According to a 2001 census, approximately 80% of the population claimed to be Christian, with the largest group of Christian churches linked to the African Independent Churches. These include the Zion Christian Church (accounting for about 11% of the population) and the Apostolic Church (about 10% of the population), as well as some Pentecostal offshoots which were founded as breakaways from various missionary churches, or the so-called Ethiopian churches. The Dutch Reformed churches make up about 6.7% of the population and include the Nederduits Gereformeerde, Nederduitsch Hervormde, and the Gereformeerde Churches. The next-largest denomination was the Roman Catholic Church at 7.1% of the population, followed by the Methodists at 6.8%, Anglicans at 3.8%, Lutherans at 2.5%, Presbyterians at 1.9%, Baptists at 1.5%, and Congregationalists at 1.1%. There are a number of Pentecostal and charismatic churches as well as congregations of Greek Orthodox and Seventh-Day Adventists. About 87% of all whites are Christian, as are about 80% of all Blacks and 87% of all Coloureds.

About 1.2% of the population are Hindu and another 1.5% are Muslim, with most adherents being of Indian descent. There are very small numbers of Jews, Buddhists, Confucians, and Rastafarians. About 15% of the population claim no formal religious affiliation, but many of these individuals practice traditional indigenous customs, including the veneration of deceased ancestors and the use of herbs, therapeutic techniques, and even black magic to manipulate the powers of the spirits. There are some who combine traditional practices with Christianity.

Though there is no state religion, Christian holidays are officially observed. Relations between most religious groups is amicable. The South African Council of Churches is an interfaith and interracial groups that promotes mutual understanding among religions and maintains good relations with the government.

## <sup>11</sup>TRANSPORTATION

South Africa's transportation network is among the most modern and extensive on the continent. In 2002, there were an estimated 275,971 km (171,654 mi) of national and provincial roads, of which 57,568 km (35,807 mi) were paved, including 2,032 km (1,264 mi) of expressways. There were 4,154,593 automobiles and 2,079,860 commercial vehicles in 2003.

The South African Transport Service, a government department under the minister of transport affairs, operates the railways, principal harbors, South African Airways, and some road transportation services. In 2004, South Africa's railroad network totaled 20,872 km (12,982 mi), all of it narrow gauge. Of that total, 10,436 km (6,491 mi) were electrified.

In 2005, the South African merchant fleet consisted of two ships of 1,000 GRT or more, with a total volume of 31,505 GRT. South Africa's seven ports, owned and operated by the government, include the deepwater ports of Durban, Port Elizabeth, and Table Bay (at Cape Town); other ports with good facilities are Richards Bay, Saldanha Bay, East London, and Mosselbaai (or Mossel Bay).

Airports in 2004 totaled an estimated 728, of which 146 had paved runways as of 2005. The government-owned South African Airways operates both international and domestic flights. Jan Smuts Airport, near Johannesburg, is the major international air-

port; other international airports are located at Cape Town and Durban. In 2003, about 9.481 million passengers were carried on domestic and international flights.

## 12 HISTORY

Fossil skulls suggest that South Africa may have been one of the earliest scenes of human evolution. Little is known of the original settlers, but when Europeans first arrived, there were two distinct groups of peoples—the Bushmen, primitive nomadic hunters of the western desert upland country, and the Hottentots, a pastoral people who occupied the southern and eastern coastal areas. Before AD 100, Bantu-speaking peoples entered the Transvaal from the north, settling territories in the north and east.

In 1488, the Portuguese sailor Bartholomeu Dias discovered the Cape of Good Hope, and on Christmas Day of 1497, Vasco da Gama discovered Natal. The first European settlement at the Cape was made in 1652 under Jan van Riebeeck on behalf of the Dutch East India Co., which needed a refreshment station on the route to the East. Because there was a shortage of farm labor, the Dutch imported slaves from West Africa, Madagascar, and the East Indies, and because of the scarcity of European women, mixed marriages took place, eventually producing the Cape Coloured people. Huguenot settlers joined the small Dutch settlement in 1688. Continued demands for meat and relatively poor agricultural production encouraged the development of cattle farming, which in turn led to the need for more grazing land. Settlements were established on the coastal plain, along the valleys, and on the Great Karoo. The European population multiplied, but the Bushmen and Hottentots declined in numbers. The first contacts with Bantu-speaking Africans were made along the Great Fish River, which, in 1778, the Cape authorities proclaimed the boundary between the colonists and the Africans. The first serious clash came in 1779, when invading Xhosa tribesmen were driven back across the river border. Three more frontier wars were fought by 1812.

In 1795, Britain occupied the Cape, and in 1814, the area was ceded to the United Kingdom by the Treaty of Vienna. The free Coloured inhabitants of the Cape were given the same legal and political status as whites, and in 1834, slavery was abolished. Because of severe droughts and in reaction to British policy and administration, about 6,000 Boers (Dutch farmers) undertook the Great Trek in 1834–36, migrating northward into the present Orange Free State and the Transvaal. Some crossed the Drakensberg Mountains into Natal. The British annexed Natal in 1843 and extended their rule over Kaffraria in 1847, Griqualand West in 1871, and Zululand and Tongaland in 1887. The Transvaal was annexed in 1877 but returned to independence after a revolt in 1880–81, culminating in a British defeat by the Boers at Majuba Hill. In 1881, Swaziland also was declared independent. After a war between the Boers and Basutos, the British proclaimed Basutoland (now Lesotho) a British territory, and in 1884, it became a British protectorate. The British granted local self-government to the Cape in 1872 and to Natal in 1897.

Meanwhile, the spread of European settlements into areas occupied by Africans led to the setting aside of large native reserves and to the development of separate white and black communities. In 1860, indentured Indians were brought into Natal to work on the sugarcane plantations; by 1911, when India halted the emigration because of what it called “poor working conditions,” more

than 150,000 Indians had come to South Africa as contract laborers. It was in South Africa, while pursuing the Indians’ claims of injustice, that Mohandas (Mahatma) Gandhi, then a young lawyer, developed his philosophy of nonviolent resistance.

The discovery around 1870 of diamonds along the Orange and Vaal rivers and in the Kimberley district led to an influx of foreigners and brought prosperity to the Cape and the Orange Free State. Railways were built and trade increased. The discovery of gold on the Witwatersrand in 1886 brought in thousands of additional newcomers and made Transvaal potentially the wealthiest state. Tension between the Boers and outsiders attracted to Transvaal was accentuated by an unsuccessful attempt to capture Johannesburg by Dr. Leander Starr Jameson (Jameson Raid) in 1895–96 and culminated in the South African (or Boer) War in 1899–1902. After a desperate struggle against the larger British forces, the Boer republics of Transvaal and the Orange Free State gave up their independence by the Treaty of Vereeniging on 31 May 1902 but shortly thereafter were granted self-government by the British. In a convention during 1908–9, the leaders of the Afrikaners (as the Boers were now called), together with those from the Cape and Natal, drafted a constitution for a united South Africa that passed the British Parliament as the South Africa Act in 1909 and became effective on 31 May 1910. The constitution provided for a union of the four territories or provinces, to be known as the Union of South Africa. In 1913, the Union Parliament passed the Bantu Land Act, setting aside 8.9 million hectares (22 million acres) of land as black areas; an additional 6.3 million hectares (15.6 million acres) were added to the black homelands by another parliamentary act in 1936.

The Union of South Africa fought with the Allies in World War I, signed the Treaty of Versailles, and became a member of the League of Nations. In 1920, the League gave South Africa a mandate over the former German colony of South West Africa (now generally called Namibia), which lasted until 1946, when South Africa refused to recognize UN authority over the area and regarded it as an integral part of the country. In 1926, a British declaration granted South Africa national autonomy and equal legal status with the United Kingdom. Mining and industrialization advanced in the period between the two wars. More intensive exploitation of the wealth of the country led to better living standards. South Africa sent troops to fight the Nazis in World War II, although many Afrikaners favored neutrality. In 1948, the National Party (NP) took power, influencing the general character of life in South Africa and, in particular, enforcing its policies of apartheid, or racial separation (officially called “separate development” after 1960) of whites and nonwhites.

South Africa’s white electorate approved a republican form of government in a 1960 referendum, and South Africa became a republic on 31 May 1961. The republican constitution did not deviate substantially from the former one, the only major change being the substitution of a president for the monarch as the head of state. As a result of objections from nonwhite members of the Commonwealth of Nations to South Africa’s presence, South Africa withdrew its application for continued Commonwealth membership in 1961.

The immediate period surrounding the creation of the republic was one of mounting pressures applied to the government because of its apartheid policies. In 1960, black unrest swelled to the point

where a state of emergency was declared. On 21 March 1960, a black demonstration was staged against the “pass laws,” laws requiring blacks to carry “reference books,” or internal passports, thus enabling the government to restrict their movement into urban areas. The demonstration resulted in the killing at Sharpeville of 69 black protesters by government troops and provided the touchstone for local black protests and for widespread expressions of outrage in international forums. During 1963–64, the government acted to stiffen its control over blacks living in white areas. After 1 May 1963, the General Law Amendment Act allowed the government to hold people for consecutive 90-day periods without trial (the length was decreased to 15 days in 1966). In 1965, the Suppression of Communism Amendment Bill renewed the government’s authority to detain for security reasons persons who had completed prison sentences.

As the Portuguese colonial empire disbanded and blacks came to the fore in Mozambique and Angola during the mid-1970s, South African troops joined the Angolan civil conflict, in an unsuccessful attempt to prevent a Soviet-backed faction from coming to power, but then withdrew from Angola in March 1976. South Africa subsequently launched sporadic attacks on Angola (which supported insurgents seeking to end South African rule over Namibia) and Mozambique and aided insurgencies in the two former Portuguese territories; these operations (and other raids into Botswana, Lesotho, and Zimbabwe) were apparently in response to the aid and political support given by South Africa’s neighbors to the African National Congress (ANC), a black nationalist group.

Beginning in June 1976, the worst domestic confrontation since Sharpeville took place in Soweto, on the outskirts of Johannesburg, where blacks violently protested the compulsory use of Afrikaans in schools; suppression of the riots by South African police left at least 174 blacks dead and 1,139 injured. The Afrikaans requirement was subsequently modified. During the late 1970s, new protest groups and leaders emerged among the young blacks. After one of these leaders, 30-year-old Steven Biko, died on 12 September 1977 while in police custody, there were renewed protests. As a result, on 4 November, the UN Security Council approved a mandatory arms embargo against South Africa—the first ever imposed on a member nation.

As of 1981, the government had designated four of the ten black homelands as “sovereign” states: Bophuthatswana, Ciskei, Transkei, and Venda. All members of the ethnic groups associated with these homelands automatically lost their South African citizenship; the government’s stated intent to grant independence to the remaining six homelands meant that the vast majority of South Africa’s blacks would eventually lose their South African citizenship. In an effort to conciliate nonwhites and international opinion, the government scrapped many aspects of apartheid in the mid-1980s, including the “pass laws” and the laws barring interracial sexual relations and marriage. A new constitution established legislative houses for Coloureds and Indians in 1984, although only 31% and 20% of the respective eligible voters went to the polls.

These measures failed to meet black aspirations, however, and as political violence mounted, in July 1985, the government imposed a state of emergency in 36 magisterial districts, embracing nearly all of the urban black population, which lasted over seven months. During this time, 7,996 persons were detained and 757

people died in political violence, by government count. A new, nationwide state of emergency was imposed in June 1986, with police and the military exercising extraordinary powers of arrest and detention. At least 4,000 and possibly as many as 10,000 were detained in 1986, including over 1,400 aged 18 or under.

In 1984, South Africa and Mozambique signed an agreement by which each country pledged not to aid the antigovernment forces in the other country; also in 1984, South Africa signed an agreement under which it withdrew forces that it had sent into southern Angola in an effort to forestall aid to guerrillas in Namibia. However, the government continued to hold its neighbors responsible for ANC violence, and South African raids into Botswana, Zambia, and Zimbabwe were conducted during 1985–86. In 1987, the government announced that it was withdrawing troops that it had sent into Angola to aid the rebels fighting against the Angolan government, which was supported by Cuban and Soviet troops.

In July 1987, the government cracked down on the United Democratic Front (UDF), an umbrella organization of over 600 civic, sports, church, trade union, women’s, professional, youth and student bodies opposed to apartheid. Some 22 of its leaders were charged with treason and many more were forced to go underground. The government banned 17 antiapartheid organizations, including the UDF and the largest trade union, on 24 February 1988. Repression increased throughout 1987 and 1988, as did protest against state policies. Alternative newspapers, *New Nation* and *Weekly Mail*, were prohibited briefly from publishing. Various antiapartheid leaders were assassinated by secret hit squads identified with the police and military intelligence. Others were detained and otherwise restricted; still others were served with banning orders. In retaliation, protest strikes and demonstrations mounted, as did organization efforts among antiapartheid activists.

In 1989, President P.W. Botha resigned as head of the NP after a “mild stroke” in January. He was replaced by F. W. de Klerk who, on 15 August, was also named acting state president. After the general election, held 6 September, de Klerk was elected to a five-year term as president.

De Klerk launched a series of reforms in September 1989 that led speedily to the release of ANC leader Nelson Mandela and others on 10 February 1990. The ANC and other resistance militants, including the Communist Party, were legalized. Mandela had been in prison 27 years and had become a revered symbol of resistance to apartheid.

At that point, the ANC began to organize within South Africa. Government began “talks about talks” with the ANC and in August 1990, the ANC suspended its armed struggle. Most leaders of the ANC returned from exile. Still, fighting continued, largely between ANC activists and supporters of the Zulu-dominated Inkatha Freedom Party, strongest in Natal province. More than 6,000 people were killed in political violence in 1990 and 1991, many victims of fighting provoked by a “third force” of operatives employed by hardliners within the Defense Force and the police.

In 1991, de Klerk introduced and parliament passed measures to repeal laws that had institutionalized apartheid policies—the Land Act (1913 and 1936), the Group Areas Act (1950), and the Population Registration Act (1950). A number of repressive security acts were repealed as well.

In July, the ANC convened its first full conference in South Africa in 30 years. They elected Mandela president and Cyril Ramaphosa the secretary general. The ailing Oliver Tambo moved from president to a new post, National Chairman.

Meanwhile, negotiations continued over constitutional changes and plans for nonracial elections and the transition to majority rule. Numerous parties engaged in a Convention for a Democratic South Africa (CODESA) starting in December 1991. On 14 September 1991, government, the ANC and Inkatha signed a pact to end factional fighting. Other groups signed on, but it hardly stemmed the high levels of violence. The militant right wing refused to cooperate with any negotiations and agreements. In order to strengthen his negotiating hand, de Klerk called a whites-only referendum for 17 March 1992. Of the 85% turnout, 68.7% supported de Klerk's efforts to negotiate a settlement. By May, however, CODESA talks bogged down. The ANC mounted a series of mass protests against the stalemated CODESA talks. After 42 residents were horribly murdered at Boipatong Township by Zulu hostel dwellers allegedly assisted by police, the ANC withdrew from CODESA. On 7 September, 24 ANC supporters were killed by the Ciskei army troops as they marched in protest on the homeland's capital.

Later that month, negotiations began again between government and the ANC. A 26 September summit between Mandela and de Klerk produced a Record of Understanding that met several key ANC demands. But this angered KwaZulu Chief Mangosuthu G. Buthelezi, so he withdrew from the talks. In February 1993, government and the ANC reached agreement on plans for a transition to democracy. Multiparty negotiations followed in April. An interim parliament was to be elected for a five-year period after a general election in April 1994. All parties gaining over 5% of the vote would be represented in the new cabinet. The new parliament would also serve as a constituent assembly to iron out details of a new constitution. The broad guidelines were agreed upon by the government, the ANC, and other parties in late December 1993. A transitional Executive Council to oversee some aspects of government, including security, came into existence in December 1993. Inkatha, led by Buthelezi, and the right wing Conservative Party refused to participate. The Conservative Party and Inkatha boycotted the talks on multiparty government. But just a few days before the scheduled elections, Inkatha agreed to participate. White conservatives tried to hold out for an Afrikaner homeland, yet the white right was divided on whether to participate in pre-election talks, in the election itself, or whether to take up arms as a last resort. There were inefficiencies and some claims of electoral fraud and intimidation, especially by the ANC against Inkatha in Natal province. The elections proceeded relatively peacefully and with great enthusiasm. They were pronounced "free and fair" by international observers and the independent Electoral Commission.

The results left the ANC as the major vote getter with 62.5%. The NP gained 20.4%; the Inkatha Freedom Party, 10.5%; the Freedom Front, 2.2%; the Democratic Party, 1.7%; and the Pan-Africanist Congress, 1.2%. ANC, thus, was awarded 252 of the 400 seats in parliament. It was the governing party in all but two of the nine regions. The IFP carried KwaZulu/Natal and the NP held the Western Cape. Mandela became president and the ANC's Thabo Mbeki and the NP's de Klerk, deputy presidents. Even Buthelezi was persuaded to take a ministerial post in the cabinet.

In May 1994, the Constitutional Assembly convened to lay the groundwork for the new constitution. All parties were included in the initial sessions, but Inkatha boycotted the Assembly's drafting of an interim constitution when its demand for international mediation on regional autonomy was not met. At the same time, violent clashes between Inkatha and ANC supporters flared anew in the Natal Province.

South Africa held local elections on 1 November 1995, although last-minute changes to the interim constitution allowed for seven provinces—including Kwa-Zulu Natal—to delay elections until 1996. The ANC also swept the provincial elections, with the NP winning the largest minority share of the vote.

Bishop Desmond Tutu convened a Truth and Reconciliation Commission in early 1996 to expose apartheid atrocities committed in the years of white rule. Although those who refused to cooperate with the commission could be subject to criminal penalties, the commission granted immunity and amnesty to those who admitted their roles in apartheid crimes. Testimony in a 1995 court case also linked death squads to the highest levels of government, including the prime minister's office.

In 1997, the Constitutional Court ratified the new constitution after rejecting a first submitted draft in 1996. The new constitution was inaugurated in February 1997. It granted a strong central government with some limited powers vested in the provinces. Inkatha, which boycotted the drafting sessions to the end, accepted the Constitutional Court's decree.

The NP withdrew from the government of national unity immediately after ratification of the constitution to take its place as the official opposition party. De Klerk, who would leave politics in August 1997, also resigned his post to head the opposition party.

By 1997, the exuberance of the new constitutional era and two years of economic expansion had given way to uncertainty in the months following ratifications. South Africa was struggling with the new political structure, a flagging economy, revolutions of the Truth and Reconciliation, and a crime wave seemingly out of control. The latter was deemed by citizens as the number one problem facing the new government. The murder rate had grown to ten times higher than the murder rate in the United States. Robbery, assault, and carjackings had left downtown Johannesburg in ruins, and vigilante groups were prevalent throughout the nation. The high crime rate had deterred foreign investment and affected the tourist industry as well.

Early in 1999, Nelson Mandela, president of South Africa since 1994, delivered his final "state of the nation" address. The vote in June 1999 passed without a single political killing and was quickly embraced by all political parties. Despite the increase in crime in the nation, the second parliamentary elections held in June 1999 were peaceful and generally fair. In the 3 June elections, the ruling African National Congress (ANC) won 266 of 400 parliamentary seats (63%), just one seat shy of the two-thirds majority required to change the constitution. Thabo Mbeki was sworn in as South Africa's second democratically elected president at a glittering inauguration ceremony, which saw Nelson Mandela step down after steering the country away from apartheid rule and oppression. However, the one-sided vote in favor of ANC was itself troubling. Critiques noted that the dominance of the ANC had the coloring of a de facto one party state.

The dominance of the ANC was clearly illustrated in the 14 April 2004 elections. The African National Congress (ANC) of President Thabo Mbeki, which had been in power since the end of the apartheid system in 1994, was reelected with an increased majority. The ANC obtained 69.7% of votes cast on the national ballot winning 279 seats, theoretically allowing them to change the constitution—though they pledged not to. Only about 56% of eligible voters took part in the election. The main opposition party, the Democratic Alliance, also obtained an increased percentage on the national ballot; 12.4% or 50 seats in the national assembly. The New National Party, a descendant of the ruling party of the apartheid era, lost most of their support, dropping from 6.9% in 1999 to 1.7%. In the 1994 elections it received 20.4% of the votes. Many of their supporters were unhappy with the party's alliance with the ANC. The Independent Democrats surprised many observers by obtaining more votes than the New National Party, becoming the fifth-largest party. The Inkatha Freedom Party which obtained 7.0% (28 seats) of the vote lost some support even in its stronghold province of Kwazulu-Natal. The United Democratic Movement also lost support winning only 2.3% of the vote. Several other smaller parties also contested in these elections. Overall the elections were deemed free and fair. The next presidential election was due April 2009 and the next parliamentary elections were due in 2009, as well.

The first four years of Mbeki in office were marked by an active foreign policy and controversy over his AIDS policy. Along with Botswana, South Africa sent peacekeeping forces to Lesotho in 1999 to quell rioting and civil unrest following the 1998 elections there. Subsequently, the government played host to the belligerents of Africa's "first world war" in the Great Lakes region, helping them reach power sharing and peace agreements in December 2002 and April 2003. In addition to sending peacekeeping troops to the DROC, South Africa also took the lead in providing peacekeepers for Burundi in early 2003 following peace negotiations by Nelson Mandela in that country. Mbeki has been one of four African heads of state to champion the New Partnership for Africa's Development (NEPAD), a continent-wide initiative that promises accountable governance in exchange for donor resources and technical assistance. South Africa hosted the World Summit on Sustainable Development in Johannesburg in August 2002.

However strong this record, it has been tarnished by Mbeki's feeble response to the flawed March 2002 elections in Zimbabwe, and by his de-linking of HIV—the virus that the world scientific community says causes AIDS—from the disease itself. His government's reluctance to introduce anti-retroviral therapy widely and affordably has damaged his credibility at home and abroad. Given HIV prevalence rates of 23% among adults 15–49 years old, Mbeki was roundly booed at the world AIDS summit in Durban in July 2000.

Although South Africa's economy is highly developed, the exclusionary nature of apartheid and distortions caused in part by the country's international isolation until the 1990s left major weaknesses. As of 2005 the economy was in a process of transition as the government seeks to address the inequities of apartheid, stimulate growth, and create jobs. South Africa is increasingly becoming integrated into the international system, and foreign investment has increased dramatically. Still, the economic dispari-

ties between population groups are expected to persist for many years, remaining an area of priority for the government.

### 13 GOVERNMENT

The terms of a new constitution adopted in February 1997 were hammered out prior to the 27–29 April 1994 election. There is a 400-seat National Assembly chosen by proportional representation (200 nationally and 200 from regional lists). Following the implementation of the new constitution on 3 February 1997, the former senate was disbanded and replaced by the National Council of Provinces with essentially no change in membership and party affiliations—although the new institution's responsibilities have been changed somewhat by the new constitution. Of 90 members, 10 come from each province or region and selected by each provincial assembly. The members serve as both a legislature and a constituent assembly. They also elect the president and deputy presidents. Elections for the National Assembly and National Council of Provinces were last held 2 June 1999 with the next to be held by 2 August 2004. The president names a cabinet, divided proportionally between parties that have gained at least 5% of the vote.

The next presidential elections were scheduled for sometime between May and July 2004.

Although the degree of autonomy and the level of power given to the regions remains contentious with the IFP's longstanding grievance about the way power is devalued to the regions, the nine provinces have assemblies based on the total number of votes cast in the general election. Thus, the number of members each provincial legislature has depends on the number of votes cast divided by 50,000. The executive branch of the provincial governments is, like the legislatures, allocated proportionally.

### 14 POLITICAL PARTIES

The early division in the South African party system was between those who promoted Afrikaner nationalism and those Afrikaans-speaking and English-speaking persons who worked together toward goals on which both sides could agree. When General Louis Botha formed the first cabinet in 1910, he combined the moderate Afrikaners and English into the South African National Party, which confronted an English-speaking opposition. Soon afterward, however, General J.B.M. Hertzog formed the National Party (NP), dedicated to placing the interests of South Africa above those of the British Empire and to developing the Afrikaner group until it was as powerful as were English South Africans.

Hard-pressed by Hertzog's NP in 1920, General Jan Christiaan Smuts, who succeeded Botha, fused the South African National Party with the English-speaking Unionists, establishing the alignment of the English-speaking, except those in the Labour Party (LP), with moderate Afrikaners. The LP allied itself with Hertzog, who achieved office in 1924. Together they carried through the so-called civilized labor policy, designed to safeguard a wide area in the economy for white labor.

Economic crisis during the Depression forced a new alignment of parties that brought Hertzog and Smuts into coalition in 1933 and fusion in the United Party (UP) in 1934. Daniel F. Malan broke with Hertzog in 1934 to form the "purified" NP, dedicated to a more exclusive and radical Afrikaner nationalism than Hertzog had ever preached.

When World War II broke out, Hertzog wished to remain neutral. Smuts swung the House of Assembly in support of the Allies and became prime minister with the support of all English-speaking South Africans and a substantial group of moderate Afrikaners in the UP. Malan won the 1948 election, the first whose campaign was waged chiefly on the racial issue. The sharpest division between the two parties arose from NP efforts to remove the Coloureds from the common voting roll.

The basic division in the party system was between the NP, which favored the policy of apartheid, or totally separate development of the different races, and the UP, which favored social and residential segregation but economic integration. The members of the NP were mainly Afrikaans-speaking and those of the UP were English-speaking, but each party had a considerable number of members of the other language group. Beginning in 1950, the Nationalists implemented their program of apartheid. Between 1953 and 1987, the NP won nine successive parliamentary elections under four party leaders: Malan (in 1953); Hendrik Frensch Verwoerd (1958, 1961, 1966); Balthazar Johannes Vorster (1970, 1974, 1977); and Pieter W. Botha (1981–87). Vorster, who succeeded Verwoerd as prime minister after the assassination of Verwoerd in 1966, left the office in 1978 to become president. In the following year, however, he was forced to resign because of a political scandal involving the misappropriation of government funds to finance clandestine political and propaganda activities in the United States, Norway, and other Western countries. The Nationalists' program met with little effective opposition from the UP, which formally disbanded in 1977. In that year, leaders of the UP and its splinter group, the Democratic Party, which had formed in 1973, established the New Republic Party (NRP), with support from English-speaking voters in Natal and the Eastern Cape. The NRP endorsed continuing white rule, but with a softening of apartheid. In the same year, another merger produced the Progressive Federal Party (PFP), which drew its main backing from English-speaking voters in urban areas and stood for universal suffrage within a federal system, with guarantees of minority rights. In the 1987 elections, the NP increased its representation from 116 (in 1981) to 123 seats. The PFP fell from 26 to 19 seats; the NRP lost 4 of its 5 seats. In 1989, the last national race-based parliamentary elections, the NP suffered a setback, winning just 48% of the vote and 93 seats. The PFP dissolved itself in favor of the Democratic Party, which took 33 seats.

The Conservative Party (CP) opposed any form of power sharing with nonwhites. It was led by a former cabinet minister, Andries Treurnicht. The CP became the official opposition party after winning 23 seats in the 1987 elections and 39 in 1989.

Several Coloured and Indian parties participated in their respective ethnic groups. The Labour Party, a Coloured party headed by the Rev. Allan Hendrickse, won 76 of the 80 directly elected seats; it opposed the new constitution, advocated repeal of all discriminatory measures, and said that it was campaigning on behalf of all nonwhites but was vague on the question of whether it would accept a unitary state governed on the principle of one-person, one-vote. All five Indian parties participating in the elections favored protection of minority rights and rejected government in a unitary state on the basis of one-person, one-vote. The National People's Party won 18 and Solidarity 17 of the 40 directly

elected seats; the two parties formed a governing alliance in January 1986.

In 1985, the government repealed a law that had prohibited people of different racial groups from belonging to the same political party.

Several extraparliamentary organizations of Africans and Asians have formed on a national basis. The African National Congress (ANC) and the South African Indian Congress have cooperated with each other and have sought to cooperate with white liberal organizations. Banned in 1960, the ANC turned from its earlier tradition of nonviolence toward sabotage and other terrorist acts. In 1987, the government offered to legalize the group if it renounced violence. In 1987 and onward, talks were held outside the country between the ANC and diverse groups of white South Africans.

Notable among the more militant African groups was the Pan-Africanist Congress (PAC), which broke away from the ANC in 1959 and was banned in 1960. The ANC and PAC had been recognized by the UN General Assembly as "the authentic representatives" of the people of South Africa. During the 1970s, a loose coalition of African student groups known as the Black Consciousness Movement developed under the leadership of Steven Biko. The United Democratic Front (UDF) was founded in 1983, claiming at its peak to be a multiracial alliance of nearly seven hundred groups representing nearly two million people. It dissolved itself in August 1991, after having continued resistance to apartheid while the ANC was in exile. Considerable ferment occurred among political parties in the run-up to the 1994 elections. The Inkatha Freedom Party (IFP) headed by Zulu Chief Mangosuthu Buthelezi, at first had a cozy relationship with the NP, but that dissolved once the NP began negotiating in earnest with the ANC. Not until just days before the elections in 1994 did the IFP agree to run candidates. It captured over 10% of the national vote and managed to win the election for the provincial government in Natal. The Freedom Front (FF) became the electoral vehicle for Gen. Constand Viljoen, former head of the Defense Force. He contested the results (2.2% of the vote, nine seats) despite resistance from the CP and other right-wing bodies. The FF sought to work within the system to achieve the creation of an autonomous Afrikaner state.

In February 1993 the ANC allowed minority parties to participate in the government for five years after the end of apartheid. Also in February 1993 the first nonwhites entered the cabinet, thus broadening the base of the NP.

The 1994 elections resulted in an overwhelming victory for the ANC, headed by Nelson Mandela, as did the 1995 local elections. The new government included six ministers from the NP and the IFP.

Any political party that wins 20% or more of the National Assembly votes in a general election is entitled to name a deputy executive president; any party that wins 20 or more seats in the National Assembly is entitled to become a member of the governing coalition. As of 1997 the ANC, the IFP, and the NP constituted a Government of National Unity.

In the second post-apartheid parliamentary elections in 1999, the ANC won handsomely, taking 266 of 400 parliamentary seats (66%), just one seat shy of the two-thirds majority required to change the constitution. The remaining seats went to 12 other

parties as follows: Democratic Party (DP) 38; Inkatha Freedom Party (IFP) 34; New National Party (NNP) 28; United Democratic Movement (UDM) 14; African Christian Democratic Party (ACDP) 6; Pan Africanist Congress (PAC) 3; United Christian Democratic Party (UCDP) 3; Vryheidsfront/Freedom Front (VF/FF) 3; Federal Alliance (FA) 2; Minority Front (MF) 1; Afrikaner Eenheids Beweging (AEB) 1; and Azanian People's Organization (Azapo) 1.

In the third post-apartheid parliamentary elections in 2004, the ANC won decisively, taking 279 of 400 parliamentary seats (69.7%), more than the two-thirds majority required to change the constitution. The remaining seats went to 11 other parties as follows: Democratic Alliance (DA) 50; Inkatha Freedom Party (IFP) 28; United Democratic Movement (UDM) 9; Independent Democrats (ID) 7; New National Party (NNP) 7; African Christian Democratic Party (ACDP) 6; Pan Africanist Congress (PAC) 3; United Christian Democratic Party (UCDP) 3; Vryheidsfront/Freedom Front (VF/FF) 4; Minority Front (MF) 2; Azanian People's Organization (Azapo) 2. The next parliamentary elections were scheduled to take place in 2009.

## **15 LOCAL GOVERNMENT**

Historically, the four provinces—Cape, Natal, Transvaal, and Orange Free State—dealt chiefly with local matters, such as hospitals, roads, municipal government, and educational matters that can be classified as general affairs (applying to all population groups). The provinces receive annual subsidies from the national government. Elected provincial councils were abolished in 1986 and replaced by regional services councils, with representation by local authorities. Executive power in each province is exercised by an administrator and executive committee appointed by the state president and responsible to the national government.

Under the 1984 constitution, local government was to be assigned to the three parliamentary houses, as applicable, or, in regard to general affairs, to the Department of Constitutional Development and Planning. However, residents in each (segregated) residential area, including blacks, elected primary local authorities, who rendered certain services as well as represented their constituents at the provincial level. As far as local government and administration for whites were concerned, elected municipal councils were retained. The local affairs of blacks living in the six black homelands within the Republic of South Africa were administered by the respective homeland governments.

Under the post-1994 election arrangements, nine provincial governments were established (Northern Province, Gauteng, Mpumalanga, Free State, Kwazulu-Natal, Eastern Cape, Western Cape, Northern Cape, and North-West). Their legislatures were determined (in size and party representation) by proportional representation. The actual distribution of governmental powers and responsibilities has to be worked out by the constituent assembly.

A transitional local government arrangement prevails. The 1995 local election results were as follows: ANC, 76.66%; NP, 18.58%; FF, 2.36%. The remaining few parties, including the Inkatha Freedom Party, split the remainder of the votes. There were 5.3 million valid votes cast and 12.7 million registered voters.

## **16 JUDICIAL SYSTEM**

South Africa has a unified judicial system. The Supreme Court has a supreme appellate division and provincial and local divisions with both original and appellate jurisdictions. The Court of Appeals, with its seat in Bloemfontein, the judicial capital, normally consists of the chief justice and a variable number of appellate judges. Special superior courts may be constituted to try security cases, and there were, in 1986, 309 magistrates' offices vested with certain judicial as well as administrative powers. Judges are appointed by the state president. There were no nonwhite judges as of 1987.

The common law of the Republic of South Africa is Roman-Dutch law, which has evolved from the uncodified law of the Netherlands as it existed when the Cape of Good Hope was ceded to Great Britain. It has been influenced by English common law in procedures more than in substantive matters. Trial by jury was abolished in 1969.

Black tribal chiefs and headmen have limited jurisdiction to hear cases in traditional courts. There are appeals courts, divorce courts, and children's courts for blacks. In self-governing black homelands, lower courts have been established by the legislative assemblies.

The judiciary has moved in the direction of more independence from the other branches with instances of alleged political interference with courts on the decline. Prospects have considerably improved for nonwhite law school graduates to receive "Articles of Clerkship" which qualify them for admission to the bar.

A new constitution went into effect partially in February 1997, with complete implementation scheduled for 1999. The 1994 interim constitution provided for an independent judiciary and the authorities respect this provision in practice. There is also a constitutional court as highest court for constitutional issues. It provides for due process, including the right to a fair, public trial, legal counsel, and the right to appeal.

## **17 ARMED FORCES**

In 2005 South Africa had 55,750 active military personnel, with 60,000 reservists. The Army had 36,000 troops, with over 168 main battle tanks, 176 reconnaissance vehicles, 1,200 armored infantry fighting vehicles and 1,467 artillery pieces. The total strength of the Navy was 4,500 personnel, in addition to 2,000 civilian personnel. Major naval units included three tactical submarines, four corvettes, 34 patrol/coastal craft and nine mine warfare vessels. The Air Force, with 9,250 personnel, had an estimated 50 to 130 combat capable aircraft, that included 26 fighters and 12 fighter ground attack aircraft. Other aircraft included 12 assault helicopters. There is also a medical corps of 6,000. South Africa provided troops to UN peacekeeping efforts in three African countries. In 2005, the defense budget totaled \$3.4 billion.

## **18 INTERNATIONAL COOPERATION**

South Africa became a charter member of the United Nations on 7 November 1945 and has technically remained a member continuously, despite past disputes and international sanctions over apartheid and the country's unwillingness to place its League of Nations mandate, Namibia, under UN international trusteeship. Namibia gained independence in 1990. South Africa is part of ECA and

several nonregional specialized UN agencies, such as the FAO, the World Bank, IAEA, UNHCR, UNESCO, UNIDO, ILO, and the WHO. The nation is also a member of the ACP Group, WTO, the African Development Bank, the New Partnership for African Development (NEPAD), the Commonwealth of Nations, G-24, G-77, the Southern African Custom Union, and the Southern African Development Community. South Africa served as the African Union's first president from July 2003 to July 2004.

The nation was diplomatically isolated from other states on the African continent after Angola, Mozambique, and Zimbabwe were constituted as black-ruled countries during 1975–80, leaving South Africa as the continent's only white-minority regime. South African teams were excluded from international competition, such as the Olympic Games (from 1960). Following changes in South Africa's political situation, the country was reinstated to international competition by the International Olympic Committee.

South Africa has supported peace negotiations in a variety of African nation conflicts, including UN missions and operations in Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Burundi (est. 2004), and the DROC (est. 1999). The nation is part of the Non-aligned Movement and a member of the Zangger Committee and the Nuclear Suppliers Group (London Group).

In environmental cooperation, South Africa is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The opening of the political process to all South Africans and the election of a new multiracial government in 1994 marked a turning point in South Africa's economic history. With a modest agriculture sector (though known for excellent fruits and wine), fabulous mineral wealth (gold accounts for over one-third of exports), a diverse manufacturing sector (centered in metals and engineering, and especially steel-related products), and growing financial services and tourism sectors, South Africa's influence extends well beyond its borders. It has a mixed economy, with substantial government intervention and a number of state-owned enterprises existing jointly with a strong private sector. A chief characteristic of the private sector is the high concentration of ownership by a small group of integrated conglomerate structures.

Real economic growth in the GDP fell from 1.1% in 1991 to about 0.5% in 1998 and rose to 2.7% in 2001. Between 2001 and 2005 GDP increased steadily from 2.7% in 2001 to 5.0% in 2005. Still, analysts estimate that the economy must grow at between 5 and 10% if South Africa is going to overcome unemployment rates estimated at 26.2% in 2004. Although the white minority enjoys living standards equal to those in the rest of the industrialized world, most of the remaining 85% of the population has Third World living standards. The high prevalence of HIV/AIDS remains the major obstacle to achieving economic growth, and, with 5.3 million people living with the disease in 2003 and over 370,000 deaths caused by it, social upheaval only adds to the crisis. High unemployment, rigid labor laws, low skill levels, crime, and corruption hamper economic progress. Emigration has also emerged as one of South Africa's challenges, as those South Africans who

are highly skilled find better markets for their skills abroad, especially in Australia, New Zealand, the United Kingdom, Canada, and the United States.

Foreign direct investment in 2003 remained below levels targeted by the government; plans were made to build a knowledge and technology-based economy to attract investment. Structural economic changes and policies geared to lower inflation helped temper the effects on the South African economy of the global economic downturn that began in 2001. A rise in interest rates and a strong rand contributed to a fall in inflation in 2003, but so did an accounting error by the government, which caused many borrowers to pay more in interest on loans than they would have had the correct economic statistics been reported by the government. Business activity and consumer confidence subsequently fell. Nonetheless, the GDP in 2005 grew by 5%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 South Africa's gross domestic product (GDP) was estimated at \$527.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$11,900. The annual growth rate of GDP was estimated at 4.5%. The average inflation rate in 2005 was 4.6%. It was estimated that agriculture accounted for 3.4% of GDP, industry 31.6%, and services 65.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$436 million or about \$10 per capita and accounted for approximately 0.3% of GDP. Foreign aid receipts amounted to \$625 million or about \$14 per capita and accounted for approximately 0.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in South Africa totaled \$99.16 billion or about \$2,165 per capita based on a GDP of \$165.4 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.8%. It was estimated that in 2000 about 50% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, South Africa's economically active population was estimated at 15.23 million. As of 2003, the services sector accounted for 65.1% of the labor force, with agriculture at 10.3%, and industry at 24.5%. Undefined occupations accounted for the remainder. In 2005, South Africa's unemployment rate was estimated at 25.2%.

In 2003, unions had a total membership of about 3.3 million or 42% of the workforce in the formal economy. The Labor Relations Act provides protection to workers. The government does not interfere with collective bargaining. The constitution provides for the rights to unionize and strike, both of which are reinforced by the Labor Relations Act of 1995. In industries and trades where employers and employees are not organized, the Minister of Labor, acting on the advice of the government-appointed wage board, may prescribe compulsory wages and conditions of employment.

As of 2005, the standard workweek was 45 hours. In addition, the law also authorized four months of maternity leave for women and time-and-a-half pay for overtime. Some collective agreements provide for three weeks' annual leave, and many industries work a five-day week. Employers must provide satisfactory working conditions and accident-prevention measures. Enforcement of safe working conditions is irregular although the government is making attempts to improve the means of enforcement. The National Economic Forum, a tripartite structure representing labor, business, and government, is involved in nurturing job creation and job training.

There is no legally mandated national minimum wage, rather negotiations between labor and management set minimum wage standards industry by industry. In addition, the Minister of Labor can set wages by sector. As of July 2005, the rate for farm workers in urban areas was about \$141 per month and \$117 per month in rural areas. However, compliance rates depended upon the province and in that same year ranged from 65–90%. Employment of minors under 15 is illegal. Child labor laws are enforced in the formal economy, but in the agricultural and informal sectors, child labor is widespread. The Ministry of Welfare does allow exceptions to the child labor laws in some sectors of the economy, such as in the performing arts.

## 22 AGRICULTURE

Over 80% of the total land area is available for farming, but only 13% is cultivated. Many areas suffer from erratic rainfall and soil erosion; cultivated land is not expected to exceed 15% in the future because of these adversities. Only 9.5% of cultivated land was irrigated in 2003. The worst drought of the 20th century in southern Africa resulted in near to total crop failure in 1991–92. Many farmers subsequently abandoned the countryside for urban areas. After many years of dry weather, South Africa had abundant rainfall in the 1995/96 growing season. Except for rice, tea, coffee, and cocoa, the country is typically self-sufficient in essential food production. The average annual growth rate of agricultural output was 0.6% during 1990–2000. During 2002–04, crop production was up another 0.6% compared with 1999–2001. Agriculture contributed an estimated 4% to GDP in 2003.

The principal crop is corn (“mealies”), which is grown mainly on the plateau of the Orange Free State and Transvaal. Some 27% of the sown area is planted in corn; output totaled 9,737,000 tons in 2004. Wheat can be grown only in winter; production of wheat totaled 1,761,000 tons in 2004. An indigenous sorghum (“Kaffir corn”) is used to make beer and is also an important source of protein. Less important, but planted in considerable quantities, are the other winter cereals—barley, oats, and rye. Potato production totaled 1,574,000 tons in 2004.

Sugarcane, indigenous to the Natal coastal belt, was grown before World War II (1939–45) in quantities sufficient to export. Increasing domestic demand after the war absorbed the total output, but with a rise in production and an expansion of the capacity of sugar mills, South Africa became a large sugar exporter. Sugarcane production totaled 19,095,000 tons in 2004. Deciduous and citrus fruits, some of them exported, are also profitable. Vegetables, peanuts, sunflower seeds, groundnuts, soy beans, coffee, ginger, tobacco, cotton, and various types of fodder plants are used domestically. In 2004, 1,683,000 tons of grapes were produced.

Wine is an important product; production in 2004 was estimated at over 91 million liters.

## 23 ANIMAL HUSBANDRY

Until the end of the 19th century, cattle were kept mainly for draft purposes and bred for strength and endurance; meat and fat needs were provided by sheep. The cattle gave little milk and yielded poor-quality meat, while the sheep gave only fat mutton and no wool. The introduction of foreign breeds and crossbreeding gradually improved the stock, providing excellent meat, wool of fairly good quality, and good milk yields. The country's sheep breeds consist mainly of Merino for wool and Dorpes for mutton. Cattle breeds include the introduced Hereford and Aberdeen Angus as well as the indigenous Afrikaner. Dairy cows are mostly Friesian, forming a well-developed dairy industry.

The livestock in 2005 included 25.3 million sheep; 13.7 million head of cattle; 6.4 million goats; 1.6 million hogs; and 121 million chickens. Output of fresh cow's milk in 2005 was 2.5 million tons; eggs, 340,000 tons; cheese, 41,600 tons; and wool (greasy), 44,100 tons. Meat production in 2005 included (in tons): beef, 643,000; pork, 122,000; mutton and lamb, 122,000; and poultry, 925,000. South Africa does not produce enough meat to satisfy domestic demand and typically imports live animals from Namibia and meat from Botswana.

Exports of meat in 2004 amounted to \$74.9 million. Exports of raw hides, skins, and leather in 2004 were valued at \$98.9 million; wool (greasy), \$72.7 million.

## 24 FISHING

After Morocco, South Africa is Africa's most important fishing nation. The Fisheries Development Corp., established in 1944, has helped modernize equipment, secure better conditions of life for fishermen, and stimulate the catching and canning of fish. The commercial fishing fleet is operated mainly from Cape Town harbor. In 2003, South Africa's fishing fleet increased by 27 vessels of 100 gross tons or larger.

The total catch for 2003 was 862,574 tons, according to the FAO. The value of fish exports was estimated at \$393.5 million that year. More than 90% of the catch is taken from the productive cold waters off the west coast. Shoal fishing by purse-seine accounts for most of the volume. Hake accounts for 70% of all deep-sea landings. Anchovy, pilchard, mackerel, round herring, snoek, abalone, kingklip, rock lobster, oysters, and mussels are other important species. One-third of the hake catch and nearly all of the abalone are exported. Anchovy, pilchard, and round herring are processed into fishmeal, fish oil, and canned fish.

Rock lobster is caught mainly along the western and southern Cape coasts; about 2,594 tons of rock lobster were caught in 2003, with much of it processed into frozen lobster tails for export. About 75% of the lobster catch is exported. South Africa ceased whaling in 1976 and is a member of the International Whaling Commission.

Oyster farming at Knysna began decades ago. Interest in mariculture has grown in recent years and permits have been granted for farming abalone, prawns, red-bait, and mud crab.

Besides commercial fishing, there are thousands of anglers who fish for recreation from the shore and small craft. There are size restrictions and limits for sport fishing. A total ban has been placed

on the catching of four species: the great white shark, Natal bass, and the potato and brindle bass.

## 25 FORESTRY

South Africa is sparsely wooded, with a wooded and forested area of about 8.9 million hectares (22 million acres), or about 7.3% of the land area. Cutting in indigenous forests is strictly controlled. Commercial forestry covers 1.2 million hectares (31 million acres), with pine and commercial softwoods, eucalyptus, and wattle the principal timbers produced. South Africa is an important producer of wattle and wattle extract, used in the tanning of leather. The timber cut was 33,159,000 cu m (1.17 billion cu ft) in 2004, with 37% used as fuel wood. Sawn wood production was 2,171,000 cu m (76.6 billion cu ft) in 2004; wood-based panels, 1,021,000 cu m (36 million cu ft); wood pulp, 2,075,000 tons; and paper and paperboard, 2,566,000 tons. Domestic timber production satisfies 90% of domestic needs. Wood is imported for furniture manufacture, railroad ties, and high-quality paper.

## 26 MINING

Since the late 19th century, South Africa's economy has been based on the production and export of minerals, which, in turn, have contributed significantly to the country's industrial development. One of the largest and most diverse mineral producers, in 2003, South Africa was the largest producer and exporter of chromium and vanadium, as well as the leading producer of aluminosilicates (andalusite) gold, gem diamonds, ferrochromium, platinum (88% of world reserve base of platinum-group metals, or PGMs), and manganese (80% of world reserve base of ore). South Africa was also the second-largest producer of zirconium and titanium minerals, as well as a major producer of cobalt, copper, iron ore, lead, nickel, silver, uranium, zinc, aggregate and sand, asbestos, dimension stone, fluor spar, lime, limestone, phosphate rock, sulfur, and vermiculite. South Africa was self-sufficient in the vast majority of its mineral needs, the bulk of which were produced in the northern half of the country. South Africa was among the top five countries in terms of reserves, ranking first in reserves of andalusite, chromite, gold, manganese, PGMs, and vanadium. De Beers, the South African mining giant, accounted for 94% of the country's diamond production and controlled 80% of the world's uncut diamond trade.

In 2003, the mining industry accounted for 7.1% of South Africa's \$466.4 billion gross domestic product (GDP). Primary mineral exports in 2003 accounted for 34% of the South Africa's merchandise trade, or \$11.5 billion. The leading export earners in 2003 were in descending order: gold, PGMs coal, ferroalloys (ferrochromium, ferromanganese, ferrosilicon, and ferrovanadium), diamonds, and aluminum. The production of iron, steel, chemicals, and fertilizers ranked among the country's top industries.

The 2003 output of PGMs (platinum, palladium, rhodium, ruthenium, and others) was 266,150 kg. Production came almost exclusively from mines in the Bushveld Complex, north of Pretoria. Anglo American Platinum Corp. Ltd. (Anglo Platinum), in 2003 was the world's largest PGM producer.

Primary gold output in 2003 was 372,767 kg, down from 398,300 in 2002. South Africa's gold output in 2003 accounted for about 15% of world production, compared to around 11% of world output by Australia and the United States, and 8% from China.

Iron ore and concentrate output (by metal content) in 2003 was 38.086 million tons (preliminary). Kumba Resources Ltd. in 2003 continued its expansion of the Sishen iron ore mine's capacity, which was to increase to 30 million tons annually by 2003, and 38 million tons per year by 2007. The Sishen Mine was previously owned by Iscor, South Africa's largest crude steel producer.

Chromium output in 2003 (gross weight) was 7.406 million tons (preliminary), compared to 6.436 million tons in 2002. Mined copper output in 2003 was 89,501 metric tons (preliminary), down from 129,589 metric tons in 2002. The country's total copper reserve base (metal content) was 13 million tons. Antimony production in 2003 (by gross weight) was put at 9,000 metric tons (preliminary). Proven and probable reserves of antimony amounted to 1.5 million tons, and mineral resources exclusive of reserves totaled 8.6 million tons. The country's total antimony reserve base was 250,000 tons.

Output of manganese ore and concentrate (primarily metallurgical-grade, but also chemical) was 3.501 million tons (gross weight) in 2003 (preliminary), up from 3.322 million tons in 2002. Total proven reserves were 12.8 million tons (44.61% manganese, 7.30% iron), and measured, indicated, and inferred resources were 237 million tons (41.24% manganese, 7.98% iron). The country's total manganese reserve base was four billion tons.

Preliminary production outputs for the other principal metals in 2003 were: vanadium, 15,000 metric tons (with a reserve base of 12 million tons); titanium (ilmenite and rutile concentrates), 2.15 million tons (with a reserve base of 146 million tons); zirconium concentrate (baddeleyite and zircon), 300,000 tons (a reserve base of 14.3 million tons); and mined nickel (metal content), 40,842 metric tons (a reserve base of 11.8 million tons). South Africa also produced cobalt, lead, silver, uranium, and zinc.

Preliminary output of natural gem and industrial diamonds in 2003 were put at 5,144,000 carats and 7.540 million carats, respectively. Approximately 94% of South Africa's diamond production in 2003 came from mines owned by De Beers Consolidated Mines Ltd. The country's total diamond reserve base was 1,127 million carats. Alluvial diamonds were discovered along the Orange River in 1867, and surface diamonds, at Kimberley, in 1870.

Preliminary output of other industrial minerals in 2003 included: chrysotile asbestos, 6,218 metric tons; vermiculite, 183,802 metric tons; and limestone and dolomite, 15.980 million tons. South Africa also produced aluminosilicates (andalusite, with a reserve base of 50.8 million tons), barite, calcite, hydraulic cement, clays (attapulgit, bentonite, fire clay, raw and calcined flint clay, and kaolin), feldspar, fluor spar (acid-grade and metallurgical-grade, with a total reserve base of 36 million tons), tiger's eye (semiprecious gem), gypsum, industrial or glass sand (silica), lime, crude magnesite, mica, nitrogen, perlite, phosphate rock (a reserve base of 2.5 billion tons), natural mineral pigments (ochers and oxides), salt, natural sodium sulfate, dimension stone (granite, norite, and slate), crushed and broken stone (quartzite and shale), aggregate and sand, sulfur, talc and pyrophyllite (wonderstone), and brick clay.

The South African minerals industry operated on a free-enterprise, market-driven basis. Government involvement was primarily confined to ownership of the national electric power supply and the national oil and gas exploration company. Mineral land holdings and production has historically been controlled either

by the government or by private entities. However, under the new Minerals and Petroleum Resources Act, existing mineral rights will revert to the South African government, unless companies act within a five year period to convert "old order" exploration and mining rights into "new" rights under terms specified in the new legislation. Since 1994, the minerals industry has undergone a major corporate restructuring, or "unbundling," aimed at simplifying a complex system of interlocking ownership, at establishing separate core-commodity-focused profit centers, and at diversifying and rationalizing nonperforming assets.

The well-developed railway and port infrastructure was built mainly to transport mineral products, and minerals continued to constitute a major part of the nation's freight. Domestic and foreign investors have committed more than \$10 billion to develop and expand new mining and value-added mineral processing capacity by 2007. The impact of HIV/AIDS on the able-bodied skilled and semiskilled work force in the country was of concern to investors. There was also increased attention to environmental issues.

## 27 ENERGY AND POWER

South Africa is the second-largest energy producer on the African continent, surpassed only by Algeria, and is the continent's largest consumer of energy.

Coal is the primary energy source produced and consumed in South Africa. The country's recoverable coal reserves are the seventh-largest in the world, which in 2002 were estimated at 54.6 billion short tons. In 2002, South Africa produced an estimated 245.3 million short tons, with domestic consumption estimated at 171.6 million short tons and exports estimated at 73.7 million short tons, for that year.

South Africa has only small proven reserves of oil. As of 1 January 2005, the country's proven oil reserves were estimated at 15.7 million barrels, according to the Oil and Gas Journal. In 2003, oil production was estimated at 194,000 barrels per day, of which 165,000 barrels per day were synthetic. The country's crude oil refining capacity, as of 1 January 2005, was estimated at 519,547 barrels per day. Demand for oil in 2003 was estimated at 469,000 barrels per day, with net oil imports estimated at 274,000 barrels per day, for that same year.

South Africa's proven reserves of natural gas, as of 1 January 2005, were estimated at 1 billion cu ft, according to the Oil and Gas Journal. Domestic consumption of natural gas and natural gas imports were each estimated by the South African Department of Minerals and Energy at 1.3 trillion cu ft in 2003.

The bulk of South Africa's electric power generating capacity is based upon conventional thermal fuels. In 2002, the country's electric generating capacity was 40.481 million kW, of which thermal capacity amounted to 38.020 million kW, followed by nuclear at 1.800 million kW and hydropower at 0.661 million kW. Electric generation totaled in 2002 totaled 205.673 billion kWh of which 92.9% was from fossil fuels, 5.8% from nuclear power, and the remainder from hydropower and other renewable sources. South Africa's demand for electricity in 2002, came to 192.199 billion kWh.

South Africa's synthetic fuels industry is highly developed and is backed by offshore condensate and natural gas production in Mossel Bay, and a plentiful supply of coal. The South African Coal,

Oil, and Gas Corporation (Sasol) is the world's leader in oil-from-coal technology. SASOL operates two coal gasification plants in Secunda and one in Sasalburg. SASOL has a capacity to produce 150,000 barrels per day, mostly to the gasoline market. South Africa's other leading synthetic fuel producer is the Petroleum Oil and Gas Corporation of South Africa (PetroSA) with capacity of 50,000 barrels per day.

## 28 INDUSTRY

The manufacturing sector has evolved over the past 70 years, beginning with light consumer industry in the 1920s and expanding into heavy industry with the creation of ISCOR (Iron and Steel Corporation of South Africa) in 1928. Industry is localized in Gauteng, Western Cape, the Durban-Pinetown area of KwaZulu-Natal, and the Port Elizabeth-Uitenhage area of Eastern Cape.

The largest industrial sector is the metal products and engineering sector dominated by ISCOR, now privatized. South Africa is the world's largest gold, platinum, manganese, chromium, vanadium, alumino-silicates, and titanium producer; and the second-largest of vermiculite and zirconium; third for fluorspar; fourth for antimony; and fifth for zinc, coal, lead, and uranium. The steel industry feeds a substantial motor vehicle sector, which experienced a 14% increase in production from 2000 to 2001. Companies like Columbus Stainless Steel and Billiton's Hillside Aluminium Smelter produce processed industrial minerals, instead of just primary commodities. A dip in gold prices during the late 1990s threatened the gold mines, but only temporarily. The mining industry contributes more than 50% to exports, and some estimates go up to 70%.

Other than Swaziland, South Africa is the only African state to produce pulp and paper. The clothing and textiles sector and the electronics sector were experiencing strong growth in 2002, as was the construction sector, which employed 260,000 people. The chemical sector centers on sizeable fertilizer production and the Modderfontein explosives factory. The sector is also home to the synthetic fuels production industry which, with three plants in operation that produce oil and petrochemicals from coal, serves 40% of the nation's motor fuels demand. There are four oil refineries in South Africa, with a total production capacity 469,000 barrels per day.

## 29 SCIENCE AND TECHNOLOGY

Among South Africa's earliest research ventures was the Royal Observatory at the Cape of Good Hope, established by the British Admiralty in 1820. Societies of leading engineers, architects, chemists, metallurgists, and geologists were organized in the 1890s, and the South African Association for the Advancement of Science was established in 1902. The Council for Scientific and Industrial Research (founded in 1945) has 13 research divisions. The Atomic Energy Corporation established an experimental nuclear reactor in 1965 and has since directed the government's nuclear program. In 1970, it was announced that its researchers had devised a new uranium-enrichment process, subsequently developed by the national Uranium Enrichment Corp. The Scientific Advisory Council to the Minister of National Education (estab-

lished in 1962) promotes the application of scientific knowledge and recommends national science policies and programs.

The Hartebeestheek Radio Astronomy Observatory's 26-meter-diameter antenna was originally constructed to serve as a tracking station for NASA's Deep Space Network. In Johannesburg are located a geological museum, the Adler Museum of the History of Medicine, and the James Hall Museum of Transport. Botanical and zoological gardens are located, respectively, in Durban and Pretoria. South Africa has 30 universities and colleges offering courses in basic and applied sciences. In 1987-97, science and engineering students accounted for 29% of college and university enrollments.

In 2002, expenditures for research and development (R&D) totaled \$3.1 billion, or 0.68% of GDP. In 1998 (the latest year for which the following data is available), the business sector accounted for the largest portion of R&D spending at 49.4%, followed by the government at 33%. Higher education accounted for 10%, with foreign sources at 7%. In 2002, there were 192 scientists and engineers, and 74 technicians per million people that were actively engaged in R&D. High technology exports in that same year were valued at \$740 million, or 5% of the country's manufactured exports.

### 30 DOMESTIC TRADE

South Africa has largely dismantled its old economic system that involved extensive government involvement in the domestic economy through state-owned enterprises. Approximately 90% of the population and consumer market surrounds the cities of Johannesburg, Cape Town, Durban, Pretoria, and Port Elizabeth.

Retail establishments are extremely diverse, ranging from local convenience stores and specialty shops to department stores, supermarkets, and chain stores. There are some wholesale outlet stores as well and hypermarkets are beginning to find a place in some suburban areas. In rural areas, merchants sponsor cooperative stores. Nearly 90% of consumer goods are domestically sourced. The number of franchises continues to grow, with about 300 firms represented as of 2002. The government maintains price controls on petroleum products and certain food products. There

are many advertising agencies, with the five largest accounting for 70% of all advertising billings.

Business hours for most offices and shops are from 8:00 AM to 1:00 PM and 2:00 PM to 4:30 PM, Monday through Friday, and from 8:30 AM until 1:00 PM on Saturday. Banks are usually open from 9 AM to 3:30 PM weekdays, and from 8:30 to 11 AM on Saturdays.

### 31 FOREIGN TRADE

Gold, diamonds and other metals and minerals are the most valuable export commodities. Exports of gold, platinum, coal, and iron account for approximately 17% of commodity exports. The share of gold as a percentage of total merchandise exports fell from 51.4% in 1980 to 13% in 2000. In 1995, processed primary product exports exceeded those of gold for the first time. The top four exports in 2004 are as follows: metals and metal products (\$6.3 billion), gold (\$5.6 billion), diamonds (\$2.9 billion), and machinery and transport equipment (\$2.6 billion). The United States and South Africa established bilateral trade agreements in the late 1990s. Main destinations of exports in 2004 were as follows: United States (10.1%), United Kingdom (9.1%), Japan (8.8%), and Germany (7%).

### 32 BALANCE OF PAYMENTS

Gold invariably represents the great majority of the country's international reserves, but decreased demand for gold lowered world prices in the 1990s, slowing financial flows. The current account balance improved at the end of 2000 due to increased merchandise export earnings, which rose by 15%. This can be attributed in part to the depreciation of the rand, which strengthened the competitiveness of South African manufactures. Petroleum imports rose that year as well.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of South Africa's exports was \$51.587 billion while imports totaled \$52.059 billion resulting in a trade deficit of

\$472 million. However, between 2001 and 2003 South Africa registered a healthy and positive trade balance.

### 3<sup>3</sup> BANKING AND SECURITIES

The South African Reserve Bank (SARB), the central bank of issue, began operations in 1921, and in 1924 assumed liability for the outstanding notes of the commercial banks. It is the fourth oldest central bank to have been established outside Europe. It purchases and disposes of the entire gold output. In September 1985, because of a net outflow of capital arising from South Africa's declaration of a state of emergency, a two-tier foreign-exchange system was adopted by the bank, involving a commercial rand for current transactions and a financial rand for investments or disinvestments by nonresidents. At the same time, certain debt payments, mainly to foreign banks, were frozen. Limited payments were resumed in April 1986, and the two-tier foreign-exchange system was discarded.

The top four banks—Standard Bank Investment Corp. (Stanbic), Amalgamated Banks of South Africa (ABSA), First National Bank (FNB), and Nedcor—accounted for at least 80% of total bank assets in the country in 2002. Foreign interest grew with groups such as Citibank, Morgan Guaranty, and Standard Chartered, setting up and targeting the business end of the market. Although foreign banks are not allowed to accept deposits, over 41 fully licensed institutions, 15 local branches of foreign banks, and 61 representative offices of foreign banks were operating in South Africa in 2002. Offshore lending is popular.

Each bank is required to maintain a reserve balance with the South African Reserve Bank equal to 8% of its short-term liabilities. Since the commercial banks have restricted themselves to traditional functions, many other institutions have been established to make loans or investments to stimulate economic growth and development. The government has sponsored financial institutions such as the Development Bank of South Africa, the Corporation for Public Deposits, the Industrial Development Corp. (IDC), the Fisheries Development Corp., and the Corporation for Economic Development.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$36.3 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$67.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 8.84%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9.5%.

The Johannesburg Stock Exchange (JSE) ranks 10th in the world in market capitalization. At the end of 2001, its total capitalization was \$140 billion. As of 2004, the JSE's market capitalization stood at \$455.536 billion. A total of 403 firms were listed on the JSE that same year. The JSE dwarfs all sub-Saharan Africa's other active stock exchanges put together, accounting for 96% of their total market capitalization at the end of 1995. On 8 November 1995, the JSE underwent its "Big Bang" when the Stock Exchange Control Act came into effect, changing the system under which the market had operated for years. New capital adequacy requirements placed major financial obligations on broking firms, and the easy fixed-commission system for brokers disappeared.

Most visibly, the traditional trading floor—the open outcry market—became a thing of the past as firms carried out all their trading by computer. Restructuring of the stock exchange also allowed banks to enter the securities markets as stockbrokers for the first time. However, market capitalization is now at about half of that peak level in 1995.

### 3<sup>4</sup> INSURANCE

Automobile third-party liability, unemployment insurance and workers' compensation insurance are all compulsory, the last of which is a virtual government monopoly. At the beginning of 1994, a consortium of black investors negotiated a deal to buy 51% of African Life, a life insurance company serving over two million customers, from majority share holders. Other insurance companies include Old Mutual and Sanlam.

Life insurance companies and pension funds are controlled by the Registrar of Financial Institutions. The main long-term capital institutions are the pension funds and life assurance companies, which invest mainly on the JSE secondary market. In 2003, the value of all direct insurance premiums written totaled \$25.398 billion, of which life insurance premiums accounted for \$20.728 billion.

### 3<sup>5</sup> PUBLIC FINANCE

The fiscal year runs from 1 April to 31 March. The minister of finance presents the budget to parliament in March for authorization of expenditures and imposition of the necessary taxes. In 1994, the ANC inherited a government that owned about half of all capital assets, one-quarter of them parastatal corporations. Since then, privatization has moved slowly, but steadily.

The US Central Intelligence Agency (CIA) estimated that in 2005 South Africa's central government took in revenues of approximately \$65.9 billion and had expenditures of \$70.6 billion. Revenues minus expenditures totaled approximately -\$4.7 billion.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

Public debt in 2005 amounted to 37.7% of GDP. Total external debt was \$44.33 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were R328,088 million and expenditures were R359,253 million. The value of revenues in US dollars was us\$43,371 million, based on a principal exchange rate for 2003 of us\$1 = R7.56475 as reported by the IMF.

### 3<sup>6</sup> TAXATION

As of 1 January 2001, South Africa's territorial system of taxation (or source-based system) was replaced with one based on worldwide incomes for resident companies, including resident branches of foreign companies. In order to preserve some of South Africa's appeal as an offshore location for international headquarters, a separate regime for nonresident International Holding Companies (IHCs) is maintained which allows for income from foreign subsidiaries not to be counted in the IHC's tax liability (under Controlled Foreign Entity provisions in the tax law).

As of 2004, the standard corporate tax in South Africa consisted of two parts: a 30% flat rate plus an additional 12.5% secondary tax (STC) on net dividends. Branch offices of nonresident companies are subject to a 35% corporate tax rate. Those branches and other nonresident companies are not subject to the STC. Dividends distributed out of mining income by oil and gas companies are also exempt from the STC. Dividends from South African sources paid to a resident individual by a South African company are tax-exempt, but, as of 23 February 2000, dividends from foreign sources received by residents are taxed at 12.5%. The maximum effective rate for companies that distribute all their after-tax profits as dividends is 37.8%.

Capital gains, untaxed before 2001, are taxed at an effective rate of 15%. For companies that rate is applied to 50% of the gains realized. For individuals, that rate is applied to 25% of the gains realized. South Africa also has a preferential offshore tax regime for international holding corporations, as well as a program of tax incentives administered by the its Industrial Development Corporation designed to assist entrepreneurs in the establishing and/or expansion of economically viable manufacturing industries.

Individual income tax is assessed according to a progressive scale with a top rate of 40% (as of 2004). Above an exempted limit, gifts are taxed at 20%, but there is no inheritance tax. The transfer of property is tax on a progressive scale depending on the value of the property. Royalties paid to nonresidents are subject to a withholding tax of 12%.

The main indirect tax is South Africa's value-added tax (VAT) with a standard rate of 14%. However, certain fuels, exports, some farming goods and basic foodstuffs, and international transport are zero-rated. Residential rents, educational services, some financial services and domestic passenger transport are exempt from the VAT. Other taxes include provincial and city taxes.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Although South Africa has signed GATT and has been liberalizing import controls with the intention of eventually removing them completely, some classes of imports are still subject to licenses and control regulations. Many goods enter South Africa duty-free. Goods that are subject to a duty pay an average rate of 12%.

There are six levels of tariffs: 0%, 5%, 10%, 15%, 20%, and 30%. For protected industries such as textiles and automobiles, high tariffs were supposed to be reduced from 100% to about 45–50% within 8 to 12 years.

South Africa maintains a common customs area with Botswana, Lesotho, Namibia, Swaziland, and the black homelands of Bophuthatswana, Ciskei, Transkei, and Venda, through the South African Customs Union. The South African Development Community intended to open a free trade area between member countries by 2000. Common customs, excise, and a value-added tax (VAT) of 14% are levied. Specific excise duties of about 10% are levied on beverages, tobacco, petroleum products, and motor vehicles. Ad valorem excise duties are levied on office machinery, film, and luxury consumer goods. Export licenses are required for a number of products.

### 3<sup>8</sup> FOREIGN INVESTMENT

Despite a considerable increase in recent years in domestic savings available for investment, foreign capital investment plays a significant role in South African economic development, and a number of manufacturing and industrial concerns have been established by the United Kingdom, the United States, and continental European companies since World War II. UK capital has been invested primarily in manufacturing, heavy engineering, and in the development of new gold fields in Transvaal and the Orange Free State. US investments are mainly in mining and manufacturing, and in wholesale and retail trade. Some 250 American companies accounted for about one-fifth of total foreign investment in South Africa as of 1982. However, between 1984 and 1987, the number of US companies with direct investments in South Africa dropped from 325 to 259. In 1986, the United States and the EEC banned new investment in South Africa.

The establishment of a multiracial government in 1994 and the lifting of sanctions led to an increase in foreign investment in South Africa. The number of multinational corporations with direct investments or employees in South Africa increased by over 20%. By 1997, total foreign direct investment (FDI) exceeded \$18 billion. The inflow of FDI in 1997 was over \$3.8 billion, but fell to \$561 million in 1998. Inward FDI flows increased to \$1.5 billion in 1999 and to \$888 million in 2000. Contrary to worldwide trends in the economic slowdown of 2001, FDI inflow in South Africa reached a record \$6.79 billion. However, the flows declined to \$757 million in 2002 to \$720 million in 2003 and \$585 million in 2004. However, for 2005 FDI inflows will be boosted by the Goldfields-Norilsk and Metcash-Metzo deals and the takeover of Amalgamated Banks of South Africa (ABSA)—one of the country's "big four" banks—by Barclays of the United Kingdom, and the purchase by Vodafone of a further 15% stake in the mobile-phone operator, Vodacom. The Barclays-ABSA transaction is estimated to have boosted FDI inflows by about \$5 billion in the third quarter of 2005, and Vodafone's purchase of the additional shares in Vodacom by \$2.4 billion.

Barclays' purchase is the largest single FDI inflow into South Africa since the transition to multiparty rule in 1994. The inflows from both Barclays and Vodafone have stimulated foreign interest in South Africa and signal a vote of confidence for the country's political and economic prospects for the medium and long term. The United Kingdom has been the largest investor with almost

half of the total, followed by the United States, Germany, the Netherlands, Malaysia, and Switzerland. Manufacturing and business services gained the lion's share of FDI, led by telecommunications; major investors included Petronas, SDC Communications, Dow Chemicals, Telecom Malaysia, Coca-Cola, and Lafarge.

### 39 ECONOMIC DEVELOPMENT

The recession of 1989 to 1993 was provoked by a drop in investment from 24% to 15%. With the inauguration of multiracial government in 1994, this investment was restored from about \$13 billion in 1994 to about \$18 billion in 1998, creating new jobs and generating growth. Tremendous changes in the structure of the economy are required as well to relieve the pressures of poverty and inequality which resulted from apartheid. A realistic strategy that attends to popular expectations and aspirations as well as to sound economic principles will look to reducing tariffs and other restrictive practices, linking wages and output, ending exchange controls, reforming taxes, and optimizing welfare allocations. The government implemented a Growth, Employment, and Redistribution (GEAR) plan to cover the years 1996–2000. The plan was successful in bringing macroeconomic stability to the country, but formal employment continued to decline, and wealth remained unequally distributed along racial lines.

South Africa has what may be called a dual economy—one comparable to industrialized nations and another comparable to developing countries. Trade liberalization increased from the early 1990s to the early 2000s. The Mbeki government in 2003 maintained a cautious fiscal policy, but due to the global economic slowdown, growth remained at 2.6% (it was forecast to rise to 3.5% in 2004). The government's monetary policy was geared to bring inflation down to the Reserve Bank's target of 3–6% by the end of 2004. This was clearly achieved as inflation was estimated at 4.3% in 2004 and 4% in 2005.

The government continues to be committed to responsible fiscal management while increasing spending on infrastructure, social services and socio-economic “upliftment” programs. Revised real GDP figures indicate that the economy has grown more rapidly and is larger than had previously been estimated, and growth for 2005 is now estimated to rise by 5%, from 4.5% in 2004. Inflation has steadily declined.

However, unemployment in 2004 was estimated at 26.2%, but unofficial sources place it at around 41%. The government adopted plans to encourage development in specific regions and in small and medium enterprise development, in part to promote growth and the creation of jobs. South Africa is a member of the Southern African Customs Union (SACU) and the Southern African Development Community (SADC).

### 40 SOCIAL DEVELOPMENT

South Africa has a comprehensive system of social legislation, which includes unemployment insurance, workers' compensation, old age pensions, disability pensions, war veterans' pensions, pensions for the blind, maternity grants, and family allowances. The first statutory benefits were initiated in 1928, and the current system was updated in 2004. The cost of most of these benefits is borne by the national government, but the cost of industrial accident insurance is borne by employers, while contributions to the unemployment insurance fund are made by employers, employ-

ees, and the government. The retirement age is 65 for men and 60 for women. Sickness and maternity benefits both pay 45% of weekly earnings; maternity benefits are payable up to a total of 26 weeks. The government funds assistance to families of limited means.

The ANC government of national unity sought to provide more social services for its black constituents within the constraints of a weakened economy. Its top priorities are housing, health, education, and the creation of more jobs in the formal economic sector.

Despite legal protection, sex discrimination is still widespread, especially in connection with economic issues including wage disparity, credit access and property rights. Domestic abuse is widespread, and victims who seek redress are not treated adequately by law enforcement, medical personnel, or the judicial system. The incidence of rape is extremely high due to general lack of security and the prevailing attitude condoning violence against women. There are many governmental and nongovernmental organizations monitoring and promoting human rights for women.

Although South Africa's human rights record has improved, there are continued reports of detainees dying in custody. Criminal activity is widespread, and vigilante and mob justice is increasing. Prison conditions are harsh.

### 41 HEALTH

As of 1992, the South African government increased its spending in the public and private sectors of health care. South Africa's governmental policy has been directed toward a more streamlined and equitable public health service to bridge the country's social and ideological divisions. Emphasis on better health care resulted in numerous projects to expand and modernize existing hospitals and clinics, as well as build new ones. There was also emphasis on preventive health care, as well as a greater demand for laboratory analysis and therapeutic equipment and disposables. Most electronic and high-tech equipment is imported. Provincial administrations maintain most major hospitals and receive subsidies from the national government. Hospital care is free for those unable to bear the costs, but medical treatment is generally conducted on a private basis.

About 80% of doctors take care of urban citizens. Large sectors of the population live in conditions nearer to those of a developing country. There are 684 hospitals, with Baragwanath Hospital near Johannesburg the largest in southern Africa. As of 2004, there were an estimated 69 physicians, 388 nurses, 10 dentists, and 24 pharmacists per 100,000 people. Chains of independent hospitals have been established. Total health care expenditure was estimated at 7.2% of GDP.

There are medical schools at the universities of Cape Town, Stellenbosch, Witwatersrand, Pretoria, Natal, and the Orange Free State. Between 1959 and 1994, most black medical students attended the medical school at the University of Natal. In addition, the Medical University of Southern Africa (near Pretoria) was opened for black students in 1978. Following the introduction of democracy in 1994, the government sought to reverse the discrimination against blacks by building 780 community clinics by the year 2000. However, the money to fund these clinics comes from the medical school budgets funded publicly. The South African Institute for Medical Research in Johannesburg is well known

for its studies of silicosis and other diseases to which mine workers are subject.

The HIV/AIDS epidemic in South Africa is among the worst in the world. As of 2004, there were approximately 5,300,000 people living with HIV/AIDS in the country, the highest number of any nation. The HIV/AIDS prevalence was 21.50 per 100 adults in 2003. There were an estimated 370,000 deaths from AIDS in 2003. An increasing percentage of those infected are infants and young children and it is estimated that nearly one-fourth of pregnant women are HIV positive, although the rate of infection varies widely among provinces. In some hospitals more than one-third of the beds are occupied by AIDS patients.

Aside from HIV/AIDS, other prevalent infectious diseases reported in South Africa include tuberculosis, measles, typhoid, malaria, and viral hepatitis. Leprosy had been reduced to less than 1 per 100,000, but malaria and tuberculosis still cause serious problems. About 52% of the male and 16% of the female populations over age 15 smoked in 1995. Between 1983 and 1992, there were about 15,000 deaths due to political and ethnic violence.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 20.6 and 18.9 per 1,000 people. Average life expectancy was 43.27 years in 2005. Infant mortality in 2005 was 61.81 per 1,000 live births and the maternal mortality rate was estimated at 340 per 100,000 live births. Children up to one year of age were immunized against tuberculosis, 95%; diphtheria, pertussis, and tetanus, 73%; polio, 73%; and measles, 76%.

## 4<sup>2</sup> HOUSING

In the late 1990s, there was an explosive growth of shacks and shantytowns surrounding South Africa's major urban areas. In 1994 the housing backlog was estimated to be 1.2 million homes for the black population, while there is a surplus of white housing units of 83,000. This backlog and demand translated into the need to build 250,000 dwelling units a year in the last years of the 20th century, or roughly 1,000 units per working day; however, only about one-tenth of that number—25,000 dwelling units—were built each year, leaving the country with a serious housing shortage. Most of the black townships and squatter settlements lack the basic infrastructure and services of water, sewage, and electricity. Efforts to solve South Africa's housing problem must focus not only on construction, but on servicing current and prospective sites by building roads and providing electricity, sanitation, and water.

At the 2001 census, there were about 11,205,705 households counted, which translates into about the same number of dwelling units. About 55.6% of all households were living in what was described as a house on a separate stand; 16% of all households were living in shacks. Some 32.3% of all households had access to piped water inside their dwelling. Another 29% had piped water in their yard. Nearly 52% of all dwellings had some type of flush toilet. Another 27% used pit latrines.

## 4<sup>3</sup> EDUCATION

The challenge facing the post-apartheid government has been to create an educational system that provides quality education to all citizens of South Africa. The educational legacy left by the apartheid government has not been easy to dismantle. Literacy rates among blacks remain low, and educational facilities in the town-

ships and rural areas need to be upgraded. During the apartheid government, education for whites was free and compulsory between the ages of 7 and 16 while attendance was not generally compulsory for blacks. Adult literacy was close to 100% for whites and about 50% for blacks in the mid-1980s.

After the Soweto riots of 1976, the national government increased expenditures for black education, and black student enrollment did rise sharply. The government reported by the early 1990s that primary and secondary schools enrolled about one million white students; 5.8 million blacks; 900,000 colored; and 300,000 Asians.

The Government of National Unity established a National Ministry of Education in 1994 and an educational system comprised of nine provincial subsystems was developed. National policies set clear educational guidelines, and the Provincial Legislatures have been accorded significant authority in setting specific priorities and policies for that province.

In 1995, President Mandela launched the Presidential Lead Project on Developing the Culture of Learning and Teaching. The program revised school governance structures, increasing school attendance and renovating hundreds of schools around the country.

Education is now compulsory for nine years, which is covered by six years of primary school and three years of junior secondary school. Students may then enter either a two-year technical school program or a three-year general senior secondary program. In 2001, about 35% of all six-year-olds were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 89% of age-eligible students. In 2001, secondary school enrollment was about 62% of age-eligible students. It is estimated that about 98% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2003; the ratio for secondary school was about 30:1.

South Africa has 21 universities and 15 technikons that provide tertiary level vocational training. In 2003, it was estimated that about 15% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 82.4%, with 84% for men and 80.9% for women.

As of 2003, public expenditure on education was estimated at 5.3% of GDP, or 18.5% of total government expenditures.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library of South Africa is made up of two branches: in Pretoria (formerly known as the State Library, 787,000 volumes) and in Cape Town (formerly known as the South African Library, 750,000 volumes). The University of Witwatersrand's main collection holds over one million volumes. Major public libraries are located in Johannesburg (850,000 volumes) and Cape Town (1.4 million volumes).

The Kaffrarian Museum in King William's Town has imposing collections of indigenous animals. The National Museum in Bloemfontein contains an ictidosaur skeleton and the Florisbad human fossil skull. The East London Museum houses the first coelacanth to be caught (the entire family had previously been thought to be extinct). The South African National Gallery is in Cape Town. Founded in 1871, it houses an extensive European collection and well as one of Africa's finest collections of contemporary African art. The South African Cultural History Museum

is also in Cape Town, as is the Castle Military Museum, which opened in 1995. Robben Island, 12 kilometers from Cape Town, is a former prison and is now a museum. Johannesburg has several archaeological museums as well as the University Art Galleries of the University of Witwatersrand. Pretoria houses the Kruger Museum, chronicling the life of Paul Kruger; the Natural Cultural History Museum; and the Museum of Anthropology and Archaeology.

#### 45 MEDIA

The government operates the postal, telegraph, and telephone services through the Department of Posts and Telecommunications. In 2003, there were an estimated 107 mainline telephones for every 1,000 people. The same year, there were approximately 364 mobile phones in use for every 1,000 people.

The South African Broadcasting Corp. (SABC), a semigovernmental organization, offers transmissions in English, Afrikaans, and nine Bantu languages. It derives its income from listeners' licenses and from its commercial services. External broadcasting services are operated by the Voice of South Africa. The country's first television service was begun in January 1976 under government auspices. In 1981 a separate channel began broadcasting in native languages. There are several privately held television and radio stations. As of 1999, there were 15 AM and 164 FM radio stations and 556 television broadcast stations, with transmissions in English, Afrikaans, and four Bantu languages. In 2003, there were an estimated 336 radios and 177 television sets for every 1,000 people. The same year, there were 72.6 personal computers for every 1,000 people and 68 of every 1,000 people had access to the Internet. There were 909 secure Internet servers in the country in 2004.

The English and Afrikaans populations have their own newspapers, distinguished not only by language but also by the variety and slant of news. Nearly all newspapers in South Africa are published by members of the Newspaper Press Union (NPU). Its main function is to hear and decide complaints against the press in cases where the complaints do not fall under the jurisdiction of the courts. The Media Council, established by the NPU, seeks to maintain editorial standards and to deal with infringements of the NPU press code. The largest daily newspapers (with language of publication and 2002 circulations) are: *The Sowetan* (English, 225,000), *The Star* (English, 162,316), *Beeld* (Afrikaans, 111,958), *Die Burger* (Afrikaans, 105,841), *Cape Argus* (English, 85,000), and *The Daily News* (English, 71,600).

The three largest-circulation Sunday newspapers are the English-language *Sunday Times* (458,000) and *Sunday Tribune* (113,000) and the Afrikaans-language *Rapport* (353,000). *Ilanga* and *Umafrika* are Zulu-language weeklies. About 150 local newspapers appear weekly or biweekly. Magazines and general periodicals are divided equally between Afrikaans and English.

The constitution provides for free speech and a free press, and the government now is said to respect these rights. News coverage and editorial opinion is vigorous and unfettered.

#### 46 ORGANIZATIONS

The cooperative movement began before the consummation of the Union, concentrating then as now on marketing agricultural produce. The movement's rapid advance, however, dates from

1922, when the first Cooperative Societies Act was passed. Every branch of farming has its own associations, to which about 75% of all farmers belong; these groups are affiliated with provincial organizations, which, in turn, are members of the South African Agricultural Union. The Agricultural Research Council is an important group for the advancement of the farming industry. Other similar groups include the Sugar Milling Research Institute, the South African Sugarcane Research Institute, and the ARC-Institute for Tropical and Subtropical Crops.

The South African Federated Chamber of Industries is the chief employers' organization. The Association of Chambers of Commerce (ASSOCOM) was formed in 1892 to promote commerce and industry in South Africa. In 1990 the South African Chamber of Business (SACOB) was formed by the merger of the Association of Commerce and Industry and the South African Federated Chamber of Industries. One hundred and two chambers of commerce and industry are members of SACOB.

To provide special aid to Afrikaans-speaking businesspeople, the Afrikaanse Handelsinstituut was established in Pretoria in 1942. It now assists all Afrikaner businesses involved in commerce, finance, and mining. Membership is offered if at least half the capital of a firm is owned by Afrikaners.

The Royal Society of South Africa, founded in 1877, is the leading scholarly organization. The South African Academy of Science and Arts was founded in 1909 and is based in Arcadia. The Geological Society of South Africa (founded in 1895) has published important research in its transactions, and its influence extends beyond South Africa. The African Music Society, an international organization that specializes in the recording of music of all parts of Africa, has its headquarters near Johannesburg. Shakespeare Society of Southern Africa is based in Grahamstown. Other organizations have been established for studies in Afrikaans, archaeology, economics, medicine, technology, and other fields. Groups for hobbyists and other amateur actives are also available, such as the All Breeds Cat Club, the Cape Lancia Club (a car club), and the Federation of Rose Societies of South Africa (R.O.S.A.).

Organizations dedicated to health and welfare include the Association of Societies for Occupational Safety and Health, Health Systems Trust-South Africa, the South African Medical Research Council, the Democratic Nursing Organization of South Africa, and the Colleges of Medicine of South Africa. The South African Medical Association promotes research and education on health issues and works to establish common policies and standards in healthcare. There are several other associations dedicated to research and education for specific fields of medicine and particular diseases and conditions, such as the Cancer Association of South Africa and Diabetes South Africa.

There are a number of sports associations throughout the country. National youth organizations include the ANC Youth League, Girl Guides Association of South Africa, Junior Chamber, National Catholic Federation of Students, YMCA/YWCA, South African Scout Association, South African Student Congress, South African Young Christian Workers, and Youth for Christ. Sports associations promote amateur competition among athletes of all ages for a variety of pastimes.

Women's organizations include the ANC Women's League, the African Gender Institute, National Council of Women of South Africa, the Nisaa Institute for Women's Development, and pro-

grams through the Office on the Status of Women. Black Sash Trust is an organization, primarily of women, dedicated to promoting human rights and civil liberties through the principles of democracy.

There are several national environmental associations in the country, including Birdlife South Africa, Endangered Wildlife Trust, the Grassland Society of Southern Africa, Wildlife and Environment Society of South Africa, African Conservation Trust, and the Environmental Monitoring Group.

National organizations promoting causes of social justice include the Friedrich Naumann Foundation–Africa Regional Office and the Legal Resources Centre. There are national chapters of the Red Cross Society, Caritas, Habitat for Humanity, the Society of St. Vincent de Paul, UNICEF, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

The tourism industry is based on private enterprise, but the government oversees tourist facilities through the South African Tourist Corporation, which also promotes tourism abroad. In addition to the principal cities and many ocean beaches, popular attractions include the Kruger National Park, situated in the northeast, on the Mozambique and Zimbabwe borders, and several game reserves; the Castle of Good Hope fortress at Cape Town (built during 1666–82); and the Kimberley Mine Museum at the site of the famous Big Hole diamond mine. Entertainment facilities include symphony halls, theaters, movies, nightclubs, and discos. Among popular pastimes are golf, tennis, bowls (lawn bowling), hunting, horse racing, rugby, football (soccer), cricket, and water sports.

Foreign nationals who travel to South Africa must have a valid passport. Visas are required for visitors from all countries except the United States, Japan, Scandinavia, and most Western European and Commonwealth Countries.

There were 6.5 million visitors who arrived in South Africa in 2003. Hotel rooms numbered 52,329 with 110,479 beds and an occupancy rate of 57%. Tourism expenditure receipts totaled \$5.2 billion that year.

In 2005, the US Department of State estimated the daily cost of staying in Johannesburg at \$191; in Cape Town, \$234 per day; and other areas, \$202.

#### 48 FAMOUS SOUTH AFRICANS

Among the most famous tribal leaders in what is now South Africa were Shaka (1773–1828), who built the Zulu into a powerful nation, and Cetewayo (d.1884), who led the Zulu in an unsuccessful war against the British in 1879. Other outstanding figures of 19th-century South Africa were Stephanus Johannus Paulus (Oom Paul) Kruger (1825–1904), president of the Transvaal and leader of the Boers, and British-born Cecil John Rhodes (1853–1902), entrepreneur and empire builder, after whom the Rhodesias (now Zambia and Zimbabwe) were named. Jan Christiaan Smuts (1870–1950), statesman and military leader, was one of the great men of the first half of the 20th century. He and two other prime ministers of Boer descent—Louis Botha (1862–1919) and James Barry Munnik Hertzog (1866–1942)—attempted to merge the two white nationality groups in a common loyalty to the British Commonwealth. Daniel François Malan (1874–1959), an Afrikaner Nationalist leader, led his party to victory in 1948 and served as prime minister (1948–54) when South Africa's ra-

cial separation policies were codified. Hendrik Frensch Verwoerd (1901–66), Nationalist prime minister from 1958 until his assassination, vigorously enforced separate development of the races and created the black homelands. His successor, Balthazar Johannes Vorster (1915–83), served as prime minister from 1966 until his elevation to the presidency in 1978; he resigned in the following year because of a political scandal. Pieter Willem Botha (b.1916) became prime minister in 1978 and president in 1984. Frederik Willem de Klerk (b.1936) was the last state president of apartheid South Africa, serving from 1989 to 1994.

Among the best-known South African writers in the English language was Olive (Emily Albertina) Schreiner (1855–1920), whose *Story of an African Farm* has become a classic. A collection of short stories about Afrikaner farmers, *The Little Karoo*, by Pauline Smith (1882–1957), is regarded as a masterpiece. South African authors of novels and short stories such as Sarah Gertrude Millin (Liebson, b. Russia, 1889–1968), Alan Stewart Paton (1903–88), Sir Laurens Van der Post (1906–96), Peter Abrahams (b.1919), Ezekiel Mphahlele (b.1919), Nadine Gordimer (b.1923), Dan Jacobson (b.1929), and John M. Coetzee (b.1940) have won considerable attention in the United Kingdom and the United States. Ignatius Roy Dunnachie Campbell (1901–57) was an eminent South African poet, and his friend William Charles Franklyn Plomer (1903–73) was a highly regarded novelist, poet, essayist, and critic. Athol Fugard (b.1932) has written internationally acclaimed plays about South African race relations.

Well-known authors and poets in the Afrikaans language are Cornelis Jacob Langenhoven (1873–1932), author of the national anthem; Christian Frederick Louis Leipoldt (1880–1947); N.P. van Wyk Louw (1906–70); the poet, playwright, and critic Uys Krige (1910–87), who also wrote in English; and André Brink (b.1935). Eugène Nielsen Marais (1871–1936), a journalist, lawyer, poet, and natural historian, was an outstanding student of animal and insect behavior. Breyten Breytenbach (b.1939) has earned international recognition as an important Afrikaans poet; he served seven years in prison (1975–82) after pleading guilty to a passport violation and to illegal contacts with an African political group.

V. (J.E.A.) Volschenck (1853–1935) is sometimes called the “father of South African art,” and Anton Van Wouw (b.Netherlands, 1862–1945) is called the “doyen” of South African sculpture. Other artists include the painters Robert Gwelo Goodman (b.England, 1871–1939), Jacob Hendrik Pierneef (1886–1957), and Walter W. Battiss (b.England, 1906–82), also an authority on Bushman art; and sculptor Coert Laurens Steynberg (1905–82).

Other noted South Africans are historian George McCall Theal (b.Canada, 1837–1919); the physical anthropologist Raymond Arthur Dart (b.Australia, 1893–1988); Clement Martyn Doke (b.England, 1893–1983), an authority on Bantu philology; the social anthropologist Isaac Schapera (1905–86); Louis Franklin Freed (b.Lithuania, 1903–81), a specialist on tropical diseases; and pioneer open-heart surgeon, Christiaan Neethling Barnard (1922–2001). Lord Henry de Villiers of Wynberg (1842–1914) was chief justice of Cape Colony and of the Union of South Africa.

South Africa's first Nobel Prize winner (for peace in 1961) was Chief Albert John Luthuli (1898–1967), a former president of the ANC, who maintained a policy of nonviolence and of cooperation between whites and blacks. Desmond Mpilo Tutu (b.1931), the secretary general of the South African Council of Churches

during 1979–84 and an outspoken foe of apartheid, received the 1984 Nobel Prize for peace. As archbishop of Cape Town, he became the Anglican primate for southern Africa in 1986. Nelson R. Mandela (b.1918), a prominent leader of the ANC, was sentenced to life imprisonment in 1964; his release was a principal demand of antigovernment activists. He became South Africa's first president elected in fully-representative democratic elections. Oliver Tambo (1919–93), the president of the ANC since 1977, directed the group from exile. Another outspoken critic of the government was the Rev. Allan Boesak (b.1945), a UDC founder and the former president of the World Alliance of Reformed Churches. More conciliatory toward the regime was Gatsha Buthelezi (b.1928), the chief of the Zulu people, who heads the Inkatha movement.

#### 49 DEPENDENCIES

South Africa has no territories or colonies. South Africa once maintained a civil administration and a military presence in Namibia (South West Africa). Namibia, a sovereign state, is discussed under its own heading elsewhere in this volume.

# SUDAN

Republic of the Sudan  
*Jumhuriyat as-Sudan*

**CAPITAL:** Khartoum

**FLAG:** The national flag consists of a tricolor of red, white, and black horizontal stripes, with a green triangle at the hoist.

**ANTHEM:** *Jundi al-Allah (Soldiers of God)*.

**MONETARY UNIT:** The Sudanese dinar (SD) is a paper currency of 100 piasters (qurush) or 1,000 milliemes. SD1 = \$0.00405 (or \$1 = SD247.17) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but a highly diverse system based on Egyptian and British standards is in local use.

**HOLIDAYS:** Independence Day, 1 January; Unity Day, 3 March; Uprising Day, 6 April; Decentralization Day, 1 July; Christmas, 25 December. Movable Muslim religious holidays include the 1st of Muharram (Muslim New Year), 'Id al-Fitr, 'Id al-'Adha, and Milad an-Nabi.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in northeast Africa, Sudan is the largest country on the continent, covering an area of 2,505,810 sq km (967,499 sq mi), with a length of 2,192 km (1,362 mi) SSE–NNW and a width of 1,880 km (1,168 mi) ENE–WSW. Comparatively, the area occupied by Sudan is slightly more than one-quarter the size of the United States. It is bounded on the N by Egypt, on the NE by the Red Sea, on the E by Eritrea and Ethiopia, on the S by Kenya, Uganda, and the Democratic Republic of the Congo (DROC), on the W by the Central African Republic and Chad, and on the NW by Libya.

The Anglo-Egyptian Agreement of 19 January 1899 established the parallel of 22°N as the international boundary between Egypt and Sudan. In 1902, however, a special administrative boundary was delineated between the Nile and the Red Sea, in order to facilitate the administration of nomadic tribes and to maintain the continuity of certain tribal areas in the border region. In 2001, the countries agreed to discuss the creation of an “area of integration” for this overlapping territory and both governments agreed to withdraw military forces from the region. The Egypt-Sudan boundary west of the Nile runs 892 km (554 mi); east of the Nile, the international boundary is 383 km (238 mi), and the administrative boundary is 357 km (222 mi). Including this administrative line, Sudan’s total boundary length is 8,550 km (5,313 mi).

Sudan’s capital city, Khartoum, is located in the northeast central part of the country.

## <sup>2</sup> TOPOGRAPHY

The greatest part of Sudan is a vast plain traversed by the northward-flowing Nile River and its tributaries. Widely separated mountain chains and many hilly areas often reach altitudes of more than 2,000 m (6,500 ft). The highest elevation is at Mount Kinyeti 3187 m (10,456 ft) along the southern border with Ugan-

da. The northern area is mainly desert, including the Nubian Desert, with rock at or near the surface covered by thin soils of low fertility. The western undulating sandy wastes merge into the Red Sea Hills to the east. Regions of swampland lie in the south.

The dominating geographic feature is the Nile River, formed near Khartoum by the confluence of the Blue Nile and White Nile rivers. There are natural harbors at Port Sudan (Bur Sudan) and Suakin on the Red Sea.

## <sup>3</sup> CLIMATE

In the northern plains and desert region, average temperatures range from 32°C (90°F) in winter (November to February) to 42°C (108°F) in summer (March to June); the hottest months are May and June. In the central and southern regions, average temperatures are 27° to 29°C (80° to 85°F). Rainfall decreases from south to north, the annual average varying from 120 cm (47 in) in the south to less than 10 cm (4 in) in the north; the rainy season is from July to September. Climatic hazards—sandstorms in the northern deserts and flooding rains in the central belt—often interfere with railroad traffic. The most temperate climate occurs in the Red Sea Hills.

## <sup>4</sup> FLORA AND FAUNA

The acacia desert shrub and acacia short-grass shrub grow in the northern desert and the grasslands of the west. The broad-leaved tropical woodland and forest region is for the most part in the southwest, where areas of luxuriant growth and closed forests are found; grass covers much of the steppe area of the southeast. Date palms line the banks of the Nile. Wildlife includes most of the mammals, birds, and reptiles common to central Africa. Many varieties of fish are found in the rivers and in the coastal waters of the Red Sea. As of 2002, there were at least 267 species of mammals,

280 species of birds, and over 3,100 species of plants throughout the country.

## 5 ENVIRONMENT

A shortage of potable water inhibits agriculture, animal husbandry, and human settlement in much of Sudan. Sudan has 30 cu km of renewable water resources, of which 96% of the annual withdrawal is used for farming and 2% is used for domestic purposes. Serious health problems are caused by diseases carried in the water supply; Only about 64% of the nation's rural dwellers and 78% of its city dwellers have access to improved water sources. The water on the nation's coasts is also polluted by industrial by-products, oil, and sewage. Sudan's cities produce about 1.1 million tons of solid waste per year. The nation's agricultural land is threatened by the advance of the desert. Government agencies vested with environmental responsibilities include the National Committee for Environment (within the National Council for Research) and the ministries of agriculture, natural resources, irrigation, energy, and health.

