional readiness and combat skills on contingency missions. Air Force reserves, for example, were the backbone of the air refueling and transport fleets.

The armed forces were deployed among a range of functional unified or specified commands for actual missions. Strategic forces were under the US Strategic Command, which was a combined service command that controlled the United States' strategic nuclear deterrence forces, which as of 2005, was made up of 550 land-based ICBMs, 16 Navy fleet ballistic missile submarines (SSBNs), and 85 operational long-range bombers (B-52s and B-1As). Land-based ICBMs are under the Air Force Space Command, while the long-range bomber force was under the Air Force Air Combat Command. The Strategic Command was also responsible for strategic reconnaissance and intelligence collection, and the strategic early warning and air defense forces. In 2002 the Treaty of Moscow was signed between the United States and Russia to reduce deployed nuclear weapons by two-thirds by the year 2012. As of 2002, the United States had more than 10,000 operational nuclear warheads.

The conventional forces were deployed to a mix of geographic and organizational commands, including the Atlantic, European, Central, Southern, Northern and Pacific commands, as well as to specific organizational commands such as the Transportation Command, Special Operations Command and Air Mobility Command. Major operational units are deployed to Germany, Korea,

and Japan as part of collective security alliances, in addition to forces stationed throughout other countries in the Middle East, Africa, Southeast Asia, Western and Eastern Europe, and Latin America. Approximately 19,000 US troops are stationed in Afghanistan with Operation Enduring Freedom.

Patterns of defense spending reflected the movement away from Cold War assumptions and confrontation with the former Soviet Union and the People's Republic of China. During the 1980s when defense spending hovered around \$300 billion a year and increased roughly 30% over the decade, defense spending absorbed roughly 6% of the gross domestic spending, 25% of federal spending, and 16% of net public spending. In the early 1990s, when the defense budget slipped back to the \$250–\$260 billion level, the respective percentages were 4.5, 18, and 11, the lowest levels of support for defense since the Korean War (1950). In 1999, the defense budget was \$276.7 billion or 3.2% of GDP. In 2005, US defense budget outlays totaled \$465 billion.

## 18 INTERNATIONAL COOPERATION

The United States is a charter member of the United Nations, having joined on 24 October 1945. The United States participates in ECE, ECLAC, ESCAP, and all the nonregional specialized agencies. The United States is a permanent member of the UN Security Council. The United States participates in numerous intergovernmental organizations, including the Asian Development Bank, the African Development Bank, OECD, APEC, the Colombo Plan, the Euro-Atlantic Partnership Council, the European Bank for Reconstruction and Development, G-5, G-7, G-8, the Paris Club (G-10), OSCE, and the WTO. Hemispheric agencies include the Inter-American Development Bank and the OAS. The country is an observer in the Council of Europe and a dialogue partner with ASEAN.

In 1992, the United States, Canada, and Mexico signed the North American Free Trade Agreement (NAFTA), creating a free-trade zone among the three countries. It was ratified by all three governments in 1993 and took effect the following year.

NATO is the principal military alliance to which the United States belongs. The ANZUS alliance was a mutual defense pact between Australia, New Zealand, and the United States; in 1986, following New Zealand's decision to ban US nuclear-armed or nuclear-powered ships from its ports, the United States renounced its ANZUS treaty security commitments to New Zealand. The country is a signatory of the 1947 Río Treaty, an inter-American security agreement. The United States has supported UN missions and operations in Kosovo (est. 1999), Liberia (est. 2003), Georgia (est. 1993), and Haiti (est. 2004). The United States belongs to the Nuclear Suppliers Group (London Group), the Zangger Committee, the Nuclear Energy Agency, and the Organization for the Prohibition of Chemical Weapons. It holds observer status in the European Organization for Nuclear Research (CERN).

In environmental cooperation, the United States is part of the Central American–US Joint Declaration (CONCAUSA), the Antarctic Treaty, Conventions on Air Pollution and Whaling, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

The US economy is the world's largest. In variety and quantity, the natural resources of the United States probably exceed those of any other nation, with the possible exception of the former Soviet Union. The United States is among the world's leading exporters of coal, wheat, corn, and soybeans. However, because of its vast economic growth, the United States depends increasingly on foreign sources for a long list of raw materials, including oil.

By the middle of the 20th century, the United States was a leading consumer of nearly every important industrial raw material. The industry of the United States produced about 40% of the world's total output of goods, despite the fact that the country's population comprised about 6% of the world total and its land area about 7% of the earth's surface.

In absolute terms the United States far exceeds every other nation in the size of its gross domestic product (GDP), which more than tripled between 1970 and 1983. In 1998 the nation's GDP in purchasing power parity terms (PPP) reached a record \$8.5 trillion in current dollars, with per capita GDP reaching \$31,500. Per capita GDP (PPP) stood at \$40,100 in 2004, and the nation's GDP (PPP) was \$11.75 trillion.

Inflation was not as significant a factor in the US economy in the 1990s and early 2000s as it was in the 1970s and 1980s. The US inflation rate tends to be lower than that of the majority of industrialized nations. For the period 1970–78, for example, consumer prices increased by an annual average of 6.7%, less than in every other Western country except Austria, Luxembourg, Switzerland, and West Germany, and well below the price increase in Japan. The double-digit inflation of 1979–81 came as a rude shock to most Americans, with economists and politicians variously blaming international oil price rises, federal monetary policies, and US government spending.

The United States entered the post–World War II era with the world's largest, and strongest, economy. Public confidence in both business and government was strong, the nation enjoyed the largest peacetime trade surplus in its history, and the gross national product grew to a record \$482.7 billion by the end of the 1950s. In the sixties the country enjoyed the most sustained period of economic expansion it had known, accompanied by rising productivity and low unemployment. Real income rose 50% during the decade, and US investment in foreign countries reached \$49 billion in 1965, up from \$11.8 billion in 1950. Big business and big government were both powerful forces in the economy during this period, when large industrial corporations accounted for vast portions of the national income, and the federal government expanded its role in such areas as social welfare, scientific research, space technology, and development of the nation's highway system.

After two decades of prosperity, Americans experienced an economic downturn in the 1970s, a period known for the unprecedented combination of lagging economic growth and inflation that gave birth to the term *stagflation*. Foreign competitors in Japan and Europe challenged the global dominance of American manufacturers, and oil crises in 1973–74 and 1979 shook public confidence in the institutions of both government and business. The forced bailouts of Chrysler and Lockheed were symbolic of the difficult transition to a new economic era, marked by the growing importance of the service sector and the ascendancy of small businesses.

During Ronald Reagan's first presidential term, from 1980 to 1984, the nation endured two years of severe recession followed by two years of robust recovery. The inflation rate was brought down, and millions of new jobs were created. The economic boom of the early and mid-eighties, however, coincided with a number of alarming developments. Federal budget deficits, caused by dramatic increases in the military budget and by rising costs of entitlement programs such as Medicaid and Medicare, averaged more than \$150 billion annually. By 1992, the total deficit reached \$290 billion, or \$1,150 for every American. In addition, corporate debt rose dramatically, and household borrowing grew twice as fast as personal income. The eighties also witnessed a crisis in the banking industry, caused by a combination of factors, including high inflation and interest rates, problem loans to developing countries, and speculative real estate ventures that caused thousands of banks to fail when the real estate boom of the early eighties collapsed.

The disparity between the affluent and the poor widened at the end of the 20th century. The share of the nation's income received by the richest 5% of American families rose from 18.6% in 1977 to 24.5% in 1990, while the share of the poorest 20% fell from 5.7% to 4.3%. Externally, the nation's trade position deteriorated, as a high level of foreign investment combined with an uncompetitive US dollar to create a ballooning trade deficit. In 1990, the American economy plunged into a recession. Factors contributing to the slump included rising oil prices following Iraq's invasion of Kuwait, a sharp increase in interest rates, and declining availability of credit. Output fell 1.6% and 1.7 million jobs were cut. Unemployment rose from 5.2% in 1989 to 7.5% in 1991, but had fallen to 4.5% by 1998.

The recovery that began in March 1991 inaugurated a sustained period of expansion that, as of mid-2000, was the third longest since World War II, characterized by moderation in the key areas of growth, inflation, unemployment, and interest rates. Real GDP growth, which fluctuated between 2% and 3.5% throughout the period, was 3.9% for 1998. After peaking at 7.5%, unemployment declined steadily throughout the early and mid-1990s, falling to 5.6% in 1995, 5.3% at the end of 1996, and in 1998, remaining below 5%. After 1993/94, inflation mostly remained under 3%. One exception to the generally moderate character of the economy was the stock market, which rose 60% between 1995 and 1997, buoyed by the combination of low unemployment and low inflation, as well as strong corporate earnings. Further cause for optimism was the bipartisan balanced-budget legislation enacted and signed into law in 1997. The plan, combining tax and spending cuts over a five-year period, was aimed at balancing the federal budget by 2002 for the first time since 1969. In early 2001, the government projected a budget surplus of \$275 billion for the fiscal year ending that September. That surplus would soon be reversed.