Due to uncontrolled hunting, the nation's wildlife is threatened. In 2003, about 5.2% of the total land area was protected, including Dinder National Park, which is listed as a Ramsar wetland site. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 16 types of mammals, 10 species of birds, 2 types of reptiles, 8 species of fish, 2 species of other invertebrates, and 17 species of plants. Threatened species included the waldrapp, northern white rhinoceros, Tora hartebeest, slender-horned gazelle, and hawksbill turtle. The Sahara oryx has become extinct in the wild.

## 6 POPULATION

The population of Sudan in 2005 was estimated by the United Nations (UN) at 40,187,000, which placed it at number 30 in population among the 193 nations of the world. The country has conducted four censuses of population since 1956; however, the most recent (1993) did not include the southern part of the country. As of 2006, plans for the fifth census were delayed due to the ongoing civil unrest. In 2005, approximately 2% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.7%; international organizations were attempting to support government efforts to reduce the fertility rate, which stood at 4.8 births per woman in 2005. The projected population for the year 2025 was 61,339,000. The population density was 16 per sq km (42 per sq mi).

The UN estimated that 36% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.85%. The capital city, Khartoum, had a population of 4,286,000 in that year. Other major cities include Port Sudan (the only modern seaport), Wad Madani, Al Ubayyid (the principal city of central Sudan), and Aṭṭarah.

## 7 MIGRATION

Many Sudanese were working abroad in the mid-1990s, chiefly in Saudi Arabia and other Persian Gulf countries but also in Libya. Although their remittances were significant for the Sudanese

economy, the absence of these workers, many of them skilled, constituted a "brain drain" of serious proportions. Perhaps 200,000 were expelled from Persian Gulf countries in 1991 because Sudan supported Iraq in the Gulf war.

As a result of the Sudanese government fighting the Sudanese People's Liberation Army in the south, there were still 209,000 Sudanese refugees in Uganda, 110,000 in the DROC, 78,000 in Ethiopia, 28,000 in Kenya, and 27,000 in the Central African Republic in June 1997.

Since the 1970s, the Sudanese government has welcomed refugees as a result of war or famine. As a result of the United Nations High Commissioner for Refugees (UNHCR) repatriation programs, 25,000 Eritreans and 62,000 Ethiopians were sent home in 1994 and 1995. The total number of migrants in 2000 was 780,000, including 415,000 refugees. In 2004 Sudan experienced a political and humanitarian crisis; a severe drought coupled with genocide in Darfur as the government supported Arab militias against Black Sudanese. Over 50,000 people died and 1.6 million Black Sudanese were displaced. The UN labeled Sudan the "world's worst humanitarian crisis" in 2004. At the end of 2004, Sudan was hosting 141,588 refugees, mainly from Eritrea, Ethiopia, Chad, and Uganda. In that same year there were 4,271 asylum seekers and 290 returned refugees. However, there were also 662,302 internally displaced persons who were at a camp in West Darfur, and another 37,416 former Eritrean refugees in Sudan. In 2005, the net migration rate was an estimated -8.78 migrants per 1,000 population. Worker remittances in 2003 amounted to \$1.2 billion.

## 8 ETHNIC GROUPS

Indigenous Sudanese include Nilotic or Negroid peoples, of whom the Dinka form the largest portion, and constitute about 52% of the national population; Arabs account for an estimated 39% of the population and Beja for 6%. In all, there are nearly 600 ethnic groups. Foreigners constitute 2% of the total populace; other groups another 1%.

## 9 LANGUAGES

Arabic, the official language, is the mother tongue of about half the population. Besides standard Arabic, Nubian and Ta Bedawie are also commonly spoken. English is used widely, in many cases serving as a lingua franca among the southern tribes. In all, more than 400 diverse dialects of Nilotic, Nilo-Hamitic, and Sudanic languages are spoken.

## 10 RELIGIONS

The state religion is Islam, whose adherents, primarily Sunni, account for about 65% of the population; most of them live in the north. As an important transit station for Mecca-bound African pilgrims, Sudan remains intimately linked with the Islamic world. Among the Muslims, religious brotherhoods (*tarigat*) play an important role in sectarian and communal life. The two most popular brotherhoods are the Ansar, which is closely associated with the Umma Party, and the Khatimia, which is associated with the Democratic Unionist Party.

About 25% of the population are practitioners of traditional indigenous religions. About 10% of the population are Christians, particularly in the south, where Christianity is reported to be growing rapidly. Most of the Christian community are professed

LOCATION: 23° to 3° N; 22° to 38° E. BOUNDARY LENGTHS: Egypt 1,273 kilometers (789 miles); Red Sea coastline, 853 kilometers (529 miles); Eritrea, 605 kilometers (376 miles); Ethiopia, 1,606 kilometers (998 miles); Kenya, 232 kilometers (144 miles); Uganda, 435 kilometers (270 miles); Democratic Republic of the Congo (DROC), 628 kilometers (390 miles); Central African Republic, 1,165 kilometers (724 miles); Chad, 1,360 kilometers (845 miles); Libya, 383 kilometers (238 miles).

TERRITORIAL SEA LIMIT: 12 miles.

Roman Catholics, Greek Orthodox, Coptic, and Anglican Christians are found in small numbers in towns. There is reported evidence, however, that many Christians continue to practice elements of traditional indigenous religions.

The 1973 constitution guaranteed unrestricted freedom of religion, but Islam was cited as the official religion. Christian mission schools in the south were nationalized in 1957 and foreign missionaries were expelled from the south in 1963–64. At present, religious organizations are subject to the 1994 Societies Registration

Act, which replaced the controversial 1962 Missionary Societies Act. Theoretically, it allows churches to engage in a wider range of activities; however, churches are subject to the same restrictions placed on nonreligious corporations. Religious groups must be registered and approved in order to be recognized or gather legally.

The civil war that resumed in 1983 is largely religious. The government is dominated by northern Muslims while southern rebel groups are mostly Christians and traditionalists. The govern-

ment, which claims Islam as the state religion, supports adherence to Shariah (Islamic) law and has declared a jihad, or holy war, against the rebel factions. The primarily Christian rebel group, the Sudan People's Liberation Movement (SPLM) supports a secular government, but seems willing to allow Shariah law in the northern states.

The government and Muslim majority continue to discriminate against and persecute non-Muslims. Many non-Muslims have been fired from jobs in civil service and non-Muslim business owners are often harassed and discriminated against in matters of government contracts and trade licenses. Students of Christian schools are often kept from completing their compulsory military service, which is required in order to move on to the university. Many Muslim employers do not allow Christian employees time off to attend Sunday worship services. Throughout the civil war, several non-Muslim women and children have been captured by Muslims, sold into slavery and forced to convert to Islam. Conversion from Islam to any other religion is punishable by death.

## <sup>11</sup>TRANSPORTATION

With the exception of a few interurban bus lines and taxi systems, all land, sea, river, and air transportation facilities are owned by the state. As of 2004, the country's 5,995 km (3,725 mi) of railroad track (all of it narrow gauge) linked most of the main towns of Sudan. The principal terminals are: Khartoum and Port Sudan in the east; Wadi Halfa' in the north (on the Egyptian border); Al Ubayyid in the center of the country; Nyala in the west; and Waw in the south. 'Aṭbarah on the Nile River (north of Khartoum) is an important junction and seat of the central administration, repair shops, and equipment-manufacturing plants of the Sudan Railways Corp.

In 1966, a bridge linking Khartoum North and Omdurman, and the enlargement of the bridge on the White Nile between Khartoum and Omdurman were completed, facilitating the circulation of traffic around these three towns. A major road (1,197 km/744 mi) linking Port Sudan with Khartoum was completed in 1980. In 2002, the overall road system totaled 11,900 km (7,395 mi), of which 4,320 km (2,684 mi) were paved. As of 2003, there were 37,100 passenger cars and 47,465 commercial vehicles.

Sudan, as of 2004, had 4,068 km (2,530 mi) of navigable inland waterways, of which 1,723 km (1,072 mi) on the Blue and White Nile rivers are open year round. River transport services link many communities. The White Nile route between Kusti and Juba (1,436 km/892 mi) is of crucial importance. Port Sudan, on the Red Sea, is primarily a cargo port, handling all of Sudan's cotton exports as well as most food imports. Passenger traffic is insignificant except for Mecca-bound pilgrims. A small Sudanese merchant marine was founded with assistance from the former Yugoslavia. As of 2005, it had two vessels (a cargo ship and a livestock carrier) of 1,000 GRT or more, totaling 20,466 GRT.

There were an estimated 75 airports in 2004. In 2005, a total of 14 had paved runways, and there was also one heliport. The international airport is at Khartoum. The state-owned Sudan Airways Corp., founded in 1947, links the main cities and provides extensive international service. Flights to the south were suspended in the mid-1980s because of the civil war. In 2003, about 421,000 passengers were carried on scheduled domestic and international flights.

## <sup>12</sup>HISTORY

The salient events in recorded Sudanese history occurred in the northern half of the country. The kingdom of Kush (or Cush), rich in gold and iron and sustained by irrigation from the Nile floodwaters, broke away from Egyptian rule about 1000 BC. It became a separate kingdom, with its capital at Napatan, and developed under the pervasive influence of Egyptian culture. It conquered Egypt for a time (736–657 BC), moved its capital to Meroe (now Merowe) in 538 BC, and was destroyed about AD 350 by the Aksumite (or Axumite) Empire in Ethiopia.

Following the fall of Kush, two successor kingdoms arose: Maqurra, in northern Sudan, with its capital at Old Dongola; and Alwa, in central Sudan, with its capital at Soba. Maqurra fell in the 15th century to an alliance of Arabs and Mamlukes from Egypt. Around the beginning of the 17th century, Alwa was conquered by an alliance of Arabs and a loose confederation of tribes ruled by the "Black Sultans" of the Funj dynasty, with their capital at Sennar. The inhabitants of the south, until the 20th century, lived in primitive tribal isolation, interrupted only by explorers and perennial slave raiding.

In the 1820s, the autonomous Ottoman viceroy of Egypt, Muhammad 'Ali, defeated the Funj sultan and brought Sudan under Turco-Egyptian rule, which lasted until 1885. By then, most of the Sudanese tribes had revolted against the harshness and corruption of the regime and rallied under the leadership of a northern shipwright, Muhammad Ahmad bin 'Abdallah. He proclaimed himself the Mahdi (Rightly Guided One), whose coming to achieve the complete victory of Islam had been prophesied in Muslim tradition. After decisively defeating a series of punitive expeditions, the Mahdi took possession of Khartoum in 1885, whereupon his troops captured and beheaded the governor, Gen. Charles Gordon, one of the British officers in the employ of Egypt. The Mahdi installed himself as head of a theocratic state, which survived until 1898, when an Anglo-Egyptian invasion force under Gen. Horatio Herbert Kitchener defeated the Mahdi's successor, the Khalifa ('Abdallah bin Muhammad), in the battle of Omdurman. British rule was set up under a nominal Anglo-Egyptian "condominium" following a French attempt to seize parts of Sudan, an effort thwarted by Kitchener at Fashoda (now Kodok) in an incident that almost provoked a war between France and Great Britain. British administration did much to restore law and order, repress slave trading, and bring modern government and economic stability to Anglo-Egyptian Sudan, as it was then called.

Sudanese nationalism erupted after World War I with Egyptian support and received its decisive impetus during World War II, when British-led Sudanese troops distinguished themselves in repelling a vastly superior Italian force. An Egyptian scheme to join Egypt and Sudan in a dual monarchy under King Faruk miscarried, as did other proposals for the "unity of the Nile Valley." Prolonged Anglo-Egyptian negotiations for agreement on a mutually acceptable form of Sudanese independence reached fruition in 1953, after Faruk was deposed.

The new Republic of the Sudan, under a parliamentary government, was proclaimed on 1 January 1956. On 17 November 1958, a military dictatorship was installed, headed by Lt. Gen. Ibrahim Abboud, commander-in-chief of the armed forces, after a bloodless coup that had the support of some party leaders. President

Abdoud's military regime was overthrown on 26 October 1964, and civilian politicians ruled for the next five years.

A revolutionary council led by Col. Gaafar Mohammed Nimeiri (Ja'far Muhammad Numayri) overthrew the government in a bloodless coup on 25 May 1969 and established the Democratic Republic of the Sudan. The new government suspended the constitution, the Supreme Council of State, the National Assembly, and all political parties; the ex-president and former ministers were arrested. Nimeiri became prime minister in October 1969. On 25 May 1971, he proclaimed that Sudan would become a one-party state, with the Sudanese Socialist Union the sole political organization. A provisional constitution was promulgated on 13 August 1971, and Nimeiri, running unopposed, was elected president in September, receiving 98.6% of the votes cast. One of Nimeiri's most significant acts was to bring an end to the sporadic civil war that had plagued Sudan since independence. A settlement with autonomist forces in the south was reached in February 1972, when negotiators for the Sudanese government and the South Sudan Liberation Front, the Anyanya rebels, agreed on a cease-fire and on autonomy for the southern provinces.

Nimeiri was reelected without opposition in 1977 and 1983, but his regime had to weather considerable turmoil both domestically and in relations with neighboring countries, especially Libya. An abortive left-wing coup attempt in July 1971 led to the execution of leading Sudanese Communists; the banning of the Trade Union Federation, the Public Servants Union, and the Teachers Union (all formerly Communist-dominated); and the expulsion of East German security advisers. Another alleged coup was foiled in January 1973, and an abortive, Libyan-inspired attempt on Nimeiri's life was disclosed by the Sudanese government in April 1974. Student riots and disclosure of yet another abortive coup came in October 1974, and during the following year the Nimeiri government faced and successfully suppressed at least two military rebellions.

In July 1976, an attempted coup by the Ansar brotherhood, allegedly with Libyan support, was crushed. In subsequent years, Nimeiri charged repeatedly that Libya was aiding Muslim dissidents in Sudan. On 16 March 1984, Omdurman was bombed by what Sudan, Egypt, and the United States claimed (but Libya denied) was a Libyan air force TU-22. Nimeiri declared a state of emergency in April 1984 to cope with protests over rising prices and a new government Islamization program (in July of that year, the National People's Assembly rejected his attempt to make Sudan an official Islamic state). The state of emergency ended in September 1984, but by then a new rebellion was under way in the south, which had become alienated by Nimeiri's efforts to restrict its autonomy and apply Shariah (Muslim law). Many Sudanese were shocked by the execution of Mahmoud Mohammed Taha, a popular Muslim political and religious leader, for heresy (in criticizing the application of Shariah) in January 1985.

Riots broke out in the spring of 1985, when, in order to gain new loans from international creditors, Nimeiri removed subsidies on basic commodities, causing prices to rise. On 7 April 1985, Nimeiri was replaced by a military council headed by Gen. Abdel-Rahman Swar ad-Dhahab. The country was renamed the Republic of Sudan, the ruling Sudanese Socialist Union was abolished, political and press freedom was restored, and food prices were lowered. Sudan reverted to a policy of nonalignment in foreign policy, backing away from its close ties with Egypt and the United States.

### Unrest in the South

General elections held in April 1986 resulted in a moderate civilian coalition government headed by Prime Minister Sadiq al-Mahdi. The government's chief problem was the continuing rebellion by the Sudanese People's Liberation Army (SPLA), which controlled much of the south and prevented voting there. The SPLA halted air traffic (including food relief) to the south and opposed two major projects vital to the economy—oil exploration and a canal that would provide water to the parched north. The coalition government was headed by the northern-based Ummah. It began searching for a formula to unite the country with the SPLA which, unlike the earlier Anyanya, was also committed to unity. Divisions with government over meeting key SPLA demands, most especially the repeal of Islamic law, prolonged the civil war. In March 1989, a new government composed of Ummah Party and Democratic Unionist Party (DUP) ministers agreed to accommodate the SPLA.

However, on 30 June 1989, a group of army officers led by Brig. Omar Hasan al-Bashir overthrew the civilian government. Mahdi was arrested and fighting in the south escalated. The coup makers created a National Salvation Revolutionary Command Council (RCC), a junta composed of 15 military officers assisted by a civilian cabinet, suspending the 1985 transitional constitution, abrogating press freedoms, and dissolving all parties and trade unions. In September 1989 the government sponsored a "National Dialogue Conference on the Political System" which produced a proposal for a new federal system of government. On 23 April 1990, Bashir declared a state of emergency and dissolved parliament. An alleged coup attempt prompted that move. The following day, 28 officers were court martialed and executed.

Despite these measures and the efforts by third parties, including former US president Jimmy Carter and Nigeria, to further the peace process, few positive results were obtained. With the fall of Ethiopia's Marxist government in 1991, the SPLA rebel faction lost its chief patron. A 1992 government offensive, coupled with a major political split in the SPLA, reduced rebel-held territory while increasing casualties and displaced persons with the latter numbering, at times, over two million.

Civilian rule returned nominally to Sudan in 1993, when the RCC was formally dissolved and Bashir was declared president. However, Bashir retained control of the military, and the government was dominated by the fundamentalist National Islamic Front (NIF), under the leadership of Hassan al-Turabi. Bashir was elected president with a reported 75% of the vote in the 1996 national elections, which were boycotted by major opposition groups; following the elections, al-Turabi was elected speaker of parliament.

In the 1990s, because of its militant Islamic policies, Sudan became increasingly isolated internationally. Sudan has given sanctuary to Muslim rebels from Tunisia and Algeria, to the Hezbollah (Party of God), to Palestinian rebels, and to the Lord's Resistance Army in Uganda. Iran assists Sudan militarily. The regime purged the civil service, the armed forces, the judiciary and the educational system of non-Muslims. It also promulgated a Penal Code based on Islamic Law. The UN General Assembly condemned Sudan's human rights violations in 1993. The United States added Sudan to its list of countries spawning international terrorism that year, and tensions with Egypt grew as well. Under international pressure, Sudan adopted a new constitution in 1998 providing

for a multiparty government; registration of new parties began in 1999.

In the same year, fighting in the oil-rich southern part of the country escalated into wholesale destruction. Human rights abuses multiplied as factional rivalries intensified between rebels loyal to SPLA leader John Garang and militants of the Nasir faction of the SPLA. The latter rejected all cooperation with the Islamic north. Famine relief efforts in the region had to be suspended owing to rebel attacks. In March 2000, a number of nongovernmental organizations (NGOs) left the country after refusing to comply with restrictions imposed by rebel authorities.

In the meantime, a power struggle between President Bashir and Hassan Turabi, party leader, parliamentary speaker, and architect of the nation's Islamist policies, ended with Turabi's forced removal and the dismissal of the National Assembly in a military raid ordered by Bashir in December 1999. In widely boycotted and discredited elections held in December 2000, Bashir was reelected and the NCP gained 355 seats to five for nonpartisans in the National Assembly. The struggle between Bashir and Turabi continued; Bashir had Turabi imprisoned March 2004–June 2005.

On 26 May 2004, the Khartoum government and the SPLA signed a power-sharing agreement in Naivasha, Kenya. On 19 November the two sides signed a pledge to commit themselves to end the 21-year civil war, a pledge which was signed in front of the 15 UN Security Council members meeting in Nairobi; this was only the fourth time the Security Council had met outside its New York headquarters. On 9 January 2005, a comprehensive peace agreement was signed, ending more than two years of intense negotiations. In July 2005, John Garang of the SPLA was sworn in as vice-president of Sudan (Bashir remained president) and three weeks later he was killed in a helicopter crash. Rioting broke out in Khartoum and other cities upon news of his death and within a week the death toll was more than 130.

### Darfur

Beginning in 2003 in Darfur—the western region of Sudan which is slightly larger than France—Arab nomads supported by the Khartoum military and government-backed Janjaweed militia groups began to attack the Fur people, subsistence farmers who make up the major ethnic group in the region. The Fur are supported by the rebel Sudan Liberation Movement/Army (SLM/A) and the Justice and Equality Movement (JEM) faction of the SLM/A. The SLM/A in early 2003 began to attack government and military outposts, with the intent of gaining influence in the affairs of the region after having been systematically marginalized socio-economically. The government armed the nomads and sent the Janjaweed—translated "men with guns on the backs of beasts"—to raid black villages on horseback, on camels, and in trucks, with guns and machetes. The Janjaweed rampages resulted in what has been called one of the world's worst humanitarian crises: countless rapes, the murders of more than 70,000 people, and the displacement of nearly two million people. The rebels claimed the depopulation of villages and consequent changes in land ownership were part of a government strategy to change the entire demography of Darfur. The government denied all humanitarian agencies access to the region; refugees were housed in camps on the border of Chad. In April 2004, the two sides agreed to a temporary cease-fire to allow for humanitarian agencies to reach those in need of

help, but the Janjaweed continued their attacks. In May 2004, the United Nations condemned the attacks on civilians and called on the Khartoum government to prevent the Janjaweed from carrying out strikes against the black African population. In July 2004, the US Congress declared the mass killings of civilians in Darfur to be genocide. A Declaration of Principles for the Resolution of the Sudanese Conflict in Darfur was signed in July 2005. By that time, estimates of the number of dead—many from hunger and disease in addition to violence—ranged from 70,000 to nearly 350,000.

## 13 GOVERNMENT

Until 2005, the government was led solely by President Lt. Gen. Omar Hasan Ahmad al-Bashir, who assumed supreme executive power in 1989 and retained it through several transitional governments in the early and mid-90s before being popularly elected for the first time in March 1996. The president is both the chief of state and head of government, and he appointed the Council of Ministers. The president serves a five-year term.

An election was held 13–23 December 2000, but it was widely dismissed as rigged and was boycotted by all opposition parties. The unicameral National Assembly consists of 360 seats—270 popularly elected and 90 elected by a supra assembly of interest groups known as the National Congress. Members serve four-year terms. Elections were held from 13–22 December 2000. The next presidential as well as legislative elections were scheduled to take place in 2009.

Historically, the government has experienced several coups and reconfigurations. A constitution took effect only on 8 May 1973—Sudan's first permanent governing document since independence in 1956. It established a presidential system and a one-party state, with the Sudanese Socialist Union (SSU) as the only political party. Nominated by the SSU for a six-year renewable term, the president (after confirmation by national plebiscite) appointed vice presidents, a prime minister, and cabinet ministers, who were answerable to him. The president was also supreme commander of the armed forces. Legislative power was vested in the 151-seat National People's Assembly.

This constitution was suspended on 6 April 1985. A temporary constitution was established on 10 October 1985, pending a permanent one to be drawn up by the National Assembly elected in 1986. A six-member civilian Supreme Council, including a president, was established as the nation's executive body in 1986, replacing the military council that had seized power in 1985. A Council of Ministers, led by a prime minister and responsible to the National Assembly, was also established to carry out executive powers.

After the 1989 military coup, the 1985 transitional constitution was suspended. In January 1991, the RCC imposed Islamic law in the six northern provinces. Executive and legislative authority was vested in a 15-member Revolutionary Command Council (RCC). Its chairman, acting as prime minister, appointed a 300-member transitional National Assembly. In mid-October 1993, Bashir dissolved the RCC and officially declared himself president. On 30 October 1993, President Bashir announced a new, predominantly civilian cabinet that consisted of 20 federal ministers, most of whom retained their previous cabinet positions. On 9 February 1995 Bashir abolished three ministries and divided their portfo-

lios to create several new ministries. These changes had the effect of increasing the National Islamic Front's presence at the ministerial level and consolidating its control over the Ministry of Foreign Affairs. Bashir was elected to a five-year term in March 1996. In 1998, a new constitution was promulgated that nominally provided for a multiparty political system. Registration of new parties took place in 1999.

In 2005, President Bashir and Sudanese People's Liberation Army (SPLA) leader John Garang signed a comprehensive peace plan, including a permanent cease-fire, and protocols on sharing power and wealth. The government and the southern rebels agreed to set up a 39,000-strong army, composed of fighters from both sides. They agreed that the south should be autonomous for six years, after which a referendum would be held on the key issue of independence. Shariah law would remain in the north, but not in Khartoum proper. The two sides agreed to a 70 to 30 split of all jobs in the central administration, in favor of the government. In the oil-rich central regions of Abyei, Blue Nile State, and the Nuba mountains, administrative jobs would be divided 55 to 45, once again in favor of the government. Sudan's oil wealth itself is to be divided equally between the north and south. After Garang's death in July 2005, Salva Kiir was sworn in as first vice-president. Bashir remained president.

#### 14 POLITICAL PARTIES

The political groupings that emerged in Sudan's struggle for independence focused on personalities or specific interest groups rather than ideology or party machinery. The most powerful force before 1958 was the Ansar sect and the Ansar-sponsored Ummah Party. Other parties were closely affiliated with the Khatmiyah sect, led by Sayyid 'Ali al-Mirghani; the leftist-dominated labor unions; the Graduates Congress, an organization of college graduates; and leaders of the black tribes of the south. For the first three years of the country's independence, these parties were strongly divided on such issues as union with Egypt (opposed by the Ummah Party); alignment with the West in economic and foreign affairs (opposed by the Khatmiyah, the labor unions, and the Graduates); Communism (courted by elements in most parties and labor unions); political secularization (sought by leaders not aligned with the religious sects); federalism (demanded by southern spokesmen); and fear of the royal aspirations of the Mahdi family. These divisions helped bring about the downfall of several coalition cabinets and finally weakened the parliamentary system to the point where the army could successfully carry out a coup without encountering resistance. Political activity was banned in 1958 and was not resumed until the overthrow of the Abboud government in October 1964.

In 1966, the Ummah Party split into two groups, one conservative, the other progressive. The following year, the Democratic Unionist Party (DUP) was formed from the amalgamation of the National Unionist Party and the People's Democratic Party. In the May 1968 elections, the DUP won 101 of 218 parliamentary seats, while no other party captured more than 36.

After the 1969 military takeover, existing political parties were banned and a special attempt was made, beginning in 1971, to suppress the powerful Communist Party. The 1973 constitution provided for a one-party state, with the Sudanese Socialist Union (SSU), established by Nimeiri in 1971, as the sole legal political

organization. In elections for the National People's Assembly, only candidates approved by the SSU were allowed to run.

In April 1986, in the first free elections held since 1968, the Ummah Party won 99 of 301 parliamentary seats, the DUP won 63, and the fundamentalist National Islamic Front (NIF) won 51. The remaining seats went mainly to regional parties, but 37 seats from the south were unfilled because of the civil war and the boycott of the elections by the Sudanese People's Liberation Front. The Ummah Party, the DUP, and four southern parties formed a coalition government, with the NIF in opposition. In August 1987, the coalition fell apart when the DUP broke away from the Ummah Party after an election in which it lost one of its two seats on the Supreme Council to an Ummah candidate, reportedly because the DUP candidate had been a close aide of Nimeiri. Prime Minister Sadiq al-Mahdi, aligned with the Ummah Party, retained his position until his overthrow in June, 1989.

In the elections for the National Assembly, held (except in the south) from 21 April to 8 May 1965, the Ummah again emerged as the most important party, gaining 76 of the 173 contested seats. The National Unionist Party, a right-wing party favoring close relations with Egypt, won 53 seats and formed a coalition government with the Ummah Party. During the mid-1960s, two regional parties—the Southern Front, formed in 1964 by Southerners living in the north, and the Sudan African National Union (SANU), formed in 1966 by Sudanese exiles in Uganda—advocated self-determination and independence for the south.

The Revolutionary Command Council (RCC) banned all parties in 1989 except for the NIF, whose members and supporters held most key positions. After the dissolution of the RCC in October 1993, the NIF further tightened its grip on the state. The RCC's executive and legislative powers were transferred to the president and the Transitional National Assembly (TNA), Sudan's appointed legislative body, which was replaced by the National Assembly elected in March 1996.

The main opposition to the central government became the Sudan's People's Liberation Army (SPLA) which joined forces in 1997 with a new alliance of northern rebels known as the National Democratic Alliance. This opposition was sponsored by Ethiopia and Eritrea, and encouraged by the United States, which holds the government of Sudan responsible for sponsoring international terrorism and for committing atrocities against its Christian population in the south.

A new constitution adopted in 1998 and revised in 2000 recognized political parties other than the NIF for the first time since 1989. However, parties had to accept the constitution and refrain from advocating or using violence against the regime. Approved parties include the ruling National Congress Party (NCP) led by Ibrahim Ahmed Umar, Popular National Congress (PNC) led by Hassan al-Turabi, and over 20 minor pro-government parties. In the fall of 1998, the National Islamic Front (NIF) changed its name to the National Congress Party.

In presidential elections held in December 2000, al-Bashir was reelected president with 86.5% of the vote, followed by Ja'afar Muhammed Numayri with 9.6%. Three other candidates received less than a combined 4% of the vote. In the boycotted parliamentary elections of 13–22 December 2000, the NCP took 355 of 400 seats. The next elections were scheduled to take place in 2009.

## 15 LOCAL GOVERNMENT

Local government experienced reorganizations in 1983, 1989, and 1994. The constitutional decree of 2 February 1994 created 26 states, each subdivided into 66 provinces and 218 districts. President Bashir stated his intention to devolve executive and legislative powers “never experienced in remote areas” to state governments. In theory, states are to be led by elected governors, deputy governors, and a cabinet of ministers.

## 16 JUDICIAL SYSTEM

The court system includes regular courts (both criminal and civil), special security courts, military courts, and tribal courts. The chief justice of the Supreme Court, as the senior judge, presides over the judiciary and according to the 1973 constitution, is directly responsible to the president through a council headed by the president. Civil justice is administered by the Supreme Court, courts of appeal, and lower courts, while criminal justice is administered by major courts, magistrates’ courts, and local people’s courts.

As of 20 January 1991, the now defunct Revolutionary Command Council imposed Islamic law in the northern states. For Muslims, justice in personal matters such as domestic relations and probate, is administered by Muslim law courts, which form the Shariah Division of the Sudan judiciary. The Shariah Division includes a court of appeal, high courts, and qadis’ courts. The president of the Shariah judiciary is the grand qadi.

The judiciary remains largely subservient to the government. In 1989 the National Salvation Revolution Command Council (RCC) placed responsibility for supervision of the judiciary with the Ministry of Justice. The 1989 Special Courts Act created three-person security courts to handle offenses involving violations of constitutional decrees, emergency regulations and some sections of the penal code. A 1993 decree dissolving the RCC gave the NIF-dominated transitional National Assembly the power to issue constitutional decrees.

## 17 ARMED FORCES

Sudanese armed forces totaled approximately 104,800 active personnel in 2005. The Army had an estimated strength of 100,000 personnel, whose equipment included 200 main battle tanks, 70 light tanks, 218 reconnaissance vehicles, 75 armored infantry fighting vehicles, 241 armored personnel carriers and over 1,105 artillery pieces. The Navy had an estimated 1,800 personnel. Major naval units included 18 patrol craft and 2 amphibious landing craft. The Air Force numbered 3,000 personnel and was equipped with 34 combat capable aircraft, that included 26 fighters and 8 fighter ground attack aircraft. The service also had 10 attack helicopters. Paramilitary forces numbered 17,500 active members and 85,000 reserves. In 2005, the defense budget totaled \$483 million. The Sudanese armed forces, largely Muslim, face an estimated 25,000 rebels of the Sudanese People’s Liberation Army and another 3,000 in other opposition groups.

## 18 INTERNATIONAL COOPERATION

Sudan joined the United Nations on 12 November 1956; it participates in ECA and several nonregional specialized agencies, such as the FAO, UNESCO, UNHCR, the World Bank, IAEA, and the WHO. The nation belongs to the African Development Bank, the

Arab Bank for Economic Development in Africa, the Arab Fund for Economic and Social Development, the Islamic Development Bank, the ACP Group, the Council of Arab Economic Unity, the Organization of the Islamic Conference (OIC), G-77, the Arab League, the Community of Sahel and Saharan States (CENSAD), COMESA, the New Partnership for Africa’s Development (NEPAD), and the African Union. Sudan holds observer status in the WTO.

Though the government has shown cooperation in international counterterrorism talks, Sudan has remained on the US list of State Sponsors of Terrorism for its alleged support of such groups as the Egyptian Islamic Jihad, the Palestinian Islamic Jihad, Hamas, and the Lord’s Resistance Army. Sudan is part of the Nonaligned Movement. In environmental cooperation, Sudan is part of the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Sudan has an agricultural economy, employing 80% of the workforce, holding considerable potential for irrigated production. Cotton and sesame account for almost a quarter each of export earnings. The livestock sector is sizable as well. However, droughts have led to famines, and civil war has led to the virtual collapse of the economy. The slave trade is alive and prospering in Sudan, operating at about \$50 a head in 1999. It is estimated that in the south as many as one million civilians have died and more than five million have been uprooted because of civil war. Economic development is also hindered by a poor transportation system that increases the cost of transporting goods over long distances; Sudan is the largest country in Africa.

Sudan’s failure to service its international debt, together with a poor human rights record, led, in 1993, to the World Bank suspending financing of 15 development projects, and to the IMF suspending Sudan’s voting rights in the organization (they were restored in 2000). Sudan was the world’s largest debtor to the IMF in 2003, with arrears of over \$1 billion. Total foreign debt exceeds \$24 billion, and high inflation has put consumer goods beyond the reach of most. In 2003, the civil war and Sudan’s international isolation continued to inhibit growth in the nonagricultural sectors, although progress on the peace process was being made with strong backing from the international community. Petroleum discoveries in the south-central region of Sudan and their export in 1999 raised hopes of economic salvation, but political instability undermines the prospect for lasting improvement in the economy. The economy, in terms of GDP, grew at an annual rate of 6.32% between 2001 and 2005, largely due to increased oil production, enhanced light industry, and an expansion of export processing zones.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Sudan’s gross domestic product (GDP) was estimated at \$85.5 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current

dollars. The per capita GDP was estimated at \$2,100. The annual growth rate of GDP was estimated at 8.6%. The average inflation rate in 2005 was 11%. It was estimated that agriculture accounted for 38.7% of GDP, industry 20.3%, and services 41%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.224 billion or about \$37 per capita and accounted for approximately 6.9% of GDP. Foreign aid receipts amounted to \$621 million or about \$19 per capita and accounted for approximately 3.8% of the gross national income (GNI).

It was estimated that in 2004 about 40% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

There were an estimated 11 million people in the Sudanese labor force as of 1996 (the latest year for which data was available). As of 1998 (the latest year for which data was available), industry and commerce engaged an estimated 7% of the labor force, with government accounting for 13% and agriculture 80%. Unemployment was estimated at 18.7% in 2002.

The trade union movement was reconstituted after the 1971 coup attempt. Strikes, banned by the government in May 1969, were legalized in 1985. The 1989 coup, however, brought a swift end to the strong labor movement which had been growing under the Sadiq al-Mahdi administration. The National Salvation Revolution Command Council (RCC) abolished labor unions and prohibited strikes by decree on 30 June 1989. The right to organize and join a union has since been restored, but the government dominates the leadership of all unions and tightly controls their activities. The largest union is the Sudan Workers Trade Union Federation with some 800,000 members in 2002.

The presence of slavery and forced labor continue to persist in Sudan and have increased in recent years. Slaves are generally taken in one of the southern war zones and then sent north to work as domestic servants, agricultural workers, or to be sent abroad. The minimum wage is about \$11 per month and is insufficient to support the average family. Although the minimum age for employment is legally set at 18 years, this is not enforced and children as young as 11 years old work full-time in all areas including industry. The legal workweek is set at six eight-hour days, with Friday designated as a day of rest.

## 2<sup>2</sup> AGRICULTURE

About one-third of the total area of Africa's largest country is suitable for agricultural development. Abundant rainfall in the south permits both agriculture and grazing grounds for the large herds owned by nomadic tribes. In the north, along the banks of the Nile and other rivers, irrigation farming prevails. Of an estimated 17.4 million hectares (43 million acres) of arable land in 2003, about 1.9 million hectares (4.7 million acres) were irrigated. Principal cash crops are cotton, sesame, peanuts, sugarcane, dates, citrus fruits, mangoes, coffee, and tobacco; the principal subsistence crops are sorghum, millet, wheat, beans, cowpeas, pulses, corn, and barley. Cotton is the principal export crop and an integral part of the country's economy. In 2004, agricultural products accounted for 23.5% of imports and 15.2% of exports; there was an agricultural trade deficit of \$242.4 million.

Government regional development schemes have played a decisive part in the economy since the 1920s. The Gezira Scheme,

located between the Blue and White Niles near their confluence at Khartoum, is the world's largest under a single management and provides a substantial portion of foreign exchange and government revenue. This storage irrigation project, which covers 840,000 hectares (more than 2 million acres) but has an additional potential of 2 million hectares (5 million acres), dates back to 1911 and was put into operation by a British firm. After the expiration of the firm's contract with the Sudanese government in 1950, the land was leased to tenant farmers, who numbered over 100,000 in 1987. They manage the scheme jointly with the government through the Gezira Board. In July 1980, construction began on the 354-km (220-mi) Jonglei Canal, intended to drain the Sudd swamp and channel water from the White Nile to the arid northern Sudan and to Egypt. Built by a French consortium at a projected cost of \$260 million and scheduled for completion in 1985, the canal could irrigate up to 243,000 hectares (600,000 acres) of Sudanese land. By 1984, however, the project had been halted by SPLA opposition, with less than 100 km (62 mi) to be excavated. In 1992, the public and private agricultural sectors invested heavily in land preparations, pesticides, and related inputs. Agricultural funding for such projects comes from the World Bank, the African Development Bank, and the International Fund for Agricultural Development. However, completion of these projects has been complicated by debt-repayment problems. In spite of efforts to improve Sudan's agricultural resources, famine conditions have existed in southern Sudan since 1986. Inadequate rains, a poor distribution infrastructure, and civil war have hampered relief efforts.

Among agricultural products in 2004 were sorghum, 2,600,000 tons; peanuts, 1,200,000 tons; sesame, 325,000 tons (the fourth-highest in the world after India, China, and Myanmar); and wheat, 332,000 tons. Cotton fiber production in 2004 was 187,000 tons. Production in 2004 also included sugarcane, 5,500,000 tons; millet, 784,000 tons; cottonseed, 269,000 tons; tomatoes, 700,000 tons; dates, 330,000 tons; yams, 137,000 tons; and corn, 60,000 tons.

## 2<sup>3</sup> ANIMAL HUSBANDRY

In 2005, the livestock population was estimated at 47 million sheep, 38.3 million head of cattle, 42 million goats, 3.3 million camels, and 37 million chickens. The national livestock herd was second only to that of Ethiopia in Africa. Cattle, found mostly in the southern rainfall area, are of two types: the shorthorn zebu of Asian origin and the longhorn sanga. Nomadic or seminomadic pastoral tribes own the bulk of the cattle. Sudanese sheep have hairy coats and are grown for meat rather than wool. They are owned almost exclusively by nomadic or seminomadic tribes. The tsetse fly prevents livestock raising in an area of approximately 200,000 sq km (77,000 sq mi) in the south. Livestock products in 2005 included an estimated 3,264,000 tons of cow's milk, 714,000 tons of meat, and 47,000 tons of eggs. Widespread smuggling also reduces income available to the government from livestock exports.

## 2<sup>4</sup> FISHING

In the southern provinces and towns, fish, particularly the Nile tilapia, is a diet staple. The river yields some 110 varieties of fish, and the Red Sea is another valuable fishing ground. In 2003, the total catch was 59,607 tons, 92% from freshwater sources.

## 25 FORESTRY

About 26% of Sudan is covered by forests. About 61.6 million hectares (152.2 million acres) of Sudan are covered by forests, half of which are dense stands of trees, mostly in the south. Sudan supplies over 80% of the world's needs of gum arabic, extracted from the acacia. Production of roundwood was estimated at 19.6 million cu m (693.8 million cu ft) in 2003, with 89% used as fuel. Timber production, apart from cutting for local village needs, is confined to forests lying within reach of navigable rivers or areas served by roads and railways. The Ministry of Agriculture and Natural Resources maintains forests, administers public preserves, and operates sawmills. Around 11% of Sudan's forests are in protected areas. The annual average deforestation rate during 1990–2000 was 1.4%.

## 26 MINING

Sudan was not rich in mineral resources, and the mineral sector has traditionally made a negligible contribution to the economy, although rising production of gold and crude petroleum in recent years has substantially increased the sector's influence. In 2002, mining accounted for 9% of Sudan's gross national product (GDP), which grew by 5.8% in 2003 and by 6% in 2002.

Estimated mineral production in 2003 included salt, 84,000 metric tons; mine chromite (gross weight), 47,000 metric tons (reported); gold, from the Red Sea Hills, 5,000 kg, down from 5,239 kg in 2002 (excluding artisanal output); gypsum, 4,600 metric tons; and hydraulic cement, 320,000 metric tons, up from 195,300 metric tons in 2002. In addition, Sudan presumably produced in 2003 clay and/or shale for cement, limestone for cement, lime, construction aggregate and fill, other construction materials (clays, sand and gravel, and stone), and marble for export. In 2003 Sudan produced an estimated 3,300 kg of silver. Sudan was also known to have deposits of barite, copper, iron ore (large reserves near Port Sudan), kyanite, lead, nickel, silver, tungsten, wollastonite, and zinc; however, little exploitation of these deposits was expected, because of civil unrest.

## 27 ENERGY AND POWER

Sudan has seen its proven reserves of crude oil increase dramatically since 2001, with crude oil output and exports increasing.

Sudan's proven oil reserves, as of 1 January 2005, have more than doubled from those in 2001, to 563 million barrels versus 2001's total of 262 million barrels, according to the Oil and Gas Journal. However, Sudan's oil reserves may be even larger because much of the country's oil exploration has centered on its central and south-central regions. In 2003 estimated oil production was put at 271,000 barrels per day and at an estimated 343,000 barrels per day in 2004. In 2004, oil consumption averaged 91,000 barrels per day, with net oil exports in that year estimated at 252,000 barrels per day. As of 1 January 2005, according to the Oil and Gas Journal, the country's crude oil refining capacity was estimated at 121,700 barrels per day at three refineries: Port Sudan at 21,700 barrels per day; El Gily at 50,000 barrels per day; and at Khartoum at 50,000 barrels per day.

Although Sudan had natural gas reserves estimated as of 1 January 2005 of 3 trillion cu ft, according to the Oil and Gas Journal,

there appears to be no recorded production or consumption as of 2002.

In 2002, Sudan's electric generating capacity totaled 0.728 million kW, of which conventional thermal based capacity totaled 0.405 million kW and hydroelectric generating capacity 0.323 million kW. Production of electricity in 2002 amounted to 2.787 billion kWh, of which 54.2% was from fossil fuels and the rest from hydropower. Consumption of electricity in 2002 was 2.592 billion kWh.

## 28 INDUSTRY

Sudan's industrial sector has been buffeted by a series of events leading to a significant contraction of output. Foreign exchange was very scarce in the 1980s and led to shortages of raw materials, skilled labor, and energy. In February 1985, the granting of import licenses and letters of credit was suspended. Over 100 manufacturing enterprises shut down as a result. By 1989, many factories were thought to be operating at 5% of capacity. Industry contributed 17% to GDP in 1999 and 24.1% in 2003.

Prior to this difficult period, Sudan's industries supplied many items that had formerly been imported—cotton textiles, sugar, hides and skins, cement, tires, flour, soap, shoes, cigarettes, batteries, sesame oil, biscuits, confectionery, household appliances, paints and varnishes, and plastics. Textiles, the largest industry, were part of a decade-long (1985–95) rehabilitation project. There are a number of cotton ginning plants, including the large Gezira plant. Sudan has a sizeable number of spinning and weaving mills.

The country's reserves of oil and gas are vast, and Sudan is considered to be underexplored. There are three oil refineries, with a total production capacity of 122,000 barrels per day.

Other factories process cotton seed and groundnuts into oil and cake. The Kenana sugar complex, commissioned in 1980, is one of the largest sugar plantation and refining installations in the world, jointly owned by the Sudanese government, the governments of Kuwait and Saudi Arabia, and other private interests.

## 29 SCIENCE AND TECHNOLOGY

The National Council for Research, founded in 1970 at Khartoum, is responsible for planning and directing national research programs in agriculture, medicine, energy, and other fields. The Agriculture Research Corporation of the Ministry of Agriculture, founded in 1904, has its headquarters in Wad Medani, and a Forestry Research Center and the Geological Research Authority operate in Khartoum. The universities of Gezira, Juba, Khartoum, and Nilayn all have faculties or colleges in scientific and technical fields, and the Sudan University of Science and Technology, founded in 1950 at Khartoum, has colleges of agriculture, engineering, and sciences. In 1987–97, science and engineering students accounted for 16% of college and university enrollments. As of 2002, there were 278 researchers and 112 technicians engaged in research and development per million people. High technology exports in 2002 were valued at \$4 million, or 7% of the country's manufactured exports.

### 30 DOMESTIC TRADE

Sudan's mercantile community is well organized through the Sudan Chamber of Commerce, which supplies information and facilitates negotiations with the authorities. The major foreign-owned trading companies, which had controlled all Sudanese trade, were nationalized in 1970.

Omdurman is a commercial center for livestock and handicrafts. The cities of El Fasher, El Gedaref, Juba, Kassala, and Wau serve as regional trade and market centers, primarily for agricultural goods. The few modern shops feature imported products. Most retail trade is conducted in open-air markets or in stalls in buildings near market centers. Because of the low literacy rate, newspaper advertising is of limited significance. Window and sidewalk displays and outdoor advertising are the principal marketing aids. An international trade fair is held annually at Khartoum.

Markets usually function from 7 AM to 2 PM, in order to escape the afternoon heat. Business hours are from 8 AM to 2 PM and 6 to 8 PM, Saturday through Thursday, with Friday as the day of rest. Normal banking hours are 8:30 AM to noon, Saturday through Thursday. Government hours are 8 AM to 2:30 PM.

### 31 FOREIGN TRADE

Sudan relies on agriculture and animal husbandry for its export commodities. The most important exports are oil seeds, especially sesame (22%), cotton (17%), and sheep (12%). Other exports include gold (7.6%), vegetable oil (6.4%), crude vegetable materials (5.3%), and sugar (3.7%). As of 2000 it was expected that the development of oil reserves estimated at over 211 billion barrels might change Sudan's foreign trade situation. Since then this has indeed happened. Crude oil is now the major export commodity from Sudan. In 2004 oil accounted for 87% of export revenues while Sesame accounted for 5%, livestock for 4%, and the rest which includes cotton and gum Arabic the remaining 4%. In 2000, Sudan imported about \$17 million worth of irrigation materials from China. In 2004, 64% of exports went to China and 13% to Japan, while imports came mainly from Saudi Arabia and China.

### 32 BALANCE OF PAYMENTS

There is a habitual payments deficit and Sudan continued to suffer from a severe shortage of foreign exchange. Remittances from Sudanese working abroad are discouraged by inequitable exchange rate policies. The 1997 trade embargo with the United States added to stresses on the balance of payments. However, Sudan began implementing IMF macroeconomic reforms in 1997. Sudan began exporting crude oil in 1999, and in the fourth quarter of that year, the country realized its first trade surplus. Approximately 70% of Sudan's crude oil production is exported. The country's external debt stood at \$25 billion in 2005, most of which was in arrears, and international credit is generally not available to Sudan.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Sudan's exports was \$5.25 billion while imports totaled \$5.03 billion resulting in a trade surplus of \$220 million.

SOURCE: Balance of Payment Statistics Yearbook 2004, Washington, DC: International Monetary Fund, 2004.

The traditional banking system was inherited from the Anglo-Egyptian condominium (1899–1955). When the National Bank of Egypt opened in Khartoum in 1901, it obtained a privileged position as banker to and for the government, allowing it to operate as a semiofficial central bank. Other banks followed, but the National Bank of Egypt and Barclays Bank dominated and stabilized banking in Sudan until after World War II. Post-World War II prosperity created a demand for an increasing number of commercial banks.

Before Sudanese independence, there had been no restrictions on the movement of funds between Egypt and Sudan, and the value of the currency used in Sudan was tied to that of Egypt. This situation was unsatisfactory to an independent Sudan, which established the Sudan Currency Board to replace Egyptian and Brit-

ish money. It was not a central bank because it did not accept deposits, lend money, or provide commercial banks with cash and liquidity. In 1959, the Bank of Sudan was established to succeed the Sudan Currency Board and to take over the Sudanese assets of the National Bank of Egypt. In February 1960, the Bank of Sudan began acting as the central bank of Sudan, issuing currency, assisting the development of banks, providing loans, maintaining financial equilibrium, and advising the government.

In 1996, there were 27 banks in Sudan, of which one, El Nilein Industrial Development Bank, was state-owned. The Bank of Khartoum was privatized at the end of 1995. Banks were nationalized in 1970 but in 1974, foreign banks were allowed to open branches in Sudan.

In December 1990 the government decided to adopt Islamic banking principles. Seven banks in Sudan are based on the principles of Islamic banking that were introduced in September 1984, namely Faisal Islamic Bank of Sudan (FIBS), Islamic Cooperative Development Bank, Tadamon Islamic Bank of Sudan, Sudanese Islamic Bank, Al-Baraka Bank, Islamic Bank of Western Sudan, and Bank of Northern Sudan. In 1999, there were 14 commercial banks in Sudan.

Banks are required to maintain 20% of total deposits as a statutory reserve with the central bank. They must also direct to the agricultural sector 40% of the funds that they have for lending under the new credit ceilings.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.0 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.7 billion.

No stock exchange exists in the Sudan.

### 3<sup>4</sup>INSURANCE

All foreign insurance companies were nationalized in 1970; there were at least 20 Sudanese insurance companies in 1997 and a National Reinsurance Co.

### 3<sup>5</sup>PUBLIC FINANCE

Sudan's budgets were in deficit from the 1960s through the 1990s. The budget deficit soared to 22% of GDP in 1991/92, which aggravated inflation. As of 2000, neither the budget deficit nor inflation showed signs of shrinking as civil war disturbs commerce, trade, and aid.

The US Central Intelligence Agency (CIA) estimated that in 2005 Sudan's central government took in revenues of approximately \$6.1 billion and had expenditures of \$5.7 billion. Revenues minus expenditures totaled approximately \$429 million. Public debt in 2005 amounted to 79% of GDP.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, budgetary central government revenues were SD216,803 million and expenditures were SD227,265 million. The value of revenues in US dollars was US\$858 million and expenditures US\$900 million, based on a market exchange rate for 1999 of US\$1 = SD252.55 as reported by the IMF. Government outlays by function were as follows: general public services, 54.7%; defense, 27.5%; public order and safety, 7.8%; economic affairs, 1.1%; housing and community amenities, 0.1%;

<b>Public Finance – Sudan (1999)</b>		
<b>(In millions of dinars, budgetary central government figures)</b>

health, 1.0%; recreation, culture, and religion, 0.1%; and education, 7.6%.

### 3<sup>6</sup>TAXATION

Sudan, as of 2005, had a standard corporate tax rate of 35%. However, the rates varied depending upon the type of company. Banks, investment and insurance companies were subject to the standard rate. Manufacturing firms were subject to a 10% rate, while agricultural and dairy companies were exempt. Unless they fell into the aforementioned business classifications, joint stock companies and limited liability companies were subject to tax rates of 15% and 35%, respectively. Capital gains derived from the sale of land and buildings were subject to a tax rate of 5%. Capital gains from the sale of automobiles were taxed at 2.5%. Other capital gains and dividends were not taxed.

Other taxes included an income tax on salaries, various consumption and production taxes, stamp duties, miscellaneous fees and charges, including a development tax, and the Zakat, an annual religious tax of 2.5% on entities operating in Sudan. The personal income tax was first imposed in July 1964, and an income tax on Sudanese working abroad was added later. Income from property, hitherto exempt from any tax, became subject to the business profits tax on 1 January 1964. There was also a value-added tax (VAT) of 10%.

### 3<sup>7</sup>CUSTOMS AND DUTIES

The Sudan has a liberal trade policy, although it restricts imports of some goods considered competitive with those produced locally. The customs tariff applies to goods from all countries except Egypt and Jordan, which receive preferential treatment.

Most tariff rates are ad valorem and range from zero to 1,100%. Export duty is 10% on cotton and gum arabic and 5% for all other items. Specific rates are applied mostly to alcoholic beverages and tobacco. Commodities not included in the tariff schedule are dutiable at 40% ad valorem. Also levied are royalties, a consumption

tax of 10%, and a 10% defense tax. An additional tax of 5–150% is imposed on a list of 122 items. The average tariff rate in 1999, as determined by the IMF, was 19.3%. The customs service is known to be extremely corrupt. In 1997, the United States implemented a trade embargo on Sudan because of terrorist activities.

### 38 FOREIGN INVESTMENT

In 1971, Sudan nationalized the holdings of foreign investors, mostly British. A privatization effort and a move toward a mixed economy began slowly in the early 1980s and picked up momentum via negotiations with the IMF in 1985. The 1980 Encouragement of Investment Act provided for repatriation of profits, tax incentives, customs relief, industrial rates for transport and electricity. However, the introduction of Shariah law in 1983 (unenforced since 1985), along with foreign exchange shortages, discouraged investors through 1986. In 1990, the government invited foreign investors to purchase companies in the parastatal sector. Key properties in the agricultural, tourist, transportation and communications sectors were identified as candidates for privatization under the National Economic Salvation Program. In 1992, the creation of four free-trade zones was announced in an attempt to encourage additional foreign investment.

In 1999, a new investment act guaranteed the equal status of foreign and national projects; and encouraged investment in the sectors of agriculture, industry, and tourism, amongst others. It gave total tax exemptions for business profits and customs duties for 10 years on capital projects and 5 years for nonstrategic industries. Foreign investment in 2000 included inflows from Canadian and Araki oil interests, as well as European investment.

Annual foreign direct investment (FDI) inflows were \$98 million in 1997, but rose to an average of \$378 million during 1998 to 2000. In 2001, FDI inflow increased to \$574 million. Since then Sudan has experienced record inflows of FDI. Between 2002 and 2004 FDI averaged \$1.2 billion reaching a record high of \$1.51 billion in 2004.

### 39 ECONOMIC DEVELOPMENT

The suspension of foreign aid and balance-of-payment support by a growing list of countries in the recent past had all but stopped economic development. In spite of this, Sudan's government continued to retain food self-sufficiency as a priority goal and sought to reallocate investment toward agriculture and other productive sectors. Private investment was welcome as the parastatal sector was privatized. Since 2000, oil exploitation began to boost economic development. The economic expansion due to increased oil production led to the International Monetary Fund (IMF) lifting Sudan's suspension on voting rights, after the country made payments to the Fund and improved its economic performance since 1997. Sudan's voting and other rights in the IMF had been suspended since 1993. However, the country's foreign debt exceeds \$25 billion, more than its annual gross domestic product (GDP). However, economic expansion for Sudan is expected to continue, driven by increases in oil production, with real GDP growth set to reach 8.5% and 8.2% in 2006 and 2007 respectively. Rising oil earnings will cause the current-account deficit to narrow from an estimated \$1.5 billion (5.5% of GDP) in 2005 to around \$400 million (0.9% of GDP) in 2007.

## 40 SOCIAL DEVELOPMENT

The social insurance system provides benefits for employed persons and the self-employed. This program excludes domestic workers, home workers, and family laborers. A separated program is in place for the armed forces and all public employees. The social insurance system is funded by employee contributions of 8% of wages, with employer contributions of 15% of payroll. Self-employed individuals contribute 25% of their monthly income. The program includes old-age and disability pensions, workers' compensation, and survivor benefits. Retirement is set at age 60, but reduced for those in arduous labor.

The fundamentalist Islamic government has redefined the place of women in society. Prior to that, the state sought to guarantee basic rights and freedoms to all women, both Muslim and non-Muslim. They were afforded opportunities in trade, the professions, and higher education. These freedoms are currently curtailed. Women have been removed from the civil service and have limited educational opportunities. They are no longer free to travel abroad without the permission of a male family member. Women who walk in public with an uncovered head or wearing slacks are often stopped and taken to police stations. Female university students in Khartoum were sentenced to be flogged, reportedly for wearing pants. Female circumcision (also referred to as female genital mutilation), although illegal, is prevalent, especially in the most drastic form. The city of Khartoum ordered the separation of the sexes in public to conform with strict Muslim law. This separation requires barriers between men and women at social events and bans them from sitting facing each other; the law dictates that the barriers be used at weddings, parties, and picnics and prohibits certain other practices perceived as inappropriate in an Islamic society. The government does not address the problem of violence against women. Women in Darfur are especially vulnerable, where rape and assaults are commonplace.

Sudan's human rights situation remained dismal. Government and SPLA continued to regularly commit abuses, including massacres, kidnapping, enslavement, forced conscription, and rape. According to human rights groups, the practice of slavery has grown as a result of the civil war that has intermittently raged in the Sudan since its independence in 1956. Freedom of speech, press, assembly, association, and political choice are repressed throughout the Sudan.

## 41 HEALTH

Between 1984 and 1992, there were about 506,000 civil war-related deaths. The government of Sudan announced a cease-fire in the 12-year-old civil war in the southern part of the country in 1995, permitting health organizations to accelerate efforts to administer vaccinations and distribute vitamin A. Despite the extension of medical services and supervision, such diseases as malaria, schistosomiasis, sleeping sickness, tuberculosis, and various forms of dysentery persist. Total health care expenditure was estimated at 3.3% of GDP. Close to 75% of the population had access to safe drinking water and 62% had adequate sanitation.

The central government operates most research laboratories and dispensaries. Hospital facilities and medical and public health services are free. As of 2004, there were an estimated 16 physicians and 85 nurses per 100,000 people.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37.2 and 9.8 per 1,000 people. About 10% of married women (ages 15 to 49) were using contraception in 2002. An estimated 89% of Sudanese women underwent female genital mutilation.

In 2005, average life expectancy was estimated at 58.54 years and the infant mortality rate was 62.50 per 1,000 live births. The maternal mortality was 500 per 100,000 live births. Immunization rates for children up to one year old were quite high: tuberculosis, 88%; diphtheria, pertussis, and tetanus, 76%; polio, 77%; and measles, 74%. Approximately 34% of children under five years old were considered malnourished.

The HIV/AIDS prevalence was 2.30 per 100 adults in 2003. As of 2004, there were approximately 400,000 people living with HIV/AIDS in the country. There were an estimated 23,000 deaths from AIDS in 2003.

## 4<sup>2</sup> HOUSING

Most Sudanese live in simple houses of their own or rent from landlords or agricultural-scheme authorities. At last report, over half of all housing units were *gottias*—single rooms with round mud walls and a conical straw roof; about one-third were *menzils*—multi-room houses with toilet facilities. Of all dwellings, over 80% were owned. Almost every house, even in the cities, has a walled courtyard or garden. In the big cities, bungalows are provided for important government officials and high-level foreign employees. A national housing authority provides low-cost housing to government employees, rural schoolteachers, and persons in low-income groups. A town-planning ordinance provides for slum clearance and replanning of towns. Khartoum has a number of modern apartment buildings.

## 4<sup>3</sup> EDUCATION

Schooling is compulsory for eight years of basic education. This may be followed by three years of general secondary school. At the secondary level, vocational programs for industrial, commercial, and agricultural studies are available for boys. Home economic programs are available for girls. The academic year runs from July to March.

Primary school enrollment in 2002 was estimated at less than 58% of age-eligible students; about 45% of those enrolled were girls. The same year, secondary school enrollment was less than 32% of age-eligible students. It is estimated that about 49% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 29:1 in 2003; the ratio for secondary school was about 26:1.

The University of Khartoum was established in 1956. A branch of Cairo University was opened at Khartoum in 1955. Other institutions include the Islamic University of Omdurman and the universities of El-Gezira (at Wad Madani) and Juba. In 1999, it was estimated that about 7% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 59%, with 69.2% for men and 49.9% for women.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

The University of Khartoum Library, in eight branches, is the principal library network with 350,000 volumes. The Library of

the Ahfad University for Women has a collection of about 80,000 books. The library at the Institute of Education in Bakhter Ruda has 28,000 volumes; the Khartoum Polytechnic collection has 30,000; and the Educational Documentation Center, also in Khartoum, has 20,000 volumes. Minor library facilities are maintained by secondary schools, houses of worship, government agencies, and foreign community centers. The National Records Office, in Khartoum, serves as the national archives and contains over 20 million documents, including 13,000 bound volumes covering Sudanese history since 1870.

There are antiquities museums in Khartoum and Merowe, which is also the site of excavations of buildings from the kingdom of Kush. The Khalifa's tomb in Omdurman contains relics of Mahdist and other recent history. The National Botanic Garden in Khartoum contains rare specimens of Sudanese flora. Khartoum also has an ethnographic museum, a natural history museum, and the Sudan National Museum. There are also museums at Al Ubayyid, Port Sudan, Wadi Halfa, Wad Madani, Merowe, Omdurman, and other locations.

## 4<sup>5</sup> MEDIA

Postal and telegraph services are state-owned. In 2003, there were an estimated 27 mainline telephones for every 1,000 people; about 444,000 people were on a waiting list for telephone service installation. The same year, there were approximately 20 mobile phones in use for every 1,000 people.

The Sudan Broadcasting Service, the government-controlled radio network, transmits daily in Arabic, English, French, Amharic, Somali, and other languages. Television service was inaugurated in 1963; an earth satellite station was completed in November 1974. The government controls all radio and television broadcasts, with particular attention to insuring that content is consistent with government policies. The only privately owned radio station is strictly limited to music. In 2003, there were an estimated 461 radios and 386 television sets for every 1,000 people. The same year, there were 6.1 personal computers for every 1,000 people and nine of every 1,000 people had access to the Internet.

Much of the press is privately owned, but the state still has great influence over publications. There are several daily papers. The largest dailies in 2002 were *Al Sudani* (305,000), *Al Ayam* (200,000), *Al Siasa* (60,000), *Al Khartoum* (25,000), and the English-language *Sudan Standard*.

The constitution provides for freedom of thought, expression, and press as regulated by law. In practice, the government is said to severely limit free speech and the press through intimidation, surveillance, and economic control. Sudan television has a permanent military censor to ensure that all broadcasts reflect government views.

## 4<sup>6</sup> ORGANIZATIONS

The cooperative movement, which began in the 1930s, has achieved some importance, especially in the irrigation schemes. In the Gezira Scheme, tenant farmers have formed many cultural, educational, and recreational groupings.

The Sudan Chamber of Commerce (Khartoum), comprising both local and foreign business interests, performs various functions for the government. There are several smaller chambers, most of them organized by resident European and Egyptian trad-

ers. More than 30 clubs serve foreign and minority groups and business firms. Such clubs serve as principal centers of social activity in Sudanese towns.

The National Center for Research, established in 1991, promotes study and research in various branches of science. The multinational African Laser, Atomic and Molecular Sciences Network is based in Khartoum.

National youth organizations include the General Sudanese Students Union, Girl Guides Association of The Sudan, YMCA/YWCA, Sudan Boy Scouts Association, and Sudan International Youth and Student Movement for the United Nations. Other youth programs and organizations are sponsored through the Supreme Council of Youth and Sports.

The Babiker Badri Scientific Association for Women's Studies serves as a social action group for the rights and education of women. There are national chapters of the Red Cross Society, UNICEF, the Society of St. Vincent de Paul, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

The main tourist attractions are big-game hunting in the forests of the south, boat excursions down the Nile through the forest and desert, deep-sea fishing, the Red Sea Hills, the underwater gardens at Port Sudan, and archaeological sites in the north. Horse racing has been popular in the Sudan since its introduction in 1929. However, since the civil war and the advent of Islamic rule, tourism in the Sudan is virtually nonexistent. There were 50,000 tourists who arrived in Sudan in 2001. Visitors to Sudan require a passport and a visa. A vaccination certificate against yellow fever is required if traveling from an infected area. Precautions against typhoid, meningitis, and malaria are recommended.

According to the US Department of State, in 2005 the estimated daily cost of staying in Khartoum was \$298.

#### 48 FAMOUS SUDANESE

The one Sudanese to achieve world renown in modern history was the Mahdi (Muhammad Ahmad bin 'Abdallah, 1843–85), who set out on a self-appointed mission to purify Islam, a mission he hoped would carry him ultimately to Istanbul and to the apex of the Muslim world. Under his banner, the people of Sudan rose against their Egyptian overlords and for over a decade kept most of their country free from foreign rule. The Mahdi died shortly after the seizure of Khartoum. His able but harsh successor, the Khalifa ('Abdallah bin Muhammad at-Ta'ishi, d.1899), organized an independent government, which lasted until 1898, when an Anglo-Egyptian expeditionary corps reconquered Sudan.

The Mahdist wars provided the background for the exploits of famous British soldiers and administrators, among them generals Charles George Gordon (1833–85), Horatio Herbert Kitchener

(1850–1916), and Sir Francis Reginald Wingate (1861–1953), the first governor-general of the condominium, as well as other foreign officers and explorers in the service of Egypt, such as the Italian Romolo Gessi (1831–81), the German Emin Pasha (Eduard Carl Oscar Theodor Schnitzer, 1840–92), the American Charles Chaillé-Long (1842–1917), and the Austrian Sir Rudolf Carl von Slatin (1857–1932).

Osman Digna ('Uthnab Abu Bakr Digna, c.1840–1926), an organizer and leader of the Mahdist armies, and Sayyid 'Abd ar-Rahman al-Mahdi (1885–1959), posthumous son of the Mahdi, are revered by Sudanese. The most influential figure in recent years was Gaafar Mohammed Nimeiri (Ja'far Muhammad Numayri, b.1930), leader of Sudan from the 1969 coup until 1985. Sadiq al-Mahdi (b.1936) was prime minister during 1966–67 and 1986–89. He was overthrown in a coup led by Field Marshal Omar Hasan Ahmad al-Bashir (b.1944) who subsequently became a dictatorial president.

#### 49 DEPENDENCIES

Sudan has no territories or colonies.

# SWAZILAND

Kingdom of Swaziland

**CAPITAL:** Mbabane (administrative and judicial); Lobamba (royal and parliamentary)

**FLAG:** Blue, yellow, crimson, yellow, and blue stripes with the shield and spears of the Emasotsha regiment superimposed on the crimson stripe.

**ANTHEM:** National Anthem, beginning "O God, bestower of the blessings of the Swazi."

**MONETARY UNIT:** The lilangeni (pl. emalangeni; E) of 100 cents is a paper currency equal in value to the South African rand, which also is legal tender. There are coins of 1, 2, 5, 10, 20, and 50 cents, 1 lilangeni, and notes of 2, 5, 10, 20, and 50 emalangeni. E1 = \$0.16129 (or \$1 = E6.2) as of 2005.

**WEIGHTS AND MEASURES:** The metric system replaced imperial weights and measures in September 1969.

**HOLIDAYS:** New Year's Day, 1 January; Commonwealth Day, 2nd Monday in March; National Flag Day, 25 April; Birthday of King Sobhuza II, 22 July; Umhlanga (Reed Dance) Day, last Monday in August; Somhlolo (Independence) Day, 6 September; UN Day, 24 October; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Holy Saturday, Easter Monday, Ascension, and the Incwala Ceremony.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

A landlocked country in southern Africa, Swaziland has an area of 17,363 sq km (6,704 sq mi), extending 176 km (109 mi) N–S and 135 km (84 mi) E–W. Comparatively, the area occupied by Swaziland is slightly smaller than the state of New Jersey. It is bounded by Mozambique on the NE and by the Republic of South Africa (including the homelands) on the SE, S, W, and N, with a total boundary length of 535 km (332 mi).

Swaziland's capital city, Mbabane, is located in the northwest part of the country.

## <sup>2</sup>TOPOGRAPHY

The country is divided west-to-east into four well defined regions, the first three being of roughly equal breadth. The four regions extend north and south and are known as the high, middle, and low veld, and the Lebombo plain and escarpment. The high veld on the west has an average altitude of 1,050 m to 1,200 m (3,445 to 3,937 ft). The middle veld averages about 450 to 600 m (1,476 to 1,969 ft), and the low or bush veld less than 300 m (984 ft). The Lebombo plain, at an average height of 610 m (2,000 ft), extends to the Lebombo escarpment, which is part of the Lebombo Mountains in the east. The entire country is traversed by rivers or streams, making it one of the best watered areas in southern Africa. The longest river is the Great Usutu, which stretches roughly from west to east across the center of the country for a total distance of 217 km (135 mi).

## <sup>3</sup>CLIMATE

The high veld has a humid near-temperate climate with about 140 cm (55 in) of mean annual rainfall. The middle veld is subtropical

and somewhat drier, with about 85 cm (33 in) of annual rainfall; the low veld, almost tropical, is subhumid, receiving about 60 cm (24 in) of rain in an average year. Rainfall tends to be concentrated in a few violent storms in the summer (October–March). Temperatures range from as low as -3°C (27°F) in winter in the highlands to as high as 42°C (108°F) in summer in the lowlands. At Mbabane, temperatures average 20°C (68°F) in January and 12°C (54°F) in July.

## <sup>4</sup>FLORA AND FAUNA

Grassland, savanna, mixed bush, and scrub cover most of Swaziland. There is some forest in the highlands. Flora include aloes, orchids, and begonias. Large indigenous mammals include the blue wildebeest, kudu, impala, zebra, waterbuck, and hippopotamus; however, wildlife has become very scarce outside the protected areas. Crocodiles live in the lowland rivers. Bird life is plentiful and includes the European stork, sacred ibis, and gray heron.

## <sup>5</sup>ENVIRONMENT

The chief environmental problem is soil erosion and degradation, particularly because of overgrazing. Population growth and the increased demand for fuel has threatened the country's forests, and the resulting deforestation has contributed to the loss of valuable soil. Swaziland has at least four protected areas for wildlife—two wildlife sanctuaries and two nature reserves—totaling 40,045 ha (98,953 acres), all in the northern half of the country. As of 2003, 3.5% of the nation's total land area was protected.

Another significant environmental problem in Swaziland is air pollution from transportation vehicles and emissions from other countries in the area. Water pollution from industrial and agricul-

tural sources is also a problem, as well as contamination by untreated sewage, which contributes to the spread of life-threatening diseases.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 6 types of mammals, 6 species of birds, and 11 species of plants. Burchell's zebra has become extinct. Threatened marine species include the Baltic sturgeon, Danube salmon, and marsh snail. The cheetah and the cape vulture are listed among the vulnerable species.

## **6** POPULATION

The population of Swaziland in 2005 was estimated by the United Nations (UN) at 1,138,000, which placed it at number 150 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 93 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 0.3%, a rate the government viewed as too high. The projected population for the year 2025 was 1,009,000. The population density was 66 per sq km (170 per sq mi).

The UN estimated that 25% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 0.98%. The administrative capital, Mbabane, had a population of 70,000 in that year.

The prevalence of HIV/AIDS has had a significant impact on the population of Swaziland, with the number of AIDS orphans growing rapidly as of 2006. The UN estimated that 33.7% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## **7** MIGRATION

Over the years, there has been a noticeable drift of educated Africans, many of whom have acquired British citizenship, from South Africa to Swaziland. Conversely, many itinerant asylum seekers were making a practice of using Swaziland as a stepping stone to gain access to South Africa in 1999. The total number of migrants in 2000 was 42,000. As of 2004, Swaziland harbored some 1,010 refugees and asylum seekers, mainly from the Great Lakes region. In 2005, the net migration rate was an estimated zero per 1,000 population, compared to -10.8 per 1,000 in 1990. The government views the migration levels as satisfactory.

## **8** ETHNIC GROUPS

The indigenous African population in Swaziland constitutes 97% of the total populace and comprises more than 70 clans, of which the Nkosi Dlamini, the royal clan, is dominant. Europeans make up the remaining 3%.

## **9** LANGUAGES

English and Siswati, which is spoken by almost all Swazi, are the official languages. Government business is conducted in English.

## **10** RELIGIONS

Most of the population is Christian, with about 40% of the population affiliated with the Zionist Church, professing a blend of

Christianity and indigenous ancestral worship. About 20% of the population are Roman Catholic. Other Christian denominations include Anglicans, Methodists, and Mormons (the Church of Jesus Christ of Latter-Day Saints). About 10% of the population are Muslims and there are small groups of Jews and Baha'is. Muslims and Baha'is are generally located in urban areas. The constitution does not specifically guarantee religious freedom, but that right is generally respected by the government and relations between religious groups are amicable.

## **11** TRANSPORTATION

The country had 3,800 km (2,364 mi) of roads in 2002, of which at least 1,064 km (662 mi) were paved. A highway runs between the southern boundary with South Africa and the eastern boundary with Mozambique. There were 30,000 passenger cars and 9,000 commercial vehicles in use in 1995. As of 2004, there were 301 km (187 mi) of railway in the country, all of it narrow gauge, and which links iron mines at Ngwenya with the Mozambique Railway and the port of Maputo in Mozambique. In the 1970s, a 94-km (58-mi) southern spur was constructed to the South African border. A 115-km (71-mi) northern spur to the South African border was completed in 1986. Airports numbered an estimated 18 in 2004, only one of which had a paved runway (as of 2005). Matsapa Airport, near Manzini, provides service—via Royal Swazi National Airways—to South Africa, Mozambique, Zambia, Malawi, Zimbabwe, Botswana, Kenya, and Tanzania. In all, about 89,500 passengers were carried on scheduled international and domestic flights in 2003 (the latest year for which data was available).

## **12** HISTORY

Like other parts of southern Africa, Swaziland was originally occupied by hunting and gathering peoples known as Bushmen. In the 16th century, according to tradition, Bantu-speaking peoples advanced southwest to what is now Mozambique. During the migration, these groups disintegrated to form the various ethnic groups of southern Africa. In fact, however, the Swazi do not appear to have broken away from the main body of the Bantu until the middle of the 18th century. The Swazi emerged as a distinct ethnic group at the beginning of the 19th century and were in constant conflict with the Zulu; they moved gradually northward and made their first formal contact with the British in the 1840s, when their ruler, Mswati II, applied to the British for help against the Zulu. The British succeeded in improving relations between the two ethnic groups.

About this time, the first Europeans came to Swaziland to settle. The independence of Swaziland was guaranteed by the British and Transvaal governments in 1881 and 1884, but owing to the excessive number of concessions (including land, grazing, and mineral rights) granted to European entrepreneurs by Mbandzeni (the king) during the 1880s, the United Kingdom decided some form of control was necessary. In 1890, a provisional government was established, representing the Swazi, the British, and the Transvaal. From 1894 to 1899, the Transvaal government undertook the protection and administration of Swaziland. After the South African (Boer) War of 1899–1902, the administration of Swaziland was transferred to the British governor of the Transvaal. An order in council established the relationship between the Swazi and

the United Kingdom in 1903, providing the basic authority under which British administration was conducted for 60 years.

### Independence

Responsibility for Swaziland was transferred in 1907 to the high commissioner for South Africa. An elected European Advisory Council was constituted in 1921. By the provisions of the Native Administration Proclamation of 1941, the position of the ngwenyama (paramount chief) as native authority was recognized. In 1963, constitutional discussions looking toward independence were opened in London. The following year, elections for a legislative council were held under the country's first constitution. After further constitutional talks, held in London in 1965, Swaziland became an independent nation within the Commonwealth on 6 September 1968.

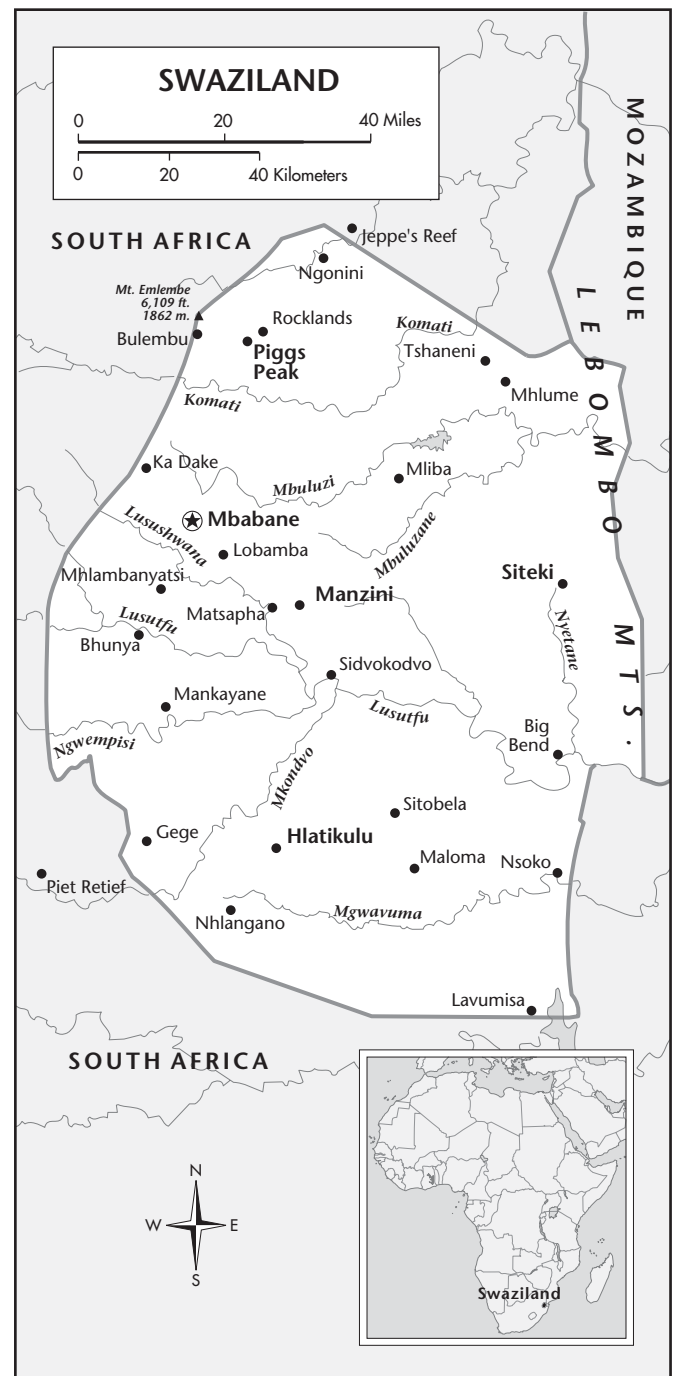

On 12 April 1973, King Sobhuza II, who had been head of the Swazi nation since 1921, announced that the constitution had been repealed and that he had assumed supreme executive, legislative, and judicial powers. In 1979, a new parliament was chosen, partly through indirect elections and partly through royal appointment.

After Sobhuza died in 1982, a prolonged power struggle took place. At first his senior wife, Queen Mother Dzeliwe, became head of state and regent. Members of the Liqoqo, the king's advisory council, seized effective power and appointed a new "Queen Regent" in August 1983 (Ntombi, one of Sobhuza's other wives). At that time it was announced that Makhosetive, the 15-year-old son of Ntombi and one of Sobhuza's 67 sons, would ascend the throne upon reaching adulthood. He was crowned King Mswati III on 25 April 1986. The intrigues continued until the new king approved the demotion of the Liqoqo back to its advisory status. He has ruled through his prime minister and cabinet.

In 1982, South Africa and Swaziland secretly signed a security agreement. Under pressure from South Africa, Swaziland arrested and deported members of the African National Congress, the leading black nationalist group in South Africa. On three different occasions in late 1985 and 1986, South African commando squads conducted raids in Swaziland, killing a number of ANC members and supporters. In November 1987, a new parliament was elected and a new cabinet appointed. Obed Dlamini was the prime minister from 1989 until 1993. In September and October 1993, popular elections were held for parliament and a new prime minister, Prince Mbilini, took office, replacing Dlamini, who was defeated in the second round of voting. Barnabas Sibusiso Dlamini was appointed prime minister in July 1996.

The Swaziland Federation of Trade Unions and the National Association of Civil Servants have organized strikes as a means to pressure the government for greater democratic control by the people of Swaziland. The strikes led the government to ban trade unions in 1995. The ban was later lifted but the country was again disrupted in 1996 by a general strike supported by the SFTU, which resulted in three leaders being detained, and the formation of a Constitutional Review Commission charged with the task of soliciting views from the Swazi nation as to the type of constitution preferred. The commission must meet with all the country's constituencies and submit a report to government officials.

The history of Swaziland during the early 2000s was dominated by controversy over drafting of the new constitution. In July 2005, after release of several drafts—in May 2003 and November 2004—

LOCATION: 25°43' to 27°20' s; 30°48' to 32°8' e. BOUNDARY LENGTHS: Mozambique, 108 kilometers (67 miles); South Africa, 446 kilometers (277 miles).

and missed deadlines, parliament passed the Swaziland constitution. The king signed it 26 July 2005, and the new constitution entered into force January 2006. However, the constitution did not open up the political space to political parties, as civil society and human rights organizations in Swaziland and elsewhere had expected. Rather, the new constitution encoded the king's absolute governing powers into the land's grand law, reinforcing the ban on political parties and allowing human rights clauses to be suspended by the king if he finds them in conflict with some undefined "public interest".

Political, civil society, and human rights organizations, and the international community, were unanimous in their criticism of the process that resulted in the new document, calling it “palace-controlled,” nontransparent, not consultative enough, and undemocratic. The constitution was written by two commissions led by the king’s brothers, Prince Mangaliso Dlamini and Prince David Dlamini, who is also justice minister. The critics charge that widely publicized “consultation” meetings with traditional leaders called by King Nswati III were window dressing. They further alleged that the king’s last-minute decision to channel approval of the constitution through a parliament he controlled, reversing his earlier decision to decree the constitution into law, was designed to mask a faulty process and to gain back-door legitimacy for the document. However, several attempts to challenge the process legally failed. For their part, royalists contended that democracy is a dividing force in the country, whereas the monarch is a strong unifying force. The king repeatedly asserted that the constitution enjoyed the full support of the Swazi people.

As of 2006, Swaziland acknowledged that it was grappling with a humanitarian crisis caused by the devastating HIV/AIDS pandemic. According to UNAIDS, Swaziland has the highest prevalence rates of HIV/AIDS in the world, ahead of neighboring Botswana, which made some strides against the disease. Nearly 4 in 10 adults are infected with the virus, and the rate is rising. In January 2004 the government revealed that over one in five Swazis were orphans and vulnerable children, and announced a program to pay primary school fees for 60,000 orphans, mostly children of HIV/AIDS victims. Combined with several years of equally devastating drought and famine, HIV/AIDS has significantly undermined the economy, which was already dependent on the regional giant South Africa. Unemployment was nearly 34% and some 70% of the population were living below the UN poverty line of a dollar a day.

In the midst of such daunting challenges, King Mswati III often came under heavy local and international criticism for lavish living, including luxury cars and mansions for his ten wives and two fiancés.

### 13 GOVERNMENT

Swaziland was a constitutional monarchy until King Sobhuza II repealed the constitution in 1973 and assumed absolute power through a state of emergency decree, which was still in force as of 2006. The king then ruled the country as king-in-council, on the advice of his former cabinet and two traditional Swazi councils, one consisting of all the chiefs and other notables, the other of the king, the queen mother, and (in theory) all adult males.

A constitution was promulgated in 1978. In 1979, a new parliament was created with a House of Assembly consisting of 50 members, 40 of whom were chosen by indirect election and 10 appointed by the crown; the 20-member Senate had 10 members chosen by indirect election and 10 appointed by the crown. To become law, legislation passed by parliament must be approved by the crown. The cabinet is presided over by a prime minister appointed by the crown from among the members of parliament.

In response to popular moves calling for reform, King Mswati III appointed several commissions to review the tinkhundla (local government) system. In July 1992, the second Tinkhundla Review Commission (popularly called Vusela II) reported to the king.

Government accepted its main recommendations—increase tinkhundla centers, allow direct representation in parliament, and institute a secret ballot. Opposition parties complained that Vusela II did not consult a broad range of Swazis and that the reforms did not address the issue of the legality of political parties. The king followed the Vusela II recommendations, rejected the creation of a multiparty system and, on 21 August 1993, the electoral process got started with nomination of candidates. On 25 September primary elections selected three candidates for each district. In October, in runoff elections, voters chose 55 members for the House of Assembly. The king appointed 10 more. A 30-member Senate was chosen, with 10 members elected by the House of Assembly and 20 appointed by the king.

After many postponements, new elections were held in 1998. Amidst tight military and police security, Swazis went to the polls on 24 October 1998 in parliamentary elections. Over 85,000 people voted, which is an estimated 40% of the voting population. During the voting, harassment by the authorities of anti-electoral groups like the Peoples United Democratic Movement (Pudemo) and the Swaziland Youth Congress (Swayoco), which were encouraging a boycott because they believed the elections would be rigged, was widespread. In addition to the 53 elected members of parliament, the king selected 10 more for the House of Assembly, 20 senators, and 10 cabinet ministers. The king also reappointed Prime Minister Sibusiso Dlamini to head the new government following the 1998 general elections.

Elections for the House of Assembly were held again on 18 October 2003. The next elections were expected October 2008. On 14 November 2003 Mswati appointed the Absolom Themba Dlamini to be prime minister. The House of Assembly had 65 seats by the 2003 election; 10 were appointed by the king and 55 elected by popular vote.

Mswati was reluctant to share power. He ruled by decree, even though the Court of Appeal has ruled against the legality of such decrees, and has often been criticized for silencing his opponents in a heavy-handed manner. The king’s disregard for the rule of law triggered what the IRIN News Network calls a rule-of-law crisis. In November 2002, in protest of government’s refusal to abide by Swaziland’s Court of Appeals’ decisions on two important rulings, the six members of the court resigned *en masse* and refused to hear cases for a period of two years. In a stinging report released in July 2004, the international human rights organization Amnesty International challenged Swaziland to “back up its recent commitments to international human rights standards by re-establishing the rule of law and confronting the systematic violation of civil, political, economic and social rights.” Facing considerable international pressure for democratization and adherence to the rule of law, Prime Minister Absolom Dlamini made overtures to the court, which resumed hearing cases in November 2004.

The state heavily controls the media, and strictly restricts freedom of expression. For instance, the palace instituted a press ban on photographs of King Mswati’s cars, following embarrassing exposure of his lavish tastes and purchase of the world’s most expensive automobile, reported to have cost us\$500,000. Some local prodemocracy groups have been forced to hold political demonstrations in neighboring countries after a government ban on political meetings and the brutal force with which demonstrators had been handled.

## 14 POLITICAL PARTIES

All parties are banned under the 1978 constitution, but this ban is defied by the People's United Democratic Movement (Pudemo), the Swaziland Liberation Front, the Swaziland Youth Congress, the Swaziland Communist Party, the Imbokodvo National Movement or INM, the Ngwane National Liberatory Congress (NNLC), the Swaziland National Front, and the Convention for Full Democracy in Swaziland, which operate openly. Pudemo went so far as to declare itself legal in February 1992, and to demand a national convention of all political factions and a referendum on the constitution.

In March 2005 Swaziland's High Court upheld a ban on legal recognition of opposition political parties, dealing a serious blow to Swaziland's two largest political organizations, PUDEMO and NNLC, which together with labor unions sought to challenge and forestall the new draft constitution. The pro-democracy groups argued that the constitutional process was illegal as it had gone against a 2002 decision by the Court of Appeal that ruled King Mswati III had no legal basis to decree laws. In their judgment the five justices invoked another decree, a 1973 state of emergency pronounced by Mswati's father, King Sobhuza, that gave absolute power to the monarchy and banned organized political opposition to royal rule. The 2005 constitution approved by the king and parliament maintained the ban on political parties. However, some local groups see the government's recently published policy guidelines for the creation, registration and running of nongovernmental organizations providing small openings for political activity.

Prodemocracy groups have vowed to continue testing provisions of the constitution in court. However, if government claims (denied by PUDEMO) linking PUDEMO with fire-bombing incidences of several locations in Mbabane the first week of October 2005 proved true, it would mark a militant and violent turn for antiroyalist political groups.

## 15 LOCAL GOVERNMENT

Swaziland is divided into four districts: Hhohho, Manzini, Shiselweni, and the largest, Lubombo. District commissioners are appointed by the central government. Mbabane, Manzini, and two other towns have municipal governments. Paralleling statutory government structure is a traditional system consisting of the king and his traditional advisors, traditional courts, and 55 tinkhundla subregional districts in which traditional chiefs are grouped.

## 16 JUDICIAL SYSTEM

The dual judicial system consists of a set of courts based on a western model and western law and a set of national courts which follows Swazi law and custom. The former consists of a Court of Appeals and a High Court, plus magistrate's courts in each of the four districts. The traditional courts deal with minor offenses and violations of traditional Swazi law and custom. Sentences in traditional courts are subject to appeal and review to the Court of Appeals and High Court. The king has authority to appoint a special tribunal with its own procedural rules in treason and sedition cases.

The judges of the Courts of Appeals are expatriates, usually from South Africa, and serve on a two-year renewable contract basis. Local judges serve indefinitely on good behavior.

Although the courts are supposed to be independent of executive and military control or influence, there have been poor relations between the judiciary and the government. Matters came to head in November 2002. The government refused to follow rulings of the Supreme Court of Appeals on two major cases, one declaring the kKings frequent decrees as illegal, and another ordering the return to their homes of Chief Mliba Fakudze and 200 of his followers forcibly evicted and exiled from their homes in Macetjeni by the Government in 2000, after defying an apparent palace order installing King Mswati's brother, Prince Maguga Dlamini, as their new chief. Government defiance sparked public protests, international condemnation, and resulted in the resignation of the entire bench in November 2002. Relations began to turn around in November 2004 when the Appeals Court resumed hearing cases after promises by the new Prime Minister Absolom Dlamini that the government would respect court decisions.

## 17 ARMED FORCES

The Umbutfo Swaziland Defense Force has fewer than 3,000 personnel and functions as a border patrol and an internal security force. A royal guard battalion was formed in 1982. Military expenditures for 2001–02 were \$20 million or 4.8% of GDP.

## 18 INTERNATIONAL COOPERATION

Swaziland joined the United Nations on 24 September 1968 and participates in ECA and several nonregional specialized agencies, such as the FAO, UNESCO, UNIDO, the World Bank, and the WHO. Swaziland also belongs to the ACP Group, the African Development Bank, the Commonwealth of Nations, G-77, WTO, the Southern African Customs Union (SACU), COMESA, the Southern African Development Community (SADC), and African Union. The country is also a part of the Nonaligned Movement. In environmental cooperation, Swaziland is part of the Convention on Biological Diversity, CITES, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

Swaziland's economy is based firmly on free market principles. The benefits of a modern economy are primarily enjoyed by the growing urban population. The majority supports itself through subsistence agriculture on rural homesteads. A relatively diversified industrial sector accounts for the largest component of the formal economy at 43% of GDP in 1999. Because of its small size, Swaziland relies heavily on the export sector, composed primarily of large firms with predominantly foreign ownership.

Surrounded almost entirely by South Africa, Swaziland's economy is heavily influenced by its dominant neighbor. The economy benefited considerably from investments that might otherwise have gone to South Africa during the period when there were international sanctions imposed on that country. On the other hand, the Swazi economy will likely suffer as a reformed South Africa attracts investment that had been going to Swaziland. In 1996, South Africa accounted for an estimated 96% of Swaziland's imports, 60% of its exports, and 50% of its foreign direct investment. In addition, remittances from Swaziland nationals working in South African mines substantially add to domestically earned income. This overwhelming presence has led some analysts to

view the Swazi economy as a small, developing part of the much larger South African economy. The economy grew by 3.6% between 1988 and 1998, and by 2.6% between 2001 and 2005. Projected growth in the South African economy is expected to boost Swazi exports and in turn stimulate growth.

In 2002, the budget deficit was estimated at 4.8% of GDP. The government had taken few steps to restructure the public sector and privatize state-owned enterprises. As of 2003, the government had plans to build a new international airport, convention center, hotel, and theme park. Swaziland's membership in the Southern African Customs Union (SACU) with South Africa, Botswana, Lesotho, and Namibia, allows for the virtually unimpeded exchange of goods between the countries, subject to South Africa's import control requirements.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Swaziland's gross domestic product (GDP) was estimated at \$6.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$5,300. The annual growth rate of GDP was estimated at 1.8%. The average inflation rate in 2005 was 4%. It was estimated that agriculture accounted for 15.1% of GDP, industry 49.7%, and services 35.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$62 million or about \$56 per capita and accounted for approximately 3.3% of GDP. Foreign aid receipts amounted to \$27 million or about \$24 per capita and accounted for approximately 1.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Swaziland totaled \$1.21 billion or about \$1,096 per capita based on a GDP of \$1.9 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.0%. In 2001 it was estimated that approximately 25% of household consumption was spent on food, 9% on fuel, 6% on health care, and 13% on education. It was estimated that in 2004 about 66% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2003, Swaziland's labor force totaled 155,700. In 2004, unemployment was estimated at 40%. There was no data available on the occupational breakdown of the country's labor force.

The law allows unions to organize and bargain collectively. About 80% of the formal private sector was organized as of 2001. The Swaziland Federation of Trade Unions is the major labor organization. There is also an employers' federation, as well as a second, breakaway labor group, the Swaziland Federation of Labor Officially. The right to strike is severely limited but unions have still engaged in strikes.

The minimum age of employment is 15, and children are rarely employed in the formal economy. Child labor is more common in

the agricultural and informal economies. Swaziland has a legally mandated sliding scale of minimum wages depending on the type of work. The minimum monthly wage for a domestic servant was approximately \$21 in 2001. For an unskilled worker it was \$33 and for a skilled worker, \$52. The government protects workers with health and safety regulations. The maximum workweek is set at 48 hours, with one day of rest.

## 2<sup>2</sup> AGRICULTURE

Swazi nation land, which comprises over 60% of the total land area, is held in trust by the crown for the Swazi people and supports about 70% of the population. Nearly half of the remaining land, which is freehold title, is owned by Europeans; the rest is owned by government or parastatal bodies. Under the traditional land tenure system, farmers till small plots, averaging less than 3 hectares (7.4 acres), but have no title or right to sell this land. The average freehold title farm, by contrast, is about 800 hectares (2,000 acres), and over 60% of freehold title cropland is irrigated. In this modern sector, agriculture expanded considerably in the early 1970s, mainly because of improved irrigation, better strains, and widespread introduction and use of fertilizers. Sugar is the most important cash crop, and corn is the staple crop. Most of the sugar produced is exported to Western Europe and North America. Output in 2004 included sugarcane, 4.5 million tons, and corn, 70,000 tons. Much of the sugar is exported to the EU, in accordance with the Sugar Protocol of the Lomé Convention; increasing amounts, however, are sold and refined domestically. Production of grapefruit in 2004 was about 37,000 tons; oranges, 36,000 tons; and pineapple, 32,000 tons. Cotton fiber production in that year was 2,000 tons. Between 1970 and 1982, 17 Rural Development Areas were established to assist traditional farmers; the program was planned to extend eventually to all Swazi nation land. The 1991/92 drought caused corn and cotton production to seriously decline; as a result the government sought emergency food assistance. By 1999, crop production was 90% of what it had been during 1989–91. During 2002–04, crop production was 5.9% lower than during 1999–2001.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Livestock raising, like agriculture, is divided into two sectors: a traditional system of grazing on communal lands for subsistence needs, and modern, commercial ranches on freehold title land. Livestock numbers recovered in 1991 from a previous drought-related selloff. In 2005, Swaziland had about 580,000 head of cattle, 274,000 goats, 27,000 sheep, 30,000 hogs, 14,000 equines, and 3.2 million chickens. The country produced 12,500 tons of beef in 2005. However, the meat processing industry has been unstable since 1988.

## 2<sup>4</sup> FISHING

By 1982, several commercial fish farms had been established and some Rural Development Areas had fish ponds. Annual production was estimated at 70 tons in 2003.

## 2<sup>5</sup> FORESTRY

Swaziland's forests (pine and eucalyptus) are among the world's largest planted forests, covering 161,000 hectares (398,000 acres),

or about 9% of the land area. The total forest area in 2000 was 522,000 hectares (1,290,000 acres), or 30% of the land area. Roundwood output totaled 890,000 cu m (31.4 million cu ft) in 2004, about 70% coniferous. Sawn wood production was 102,000 cu m (3.6 million cu ft). Of Swaziland's planted forests, half supply the Usutu pulp mill, a large export earner producing unbleached wood pulp. About 3% of Swaziland's forests are in protected nature reserves and game sanctuaries.

## 26 MINING

The historic mineral sector of Swaziland has essentially collapsed. The kingdom contained the world's oldest known mine site, the Lion Cavern, at the Ngwenya iron mine, on Bomvu Ridge, northwest of Mbabane. Carbon-14 dating estimated that mining of hematite (libomvu) and specularite ochres, for cosmetic and ritual uses, took place at the site from 43,000–41,000 BC until at least 23,000 BC; the mine was closed in 1977. Mining's role in Swaziland's economy has been declining in recent years, and as of 2004, accounted for only a minor factor in its overall economy. Asbestos mining ceased in 2000, diamond mining ceased in 1996, and mining of the once-major export of iron ore stopped in the late 1970s (it reached 2.24 million tons in 1975).