At the beginning of the 21st century, significant economic concerns—aside from the inevitable worry over how long the boom could last without an eventual downturn—included the nation's sizable trade deficit, the increasing medical costs of an aging population, and the failure of the strong economy to improve conditions for the poor. Since 1975, gains in household income were experienced almost exclusively by the top 20% of households. However, in the late 1990s and early 2000s, productivity was con-

tinuing to grow, inflation was relatively low, and the labor market was tight.

Economic growth came to a standstill in the middle of 2001, largely due to the end of the long investment boom, especially in the information technology sector. The economy was in recession in the second half of 2001, and the service sector was affected as well as manufacturing. The 11 September 2001 terrorist attacks on the United States exacerbated the poor economic situation. Average real GDP growth rose by only 0.3% in 2001. The US economy, which had driven global economic growth during the 1990s, became the cause of a worldwide economic downturn, including in the rest of North America, Europe, Japan, and in the developing economies of Latin America and Southeast Asia strongly influenced by trends in the US economy.

The economy began to recover, slowly, in 2002, with GDP growth estimated at 2.45%. Analysts attributed the modest recovery to the ability of business decision-makers to respond to economic imbalances based on real-time information, on deregulation, and on innovation in financial and product markets. Nevertheless, domestic confidence in the economy remained low, and coupled with major corporate failures (including Enron and WorldCom) and additional stock market declines, growth remained sluggish and uneven. Economic growth slowed at the end of 2002 and into 2003, and the unemployment rate rose to 6.3% in July 2003. The CPI inflation rate fell to under 1.5% at the beginning of 2003, which raised concerns over the risk of deflation. As well, there was a substantial rise in military spending as a result of the war in Iraq which began in March 2003.

Following the start of the war in Iraq, consumer spending rebounded, as did stock prices; the housing market remained strong; inflation was low; the dollar depreciated on world markets; additional tax cuts were passed; there was an easing of oil prices; and productivity growth was strong. Nevertheless, in 2003, the federal budget deficit was projected to reach \$455 billion, the largest shortfall on record.

The American economy grew at the rate of 4.3% in the third quarter of 2005, despite the ravages of Hurricane Katrina, which destroyed the port city of New Orleans and closed down a large portion of the energy industry. Unemployment hovered around 5% in 2005. Productivity had grown by 4.7%. But the nation's fast-growing economy had shaky underpinnings. Oil prices were at their highest level in real terms since the early 1980s, at \$53.27/barrel. The inflation rate, which ran above 4% in late 2005, was at its highest level since 1991 (although core inflation, which excludes volatile energy and food prices, was still relatively modest). Wage growth was sluggish, and the jobs market was lagging the recovery. The current account deficit ballooned to record levels, and consumer spending was increasingly tied to prices in the overinflated housing market. The government ran a deficit of \$412 billion in 2004, or 3.6% of GDP, but the deficit was forecast to narrow to \$331 billion in 2006. Analysts projected that US deficits would average about 3.5% of GDP until about 2015.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 the United States's gross domestic product (GDP) was estimated at \$12.4 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and com-

puted on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$41,800. The annual growth rate of GDP was estimated at 3.5%. The average inflation rate in 2005 was 3.2%. It was estimated that agriculture accounted for 1% of GDP, industry 20.7%, and services 78.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$3.031 billion or about \$10 per capita.

The World Bank reports that in 2003 household consumption in United States totaled \$7.385 trillion or about \$25,379 per capita based on a GDP of \$10.9 trillion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.7%. In 2001 it was estimated that approximately 13% of household consumption was spent on food, 9% on fuel, 4% on health care, and 6% on education. It was estimated that in 2004 about 12% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

The US labor force, including those who were unemployed, totaled 149.3 million in 2005. Of that total in that same year, farming, fishing and forestry accounted for 0.7% of the workforce, with manufacturing, extraction, transportation and crafts at 22.9%, managerial, professional and technical at 34.7%, sales and office at 25.4% and other services at 16.3%. Also that year, the unemployment rate was put at 5.1%. Earnings of workers vary considerably with type of work and section of country. In the first quarter of 2003, the national average wage was \$15.27 per hour for nonagricultural workers, with an average workweek of 33.8 hours. Workers in manufacturing had a national average wage of \$15.64, (including overtime), with the longest average workweek of all categories of workers at 40.4 hours in the first quarter of 2003.

In 2002, 13.2% of wage and salary workers were union members—16.1 million US citizens belonged to a union that year. In 1983, union membership was 20.1%. In 2002, there were 34 national labor unions with over 100,000 members, the largest being the National Educational Association with 2.7 million members as of 2003. The most important federation of organized workers in the United States is the American Federation of Labor–Congress of Industrial Organizations (AFL–CIO), whose affiliated unions had 13 million members as of 2003, down from 14.1 million members in 1992. The major independent industrial and labor unions and their estimated 2002 memberships are the International Brotherhood of Teamsters, 1,398,412, and the United Automobile Workers, some 710,000 (the majority of whom work for General Motors, Ford, and Daimler-Chrysler). Most of the other unaffiliated unions are confined to a single establishment or locality. US labor unions exercise economic and political influence not only through the power of strikes and slowdowns but also through the human and financial resources they allocate to political campaigns (usually on behalf of Democratic candidates) and through the selective investment of multibillion-dollar pension funds.

The National Labor Relations Act of 1935 (the Wagner Act), the basic labor law of the United States, was considerably modified by the Labor-Management Relations Act of 1947 (the Taft-Hart-

ley Act) and the Labor-Management Reporting and Disclosure Act of 1959 (the Landrum-Griffin Act). Closed-shop agreements, which require employers to hire only union members, are banned. The union shop agreement, however, is permitted, if it allows the hiring of nonunion members on the condition that they join the union within a given period of time.

As of 2003, 23 states had right-to-work laws, forbidding the imposition of union membership as a condition of employment. Under the Taft-Hartley Act, the president of the United States may postpone a strike for 90 days in the national interest. The act of 1959 requires all labor organizations to file constitutions, bylaws, and detailed financial reports with the Secretary of Labor, and stipulates methods of union elections. The National Labor Relations Board seeks to remedy or prevent unfair labor practices and supervises union elections, while the Equal Employment Opportunity Commission seeks to prevent discrimination in hiring, firing, and apprenticeship programs.

The number of work stoppages and of workers involved reached a peak in the late 1960s and early 1970s, declining steadily thereafter. In 2002, there were 19 major stoppages involving 46,000 workers resulting in 660,000 workdays idle, compared with 1995, when there were 31 major stoppages involving 191,500 workers resulting in 5,771,000 days idle; a major stoppage was defined as one involving 1,000 workers or more for a minimum of one day or shift.

## 2<sup>2</sup> AGRICULTURE

In 2004, the United States produced a substantial share of the world's agricultural commodities. Agricultural exports reached almost \$63.9 billion in 2004. The United States had an agricultural trade surplus of \$4 billion in 2004, 14th highest among the nations.

Between 1930 and 2004, the number of farms in the United States declined from 6,546,000 to an estimated 2,110,000. The total amount of farmland increased from 399 million hectares (986 million acres) in 1930 to 479 million hectares (1.18 billion acres) in 1959 but declined to 380 million hectares (938 million acres) in 2002. From 1930 to 2004, the size of the average farm tripled from 61 to 179 hectares (from 151 to 443 acres), a result of the consolidation effected by large-scale mechanized production. The farm population, which comprised 35% of the total US population in 1910, declined to 25% during the Great Depression of the 1930s, and dwindled to less than 2% by 2004.

A remarkable increase in the application of machinery to farms took place during and after World War II (1939–45). Tractors, trucks, milking machines, grain combines, corn pickers, and pick-up balers became virtual necessities in farming. In 1920 there was less than one tractor in use for every 400 hectares (1,000 acres) of cropland harvested; by 2003 there were five tractors per 400 hectares. Two other elements essential to US farm productivity are chemical fertilizers and irrigation. Fertilizers and lime represent more than 6% of farm operating expenses. Arable land under irrigation amounted to 12% of the total in 2003.

Substantial quantities of corn, the most valuable crop produced in the United States, are grown in almost every state; its yield and price are important factors in the economies of the regions where it is grown. Production of selected US crops in 2004 (in 1,000 metric tons), and their percent of world production were wheat,

58,737 (9.3%); corn, 299,917 (33.2%); rice, 10,469 (1.7%); soybeans, 85,013 (41.6%); cotton, 5,062 (20.5%); and tobacco, 398.8 (6.1%).

### 23 ANIMAL HUSBANDRY

The livestock population in 2005 included an estimated 95.8 million head of cattle, 60.6 million hogs, and 6.1 million sheep and lambs. That year, there were 1.9 billion chickens, and 88 million turkeys. Milk production totaled 80.1 million metric tons in that year, with Wisconsin, California, and New York together accounting for much of the total. Wisconsin, Minnesota, and California account for more than half of all US butter production, which totaled 608,900 metric tons in 2005; in that year, the United States was the world's largest producer of cheese, with almost 4.5 million metric tons (24% of the world's total). The United States produced an estimated 15% of the world's meat supply in 2005. In 2005, meat animals accounted for \$4.97 billion in exports; dairy and eggs, \$1.17 billion.

### 24 FISHING

The 2003 commercial catch was 5.48 million tons. Food fish make up 80% of the catch, and nonfood fish, processed for fertilizer and oil, 20%. Aquaculture accounts for about 10% of total production.