In 2004, Swaziland produced an estimated 300,000 cu m of quarry stone products, and also produced brick clay, anthracite coal, pyrophyllite, and sand and gravel. Small-scale, unreported gold mining has taken place. The mining of chrysolite fiber asbestos, once the dominant source of mining revenue, employing 1,000 workers at Bulumbe, one of the world's largest asbestos mines, ceased because of declining reserves, environmental concerns, and weak markets. In 2000, the last year of asbestos production, 12,690 metric tons was produced. An estimated 1,150 metric tons of ferrovanadium was produced in 2004, up from 1,011 metric tons in 2003. Although fewer than 1,000 Swazis were directly employed in the mining sector, 1,000 people processed timber from the country's extensive pine populations for mines in South Africa, and 10,000–15,000 Swazis were employed in South African mines.

## 27 ENERGY AND POWER

Swaziland's primary fossil fuel resource is coal. The country has no proven reserves of oil or natural gas, and thus must rely on imports to meet its petroleum and natural gas needs.

As of 1 January 2005, Swaziland had no proven reserves of crude oil, or natural gas, nor any petroleum refining capacity. In 2004, the country's imports and consumption of petroleum products each averaged 3,000 barrels per day.

Coal is Swaziland's only fossil fuel resource. As of 2003, these reserves came to 229 million short tons. Demand and production for coal that year each came to 410,000 short tons.

As of 1 January 2003, Swaziland's total installed electric generating capacity totaled 0.124 million kW, of which conventional thermal capacity accounted for 0.080 million kW and hydropower accounting for 0.044 million kW of capacity. Electric power output in 2002 totaled 0.395 billion kWh, of which 0.202 billion kWh came from conventional thermal sources and 0.193 from Hydroelectric sources. Demand for electric power in 2002 totaled 1.166 billion kWh.

## 28 INDUSTRY

Manufacturing consists primarily of the following export-oriented industries: wood pulp production, drink processing, fruit canning (Swazican), and sugar processing. Manufacturing growth in the mid-1990s was mostly attributable to increased production of drink processing at Bromor Foods and the sugar-based production activities of the Royal Swaziland Sugar Corporation and Cadbury Confectioneries. Swaziland's three sugar mills have an annual production capacity of 500,000 tons. Usutu Pulp, Swaziland's largest employer, is the leading wood pulp processing company, with an annual capacity to produce 220,000 tons of bleached kraft pulp. Sappi, a London-based company, manages the Usutu Pulp Company. Cement, agricultural machinery, electronic equipment, and refrigerator production are also important parts of Swaziland's manufacturing sector. Textiles, footwear, gloves, office equipment, confectionery, furniture, glass, and bricks are also manufactured. Industry accounts for over 40% of GDP.

Sanctions against South Africa in the late 1980s and internal unrest inspired interest in the relocation of South African-based industry, such as Coca-Cola, in Swaziland. Reexports of South African manufactures with "Made in Swaziland" labels also appeared at that time. The industrial sector growth of the 1980s slowed in the early 1990s as stability returned to South Africa and sanctions were eliminated. Textile manufacturing, which flourished when South African tariffs were high, began to wither when they were equalized.

Creation of the Southern African Development Community further marginalized the previous industry benefits to operating in Swaziland. The privatization of state-owned industry in 2000 increased foreign interest in Swaziland's industrial sector. There are no known oil or natural gas reserves in Swaziland.

In 2005, the government announced plans to reduce the budget deficit, including a reduction in expenditure on personnel. However, the government's willingness to carry this out has been called into question by recent salary increases for the cabinet and parliamentarians. Inflation has risen, but is expected to decline in the short term as food prices come down.

## 29 SCIENCE AND TECHNOLOGY

The University of Swaziland, founded originally as part of the University of Botswana, Lesotho, and Swaziland in 1964, has faculties of agriculture and science. The Swaziland College of Technology, founded originally in 1946 as a trade school, offers courses in various fields of engineering. The Geological Survey and Mines Department, founded in 1946 at Mbabane, conducts mining research, and three other institutes conduct agricultural research. In 2002, high technology exports were valued at \$3 million, or 1% of the country's manufactured exports.

## 30 DOMESTIC TRADE

South Africa's substantial presence in Swaziland's domestic economy essentially means that South African business is the driving force in Swaziland's domestic commerce. South African employers and investors dominate certain sectors of local trade. Recently, however, the government has been working on programs to encourage local ownership and operation of small to medium-sized

establishments. A few franchises have been established. Bargaining is an accepted practice in many Swazi business deals. The most developed distribution routes are those connecting to South Africa. Mbabane and Manzini are the principal commercial centers. Manufactured articles are generally available in all urban centers and are marketed mostly by South Africans.

Business hours are from 8:15 or 8:30 AM to 1 PM and from 2 to 5 PM, Monday–Friday, and from 8:15 or 8:30 AM to 1 PM, Saturday. Banks are open weekdays from 8:30 AM to 1 PM and Saturdays from 8:30 to 11 AM.

### 3<sup>1</sup> FOREIGN TRADE

Swaziland's exports have traditionally equaled a significant portion of GDP. As a result, the country's entire economy tends to mirror world commodity prices, and especially the state of the South African economy.

The value of exports has risen steadily during the 1990s; while the value of imports rose until 1997, when purchases suddenly dropped by 27%. This was probably due to the creation of the South African free trade area. Principal exports in 2003 included sugar, soft drink concentrates (a large US investment), wood pulp and lumber, cotton yarn, and fruit. Principal imports were motor vehicles, machinery, transport equipment, food, petroleum products, and chemicals.

Almost 96% of imports either originate in or transit through South Africa, and direct sales to and transshipments through South Africa account for about 72% of Swaziland's exports. About 12% of exports go to the European Union.

### 3<sup>2</sup> BALANCE OF PAYMENTS

A decline in long-term capital inflows, increasing government deficits, and a drop in donor assistance plagued Swaziland with a current account deficit for much of the 1990s. The goods and services account has been negative since the 1980s. Payments made by the Southern African Customs Union (SACU) to Swaziland, along with donor assistance, have offset this deficit, but these sources of revenue are threatened. Increased government deficits have also weakened the position of the current account.

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Swaziland's exports was \$2.007 billion while imports totaled \$2.096 billion resulting in a trade deficit of \$89 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank of Swaziland is the nation's central bank. Swaziland has been experiencing excess liquidity for some time. The nation's commercial banks were Standard Bank, First National and the Nedbank as of 1998. The Swaziland Development and Savings Bank was undergoing reconstruction in that year after a 1995 bankruptcy. The Swaziland Building Society provided mortgages for housing.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$62.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$189.7 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 5.06%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9.5%.

The Swaziland Stock Market was established in 1990, and has only five company listings.

### 3<sup>4</sup> INSURANCE

The Swaziland Royal Insurance Corp., 41% state owned, began operating in 1974. It is majority-owned by South African insurance and reinsurance companies. The Swaziland National Provident Fund is a mandatory savings institution for employees.

### 3<sup>5</sup> PUBLIC FINANCE

In the past, the government maintained a prudent fiscal policy by avoiding large deficits and restricting public sector growth. From 1987 to 1991, large budgetary surpluses were registered, and the

government began making repayments on the external debt as a net creditor to the bank. Budgetary deficits during the 1990–2000s reflected extravagant government spending on the monarchy and his family. The civil service was overstuffed as well, prompting a reduction of 5,000 employees in 2000.

The US Central Intelligence Agency (CIA) estimated that in 2005 Swaziland's central government took in revenues of approximately \$805.6 million and had expenditures of \$957.1 million. Revenues minus expenditures totaled approximately -\$151.5 million. Total external debt was \$357 million.

The International Monetary Fund (IMF) reported that in 2000, the most recent year for which it had data, budgetary central government revenues were €2,817.1 million and expenditures were €2,899.7 million. The value of revenues in US dollars was us\$1,945 million and expenditures us\$2,002 million, based on an official exchange rate for 2000 of us\$1 = €1.4481 as reported by the IMF. Government outlays by function were as follows: general public services, 30.6%; defense, 7.6%; public order and safety, 8.1%; economic affairs, 21.1%; housing and community amenities, 3.6%; health, 8.0%; recreation, culture, and religion, 0.6%; education, 19.8%; and social protection, 0.4%.

### 36 TAXATION

Swaziland has a progressive personal income tax system with rates ranging from 0–30%. There are no local taxes. As of the year ending 30 June 2005, the corporate income tax was levied at a rate of 30%. There are no capital gains tax, tax on dividends from companies paid to residents, or estate taxes. Swaziland has double taxation treaties with several countries including South Africa. The standard rate for the sales tax was increased from 12% to 14% in 2003, with higher rates for items like liquor (25%) and tobacco. Exempted from sales tax are fresh foodstuffs, drugs, medicines, furniture and building supplies.

### 37 CUSTOMS AND DUTIES

Swaziland belongs to the Southern African Customs Union (SACU) with South Africa, Lesotho, Botswana, and Namibia. South Africa levies and collects most of the customs, sales, and excise duties for the five member states, paying a share of the revenues to the other four. Local import duties are applied to wines, spirits, and beer. Swaziland also signed a double taxation agreement with the United States in 2000.

### 38 FOREIGN INVESTMENT

Cognizant of its subordinate relationship to South Africa, Swaziland has fostered an investment climate agreeable to foreign businesses. More than half of all enterprises are foreign owned or joint ventures. South African investment has consistently accounted for

around 45% of FDI. It is surmised that British entities inject the largest portion of the remaining 55%, followed by Taiwan. The United States, Denmark, the Netherlands, and Germany are also present. Foreign investors pay a reduced 10% corporate tax and are exempted from withholding tax on dividends for the first 10 years.

In 1997, Swaziland experienced divestment of foreign direct investment (FDI) amounting to -\$15.1 million, but in 1998 annual FDI inflow rose to \$151 million. Inflow was \$100 million in 1999,

### Public Finance – Swaziland (2000)

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

but there was a reverse flow of -\$18.5 million in 2000. FDI inflow in 2001 was \$68 million, in 2002 was \$48.7 million, and in 2003 was \$60.8 million. FDI grew by 10.4% in 2003 and much of this growth was through reinvested earnings. There is no policy of encouraging Swazis or Swazi business to invest abroad generally, but a handful of Swazi businesses invest abroad, primarily in South Africa.

### 39 ECONOMIC DEVELOPMENT

The growth that was experienced in past years left unaffected the 60% of Swazis who live on small family farms. While manufacturing employment has risen, about half of Swazis are unemployed and actively seeking work. It is hoped that the existence of a multiracial government will prove beneficial to ongoing Swaziland-South African economic development. Economic activity weakened in the early 2000s, however, in part due to drought and closures by foreign firms. Food shortages and the spread of HIV/AIDS have exacerbated the dire conditions of high unemployment, income inequality, and poverty. A National Emergency Response Committee (NERCHA) was established in 2001 to combat HIV/AIDS.

### 40 SOCIAL DEVELOPMENT

Social services have developed slowly. A system of pensions exists for formally employed persons. Old-age, disability, and survivorship is covered. The program is funded by 5% contribution by both employees and employers. Retirement is allowed between ages 45 and 50 and pensions may be paid as a one-time lump sum or divided into installments. Private work injury insurance is mandatory for all employers.

Women do not have full legal equality with men, and a married woman is virtually a legal minor. Women may not open a bank account, buy land, or leave the country without her husband's permission. In addition, women do not automatically transmit citizenship to their children, and cannot transfer property to them either. Domestic violence is commonplace, and rape is viewed as a

minor offense by most men. Women are inhibited from reported violence, and the court system is unsympathetic. Child abuse is also a widespread social problem despite legislation protecting the rights of children.

There are continued reports of the use of excessive force by police, and torture during interrogation. The law does not provide for freedom of speech and of the press, and the government restricts these activities. However, human rights organizations are permitted to operate.

#### 41 HEALTH

Major health problems include bilharzia, typhoid, tapeworm, gastroenteritis, malaria, kwashiorkor, and pellagra. In 2004, there were an estimated 18 physicians, 2 dentists, 4 pharmacists, and 320 nurses per 100,000 people. Traditional healers are still consulted by over 80% of the population. Only about 43% of the population has access to safe water, and 36% has adequate sanitation. About 56% of the population had access to health care services.

About 27% of married women used contraceptives. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 39.6 and 23.2 per 1,000 people. In 2005, average life expectancy was 33.22 years, the lowest in the world. The infant mortality rate was 72.92 per 1,000 live births. The immunization rates for children under one year of age were as follows: diphtheria and pertussis, 96%; polio, 96%; measles, 94%; tuberculosis, 100%; and tetanus, 75%.

The HIV/AIDS prevalence was 38.80 per 100 adults in 2003, the highest rate in the world. As of 2004, there were approximately 220,000 people living with HIV/AIDS in the country. There were an estimated 17,000 deaths from AIDS in 2003.

#### 42 HOUSING

The search for jobs in urban settings has caused a housing shortage in these areas. Several squatter settlements have developed, accounting for as much as half of annual shelter production in cities. It has been estimated that about 60% of the urban population resides in temporary shelters, and that number grows as more and more households are unable to afford the high cost of home ownership. In response, the government has been working with international programs, such as the World Bank, to create and improve urban housing. In 2001, the Swaziland National Housing Board provided for over 1,000 rental units and 500 units for ownership to low- and middle-income families.

#### 43 EDUCATION

The majority of primary and secondary schools are run by missions with grants from the government. Children go through seven years of primary and five years of secondary schooling (in three and two-year cycles). Schooling is not compulsory, and nominal fees are charged to parents. The academic year runs from August to May.

Primary school enrollment in 2003 was estimated at about 75% of age-eligible students. The same year, secondary school enrollment was about 32% of age-eligible students. It is estimated that about 75% of all students complete their primary education. The

student-to-teacher ratio for primary school was at about 31:1 in 2003; the ratio for secondary school was about 16:1.

Higher education is provided by the University of Swaziland and the Swaziland College of Technology. In 2003, it was estimated that about 5% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 79.2%, with 80.4% for men and 78.1% for women.

As of 2003, public expenditure on education was estimated at 7.1% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The Swaziland National Library Service was founded in 1971; with 250,000 volumes, it has 12 branches throughout the country and operates school libraries at secondary levels. There is also a mobile library service. The University of Swaziland in Kwaluseni has 180,000 volumes. The Swaziland Library Association was founded in 1984. The Swaziland National Museum in Lobamba, founded in 1972, contains collections primarily of ethnographic material and cultural objects of South Africa Bantu groups.

#### 45 MEDIA

In 2003, there were an estimated 44 mainline telephones for every 1,000 people; about 15,600 people were on a waiting list for telephone service installation. The same year, there were approximately 84 mobile phones in use for every 1,000 people.

The government-operated Swaziland Broadcasting Service broadcasts radio programs in English and Siswati and television programs in English. As of 2004, there were two government-owned radio stations and one independent (religious) radio station. There was one privately owned television station, however, the latter was owned by a relative of the former king. The government also has a television station. In 2003, there were an estimated 162 radios and 34 television sets for every 1,000 people. The same year, there were 28.7 personal computers for every 1,000 people and 26 of every 1,000 people had access to the Internet. There were two secure Internet servers in the country in 2004.

There are two major daily English language newspapers, the *Times of Swaziland* and the *Swaziland Observer*, with circulations in 2002 of 18,000 and 11,000, respectively. Freedom of speech and of the press are said to be limited, especially on political matters.

#### 46 ORGANIZATIONS

There are more than 123 cooperative societies, including the Swaziland Central Cooperatives Union. The national chamber of commerce and industry is in Mbabane. The National Consumer's of Swaziland was established in 1994. There are active professional associations, such as the Swaziland Nurses Association and Swaziland National Association of Teachers.

Educational organizations include the Swaziland Educational Research Association and Fundza, which works to establish school libraries throughout the country.

National youth organizations include the Swaziland Boy Scouts Association, Swaziland Workcamp Association, and the Swaziland Youth Forum. There are several sports associations in the country promoting amateur competition for athletes of all ages in a variety

of pastimes; many of these groups are affiliated with international counterparts, as well as with the Swaziland Olympic and Commonwealth Games Association.

Volunteer service organizations, such as the Lions Clubs International, are also present. Social action and development groups include the Human Rights Association of Swaziland and Emanti Esive (Water for Community Development), a health and wellness organization. There are national chapters of the Red Cross Society, UNICEF, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Swaziland offers the tourist a magnificent variety of scenery and casinos at Mbabane, Nhlangano, and Pigg's Peak. The tea estates near the Mdzimba Mountains are also an attraction. Popular sports are tennis, squash, hiking, fishing, white-water rafting, lawn bowls (bowling on a green), and golf. If traveling from an infected area vaccination against yellow fever is required. Precautions against cholera, typhoid, polio, and malaria are recommended. Passports and travel documents are required of all visitors as well as visas from more than 145 countries including China and Russia.

In 2003, there were 218,813 visitors who arrived in Swaziland. Hotel rooms numbered 1,339 with 2,436 beds and a 33% occupancy rate. Over 50% of the visitors came from African nations.

According to 2005 US Department of State estimates, the daily cost of staying in Mbabane was \$247.

#### 48 FAMOUS SWAZI

Sobhuza II (1899–1982) was king, or ngwenyama, of the Swazi nation from 1921 until his death. Mswati III (b.1968) became king in 1986.

#### 49 DEPENDENCIES

Swaziland has no territories or colonies.

# TANZANIA

United Republic of Tanzania  
*Jamhuri Ya Muungano Wa Tanzania*

**CAPITAL:** Dodoma

**FLAG:** The flag consists of a black diagonal stripe running from the lower left corner to the upper right corner, flanked by yellow stripes. The diagonal stripes separate two triangular areas: green at the upper left and blue at the lower right.

**ANTHEM:** The Tanzanian National Anthem is a setting to new words of the widely known hymn *Mungu Ibariki Afrika (God Bless Africa)*.

**MONETARY UNIT:** The Tanzanian shilling (Sh) of 100 cents is a paper currency. There are coins of 5, 10, 20, and 50 cents and 1, 5, 10, and 20 shillings, and notes of 10, 20, 50, 100, 200, 500, and 1,000 shillings. Sh1 = \$0.00089 (or \$1 = Sh1,123.2) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** Zanzibar Revolution Day, 12 January; Chama Cha Mapinduzi Day, 5 February; Union Day, 26 April; International Workers' Day, 1 May; Farmers' Day, 7 July; Independence Day, 9 December; Christmas, 25 December. Movable religious holidays include 'Id al-Fitr, 'Id al-'Adha, Milad an-Nabi, Good Friday, and Easter Monday.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in East Africa just south of the equator, mainland Tanzania lies between the area of the great lakes—Victoria, Tanganyika, and Malawi (Niassa)—and the Indian Ocean. It contains a total area of 945,087 sq km (364,900 sq mi), including 59,050 sq km (22,799 sq mi) of inland water. Comparatively, the area occupied by Tanzania is slightly larger than twice the size of the state of California. It is bounded on the N by Uganda and Kenya, on the E by the Indian Ocean, on the S by Mozambique and Malawi, on the SW by Zambia, and on the W by Zaire, Burundi, and Rwanda, with a total boundary length of 4,826 km (2,999 mi), of which 1,424 km (885 mi) is coastline. Tanzania claims part of Lake Malawi, although its internationally recognized boundary is the east-north shore.

The section of the United Republic known as Zanzibar comprises the islands of Zanzibar and Pemba and all islets within 19 km (12 mi) of their coasts, as well as uninhabited Latham Island, 58 km (36 mi) south of Zanzibar Island. Zanzibar Island lies 35 km (22 mi) off the coast, and Pemba Island is about 40 km (25 mi) to the NE. The former has an area of 1,657 sq km (640 sq mi), and the latter 984 sq km (380 sq mi).

Tanzania's capital city, Dodoma, is located on the Indian Ocean coast.

## <sup>2</sup> TOPOGRAPHY

Except for the islands and a coastal strip varying in width from 16 to 64 km (10–40 mi), Tanzania lies at an altitude of over 200 m (660 ft). A plateau averaging 900–1,800 m (3,000–6,000 ft) in height makes up the greater part of the country. Mountains are grouped in various sections. The Pare range is in the northeast,

and the Kipengere Range is in the southwest. Kilimanjaro (5,895 m/19,340 ft), in the north, is the highest mountain in Africa.

On the borders are three large lakes: Victoria, the second-largest freshwater lake in the world, exceeded only by Lake Superior; Tanganyika, second only to Lake Baykal as the deepest in the world; and Lake Malawi. Lakes within Tanzania include Natron, Eyasi, Manyara, and Rukwa.

Tanzania has few permanent rivers. During half the year, the central plateau has no running water, but in the rainy season, flooding presents a problem.

Two-thirds of Zanzibar Island, to the center and the east, consists of low-lying coral country covered by bush and grass plains and is largely uninhabited except for fishing settlements on the east coast. The western side of the island is fertile and has several ridges rising above 60 m (200 ft). Masingini Ridge, at 119 m (390 ft), is the highest point on the island. The west and center of Pemba Island consists of a flat-topped ridge about 9.5 km (6 mi) wide, deeply bisected by streams. Pemba is hilly, but its highest point is only 95 m (311 ft). Apart from the narrow belt of coral country in the east, the island is fertile and densely populated.

## <sup>3</sup> CLIMATE

There are four main climatic zones: (1) the coastal area and immediate hinterland, where conditions are tropical, with temperatures averaging about 27°C (81°F), rainfall varying from 100 to 193 cm (40 to 76 in), and high humidity; (2) the central plateau, which is hot and dry, with rainfall from 50–76 cm (20–30 in), although with considerable daily and seasonal temperature variations; (3) the semitemperate highland areas, where the climate is healthy and bracing; and (4) the high, moist lake regions. There is little seasonal variation in the Lake Victoria area, but the eastern sec-

tions average only 75–100 cm (30–40 in) of rain, while the western parts receive 200–230 cm (80–90 in). A small area north of Lake Niassa receives 250 cm (100 in) of rain. There are two rainy seasons in the north, from November to December and from March through May. In the south there is one rainy season, from November to March.

The climate on the islands is tropical, but the heat is tempered by sea breezes that are constant throughout the year, except during the rainy seasons. The seasons are well defined. From December to March, when the northeast monsoon blows, it is hot and comparatively dry. The heavy rains fall in April and May, and the lesser in November and December. It is coldest and driest from June to October, during the southwest monsoon.

#### 4 FLORA AND FAUNA

Common savanna species cover most of the drier inland areas—amounting to about one-third of the country—between altitudes of 300 and 1,200 m (1,000 and 4,000 ft). Two main types of closed-forest trees—low-level hardwoods and mountain softwoods—are found in high-rainfall areas on the main mountain masses and in parts of the Lake Victoria Basin. Wooded grasslands are widely scattered throughout the country. The drier central areas include bushlands and thickets. Grasslands and heath are common in the highlands, while the coast has mangrove forest. There are over 10,000 species of plants throughout the country.

The 4 million wild mammals include representatives of 316 species and subspecies, notably antelope, zebra, elephant, hippopotamus, rhinoceros, giraffe, and lion. Various types of monkeys are plentiful.

There are over 230 species of birds found in the country, ranging in size from ostrich to warbler. Insect life, consisting of more than 60,000 species, includes injurious species and disease carriers. There are at least 25 species of reptiles and amphibians and 25 poisonous varieties among the 100 species of snakes. Fish are plentiful.

The flora and fauna of Zanzibar and Pemba are varied. Mammals common to both are galagos, fruit-eating and insectivorous bats, genet, mongooses, small shrews, rats, and mice. Zanzibar has the leopard, Syke's monkey, civet, and giant rat. Unique species of tree coney are found on Pemba and Tumbatu Islands. There are also five unique mammals—Kirk's colobus (monkey), two elephant shrews, duiker antelope, and squirrel.

#### 5 ENVIRONMENT

The Ministry of Natural Resources and Tourism, the Tanzania National Parks Department, and the Ministry of Lands, Housing, and Urban Development are the government agencies entrusted with environmental responsibilities in Tanzania. One of the nation's major concerns is soil degradation as a result of recent droughts. Also of concern is the drop in water level at Lake Victoria. Some reports estimate that in the period of 1995–2005, the water level dropped by one meter.

The nation's land is also affected by the related problem of desertification. Tanzania lost 14.4% of its forest and woodland area between 1983 and 1993. Tanzania has 82 cu km of renewable water resources with 89% of annual withdrawals used for farming and 2% for industrial activity. About 92% of urban dwellers and 62% of the people living in rural areas have access to improved

water sources. The nation's cities produce about 1.8 million tons of solid waste per year.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 34 types of mammals, 37 species of birds, 5 types of reptiles, 40 species of amphibians, 28 species of fish, 17 types of mollusks, 16 species of other invertebrates, and 239 species of plants. The nation's marine habitats are threatened by damage to its coral reefs caused by the fishing industry's use of dynamite. Threatened species included the Uluguru bush-shrike, green sea turtle, hawksbill turtle, olive ridley turtle, and Zanzibar suni. At least 16 species of fish have become extinct.

#### 6 POPULATION

The population of Tanzania in 2005 was estimated by the United Nations (UN) at 36,481,000, which placed it at number 33 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.4%, a rate the government viewed as too high and sought ways to reduce the fertility rate, which stood at more than five births per woman. The projected population for the year 2025 was 52,604,000.

The overall population density was 39 per sq km (100 per sq mi). The most densely populated regions are the well-watered or elevated areas, particularly in the Usambara Mountains around Kilimanjaro and Meru, on the shores of Lake Victoria, in the Southern Highlands, and in the coastal areas around Tanga and Dar es Salaam.

The UN estimated that 32% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.24%. The 2002 Tanzania census reported a metropolitan population for Dodoma, the capital, of 1,698,996. Other large cities and their 2002 regional populations include Mwanza, 2,665,956; Dar es Salaam, 2,497,940; Tanga, 1,742,412; Kigoma, 1,240,939; Arusha, 1,221,890; and Zanzibar 1,003,794.

The prevalence of HIV/AIDS has had a significant impact on the population of Tanzania. The UN estimated that 7.8% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

#### 7 MIGRATION

Out of an estimated Asian population of 100,000 in 1967, almost half, most of them with British passports, had left the country by 1980. Arabs, who were the dominant group on Zanzibar before the 1964 revolution, despite forming less than 20% of the population, fled after the event to the mainland or the Middle East. There is some emigration of laborers seeking work in neighboring countries, but Tanzanians who leave the country without authorization are subject to prosecution on return. During the clove harvest, labor moves from the towns to the clove plantations, from Zanzibar to Pemba, and from the mainland territories to Pemba. As a result of migration from rural areas to the cities, the urban population

LOCATION: 1° to 11°45' S; 29°21' to 40°25' E. BOUNDARY LENGTHS: Uganda, 418 kilometers (260 miles); Kenya, 769 kilometers (478 miles); total coastline (including coasts of Zanzibar and Pemba islands), 1,271 kilometers (790 miles); Mozambique, 756 kilometers (470 miles); Malawi, 451 kilometers (280 miles); Zambia, 322 kilometers (200 miles); Democratic Republic of the Congo, 459 kilometers (285 miles); Burundi, 451 kilometers (280 miles); Rwanda, 217 kilometers (135 miles).

TERRITORIAL SEA LIMIT: 50 miles.

is estimated to be growing by 6.5% per year. Urban authorities are empowered to return the unemployed to their villages.

In October 1993, around 250,000 Burundian refugees fled to Tanzania to escape from a military coup in Burundi. Most of these refugees returned within three months. Following the genocide in Rwanda, 500,000 Rwandan refugees arrived in April 1994. In 1996, 220,000 Rwandan refugees in Burundi fled to Tanzania to escape from the fighting in northern Burundi; they were allowed to enter based on humanitarian grounds. By December 1995, around

500,000 were repatriated following an agreement between Tanzania, Rwanda, and the United Nations High Commissioner for Refugees (UNHCR). In 1995, 18,000 Mozambicans entered Tanzania. Since 1997, 33,000 Zaireans and 59,000 Burundians have entered Tanzania. The total number of migrants living in Tanzania in 2000 was 893,000. As of 2004, there were 602,088 refugees in Tanzania, including some 443,000 from Burundi, and 153,000 from DROC. There were also 166 asylum seekers and 2 returned refugees. In 2004, Tanzania remained the fourth-largest asylum country.

In 2005, the net migration rate was estimated as -3.11 per 1,000 population. The government viewed the migration levels as satisfactory.

## **8** ETHNIC GROUPS

Mainland-native Africans constitute 99% of the total population. About 130 tribes have been categorized into 5 ethnic groups distinguishable by their physical characteristics and languages. Approximately 95% of Tanzanians may be roughly classified as Bantu, a comparatively recent blend mainly of Hamitic and Negroid stocks. Tribes range in membership from only a few thousand to the Sukuma tribe, which numbers more than two million. Other major tribes include the Nyamwezi, Makonde, Haya, and Chagga. The Luo, east of Lake Victoria, are the only people of Nilotic origin; the Masai of the northern highlands are Nilo-Hamites. A very small number of Bushmen-like people are scattered throughout northern Tanzania, where small tribes of Cushitic origin also live. The inhabitants of Zanzibar and Pemba are chiefly descendants of mainland Africans or are of mixed African and Arab extraction. The remaining 1% of the populace is made up of non-Africans, including Arabs, Asians, and Europeans.

## **9** LANGUAGES

Most Tanzanians speak variations of Bantu languages and dialects. Various languages also have Hamitic or Nilotic origins. Swahili (or Kiswahili) is the official language, as well as the lingua franca, and is understood in most parts of the country, although its usefulness declines toward the west. English, also an official language, is the primary language of commerce, administration, and higher education. Kiunguja, a form of Swahili, and Arabic are widely spoken in Zanzibar. The first language of most people is one of the local languages.

## **10** RELIGIONS

Since religious demography has been removed from government censuses as of 1967, reliable statistics on religious affiliation are difficult to obtain. Sociologists and religious leaders estimate that between 30–40% of the total population are Christian and that about an equal percentage are Muslim. The Christian churches represented include Roman Catholic, Pentecostal, Protestant, Seventh-Day Adventist, the Church of Jesus Christ of Latter-Day Saints, and Jehovah's Witnesses. A majority of the Muslims are Sunni, while others belong to one of several Shia groups. On the island of Zanzibar, about 99% of the inhabitants are Muslim.

Though the constitution forbids religious discrimination, many Muslims believe that they are disadvantaged with less representation in civil service, government, and other public institutions. A number of fundamental Muslims argue that the government is attempting to institute a Christian state. A 2001 Mufti Law allows the president of Zanzibar to appoint a mufti (Islamic leader) as a Zanzibar government official who settles religious disputes involving Muslims and generally monitors Muslim activities on the island. On the mainland, the National Muslim Council of Tanzania (BAKWATA) is a nongovernmental organization that has elected their own mufti. Several Muslims object to the government support shown for the appointment or elections of muftis, believing that it will only lead to government control of Islamic religious affairs. Fundamental Muslim groups on Zanzibar have initiated

highly confrontational, anti-Christian proselytizing campaigns, and Christian fundamentalists have responded by calling Muslims "servants of Satan." Tension also exists between fundamental and moderate Muslim groups, as the fundamentalists criticize secular Muslims who drink alcohol and marry Christian women. Certain Christian and Muslim holidays are celebrated as national holidays.

## **11** TRANSPORTATION

As of 2004, the Tanzanian Railways Corporation operated domestic railway services on 3,690 km (2,218 mi) of track, all of it narrow gauge. The Central Line extends 1,255 km (780 mi) from Dar es Salaam to Kigoma; its main branch lines are Tabora to Mwanza (381 km/237 mi) and Kaliua to Mpanda (211 km/131 mi). The Northern Line, extending from Dar es Salaam and Tanga to Moshi and Arusha, is linked to the railway systems of Kenya and Uganda. The 1,857-km (1,154-mi) Tazara railway, operated by the Tanzania-Zambia Railway Authority, links Dar es Salaam in Tanzania with Kpiri Mposhi in Zambia; 962 km (598 mi) of the line are in Tanzania. The Tazara railway is used mainly to transport goods for Zambia and Malawi. In 2002, Tanzania had 85,000 km (52,819 mi) of roads, 4,250 km (2,641 mi) of which were paved. In 2003, there were 20,100 passenger cars and 50,200 commercial vehicles.

Tanzania has a small national merchant shipping line of three freighters and one tanker. The principal ports on the mainland are Dar es Salaam, Mtwara, Tanga, and Lindi, all of which are managed by the Tanzanian Harbours Authority. Tanzanian ports handle cargo for landlocked Zambia, Zaire, Uganda, Rwanda, and Burundi. Freight and passenger vessels serve Mwanza and other Lake Victoria ports, among them Bukoba and Musoma. A joint Burundian-Tanzanian shipping company operates on Lake Tanganyika, and the Tanzanian Railways Corporation operates vessels on lakes Tanganyika, Victoria, and Niassa. Tanzania's rivers are not navigable. In 2005, Tanzania's merchant fleet comprised 11 ships of 1,000 GRT or more, totaling 25,481 GRT.

Airports in 2004 totaled an estimated 123, only 11 of which had paved runways as of 2005. Most internal air services are operated by Air Tanzania, which also flies internationally. Charter companies operate flights to government-maintained airports, landing fields, and privately owned airstrips. Foreign airlines provide service from international airports at Dar es Salaam and in the vicinity of Mt. Kilimanjaro (opened in 1971). There is also an international airport on Zanzibar, which maintains its own airline, Zanair. In 2003, scheduled airline traffic carried about 150,000 passengers.

## **12** HISTORY

Paleontologists Louis and Mary Leakey, working at Olduvai Gorge and elsewhere in northern Tanzania, uncovered fossil evidence that humanlike creatures inhabited the area at least as early as 3.7 million years ago. Excavations of Stone Age sites have revealed that the hunter-gatherers of the late Stone Age, known as Bushmen, were gradually displaced by successive waves of Cushitic, Bantu, and Nilotic peoples. By the 1st millennium AD, the Iron Age Urewe culture had developed along the western shore of Lake Victoria.

Arabs from the Persian Gulf area were engaged in trade along the Indian Ocean coast by the 9th century AD and by the 12th cen-

tury had established trading posts on the mainland and the offshore islands. Intermarriage between the Arabs and coastal Bantu-speaking peoples resulted in the creation of the Swahili people and language. (Swahili literally means “of the coast.”)

The first contacts of European nations with the East African coast were incidental to their quest for spices. In 1498, Vasco da Gama rounded the Cape of Good Hope, and thereafter the Portuguese established trading and supply posts on the East African coast for their ships on the way to India. Eventually, the Portuguese lost control of the sea routes, and in 1698, the Ya’aruba imam of the Ibadhi Arabs of Oman, Sa’if bin Sultan, expelled the Portuguese from every position that they held north of Mozambique. The Ibadhis of Oman long remained in at least nominal control of East Africa, and there was a lucrative trade in slaves and ivory.

Sayyid Sa’id bin Sultan (the ruler of Oman during 1806–56), above all others, must be regarded as the founder of modern Zanzibar. Sa’id first visited Zanzibar in 1828, and in 1840, he made the island his capital. A believer in free trade, he encouraged foreign merchants, including Indians, broke up Arab monopolies, and made commercial treaties with the United States and the United Kingdom. Zanzibar is indebted to him most for his establishment of the clove tree. By the time he died in 1856, he had established a large, loosely held empire that included Oman, Zanzibar, and the East African coast inland to the Great Lakes and the Congo. Zanzibar produced three-quarters of the world’s clove supply on plantations worked by slaves from the mainland. British pressure forced the closing of the slave trade in 1876, although slavery itself was not abolished until 1897.

The rise of Zanzibar as a commercial center was largely due to its trading links to the interior. Many of the caravan routes that stretched across East Africa were pioneered by African mainland societies. For example, the Yao living around Lake Malawi supplied the southern Tanzania trading town of Kilwa with slaves and ivory. African societies that gained control over the trade routes enhanced their power and wealth. In northeast Tanzania, a powerful trading and military state emerged in the 1860s in Urambo. Its leader, Mirambo was an excellent military and commercial strategist. He challenged the position of coastal traders in the area as well as the leading states that were closely aligned to Zanzibar.

The first Europeans to explore the interior were the British Sir Richard Francis Burton and John Hanning Speke, who crossed the country in 1857 to search for the source of the Nile, which Speke discovered in 1858. In 1866, Sultan Majid of Zanzibar began building the coastal town of Dar es Salaam (“Haven of Peace”). In 1871, Scottish missionary and explorer David Livingstone had reached Ujiji when his whereabouts became unknown to the outside world; the Anglo-American explorer Henry Morton Stanley, commissioned by a US newspaper, located him there later in that year. Tanganyika (the name for the mainland prior to the 1964 union with Zanzibar) came under German influence in 1884–85, when Karl Peters concluded treaties with chiefs of the interior in order to secure a charter for his German East Africa Company.

In 1890, two treaties between Germany and Great Britain were signed: the first partitioned the territories on the mainland hitherto controlled by the sultan of Zanzibar; the second officially recognized Anglo-German spheres of influence, excluded Germany from the Upper Nile, and established a British protectorate over Zanzibar and Pemba. Tanganyika and Ruanda-Urundi (now

Rwanda and Burundi) became recognized as German East Africa in 1891. As they occupied the interior, the German-led troops put down African opposition and uprisings. Intense military opposition to the European imperialism was led by Mirambo of the Nyamwezi in northwest Tanzania, by Mkwawa of the Hehe in southern highlands and by Meli of the Chagga around Kilimanjaro. However, the most bloody and intense opposition to German rule was the Maji-Maji war from 1905–1907. This war was inspired by Kinjekitile, a charismatic spiritual leader from southern Tanzania, succeeded in uniting a large number of African societies to fight the Germans. People who took Kinjekitile’s medicine were told that the “white man’s bullets” could not harm them. After initial battlefield successes, the Germans initiated a scorched earth policy that eventually starved southern Tanzania into submission. During World War I, a small German force led by Gen. Paul von Lettow-Vorbeck fought a long defensive guerrilla war against British armies, and much of Tanganyika was laid waste.

### Moving Toward Independence

Beginning in 1920, the United Kingdom administered Tanganyika as a mandate of the League of Nations. A customs union was established with Kenya and Uganda, the cultivation of export crops was encouraged, and a system of indirect rule was instituted. A Legislative Council for Tanganyika was created in 1926, but not until 1945 were seats reserved for Africans. In 1946, Tanganyika became a UN trust territory. After 1954, the Tanganyika African National Union (TANU) petitioned the UN Trusteeship Council to put pressure on the UK administration to establish a timetable for independence. TANU-supported candidates won the elections of 1958–60 for the Legislative Council, and Julius Nyerere became chief minister in September 1960. On 9 December 1961, Tanganyika became an independent nation. On 9 December 1962, it was established as a republic, headed by Nyerere as president.

In Zanzibar, a Legislative Council with an elected element had been established in 1957. On 24 June 1963, a deeply divided Zanzibar attained internal self-government; it became completely independent on 10 December 1963 under the (ZNP) Zanzibar Nationalist Party. On 12 January 1964, however, the ZNP government was overthrown by African nationalists allowing ZNP’s bitter rivals the ASP (Afro-Shirazi Party) to take power. The sultan, who had fled, was deposed, and Abeid Karume was installed as president. On 26 April 1964, Tanganyika merged with Zanzibar and became the United Republic of Tanganyika and Zanzibar, with Nyerere as president; in October, the name was changed to Tanzania. Karume, still president of Zanzibar and a vice president of Tanzania, was assassinated on 7 April 1972; his successor as head of the Zanzibar Revolutionary Council was Aboud Jumbe.

Under Nyerere, Tanzania became steadily more socialist. In international affairs, Tanzania became one of the strongest supporters of majority rule in southern Africa, backing liberation movements in Mozambique, Southern Rhodesia (now Zimbabwe) and South Africa. Growing differences between the East African Community’s three members (Kenya, Tanzania, and Uganda) led to the breakup in 1977 of the 10-year-old group. Tanzania’s border with Kenya remained closed until 1983. On 30 October 1978, Ugandan forces invaded Tanzania; Nyerere retaliated by sending 20,000 Tanzanian troops into Uganda. Ugandan President Idi Amin’s forces were routed in April 1979, and former president Milton

Obote, who had been living in exile in Tanzania, was returned to power. In 1982, Tanzanian troops helped put down an army mutiny in the Seychelles.

In 1980, Nyerere was reelected without opposition to his fifth and last term as president. During the early 1980s, Tanzania was plagued by poor economic performance, and there was a small, unsuccessful army mutiny against Nyerere in January 1983. There was also rising dissatisfaction in Zanzibar over the islands' political ties to the mainland; an attempt to overthrow Jumbe in June 1980 failed. In 1984, Jumbe and his colleagues, including his Chief Minister Seif Shariff Hamad, attempted to push for more autonomy for Zanzibar. As a result, Aboud Jumbe was pressured by the union government to resign his posts as vice president of Tanzania and president of Zanzibar in January 1984. His Chief Minister, Seif Shariff Hamad was detained. Ali Hassan Mwinyi, Jumbe's successor, was elected president of Zanzibar in April 1984. He was succeeded by Idris Abdul Wakil in October 1985. Mwinyi succeeded Nyerere as president of Tanzania in November 1985, following presidential and parliamentary elections, and was reelected in 1990. Mwinyi was identified with those in the ruling party, Chama Cha Mapinduzi (CCM), seeking greater political and economic liberalization, and in 1990 Nyerere resigned as chairman of the CCM. On 14 October 1999 Julius Nyerere died of leukemia. Idris Wakil, died shortly after on 15 March 2000.

Liberalization was not easy to attain. Except for religion, the CCM controlled almost all areas of social affairs. Party cells at work and in the community shadowed Tanzanians constantly. In February 1992, at an extraordinary national conference of CCM, delegates voted unanimously to introduce a multiparty system. On 17 June 1992, Mwinyi signed into law constitutional amendments that allowed new parties (with certain exceptions) to participate in elections. The first multiparty elections since the reinstatement of multiparty politics were local government elections held in 1994. In the elections the ruling party CCM soundly defeated the opposition parties. Despite strong government and CCM support for liberalization, the state is at least rhetorically committed to socialism as the concept of "socialism and self-reliance" is retained in article nine of the union constitution.

Rifts between the mainland (Tanganyika) and Zanzibar grew in the 1990s, often linked to the ongoing Christian-Muslim division. In December 1992, in violation of the constitution, the government in heavily Muslim Zanzibar covertly joined the Organization of Islamic Countries (OIC). In August 1993, parliament debated a motion calling for constitutional revisions to create a separate government for Tanganyika, to parallel the Zanzibar government. At that point, Zanzibar agreed to withdraw from the OIC and to allow Tanzanians from the mainland to visit without passports.

In April 1993, fundamentalist Muslims were arrested for attacking owners of pork butcheries in Dar es Salaam. Demonstrations at their trials led to more arrests and a government ban on the Council for the Propagation of the Koran. Around the same time the government also arrested an evangelist pastor named Christopher Mtikila who had formed a political party not recognized by the government. Mtikila, a populist preacher, accused the government of selling the country off to Arabs and Zanzibaris and his actions helped to heighten Christian-Muslim tensions. Mwinyi shuffled his cabinet several times in 1993 to balance Christian and Muslim interests. Later under the Mkapa regime, religious ten-

sions became apparent again when Muslims protested over the arrest of a religious leader from the Mwembechai Mosque in Dar es Salaam on the grounds that he was threatening peace and stability through his provocative sermons. In a demonstration that followed the arrest, two people were shot dead by the police and 135 demonstrators were arrested.

From the constitutional amendment of 1992 sprang the elections of October 1995, the first multiparty elections in Tanzania since the 1960s. However, the CCM commitment to a fair and open election was questioned. CCM candidate Benjamin Mkapa was elected union president in a vote that opposition parties and international observers considered flawed. On Zanzibar, international observers and the opposition Civic United Front (CUF) believed that CCM intimidation and vote rigging influenced the election results for the islands' government to favor CCM. The CUF claimed victory, only to have the CCM reject the results. The CCM-dominated electoral commission then declared CCM candidate Salmin Amour the winner of the presidential race and gave the CCM the majority of seats in Zanzibar's House of Representatives. CUF boycotted sessions of the Zanzibar House and refused to recognize the Amour government until a 1999 Commonwealth-brokered agreement was reached between the two rival parties. Despite the agreement, political tensions on the islands were high as the October 2000 elections approached.

Among the major problems inherited by Mkapa was the fate of the 700,000 refugees living in camps near the northern and western borders. Tanzania had taken in some 500,000 Rwandan refugees who fled the violence in their country since 1980. In one day at the height of the 1994 genocide in Rwanda, 200,000 refugees crossed over the border. Additionally, the government took in 200,000 refugees from Burundi. The strain on the country's resources, coupled with incursions into Tanzania by Tutsi dominated Burundi government forces chasing Hutu rebels, led the government to close its borders in 1995. In February 1997, Tanzania implemented its much-criticized plan to repatriate or expel its refugee population. In 1998 Tanzania severed its relations with Burundi and refused to recognize the military government of Maj. Pierre Buyoya. In response, Burundi closed its embassy in Dar es Salaam. Repatriation of Rwandan refugees was nearly completed by end of 2002.

On 7 August 1998, simultaneous bombings of the US embassies in Nairobi and Dar es Salaam—claiming 12 Tanzanian lives—were attributed to Osama bin Laden's al-Qaeda organization. Combined investigations and close cooperation between the Tanzanian and US governments facilitated the capture of a number of the terrorists. However, in early 2003 Western governments issued warnings to their citizens of possible terrorist threats on Zanzibar, which had a devastating impact on the economy with some hotel bookings down by 50%.

In October 2000, Tanzanians went to the polls reelecting Benjamin Mkapa and giving the ruling CCM party 244 of 272 seats in the parliament. The CUF disputed the results in Zanzibar, and in January 2001 after the government declared a protest march illegal, security forces shot and killed approximately 30 persons, seriously injured 300, and displaced some 2,000 more. On 26 February 2001, in what appeared to be a revenge murder, the CCM secretary general for Pemba was found killed with machete slashes to his skull and body. Following year-long talks between the CCM

and CUF, a constitutional amendment act was passed by the Zanzibari parliament on Pemba island towards the implementation of a reconciliation agreement signed by the two parties in October 2001. The passage of the act meant a review of the judiciary and Zanzibar Electoral Commission (ZEC), as well as the introduction of a director of public prosecution.

Presidential and parliamentary elections were held on 14 December 2005. Originally scheduled for 30 October, the elections were postponed due to the death of a vice presidential candidate. These polls were the third since the country returned to multi-party rule in 1992. They were also significant in that the incumbent President Benjamin Mkapa, who has served two consecutive terms, stepped down in accordance with the constitution. Jakaya Kikwete was elected president winning 80.3% of the votes. The next presidential election was scheduled for 2010.

Elections for the presidency of Zanzibar and its House of Representatives took place on 30 October 2005, as scheduled. Amani Abeid Karume of CCM won 53.18% of the votes and Seif Sharif Hamad of CUF won 46.07% of the votes in the presidential election. Voter turnout was high at 90.8% of registered voters. Immediately after the results were announced, riots broke out and a number of people were beaten and shot by the police. CUF protested the results claiming that Karume had won the presidency in Zanzibar through rigging. In the Zanzibar House of Representatives, CCM won 30 of the 50 seats and CUF took 19, with one seat being invalidated.

As of mid-2005, Tanzania faced a number of issues and challenges. According to the UNDP human development report for 2005, Tanzania ranked 164 out of 173 countries making it one of the world's poorest nations. The HIV adult prevalence rate was 11% with over two million people infected with the virus. The US State Department report on democracy and human rights observed that while Tanzania had improved its respect for human rights in recent years, the government's overall record remained poor. The report found that police were more disciplined in recent years, but members of the police and security forces committed unlawful killings and mistreated suspected criminals. The most serious violations of human rights resulted from election-related violence in Zanzibar in 2001 and in October 2005.

### 13 GOVERNMENT

A new constitution, replacing the 1965 interim document, went into effect April 1977 and was substantially amended in October 1984 and in 1992. It has been amended eight times.

The president, who is both chief of state and head of government, can be elected for no more than two five-year terms by universal adult suffrage. Before the constitutional amendments in 1992, the sole legal party Chama cha Mapinduzi (CCM) nominated the president. Two vice presidents, whom he appointed, assisted him: one was the prime minister and the other was the president of Zanzibar. As of 1995, the president is assisted by a vice president, prime minister, and cabinet. If the president of Tanzania is from Zanzibar, the vice president must be from the mainland and vice-versa.

As of 1995, the 274-seat unicameral national assembly consists of 232 members elected by universal adult suffrage for five-year terms, 36, or 15%, of the seats reserved for women nominated by their parties (parties nominate the women members of parliament

in proportion to the number of seats they control), and 5 members from the Zanzibar House of Representatives and the attorney general. Presidential and legislative elections are held concurrently, and in each legislative constituency. All candidates in competing in elections must belong to political parties. The prime minister, who is chosen from the assembly members, heads the assembly. If the president withholds his assent from a bill passed by the assembly, it does not become a law unless the assembly passes it again by a two-thirds majority. The president may dissolve the assembly and call for new presidential and legislative elections if he refuses to assent to a law passed by such a majority within 32 days of its passage.

The Revolutionary Council of Zanzibar, which held power on the islands since 1964, adopted a separate constitution in October 1979, which it replaced in January 1984. The new constitution provides for a popularly elected president and a 75-member Council of Representatives, 50 of whom are popularly elected and 25 appointed. The government of Zanzibar has exclusive jurisdiction over internal matters, including immigration, finances, and economic policy. Since the 1990s, a trend toward greater autonomy for Zanzibar has been the basis of political tension with the mainland.

The Articles of Union and Acts of Union of 1964 provided for two governments: the union government, which also handled mainland issues, and the Zanzibar government, which dealt with nonunion matters pertaining to Zanzibar. The Tanganyikan constitution of 1962 was amended to accommodate the two government arrangement, which has remained in place ever since. However, the two-government system has been criticized as favoring Zanzibar because there is no separate government for the mainland. Moreover, Zanzibar's representation in parliament is considered to be disproportionate to its small population. In August 1993, following Zanzibar's attempt to join the OIC in violation of the constitution, the National Assembly adopted a resolution that provided for the possibility of setting up a mainland or Tanganyikan government to parallel that of Zanzibar. The issue of a federated system with three governments has remained a bone of contention between CCM and the opposition parties.

Renegotiation of the Union pact was the key issue of the 1995 elections, the first contested elections on Tanzania in 20 years. Although the former ruling party emerged from those elections with the Zanzibar presidency and a majority in the House of Representatives, the secessionist movement remained strong on the islands. The Zanzibar government established its own department of revenue and foreign affairs.

In February 2000 the Zanzibar CCM and the mainland CCM factions clashed over a constitutional amendment that would have allowed Zanzibar's President Salmin Amour to seek a third term. CCM's National Executive Committee postponed consideration of the issue until after the 2000 elections, effectively blocking Amour's bid. On 29 October 2000, Zanzibar elected Amani Abeid Karume president, and Benjamin Mkapa was returned president of the Tanzanian republic. In 2005 Jakaya Kikwete was elected president with 80.3% of the votes. In controversial Zanzibar elections held in October 2005, Karume won 53.18% of the votes to retain the Zanzibar presidency.

## 14 POLITICAL PARTIES

At independence in 1961, Tanganyika (Tanzania Mainland) had a multiparty political system. The Tanganyika African National Union (TANU), established in 1954, was the overwhelmingly dominant political party in preindependence Tanganyika. Other political parties of this era included the United Tanganyika Party, the African National Congress, and the All Muslim National Unity of Tanganyika. In Zanzibar, there were three important political parties prior to independence. These were the ZNP (Zanzibar Nationalist Party), ASP (Afro-Shirazi Party), and ZPPP (Zanzibar and Pemba Peoples's Party). On 5 February 1977, ASP the ruling party of Zanzibar and TANU merged into the Chama Cha Mapinduzi (CCM) or Revolutionary Party. It became the sole legal political party in Tanzania. All candidates had to be approved by the CCM and were permitted to campaign only on the CCM platform. Elections within the single party framework were competitive, however. In the balloting on 13 and 27 October 1985, 328 candidates competed for 169 elective seats in the National Assembly. In 1987, former president Julius K. Nyerere was reelected chairman of the CCM. He stepped down in 1990, to be succeeded by Ali Hassam Mwinyi.

The CCM officially favors nonracism and African socialism. The basic aims, laid down in Nyerere's Arusha Declaration of 1967, are social equality, self-reliance, economic cooperation with other African states, *ujamaa* (familyhood), and the development of forms of economic activity, particularly in rural areas, based on collective efforts. However, since the late 1980s, CCM has slowly transformed itself into a pro-market, pro-business party. The party is divided into locally organized branches, which are grouped into districts, which in turn are grouped into regions. The 172-member National Executive Committee is the principal policymaking and directing body of the CCM. A central committee of 18 members is elected at periodic party congresses.

Although Tanzania amended its constitution in 1992 to become a multiparty state, the CCM still controls government. Other parties have tried to organize, and have complained of harassment by government and CCM activists. Before taking part in elections, the new parties undergo a six-month probation during which they can recruit and organize. Some 20 opposition groups had registered in the first four months of their legality. However, parties representing regional, racial, ethnic, or religious groups are explicitly prohibited.

Multiparty elections were held in Zanzibar on 25 October 1995 and union-wide on 29 October 1995. International observers and opposition parties accused the CCM of voter fraud and intimidation of opposition candidates in Zanzibar. While Civic United Front (CUF) claimed victory, on 26 October, the election commission declared CCM presidential candidate Salmin Amour the winner by 1,565 votes over the CUF's Seif Shariff Hamad. The CCM also won 26 of the 50 seats in the House of Representatives. Citing fraud in the election, the CUF boycotted the House and refused to recognize the Amour government. CCM-CUF tension in Zanzibar increased dramatically after the government arrested eighteen CUF members and charged them with treason, an offence punishable by death. Four of those charged with treason were CUF members of the Zanzibar House of Representatives. The Commonwealth Secretary General, Chief Emeka Anyaoku, tried to reconcile the two parties. An agreement was reached be-

tween the two parties in 1999 but tensions on the island remained high as CUF charged CCM with not living up to the agreement. As the 2000 elections approached, the treason suspects were still behind bars and clamoring to run for office from prison.

The Union election held on 29 October 1995 was so disorganized that it was cancelled in Dar es Salaam and held again on 19 November. In the presidential election, CCM candidate Benjamin Mkapa won with 61.8% of the vote. Former Deputy Prime Minister Augustino Mrema of the National Convention for Constitutional Reform received 27.7%; Ibrahim Lipumba of the Civic United Front won 6.4%, and John Cheyo of the United Democratic Party captured 3.97%. Parliamentary election results saw the CCM win 59.2% of the vote and 186 seats; NCCR, 21.83% and 16 seats; CUF, 5% and 24 seats; Chadema, 6.2% and 3 seats, and UDP, 3.3% and 3 seats.

As of the October 2000 elections there were 12 permanently registered opposition parties: Civic United Front/Chama Cha Wananchi (CUF), the National Convention for Constitutional Reform (NCCR-Mageuzi), the Union for Multiparty Democracy (UMD), Chama cha Demokrasia na Maendeleo (CHADEMA), the National League for Democracy (NLD), the Tanzania Peoples Party (TPP), the Tanzania Democratic Alliance (TADEA), the National Redemption Alliance (NRA), the Popular National Party (PONA), the United Peoples Democratic Party (UPDP), the United Democratic Party (UDP), and the Tanzania Labor Party (TLP).

In the presidential elections on 29 October 2000, CCM candidate Benjamin William Mkapa was reelected president with 71.7% of the vote, defeating CUF candidate Ibrahim Haruna Lipumba who garnered 16.3%. TLP candidate Augustine Lyatonga Mreme managed to obtain 7.8%, and John Momose Cheyo of the UDP 4.2%. In the National Assembly, the CCM won 244 of 272 seats to 16 for the CUF, 4 for CHADEMA, 3 for TLP, and 2 for UDP. In the Zanzibar House of Representatives the CCM won 34 seats to 16 for CUF. However, on Zanzibar the elections and postelections period were marred by violent civil unrest.

The results of the 2005 National Assembly election were as follows: CMM, 206 seats; CUF, 19 seats; CHADEMA, 5 seats; other, 2 seats; 37 women were appointed by the president, and Zanzibar representatives, 5 seats. The results of the 2005 Zanzibar House of Representatives election were as follows: CCM, 30 seats; CUF, 19 seats; and 1 seat was nullified with a rerun scheduled.

In the Union elections scheduled for December 2005, ten political parties fielded candidates for the presidency of Tanzania. Benjamin Mkapa of CCM stepped down as mandated by the constitution. CCM fielded Jakaya Kikwete who won the presidency with 80.3% of the votes, while Sauti ya Umma (SAU) was represented by Henry Kyara and CUF supported Ibrahim Lipumba who won 11.7% of the votes. Other presidential candidates included Emmanuel Makaidi of National League for Democracy (NLD); Freeman Mbowe of Chama cha Demokrasia na Maendeleo (CHADEMA) (won 5.9% of the votes); Augustine Mrema of Tanzania Labour Party (TLP); Christopher Mtikila of Democratic Party (DP); Sengondo Mvungi of National Convention for Construction and Reform-Mageuzi (NCCR-Mageuzi) also supported by the Forum for the Restoration of Democracy (FORD), National Reconstruction Alliance (NRA), Union for Multiparty Democracy (UMD), and United People's Democratic Party (UPDP);

Anna Senkoro of Progressive Party of Tanzania-Maendeleo (PPT-Maendeleo); and Leonard Shayo of Demokrasia Makini (MAKINI). The next general elections were to be held December 2010.

## 15 LOCAL GOVERNMENT

Mainland Tanzania is divided into 20 administrative regions, which are subdivided into 86 districts. Zanzibar and Pemba are divided into five regions. Regional commissioners are appointed by the central government, as are district commissioners and development directors for the districts.

The units of local government are district development councils. Each district development council includes elected members, but these bodies are only advisory. In Zanzibar, revolutionary committees are responsible for regional administration.

## 16 JUDICIAL SYSTEM

Mainland Tanzanian law is a combination of British, East African customary law, and Islamic law. Local courts are presided over by appointed magistrates. They have limited jurisdiction, and there is a right of appeal to district courts, headed by either resident or district magistrates. Appeal can be made to the High Court, which consists of a chief justice and 17 judges appointed by the president. It has both civil and criminal jurisdiction over all persons and all matters. Appeals from the High Court can be made to the five-member Court of Appeal. Judges are appointed to the Court of Appeal and the High Court by the president on the advice of the chief justice and to courts at lower levels by the chief justice.

In 1985, the Zanzibar courts were made parallel to those of the mainland. Islamic courts handle some civil matters. Cases concerning the Zanzibar constitution are heard only in Zanzibar courts. All other cases may be appealed to the Court of Appeal of the Republic.

Although declared independent by the constitution, the judiciary is subject to executive branch influence and is criticized as inefficient and corrupt. Questions have been raised as to the availability of a fair trial in politically charged cases.

## 17 ARMED FORCES

Tanzania's armed forces totaled 27,000 active personnel in 2005, with reserves numbering 80,000. The Army had 23,000 personnel in 5 infantry brigades, 1 tank brigade, 6 artillery battalions, 2 mortar battalions, 2 antitank battalions, 2 air defense battalions, and 1 engineering regiment. Equipment included 45 main battle tanks, 55 light tanks and 378 artillery pieces. The Navy had an estimated 1,000 personnel, whose major units consisted of six patrol/coastal vessels and two amphibious landing craft. The Air Defense Command numbered an estimated 3,000, operating 19 combat capable aircraft, including 9 fighters and 10 fighter ground attack aircraft. Police field forces, which included naval and air units, numbered 1,400. In 2004 (the latest year for which data was available), the defense budget totaled \$362 million.

## 18 INTERNATIONAL COOPERATION

Tanganyika was admitted to United Nations membership on 14 December 1961, and Zanzibar on 16 December 1963; following their union into what was eventually called Tanzania, the two regions retained a single membership. Tanzania is a member of ECA and several nonregional specialized agencies, such as the

FAO, ILO, the World Bank, UNESCO, UNHCR, UNCTAD, and the WHO. It is also a member of the African Development Bank, the East African Development Bank, the Commonwealth of Nations, the ACP Group, G-6, G-77, the WTO, the Southern African Development Community (SADC), and the African Union. Along with Rwanda, Burundi, and Uganda, it belongs to the Kagera Basin Organization. Julius Nyerere, Tanzania's first president, was one of the founding members of the Nonaligned Movement. Tanzania, Uganda, and Kenya signed an East African Cooperation Treaty in September 1999. A second treaty establishing a Customs Union was signed in March 2004.

In environmental cooperation, Tanzania is part of the Basel Convention, the Convention on Biological Diversity, CITES, the Kyoto Protocol, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Tanzania has an agricultural economy whose chief commercial crops are sisal, coffee, cotton, tea, tobacco, pyrethrum, spices, and cashew nuts. Agriculture accounts for 48% of GDP, provides 85% of exports, and employs 80% of the workforce. The most important minerals are gold and diamonds. Industry is mainly concerned with the processing of agricultural materials for export and local consumption. Gas production in the Rufiji Delta was scheduled for 2002. The multimillion dollar Songosongo gas pipeline project was being developed in 2003.

After 25 years of socialist experimentation achieved important advances in education and health, poor economic performance led the government, in 1986, to adopt market-style reforms in conjunction with the IMF structural adjustment program. Since then, significant progress has been made in revitalizing the economy and donors have pledged additional funds to rehabilitate Tanzania's deteriorated economic infrastructure. The high inflation rate dropped to 5% in 2001 and 4.1% in 2004. Growth averaged 4.2% in 1996–2000, and picked up steadily to 6.2% in 2002, before slightly dropping in 2003 to an estimated 5.7% because of drought, and then recovering to 6.7% in 2004.

In 2001, bilateral donor countries pledged \$1 billion in aid for the country's reform programs, including education. Tanzania in 2003 was receiving \$3 billion over time in debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative, and the net present value of Tanzania's external debt was being reduced by 54%. The economy was improving, with the mining, tourism, agriculture, construction, telecommunications, and utilities sectors all showing potential for growth. The government had sold off state-owned enterprises, was welcoming foreign investment, and had implemented strict fiscal and monetary policies. Nonetheless, Tanzania's macroeconomic progress had not translated into better lives for its rural poor.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Tanzania's gross domestic product (GDP) was estimated at \$26.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$700. The annual

growth rate of GDP was estimated at 6.1%. The average inflation rate in 2005 was 4.1%. It was estimated that agriculture accounted for 43.2% of GDP, industry 17.2%, and services 39.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$7 million or about \$0 per capita and accounted for approximately 0.1% of GDP. Foreign aid receipts amounted to \$1,669 million or about \$47 per capita and accounted for approximately 16.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Tanzania totaled \$7.94 billion or about \$221 per capita based on a GDP of \$10.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 1.8%. In 2001 it was estimated that approximately 67% of household consumption was spent on food, 5% on fuel, 4% on health care, and 12% on education. It was estimated that in 2002 about 36% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

Over 80% of Tanzania's working population was estimated to be engaged in agriculture in 2002, with the industrial and services sectors accounting for the remaining workforce. The labor force was estimated at 19.22 million in 2005. There was no data available on unemployment in Tanzania.

In 1964, by legislation of the National Assembly, the existing 13 trade unions were dissolved and amalgamated into a single national institution, the National Union of Tanzanian Workers. This was reorganized in 1978 to take in Zanzibar trade union activity as the Organization of Tanzania Trade Unions (OTTU), which still is the only labor union organization. The OTTU was renamed the Tanzania Federation of Trade Unions (TFTU) in 1995. As of 2002, only approximately 5–7% of the wage-earning labor force was organized. Strikes are permitted after a lengthy and complicated arbitration procedure which delays a resolution for months. Collective bargaining does not regularly occur, and public sector employee wages and benefits are set by the government.

With the permission of a parent, a child as young as 12 years old may work on a day-to-day basis. Employment of a long-term contractual nature cannot begin until a minor is at least 15. Enforcement of these provisions is inadequate and has actually declined in recent years with increased privatization. The standard workweek is 40 hours for government workers, while most private employers retain a 44 to 48-hour workweek. A minimum wage is fixed by law; as of 2002, it was about \$38 a month.

## 2<sup>2</sup> AGRICULTURE

About 5.8% of the total land area is cultivated, with about two-thirds belonging to farmers owning or operating farms of five hectares (12.4 acres) or less. A massive collectivization and cooperative agricultural program was begun in 1967; by the end of 1980, 8,167 self-help villages, involving more than 14 million people, had been established. The program was coupled with the takeover of large estates.

The principal food crops are corn, millet, rice, sorghum, and pulses. The chief cash crops are coffee, cotton, and cashew nuts; si-

sal, cloves, sugar, tea, pyrethrum, and tobacco are also important. Tanzania is one of Africa's leading producers of sisal; in 2004, production was 23,500 tons. Other estimated agricultural production in 2004 included manioc, 6,890,000 tons; corn, 2,800,000 tons; sorghum, 650,000 tons; rice, 647,000 tons; and millet, 270,000 tons. Production in 2004 also included coffee, 47,000 tons; cotton, 109,000 tons; cashew nuts, 100,000 tons; tea, 25,500 tons; tobacco, 24,500 tons; sweet potatoes, 970,000 tons; white potatoes, 260,000 tons; and 83,000 tons of peanuts. Sugarcane production in that year was an estimated 1,800,000 tons; bananas, 150,400 tons; plantains, 601,600 tons; dry beans, 280,000 tons; seed cotton, 330,000 tons; and cottonseed, 210,000 tons.

Tanzania is the third leading producer of cloves, which are grown mostly on Pemba; production totaled 12,500 tons in 2004. Tanzania is also an important producer of coconuts (370,000 tons in 2004), mostly from the island of Zanzibar.

There was a steady decline in agricultural production during the late 1970s and early 1980s because of drought and low prices paid by the state crop-marketing agencies. In addition, there was a shortage of farm implements; only 3,000 of the nation's 10,000 tractors were in working order in 1982, and even hand hoes and oxen plows were in acute shortage. By 2003, there were some 7,600 tractors in service (down from 8,000 in 1985). Beginning in 1986, reforms of the cooperative unions and crop marketing boards have aided production. The purchase of crops (especially coffee, cotton, sisal, tea, and pyrethrum) has been opened to private traders.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Although large areas are unsuitable for livestock because of the tsetse fly, considerable numbers of cattle, sheep, and goats are kept, and livestock raising makes a substantial contribution to the economy. The estimated livestock population in 2005 included 17,800,000 head of cattle, 12,550,000 goats, 3,521,000 sheep, 455,000 pigs, and 30,000,000 poultry. About 364,000 tons of meat were produced in 2005. Milk production that year consisted of 940,000 tons from cows and 104,000 tons from goats.

## 2<sup>4</sup> FISHING

With over 6% of Tanzania's area consisting of open lake waters, inland fishing, especially on Lake Tanganyika, occupies an important place in the economy. There is also fishing in the Indian Ocean. The total catch was 363,522 tons in 2003, about 83% from inland waters. Nile perch, dagaas, and tilapias are the main species caught.

## 2<sup>5</sup> FORESTRY

Some 38,811,000 hectares (95,902,000 acres), or 43.9% of Tanzania's total land area, is classified as forest. There are about 13,000,000 hectares (32,000,000 acres) of permanent forest reserves. Small plantations for fast-growing trees have been established in these reserves. On the islands, remains of former forests are found only in two reserves.

Production in 2004 included about 23.8 million cu m (840 million cu ft) of roundwood, with 90% used as fuel wood. Sawn wood production was 24,000 cu m (847,000 cu ft) that year.

## 26 MINING

With the rebirth of the gold industry, in 1999, gold has dominated the mineral industry in Tanzania, and was expected to grow substantially in the near future. Because of significant exploration successes and government investment incentives, Tanzania's mining sector has been playing an increasingly important role in the economy. Mining sector output, by value, grew by about 17% in 2003, and by 15% in 2002. From 1999 through 2003, substantial increases in gold production spurred growth in the country's mining sector by around 15% annually. Tanzania's gross domestic product (GDP) grew by 7.1% in 2003, of which mining and quarrying accounted for 3% of GDP in that year. Gold was the top export commodity in 2003, accounting for \$504.1 million out of a total of \$560.2 million in mineral exports for that year. Overall, mineral exports accounted for 48% of Tanzania's exports by value in 2003.

Output of refined gold in 2003 totaled 48,018 kg, up from 43,320 kg in 2002. With the opening of three new mines, and planned investment of \$1.5 billion, gold production reached 30,088 kg in 2001 and was expected to reach 57,000 kg in 2007.

Diamond output in 2003 was 236,582 carats, down from 239,761 carats in 2002. Diamonds, 85% of which were gem-quality or semi-gem-quality, were mined at the Williamson field, in Mwadui. The deposits were jointly-owned by the government and Willcroft, of Canada. Diamond production has declined since the 1967 peak (988,000 carats), because of depletion of higher-grade ores and equipment failure. Production hit a low in 1994, of 17,177 carats. Diamond resources were 114 million tons containing 6.5 million carats. The output of other gemstones (including amethyst, aquamarine, chrysoptase, emerald, garnet, kyanite, opal, peridot, lo-lite, ruby, sapphire, tanzanite, and tourmaline) was 1,530,000 kg in 2003, compared to 196,000 in 2002. African Gem Resources, the new owner of block C of the Merlani mining area, estimated that block C, with resources of 2.24 million tons of ore, grading 22 carats per ton, contained two-thirds of the world's known deposits of tanzanite.

In 2003, Tanzania produced 23,176 metric tons (preliminary) of crude gypsum and anhydrite, as well as calcite, hydraulic cement, crushed limestone, salt, and presumably stone, and sand and gravel. Resources of limestone totaled 155 million tons; marble resources for lime production totaled 137 million tons; and calcitic marble resources amounted to 121 million tons. No iron ore or graphite was produced in 2003. Resources and proven reserves of iron ore, in Itewe, Liganga, and the Uluguru Mountains, totaled 103 million tons. Deposits of cobalt, copper, lead, mica, nickel, phosphates, tin, titanium, tungsten, and uranium were also known to occur, and companies were exploring for cobalt and nickel and planning to produce copper concentrate from a gold mine.

## 27 ENERGY AND POWER

Tanzania has proven reserves of natural gas and coal but must rely on imports for all its crude oil.

Tanzania, as of January 2003, had no proven reserves of crude oil, but as of that date, did possess a crude oil refining capacity of 14,900 barrels per day. However, the refinery, as of February 2004, was reported to be no longer operational and was being used as an

oil storage area. In 2002, the country's imports and consumption of refined oil products each averaged 21,720 barrels per day. There were no recorded imports or consumption of natural gas in 2002.

Coal is Tanzania's most abundant resource. Reported as of February 2004, the country has recoverable coal reserves of 220 million short tons. In 2002, coal output totaled 91,000 short tons.

Tanzania electric power generating capacity in 2002 came to 0.832 million kW, of which 0.560 million kW was hydroelectric capacity, with conventional thermal capacity at 0.302 million kW. Electric power output in 2002 totaled 2.952 billion kWh, of which hydroelectric power provided 2.709 billion kWh and conventional thermal sources 0.243 billion kWh. Demand for electric power in 2002 totaled 2.773 billion kWh. Electric power imports that year totaled 0.028 billion kWh.

## 28 INDUSTRY

Manufacturing output increased by an average of 1.1% during the decade 1980-90, and by 1.7% between 1988 and 1998, when it accounted for 6.8% of GDP. Industry in general accounted for 17% of GDP in 2000. Along with the results of parastatal inefficiencies; fuel and import costs, lack of foreign exchange, power shortages, lack of spare parts, and unreliable local services have tested the manufacturing sector severely. By 2001, 333 of 395 state-owned companies had been privatized, including tobacco and cashew farms, mines, the brewery, and a cigarette factory.

Tanzanian industry is centered on the processing of local agricultural goods. Some products are exported to neighboring countries: textiles and clothes, shoes, tires, batteries, transformers and switchgear, electric stoves, bottles, cement, and paper. Other industries include oil refining, fertilizers, rolling and casting mills, metal working, beer and soft drinks, vehicle assembly, bicycles, canning, industrial machine goods, glass and ceramics, agricultural implements, electrical goods, wood products, bricks and tiles, oxygen and carbon dioxide, and pharmaceutical products. In the early 2000s, the industrial sector was relatively weak, but made small gains in the production of cement, soft drinks, corrugated iron sheeting, food processing, chemicals, leather products, and textiles. The construction industry was growing at a slow pace at that time, at less than 5% per year.

Oil and natural gas exploration are encouraged, and natural gas reserves were estimated at 2 trillion cubic feet (Tcf) in 2000. Tanzania has one oil refinery at Dar es Salaam with a production capacity of 15,000 barrels per day.

## 29 SCIENCE AND TECHNOLOGY

The Tanzania Commission for Science and Technology, founded in 1958 at Dar es Salaam, advises the government on science and technology policy. Much of the scientific and technical research in Tanzania is directed toward agriculture. Facilities include the Livestock Production Research Institute at Dodoma (founded in 1905), the National Institute for Medical Research at Amani and Mwanza (founded in 1949), the Silviculture Research Institute at Lushoto (founded in 1951), the Agricultural Research Institute of the Ministry of Agriculture at Mlingano (founded in 1934), and the Tropical Pesticides Research Institute at Arusha (founded in 1962). The University of Dar es Salaam (founded in 1961) has faculties of science, medicine, and engineering and an institute of marine sciences; Sokoine University of Agriculture at Morogoro

(founded in 1984) has faculties of agriculture, forestry, and veterinary medicine. The Open University of Tanzania (founded in 1992 at Dar es Salaam) has faculties of science, technology, and environmental studies. In 1987–97, science and engineering students accounted for 37% of college and university enrollments. In 2002, high technology exports were valued at \$1 million, or 2% of the country's manufactured exports.

### 3<sup>0</sup> DOMESTIC TRADE

Dar es Salaam is Tanzania's main distribution center. Mombasa, in Kenya, and inland Tanzanian towns also serve as trade centers. Previously, Tanzania used nontariff trade barriers to protect local industries and domestic commerce. With trade liberalization, tariff barriers have been adjusted for this purpose. Most retail shops are small, privately owned establishments that specialize in one or two specific products.

Normal business hours are 7:30 am to 2:30 PM, Monday through Friday; firms that take a lunch break at noon may stay open to 4 or 4:30 PM. Banks are open from 8:30 am to noon, Monday through Friday, and 8:30 to 11 AM on Saturday.

### 3<sup>1</sup> FOREIGN TRADE

The chief imports are transport equipment and intermediate and industrial goods machinery. The big traditional export commodities for Tanzania are coffee (17.1%), fish and shellfish (11.6%), and fruits and nuts (including cashews—16.8%). Other exports include unfinished tobacco (8.6%) and cotton (7.4%). Since peaking in 1996–97, growth in traditional commodity exports has stagnated. Traditional commodity exports (coffee, cotton, sisal, tea, tobacco, cashew nuts and cloves) reached \$435 million in 1997, but averaged only \$218 million annually in 2001–04. This is largely due to the falling prices at international markets for these commodities. On the other hand, Tanzanian nontraditional exports rose to \$327.5 million in 1996, but fell back to \$232.2 million in 1998. The fall mainly reflected a decline in exports of petroleum products and manufactured goods. Petroleum exports have been adversely affected by smuggling and by the reforms currently under way in the sector, which have led to the restructuring of the Tanzanian and Italian Petroleum Refinery (Tiper). However, the

start of large-scale gold mining has resulted in dramatic increases in export earnings for this nontraditional sector expanding export earnings to \$911.2 million in 2003.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Tanzania typically runs a current account deficit, although long term capital investment from abroad resulted in surpluses for several years during the 1970s. Agricultural marketing reforms and flexible exchange policies are expected to provide export growth in upcoming years, as exports move from the underground to the official market.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Tanzania's exports was \$1.573 billion while imports totaled \$2.391 billion resulting in a trade deficit of \$818 million.

### 3<sup>3</sup> BANKING AND SECURITIES

On 5 February 1967, Tanzania nationalized all banks after the adoption of the Arusha Declaration. From then until 1991, banking was a state monopoly led by the central Bank of Tanzania (BoT) and the National Bank of Commerce (NBC). In 1991, the financial services sector was opened to private and foreign capital. In 1993, the first private banks opened their doors. These were Meridien BIAO and Standard Chartered, the latter being among the UK-owned banks that were nationalized in 1967. Meridien's Zambian-based African network collapsed in 1995, and Stanbic of South Africa took over the Tanzanian subsidiary after its seizure by the BoT. The Kenyan-owned Trust Bank opened in March 1995, to be followed by Eurafrican Bank (a Belgian-led venture). Also in early 1995, the only private bank to be majority-owned by indigenous Tanzanians, First Adili Bank, began business.

In 2002, the BoT was still the central bank and bank of issue, provided advice to the NBC. The NBC, which used to be accounted for over 75% of the country's transactions, was split in 1997 into

NBC 1997 and the National Microfinance Bank (NMB). Other Tanzanian banks include the People's Bank of Zanzibar, the Tanzania Investment Bank, the Tanzania Housing Bank, the Rural Cooperative and Development Bank (CRDB), and the Tanganyika Post Office Savings Bank. Foreign banks include Citibank, Stanbic Bank, Standard Charter, Bank of Great Britain, EuroAfrican Bank, Akiba Commercial Bank, and Exim Bank.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$874.0 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.9 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 8.7%.

The establishment of a local stock market, the Dar es Salaam Stock Exchange (DSE), occurred in March 1998. By 2003 there were four companies listed on the exchange with a total market capitalization of about \$500 million: Tanzania Breweries Limited, Tanzania Tea Packers Limited, TOL Limited (producer of industrial gases), and Tanzania Cigarette Company Limited.

### 34 INSURANCE

All insurance companies were nationalized in 1967. There is one national insurance company, the National Insurance Corporation of Tanzania, that covers life, fire, automobile, marine, and general accident insurance.

### 35 PUBLIC FINANCE

The Tanzanian budget covers cash expenditures and receipts for the mainland only, and does not include Zanzibar government revenues and expenditures. Total expenditures include a development budget and revenues include profits from privatization sales. The fiscal year ends on 30 June. In the early 1980s, the annual budget deficit went over 10% of GDP, and payment arrears on external debts started to mount. Since 1986, the government has improved its fiscal and monetary policies, with mixed results. Tanzania qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) Initiative.

The US Central Intelligence Agency (CIA) estimated that in 2005 Tanzania's central government took in revenues of approximately \$2.2 billion and had expenditures of \$2.6 billion. Revenues minus expenditures totaled approximately -\$434 million. Public debt in 2005 amounted to 5% of GDP. Total external debt was \$7.95 billion.

### 36 TAXATION

The corporate income tax rate in 2005 was 30% of taxable profits. Withholding taxes include: a 10% general rate for dividends (5% for companies listed on the Dar es Salaam Stock Exchange); 10% for interest; 15% on royalties; and a 10% rate on rents for residents (15% rate for nonresidents). Capital gains are treated as ordinary business income and subject to the corporate rate.

Income taxes are also levied on wages and salaries. There is a Housing Levy and a Vocational Education Training Levy on gross payroll. There is a value-added tax (VAT) with a standard rate of 20%, as of 2005. Exemptions from VAT include computers, tour operations, hospital equipment, and investments in educational equipment. Other taxes include a stamp duty on sales, a transport

withholding tax, local government development levies, an entertainment tax (for non-VAT-registered taxpayers), and airport and seaport departure charges.

### 37 CUSTOMS AND DUTIES

Tanzania has a single column tariff with many items dutiable ad valorem. Customs duties range from 0–25%, not including the VAT. In 1992, the government abolished duties and taxes on raw materials for industry as part of an economic reform program. In 1995, a uniform 5% tax was levied on imported capital goods. Import duties and sales tax apply according to the value of goods. There is a value-added tax of 20%. There are no export controls, except for protected wild animals, and there are no prohibited imports, except for narcotics and other internationally prohibited drugs. Import and export licenses are not needed.

### 38 FOREIGN INVESTMENT

From independence in 1961, Tanzania followed state-centered socialist policies. With the initiation of economic reforms in 1986, investment interest in Tanzania has grown considerably in all sectors. Under the Tanzania Investment Promotion Policy of 1990 the Investment Promotion Center was established and by 1997, it had approved about 1,025 projects worth \$3.1 billion. The operations of foreign banks were authorized in 1991, and the banking industry was substantially reformed to make it more competitive. In 1992, the Zanzibar Investment Promotion Agency (ZIPA) Act established the Tanzania Investment Center (TIC) as a one-stop shop for facilitating and coordinating private-sector investment, and for issuing certificates of incentives to qualifying investors. The incentive package includes 100% capital allowances in computing gains and profits of an enterprise; 0% import duty on capital equipment in "lead" sectors (mining, oil and gas, tourism, and infrastructure development), and 5% import duty on equipment for projects in "priority" sectors (agriculture, aviation, commercial buildings, development banks, export processing, special regions, human resources development, manufacturing, natural resources, radio and TV broadcasting, and tourism); and an automatic permit to employ up to five foreign nationals. The Tanzania Investment Act of 1997 was strengthened by the Land Act of 1999 and the Village Land Act of 1999, which provide the right to acquire land in urban and rural areas, respectively. As a further impetus for reform, the Tanzanian government has taken steps to qualify under the US Africa Growth and Opportunity Act (AGOA), effective 2001, that mandates tariff-free and quota-free access to the US market for countries making market-based reforms.

From 1997 to 2004, annual foreign direct investment (FDI) inflows increased steadily from \$157.8 million to \$527 million in 2003, slightly dropping to \$470 million in 2004. The annual average of foreign direct investment between 1997 and 2004 was \$393 million. The 10 leading countries that have invested in Tanzania are the United Kingdom, the United States, Kenya, Canada, South Africa, China, Germany, Italy, the Netherlands, and India. Foreign investment has mainly gone into mining, manufactures, agriculture, and tourism.

### 39 ECONOMIC DEVELOPMENT

The Tanzanian government has focused in recent years on reorganizing and restructuring its economic institutions. Progress

has been encouraging and private sector investors are increasingly interested in mining, transport, tourist, and fishing sector opportunities.

The fourth five-year development plan (1981–86) was not fully carried out because of Tanzania's economic crisis. Among the projects implemented were an industrial complex, a pulp and paper project, a machine-tool plant, a phosphate plant, and the development of natural gas deposits. The Economic and Social Action Plan of 1990 scaled back the government's ambitions and sought to continue moderate growth in the economy, improve foreign trade, and alleviate some of the social costs of economic reform. Development planning is now conducted on an annual basis, with recent development priorities set in the areas of transport infrastructure, health, and education.

In 2000, the International Monetary Fund (IMF) approved a three-year \$181.5 million Poverty Reduction and Growth Facility (PRGF) Arrangement for Tanzania (it expired in June 2003). With the inception of this program, gross domestic product (GDP) growth averaged more than 5%, while inflation declined to below 5%. The servicing of Tanzania's over \$8 billion external debt absorbs around 40% of total government expenditures. In 2001, Tanzania became eligible for \$3 billion in debt service relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative. The government has taken steps to attract foreign investment, including revamping tax codes, floating the exchange rate, licensing foreign banks, and creating an investment promotion center to trim bureaucratic red tape. Poverty remains pervasive, however, and is the main target for economic development.

At the annual meeting of the IMF and the World Bank in Washington, DC in September of 2005, the IMF announced its new policy support instrument (PSI), which is likely to replace PRGF programs in countries such as Tanzania that have successfully completed multiple PRGFs. At this meeting, the possibility of a complete write-off of Tanzania's multilateral debt moved closer as the G8 and IMF and World Bank agreed a debt-forgiveness package to be implemented in early 2006.

#### 40 SOCIAL DEVELOPMENT

A social insurance system was implemented in 1998. It covers employees in the private sector, and some public workers and self-employed persons. Domestic workers are excluded, although voluntary coverage is available. Employers contribute 10% of payroll and employees contribute 10% of their wages. Coverage includes old age, disability, and survivorship payments, as well as medical care and maternity benefits. The labor code requires employers to provide severance pay to employees with continuous service of at least three months.

The government advocates equal rights and employment opportunities for women. However, discrimination and violence against women are widespread. The law does not specifically address spousal abuse and victims are hesitant to seek assistance. Female genital mutilation is prevalent. Rape is a significant problem, and the police are ill equipped to deal with the few cases that are actually reported. In Zanzibar, unmarried women who become pregnant and are under the age of 21 are subject to two years' imprisonment. Inheritance laws favor men.

Tanzania's human rights record remains poor. Police abuse of prisoners and detainees is widespread. Prison conditions are poor,

and dysentery, malaria, and cholera are common. There are reports that the government has blocked the registration of local human rights organizations.

#### 41 HEALTH

In 1975, the government began to nationalize all hospitals, including those run by Christian missions; private medical practice was ended in 1980. Medical treatment is free or highly subsidized in company clinics as well as hospitals. The pyramid structure of Tanzania's national health care system, stressing primary care at an affordable cost, makes it a pioneer in sub-Saharan Africa. Approximately, 54% of the population had access to safe drinking water and 90% had adequate sanitation. An estimated 80% of the population had access to health care services and public health care expenditures were 3% of GDP. Life expectancy was 45.24 years in 2005.

There are close to 3,000 rural health facilities, 17 regional hospitals, and 3 national medical centers. As of 2004, it was estimated that there were fewer than 4 physicians per 100,000 people. Medical staff morale was low due to declining wages and management and operational difficulties in the central medical stores and domestic pharmaceuticals industries. Imports of drugs are overseen by the Pharmaceutical Board; there are four local manufacturers.

Special programs of disease control have been carried out with the assistance of the World Health Organization and UNICEF for most major diseases, including malaria, tuberculosis, sleeping sickness, schistosomiasis, poliomyelitis, and yaws. As of 2000, an estimated 44% of children under five were malnourished. Children up to one year old were immunized against tuberculosis, 82%; diphtheria, pertussis, and tetanus, 74%; polio, 73%; and measles, 69%. Tanzania's tuberculosis treatment program is less than 20 years old and consists of inexpensive drugs that cut recovery time in half.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 39.1 and 13 per 1,000 people. About 25% of married women (ages 15 to 49) used contraception in 2000. Infant mortality in 2005 was 98.54 per 1,000 live births. Maternal mortality was an estimated 530 per 100,000 live births.

The female genital mutilation prevalence in Tanzania was lower than most African nations. An estimated 1.5 million or 10% suffered from the procedure. The government of Tanzania has not prohibited it.

The HIV/AIDS prevalence was 8.80 per 100 adults in 2003. As of 2004, there were approximately 1,600,000 people living with HIV/AIDS in the country. There were an estimated 160,000 deaths from AIDS in 2003. The Tanzanian government is working to stop the spread of AIDS by improving the treatment of sexually transmitted diseases. Intervention on some STDs has shown a reduction in HIV prevalence.

#### 42 HOUSING

Tanzania has developed a serious urban housing shortage as a result of the influx of people to the towns. All development planning has included considerable financial allocations for urban housing schemes. With private enterprise unable to meet the demand, the

government in 1951 launched a low-cost housing program, which has been continued since that time.

A significant number of dwellings are constructed from mud and poles or from mud bricks and blocks. A smaller percentage of dwellings are made of concrete and stone, or of baked and burned bricks. Piped indoor water is available to about one-fourth of households and over half have private toilets. In 1995, it was estimated that about 70% of the urban population was living in temporary shelters of squatter/slum areas. The housing deficit in urban areas was estimated at 1.2 million units. In 2002, there were an estimated 6,996,036 households; the average household size was 4.9 members.

### 43 EDUCATION

Education is compulsory for seven years, generally for children between the ages of 7 and 14. This is covered by a two-stage primary school program (four years plus three years). Students may then attend four years of lower secondary and two years of upper secondary school. In the upper secondary level, students choose three courses of study from the following topics: languages, arts, social sciences, mathematics, sciences, commercial subjects, military science, and technology. All senior secondary students take a course in political education. The academic year runs from September to July.

Primary school enrollment in 2003 was estimated at about 69% of age-eligible students. In 2000, secondary school enrollment was about 4.6% of age-eligible students. It is estimated that about 57.7% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 56:1 in 2003.

The University College in Dar es Salaam opened in 1961 and achieved university status in 1970. The Sokoine University of Agriculture, at Morogoro, was founded in 1984. Other educational facilities in Tanzania include trade schools, the Dar es Salaam Technical College, University College of Lands, Architecture, and Survey (Formerly Ardhi Institute of Dar es Salaam), the Institute of Finance Management and a political science college (both in Dar es Salaam), the College of African Wildlife Management at Mweka, the Institute of Development Management at Morogoro, and the College of National Education in Korogwe. The School of Art at Bagamoyo, devoted to preserving traditional cultures, is one of the few national art schools in sub-Saharan Africa. In 1995, an Open University was established to offer distance learning programs to students in remote areas. The first university to be established on Zanzibar, the University of Zanzibar, opened in 1998. In 2003, it was estimated that about 1% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 69.4%, with 77.5% for men and 62.2% for women.

As of 2003, public expenditure on education was estimated at 2.2% of GDP.

### 44 LIBRARIES AND MUSEUMS

The Tanzania Library Service was established in 1964. It maintains the National Central Library in Dar es Salaam (656,000 volumes), 20 regional public libraries, a school library service, and a rural extension service. The British Council Library and the American Center Library are also in Dar es Salaam. The other major library is the University of Dar es Salaam Library (750,000 volumes). The

library at Dar es Salaam Technical College circulates books by mail to all parts of the country. Also in the capital is the library of the East African Literature Bureau. Zanzibar's National Archives has a collection of Arabic manuscripts. The Tanzanian Library Association was founded in 1973.

The National Museums of Tanzania, with branches in Dar es Salaam and Arusha, have ethnographical, archaeological, historical, geological, and natural history sections; the discoveries from Olduvai Gorge are located there. The Department of Geological Survey maintains a geological museum in Dodoma. There are also museums in Arusha, Bagamoyo, Mikumi, Mwanza, and Tabora.

In Zanzibar, the Government Museum has extensive exhibits illustrating the history, ethnography, industries, and natural history of Zanzibar and Pemba. Tabora has the Livingstone and Stanley Memorial site. There is a fine arts museum in Marangu.

### 45 MEDIA

In 2003, there were an estimated 4 mainline telephones for every 1,000 people; about 8,000 people were on a waiting list for telephone service installation. The same year, there were approximately 25 mobile phones in use for every 1,000 people.

Radio Tanzania, a government corporation, broadcasts internally in Swahili and English and abroad in English, Afrikaans, and several indigenous African languages. Radio Tanzania Zanzibar broadcasts in Swahili. Private radio and television stations broadcast from Dar es Salaam. As of 1999 there were 12 AM and 4 FM radio stations and 3 television stations. In 2003, there were an estimated 406 radios and 45 television sets for every 1,000 people. The same year, there were 5.7 personal computers for every 1,000 people and 7 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

In 2004, there were about 110 newspapers published in English and Kiswahili, including 19 dailies and 53 weeklies. Many of the papers are privately owned. The largest dailies, both published in Dar es Salaam, are the government-owned *Daily News* (in English), with a circulation of about 50,000 in 2002, and the CCM-owned *Uhuru* (in Swahili), with a circulation of 100,000. *Kipanga* (in Swahili) is published on Zanzibar by the government. The constitution provides for freedom of speech and the press; however, the government is said to pressure journalists into self-censorship.

### 46 ORGANIZATIONS

In most of the larger centers, chambers of commerce represent commercial, agricultural, and industrial interests. Rural cooperatives, dissolved in 1976, were reintroduced in 1982 to take over from state bodies the functions of crop purchasing and distribution of agricultural products. There are professional associations and unions for a number of fields, such as the Tanzania Teachers' Union and the Tanzania Sports Medicine Association. The Tanzania Consumers Protection Association is active.

The CCM has five principal affiliates: the Umoja Wa Wawake Wa Tanzania, a women's organization; the Youth League; the Workers' Organization; the Union of Cooperative Societies; and the Tanzania Parents' Association. Cultural organizations include the National Kiswahili Council, which promotes the use of the Swahili language.

The Tanzanian Scout Association, Girl Guides, and YMCA/YWCA programs are available for youth. There are also several sports associations offering youth programs for athletes interested in a variety of pastimes, such as badminton, cricket, lawn tennis, squash, and track and field.

Social action groups include the Catholic Women Organization of Tanzania, the Center for Human Rights Promotion, National Peace Council of Tanzania, and the Tanzania Gender Networking Program. The multinational African Medical and Research Foundation–Tanzania is based in Dar es Salaam. The Center for Women and Children's Rights, established in 1998, and the Huruma Rehabilitation Programme, established in 1994, are dedicated to promoting and supporting the rights and social welfare of women. Volunteer service organizations, such as the Lions Clubs International, are also present. International organizations with national chapters include Amnesty International, Habitat for Humanity, Africare, Caritas, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tanzania has great natural resources along its Indian Ocean coastline, 29 game reserves and 13 national parks, especially the 14,763 sq km (5,700 sq mi) Serengeti National Park, famed for its profusion of wildlife. Tourists also enjoy the dramatic view of Mt. Kilimanjaro. As of 2006, scientists were predicting that Kilimanjaro's ice cap, which had visibly shrunk during the 1990s, would completely disappear by 2015. Other attractions are the national dancing troupe and the ebony wood sculptures of the Makonde tribe. Visas are required and are valid for Zanzibar as well.

Yellow fever immunizations are required if traveling from an infected area, and malaria suppressants advised.

In 2005, the US Department of State estimated the cost of staying in Dar es Salaam at \$255 per day. Other areas were significantly less with daily expenses of \$187.

#### 48 FAMOUS TANZANIANS

The most famous 19th-century Zanzibari was Sayyid Sa'id bin Ahmad al-Albusa'idi (b.Oman, 1791–1856), who founded the Sultanate. Mkwawa, chief of the Hehe, carried on guerrilla warfare against the Germans for three years until he was betrayed for a reward in 1898. The Germans cut off his head and sent it to the anthropological museum in Bremen; in 1961, Mkwawa's skull was returned to the Hehe. The foremost present-day figure is Julius Kambarage Nyerere (1922–99), the founder and first president of independent Tanganyika (and later of Tanzania) from 1962 to 1985, when he stepped down. He was succeeded by 'Ali Hassan Mwinyi (b.1925), who had been president of Zanzibar during 1984–85. Abeid Karume (1905–72), a sailor of Congolese origin, was the first president of Zanzibar and first vice president of Tanzania until his assassination. He was succeeded by Aboud Jumbe (b.1920), who resigned both posts in 1984. Since 1985, the pres-

ident of Zanzibar has been Idris Abdul Wakil (b.1925). Edward Moringe Sokoine (1938–84), a prime minister during 1977–80 and 1983–84, was regarded as Nyerere's most likely successor until he died in a car crash. Salim Ahmed Salim (b.1942) was a president of the UN General Assembly during 1979–80, a foreign minister during 1980–84, and a prime minister during 1984–85. An internationally known Tanzanian runner is Filbert Bayi (b.1953), a former world record holder at 1,500 m.

#### 49 DEPENDENCIES

Tanzania has no territories or colonies.

# TOGO

Republic of Togo  
*République Togolaise*

**CAPITAL:** Lomé

**FLAG:** The national flag consists of five alternating horizontal stripes of green and yellow. A five-pointed white star is at the center of a red square that spans the height of the top three stripes.

**ANTHEM:** *Terre de nos aïeux (Land of Our Fathers)*.

**MONETARY UNIT:** The Communauté Financière Africaine franc (CFA Fr) is a paper currency of 100 centimes. There are coins of 1, 2, 5, 10, 25, 50, 100, and 500 CFA francs and notes of 50, 100, 500, 1,000, 5,000, and 10,000 CFA francs. CFA Fr1 = \$0.00192 (or \$1 = CFA Fr521.74) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; National Liberation Day, 13 January; Economic Liberation Day, 24 January; Victory Day, 24 April; Independence Day, 27 April; Labor Day, 1 May; Martyrs' Day, 21 June; Assumption, 15 August; All Saints' Day, 1 November; Anniversary of the failed attack on Lomé, 24 September; Christmas, 25 December. Movable religious holidays include Easter Monday, Ascension, Whitmonday, 'Id al-Fitr, and 'Id al-'Adha'.

**TIME:** GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the west coast of Africa, Togo has an area of 56,785 sq km (21,925 sq mi), extending 510 km (317 mi) N–S and 140 km (87 mi) E–W. Comparatively, the area occupied by Togo is slightly smaller than the state of West Virginia. Togo is bounded on the N by Burkina Faso, on the E by Benin, on the S by the Gulf of Guinea, and on the W by Ghana, with a total boundary length of 1,703 km (1,058 mi), of which 56 km (35 mi) is coastline.

Togo's capital city, Lomé, is located on the Gulf of Guinea coast.