Alaska pollock, with landings of 1,524,904 tons, was the most important species in quantity among the commercial fishery landings in the United States in 2003. Other leading species by volume included Gulf menhaden, 522,195 tons; Atlantic menhaden, 203,263 tons; Pacific cod, 257,436 tons; North Pacific hake, 140,327 tons; and American cupped oyster, 183,940 tons. In 2003, exports of fish products totaled \$3,398 million (fourth after China, Thailand, and Norway).

Aquacultural production consists mostly of catfish, oysters, trout, and crayfish. In 2004, there were 1,147 catfish and 601 trout farms in the United States, with sales of \$425 million and \$64 million, respectively.

Pollution is a problem of increasing concern to the US fishing industry; dumping of raw sewage, industrial wastes, spillage from oil tankers, and blowouts of offshore wells are the main threats to the fishing grounds. Overfishing is also a threat to the viability of the industry in some areas, especially Alaska.

### 25 FORESTRY

US forestland covers about 226 million hectares (558.4 million acres), or 25% of the land area. Major forest regions include the eastern, central hardwood, southern, Rocky Mountain, and Pacific coast areas. The National Forest Service lands account for approximately 19% of the nation's forestland. Extensive tracts of land (4 million acres or more) are under ownership of private lumber companies in Alabama, Arkansas, Florida, Georgia, Maine, Oregon, and Washington. During 1990–2000, forested area increased by an annual average of 38,000 hectares (93,900 acres) per year.

Domestic production of roundwood during 2004 amounted to 458.3 million cu m (16.2 billion cu ft), or 1.7% of world production, of which softwoods accounted for roughly 60%. Other forest products in 2004 included 54.3 million metric tons of wood pulp, 83.6 million metric tons of paper and paperboard (excluding newsprint), and 44.2 million cu m (1.56 billion cu ft) of wood-

based panels. Rising petroleum prices in the late 1970s sparked a revival in the use of wood as home heating fuel, especially in the Northeast. Fuelwood and charcoal production amounted to 43.6 million cu m (1.5 billion cu ft) in 2004.

Throughout the 19th century, the federal government distributed forestlands lavishly as a means of subsidizing railroads and education. By the turn of the century, the realization that the forests were not inexhaustible led to the growth of a vigorous conservation movement, which was given increased impetus during the 1930s and again in the late 1960s. Federal timberlands are no longer open for private acquisition, although the lands can be leased for timber cutting and for grazing. In recent decades, the states also have moved in the direction of retaining forestlands and adding to their holdings when possible.

### 26 MINING

Rich in a variety of mineral resources, the United States was a world leader in the production of many important mineral commodities, such as aluminum, cement, copper, pig iron, lead, molybdenum, phosphates, potash, salt, sulfur, uranium, and zinc. The leading mineral-producing states were Arizona (copper, sand and gravel, portland cement, molybdenum); California (portland cement, sand and gravel, gold, boron); Michigan (iron ore, portland cement, sand and gravel, magnesium compounds); Georgia (clays, crushed and broken stone, portland and masonry cement, sand and gravel); Florida (phosphate rock, crushed and broken stone, portland cement, sand and gravel); Utah (copper, gold, magnesium metal, sand and gravel); Texas (portland cement, crushed and broken stone, magnesium metal, sand and gravel); and Minnesota (iron ore, construction and industrial sand and gravel, crushed and broken stone). Oklahoma and New Mexico were important for petroleum and natural gas, and Kentucky, West Virginia, and Pennsylvania, for coal. Iron ore supported the nation's most basic nonagricultural industry, iron and steel manufacture; the major domestic sources were in the Lake Superior area, with Minnesota and Michigan leading all other states in iron ore yields.

### 27 ENERGY AND POWER

The United States is the world's leading energy producer and consumer.

According to British Petroleum (BP), as of the end of 2003, the United States had proven oil reserves of 29.4 billion barrels. Oil production that year averaged 7.4 million barrels per day, with domestic demand averaging 20 million barrels per day. As a result, the United States in 2003 was a net oil importer. In 2003, imports of all oil products averaged 12.3 million barrels per day, of which crude oil accounted for an average of 9.7 million barrels per day. Refined oil production in 2003 averaged 17.8 million barrels per day.

At year-end in 2003, the United States had proven reserves of natural gas totaling 5.29 trillion cu m (186.9 trillion cu ft), according to BP. Gross production that year, according to the Energy Information Administration (EIA), totaled 24,056.00 billion cu ft. Of that amount in 2003, some 98 billion cu ft was vented or flared, and 3,548 billion cu ft was re-injected. Marketed production totaled 19,912 billion cu ft, with dry production at 19,036 billion cu ft. Demand in that same year for dry production totaled 22,375 billion cu ft. As with oil, the United States was a net importer of

natural gas. Imports of dry natural gas in 2003 totaled 3,996 billion cu ft, while dry exports totaled 692 billion cu ft, according to the EIA.

The United States had recoverable coal reserves of 246.6 billion metric tons at the end of 2004, according to BP. Of that amount, anthracite and bituminous coal reserves totaled 111.3 billion metric tons, with sub-bituminous and lignite reserves totaling 135.3 billion metric tons, according to BP. In 2003 according to the EIA, coal production by the United States totaled 1.1 billion short tons, of which 988 million short tons consisted of bituminous coal, with anthracite output totaling 1.3 million short tons. Lignite or brown coal output that year totaled 80.6 million short tons, according to the EIA.

In 2003, US electric power generation capacity by public and private generating plants totaled 932.832 million kW, of which 736.728 million kW of capacity belonged to conventional thermal fuel plants, followed by nuclear plant at 98.794 million kW. Hydroelectric capacity that year totaled 79.366 million kW, with geothermal/other capacity at 17.944 million kW. Electric power output in 2003 totaled 3,891.720 billion kWh, of which conventional thermal plants generated 2.76 billion kWh, followed by nuclear plants at 763.733 billion kWh, hydroelectric facilities at 275.806 billion kWh and geothermal/other facilities at 93.531 billion kWh.

During the 1980s, increasing attention was focused on the development of solar power, synthetic fuels, geothermal resources, and other energy technologies. Such energy conservation measures as mandatory automobile fuel-efficiency standards and tax incentives for home insulation were promoted by the federal government, which also decontrolled oil and gas prices in the expectation that a rise in domestic costs to world-market levels would provide a powerful economic incentive for consumers to conserve fuel. In 2001 the United States had 1,694 MW of installed wind power.

## 28 INDUSTRY

Although the United States remains one of the world's preeminent industrial powers, manufacturing no longer plays as dominant a role in the economy as it once did.

Between 1979 and 1998, manufacturing employment fell from 20.9 million to 18.7 million, or from 21.8% to 14.8% of national employment. Throughout the 1960s, manufacturing accounted for about 29% of total national income; by 1987, the proportion was down to about 19%. In 2002, manufacturing was experiencing a decline due to the recession that began in March 2001. In 2004, industry accounted for 19.7% of GDP. That year, 22.7% of the labor force was engaged in manufacturing, extraction, transportation, and crafts.

Industrial activity within the United States has been expanding southward and westward for much of the 20th century, most rapidly since World War II. Louisiana, Oklahoma, and especially Texas are centers of industrial expansion based on petroleum refining; aerospace and other high technology industries are the basis of the new wealth of Texas and California, the nation's leading manufacturing state. The industrial heartland of the United States is the east-north-central region, comprising Ohio, Indiana, Illinois, Michigan, and Wisconsin, with steelmaking and automobile manufacturing among the leading industries. The Middle At-

lantic states (New Jersey, New York, and Pennsylvania) and the Northeast are also highly industrialized; but of the major industrial states in these two regions, Massachusetts has taken the lead in reorienting itself toward such high-technology industries as electronics and information processing.

Large corporations are dominant especially in sectors such as steel, automobiles, pharmaceuticals, aircraft, petroleum refining, computers, soaps and detergents, tires, and communications equipment. The growth of multinational activities of US corporations has been rapid in recent decades.

The history of US industry has been marked by the introduction of increasingly sophisticated technology in the manufacturing process. Advances in chemistry and electronics have revolutionized many industries through new products and methods: examples include the impact of plastics on petrochemicals, the use of lasers and electronic sensors as measuring and controlling devices, and the application of microprocessors to computing machines, home entertainment products, and a variety of other industries. Science has vastly expanded the number of metals available for industrial purposes, notably such light metals as aluminum, magnesium, and titanium. Integrated machines now perform a complex number of successive operations that formerly were done on the assembly line at separate stations. Those industries have prospered that have been best able to make use of the new technology, and the economies of some states have been largely based on it.