## <sup>2</sup> TOPOGRAPHY

Togo is traversed in the center by a chain of hills, the Togo Mountains, extending roughly southwest into Ghana and northeastward into Benin and averaging about 700 m (2,300 ft) in height. The highest elevation is Mt. Agou (986 m/3,235 ft). To the north and west of these hills, the Oti River drains in a southwesterly direction into the Volta River, which constitutes a part of the upper boundary with Ghana. To the north of the Oti River Valley lies gently undulating savanna country. From the southern spurs of the central hills, a plateau stretches gradually southward to a coastal plain. The coastline consists of a flat sandy beach thickly planted with coconut trees and partially separated from the mainland by lagoons and lakes that are the former estuaries of several rivers.

## <sup>3</sup> CLIMATE

Togo has a humid, tropical climate, but receives less rainfall than most of the other countries along the Gulf of Guinea. In the south there are two rainy seasons, from March to early July and in September and October. The heaviest rainfall occurs in the hills of the west, southwest, and center, where the precipitation averages about 150 cm (60 in) a year. North of the Togo Mountains there

is one rainy season, lasting from April to August. Rainfall in this region averages 100 cm (40 in) a year. The coast gets the least rainfall, about 78 cm (31 in) annually. The average maximum and minimum temperatures are 30°C (86°F) and 23°C (73°F) at Lomé, on the southern coast, and 35°C (95°F) and 15°C (59°F) at Mango, in the north.

## <sup>4</sup> FLORA AND FAUNA

Natural vegetation is chiefly of the savanna type, luxuriant in the rainy season, brittle grass and shrub during the dry season. Dense belts of reeds are found along the coastal lagoons. Much of the largest wildlife has been exterminated in the southern area, but in the north, elephants and lions still can be found. Hippopotamuses and crocodiles live in and along the rivers, and monkeys are fairly common. The coastal swamps abound in snakes. As of 2002, there were at least 196 species of mammals, 117 species of birds, and over 3,000 species of plants throughout the country.

## <sup>5</sup> ENVIRONMENT

The dense tropical rain forests that once covered much of the country are now found only along the river valleys and in isolated pockets of the Atakora Mountains. Slash-and-burn agriculture and the cutting of wood for fuel are the major causes of forest depletion. Between 1990 and 2000, Togo lost an average of 3.4% of its forest and woodland each year. Soils are generally of poor quality, requiring intensive fertilization and cultivation to be productive. The soil and water supply are threatened by pesticides and fertilizers. The nation's land is also threatened by desertification.

Water pollution is a significant problem in Togo, where only 80% of urban dwellers and 36% of the people living in rural areas have access to improved water sources. Contamination of the water supply contributes to the spread of disease.

Responsibility in environmental matters is vested in the Ministry of Rural Development and the Ministry of Environment and Tourism. The government of Togo has tried to protect the nation's environment through a comprehensive legislative package, the Environmental Code of 1988. As of 2003, 7.9% of Togo's total land area was protected.

The nation's wildlife population is at risk due to poaching and the clearing of land for agricultural purposes. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 7 types of mammals, 2 species of birds, 2 types of reptiles, 3 species of amphibians, 8 species of fish, and 10 species of plants. Threatened species included the African elephant, Diana monkey, and West African manatee.

## 6 POPULATION

The population of Togo in 2005 was estimated by the United Nations (UN) at 6,145,000, which placed it at number 101 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 2.7%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 9,613,000. The population density was 108 per sq km (280 per sq mi), with density greatest in the south, exceeding 500 per sq km (200 per sq mi) in some areas.

The UN estimated that 33% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 3.96%. The capital city, Lomé, had a population of 799,000 in that year. Other important centers with estimated populations are Sokodé, 86,500; Kpalimé, 75,000; Atakpamé, 64,000; and Aného, 24,000.

The prevalence of HIV/AIDS has had a significant impact on the population of Togo. The number of AIDS orphans increased by 17,000 from 2003–04. The UN estimated that 6% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

There is a steady migration of laborers from rural to urban areas. Members of the Ewe group migrate to and from Ghana. Formerly, an estimated 100,000 workers went to Ghana from Togo each year, but because of Ghana's declining economy, this number has probably decreased. There is also much movement of Ouatchi, Adja, Kabré, and Losso peoples to and from Benin. Some of the aliens expelled from Nigeria in 1983 were Togolese; moreover, Togo suffered the disruptive effect of the hundreds of thousands of Ghanaians who returned home from Nigeria via the Togolese coastal roads. Foreign refugees in Togo, including Ewe dissidents in exile from Ghana, are entitled to employment and free medical treatment, although they retain the status of aliens. About 7% of the population consists of noncitizens. The total number of migrants in Togo in 2000 was 179,000 including refugees. As of 2004, there were 11,285 refugees, including 11,208 Ghanaian refugees in northern Togo, and 390 asylum seekers, and 120 returned refugees. In 2005, the net migration rate was estimated as zero migrants per 1,000 population. This was a significant change from

-6.7 per 1,000 in 1990. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Native Africans constitute 99% of Togo's total population. About 40 tribal groups comprise a mosaic of peoples of distinct languages and histories. The main ethnic group consists of the Ewe and such related peoples as the Ouatchi, Fon, and Adja; they live in the south and constitute about 20–25% of the population. Next in size are the Kabye, accounting for about 10–15% of the population. As elsewhere in Africa, political and ethnic boundaries do not coincide. Thus, the Ewe are divided by the Togo–Ghana boundary, and large numbers of Ouatchi, Adja, Kabye, and Losso live in adjacent Benin. Other significant groups are the Mina (5% of the population), Cotocoli (10–15%), Moba (10–15%), Gourma, Akposso, Ana, Lamba, Ehoué, and Bassari. Despite Togo's complex ethnic, linguistic, and racial makeup, a major distinction can be made between the tribes of Sudanic origin that inhabit the northern regions and those of the true Negroid Bantu type found in the south. The remaining 1% of Togo's populace is non-African, mostly European and Syrian-Lebanese.

## 9 LANGUAGES

French is the official language. Most newspapers are printed in French, and trade and commerce passing through Aného and Lomé usually are conducted in that language; however, the public schools combine French with Ewe and Mina in the south, Kabiye and Dagomba in the north. In northern Togo, Hausa is also widely spoken. Pidgin English and French are used widely in the principal trading towns. In all, more than 44 different languages and dialects are spoken in Togo.

## 10 RELIGIONS

The most recent statistics indicate that about 47% of the population are Christian. Of these nearly 28% are Catholic. About 14% of the population are Sunni Muslim. Nearly 33% practice a variety of traditional indigenous religions or other faiths, including Vodoun (Voodoo), which is believed to have originated in the region that is now Togo. Most of the Muslims live in the central and northern parts of the country, while Christians are found primarily in the south.

The government requires registration of religious groups, but this involves a fairly easy process and no applications have been rejected outright. The constitution provides for freedom of religion and this right is generally respected in practice. Certain Muslim and Christian holidays are celebrated as national holidays.

## 11 TRANSPORTATION

Togo has a relatively well-developed road system of about 7,520 km (4,673 mi), of which 2,376 km (1,476 mi) were paved in 2002. One main road, completely paved since 1980, runs north from Lomé to the border with Burkina Faso; another runs east along the coast from Lomé to Aného and onward to the Benin border; and a third runs west along the coast to the Ghana border. Because of extreme variations in weather, the roads that are not paved require constant attention. During the dry season, they are very dusty and crack easily, but during the rainy season they become extremely

muddy and are frequently washed out. In 2003, there were 97,800 passenger cars and 43,200 commercial vehicles.

As of 2004, Togo had 568 km (326 mi) of meter gauge (narrow gauge) railroad, including three major lines from Lomé: to Kpalimé (116 km/72 mi), to Aného (44 km/27 mi), and to Atakpamé and Blitta (276 km/171 mi). An 80-km (50-mi) spur goes to Tabligbo. The rail system is operated by Chemin de Fer Togolais.

Togo lacks a natural harbor, but in 1968 a major deepwater port east of central Lomé was completed with a loan from the Federal Republic of Germany (FRG). An autonomous free port at Lomé serves landlocked Burkina Faso, Niger, and Mali. There is also a phosphate-handling port at Kpémé. A small merchant-shipping fleet was created in 1974 as a joint venture with the FRG. In 2005 there were two ships of 1,000 GRT or over, totaling 3,918 GRT. As of 2003, Togo's navigable inland waterways consisted of a 50 km (31 mi) stretch of the Mono River, in which navigation is seasonal and dependent upon rainfall.

There were an estimated nine airports in 2001, only two of which had paved runways as of 2005. The international airport at Lomé links Togo with other countries of West and Central Africa and with Europe; a second international airport, at Niamtougou, was completed in the early 1980s. Among the international airlines serving Togo is Air Afrique, of which Togo owns a 7% share. Air Togo operates domestic service, flying to airstrips at Atakpamé, Sokodé, Sansanné-Mango, Lama-Kara, Niamtougou, and Dapaong. In 2003, about 46,000 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Between the 12th and the 18th century, the Ewe, Adja, and related peoples, who now constitute a majority of the population of southern Togo and adjoining Ghana, came to this area from the Niger River Valley as a result of pressure from the east. Portuguese sailors visited the coast in the 15th and 16th centuries. Slave shipments began from Grand Popo (now in Benin), Petit Popo (now Aného), and other coastal villages; traders introduced the growing of cassava, coconuts, corn, and other crops in order to provision their slave ships. The French established trading posts at Petit Popo in 1626 and again in 1767, but abandoned them each time. The French were again active there and at Porto-Séguero, east of Lomé, from 1865 to 1883.

German traders came to Grand Popo as early as 1856, but did not arrive in significant numbers until 1880. Germany finally established control over the area, its first African acquisition, on 5 July 1884, when Dr. Gustav Nachtigal made a treaty with the chief of Togo, a village on the north side of a lagoon behind Porto-Séguero. The treaty established a German protectorate over a small coastal enclave, and the village name eventually was given to the entire territory. The Germans established a capital first at Baguida, then at Zebe, and in 1897 at Lomé. Boundary delimitations with the British and French were made in 1897 and 1899. Although the Volta River formed a natural boundary between Togo and the Gold Coast (now Ghana), as a result of the negotiations, the frontier diverged from the river about 320 km (200 mi) north of Lomé and descended diagonally, so that the so-called Volta Triangle on the left bank became part of the Gold Coast. The boundary arrangements resulted in splitting the Ewe, Adja, Ouatchi, Fon, and other peoples between the Gold Coast, Togo, and Dahomey (now Benin). As the Germans extended their control to the north, they

LOCATION: 6°5' to 11°11'N; 0°5' to 1°45' E. BOUNDARY LENGTHS: Burkina Faso, 126 kilometers (78 miles); Benin, 644 kilometers (400 miles); Gulf of Guinea coastline, 56 kilometers (35 miles); Ghana, 877 kilometers (545 miles). TERRITORIAL SEA LIMIT: 30 miles.

built roads and railroads and established administrative, legal, economic, educational, and other institutions.

Soon after the outbreak of World War I in August 1914, neighboring French and British units gained control of Togo. In a provisional arrangement, the British took the coastal area and the railways, and the French assumed control of the interior. League of Nations mandates were established in 1922.

Following World War II, both the United Kingdom and France placed their spheres of Togoland under UN trusteeship. Beginning in 1947, leaders of the Ewe people repeatedly petitioned the UN first for Ewe unification and subsequently for Togoland unification. At the time, the Ewe were under three different administrations: the Gold Coast, British Togoland, and French Togoland. For nine years thereafter, the Togoland question was before the UN. Its resolution was difficult not only because of the resistance of the British and French governments to the Ewe demands, but also because both the Ewe and non-Ewe of the two Togolands were deeply divided on the form self-determination should take. The problem was partially resolved by a plebiscite held in British Togoland on 9 May 1956 under UN supervision. A majority of the registered voters decided in favor of integration of British Togoland with an independent Gold Coast. Consequently, when the Gold Coast became the independent state of Ghana, British Togoland ceased to exist.

On 28 October 1956, in a referendum held in French Togoland, 72% of the registered voters chose to terminate French trusteeship and to accept the status of internal autonomy and continued association with France that had been proffered them by the French government. This unilateral effort to terminate French trusteeship was not accepted by the UN.

In April 1958, new elections were held under UN supervision. The Committee for Togolese Union, pledged to secure complete independence, won control of the Togo Assembly, and its leader, Sylvanus Olympio, subsequently became prime minister. On 13 October 1958, the French government announced that full independence would be granted, and on 27 April 1960, the Republic of Togo became a sovereign nation, with Olympio as president.

President Olympio was assassinated on 13 January 1963 by military insurgents. At the insurgents' behest, Nicolas Grunitzky, the exiled leader of the Togolese Party for Progress, returned to Togo and formed a provisional government. He abrogated the constitution, dissolved the National Assembly, and called new elections. In the May 1963 balloting, Grunitzky was elected president, a new 56-member National Assembly was chosen, and a new constitution was approved by national referendum.

Grunitzky held office through 1966. The final months of his presidency were marked by antigovernment demonstrations involving many of Olympio's former supporters and sympathizers. On 13 January 1967, the Grunitzky government was overthrown by a military coup led by Col. Kléber Dadjo, who was succeeded in April 1967 by Lt. Col. Étienne Éyadéma. The constitution was again suspended and the Assembly dissolved, and Éyadéma declared himself president.

In 1969, Éyadéma proposed the establishment of a national party of unification, the Togolese People's Rally (*Rassemblement du Peuple Togolais*—RPT). At its first party congress in November 1971, the RPT representatives opposed the idea of constitutional government and asked for a national referendum in support of the

Éyadéma regime. This took place in January 1972, with 99% of the population voting for Éyadéma. Survivors of a 1970 plot to overthrow the regime were pardoned after the referendum, and several former members of Olympio's government joined the RPT. Others of Olympio's supporters went into exile or into business, and there was no coherent opposition to the government.

In 1974, Éyadéma began to advocate a "cultural authenticity" policy, stimulated at least in part by the crash of his private plane in January 1974, from which he escaped uninjured. The crash (the cause of which he believed suspicious) followed his nationalization of the phosphate industry and appeared to spur his drive for further Africanization in Togo. At this time, Éyadéma dropped his first name, Étienne, using instead his African second name, Gnassingbé.

Éyadéma was reelected as president without opposition on 30 December 1979, when the voters also approved a draft constitution for what was called the Third Republic (succeeding the republics headed by Olympio and Grunitzky). A 67-member National Assembly was elected at the same time. Éyadéma remained firmly in control in the early 1980s, despite the disruptions caused by Nigeria's expulsion of illegal aliens and the economic decline attributable to falling phosphate prices. An alleged plot to assassinate Éyadéma on 13 January 1983, while French president, François Mitterrand, was visiting Togo, apparently misfired. Éyadéma reportedly blamed Gilchrist Olympio, the son of the former president, for the coup attempt.

On 23–24 September 1986, about 60 insurgents, mostly Togolese in exile, attempted to seize control of Lomé but were repulsed. About 150 French and 350 Zairian troops were flown in to help restore order. The official death toll was 26. The coup attempt was reportedly financed by Gilchrist Olympio, who was sentenced to death in absentia. Another 12 men were given death sentences, and 14 were sentenced to life imprisonment. Éyadéma accused Ghana and Burkina Faso of aiding the insurgents. In National Assembly elections on 24 March 1985, 216 candidates, all approved by the RPT, contested 77 seats; only 20 deputies were reelected. Éyadéma was elected unopposed to a new seven-year term as president on 21 December 1986.

Opposition to Éyadéma's rule came to a head in March 1991 when, after police clashes with thousands of antigovernment demonstrators, the government agreed to institute a multiparty system and to grant amnesty to dissidents. On 28 August 1991, Éyadéma ended 24 years of military rule by surrendering authority to Joseph Kokou Koffigoh, an interim prime minister selected by a National Conference. The RPT was to be disbanded and Éyadéma barred from running for the presidency.

In October and November 1991, armed forces loyal to Éyadéma failed several times to overthrow Koffigoh. On 3 December 1991, however, they attacked the government palace and seized him. The French refused to help Koffigoh; instead, he was forced to compromise; he then formed a coalition government with Éyadéma and legalized the RPT.

On 5 May 1992, opposition leader Gilchrist Olympio was severely wounded in an ambush, and in July another opposition figure was assassinated. The transitional government several times rescheduled the referendum on a new constitution. Finally, on 27 September 1992, it was approved. The legislative and presidential elections were postponed again and again until August 1993.

The Army, composed largely of Kabyé (Éyadéma's group) has never accepted Éyadéma's ouster, the National Conference, or Koffigoh. Eventually, Koffigoh's interim government was dissolved in 1992, and Éyadéma consolidated his powers. However, in January 1993 he reappointed Koffigoh prime minister of a government which cooperated closely with Éyadéma, now president. On 25 August 1993, Éyadéma easily won reelection as president (97% of the vote). The electoral process, however, was marred by a low turnout (all major opposition candidates refused to participate) and serious irregularities.

Following delays, legislative elections were held in two rounds in February 1994. With the exception of Olympio's Union of the Forces of Change (UFC), the main opposition parties participated. The RPT reportedly took 33 of the 81 seats in the first round. The Action Committee for Renewal (CAR), won 19. Koffigoh's New Force Coordination failed to take a single seat. Nonetheless, the armed forces continued to attack opposition politicians. The second round voting was marred by violence, with armed gangs attacking voting stations and opposition supporters. Still, international observers declared the election satisfactory.

On 24 February 1994 the National Electoral Commission released results for 76 seats as follows: opposition, 38 seats; RPT, 37 seats; Koffigoh, 1 seat. The Supreme Court ordered new elections for 3 seats of the Action Committee for Renewal and the Togolese Union for Democracy, lowering their totals to 34 and 6 seats, respectively. Defections from the CAR to the RPT and the merging of the Union of Justice and Democracy (UJD) with the RPT gave the RPT a narrow majority with 42 seats.

In June 1998 Éyadéma officially won the presidential elections with 52%, but the opposition rejected the election as rigged. Éyadéma's dubious victory precipitated a national crisis, and led the opposition to boycott the legislative elections delayed and then scheduled for March 1999. In July, the RPT and opposition parties signed the Lomé Framework Agreement, which included a pledge by Éyadéma to respect the constitution and not to seek another term. The Agreement ensured among other things political rights for opposition leaders, the safe return for refugees, and compensation for victims of political violence. Éyadéma also agreed to dissolve the National Assembly in March 2000 and hold new legislative elections, to be supervised by an independent national election commission (CENI). The March deadline passed, as did deadlines in October 2001 and March 2002. The elections were finally held on 27 October 2002, but under a boycott from the Union of the Forces for Change (UFC) and the Action Committee for Renewal (CAR), grouped as the Coalition of Democratic Forces (CFD). The RPT took 72 of the 81 seats.

In December 2002, parliament amended the constitution to allow Éyadéma to seek a third term, and to bar Gilchrist Olympio, leader of the UFC, from running by instituting residence requirements. In February 2003, a new nine-member CENI was formed, including four representatives each of the RPT and the opposition umbrella group CFD. The ninth member was the president of the Lomé Court of Appeal. However, the UFC withdrew from the CFD because it regarded CENI's mandate as curtailed by the government, and because it regarded the CFD's actions and strategies as incoherent. In June, Éyadéma won the election with 57.8% of the vote, but no international observers were present, and the

opposition refused to accept the outcome as a free and fair expression of the will of the people.

Facing a new political stalemate, the government initiated talks in late 2003 and into 2004 with the opposition via the Cotonou Convention platform (2000) sponsored by the EU. Despite the regime's new promises to implement reforms, the opposition mostly boycotted the talks. In December 2004, the boycott seemed to be having an effect as Éyadéma dissolved the parliament and announced new elections for 2005. However, in February 2005, he died unexpectedly leaving a succession void, which was precipitously filled by his son, Faure Gnassingbé. Although Gnassingbé had the support of the army, strong pressure from ECOWAS forced him to step down and to organize fresh elections. On 24 April, Gnassingbé won the election, but again the opposition dismissed the exercise as fraudulent, and neither the EU nor the United States recognized the outcome as legitimate. In rioting that followed, more than 150 people were killed, and thousands fled the country in the face of government crackdowns. Gnassingbé also appointed his brother Kpatcha Gnassingbé to be defense minister.

In the months that followed, Nigerian president Obasanjo insisted on a government of national unity with an opposition prime minister. Bowing to concerted pressure, Gnassingbé finally appointed an opposition leader, Edem Kodjo—a former head of the OAU—to be the new prime minister, however, this appointment was refused by the UFC. Talks held in Rome between Gnassingbé and Gilchrist Olympio sponsored by the Italian Catholic community of Sant Egidio, revealed a number of sticking points including a mutually acceptable electoral framework and constitutional rules.

Specifically, the opposition demanded a return to the 1992 constitution while the RPT refused to reverse the amendments made in 2002 that disqualify Olympio's candidacy, but allow Gnassingbé to hold office. In the meantime, Lomé became a dangerous city beset by violent organized crime. Owing to government crackdowns, poor military accountability and harassment by pro-government militias, the number of Togolese seeking refuge in neighboring Benin and Ghana grew to about 45,000 by 2006.

### 13 GOVERNMENT

The constitution of 30 December 1979 provided for a president nominated by the RPT and elected for a seven-year term by universal adult suffrage at age 18. The president nominated and presided over the cabinet and may rule by decree after declaring a state of emergency. Members of the National Assembly were nominated by the RPT and directly elected for five years. The legislature, which may be dissolved by the president, met twice a year.

A new constitution mandating multiparty elections was approved in a referendum on 27 September 1992. Although opposition parties are permitted, they are subjected to intimidation and coercion. Chief of state, President Gen. Gnassingbé Éyadéma, held power between April 1967 and February 2005, which made him sub-Saharan Africa's longest ruling leader at the time. The cabinet is a Council of Ministers appointed by the president and the prime minister. Given the weakness of the legislature, and the RPT's majority, public decision-making authority resides with the executive.

According to the constitution, the president is elected by popular vote for a five-year term. In December 2002, the National Assembly amended the constitution, revoking the two-term limit on the presidential office (allowing Éyadéma to run again), instituting a single rather than two-round system of voting (to prevent the opposition from forcing a run-off against their best-placed candidate), insisting that presidential candidates be residents of Togo for at least 12 months prior to the election (to prevent Gilchrist Olympio from running), and to lower the minimum age for presidential candidates to 35, (enabling Faure Gnassingbé to run). The 81-seat National Assembly is selected in national, multiparty elections.

The next presidential election was scheduled in principle for 2010, and the next parliamentary election was scheduled for 2007 with the possibility that an agreement would be reached to hold it in 2006.

## 14 POLITICAL PARTIES

Political parties in Togo were considerably more active and competitive before independence than after, and from 1969 till the legalization of opposition parties in 1991, Togo was a one-party state. In the first Territorial Assembly elections in 1946, there were two parties, the Committee of Togolese Unity (Comité de l'Unité Togolaise—CUT) and the Togolese Party for Progress (Parti Togolais du Progrès—PTP). The CUT was overwhelmingly successful, and Sylvanus Olympio, the CUT leader and Assembly president, campaigned for Ewe reunification. The CUT controlled all Assembly seats from 1946 to 1952. In the 1952 elections, however, the CUT was defeated, and it refused to participate in further elections because it claimed that the PTP was receiving French support. In the territorial elections of 1955, the PTP won all 30 Assembly seats, and when Togo was given autonomy in 1956, Nicolas Grunitzky, PTP leader, became prime minister.

In the UN-supervised elections of April 1958, the CUT regained power with a demand for independence from France, while the PTP and the Union of Chiefs and Peoples of the North (Union des Chefs et des Populations du Nord—UCPN) advocated that Togo remain an autonomous republic within the French Union. The two defeated parties merged in October 1959 to form the Togolese People's Democratic Union (Union Démocratique des Populations Togolaises—UDPT), under Grunitzky's leadership.

In March 1961, the National Assembly enacted legislation that based elections to the Assembly on a party-list system, with a single ballot in which a majority would be decisive. In the April 1961 elections, which were held on this single-list system, candidates from the alliance of the UDPT and the Togolese Youth Movement (Mouvement de la Jeunesse Togolaise—Juvento) were prevented from registering and were not permitted on the ballot. Consequently, the new Assembly consisted entirely of CUT members.

After Olympio (who had become president in 1960) was assassinated by military insurgents, Grunitzky, who was living in exile in Benin (then Dahomey), was invited back to Togo to form a provisional government. Grunitzky announced that free elections would be held, but in fact the delegates of the four leading parties—UDPT, Juvento, the Togolese Unity Movement (Unité Togolaise, formed from the CUT after Olympio's assassination), and the Togolese Popular Movement (Mouvement Populaire Togolais)—as well as the insurgents' Committee of Vigilance, agreed

on a single national union list of candidates. In the elections of 5 May 1963, Grunitzky became president and Antoine Meatchi vice-president; a new 56-member Assembly was elected; and a new constitution was approved by national referendum. In early 1967, however, Grunitzky was deposed, and a military regime took power, with no constitution and no legislature.

Organized political activity was suspended until 1969, when the Togolese People's Rally (Rassemblement du Peuple Togolais—RPT) was founded as the nation's sole legal political party. The President heads the RPT, which has a Central Committee and a Political Bureau. In the 1979 and 1985 legislative elections, all candidates were nominated by the RPT. In the 1994 legislative elections, however, other parties participated.

Political opposition to Éyadéma became bolder after 1990. For years, an anti-Éyadéma group, the Togolese Movement for Democracy (Mouvement Togolais pour la Démocratie), functioned in exile from Paris. After opposition parties were legalized on 12 April 1991, and especially after the National Conference engineered a governmental change in August 1991, other parties began to function, albeit in an atmosphere of threat from the armed forces and pro-Éyadéma gangs. Among the country's parties as of 1996 were the Coordination des Forces Nouvelles (CFN), Rally of the Togolese People (RPT), Togolese Union for Democracy (UTD), Action Committee for Renewal (CAR), Union for Democracy and Solidarity (UDS), Pan-African Sociodemocrats Group (GSP—an alliance of three radical parties: CDPA—Democratic Convention of African Peoples, PDR—Party for Democracy and Renewal, and PSP—Pan-African Social Party), Union of Forces for Change (UFC), and Union of Justice and Democracy (UJD).

All major opposition parties boycotted the 1993 elections, delaying elections until February 1994. The winners distributed the seats as follows: CAR 36, RPT 35, UTD 7, UJD 2, CFN 1. However, as a result of defections from the CAR to the RPT and the merging of the UJD with the RPT, representation in the National Assembly in August 1997 was RPT 42, CAR 32, UTD 5, CFN 1, independent 1, giving Eyadéma's party a narrow majority.

Disagreements between the divided opposition and the RPT thwarted efforts to achieve a national consensus on how the 1998 elections were to be conducted. The opposition boycotted the elections in March 1999 to protest the alleged cheating by Éyadéma and his supporters in the June 1998 presidential election. But progress was made in defining the role of the national electoral commission (CENI), and by April 2000, the two sides agreed to return to the table to discuss endorsement of an electoral bill, and related issues pertaining to national reconciliation. Legislative elections were delayed throughout 2000, 2001, and early 2002; they were finally held on 27 October 2002. The elections were judged to be democratic and transparent by international election observers, but the two main opposition parties—the UFC and the CAR—grouped as the Coalition of Democratic Forces (CFD), boycotted the elections, and the RPT emerged with 72 of the 81 seats. Also winning seats were the Rally for Democracy and Development (Rassemblement pour le soutien de la démocratie et du développement—RSDD), 3; the Union for Democracy and Social Progress (Union pour la démocratie et le progrès social—UDPS), 2; Juvento, 2; the Believers' Movement for Equality and Peace (Mouvement des croyants pour l'égalité et la paix—MOCEP), 1; and an independent won 1 seat.

In early 2003, the UFC pulled out of the CFD umbrella opposition organization, due to disagreements with its strategies and its agreement to sit on the newly reformed electoral commission, CENI, which the UFC judged to be manipulated by the government. In the June 2003 presidential contest, Éyadéma scored 57.8% of the vote to 33.7% for the UFC candidate, Emmanuel Bob-Akitani, Gilchrist Olympio's replacement. In the April 2005 presidential contest, Bob-Akitani ran against Éyadéma's son, Faure Gnassingbé, and was defeated 60.1% to 38.3%. The main opposition declared both polls fraudulent, and has refused to accept the results. The UFC and the CAR remained outside the government of national unity.

### 15 LOCAL GOVERNMENT

Togo is divided into five administrative regions—Maritime, Plateaux, Centrale, Kara, and Savanes—each supervised by an inspector. The regions are subdivided into 30 prefectures and four sub-prefectures. Inspectors and prefects are appointed by the president. The prefectures and sub-prefectures are subdivided into cantons. The prefectures in theory are supposed to be governed by elected councils, but these elections have never been held.

A policy of decentralization has been undertaken in Togo, and local communities comprise 30 communes, 9 of them “fully independent” with an elected mayor, and 21 “semi-independent” with the prefect acting as mayor. Communes have popularly elected municipal councils.

### 16 JUDICIAL SYSTEM

Maintaining the independence of the judiciary is the responsibility of the Superior Council of Magistrates, which was set up in 1964 and includes the president of the republic as chairman, the minister of justice, the president and vice president of the Supreme Court, and others. A Constitutional Court is the highest court of jurisdiction in constitutional matters. The Supreme Court sits in Lomé; there is also a sessions court (Court of Assizes), and Appeals Courts. Tribunals of first instance are divided into civil, commercial, and correctional chambers; labor and children's tribunals; and the Court of State Security, set up in September 1970 to judge crimes involving foreign or domestic subversion. A Tribunal for Recovery of Public Funds handles cases involving misuse of public funds.

The judicial system blends African traditional law and the Napoleonic Code in trying civil and criminal cases. In practice, the judiciary is subject to the influence and control of the executive branch.

Defendants in criminal cases are presumed innocent and are afforded the right to counsel. Village chiefs or a Council of Elders may try minor criminal cases in rural areas. Appeals from such rulings may be taken to the regular court system.

Trials are open and judicial procedures are generally respected. However, the judicial system suffers from the lack of personnel and remains overburdened.

### 17 ARMED FORCES

In 2005, Togo's armed forces numbered 8,550 active personnel. The Army numbered some 8,100 troops including a Presidential Guard unit. Equipment included two main battle tanks and nine *Scorpion* light tanks. The 250-member Air Force had 16 combat

capable aircraft that included 4 fighter ground attack aircraft. The country's estimated 200-member Navy had two coastal patrol vessels. Paramilitary forces numbered 750 members. In 2005, the defense budget totaled \$38.3 million.

### 18 INTERNATIONAL COOPERATION

Togo was admitted to the United Nations on 29 September 1960. It is a member of ECA and several nonregional specialized agencies, such as the World Bank, UNESCO, UNIDO, the ILO, FAO, and the WHO. Togo also belongs to the African Development Bank, the ACP Group, the Arab Bank for Economic Development in Africa, ECOWAS, G-77, the WTO, the Organization of the Islamic Conference (OIC), the West African Economic and Monetary Union, the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), and the African Union. Togo has been an active member of the Conseil d'Entente, which includes Côte d'Ivoire, Niger, Burkina Faso, and Benin. Togo hosted the signing ceremony for the Lomé Convention (providing for preferential treatment by the European Community for developing countries) in February 1975. The nation is part of the Franc Zone.

In environmental cooperation, Togo is part of the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

### 19 ECONOMY

Togo has an agricultural economy with over 65% of its people engaged in subsistence and commercial agriculture. Togo is drought-prone but is food self-sufficient in years of ample rainfall. Coffee, cocoa, and cotton are the major cash crops, and the food crops include corn, sorghum, millet, cassava, and yams. The nation also has an active commercial sector and significant phosphate deposits upon which it draws for foreign exchange.

Political instability led to the suspension of international aid in 1992 as donors pressured the government into quicker action toward democratic reforms. Economic activity was further disrupted by an eight-month general strike that lasted until July 1993.

In January 1994 France suddenly devalued the CFA franc, cutting its value in half overnight. Immediately, prices for almost all imported goods soared, including prices for food and essential drugs. The devaluation was designed to encourage new investment, particularly in the export sectors of the economy, and discourage the use of hard currency reserves to buy products that could be grown domestically. Unfortunately, political instability and a general atmosphere of uncertainty prevented the country from taking advantage of the devaluation to improve the economy. Excessive military expenditures and stalled progress on privatizing state-owned enterprises were factors keeping the World Bank and IMF from resuming aid. During the 1995 to 1997 structural adjustment program, Togo succeeded in meeting demands and capturing funds only for the last year.

The 1998 presidential elections and 1999 legislative elections were characterized as undemocratic. These events led to reconciliation talks in July 1999 that laid the groundwork for a more democratic government, bringing back substantial development aid. However, legislative elections held in 2002 were boycotted

by opposition parties, and the presidential elections of 2003 were deemed by opposition leaders to be marred by irregularities and fraud. This political climate did little to encourage foreign investors, increase donor contributions, and provide the stability needed for economic progress. While most bilateral and multilateral aid to Togo remained frozen as of early 2006, the EU initiated a partial resumption of cooperation and development aid to Togo in late 2004, based upon commitments by Togo to expand opportunities for political opposition and liberalize portions of the economy.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Togo's gross domestic product (GDP) was estimated at \$9.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,600. The annual growth rate of GDP was estimated at 2.8%. The average inflation rate in 2005 was 5.5%. It was estimated that agriculture accounted for 39.5% of GDP, industry 20.4%, and services 40.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$103 million or about \$21 per capita and accounted for approximately 5.9% of GDP. Foreign aid receipts amounted to \$45 million or about \$9 per capita and accounted for approximately 2.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Togo totaled \$1.49 billion or about \$307 per capita based on a GDP of \$1.8 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.9%. It was estimated that in 1989 about 32% of the population had incomes below the poverty line.

## 21 LABOR

Togo's labor force in 2002 (the latest year for which data was available) was estimated at two million. In 1998, about 65% of the labor force engaged in agriculture, 30% in services, and 5% in industry. The majority of families engage in subsistence farming. Data on unemployment in Togo was not available.

Trade unions in Togo, which once were the base for left-wing opposition to the military regime, have been incorporated into the one-party system. The Central Committee of the RPT dissolved the central bodies of all Togolese trade unions in December 1972, and the National Workers Confederation of Togo (Confédération Nationale des Travailleurs du Togo—CNTT) was established in 1973 as the sole national union. In 1991, the National Conference suspended the automatic withholding of CNTT dues for all workers, and it froze CNTT's assets. Several trade unions left the CNTT, some of which then affiliated with two new federations: the Labor Federation of Togolese Workers and the National Union of Independent Syndicates. Since 1991, all of Togo's labor federations have taken a more active role in independent collective bargaining. About 60–70% of the workforce in the formal (wage) sector (about 20% of the entire workforce) was unionized as of 2002.

The minimum working age is 14 (18 for certain industrial employment) but it is not enforced and many children work, especially on their family's subsistence farms. The minimum wage varies for different categories of employment and ranged from \$20 to \$33 monthly in 2002. This does not provide a living wage for a family. The workweek is limited to 72 hours, with one mandatory rest period of 24 hours.

## 22 AGRICULTURE

Togo is predominantly an agricultural country, with about four-fifths of the work force engaged in farming. Approximately 12% of the land area is arable. Most food crops are produced by subsistence farmers who operate on family farms of less than 3 hectares (7 acres). Peanuts and sorghum are grown in the extreme north; sorghum, yams, and cotton in the region around Niamtougou; sorghum, cotton, and corn in the central region; coffee, cocoa, and cotton in the southern plateau; and manioc, corn, and copra near the coast. Agriculture accounted for about 39.5% of GDP in 2003.

In the late 1990s, the government emphasized food production. Main food crops in 2004 (in tons) included manioc, 725,000; yams, 570,000; corn, 485,000; sorghum, 180,000; and millet, 50,000. Although Togo is basically self-sufficient in food, certain cereals—notably wheat, which cannot be grown in Togo—must be imported.

Leading cash crops are coffee and cocoa, followed by cotton, palm kernels, copra, peanuts, and shea nuts (karité). Coffee production decreased from 22,000 tons in 1991 to 13,500 tons in 2004. Cocoa production amounted to just 8,500 tons in 2004—less than half the amount produced 15 years earlier. When world prices for both coffee and cocoa fell in the mid-1980s, there was a greater emphasis on cotton production, with cotton exports increasing by over 400% from 1984 to 1992. Cotton production averaged 7,000 tons annually from 1979 to 1981; production in 2004 totaled 76,000 tons of fiber. A new state organization, the Togolese Cotton Co., had been set up in 1974 to develop the industry. Production of palm kernels, historically erratic, was estimated at 21,000 tons in 2004. There are over 100,000 coconut trees in Togo; about 2,000 tons of copra are produced annually. The peanut crop in 2004 was 33,000 tons (shelled). Some attempts are being made to export pineapples, house plants, vegetables, and palm oil.

## 23 ANIMAL HUSBANDRY

Alleviation of the tsetse fly in the savanna area north of the Atakora Mountains has permitted the development of small-scale cattle raising. Most of the cattle thus produced, principally the humpless West African shorthorn type, are either consumed locally or, when there are surpluses, driven south for consumption in the main cities and towns. Few cattle are exported. Grazing is communal, in the south on family group lands and in the north on tribal lands. Water supplies are short in certain areas.

Livestock in 2005 included an estimated 1.48 million goats, 1.85 million sheep, 320,000 hogs, 280,000 head of cattle, and 9 million chickens. There are slaughterhouses at Lomé, Atakpamé, Sokodé, Lama-Kara, Sansanné-Mango, and Dapaong.

## 24 FISHING

Fishing remains relatively unimportant, in part because of the country's limited territorial waters. Production, mostly by small operators employing pirogues, amounted to an estimated 28,706 tons in 2003; about 78% of that was caught in Atlantic waters and the rest inland. Almost all fish is sold smoked or dried. A new fishing quay has been constructed at Lomé, and a joint Libyan-Togolese fishing company has been established. Togo imports fish from Europe and its West African neighbors.

## 25 FORESTRY

Although much of Togo once was forested, the country now must import wood. Production of roundwood in 2004 was estimated at 5,914,000 cu m (208,700,000 cu ft), of which 96% was for fuel.

## 26 MINING

As of 2004, Togo was a producer of cement, clinker, diamonds, gold, limestone and phosphate rock, the latter of which is found mostly in the coastal region and whose production accounts for most of the country's industrial activity. Phosphate rock is also a leading export commodity, accounting for around 24% of the country's gross domestic product (GDP). Phosphate rock production (by gross weight) in 2004 was 1.115 million metric tons, down from 1.441 million metric tons in 2003. Togo's output of phosphate rock has been declining since production hit a high of 2.73 million metric tons in 1996. Virtually the entire output was exported, the principal destination being the European Union (EU). However, the phosphate rock currently mined in the coastal region contains a high amount of cadmium (about 150 milligrams per kilogram; mg/kg), and the EU is considering setting a 60mg/kg cadmium limit on imports of phosphate rock within five years, followed by a 20mg/kg limit within 15 years. Although cadmium-free resources have been identified in Togo's northwest, they are not currently being mined. The phosphate industry was nationalized in 1974, and production was carried-on by the Togolese Office of Phosphates (Office Togolais des Phosphates—OTP), one of Togo's largest employers. Although the government was pursuing the privatization of its phosphate mines; no serious offers were made.

Exploitation of marble reserves in the region around Niamtougou was begun in 1970 by the Togolese Marble Co. The state-run Nouvelle Sotoma closed operations in 1991, and the government has been looking for private investors to lease or purchase the operation.

Iron ore reserves, east of Bassari, were 95 million tons, averaging more than 40% iron. There was some artisanal recovery of diamond and gold. Other mineral deposits included attapulgite, barite, bauxite, bentonite, brick clay, chromite, copper, dolomite, garnet, granite, gypsum, kaolin, kyanite, limestone, manganese, monazite, nickel, peat, rutile, silica sand, and dimension stone. The government considered many of these potential small-scale operations.

## 27 ENERGY AND POWER

Togo, as of 1 January 2003 had no proven reserves of crude oil, natural gas, or oil refining capacity. All hydrocarbon needs were met by imports. In 2002, Togo's imports and consumption of re-

fined petroleum products averaged 11,870 barrels per day. There were no recorded imports or consumption of natural gas in 2002.

Togo's main energy source is electricity. Togo's installed electrical generating capacity in 2002 totaled 0.035 million kW, of which 0.032 million kW of capacity came from conventional thermal plants, and 0.003 million kW came from Hydroelectric sources. Electric power production in 2002 amounted to 0.115 billion kWh, of which conventional thermal plants produced 0.112 billion kWh, and hydroelectric plants the rest. Demand for electric power that year came to 0.602 billion kWh, necessitating electricity imports of 0.500 billion kWh.

## 28 INDUSTRY

Manufacturing represents a small part of the economy (6–8%), with textiles and the processing of agricultural products—palm oil extraction, coffee roasting, and cotton ginning and weaving—being the most important sectors. Cocoa, coffee, and cotton generate some 40% of export earnings, with cotton being the most important cash crop. Other industries were developed to provide consumer goods—footwear, beverages, confectioneries, salt, and tires. Phosphate mining, however, is the most important industrial activity, accounting for 5% of GDP and 26–28% of exports in 2002. Togo as of 2006 was the world's fourth-largest producer of phosphate. Until the mid-1980s, most industries were partly or totally government owned. Sales and leases reduced the parastatal sector by nearly half by 1990, but by 2006 most privatization had stalled.

The government-owned phosphates plant put out a maximum of 3.3 to 3.5 metric tons a year, at the Office Togolaise de Phosphates (OTP). Togo's cement clinker plant, Cimtogo, is operated and owned by a Norwegian company, Scancem. The textile complex at Kara, along with a second plant at Dadja, were bought by American and Korean interests in 1987. A cotton ginning plant opened in 1991 in Talo; as of 2002 there were six cotton-producing factories in Togo, with a capacity of 205,000 metric tons. A plastics factory is 25% state owned and 75% owned by Danish and Swiss interests. The steel rolling mill in Lomé reopened in 1991. The state-owned national oil refinery was leased to Shell Togo and converted into a storage facility. The national dairy was bought by a Danish company in 1995. A free-trade zone opened in Lomé in 1990. Following the election of Faure Gnassingbé as president in 2005, there was more interest in this program, as the country wished to attract foreign business from Asia and Europe in the industry and service sectors.

Togo is involved in the \$500 million West Africa Gas Pipeline. The pipeline's estimated capacity is 400 million cubic feet per day, and is expected to supply industry in Nigeria, Ghana, Benin, and Togo. Construction of the pipeline began in 2005.

## 29 SCIENCE AND TECHNOLOGY

The National Institute of Scientific Research, founded in 1965 at Lomé, is the central scientific coordinating body. Several French research institutes have branches in the capital, and there are pilot farm projects throughout the country. The University of Benin at Lomé maintains faculties of sciences and medicine and schools of engineering and agriculture. Togo also has an agricultural school at Kpalimé and a technical college at Sokodá. In 1987–97, science and engineering students accounted for 35% of college and uni-

versity enrollments. In the same period, expenditures for research and development totaled 0.5% of GNP. For the period 1990–2001, there were an estimated 102 scientists and engineers, and 65 technicians engaged in research and development per million people. High technology exports in 2002 were valued at \$1 million, accounting for 1% of the country's manufactured exports.

### 30 DOMESTIC TRADE

The Togolese are among the most active traders on the West African coast, with much of the domestic trade handled by women. The national trade organization, Société Nationale de Commerce (SONACOM), has a monopoly on importation and distribution of soaps, cereals, sugar, salt, and industrial products, but there is still a flourishing free market both within Togo and with neighboring countries.

Most wholesalers have their headquarters in Lomé, the principal commercial and financial center. In Lomé, some shops specialize in such lines as dry goods, foodstuffs, and hardware. Elsewhere, retailers deal in a wide variety of goods rather than specializing in a few products. In the smaller towns, individual merchants deal in locally grown products and items of the first necessity. Kpalimé, Sokodé, and Tsévié are smaller regional commercial and trade centers.

Business hours are from 8 AM to 5:30 PM, Monday through Friday, and from 7:30 AM to 12:30 PM on Saturday. Banks are normally open from 8 AM to 4 PM on weekdays only.

### 31 FOREIGN TRADE

Togo's export earnings in 2000 fell to nearly half their 1999 level due to sharp declines in coffee, cotton, and gold output. Togo's main export commodities are crude fertilizers, cotton, and cement. Other exports include coffee and cocoa.

In 2004, Togo's primary export partners were: Burkina Faso (16.3%), Ghana (15%), Benin (9.4%), Mali (7.6%), China (7.4%), and India (5.6%). Primary import partners included: China (25.5%), India (13.3%), and France (11.5%).

SOURCE: *Balance of Payment Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

### 32 BALANCE OF PAYMENTS

In 2005, the value of Togo's exports was estimated at \$768 million, and the value of imports at \$1.047 billion. The current account balance was estimated at -\$223 million. Togo had an external debt burden of \$2 billion in 2005. The country had \$331 million in reserves of foreign exchange and gold.

### 33 BANKING AND SECURITIES

The bank of issue is the Central Bank of the West African States (Banque Centrale des États de l'Afrique de l'Ouest-BCEAO), based in Dakar, which also acts in that capacity for Benin, Côte d'Ivoire, Niger, Senegal, and Burkina Faso. Togo has a 10% share in the BCEAO, the development bank of which has its headquarters in Lomé.

The most important commercial and savings banks include the Banque Internationale de L'Afrique (BIA), ECOBANK Togo, the Bank of Credit and Commerce International, the Libyan Arab-Togolese Bank of Foreign Commerce, the Banque Togolaise de Commerce et de L'Industrie (BTCl), and the Union Bank of Togo (the latter two with a state share of 35%).

Development banks include the Togolese Development Bank, founded in 1967, which has a 50% state share; the 36.4% state-owned National Farm Credit Fund; and the state-owned National Investment Co., which is intended to mobilize savings, guarantee loans to small- and medium-sized domestic enterprises, and amortize the public debt. The banking and credit systems are not well developed, and large sections of the population remain outside the monetary economy. The banking system was virtually shut down by the general strike in the first half of 1993 and a limited service operated until the second half of 1994.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$220.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits,

and money market mutual funds—was \$327.0 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There are no securities exchanges in Togo.

### 34 INSURANCE

The Togolese Insurance Group is 63% state owned; about a half-dozen French companies were also operating in Togo in the 1990s.

### 35 PUBLIC FINANCE

By the late 1970's, public investment expenditures had reached an unsustainable level (exceeding 40% of GDP), touched off by an earlier rise of commodity prices. As a result, large payment arrears on the external debt began to mount. In the mid-1980s, the fiscal deficit was reduced largely through IMF credits and debt reschedulings. The civil unrest of 1991 resulted in decreased revenues and increased expenditures, and led to an overall budget deficit of 7.5% of GDP. In 1992, further civil unrest widened the budget deficit to 8.5% of GDP. In 1994, Togo entered into new programs with the IMF and the World Bank.

The US Central Intelligence Agency (CIA) estimated that in 2005 Togo's central government took in revenues of approximately \$251.3 million and had expenditures of \$292.9 million. Revenues minus expenditures totaled approximately -\$41.6 million. Total external debt was \$2 billion.

### 36 TAXATION

Taxes are levied on individual incomes and on corporate profits and capital gains. A transactions tax, a tax on fuel consumption, and social security contributions are also paid. There are also registration and stamp taxes and a tax on income from securities. A 5% "solidarity" surtax on salaries was imposed in 1983 as an austerity measure. There was a value-added tax of 18% in 1998.

### 37 CUSTOMS AND DUTIES

There are no export controls. Tariffs are based on a nondiscriminatory schedule at 5%, 10%, or 20% and there is a customs stamp tax and a 3% statistical tax. A common external tariff (CET) for members of the West African Economic and Monetary Union (WAEMU) is set at a maximum of 22% for goods coming from outside the WAEMU. Restricted or prohibited goods include arms, ammunition, narcotics, and explosives.

### 38 FOREIGN INVESTMENT

In the 1980s, Togo was distinguished by a relatively pro-Western, entrepreneurial stance, but incidents of political violence from 1991 to 1994—including the targeting of foreign-owned shops (principally Lebanese and Indian) by rioters in January 1993—and in 1998, following the contested presidential election in June, together with the maintenance of many restrictions on foreign investment and evidence of increased corruption have deterred foreign investment as well as stalled the privatization process. Togo's current investment code, enacted April 1990, was designed as an

improvement over the previous code, and offers foreign investors guaranteed repatriation of capital and profits. The former investment code offered tax exemptions, but these were abused, and were removed in the 1990 revision. The investment code, which applies only to foreign investment of about \$42,000, allows foreign participation up to 100% ownership in eight listed sectors (agriculture, fishing, and forestry; manufacturing; mining; low-cost housing; tourist infrastructure; agricultural storage; applied research; and socio-cultural activities), requires that the business must employ at least 60% local workers and provide at least 25% of the funding. The 1989 export processing zone (EPZ) law gives companies the advantages of duty-free imports of materials for production, a less restrictive labor code, and the ability to hold foreign currency accounts. About 35 firms were operating in the EPZ in 2002, representing investments from France, Italy, Norway, Denmark, the United States, India, and China. A severe electricity shortage in the EPZ from March to May 1998 hurt manufacturing enterprises particularly. Prospects for foreign investment in the EPZ in the industrial and service sectors looked brighter after the election of Faure Gnassingbé in 2005. In 2000 a Franco-Canadian consortium took over the state power company.

The annual inflow of foreign direct investment (FDI) to Togo rose from \$23 million in 1997 to a high of almost \$70 million in 1999. FDI inflow declined to \$57.2 million in 2000, but recovered to \$67 million in 2001. As a percent of gross fixed capital formation, FDI inflows rose from 11.3% in 1997 to nearly 35% in 1999, averaging about 30% in 2000 and 2001. In 2003, FDI amounted to 1.12% of GDP.

Major foreign investors include the United States, France, Germany, and Denmark. Petroleum products distribution, seafood processing, construction, textile milling, and agricultural processing are the main foreign businesses. The top corporate tax rate in 2006 was 40%.

### 39 ECONOMIC DEVELOPMENT

The 1981–85 development plan called for spending roughly equal allocation levels for rural development (26.5%), industry (29.2%), and infrastructure (29.5%). In the 1986–90 development plan, principal allocations were for infrastructure and rural development.

Of the development funds for the 1986–90 plan, 90% were sought from foreign sources. Principal sources of development aid are France, Germany, the United States, China, the EU, the World Bank, and IDA. France ranked first among the bilateral donors, with Germany second. The government was diverted from implementing the plan by international financial considerations and concerns over the process of democratization. In 1998 the EU and World Bank suspended aid because of such considerations, and poor economic performance. Accords signed in 1999 brought back some interest in developing the country economically, but the major setback remained inadequate political development. While most bilateral and multilateral aid to Togo remained frozen as of early 2006, the EU initiated a partial resumption of cooperation and development aid to Togo in late 2004, based upon commitments by Togo to expand opportunities for political opposition and liberalize portions of the economy.

Togo is a member of the Economic Community of West African States (ECOWAS), whose development fund is located in Lomé.

The country is also a member of the West African Economic and Monetary Union (UEMOA). Affiliated with the UEMOA is the West African Development Bank, also based in Lomé.

#### 40 SOCIAL DEVELOPMENT

The government's social welfare program, under a 1973 law, amended in 2001, includes family allowances and maternity benefits; old age, disability, and death benefits; and workers' compensation. Retirement is normally allowed at age 55. The program covers employed persons, students, apprentices and members of cooperatives. Maternity benefits are provided for 14 weeks to working women. The labor code requires employers to provide paid sick leave. Family allowances are available for almost all workers with children, including domestic, casual, and temporary laborers. The program supplements a continued strong sense of social obligation to one's family or clan, even among those in urban centers.

The status of women is improving, but they are still subject to legal and social restrictions. A husband may deny his wife the right to work and has legal control over her earnings. Women face discrimination in employment and access to education. A wife has no financial rights in a divorce and no inheritance rights upon the death of her husband. Polygamy is practiced. Although illegal, female genital mutilation is performed on numerous girls and women. Domestic abuse and violence are widespread. Child labor also continued to be a problem.

The human rights record of the Togolese government remains poor. Abuses include political repression, excessive force by police (with little accountability), and arbitrary arrest and detention. Prison conditions remained very harsh. Human rights organizations are permitted to exist, although they may be subject to intimidation by the government.

#### 41 HEALTH

Medical services include permanent treatment centers and a mobile organization for preventive medicine. Special facilities treat leprosy, sleeping sickness, and mental illness. All services are free except at the clinic attached to the hospital in Lomé, where some patients pay a nominal fee. In 2004, there were an estimated 6 physicians, 17 nurses, 1 dentist, 3 pharmacists, and 7 midwives per 100,000 people. About 61% of the population had access to health care services, and total health care expenditure was estimated at 2.6% of GDP. Approximately 54% of the population had access to safe drinking water and 34% had adequate sanitation.

The Mobile Service for Hygiene and Preventive Medicine performs mass inoculations, carries out pest control campaigns, and provides education in hygiene and basic preventive measures. Its activities have led to significant decreases in mortality caused by smallpox, yellow fever, and sleeping sickness. Yaws, malaria, and leprosy continue to be major medical problems. Immunization rates for children up to one year old were: tuberculosis, 73%; diphtheria, pertussis, and tetanus, 71%; polio, 71%; and measles, 58%. Rates for DPT and measles were, respectively, 41% and 43%.

The crude birth rate and overall mortality rate were estimated at, respectively, 36.1 and 11.3 per 1,000 people. The fertility rate in 2000 was five children per woman living through her childbearing years. The infant mortality rate was 62.20 per 1,000 live births in 2005 and the maternal mortality rate was 480 per 100,000 live births. Average life expectancy in 2005 was 57.01 years.

The HIV/AIDS prevalence was 4.10 per 100 adults in 2003. As of 2004, there were approximately 110,000 people living with HIV/AIDS in the country. There were an estimated 10,000 deaths from AIDS in 2003.

At least 50% of the women in Togo underwent female genital mutilation. The government has published a policy opposing the practice.

#### 42 HOUSING

With the limited resources at its disposal, the government is endeavoring to solve the problem of urban overcrowding by promoting housing schemes and establishing sanitation facilities. According to the latest available information for 1980–88, total housing units numbered 470,000 with 6.2 people per dwelling.

Rural dwellings are generally made from sun-dried mud bricks and mud plaster, with straw roofs. Urban dwellings are made of cement blocks and/or bricks with brick or iron sheeted roofs.

#### 43 EDUCATION

Six years of primary education (ages 6–12) is compulsory and free of charge. Secondary education lasts for seven years, with students attending either general or technical secondary schools. Mission schools play an important role in education.

In 2001, about 2% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 91% of age-eligible students. In 2000, secondary school enrollment was about 26.6% of age-eligible students. It is estimated that about 77.8% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2000; the ratio for secondary school was about 31:1. In 2000, private schools accounted for about 40% of primary school enrollment and 18% of secondary enrollment.

The University of Lomé and the University of Kara are the primary sites for higher education. Lomé also has colleges of administration, architecture, and urban planning. In 1999, it was estimated that about 4% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 53%, with 68.5% for men and 38.3% for women.

As of 2003, public expenditure on education was estimated at 2.6% of GDP, or 13.6% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Lomé has a collection of approximately 18,000 volumes. The University of Lomé Library offers some library services to the public. There is a public library with 26 service points holding a total of 63,000 volumes. The National Museum, founded in Lomé in 1975, has ethnography, history, and art exhibits. There are regional museums in Aného, Kara, Savanes, and Sokode.

#### 45 MEDIA

Telecommunications links are maintained with major African, European, and American cities. There is an automatic telephone exchange in Lomé. In 2003, there were an estimated 12 mainline telephones for every 1,000 people; about 27,500 people were on a waiting list for telephone service installation. The same year,

there were approximately 44 mobile phones in use for every 1,000 people.

The government owns the only major television station as well as the primary radio stations. The radio network presents programs in French, English, and local languages. Television service, broadcast in French and local languages, began in 1973. In 2003, there were an estimated 263 radios and 123 television sets for every 1,000 people. The same year, there were 32 personal computers for every 1,000 people and 42 of every 1,000 people had access to the Internet. There was one secure Internet server in the country in 2004.

*The Journal Officiel de la République du Togo* is published daily in Lomé; another Lomé daily, *Togo-Presses*, published in French and *Ewe*, had a circulation of 15,000 in 1999. Both are government owned. In 2005, there were at least six privately owned weekly papers.

The constitution of Togo provides for freedom of speech and of the press; however, though the government is said to generally respect these rights, it has on one occasion intimidated journalists through threats, detention, and other persecution. Opposition media are tolerated, though sometimes censored or prevented access to information.

#### 46 ORGANIZATIONS

The Chamber of Commerce, Agriculture, and Industry is active in Lomé. The Federation of Non-Government Organizations of Togo helps promote small enterprise development by providing training and lobbying services. The African Organization of Supreme Audit Institutions, a large multinational organization promoting high ethical business and accounting standards, is based in Lomé.

The major women's and youth groups are affiliated with the RPT. There is also a Junior Chamber, the Scout Association of Togo, and YMCA/YWCA programs for youth. Sports associations promote amateur competitions in such pastimes as tae kwon do, baseball and softball, badminton, and track and field. Cultural organizations, all located in Lomé, include the Alliance Française, American Cultural Center, Goethe-Institute, and Togolese Association for Cultural Exchanges with Foreign Countries.

Social action organizations include Islands of Peace, the Adventist Development and Relief Agency, and the Togo Association of Volunteers for Development. Volunteer service organizations, such as the Lions Clubs International, are also present. There are national chapters of the Red Cross Society, Caritas, UNICEF, and CARE Togo.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include the Mandouri hunting reserve in the northeast, and the beaches and deep sea fishing of the Gulf of Guinea coast. Even though social and political calm has been restored after disturbances in the early 1990s, there has been lack of financial resources for the development of tourism. In 2003, there were 60,592 tourist arrivals creating an 11% occupancy rate in the 4,480 hotel rooms with 6,720 beds. Tourism receipts totaled about \$16 million in 2002.

According to 2005 estimates of the US Department of State, the average daily cost of staying in Lomé was \$170, and Lama Kara and other small areas were significantly smaller averaging \$72.

#### 48 FAMOUS TOGOLESE

Togo's most prominent statesman was Sylvanus Olympio (1902–63), who led his country's fight for independence and was its first president. Gnassingbé Eyadéma (Étienne Eyadéma, 1937–2005) was president of Togo from 1967 until his death in 2005, when his son Faure Essozimna Gnassingbé (b.1966) became president. Edem Kodjo (b.1938) was OAU secretary-general, 1978–84.

#### 49 DEPENDENCIES

Togo has no territories or colonies.

# TUNISIA

Republic of Tunisia  
*Al-Jumhuriyah at-Tunisiyah*

**CAPITAL:** Tunis

**FLAG:** Centered on a red ground is a white disk bearing a red crescent and a red five-pointed star.

**ANTHEM:** *Al-Khaladi (The Glorious)*.

**MONETARY UNIT:** The Tunisian dinar (D) is a paper currency of 1,000 millimes. There are coins of 1, 2, 5, 10, 20, 50, and 100 millimes and of ½, 1, and 5 dinars, and notes of 1, 5, 10, and 20 dinars. D1 = \$0.78125 (or \$1 = D1.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 20 March; Martyrs' Day, 9 April; Labor Day, 1 May; Victory Day, 1 June; Republic Day, 25 July; Women's Day, 13 August; Evacuation Day, 15 October; Accession of President Ben Ali, 7 November. Movable religious holidays include 'Id al-Fitr, 'Id al-Adha, 1st of Muharram (Muslim New Year), and Milad an-Nabi.

**TIME:** 1 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the northern coast of Africa, Tunisia has an area of 163,610 sq km (63,170 sq mi), extending 792 km (492 mi) N–S and 350 km (217 mi) E–W. Comparatively, the area occupied by Tunisia is slightly larger than the state of Georgia. It is bounded on the N and E by the Mediterranean Sea, on the SE by Libya, and on the W by Algeria, with a total boundary length of 2,572 km (1,598 mi), of which 1,148 km (713 mi) is coastline.

Tunisia's capital city, Tunis, is located on the northern coast.

## <sup>2</sup>TOPOGRAPHY

The Nemencha mountains—eastern extensions of the Atlas chain—divide the country into two distinct regions, the well-watered north and the semiarid south. The latter includes Tunisia's highest point, Jebel Chambi, 1,544 m (5,064 ft), near Kasserine. The northern region is further divided into three subregions: the northwest, with extensive cork forests; the north-central, with its fertile grasslands; and the northeast, from Tunis to Cape el-Tib, noted for its livestock, citrus fruits, and garden produce. The southern region contains a central plateau and a desert area in the extreme south, which merges into the Sahara and is characterized by date palm oases and saline lakes, the largest of which is Chott el Djerid. The Medjerda, the most important river system, rises in Algeria and drains into the Gulf of Tunis.

## <sup>3</sup>CLIMATE

Tunisia consists of two climatic belts, with Mediterranean influences in the north and Saharan in the south. Temperatures are moderate along the coast, with an average annual reading of 18°C (64°F), and hot in the interior south. The summer season in the north, from May through September, is hot and dry; the winter,

which extends from October to April, is mild and characterized by frequent rains. Temperatures at Tunis range from an average minimum of 6°C (43°F) and maximum of 14°C (57°F) in January, to an average minimum of 21°C (70°F) and maximum of 33°C (91°F) in August. Precipitation in the northern region reaches a high of 150 cm (59 in) annually, while rainfall in the extreme south averages less than 20 cm (8 in) a year.

## <sup>4</sup>FLORA AND FAUNA

Tunisia has a great variety of trees, including cork oak, oak, pines, jujube, and gum. More than one-fourth of the country is covered by esparto grass, which is the characteristic vegetation of the steppe region. Jackal, wild boar, and several species of gazelle are numerous. Horned vipers and scorpions are common in the Sahara. The sleeved mouflon, a species of wild sheep, is found in the mountains. As of 2002, there were at least 78 species of mammals, 165 species of birds, and over 2,100 species of plants throughout the country.

## <sup>5</sup>ENVIRONMENT

Loss of agricultural land to erosion, and degradation of range and forest lands because of overgrazing or overcutting of timber for fuel are major concerns. Erosion threatens about 76% of the nation's land area. Overcrowding and poor sanitation in urban centers are also major environmental problems. Pollution from industry and farming activities threatens the nation's limited water supply. Tunisia has about four cu km of renewable water resources with 86% of annual withdrawals used for farming and 1% for industrial purposes. Only 60% of the people living in rural areas have access to improved water sources. The nation's cities produce

about 0.9 million tons of solid waste; inadequate disposal of toxic and hazardous wastes poses health risks.

There are four national parks, including one natural UNESCO World Heritage Site; however, in 2003 less than 1% of the total land area was protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 10 types of mammals, 9 species of birds, 3 types of reptiles, 9 species of fish, and 5 species of invertebrates. Threatened species in Tunisia include the Barbary hyena, Barbary leopard, two species of gazelle (Cuvier's and slender-horned), the Mediterranean monk seal, and oryx. The Bubal hartebeest has become extinct. A World Wildlife Fund project succeeded in rescuing the Atlas deer from near extinction.

## 6 POPULATION

The population of Tunisia in 2005 was estimated by the United Nations (UN) at 10,043,000, which placed it at number 80 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were 102 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.1%. The government has had a commitment to family planning and reproductive health since the 1990s. The projected population for the year 2025 was 11,583,000. The overall population density was 61 per sq km (159 per sq mi), ranging from only about 4 per sq km (10 per sq mi) in the south to over 1,000 per sq km (400 per sq mi) in the thickly settled north.

The UN estimated that 65% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.59%. The capital city, Tunis, had a population of 1,996,000 in that year. Other cities are Sfax (Safaqis); Ariana (a suburb of Tunis); Bizerte (Binzart); Gabes; and Sousse (Susa).

## 7 MIGRATION

French and Italian migration to Tunisia dates from the French military occupation of 1881. There were 255,000 Europeans in Tunisia in 1956, but most have since left the country. With the conclusion of the Franco-Algerian war in 1962, 110,000 Algerian refugees returned to their homeland.

Internal migration constitutes a serious problem. Rural unemployment has caused significant population movement to urban centers, where conditions are often harsh. Since 1964, the government has sought to decentralize industry and to resettle nomads and seminomads in permanent villages. Many Tunisians seek employment abroad; in the early 1990s there were approximately 350,000 Tunisian workers in foreign countries, mostly Libya and France. The total number of migrants in 2000 was 38,000. In 2003, the Tunisian government, along with the Algeria and Morocco, cracked down on sub-Saharan migration that was heading toward Europe.

In 2004, there were some 90 refugees and 12 asylum seekers. The net migration rate in 2005 was estimated as -0.54 migrants per 1,000 population. The government views the migration levels as satisfactory. Worker remittances in 2003 were \$1.1 billion.

## 8 ETHNIC GROUPS

Tunisia has a highly homogeneous population, almost entirely of Arab and Berber descent (98%). The small European population (1%) consists mostly of French and Italians. Tunisian Jews and other groups make up the remaining 1% of the populace.

## 9 LANGUAGES

Arabic is the official language and one language used in commerce. French is taught to all school children and is also commonly used in commerce and administration. Small numbers of people speak Berber.

## 10 RELIGIONS

Islam is the state religion and nearly all Tunisians are Sunni Muslims. A small number are of the mystical Sufi branch. The Christian community, which contains only about 25,000 people, is made up primarily of Roman Catholics, Russian Orthodox, French Reformists, Anglicans, Greek Orthodox, and a small number of Jehovah's Witnesses and Seventh-Day Adventists. There are approximately 1,500 Jews in the country and about 150 Baha'is.

The constitution provides for the free exercise of religions that do not disturb the public order. Under this stipulation, the government restricts groups that are considered to be part of Islamic fundamentalist movements. Though members of other established, non-Muslim religions are generally allowed to practice freely, proselytizing is prohibited by law. Muslims who convert to another faith are often denied the right to vote, obtain a passport, and to enlist in the army, as well as facing social discrimination. Members of the Baha'i faith are only allowed to practice their faith in private, since the government considers the religion to be a heretical sect of Islam. The government offers some state support of the Jewish community, such as paying the salary of the grand rabbi, presumably based on the point that Judaism is considered to be indigenous to the country. The government prohibits the formation of political parties based on religious doctrines.

## 11 TRANSPORTATION

As of 2002, Tunisia had 23,100 km (14,354 mi) of highway, of which 18,226 km (11,326 mi) were paved, including 142 km of expressways. Roads connected the major cities and provided access to most regions of the country. In 2003, there were 585,194 passenger cars and 288,285 commercial vehicles. The Tunisian National Railway Co. (Société National des Chemins de Fer Tunisiens) operates over 2,152 km (1,337 mi) of standard, narrow and dual gauge track, located mostly in the northern region and central plateau. Most of the country's rail system is narrow gauge, accounting for 1,674 km (1,040 mi), followed by standard gauge at 468 km (291 mi). The remainder—10 km (6.2 mi)—consists of dual gauge right-of-way. A metro rail system for Tunis opened in 1985.

Tunisia has excellent shipping facilities at Tunis, the principal port, and at Sfax, Sousse, Bizerte, and Gabes; Sekhira is the port for oil exports. The free port terminal at Zarzis is scheduled for further development at an estimated cost of \$20.8 million, in order to expand harbor and storage facilities. Tunisia's modest merchant fleet, established in 1958, operates a freighter service principally to French ports. As of 2005 there were 12 ships of 1,000 GRT

or more, totaling 124,733 GRT. The Tunisian Navigation Co. is the principal shipping firm.

Airports in 2004 numbered an estimated 30, of which 14 had paved runways as of 2005. Tunis-Carthage Airport, about 14 km (9 mi) from the capital, provides direct connections to most of the major cities of Europe and the Middle East. There are five other international airports, at Menzel Bourguiba (Monastir), Zarzis (Jerba), Tozeur, Tabarka, and Sfax. Tunis Air, the national airline, is owned by the Tunisian government (51%), Air France, and Tunisian citizens. In 2003, about 1.720 million passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The history of early Tunisia and its indigenous inhabitants, the Berbers, is obscure prior to the founding of Carthage by seafaring Phoenicians from Tyre (in present-day Lebanon) in the 9th century BC. A great mercantile state developed at Carthage (near modern-day Tunis), which proceeded to dominate the western Mediterranean world. The great Carthaginian general Hannibal engineered the monumental trans-Alpine assault on Rome in 211 BC and inflicted costly losses on the Roman Empire until choosing suicide rather than capture in 183 BC. Carthage was eventually burned to the ground by the Romans at the culmination of the Punic Wars in 146 BC. The Romans subsequently rebuilt the city, making it one of the great cities of the ancient world. With the decline of the Roman Empire, Tunisia fell successively to Vandal invaders during the 5th century AD, to the Byzantines in the 6th century, and finally to the Arabs in the 7th century. Thenceforth, Tunisia remained an integral part of the Muslim world.

In the 9th century, the governor of Tunisia, Ibrahim ibn Aghlab, founded a local dynasty nominally under the sovereignty of the 'Abbasid caliphs of Baghdad. The Aghlabids conquered Sicily and made Tunisia prosperous. In 909, the Fatimids ended Aghlabid rule, using Tunisia as a base for their subsequent conquest of Egypt. They left Tunisia in control of the subordinate Zirid dynasty until the 11th century, when the Zirids rebelled against Fatimid control. The Fatimids unleashed nomadic Arab tribes, the Banu Hilal and Banu Sulaym, to punish the Zirids, a move resulting in the destruction of the Zirid state and the general economic decline of Tunisia. In the 13th century, the Hafsids, a group subordinate to the Almohad dynasty based in Morocco, restored order to Tunisia. They founded a Tunisian dynasty that, from the 13th century to the 16th, made Tunisia one of the flourishing regions of North Africa. In the beginning of the 16th century, however, Spain's occupation of important coastal locations precipitated the demise of Hafsids rule.

In 1574, the Ottoman Turks occupied Tunisia, ruling it with a dey appointed by the Ottoman ruler. The dey's lieutenants, the beys, gradually became the effective rulers, in fact if not in name. Ultimately, in 1705, the bey Husayn ibn 'Ali established a dynasty. Successive Husaynids ruled Tunisia as vassals of the Ottomans until 1881 and under the French until 1956, the year of Tunisia's independence (the dynasty was abolished in 1957). During the 19th century, the Tunisian dynasts acted virtually as independent rulers, making vigorous efforts to utilize Western knowledge and technology to modernize the state. But these efforts led to fiscal bankruptcy and thus to the establishment of an international commission made up of British, French, and Italian representa-

LOCATION: 7°33' to 11°38'E; 29°54' to 37°21' N. BOUNDARY LENGTHS: Mediterranean coastline, 1,028 kilometers (639 miles); Libya, 459 kilometers (285 miles); Algeria, 958 kilometers (595 miles). TERRITORIAL SEA LIMIT: 12 miles.

tives to supervise Tunisian finances. Continued rivalry between French and Italian interests culminated in a French invasion of Tunisia in May 1881. A protectorate was created in that year by the Treaty of Bardo; the Convention of La Marsa (1883) allowed the Tunisian dynasty to continue, although effective direction of affairs passed to the French. French interests invested heavily in Tunisia, and a process of modernization was vigorously pursued; at the same time, direct administration in the name of the dynasty was gradually expanded. The Tunisians, in turn, supported France in World War I.

The beginnings of modern nationalism in Tunisia emerged before the outbreak of the war, with hopes of greater Tunisian participation in government encouraged during the war by pronouncements such as the Fourteen Points (1918) of Woodrow Wilson. When these hopes were not realized, Tunisians formed a moderate nationalist grouping, the Destour ("Constitutional") Party. Dissatisfaction over the group's poor organization led, in 1934, to a split: the more active members, led by Habib Bourguiba, founded the Neo-Destour Party. France responded to demands for internal autonomy with repression, including the deposition and exile of the sovereign Munsif Bey. On 23 August 1945, the two Destour parties proclaimed that the will of the Tunisian people was independence. But the French still held firm. In December 1951, they again rejected a request by the Tunisian government for internal autonomy. The situation worsened when extremists among the French colonists launched a wave of terrorism. Finally, on 31 July 1954, French Premier Pierre Mendès-France promised the bey internal autonomy. After long negotiations accompanied by considerable local disorder, a French-Tunisian convention was signed on 3 June 1955 in Paris. On 20 March 1956, France recognized Tunisian independence.

In April 1956, Habib Bourguiba formed the first government of independent Tunisia, and on 25 July 1957, the National Assembly, having established a republic and transformed itself into a legislative assembly, elected Bourguiba chief of state and deposed the bey. A new constitution came into effect on 1 June 1959. Bourguiba won the first presidential election in 1959 and was reelected in 1964, 1969, and 1974, when the National Assembly amended the constitution to make him president for life.

Economic malaise and political repression during the late 1970s led to student and labor unrest. A general strike called by the General Union of Tunisian Workers (UGTT) on 26 January 1978, in order to protest assaults on union offices and the harassment of labor leaders, brought confrontations with government troops in which at least 50 demonstrators and looters were killed and 200 trade union officials, including UGTT Secretary-General Habib Achour, were arrested. Prime Minister Hedi Nouria was succeeded by Mohamed Mzali in April 1980, marking the advent of a political liberalization. Trade union leaders were released from jails, and Achour ultimately received a full presidential pardon. In July 1981, the formation of opposition political parties was permitted. In elections that November, candidates of Bourguiba's ruling Destourian Socialist Party, aligned in a National Front with the UGTT, garnered all 136 National Assembly seats and 94.6% of the popular vote. An economic slump in 1982–83 brought a renewal of tensions; in January 1984, after five days of rioting in Tunis, the government was forced to rescind the doubling of bread prices that had been ordered as an austerity measure.

After independence, Tunisia pursued a nonaligned course in foreign affairs while maintaining close economic ties with the West. Tunisia's relations with Algeria, strained during the 1970s, improved markedly during the early 1980s, and on 19 March 1983 the two nations signed a 20-year treaty of peace and friendship. Relations with Libya have been stormy since the stillborn Treaty of Jerba (1974), a hastily drafted document that had been intended to merge the two countries into the Islamic Arab Republic; within weeks after signing the accord, Bourguiba, under pressure from Algeria and from members of his own government, retreated to a more gradualist approach toward Arab unity. A further irritant was the territorial dispute between Libya and Tunisia over partition of the oil-rich Gulf of Gabes, resolved by the international Court of Justice in Libya's favor in 1982. Tunisian-Libyan relations reached a low point in January 1980, when some 30 commandos (entering from Algeria but apparently aided by Libya) briefly seized an army barracks and other buildings at Gafsa in an abortive attempt to inspire a popular uprising against Bourguiba. In 1981, Libya vetoed Tunisia's bid to join OAUPEC and expelled several thousand Tunisian workers; more Tunisian workers were expelled in 1985.

Following the evacuation of the Palestine Liberation Organization (PLO) from Lebanon in August 1982, Tunisia admitted PLO Chairman Yasir Arafat and nearly 1,000 Palestinian fighters. An October 1985 Israeli bombing raid on the PLO headquarters near Tunis killed about 70 persons. By 1987, the PLO presence was down to about 200, all civilians.

In 1986 and 1987, Bourguiba dealt with labor agitation for wage increases by again jailing UGTT leader Achour and disbanding the confederation. He turned on many of his former political associates, including his wife and son, while blocking two legal opposition parties from taking part in elections. Reasserting his control of Tunisian politics, Bourguiba dismissed Prime Minister Mzali, who fled to Algeria and denounced the regime. A massive roundup of Islamic fundamentalists in 1987 was the president's answer to what he termed a terrorist conspiracy sponsored by Iran, and diplomatic relations with Tehrān were broken. On 27 September 1987, a state security court found 76 defendants guilty of plotting against the government and planting bombs; seven (five in absentia) were sentenced to death.

General Zine el-Abidine Ben Ali, the trusted minister of interior who had conducted the crackdown, was named prime minister in September 1987. Six weeks later, Ben Ali seized power, ousting Bourguiba, whom he said was too ill and senile to govern any longer. He assumed the presidency himself, promising political liberalization. Almost 2,500 political prisoners were released and the special state security courts were abolished. The following year, Tunisia's constitution was revised, ending the presidency for life and permitting the chief executive three five-year terms. Elections were advanced from 1991 to 1989 and Ben Ali ran unopposed. Candidates of the renamed Destour Party, the Constitutional Democratic Rally (RCD), won all of the 141 seats in the Chamber of Deputies, although the Islamist party, an-Nahda, won an average of 18% of the vote where its members contested as independents.

The constitution does not permit political parties based on religion, race, regional, or linguistic affiliation, and thus Islamist parties in Tunisia face an uphill battle in gaining official recognition.

After an attack on RCD headquarters in 1990, the government moved decisively against its Islamist opposition. Thousands were arrested and in 1992 military trials, 265 were convicted.

In the March 1994 presidential election, two men not Islamist-affiliated, after announcing their candidacy for the presidency, were arrested and Ben Ali again was unopposed and was reelected with 99.9% of the vote. In the electoral system established for the 1994 Chamber of Deputies elections, the number of seats had been increased from 144 to 163. That year, a new proportional system was established where 144 of the seats were to be contested and were won by the majority party and the remaining 19 were to be distributed to the remaining contesting parties according to their vote draw at the national level. In the parliamentary elections the president's RCD took all 144 seats with the remaining six parties dividing up the 19 set-aside seats. In the 1995 municipal elections, out of 4,090 seats contested in the 257 constituencies, independent candidates and members of the 5 recognized political parties won only 6 of the seats.

In July 1998 Ben Ali announced his plans to contest the presidential elections scheduled for October 1999. Two other candidates, Mohamed Belhaj Amor of the PUP and Abderrahmane Tlili of the UDU also announced their candidacy. The parliament had again been enlarged to 182 members, with 34 seats guaranteed to the opposition. In the 1999 elections Ben Ali received 99.4% of the votes, with Amor receiving 0.3% and Tlili 0.2%. The RCD was awarded with 148 seats and the 5 other official parties splitting the remaining 34 seats.

In the 1990s Tunisia continued to follow a moderate, non-aligned course in foreign relations, complicated by sporadic difficulties with its immediate neighbors. Relations with Libya remained tense after ties were resumed in 1987. However, Ben Ali pursued normalized relations, which dramatically improved over the next few years. Thousands of Tunisians found work in Libya as the border was reopened. In 1992 the UN Security Council imposed sanctions against Libya due to its decision not to hand over for trial suspects in the Pan Am bombing affair. Tunisia did not wholeheartedly support all of the UN Security Council sanctions due to the real economic ties that the two countries have. Due to these ties Libya's difficulties impacted on the ability of Tunisia and the Union of the Arab Maghreb (UAM) to establish closer relations with the European Union. From 1995 forward, Tunisia lobbied at the international level for the cessation of the sanctions due to the suffering that was caused to the Libyan people as well as to the regional tensions that the sanctions were creating. By 1997 Tunisia had quietly resumed joint economic projects and bilateral visitation with Libya. Following Libya's 1998/99 decision to hand over the Pan Am bombing suspects for trial in the Netherlands for the 1988 Pam Am explosion over Lockerbie, Scotland, Tunisia moved to normalize relations with Libya, including resumption of TunisAir flights to Tripoli in June 2000.

Ben Ali also appeared committed to the promotion of the UAM, an organization that became formalized in 1989 with Mauritania, Morocco, Algeria, Tunisia, and Libya. Ben Ali became president of the organization for 1993, though at this point the active work toward unification of the five countries was put on hold due in large part to the political and economic difficulties that Algeria and Libya faced internally and internationally. In 1999 the leaders of Mo-

rocco and Tunisia again called for a resuscitation of the organization and pledged to work toward that end in the following year.

Tunisia's relations with Algeria in the 1990s were controlled by the Islamist issue. The leadership of Tunisia's not-officially-recognized ah-Nahda party continued to be closely watched by both countries. With the decision of the Algerian military to annul their January 1992 elections in order to prevent the Islamists from gaining control of the government, relations improved between the two countries. Algeria signed a border agreement in 1993 with Tunisia, ratified during a state visit of the Algerian leader. Reciprocal visits between the leadership of the two countries reinforced their commitment to controlling their joint border and fighting "extremism."

In 1988 Abu Jihad, the military commander of the PLO, was assassinated near Tunis by Israeli commandos, provoking a Tunisian protest to the United Nations Security Council and a following resolution of condemnation of the Israeli aggression by the Council. However, relations with Israel then improved, and in 1993, Tunisia welcomed an official Israeli delegation as part of the peace process. Joint naval exercises between the two countries took place in March 1994. The PLO offices in Tunis were closed in 1994 as the new Palestinian Authority (PA) took up residence in Gaza. In 1996, following PA elections, Tunisia moved to establish low-level diplomatic relations with Israel as it also announced its decision to recognize PA passports. However, with the slowing of the peace process and the election of the Netanyahu government in Israel, improving relations between Israel and Tunisia cooled and remained on hold.

Ben Ali also moved to normalize relations with Egypt and visited Cairo in 1990 to that end, the first such trip by a Tunisian president since 1965. In 1997 several agreements regarding economic and cultural cooperation were signed between the two countries.

Although the United States has provided economic and military aid, Tunisia opposed American support for Kuwait following Iraq's invasion in 1990. The support of Iraq in this crisis caused a rift in relations with Kuwait that were finally healed, through Ben Ali's efforts, with the visit of Kuwait's crown prince to Tunis in 1996 and a loan from the Kuwait-based Arab Fund for Economic and Social Development being granted to Tunisia. At the same time, Tunisia continued good relations with Iraq and continued to call for a cessation of UN sanctions against Baghdad.

The consistent stance of Ben Ali's government toward Islamist parties has brought him friends in the West, though his own poor human rights record has provoked consternation from Western governments and vocal criticism from Western media and human rights organizations. Complaints against his regime have included torture under interrogation, deaths in custody, secret or unfair trials and long prison sentences for opposition leaders, inhumane prison conditions, and restrictions on free speech and the press, including controls on the use of satellite dishes. Ironically, the UN Committee against Torture (along with numerous other human rights groups and including the Arab Commission of Human Rights) denounced the police and security forces in Tunisia, while Tunisia was unanimously elected to the UN Human Rights Commission in 1997. This caused international controversy, and by 2006, a Human Rights Council replaced the UN Human Rights Commission. The Human Rights Council was meant to be a standing body that would meet year-round to promote and

protect human rights with a membership that excluded the worst human rights violators.

In July 1995, Tunisia signed an association agreement with the European Union that in 2007 would make the country part of a free-trade area around the Mediterranean known as the European Economic Area, the first southern Mediterranean country to be brought into the planned association. The United States has continued to offer praise to Tunisia and encouragement of US investment, but has held off on requested military aid. Relations with Italy, Tunisia's second-largest trading partner after France, have been complicated by the issues of illegal immigration from Tunisia and of fishing rights.

On 6 April 2000, Bourguiba died at age 96. A seven-day period of mourning was declared, and thousands of mourners lined his funeral procession route.

Following the 11 September 2001 terrorist attacks on the United States, the United States called upon all states to implement counterterrorism measures. On 11 April 2002, a truck exploded at a synagogue on the Tunisian resort island of Djerba, killing 21 people, including 14 German tourists. German intelligence officials reported the bombing was a terrorist attack, and cited links to the al-Qaeda organization. In November, Ben Ali called for an international conference on terrorism to establish an international code of ethics to which all parties would be committed. In December, the United States praised Tunisia for its efforts in combating terrorism, and for its "record of moderation and of tolerance in the region."

In a referendum held on 26 May 2002, voters overwhelmingly approved a series of constitutional amendments that would make a marked change in the country's political structure. They included: additional guarantees regarding the pretrial and preventive custody of defendants; the creation of a second legislative body; the elimination of presidential term limits, along with the setting of a maximum age ceiling of 75 years for a presidential candidate; and the consecration of the importance of human rights, solidarity, mutual help, and tolerance as values enshrined in the constitution.

In November 2002, Ben Ali announced a series of electoral reform measures. In addition to the creation of a second legislative body (Chamber of Advisors approved by the May referendum) these included provisions to further guarantee the fairness of voter registration and election processes, and provisions to reduce the minimum requirement for campaign financing and reimbursement by the state. He also called on radio and television operators to provide wider coverage of opposition parties and nongovernmental organizations, and introduced a bill that would guarantee citizens' privacy and protection of personal data.

Presidential and legislative elections were held on 24 October 2004. Ben Ali was reelected for a fourth term with 94.5% of the vote. His contenders included Mohamed Bouchiha (PUP), Mohamed Ali Halouani (Ettajdid), and Mounir Beji (PSDL). The main opposition group, the Democratic Progressive Party (PDP), pulled out of the election two days before the vote, saying its participation would only legitimize a masquerade of democracy. The legislative election for the Chamber of Deputies was dominated by the RCD, as was the election for the new Chamber of Advisors held on 3 July 2005. The next presidential and Chamber of Deputies

elections were to be held in October 2009. The next Chamber of Advisors election was to be held July 2011.

### 13 GOVERNMENT

According to the constitution of 1959, Tunisia is an Islamic republic, although since independence it has been a thoroughly secular state. The president, who is chief of state, must be a Muslim and a Tunisian citizen, born of a Tunisian father and grandfather, and at least 40 years old. He serves a five-year term. The president enjoys extensive powers, initiating and directing state policy and appointing judges, provincial governors, the mayor of Tunis, and other high officials. The cabinet, headed by a prime minister, varies in size and is under presidential domination.

The unicameral National Assembly or Chamber of Deputies (Majlis al-Ummah) was expanded in 1993 to 163 members and again in 1997 to 182 members, elected by general, free, direct, and secret ballot. Since 1994 the opposition has been guaranteed a number of seats in the assembly, with the changes introduced in 1997 guaranteeing them 20% of the assembly seats. All citizens 20 years of age or older may vote; candidates must be at least 25 years old and born of a Tunisian father or Tunisian mother. The assembly sits twice a year for five years, but may be extended in the event that a national emergency prevents new elections. Presidential ratification is required before a bill passed by the legislature can become law, but the assembly may override the president's veto by a two-thirds majority. The president may enact decrees in an emergency or when the assembly is in recess.

A series of constitutional amendments were overwhelmingly approved by voters in a 26 May 2002 referendum. Civil liberties were expanded, and human rights were guaranteed. Provisions for a second legislative body, a Chamber of Advisors, were made. Presidential term limits were abolished, and the age limit for a presidential candidate was raised from 70 to 75, thereby making Ben Ali, then age 65, eligible for reelection in 2004 and 2009.

### 14 POLITICAL PARTIES

The Constitutional Democratic Rally (RCD) dominates the country's political life. Its leader from its founding as the Neo-Destour Party in 1934 to 1987 was Habib Bourguiba. In the first national elections in 1956, all 98 seats in the National Assembly were won by the National Union, a united front of the Neo-Destour Party with the UGTT, the National Union of Tunisian Farmers, and the Tunisian Union of Craftsmen and Merchants. In the November 1959 elections for the National Assembly, the Communist Party (Parti Communiste Tunisien) presented a list of 13 candidates in Tunis and Gafsa; elsewhere, the Neo-Destour Party was unopposed, and the ruling party won all 90 seats at stake. From 1959 to 1994, the RCD (acting in 1981 as part of a National Front with the UGTT) held a monopoly of Assembly seats.

Banned in 1963, the Communist Party was the first opposition group to be fully legalized under the political liberalization of 1981. Two other parties, the Movement of Social Democrats (Mouvement des Démocrates Socialistes—MDS) and the Party of Popular Unity (Parti de l'Unité Populaire—PUP), failed to retain their provisional authorization when each fell short of receiving a 5% share of the total vote in the November 1981 election but nevertheless were formally legalized in 1983. The principal Islamist

party, an-Nahda, has been outlawed. In 1992, it was hit hard by the jailing of many of its senior leaders.

Due to a change in the 1994 electoral code to guarantee the opposition would win seats, opposition parties such as the Movement of Social Democrats (MDS) entered the Chamber of Deputies. As of 2006, there were seven officially recognized opposition parties: MDS, PUP, the Union of Democratic Unionists (UDU), Ettajdid (also called the Renewal Movement), the Social Democratic Liberal Party (PSDL), plus the Democratic Progressive Party (PDP) and the Democratic Forum for Labor and Liberties (FDTL), the only two not represented in the Chamber of Deputies as of the October 2004 elections. The RCD held 152 of the 182 seats as of 2006. The Islamist an-Nahda remained an outlawed party.

## 15 LOCAL GOVERNMENT

Tunisia is divided into 23 provinces (*wilayets*, or governorates). Each province is headed by a governor appointed by the president through the secretary of interior. The governor is assisted by elected municipal councils and a governmental council, members of which are appointed for a three-year term by the central government on the governor's nomination. Each province is in turn divided into delegations (*mutamadiyat*), the number of which varies with the size and social and economic importance of the province. The number of communes, or municipalities, in 2006 was 257. In local elections boycotted by the opposition in 1990, RCD candidates won control of all but one of the councils. In 1990 proportional representation for municipal elections was introduced, where the winning party would receive 50% of the council seats with the remaining seats to be proportionally divided between the other political parties according to their electoral draw.

Municipal elections were held in May 2005. Local council members serve five-year terms.

## 16 JUDICIAL SYSTEM

The constitution provides for an independent judiciary. The judiciary is susceptible to being influenced by the executive branch in practice. Magistrates are appointed by the president upon recommendation of the Supreme Council of the Magistracy; its members are drawn from the Department of Justice and the courts of appeal and cassation. In 2006, there were 51 cantonal courts, 23 courts of first instance, and 3 courts of appeal, located in Tunis, Sousse, and Sfax. A Court of Cassation in Tunis has three civil sections and one criminal section; it acts as the ultimate court of appeal. In addition, a High Court is constituted for the sole purpose of prosecuting a member of the government accused of high treason. The Council of State is an administrative tribunal empowered to resolve conflicts between citizens and the state and public authorities; as an accounting department, it is empowered to audit and examine government records.

Civil and criminal law generally follows French-influenced practices that evolved during the period of the protectorate. Since 1956 there has been a steady reform of existing Islamic legislation, including the abolition of polygamy. Shariah courts were abolished in 1956.

A military tribunal consisting of a presiding civilian judge from the Court of Cassation and four military judges hears cases involving military personnel as well as cases concerning civilians

when national security is deemed to be at stake. Decisions of the military tribunal may be appealed to the Court of Cassation.

## 17 ARMED FORCES

As of 2005, Tunisia had an Army of 27,000 active personnel equipped with 84 main battle tanks, 48 light tanks, 60 reconnaissance vehicles, 268 armored personnel carriers, and 276 artillery pieces. The Navy numbered 4,500 personnel. Major naval units totaled over nineteen patrol boats and two logistics/support vessels. The Air Force had 3,500 personnel, with 27 combat capable aircraft that included 12 fighters and 3 fighter ground attack aircraft, in addition to 11 search and rescue, 11 support, and 37 utility helicopters. Paramilitary forces consisted of a 12,000-member National Guard. Tunisia participated in peacekeeping efforts in the DROC, Burundi, Côte d'Ivoire and Ethiopia/Eritrea. The defense budget in 2005 totaled \$436 million.

## 18 INTERNATIONAL COOPERATION

Admitted to the United Nations on 12 November 1956, Tunisia belongs to ECA and several nonregional specialized agencies, such as the World Bank, the FAO, UNESCO, UNHCR, UNIDO, IAEA, and the WHO. The nation also participates in the African Development Bank, the Arab Bank for Economic Development in Africa, the Arab Fund for Economic and Social Development, the Islamic Development Bank, the Arab League, OAPEC, the Organization of the Islamic Conference (OIC), the New Partnership for Africa's Development (NEPAD), the Community of Sahel and Saharan States (CENSAD), G-77, the Arab Maghreb Union, and African Union. The nation has observer status in the OAS and Black Sea Economic Cooperation Zone. Tunisia was the site of the Palestine Liberation Organization (PLO) headquarters from 1982–93. Tunisia is part of the Nonaligned Movement.

In environmental cooperation, Tunisia is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Agriculture is still the mainstay of the Tunisian economy, although minerals (especially crude oil and phosphates), textiles, and tourism are the leading sources of foreign exchange. Industrial development has increased rapidly since the 1960s. Tunisians live a middle class lifestyle with almost 80% of household owning their own home. The GDP grew by 4.7% annually during 1961–70, by 7.3% during 1970–81, by only 2.9% during 1982–87, and by 4.6% during 1988–98. It stood at 4.8% in 2001. GDP growth slowed to a 15-year low of 1.9% in 2002 due to agricultural drought and sluggish tourism. Better rains between 2003–05 helped push GDP growth to around 5%. An association agreement with the European Union signed in 1998 was forecast to have negative short-term effects to the economy (due to the required drop of trade barriers), but positive long-term effects. Roughly 80% of foreign trade is carried out with Europe, and a free trade zone between Tunisia and the EU is to come into effect in 2010 as a result of the association agreement.

After a period of socialist economic policies Tunisia began a structural reform program with the IMF designed to encourage a

market-based economy. Privatization of state-owned enterprises began in 1987 with 67 of the government's 189 companies privatized through 1995. The privatization program, however, focused on smaller companies so as not to disrupt employment. Privatization of the energy, construction materials, and transport sectors, all of which contain unprofitable and overstaffed entities, has yet to occur. The reforms also decontrolled domestic prices and liberalized foreign trade. The private sector accounted for about 60% of output in 1999.

Tourism, increasing as a growth sector, experienced a decline in 2001 following the 11 September 2001 terrorist attacks on the United States: there were 13% fewer tourists arriving in Tunisia in the first half of 2002 than during the same period in 2001. However, the government doubled its expenditures on tourism promotion in 2002. A drought in 2001–02 caused a decrease in cereal production, as well as in the production of olive oil, but rains returned over the 2003–05 period. By 2006, industrial production, total exports, and the number of tourists had all increased. Overall total visitors to the country were approximately 5.1 million in 2003; goals were 2004, 5.5 million; 2005, 6 million, and 2006, 6.5 million. Half the number of visitors come from Maghreb countries such as Libya and Algeria. There was a marked increase in total visitors from European countries as France and Germany, despite a terrorist attack in early 2002 in which 21 people, mostly German tourists, were killed. The number of visitors from Eastern Europe also increased in the mid-2000s. Tourism contributes approximately 7% of GDP.

Unemployment remained high in 2005 (at an estimated 13.5%, but likely higher). In 2002, the banking and insurance sectors began to be privatized. Foreign trade, in terms both of imports and exports, increased markedly in 2001–02. The increases in exports during those years were due to the textile and clothing sector, leather and footwear sector, mechanical and electrical industries, and the agro-food, phosphates, and energy sectors.

Tunisia began to open its telecommunications sector to foreign business in 2002. Thirty-five companies were due to be privatized in 2003–04, including the national petroleum distribution company (SNDP), the state automobile manufacturer (STIA), and the joint Tunisian/Algerian white cement company (SOTACIB). Twelve hotels were also up for sale, and the sale of the government's share in the partially state-owned Banque du Sud was nearing completion.

In 2001, Egypt, Jordan, Morocco, and Tunisia agreed to set up a free trade zone ahead of the 2010 target for trade barriers to end in the Euro-Mediterranean area. The Great Arab Free Trade Zone was eventually expected to encompass 10 Arab nations.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Tunisia's gross domestic product (GDP) was estimated at \$76.9 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$7,600. The annual growth rate of GDP was estimated at 4.9%. The average inflation

rate in 2005 was 2%. It was estimated that agriculture accounted for 13.8% of GDP, industry 30.7%, and services 55.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$1.250 billion or about \$126 per capita and accounted for approximately 5.0% of GDP. Foreign aid receipts amounted to \$306 million or about \$31 per capita and accounted for approximately 1.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Tunisia totaled \$15.62 billion or about \$1,578 per capita based on a GDP of \$25.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.5%. In 2001 it was estimated that approximately 28% of household consumption was spent on food, 8% on fuel, 3% on health care, and 12% on education. It was estimated that in 2001 about 7.6% of the population had incomes below the poverty line.

## 21 LABOR

Tunisia's labor force was estimated at 3.41 million in 2005. In 1995 (the latest year for which data was available), estimated employment by sector was as follows: services 55%, industry 23%, and agriculture 22%. Since 1958, regional workshops to combat underemployment have provided jobs in land development, reforestation, terracing, and drainage. Full employment has been a goal of successive development plans; however, rates of unemployment and underemployment have remained high. The estimated unemployment rate in 2005 was 13.5%.

The only trade federation is the General Union of Tunisian Workers (Union Générale des Travailleurs Tunisiens—UGTT). In 2002, about 15% of the workforce belonged to the UGTT. Unions have the right to strike after a mandatory notice period of ten days. Regional labor councils seek to foster cooperation between management and labor. Collective bargaining contracts cover 80% of the private workforce.

The labor code sets the regular workweek at 48 hours with one 24-hour rest period for most sectors. If the workday exceeds 10 hours, overtime rates must be paid. All workers are entitled to annual paid leave of up to 18 working days. All nonagricultural employers with over 40 workers are required to have a medical facility available. In 2002, the minimum wage was \$138 per month in industry and \$4.27 per day in agriculture.

The minimum age for agricultural work is 13 years and the minimum age for manufacturing is 16. Children must attend school until 16 and have restricted working hours until the age of 18. The laws are somewhat effectively enforced but children can still be seen performing agricultural work in rural areas and working as vendors in urban areas.

## 22 AGRICULTURE

In 2003, about 25% of the labor force engaged in agriculture, which accounted for about 14% of GDP. Fertile land is generally limited to the north, where cereals, olives, fruits, grapes, and vegetables are produced. In the southern desert and plateau, desert farming is precarious, but barley is produced in quantity. About 4,900,000 hectares (12,108,000 acres) are arable. Cereals account

for 1,347,000 hectares (3,328,000 acres), while tree crops utilized 2,000,000 hectares (4,492,000 acres).

Harvests have traditionally yielded sizable surpluses for export, chiefly to France. Tunisia's early growing season allows the nation to profit from exporting fresh produce to Europe before European crops ripen. Crops fluctuate greatly in size, however, depending upon the weather. In very poor years, wheat and barley must be imported to satisfy local food requirements.

Chief grain crops in 2004 were wheat, 1,722,000 tons, and barley, 395,000 tons. Olive trees number some 55 million; output of olives in 2004 comprised 650,000 tons, with 130,000 tons of olive oil produced in 2004/05. Other important commodities (with 2004 production estimates, in thousands of tons) were tomatoes, 970; oranges, 106; potatoes, 375; peppers, 255; dates, 122; and grapes, 122.

The government has undertaken irrigation and soil conservation projects to improve agricultural production and raise the living standard of rural areas. The 1962–71 plan aimed at constructing 40 dams, mostly in the Medjerda River system, plus opening over 1,000 new wells, particularly in the southern regions. In the period 1962–64, the government initiated a program to help the new cooperative farm system, with a total investment of d150.5 million; remaining European-owned farms were nationalized as part of the program. In 1969, however, the development of cooperatives was halted, and appropriated land was redistributed to individual Tunisian owners. Irrigation and flood-control projects, many undertaken with foreign aid, were under way in Bizerte, the Medjerda River basin, and other locales in the early 1980s. To increase and direct the flow of capital to this sector, the government has established the Agricultural Investment Promotion Agency and the National Agricultural Development Bank.

### 23 ANIMAL HUSBANDRY

Although animal breeding is a major occupation in the central plateau and southern region, the largest herds are in the well-watered north. In 2005 there were an estimated 6,700,000 sheep, 1,400,000 goats, 750,000 head of cattle, 231,000 camels, 230,000 asses, 81,000 mules, 57,000 horses, 6,000 pigs, and 64 million chickens. Meat production in 2005 consisted of 120,600 tons of poultry, 55,000 tons of beef, 55,000 tons of mutton, and 9,500 tons of goat meat. Milk production in 2005 was 60,500 tons; cheese, 3,800 tons.

Since 1970, a great effort has been undertaken to develop the livestock sector to meet increased demands created by Tunisia's improved standard of living and expanding tourism. Poultry farming is being encouraged to provide farmers with an additional resource and to increase protein in the local diet.

### 24 FISHING

Commercial fishing takes place along the Mediterranean coast and in the Lake of Tunis and Lake Achkel. Small quantities of tuna, sardines, shrimp, and lobsters are exported. Except for some trawler and sponge fishing, most activity is on a limited scale; the 2003 catch was 92,507 tons. In 2003, fish and fishery products ex-

ports exceeded \$105 million. The National Fisheries Office owns part of the trawler fleet.

### 25 FORESTRY

Forested lands cover about 510,000 hectares (1,260,000 acres), a large proportion of which was state owned. The oak and pine forests of the northern highlands provide cork for export (some 9,000 tons produced annually) and firewood for local use. Estimated forestry output in 2004 included wood for fuel, 2,137,000 cu m (75.4 million cu ft); wood-based panels, 104,000 cu m (3.67 million cu ft); paper and paperboard, 94,000 tons; and sawn wood, 20,400 cu m (720,419 cu ft).

### 26 MINING

In 2004, Tunisia's mineral production included barite, clay, gypsum, iron ore, lead, phosphate rock, silver, zinc and salt. Washed phosphate rock production in 2004 totaled 7,954 metric tons (gross weight). (12.9 million tons in 2000; 90% from open-pit mining) was entirely controlled by the government-owned *Compagnie des Phosphates de Gafsa* (CPG), founded in 1896. CPG was the largest company in Tunisia, both in terms of employees and capital investment, directly employing 9,000 people and indirectly employing over 200,000. The Kef Eschfair Mine accounted for 29.5% of total ore volume; the Kef Eddour Mine, 19.6%; and the Jallabia Mine, 18.2%. The underground M'rata Mine was closed in 2000. Known reserves of crude phosphate, in the south, amounted to 100 million tons (5% of world reserves). High-grade iron ore was found in the north, while lead and zinc, mined intermittently since Roman times, were widely dispersed. International interest in developing Tunisia's lead-zinc deposits continued to grow. High-quality marine salt was exploited along the coast. Uranium was discovered in 1965. In 2004, preliminary mineral production included: washed phosphate rock, 7,954,000 metric tons (gross weight); iron ore (metal content), 128,000 metric tons, up from 97,000 metric tons in 2003; zinc concentrate (gross weight), 52,747 metric tons; mined lead, 5,500 metric tons (estimated); cement (hydraulic and white), 7.124 million metric tons; marine salt, 608,000 metric tons; and gypsum, 130,000 metric tons (estimated). Barite, clays, fertilizers (triple-superphosphate, phosphoric acid, diammonium-phosphate, and ammonium nitrate), gravel, lime, sand, and stone were also produced. No fluorspar was mined during 2000–04.

### 27 ENERGY AND POWER

Tunisia has only modest reserves of oil, no known reserves of coal, but fairly robust reserves of natural gas.

As of 1 January 2005, Tunisia's reserves of crude oil totaled 308 million barrels. Petroleum output in 2004 was estimated at 79,800 barrels per day, of which almost all of it was crude oil. In 2000 Tunisia became a net importer of oil. In 2002, production of refined oil products averaged 37,360 barrels per day, while demand for refined oil products that year averaged 87,860 barrels per day. Imports of all petroleum products in 2002 averaged 86,630 barrels per day, with crude oil imports accounting for 23,280 barrels per day. Exports of crude oil in 2002 averaged 60,820 barrels per day. Nearly 75% of Tunisia's oil production comes from the El Borma (the country's largest) and the Ashtart fields. Tunisia has a single

oil refinery at Bizerte, which as of 1 January 2005, had a crude oil refining capacity of 34,000 barrels per day.

Tunisia's proven reserves of natural gas as of 1 January 2005, totaled 2,750 billion cu ft, of which around two-thirds of it is located offshore. In 2003, natural gas production totaled 100 billion cu ft, up from 88 billion cu ft in 2002 and 79 billion cu ft in 2001. Tunisia's consumption of natural gas is also increasing. According to Tunisia's state-owned electric and gas company, Société Tunisienne de l'Électricité et du Gaz (STEG), natural gas accounted for 44% of all energy consumed in 2005, up from 14% in 2003. The Miskar gas field, located about 130 km (80 mi) into the Gulf of Gabes, produces the majority of the country's natural gas.

In 2002, Tunisia's electric power generating capacity was 2.894 million kW, of which 2.894 million kW of capacity was dedicated to conventional thermal fuel plants. Hydroelectric capacity that year came to 0.054 million kW, followed by geothermal/other sources at 0.020 million kW. Electric power output that same year totaled 11.140 billion kWh, of which 11.044 billion was produced by fossil fuel burning facilities. Hydropower produced 0.066 billion kWh, followed by geothermal/other at 0.030 billion kWh. Demand for electric power in 2002 totaled 10.301 billion kWh. In 1999 more than 94% of Tunisian households had access to electrical power.

## 2<sup>8</sup> INDUSTRY

Tunisia has a relatively diversified economy, with agricultural, mining, energy, and manufacturing production. Manufacturing industries, particularly those producing for export, have fueled Tunisia's growth for many years. They contribute one-fifth of total GDP, three-quarters of export earnings, and employ more than one-fifth of the labor force. The manufacturing industry is dominated by textile and leathers operations, followed by the electrical and mechanical industries, chemical exports (mainly phosphate by-products), and agribusiness. Agribusiness includes flour milling; fish, fruit, and vegetable canning; olive oil processing; and sugar refining. As one of the world's largest sources of phosphates, the country's mineral-processing industries are dominated by the manufacture of phosphate fertilizers. Handicrafts industries produce clothing, rugs, pottery, and copper and leather goods for both local and export markets.

The skills of the Tunisian work force and their relatively low wages have led an increasing number of European clothing firms to subcontract their work to Tunisian factories, thereby causing a sharp increase in Tunisia's exports of clothing. Textiles are the primary source of foreign currency revenue, with more than 90% of production being exported. The electrical power industry in Tunisia increased dramatically in the early 2000s, with the state supporting major renovations in existing plants, and the construction of new power plants. Tunisia has approximately 60 automotive assembly plants.

An oil refinery at Bizerte has a production capacity of 34,000 barrels per day. In December 2005, the Ministry of Industry and Energy opened bidding to build a new \$150 million refinery at La Skhirra; the Ministry planned to finalize the contract by 2007.

In 2005, the industrial production growth rate was estimated at 3.8%.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The Pasteur Institute, founded in 1893, conducts medical research in Tunis. That city is also home to institutes for the study of veterinary science (1897) and geology (1962). There are research centers for agronomy (founded in 1914) and forestry (1967) in Ariana. Science and engineering students account for about one-third of college and university enrollments. The University of Sciences, Technologies, and Medicine of Tunis (Tunis II, founded 1988) maintains a comprehensive science program, including faculties of medicine and mathematics, physics, and natural sciences and schools of veterinary medicine, health sciences and technology, engineering, computer science, and agriculture. The University of Sfax (founded in 1988) has faculties of medicine and science.

In 2002, Tunisia had 1,013 scientists and engineers, and 34 technicians engaged in research and development per million people. In that same year, Tunisia's expenditures on research and development totaled \$416.080 million, or 0.63% of GDP. Of that amount, 51.1% came from government sources, followed by higher education at 35.1%. Business provided 8% and 5.9% came from foreign sources. High technology exports in 2002 totaled \$177 million, or 4% of the country's manufactured exports.

## 3<sup>0</sup> DOMESTIC TRADE

Rades/Tunis is the principal commercial, industrial, and distribution center; most of the import and export houses, banks, and mining firms have their central offices in the city. Other commercial and distribution centers are Sfax, noted for olive oil and phosphate shipments, and Bizerte, known for grain and olive oil. Fairs are held at various times of the year in Sfax, Sousse, Tunis, and other towns. Most businesses are family-owned and operated. The government has posed some resistance to the establishment of foreign firms, particularly foreign franchises. An extensive system of price controls was for the most part eliminated in 1998, but the government still exerts pressure on private firms to show restraint in price increases. The chief advertising media are daily newspapers, outdoor displays, and motion picture theaters. The first private radio station started broadcasting in November 2003, and a private satellite television channel started broadcasting in February 2005. Other private television and radio stations are expected in the future. Arabic is the language of sales promotion, French the language of commercial correspondence.

Normal business hours in winter are from 8:30 AM to 1 PM and 3 to 5:45 PM, Monday–Friday. Summer business hours are from 8:30 AM to 1 PM Monday through Saturday.

## 3<sup>1</sup> FOREIGN TRADE

Tunisia's foreign trade is based upon the export of mineral and agricultural products, textiles, and chemicals in exchange for consumer goods, raw and processed materials, and agricultural and industrial equipment. Apparel, textiles, and leather are now the major exports. By 2000 their share of exports amounted to nearly half of total export value. The petroleum industry's share in Tunisian foreign trade dropped from a peak of 44% of the total in 1984 to only 12% in 2000.

Garments make up a large portion of Tunisia's export commodities. Other exports include crude petroleum, chemicals, manufactured fertilizers, and vegetable oils. In 2000 Tunisia's im-

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

ports were distributed among the following categories: consumer goods, 12.0%; food, 5.9%; fuels, 10.6%; industrial supplies, 39.4%; machinery, 20.8%; and transportation, 11.4%.

The EU is the focus of Tunisia's foreign trade, accounting for an estimated 80% of exports and 71% of imports in 2000. France is by far Tunisia's largest trading partner, being the market for 33.1% of Tunisia's exports in 2004 and the source of 25.2% of its imports. The next three largest trading partners in 2004 were Italy, Germany, and Spain. Tunisia's main non-EU trading partner is Libya.

Overall, Tunisia's export revenue grew 12% year-on-year in 2005, led by olive oil exports. Tunisia in 2005 was the world's leading exporter of olive oil in bulk, alongside Turkey. Most of the exports go to Italy and Spain, where the oil is blended with local product for the internal market, freeing up local oils for export.

**3<sup>2</sup> BALANCE OF PAYMENTS**

Since 1960, Tunisia has experienced perennial trade deficits. These have been partly covered by tourist income, by remittances from Tunisian workers abroad, and by foreign investment and assistance. The 8th Development Plan (1992–96) aimed at improving the balance of payments deficit from 4.2% of GDP in 1991 to 2% by 1996 by encouraging free trade, foreign direct investments, and elimination of exchange restrictions. The budget deficit declined from 4.0% of GDP in 1997, to 1.7% of GDP in 1998, due to the privatization of two cement plants. The country's trade deficit rose substantially in 2000, by nearly 20%. Imports rose 16.5%, and exports climbed 14.9%. Food exports decreased, driven by weak olive oil sales. Although textile exports still remain the country's leading source of hard currency, ready-to-wear apparel sales have fallen off in recent years. Nevertheless, high petroleum product prices made up the difference for the decline in lower-performing export sectors in the early 2000s.

In 2005, exports were estimated at \$10.3 billion, and imports were valued at \$12.86 billion. The current-account balance stood at -\$492 million.

**3<sup>3</sup> BANKING AND SECURITIES**

The Central Bank of Tunisia (Banque Centrale de Tunisie-BCT), established in September 1958, is the sole bank of issue. The Tun-

sian Banking Co. (Société Tunisienne de Banque-STB) was established in 1957; it is the leading commercial and investment bank; the state holds 52% of the STB's capital.

The banking system is a mixture of state-owned and private institutions which offer a variety of financial instruments and services. There are 13 commercial banks; eight development banks; eight leasing companies; eight offshore banks; a savings bank; five portfolio management institutions; two merchant banks. Commercial banks include Citibank, Amen Bank, Banque International Arabe de Tunisie (BIAT), Banque Nationale Agricole (BNA); and one merchant bank is International Maghreb.

Of the 12 commercial banks, one is fully state-owned and four others are part-owned by the state. These five banks control 70% of total bank assets. Total estimated assets of these banks amounted to \$8.9 billion in 1997. In 1999, the World Bank approved a \$159 million loan to support banking reform efforts in Tunisia. The weak banking system is under government duress and has a low average credit line. Commitments under the WTO and EU free trade agreement will begin to liberalize the banking sector.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$4.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$11.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 6.04%.

A stock exchange began operations in Tunis in May 1970. While its activities have been expanding steadily, they remain limited to transactions in securities issued by the state and the stocks of a few private or government-owned firms, including 46 companies, 13 of them banks. Between 2000 and 2001, the Tunisian stock exchange reported a 30% loss. As of 2004, a total of 44 companies were listed on the Tunis Stock Exchange, which had a market capitalization of \$2.641 billion. In 2004, BVM General index rose 3.7%

from the previous year to 974.8. The exchange completed a shift to fully electronic trading, but remains under the government eye.

### 3<sup>4</sup> INSURANCE

Although Tunisians have traditionally resisted taking out insurance, the insurance market has begun to grow rapidly, with turnover growing by 24% in 1994. Vehicle insurance is the biggest category. There are 22 companies in all, 15 of which are Tunisian and seven foreign, including firms from France and Italy. Four of the Tunisian companies are state-owned including the biggest, STAR, founded in 1958. The insurance business is shared roughly equally between state-owned and private companies. In 2003, the value of all direct insurance premiums written totaled \$456 million, of which nonlife premiums accounted for \$416 million. Star was Tunisia's top nonlife insurer in 2003, with gross written nonlife premiums of \$137.6 million, while HAYETT was the leading life insurer that year, with gross written life insurance premiums of \$7.1 million.

### 3<sup>5</sup> PUBLIC FINANCE

Each year, an administrative budget and a development budget are submitted to the National Assembly. Levies on imports provide the major sources of current revenue, but trade agreements with the WTO and the EU will disturb this pattern. Government spending amounted to about half of GDP in 1999, 60% of which was spent on social projects. The Tunisian government's economic reform programs are lauded as some of the best in the world by international financial institutions. Reforms included liberalized prices, reduced tariffs, and lowered debt-to-GDP ratios. Since the privatization program was launched in 1987, about 140 state-owned enterprises had been fully or partially privatized as of 2002.

The US Central Intelligence Agency (CIA) estimated that in 2005 Tunisia's central government took in revenues of approximately \$7.3 billion and had expenditures of \$8.3 billion. Revenues minus expenditures totaled approximately -\$982 million. Public

debt in 2005 amounted to 58.7% of GDP. Total external debt was \$18.91 billion.

The International Monetary Fund (IMF) reported that in 2004, the most recent year for which it had data, central government revenues were D10,296 million and expenditures were D11,091 million. The value of revenues in US dollars was us\$8,267 million and expenditures us\$8,907 million, based on a market exchange rate for 2004 of us\$1 = D1.2455 as reported by the IMF. Government outlays by function were as follows: general public services, 16.8%; defense, 4.9%; public order and safety, 7.7%; economic affairs, 14.9%; housing and community amenities, 5.1%; health, 5.5%; recreation, culture, and religion, 3.2%; education, 20.1%; and social protection, 21.9%.

### 3<sup>6</sup> TAXATION

The standard corporate tax rate was 35% in 2005. Exporting resident companies are exempt from most taxes. However, all companies are liable to a minimum tax of 0.5% of turnover, with a ceiling of D2,000 (about us\$1,470). There is also a 0.2% turnover tax on industrial and commercial establishments. Capital gains are taxed at 35%. Dividend income is not taxed, but income from royalties is subject to a 15% withholding tax if made to nonresidents.

Personal taxes include a progressive income tax and a benefits tax levied on gross salaries and paid quarterly by the employer to the National Social Security Fund. The inheritance (succession) tax is 6%.

The main indirect tax is Tunisia's value-added tax (VAT), with a standard rate of 18%, a reduced rate of 6% and a top rate of 29%. The VAT is assessed on all transactions and on imports.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Tunisia's import duties, as of 2005, range from 10% to more than 200%. Most goods do not need import licenses. Exceptions include textiles and automobiles. There is a 3% customs formality fee based on the total duties paid on the import. Certain luxury goods are assessed a consumption tax as high as 700%. Most goods entering Tunisia are subject to an 18% value-added tax (VAT). However, some goods are subject to VAT rates of 6%, 10%, and 29%. As of 1999, all cotton imports were duty-free. The import of weapons and health care products is strictly controlled, while imports that go against health, morality, or cultural heritage are prohibited.

In 1969, Tunisia was granted associate membership in the European Community. Under the accord, which was renewed in 1976 and 1983, the EC countries removed customs duties and quotas on nearly all of Tunisia's industrial exports. In 1995, Tunisia signed a free trade accord with the renamed European Union that will remove tariff and other trade barriers on most nonagricultural goods, services, and capital by 2008. Tunisia is also a member of the World Trade Organization.

### 3<sup>8</sup> FOREIGN INVESTMENT

In 1972, an investment law provided special benefits to companies manufacturing commodities for export, a regulation that stimulated some foreign involvement, particularly in the textile industry. Incentives consisted of partial or total tax exemption for periods of 10–20 years, as well as exemption from customs and import duties on raw materials and equipment. A similar law that encouraged investment in industries producing for local markets was en-

SOURCE: Government Finance Statistics Yearbook 2004, Washington, DC: International Monetary Fund, 2004.

acted in 1974 and amended in 1981; the statute required that such firms exhibit partial (in many cases majority) Tunisian ownership. A 1981 law offered incentives for investment in less-developed regions. Kuwait, Saudi Arabia, Qatar, the United Arab Emirates, and Algeria participated with Tunisia in development banks to channel Arab investment funds.

Tunisia's severe balance of payments crisis forced the government to reverse many of its protectionist and socialist policies under structural adjustment programs supervised by the IMF and World Bank. A new investment code was passed in 1989 offering further tax and customs concessions to local as well as foreign investors, particularly in export-oriented enterprises. Tunisian law still prohibits ownership of land by non-Tunisians, although a special 40-year land lease system permits agricultural development by foreign companies. In January 1994 the government adopted an investment incentives law that, in conjunction with added provisions, offers tax reductions on reinvested profits and revenues, and optional depreciation schedules for production equipment. For companies that export at least 80% of their output, the incentives include a 10-year profits tax holiday, with a 50% reduction thereafter; full tax and duty exemptions on materials and services used in production; full tax exemption on reinvested profits and revenue; and duty-free import of capital goods that have no local equivalent. Large investments with high job creation may qualify to use state land virtually rent-free.

Foreign property is still at risk of expropriation by the Tunisian government and in 1995 an American company had property taken without compensation. The government also reserves the right to take property by eminent domain, in which case just compensation is offered. There remain many restrictions on foreign investment as the government pursues a gradualist approach, caught between pressure to liberalize from the IMF and the WTO, and a fear of igniting a popular uprising. Under the terms of its accession to the WTO (29 March 1995), Tunisia was obligated to relax restrictions on foreign participation in its information, telecommunications, and financial services industries by 2003.

The annual inflow of foreign direct investment (FDI) in Tunisia peaked at \$778.8 million in 2000, up from \$368 million in 1999. The annual inflow has fallen since, caught in the global economic slowdown of 2001 and, in particular, the decline in FDI flows worldwide following the 11 September 2001 terrorist attacks in the United States. FDI inflow in Tunisia was \$486 million in 2001 and \$402 million in 2002. Tunisia attracted FDI totaling \$626 million in 2003. Total FDI in Tunisia by 2004 was estimated at \$14.3 billion. FDI in manufacturing industries, the main generator of jobs and exports and the real indicator of the investment climate, totaled \$216 million in 2003 compared with \$180 million in 2002.

As much as 75% of FDI in Tunisia has been in the petroleum sector. Other important sectors are textiles, and mechanical and electrical industries. The telecommunications industry is ready for substantial growth. France is the largest investor, followed by Italy, Germany, Belgium, Switzerland, and the United Kingdom.

As of 2004, 2,600 companies had established operations in Tunisia as a result of FDI. About 85% are totally exporting operations, the vast majority in the textile and footwear industries.

### **39 ECONOMIC DEVELOPMENT**

The plan for 1973–76 proposed increasing investments by 75% over the previous ten-year plan. An annual growth rate of 6.6% was targeted for the period. Fully 75% of the plan's investments were to be financed with international aid. Manufacturing industries received the largest single allocation of total investment under the 1977–81 plan. Once again, the burden of financing the program fell on external sources, with Arab funds accounting for 30% of the anticipated foreign capital. Actual growth came close to the target of 7.5% a year in real terms. The development plan for 1982–86 set forth three main goals: employment growth, regional development, and balance of payments equilibrium. Some 33% of the total expenditure was to be invested in labor-intensive industries. Performance fell far short of the goal of 6% a year in real growth.

The inauguration of the 1987–94 development plan followed the foreign exchange crisis of 1986, and the adoption of an International Monetary Fund (IMF) sponsored economic rehabilitation scheme. Services were to receive 39%, agriculture 19%, and manufacturing 16%. This plan was successfully completed, winning the country accolades from investment institutions. The 1994–96 development plan was based on strong expansion in the manufacturing industry (8.7%) and tourism (22%). The plan called for further cuts in consumer subsidies and the privatization of many state assets. The economic development plan of 1997–2001 called for investment in telecommunications infrastructure, continued privatization of industry, and lowering of trade barriers.

The 10th economic development plan of 2002–06 aimed at improving the competitiveness of the economy; increasing the private sector's share in investment; setting up a knowledge economy; and securing sustainable economic and social development and a creation of new jobs while maintaining global balances. Targets set for economic development included: an average economic growth of 5.7% a year; an increase in private sector investment to 60% (the total investment rate would be brought to 26.6% by 2006); and the consolidation of the national savings rate to reach 26% of GNP by 2006, allowing for the financing of 91% of projected investment.

As of 2006, the tourism industry was growing. A surge in demand for new housing and luxury units and a series of plans to expand transportation infrastructure and develop Tunisia's growth corridors combined to improve conditions for both the construction industry and foreign investors. Challenges for the economy remaining are high unemployment, the existence of the "gray" economy, the continued dominance of the public sector, and masses of bureaucratic red tape that increase the cost of doing business in the country.

### **40 SOCIAL DEVELOPMENT**

A social insurance system provides benefits including maternity payments, family allowances, disability and life insurance, and old age insurance. The system covers private-sector employees and some categories of fishermen. There are special systems for government workers, agricultural workers, the self-employed, fishermen, artists and intellectuals. Pensions normally are provided at age 60, and benefits are equal to 40% of average earnings, plus 0.5% for each 3 months of contributions above 120. Work inju-

ry insurance is compulsory for employers and covers all salaried workers including domestic servants. Unemployment benefits are provided for all salaried nonagricultural workers and payable for six months.

Tunisian women enjoy full civil and political rights under the law. Educational and employment opportunities are growing steadily. The law specifically requires equal pay for equal work and this is generally respected. Inheritance laws, based on Muslim tenets, discriminate against women. Domestic violence occurs but the police and courts regard the issue as a family matter. In 2004 the government launched a morality campaign, which penalized women deemed immodest in dress or behavior. The rights of children are protected.

Human rights organizations are permitted to operate in Tunisia, but may be subject to some government restrictions and harassment. Continuing human rights abuses include arbitrary arrest and detention and abuse of prisoners, including torture.

#### 41 HEALTH

Free health services are available to about 70% of the population, with about 90% of the population having access to health care services. As of 2004, there were an estimated 70 physicians, 287 nurses, 13 dentists, and 17 pharmacists per 100,000 people. Total health care expenditure was estimated at 5.1% of GDP.

Health conditions improved significantly in the 1990s and early 2000s, although diet and sanitation remain deficient. Epidemics have virtually disappeared and the incidence of contagious diseases has been considerably reduced. Immunization rates for children up to one year old were: tuberculosis, 75%; diphtheria, pertussis, and tetanus, 90%; polio, 90%; and measles, 89%.

The government supports a family planning program. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 16.8 and 5 per 1,000 people. About 60% of married women (ages 15 to 49) used contraception. The fertility rate in 2000 was 2.1 children per woman surviving her childbearing years. Infant mortality was 24.77 per 1,000 live births in 2005 and average life expectancy was 74.89 years. Maternal mortality was 70 per 100,000 live births.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 1,000 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

#### 42 HOUSING

The government has spent well over \$1 billion on workers' housing. Since the mid-1960s, trade unions have provided new housing for members. Financial assistance to needy homeowners is provided by a national housing fund.

In 2000, the housing stock stood at about 2,501,000 serving about 1,999,200 households, with an average of 4.78 people per household. By 2003, the number of households had increased to 2,137,600 with an average of 4.61 people per household. About 45% of all housing was considered to be of modern construction, including detached apartment complexes and villas. About 54% of all housing was of traditional construction, such as an Arabic-style home.

In 2001, the Ministry of Housing announced that the amount of available housing had exceeded the number of families by about

13% and that there had been a decrease in slums by about 1.2%. However, squatter communities, called *gourbilles*, are still prevalent in urban regions.

#### 43 EDUCATION

On becoming independent in 1956, Tunisia inherited a small but efficient educational system based on French and, to a lesser extent, Islamic influence. In 1958, the government nationalized most of the existing facilities; remaining private institutions were subject to government regulation. In the same year the government began a comprehensive plan for educational development to achieve universal, free, compulsory primary education and a significant expansion of the secondary school system.

Primary school covers nine years of study in two cycles of six plus three years. Secondary school covers an additional four years, with two years of general education plus two years of specialized education in arts, mathematics, experimental sciences, technology, or economy and management. Vocational studies are also available at the secondary level. The academic year runs from September to June.

In 2001, about 19% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 97% of age-eligible students. The same year, secondary school enrollment was about 64% of age-eligible students. It is estimated that nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 22:1 in 2003; the ratio for secondary school was about 20:1.

The University of Tunis was founded on 31 March 1960. In total there are 162 institutions of higher education, including 13 universities. In 2003, it was estimated that about 27% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 74.3%, with 83.4% for men and 65.3% for women.

As of 2003, public expenditure on education was estimated at 6.4% of GDP, or 18.2% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library (est. 1885) in Tunis contains a special collection of rare Arabic and Oriental manuscripts. The University of Tunis library has 220,000 volumes. The Arab League Documentation and Information Center, with 25,000 volumes, has been housed at Tunis since 1980. The collections of Tunisia's approximately 380 public libraries hold over 2.7 million volumes. There are also 23 regional libraries throughout the country.

The Bardo National Museum, founded in Tunis in 1888, has the largest collection of Roman mosaics in the world. Another fine collection is located at the museum in Sousse, which contains archaeological remains dating from the 6th century BC to the 6th century AD. The Raqqada Museum, housed in a former presidential palace near Kairouan, has the country's largest collection of Islamic art, including manuscripts of the Quran (Koran) from the Great Mosque of Kairouan. Other museums are in Monastir, Sfax, Qairouan, Maktar, Sbeitla, Sousse, and Carthage. The National Institute of Archaeology is located in Tunis, as is the Center of Living Arts and the Museum of Traditional and Popular Art.

## 45 MEDIA

Tunisia's well-developed postal, telephone, and telegraph system is government-operated and links all the important cities. A marine cable connects Tunisia with France, and a land cable links it with Algeria and Morocco. In 2003, there were an estimated 118 mainline telephones for every 1,000 people; about 108,700 people were on a waiting list for telephone service installation. The same year, there were approximately 192 mobile phones in use for every 1,000 people.

The government-owned Tunisian Radio-Television Broadcasting (ERTT) broadcasts in Arabic, French, and Italian over one national station, one international station, and five regional stations. Relay stations bring in programs from Italian television. In 2004, the government owned the two major television networks and all but one of the national radio stations. Egyptian and British channels are available via satellite. In 2003, there were an estimated 158 radios and 207 television sets for every 1,000 people. The same year, there were 40.5 personal computers for every 1,000 people and 64 of every 1,000 people had access to the Internet. There were 19 secure Internet servers in the country in 2004.

In 2004, there were over 250 newspapers and magazines in the country. There were eight major daily newspapers, including (with language of publication and 2002 circulation rates as available) *As-Sabah* (Arabic, 50,000), *Assahafa/La Presse* (Arabic), *Le Renouveau* (French, 23,000), *Al Amal* (Arabic, 50,000), *La Presse de Tunisie* (Arabic/French, 40,000), *L'Action* (French, 40,000), and *Errai El-Am* (Arabic). The Arabic *Ach Chourouk* (110,000) and the French *Le Temps* (42,000) are major weeklies.

The constitution provides for freedom of speech and of the press. However, the government is said to limit these freedoms significantly through economic control, confiscations, imprisonment, and detention. Government permits are required for distribution of publications. Criticism of high government officials or fundamental state institutions can result in seizure or suspension of the offending publication.

## 46 ORGANIZATIONS

There are chambers of commerce in Tunis, Sfax, Sousse, and Bizerte; the Tunisian Union of Industry, Commerce, and Crafts, a national association of trade federations and business interests, is in Tunis. The National Union of Tunisian Farmers is very active. There are professional associations for several different fields, particularly those involving medicine and healthcare.

The National Union of Tunisian Women promotes greater participation by women in economic, political, and cultural affairs. National youth organizations include the Tunisian General Union of Students, the Young Constitutional Democrats, the League of Arab States Youth and Sports Division, Junior Chamber, and Scouts of Tunisia. Kiwanis and Lions Clubs have active programs. There are several sports associations, including the multinational African Boxing Confederation, African Rugby Football Union, and the African Table Tennis Federation.

The multinational Arab League Educational, Cultural and Scientific Organization encourages cultural unity among Arab countries.

The Arab Institute for Human Rights and the Arab Medical Union, both based in Tunis, are multinational, social action orga-

nizations. Other international organizations with national chapters include Greenpeace, Amnesty International, Caritas, UNICEF, and the Red Crescent Society.

## 47 TOURISM, TRAVEL, AND RECREATION

Tunisia's cosmopolitan capital city, Tunis, the ruins of Carthage, the ancient Muslim and Jewish quarters of Jerba, and the modern coastal resorts in the vicinity of Monastir and Sousse are among the main tourist attractions. Recreations include hunting, hiking, golf, tennis, and other water sports.

Tunisia has been investing in the tourism industry since the late 1990s. In 2003, there were 5,114,303 foreign visitors. Tourist expenditures reached about \$1.9 billion that year, and hotel rooms numbered 110,009 with 222,018 beds and an occupancy rate of 42%. Visitors stayed in Tunisia an average of six nights.

According to 2005 US Department of State estimates, the daily cost of staying in Tunis or Carthage was \$165, and other areas about \$117.

## 48 FAMOUS TUNISIANS

Ancient Carthage was located near the site of modern Tunis. Its most famous leader was Hannibal (247–183 BC), the general who campaigned in Italy for several years (218–211 BC) but who was defeated by the Romans under Scipio Africanus at Zama in 202 BC. The dominant figure of modern Tunisia was Habib Bourguiba (Habib bin 'Ali ar-Rugaybah, 1903–2000); he led Tunisia to independence, formed its first government, and was president from 1957 to 1987. Mongi Slim (1908–69) served as president of the 16th session of the UN General Assembly (1961–62). Mohamed Mzali (b.1925) has served in numerous government posts, including prime minister in 1980–86. Gen. Zine el 'Abidine Ben 'Ali (b.1936) assumed the presidency in 1987.

Tunisia's noteworthy literary figures include Albert Memmi (b.1920), the author of *The Statue of Salt* (1957), who writes in French; and Mahmoud Messadi (1911–2004), who wrote in Arabic. Prominent Tunisian painters are Ammar Farhat (1911–86) and Jallah bin 'Abdallah (b.1921).

## 49 DEPENDENCIES

Tunisia has no territories or colonies.

# UGANDA

Republic of Uganda

**CAPITAL:** Kampala

**FLAG:** The national flag consists of six equal horizontal stripes of black, yellow, red, black, yellow, and red (from top to bottom); at the center, within a white circle, is a crested crane, the national bird of Uganda.

**ANTHEM:** Begins "O Uganda! May God uphold thee."

**MONETARY UNIT:** The new Uganda shilling (NUS<sub>H</sub>) was introduced in May 1987 with a value equal to 100 old Uganda shillings. NUS<sub>H</sub>1 = \$0.00056 (or \$1 = NUS<sub>H</sub>1,776.68) as of 2005. There are coins of 1, 2, and 5 shillings, and notes of 10, 20, 50, 100, 200, 500, and 1,000 shillings.

**WEIGHTS AND MEASURES:** The metric system is now in use.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1 May; Martyrs' Day, 3 June; Independence Day, 9 October; Christmas Day, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, 'Id al-Fitr, and 'Id al-'Adha'.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country in east-central Africa, situated north and northwest of Lake Victoria, Uganda has a total area of 236,040 sq km (91,136 sq mi), of which 36,330 sq km (14,027 mi) is inland water. Comparatively, the area occupied by Uganda is slightly smaller than the state of Oregon. It extends 787 km (489 mi) NNE–SSW and 486 km (302 mi) ESE–WNW. Bounded on the N by Sudan, on the E by Kenya, on the S by Tanzania and Rwanda, and on the W by the Democratic Republic of the Congo (DROC). Uganda has a total boundary length of 2,698 km (1,676 mi).

## <sup>2</sup> TOPOGRAPHY

The greater part of Uganda consists of a plateau 800 to 2,000 m (2,600–6,600 ft) in height. Along the western border, in the Rwenzori Mountains, Margherita Peak reaches a height of 5,109 m (16,762 ft), while on the eastern frontier Mount Elgon rises to 4,321 m (14,178 ft). By contrast, the Western Rift Valley, which runs from north to south through the western half of the country, is below 910 m (3,000 ft) on the surface of Lake Edward and Lake George and 621 m (2,036 ft) on the surface of Lake Albert (L. Mobutu Sese Seko). The White Nile has its source in Lake Victoria; as the Victoria Nile, it runs northward through Lake Kyoga and then westward to Lake Albert, from which it emerges as the Albert Nile to resume its northward course to the Sudan. With 69 lakes, Uganda has the highest number of lakes in Africa.

## <sup>3</sup> CLIMATE

Although Uganda is on the equator, its climate is warm rather than hot, and temperatures vary little throughout the year. Most of the territory receives an annual rainfall of at least 100 cm (40 in). At Entebbe, mean annual rainfall is 162 cm (64 in); in the northeast,

it is only 69 cm (27 in). Temperature generally varies by altitude; on Lake Albert, the mean annual maximum is 29°C (84°F) and the mean annual minimum 22°C (72°F). At Kabale in the southwest, 1,250 m (4,100 ft) higher, the mean annual maximum is 23°C (73°F), and the mean annual minimum 10°C (50°F). At Kampala, these extremes are 27°C (81°F) and 17°C (63°F).

## <sup>4</sup> FLORA AND FAUNA

In the southern half of Uganda, the natural vegetation has been largely replaced by cultivated plots, in which plantain is the most prominent. There are, however, scattered patches of thick forest or of elephant grass and mvuli trees, providing excellent timber.

The cooler western highlands contain a higher proportion of long grass and forest. In the extreme southwest, however, cultivation is intensive even on the high mountain slopes. In the drier northern region, short grasses appear, and there are areas of open woodland; thorn trees and borassus palms also grow.

Elephant, hippopotamus, buffalo, cob, topi, and a variety of monkeys are all plentiful, while lion, giraffe, and rhinoceros also are seen. At least six mammal species are found only in Uganda.

The birds of Uganda include the crowned crane (the national emblem), bulbul, weaver, crow, shrike, heron, egret, ibis, guinea fowl, mouse bird, lourie, hornbill, pigeon, dove, bee-eater, hoopoe, darter, lily-trotter, marabou stork, kingfisher, fish eagle, and kite. As of 2002, there were at least 345 species of mammals, 243 species of birds, and over 4,900 species of plants throughout the country.

There are relatively few varieties of fish, but the lakes and rivers contain plentiful stocks of tilapia, Nile perch, catfish, lungfish, elephant snout fish, and other species. Crocodiles, too, are found in many areas and are particularly evident along the Nile between the Kabalega (Murchison) Falls and Lake Albert. There

is a wide variety of snakes, but the more dangerous varieties are rarely observed.

## 5 ENVIRONMENT

Major environmental problems in Uganda include overgrazing, deforestation, and primitive agricultural methods, all of which lead to soil erosion. Attempts at controlling the propagation of tsetse flies have involved the use of hazardous chemicals. The nation's water supply is threatened by toxic industrial pollutants; mercury from mining activity is also found in the water supply.

Forests and woodlands were reduced by two-thirds between 1962 and 1977. By 1985, 193 square miles of forests were eliminated. Between 1990 and 2000, the annual rate of deforestation was about 2%. Wetlands have been drained for agricultural use. As of 2003, 24% of Uganda's total land area was protected, including two natural UNESCO World Heritage Sites and two Ramsar wetland sites.

In 1996, water hyacinth growth created a serious environmental and economic problem on Lake Victoria. By some estimates, the hyacinths covered 6,000 ha (14,820 acres) of water, still less than 0.1% of the lake. When the masses of hyacinths drifted into Uganda's ports and coves, they impaired the local fishing, trapped small boats in ports, and kept fish under the plants. The weed invasion had also been known to affect cargo boat and ferry transportation by fouling engines and propellers and making docking difficult. Environmentalists introduced different types of pests to control the weed growth, so that by 2001, much of the growth had diminished. Of more recent concern for Lake Victoria is the drop in water level that has occurred in from about 1995–2005. Some reports estimate that the water level had dropped by one meter in that decade.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 29 types of mammals, 15 species of birds, 6 species of amphibians, 27 species of fish, 10 types of mollusks, 9 species of other invertebrates, and 38 species of plants. Threatened species include the mountain gorilla, northern white rhinoceros, black rhinoceros, and Nile crocodile. Poaching of protected animals is widespread.

## 6 POPULATION

The population of Uganda in 2005 was estimated by the United Nations (UN) at 26,907,000, which placed it at number 41 in population among the 193 nations of the world. In 2005, approximately 2% of the population was over 65 years of age, with another 51% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 3.2%. In response to this rate, which the government viewed as too high, the government revised its Population Policy in an attempt to slow population growth. As of 2006 Uganda had one of the fastest-growing populations in the world. The projected population for the year 2025 was 55,810,000.

The overall population density was 112 per sq km (289 per sq mi). However, density varied from 673 per sq km (260 per sq mi) in Kabale to 36 per sq km (14 per sq mi) in the dry Karamoja plains. The northern, eastern, and western regions are less densely populated than the region along the north shore of Lake Victoria.

The UN estimated that 12% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 4.67%. The capital city, Kampala, had a population of 1,246,000 in that year. Other major cities and their estimated populations were Jinja, 106,000; Mbale, 70,437; and Masaka, 61,300.

## 7 MIGRATION

Expulsion of Asian noncitizens was decreed by the Amin government in 1972; almost all the nation's 74,000 Asians, both citizens and noncitizens, emigrated during the Amin regime. In 1982, the government enacted the Expropriated Properties Bill, which provided for the restoration of property to Asians expelled under Amin. About 6,000 Asians had returned by 1983.

After the fall of the Amin regime, as many as 240,000 people from Amin's West Nile district may have fled Zaire (now the Democratic Republic of the Congo) and the Sudan. Many of them returned to Uganda in 1983; government campaigns against guerrillas, however, displaced thousands more, and at the end of 1986 there were an estimated 170,000 Ugandan refugees in Sudan and 23,000 in Zaire. The refugee population in Zaire remained steady, but the number in the Sudan had dropped to 3,800 by the end of 1992.

As of 2004, Uganda had 250,482 refugees, 1,809 asylum seekers, and 91 returned refugees. According to the United Nations High Commissioner for Refugees (UNHCR), these refugees were primarily from Sudan (214,623), Rwanda (18,902), and the DROC (14,982), and other neighboring African nations. Asylum seekers were from Somalia, the DROC, Rwanda, Burundi and Ethiopia. In that same year some 16,000 Ugandans were refugees in the DROC and Sudan, and some 1,200 sought asylum in South Africa, the United Kingdom and Kenya. The net migration rate in 2005 was estimated as -1.49 migrants per 1,000 population. The government views the migration levels as satisfactory. Worker remittances in 2002 were \$365 million.

## 8 ETHNIC GROUPS

Uganda's ethnic groups are most broadly distinguished by language. In southern Uganda, most of the population speak Bantu languages. Sudanic speakers inhabit the northwest; Nilotic speakers, principally the Acholi and Langi, live in the north; and the Iteso and Karamajong in the northeast. The Baganda, who populate the northern shore of Lake Victoria, constitute the largest single ethnic group in Uganda, making up about 17% of the total population. The Ankole account for about 8%, Basogo 8%, Iteso 8%, Bakiga 7%, and the Langi 6%. Perhaps 6% of the population (not counting refugees) is of Rwandan descent, either Tutsi or Hutu. Most of them live in the south. Bagisu constitute 5%; Acholi account for 4%; Lugbara another 4%; Bunyoro 3%; and Batoro 3%. The Karamajong account for 2%. The Bakonjo, Jopodhola, and Rundi groups each account for 2% of the population as well. About 1% is comprised of non-Africans, including Europeans, Asians, and Arabs. Other groups make up the remaining 8%.

## 9 LANGUAGES

English is the official national language. It is taught in grade schools, used in courts of law, and by most newspapers and some radio broadcasts. Bantu languages, particularly Luganda (the language of the Baganda), are widespread in the southern, western,

and central areas. Luganda is the preferred language for native-language publications and may be taught in school. Nilotic languages are common in the north and northeast, and Central Sudani clusters exist in the northwest. Kiswahili (Swahili) and Arabic are also widely spoken.

## 10 RELIGIONS

Christianity is the majority religion, practiced by about 75% of the population, with about 90% of all Christians fairly evenly split in membership as Roman Catholics or Anglicans. Other denominations include Seventh-Day Adventist, the Church of Jesus Christ of Latter-Day Saints, Jehovah's Witnesses, Baptists, the Orthodox Church, the Unification Church, and Pentecostal churches. Muslims account for about 15% of the population; most are of the Sunni sect. Others practice traditional African religions, which are more common in the north and west of Uganda. There are also small numbers of Hindus, Baha'is, and Jews. Traditional beliefs and customs are often practiced in conjunction with other established faiths.

Though freedom of religion is provided for in the constitution, local governments have placed restrictions on some religious groups that are considered to be cults. This has been particularly true since 2000, when it was discovered that members of a cult group had killed over 1,000 citizens. Some organizations are banned from evening meetings for what local authorities claim to be a matter of public safety. All religious organizations must register with the government; failure to do so brings the threat of criminal prosecution for those who practice any religious activities. Several religious alliances have formed in cooperation for peace within the country. These include the Acholi Religious Leaders Peace Initiative, the Inter-Religious Council, Religious Efforts for Teso and Karamoja, and the Inter-Religious Program. Certain Muslim and Christian holidays are officially observed.

## 11 TRANSPORTATION

A landlocked country, Uganda depends on links with Tanzania and Kenya for access to the sea. The main rail line runs from Tororo in the east through Jinja and Kampala to the Kilembe copper mines near Kasese. The northwest line runs from Tororo to Pakwach. Eastward from Tororo, the line crosses into Kenya and runs to the port of Mombasa. As of 2004, the Ugandan railway system totaled 1,241 km (771 mi), all of it narrow gauge.

In 2002, there were 27,000 km (16,778 mi) of roads, 1,809 km (1,125 mi) of which were surfaced. In 2003, there were 51,010 passenger cars and 43,150 commercial vehicles registered in Uganda. However, many were not in service due to damage, shortages of fuel and spare parts, and closing of repair and maintenance facilities.

Steamships formerly carried cargo and passengers along the country's major lakes and navigable rivers, but there is no regular service on the Nile. Three Ugandan train ferries ply Lake Victoria, connecting at Kisumu, Kenya, and Mwanza, Tanzania. Important ports and harbors include Entebbe, Jinja, and Port Bell. As of 2004, Uganda had an estimated 300 km (187 mi) of navigable inland waterways. As of 2002, Uganda had a merchant fleet of three cargo ships totaling 5,091 GRT.

In 2004, airports numbered an estimated 29, only 4 of which had paved runways as of 2005. Uganda's international airport is at

LOCATION: 4°7' N to 1°30' S; 29°33' to 35°20' E. BOUNDARY LENGTHS: Sudan, 435 kilometers (271 miles); Kenya, 933 kilometers (578 miles); Tanzania, 396 kilometers (247 miles); Rwanda, 169 kilometers (105 miles); Democratic Republic of the Congo (DROC), 765 kilometers (475 miles).

Entebbe. In 2003, about 40,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

San-like peoples were among the Uganda region's earliest inhabitants. Over the centuries, however, they were overcome by waves of migrants, beginning with the Cushitic speakers, who probably penetrated the area around 1000 BC. In the first millennium AD, Bantu-speaking peoples moved into the highland areas of East Africa, where they cultivated the banana as a food crop. After AD 1000, two other migrations filtered through the area: Nilotic-speaking Sudanic people and Luo speakers.

In the region south and west of the Nile, a number of polities formed, most of them strongly centralized. North and east of the Nile, political organization tended to be decentralized. In the

south, the kingdom of Bunyoro was the most powerful and extensive, but in the 18th century the neighboring kingdom of Buganda began to challenge its supremacy. The two states were engaged in a critical power struggle when the British explorers John Hanning Speke and J. A. Grant reached Buganda in 1862. They had been preceded some years earlier by Arab ivory and slave traders. Other foreigners soon followed. Sir Samuel Baker entered Uganda from the north shortly after Speke's departure. Baker described a body of water, which he named Lake Albert. Baker returned to Uganda in 1872–73 as a representative of the Egyptian government, which was pursuing a policy of expansion up the Nile. The first Christian missionaries, members of the Church Missionary Society of Great Britain, came to Buganda in 1877. They were followed in 1879 by the Roman Catholic White Fathers.

The missionaries were welcomed by the *kabaka* (ruler) of Buganda, Mutesa I, who hoped to gain their support or the support of their countrymen against the Egyptian threat from the north. When the missionaries displayed no interest in military matters and the Egyptian danger was removed by the Mahdist rising in the Sudan in the early 1880s, Mutesa became less amenable. His son, Mwangi, who succeeded Mutesa on the latter's death in 1884, was even more hostile, fearing the influence exerted over his subjects by both the missionaries and the Arab traders. The *kabaka*, therefore, began to persecute the Bagandan adherents of Christianity and Islam. Both sets of converts joined forces to drive the *kabaka* from his country in 1888. A few weeks later, the Christians were expelled by the Muslims. Mwangi then appealed to the Christians for help, and they finally succeeded in restoring him to power early in 1890.

In 1888, the Imperial British East African Co. was granted a charter and authorized to administer the British sphere of East Africa. The Anglo-German agreement of 1890 officially outlined imperial spheres of influence in East Africa. By that agreement, what is now Uganda and Kenya were to be considered British spheres and Tanganyika a German sphere. In 1890, Capt. F. D. Lugard was sent to Buganda to establish the company's influence there. Lugard obtained Mwangi's agreement to a treaty that placed Buganda under the company's protection. Shortly afterward, however, lack of funds compelled the company to withdraw its representatives from Buganda.

In 1894, the kingdom of Buganda became a British protectorate, which was extended in 1896 to cover Bunyoro and most of what is now Uganda. In 1897, Mwangi led a revolt against British encroachments; he was quickly defeated and deposed. His infant son, Daudi Chwa, succeeded him, and a regency was established to govern Buganda under British supervision. Under the Uganda Agreement of 1900, Buganda was ruled indirectly by the British, who in turn used the Baganda leadership as agents to extend British control indirectly throughout Uganda. The agreement confirmed the privileged position of Buganda in Uganda and of the traditional chiefs in Buganda. Subsequent treaties for indirect rule were concluded with the remaining kingdoms over a period of years.

Buganda's rebuff of British policies following World War II marked the beginning of a conflict over the place of Buganda within the future evolution of the territory. *Kabaka* Mutesa II was deposed in 1953 when he refused to force his chiefs to cooperate

with the British. He was restored to power in 1955 under a compromise agreement.

It was only at the constitutional conference convened in London in October 1961 that a place was agreed for Buganda in a federal relationship to central government. It was also decided at this conference that Uganda should obtain independence on 9 October 1962. At a second constitutional conference in June 1962, Buganda agreed to scale down its demands over financial matters and ended its threats of secession from the central government. In August, a federal relationship with the kingdom of Ankole was agreed upon, and the agreement used as a model for dealing with the remaining two kingdoms, Bunyoro and Toro.

On 9 October 1963, an amendment to the constitution abolished the post of governor-general and replaced it with that of president. Sir Edward Mutesa (*Kabaka* Mutesa II of Buganda) became Uganda's first president. In February 1966, the 1962 constitution was suspended and the prime minister, Milton Obote, assumed all powers of government. Parliament formally abrogated the 1962 constitution on 15 April 1966 and adopted a new constitution, which created the post of president and commander-in-chief; Obote was elected to fill this position on the same day. Obote declared a state of emergency in Buganda following a clash between the police and dissident Baganda protesting the new constitution. On 24 May, Ugandan troops took control of the *kabaka*'s palace, and the *kabaka* fled the country.

Further revisions to the constitution enacted in June 1967 abolished the federal relationship of Buganda and the other kingdoms, making Uganda a unitary state. Uganda became a republic with an executive president, who would be concurrently head of state and government.

Following a failed assassination attempt on Obote in December 1969, parliament declared a state of emergency on 22 December. Ten opposition leaders were arrested and all opposition parties were banned.

#### Amin Seizes Power

On 25 January 1971, while Obote was out of the country, Maj. Gen. Idi Amin led a successful military coup. Obote was received by Tanzania as a political exile. The Second Republic of Uganda was proclaimed on 17 March 1971, with Amin as president. In September 1972, Ugandans who had followed Obote into exile in Tanzania staged an abortive invasion. They were immediately overpowered, but tensions between Uganda and Tanzania remained high.

The expulsion of Asian noncitizens from Uganda in August 1972 also caused international tension, especially with the United Kingdom. Expulsion of numerous British nationals in 1973 and the nationalization of UK-owned enterprises beginning in December 1972, further aggravated relations with the United Kingdom. An Israeli commando raid on Entebbe Airport on 3–4 July 1976, which freed 91 Israeli passengers and 12 crew members held captive by pro-Palestinian radicals in a hijacked aircraft, was a severe blow to the prestige of Amin, who was suspected of collusion with the hijackers (20 Ugandan troops were killed during the raid).

Under Amin, Uganda suffered a reign of terror that had claimed 50,000 to 300,000 lives by 1977, according to Amnesty International. The expulsion of the Asians took a heavy toll on trade and

the economy. Agricultural and industrial production also fell, and educational and health facilities suffered from the loss of skilled personnel. The collapse in 1977, essentially because of political differences, of the 10-year-old East African Community (members—Kenya, Tanzania, and Uganda) also dealt a blow to Uganda's economy.

In late October 1978, Ugandan forces invaded Tanzanian territory, but Tanzanian forces, supported by anti-Amin rebels, struck back and by January 1979 had entered Ugandan territory. Kampala was taken on 11 April 1979, and all of Uganda was cleared of Amin's forces by the end of May; Amin fled first to Libya and later to Saudi Arabia. Yusuf K. Lule, an educator, formed a provisional government but was ousted on 20 June in favor of Godfrey Binaisa. On 13 May 1980, a military takeover ousted Binaisa and installed Paulo Muwanga. Parliamentary elections administered by Muwanga and other supporters of Obote, who returned from exile in Tanzania, were held on 10 December 1980. The election results, which opponents claimed were fraudulent, gave Obote's Uganda People's Congress (UPC) a clear majority, and he was sworn in as president on 15 December 1980. A period of reconstruction followed, and Tanzanian troops left in mid-1981. Security remained precarious, however. An undisciplined soldiery committed many outrages, and antigovernment guerrilla groups, especially the National Resistance Army (NRA), which was supported from abroad by Lule and Binaisa, remained active.

Obote's second term in office was marked by continued fighting between the army and guerrilla factions. As many as 100,000 people may have died as a result of massacres, starvation, and hindrance of relief operations. International groups denounced the regime for human rights abuses. On 27 July 1985, Obote was overthrown in a military coup and Lt. Gen. Tito Okello, commander of the armed forces, was installed as president.

The NRA continued fighting, however, and on 26 January 1986 it occupied Kampala. Three days later, NRA leader Yoweri Museveni assumed the presidency. By April the National Resistance Movement (NRM) government was in control of most of the country, but armed supporters of the Obote, Amin, and Okello regimes remained active in northern and northeastern Uganda, as well as opposition from Karamojong separatists and prophetic religious movements, most notably the Holy Spirit rebels of Alice Lakwena in 1987.

After 1990, except for tiny groups of bandits, rebel military action was almost eliminated. However, Museveni resisted introducing a multiparty constitution advocating "no-party government" instead. In late August 1992, parliament formalized the ban on party politics which officials of the UPC and Democratic Party, DP (both abolished by Museveni in 1986) rejected at a press conference. Nonetheless, parties became more active, despite the ban and police action.

Although lauded by western countries as a new breed of African leader, and Uganda as a role model for African development, there was growing criticism of Museveni for his lack of democratic credentials. In July 1993, parliament enacted Constituent Assembly Statute No. 6, the basis for nonparty elections to choose a constituent assembly, which would consider the draft constitution released in December 1992 by an appointed commission. In a secret ballot election on 28 March 1994, Ugandans elected 214 delegates to the 288-member assembly. Also included were 10 delegates ap-

pointed by the president, 56 representing interest groups, and 8 representing 4 parties that had contested the 1980 election.

In addition, the government introduced constitutional changes allowing the Baganda to restore their monarchy purely for ceremonial purposes. Ronald Mutebi, son of the former king, was installed as Kabaka on 31 July 1993. The monarchies had been abolished in the 1967 constitution. A second king was restored and a third was rejected by government.

In October of 1995, the new constitution was finally enacted. It replaced the interim National Resistance Council with a permanent parliament, and made minor changes in executive power, but its most noticed element was the prohibition of political party activity for five years.

The first popular elections for president since independence were held on 9 May 1996. Museveni won with 74% of the vote, Paul Ssemogerere got 24%, and Muhammad Mayanja 2%. Non-party parliamentary elections for the 276-member (214 elected, 62 nominated by special groups) house followed on 27 June 1999. The elections were peaceful and orderly, but election conditions, including restrictions on political party activities, resulted in flaws. Elections were held again in March 2001 with Museveni claiming victory with 69% of the vote to 28% for Kizza Besigye. The results were upheld despite objections by the opposition.

By June 2003, there was growing concern over the government's inability to build political consensus in the country and to maintain peace and security. In the north, the Lord's Resistance Army (LRA), a cult-like Christian rebel group operated from bases in southern Sudan, and in western Uganda, the Allied Democratic Forces (ADF) stepped up rebel attacks from the DROC. Other rebel groups included Rwanda Hutu rebels, Uganda National Rescue Front-II, and the Uganda National Front/Army. Members of these rebel groups murdered, raped, kidnapped, tortured, and abducted children using them as combatants, sex and labor slaves. UNICEF estimated that the LRA and ADF abducted over 4,900 men, women and children since 1987, most of whom remained missing.

Museveni has tried both diplomatic and military means to end the fighting. He reluctantly accepted an Amnesty Bill in January 2000, which provided for pardon to any rebels who surrendered their arms within six months. Three months later, no rebels had complied. A highly publicized all-out offensive in 2002 also failed to achieve its goals, and independent observers accused government troops of killing innocent civilians including women and children.

In 2004, three opposition groups—Reform Agenda, the Parliamentary Advocacy Reform (PAFO), and the National Democratic Forum (NDF)—merged to form the FDC, which became the main challenger to Museveni's NRM party. In 2005, the parliament approved two constitutional amendments that restored a multiparty system and removed the two-term limit for the president. The elimination of the two-term limit, which opposition groups and donors stridently opposed, was significant in that it allowed Museveni to run for another term. Uganda had operated under a no-party system since 1980. Subsequently, some 50 parties formed and began to campaign in the run-up to the 2006 elections. In August, the parliament also approved additional changes to the constitution that increased the power of the executive vis-à-vis the legislature.

The February 2006 polls marked the first multiparty presidential and parliamentary elections in 26 years. In the run-up, three people were killed as a result of violent clashes between security personnel and opposition supporters. Voting day itself was mostly peaceful though many irregularities such as unsealed ballot boxes, under-age voting, and military patrols in the vicinity of polling stations were reported. Thousands of domestic and international observers from the EU, AU, United States and Commonwealth nations observed the polling. Some 80–90% of polling stations were monitored.

As the results were announced the following day, the FDC alleged voter-list tampering. International observer missions, though not uniform in their assessments, generally rated the exercise as short of free and fair. The main complaint by observers was that the playing field had been made extremely unlevel mostly because of the rape and treason charges leveled at Dr. Kizza Besigye, Museveni's opponent, by government agencies. In March 2006 the rape charges were dropped. However, the treason trial was due to begin on 15 March 2006. Ironically, Mr. Besigye, who had fled Uganda after losing the 2001 poll, had formerly been Museveni's personal doctor, and the two were allies in the guerrilla war. The official results gave Museveni the victory by a margin of 59.28% of the vote to Dr. Besigye's 37.36%. The FDC immediately challenged the results, but police surrounded FDC headquarters to prevent a mass protest. Voter turn-out was 68.6%.

In the 2006 parliamentary contest, the NRM ruling party took the majority of the seats with 202 to 40 for the FDC and 49 seats to other smaller opposition groups. This result assured the president's party of a two-thirds majority. In a hotly contested race in a district in southwest Uganda, the first lady, Janet Museveni, became a member of parliament by beating an FDC incumbent of ten years. Evidence that she used state resources during her campaign did not reverse the outcome. Although the FDC accused the NRM of having stolen the election, it vowed to pursue change through legal and constitutional means. A separate FDC tally showed Museveni winning 51% of the vote with enough votes to exceed a run-off by only 600,000—which the FDC claimed it could prove was rigged.

Internationally, a cease-fire with President Joseph Kabila of DROC signed in 2003 was threatened by alleged evidence of rebel ADF bases in neighboring Ituri province. Additionally, though most Ugandan troops were withdrawn from Congolese territory in early 2003, the Ugandan government was likely to send troops back in if Rwanda were to do the same. Relations with Sudan continued to be unsettled because of unanswered questions following the crash of John Garang's helicopter in July 2005. Garang, former leader of the SPLA, had been a long-time friend of Museveni, but speculation that Uganda was connected to the crash chilled relations with the South Sudan government. For Uganda, this meant that insecurity in the north would likely continue, especially with the rebel group, the Lord's Resistance Army (LRA) able to operate from Sudanese territory.

### **13 GOVERNMENT**

Following Gen. Amin's coup of 25 January 1971, provisions of the 1967 constitution dealing with the executive and legislature were suspended, and Amin ruled by decree. As commander-in-chief of

the armed forces and president of the military government, he exercised virtually all power.

Following Amin's defeat, the Uganda High Court in 1980 declared a modified version of the 1967 constitution to be the law of the land. The constitution was amended in May 1985, but it was suspended with the fall of the Obote government in July, when the National Assembly was dissolved. A 270-person National Resistance Council was established in 1986 to act as the nation's legislative body pending the holding of elections. Nonpartisan elections for the NRC were held in February 1989. There were 382 members, 216 elected and 166 appointed by the president. An appointed cabinet (including members of the banned opposition parties) advised the president. He also sought advice from and consensus with key interest groups and institutions on important policy issues, especially from the National Resistance Army.

The new constitution was enacted in October 1995, replacing the NRC with an elected parliament while leaving the power and structure of the executive largely unchanged. It provided for a 276-member body, with ensured representation for special interest groups (including 39 seats for women, 10 for the Army, 5 for the disabled, 5 for youth, and 3 for trade unions). By 2003, the number and proportion of appointed seats had been altered. In 2005, parliament voted two significant changes to the constitution that restored multipartyism and revoked the two-term limit for presidents.

Parliamentary elections were first held on 27 June 1996 and again on 26 June 2001. The parliamentary term is five years. The current eighth legislative body numbers 309 members up from 304 seats in the seventh parliament. Presidential elections were held on 9 May 1996, on 12 March 2001, and most recently (along with parliamentary elections) on 23 February 2006—the first multiparty elections in 26 years. Fresh elections were due in 2011. Suffrage is universal at age 18.

### **14 POLITICAL PARTIES**

The Uganda People's Congress (UPC), founded in 1959, was the leading political party of the pre-Amin era. At the time of independence it formed a ruling coalition with the Kabaka Yekka (The King Only), which drew its support from the Baganda. The opposition party was the Democratic Party (DP), founded in 1953.

The marriage of convenience between the UPC and the Kabaka Yekka deteriorated, and in February 1966, Prime Minister Milton Obote, who had been the head of the UPC, suspended the constitution, deposed the president and vice president, and began a move to power, which culminated in the proclamation of the Republic of Uganda under a new constitution adopted in September 1967. The political situation under Obote continued to deteriorate, and after an attempt on his life, Obote's government banned the opposition parties and arrested 10 of their leaders. Uganda was subsequently declared a one-party state in 1969, the UPC remaining as the only legal party. After the military overthrow of the Obote government on 25 January 1971, Maj. Gen. Amin outlawed all political parties.

After the overthrow of Amin, four political parties took part in the parliamentary elections held in December 1980. The UPC was declared to have won 74 seats in the National Assembly; the DP, 51; the Uganda Patriotic Movement, 1; and the Conservative Party, 0. These parties, as well as Yoweri Museveni's National Re-

sistance Movement and the Uganda Freedom Movement, were represented in the cabinet appointed in 1986. The government ordered all parties to suspend active operations, however, and mandated that elections would not be held before 1989.

By 1991, however, party activity, although banned, began to increase. Top officials of the DP and UPC were arrested in January 1992. Museveni insisted that no party activity could precede the new constitution. In August, the DP and UPC held a joint press conference to denounce parliament's formalization of the ban. President Museveni declared that parties were not allowed to participate in either the presidential election or the parliamentary elections held in May and June of 1996, respectively. Nonetheless, 156 of the 276 members of the parliament elected in 1996 were considered to be supporters of General Museveni. The UPC, DP, and CP remained the most important opposition parties.

In June 2000, the no-party system was subjected to a national referendum. Despite accusations of vote rigging and manipulation by the opposition, Ugandans approved it. They also reelected Museveni to a second five-year term in March 2001. In the 303-member National Assembly, 214 seats were directly elected by popular vote, and 81 were nominated by legally established special interest groups including women (56), army (10), disabled (5), youth (5), labor (5), and ex officio members (8). Campaigning by party was not allowed.

In May 2003, the National Executive Committee recommended that subject to another national referendum in 2004, parties be free to operate. Nonetheless, the United States was particularly concerned about the lack of political space and freedom of speech that Museveni's Movement has allowed other political forces. The United States also expressed its disapproval of any attempt by Museveni or his Movement to tamper with the constitution to legalize a run for a third term. Nevertheless, the February 2006 elections showed the grassroots strength of the reconstituted National Resistance Movement Organization (NRMO), which despite opposition (FDC) complaints, was confirmed in its victory by parallel vote tabulation. One deciding factor in the outcome, however, was a highly unlevel playing field characterized by the use of state resources, intimidation, and a smear campaign on FDC candidate, Dr. Besigye, launched by the ruling NRMO party.

## 15 LOCAL GOVERNMENT

Until the adoption of the 1967 constitution, local government in Buganda was conducted on behalf of the kabaka by six ministers, advised by the *lukiko* (Buganda council) and by a hierarchy of chiefs. With the abolition of the federal system of government in 1967, Buganda was divided into four districts, and the kabaka's government was dissolved. The federal status of the kingdoms of Ankole, Bunyoro, and Toro was also abolished. Under that constitution, Uganda was divided into 18 districts.

In 1973, President Amin instituted a new system of provincial government establishing 10 provinces subdivided into 26 districts. Later Kampala became Central Province. In 1980 the number of districts increased to 33, and in March 2000, to 39. By 2002, there were 45 districts and by 2006, the number rose to 56.

Since 1986, National Resistance Movement committees have played leading roles in local and district affairs. In early March 1992, local council elections were held nationwide. Political par-

ties were not allowed to campaign, although many candidates could be identified as members of particular parties.

There was disappointment on the part of donors with logistical delays, irregularities in distribution of electoral material and voting, confusion over electoral laws, and electoral violence during the 2002 local elections.

## 16 JUDICIAL SYSTEM

In 1995, the government restored the legal system to one based on English common law and customary law. At the lowest level are three classes of courts presided over by magistrates. Above these is the chief magistrate's court, which hears appeals from magistrates. The High Court hears appeals and has full criminal and civil jurisdiction. It consists of a chief justice and a number of puisne justices. The three-member Court of Appeal hears appeals from the High Court. A military court system handles offenses involving military personnel. Village resistance councils (RCs) mediate disputes involving land ownership and creditor claims. These councils have at times overstepped their authority in order to hear criminal cases including murder and rape. RC decisions are appealable to magistrate's courts, but ignorance of the right to appeal and the time and cost involved make such appeals rare. In practice, a large backlog of cases delays access to a speedy trial.

Although the president retains some control of appointments to the judiciary, the courts appear to engage in independent decision-making and the government normally complies with court decisions. Uganda accepts the jurisdiction of the International Court of Justice with reservations.

## 17 ARMED FORCES

After Amin's regime was overthrown, a Commonwealth training force was sent to reorganize the army, which proved difficult. In 1987, the National Resistance Army (NRA) was established as the national army in the wake of another civil war. Thousands of defeated guerillas were given amnesty and integrated into the NRA, swelling its ranks to as many as 70,000–100,000 men, armed with outdated US, UK, and Russian weapons.

The Ugandan People's Defense Force was estimated at 40,000–45,000 in 2005, and consisted of five divisions, one armored and one artillery brigade. Equipment included 152 main battle tanks and 20 light tanks. There was an air wing with 15 combat capable aircraft that included 11 fighters, in addition to six attack helicopters. Paramilitary forces consisted of a border defense unit of around 600, some 400 marines, a police air wing of around 800, and local defense units numbering up to 10,000. In 2005, the defense budget totaled \$196 million.

## 18 INTERNATIONAL COOPERATION

On 25 October 1962, Uganda became the 110th member of the United Nations; it is a member of ECA and several nonregional specialized agencies, such as the World Bank, IAEA, the FAO, ILO, UNESCO, UNHCR, UNIDO, and the WHO. Uganda participated in the establishment of the African Development Bank. It is a member of the Commonwealth of Nations, the ACP Group, the WTO, the East African Development Bank, the Islamic Development Bank, the Organization of the Islamic Conference (OIC), COMESA, the New Partnership for Africa's Development (NEPAD), and G-77. Kampala was the headquarters of the African

Union (formerly the Organization of African Unity) for the 1975 summit meeting, and then president Idi Amin was the OAU president for 1975–76.

Uganda generally supports peace efforts in neighboring countries. Relations with Rwanda, Congo and Sudan are sometimes tense, primarily due to unrest in those nations. Uganda fully supports the international war on terrorism. The country is part of the Nonaligned Movement. In environmental cooperation, Uganda is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Uganda's economy is agriculture based, with agriculture employing over 80% of the population and generating 90% of export earnings. Coffee is the main export crop, with tea and cotton other agricultural products. Uganda also has mineral deposits of copper and cobalt, which contributed 30% of export earnings during the 1960s, although the mining sector is now only a minor contributor to the economy.

The upheavals of the 1970s and the troubles of the 1980s left the economy in disarray. However, economic reforms begun in 1986 have resulted in important progress. The government made significant strides in liberalizing markets and releasing government influence during the 1990s, although some administrative controls remained in 2003. Monopolies were abolished in the coffee, cotton, power generation, and telecommunications sectors and restrictions on foreign exchange were removed. Reforms improved the economy and gained the confidence of international lending agencies.

The economy has posted growth rates in the GDP averaging 6.9% from 1988–98, and 5.8% from 2000–2005. Consequently, the economy has almost doubled. Still, Uganda is one of the poorest countries in the world heavily dependent on foreign aid (approximately 55% of government spending in 1998). High growth rates are necessary to balance the population growth rate of over 3%. The government in 2003 was known for its sound fiscal management. World coffee prices recovered in 2003, which brought in revenue. New property developments have been fueled by an influx of foreign investment, which has provided testimony of confidence in Uganda's economy. Ugandan Asians, who had been expelled by Idi Amin in 1972, have had their property restored and have brought business back into the country. One of the first African nations hit by HIV/AIDS, Uganda had by 2005 witnessed a drop in infection rates over the previous decade. However, Uganda's continued involvement in the civil war in the Democratic Republic of the Congo compromised the progress Uganda has made on many other fronts.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Uganda's gross domestic product (GDP) was estimated at \$46.0 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,700. The annual

growth rate of GDP was estimated at 9%. The average inflation rate in 2005 was 9.7%. It was estimated that agriculture accounted for 31.1% of GDP, industry 22.2%, and services 46.9%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$295 million or about \$12 per capita and accounted for approximately 4.7% of GDP. Foreign aid receipts amounted to \$959 million or about \$38 per capita and accounted for approximately 15.6% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Uganda totaled \$4.92 billion or about \$195 per capita based on a GDP of \$6.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 6.0%. It was estimated that in 2001 about 35% of the population had incomes below the poverty line.

## 21 LABOR

Uganda's workforce in 2005 was estimated at 13.17 million. As of 2003, agriculture accounted for the majority of the country's workforce at 69.1%, followed by the services sector at 23.1%, industry at 7.6% and undefined occupations for the remainder. A 2003 survey of the Ugandan workforce gave an unemployment rate for that year of 3.2%.

The Uganda Trade Union Congress was dissolved in 1973 and replaced by the National Organization of Trade Unions, which remains the largest labor federation. NOTU is independent of the government but has little influence in the economy since it claims only about 5% of the workforce. Strikes are permitted by law but are greatly restricted by lengthy and complicated procedures.

The minimum working age is 18 but many children work out of economic necessity and because school fees are so high. A large percentage of under-18 children do not attend school. Most children work in the informal sector. In 2002, the legal minimum wage remained at a level set in the early 1960s, at \$3.50 per month. Wage earners are an extremely small percentage of the workforce. In this sector, the workweek is set at 40 hours. Most workers supplement their income with second jobs and family farming. Occupational safety regulations have existed since 1954 but the government lacks the resources to implement them.

## 22 AGRICULTURE

Uganda's economy is predominantly agrarian; 32% of the GDP, 70% of the employed labor force, and 40% of export earnings are derived from the agricultural sector. A total of 7,350,000 hectares (18,162,000 acres), or 37% of the land area, is under cultivation. Subsistence production remains the pattern; 70% of the area under cultivation is used to produce locally consumed food crops. Women provide over half of agricultural labor, traditionally focusing on food rather than cash crop production. The monetary value of market crops is exceeded by the estimated value of subsistence agriculture. Plantains, cassava, sweet potatoes, and bananas are the major food crops. In 2004, food production estimates included plantains, 9.9 million tons; cassava, 5.5 million tons; sweet potatoes, 2.6 million tons; bananas, 615,000 tons; millet, 700,000

tons; corn, 1,350,000 tons; sorghum, 420,000 tons; beans, 545,000 tons; and potatoes, 573,000 tons.

Coffee is still an important export earner for Uganda, with receipts in 2004 at \$124.2 million, 35% of agricultural exports. Production of robusta, which was cultivated by the Baganda before the arrival of the Arabs and British, and some arabica varieties of coffee provides the most important single source of income for more than one million Ugandan farmers and is the principal earner of foreign exchange. Export crop production reached a peak in 1969. Estimated production of major cash crops in 2004 included coffee, 186,000 tons; cotton (lint), 22,200 tons; tea, 36,000 tons; sugarcane, 1,600,000 tons; and tobacco, 33,000 tons. Roses and carnations are grown for export to Europe.

### 23 ANIMAL HUSBANDRY

Uganda had an estimated 6.1 million head of cattle; 7.7 million goats; 1.15 million sheep; and 1.3 million hogs in 2005, as well as about 33 million chickens. Meat production in 2005 was an estimated 256,000 tons, 23% pork. The tsetse fly, which infests about 30% of Uganda, limits livestock production, and cattle rustling remains a problem. The livestock sector had been disrupted by armed rebels, but the United Nations, the EU, Denmark, and several international development banks are contributing to its revitalization.

### 24 FISHING

Many persons find employment in fishing and the marketing of fish, and many fishermen sell their catch to the main distribution centers. Most fish are caught from dugouts or hand-propelled canoes. Lake Victoria and Lake Kyoga are the major commercial fishing areas; Nile perch and Nile tilapia are the most abundant species. In 2003, the total catch was estimated at 245,431 tons. The fishing industry has benefited from a large ice-making plant at Soroti.

### 25 FORESTRY

Forests cover 4,190,000 hectares (10,353,000 acres), or 21% of the land area. About half of the forested area is savanna woodland. In 2000, production of roundwood was estimated at 39.4 million cu m (139 billion cu ft). About 92% was used for fuel.

### 26 MINING

Mining and quarrying in fiscal year 2002/2003 accounted for 1% of Uganda's gross domestic product (GDP), which grew by 4.7% in 2002/2003 and 6.8% in 2002/2001. Gold accounted for 13% of Uganda's exports by value in 2002. In recent years, Uganda has been known to produce cobalt (95% of which was exported), limonite and other iron ore, niobium, steel, tantalum, tin, tungsten, apatite, gypsum, kaolin, brick clays and other clays, hydrated lime, quicklime, limestone, pozzolanic materials (used for pozzolanic cement), and salt (by evaporation of lakes and brine wells).

Mine gold output (metal content) in 2003 was estimated at 5 kg, up from 3 kg in 2002. Gold production began in 1992. Limestone output, in 2003 was estimated at 226,408 metric tons, up from 140,022 metric tons in 2002. Limestone resources at the largest deposits—Hima, Tororo Hill, and Bukiribo—totaled 46.1 million tons. Output of hydraulic cement in 2003 was estimated at 505,000 tons, down slightly from 505,959 metric tons in 2002; and colum-

bite-tantalite ore and concentrate (gross weight) was estimated at 7,200 kg. In addition, Uganda presumably produced copper content of slag, corundum, garnet, gemstones, gravel, marble, ruby, sand, and vermiculite. No wolfram was produced in 2003. Extraction of copper was halted in 1980.

The Namekhela high-quality vermiculite deposit had resources of 5 million tons. Pyrochlore resources amounted to 6 million tons. Iron ore resources in Sukulu were 45.7 million tons at an average grade of 62% iron; the Muko deposit, worked by artisanal miners, contained 30 million tons at a grade 61–67% iron; and there were additional resources at Kyanyamuzinda, Metuli, Mugabuzi, and Wambogwe. Inferred resources of wolframite were 20 million tons; gypsum deposits totaled 5.5 million tons; marble resources, 10 million tons; the Sukulu phosphate deposit had resources of 230 million tons; and there were occurrences of silica sand deposits. The abandoned Kilembe copper mine had proven reserves of 5 million tons, and its tailings contained 5.5 million tons. A pilot study in 1991 attempted to process the tailings for cobalt and copper, using a natural strain of bacteria to separate the cobalt metal.

The United Nations Security Council accused Ugandan government officials, military officers, and businessmen of illegally exploiting columbium, diamonds, gold, and tantalum from Democratic Republic of the Congo; the Ugandan government denied the accusations.

### 27 ENERGY AND POWER

Uganda has no known reserves of crude oil, natural gas or coal, nor any refining capacity.

Uganda must import all the petroleum products, natural gas or coal that it consumes. In 2002, demand and imports of refined petroleum products each averaged 9,920 barrels per day. There were no recorded imports of natural gas or coal, nor any demand for either in that year.

Uganda's electric power generating capacity is almost entirely hydroelectric. In 2002, electric generating capacity totaled 0.303 million kW, with conventional thermal capacity accounting for 0.003 million kW. Electric power output that year totaled 1.675 billion kWh, with 1.668 billion kWh from hydroelectric sources and 0.007 billion kWh from fossil fueled plants. Demand for electric power in 2002 totaled 1.413 billion kWh. Only an estimated 3–5% of the population has access to electricity. Fuel wood and charcoal supply 95% of required energy.

### 28 INDUSTRY

Production of most industrial products declined in 1973, largely because of the expulsion of skilled Asian personnel. A precipitous decline followed, with output in 1985 little more than a third of the postindependence peak levels of 1970–72. As of 2002, however, growth over the past decade had occurred in manufacturing and construction, among other sectors, and the size of the Ugandan economy had doubled. Industrial contribution to GDP was 21% in 2004. The agricultural industry produces cotton, coffee, tea, sugar, tobacco, edible oils, and dairy products. Ugandan industrial production also includes grain milling, brewing, vehicle assembly, textiles, steel, metal products, cement, soap, shoes, animal feed, fertilizers, paint, and matches.

The textile industry suffers from a lack of skilled labor but is being encouraged by funds from the EU and the Arab Develop-

ment Bank. General Motors is assembling vehicles in Uganda, and Lonrho has returned to manage its previously owned brewery, to build an oil pipeline, and to join in agricultural marketing efforts. Coca-Cola, Pepsi, and Schweppes are producing soft drinks. A tannery will make Uganda self-sufficient in leather products. Batteries, canned foods, pharmaceuticals, and salt are among the other products being produced in Uganda's industrial sector.

In 2002, the country planned to build from one to three hydroelectric projects along the Nile River, and this and other infrastructure projects fueled the construction industry.

### 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Uganda has a medical association, a child malnutrition unit, an agriculture research institute, a forestry research center, and a cotton research station in Kampala. An animal health research center and the Geological Survey and Mines Department are in Entebbe. Makerere University (founded originally in 1922 as a technical school at Kampala) has faculties of science, agriculture and forestry, technology, medicine, and veterinary science. Uganda Polytechnic Kyambogo (founded in 1954 at Kampala) has 1,000 students. Mbarara University of Science and Technology (founded in 1989) has faculties of medicine and science education.

In 1987–97, science and engineering students accounted for 17% of college and university enrollments. In 2001 expenditures on research and development (R&D) totaled \$259.438 million, or 0.82% of GDP. In 2000 (the latest year for which data was available), foreign sources accounted for the overwhelming majority of R&D spending at 90.3%, followed by government sources at 6.6%, the domestic business sector at 2.2%, higher education at 0.6%, and private nonprofit organizations at 0.3%. As of 2001, there were 25 researchers and 15 technicians engaged in R&D per million people. High technology exports in 2002 totaled \$4 million, accounting for 12% of the country's manufactured exports.

### 3<sup>0</sup> DOMESTIC TRADE

Most retail trade is accomplished through small shops supplied by small distributors. Consumer products are priced based on what the market will bear. Kampala is Uganda's main commercial center, but many concerns have their headquarters or regional offices in Nairobi, Kenya. Bootlegging of cassettes and videos is common. The market for smuggled goods, including fuel, clothing, electronics and other consumer goods, is rather large. English is the business language, although Swahili is often spoken as well. Products are marketed through radio and television advertising.

Business hours are from 8 or 8:15 AM to 12:30 PM and from 2 to 5 PM. Shops close on Sundays. Banking hours are 8:30 AM to 12:30 PM, Monday–Friday.

### 3<sup>1</sup> FOREIGN TRADE

Principal imports in 2005 included machinery equipment, iron, steel, vehicles and accessories, chemical and related products, medical supplies, petroleum and related products, vegetable products, animal fats and oil. Traditionally, coffee accounted for nearly a third (31%) of Uganda's export commodities. For example in 2005 the big four exports were coffee (41%), fish (34%), cotton (13%), and tea (12%). Other exports include gold and tobacco.

Uganda exports most of its goods to Belgium, Netherlands, the United States, Germany and Spain while most of its imports come

from Kenya, the United Kingdom, China and Japan. Principal trading partners for exports in 2004 as a percent of total exports were as follows: Netherlands (15.8%), Belgium (10.2%), the United States, (9.0%), Germany (7.8%), and Spain (6.6%). Principal trading partners for imports in 2004 as a percent of total imports were as follows: Kenya (44.6%), South Africa (6.6%), India (5.6%), the United Kingdom (5.3%), and China (4.5%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Uganda had a favorable balance of payments in the 1930s and throughout the postwar years—an unusual feature in an underdeveloped country. The favorable balance with the rest of the world, however, was diminished by deficits in trade with Kenya and Tanzania following independence. Uganda's payments position declined during the 1960s, and during the 1970s, years of deficit out-

numbered those of surplus; moreover, the deficits were larger than the surpluses. Poor trade performances and mounting debt service led to a loss of reserves in the 1980s. From 1986 to 1990, merchandise exports fell by 56% (due largely to plummeting coffee prices), while merchandise imports increased by 30%, so that the trade deficit widened rapidly from \$69 million to \$440 million in just a few years. Trade deficits continued through the 1990s. Low levels of foreign investment, coupled with weak coffee exports, led to a decline in foreign exchange reserves and a deteriorating balance of payments position in the early 2000s.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Uganda's exports was \$791.1 million while imports totaled \$1.608 billion resulting in a trade deficit of \$816.9 million.

### 33 BANKING AND SECURITIES

The Bank of Uganda was established on 16 May 1966 as the bank of issue, undertaking the function previously served by the East African Currency Board in Nairobi. The government-owned Uganda Commercial Bank (UCB) provided a full commercial banking service, complementary to and in competition with other commercial banks in the country. Uganda was rocked by a banking scandal in 1989. Lack of public confidence in the system was compounded by a prolonged period of high inflation, which caused rapid erosion in the value of money, and by the liquidity and insolvency problems of some banks. These problems remained unresolved through the 1990s.

In 1998, the financial sector included the Bank of Uganda together with 18 commercial banks and 2 development banks. In addition to the UCB, major commercial banks included Crane Bank Limited, Stanbic, Bank of Baroda, Standard Chartered Bank, Nile Bank, and Barclays Bank. The Uganda Development Bank is a government bank that channels long-term loans from foreign sources to Ugandan businesses. The East African Development Bank, the last remnant of the defunct East African Community, obtains funds from abroad for Kenya, Tanzania, and Uganda.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$517.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$938.8 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9%.

The government supported the establishment of a stock exchange in Kampala, and it inaugurated the Capital Markets Authority in 1995/96. The initial stage of capital market development concentrated on the interbank market and the sale of treasury bills, which the Bank of Uganda started selling in 1992 at weekly auctions. The exchange was officially opened in 1997, but in 1999, had not been active since inception.

### 34 INSURANCE

As of 1997, the government-owned National Insurance Corp. of Uganda, the Uganda American Insurance Co., and the East Africa General Insurance Co. were doing business in Uganda. Some 27 insurance companies were operating in Uganda in 1998.

### 35 PUBLIC FINANCE

The fiscal year runs from 1 July to 30 June. The main sources of government revenue are the export duties on coffee and cotton, import duties, income and profit taxes, excise taxes, and sales taxes. Deficits are chronic. Over half of public monies comes from foreign aid.

The US Central Intelligence Agency (CIA) estimated that in 2005 Uganda's central government took in revenues of approximately \$1.8 billion and had expenditures of \$1.9 billion. Revenues minus expenditures totaled approximately -\$59 million. Public debt in 2005 amounted to 62.8% of GDP. Total external debt was \$4.949 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, budgetary central government revenues were NUS\$2,014.8 billion and expenditures were NUS\$2,483.2 billion. The value of revenues in US dollars was us\$1.12 million and expenditures us\$1.38 million, based on a principal exchange rate for 2002 of us\$1 = NUS\$1,797.6 as reported by the IMF.

### 36 TAXATION

Individual income is taxed progressively at rates ranging from 4–15% for residents, and 15–20% for nonresidents. For the year ending 30 June 2005, corporate income was taxed at 30%, while mining companies were subject to a tax rate ranging from 25–45%, based on the level of profits. Capital gains are taxed at the corporate rate and are applied only to business assets. Generally, dividends, interest income, royalties and management fees are subject to a 15% withholding tax. Social security taxes are paid by both employers and employees.

A value-added tax (VAT) is set at 17%. The tax holiday for foreign investments was eliminated in 1997, replaced with accelerated appreciation schedules.

### **37 CUSTOMS AND DUTIES**

All imports and exports require licenses. As a party to the Lomé Convention, Uganda benefits from EU tariff preferences for its goods. Import duties are levied at 15%. Excise surcharges are set at 10%. Reductions were planned for 1999 to 2000.

Items that cannot be exported without permission from Uganda include scrap iron, wood charcoal, timber, coffee husks, fresh fish, and game trophies. Other restrictions exist when importing medications, firearms, live animals, endangered species, second-hand clothing, explosives, and plants; and when exporting minerals, fruit, and hides and skins. Prohibited imports include pornographic materials and used tires.

### **38 FOREIGN INVESTMENT**

A large number of Asian Ugandan companies were expropriated in 1972. A 1982 law provided for restoration of expropriated property to Asians who returned and for compensation to those who did not; a number of large Asian-owned enterprises resumed operations in 1986 as joint ventures, in which the government held 51% ownership. The United Kingdom group Mitchell Cotts also regained its nationalized property by participating in a similar joint venture. Further measures were taken in 1991 to recompense Asian Ugandans, and a new investment code designed to protect foreigners was issued in 1990. Ugandan law still allows for expropriation for public purposes, but investors are guaranteed compensation within 12 months. The Ugandan government has made attracting foreign investment a central part of its policy, and the Uganda Investment Authority has reported that the country has moved from 161 to 82 on a world ranking of average FDI per capita in the period 1990 to 2000. Most FDI inflows have come from expatriate Asians investing in repatriated property. Other investors are deterred by pervasive corruption. On Transparency International's 2002 listing of countries according to its Corruption Perception Index (CPI), Uganda was ninth from the bottom of 102 countries, scoring 2.1 on the 10-point index. Corruption infected the privatization process, which had greatly slowed in 2002 due to a lack of transparency, rampant asset stripping, and the failures of a number of negotiations.

From 1998 to 2001, the average annual inflow of foreign direct investment (FDI) held rather steady at approximately \$229 million a year, peaking in 2000 at \$275 million. From 2000–2004 FDI averaged \$231 million with the year 2004 registering \$237 million.

Foreign investors include those from the United Kingdom, India, Kenya and South Africa. Foreign companies operating in Uganda in 2005 included Pepsi, Coca-Cola, Caltex, Sheraton, Starcom, Citibank, Xerox, Cargill, AES, Colgate Palmolive, Swift Global, IBM, Hewlett-Packard, GM, Ford, Ernst and Young, Price-Waterhouse-Coopers, Deloitte and Touche, and Caterpillar.

### **39 ECONOMIC DEVELOPMENT**

Uganda's economic development policy for the early 1990s was outlined in the Economic Recovery Program for 1988–92. State investment was lowered by 42% from the previous plan and the export sector was to be revived, particularly the nontraditional export sector. The investment budget was divided equally among the

transport and communications sector, social infrastructure, agriculture, and the industry and tourism sector.

Inflation, which ran at 240% in 1987 and 42% in mid-1992, was under 5% for 1998. This was further reduced to -0.3% in 2002 but was estimated to have risen to 9.7% in 2005. Nevertheless, a slowdown in privatization, low interest in foreign investment, and sustained but limited growth dimmed the prospects for economic development.

In 2000, Uganda became eligible for \$1.3 billion in debt service relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In 2002, the IMF approved a three-year \$17.8 million Poverty Reduction and Growth Facility (PRGF) Arrangement for Uganda, which was due to expire in September 2005. Political instability and poor economic management have stunted economic development, although gross domestic product (GDP) growth stood at 5.5% in 2005. The government was implementing a Poverty Eradication Action Plan (PEAP) in 2003, with the goal of reducing the incidence of poverty to less than 10% of the population by 2017. The Economist Intelligence Unit reported that the latest IMF review in 2005 of Uganda's poverty reduction and growth facility (PRGF) was broadly positive. The government has published a new poverty eradication and action plan (PEAP). There were, however, a number of weaknesses in the PEAP, such as how high levels of donor inflows could be better managed.

### **40 SOCIAL DEVELOPMENT**

A social security system was introduced in 1967 and amended in 1985. This program provides old-age and disability pensions for employees of firms with five or more workers. Voluntary coverage is available. Retirement benefits amount to total employee and employer contributions plus interest, payable in a lump sum. Work injury benefits are provided for all workers and is funded by the employer.

Women are accorded equal rights by law, but tradition limits their exercise of them. Under customary law, women may not own or inherit property and are not entitled to custody of their children after divorce. The children of Ugandan women married to foreigners are not entitled to Ugandan citizenship. This stipulation does not apply to Ugandan men married to foreigners. Domestic abuse and violence against women is common. According to a 2003 study, one in three women were victims of domestic abuse. There are still reports of abduction and rape to obtain wives, and in 2004, thousands of women were raped by rebel forces. Female genital mutilation is practiced by several ethnic groups. Child labor is common.

The human rights situation in Uganda has improved in a few areas, but serious violations persisted, including excessive force by security forces, incommunicado detention, and prolonged pretrial detention. Prison conditions are very poor.

### **41 HEALTH**

Although medical treatment in government hospitals and dispensaries is free, facilities deteriorated greatly under Amin's rule. Following the 1978–79 war of liberation, many hospitals were left without medicine or beds. A new government health care policy in 1993 outlined goals for restoration of a cohesive network of health care services. As of 2000, however, Uganda's health indica-

tors were still poor, even in comparison with those of other African countries. Containment of serious diseases, such as cholera, dysentery, tuberculosis, malaria, schistosomiasis, sleeping sickness, typhus, and leprosy, has been made difficult by poor sanitation and unclean water. Other barriers to health care access for the rural poor were distance from providers, cost of services, and inadequate quality of health care. Less than half the population lives within 5 km (3 mi) of a health care facility. An estimated 71% of the population had access to health care services. The most serious obstacle to health has arisen from nutritional deficiencies, particularly among children. The goiter rate was 75 per 100 school-age children. Approximately 50% of the population had access to safe drinking water and 75% had adequate sanitation. As of 2004, it was estimated that there were fewer than 5 physicians per 100,000 people. There were fewer than 6 nurses per 100,000 population, and even fewer midwives. Total health care expenditure was estimated at 5.9% of GDP.

Planned health care projects in the 1990s included: rehabilitation of buildings, equipment, fittings, and services; institutional support and training; designs for five district hospitals and 10 rural centers; and a mental health rehabilitation study. Malaria remains the country's most serious health threat, even more so than AIDS. Venereal disease continues to be a problem in the adult population and AIDS became a severe problem in the 1980s, with an estimated 800,000 Ugandans HIV-positive in 1989. The country plans to focus on health care awareness and education—in particular, family planning and AIDS. Prevention strategies that change high-risk sexual behavior have had a direct impact on HIV infection rates in Uganda. The HIV/AIDS prevalence was 4.10 per 100 adults in 2003. As of 2004, there were approximately 530,000 people living with HIV/AIDS in the country. There were an estimated 78,000 deaths from AIDS in 2003.

The life expectancy was only 51.59 years in 2005. The infant mortality rate that year was 67.83 per 1,000 live births. Only 15% of married women ages 15–44 used any form of contraception. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 47.2 and 17.5 per 1,000 people. Immunization rates for children up to one year old were high: tuberculosis, 84%; diphtheria, pertussis, and tetanus, 58%; polio, 59%; and measles, 60%. Commonly reported diseases were guinea worm, measles, and tuberculosis.

## 42 HOUSING

Most of the inhabitants live in thatched huts with mud and wattle walls, but styles of building vary from group to group. Even in rural areas, however, corrugated iron is used extensively as a roofing material. In urban centers, sun-baked mud bricks, concrete blocks, and even fired bricks were encouraged by the government, which was responsible for a number of housing schemes prior to the Amin era. In that period, housing was neglected and there was considerable damage to the nation's housing stock during the 1978–79 war.

The National Housing and Construction Corp., a government agency founded in 1964, builds residential housing and has sponsored a number of developments in recent years. One of its newest projects is called the Growing House. The Growing House is a basic, one-bedroom detached house that is ready for immediate oc-

cupation but is designed for easy expansion by the owner, as their own financial situation allows.

For 1980–88, the total number of housing units was 3.1 million with 5.1 people per dwelling. At the 2002 census, there were 5,126,558 housing units nationwide. At least 71% of all units were considered to be temporary structures. Another 11% were semi-permanent structures. About 78% of all housing was owner occupied. Only 11% of all houses had access to piped drinking water. Only 5.7% had a water source on the premises; 21.9% of the population relied on water sources that are 1 km (0.62 miles) or further from their home. Only 1.7% of all dwellings had flush toilets; 63.6% of all households used pit latrines. The average household had 4.7 members.

## 43 EDUCATION

The school system generally comprises a seven-year primary course, a four-year junior secondary course, and a two-year senior secondary course for those who qualify. Those who do not choose to attend general secondary schools may attend technical schools for three years. Agricultural studies are compulsory in all secondary programs. Many of the senior schools are boarding establishments, and bursaries are available from local authorities and various groups for qualified candidates unable to pay the fees. Primary schools are financed from central government grants, local government funds, and fees from pupils. In 1997, the government eliminated fees for education and introduced universal primary education made possible by IMF debt relief. All senior secondary schools, technical schools, and training colleges receive direct grants-in-aid. The academic year runs from October to July.

In 2001, about 4% of children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 1995 was estimated at about 87% of age-eligible students. In 2003, secondary school enrollment was about 16% of age-eligible students. It is estimated that about 63.4% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 59:1 in 2000; the ratio for secondary school was about 18:1.

The University College of East Africa (founded 1921), became Makerere University in 1970. Situated on the outskirts of Kampala, it prepares students for degrees in the arts, sciences, and agriculture and for advanced diplomas in medicine, education, engineering, law, and veterinary science. Other universities include Mbale Islamic University and the Mbarara University of Science and Technology. There are also a number of religious colleges, 5 commercial colleges, 52 technical schools, and 71 colleges for teachers. In 2003, it was estimated that about 3% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 68.9%, with 78.8% for men and 59.2% for women.

As of 2003, public expenditure on education was estimated at 2.5% of GDP.