In the 1980s and 1990s, the United States was the world leader in computer manufacturing. At the beginning of the 21st century, however, the high-tech manufacturing industry registered a decline. Semiconductor manufacturing had been migrating out of the United States to East Asian countries, especially China, Taiwan, and Singapore, and research and development in that sector declined from 1999–2003. Certain long-established industries—especially clothing and steelmaking—have suffered from outmoded facilities that (coupled with high US labor costs) have forced the price of their products above the world market level. In 2005, the United States was the world's third-leading steel producer (after China and Japan). Employment in the steel-producing industry fell from 521,000 in 1974 to 187,500 in 2002. Automobile manufacturing was an ailing industry in the 1980s, but rebounded in the 1990s. The "Big Three" US automakers—General Motors (GM), Ford, and Daimler-Chrysler—manufactured over 60% of the passenger cars sold in the United States in 1995. In 2005, however, General Motors (GM) announced it was cutting 30,000 North American manufacturing jobs, the deepest cuts since 1991, when GM eliminated 74,000 jobs over four years. Passenger car production, which had fallen from 7.1 million units in 1987 to 5.4 million in 1991, rose to 6.3 million by 1995 and to 8.3 million in 1999. In 2003, over 12 million motor vehicles were produced in the United States.

The United States had a total of 148 oil refineries as of January 2005, with a production capacity as of September 2004 of 17.1 million barrels per day. Crude oil and refined petroleum products are crucial imports, however.

## 29 SCIENCE AND TECHNOLOGY

In 2003, an estimated \$284.6 billion was spent on research and development (R&D). Since 1980, industry's share of funding for R&D has grown to exceed the share provided by the federal gov-

ernment. In 2003, the proportions were 63.1% from industry and 31.2% from the federal government, followed by 5.7% from higher education. As of 2002, national spending on R&D amounted to 2.67% of GDP. In that same year, high technology exports were valued at \$162.345 billion, or 32% of the country's manufactured exports. There were an estimated 4,099 scientists and engineers engaged in research and development per million people for the period 1990–2001.

In 1998 NASA's budget was \$9.9 billion. In 1960 NASA spent only \$1.1 billion. Launching of the space shuttle orbiter *Columbia* began in 1981; a fleet of four reusable shuttles, which would replace all other launch vehicles was planned. However, the January 1986 *Challenger* disaster, in which seven crew members died, cast doubt on the program. The three remaining shuttles were grounded, and the shuttles were redesigned for increased safety. A new shuttle, *Endeavour*, was built to take the place of *Challenger*. President Reagan, following the *Challenger* disaster, banned the shuttle from commercial use for nine years. The shuttle's return to space began with the launch of the shuttle *Atlantis* in September 1988. Following the catastrophic breakup of the space shuttle *Columbia* in February 2003, NASA suspended the launch schedule until the cause of the accident was determined.

The National Science Foundation (founded in 1950) is one of the chief government agencies funding scientific research. The American Association for the Advancement of Science (founded in 1848) promotes public understanding of science and technology. The National Academy of Sciences (founded in 1863) and the National Academy of Engineering (founded in 1964) are both headquartered in Washington, DC. In 1996, more than 95,000 students in the United States earned master's degrees in science and engineering. In 2002, of all bachelor's degrees awarded, 17.1% were in the sciences (natural, mathematics and computers, engineering).

### 30 DOMESTIC TRADE

Total retail sales for 2004 were \$3.5 trillion. Total e-commerce sales were estimated at \$69.2 billion, an increase of 23.5% over 2003. The growth of great chains of retail stores, particularly in the form of the supermarket, was one of the most conspicuous developments in retail trade following the end of World War II. Nearly

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

100,000 single-unit grocery stores went out of business between 1948 and 1958; the independent grocer's share of the food market dropped from 50% to 30% of the total in the same period. With the great suburban expansion of the 1960s emerged the planned shopping center, usually designed by a single development organization and intended to provide different kinds of stores in order to meet all the shopping needs of the particular area. Between 1974 and 2000, the square footage occupied by shopping centers in the United States grew at a far greater rate than the nation's population.

Installment credit is a major support for consumer purchases in the United States. Most US families own and use credit cards, and their frequency of use has grown significantly in the 1990s and 2000s with aggressive marketing by credit card companies which have made cards available to households that didn't qualify in the past. The number of credit cards per household in 2004 was 8. The number of credit cards in circulation in 2004 was 641 million. The average household credit card debt in the United States in 2004 was approximately \$8,650, and the total credit card debt in the United States in 2004 was some \$800 billion. The use of debit cards was expected to exceed the use of credit cards in 2005.

The US advertising industry is the world's most highly developed. Particularly with the expansion of television audiences, spending for advertising has increased almost annually to successive record levels. Advertising expenditures in 2003 reached an estimated \$249 billion, up from \$66.58 billion in 1982 and \$11.96 billion in 1960. Of the 2003 total, \$87.8 billion was spent in radio, broadcast television, and cable television; \$57.2 billion was spent on print media (newspapers and magazines); and internet advertising amounted to \$5.6 billion.

In 2003 merchant wholesalers had combined total sales of \$2.88 trillion.

### 31 FOREIGN TRADE

The volume of the US exports and imports exceeds that of any country. However, the value of US external sector as a percentage of GDP is comparatively low. The foreign trade position of the United States deteriorated in the 1980s as the United States became a debtor nation with a trade deficit that ballooned from \$24 billion to over \$100 billion by the end of the 1980s; by 2004, the trade deficit had reached an estimated \$618 billion, a 24% increase over 2003. Exports of goods and services totaled \$1.14 trillion in 2004, while imports totaled \$1.76 trillion. The gap in merchandise trade with China jumped some 31% to nearly \$162 billion in 2004, by far the largest gap than with any other trading partner. The United States' largest trading partners were Canada, Mexico, Japan, the United Kingdom, China, and Germany.

The United States' major exports include transistors, aircraft, motor vehicle parts, automobiles, computers, telecommunications equipment, medicines, chemicals, and soybeans, fruit, and corn. Major imports include computers, motor vehicle parts, automobiles, telecommunications equipment, office machines, electric power machinery, clothing medicines, furniture, toys, crude oil, and agricultural products.

### 32 BALANCE OF PAYMENTS

Since 1950, the United States has generally recorded deficits in its overall payments with the rest of the world, despite the fact that

(1) Detailed data are presented on a Census basis. The information needed to convert to a BOP basis is not available.

(2) Countries included in Euro Area are also included in European Union. See Page 27 of the FT-900 release for a list of countries.

(3) Selected countries are included in more than one area grouping. Indonesia is included in both OPEC and Pacific Rim;

Venezuela is included in both OPEC and Other South/Central America.

(4) The export totals reflect shipments of certain grains, oilseeds, and satellites that are not included in the country/area totals.

NOTE: For information on data sources, nonsampling errors and definitions, see the information section on page 27 of the FT-900 release, or at [www.census.gov/ft900](http://www.census.gov/ft900) or [www.bea.gov/bea/di/home/trade.htm](http://www.bea.gov/bea/di/home/trade.htm).

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

it had an unbroken record of annual surpluses up to 1970 on current-account goods, services, and remittances transactions. The balance of trade, in the red since 1975, reached a record deficit of \$618 billion in 2004. The current account deficit in 2004 was 5.5% of GDP, or an estimated \$635 billion.

The nation's stock of gold declined from a value of \$22.9 billion at the start of 1958 to \$10.5 billion as of 31 July 1971, only two weeks before President Nixon announced that the United States would no longer exchange dollars for gold. From 1990–2004, the value of the gold stock was stable at \$11 billion. The US holds 8,140 metric tons of gold, and in December 2005, gold was trading at nearly \$500 an ounce.

### 33 BANKING AND SECURITIES

The Federal Reserve Act of 1913 provided the United States with a central banking system. The Federal Reserve System dominates US banking, is a strong influence in the affairs of commercial banks, and exercises virtually unlimited control over the money supply. The Federal Reserve Bank system is an independent government organization, with important posts appointed by the president and approved by the Senate.

Each of the 12 federal reserve districts contains a federal reserve bank. A board of nine directors presides over each reserve bank. Six are elected by the member banks in the district. Of this group, three may be bankers; the other three represent business, industry, or agriculture. The Board of Governors of the Federal Reserve System (usually known as the Federal Reserve Board) appoints the remaining three, who may not be officers, directors, stockholders, or employees of any bank and who are presumed therefore to represent the public.

The Federal Reserve Board regulates the money supply and the amount of credit available to the public by asserting its power to alter the rediscount rate, by buying and selling securities in the open market, by setting margin requirements for securities pur-

chases, by altering reserve requirements of member banks in the system, and by resorting to a specific number of selective controls at its disposal. The Federal Reserve Board's role in regulating the money supply is held by economists of the monetarist school to be the single most important factor in determining the nation's inflation rate.

Member banks increase their reserves or cash holdings by rediscounting commercial notes at the federal reserve bank at a rate of interest ultimately determined by the Board of Governors. A change in the discount rate, therefore, directly affects the capacity of the member banks to accommodate their customers with loans. Similarly, the purchase or sale of securities in the open market, as determined by the Federal Open Market Committee, is the most commonly used device whereby the amount of credit available to the public is expanded or contracted. The same effect is achieved in some measure by the power of the Board of Governors to raise or lower the reserves that member banks must keep against demand deposits. Credit tightening by federal authorities in early 1980 pushed the prime rate—the rate that commercial banks charge their most creditworthy customers—above 20% for the first time since the financial panics of 1837 and 1839, when rates reached 36%. As federal monetary policies eased, the prime rate dropped below 12% in late 1984; as of 2000 it was below 10%. In mid-2003 the federal funds rate was reduced to 1%, a 45-year low.