## 44 LIBRARIES AND MUSEUMS

Makerere University has the largest and most comprehensive library in East Africa. It consists of a central library with over 566,000 volumes, which functions as the National Reference Library, and the Albert Cook Library of Medicine with over 55,000 volumes, which functions as the National Library of Medicine.

The university also has specialized libraries in the fields of technology, education, social sciences, and farm management. The Public Libraries Board, founded in 1964, administers the Uganda Library Service, with 20 branches and 160,000 volumes.

The Uganda Museum, founded in 1908 on the outskirts of Kampala, contains an excellent anthropological collection. The museum conducts a regular education service in collaboration with the Uganda Society. It has a fine collection of East African musical instruments and a growing collection of archaeological specimens. The Zoological Museum at Makerere University has a collection of rock fossils, birds, and mammals indigenous to Uganda, and the university's geology department has natural history collections. Entebbe has botanical gardens, a zoo, an aquarium, and a game and fisheries museum. There are also two fine arts museums in Kampala, regional folk museums at Kabale, Mbarara, and Soroti, a variety of agricultural and forestry collections, and three national park museums.

#### 45 MEDIA

In 2003, there were an estimated two mainline telephones for every 1,000 people. The same year, there were approximately 30 mobile phones in use for every 1,000 people.

Radio Uganda, founded in 1954, controls the only national radio broadcasting station in the country, broadcasting daily in 22 languages, including English, French, Swahili, and local languages. In 2004, there were about 60 local and regional radio stations that were privately owned. Uganda television sponsors a public broadcasting station with programming in English, Swahili, and Luganda. In 2001, there were about eight television stations. In 2003, there were an estimated 122 radios and 18 television sets for every 1,000 people. The same year, there were four personal computers for every 1,000 people and five of every 1,000 people had access to the Internet. There were two secure Internet servers in the country in 2004.

The government-operated *New Vision*, with a 2002 circulation of 40,000 is published in English in Kampala. Two other major dailies published in Kampala are *The Monitor* (in English, 34,000) and *Munno* (in Luganda, 15,000).

The constitution provides for free speech and a free press; however, the government is said at times to restrict these rights in practice. The occasional use of sedition laws and imprisonment of some members of the media lead to the general practice of self-censorship.

#### 46 ORGANIZATIONS

There is a National Chamber of Commerce and Industry and an employers' federation. The cooperative movement is extensive. The Uganda Manufacturers Association sponsors an annual international trade fair in Kampala held in early October.

The Uganda Society is the oldest and most prominent cultural organization. The Uganda National Council for Science and Technology was established in 1990 to promote interest, education, and research in various branches of science. There are several professional organizations that also promote education and research in specialized fields of science and technology, such as the Uganda Medical Association.

There are a number of women's rights groups, including the Committee for the Advancement of Women of the Bahai's of

Uganda, the National Association of Women Organizations of Uganda, the Uganda Association of University Women, and the multinational African Women's Leadership Institute. National youth organizations include Boy's Brigade of Uganda, the Uganda Scouts Association, Uganda Girl Guides, Junior Chamber, and YMCA/YWCA. The Mukono Multi-Purpose Youth Organization promotes programs for the health and well-being of youth, particularly those in rural areas. The National Council of Sports is active in promoting amateur athletics programs.

The African Medical and Research Foundation is dedicated to public health issues. The Minsaki Katende Foundation, founded in 2003, serves as a national HIV/AIDS support organization and provides programs for orphans and the disabled. There are national chapters of the Red Cross Society, UNICEF, Habitat for Humanity, and Caritas.

#### 47 TOURISM, TRAVEL, AND RECREATION

Wildlife, the major tourist attraction, includes the endangered mountain gorilla as well as many other animal species. There are 10 national parks that spread across Uganda and both sides of the equator, all rich in biodiversity. Tourism facilities are adequate in Kampala but limited in other areas. Hiking in the Virunga Mountains is popular along with white-water rafting, and mountain biking. Tourists require a passport and visa. A vaccination against yellow fever is required to enter Uganda.

In 2003, about 305,000 tourists visited Uganda, the vast majority from African countries. That same year, tourism expenditure receipts totaled \$221 million. There were 19,385 hotel rooms in 2002, with 29,295 beds.

According to 2004 US Department of State estimates, the daily cost of staying in Kampala was \$293; in Entebbe, \$164; and in other areas, considerably lower.

#### 48 FAMOUS UGANDANS

Kabaka Mutesa I (r.1856–84) contributed to Uganda's modern development. Sir Apollo Kagwa, chief minister (1890–1926) to Kabaka Mwanga and his successor, Kabaka Daudi Chwa, was one of the dominant figures in Uganda's history. Mukama Kabarega of Bunyoro (r.1896–99) led his people against British and Buganda forces until captured and exiled in 1899; he died in exile in 1923. Apollo Milton Obote (1924–2005), founder of the UPC and prime minister from 1962 to 1966, overthrew the first president, Sir Edward Frederick Mutesa (Kabaka Mutesa II of Buganda, 1924–69), and was himself president of Uganda from 1966 to 1971 and from 1980 to 1985. Maj. Gen. Idi Amin Dada (1925–2003) overthrew Obote in 1971 and led a military government until he was ousted in 1979 by Tanzanian forces and Ugandan rebels. Yoweri Museveni (b.1944), leader of the National Resistance Movement, became president in 1986 with the help of about 2,000 guerrillas recruited among Tutsi refugee families who had fled Rwanda.

#### 49 DEPENDENCIES

Uganda has no territories or colonies.

# UNITED KINGDOM AFRICAN DEPENDENCIES

## BRITISH INDIAN OCEAN TERRITORY

In November 1965, the United Kingdom created a new colony, the British Indian Ocean Territory, from three island groups (Aldabra, Farquhar, and Des Roches) and the Chagos Archipelago (formerly a dependency of Mauritius). Aldabra, Farquhar, and Des Roches became part of independent Seychelles in 1976.

The chief island of the Chagos Archipelago is Diego Garcia, on which the United States maintains a naval base under an agreement with the British. The expressed intent of the United States to expand its naval base in order to strengthen the US military presence in the Indian Ocean and thereby secure the oil routes from the Persian Gulf was a sensitive international question in the late 1970s and early 1980s.

The Chagos Archipelago is located at 6° S and 72° E and covers a total area of 54,400 sq km (21,000 sq mi), although the land area is only 60 sq km (23 sq mi). Diego Garcia is both the largest island (44 sq km/17 sq mi) and the most southerly, lying nearly 1,770 km (1,100 mi) east of Mahé, the main island of the Seychelles; it is also the only populated island in the territory. The military installation there has military personnel and civilian contract employees from the United Kingdom, Mauritius, the Philippines, and the United States. The average temperature on Diego Garcia is 27° C (81° F); annual rainfall ranges from 230–255 cm (90–100 in).

France took possession of the Chagos Archipelago during the 18th century but ceded it to the United Kingdom in 1814. It was administered as a dependency of Mauritius until 1965. Initially the archipelago was exploited for copra by slave laborers from Mauritius; after emancipation in the 19th century, they became contract employees. Some of them, now known as Ilois, stayed on and became permanent residents. The United Kingdom bought the copra plantations from the private owners in 1967 and decided to close them down; some 1,200 Ilois were removed to Mauritius during 1967–73. In 1982, after prolonged negotiation, the United Kingdom granted £4 million to the Ilois on Mauritius, whose government agreed to provide land worth £1 million for their permanent resettlement.

In 1980, the government of Mauritius demanded that Diego Garcia revert to its control, arguing that the United Kingdom had violated an understanding allegedly given in 1967 that the island would not be used as a military base. The UK government denied giving any such assurance. As of 1999, a military installation on Diego Garcia was under joint jurisdiction by the United States and the United Kingdom. In 2000, a British High Court upheld the military status of Diego Garcia. In 2005 there were 1,500 military personnel and 2,000 civilians living on Diego Garcia.

## ST. HELENA

St. Helena, a British colony 122 sq km (47 sq mi) in area, is a mountainous island in the South Atlantic Ocean at approximately 16° S and 5°45' W, about 1,930 km (1,200 mi) from the west coast of Af-

rica. The maximum elevation, at Diana's Peak, is 828 m (2,717 ft). Southeast trade winds give the island a pleasant climate, despite its tropical location. The temperature at Jamestown, the capital, on the north coast, ranges from 18°–29° C (65–85° F); inland, as the elevation rises, temperatures are somewhat cooler. Rainfall ranges to an annual maximum of about 100 cm (40 in). The population, of mixed origin, was estimated at 7,460 in mid-2005; approximately 25% of the population lives in Jamestown. The language is English, and the majority of people are Anglicans.

Jamestown has open anchorages but no port facilities. The St. Helena Shipping Co. provides passenger and cargo service from the United Kingdom and South Africa. As of 2004, there was one airport on the island. St. Helena has 198 km (123 mi) of all-weather roads, 168 km (104 mi) of which have been paved.

Uninhabited when first sighted by the Portuguese navigator João da Nova Castella in 1502, and claimed by the Dutch in 1633, the island was garrisoned in 1659 by the British East India Company, captured by the Dutch in 1673, and retaken that same year by the English. It became famous as the place of Napoleon's exile, from 1815 until his death in 1821, and passed to the crown in 1834.

The island is administered by a governor, with the aid of a Legislative Council that includes, in addition to the governor, the speaker, 3 ex-officio, and 12 elected members. General elections were held in August 2005; Council committees, a majority of whose members belong to the Legislative Council, are appointed by the governor and charged with executive powers and general supervision of government departments. The Supreme Court of St. Helena, headed by a chief justice, has full criminal and civil jurisdiction. Other judicial institutions include a magistrate's court, a small claims court, and a juvenile court.

St. Helena coins of 1, 2, 5, 10, and 50 pence and 1 pound and notes of 5 and 10 pounds are legal tender; their value is on a par with their UK equivalents.

The domestic economy is based on agriculture. The main crops are potatoes, sweet potatoes, corn, and vegetables. St. Helenians also are employed on Ascension and the Falkland Islands. Fish, especially skipjack and tuna, are among St. Helena's primary exports. There are no exploitable minerals, and virtually all timber is imported. St. Helena also imports all of its consumer and capital goods. The United Kingdom, the United States, Tanzania, and South Africa are St. Helena's main trading partners. In 2004, imports were valued at us\$45 million, and exports at us\$19 million; British aid amounted to us\$5.3 million in 1997; total foreign aid in 1995 amounted to us\$12.6 million.

There is an unemployment relief system, and workers' compensation is paid for death or disablement. There is one labor union, the St. Helena General Workers' Union; approximately two-thirds of the labor force works for the government. Health facilities include a hospital of 58 beds as well as facilities for the elderly and the physically and mentally disabled.

The population is entirely literate. Education is free and compulsory between the ages of 5 and 15. A free public library is located in Jamestown, and there are branch libraries in several rural districts. Longwood House, Napoleon's home in exile, is now

French property and a museum. The colony had 2,200 main telephone lines in use in 2002. Cable and Wireless Ltd. provides telegraph communications between St. Helena, Cape Town, and Ascension Island. Radio receivers in use numbered about 3,000 in 1997. The government maintains a radio broadcasting station, a weekly newspaper, and monthly film shows in each district. Television programs are received via satellite and distributed by cable. There were 500 Internet users in 2002.

Dependencies of St. Helena are Tristan da Cunha and Ascension, which are inhabited, and Gough Island, the three Nightingale Islands, and Inaccessible Island, which are not. Tristan da Cunha, at 37°15' s and 12°30' w, approximately 2,400 km (1,500 mi) sw of St. Helena, is a partly wooded volcanic island, with an area of 98 sq km (38 sq mi), reaching a maximum elevation of 2,060 m (6,760 ft). Annual rainfall averages 168 cm (66 in) on the coast. The population numbers around 300, nearly all of whom traced their ancestry to members of an English garrison sent to the island in 1816. Communications are limited to a few calls by ships each year and to a wireless station in daily contact with Cape Town. There is also a local broadcasting and radiotelephone service.

A South African rock lobster (crayfish) company operates a fish-freezing factory on the island. This facility replaced a cannery that was destroyed by a volcanic eruption in October 1961 that forced the inhabitants to evacuate the island. They were resettled near Southampton, England, in January 1962. Owing to their previous isolation, however, the islanders were particularly vulnerable to respiratory diseases, and many of them became ill because of the English climate. In March 1963, an advance group returned to Tristan da Cunha to repair some of the damaged property and to plant potatoes, the staple subsistence crop; the remaining islanders returned by the end of the year. With the construction of a harbor, shore fishing has also developed.

An island council consists of an administrator (who also serves as a magistrate), three appointed members, and eight elected members. Considerable revenue is derived from the sale of stamps; however, the fishing industry provides the chief source of livelihood. Development aid ended in 1980, and since then the island has financed its own projects.

Ascension, at 7°56' s and 14°25' w, about 1,131 km (703 mi) nw of St. Helena, is a bleak volcanic island with an area of 88 sq km (34 sq mi). The island's highest peak, Green Mountain, is 859 m (2,817 ft) above sea level. Ascension became a dependency of St. Helena in 1922 and is an important telecommunications station. In 1942, during World War II, the United States established an air base on the island. A US National Aeronautics and Space Administration (NASA) tracking station and a British Broadcasting Corp. (BBC) relay station were established in 1966. British forces used the island in 1982 as a staging area for the recovery of the Falkland Islands from Argentine occupation, and a new Royal Air Force camp was completed in 1984. The population of Ascension, excluding British military personnel, totals around 1,100.

Sea turtles come to the island between December and May to lay their eggs. Wild goats and partridges abound. Ascension is the breeding ground of the sooty tern, the "wide-awake bird."

# ZAMBIA

Republic of Zambia

**CAPITAL:** Lusaka

**FLAG:** The flag is green, with a tricolor of dark red, black, and orange vertical stripes at the lower corner of the fly, topped by a golden flying eagle.

**ANTHEM:** *Stand and Sing for Zambia.*

**MONETARY UNIT:** The kwacha (K) of 100 ngwee replaced the Zambian pound (z£) on 15 January 1968. There are coins of 1, 2, 5, 10, 20, and 50 ngwee, and notes of 1, 2, 5, 10, 20, 50, 100, and 500 kwacha. K1 = \$0.00022 (or \$1 = K4,549.58) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Youth Day, 11 March; Labor Day, 1 May; African Freedom Day, 24 May; Heroes' Day, 1st Monday after 1st weekend in July; Unity Day, Tuesday after Heroes' Day; Farmers' Day, 5 August; Independence Day, 24 October; Christmas, 25 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country in south central Africa, Zambia has an area of 752,614 sq km (290,586 sq mi), with a maximum length of 1,206 km (749 mi) E–W and a maximum width of 815 km (506 mi) N–S. Comparatively, the area occupied by Zambia is slightly larger than the state of Texas. Bounded on the NE by Tanzania, on the E by Malawi, on the SE by Mozambique and Zimbabwe, on the S by Zimbabwe, Botswana, and Namibia (South West Africa), on the W by Angola, and on the W and N by the Democratic Republic of the Congo (DROC), Zambia has a total boundary length of 5,664 km (3,519 mi).

Zambia's capital city, Lusaka, is located in the south central part of the country.

## <sup>2</sup> TOPOGRAPHY

Most of the landmass in Zambia is a high plateau lying between 910 and 1,370 m (3,000–4,500 ft) above sea level. In the northeast, the Muchinga Mountains exceed 1,800 m (5,900 ft) in height. Elevations below 610 m (2,000 ft) are encountered in the valleys of the major river systems. Plateau land in the northeastern and eastern parts of the country is broken by the low-lying Luangwa River, and in the western half by the Kafue River. Both rivers are tributaries of the upper Zambezi, the major waterway of the area. The frequent occurrence of rapids and falls prevents through navigation of the Zambezi.

There are three large natural lakes—Bangweulu, Mweru, and Tanganyika—all in the northern area. Lake Tanganyika is the largest with an area of about 12,770 sq km (32,893 sq mi). Lake Bangweulu and the swamps at its southern end cover about 9,840 sq km (3,799 sq mi) and are drained by the Luapula River. Kariba, one of the world's largest manmade lakes, is on the southern bor-

der; it was formed by the impoundment of the Zambezi by the construction of the Kariba Dam.

## <sup>3</sup> CLIMATE

Although Zambia lies within the tropics, much of it has a pleasant climate because of the altitude. Temperatures are highest in the valleys of the Zambezi, Luangwa, and Kafue and by the shores of Lakes Tanganyika, Mweru, and Bangweulu.

There are wide seasonal variations in temperature and rainfall. October is the hottest month. The main rainy season starts in mid-November, with heavy tropical storms lasting well into April. The northern and northwestern provinces have an annual rainfall of about 125 cm (50 in), while areas in the far south have as little as 75 cm (30 in). May to mid-August is the cool season, after which temperatures rise rapidly. September is very dry.

Daytime temperatures may range from 23° to 31° C (73–88°F), dropping at night to as low as 5° C (41°F) in June and July. Lusaka, at 1,250 m (4,100 ft), has an average minimum of 9° C (48°F) and an average maximum of 23° C (73°F) in July, with averages of 17° C (63°F) and 26° C (79°F), respectively, in January; normal annual rainfall is 81 cm (32 in).

## <sup>4</sup> FLORA AND FAUNA

Most of the territory is plateau and the prevailing type of vegetation is open woodland or savanna. Acacia and baobab trees, thorn trees and bushes, and tall perennial grasses are widespread, becoming coarser and sparser in the drier areas to the south. To the north and east grows a thin forest. The southwest has forests of Zambian teak (*Baikiaea plurijuga*).

The national parks and game reserves, such as the Kafue National Park, conserve the wildlife threatened by settlement. The Cookson's wildebeest, Senga Kob, Thornicroft giraffe, and red

lechwe are unique to Zambia. The many varieties of buck include kudu, impala, duiker, and sten. In Luangwa Valley can be found giraffe, zebra, rhinoceros, elephant, baboon, monkey, hyena, wolf, and lion. Among the nocturnal animals are serval and civet cat, genet, and jackal. Other mammals include the honey badger, ant bear, rock rabbit, wart hog, and bush pig.

Zambia has a wealth of bird life, including the eagle, gull, tern, kingfisher, swift, redwing, lark, babbler, sunbird, weaver, red-billed quelea (in Luangwa Valley), stork, goose, plover, skimmer, bee-eater, wagtail, sparrow, swallow, thrush, shrike, nightingale, dove, nightjar, and an occasional ostrich. White pelican, flamingo, heron, ibis, and the crowned crane are found in the game reserves. As of 2002, there were at least 233 species of mammals, 252 species of birds, and over 4,700 species of plants throughout the country.

There are more than 150 recorded species of reptiles, including 78 species of snakes and 66 of lizards. Among them are the crocodile, tortoise, turtle, terrapin, gecko, agama, nonvenomous python, mamba, viper, and adder. The range of species of fish is also wide and includes bream, snoutfish, butterfly, tigerfish, bottle-nose, gorgefish, mudfish, catfish, barbel, “vundu,” squeaker, white-bait, perch, carp, bass, and “utaka” (of the sardine type). Insect types number in the thousands, and many are peculiar to the area. The Copperbelt region and the swamps of Lake Bangweulu are especially rich in insect life.

## 5 ENVIRONMENT

Both traditional and modern farming methods in Zambia involve clearing large areas of forest. As of 1985, the nation had lost 699 sq km (270 sq mi) of forestland, mainly to slash-and-burn agriculture but also to firewood gathering and charcoal production. Consequent erosion results in the loss of up to 3 million tons of topsoil annually. The exclusive cultivation of a single crop on agricultural land and the use of fertilizers threaten the soil and contribute to acidification. The Copperbelt region, Zambia’s mineral-extraction and refining center has been polluted by contaminants including acid rain. The buildup of toxins in the soil near many smelters poses a threat to food crops.

Air pollution is caused by vehicle emissions and coal-powered industrial plants. Lack of adequate water-treatment facilities contributes to the prevalence of bilharziasis and other parasitic infections. Water pollution arises from contamination by sewage and toxic industrial chemicals. The nation has 80 cu km of renewable water sources, of which 77% of annual withdrawals is used for farming and 7% for industry. Roughly 90% of Zambia’s city dwellers and 36% of the people living in rural areas have access to improved water sources.

Wildlife is endangered in some areas by hunting and poaching, although the National Parks and Wildlife Act (1982) mandates automatic imprisonment for trading illicitly in elephant tusks and rhinoceros horns. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 11 types of mammals, 12 species of birds, 1 species of amphibian, 4 types of mollusks, 3 species of other invertebrates, and 8 species of plants. Threatened species include the African wild dog, the black rhinoceros, the Madagascar pond heron, and white-winged crane.

## 6 POPULATION

The population of Zambia in 2005 was estimated by the United Nations (UN) at 11,227,000, which placed it at number 73 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 45% of the population under 15 years of age. There were 100 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.9%, a rate the government viewed as too high. With support from international organizations, the country sought to reduce its fertility rate, which stood at 5.8 births per woman in 2005. The projected population for the year 2025 was 15,798,000. The population density was 15 per sq km (39 per sq mi).

The UN estimated that 35% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.32%. The capital city, Lusaka, had a population of 1,394,000 in that year. Population estimates for other cities included Ndola (374,757), Kitwe (363,734), Kabwe (219,600), Chingola (211,755), and Mufulira (204,104). The main urban concentrations were in the Copperbelt mining complex.

The prevalence of HIV/AIDS has had a significant impact on the population of Zambia. The UN estimated that 17% of adults between the ages of 15–49 were living with HIV/AIDS in 2005. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

Before independence, the size of the European population waxed and waned with the fortunes of the mining industry. During the political upheavals of the mid-1960s, many Europeans in the mining industries left Zambia. As of 1999, there were nearly 200,000 refugees in Zambia. Most were from Angola; the rest were from the DROC, Rwanda, Burundi, and other African countries. There were 377,000 migrants living in Zambia in 2000, including refugees. By the end of 2004 there were 17,307 refugees and 84 asylum seekers in Zambia. However, in that same year over 39,000 Angolan refugees had been assisted by the United Nations High Commissioner for Refugees (UNHCR) in Zambia, as well as, over 49,000 refugees from the DROC, and over 3,000 refugees from Rwanda. Also in 2004, 111 Zambians sought asylum in South Africa. The net migration rate in 2005 was estimated as zero migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The African community, close to 99% of Zambia’s total population, is composed of various Bantu groups. (The term “Bantu” refers roughly to all peoples in whose language the root *ntu* means “man.”) The Bemba group—37% of the African population—inhabits the Northern and Copperbelt provinces. Other African societies include the Tonga (19%), Lunda (12%), Nyanja (11%), Mambwe (8%), and Lozi or Barotse (7%). In all, there are at least 73 different African societal classifications.

The Europeans, accounting for about 1% of the population, are mainly of British stock, either immigrants or their descen-

LOCATION: 9° to 18° S; 23° to 34° E. BOUNDARY LENGTHS: Tanzania, 338 kilometers (210 miles); Malawi, 837 kilometers (523 miles); Mozambique, 419 kilometers (260 miles); Zimbabwe, 797 kilometers (498 miles); Namibia (Caprivi Strip), 233 kilometers (145 miles); Angola, 1,110 kilometers (690 miles); Democratic Republic of the Congo (DROC), 1,930 kilometers (1,193 miles).

dants from the United Kingdom or South Africa. Other European groups include those of Dutch, Italian, and Greek descent. Counting Asians, mainly migrants from the Indian subcontinent, and people of mixed race, other non-Africans constitute only about 0.2% of the population.

## 9 LANGUAGES

Some 80 different languages have been identified, most of them of the Bantu family. For educational and administrative purposes, seven main languages are recognized: Bemba, Lozi, Lunda, Kaonda, Luvale, Tonga, and Nyanja. Bemba, with its various dialects, is widely spoken in northern Zambia and is the lingua franca in the Copperbelt. The Ila and Tonga tongues predominate in the Southern Province. English is the official language.

## 10 RELIGIONS

An estimated 87% of the population professes some form of Christianity. Another 1% are either Muslim or Hindu. The majority of Christians are either Roman Catholics or Protestants. There has also been a surge in new Pentecostal churches, which have attracted many young followers. Muslims tend to be concentrated in parts of the country where Asians have settled—along the railroad line from Lusaka to Livingstone and in the eastern province.

A 1996 amendment to the constitution declared the country a Christian nation while providing for freedom of religion in practice. Some members of the Muslim community have complained of discrimination since the country was declared a Christian nation. They claim they cannot freely teach and practice Islam; how-

ever, other Muslim organizations state they have not experienced any restrictions on their activities. Religious groups must register with the government in order to operate legally; however, all applications for registration are reportedly approved without discrimination. Various ecumenical groups have formed to promote interfaith dialogue and to discuss national political concerns. These include the Zambia Episcopal Conference, the Christian Council of Zambia, and the Evangelical Fellowship of Zambia.

## <sup>11</sup>TRANSPORTATION

Almost all of Zambia's industries, commercial agriculture, and major cities are located along the rail lines, which are often paralleled by highways. The Zambia Railways system consists of 2,173 km (1,349 mi) of track, all of it narrow gauge. The rail link with the Atlantic via the Katanga and Benguela railways to Lobito Bay in Angola has been affected by instability in Angola since the mid-1970s. Construction began in October 1970 on the Tazara railway, a 1,860-km (1,156-mi) line linking Dar es Salaam in Tanzania with Kapiri Mposhi, north of Lusaka; intended to lessen Zambian dependence on the former white-minority regimes of South Africa and the former Rhodesia (presently Zimbabwe), the line (890 km/553 mi of which is in Zambia) was completed and commissioned in July 1976. Equipment and operational problems have kept the railway from reaching its full potential, however, and rail cargo links with South Africa and Mozambique ports, passing through Zimbabwe, remain important for Zambian commerce.

Zambia had 66,781 km (41,498 mi) of roadway in 2002. The principal routes were: the Great North Road (809 km/503 mi), running from Kapiri Mposhi through Tanzania to Dar es Salaam, with a connecting road in Zambia from Kapiri Mposhi south to Livingstone (Maramba); the Great East Road (586 km/364 mi), from Lusaka to Chipata and thence to the Malawi border, with a connecting road (583 km/362 mi) from Mongu to Lusaka; the Zaire Border Road, from Kapiri Mposhi on the Great North Road through the Copperbelt region to Katanga, DROC; and the Kafue-Harare (Zimbabwe) road. Road services continue to play an important role in transporting copper and general cargo to and from Dar es Salaam. Transport services on the main routes also are provided by the National Transport Corp. of Zambia, the state-owned freight and passenger transport service. The United Bus Co. of Zambia is the largest passenger carrier. In 2003, there were 114,300 registered motor vehicles, including 68,500 passenger cars.

In 2004, there were an estimated 109 airports, but only 10 of which had paved runways as of 2005. Lusaka International is the principal airport. State-owned Zambia Airways is the national airline. Zambia Airways provides international service from Lusaka to several African and European countries, as well as domestic service to 17 Zambian centers. In 2003, about 51,000 passengers were carried on scheduled domestic and international flights.

There are 2,250 km (1,398 mi) of waterways, including Lake Tanganyika, and the Zambezi and Luapula rivers. Mpulungu on Lake Tanganyika is Zambia's only port and receives goods supplied through Tanzania. There are several fishing harbors on Kariba Lake.

## <sup>12</sup>HISTORY

The history of Zambia before the 19th century can be studied only through archaeology and oral traditions. Iron working and agriculture were practiced in some parts of Zambia by about AD 100. By AD 900, mining and trading were evident in southern Zambia. Between the 15th century (or possibly earlier) and the 18th century, various groups of Bantu migrants from the southern Congo settled in Zambia. By the beginning of the 19th century, three large-scale political units existed in Zambia, in three different types of geographic environment. On the northeast plateau between the valleys of the Luapula and Luangwa, the Bemba had established a system of chieftainships; the Lunda kingdom of Kazembe was in the Luapula Valley; and the kingdom of the Lozi was in the far west, in the floodplain of the upper Zambezi.

Zambia was affected by two "invasions" in the mid-19th century. Shaka's Zulu empire in South Africa set in motion a series of migrations, commonly referred to as the mfecane; groups of peoples, including the Ngoni, were forced to migrate north across the Zambezi in order to avoid the Zulu raids and conquests. The other invasion came in the form of traders from the north—Nyamwezi, Arabs, and Swahili—drawing Zambia into long-distance trading systems.

The first significant European contact was through Christian missionaries. David Livingstone explored the region near Lake Bangweulu extensively from 1851 to his death in 1873. In 1884, François Coillard, a French Protestant missionary, settled in Barotseland (now the Western Province).

In the 1890s, Cecil Rhodes' British South Africa Company, which had already established itself to the south, extended its charter to the lands north of the Zambezi. From 1891 to the end of 1923, the territory—known as Northern Rhodesia—was ruled by this private company. Efforts to stimulate European settlement were disappointing, since anticipated discoveries of mineral wealth failed to materialize.

In the 1920s, new methods of exploiting the extensive mineral deposits in the Copperbelt region transformed the economic life of the territory. Development of these ore bodies, although hampered by the Great Depression, reversed the roles of the two Rhodesias. Northern Rhodesia, formerly viewed as an economic liability in any projected merger with Southern Rhodesia, now was seen as a source of wealth. European settlements rose rapidly, spurred directly by the requirements of the mining industry and indirectly by the subsequent expansion of the economy.

Before federation in 1953, the political development of the territory focused on two relationships: that of the European settlers with the colonial authorities on the one hand, and that between the settlers and the Africans on the other. The European settler community pressed for a greater voice in the colony's affairs. The major political issue involving the relations between Europeans and Africans concerned the allocation of land. Commissions on land policy designated the areas adjacent to the railway line as crown land. Although there was no legal bar to the acquisition of crown land by Africans, the effect of the arrangement was to exclude them from the commercially most attractive acreage.

In 1953, Northern Rhodesia became a member of the Federation of Rhodesia and Nyasaland. Even though the overwhelming majority of Africans in the territory was opposed to the federal arrangement, the British government decided that Northern Rho-

desia would participate in the federation. In 1960, a royal commission reported that, despite clear economic benefits, the majority of Africans in both Northern Rhodesia and Nyasaland was opposed to the continuance of federation in its present form. In early 1962, Nyasaland's desire to secede from the federation was acknowledged by the British government.

Following its initiation into the federation, the government of Northern Rhodesia underwent constitutional changes, with a growing emphasis on African representation. Africans had not been represented on the Legislative Council until 1948, when two were named to that body. An enlarged Legislative Council, convened in 1954 just after the formation of the federation, included four Africans selected by the African Representative Council. A new constitution, introduced in January 1959, aimed at replacing the council with a political system based on a greater degree of cooperation between the races.

Discussions on a revision of this constitution began in December 1960 but were brought to an early close by disagreement between the European-dominated United Federal Party and the United National Independence Party (UNIP). But agreement was finally reached, and a new constitution came into effect in September 1962. Elections later that year produced an African majority in the Legislative Council, which then called for secession from the federation, full internal self-government under a new constitution, and a new National Assembly based on a broader, more democratic franchise.

### **The Republic of Zambia is Born**

On 31 December 1963, the Federation of Rhodesia and Nyasaland was formally dissolved. On 24 October 1964, Northern Rhodesia became an independent republic, and its name was changed to Zambia. Kenneth Kaunda, the leader of the ruling UNIP, became the nation's first president. Kaunda was reelected in 1969, 1973, 1978, and 1983, surviving a series of coup attempts during 1980–81.

During the 1970s, Zambia played a key role in the movement toward black majority rule in Rhodesia. Zambia's border with Rhodesia was closed from 1973 to 1978 by Kaunda in retaliation for Rhodesian raids into Zambia; the raids were intended to impede the infiltration of Patriotic Front guerrillas into Rhodesia from their Zambian bases. The emergence of independent, black-ruled Zimbabwe eased the political pressure, but a drastic decline of world copper prices in the early 1980s, coupled with a severe drought, left Zambia in a perilous economic position. The continuing civil war in Angola also had repercussions in Zambia, bringing disruption of Zambian trade routes and casualties among Zambians along the border.

A South African air raid near Lusaka on 19 May 1986 was aimed at curbing Zambia's support for black nationalist groups in exile there. Later in the year, Kaunda supported Commonwealth sanctions against South Africa but did not take action himself, since Zambia was heavily dependent on imports from South Africa.

Riots, the worst since independence, broke out on 9 December 1986 in protest against the removal of subsidies for cornmeal, which had caused the price to rise by 120%; 15 people were killed, hundreds were injured, and hundreds of shops were looted. Peace returned two days later when Kaunda restored the subsidy and nationalized the grain-milling industry. He also ruled thenceforth

with state of emergency powers. Reduction in government spending in order to reduce the deficit had been demanded by the International Monetary Fund, along with the devaluation of the currency, as a condition for extending new loans to enable Zambia to pay for essential imports. On 1 May 1987, Kaunda rejected the IMF conditions for a new financing package of about \$300 million. He limited payments on the foreign debt to well under 10% of export earnings and established a new fixed currency rate of eight kwacha to the dollar. This did little to improve the economy or the popularity of Kaunda and UNIP.

By early 1989, Zambia, in consultation with the IMF and the World Bank, developed a new economic reform plan. In early 1991, Zambia qualified for World Bank assistance for the first time since 1987, although this was later suspended. By 1990, a growing opposition to UNIP's monopoly of power had coalesced in the Movement for Multiparty Democracy (MMD). A number of UNIP defectors and major labor leaders came together to pressure Kaunda to hold multiparty elections. In December 1990, after a tumultuous year that included riots in Lusaka and a coup attempt, Kaunda signed legislation ending UNIP's legal monopoly of power.

After difficult negotiations between the government and opposition groups, Zambia enacted a new constitution in August 1991. It enlarged the National Assembly, established an electoral commission, and allowed for more than one presidential candidate. Candidates no longer were required to be UNIP members. In September, Kaunda announced the date for Zambia's first multiparty parliamentary and presidential elections in 19 years. On 31 October and 1 November 1991, the 27-year long state of emergency was terminated. Frederick J. T. Chiluba (MMD) defeated Kaunda, 81% to 15%. The MMD won over 125 of the 150 elected seats in the Assembly. UNIP won 25 seats, although UNIP swept the Eastern Province, winning 19 seats there.

Despite the change of government, the economy still sputtered. Chiluba's austerity measures may have been popular with Zambia's creditors, but not with its people. Likewise, his privatization plans alarmed the unions, his original base of support. Chiluba's MMD in power became autocratic and corrupt. Kaunda, his family, and UNIP officials were harassed. The press began to criticize Chiluba's government and Chiluba lashed back. An Anticorruption Commission investigated three senior cabinet ministers suspected of abuse of office.

UNIP remained the principal target of Chiluba's wrath. In February 1993, a document known as "Operation Zero Option" was leaked to the press. Allegedly written by Kaunda loyalists, it called for a campaign of strikes, riots and crime to destabilize the government. On 4 March 1993, government declared a three-month state of emergency and detained 26 UNIP members, including three of Kaunda's sons. Chiluba lifted the state of emergency on May 25 and released all but eight of the detainees, whom he charged with offenses from treason to possession of seditious documents.

Throughout the 1990s, Zambia continued to face troubles in its attempts to modernize its economy and to reform its political system. Despite liquidation of the government's huge stake in the nation's industrial sector, and implementing a drastic austerity program to reduce its budget deficit, the country saw only marginal growth. Further, despite the promise of fresh beginnings in 1991, the country momentarily reverted to one-party rule under

Chiluba as the MMD fraudulently won huge victories in the November 1996 elections prompting foreign donors to suspend aid payments briefly in early 1997. Subsequently, a campaign mounted by Chiluba and his party to amend the constitution to allow a third term was defeated. In the election of 27 December 2001, Chiluba's handpicked candidate Levy Mwanawasa was elected president with 29% of the vote; the MMD picked up 68 of 150 seats in the National Assembly. The vote was ruled flawed by international and local poll monitors—mainly on grounds of misuse of state funds and vote buying. An opposition petition to the Supreme Court alleged that the elections were rigged.

In an overture for national unity, or perhaps a bid to save his presidency, Mwanawasa named nine opposition members of parliament to his cabinet in February 2003. The move provoked a constitutional crisis when Mwanawasa refused to back down against a High Court ruling that the appointments were unconstitutional. Opposition parties expelled the members of parliament from the National Assembly. Later that month the Supreme Court declined a petition by former president Chiluba seeking immunity from prosecution under the government's anticorruption drive. Chiluba was accused of abuse of office and 60 counts of theft during his ten-years in office. In May 2003, under pressure from church, women's and other civil society groups, Mwanawasa conceded to the formation of a constituent assembly to review the constitution. Civic groups contended that the current document grants the executive far-reaching powers, which groups say is at odds with their vision for a people-driven constitution. Activist opponents of the president's vision for the constitutional review process took to wearing green ribbons and honking their horns on Fridays.

Levy Mwanawasa attempted to root out corruption in Zambia unlike the increasingly apparent corruption of the later years of Frederick Chiluba's time in office. Chiluba was arrested by Mwanawasa's government and charged with several counts of embezzlement and corruption, firmly quashing initial fears that President Mwanawasa would turn a blind eye to the allegations of his predecessor's corrupt practices. However, his early zeal to root out corruption waned, with key witnesses in the Chiluba trial leaving the country. The Constitutional Review Commission set up by Mwanawasa also hit some turbulence, with arguments as to where its findings should be submitted leading to suspicions that he has been trying to manipulate the outcome. Nevertheless, Zambian people view Mwanawasa's rule as a great improvement on Chiluba's corrupt regime.

In recent years, the government has considered participation in a future free trade area as part of the Southern Africa Development Community (SADC) arrangement. Food security and care for AIDS orphans and vulnerable children were also on the policy agenda. The government had also commenced the repatriation of some 5,000 Rwandan refugees. An estimated 1.2 million Zambians are HIV positive, with 21.5% of adults aged between 15 and 49 years infected with the virus. Around 86% of Zambians are classified as poor, which impacts nutritional status. Lingering fallout from crop failures and drought in the sub-region in 2001-2002 required targeted food aid for some 60,000 persons, down from a high of 2.7 million in 2002.

### **13 GOVERNMENT**

From 1953 to 1963, Northern Rhodesia was a protectorate under the jurisdiction of the British crown, within the Federation of Rhodesia and Nyasaland. On 24 October 1964, it became an independent republic. The constitution of January 1964 was amended in 1968 and in 1972, when it was officially announced that Zambia would become a one-party "participatory democracy," with the sole party the ruling United National Independence Party. A new constitution was drafted and received presidential assent in August 1973.

Under the 1973 constitution, the president of the Republic of Zambia was head of state, commander-in-chief of the armed forces, and president of the UNIP. Once chosen by the ruling party, the president had to be confirmed by a majority of the electorate, but there was no limitation on the length of the president's tenure in office. The prime minister was the leader of government business and an ex officio member of the UNIP Central Committee. As provided in the constitution, the Central Committee consisted of not more than 25 members, 20 to be elected at the party's general conference held every 5 years, and 3 to be nominated by the president, who was also a member. Cabinet decisions were subordinate to those of the UNIP Central Committee. The parliament consisted of the president and a National Assembly of 125 elected members, but all Assembly members had to be UNIP members, and their candidacy had to be approved by the party's Central Committee. The constitution also provided for a House of Chiefs of 27 members. A Bill of Rights guaranteed the fundamental freedom and rights of the individual, but if at any time the president felt the security of the state threatened, he had the power to proclaim a state of emergency. Indeed, Zambians lived under a state of emergency for 27 years.

In August 1991, a new constitution was promulgated. The president is now elected directly by universal suffrage and may serve a maximum of two five-year terms. The National Assembly has 150 directly elected members with up to eight appointed by the president, also for five-year terms. Since 2 January 2002, President Levy Mwanawasa served as head of state with Vice President Enoch Kavindele (4 May 2001) and on 4 October 2004 a new vice president was appointed, Lupando Mwaape. The next presidential elections were scheduled for December 2006.

### **14 POLITICAL PARTIES**

African nationalism began to rise in Northern Rhodesia after World War II. African welfare associations, founded before the war, developed rapidly into political organizations. In 1946, representatives from 14 welfare societies formed the Federation of Welfare Societies. In 1948, the federation was reconstituted as the Northern Rhodesia Congress. It became the North Rhodesian African National Congress (ANC) in 1951 under the leadership of Harry Nkumbula. In 1958, dissatisfaction with Nkumbula's leadership gave rise to a breakaway movement led by the party's secretary-general, Kenneth Kaunda. Kaunda formed the Zambia African National Congress, which was declared illegal the following year. In 1960, the United National Independence Party (UNIP) was formed under Kaunda's leadership. UNIP received a majority of the popular votes in the 1962 elections and formed the first

government after independence. The ANC became the chief opposition party.

In 1967, the United Party (UP) was formed by Nalumino Munda, a Lozi who had been dismissed from the cabinet in 1966. Its support came mainly from Barotseland in the southwest, where the UP promised to restore the power of the chiefs. After violence erupted in the Copperbelt, Kaunda banned the UP as a "threat to public security and peace," and Munda and his principal officers were arrested. In August 1968, the UP was declared illegal. Munda was released in 1969, joined the UNIP in 1974, and was named prime minister in 1981.

In the general elections of December 1969, the UNIP won 81 seats in the National Assembly, the ANC 23, and independents 1. Kaunda was reelected president. The elections were followed by violence and political unrest. At the opening of the new Assembly, the speaker refused to recognize the ANC as the official opposition. With the proclamation of a one-party state in December 1972, UNIP became the only legal party in Zambia. The ANC was assimilated into UNIP; the United Progressive Party, formed in August 1971, was summarily disbanded by the government, and its founder, Simon Kapwepwe, briefly arrested.

On 5 December 1973, the first presidential elections held under the new constitution brought the reelection of Kaunda to a third term with 85% of the vote. Voters also filled the 125 elective seats in the National Assembly. In 1975, the UNIP declared its ranks open to former followers of banned parties, but in 1978 candidacy was restricted to those with five years' continuous UNIP membership. National Assembly and presidential elections were held in December 1978, with Kaunda, again unopposed, receiving 80.5% of the vote. In the elections of October 1983, Kaunda's share of the total rose to 93%. A total of 766 candidates ran for the 125 Assembly seats.

After considerable social unrest in 1986 and again in 1990, the Kaunda government came under domestic and international pressure to end UNIP's monopoly in legitimate partisan activity. A Movement for Multiparty Democracy (MMD) was formed and led by trade unionists and defectors from UNIP. Finally, in December 1990, Kaunda signed into law a bill legalizing opposition political parties. In the new constitution adopted in August 1991, candidates are no longer required to belong to UNIP.

These changes paved the way to multiparty presidential and parliamentary elections on 31 October and 1 November 1991, the first in 19 years. The MMD's leader, Frederick Chiluba, easily won the presidency, 81% to 15% for Kaunda. The MMD got 125 seats to 15 for UNIP in the National Assembly. Kaunda and his family were harassed by the MMD, which forced Kaunda to step down as UNIP leader in August 1992. However, he returned a few years later to reclaim UNIP leadership. He briefly considered running on the UNIP ticket in the national presidential elections in 2001.

Since the legalization of multiparty competition, more than 30 parties have operated in the country. Parties include Agenda for Zambia (AZ), Forum for Democracy and Development (FDD), Heritage Party (HP), Progressive Front (PF), Movement for Multiparty Democracy (MMD), National Citizens Coalition (NCC), National Leadership for Development (NLD), National Party (NP), Patriotic Front (PF), Zambian Republican Party (ZRP), Social Democratic Party (SDP), United National Independence Party (UNIP), United Party for National Development (UPND), and

the National Democratic Alliance (NADA). The United Democratic Party and the United Democratic Congress Party are headed by former top UNIP leaders. The National Party (also with prominent ex-MMD figures) was created in August 1993 and won four seats in the Assembly in 1993–94 by-elections. Within the MMD there is a breakaway group, the Caucus for National Unity, to root out corruption in government.

In elections held on 20 November 1996, President Frederick Chiluba and the MMD won over 85% of the available seats in the National Assembly. However, independent observers condemned the election as being rigged by the MMD.

In the election of 27 December 2001, Levy Mwanawasa was elected president with 29% of the vote to 27% for Anderson Mazoka, 13% for Christon Tembo, 10% for Tilyenji Kaunda, 8% for Godfrey Miyanda, 5% for Benjamin Mwila, and 3% for Michael Sata. In the legislative contest held the same date, eight parties won seats in the National Assembly. The MMD claimed 45.9% of the vote winning 68 seats, followed by the UPND with 32.4% and 48 seats, the UNIP with 8.8% and 13 seats, the FDD with 8.1% and 12 seats, the HP with 2.7% and 4 seats, the PF with 0.7% and one seat, the ZRP with 0.7% and one seat, and independents with 0.7% and one seat. Two seats were not determined. The next elections were due in December 2006.

## 15 LOCAL GOVERNMENT

Zambia is divided into nine provinces (including the special province of Lusaka), administered by officials appointed by the central government. Each province is further divided into districts, presided over by district secretaries. Around 55% of Zambians live in towns and cities, giving Zambia one of the highest urbanization rates in Africa. Lusaka has a city council, and the other large towns have councils or town management boards; most townships, however, are directly administered by government officers. Local elections in urban areas are organized on a ward system with universal adult suffrage. Local urban authorities can levy taxes, borrow money, and own and manage housing projects. They control roads, water, power, town planning, health facilities, and other public services within their areas.

Administrative districts lying outside municipal and township areas are governed by rural councils, consisting of members elected by universal adult suffrage and a minority of nominated members, mainly chiefs, appointed by the under minister of the interior. Councils have evolved from the former native authorities, which were constituted on a tribal basis. The rural councils have frequently cut across African societal boundaries in order to establish larger and more viable units. The functions and powers of rural councils are similar to those of the urban local authorities.

## 16 JUDICIAL SYSTEM

The judicial system is based on English common law and customary law. Common law is administered by several High Courts, which have authority to hear criminal and civil cases and appeals from lower courts. Resident magistrate's courts are also established at various centers. Local courts mainly administer customary law, especially cases relating to marriage, property, and inheritance.

Under the constitution of 1991, the Supreme Court is the highest court in Zambia and serves as the final court of appeal. The chief justice and other eight judges are appointed by the president.

In consultation with the prime minister, the president also appoints the director of public prosecution and the attorney general, the latter being the principal legal adviser to the government. The independence of the judiciary has been respected by the government. Trials in magistrate courts are public.

## 17 ARMED FORCES

As of 2005, the strength of the armed forces was 15,100 active personnel, supported by 3,000 reservists and paramilitary forces that consisted of two police battalions, totaling 1,400 members. The Army had 13,500 personnel, whose equipment included 30 main battle tanks and 30 light tanks. The Air Force had 1,600 personnel operating 33 combat capable aircraft, that included 14 fighters and 12 fighter ground attack aircraft. In 2005, the defense budget totaled \$48.1 million.

## 18 INTERNATIONAL COOPERATION

Zambia joined the United Nations on 1 December 1964 and participates in ECA and several nonregional specialized agencies, such as the FAO, UNESCO, UNHCR, UNIDO, the FAO, the World Bank, IAEA, and the WHO. It belongs to the African Development Bank, the ACP Group, the Commonwealth of Nations, G-77, the WTO, COMESA, and the African Union. Located in Zambia are the headquarters of the International Red Locust Control Organization for Central and Southern Africa, as well as COMESA headquarters, an office of the UN High Commissioner of Refugees, and a regional office of the UN Institute for Namibia, established to provide training for future administrators of an independent Namibian state. Zambia belongs to the Southern African Development Community (SADC) and the Preferential Trade Area for Eastern and Southern Africa.

Zambia has played an important role in peace negotiation efforts for neighboring states, particularly the DROC. The country has also supported UN operations and missions in Kosovo (est. 1999), Ethiopia and Eritrea (est. 2000), Liberia (est. 2003), Sierra Leone (est. 1999), Burundi (est. 2004), and Côte d'Ivoire (est. 2004). Zambia is part of the Nonaligned Movement.

In environmental cooperation, Zambia is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The Zambian economy was in a precarious state during the 1990s. High inflation, severe drought, declining export prices, and failed economic policies all took their toll. Four of the nation's 20 banks failed and total debt stood at \$7 billion in 1999. Divided into the population, that was \$700 of debt per capita, compared with a GDP per capita of only \$380. After steady declines in per capita GDP, Zambia was redesignated a least developed country by the United Nations. The impact of inflation on the poor, the middle class, and business eroded public support for the government's reform policies. Economic reforms aimed at privatizing the economy succeeded in selling approximately 85% of 330 parastatal com-

panies, including the main copper mining conglomerate Zambia Consolidated Copper Mines (ZCCM) in 2000.

The first sign that tight monetary and fiscal policies were beginning to have an effect, was a rapid drop in the inflation rate, but by 1998, the rate had increased from 19% in 1997 to 31% in 2001. It was forecast to remain at around 20% in 2002. After the drought of 1992, agricultural production rebounded with record harvests of many crops, but the government's tight cash budget policy limited its capacity to purchase the crops. The key copper industry (which took in 80% of export revenues in 1999), maintained production levels, but depressed world prices kept revenues at lower levels. However, in 2000, copper export earnings reached \$800 million, a 5.4% increase over 1999, but declined to \$595 million in 2003. As of 2003, there was growing interest in developing coffee and tobacco as cash crops, but the main agricultural product is maize, a noncash crop necessary for domestic consumption. The tourism industry is growing. In 2000 Zambia became eligible for \$3.8 billion in debt relief under the IMF/World Bank Heavily Indebted Poor Countries (HIPC) initiative.

In 2005, the kwacha had gained some ground and remained strong, but falling copper prices and the need for maize imports will put downward pressure on it. Furthermore, the only oil refinery in Zambia was shut down in 2005 bringing the country into a fuel crisis that is likely to wreck havoc on an already weak economy. The fuel crisis has adversely affected the mining sector. It is estimated that about 1.7 million Zambians do not have adequate food due to a prolonged drought.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Zambia's gross domestic product (GDP) was estimated at \$10.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$900. The annual growth rate of GDP was estimated at 5.8%. The average inflation rate in 2005 was 19%. It was estimated that agriculture accounted for 21.7% of GDP, industry 29.5%, and services 48.8%.

Foreign aid receipts amounted to \$560 million or about \$54 per capita and accounted for approximately 13.4% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Zambia totaled \$2.89 billion or about \$278 per capita based on a GDP of \$4.3 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of -2.6%. Approximately 52% of household consumption was spent on food, 8% on fuel, 2% on health care, and 11% on education. It was estimated that in 1993 about 86% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, the labor force in Zambia was estimated at 4.8 million persons. Agriculture accounts for 85% of the country's workforce, with industry accounting for only 6% and the services sec-

tor only 9%. In 2000 it was estimated that 50% of the workforce was unemployed.

The Labor Department is responsible for employment exchange services and for enforcing protective labor legislation. In 2002, about 60% of the country's 300,000 formal wage earners were unionized. There were about 19 large national labor unions, all but one of them affiliated with the Zambia Congress of Trade Unions (ZCTU). With the exception of essential services, all workers have the right to strike.

The minimum wage was \$0.07 per hour in 2002. The maximum regular workweek is 48 hours, but most wage earners work 40-hour weeks. The minimum working age is 16 years. This is enforced in the industrial sector but not in subsistence agriculture, domestic services, or the informal economy where children are more likely to work. The law also regulates minimum health and safety standards in industry but staffing problems at the Ministry of Labor chronically limit enforcement effectiveness.

## 22 AGRICULTURE

The development of commercial farming followed the construction of the railroad in the early 20th century, but the main stimulus did not come until World War II (1939–45), when it was necessary to ensure a maximum output of copper and to minimize the shipping space required for food imports. Food production continued to expand as the copper industry helped raise living standards. Additional European immigration in the 1950s, as well as programs to diversify the economy, gave rise to the production for export of tobacco, cotton, and peanuts. However, partly because of the rapidly rising population, agricultural output never reached the point of meeting domestic food requirements. Only 5% of the land area is cultivated at any time, although a much larger area is potentially arable.

The majority of Zambia's population engages in subsistence farming. The principal subsistence crops are corn, sorghum, and cassava, while the main cash crops are tobacco, corn, sugarcane, peanuts, and cotton. In 1992, liberalized marketing began for most crops, but because of the 1991/92 drought, corn marketing remained under government control. A bountiful 1993 harvest made a solid recovery from the drought. In 2003, agriculture accounted for 23% of total GDP.

Production of tobacco, the most important export crop, was estimated at 4,800 tons in 2004. Marketed corn production in 2004 was 1,161,000 tons. Cotton production reached 22,000 tons of fiber. Also marketed in 2004 were 1,800,000 tons of sugarcane, 10,000 tons of sunflowers, 42,000 tons of peanuts, and 135,000 tons of wheat.

## 23 ANIMAL HUSBANDRY

The estimated livestock population in 2005 included 2,600,000 head of cattle, 1,270,000 goats, 340,000 hogs, and 150,000 sheep. Cattle production in certain regions is limited by sleeping sickness, carried by the tsetse fly. During 2005, beef production was 40,800 tons; poultry, 36,500 tons. Meat production in 2005 was estimated at 127,000 tons.

## 24 FISHING

Because Zambia's inland waters are a valuable source of food and employment, the fishing industry plays an important part in the

rural economy. Large quantities of fish, most of which are transported by rail to processing centers, are frozen or dried. Major quantities are obtained from Bangweulu, Tanganyika, and Mweru lakes, and from the Kafue and Luapula rivers. The catch in 2003 was 69,500 tons.

## 25 FORESTRY

About 42% of Zambia is covered by forest; commercial exploitation is concentrated in the southwest and in the Copperbelt. Roundwood production was about 8.05 million cu m (284 million cu ft) in 2004, 90% of it for fuel needs.

## 26 MINING

Zambia's mining sector in 2003 was dominated by the production of copper and cobalt, for which the country ranks 11th and second in the world, respectively. The country was also a leading producer of gem quality emeralds. However, mining and quarrying as a whole, accounted for only 2.8% of Zambia's gross domestic product (GDP) in 2003, although employment in that industry rose to 53,900, from 39,900 in 2002. Gemstones, mined mostly by small-scale and artisanal miners, also recorded significant earnings; earnings from this segment may amount to as much as \$250 million per year, since much of the output bypassed official counts. Construction was another leading industry, along with the production of chemicals and fertilizers. By 2000, privatization of most of the major mines, including copper, had been completed, and efforts were ongoing to privatize the gemstone and other small mines sectors, and to attract foreign investors to develop other known metallic and industrial mineral resources. Among the difficulties faced by landlocked Zambia were high transportation costs, the threat posed by HIV/AIDS to the labor force, cyclical world commodity prices, and the impact of civil wars in Angola and Democratic Republic of the Congo on foreign investment.

In 2003, total copper mine output (by concentration, cementation, and leaching; metal content) was 349,000 metric tons, up from 330,000 metric tons in 2002. The output of cobalt (metal content), as a by-product of copper mining and processing, was 6,550 metric tons, up from 6,144 metric tons in 2002. The mining industry has been effected by declining world copper demand, slow global economic growth, labor unrest, transportation difficulties, including port and rail congestion, and shortages of spare parts, raw materials, and fuel. Most of Zambia's major mines had been privatized by 2000. However, investment reversals in 2002 involved the Konkola Mines and the Baluba-Luanshya Mines. As a result, the government was forced to reopen privatization bids.

Among the largest copper mines were the Nkana (5.5 million tons ore per year capacity), the Nchanga and Chingola open-pits (4.5 million tons ore per year), the Nchanga underground (2.8 million tons), the Mufalira (2.8 million tons), the Konkola underground (2.2 million tons), the Luanshya underground (1.7 million tons), and the Baluba underground (1.4 million tons). The country's total mineral resources exceeded 2,580 million tons, with ore reserves of 728 million tons. Equinox Resources Ltd.'s Lumwana project, with two large copper-cobalt-gold-uranium deposits (Chimwunga and Malundwe), had resources of 1 billion tons that contained 0.67% copper, and 481 million tons of ore (1% copper). The Kalimba Group's Nama and Ngosa areas had a resource of 950 million tons.

Zambia also produced gold, refined selenium, silver, cement, clays (including brick, china, and ball), gemstones (amethyst, beryl, emerald, red garnet, and tourmaline), calcined lime, limestone, sand and gravel, and sulfur. No iron ore, tin, aquamarine, citrine, feldspar, magnetite, or nitrogen has been produced for several years. Exploration was being carried out for zinc, and for diamonds in western Zambia.

## 27 ENERGY AND POWER

Zambia is self-sufficient in electricity. The country's output of electric power in 2002 totaled 9.015 billion kWh, of which nearly 100% was from hydropower. Consumption of electricity in that year totaled 5.684 billion kWh. Total electric power generating capacity in 2002 was 1.8 million kW. Zambia exports almost 30% of its production to Zimbabwe.

Zambia relies almost entirely on imports to meet its hydrocarbon needs. In 2002, imports of all petroleum products averaged 12,240 barrels per day, of which crude oil accounted for 9,500 barrels per day. Refined oil product output in 2002 averaged 9,800 barrels per day. Refined petroleum consumption that year averaged 12,190 barrels per day. Crude oil is imported by means of a pipeline from Tanzania.

Coal production in 2002 totaled 231,000 short tons, all of which was bituminous. Demand for coal that year totaled 150,000 short tons.

## 28 INDUSTRY

Industry accounted for 28% of GDP in 2001. Apart from copper refining, the most important industries are those connected with the manufacture of sulfuric acid, fertilizer, compressor lubricants, electrical appliances and parts, glass, batteries, cigarettes, textiles, yarn, glycerine, vehicle and tractor assembling, sawmilling, wood and joinery manufacture, tire retreading, processing of food and drink, and the manufacture of cement and cement products. Nitrogen Chemicals of Zambia, which produces fertilizer, is the largest nonmining enterprise. Since tariff barriers for imports have been lifted, many manufacturing facilities have closed, especially in the clothing industry.

To assist in the establishment of manufacturing and processing industries, the government has formed the Industrial Development Corp. of Zambia (INDECO). It has developed a number of enterprises, including a chemical-fertilizers plant, an explosives plant, a glass bottle factory, and a battery factory; these projects were joint ventures with foreign companies. The country has one oil refinery, at Ndola, with a production capacity of 24,000 barrels per day.

## 29 SCIENCE AND TECHNOLOGY

The National Council for Scientific Research, founded in 1967 at Lusaka, advises the government on scientific matters and coordinates and disseminates the results of the Zambian research effort. Scientific learned societies include the Engineering Institution of Zambia, founded in 1955 at Lusaka. Research institutes specialize in fisheries, veterinary science, geology, agriculture, forestry and forest products, tropical diseases, pneumoconiosis, and red locust control. The University of Zambia, founded in 1965 at Lusaka, has departments of natural sciences, engineering, medicine, agricultural sciences, veterinary sciences, and mines. Copperbelt

University, founded in 1979 at Kitwe, has schools of environmental studies and technology. Three other colleges offer courses in agriculture and engineering. In 1987–97, science and engineering students accounted for 16% of college and university enrollments. In 1999 (the latest year for which data is available, there were 55 researchers and 17 technicians engaged in research and development per million people. In 2002, high technology exports totaled \$2 million, or 2% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Since independence, trading activity has increased in both rural and urban areas, especially in Lusaka. The Zambian Privatization Agency was in the process of privatizing parastatals that controlled large wholesale and retail chains. Centers of trading activity are the main towns along the rail line. Wholesale outlets are prevalent in larger towns and cities, while individually owned vendors and smaller retail shops are common in smaller communities and remote areas.

Normal business hours are from 8 AM to 5 PM, Monday–Friday, and 8 AM to 12:30 PM on Saturday. Banks are open from 8:15 AM to 12:45 PM on most weekdays, but close at noon on Thursdays and 11 AM on Saturdays.

## 31 FOREIGN TRADE

Mineral commodities account for about 90% of exports, led by copper and cobalt. Other export commodities include zinc, lead, and tobacco. Leading imports are machinery, transportation equipment, foodstuffs, fuels, petroleum products, electricity, and fertilizer.

## 32 BALANCE OF PAYMENTS

Zambian trade is normally in rough balance. However, a heavy debt burden gives the country a current account deficit, and hard currency is often in short supply. Total debt service payments in 1997 equaled \$277 million, or about 21% of export earnings.

In the early 2000s, the trade deficit worsened due to mining-related imports needed to reform the privatized copper industry. Nonetheless, an improvement in official and commercial inflows,

supported by a resumption of concessional donor support, was expected to prompt a recovery.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Zambia's exports was \$1.947 billion while imports totaled \$1.934 billion resulting in a trade deficit of 13 million.

**3.3 BANKING AND SECURITIES**

In November 1970, the Zambian government announced that it would take a majority interest in all banks operating in Zambia; however, the banking proposals were later modified so that the government became majority shareholder through the State Finance and Development Corp. of the already state-owned Zambia National Commercial Bank Ltd. (ZNCB) and the Commercial Bank of Zambia. The state-owned Bank of Zambia (BOZ), the central bank founded in 1964, sets and controls all currency and banking activities in the country.

In 2002, the leading commercial banks were subsidiaries of Barclays, Citibank, Equator Bank, Standard Chartered, First Alliance, and Stanbic. There are two development banks: the Development Bank of Zambia and the Lima Bank. Other state-owned financial institutions include the Zambia National Building Society, and the Import Export Bank of Zambia, launched in early 1988 to promote trade generally and nontraditional exports in particular. In 1985, the first locally and privately owned bank was formed, the African Commercial Bank. Its success led to the establishment of several more, including Caymont Merchant Bank, making Zambia one of Africa's most "overcrowded" countries in terms of banking, with 28 registered commercial banks at the end of December 1994. This number had dropped to twelve, however, by 2002.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$288.4 million. In that same year, M2—an ag-

gregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$764.3 million.

In 1997, things were looking up for the Lusaka Stock Exchange (LuSE), which has in the past struggled to attract new listings and improve its frequently thin trading volumes.

**3.4 INSURANCE**

On 1 January 1972, the Zambia State Insurance Corp. (ZSIC) took over all insurance transactions in Zambia. The operations of ZSIC cover fire, marine, aviation, accident, motor vehicle, and life insurance. All imports must be insured with this agency.

**3.5 PUBLIC FINANCE**

With its heavy dependency on copper, Zambia is able to show comfortable surpluses in its public accounts only when the mining industry is prosperous. From 1985 to 1987, Zambia attempted to implement a structural reform program, sponsored by the IBRD and IMF. In 1987, however, the government stopped the program and reverted to deficit spending and monetary creation. By 1992, a new government was committed to curtailing public expenditures through privatization and decreasing the civil service. By 1998, more than 85% of parastatals were privatized. In early 2000, the giant parastatal mining company, Zambian Consolidated Copper Mines (ZCCM) was completely privatized; that transaction helped Zambia satisfy the conditions for balance of payment support.

The US Central Intelligence Agency (CIA) estimated that in 2005 Zambia's central government took in revenues of approximately \$1.6 billion and had expenditures of \$1.8 billion. Revenues minus expenditures totaled approximately -\$178 million. Public debt in 2005 amounted to 104.2% of GDP. Total external debt was \$5.866 billion.

The International Monetary Fund (IMF) reported that in 1999, the most recent year for which it had data, budgetary central government revenues were K1,844.4 billion and expenditures were

κ1,874.3 billion. The value of revenues in US dollars was us\$770 million and expenditures us\$780 million, based on a official exchange rate for 1999 of us\$1 = κ2,388.02 as reported by the IMF. Government outlays by function were as follows: general public services, 40.5%; defense, 3.9%; public order and safety, 3.3%; economic affairs, 20.5%; housing and community amenities, 2.3%; health, 13.2%; recreation, culture, and religion, 0.6%; education, 14.4%; and social protection, 1.3%.

### 3<sup>6</sup>TAXATION

As of 2005, Zambia's corporate tax rate ranged from 15% up to 45%, depending upon the type of business. Generally, dividends, interest, royalties and management fees are each subject to a 15% withholding tax. There is also a mineral royalty tax and a property transfer tax.

Income taxes include a 1% charge by local Councils on the gross salaries of employees after a deduction of 300,000 Kwacha (about \$66.55) and a 1.015% property tax. Individual income is taxed according to a progressive schedule with four bands: 0% on the first 600,000 Kwacha (about \$133) of annual income; 10% on the next 600,000 Kwacha; 20% on the next 600,000 Kwacha, and 30% on the increment of annual income above 1,800,000 Kwacha (about \$400).

A value-added tax (VAT) with a standard rate of 20% replaced the sales tax in 1995. The standard rate was subsequently reduced to 17.5%, where it stands as of 2005. Items exempted from VAT include insurance transactions, mosquito nets and insecticides, and exports.

### 3<sup>7</sup>CUSTOMS AND DUTIES

Tariff schedules give preferential treatment to imports from the United Kingdom and other Commonwealth countries. Zambia belongs to the Common Market of Eastern and Southern Africa (COMESA) and the Southern African Development Community (SADC), both committed to free trade. Rebates are allowed on certain capital goods and on most materials used in local manufacturing industries. Tariff protection also is accorded to selected new industries. Most imports require licenses. Import duties ranged from 5% for raw materials and capital equipment, 15% for intermediate goods, and 25% on final products as of 2005. Selected items, such as soaps and vegetable cooking oils, carry special protective tariffs. There are no free trade zones.

### 3<sup>8</sup>FOREIGN INVESTMENT

In the past, the heaviest concentrations of foreign private capital in Zambia were in the mining enterprises of the Copperbelt. Anglo-American holds only a 27% interest in the national mining company ZCCM, a company that was privatized in 2000. Most investment is from the United Kingdom or South Africa. Although tax holidays have been offered as incentives, Zambia's highly socialized economy has not been conducive to private foreign investment, and exchange controls have made the repatriation of profits and dividends difficult.

Laws concerning retention of foreign exchange have been consistent, achieving full liberalization only recently. In 1983, exporters of nontraditional items could keep 50% of earned foreign exchange to finance imported inputs. This resulted in a fivefold increase in nonmetal exports. This provision was revoked in 1987.

The Investment Act of 1991 provided for a 70% foreign exchange retention during the first three years of a license, 60% in the next two years, and 50% for the rest of the license's term. This act was subsequently revised to allow for full retention of foreign exchange earnings.

Annual foreign direct investment (FDI) flow into Zambia reached \$207 million in 1997, after which it steadily declined, from \$198 million in 1998 to \$72 million in 2001. Zambia's success in attracting FDI declined from 1990 to 2000. The FDI flow increased steadily from \$82 million in 2002 to \$334 million in 2004. For the period 1988 to 1999, Zambia's share of world FDI inflows was more than four times its share in world GDP. For the period 1998 to 2000, its share of world inward FDI was less than twice its share of world GDP.

### 3<sup>9</sup>ECONOMIC DEVELOPMENT

Controlling inflation is a development priority, followed by faster implementation of social sector programs, legal and civil service reform, and privatization. New investment has been slow to form as investors await anticipated lower inflation rates. The lack of administrative capacity lies at the heart of the delays. Various debt cancellations and loans have been prescribed by the World Bank (loan of \$170 million), Paris Club (aid of \$630 million), and the United States (aid of \$20 million). Inflation stood at 26.7% in 2002 and at 18.5% in 2004.

The public sector in 2003 represented some 44% of total formal employment. In 2000, Zambia became eligible for \$3.8 billion in debt service relief under the International Monetary Fund (IMF)/World Bank Heavily Indebted Poor Countries (HIPC) initiative. In July 2005, the world's eight leading industrialized nations (G8) agreed to provide further debt relief for poor countries including Zambia. The additional relief for Zambia would cut around \$2.8 billion and combining this with the \$3.9 billion debt write-off package agreed under the heavily indebted poor countries (HIPC) initiative, Zambia's debt burden would decline to just \$300 million by mid-2006. This comes as a direct result of the government's fiscal austerity measures which had finally paid off through the two debt cancellations which is likely to renew confidence of donors and investors in the country's economic policies.

In 2003, the government indicated it would take measures to privatize the Zambia National Commercial Bank and the national telephone and electricity utilities. In 2005, the Zambia Privatisation Agency (ZPA) invited bids for 49% government shareholding in the Zambia National Commercial Bank with management rights. The closing date for submission of bids was 13 September 2005 with bids received from three entities. In addition to undertaking a relatively ambitious privatization program, Zambia in the early 2000s was implementing trade and exchange liberalization, and the liberalization of agricultural policies.

### 4<sup>0</sup>SOCIAL DEVELOPMENT

A social insurance system provides benefits to most employed persons. Coverage includes old age pensions, permanent disability benefits, and survivorship payments. Medical care is available to all citizens in government facilities. Workers' compensation is funded totally by the employer. A funeral grant is also provided.

A national provident fund requires employers and employees to make contributions toward a worker's retirement at ages 50–55.

This program covers employed persons, including domestic servants in urban areas, and agricultural workers. The lump sum payment is equivalent to contributions plus interest. Maternity leave of 90 days plus a maternity grant for each birth are provided to working women. Medical benefits are available to all citizens in government run facilities and rural health clinics. Employers are required to fund work injury insurance for all employees.

Domestic violence against women is a widespread problem. Police are hesitant to interfere, although in 2004 the government formed a sex crimes unit to address the issue. Women have full legal rights under law, but customs discriminate against women in areas of inheritance, property ownership, and marriage. Sex-based discrimination in education and employment is pervasive. Women are underrepresented in senior management positions in the private sector and in high-level government positions. However, a growing number of women can be found in local government. Child welfare is a serious concern; there were approximately one million orphans under the age of 15 in 2004, mostly attributable to the deaths of parents from AIDS.

Human rights abuses, including beatings and even the killing of persons in police custody, continue to be reported. A government-created commission is investigating past human rights abuses and some offenders have been punished. However, human rights organizations operate freely in Zambia.

#### 41 HEALTH

In 1964, responsibility for public health was transferred from the federation to Zambian authorities. Since then, the government has developed a health plan centered on specialist hospitals, with general and regional hospitals dealing with less complicated cases. At a lower level, district hospitals treat common medical and surgical cases. Rural health centers and clinics with outpatient facilities have been established throughout the country. Services to Zambian nationals are free at the rural health centers and clinics and at hospitals at the large urban centers. Due to government spending restrictions, the public health care sector has suffered from a severe shortage of doctors, medicine, and medical equipment and supplies. Health indicators have suffered since the advent of the AIDS epidemic, with earlier improvements reversed. For example, average life expectancy, which has been declining since 1984, was down to 39.70 years in 2005.

The government records indicated nine hospitals and a few small outpatient clinics. Zambia produces locally 25% of the pharmaceuticals it consumes. As of 2004, there were an estimated 7 physicians and 113 nurses per 100,000 people. Total health care expenditure was estimated at 6.9% of GDP.

Malaria and tuberculosis are major health problems, and hookworm and schistosomiasis afflict a large proportion of the population. Cholera remains prevalent. In addition, the HIV/AIDS epidemic has increased the incidence of tuberculosis. Other commonly reported diseases in Zambia were diarrheal diseases, leprosy, and measles.

Zambia has one of the highest rates of HIV infection, even in hard-hit sub-Saharan Africa. The HIV/AIDS prevalence was 16.50 per 100 adults in 2003. As of 2004, there were approximately 920,000 people living with HIV/AIDS in the country. There were an estimated 89,000 deaths from AIDS in 2003. It has been esti-

ated that 500,000–1,000,000 Zambian children have lost both parents to AIDS.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 41 and 21.9 per 1,000 people. About 26% of Zambian married women used contraceptives. The maternal mortality rate was 649 per 100,000 live births. It was estimated that 32 of every 100 school-age children suffered from goiter. Children up to one year old were immunized against tuberculosis, 81%; diphtheria, pertussis, and tetanus, 70%; polio, 70%; and measles, 69%. The infant mortality rate in 2005 was 88.29 per 1,000 live births. In the same year, 42% of the all children under five were malnourished.

#### 42 HOUSING

Widespread instances of overcrowding and slum growth have for many years focused government attention on urban housing problems. Local authorities have statutory responsibility for housing and housing management. The Zambia National Building Society makes loans to local agencies for the financing of approved schemes and the National Housing Authority established a special fund to support self-help projects for low-income earners. One program gives land ownership to certain residents in recognized informal settlements, thus giving them legal status to build more permanent structures. Mining companies have constructed townships for the families of African workers in the Copperbelt.

The 2000 census counted 1,768,287 housing units nationwide. A 2002/2003 housing survey stated that 66% of all dwellings were defined as traditional structures; these use mud bricks, thatch, straw, and grass as primary building materials. Traditional dwellings accounted for 91% of the housing stock in rural areas and 16% in urban areas. About 34% of the population lived in modern or conventional housing structures. Conventional structures accounted for 86% of the housing stock in Lusaka province and 72% of housing in Copperbelt. About 78% of all dwellings were owner occupied. About 54% of all households lived in units of only one bedroom. Only 50% of all households had access to a source of clean drinking water, 18% had electricity for lighting, and over 50% of all households used pit latrines. The average household size was about five members.

#### 43 EDUCATION

Most of the nation's schools are operated by local authorities or by missions and are aided by the central government. A small number of schools are directly administered by the government. Primary education lasts for seven years and is compulsory. Secondary education lasts for five years: two years of junior and three years of senior school. Students must pass an entrance exam to enter senior secondary school.

Primary school enrollment in 2003 was estimated at about 68% of age-eligible students. The same year, secondary school enrollment was about 23% of age-eligible students. It is estimated that about 69% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 43:1 in 2003; the ratio for secondary school was about 34:1.

The University of Zambia was established in 1965, and the Copperbelt University opened in 1986. Other institutions of higher learning include technical colleges and a two-year college of agriculture. In 2001, it was estimated that about 2% of the tertia-

ry age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 67.9%, with 76.1% for men and 59.7% for women.

As of 2003, public expenditure on education was estimated at 2% of GDP, or 17.6% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The Zambia Library Service maintains 900 library centers, six regional libraries, six branch libraries, and a central library with 500,000 volumes. The Lusaka Urban District Libraries has 145,000 volumes, and the Zambesi District Library has 120,000. The National Archives of Zambia maintains a library of about 70,000 volumes. The University of Zambia has holdings of more than 2.5 million books.

Zambia's museums include the National Museum, located in Livingstone. It has displays on natural history, archaeology, ethnography, recent history, African art, metallurgy, and memorabilia relating to David Livingstone. The Eastern Cataract Field Museum near Victoria Falls concentrates on archaeology and geology, including illustrations of the formation of the falls and the Stone Age sequence in the area. Lusaka has the Art Center and the Military and Police Museum of Zambia. The Moto Moto Museum in Mbala (founded in 1974) exhibits ethnography and history materials. The Copperbelt Museum at Ndola exhibits geological and historical items as well as ethnic art.

#### 45 MEDIA

The central government is responsible for postal and telecommunication services. A direct radiotelegraph circuit has been established between Lusaka and London, and direct telephone links are in operation to all neighboring countries. In 2003, there were an estimated eight mainline telephones for every 1,000 people; about 11,600 people were on a waiting list for telephone service installation. The same year, there were approximately 22 mobile phones in use for every 1,000 people.

The Zambia Broadcasting Service, which provides radio programs in English and seven local languages, and Zambian Television are government owned and operated. As of 2001, there were also several church-sponsored radio stations, two private commercial stations and three community stations. The same year there were 19 AM and 5 FM radio stations. There were nine television stations in 2002. In 2003, there were an estimated 179 radios and 51 television sets for every 1,000 people. The same year, there were 8.5 personal computers for every 1,000 people and six of every 1,000 people had access to the Internet. There were two secure Internet servers in the country in 2004.

There are a number of privately-owned newspapers in the country. However, the publications with the largest circulations tend to be politically affiliated. There are three major daily newspapers: the UNIP-owned *Times of Zambia*, founded in Ndola in 1943 and with an estimated 2002 daily circulation of 32,100; the government-owned *Zambia Daily Mail*, published in Lusaka, with a circulation of 40,000; and *The Post*, an independent English-language paper founded in 1991, with a circulation of 40,000.

The constitution provides for free expression, including a free press; however the penal code lists several exceptions and justifies government restrictions and censorship.

#### 46 ORGANIZATIONS

Professional and learned societies include the Wildlife Conservation Society of Zambia, the Zambia Library Association, and the Zambia Medical Association, all in Lusaka. Business groups include chambers of commerce in the major towns. The Zambia Association of Chambers of Commerce and Industry is located in Lusaka. The Consumer Protective Association of Zambia is also active.

National youth organizations include the Catholic Agricultural and Rural Youth Movement, Girl Guides Association of Zambia, YMCA/YWCA, United National Independence Party Youth League, Zambian Youth League, Girl Guides, and the Zambia Scouts Association. There are sports associations promoting amateur competition for athletes of all ages in a wide variety of pastimes, including softball, baseball, squash, lawn tennis, badminton, and weightlifting.

National women's organizations include the National Women's Lobby Group, the Society For Women and AIDS in Zambia, Women for Change, and the Women in Development Department. Among service organizations are the Lions, Rotary, Junior Chamber of Commerce (Jaycees), Professional Women's Club, and Women's Institute. There are national chapters of the Red Cross Society, Habitat for Humanity, the Society of St. Vincent de Paul, UNICEF, and Amnesty International.

#### 47 TOURISM, TRAVEL, AND RECREATION

One of the most impressive tourist attractions in Zambia is Mosi-oa-Tunya ("the smoke that thunders")—Victoria Falls. In 1972, a national park system created 17 parks covering 8% of the entire country. The Kafue National Park, one of the largest in Africa, with 22,500 sq km (8,700 sq mi) of bush, forest, and plain, is well-served with tourist facilities. South Luangwa National Park is another outstanding wildlife area. Tourism in Zambia has maintained a steady increase since the mid-1970s. A valid passport is required to enter Zambia. Most travelers need a visa. Proof of vaccination against yellow fever is required if traveling from an infected country.

In 2003, about 578,000 visitors arrived in Zambia, mostly from other African countries. There were 5,202 hotel rooms with 8,774 beds and an occupancy rate of 53%. Tourism expenditure receipts totaled \$149 million that year.

According to 2005 US Department of State estimates, the cost of staying in Lusaka was \$171 per day. Expenses in other areas ranged from \$51 to \$213 per day.

#### 48 FAMOUS ZAMBIANS

Kenneth David Kaunda (b.1924) was Zambia's president from independence in 1964 until 1991. Frederick J.T. Chiluba (b.1943) ousted Kaunda in 1991 in Zambia's first free elections and was re-

elected in 1996; he served until 2002. Levy Patrick Mwanawasa (b.1948) is the third president of Zambia (since 2002).

Nalumino Mundia (1927–88), long prominent in Zambian political affairs, was prime minister 1981–85, when he became ambassador to the United States.

#### 49 DEPENDENCIES

Zambia has no territories or colonies.

# ZIMBABWE

Republic of Zimbabwe

**CAPITAL:** Harare

**FLAG:** The flag has seven equal horizontal stripes of green, yellow, red, black, red, yellow, and green. At the hoist is a white triangle, which contains a representation in yellow of the bird of Zimbabwe superimposed on a red star.

**ANTHEM:** *God Bless Africa.*

**MONETARY UNIT:** The Zimbabwe dollar (z\$) is a paper currency of 100 cents. There are coins of 1, 5, 10, 20, and 50 cents and 1 dollar, and notes of 2, 5, 10, and 20 dollars. z\$1 = us\$0.00007 (or us\$1 = z\$15190.8) as of 2005. These are official exchange rates, non-official rates vary significantly

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 18 April; Workers' Day, 1 May; Africa Day, 25 May; Heroes' Days, 11–13 August; Christmas Day, 25 December; Boxing Day, 26 December. Movable holidays are Good Friday, Holy Saturday, Easter Monday, and Whitmonday.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

A landlocked country of south central Africa, Zimbabwe (formerly Rhodesia) lies between the Zambezi River on the N and the Limpopo River on the S. It has an area of 390,580 sq km (150,804 sq mi), with a length of 852 km (529 mi) WNW–ESE and a width of 710 km (441 mi) NNE–SSW. Comparatively, the area occupied by Zimbabwe is slightly larger than the state of Montana. Bounded on the N and E by Mozambique, on the S by the Republic of South Africa, on the SW by Botswana, and on the NW and N by Zambia, Zimbabwe has a total boundary length of 3,066 km (1,905 mi). Zimbabwe's capital city, Harare, is located in the northeast part of the country.

## <sup>2</sup> TOPOGRAPHY

Most of Zimbabwe is rolling plateau, with over 75% of it lying between 600 and 1,500 m (2,000–5,000 ft) above sea level, and almost all of it over 300 m (1,000 ft). The area of high plateau, known as the highveld, is some 650 km (400 mi) long by 80 km (50 mi) wide, and stretches northeast to southwest at 1,200–1,675 m (4,000–5,500 ft). This culminates in the northeast in the Inyanga mountains, reaching the country's highest point at Mt. Inyangani, 2,592 m (8,504 ft). On either side of the highveld is the middleveld, a plateau ranging from about 600–1,200 m (2,000–4,000 ft) in height. Below 610 m (2,000 ft) are areas making up the lowveld, wide and grassy plains in the basins of the Zambezi and the Limpopo.

The highveld is a central ridge forming the country's watershed, with streams flowing southeast to the Limpopo and Sabi rivers and northwest into the Zambezi. Only the largest of the many rivers have an all-year-round flow of water.

## <sup>3</sup> CLIMATE

Altitude and relief greatly affect both temperature and rainfall in Zimbabwe. The higher areas in the east and the highveld receive more rainfall and are cooler than the lower areas. Temperatures on the highveld vary from 12–13°C (54–55°F) in winter to 24°C (75°F) in summer. On the lowveld the temperatures are usually 6°C (11°F) higher, and summer temperatures in the Zambezi and Limpopo valleys average between 32–38°C (90–100°F). Rainfall decreases from east to west. The eastern mountains receive more than 100 cm (40 in) annually, while Harare has 81 cm (32 in) and Bulawayo 61 cm (24 in). The south and southwest receive little rainfall. Seasonal shortages of water are common.

The summer rainy season lasts from November to March. It is followed by a transitional season, during which both rainfall and temperatures decrease. The cool, dry season follows, lasting from mid-May to mid-August. Finally, there is the warm, dry season, which lasts until the onset of the rains.

## <sup>4</sup> FLORA AND FAUNA

The country is mostly savanna, although the moist and mountainous east supports tropical evergreen and hardwood forests. Trees include teak and mahogany, knobthorn, msasa, and baobab. Among the numerous flowers and shrubs are hibiscus, spider lily, leonotus, cassia, tree wisteria, and dombeya. There are over 4,400 species of plants throughout the country.

Mammals include elephant, lion, buffalo, hippopotamus, rhinoceros, gorilla, chimpanzee, baboon, okapi, giraffe, kudu, duiker, eland, sable, gemsbok, waterbuck, zebra, warthog, lynx, armadillo, porcupine, fox, badger, otter, hare, bat, shrew, and scaly anteater. There are at least 270 species of mammal in the country.

Snakes and lizards abound. The largest lizard, the water monitor, is found in many rivers, as are several species of crocodile.

About 500 species of birds include the ant-thrush, barbet, bee-eater, bishop bird, bulbul, bush-warbler, drongo, emerald cuckoo, grouse, gray lourie, and pheasant.

## 5 ENVIRONMENT

Among the most serious of Zimbabwe's environmental problems is erosion of its agricultural lands and deforestation. By 1992, deforestation was progressing at the rate of 70,000–100,000 ha per year, or about 1.5% of the nation's forestland. This same rate of deforestation was reported to the year 2000. The confinement of large segments of the population to relatively unproductive lands before independence put severe pressure on these lands, a substantial portion of which may have been irreversibly damaged.

Zimbabwe's air is polluted by vehicle and industrial emissions, while water pollution results from mining and the use of fertilizers. Zimbabwe's cities produce 0.5 million tons of solid waste per year. The nation has been estimated to have the highest DDT concentrations in the world in its agricultural produce.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 8 types of mammals, 10 species of birds, 6 species of amphibians, 2 species of invertebrates, and 17 species of plants. Zimbabwe has about half of the world's population of black rhinoceroses, an endangered species. Rare or threatened species include the cape vulture, black-cheeked lovebird, and brown hyena. For protection, the government has adopted a policy of shooting poachers on sight.

## 6 POPULATION

The population of Zimbabwe in 2005 was estimated by the United Nations (UN) at 13,010,000, which placed it at number 68 in population among the 193 nations of the world. In 2005, approximately 3% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.1%. The projected population for the year 2025 was 14,430,000. The population density was 33 per sq km (86 per sq mi).

The UN estimated that 34% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.48%. The capital city, Harare, had a population of 1,469,000 in that year. Other large cities and their estimated populations included Bulawayo, 676,000; Chitungwiza, 321,782; Gweru, 137,000; Kwekwe, 88,000; Kadoma, 67,750; and Masvingo, 60,000.

The prevalence of HIV/AIDS has had a significant impact on the population of Zimbabwe. The UN estimated that 33.9% of adults between the ages of 15–49 were living with HIV/AIDS in 2001. The AIDS epidemic causes higher death and infant mortality rates, and lowers life expectancy.

## 7 MIGRATION

By early 1987, about 110,000 whites were estimated to have remained in Zimbabwe, about half the number since independence in 1980. There were also about 25,000 Coloured (of mixed race) and 10,000 Asians. Some 1.5 million people who had left for neighboring states during the civil war returned after independence, putting considerable strain on the new nation. In addition, by the end of 1992, famine and civil war in Mozambique had driven an

estimated 136,600 Mozambicans into Zimbabwe. Between 1992 and 1996, 241,000 Mozambican refugees repatriated from Zimbabwe. As of 1999, Zimbabwe was hosting some 1,200 refugees, the majority of whom were from Somalia, Ethiopia, and countries in the Great Lakes region.

In the early 1990s, there were about 25,000 Zimbabwe-born whites and 14,000 Zimbabwe-born blacks living in South Africa. As of 1999, there was still a small but steady flow of Zimbabweans into South Africa and Botswana in search of better paid employment.

In 2000 there were 656,000 migrants living in Zimbabwe, including refugees. By 2004, there were 6,884 refugees and no asylum seekers. In that same year over 7,000 Zimbabweans sought asylum in South Africa, the United Kingdom, Germany, and the United States. The net migration rate in 2005 was estimated as zero migrants per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Africans make up 98% of the total population in Zimbabwe and are mainly related to the two major Bantu-speaking groups, the Shona (about 82% of the population) and the Ndebele (about 14%). Of the former group, the Korekore predominate in the north; the Zezuru are in the center around Harare; the Karanga are in the south; the Ndau and Manyika in the east; the Kalanga in the west; the Rozwi are spread throughout the country. The various clans of the Ndebele, more recent immigrants from the south, occupy the area around Bulawayo and Gwanda. Other groups account for 11% of the African populace and include the Tonga near Kariba Lake, and the Sotho, Venda, and Hlengwe along the southern border.

Whites make up 1% of the non-African population. Europeans are almost entirely either immigrants from the United Kingdom or South Africa or their descendants; those from South Africa include a substantial number of South African Dutch (Afrikaner) descent. There are small groups of Portuguese, Italians, and other Europeans. Asians and peoples of mixed ancestry make up the remaining 1%.

## 9 LANGUAGES

The Shona speak dialects of the same Bantu language, Shona. There are six major dialects: Karanga, Zezuru, Korekore, Manyika, Ndau, and Kalanga. The Ndebele speak modified versions of Ndebele (or Sindebele), which belongs to the Nguni group of south-east Bantu languages.

English, the official language, is spoken by most Europeans and by an increasing number of Africans.

## 10 RELIGIONS

Historically, Christianity, brought into the region by Portuguese traders and Jesuit priests in the late 1500s, has been the dominant religion of the nation. About 60–70% of the total population belong to various Christian denominations, with the largest being Roman Catholic (between 17–27% of the population). Certain regions of the country have traditional links to specific denominations, based on "areas of interest," which were created by missionaries from groups such as the Catholics, Methodists, Anglicans,

LOCATION: 15°37' to 22°25' S; 25°14' to 33°4' E. BOUNDARY LENGTHS: Mozambique, 1,231 kilometers (762 miles); South Africa, 225 kilometers (140 miles); Botswana, 813 kilometers (505 miles); Zambia, 797 kilometers (498 miles).

Dutch Reformed, and the Salvation Army. As a result, individuals will often claim adherence to their local denomination.

There is a small Muslim community, estimated at less than 1% of the population. They are primarily immigrants from South Asia, the Middle East, and North Africa. There are also small numbers of Greek Orthodox, Jews, Hindus, Buddhists, and atheists.

A good number of indigenous churches have developed from the mainstream Christian churches. The Zimbabwe Assembly of God, a branch of the Assemblies of God Church, adheres strictly to Christian tenets and opposes incorporation of traditional practices and beliefs. Other groups such as the Seven Apostles, provide a mixture of traditional religious practices with Christianity. An organization known as Fambidzano formed in the mid-1970s to serve as a support coalition of indigenous churches. One of the goals of the organization is to provide continuing theological and biblical education for church leaders.

Belief in and practice of traditional religions is thought to be quite widespread, as it is sometimes practiced in conjunction with other established belief systems. The belief in and respect for traditional healers resulted in the organization of the Zimbabwe National African Traditional Healers' Association (ZINATHA), which provides licensing and regulation of healers.

In response to widespread belief in and fear of witchcraft, the government has initiated the Witchcraft Suppression Act (WSA), which prohibits the practice of witchcraft, but also calls for prosecution of those falsely accusing others of the practice or engaging in witch hunts. The act has helped protect those, particularly women, who have been falsely accused of witchcraft. However, members of ZINATHA are seeking an amendment to the law that would redefine certain terms. The Act defines witchcraft as "the use of charms and any other means or devices adopted in the practice of sorcery." The proposed amendment would refocus the law to prohibit any practices that are intended to cause harm.

Though relations between religious groups are generally amicable, some tensions exist between Christians and practitioners of traditional religions. In particular, Christian churches oppose traditional practices that allow polygamy and refuse the use of modern medicine. Some tension exists between the government and indigenous religions which refuse to participate in public health and vaccination programs because of religious beliefs in healing through prayer alone. The Zimbabwe Council of Churches, the Heads of Denominations, and the Evangelical Fellowship of Zimbabwe are ecumenical groups that promote interfaith dialogue and cooperation, while offering forums for discussion of social and political issues.

## **11** TRANSPORTATION

In 2004, the National Railways of Zimbabwe, a public corporation, operated 3,077 km (1,912 mi) of rail lines (all of it narrow gauge), of which 313 km (194 mi) were electrified. Rail links exist with Zambia, Mozambique, Botswana, and the Republic of South Africa. Electrification of the railroads was begun following independence. There were 18,338 km (11,395 mi) of road in 2002, of which 8,692 km (5,401 mi) were classified as paved. In 2003, there were 401,007 registered motor vehicles, including 347,007 passenger cars and 54,000 commercial vehicles.

The Mazoe and Zambezi rivers are used for transporting chrome ore from Harare to Mozambique. Important ports and harbors are at Binga and Kariba.

In 2004, there were an estimated 404 airports, but only 17 of which had paved runways as of 2005. Zimbabwe operates domestic, regional, and European flights. Harare and Bulawayo are the principal airports. In 1997, total scheduled traffic included 938 million passenger-km (583 million passenger-mi) and 153 million freight ton-km (95 million freight ton-mi) of flight. Zimbabwe's passenger airline is Air Zimbabwe, and its international cargo airline is Affretair. In 2003, about 201,000 passengers were carried on scheduled domestic and international airline flights.

## **12** HISTORY

Evidence of Stone Age cultures dating back 100,000 years has been found, and it is thought that the San people, now living mostly in the Kalahari Desert, are the descendants of Zimbabwe's original inhabitants. The remains of ironworking cultures that date back to AD 300 have been discovered. Little is known of the early ironworkers, but it is believed that they were farmers, herdsman, and hunters who lived in small groups. They put pressure on the San by gradually taking over the land. With the arrival of the Bantu-speaking Shona from the north between the 10th and 11th centuries AD, the San were driven out or killed, and the early ironworkers were incorporated into the invading groups. The Shona gradually developed gold and ivory trade with the coast, and by the mid-15th century had established a strong empire, with its capital at the ancient city of Zimbabwe. This empire, known as Munhumutapa, split by the end of the century, the southern part becoming the Urozwi Empire, which flourished for two centuries.

By the time the British began arriving in the mid-19th century, the Shona people had long been subjected to slave raids. The once-powerful Urozwi Empire had been destroyed in the 1830s by the Ndebele, who, under Mzilikaze, had fled from the Zulus in South Africa. David Livingstone, a Scottish missionary and explorer, was

chiefly responsible for opening the whole region to European penetration. His explorations in the 1850s focused public attention on Central Africa, and his reports on the slave trade stimulated missionary activity. In 1858, after visiting Mzilikaze, Robert Moffat, Livingstone's father-in-law, established Inyati Mission, the first permanent European settlement in what is now Zimbabwe.

To forestall Portuguese and Boer expansion, both the British government and Cecil Rhodes actively sought to acquire territory. Rhodes, whose fortune had been made through diamond mining in South Africa, became especially active in gaining mineral rights and in sending settlers into Matabeleland (the area occupied by the Ndebele people) and Mashonaland (the area occupied by the Shona people). In 1888, Lobengula, king of the Ndebele, accepted a treaty with Great Britain and granted to Charles Rudd, one of Rhodes's agents, exclusive mineral rights to the lands he controlled. Gold was already known to exist in Mashonaland, so, with the grant of rights, Rhodes was able to obtain a royal charter for his British South Africa Company (BSAC) in 1889. The BSAC sent a group of settlers with a force of European police into Mashonaland, where they founded the town of Salisbury (now Harare). Rhodes gained the right to dispose of land to settlers (a right he was already exercising *de facto*). With the defeat of the Ndebele and the Shona between 1893 and 1897, Europeans were guaranteed unimpeded settlement. The name Rhodesia was common usage by 1895.

Under BSAC administration, British settlement continued, but conflicts arose between the settlers and the company. In 1923, Southern Rhodesia was annexed to the crown; its African inhabitants thereby became British subjects, and the colony received its basic constitution. Ten years later, the BSAC ceded its mineral rights to the territory's government for £2 million.

After the onset of self-government, the major issue in Southern Rhodesia was the relationship between the European settlers and the African population. The British government, besides controlling the colony's foreign affairs, retained certain powers to safeguard the rights of Africans. In 1930, however, Southern Rhodesia adopted a land apportionment act that was accepted by the British government. Under this measure, about half the total land area, including all the mining and industrial regions and all the areas served by railroads or roads, was reserved for Europeans. Most of the rest was designated as Tribal Trust Land, native purchase land, or unassigned land. Later acts firmly entrenched the policy of dividing land on a racial basis.

In 1953, the Central African Federation was formed, consisting of the three British territories of Northern Rhodesia (now Zambia), Nyasaland (now Malawi), and Southern Rhodesia, with each territory retaining its original constitutional status. In 1962, in spite of the opposition of the federal prime minister, Sir Roy Welensky, Nyasaland and Northern Rhodesia withdrew from the federation with British approval. The federation disbanded in 1963. Southern Rhodesia, although legally still a colony, sought an independent course under the name of Rhodesia.

Political agitation in Rhodesia increased after the United Kingdom's granting of independence to Malawi and Zambia. The white-settler government demanded formalization of independence, which it claimed had been in effect since 1923. The African nationalists also demanded independence, but under conditions of universal franchise and African majority rule. The British gov-

ernment refused to yield to settler demands without amendments to the colony's constitution, including a graduated extension of the franchise leading to eventual African rule. Negotiations repeatedly broke down, and on 5 November 1965, Rhodesian Prime Minister Ian Smith declared a state of emergency. On 11 November, the Smith government issued a unilateral declaration of independence (since known as UDI). The British government viewed UDI as illegal and imposed limited economic sanctions, but these measures did not bring about the desired results. In December, the UN Security Council passed a resolution calling for selective mandatory sanctions against Rhodesia. Further attempts at a negotiated settlement ended in failure. In a referendum held on 20 June 1969, the Rhodesian electorate—92% white—approved the establishment of a republic.

The British governor-general, Sir Humphrey Gibbs, resigned on 24 June 1969. The Legislative Council passed the constitution bill in November, and Rhodesia declared itself a republic on 2 March 1970. The United Kingdom called the declaration illegal, and 11 countries closed their consulates in Rhodesia. The UN Security Council called on member states not to recognize any acts by the illegal regime and condemned Portugal and South Africa for maintaining relations with Rhodesia.

Problems in Rhodesia deepened after UDI, largely as a result of regional and international political pressure, African nationalist demands, and African guerrilla activities. Members of the African National Council (ANC), an African nationalist group, were increasingly subjected to persecution and arrest. Nevertheless, guerrilla activity continued. The principal African nationalist groups, besides the ANC, were the Zimbabwe African People's Union (ZAPU), and the Zimbabwe African National Union (ZANU).

A meeting took place in Geneva in October 1976 between the British and Smith governments and four African nationalist groups. Prominent at the meeting were Joshua Nkomo, the leader of ZAPU; Robert Mugabe, leader of ZANU; Bishop Abel Muzorewa of the ANC; and the Reverend Ndabaningi Sithole, former leader of ZANU. Nkomo and Mugabe had previously formed an alliance, the Patriotic Front. The conference was unable to find the basis for a national settlement; but on 3 March 1978, the Smith regime signed an internal agreement with Muzorewa, Sithole, and other leaders, providing for qualified majority rule and universal suffrage. Although Bishop Muzorewa, whose party won a majority in the elections of April 1979, became the first black prime minister of the country (now renamed Zimbabwe-Rhodesia), the Patriotic Front continued fighting.

Meanwhile, the British government had begun new consultations on the conflict, and at the Commonwealth of Nations Conference in Lusaka, Zambia, in August 1979, committed itself to seeking a settlement. Negotiations that began at Lancaster House, in England, on 10 September resulted in an agreement, by 21 December, on a new, democratic constitution, democratic elections, and independence. On 10 December, the Zimbabwe-Rhodesian parliament had dissolved itself, and the country reverted to formal colonial status during the transition period before independence. That month, sanctions were lifted and a cease-fire declared. Following elections held in February, Robert Mugabe became the first prime minister and formed a coalition government that included Joshua Nkomo. The independent nation of Zimbabwe was

proclaimed on 18 April 1980, and the new parliament opened on 14 May 1980.

### Independence and Factionalism

Following independence, Zimbabwe initially made significant economic and social progress, but internal dissent became increasingly evident. The long-simmering rivalry erupted between Mugabe's dominant ZANU-Patriotic Front Party, which represented the majority Shona ethnic groups, and Nkomo's ZAPU, which had the support of the minority Ndebele. A major point of contention was Mugabe's intention to make Zimbabwe a one-party state. Mugabe ousted Nkomo from the cabinet in February 1982 after the discovery of arms caches that were alleged to be part of a ZAPU-led coup attempt. On 8 March 1983, Nkomo went into exile, but returned to Parliament in August.

Meanwhile, internal security worsened, especially in Matabeleland, where Nkomo supporters resorted to terrorism. The government responded by jailing suspected dissidents, using emergency powers dating from the period of white rule, and by military campaigns against the terrorists. The government's Fifth Brigade, trained by the Democratic People's Republic of Korea and loyal to Mugabe, was accused of numerous atrocities against civilians in Matabeleland during 1983. By early 1984, it was reported that many residents in Matabeleland were starving as a result of the military's interruption of food supplies to the area.

Armed dissidents continued to operate in Matabeleland until 1987, and food supplies in the area continued to be inadequate. A round of particularly brutal killings—men, women, and children—occurred late in the year. The violence abated after the two largest political parties, ZANU and ZAPU, agreed to merge in December 1987.

A growing problem, however, was the political instability of Zimbabwe's neighbors to the south and east. In 1986, South African forces raided the premises of the South African black-liberation African National Congress in Harare, and 10,000 Zimbabwean troops were deployed in Mozambique, seeking to keep antigovernment forces in that country from severing Zimbabwe's rail, road, and oil-pipeline links with the port of Beira in Mozambique. Although Beira is the closest port to landlocked Zimbabwe, because of the guerrilla war in Mozambique about 85% of Zimbabwe's foreign trade was passing through South Africa instead.

Despite its reputed commitment to socialism, the Mugabe government was slow to dismantle the socioeconomic structures of the old Rhodesia. Until 1990, the government's hands were tied by the Lancaster House accords. Private property, most particularly large white-owned estates, could not be confiscated without fair market compensation. Nevertheless, economic progress was solid and Zimbabwe seemed to have come to terms with its settler minority. There was only modest resettlement of the landless (52,000 out of 162,000 landless families from 1980 to 1990) and when white farmers were bought out, black politicians often benefited. Some 4,000 white farmers owned more than one-third of the best land.

In March 1992, a controversial Land Acquisition Act was passed calling for the government to purchase half of the mostly white-owned commercial farming land at below-market prices, without the right of appeal, in order to redistribute land to black peasants. However, the government continued to move slowly and not until

April 1993 was it announced that 70 farms, totaling 470,000 acres, would be purchased. Unease among whites grew, as did fear of unemployment, already at around 40%. Economic conditions also threatened to derail the Economic Structural Adjustment Program (ESAP) designed by the IMF and the World Bank. ESAP pressed for a market-driven economy, reduction of the civil service, and an end to price controls and commodity subsidies.

Meanwhile, in the March 1990 elections, Mugabe was reelected with 78.3% of the vote. The Zimbabwe Unity Movement (ZUM) candidate, Tekere, received about 21.7% of the vote. For parliament, ZANU-PF got 117 seats; ZUM, 2 seats; and ZANU-Ndonga, 1 seat. There was a sharp drop in voter participation, and the election was marred by restrictions on opposition activity and open intimidation of opposition voters. At first, Mugabe insisted that the results were a mandate to establish a one-party state. In 1991, however, growing opposition abroad and domestically, even within ZANU-PF, forced him to postpone his plans. Sensing an erosion of political support, Mugabe restricted human and political rights, weakened the Bill of Rights, placed checks on the judiciary, and tampered with voters' rolls and opposition party financing. The government also suspended the investigation into the 1982–87 Matabeleland Crisis, a decision that prompted a November 1993 reprimand by the Organization of African Unity (OAU)'s Human Rights Commission.

As the economy sputtered, political opposition grew. In January 1992, Sithole returned from seven years of self-imposed exile in the United States. In July, Ian Smith chaired a meeting of Rhodesian-era parties seeking to form a coalition in opposition to Mugabe. Sithole and his ZANU-Ndonga Party, the United African National Congress, the largely white Conservative Alliance, and Edgar Tekere's ZUM were included. Students, church leaders, trade unionists, and the media began to speak out. In May 1992 a new pressure group, the Forum for Democratic Reform, was launched in preparation for the 1995 elections. Parliamentary and presidential elections in 1995 and 1996 though officially won by ZANU-PF, were discredited by opposition boycotts and low voter turnout. Then in 1997, a homegrown pro-democracy coalition was launched from the constituency for constitutional reform—the National Constitutional Assembly (NCA). The birth of the NCA dovetailed with the growing radicalization of the Zimbabwe Confederation of Trade Unions (ZCTU) and its transformation from a collective bargaining agent for organized urban industrial labor into a broad-based political opposition movement representing a wide spectrum of civil society, the Movement for Democratic Change (MDC). The official launch of the MDC at Rufaro Stadium on 11 September 1999 was followed by the first Congress at which Morgan Tsvangirai was elected president, and Gibson Sibanda his deputy. NCA supporters embraced the MDC as a vehicle for implementing the new constitution should the government be amenable to it.

The MDC's first test came in February 2000 at a national referendum for constitutional changes strongly pro-regime. On 12–13 February, voters soundly rejected the proposals much to the chagrin of the ruling party. The results signaled that ZANU-PF was not invincible, and they catapulted Morgan Tsvangirai and the MDC into a leading position heading into the 24–25 June parliamentary elections. Again threatened, Mugabe cracked down on the opposition. In the run-up to and aftermath of the elections, 34

people were killed, including Tsvangirai's driver and a poll worker who were killed in a gasoline-bomb attack. Officially, but without the sanction of international observers, ZANU-PF claimed 62 of 120 elective seats in the House of Assembly, with the MDC taking 57 seats with a turnout of 60% of eligible voters.

The credibility the regime was further damaged in the 9–11 March 2002 presidential polls, the conduct of which was declared fraudulent by the opposition and—with the exception of the African Union (AU) and Southern African Development Community (SADC)—by the international community. Officially, Mugabe garnered 53.8% of the vote to 40.2% for Tsvangirai while others claimed 6.0%. The government prevented as many voters as possible in urban districts favorable to the MDC from registering, reduced the number of urban polling stations by 50% over the 2000 elections, added 664 rural polling stations, conducted a state media barrage, and intimidated the opposition. By some reports, 31 people were killed in January and February and 366 tortured. The opposition mounted a legal challenge to the results while the Commonwealth suspended Zimbabwe for one year.

By 2003, the country faced multiple crises. Owing to negative impacts of land grabbing, squatting, and repossessions of large white farms under the government's fast-track land reform program, some 400,000 jobs had been lost in commercial agriculture. Combined with a 90% loss in productivity in large-scale farming since the 1990s, some 5.5 million people in a population of 11.6 million were in need of food aid. Inflation had reached 228% and a fuel crisis threatened the nation. Strikes crippled production, prompting ever more severe repression by the government. More than 30% of the adult population was infected with the AIDS virus.

Given the devastating social impact of these issues, internal and diplomatic pressures were mounting for Mugabe to abandon his survival strategy in favor of a quick and clean exit strategy. One such move afoot was to offer the MDC a form of transitional government in exchange for cooperation in amending the constitution to allow a managed presidential succession and immunity from prosecution for the president and his followers in their retirement. However, there was a reluctance on the part of Tsvangirai's supporters to offer amnesty to a regime that had committed in excess of 550,000 cases of human rights violations ranging from murder, abduction, and rape to arson.

Tsvangirai was arrested and charged with treason in June 2003; he already had an outstanding treason charge from 2002 for attempting to assassinate Mugabe. In October 2004, Tsvangirai was acquitted of the 2002 treason charge. In August 2005, prosecutors dropped the remaining treason charges against Tsvangirai.

In a parliamentary election held in March 2005, the ZANU-PF party won two-thirds of the vote. The opposition claimed the election was rigged, but the MDC won almost all urban seats in the second election in a row. From May to July of that year, tens of thousands of shanty dwellings and illegal street stalls were destroyed as part of a government clean-up program ("Operation Murambatsvina"—"Drive Out Rubbish"). In some cases the police forced people to knock down their own homes. In other cases, trucks and bulldozers moved in. The United Nations estimated the program left approximately 700,000 people homeless. The government's policy of moving city dwellers to rural areas only worsened

the already dire consequences of food shortages. The main opposition to Mugabe's rule came from urban areas.

### 13 GOVERNMENT

Under the constitution of 18 April 1980, independent Zimbabwe had a bicameral parliament consisting of a house of assembly with 100 members, 20 of whom were elected by white voters, and 80 by persons on the common voters' roll, which included all voters except whites. The upper house, or senate, had 40 members, 14 of whom were chosen by the 80 assembly members elected from the common roll, 10 by the 20 white assembly members, 10 by the council of chiefs, and 6 nominated by the president on the advice of the prime minister. The racial basis of parliament could not be amended until 1987 unless by unanimous vote of parliament; amendment afterward needed only a 70% vote of the assembly. During the first 10 years of independence, the declaration of rights in the constitution could be amended only by a unanimous vote of the assembly; amendment of other clauses required a 70% majority. In August 1987, as soon as the constitution allowed, the separate representation for whites in parliament was abolished and the 20 seats were temporarily filled by representatives selected by the other 80 members.

After the 1990 elections, the two houses of parliament were merged into a single chamber of 150 members—120 elected by popular vote serving for five years, 10 traditional chiefs, 8 provincial governors, and 12 members appointed by the president. A constitutional change created an executive presidency and abolished the office of prime minister. ZANU leader Robert Mugabe assumed the presidency on 1 December 1987. Amidst controversy, he was reelected in March 1990, March 1996, and March 2002.

There is universal suffrage from age 18. The next presidential elections were scheduled for March 2008.

### 14 POLITICAL PARTIES

The Rhodesian Front Party, which dominated politics from its formation in March 1962 until the establishment of majority rule in 1979, advocated racial separation, division of land on a racial basis, and the protection of the Rhodesian whites. The party won all 20 Assembly seats reserved for whites in both the 1979 and 1980 elections, and in 1981, it changed its name to the Republican Front Party (RFP). Ian Smith, who served (1964–79) as prime minister, remained as party leader until his suspension from parliament in 1987. He was succeeded by Mark Partridge. The name of the party had previously been changed again to the Conservative Alliance Zimbabwe (CAZ). The CAZ won 15 of the 20 seats allotted to whites in the 1985 elections.

The principal black parties in Zimbabwean politics originated in the struggle for independence along ethnic lines. The Zimbabwe African People's Union (ZAPU) was formed in December 1961 and led by Joshua Nkomo. It was split in July 1963 by the creation of the Zimbabwe African National Union (ZANU), led by the Reverend Ndabaningi Sithole, and later by Robert Mugabe. ZAPU's constituency was eventually reduced to the Ndebele minority, while ZANU gained wide support among the Shona ethnic group. Both ZAPU and ZANU took up arms against the government and in 1976 allied themselves in the Patriotic Front (PF).

After Bishop Abel Muzorewa accepted the Smith government's proposal for an internal constitutional settlement in 1978, his

followers, now known as the United African National Council (UANC), emerged as the major party. In elections on 17–21 April 1979, the UANC captured a majority of 51 seats in the new Assembly, and Muzorewa became the nation's first black prime minister. The elections, however, were boycotted by the PF, which continued its armed opposition to the government.

Under British auspices, a new constitutional settlement obtained PF approval in 1979, and the elections of 27–29 February 1980 were contested by nine parties, including ZANU-Patriotic Front, led by Robert Mugabe, and ZAPU (which registered under the name Popular Front). Of the 80 Assembly seats elected from the common rolls, ZANU-Patriotic Front took 57, Popular Front (or ZAPU) 20, and UNAC 3. In the July 1985 elections, ZANU-PF won 63 seats, PF-ZAPU, 15. After much enmity and bitterness during most of the 1980s, ZAPU and ZANU finally agreed to merge in late 1987 under the name of ZANU-PF and the merger was consummated in December 1989.

President Mugabe declared his intention to make Zimbabwe a one-party state by 1990. He regarded his party's victory in the 1990 elections as a mandate to proceed with his plans to establish ZANU-PF as the only legal party. He was soon turned away from that scheme by strong pressure from creditor governments abroad and a chorus of opposition domestically, including from within ZANU-PF. Zimbabwe got caught up in the general press throughout tropical Africa for greater decentralization of power and competitive party politics.

New parties began to emerge in the late 1980s and early 1990s in preparation for the expected elections in 1995. Tekere's Zimbabwe Unity Movement (ZUM) contested the 1990 elections with some success. The UANC merged with ZUM in January 1994. In January, longtime Mugabe rival Sithole returned from exile and created his own party, also using the ZANU rubric of ZANU-Ndonga or sometimes ZANU-Sithole.

In March 1993, former Chief Justice Enoch Dumbutshena launched the Forum Party, an outgrowth of the pressure group, Forum for Democratic Reform. The Democratic Party emerged from a split within ZUM.

In 1996 elections for Executive President, Robert Mugabe, the longtime ruler of Zimbabwe, won 93% of the vote, while his party, the Zimbabwe African National Union-Patriotic Front, won 98% of the available seats in elections held a year earlier. However, in both elections it was widely accepted that the result had been predetermined. The Zimbabwe government made little pretense of conducting a free and fair election.

Parliamentary elections were scheduled for April 2000, but were postponed until June. Two new strong political parties were formed to challenge Mugabe's ZANU-PF. The United Democratic Front (UDF) party was launched by Lupi Mushayakarara, former Rhodesian leader Ian Smith, Abel Muzorewa, and Ndabaningi Sithole, a pack of leaders that Mugabe dismissed as "ghosts of the past." A more formidable opponent emerged in the form of the Movement for Democratic Change (MDC) led by Morgan Tsvangirai. The MDC successfully campaigned against a government-sponsored draft constitution in the national referendum held in February 2000 with the government securing 45% of the national referendum votes against 55% for the opposition. The opposition argued that the draft constitution further entrenched executive rule allowing Mugabe to dissolve cabinet and parliament,

and to rule by decree. Led by the MDC, opposition parties won nearly half of the seats in the House of Assembly in the June 2000 elections.

Parliamentary elections were held on 31 March 2005. ZANU-PF won 78 of 150 seats, or 59.6% of the vote. The MDC won 41 seats, or 39.5% of the vote. One seat was secured by an independent candidate. The elections were not marked by violence as in the past, but the opposition claimed the elections were fraudulent. Human rights groups said that hundreds of thousands of "ghost voters" appeared on the electoral roll. Other parties functioning in Zimbabwe were the National Alliance for Good Government (NAGG), the International Socialist Organization, the Shalom Reform Zimbabwe Party, and the Zimbabwe Labour Party. The next parliamentary elections were scheduled for 2010.

Challenges to the continued success of the MDC included leadership, credibility on the streets, articulation of position on contentious issues, and resource base. It remained to be seen whether the MDC could transform itself in a sustainable way from a broad-based civic movement opposed to Mugabe into an organized political entity representing and voicing the interests of a defined constituency all the while contesting power.

### 15 LOCAL GOVERNMENT

Each of the eight provinces of Zimbabwe is administered by a provincial commissioner appointed by the central government. Local services are provided by city, town, and rural councils. The Ministry of Local Government, Rural and Urban Planning is charged with ensuring the establishment of local authorities where necessary and local adherence to legislation. In addition to the eight provinces, two cities have provincial status: Harare and Bulawayo.

### 16 JUDICIAL SYSTEM

The legal system is based on Roman-Dutch law and has been influenced by the system of South Africa. A four-member Supreme Court, headed by the chief justice, has original jurisdiction over alleged violations of fundamental rights guaranteed in the constitution and appellate jurisdiction over other matters. There is a High Court consisting of general and appellate divisions. Below the High Court are regional magistrate's courts with civil jurisdiction and magistrate's courts with both civil and criminal jurisdiction. Before independence, separate African courts had jurisdiction over cases involving traditional law and custom. Beginning in 1981, these courts were integrated into the national system.

The chief justice of the High Court is appointed by the president upon recommendation of the Judicial Service Commission. The Commission also advises the president on the appointment of the other judges.

In 1990 the Customary Law and Local Courts Act established a unitary court system made up of headmen's courts, chiefs' courts, magisterial courts, the High Court, and the Supreme Court. Under this system, customary law cases can be appealed through all levels to the Supreme Court.

The constitution provides for the right to a fair trial and the judiciary rigorously enforces this right. However, under Mugabe, the judiciary's reputation for independence from the executive branch has been compromised as the executive has refashioned the courts to conform with its dictates. Nevertheless, the High

Court has ruled in favor in several of the MDC's elections petitions alleging violence and intimidation that obstructed the election process.

### 17 ARMED FORCES

Regular armed forces numbered 29,000 active personnel in 2005. The Army had an estimated 25,000 troops including a Presidential Guard. Armaments included 40 main battle tanks, most of which were listed as nonoperational, and 242 artillery pieces. The Air Force had 4,000 personnel with 50 combat capable aircraft, that included 13 fighters and 1 fighter ground attack aircraft. The service also had six attack helicopters. Paramilitary forces included the Zimbabwe Republic Police Force, with 19,500 members, and the Police Support Unit with 2,300 members. In 2005, the defense budget totaled \$255 million.

### 18 INTERNATIONAL COOPERATION

Zimbabwe became a United Nations member on 25 August 1980 and belongs to ECA and several nonregional specialized agencies, such as the World Bank, the FAO, IAEA, UNESCO, UNIDO, and the WHO. It is also a member of the African Development Bank, the Commonwealth of Nations, the ACP Group, G-15, G-77, the African Union, the WTO, COMESA, the Southern African Development Community (SADC), and the Preferential Trade Association (PTA) for eastern and southern Africa. Zimbabwe is part of the Nonaligned Movement.

In environmental cooperation, Zimbabwe is part of the Convention on Biological Diversity, CITES, the Montréal Protocol, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

### 19 ECONOMY

Zimbabwe has developed one of the most diverse economies in Africa. It has abundant agricultural and mineral resources and a well-developed industrial sector and infrastructure. Average annual growth during the first postindependence decade was 2.9%, but grew at an annual negative growth rate (i.e. declined) of 7.2% between 2001 and 2005 with a peak of -10.6% in 2003. Problems abound, with an annual average inflation rate of 246% between 2001 and 2005 and the unemployment rate above 70% in 2002. It is estimated that over 70% of Zimbabwe's population currently lives below the poverty line. A small white elite continues to dominate economic resources, but repatriation of white farms caused the flight of white capital in 2000, and by 2003, the land reform program had created chaos and violence. Inflation seriously threatened the gold mining and tobacco industries.

The government remained committed to the 1991-95 Economic Structural Adjustment Program (ESAP), despite severe hardships the Program caused average Zimbabweans. Central to this program was the reduction of the civil service by 25% with some 32,000 jobs eliminated by 1994. Although Zimbabwe recovered from the effects of the devastating 1991-92 drought, which caused a decline of between 8% and 9% in the GDP, thousands remained chronically dependent on food support. During 2000-05 period, many of Zimbabwe's population struggled to afford basic commodities as inflation rose. The African Development Bank and the IMF granted loans to Zimbabwe in 1999 and 2000, but Zimbabwe's external debt had already risen to \$5 billion in 2001 and

is currently estimated to be \$5.2 billion. Civil unrest threatens the ruling government of Robert Mugabe. High budget deficits, inflation, and the HIV/AIDS pandemic prevent economic stability. As of 2002, the IMF's program with Zimbabwe remained suspended because the country was not complying with the IMF's conditions, and Zimbabwe had not made payments to the IMF since 2001. The World Bank also suspended programs in 2000 due to Zimbabwe's falling into arrears on payments. Mugabe's greater exercise of control over the economy did not portend well for the future. In its April 2005 World Economic Outlook, the IMF projected that real GDP in Zimbabwe would contract by 1.6% in 2005 and that growth would be stagnant in 2006. The fall in GDP in 2005 represented the seventh consecutive year of decline. GDP in 2005 was 40% lower than in 1998 and it is projected that in 2010 it will be 57% lower than in 1998.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Zimbabwe's gross domestic product (GDP) was estimated at \$28.4 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$1,900. The annual growth rate of GDP was estimated at -4%. The average inflation rate in 2005 was 266.8%. It was estimated that agriculture accounted for 17.9% of GDP, industry 24.3%, and services 57.9%.

Foreign aid receipts amounted to \$186 million or about \$14 per capita.

The World Bank reports that in 2003 household consumption in Zimbabwe totaled \$12.87 billion or about \$982 per capita based on a GDP of \$17.8 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 0.4%. Approximately 20% of household consumption was spent on food, 21% on fuel, 3% on health care, and 15% on education. It was estimated that in 2004 about 80% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Zimbabwe's labor force was estimated at 3.94 million. As of 1996 (the latest year for which data was available), 66% of the workforce was engaged in agriculture, 24% in services, and 10% in industry. Growing unemployment remains a serious problem as new jobs fail to keep pace with the number of new job seekers. The unemployment rate in 2004 was estimated at 60%.

In 1981, the Zimbabwe Congress of Trade Unions (ZCTU) was formed as an umbrella organization for all trade unions and to promote the formation of a single trade union for each industry. As of 2002, about 25% of the salaried workforce were members of the 31 unions which formed the ZCTU. Spontaneous strikes and lockouts are banned. Government-mandated worker committees carry out many functions performed by unions elsewhere, and annual wage increases are mandated for all workers.

Since independence, a priority of the government's wage policy has been reduction of the huge variation in earnings among work-

ers, partly by increasing minimum wages and by controlling increases in higher wage brackets. The monthly minimum wage in 2002 ranged from about us\$14 for agricultural workers to us\$30 in the manufacturing sector. Although children under the age of 15 are legally banned from employment, child labor is widespread in all aspects of the economy. Workplace safety and health continue to be problems. There are no general standards for the safety of the work environment. The government sets standards and enforces them on an inconsistent basis.

## 22 AGRICULTURE

In 2003, Zimbabwe had 3.3 million hectares (8.3 million acres) of arable land, covering 8.7% of the country's total land area. Most of what is now central Zimbabwe was sparsely populated when Europeans first settled into the region, gradually transforming the bush into fertile farmland. Since 2000, government policy changes have led to the seizure of 4,000 white-owned farms, and many who lost land have emigrated elsewhere in Africa or overseas. In 2003, agriculture accounted for 17% of GDP and 23% of exports.

In April 2000, some 35,000 guerilla veterans of Mugabe's Bush War revolution began expropriating hundreds of white-owned farms, frequently assaulting and occasionally murdering farmers. The farmland occupation cost millions of dollars in crop damage. Mugabe had promised to give each landless veteran z\$50,000 as well as a monthly pension, but there was no money in the budget for it. Zimbabwe's High Court ordered police to evict the squatters from white farms, but the order was not enforced. Mugabe gave an implied approval of the confiscation by publicly declaring all white Zimbabweans as enemies of the state. The mainly white Commercial Farmers Union of Zimbabwe had been willing to negotiate redistribution of much of the farmland owned by whites, but Mugabe and the ruling ZANU-PF party were reluctant to settle. Previous land confiscations ordered by Mugabe have typically resulted in farmland left fallow or under the control of corrupt government officials. Crop production during 2002-04 fell by almost 25% compared with 1999-2001.

Since 1991, Zimbabwean agriculture has undergone a fundamental transition away from artificial producer and consumer prices, which were set far below world market levels. Many commercial farms changed from corn, cotton, and oilseed production to tobacco and horticultural activities because the government refused to permit producer prices to keep pace with rising input prices. About 63% of the economically active population was engaged in agriculture in 2000.

In the early 1990s, drought severely affected the output of every crop except tobacco. Corn, wheat, cotton, oilseed, coffee, and sugar outputs all declined by at least 75%. Tobacco production in 2004 was 80,000 tons. Corn production in 2004 totaled only 1,000,000 tons, down from 2,609,200 tons in 1996. In 2004, cotton production totaled 100,000 tons. Marketed production figures of other crops in 2004 were wheat, 80,000; sorghum, 80,000; soybeans, 93,000; peanuts, 150,000; coffee, 9,000; and sunflower seeds, 5,000. Rice, potatoes, tea, and pyrethrum are also grown.

## 23 ANIMAL HUSBANDRY

In 2005, some 5,400,000 head of cattle, 2,970,000 goats, 610,000 sheep, 610,000 hogs, 112,000 donkeys, and 28,000 horses were held. Chickens numbered about 23 million. Livestock raising is

an important industry, which has been helped by increased diversification initiated after 1965. In 2005, beef production totaled 96,700 tons; pork, 27,500 tons; and goat meat, 12,800 tons. Fresh milk production from cows totaled 248,000 tons.

## 24 FISHING

There is some commercial fishing on Kariba Lake. Rural Zimbabweans fish the smaller lakes and rivers. The total catch in 2003 was estimated at 15,600 tons, with dagaas accounting for 67%.

## 25 FORESTRY

About 49% of Zimbabwe's land area is estimated to be forest, but this classification included scattered tree savanna and considerable areas of grassland likely to be reforested in the foreseeable future. Forestry is gaining importance in Zimbabwe. There are hardwood forests in the western part of the country and in the Victoria Falls area. About 100,000 tons of teak, mahogany, and mukwa (kiaat) are cut annually. Roundwood production totaled 9.1 million cu m (321 million cu ft) in 2004, with about 89% used as fuel wood. Sawn wood production that year was 397,000 cu m (14 million cu ft). Softwood afforestation projects have been undertaken in the eastern districts to supply local needs heretofore met by imports; however, the loss of woodlands may be as high as 1.5% per year.

## 26 MINING

Zimbabwe's chief minerals were coal, gold, copper, nickel and clays. Zimbabwe was a world leader in the production of lithium minerals, chrysotile asbestos, and ferrochromium, with more than half of the world's known chromium reserves. Zimbabwe was self-sufficient in most minerals, producing 35 commodities mainly from small-scale mines. The total value of mineral production totaled \$804.3 million in 2003. Employment however in the mining and quarrying sector has declined between 1998 and 2002, dropping from 61,000 to 43,000 in 2002. The fall may be attributed to economic conditions that have forced many smaller mining operations to shutdown between 2000 and 2003. However, another 100,000 to 300,000 were thought to be employed in the panning for gold. Of total exports of \$1.23 billion in 2003, mineral and manufactured metal exports accounted for \$492.3 million, up from \$426.6 million in 2002.

Gold production peaked in 1999 at 27,666 kg, but government policies caused a more than 50% drop to 12,564 kg in 2003. As a result, gold exports also fell, from \$236.1 million in 1998 to \$137.4 million in 2003. Gold historically had been a major export.

Although several major metals saw production increases in 2003, most of the other minerals saw production declines ranging from 5% to more than 60% in 2003. Among the reasons for the decline were: general domestic economic conditions compounded by the state-sanctioned expropriation of commercial farmlands which threatened to spill over to the mining sector, and the high incidence of HIV/AIDS—25% of the 15–49-year-old population was infected—added substantially to the mining sector's labor costs, through absenteeism, lost productivity, medical treatment, and skill replacement.

Output of other major minerals in 2003 included chromite (gross weight), 637,099 metric tons, down from 749,339 metric tons; asbestos, 147,000 tons, down from 168,000 in 2002; mine

copper concentrate (metal content), 2,767 metric tons, up from 2,502 metric tons in 2002; mined nickel, 11,600 metric tons (estimated), up from 8,092 metric tons; lithium minerals (gross weight), 12,131 metric tons, down from 33,172 metric tons in 2002; black granite, 47,007 metric tons, down from 408,550 metric tons in 2002; iron ore (metal content), 184,000 tons, up from 136,000 in 2002; and marketable phosphate rock concentrate, 95,496 metric tons, down from 107,854 metric tons in 2002. The Madziwa nickel mine was closed down in 2000, the Mhangura Copper Mines were near depletion, and Munyati Copper Mines Ltd. suspended operations in 2000, following its abandoned sale. In the late 1960s and early 1970s, copper replaced gold and asbestos as the most valuable mineral, but its production has not kept pace with other minerals. Zimbabwe in 2003 also produced palladium, platinum, rhodium, selenium, silver, barite, hydraulic cement, clays (including montmorillonite bentonite and fire clay), emerald, feldspar, graphite, kyanite, limestone, magnesite, mica, nitrogen, rough quartz, sulfur, talc, and vermiculite. National PGM metal production grew in 2003 to an estimated 8,418 kg, up from 4,729 kg in 2002. No antimony, lead, zinc, diamonds, or iron oxide pigments were produced in 2003.

Gold panning was legal, but, by the Gold Trade Act, the Reserve Bank of Zimbabwe had a monopoly on purchasing and exporting of all gold and silver produced in the country. The revised code also permitted unlimited foreign exchange to companies that exported more than 75% of their production, and mining companies were allowed to keep 5% of their export earnings, to buy imported raw materials. Coal deposits in the Hwange area were substantial.

Excess government intervention in the economy and in state-run industries has been a major contributor to the growing number of closed mines and suspended projects, undermining the ability of the mining sector to generate more than 25% of export earnings. The government has been making efforts to privatize its interests in the energy, mining, and rail sectors, and to loosen its foreign exchange rules. Although the short-term outlook was not favorable, the natural resource endowment and a well-developed infrastructure remained in place.

## 27 ENERGY AND POWER

Zimbabwe relies heavily on hydroelectricity and coal for its energy needs. Wood is also important.

With no proven oil reserves or refining capacity, the country's demand for refined oil is met by imports. In 2002, imports of refined petroleum products averaged 21,560 barrels per day, of which distillates accounted for 11,490 barrels per day and gasoline 5,680 barrels per day. Demand for refined products averaged 22,330 barrels per day in that same year. A pipeline from the Mozambique port of Beira to Mutare provides the majority of Zimbabwe's refined petroleum and diesel oil; the rest comes from South Africa.

Coal reserves in Zimbabwe were estimated at about 809 million tons at the beginning of 1998. Production in 2002 totaled 4,068,000 short million tons, with much of that amount going to the coal-fired Hwange plant for electricity production. Imports of coal totaled 43,000 short tons that year.

Electrical production is shared with Zambia. In 2002, Zimbabwe produced 8.279 billion kWh of electricity, of which 54% was from fossil fuels and 46% from hydropower. Consumption of elec-

tricity in 2002 was 11.394 billion kWh. Installed capacity in 2002 was 1.961 million kW, of which 61.5% of capacity came from conventional thermal plants.

## 28 INDUSTRY

Zimbabwe has a substantial and diverse manufacturing base, which is partly a legacy of the international sanctions imposed over the five years prior to independence. Industry accounted for only 14% of GDP in 2001, however. Manufacturing was at its lowest level in 15 years in 2001 due to civil unrest. Food and beverages, minerals processing, chemical and petroleum products, and textiles account for the majority of the value added by manufacturing. Lower levels of consumer demand because of high prices have affected producers of many household goods, clothing, footwear, drink, and tobacco products.

The Zimbabwe Iron and Steel Corporation (ZISCO) was operating at 30% in 1996, and supplied 60% of local need. The Zimchem chemical refinery processes a range of chemical products. Cement is produced in large quantities. Zimbabwe also has a substantial cotton and textile industry. The textiles industry has lost some 17,000 jobs in recent years to foreign competition from South Africa, which used subsidies, export incentives, and tariff protection to support its textiles industry. The gold mining industry faced collapse and closure in 2000 because of a lack of foreign exchange. Gold output dropped by half in that year, and 46,000 jobs were in peril. The tobacco industry was also in danger of foreclosure due to farm repatriation. As of 2005, the dire condition of the economy (a severely problematic balance of payments situation, devaluation of the currency, desperate foreign currency shortage, high inflation, very high interest rates, a fall in exports, and fuel shortages) was damaging the operations and viability of the manufacturing, construction, and mining sectors, in addition to agriculture.

## 29 SCIENCE AND TECHNOLOGY

Much of Zimbabwe's research effort is directed at improvements in agriculture. The government's budget for agricultural research is administered by the Agricultural Research Council which is headquartered in Harare and operates seven research institutes, eight research and experiment stations, and the National Herbarium and Botanic Garden. In Harare, at the Blair Research Laboratory, simple, innovative technologies are being developed to improve Zimbabwe's water supply and sewage disposal. Other research organizations, all in Harare, include the Geological Survey of Zimbabwe, the Institute of Mining and Metallurgy, and the Public Health Laboratory. The National University of Science and Technology, founded in 1990 at Bulawayo, has faculties of industrial technology and applied sciences. The University of Zimbabwe, founded in 1955 at Harare, has faculties of agriculture, engineering, medicine, science, and veterinary science. Degrees in agriculture and polytechnic studies are offered by seven colleges. In 1987-97, science and engineering students accounted for 24% of college and university enrollments. In 2002, high technology exports were valued at \$21 million, or 3% of all manufactured exports.

## 30 DOMESTIC TRADE

Harare and Bulawayo are the country's principal distribution centers. They are linked by rail and road to smaller towns that serve

as centers for their immediate rural areas. Head offices of most of the large companies are in one or the other of the two cities. There are supermarkets and department stores in Harare as well as few newer shopping centers offering a wider variety of goods. Many products are locally produced. Kwe Kwe serves as a processing and distribution center for livestock, tobacco, steel, and chrome. Mutare is a regional trading center. A chaotic, controversial land reform program and uncontrolled inflation have hindered the domestic trade and economy.

Business hours are generally from 8 AM to 5 PM Monday through Saturday. Banks are open from 8:30 AM to 2 PM Monday through Friday, except on Wednesday, when they close at noon. Saturday banking hours are from 8:30 to 11 AM.

## 31 FOREIGN TRADE

Due to violence in 2000, the annual tobacco auction that usually provides 30% of Zimbabwe's foreign exchange earnings had less than 20% of its normal sales volume and sold bales at prices 15% lower than usual. Unmanufactured tobacco from Zimbabwe (30% of total exports) typically accounts for about 11% of the world's export market in that category.

Gold had been the second-largest export commodity, but gold revenues were down by almost 50% in 2000 due to high inflation rates in Zimbabwe and low world market prices for gold. Other important exports include cotton (9.2%), iron and steel (9.2%), sugar (4.7%), and nickel (4.4%).

In 2005 the principal exports in terms of monetary revenues were as follows: gold (\$366 million), tobacco (\$227 million), ferro-alloys (\$185 million), and platinum (\$121 million). During the same year the principal imports were as follows: fuels (\$413 million), chemicals (\$401.3 million), machinery (\$271.4 million), and manufactured goods (\$268.7 million).

## 32 BALANCE OF PAYMENTS

Zimbabwe's imports grew by an average of 11% between 1988 and 1998, reflecting a relaxation of import controls and the inflow of capital goods needed for investment, but declined rapidly after 1998. The rapid rise of the current account deficit since 1989 was caused primarily by the surge in imports from the creation of the

Open General Import License (OGIL) list of items possible for importation without first obtaining a foreign exchange allocation from the government. With huge pent-up demand and future uncertainty about the program, importers rushed to take advantage of the opportunity, often hoarding several years' supply of items, which caused the trade deficit to balloon. After 1997, the amount of imports leveled off, and dropped rapidly in 1998. Due to the government's disastrous land reform programs, the commercial sector, as the traditional source of exports and foreign exchange, has suffered considerably.

The Economist Intelligence Unit reported that in 2005 the purchasing power parity of Zimbabwe's exports was \$1.686 billion while imports totaled \$2.053 billion resulting in a trade surplus of \$367 million.

**33 BANKING AND SECURITIES**

Zimbabwe has a relatively well-developed financial sector, in sub-Saharan Africa, second only to that of South Africa. The Reserve Bank of Zimbabwe (RBZ) administers all monetary and exchange controls and is the sole bank of issue. The Zimbabwe Development Bank was established in 1983 as a development finance institution.

Five commercial banks and 10 merchant banks operate in Zimbabwe. Commercial banks include Barclays, Standard Chartered, Stanbic, the Zimbabwe Banking Corporation, and the Commercial Bank of Zimbabwe. Merchant banks include the Merchant bank of Central Africa, First Merchant Bank, Standard Chartered Merchant Bank, Syfrets Merchant Bank, National Merchant Bank of Zimbabwe. Commercial banks are obliged to maintain a statutory deposit ratio of 20%. The Post Office Savings Bank is an important savings institution. High inflation rates in the late 1990s prompted the government to print \$250 million worth of Zimbabwean dollars in order to keep the state running, instead of depreciating the currency itself.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$2.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 21.52%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 57.2%.

The Zimbabwe Stock Exchange (ZSE), with floors in Harare, deals in government securities and the securities of many privately owned companies. The stock exchange opened in 1946. Until 1993, it was insignificant as a source of new capital, but the government allowed foreign investment through the ZSE, and by September 1995 the net foreign inflow exceeded us\$125 million. In 1997, the value of shares traded more than doubled, but in 1998, there was an 88% decline in the value of shares traded because of social unrest and high interest rates. 2001 proved to be a banner year, however, with market capitalization at a soaring all-time high of just under \$8 billion, and trading valued at \$1.5 billion. The ZSE Industrial Index was up 158% for the year, at 46,351.9, despite the severe economic slowdown caused by President Robert Mugabe's policies. As of 2004, a total of 79 companies were listed on the ZSE, which had a market capitalization of \$1.941 billion. In that same year, the ZSE Industrial index rose 173.3% from the previous year to 1,097,492.5. Trading value in 2004 totaled \$136 million.

**34 INSURANCE**

Insurance companies must be registered with and licensed by the Registrar of Insurance, make security deposits with the treasury, file annual financial reports, and observe other government regulations. Principal types of insurance written are life, fire, automobile, employers' liability, and accident. Automobile third-party liability is compulsory. There were some 50 insurance companies doing business in Zimbabwe in the mid-1980s.

In 1996, insurance companies continued to complain about the persistence of regulations that they considered to be inappropriate in the liberalized environment. Two foreign-owned insurance companies were reported to be holding out against government localization requirements against which a deadline of 1 August 1993, for 51% local shareholding had been set. The requirement on insurance companies and pension funds to invest 55% in government securities was also felt to be too high. In 2003, the value of all direct insurance premiums written totaled \$482 million, of which life insurance premiums accounted for \$277 million. NicozDiamond was the country's top nonlife insurer in 2003, with gross written nonlife premiums of \$195 million. In 2002, Old Mutual was the leading life insurer, with gross written life insurance premiums of \$144.3 million.

**35 PUBLIC FINANCE**

Zimbabwe derives its principal revenues from income taxes, sales tax, customs and excise duties, and interest, dividends, and profits. Principal categories of expenditure are education, defense, debt service, and agriculture. Budgets for the 1970s and the 1980s were generally in deficit. Escalating fiscal deficits in the 1980s led to the implementation early in 1991 of an extensive reform program, which focused on fiscal deficit reduction and monetary reforms. A

severe drought in 1992, however, set back the program; the deficit rose to more than 10% of GDP in 1993, and 15% of GDP in 2000. In 1999, an estimated one-third of the total budget was spent on troops sent to the Congo. Pay raises from 60% up to 90% were given to the civil service and the army.

The US Central Intelligence Agency (CIA) estimated that in 2005 Zimbabwe's central government took in revenues of approximately us\$1.4 billion and had expenditures of us\$1.9 billion. Revenues minus expenditures totaled approximately -us\$496 million. Public debt in 2005 amounted to 30.1% of GDP. Total external debt was us\$5.17 billion.

The International Monetary Fund (IMF) reported that in 1997, the most recent year for which it had data, central government revenues were z\$30,539.8 million and expenditures were z\$36,454.4 million. The value of revenues in US dollars was us\$36,314 million and expenditures us\$43,346 million, based on a official exchange rate for 1997 of us\$1 = z\$0.841 as reported by the IMF. Government outlays by function were as follows: general public services, 25.0%; defense, 7.1%; public order and safety, 6.2%; economic affairs, 6.8%; housing and community amenities, 4.4%; health, 8.1%; recreation, culture, and religion, 0.1%; education, 24.2%; and social protection, 18.2%.

**36 TAXATION**

The corporate tax rate as of 2005 was 30% plus a 3% AIDS levy, down from a flat rate of 36.8%. A 5% levy is imposed on the net profits of banking institutions. New projects or enterprises in designated growth point area are taxed at 15% for five years. Other tax concessions are available for export manufacturers. Dividends paid to a Zimbabwean company are not taxable, but dividends paid to a foreign company are subject to 15% withholding if the company is stock exchange-listed, and 20% otherwise. Listed securities are exempt from capital gains tax, which is otherwise 20%. Withholding rates may be reduced or eliminated in double taxation agreements. Zimbabwe has tax treaties with at least 12

countries, including the United Kingdom, France, Germany, the Netherlands, Sweden, Canada, South Africa, Poland, Malaysia, Bulgaria, and Mauritius.

The primary tax on individuals is an income tax, which is based on a graduated scale of rates: 0%, 20%, 25%, 30%, 35%, and 40%.

As of 2005, Zimbabwe had a value-added tax (VAT) with a standard rate of 15%, which was applied to most goods and services. Exempt from the VAT were rail or road passenger transport, financial, medical, educational and training services, long-term residential leases, tobacco, and fuel. Exports are zero-rated, as are prescribed drugs and tourist services. Tobacco sold on the auction floor is subject to a 1.5% levy. There are excise duties on alcoholic beverages, cigarettes, and tobacco. Other taxes include a betting tax, and stamp, transfer, and estate duties.

**37 CUSTOMS AND DUTIES**

Zimbabwe uses the GATT system of tariff codes. Imports are subject to duty, import tax, and surtax. Capital goods are exempt from all three. Duties mostly range between 15% and 20% but can go as high as 60%. The surtax is 10% and sales tax is charged to the importer as the end-user. The customs duty for textiles is 5% and the duty for clothes is 15%.

Zimbabwe is a member of the 14-nation Southern African Development Community (SADC), which was formed to promote "regional integration," and the 22-nation Preferential Trade Area (PTA) of Eastern and Southern Africa, which provides reduced duties on trade between member countries.

**38 FOREIGN INVESTMENT**

From independence in 1980 until 1991, the government was very defensive toward foreign investment, subjecting each proposal to careful scrutiny and requiring foreign investors to get permission from the Foreign Investment Center for the development of any new enterprise in Zimbabwe. Enterprises could be 100% foreign owned, especially in priority areas, but there was (and is) in effect a strong preference for joint ventures with at least 30% local participation.

In 1991 there was some revision of the regulations but the emphasis on indigenization remained at least as strong as the emphasis on the need to attract foreign investment. There is a long list of reserved sectors, but priority areas are offered a schedule of tax and tariff exemptions and incentives. Incentives are aimed at encouraging capital investments, the transfer of technology, the utilization of local raw materials, the development of rural areas, the use of labor-intensive methods, and the hiring of local personnel. Industries geared toward exporting that meet EPZ requirements receive tax holidays and customs free trade. In 1992, as part of a structural reform program under the IMF's Enhanced Structural Adjustment Facility (ESAF), the Zimbabwe Investment Centre (ZIC) was established as a one-stop shop for investment approval. In 1995, disbursements under the ESAF program were suspended for failure to meet IMF targets, and in 1996, the government substituted a second plan, the Zimbabwe Program for Economic and Social Transformation (ZIMPREST), whose operations investors have found much less satisfactory. By the late 1990s, political turbulence and the government's defiance of the IMF had greatly increased investor risk, and brought foreign direct investment flows to a standstill.

Foreign investment has played a crucial role in Zimbabwe's development. In 1998, foreign direct investment (FDI) in Zimbabwe totaled over \$444 million; by 2001, FDI in-flow had fallen to \$5.4 million. In the last three years (2003–05) FDI has all but dried up, as the government's focus on political objectives at substantial cost to the economy continue and a return to better policies and practices seems no closer. At the end of the 1970s, foreigners owned an estimated 70–80% of listed corporations. Today, offshore ownership of shares on the Zimbabwe Stock Exchange has fallen to approximately 25%.

There has been a comparable decline in foreign portfolio investment, reflected in the transformation of Zimbabwe's capital account balance, from a surplus in 1995 equal to 7.1% of GDP to a deficit in 2002 equal to 6.5% of GDP. The lack of foreign currency in the country has made investment even less attractive because of the near-impossibility of converting earnings out of the rapidly depreciating local currency, which the government in many cases restricts. The suspension of IMF funding, with its negative implications about the credit-worthiness of the country, has limited most business transactions to a cash basis. The situation was worsened in June 2003, when the IMF suspended Zimbabwe's voting rights in the organization for failure to make effective efforts to repay arrears of about \$305 million to the fund. Zimbabwe's total arrears increased from \$700 million at the end of 2001 to \$1.5 billion at the end of 2002. Somewhat ironically, the Zimbabwe Stock Exchange (ZSE), founded in 1896 and open to foreign investment since 1993, has been the best- or second-best-performing emerging market stock exchange since 1999, propelled by inflation rates that in 2003 were reaching 300%.

Most foreign investment in Zimbabwe has roots in the colonial era, such as the mining conglomerate Anglo-American of Zimbabwe (AMZIM), and the timber company Lonrho, long the country's two largest investors. In 2001 Lonrho sold its timber holdings in Zimbabwe to Brotherhood Holdings Ltd. for a cash payment of \$275 million. AMZIM, after selling off a number of subsidiaries, announced in June 2003 that it was relocating its headquarters to South Africa. Government policy allows squatters to take over, at times forcefully, white-owned commercial farms. When Zimbabwe was Rhodesia, white farmers, constituting less than 1% of the population, controlled over one-third of the land. Under Zimbabwe's investment regime investments in agriculture were discouraged and underutilized land was subject to fair-value purchase by the government for redistribution to family farmers. This policy primarily affected the 50% of the 11 million ha of agricultural estates created prior to independence. The United States provided some funding for a land-for-purchase program from 1980 to 1997, but by 1998 the government had rejected this gradualist approach as too slow. By 2003, over 4,000 white-owned farms had been taken against the will of the owners.

### 39 ECONOMIC DEVELOPMENT

A three-year transitional development plan was adopted for 1982–85. It called for investments in the public sector and assumed an average net growth rate of 8% per year. Manufacturing was to receive 23% of total investment, transport 14%, and agriculture 13%. Total investment fell 30% short of this goal. The Five-Year Development Plan for 1986–90 called for an annual growth rate of 5.1%, some 60% from public-sector investment and 40% from

foreign sources. Education, defense, and debt service were the largest categories of government spending. During the 1990s, the International Monetary Fund (IMF) supported Zimbabwe's balance of payments, but in 1999 President Robert Mugabe declared that he would sever ties with the development fund. The president was not willing to "save" the economy under a structural adjustment plan because it would have effectively bankrupted the government. In 2000, economic development slid backwards as inflation spiraled, industries died, and agricultural production fell; but in terms of leveling the distribution of wealth between blacks and whites, it was a red-letter year.

Mugabe's radical land reform program, poor management of the economy, and interference with the judiciary have combined to prevent further investment and development. Shortages of food, fuel, and foreign exchange marked the early 2000s. The IMF adopted a declaration of noncooperation for Zimbabwe in 2002 and suspended its technical assistance to the country, due to the nonpayment of arrears. In 2003, the IMF suspended Zimbabwe's voting and related rights. That year, inflation stood at 385%, and economic and social conditions had deteriorated, including a rise in unemployment and poverty, and a worsening of the HIV/AIDS pandemic in the country. In February 2003, the government launched a National Economic Revival Program (NERP) designed to stabilize the economy. The Economist Intelligence Unit notes that since no fundamental changes in economic policy are expected, the economic collapse of recent years is expected to continue and real GDP is forecast to contract by 4.2% in 2006 and 1.5% in 2007. Inflation is forecast to remain firmly in triple digits as monetary policy will remain loose and the government will struggle to rein in spending, and because of ongoing food and foreign-exchange shortages and high world oil prices.

### 40 SOCIAL DEVELOPMENT

The social insurance system, instituted in 1993, has been updated in 2001, 2002, and 2003. All employed persons between the ages of 16 and 64 who are citizens or residents of Zimbabwe are covered. Old age pensions, disability, and survivorship benefits are provided under the program. Workers' compensation is available to all private-sector employees except domestic workers; government employees are covered under a state plan.

In 1993, a social security system was introduced providing old age, disability, and survivor's pensions. The program covers all employees between the ages of 16 and 65. Retirement is normally allowed at age 60. Free health care is provided for low-income families (about 75% of the population). Maternity benefits provide 70% of regular earnings for 90 days. Workers compensation insurance is provided for private sector employees. The State Disability Act provides coverage to public sector employees.

Domestic violence and abuse is common, and is on the rise due to economic stress and high unemployment. As of 2004, there was no legislation addressing domestic abuse, and officials often condone wife beating. Despite some legislative advances, women are bound by traditional customs which are discriminatory in areas of property ownership and inheritance. Sexual harassment in the workplace is prevalent. Rape, including politically motivated assaults, remain a huge and underreported problem. There are hundreds of thousands of orphans due to the large number of deaths

from HIV/AIDS. Education is not compulsory, and schooling is not free.

There are numerous reports of human rights violations. Abuses included police killings, beatings, and torture, violation of privacy rights, and persecution of journalists. The government has generally failed to take action against those responsible for human rights abuses.

## 41 HEALTH

All health services are the responsibility of the Ministry of Health, which covers 50% of total health care expenditures provided by local authorities (with Ministry of Health grants), mission churches (also with grants), and industrial organizations and private services. The government has declared its intention to provide free medical services for all. Prior to independence, facilities for Africans were free, but these were greatly inferior to those available to Europeans. Zimbabwe has been focusing on building and/or upgrading rural health care centers and district hospitals and expanding rural health programs, such as immunization, control of diarrheal diseases, training of health care workers, and improving the supply and affordability of essential drugs. The local pharmaceutical industry is well developed. The Ministry of National Supplies operates the Government Medical Stores, which procures goods on behalf of the Ministry of Health. There were four tiers of health care delivery in Zimbabwe: 56 rural hospitals and 927 health centers (public and private) providing preventive and curative services; 55 district hospitals; 8 provincial and 4 general hospitals; and 5 central hospitals located in major cities. As of 2004, there were an estimated 6 physicians and 54 nurses per 100,000 people. About 85% of the population had access to health care services. An estimated 85% of the population had access to safe drinking water and 68% had adequate sanitation.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 24.6 and 24 per 1,000 people. About 54% of married women (ages 15 to 49) were using contraception. The fertility rate was 3.8 births per woman. Infant mortality was 52.34 per 1,000 live births in the same year, and life expectancy was only 39.13 years in 2005. Maternal mortality rates were high with an estimated 695 per 100,000 live births and the disease pattern for mothers and children was one of mainly preventable diseases. The government of Zimbabwe paid for 80% of the routine immunizations. The immunization rates for children under five were as follows: diphtheria, pertussis, and tetanus, 78%; polio, 79%; measles, 73%; and tuberculosis, 82% in 1994.

Guinea worm incidence has decreased from 1,570 cases in 1991 to 257 in 1995. Commonly reported diseases were malaria and measles. Tuberculosis continues to be a major health problem. Local campaigns are under way to control schistosomiasis, which affects a large percentage of the African population. An estimated 16% of children under five years old were considered malnourished.

The AIDS epidemic is among the worst in the world. The HIV/AIDS prevalence was 24.60 per 100 adults in 2003, the fourth highest in the world. As of 2004, there were approximately 1,800,000 people living with HIV/AIDS in the country. There were an estimated 170,000 deaths from AIDS in 2003. Demographic surveys project that AIDS may increase child mortality rates nearly threefold by the year 2010 in Zimbabwe.

## 42 HOUSING

In rural areas, Africans live in villages and on farms in housing that is mainly of brick or mud and stick construction with thatch or metal roofs. The villages are usually small (except for the massive protected villages), with fewer than 100 inhabitants. Urban housing is generally of brick. According to the latest available information for 1980–88, total housing units numbered two million, with 4.2 people per dwelling. In 2000, the housing deficit was estimated at over one million units. In 2001, about 3.4% of the urban population lived in slums.

The Zimbabwe National Association of Housing Cooperatives (ZINAHCO) is an umbrella organization of over 1,000 national housing cooperatives. The organization was established as a means of providing advice to member groups on dealing with local and national authorities and to offer training in building techniques. In 2003, ZINAHCO was working to change urban building standards which dictate that hook-ups to public services must be in place before an owner may begin to build a home. The Cooperatives argue that for many of the urban poor living in slum shacks, it is more appropriate to first allow for the construction of permanent structures with communal utility services. Residents can then install utilities at a later date, as they can afford to do so.

## 43 EDUCATION

A unitary system of education under the Ministry of Education has replaced the dual system of separate educational facilities for Africans and non-Africans formerly maintained by the Rhodesian government. Education is free and compulsory for seven years between the ages of 6 and 13. Secondary education lasts for six years (four years lower and two years upper). The government has developed a strong vocational school and apprenticeship system.

Primary school enrollment in 2003 was estimated at about 80% of age-eligible students. The same year, secondary school enrollment was about 38% of age-eligible students. It is estimated that about 80.6% of all students complete their primary education. The student-to-teacher ratio for primary school was at about 39:1 in 2003; the ratio for secondary school was about 22:1. In 2003, private schools accounted for about 86.9% of primary school enrollment and 71.3% of secondary enrollment.

The University of Zimbabwe provides higher education on a multiracial basis. Other universities include the National University of Science and Technology and the Africa University, which is sponsored by the United Methodist church. In 2003, it was estimated that about 4% of the tertiary age population were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 90%, with 93.8% for men and 86.3% for women.

As of 2003, public expenditure on education was estimated at 4.7% of GDP.

## 44 LIBRARIES AND MUSEUMS

The National Free Library of Zimbabwe was founded in 1943 in Bulawayo as a national lending library and center for interlibrary loans. It has over 100,000 volumes. The Bulawayo Public Library holds about 100,000 volumes and operates a mobile library service. Other libraries include the Harare City Library, with 200,000 volumes and the Turner Memorial Library in Mutare. The Na-

tional Archives of Zimbabwe, located in Harare, receives a copy of every book published in Zimbabwe, as does the Bulawayo Public Library. The library at the University of Zimbabwe is the largest in the country, with 500,000 volumes in the main library and branches. The Parliament of Zimbabwe holds a collection of 115,000 volumes.

The Zimbabwe Museum of Natural History (1901) at Bulawayo has geologic, ethnographic, historical, and zoological collections. A Railway Museum is also located in Bulawayo. Located in Harare are the Zimbabwe Museum of Human Sciences, with archaeological, historical, zoological, and other collections, the National Gallery of Zimbabwe, which displays works of national, regional, and European art, and the Queen Victoria Museum. There is a military museum in Gweru and a children's museum in Marondera.

#### 45 MEDIA

The Ministry of Information, Posts, and Telecommunications provides telephone, telegraph, and postal services. In 2003, there were an estimated 26 mainline telephones for every 1,000 people; about 131,000 people were on a waiting list for telephone service installation. The same year, there were approximately 32 mobile phones in use for every 1,000 people.

The state-owned Zimbabwe Broadcasting Corporation controls all domestic broadcasting of television and radio. In total there were 7 AM and 20 FM radio stations in 1998. In 1997, there were 16 television stations. In 2003, there were an estimated 362 radios and 56 television sets for every 1,000 people. The same year, there were 52.7 personal computers for every 1,000 people and 43 of every 1,000 people had access to the Internet. There were seven secure Internet servers in the country in 2004.

There are a number of independent and government-owned newspapers in the country. The *Herald* (2002 circulation, 122,166) and the *Chronicle* (74,032) are owned by the Mass Media Trust (MMT), a holding company affiliated with the ZANU-PF. Though circulation figures were not available at this printing, *The Daily News*, an independent publication, is reported to have the largest circulation in the country. Major independent weeklies include *The Financial Gazette*, *The Independent*, and *The Standard*.

The constitution provides for free expression, but allows for legal limitations in the name of defense, public safety, public order, state economic interest, public morality, and public health. There is said to be a high degree of self-censorship employed by the media, though an increasingly independent press is sometimes critical of the government.

#### 46 ORGANIZATIONS

The government encourages the development of agricultural and other cooperatives, which are seen as a means of improving the subsistence economy. The Zimbabwe National Chamber of Commerce has many branches. The Consumer Council of Zimbabwe is located in Harare. The Africa regional office of Consumers International is in Harare.

The National Arts Council of Zimbabwe is based in Harare. The Zimbabwe Medical Association and the Zimbabwe Scientific Association serve as both professional associations and educational/research organizations. The Wildlife Society of Zimbabwe is an

educational and activist group for conservation and environmental issues.

National youth organizations include Youth for Christ, Junior Chamber, the Zimbabwe National Students Union, Zimbabwe Student Christian Movement, the Boy Scouts Association of Zimbabwe, The Girl Guides Association of Zimbabwe, and YMCA/YWCA. There are sports associations promoting amateur competition for athletes of all ages in a wide variety of pastimes, including softball, baseball, badminton, and track and field.

The Zimbabwe Association for Human Rights was established in 1994. Active groups for women's rights and social development include the Kunwana Women Association, the Musasa Project, the Zimbabwe Association of University Women, and the Zimbabwe Women's Bureau. Amnesty International, Habitat for Humanity, the Society of St. Vincent de Paul, UNICEF, and the Red Cross have national chapters.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include Victoria Falls and the Kariba Dam on the Zambezi River, numerous wildlife sanctuaries and game reserves, including Hwange National Park, the eastern highlands, the Matobo Hills, and the Zimbabwe ruins near Masvingo. There are safari areas in the Zambezi Valley below the Kariba Dam and at Tuli. Resort, camping, and fishing facilities are also available. South African visitors still account for the largest share of the tourist trade. Political progress in South Africa brightens the outlook for tourism in Zimbabwe. A passport, visa, onward/return ticket, and sufficient funds are required for travel to Zimbabwe. Precautions against typhoid, malaria, and hepatitis are recommended.

In 2001, approximately 2,067,864 tourists visited Zimbabwe. Tourism receipts for 2003 totaled us\$44 million. In that year there were 5,766 hotel rooms with 12,053 beds and a 38% occupancy rate. The average length of stay was three nights.

According to 2005 US Department of State estimates, the cost of staying in Harare was us\$301 per day, and at Victoria Falls, us\$411 per day.

#### 48 FAMOUS ZIMBABWEANS

The country's former name, Rhodesia, was derived from Cecil John Rhodes (1853–1902), whose company administered the area during the late 19th and early 20th centuries.

Lobengula (1833–94), king of the Ndebele, whose grant of the minerals concession in his territory to Rhodes in 1888 led to European settlement, headed an unsuccessful rebellion of his people against the settlers in 1893. Prominent African nationalist leaders are Joshua Nkomo (1917–99), leader of ZAPU; Bishop Abel Muzorewa (b.1925) of the United Methodist Church, who became the nation's first black prime minister in 1979; and ZANU leader Robert Gabriel Mugabe (b.1924), who became prime minister after independence and later first executive president; he has been head of state since 1980. Ian Smith (b.1919) was prime minister from 1964 to 1979. Many of the early works of the British novelist Doris Lessing (b.1919) are set in the Rhodesia where she grew up.

#### 49 DEPENDENCIES

Zimbabwe has no territories or colonies.

# INDEX TO COUNTRIES AND TERRITORIES

This alphabetical list includes countries and dependencies (colonies, protectorates, and other territories) described in the encyclopedia. Countries and territories described in their own articles are followed by the continental volume (printed in *italics*) in which each appears. Country articles are arranged alphabetically in each volume. For example, Argentina, which appears in *Americas*, is listed this way: Argentina—*Americas*. Dependencies are listed here with the title of the volume in which they are treated, followed by the name of the article in which they are dealt with. In a few cases, an alternative name for the same place is given in parentheses at the end of the entry. The name of the volume *Asia and Oceania* is abbreviated in this list to *Asia*.

# READER'S GUIDE

**GENERAL NOTE:** The Twelfth Edition of *Worldmark Encyclopedia of the Nations* (WEN) is comprised of five volumes. Volume 1 is dedicated to the United Nations and its related agencies. Volumes 2 through 5, “Africa,” “Americas,” “Asia and Oceania,” and “Europe,” contain entries on the countries of the world.

Reflecting the ever-changing status of the world geopolitical situation, the Twelfth Edition includes entries for 194 countries, one more than the previous edition. This reflects the 2006 decision of Montenegro to dissolve its relationship with Serbia to become an independent nation in its own right. Seven entries describe dependencies. This edition no longer includes volume 6, which was entitled *World Leaders*.

Some notable changes in previous editions include the Eleventh Edition's inclusion of an entry on East Timor, coverage of the aftermath of the terrorist attacks of 11 September 2001, and the expansion of the European Union and the North Atlantic Treaty Organization (NATO). Changes in the Tenth Edition included recording of the change in status for Macau; as of December 1999 Macau came under Chinese authority, and thus Macau was incorporated into the China entry (previously it was described under Portuguese Asian Dependency). Similarly, the entry for United Kingdom Asian Dependency (Hong Kong) was eliminated with the Ninth Edition; as of 1997 Hong Kong came under Chinese authority and, like Macau, is described in that country's entry. Also with the Tenth Edition, the introduction of the euro as currency in the nations of the European Union was noted. The Eighth Edition of this encyclopedia (1995) reported on the dramatic changes in the world in the early 1990s, including the dissolution of the USSR, Czechoslovakia, and Yugoslavia; the unification of Germany; the unification of Yemen; and the independence of Eritrea. These changes resulted in twenty-five new country articles. Whereas the First Edition of the *Worldmark Encyclopedia of the Nations*, in one volume, contained 119 articles, the present Twelfth Edition now contains 201.

In compiling data for incorporation into the *Worldmark Encyclopedia of the Nations*, substantial efforts were made to enlist the assistance of the government of every nation in the world, as well as of all pertinent UN agencies, who cooperated by supplying data and by revising and updating materials relevant to their sphere of interest. Material received from official sources was reviewed and critically assessed by the editors as part of the process of incorporation. Materials and publications of the UN family and of intergovernmental and nongovernmental organizations throughout the world provided a major fund of geographic, demographic, economic, and social data.

In compiling historical, economic, and political data, primary materials generated by governments and international agencies were supplemented by data gathered from numerous other sources including newspapers (most notably *The European*, the *Financial Times*, the *New York Times*, and the *Wall Street Journal*); periodicals (most notably *Current History*, *Elections Today*, *The Economist*, the *Far Eastern Economic Review*, *Foreign Affairs*, and *World Press Review*); and thousands of World Wide Web sites hosted by government agencies and embassies.

The reader's attention is directed to the Glossary of Special Terms for explanations of key terms and concepts essential to a fuller understanding of the text.

**COUNTRY NAMES:** Country names are reported (as appropriate) in three forms: the short-form name (generally conformed to the U.S. Central Intelligence Agency's *World Factbook 2006*), as commonly used in the text; the English version of the official name (generally conformed to the United Nations list of country names); and the official name in the national language(s). When necessary, textual usages of some short-form names have been rectified, usually through the substitution of an acronym for the official name, in order to strike a better balance between official usages and universal terminology. Thus the following short-form names have been adopted throughout (except in historical context to preserve accuracy): DROC (Democratic Republic of the Congo—known as Zaire prior to the Ninth Edition); ROC (Republic of the Congo); FRG (Federal Republic of Germany); North Korea: DPRK (Democratic People's Republic of Korea); and South Korea: ROK (Republic of Korea). In addition, Vietnam has replaced Viet Nam to reflect common usage.

**MAPS:** Spellings on the individual country maps reflect national usages and recognized transliteration practice. To clarify national boundaries and landforms, dark shading has been applied to waters, and lighter shading to lands not within that nation's jurisdiction. Cross-hatching has been used to designate certain disputed areas. Rivers that run dry during certain times of the year are indicated by dashed instead of solid lines.

**FLAGS AND NATIONAL EMBLEMS:** All depictions of flags, flag designations, and national emblems have been reviewed and, where necessary, corrected or changed to reflect their official usage as of 2006. In general, the term “national flag” denotes the civil flag of the nation.

**CURRENCY:** In most cases, currency conversion factors cited in the Twelfth Edition are as of the first quarter of 2006.

**WEIGHTS AND MEASURES:** The general world trend toward adoption of the metric system is acknowledged through the use of metric units and their nonmetric (customary or imperial) equivalents throughout the text. The two exceptions to this practice involve territorial sea limits, which are reported in nautical miles, and various production data, for which (unless otherwise stated) units of measure reflect the system in use by the country in question. All tons are metric tons (again, unless otherwise indicated), reflecting the practice of the UN in its statistical reporting.

**HOLIDAYS:** Except where noted, all holidays listed are official public holidays, on which government offices are closed that would normally be open. Transliterations of names of Muslim holidays have been standardized. For a fuller discussion on these points, and for a description of religious holidays and their origins and meanings, see the Glossary of Religious Holidays in this volume.

**GEOGRAPHIC INFORMATION:** To update the sections on Location, Size, and Extent; Topography, Climate, Flora and Fauna, and Environment, the following print publications (and their publishers) were used: *Geo-Data: The World Geographical Encyclopedia* (Gale Group), *World Development Indicators 2005* (The World Bank), and *World Resources* (Oxford University Press). Additional data was acquired from these websites: Library of Congress, *Country Studies: Country Profiles* (<http://lcweb2.loc.gov/frd/cs/profiles.html>); *Ramsar Convention on Wetlands* (<http://www.ramsar.org>); *UNESCO World Heritage Centre* (<http://www.whc.unesco.org>); *United Nations Environment Programme* (<http://www.unep.org>); *Weather Channel: Averages and Records* (<http://www.weather.com/common/home/climatology.html>); *World Conservation Union: Species Survival Commission* (<http://www.iucn.org/themes/ssc>); *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>).

**POPULATION DATA:** Data for the four rubrics describing population (Population, Migration, Ethnic Groups, Languages) were compiled from numerous publications of the U.S. Department of State, the World Bank, the United Nations, and the Organization for Economic Co-Operation and Development (OECD), specifically its publication *Trends in International Migration*. Also consulted were *The State of the World's Refugees* (Oxford University Press) and *International Committee of the Red Cross Annual Report* (International Committee of the Red Cross)

**RELIGIONS:** Data for this section were compiled in large part from the *2005 International Religious Freedom Report* released by the Bureau of Democracy, Human Rights, and Labor, U.S. Department of State. This is an annual report to Congress compiled in compliance with Section 102(b) of the International Religious Freedom Act (IRFA) of 1998. The *2005 Report* covers the period from 1 July 2004 to 30 June 2005 and includes the work of hundreds of State Department, Foreign Service, and other U.S. government employees. The authors gathered information throughout this period from a variety of sources, including government and religious officials, nongovernmental organizations, journalists, human rights monitors, religious groups, and academics.

**TRANSPORTATION:** Sources consulted for updated information on transportation include publications of the American Automobile Manufacturers Association, the International Road Transport Union, specifically its publication *World Transport Data*, and the *World Factbook 2006*.

**HISTORY:** In writing the History rubric, a variety of news and background information sources on each country were used. Full country profiles—including information on the history, economy, political institutions, and foreign relations on most nations of the world—are provided by the U.S. Library of Congress and by the U.S. Department of State; similar formats are published by the *BBC News International* version and *The Economist's* Country Briefings feature. In consulting news sources for up-to-date information on events, only reported facts (not editorials) were used. The *New York Times* and the *Washington Post* are more comprehensive than the *Wall Street Journal*, whose focus is placed on financial and business news. While the website of the United Nations was used extensively in compiling Volume 1 “United Nations,” of the *Worldmark Encyclopedia of the Nations*, its coverage of such problems as politics in the Middle East and global terrorism pertained to and supported the updating of history rubrics of a number of countries. Other organizations that publish journals or studies on global current events, foreign policy, international relations, and human rights include Amnesty International; Human Rights Watch; *Foreign Affairs*, published by the Council on Foreign Relations; and *Great Decisions*, published by the Foreign Policy Association. In addition, the

official websites of each nation were consulted critically for information that could be gleaned from a state's view of its own history and place in the world.

**GOVERNMENT:** The Government rubric is constructed by outlining the institutions of government as they were formed throughout a nation's modern history, up to those existing under the present constitution. *Countries of the World and Their Leaders Yearbook 2006* (Thomson Gale) outlines the form of government and provides information on political conditions.

The U.S. Library of Congress and the U.S. Department of State chronicle constitutional changes and also provide information on the form of government. Electionworld and the *World Factbook 2006* provide information on officeholders in place at the time of publication. The *BBC News International* "Country Profiles" cover current leaders and their political parties, and *The Economist* is comprehensive in its coverage of political structures and political forces in place and at work in the nations it profiles. The official government websites of individual nations were also consulted.

**POLITICAL PARTIES:** *Countries of the World and Their Leaders Yearbook 2006* not only lists the political parties present in each nation, but provides additional information on the political parties in its "History" and "Government and Political Conditions" sections. *The Economist* also has sections in its country briefings labeled "political structure" and "political forces," which describe the political climate of each nation the magazine profiles. In addition, *The Economist* provides a brief history of the nation, which often includes the history of political parties. Editors reviewed the profiles of selected nations prepared by the U.S. Library of Congress, which include comprehensive coverage of politics and political parties. The *World Factbook 2006* was consulted for a list of political parties, and often, their leaders. The website, Electionworld.org, describes the major political parties and their leaders, and also lists minor and defunct parties. Political Resources on the Net, a website, compiles links to a variety of sites useful to the researcher with a critical eye.

**LOCAL GOVERNMENT:** *Countries of the World and Their Leaders Yearbook 2006* lists the administrative subdivisions in each nation of the world; as does the U.S. State Department in its *Background Notes*, and the U.S. Central Intelligence Agency in its *World Factbook 2006*. *The Economist* was consulted for a description of regional legislatures. The U.S. Library of Congress "Country Profiles" briefings describe administrative divisions and provincial and local government.

**JUDICIAL SYSTEM:** *Countries of the World and Their Leaders Yearbook 2006*, *Background Notes*, and the *World Factbook 2006* all provided basic information on each nation's judicial system. *The Economist* was consulted for a description of the legal systems of each nation it profiles. The U.S. Library of Congress "Country Profiles" briefings provided more in-depth detail about judicial power and structure in the nations it profiles. Jurist, a web-based legal news and real-time legal research service based out of the University of Pittsburgh School of Law in Pittsburgh, Pennsylvania, was consulted as well for concise information on each nation it profiles.

**ARMED FORCES:** Statistical data on armed forces was compiled from the *World Factbook 2006*, *The Military Balance* (The International Institute for Strategic Studies), the *SIPRI Yearbook* (Stockholm International Peace Research Institute), and other print and online sources including *Current World Nuclear Arsenals* maintained by the Center for Defense Information.

**INTERNATIONAL COOPERATION:** This section was updated using data provided by news agencies and the following websites: *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>) and *Background Notes* (<http://www.state.gov/r/pa/ei/bgn>).

**ECONOMY:** In addition to numerous official online sources, data on the economies of the world were compiled from the most recent editions of the following U.S. government publications: *National Trade Estimate on Foreign Trade Barriers*, *Country Commercial Guides*, and *Economic Policy and Trade Practices*. *The Economist* was consulted for detailed information on economic structures and select indicators in its "Country Profiles" archive; it also included economic and political forecasts for the nations it profiled. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries it profiled, in addition to detailing the current state of various sectors of those economies. *The Index of Economic Freedom* (Heritage Foundation) was also consulted for its measurement of independent variables into broad factors of economic freedom.

**INCOME:** Statistics on national income were obtained from sources published by the United Nations, The World Bank, and the U.S. Central Intelligence Agency (CIA). CIA figures are for gross domestic product (GDP), defined as the value of all final goods and services produced within a nation in a given year. In most cases, CIA figures are given in purchasing power parity terms.

**LABOR:** Labor statistics were compiled from *World Employment* and *Yearbook of Labour Statistics* (International Labour Office—ILO) and the ILO’s website *Child Labor Statistics by Country* (<http://www.ilo.org/public/english/standards/ipecc/simpoc/countries.htm>); the World Bank publication *World Development Indicators 2004*; and the U.S. State Department’s *Human Rights Reports 2005*.

**AGRICULTURE, FISHING AND FORESTRY:** In addition to government sources, statistical data for these sections was compiled from the following yearbooks published by the Food and Agriculture Organization of the United Nations: *Trade; Fishery Statistics: Commodities; Fisheries; Production; Agriculture; and Forest Products*.

**MINING:** Data on mining and minerals production came from various online sources and from statistics compiled by the Minerals Information office of the U.S. Geological Survey, U.S. Department of the Interior, including Volume III of the *Minerals Yearbook*. This volume of the *Minerals Yearbook* is published both electronically on the Internet and in various print formats available from the U.S. Government Printing Office Superintendent of Documents. The *Yearbook* provides an annual review of mineral production and trade and of mineral-related government and industry developments in more than 175 countries.

**ENERGY AND POWER:** Key sources consulted include *Country Analysis Briefs* (U.S. Energy Information Administration, U.S. Department of Energy), *Key World Energy Statistics* (International Energy Agency), and *World Development Indicators* (The World Bank).

**INDUSTRY :** The primary source material for the Industry rubric was the U.S. State Department’s *Country Commercial Guides*, which provide a comprehensive look at countries’ commercial environments, using economic, political, and market analysis. *Background Notes* were consulted for the information on the industrial history and climate of each country profiled. Also useful was information contained in the “Country Profiles” published by the U.S. Library of Congress. The *World Factbook 2006* provides a list of key economic indicators. *The Economist* and, to a lesser extent, *BBC News* were useful in providing background material for the Industry rubric.

**SCIENCE AND TECHNOLOGY:** The following print sources were consulted: *The Nature Yearbook of Science and Technology* (Palgrave Macmillan Publishers Ltd.); *NIRA’s World Directory of Think Tanks* (National Institute for Research Advancement); in addition, the following websites were accessed: *International Science and Technology Activity* (maintained by Industry Canada, Government of Canada); *Economics Departments, Institutes, and Research Centers in the World* (maintained by the Department of Economics, University of Connecticut); *Science and Technology Statistics* (maintained by UNESCO Institute for Statistics); *World Development Indicators* (maintained by The World Bank); and *Annual Statistics* (patent and trademark information, maintained by the World Intellectual Property Organization).

**DOMESTIC TRADE:** Source material for the Domestic Trade rubric came from the U.S. State Department’s *Country Commercial Guides*, *Background Notes*, and the United Nations publication, *International Trade Statistics Yearbook*. Also used was information contained in the “Country Profiles” published by the U.S. Library of Congress. *The Economist* and, to a lesser extent, the *BBC* were consulted in providing background material for the Domestic Trade rubric. The World Bank’s service “Doing Business” database and the U.S. Commercial Service’s “Buy USA” website were consulted for information on conducting business in a nation, which included business hours and business regulations. Finally, most nations’ government websites provided information on domestic trade.

**FOREIGN TRADE:** Sources consulted included *2005 International Trade Statistics Yearbook* (Department of Economic and Social Affairs, Statistics Division, United Nations) and *Direction of Trade Statistics* (Real Sector Division, IMF Statistics Department, International Monetary Fund). The U.S. Department of State’s *Country Commercial Guides* and *Background Notes* were also used. *The Economist* and the *World Factbook 2006* were consulted in listing import and export partners and key products traded. Various UN bodies—such as UNCTAD and UNESCO—provided up-to-date trade statistics.

**BALANCE OF PAYMENTS:** Balance of payments tables were computed from the International Monetary Fund’s *Balance of Payments Statistics Yearbook*. In some cases, totals are provided even though not all components of those totals have been reported by the government of the country. Accordingly, in some instances numbers in the columns may not add to the total. Supplementing the IMF’s *Balance of Payments Statistics Yearbook* were *The Economist*’s “Country Briefings,” the *World Factbook 2006*, and information taken from the U.S. State Department, in particular, the *Country Commercial Guides*. “Country Profiles” from the U.S. Library of Congress were also used. Also consulted was the United Nations publication *National Accounts Statistics: Main Aggregates and Detailed Tables*.

**BANKING AND SECURITIES:** Statistical data on securities listings and market activity was compiled in part from *Emerging Stock Markets Factbook, 2005* (Standard and Poor’s) as well as from the websites *Country*

*Forecasts* (www.countrywatch.com) and *International Banking Statistics* (www.bis.org/statistics/bankstats.htm). Various websites specific to the individual countries of the world were also consulted.

**INSURANCE:** Primary sources for information on insurance include the online resources of the Insurance Information Institute, Rowbotham and Co. LLP, PricewaterhouseCoopers, the Swiss Reinsurance Company, and J. Zakhour & Co., as well as numerous national websites dealing with insurance.

**PUBLIC FINANCE:** In addition to official government websites, analytical reports from the U.S. Department of Commerce, and news reports, the following publications were consulted for standardized statistical data: *World Factbook 2006*, *International Financial Statistics Yearbook, 2002* (International Monetary Fund), and *Government Finance Statistics Yearbook, 2002* (International Monetary Fund).

**TAXATION:** Information on Taxation was compiled from country data sheets published by international accounting firms (Deloitte and Ernst & Young). Additional information was obtained from the U.S. Commerce Department and the government websites of the countries of the world.

**CUSTOMS AND DUTIES:** Information on Customs and Duties was compiled from country data sheets published by the accounting firms of Deloitte and Ernst & Young. Additional information was obtained from the U.S. Commerce Department, the World Trade Organization and the government website of the countries of the world.

**FOREIGN INVESTMENT:** Source material for the Foreign Investment rubric included the U.S. State Department's *Country Commercial Guides*, which provided a comprehensive analysis of the foreign direct investment environments of the countries of the world, as did the World Bank publication, *A Better Investment Climate for Everyone*. The International Monetary Fund's publications *International Financial Statistics Yearbook* and *Balance of Payments Statistics Yearbook*, and the U.S. State Department's *Background Notes* were consulted for the information on foreign direct investment. Also used was information contained in the "Country Profiles" published by the U.S. Library of Congress. *The Economist* was consulted in providing basic FDI figures and other relevant data.

**ECONOMIC DEVELOPMENT:** Source material for the Economic Development rubric included the U.S. State Department's *Country Commercial Guides* and *Background Notes*. *The Economist* was consulted for economic and political forecasts for selected nations. The U.S. Library of Congress "Country Profiles" provided a brief historical overview of the economies of the countries profiled, in addition to detailing the current state of various sectors of those economies. The *Index of Economic Freedom* was also consulted for its broad description of economic freedom and development. Information on foreign aid was taken from the print publications and websites of the International Monetary Fund, World Bank, and the United States Agency for International Development (USAID).

**SOCIAL DEVELOPMENT:** Publications consulted in the preparation of this rubric include *2005 Country Reports on Human Rights Practice* (<http://www.state.gov/g/drl/rls/hrrpt/2005/index.htm>), *International Save the Children Alliance Annual Report 2004* (Cambridge House), *The State of the World's Children* (Oxford University Press), and the *World Development Report* (Oxford University Press). Additional information was obtained from country-specific websites and general news publications.

**HEALTH:** Statistical sources consulted include *Country Health Briefing Papers* (a series of reports produced by IHSD Limited and DFID Health Systems Resource Centre for the United Kingdom Department for International Development); *Health Care Systems in Transition* (European Observatory on Health Care Systems, World Health Organization Regional Office for Europe); *Health in the Americas*, Volume II (Pan American Health Organization, World Health Organization) as well as numerous websites on the individual nations of the world. In addition, country-specific health profiles published by the World Health Organization and the World Bank were consulted.

**HOUSING:** The latest government population and housing census information available was used for each country through access of official government websites. Also of use was the World Bank publication *World Development Indicators 2005*. Topics accessed on the World Bank's website included *Countries and Regions*, *Urban Development*, and *Housing and Land*. Other websites consulted included Habitat for Humanity (<http://www.habitat.org>), United Nations Human Settlements Programme (<http://unhabitat.org>) and the U.S. Agency for International Development (USAID—<http://www.usaid.gov>). USAID topics accessed included *Locations* and *Urban Programs*.

**EDUCATION:** Data on Education was obtained from various UNESCO publications including *World Education Report*, *Global Education Digest*, *Education for All Global Monitoring Report 2005*, and the UNESCO *Statistical Yearbook*. Also consulted was *EdStats* compiled by the World Bank (<http://devdata.worldbank.org/edstats/>), the *World Factbook 2006* (<https://www.cia.gov/cia/publications/factbook>), the UNESCO

website's *Country and Regional Profiles* (<http://www.uis.unesco.org/profiles/>), and *World Data on Education* (International Bureau of Education).

**LIBRARIES AND MUSEUMS:** Some information concerning libraries and museums was accessed through official government websites of various countries when links were available to tourism, education, and/or cultural ministries or departments. In addition, the following websites were consulted: American Library Association (<http://www.ala.org>); International Federation of Library Associations and Institutions (<http://www.ifla.org>); Museums of the World (<http://www.museum.com>); and United Nations Educational, Scientific, and Cultural Organization (<http://www.unesco.org>).

**MEDIA:** Primary sources for this section include the annual *Editor & Publisher* publication *International Year Book*, online data provided by UNESCO, and the media sections of the "Country Profiles" featured on the website of *BBC News*. The UNESCO profiles provide key statistics and indicators on education, science and technology, and culture and communication. In addition, government and other websites related to the countries of the world were consulted. Additional sources consulted include the publications *World Development Indicators 2005* (World Bank), *World Media Handbook* (United Nations), *World Factbook 2006*, and *2005 Country Reports on Human Rights Practices*.

**ORGANIZATIONS:** Lists of member countries were obtained through the official websites of a variety of prominent international organizations and associations, such as the International Federation of Red Cross and Red Crescent Societies, Amnesty International, Kiwanis International, the World Alliance of YMCAs, the World Organization of the Scout Movement, etc. *Associations Unlimited* (Thomson Gale) was also consulted.

**TOURISM, TRAVEL, AND RECREATION:** Statistical sources consulted include *Yearbook of Tourism Statistics* and *Compendium of Tourism Statistics*, both published by the World Tourism Organization. Tourism websites of the individual countries were also consulted, as well as the United Nations publication *Schedule of Daily Substinence Allowance Rates* and the U.S. Department of State per diem travel allowances published online at [www.state.gov/r/pa/ei/bgn](http://www.state.gov/r/pa/ei/bgn).

**FAMOUS PERSONS:** Entries are based on information available through March 2006. Where a person noted in one country is known to have been born in another, the country (or, in some cases, city) of birth follows the personal name in parentheses.

**DEPENDENCIES:** Source material for the Dependencies rubric was taken from *Background Notes* and from the website of the United Nations. The Library of Congress's "Country Profiles" archive provided up-to-date information on dependencies. *The Economist* and the website of *BBC News* were also consulted, as was *Countries of the World and Their Leaders Yearbook 2006*.

**BIBLIOGRAPHY:** Bibliographical listings at the end of country articles are provided as a guide to further reading on the country in question and are not intended as a comprehensive listing of references used in research for the article. Effort was made to provide a broad sampling of works on major subjects and topics as covered by the article; the bibliographies provide, wherever possible, introductory and general works for use by students and general readers, as well as classical studies, recent contributions, and other works regarded as seminal by area specialists. The country article bibliographies were supplemented with information obtained from a search conducted in July 2006. An extensive bibliography listing key references related to the facts in this encyclopedia follows. However, it is not a complete listing since many fact sheets, brochures, World Wide Websites, and other informational materials were not included due to space limitations.

# GUIDE TO COUNTRY ARTICLES

All information contained within a country article is uniformly keyed by means of small superior numerals to the left of the subject headings. A heading such as "Population," for example, carries the same key numeral (6) in every article. Thus, to find information about the population of Albania, consult the table of contents for the page number where the Albania article begins and look for section 6 thereunder. Introductory matter for each nation includes coat of arms, capital, flag (descriptions given from hoist to fly or from top to bottom), anthem, monetary unit, weights and measures, holidays, and time zone.

## SECTION HEADINGS IN NUMERICAL ORDER

1	Location, size, and extent	27	Energy and power
2	Topography	28	Industry
3	Climate	29	Science and technology

## FREQUENTLY USED ABBREVIATIONS AND ACRONYMS

AD—Anno Domini	fl.—flourished	m <sup>3</sup> —cubic meter(s)	rev. ed.—revised edition
AM—before noon	FRG—Federal Republic of Germany	mi—mile(s)	s—south
b.—born	ft—foot, feet	Mt.—mount	sq—square
BC—Before Christ	ft <sup>3</sup> —cubic foot, feet	Mw—megawatt(s)	St.—saint
c—Celsius	GATT—General Agreement on Tariffs and Trade	N—north	UK—United Kingdom
c.—circa (about)	GDP—gross domestic products	n.d.—no date	UN—United Nations
cm—centimeter(s)	gm—gram	NA—not available	US—United States
Co.—company	GMT—Greenwich Mean Time	oz—ounce(s)	USSR—Union of Soviet Socialist Republics
Corp.—corporation	GNP—gross national product	PM—after noon	w—west
cu ft—cubic foot, feet	GRT—gross registered tons	r.—reigned	
cu m—cubic meter(s)	ha—hectares		
d.—died	i.e.—id est (that is)		
E—east	in—inch(es)		
e—evening	kg—kilogram(s)		
e.g.—exempli gratia (for example)	km—kilometer(s)		
ed.—edition, editor	kw—kilowatt(s)		
est.—estimated	kwh—kilowatt-hour(s)		
et al.—et alii (and others)	lb—pound(s)		
etc.—et cetera (and so on)	m—meter(s); morning		
F—Fahrenheit			

A fiscal split year is indicated by a stroke (e.g. 1998/99).  
For acronyms of UN agencies and their intergovernmental organizations, as well as other abbreviations used in text, see the United Nations volume.  
A dollar sign (\$) stands for US\$ unless otherwise indicated.  
Note that 1 billion = 1,000 million.

# ANTIGUA AND BARBUDA

**CAPITAL:** St. John's

**FLAG:** Centered on a red background is a downward-pointing triangle divided horizontally into three bands of black, light blue, and white, the black stripe bearing a symbol of the rising sun in yellow.

**ANTHEM:** Begins "Fair Antigua and Barbuda, I salute thee."

**MONETARY UNIT:** The East Caribbean dollar (EC\$) is a paper currency of 100 cents, pegged to the US dollar. There are coins of 1, 2, 5, 10, 25 cents and 1 dollar, and notes of 5, 10, 20, and 100 dollars. EC\$1 = US\$0.37037 (or US\$1 = EC\$2.7; as of 2004).

**WEIGHTS AND MEASURES:** Imperial measures are used, but the metric system is being introduced.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, 1st Monday in May; CARICOM Day, 3 July; State Day, 1 November; Christmas, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, and Whitmonday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The state of Antigua and Barbuda, part of the Leeward Islands chain in the eastern Caribbean, is approximately 420 km (261 mi) SE of the US Commonwealth of Puerto Rico and 180 km (110 mi) N of the French overseas department of Guadeloupe. The total land area of 440 sq km (170 sq mi) includes Antigua (280 sq km/108 sq mi); Barbuda (161 sq km/62 sq mi); and uninhabited Redonda (1.3 sq km/5 sq mi), located 40 km (25 mi) to the SW. This total area comprises slightly less than 2.5 times the size of Washington, D.C. The total coastline is 153 km (95 mi). Antigua and Barbuda's capital city, St. John's, is located on the northwestern edge of the island of Antigua.

## <sup>2</sup> TOPOGRAPHY

Partly volcanic and partly coral in origin, Antigua has deeply indented shores lined by reefs and shoals; there are many natural harbors and beaches. Boggy Peak (402 m/1,319 ft), in southwestern Antigua, is the nation's highest point. Antigua's northeastern coastline is dotted by numerous tiny islets; the central area is a fertile plain. Barbuda, a coral island with a large harbor on the west side, rises to only 44 m (144 ft) at its highest point. Redonda is a low-lying rocky islet.

## <sup>3</sup> CLIMATE

Temperatures average 24°C (75°F) in January and 29°C (84°F) in July, with cooling tradewinds from the east and northeast. Rainfall averages 117 cm (46 in) per year; September through November is the wettest period. The islands have been subject to periodic droughts and to autumn hurricanes.

## <sup>4</sup> FLORA AND FAUNA

Most of the vegetation is scrub, but there is luxuriant tropical growth where fresh water is available. Many varieties of fruits,

flowers, and vegetables are grown. Palmetto and seaside mangrove are indigenous, and about 1,600 hectares (4,000 acres) of red cedar, white cedar, mahogany, whitewood, and acacia forests have been planted. Barbuda is heavily wooded, with an abundance of deer, wild pigs, guinea fowl, pigeons, and wild ducks. Pineapple plantations can be found throughout Antigua.

## <sup>5</sup> ENVIRONMENT

Water management is the principal environmental concern. A water shortage due to limited freshwater resources is exacerbated by limited rainfall and drought. The existing water supply is threatened by pollution from distilleries, food processing facilities, and other industrial operations. Deforestation resulting from the nation's energy demands, combined with agricultural development, contributes to soil erosion, as rainfall, which is concentrated in a short season, quickly runs off, compounding the water shortage problem on the islands. The nation's main city, St. John's, has developed a problem with waste disposal. Untreated sewage from resort hotels travels in open sewage lines across the land and empties into the sea. Construction of a desalination plant in 1970 relieved some of the water shortage.

The government of Antigua and Barbuda supports a Historical, Conservation, and Environmental Commission. There are four main protected areas, including the offshore islands of North Sound and Codrington Lagoon of Barbuda, the latter of which is a Ramsar wetland site. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 2 species of birds, 5 types of reptiles, 11 species of fish, and 4 species of plants. Endangered species in the nation included the Antiguan ground lizard, the West Indian whistling duck, and the Antiguan racer.

## 6 POPULATION

The population of Antigua and Barbuda in 2005 was estimated by the United Nations (UN) at 80,000, which placed it at number 182 in population among the 193 nations of the world. In 2005, approximately 8% of the population was over 65 years of age, with another 26% of the population under 15 years of age. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.4%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 87,000. The population density was 182 per sq km (471 per sq mi).

The UN estimated that 37% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.54%. The capital city, St. John's (Antigua), had a population of 28,000 in that year. The majority of the populace resides on the island of Antigua.

## 7 MIGRATION

The United Kingdom has been the historic destination of Antiguan emigrants, but in recent years St. Martin, Barbados, the US Virgin Islands, and the US mainland have been the principal recipients of the outflow. The primary motive for emigration is the search for work. The net migration rate in 2005 was -6.11 migrants per 1,000 population. The government views both the immigration and emigration levels as too high.

## 8 ETHNIC GROUPS

Antiguans are almost entirely of African descent. There are small numbers of persons of British, Portuguese, Lebanese, and Syrian ancestry.

## 9 LANGUAGES

English is the official and commercial language. An English patois is in common use.

## 10 RELIGIONS

The dominant religion is Christianity. Over 70% of the population belongs to churches represented in the Antigua Christian Council, which include the Anglicans, Methodists, Moravians, Roman Catholics, and the Salvation Army. The Anglican Church is the dominant denomination, representing about 35% of the population. Methodists account for about 15%. The Moravians also make up about 15% of the population and Roman Catholics make up about 6% of the population. There are about 400 Jehovah's Witnesses. Communities of non-Christians are fairly small. Rastafarianism has an estimated 1,000–1,500 adherents. The Baha'i faith has about 50 members. As estimate on the number of Muslims practicing in the country was unavailable. St. John's, as capital, serves as the episcopal seat of both the Anglican and Roman Catholic churches.

The constitution provides for freedom of religion and this right is generally respected in practice. Christian holidays are celebrated as public holidays. The Antigua Christian Council actively promotes tolerance and mutual understanding among religious denominations. The Council has also served as an advocate for peace, particularly during political elections. In early 2004, the council presented a "Code of Ethics" that denounced any use of violence and verbal abuses during March elections; all of the candi-

dates signed the code. The United Evangelical Association unites most of the nation's independent evangelical churches.

## 11 TRANSPORTATION

In 2002, there were 1,165 km (724 mi) of highways, of which 384 km (239 mi) were paved. In 1995, there were 302 motor vehicles per 1,000 population. The railway consists of 77 km (48 mi) of narrow-gauge track, used mainly to haul sugar cane. The islands have no natural deepwater harbors; a deepwater facility was constructed at St. John's in 1968. The merchant fleet in 2005 consisted of 980 ships (1,000 GRT or over), totaling 5,873,626 GRT. In 2005, there were three airports, two of which had paved runways. Vere Cornwall Bird International Airport, 7 km (4 mi) northeast of St. John's, accommodates the largest jet aircraft; Coolidge Airport, also on Antigua, handles freight. There is also a landing strip at Codrington. Domestic and international scheduled flights carried 1,369,100 passengers in 2001.

## 12 HISTORY

The first inhabitants of Antigua and Barbuda were the Siboney, whose settlements date to 2400 BC. Arawak and Carib Indians inhabited the islands at the time of Christopher Columbus' second voyage in 1493. Columbus named Antigua after the church of Santa Maria de la Antigua, in Sevilla (Seville), Spain. Early settlements were founded in 1520 by the Spanish, in 1629 by the French, and in 1632 by the British. Antigua formally became a British colony in 1667 under the Treaty of Breda.

In 1674, Sir Christopher Codrington established the first large sugar estate in Antigua. He leased Barbuda to raise slaves and supplies for this enterprise. In 1834 slavery was abolished, but this was a mere technicality, since no support was provided for the new freemen. In 1860, Antigua formally annexed Barbuda. The Federation of the Leeward Islands served as the governing body of the islands from 1871 to 1956, and from 1958 to 1962, they belonged to the Federation of the West Indies.

Antigua became an associated state with full internal self-government as of 27 February 1967. Opposition to complete independence came from the residents of Barbuda, who sought constitutional guarantees for autonomy in land, finances, and local conciliar powers. With these issues still not fully resolved, Antigua and Barbuda became an independent state within the Commonwealth of Nations on 1 November 1981, with Vere Cornwall Bird as prime minister. (Considered a national hero for his role in leading the nation to independence, when Bird died in 1999, thousands turned out to observe a national moment of silence in his honor.) Bird and the Antigua Labor Party (ALP) won renewed mandates in every subsequent election to that of 1976 under his leadership until 1994 and also under the leadership of his son, Lester Bird, up until March 2004, when the ALP lost power in national elections.

Antigua is an active participant in Caribbean affairs. In May 1987, the prime ministers of the members of the Organization of Eastern Caribbean States (OECS) agreed on a merger proposal, creating a single nation out of their seven island states. A national referendum in each of the states was planned for ratification of the accord, but the referendums were defeated and the seven nations remained separate.

In its fifth general election as an independent nation, on 23 March 2004, Antigua and Barbuda experienced a peaceful change of government. The United Progressive Party (UPP), led by Winston Baldwin Spencer, won 13 of the 17 elected seats. The opposition, led by Robin Yearwood, retained four seats. Winston Baldwin Spencer was named prime minister in 2004. The next election was scheduled for 2009.

**13 GOVERNMENT**

Universal adult suffrage on the islands dates from 1951, and ministerial government from 1956. The bicameral legislature gained its present form in 1967, and the United Kingdom granted formal independence to Antigua and Barbuda in November 1981. Under the constitution, the chief of state is the reigning British monarch. A local governor-general, appointed on the advice of the prime minister, is the chief of state's representative in Antigua and Barbuda. Since 10 June 1993, Governor-General Sir James B. Carlisle has represented Queen Elizabeth II. The bicameral legislature consists of a 17-member House of Representatives, elected from single-member constituencies for up to five years by universal adult suffrage at age 18; and a 17-member Senate, appointed by the governor-general, of whom 11 (including at least one inhabitant of Barbuda) are named on the advice of the prime minister, 4 on the advice of the leader of the opposition, 1 at the governor-general's discretion, and 1 on the advice of the Barbuda council. The governor-general appoints the prime minister, who must have the support of a majority of the House, and the cabinet.

The prime minister as of 2004 was Winston Baldwin Spencer, with the next elections scheduled for 2009. The prime minister, in addition to his role as prime minister, holds a number of other governmental posts, including minister of defense; minister of external affairs; minister of legislature, privatization, printing, and electoral affairs; minister of telecommunications and gambling; minister of public works, sewage, and energy; and minister of urban development and renewal.

**14 POLITICAL PARTIES**

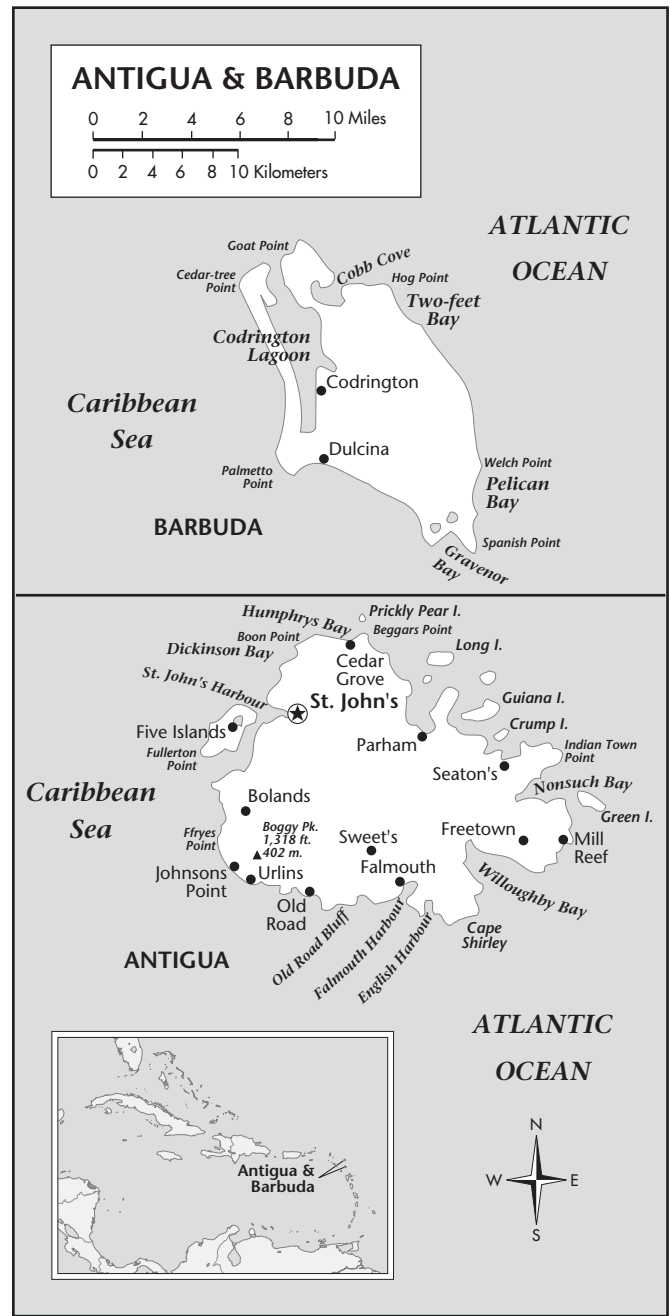

The United Progressive Party (UPP) took over power in 2004 formerly held by the Antigua Labor Party (ALP) since 1946, except for a period from 1971 to 1976, when the Progressive Labor Movement (PLM), led at the time by George H. Walter, held a parliamentary majority. As of 2004 the UPP, a coalition of the Antigua Caribbean Liberation Movement (ACLM), the Progressive Labor Movement (PLM), and the United National Democratic Party (UNDP), was led by Winston Baldwin Spencer. Other active political parties in 2004 included the Antigua Labor Party, led by former Prime Minister Lester Bryant, and the Barbuda's People's Movement.

**15 LOCAL GOVERNMENT**

The island of Antigua has six parishes and two dependencies, Barbuda and Redonda. Twenty-nine community councils, each with nine members, five elected and four appointed, conduct local government affairs.

**16 JUDICIAL SYSTEM**

English common law and local statutory law form the basis for the legal system, which the Eastern Caribbean Supreme Court, based

LOCATION: Antigua: 17°9' N; 61°49' W. Barbuda: 17°41' N; 61°48' W. TOTAL COAST-LINE: 153 kilometers (95 miles). TERRITORIAL SEA LIMIT: 12 miles.

in St. Lucia, administers; it also provides a High Court and Court of Appeal. Final appeals may be made to the Queen's Privy Council in the United Kingdom. A court of summary jurisdiction on Antigua, which sits without a jury, deals with civil cases involving sums of up to EC\$1500; three magistrates' courts deal with summary offenses and civil cases of not more than EC\$500 in value. The Industrial Court, for arbitration and settlement of trade disputes, was reintroduced in 1976. On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). The first session of the CCJ was scheduled for November 2003. Eight nations—Barbados, Belize,

Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although 14 nations, including Antigua and Barbuda, were planning to use the court for appeals.

The constitution prohibits arbitrary arrest and detention. The suspect must be brought before a court within 48 hours of arrest or detention. The constitution prohibits arbitrary interference with privacy, family, home, or correspondence. The government respects these provisions in practice.

## 17 ARMED FORCES

As of 2005, there was a Royal Antigua and Barbuda Defense Force of some 170 active personnel (Army, 125; Navy, 45) and 75 reservists. The Navy has three patrol craft. The military budget in 2005 was \$4.81 million.

## 18 INTERNATIONAL COOPERATION

Antigua and Barbuda joined the United Nations on 11 November 1981. It belongs to several specialized UN agencies, such as FAO, ICAO, IFAD, IFC, ILO, IMF, UNESCO, the World Bank, and WHO. The country joined the WTO 1 January 1995. Antigua and Barbuda is a member of the ACP Group, CARICOM, the CDB, G-77, the ICFTU, the World Confederation of Labor, and the World Federation of Trade Unions. It is also a part of the Commonwealth of Nations, the OECS, the OAS, the Eastern Caribbean's Regional Security System (RSS), the Association of Caribbean States (ACS), and the Alliance of Small Island States (AOSIS).

Antigua and Barbuda is a member of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In cooperation on environmental issues, Antigua and Barbuda is part of the Basel Convention, the Convention on Biological Diversity, CITES, the London Convention, the International Convention for the Regulation of Whaling, the Nuclear Test Ban Treaty, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Sugar and cotton production historically were the mainstays of Antigua and Barbuda's economy. This changed in the 1960s when tourism became the main industry. The sugar industry has become insignificant and cotton output has declined. Antigua and Barbuda's reliance on tourism has made its economy quite vulnerable to natural disasters and global politics. As the production of sugar declined in the 1980s, the country's public sector debt skyrocketed. In the 1990s, the tourism industry was ravaged when five major hurricanes hit the islands. Tourism suffered an additional setback in 2001 and 2002 following the 11 September 2001 terrorist attacks on the United States. As of 2004, the tourism industry had recovered, and logged more than 750,000 visitors, mostly from Europe and the United States, although the industry slowed again in 2005. About 500,000 of the visitor arrivals in 2004 came via cruise ship.

The economy of this small eastern Caribbean island-nation continues to be precarious. Antigua and Barbuda together consist of less than 300 square miles of land, and the nation had a population of 68,722 in July 2005. A troubling report from the International Monetary Fund in 2004 documented the nation's dif-

iculties: debt was 137% of GDP, and salaries of government workers—about 37% of the total work force—were eating up 60% of public revenue.

The International Monetary Fund noted in early 2006, however, that the government had introduced significant economic reforms, many of which have been designed to curb public sector corruption and to overhaul the country's tax system. The international lending authority is generally quite optimistic about Antigua and Barbuda's future.

The economy is primarily service-based. Tourism, financial services and government services are Antigua and Barbuda's major employers. Tourism accounts for more than half of the nation's GDP. What agricultural production remains is directed primarily to the domestic market. Farming faces water and labor shortages, as the lure of higher wages draws more people to tourism and construction. Tourism has helped stimulate the construction industry in recent years, leading to the development of enclave-type assembly plants where bedding, handicrafts, and electronics components are assembled for export.

GDP for Antigua and Barbuda was \$815.2 million in 2004. In 2004, agriculture accounted for 3.2% of GDP and employed 11% of the labor force, while services, including tourism accounted for 76.8%. Antigua and Barbuda's small assembly plants made up the remaining 19.2% of GDP. The GDP growth rate fell to 3.5% in 2000, and hovered as of 2002 at about 3%, as the islands felt the effects of a worldwide slowdown in tourism. However, with the recovery of tourism, GDP rose to 5.2% in 2004. Although GDP growth slowed to 3% in 2005, the IMF anticipated that a rebound in tourism and construction activity associated with the 2007 Cricket World Cup would help stimulate Antigua and Barbuda's economy.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Antigua and Barbuda's gross domestic product (GDP) was estimated at \$750.0 million. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$11,000. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2005 was 0.4%. It was estimated that agriculture accounted for 3.9% of GDP, industry 19.2%, and services 76.8%.

In 2001 approximately 36% of household consumption was spent on food, 8% on fuel, 3% on health care, and 18% on education. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

The total labor force in 2002 was estimated at 30,000. About 82% of the employed labor force worked in occupations connected with tourism or other services; 7% in industry, and 11% in agriculture, hunting, forestry, and fishing. The unemployment rate was estimated at 11% in 2001.

Around 75% of the workforce is unionized. Workers have a recognized right to strike unless either party in a dispute requests

mediation. Employers found guilty of antiunion discrimination are routinely ordered to make compensation payments to an affected worker, although the employer will not be required to rehire the worker.

The law provides for a maximum 48-hour workweek, but most people work 40 hours on the average. In 2002, the minimum wage averaged us\$2.22 per hour, but generally wages are paid according to experience and skill level. The vast majority of employed persons earned substantially more than the minimum. There is a minimum working age of 16, which is entirely enforced by the Labor Ministry. In addition, those under the age of 18 are prohibited from working later than 10 pm and must have a medical clearance. All forms of compulsory or forced labor (including slavery) are forbidden. Although specific regulations and laws regarding occupational health and safety have yet to be promulgated by the government, workers can leave a workplace deemed to be dangerous, without facing jeopardy to their jobs.

## 22 AGRICULTURE

Some 30% of land on Antigua is under crops or potentially arable, with 18% in use. Sea-island cotton is a profitable export crop. A modest amount of sugar is harvested each year, and there are plans for production of ethanol from sugarcane. Vegetables, including beans, carrots, cabbage, cucumbers, plantains, squash, tomatoes, and yams, are grown mostly on small family plots for local markets. Over the past 40 years, agriculture's contribution to the GDP has fallen from over 40–4%. The decline in the sugar industry left 60% of the country's 66,000 acres under government control, and the Ministry of Agriculture is encouraging self-sufficiency in certain foods in order to curtail the need to import food, which accounts for up to 25% by value of all imports. Crops suffer from droughts and insect pests, and cotton and sugar plantings suffer from soil depletion and the unwillingness of the population to work in the fields. Mango production in 2004 was 1,430 tons.

## 23 ANIMAL HUSBANDRY

Livestock estimates in 2004 counted 14,300 head of cattle, 19,000 sheep, and 36,000 goats; there were some 5,700 hogs in the same year. Most livestock is owned by individual households. Milk production in 2004 was an estimated 5,350 tons. The government has sought to increase grazing space and to improve stock, breeding Nelthropp cattle and Black Belly sheep. There is a growing poultry industry. In 1992, the European Development Bank provided us\$5 million to the government to help develop the livestock industry.

## 24 FISHING

Most fishing is for local consumption, although there is a growing export of the lobster catch to the United States and of some fish to Guadeloupe and Martinique. Antiguans consume more fish per capita (46 kg/101.4 lb) per year live weight than any other nation or territory in the Caribbean. The main fishing waters are near shore or between Antigua and Barbuda. There are shrimp and lobster farms operating, and the Smithsonian Institution has a Caribbean king crab farming facility for the local market. The government has encouraged modern fishing methods and supported mechanization and the building of new boats. Fish landings in

2003 were 2,587 tons; the lobster catch, 243 tons. Exports of fish commodities in 2003 were valued at us\$1.4 million.

## 25 FORESTRY

About 11% of the land is forested, mainly by plantings of red cedar, mahogany, white cedar, and acacia. A reforestation program was begun in 1963, linked with efforts to improve soil and water conservation.

## 26 MINING

Few of the islands' mineral resources, which included limestone, building stone, clay, and barite, were exploited until recently. Limestone and volcanic stone have been extracted from Antigua for local construction purposes, and the manufacture of bricks and tiles from local clay has begun on a small scale. Barbuda produced a small amount of salt, while phosphate has been collected from Redonda.

## 27 ENERGY AND POWER

Electric power produced in 2002 totaled 0.099 billion kWh, all from fossil fuels, and based on a capacity of 27,000 kW. Consumption of electricity was 0.092 billion kWh. The Antigua Public Utilities Authority, run by the Ministry of Public Works and Communications, operates generating stations at Cassada Gardens and Crabbes Peninsula. Gas is now produced and refined locally. Off-shore oil exploration took place during the early 1980s.

As part of the government's energy conservation program, incentives are offered for the manufacture and use of solar-energy units, and there are import surcharges on automobiles with engine capacities exceeding 2,000 cc. Under study as alternatives to fossil fuels are wind power, surplus bagasse from the sugar refinery, and fast-growing tree species. Imports of refined petroleum products in 1994 surpassed 3,000 barrels per day, mostly in the form of jet fuel, distillates, and gasoline.

## 28 INDUSTRY

Most of the industrial activity in Antigua and Barbuda is assembly-based, although the islands also produce rum, refined petroleum, and paints. Other items, such as furniture, handicrafts, and electrical components, are primarily for export. The government encourages investment in manufacturing establishments, and most industries have some government participation.

Industry accounted for 19.2% of GDP in 2002. Manufacturing—which accounts for approximately 5% of GDP—comprises enclave-type assembly for export with major products being bedding, handicrafts, and electronic components. The industrial park, located in the Coolidge Area, produces a range of products such as paints, furniture, garments, and galvanized sheets, also mainly for export.

## 29 SCIENCE AND TECHNOLOGY

Technological services for the fishing industry, such as the introduction of depth finders and hydraulic gear, are provided by the government. An extramural department of the University of the West Indies offers technical courses, as does Antigua State Col-

lege. The University of Health Sciences at St. John's, founded in 1982, has a school of medicine.

### 30 DOMESTIC TRADE

The economy in Antigua and Barbuda is primarily service based with a focus on tourism. General business is usually conducted from 8:30 AM to 4 PM, Monday–Saturday, except for Thursday afternoon, when many shops close. Banks are open from 8 AM to noon five days a week, and on Friday additionally from 3 to 5 PM. St. John's is the main commercial center with many small shops and a few larger supermarkets. Fresh seafood and produce are sold in Saturday morning markets.

### 31 FOREIGN TRADE

Antigua and Barbuda are part of the US Caribbean Basin Initiative that grants duty-free entry into the United States for many goods. Antigua and Barbuda also belongs to the predominantly English-speaking Caribbean Community and Common Market (CARICOM) and the CARICOM Single Market and Economy. However, with tourism as its primary industry, trading relationships between Antigua and Barbuda and other nations are relatively small. The islands import considerably more items than they export. Imports, for instance, totaled \$369 million in 2004 compared with \$20 million for exports. The International Monetary Fund (IMF) projected that Antigua and Barbuda's exports would grow by 7.7% and imports would increase by 3.3% in 2005.

Most of what the country exports goes to the Organization of Eastern Caribbean States (OECS) (24%), the United States (10%), Barbados (21%), and Trinidad and Tobago (7%). Imports include food and live animals, machinery and transport equipment, manufactures, chemicals, and oil. Major providers are the United States (27%), the United Kingdom (10%), and the OECS (1%).

### 32 BALANCE OF PAYMENTS

Foreign investment in tourism-related construction has helped to compensate for the trade imbalance that Antigua and Barbuda face. However, the dependence on imports is of concern to many experts on Antigua and Barbuda's economy, and the country has begun to take steps to increase its level of exports. The IMF projected that 2005 exports will increase by 7.7% while imports will rise more slowly to 3.6%.

The US Central Intelligence Agency (CIA) reported that in 2004 the purchasing power parity of Antigua and Barbuda's exports was \$214 million. Imports accounted for \$735 million.

### 33 BANKING AND SECURITIES

There were eight commercial banks in 1994, five of which were foreign, including the Bank of Antigua and the Stanford International Bank. The Antigua and Barbuda Development Bank, wholly owned by the government, began operations in 1975. Currency is issued by the Eastern Caribbean Central Bank. The financial industry suffered in Antigua and Barbuda in 1999, due to fears of money laundering by drug cartels. The government passed the Money Laundering Prevention Amendment in order to protect foreign investment in the sector.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$125.8 million. In that same year, M2—an ag-

gregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$577.6 million.

### 34 INSURANCE

There are several life insurance companies on the islands.

### 35 PUBLIC FINANCE

Since the abolition of the income tax on residents, government revenues have been derived mainly from indirect taxes, principally customs and excise duties and consumption taxes. A major source of revenue is the US's military bases.

The US Central Intelligence Agency (CIA) estimated that in 2000 Antigua and Barbuda's central government took in revenues of approximately \$123.7 million and had expenditures of \$145.9

million. Revenues minus expenditures totaled approximately - \$22.2 million. Total external debt was \$231 million.

### 3<sup>6</sup> TAXATION

The profits tax for corporations in 2003 was 40%. Incorporated businesses are taxed at 2% of gross income with the first \$4,160 of income per month tax-exempt. The income tax, introduced in 1924, was abolished for residents at the end of 1976. Taxes on residential property are based on current replacement values, and in 2003 were subject to surcharges of 0–20% depending on zoning regulations. Hotels are taxed at preferential rate of 0.2% of taxable value while other commercial property is taxed at 0.75% of taxable value. Other taxes include taxes on life and general insurance premiums, and on property transfers.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Antigua and Barbuda adheres to the common external tariff schedule of CARICOM; rates (which range up to 35%) are generally ad valorem, based on the cost, insurance, and freight value, and a wide range of goods is permitted duty-free entry. Additional special rates are applied for tobacco, cement, petroleum products, vans and trucks, and certain types of timber.

### 3<sup>8</sup> FOREIGN INVESTMENT

The government's efforts to improve the investment climate have met with some success. Antigua and Barbuda offer tax holiday periods of 10 to 15 years, and rebates of 25–50% to export-oriented industries. The country also allows imports of machinery, equipment, spare parts, and raw materials duty free to companies who meet government requirements. The offshore financial sector has grown aggressively, offering tax-haven facilities to international business companies, trusts, banks, and insurance companies. In addition, the country has no capital gains or personal income tax. In addition to local tax and duty concessions, manufacturers have access to the United States, European, Canadian, and Caribbean markets through the Lomé Convention, Caribbean Basin Initiative (CBI), CARICOM, and other agreements.

In 1997 and 1998, the reported inflow of foreign direct investment (FDI) was \$22.9 million and \$27.4 million respectively. Increases in 1999 and 2000 to \$36.5 million and \$33.2 million reflected growth in the islands' technology sector when the Internet gaming company Starnet Communications International moved its headquarters to St. John's. Internet gaming is treated like a financial institution under the law. FDI increased steadily, rising to \$106 million in 2004.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Because of its reliance on tourism, Antigua and Barbuda's prospects for economic growth will depend on the economic fortunes of the industrialized world, particularly the EU and United States. However, the hurricanes and global slowdown in tourism following the 11 September 2001 attacks have prompted Antigua and Barbuda to begin diversifying the economy in recent years. The island-nation encourages growth in transportation, communications, Internet gambling, and financial services.

Antigua has the largest tourist sector in the Leeward and Windward Islands. Frequent cruise ship arrivals at the St. John's Har-

bour and the Deep Water Harbour play a major part in boosting tourism.

There has been a substantial decrease in agriculture's contribution to the country's gross domestic product (GDP), falling from 40% to just slight more than 3% since the 1960s. However, the Ministry of Agriculture has been implementing policies to encourage farmers to increase output in an effort to decrease imports of agricultural products. The trade imbalance severely endangers the Antiguan and Barbadian economy in the event of decreased tourism revenues.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

Social insurance was implemented in 1972, with a social assistance system enacted in 1993. All employees and self-employed between the ages of 16 and 59 are covered, with a few minor exceptions. The program is funded by contributions from employees and employers. It provides old age, disability, and survivor benefits. The cost of a medical insurance scheme that includes maternity benefits is shared equally between employers and employees. Workers' medical services are provided directly through public health facilities.

Although there are no legal restrictions on women's roles in society, traditional expectations tend to limit their activities outside the home, especially in rural areas. Women are well represented in public service, accounting for more than half of the work force. Domestic violence against women is a serious problem, but the legal system is often lenient when addressing this issue. Police are reluctant to intervene, and many abused women refuse to testify for fear of retaliation. Nongovernmental organizations were increasingly advocating women's rights and providing support to abused women. Child abuse also appeared to be prevalent.

Human rights are generally respected by the government, although prison conditions are poor.

### 4<sup>1</sup> HEALTH

Four institutions are maintained for the care of the sick and aged. Holberton Hospital, with 135 beds, is the only public acute care facility. The only private hospital is Adelin Medical Center. Other facilities include the Fiennes Institute for the aged, with 100 beds, and the Mental Hospital, with 150 beds. In addition, 9 health centers and 18 dispensaries are located throughout the country. As of 2004, there were an estimated 17 physicians, 328 nurses, and 18 dentists per 100,000 people.

The infant mortality rate in 2005 was estimated at 22 per 1,000 live births, up from 12 in 1998. The average life expectancy was 71.9 years in 2005. As of 1995, 100% of the population was immunized against diphtheria, pertussis, and tetanus and 94% against measles, mumps, and rubella. The leading causes of death included cancer, cardiovascular disease, and trauma.

By the end of 2003, 271 cases of HIV/AIDS had been reported. As of that year, the annual incidence of AIDS was 209 per million people. The government approved a national policy on HIV/AIDS and other sexually transmitted diseases in 1997.

### 4<sup>2</sup> HOUSING

The housing stock in Antigua and Barbuda is continually threatened by natural disasters, particularly by severe hurricanes which seem to hit the country every three to five years. The Central Hous-

ing and Planning Authority (CHAPA) advises on suitable sites, rehabilitates houses in the event of disaster, develops new housing tracts, and redevelops blighted areas. In March 2003, the government announced that plans were in place for CHAPA to build a number of affordable housing developments on private lands and to institute a Housing Improvement Mortgage program to make it easier for citizens to purchase these homes. At least six housing developments are planned as part of a three-year program to meet increased demand for housing. Most of these planned homes are single family dwellings with two or three bedrooms.

### 43 EDUCATION

Education for children between the ages of 5 and 16 years is compulsory. Primary education begins at the age of five years and normally lasts for seven years. Secondary education lasts for five years, with three years of lower secondary, followed by two years of upper secondary. In 2001, there were about 13,000 students enrolled at the primary schools and 5,000 students at the secondary schools. About 1,000 secondary school age students were enrolled in vocational programs. As of 2000 the primary pupil-teacher ratio was an estimated 19 to 1; the ratio for secondary school was about 13:1. The government administers the majority of the schools. In 2003, estimated spending on education was about 3.8% of the GDP. In 2000, about 38% of primary school students were enrolled in private schools.

There currently are three colleges. The University of Health Sciences, Antigua, was founded in 1982. It had, in the 1990s, an enrollment of 46 students and 16 teachers. The University of the West Indies School of Continuing Studies (Antigua and Barbuda) was founded in 1949 and offers adult education courses, secretarial skills training programs, summer courses for children, and special programs for women. In 1972, the technical and teacher's training colleges merged and formed the Antigua State College.

The University of the West Indies has campuses in Barbados, Trinidad, and Jamaica, and it maintains extramural departments in several other islands, including Antigua. Those interested in higher education also enroll at schools in the United Kingdom, the United States, Europe and Canada. The adult literacy rate is approximately 89%.

### 44 LIBRARIES AND MUSEUMS

The largest library is the Antigua Public Library located in St. John's with 50,000 volumes. The library at the University of the West Indies School of Continuing Studies on St. John's has 10,000 volumes. The American University of Antigua College of Medicine has been establishing a fairly good sized library, primarily for use by the students and faculty. The Museum of Antigua and Barbuda is at St. John's, as is Betty's Hope, a historic sugar plantation. A Dockyard Museum is housed in the Naval Officer's House at English Harbor.

### 45 MEDIA

The islands' automatic telephone system, operated by the Antigua Public Utilities Authority, had approximately 38,000 mainline telephones in 2002. The same year, there were about 38,200 mobile

phones in use. International telephone and telex services are supplied by Cable and Wireless (West Indies), Ltd.

In 2001, the first independent radio station, Observer, began operations. This station is operated by the owners of the *Observer* newspaper. In 2005, there were six main radio broadcast stations. ABS Radio is run by Antigua and Barbuda Broadcasting Service, Crusader Radio is owned by the United Progressive Party, and Caribbean Radio Lighthouse is operated by the Baptist church. The only television station, ABS Television, is operated by the government. In 1997 there were about 36,000 radios and 31,000 television sets in use throughout the country. In 2003, there were about 1,665 Internet hosts within the country serving about 10,000 users.

The *Workers' Voice*, the official publication of the ALP and the Antigua Trades and Labour Union, appears weekly and has a circulation of 6,000 as of 2002. The *Outlet*, published weekly by the Antigua Caribbean Liberation Movement, has a circulation of 5,000. The *Nation*, with a circulation of about 1,500, is published by the government and appears weekly.

The constitution ensures the freedom of expression and press, and the authorities are said to generally respect these rights in practice. However, the government dominates all electronic media, thereby restricting to some degree opposing political expression and news.

### 46 ORGANIZATIONS

Four employers' organizations represent workers' interests in Antigua and Barbuda. The Antigua Chamber of Commerce has its headquarters in St. John's. The Antigua Cotton Growers Association was founded in 1985.

Many missionary, charity, and family health organizations have operations on the islands, including Planned Parenthood, the Caribbean Family Planning Affiliation, the Inter-American Foundation, the American Bible Society, and the People-to-People Health Foundation. There is a chapter of Lions Clubs International. The Antigua and Barbuda Association of Persons with Disabilities was founded in 1995.

Youth organizations include the Girls Brigade, Red Cross Youth, Young Women's Christian Association, Girl Guides, Young Men's Christian Association, and Youth for Christ. There are also a few national sports organizations, such as the Athletic Association of Antigua and Barbuda and the Antigua and Barbuda Tennis Association.

There are national chapters of the Red Cross, Habitat for Humanity, and UNICEF.

### 47 TOURISM, TRAVEL, AND RECREATION

Tourism is the main source of revenue in Antigua and Barbuda. Antigua's plethora of beaches—said to number as many as 365—and its charter yachting and deep-sea fishing facilities have created the largest tourist industry in the Windward and Leeward Islands. The international regatta and Summer Carnival are popular annual events. Cricket is the national pastime; local matches are played Thursday afternoons, Saturdays, and Sundays. All visitors, except

nationals of the United States, Canada, and the United Kingdom, must have a valid passport to enter Antigua and Barbuda.

A wide range of hotels and restaurants served approximately 232,000 tourists in 1999. Receipts from tourism climbed to us\$290 million that year.

In 2005, the US Department of State estimated the daily expenses in Antigua and Barbuda at us\$222.

#### 48 FAMOUS ANTIGUANS AND BARBUDANS

The first successful colonizer of Antigua was Sir Thomas Warner (d.1649). Vere Cornwall Bird, Sr. (1910–99) was prime minister from 1981–94. (Isaac) Vivian Alexander (“Viv”) Richards (b.1952) is a famous cricketer. Jamaica Kincaid (b.1949), author of *Autobiography of My Mother* (1996), was born Elaine Potter Richardson; she changed her name when she moved to the United States.

#### 49 DEPENDENCIES

Antigua and Barbuda has no territories or colonies.

# ARGENTINA

Argentine Republic  
*República Argentina*

**CAPITAL:** Buenos Aires

**FLAG:** The national flag consists of a white horizontal stripe between two light blue horizontal stripes. Centered in the white band is a radiant yellow sun with a human face.

**ANTHEM:** *Himno Nacional*, beginning “Oíd, mortales, el grito sagrado Libertad” (“Hear, O mortals, the sacred cry of Liberty”).

**MONETARY UNIT:** The peso (A\$) is a paper currency of 100 centavos. There are coins of 1, 5, 10, 25 and 50 centavos, and notes of 1, 2, 5, 10, 20, 50, and 100 pesos. The rate of exchange is about A\$0.34722 (or US\$1=A\$2.88) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; Anniversary of the 1810 Revolution, 25 May; Occupation of the Islas Malvinas, 10 June; Flag Day, 20 June; Independence Day, 9 July; Anniversary of San Martín, 17 August; Columbus Day, 12 October; Immaculate Conception, 8 December; Christmas, 25 December. Movable religious holidays include Carnival (two days in February or March) and Good Friday.

**TIME:** 9 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Shaped like a wedge with its point in the south, Argentina, the second-largest country in South America, dominates the southern part of the continent. Argentina is slightly less than three-tenths the size of the United States with a total area of 2,766,890 sq km (1,068,302 sq mi); the length is about 3,650 km (2,268 mi) N–S and the width, 1,430 km (889 mi) E–W. To the N Argentina is bounded by Bolivia; to the NE by Paraguay; to the E by Brazil, Uruguay, and the Atlantic Ocean; and to the S and W by Chile, with a total boundary length of 9,665 km (6,006 mi).

Argentina lays claim to a section of Antarctica of about 1,235,000 sq km (477,000 sq mi). Both Argentina and the United Kingdom claim the Falkland Islands (Islas Malvinas), with the United Kingdom exercising effective occupancy. In 1978, Argentina almost went to war over three Chilean-held islands in the Beagle Channel. The case was referred to papal mediation; on 29 November 1984, the two countries signed a treaty that confirmed Chile’s sovereignty over the three islands.

Argentina’s capital city, Buenos Aires, is located along the eastern edge of the country on the Atlantic coast.

## <sup>2</sup>TOPOGRAPHY

Except for the mountainous western area, Argentina is for the most part a lowland country. It is divided into four topographical regions: the Andean region, Patagonia, the subtropical plain of the north, and the pampas. The Andean region, almost 30% of the country, runs from the high plateau of the Bolivian border southward into western Argentina. Within the Andes there are over 1,800 volcanoes, about 28 of which are still considered to be active. Patagonia comprises all the area from the Río Negro to the southern extremity of the continent, or about 777,000 sq km

(300,000 sq mi). Rising from a narrow coastal plain, it extends westward in a series of plateaus. In most places, the altitude range is 90–490 m (300–1,600 ft), although it may rise to 1,500 m (5,000 ft). Patagonia is a semiarid, sparsely populated region. It includes the barren island of Tierra del Fuego, part of which belongs to Chile. A portion of the Gran Chaco, covering the area between the Andean piedmont and the Paraná River, consists of an immense lowland plain, rain forests, and swampland, little of which is habitable.

The most characteristic feature of Argentine topography, however, is the huge expanse of lush, well-watered level plains known as the pampas. Stretching from the east coast estuary, Río de la Plata, the pampas spread in a semicircle from the Buenos Aires area to the foothills of the Andes, to the Chaco, and to Patagonia, forming the heartland of Argentina, the source of its greatest wealth, and the home of 80% of its people.

The major Argentine rivers, which originate in the Andean west or the forested north, flow eastward into the Atlantic Ocean. The Paraná, Uruguay, Paraguay, and Alto Paraná rivers all flow into the Río de la Plata, which reaches a maximum width at its mouth of 222 km (138 mi), between Uruguay and Argentina. The highest peaks in Argentina are Mt. Aconcagua (6,960 m/22,835 ft), also the highest mountain in South America; and Mt. Tupungato (6,800 m/22,310 ft). There is a region of snow-fed lakes in the foothills of the Andes in western Patagonia. Many small lakes, some of which are brackish, are found in the Buenos Aires, La Pampa, and Córdoba provinces.

## <sup>3</sup>CLIMATE

Argentina’s climate is generally temperate, but there are great variations, from the extreme heat of the northern Chaco region, through the pleasant mild climate of the central pampas, to the

subantarctic cold of the glacial regions of southern Patagonia. The highest temperature, 49°C (120°F), was recorded in the extreme north, and the lowest, -16°C (3°F), in the southern tip of the country. Rainfall diminishes from east to west. Rainfall at Buenos Aires averages 94 cm (37 in) annually, and the mean annual temperature is 16°C (61°F). Light snowfalls occur occasionally in Buenos Aires. Throughout Argentina, January is the warmest month and June and July are the coldest. North of the Río Negro, the winter months (May–August) are the driest period of the year. The wide variations of climate are due to the great range in altitude and the vast extent of the country. In the torrid zone of the extreme north, for example, the Chaco area has a mean annual temperature of about 23°C (73°F) and a rainfall of about 76 cm (30 in), whereas Puna de Atacama has a temperature average of 14°C (57°F) and a rainfall of about 5 cm (2 in). The pampas, despite their immensity, have an almost uniform climate, with much sunshine and adequate precipitation. The coldest winters occur not in Tierra del Fuego, which is warmed by ocean currents, but in Santa Cruz Province, where the July average is 0° C (32°F).

#### **4 FLORA AND FAUNA**

More than 10% of the world's flora varieties are found in Argentina. The magnificent grasslands have figured prominently in the development of Argentina's world-famous cattle industry. Evergreen beeches and Paraná pine are common. From yerba maté comes the national drink immortalized in gaucho literature, while the shade-providing ombú is a national symbol.

Many tropical animals thrive in the forests and marshes of northern Argentina; among them are the capybara, coypu, puma, and various wildcats. In the grasslands and deserts are the guanaco, rhea, and many types of rodents. The cavy, viscacha, tuco tuco, armadillo, pichichiago, otter, weasel, nutria, opossum, various types of fox, and hog-nosed skunk are common. The ostrich, crested screamer, tinamou, and ovenbird are a few of the many species of birds. Caimans, frogs, lizards, snakes, and turtles are present in great numbers. The dorado, a fine game fish, is found in larger streams, and the pejerrey, corvina, palameta, pacu, and zurubi abound in the rivers.

Spanish cattle on the pampas multiplied to such an extent that the role of wild cattle herds in Argentine history was the same as that of the buffalo herds in the US West. Argentina is richly endowed with fossil remains of dinosaurs and other creatures.

#### **5 ENVIRONMENT**

The principal environmental responsibilities are vested in the Ministry of Public Health and the Environment; the Subsecretariat of Environmental Planning in the Ministry of Transportation and Public Works; and the Subsecretariat of Renewable Natural Resources and Ecology within the Secretariat of State for Agriculture and Livestock. In 1977, the Metropolitan Area Ecological Belt State Enterprise was created to lay out a 150-km (93-mi) greenbelt around Buenos Aires, with controls on emission and effluents as well as on building density.

The major environmental issues in Argentina are pollution and the loss of agricultural lands. The soil is threatened by erosion, salinization, and deforestation. Air pollution is also a problem due to chemical agents from industrial sources. The water supply is threatened by uncontrolled dumping of pesticides, hydrocarbons,

and heavy metals. Argentina has a renewable water supply of 276 cu km. In 2002, some 97% of all city dwellers and over 70% of rural dwellers had access to improved water sources.

In 2000, about 12.7% of the land area contained forest and woodland. In 2003, about 6.6% of the total land area was protected. Argentina has four natural UNESCO World Heritage Sites: Los Glaciares, Iguazu National Park, Peninsula Valdes, and Ischigualasto/Talampaya National Parks. There are 14 sites designated as Ramsar Wetlands of International Importance.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 32 types of mammals, 55 species of birds, 5 types of reptiles, 30 species of amphibian, 12 species of fish, and 42 species of plants. Endangered species in Argentina include the ruddy-headed goose, Argentinean pampas deer, South Andean huemul, Puna rhea, tundra peregrine falcon, black-fronted piping guan, glaucous macaw, spectacled caiman, the broad-nosed caiman, Lear's macaw, the guayaquil great green macaw, and the American crocodile.

#### **6 POPULATION**

The population of Argentina in 2005 was estimated by the United Nations (UN) at 38,592,000, which placed it at number 31 in population among the 193 nations of the world. In 2005, approximately 10% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were 96 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.1%, a rate the government viewed as satisfactory, although reducing fertility among adolescents was a government priority. The projected population for the year 2025 was 46,424,000. The population density was 14 per sq km (36 per sq mi).

The UN estimated that 89% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.25%. More than one-third of all Argentines live in or around Buenos Aires, the capital city, which had a population of 13,047,000 in 2005. Other estimated metropolitan area populations in 2000 were Córdoba, 1,592,000; Rosario, 1,312,000; Mendoza, 988,600; La Plata, 838,600; and San Miguel de Tucumán, 837,000.

The majority of the population descends from early Spanish or Italian immigrants. Approximately 10% of the people are of indigenous Indian or mestizo descent.

#### **7 MIGRATION**

Migration to Argentina from Spain and Italy has been heavy in the past. Under the rule of Juan Domingo Perón (1946–1955), immigration was restricted to white persons, exceptions being made for relatives of nonwhites (Japanese and others) already resident. More recently, immigrants from across the border in Paraguay have numbered at least 600,000; Bolivia, 500,000; Chile, 400,000; Uruguay, 150,000; and Brazil, 100,000. Some 300,000 illegal aliens were granted amnesty in 1992. Foreigners, on application, may become Argentine citizens after two years' residence. A total of 16,738 were naturalized in 1991, of which 13,770 were from other American countries. In 2000, Argentina's refugee population was estimated at 2,400. Few Argentines emigrated until the 1970s, when a "brain drain" of professionals and technicians began to de-

velop. In the mid-1980s, some 10,000 of the estimated 60,000 to 80,000 political exiles returned home.

Of much greater significance to Argentina has been the tendency for workers in rural areas to throng to the cities. This had particular political and economic overtones during the Perón regime. Perón's encouragement of workers to move to Buenos Aires and surrounding industrial areas drained rural areas of so many persons that agriculture and livestock raising, the base of Argentina's wealth, suffered severely. Moreover, the inability of the economy to absorb all of the new urban masses led to a host of economic and social problems that still besiege the nation in the 21st century. Both the federal government and provincial governments have since vainly entreated aged workers to return to rural areas.

There has been a significant increase in asylum claims in recent years, beginning in the latter half of the 1990s. As of the end of 2004, there were 3,910 refugees and asylum seekers. Of the 990 asylum seekers, 428 received counseling and assistance from the United Nations High Commissioner for Refugees (UNHCR). Most asylum seekers were from neighboring countries, but there were also more than 30 other nationalities from Latin America, Eastern Europe, Africa, and Asia. In 2005 estimates were that there were 0.4 migrants per 1,000 population.

## 8 ETHNIC GROUPS

Argentina's population is overwhelmingly European in origin (principally from Spain and Italy); there is little mixture of indigenous peoples. An estimated 97% of the people are of European extraction and 3% are mestizo, Amerindian, or of other nonwhite groups. The pure Amerindian population has been increasing slightly through immigration from Bolivia and Paraguay.

## 9 LANGUAGES

The national language of Argentina is Spanish. Argentine Spanish has diverged in many ways from Castilian, showing the effects of the vast influx of foreigners into Buenos Aires, as well as of Spaniards from Andalucía, Galicia, and the Basque provinces. First- and second-generation Italians have added their touch to the language, and French settlers have contributed many Gallicisms.

The outstanding phonetic feature of Argentine Spanish is the yeísmo, in which the *ll* and *y* are pronounced like the *z* in *azure*. The meaning of many Castilian words also has been modified. The Porteños, as the inhabitants of Buenos Aires are called, rely heavily upon a variety of intonations to express shades of meaning.

English has become increasingly popular as a second language, especially in metropolitan areas and in the business and professional community. There are pockets of Italian, French, and German immigrants speaking their native languages. Some Amerindian languages are still spoken, including a version of Tehuelche in the pampas and Patagonia, Guaraní in Misiones Province, and Quechua in some parts of the Jujuy and Salta provinces.

## 10 RELIGIONS

Statistics submitted by nongovernmental organizations in 2001 indicate that the Roman Catholics continue to claim the largest number of members, at about 88% of the population. Protestants accounted for about 7% of the population. About 1.5% of the population are Muslims and about 1% are Jewish. These statistics,

LOCATION: 21°47' to 55°16' S; 53°38' to 73°35' W. BOUNDARY LENGTHS: Bolivia, 832 kilometers (517 miles); Paraguay, 1,880 kilometers (1,168 miles); Brazil, 1,224 kilometers (761 miles); Uruguay, 579 kilometers (360 miles); Atlantic coastline, 4,989 kilometers (3,100 miles); Chile, 5,150 kilometers (3,200 miles).

TERRITORIAL SEA LIMIT: 200 miles.

however, simply refer to reported membership and do not indicate active religious practice.

Argentina retains national patronage, a form of the old Spanish royal patronage, over the Roman Catholic Church. Under this system, bishops are appointed by the president of the republic from

a panel of three submitted by the Senate; papal bulls and decrees must be proclaimed by the president and sometimes must be incorporated into an act of the Congress. The government also provides the Catholic Church with certain subsidies. However, the constitution does provide for freedom of religion and the government encourages tolerance and understanding between social and religious groups.

The Secretariat of Worship in the Ministry of Foreign Affairs, International Trade, and Worship is responsible for overseeing relations between religious organizations and the government. According to the National Registry kept by the secretariat, there are about 2,800 religious organizations in the country representing about 30 different religious denominations or groups. Certain Catholic holidays are officially observed; however, the law allows for up to three days of paid leave for those observing Jewish or Islamic holidays. Associations that promote interdenominational understanding and cooperation include the Argentine Jewish-Christian Brotherhood (an affiliate of the International Council of Christians and Jews), the Argentine Council for Religious Freedom, the Foundation for Education and Peace, and the Federation of Arab Entities.

Some members of non-Catholic faiths have reported discrimination in employment through the military and the federal ministries, but these reports have not been substantially verified. Anti-Semitic and anti-Muslim attitudes have surfaced in some social circles, but a number of nongovernmental ecumenical groups are working toward greater levels of understanding and acceptance through all faiths.

## **11** TRANSPORTATION

Argentina has the largest railway system in South America, with 34,091 km (21,204 mi) of track (167 km electrified) as of 2004. Although railroads link all the provinces, the three provinces of Buenos Aires, Córdoba, and Santa Fe contain about one-half the total track and are the destinations of about two-thirds of all goods carried. The seven major railroads and all other lines belong to the state and are administered by Argentine Railways. Until 1947, when Perón bought them at a price exceeding their real value, the railroads were mainly under the control of British interests. Since then, they have been in decline and have regularly run up large deficits. A major problem is that the railway system uses three incompatible track gauges (standard: 1.435-m; broad: 1.676-m; and narrow: 1.000-m and 0.750-m), which severely restricts system interoperability, and forces virtually all interregional freight traffic to pass through Buenos Aires. The railroads' share of merchandise transported has declined steadily since 1946.

A five-year railroad modernization and rationalization plan was initiated by the military government in 1976, but the general decline of the railway system was not halted, and the number of passengers carried dropped from 445 million in 1976 to about 300 million in 1991. The subway system in Buenos Aires, completely state-owned since 1978, consists of five lines totaling 36 km (22 mi).

The continued deterioration of the railroads has resulted in a sharply increased demand for road transportation, which the present highways cannot handle. By 2001, the nation had 215,434 km (133,871 mi) of roads, of which 63,553 km (39,492 mi) were paved. In late 1969, a tunnel under the Río Paraná was opened,

connecting Santa Fe with the nation's eastern region. The road system is still far from adequate, especially in view of Argentina's rapidly increasing automotive industry. In 2003, the total number of registered vehicles reached 6,873,000, including 5,380,000 passenger cars and 1,493,000 commercial vehicles.

The main river system of Argentina consists of the Río de la Plata and its tributaries, the Paraná, Uruguay, Paraguay, and Alto Paraná rivers. There is a total of 10,950 km (6,800 mi) of navigable waterways, offering vast possibilities for efficient water transportation. The river system reaches Paraguay, northeastern Argentina, and regions of Brazil and Uruguay. The La Plata estuary, with its approaches and navigation channels, is the basis of the entire river system. The La Plata ports (Buenos Aires and La Plata) account for more than half of all maritime cargo, including more than two-thirds of all cargo transported on the river system. The Paraná is easily navigable up to Rosario, but the 171-km (106-mi) stretch between Rosario and Santa Fe has considerably less depth and is less suitable for oceangoing vessels. Up-river from Santa Fe, the Paraná rapidly loses depth and is navigable only by small ships.

The port of Buenos Aires handles about four-fifths of the country's imports and exports, and it is the focus of river traffic on the La Plata system. Other major ports are Rosario, Quequén, Bahía Blanca, Campana, and San Nicolás. Most port storage facilities are owned and operated by the government. In 1961, the State Merchant Fleet and the Argentine Overseas Navigation Fleet were merged to form the Argentine Maritime Lines. This state company carries approximately one-half of all Argentine overseas freight. In 2005, the merchant marine consisted of 26 vessels with a total GRT of 149,007.

Buenos Aires is the most important air terminal in South America. The four principal airports include Aeroparque and Ezeiza, both at Buenos Aires, Catarata Iguazu at Iguazu, and El Plumerillo at Mendoza. In 2004, there were an estimated 1,334 airports and landing fields, of which only 144 had paved runways as of 2005. The government line is Aerolíneas Argentinas. However, there are other major Argentine airlines and many foreign lines operating in the country. In 2003, the total scheduled civil aviation services flew 113 million freight ton-km and carried 6.03 million passengers on domestic and international flights.

## **12** HISTORY

Before the Spaniards arrived, about 20 Amerindian groups comprising some 300,000 people lived in the region now called Argentina. They were mainly nomadic hunter-gatherers, although the Guandant practiced slash-and-burn agriculture.

Spaniards arrived in Argentina in 1516. They called the region "La Plata" (literally "silver") under the mistaken impression that it was rich in silver. Colonists from Chile, Peru, and Asunción (in present-day Paraguay) created the first permanent Spanish settlements in Argentina, including Buenos Aires in 1580. In 1776, Río de la Plata became a vice-royalty, with Buenos Aires as the main port and administrative center.

During the early colonial period, there was little interest in Argentina. The region had no mineral wealth, and Spaniards overlooked the fertile soil and temperate climate of the region. As a result, Buenos Aires had a population of only about 25,000 at the time of the viceroy's arrival. The Spaniards could not afford to ignore Buenos Aires by the late 1700s, when the city was growing

rapidly thanks to illegal trade financed by British interests. Goods were smuggled to Brazil and the Caribbean Islands. Spain worried about British and Portuguese expansion and sought to control trade and collect more taxes from the growing commerce.

In May 1810, following the example set by Spanish cities after the capture of King Ferdinand VII by the French, Buenos Aires held an open town meeting (*Cabildo Abierto*). A junta was elected, which deposed the viceroy and declared itself in authority. On 9 July 1816, a congress of provincial delegates in San Miguel de Tucumán signed a declaration of independence, and in 1817, Gen. José de San Martín led an army across the Andes to liberate Chile and Peru.

After independence, Buenos Aires was a major force in the region, and strongmen (*caudillos*) from the surrounding provinces attempted to curb its power. The internal power struggle lasted until Juan Manuel de Rosas became governor of Buenos Aires Province. He imposed order and centralism from 1835 until 1852, when the forces of Gen. Justo José de Urquiza defeated him. A new constitution was adopted in 1853, and Urquiza was elected president in 1854. The struggle for power between Buenos Aires, the hub of commercial activity for the country, and the provinces that provided the raw materials, continued through the late 1800s. It was not until 1880, when the city was named the federal capital, that regional peace was achieved. By then, Argentina was becoming a modern nation, with new railroads and roads under construction. Thousands of European immigrants flocked to the country each year looking for a better life. Buenos Aires alone grew from 90,000 people in 1851 to 1.3 million by 1910, when the city was called the “Paris of South America.”

Social conflicts always had been part of Argentina’s history, but they intensified during the late 19th century as the gap between the wealthy classes and the poor widened. The National Party, under the leadership of Gen. Julio Roca (who served two terms as president, 1880–86 and 1898–1904) and supported by the military and landowners, dominated the nation. To combat this powerful coalition, a middle-class party called the Radical Civic Union (*Unión Cívica Radical*) was formed. The Radicals stressed democratic practices and attempted to expand the political system beyond its elite-restricted boundaries. The Radicals’ efforts came to fruition in 1916, when Hipólito Yrigoyen was elected president for a six-year term. But little changed for the working classes. Most workers could barely afford to feed their families during this time, despite the tremendous affluence of the upper class. Workers who sought to improve their working conditions were suppressed. A violent army attack against striking metalworkers in 1919 came to be known as “*La Semana Trágica*” (The Tragic Week). Yrigoyen sat out for a term, and was reelected president in 1928, but he did not last long. An economic crisis precipitated by the world depression led to a military coup in 1930.

For the next 13 years, Argentina was ruled by the old conservative oligarchy. The military-landowner alliance brought both economic recovery and political corruption, as well as the exacerbation of social tensions. Particularly divisive was the matter of Argentina’s foreign relations. While opening Argentina to trade with Europe improved the economic picture, many felt that the leadership had sold out to foreign interests. Argentina’s careful neutrality toward the Axis powers masked considerable Fascist sympathies, further dividing the nation.

Another military coup in 1943 brought to power an even more Axis-sympathetic group but also launched a new era in Argentine politics. Argentina had undergone an industrial expansion, accelerated by the war. This expansion led to the formation of a large blue-collar workforce, which in 1943 came under the direction of the military head of the Labor Department, Col. Juan Domingo Perón. Perón used his new constituency to build a power base that allowed him in 1946 to be elected president, while his supporters won majorities in both houses of congress. Perón, it was later reported, allowed many Nazi German leaders to hide in Argentina.

Perón made sweeping political, economic, and social changes. His ideology was an unusual blend of populism, authoritarianism, industrialism, and nationalism. His strong personal appeal was buttressed by the charm of his wife Eva (“Evita”), a woman of modest upbringing who captivated the masses with her work on behalf of the poor. Peronist rhetoric stressed the rights of *descamisados* (literally “shirtless”), the poor of Argentina.

Perón sought to establish a foreign policy that allied Argentina with neither the West nor East, while acting as protector of weaker Latin American nations against US and British “imperialists.” He coined a new word to describe his approach—*justicialismo* (roughly translated as “essence of justice.” After reelection in 1951, Perón became increasingly dictatorial and erratic, especially after the death of Evita a year later. Economic hardship led to reversals in policy that favored the old oligarchy. Newspapers were shut down and harassed. Perón legalized divorce and prostitution, and began to incite violence against churches. Finally, a military group took over in September 1955.

For the next 20 years, Argentina felt the shadow of Perón. From exile in Spain, Perón held a separate veto power. Under the military’s watchful eye, a succession of governments attempted unsuccessfully to create a new political order.

The first of these efforts came from Gen. Pedro Eugenio Aramburu, who repressed Perón’s followers and declared their party illegal. After two years of provisional government, elections were held. Rival factions of the old Radical Civic Union competed in a contest won by Arturo Frondizi of the more left-leaning UCRI. With the initial support of the Peronistas, Frondizi attempted to balance that support with the military, which grew nervous at the mention of Peronism. Frondizi curbed inflation through an austerity program and increased Argentina’s petroleum production by extending concessions to foreign companies. These economic measures helped increase political tensions, and in the elections of 1961 and 1962, Peronist candidates, running under the banner of the Justicialist Front (*Frente Justicialista*), won sweeping victories. A military junta removed Frondizi from the presidency in March 1962 and annulled the elections, thus denying governorships to the supporters of Perón. Divisions among the military leaders kept the nation in a state of tension until mid-1964, when new elections were held. Dr. Arturo Illía of the rightist UCRP won the presidency. Illía’s administration was beset by rising government debt, inflation, labor unrest, and political agitation, but was most seriously threatened by the military. The chief of the armed forces, Lt. Gen. Juan Carlos Onganía resigned in November 1965, after Illía appointed a Peronist sympathizer as war minister.

In June 1966, following election victories by the Peronist faction, the military leaders installed Onganía as President. Onganía dissolved the nation’s legislative bodies and suspended the con-

stitution. Onganía announced a revolutionary program to restore economic prosperity and social stability, saying that only after this restoration would the democratic system be reestablished. Inflation was cut by means of rigid wage controls, and by the end of 1969, the economy was growing at a rate of 7% annually. His economic policies were overshadowed, however, by growing political tension. With the help of the military, strict controls were imposed on the press and all means of mass communication. Students led in denouncing these repressive policies, and in the early months of 1969, violence erupted in Córdoba and Rosario.

Dissatisfaction mounted early in 1970, and acts of terrorism increased. Several groups were active, some of which claimed to be Peronist, others Marxist, still others claiming to be both. The most serious incident was the kidnapping and killing of former President Aramburu by a Peronist group. Although President Onganía stiffened in response to the disorder, it was becoming clear that Argentina would never be stabilized without the participation of the Peronists. For his part, Perón encouraged these groups from abroad.

In June 1970, a junta of high-ranking military officers removed Onganía, and began to move toward democratic reform. Under two ensuing military governments, preparations were made for elections that would include the Peronists, now organized as the Justicialist Liberation Front (FREJULI). In general elections held in March 1973, the winner was Dr. Héctor J. Cámpora, whose unofficial slogan was “Cámpora to the presidency; Perón to power.” Cámpora was elected president with 49% of the vote, while FREJULI won a congressional majority and 11 of the 22 provincial governorships. However, Cámpora, who assumed office in May 1973, was no better able than his predecessors to cope with a rising tide of terrorism, much of it from extreme Peronist factions. After a consultation with Perón in Madrid, Cámpora announced his resignation, effective in July.

Perón, who had returned to Argentina in June 1973, ran for the presidency and took 61.9% of the vote in a special election in September. His running mate was his third wife, María Estela (“Isabel”) Martínez de Perón, a former exotic dancer. There was no magic left in the elderly Perón. He cracked down on the very terrorist groups he had encouraged, but the economy sagged. When he died in July 1974, his widow succeeded to the presidency.

Isabel had none of Evita’s appeal, and her administration plunged Argentina more deeply into chaos. The first year of Isabel Perón’s regime was marked by political instability, runaway inflation, and a renewal of guerrilla violence. In September 1975, Perón vacated her office for 34 days, ostensibly because of ill health. During her absence, the military strengthened its position. In March 1976, she was arrested in a bloodless coup, and a military junta consisting of the commanders of the army, navy, and air force took over. The leading member of the junta was Army Commander Lt. Gen. Jorge Rafael Videla, who became president.

The junta dissolved congress, suspended political and trade union activity, and mounted a concerted campaign against leftist guerrillas. For seven years, the military attempted to “purify” Argentina by imprisoning, torturing, and executing leftists, Peronists, trade unionists, and members of other political parties deemed divisive. Military officers also kidnapped the babies of the “disappeared” and gave them to officers or released them to adoption agencies. Meanwhile, they attempted a complete liberaliza-

tion of the economy, including the privatization of banking and industry. However, the military was never able to solve the problem of inflation, which remained in triple digits for most of this period.

In March 1981, Gen. Roberto Viola succeeded Videla as president, and in December, Lt. Gen. Leopoldo Galtieri took over. Troubled by economic woes and lacking any political support from the general populace, the military turned to foreign affairs in an attempt to gain support. In April 1982, Argentina invaded the Falkland Islands, claiming sovereignty over them, but in the ensuing war with the United Kingdom, Argentina’s armed forces were routed, surrendering in June. The defeat led to Galtieri’s resignation, and a new junta was formed in July under Maj. Gen. Reynaldo Benito Antonio Bignone. Liberalization measures during the remainder of 1982 led to strikes and antigovernment demonstrations, including a one-day general strike in December in which 90% of the work force reportedly took part. In addition to demands for a return to civilian rule, more and more Argentines demanded to know the fate of at least 10,000—and perhaps as many as 30,000—persons who had “disappeared” during what came to be known as the “dirty war” of 1976–83. Official government figures for the “disappeared” stand at 10,000, but human rights groups believe it is much higher.

In elections for a civilian president held in October 1983, the upset winner was a human rights activist from the People’s Radical Civic Union (Unión Cívica Radical del Pueblo—UCRP), Dr. Raúl Alfonsín. After taking office in December, Alfonsín called for a new inquiry into the “disappearances” and ordered the prosecution of former junta members. In December 1985, five were convicted, including Lt. Gen. Videla. The legacy of the “dirty war” preoccupied the Alfonsín government. The president saw the need to close the 50-year cycle of military intervention and political instability by building a stable democracy. However, the political reality of Argentina could not be changed by wishes. The human rights trials of leading military officers irked the military, and in April 1987, an abortive military uprising spread to a number of bases. Although Alfonsín refused to yield to the rebels, he soon afterward retreated from his position, getting approval from congress for a law that would limit the trials to a few superior officers, thereby accepting the defense of “taking orders” for the lower-ranking officers.

The Alfonsín administration also acted to halt rampant inflation with the “Austral Plan” of mid-1985, which froze wages and prices and created a new unit of currency, the austral, to replace the beleaguered peso. The initial success of the plan was weakened by a resurgence of inflation and labor intransigence over wage demands. With the failure of the Alfonsín administration to stabilize the economy or bring military leaders to justice, Argentines sought change from an old source: the Peronists. In May 1989, Carlos Saul Menem, running under the Justicialist banner, was elected with 47% of the popular vote. Because the Alfonsín government was in such dire straits, the president resigned in July and Menem was immediately installed. This was Argentina’s first transfer of power between democratically elected leaders in more than 60 years.

Menem abandoned his party’s traditional support of state enterprises; he cut government spending and generally liberalized the Argentine economy. He also pardoned and released top mili-

tary leaders involved in human rights violations. In May 1995 after he successfully changed the constitution, following a first term marked by economic success and political stability, Menem was reelected to a second four-year term. He weathered Argentina's 1995–96 economic recession with the aid of Domingo Cavallo, the minister of economics and architect of the anti-inflation plan. Despite the economic successes, many Argentines grew tired of Menem and alleged corruption in his administration. Menem also could not keep his private “playboy” life apart from politics, and began showing the traits of a *caudillo* by pressing for changes to the constitution so he could run for a third term in 1999. His bitter party rival and critic, Eduardo Duhalde, prevailed and represented the Justicialists in the 1999 presidential election. For Duhalde, a downturn in the economy came at a bad time. In 1999, Argentina entered a recession and saw its GDP decline by 3%. Unemployment reached 14%. Menem didn't help his party's cause. He seemed more intent in undermining Duhalde, while actively campaigning for a third term in 2003.

In the meantime, Fernando de la Rúa Bruno, the mayor of Buenos Aires, had balanced the city's budget and even managed to increase and improve services. A leader of the Unión Cívica Radical, de la Rúa aligned his party with a new political movement called Front for a Country in Solidarity (FREPASO), an amalgamation of several center-left parties. De la Rúa's conservatism and successes in Buenos Aires got the attention of voters. He provided a sharp contrast to the excesses of the *bon vivant* Menem. A serious president would take the country's problems seriously, his aides stressed. The campaign worked. In October 1999, voters gave de la Rúa 48.5% of the vote. Duhalde received 38.1%.

After taking office, de la Rúa declared a national economic emergency. By March 2000, he had pushed through Congress a new budget that sliced in half the fiscal deficit and new laws to weaken the bargaining power of unions. While the Alianza held on to a slim majority in the lower Chamber of Deputies, the Senate remained under Justicialist control. Partially because of his inability to restrict spending by provincial governors and because he had little maneuvering space to adopt policies that could stimulate growth, de la Rúa could not overcome the economic crisis and the government was eventually forced to devalue the national currency. Social and political chaos ensued with the economy going into its worst recession in decades. After his party lost the mid-term elections in 2001, President de la Rúa's popularity continued to fall and the economic situation became unbearable. After protests turned violent in Buenos Aires in December 2001, looting and chaos erupted, followed by police repression. De la Rúa was forced to resign. After a few weeks of political instability, the Senate chose Eduardo Duhalde, who had been elected to the Senate in the 2001 midterm election, as a temporary president. Duhalde governed until May 2003, when Néstor Kirchner, elected in April, was inaugurated president. Although former president Carlos Menem obtained the plurality of votes in the first round among a handful of other presidential candidates, the former president withdrew less than a week before the runoff when it became clear that Kirchner, who came in second with 22% of the vote, would win by a landslide. Kirchner was a little-known governor from the southern province of Santa Cruz, but he successfully captured the growing anti-Menem sentiment. In addition, Kirchner was wide-

ly seen as Duhalde's favorite and many expected him to carry on Duhalde's policies.

In the end, the 2003 presidential election turned out to be a contest between the two Perónist rivals, Menem and Duhalde. Although Duhalde's candidate became president, Menem's withdrawal prevented Kirchner from winning a majority of votes in the runoff election. With his legitimacy weakened and his independence of Duhalde under doubt, Kirchner became president of a country in the midst of an economic, social and political crisis. The economy shrank by 14% in 2002 and official unemployment remained at 25%. With a mounting foreign debt and financial obligations to foreign lenders difficult to meet, President Kirchner opted for a radical economic reform package. Argentina opted to default on its foreign debt and called on creditors to renegotiate on terms much more convenient to Argentina's interest. In the end, Kirchner got away with his initiative and successfully lowered Argentina's foreign debt by renegotiating it. Disappointed creditors were forced to choose partial payment or no payment at all. Although the move made Kirchner very popular domestically, Argentina's credit abroad was severely hurt. Almost no foreign investment has entered Argentina since the country defaulted on its past debt.

Yet, because Argentina's exports had been strong and because the country continued to rely on a weak national currency to make its exports more competitive, the economy grew rapidly under Kirchner's administration. The economic recovery, deemed as unsustainable in the long term by many economists, was sufficiently strong to reduce unemployment and improve the president's approval ratings. Kirchner and the Peronist Party went on to win an absolute majority in congress in the 2005 mid-term legislative elections. Kirchner's wife, Cristina Fernández (Cristina Kirchner) won a Senate seat representing the province of Buenos Aires, the most populous in the country. Her victory over Duhalde's wife highlighted the absolute control the Kirchner political machine exerted over the Peronist Party.

Although the economy continued to do well relying on strong exports, some signs of inflationary pressures emerged in early 2005. Price control schemes and a more active intervention in the economy by the central government underlined Kirchner's strong mistrust of free trade policies. The president's decision to attract foreign investment from Venezuela's Hugo Chávez government put Argentina at odds with the United States. But the strong nationalist discourse by the Argentine leader helped boost his popularity at home. Whether or not Kirchner would run for reelection or step down in favor of his wife Cristina was undecided as of mid-2006, but either way, it was felt that the Kirchners were likely to remain in power after the 2007 presidential elections.

### 13 GOVERNMENT

Argentina's government is ruled by its 1853 constitution, although that document has been suspended many times. The basic structure is federal and republican. In 1949, the Perón government adopted a new constitution, but the subsequent military government expunged that document. Some modifications in the original constitution were subsequently made by a constituent assembly that

met in October 1957. In July 1962, a system of proportional representation was adopted.

The constitution provides for a federal union of provinces that retain all powers not specifically delegated to the federal government by the constitution. There is a separation of powers among the executive, legislative, and judicial branches, but the president is powerful within this arrangement. The president can draw up and introduce his own bills in Congress, appoint cabinet members and other officials without the consent of the Senate, and possesses broad powers to declare a state of siege and suspend the constitution. The president is commander-in-chief of the army, navy, and air force and appoints all major civil, military, naval, and judicial offices, with the approval of the Senate in certain cases. The president is also responsible, with the cabinet, for the acts of the executive branch and has the right of patronage (control over appointments) in regard to bishoprics. The president and vice president are directly elected for a four-year term and cannot be re-elected beyond a second consecutive term. They or their parents must be native-born citizens. Voting is compulsory for all citizens 18 to 70 years of age.

The constitution calls for a National Congress consisting of a Senate and a Chamber of Deputies. The 72 senators are directly elected, 3 from each of the 23 provinces and the Federal District of Buenos Aires. The term of office is set at six years, with staggered elections every three years for one-third of the membership. The Chamber of Deputies is the result of direct elections for 257 seats. Seats are allocated to each province in proportion to its population, but less populated provinces are over-represented. The deputies' term of office is four years, with one-half of the membership being elected every two years. The Chamber of Deputies is authorized to receive the budget and initiate fiscal legislation and has the exclusive right to impeach officials before the Senate.

The most recent suspensions of the constitution were between 1966 and 1973, and then again from 1976 until 1983. During the most recent suspension, a military junta performed the executive, legislative, and judicial functions. Since the resumption of civilian government in 1983, there has been an uneasy relationship between the military and the government. The controversial trials of military leaders led to serious questions about the credibility of the judiciary and mild sentences for the accused. Revisions to the constitution were approved in August 1994. During political crisis of the late 1990s, the military was unwilling to step back into political life signaling a consolidation of democracy and civilian rule in Argentina.

## 14 POLITICAL PARTIES

Political party activity in Argentina has been sporadic, given the frequency of military takeovers and the many years during which parties have been banned. Still, several parties reformed in the 1980s and continued to be active in the 1990s and into the 21st century.

Traditionally, the alignment of Argentine political parties has been along socioeconomic and religious lines. The landowners, the high clergy, and the more conservative lower class supporters have formed an alliance that defends the church and the status quo. On the other side have been the advocates of change: merchants and professionals who resent the preeminence of the aristocracy and who tend also to be anticlerical. This second group has supported

separation of church and state and decentralization. However, in modern times, new parties have emerged to represent the working class, small farmers, and intellectuals.

During the first half of the 20th century, the Radical Party in Argentina was either the governing party or the chief opposition. The Radicals were committed to the expansion of Argentine politics to the middle and lower classes, and a transformation of the nation's economic and social life. This party was as close to a mass-based party as Argentina had ever had. The core was middle class, but the party was also supported by upper- and lower-class elements. Only radical by the standards of Argentine politics, it occupied a middle ground between the Conservatives and the Socialist left. However, with a heterogeneous membership, tensions and schisms were frequent. The party split into the Radical Intransigent Civic Union (Unión Cívica Radical Intransigente—UCRI), which formed the major support for Arturo Frondizi in 1958, and the People's Radical Civic Union (Unión Cívica Radical del Pueblo—UCRP), led by Ricardo Balbín. The UCRP was somewhat more nationalistic and doctrinaire than the UCRI, but shifting policies made the differences difficult to define. Balbín's party survived into the 1980s as the Radical Civic Union (Unión Cívica Radical—UCR). After the military stepped down in 1983, that party was one of the few viable political entities in Argentina, and emerged victorious in the 1983 elections. However, with the failure of the Alfonsín administration, the UCR found itself again in its old role as loyal opposition. The UCR regained the presidency in 1999 with de la Rúa, but his dismal performance and his early departure sent the UCR into its worst crisis in history. In the 2003 presidential election, the UCR official candidate only captured 2.3% of the vote. In the 2005 mid-term elections, the UCR recovered somewhat, but it remained far below its historic strength.

The Conservatives dominated Argentine politics from about 1874 to 1916 and again from 1932 to 1945 when they were known as the National Democrats. This era of Argentine politics was known as the "Concordancia." The Conservatives were the chief spokesmen for the landed interests, from whom they drew their main support. During the Perón regime, the right lost most of its influence. In 1958, conservative parties banded together to form the National Federation of Parties of the Center (Federación Nacional de Partidos del Centro). Years of military rule in the name of conservatism yielded no mass-based conservative parties, mainly because the military professed a disdain for partisan politics. Currently, there are several small right-wing parties, the largest of which is the Union of the Democratic Center (UCD).

Although leftism in Argentina has a long tradition, it was dealt a serious blow during the 1976–83 military governments. Those governments were committed to the extermination of all leftist influences. This meant the jailing and "disappearance" of leaders of the socialist and communist movements. In addition, Peronism preempted much of the ideological appeal of these parties, as well as their traditional working-class constituencies. The earliest leftist party was the Communist Party, founded in 1918 by Juan B. Justo, who split from Yrigoyen and the Radicals. The Communists were never terribly revolutionary, but concentrated instead on the trade union movement. In the 1970s, Argentine leftism was thrown into confusion by the appearance of several substantial "urban guerrilla" movements. The Trotskyist People's Revolutionary Army (Ejército Revolucionario del Pueblo—ERP), the Montoneros, and the

Peronist Armed Forces (FAP), among others, became major players on the Argentine political scene, if only because of the dramatic impact of their actions. Their presence may well have hastened the return of Perón in 1974, but their persistence became a major justification for the military repression that followed. Refusing to make any distinction between a leftist and a terrorist, the government decimated the Argentine left.

Peronism defies political classification, and it was still alive in Argentina in the early 2000s. Peronism went underground for nearly two decades after the coup of 1955. Operating under the names Popular Union Party, Populist Party, and Laborite Party, a variety of Peronist organizations put up candidates wherever possible. The movement was alternately wooed, tolerated, or repressed, depending on the degree to which the military was involved. In 1973, elections were held in which the Peronists were allowed to field a candidate, Hector J. Cámpora, representing a coalition of various Peronist factions and other smaller parties. This coalition, the Justice Liberation Front (Frente Justicialista de Liberación—FREJULI), took 49% of the vote. Under Cámpora's successors, Juan Perón and Isabel Perón, FREJULI remained the governing coalition until the March 1976 coup, after which political activity was suspended until 1980. A "reform" movement led to infighting that crippled the party in the 1983 elections.

In 1989, Carlos Menem's victory was accompanied by solid legislative majorities in both houses of the legislature. The Justicialist Party (JP) had 122 seats in the Chamber of Deputies and 27 seats in the Senate. In the elections of May 1995, the party took 132 of a total 257 seats in the Chamber of Deputies, and 38 of a total 72 Senate seats. In 1999, the JP suffered a set back in the Chamber, but retained control of the Senate. In 2001, the JP regained seats in the Chamber reaching a total of 116 and increased its hold of the Senate where it controlled 66 seats, two short of a majority. In the 2003 and 2005 parliamentary elections, the Peronistas remained the dominant party in both chambers. Yet, in 2005, Kirchner created an alternative Peronist party (the Front for Victory) that won about one-third of the seats up for election. President Kirchner commanded the loyalty of the large majority of all the Peronist factions that won seats in Congress in 2005.

Argentina's party politics have been contentious and vicious over the years, with various sides coalescing in order to defeat rivals. One notable exception was the formation in July 1981 of the Multipartidaria, an alliance among Argentina's five leading parties—FREJULI, the UCR, the Democratic Christian Federation (Federación Demócrata Cristiana), the Movement for Integration and Development (Movimiento de Integración y Desarrollo—MID), and the Intransigent Party (Partido Intransigente). Claiming the support of about 80% of the voters, this opposition alliance began to negotiate with the military concerning a return to constitutional government, and in July 1982, political parties were formally permitted to resume their activities.

In April 1994, the Front for a Country of Solidarity (Frente del País Solidario or Frepaso) was formed. A center-left group, it has won widespread middle-class support by campaigning against government corruption. It defeated the UCR for second place in the 1995 legislative elections when it gained a representation in the Chamber of Deputies of 29 members. In 1999, Frepaso joined the UCR to create the Alianza (alliance) to elect UCR candidate Fernando de la Rúa. He was elected with 48.5% and assumed the

presidency in December. The Alianza has a slim majority in the lower house of Congress, but the Justicialists remain in control of the Senate. The Alianza proved to be short-lived. With the resignation of Vice President Carlos Álvarez in 2000, the Alianza fell apart. With de la Rúa's resignation in 2001, a new leftwing movement emerged led by former Radical Party deputy Elisa Carrió. Her Alternative for a Republic of Equals (ARI) won 8 seats in the Senate and 17 seats in the Chamber in 2001 and Carrió placed fourth in the 2003 presidential election. It remains to be seen if ARI will remain a political party beyond the parliamentary elections scheduled for October 2003.

Despite the political and social crisis, the Peronista and Radical parties continue to dominate Argentinean politics. In the 2001 midterm election, the Peronistas regained ground in the Chamber and Senate. De la Rúa's demise dealt a severe blow to the Radical Party. In the 2003 presidential election, the Radical Party candidate obtained fewer than 3% of the vote, but two formerly Radical Party militants running as an independent and in a leftist coalition collected more than 30%. The Peronist party also faced the 2003 election in the midst of a division. The three Peronist presidential candidates obtained more than 50% of the vote combined, showing that party's continuous domination of Argentine politics.

## **15 LOCAL GOVERNMENT**

Argentina is a federation of 23 provinces and the federal capital of Buenos Aires. During the 19th century there was a bitter struggle between Buenos Aires and the interior provinces, and there has long been an element of tension regarding the division of powers between the central government and provincial bodies. The federal government retains control over such matters as the regulation of commerce, customs collections, currency, civil or commercial codes, or the appointment of foreign agents. The provincial governors are elected every four years.

The constitutional "national intervention" and "state of siege" powers of the president have been invoked frequently. The first of these powers was designed to "guarantee the republican form of government in the provinces." Since the adoption of the 1853 constitution, the federal government has intervened over 200 times, mostly by presidential decree. Under this authority, provincial and municipal offices may be declared vacant, appointments annulled, and local elections supervised. Between 1966 and 1973, all local legislatures were dissolved and provincial governors were appointed by the new president. A restoration of provincial and municipal government followed the return to constitutional government in 1973. After the March 1976 coup, the federal government again intervened to remove all provincial governors and impose direct military rule over all municipalities. Since 1983, representative local government has been in force again.

Until 1996, the president appointed the mayor of Buenos Aires, and by law, the president and congress controlled any legislation that affected the city. Constitutional reforms that year led to an elected mayoral position, and a 60-member Poder Legislativo (legislative power). The members are elected by proportional representation to four-year terms.

## **16 JUDICIAL SYSTEM**

Justice is administered by both federal and provincial courts. The former deal only with cases of a national character or those to

which different provinces or inhabitants of different provinces are parties. The Supreme Court, which supervises and regulates all other federal courts, is composed of nine members nominated by the president and confirmed by the Senate. Other federal courts include nine appellate courts, with three judges for each; single-judge district courts, at least one for each province; and one-judge territorial courts. The federal courts may not decide political questions. Judges of the lower courts are appointed by the president.

Provincial courts include supreme courts, appellate courts, courts of first instance, and minor courts of justices of the peace (*alcaldes*) and of the market judges. Members of provincial courts are appointed by the provincial governors. Trial by jury was authorized by the 1853 constitution for criminal cases, but its establishment was left to the discretion of congress, resulting in sporadic use.

A 1991 law provides a fund for compensating prisoners who were illegally detained during the 1976–83 military dictatorship. In 1992, a system of oral public trials was instituted in order to speed up the judicial process while improving the protection of procedural rights of criminal defendants.

In practice, there is not a truly independent judiciary. The courts lack power to enforce orders against the executive and federal judges who actively pursue charges of police or military corruption. In 1989, President Menem, in a court-packing maneuver, expanded the number of Supreme Court justices from five to nine. In 2003, shortly after taking office, President Néstor Kirchner signaled his intention to remove some of Menem's appointees and to strengthen the judiciary by undoing some of Menem's moves that turned the Supreme Court into a political ally of the president rather than an autonomous power of the state. Formal and informal constitutional accusation against Menem-appointed Supreme Court justices between 2003 and 2005 allowed Kirchner to appoint new justices who were considered friendly to his regime. Thus, the autonomy and independence of the Supreme Court continued to be weakened by the executive's decision to influence the appointment and tenure of justices.

The constitution prohibits arbitrary interference with privacy, family, home or correspondence. The government respects these provisions. The constitution prohibits torture; however, police brutality remains a serious problem. The judicial system is subject to delays, resulting in lengthy pretrial detention.

## 17 ARMED FORCES

The Argentine armed forces in 2005 numbered 71,400 active personnel, with no formally established reserves. The Army of 41,400 was organized into 3 corps and included mechanized infantry, engineer, and artillery battalions. Equipment included 200 main battle tanks, 150 light tanks, 74 reconnaissance vehicles, 105 armored infantry fighting vehicles, 422 armored personnel carriers, and 1,701 artillery pieces. The Navy had 17,500 personnel including 2,500 Marines and 2,000 naval aviation personnel. Equipment included 3 tactical submarines, 5 destroyers, 8 frigates, and 14 patrol/coastal vessels. The naval aviation arm had 11 combat capable aircraft including 6 fighter ground attack and 5 antisubmarine warfare aircraft, in addition to 4 maritime patrol aircraft and 7 antisubmarine warfare helicopters. The Air Force numbered 12,500 personnel with 104 combat-capable aircraft that included 13 fighters and 91 fighter ground attack aircraft. Paramilitary forces in-

cluded an 18,000 member gendarmerie and the 13,240 member Prefectura Naval (Coast Guard). In 2005, the defense budget totaled \$1.75 billion. In that same year, Argentine military forces were deployed in five countries or regions as UN peacekeepers.

## 18 INTERNATIONAL COOPERATION

Argentina is a charter member of the United Nations, having joined on 24 October 1945; it belongs to ECLAC and all the non-regional specialized agencies, such as IAEA, FAO, IFC, UNIDO, UNESCO, WHO, ILO, and IMF. It is a member of the World Bank and joined the WTO on 1 January 1995. Argentina also belongs to the OAS and many other inter-American and intergovernmental organizations, such as the Cartagena Group (G-11), G-15, G-19, G-24, G-77, IADB, LAES, and LAIA. The country is a nonregional member of the African Development Bank and a member of the Permanent Court of Arbitration. Argentina has been an active member of Mercosur (Southern Common Market), the economic and strategic alliance formed by Brazil, Argentina, Uruguay, and Paraguay, with Chile and Bolivia allied as associate members. It is also part of the 19 member Río Group and the South American Community of Nations.

Argentina belongs to the G-6, the Australia Group, the Zangger Committee, the Organization for the Prohibition of Chemical Weapons, the Nuclear Suppliers Group (London Group), and the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). The country also holds a seat on the UN Monitoring, Verification, and Inspection Commission (UNMOVIC), which was originally established in 1999 as the Special Commission for the Elimination of Iraq's Weapons of Mass Destruction (UNSCOM). Argentina was the only Latin American country to participate in the 1990–91 Gulf War. The United States designated Argentina as a non-NATO ally in January 1998. Argentina has participated in UN peacekeeping and administrative efforts in Kosovo (est. 1999), Western Sahara (est. 1991), Cyprus (est. 1964) and Haiti (est. 2004). The country is a signatory of the 1947 Río Treaty.

In cooperation on environmental issues, Argentina is part of the Antarctic Treaty, the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, Convention of Antarctic-Marine Living Resources, the London Convention, the International Convention for the Regulation of Whaling, the Kyoto Protocol, the Montréal Protocol, MARPOL, Antarctic-Environmental Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Argentina has one of the most highly developed economies and most advantageous natural resource bases of Latin America, but political instability and conflicts among various sectors of the economy have delayed the realization of this potential. The delay has likely been lengthened by the four-year recession that turned into an acute financial crisis in 2001–02 that reduced Argentina's per capita income from \$7,330 in 2001 (the highest in Latin America) to \$2,700 in 2002 (the sixth-highest), and left an estimated 54.3% of the population below the poverty line. It may have

set a modern record for the amount of wealth lost in the shortest period of time.

Argentina's economy had weathered repeated blows to its prospects for sustained growth during 1980–2005—deep recession and slow growth that accompanied hyperinflation in 1989 (4,924%) and 1990 (1,344%), a recession in 1995 following the devaluation of the Mexican peso, nonstop recessions from 1999 that followed the successive impacts of the Asian financial crisis in 1997, the Russian financial crisis in 1998, and the Brazilian financial crisis in 1999, all raising the question of the viability of emerging markets like Argentina's, and finally the global slowdown caused by the United States recession from the beginning of 2001, aggravated by the aftereffects of the 11 September 2001 terrorist attacks on the United States, which in particular put a chill on foreign investment flows. However, the factor that seems to have pushed the Argentine economy over the brink was a tough policy by the administration of US president George W. Bush with respect to IMF rescue packages. Public doubts were expressed by the US treasury as to Argentina's ability to repay its debts and there was public discussion about a willingness to allow an "orderly default." Unpopular steps taken by the government—tax increases (January 2000, April 2001, and August 2001), spending cuts, a "zero deficit" target, and restrictions on bank withdrawals to preserve the peso's convertibility to the dollar—proved of no avail in stopping the decline in investor and consumer confidence, evidenced in widening spreads on Argentine bonds, massive withdrawals from the banks, a halt to investment and a slowdown in production, with a consequent decline in revenues, and a hopelessly worsening debt situation. The IMF had agreed to a standby agreement in December 2000, and to its enhancement in March 2001 when it became apparent that the original targets were not going to be met, but no agreement on a third arrangement could be reached at the end of 2001, as street violence broke out and the country went through an extraordinary five presidents in two weeks. It was the third president who actually took the step of defaulting on payments due on \$132 billion of bonds in late December 2001, and it was the fifth who broke the one-to-one peg of the peso to the dollar in January 2002, which plunged to a low of  $\text{us}\$1 = \text{ec}\$3.87$  in June 2002. With the devalued currency, external debt jumped from 56% of GDP to over 130%. In November 2002, Argentina also defaulted on payments due to the World Bank.

Prior to 1970, Argentina suffered serious deficits in trade balance, but with increased exports, favorable trade balances were achieved during the 1970s. In 1974, increases of 7.6% were registered for agriculture, 7.5% for commerce, and 22.3% for construction. However, the average increase of annual GDP registered only 40% from 1977 to 1987. During the period between 1988 and 1999, average annual growth reached 4.4%, due largely to successful economic planning and political stability. On 23 January 2003 the government entered into a nine-month agreement with the IMF supported by loans of \$6.87 billion with the explicit understanding that a longer term arrangement would be concluded following the presidential election in April 2003. The winner, Nestor Kirchner, a Peronist from Patagonia and not widely known, promised a \$3-billion public works program but without deficit spending.

Twenty years earlier in 1982, the peso had so depreciated that the government decided to redenominate the currency, which it

did in 1983, at 10,000:1. Also in 1983, Argentina received a stabilization loan from the IMF to compensate for the effects of inflation and recession. As a condition for the loan, the government agreed to reduce the inflation rate to 165% in 1983. By autumn, however, inflation was running at an annual rate of over 900%; the inflation rate for the whole of 1983 was 434%, the highest in the world. Thereafter, it rose without interruption until it reached some 1,200% in mid-1985. At that time, the government introduced the Austral Plan—a bold attempt to halt inflation by freezing wages and prices, revaluing (and redenominating) the currency, and resolving to finance public spending with real assets only (not by printing money); under this plan the annual rate for 1985 was cut to 385%. By the end of 1986, the rate had been cut further to 82%; by early 1987, however, inflation had begun to surge again, and it was expected to exceed 100% by the end of the year.

In July 1989, President Carlos Menem of the Justicialista Party took office at a time when the economy was entangled in a hyperinflationary spiral. In 1991, President Menem unveiled an innovative stabilization/reform program, which was implemented successfully. The cornerstone of the stabilization/reform plan was to link the peso to the dollar at a fixed rate of 0.99 pesos per dollar (under the 1991 "Convertibility Law"), and requiring congressional approval for devaluation. In 1992, economic policy continued to focus on structural adjustment involving a strategy of cleaning up the fiscal accounts. The reforms took on a four-pronged approach: fiscal revenues were strengthened through a broadening of the VAT and an enhancement in revenue enforcement; administrative reforms included a substantial cut in public payroll and revamping of national fiscal accounting; the use of the Central Bank's rediscount window to finance deficits of provincial governments was curtailed; and public enterprises were privatized. Both revenue enhancements and expenditure cutbacks sharply reduced the inflation rate.

After three years of swift growth, the devaluation of the Mexican peso on 20 December 1994 pushed the Argentine economy into a severe recession, but economy minister Domingo Cavallo took an austere line and refused to devalue the Argentine currency in 1995, even though the economy shrank by 4.4% in that year. However, the economy began to recover in 1996, and by 1998 the inflation rate held at about 1%, one of the lowest rates in the world. Even though inflation was low in 1999, a recession brought the realization that high consumer prices were not the only roadblock to economic development. Negative growth also reflected poor labor policies and a lack of capital in 2000.

The country has to a large degree overcome its dependence on imported machinery and finished products, but in their place there has grown a great external demand for parts and raw materials that are assembled or finished within the country. Basic industries, such as iron and steel, petroleum and petrochemicals, aluminum, plastics, and electrical equipment are being established, but these will continue to require extensive raw material imports for some time, or even permanently, because of the absence of certain minerals, such as bauxite (which is needed for aluminum production).

In 2004, the economy expanded by 9.0%, up from 8.8% in 2003, and from a dramatic -10.9% in 2002; in 2005, the GDP growth rate was estimated at 6.7%, while the GDP per capita (at purchasing power parity) grew to \$13,600. The inflation rate was reduced

to 4.4% in 2004, but was estimated to have grown again to 8.8% in 2005. The unemployment rate was on a downwards trend after 2002, and in 2005 it looked like it was brought back under control (at 11.7%). All of the provinces in Argentina achieved a consolidated fiscal surplus of 5.8% in 2004, with the tax burden growing however, to almost 28%.

## 2<sup>0</sup> INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Argentina's gross domestic product (GDP) was estimated at \$537.2 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$13,600. The annual growth rate of GDP was estimated at 8.2%. The average inflation rate in 2005 was 11.8%. It was estimated that agriculture accounted for 10.5% of GDP, industry 35.8%, and services 53.7%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$253 million or about \$7 per capita and accounted for approximately 0.2% of GDP. Foreign aid receipts amounted to \$109 million or about \$3 per capita and accounted for approximately 0.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Argentina totaled \$81.2 billion or about \$2,142 per capita based on a GDP of \$129.6 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 0.1%. In 2001 it was estimated that approximately 30% of household consumption was spent on food, 17% on fuel, 15% on healthcare, and 15% on education. It was estimated that in 2005 about 38.5% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

As of 2005, Argentina's labor force was estimated at 15.34 million. According to 1996 estimates (the latest year for which data was available), the labor force was divided as follows: 18.5% in manufacturing, 2.2% in agriculture and mining, 18.1% in commerce, 10.3% in transport and communications, 9.5% in public administration and defense, and the remainder in other sectors. As of September 2005, Argentina's unemployment rate stood at 11%, down from 25% in 2001.

Unions in Argentina came into their own during the reign of Juan Perón, who used the labor movement as a vehicle to achieve and hold dictatorial power. He built the General Confederation of Labor (Confederación General del Trabajo—CGT) from a disjointed membership of about 250,000 into a highly centralized organization of 6 million workers encompassing every aspect of the Argentine economy. Although the labor unions won tremendous benefits in the form of higher wages and improved working conditions as a result of Perón's support, these advances were built on a political rather than on a sound economic foundation, and the fortunes of the CGT waxed and waned with those of Perón and his followers, as well as with successive governments. As of 2005, an estimated 35% of the workforce belonged to a union.

The national minimum wage is set at \$215 per month which does not provide a living wage for a family. However, most workers earn considerably more. The average salary in the formal sector is around \$550 per month. The legal workweek has a maximum of 48-hours, at 8 hours a day. Overtime hours worked in excess of those limits are subject to overtime rates of pay. Children under the age of 14 are legally prohibited from full-time work, as they are required to attend school. However, child labor continues to be a problem, particularly in the informal or underground economy. Children between the ages of 14 and 18 are allowed to work, but only for limited hours and only in a limited number of occupations, and only if they have finished compulsory schooling, which usually ends at 15. There are extensive occupational and health and safety laws but they are not fully enforced because the government has inadequate resources. Cases of very poor labor conditions are known to exist in plants employing illegal aliens.

## 2<sup>2</sup> AGRICULTURE

Agriculture and agro-industry in Argentina focus on the production of cereal, oil grains and seeds, sugar, fruit, wine, tea, tobacco, and cotton. Argentina is one of the greatest food-producing and food-exporting countries of the world, with an estimated 35,000,000 hectares (86,500,000 acres) of arable and permanent cropland, or 12.8% of the land area. Agriculture and animal husbandry have traditionally supplied the nation with 70–95% of its export earnings, and the landowners have alternated the two activities in accordance with prices on the world market. As of 2004, agriculture made up 10% of the GDP. Agricultural products also accounted for 43% of exports by value. One of the most important factors in Argentine agriculture is the advanced degree of mechanization; in 2002, an estimated 300,000 tractors and 50,000 harvester-threshers were in use.

The principal agricultural region consists of the humid pampas, one of the world's greatest reaches of arable land. Argentine agriculture is virtually coextensive with this region, although efforts have been made to spread it into other areas. Citrus fruit, tobacco, cotton, and sugarcane are cultivated outside the pampas.

Wheat is the leading crop. Argentina accounted for about 61% of all wheat produced in South America in 2004 and was the world's fifth-leading wheat exporter. The area harvested in 2004 was estimated at 5.74 million hectares (14.18 million acres), and production at 14.5 million tons. Argentina is the sixth-largest corn-growing country in the world. The area harvested in 2004 was 2.33 million hectares (5.75 million acres), and production was 15 million tons. Barley is favored as the grain of greatest yield and resistance to disease; types for feed and beer are grown in the pampas areas having soil unfavorable or a climate too rigorous for wheat. Harvests amounted to 659,000 tons per season in the early 1970s; in 2004 production was 1,004,000 tons.

Rice is a major crop, with a 2004 production of 1,060,000 tons on plantings of 169,200 hectares (418,000 acres). Argentina was once one of the world's biggest producers of flaxseed (linseed); production in 2004 was 29,000 tons (1.5% of world production), down more than 90% from the early 1990s. Most of the crop is exported in the form of linseed oil. The province of Tucumán dominates the sugar-raising industry, which dates from 1646; sugarcane production in 2004 was 19.3 million tons. To control overproduction, the government formed the National Sugar Co. in 1970 and

forbade the construction of new sugar mills through the end of the decade.

Cotton growing dates from 1909 and is concentrated in Chaco province. In 2004 the production of cotton fiber was 112,000 tons, down from 432,000 tons in 1996. Sunflower seed oil is a major industrial plant product; 1.8 million hectares (4.5 million acres) of sunflowers were harvested in 2004, producing 3,100,000 tons of sunflower seeds. Tobacco is raised in several northern provinces, especially Misiones; production in 2004 was an estimated 118,000 tons. Soybean production, only 78,000 tons in 1971–72, increased to 7.1 million tons by 1985–86, and to 31.5 million tons in 2004, 15% of world production.

Fruit growing has developed rapidly since the 1940s. Estimates for 2004 fruit production (in tons) were apples, 1,262,000; oranges, 770,000; lemons and limes, 1,300,000; peaches and nectarines, 272,000; and grapefruit, 170,000. The output of bananas was 400,000 tons in 1974, 10 times the 1961–65 average; it fell to 144,000 tons in 1978 and rebounded to 280,000 tons in 1992 before declining to 180,000 tons in 2004.

The province of Mendoza is the center for the nation's vineyards. In 2004, grape production was 2.36 million tons. Argentina is one of the world's leading producers of wine, exporting 159,826 tons in 2004, or 2% of the world's total wine exports.

## 23 ANIMAL HUSBANDRY

Argentina is one of the world's preeminent producers of cattle and sheep, possessing approximately 3% of the entire world's stock of the former and 1% of the latter. Livestock and meat exports play an essential part in the nation's international trade. Annual meat exports (including meat extracts) were 598,900 tons in 1978, but fell to 394,900 tons in 1981 and 301,390 tons in 1997 before rising to 1,183,000 tons in 2004. Because of extremely favorable natural conditions, Argentina, with about 50.8 million head of cattle in 2004, is one of the world's leading cattle-raising countries.

Cattle were introduced into Argentina by Pedro de Mendoza in 1536, and these cattle, together with those brought by other explorers, quickly became wild and began to multiply on the lush grasses of the pampas. There was no attempt to control the vast herds; when the inhabitants wanted meat and hides, they would merely kill the animals at random and take the desired parts. The most important single advance was the invention of refrigeration, which enabled ships to transport meat without spoilage. The policy followed by foreign-owned meat-packing firms of purchasing cattle by quality rather than weight led to the introduction of new breeds and selective crossbreeding, which have brought the cattle industry to its present advanced state.

Argentine pastures cover an estimated 142 million hectares (350.9 million acres) and are most productive in the provinces of Buenos Aires, Santa Fe, Córdoba, Entre Ríos, and Corrientes. The most important beef-producing breeds are Shorthorn, introduced in 1823; Hereford, 1858; Aberdeen Angus, 1879; and in recent years, zebu and Charolais.

The dairy industry has shown steady development. In 2004, the following quantities were produced: milk, 8,100,000 tons; cheese, 260,000 tons; and butter, 55,000 tons. The most important dairy breeds are Holstein-Friesian, Jersey, and Holando Argentino. Córdoba, Santa Fe, and Buenos Aires are the three major dairy provinces. Argentina's dairy sector has received the most investments

in recent years, especially foreign investments. Egg production was 300,000 tons in 2004. The number of chickens in 2004 reached 95 million.

In sheep raising, Argentina ranks second in South America after Brazil, with an estimated 12.5 million animals in 2004. Before World War II (1939–45), Argentina accounted for 14% of the world's wool production, but in the 1970s, its production declined; the wool clip (greasy basis) was 60,000 tons in 2004. In 2004, production of mutton and lamb was 51,700 tons. Patagonia has approximately 40% of all the sheep in Argentina.

Total meat production was 3.9 million tons in 2004, of which 2.7 million tons consisted of beef. Beef exports for 2004 were valued at over \$1 billion.

In 2004, Argentina had 3.6 million horses, placing it among the top 5 countries in the world. Argentine horses, especially favored as polo ponies and racehorses, have won many international prizes. Other livestock in 2004 included 3 million pigs and 4.2 million goats. In 2004, Argentina accounted for nearly 5% of the world's production of cow hides. Argentina is South America's largest producer of honey, with an output of 80,000 tons in 2004.

## 24 FISHING

In a country that is among the world's leaders in meat production, fishing has not been able to develop as an industry of any significance. In recent years, the government has tried with some success to induce the public to eat more fish in order to export more beef, one of the country's largest earners of foreign exchange. Since 1970, the government has offered fiscal incentives to encourage the modernization of the fishing industry. The catch has increased from 475,043 tons in 1982 to 1,256,000 tons in 1996 before falling to 916,246 tons in 2003.

The most favored saltwater fish are the pejerrey, a kind of mackerel; the dorado, resembling salmon but of a golden color; and the zurubí, an immense yellow-and-black-spotted catfish. The principal species in the 2003 catch were Argentine hake (36%), Argentine shortfin squid (15%), and grenadier (11%).

Argentina established a 322-km (200-mi) territorial sea limit in December 1966. In 1982, the government moved to protect Argentina's coastal waters from foreign exploitation, declaring that only 16 foreign vessels would be allowed in Argentine waters at any one time.

## 25 FORESTRY

Argentina's forests, estimated at some 50.9 million hectares (125.8 million acres), or about 18.6% of the total area, constitute one of its greatest underexploited natural resources. Of the 570 species of trees sold in international commerce, Argentina possesses 370, but of these it exploits only about a dozen species. A major factor in the industry's lack of development is the great distance of most forests from the markets and the resultant high cost of transportation. In the Río Paraná Delta, the woods currently exploited are softwoods, such as the elm and willow, used in the cellulose and container industries; in the Gran Chaco, white quebracho, used as a fuel and in the refining of coal, and red quebracho, from which tannin is extracted; in Misiones Province, several varieties, including cedar for furniture manufacturing; in the Salta-Tucumán re-

gion, cedar and oak; and in Patagonia, araucania, pine, cypress, larch, and oak.

The most important tree is the red quebracho, which contains 21% tannin, the extract used for tanning. Argentina possesses four-fifths of the world's supply of this wood. Many quebracho trees now being used are from 200 to 500 years old, and trees younger than 75 years are of little commercial use. Since the trees are not being replaced, it is estimated that the quebracho forests will eventually be exhausted.

Production of roundwood was 9,307,000 cu m (328,500,000 cu ft) in 2003. Exports of forest products totaled \$280.7 million that year.

## 26 MINING

Argentina is an important regional producer of minerals, including primary aluminum, mine lead, copper, and zinc, and silver and gold.

In 2003 the value of nonfuel mineral production totaled \$1.1 billion, of which copper concentrate alone accounted for \$467 million.

Argentina was the third-largest Latin American producer of aluminum in 2003, producing 271,932 metric tons; one of six Latin American producers of mine lead and zinc, ranking second to Mexico in lead; and the fourth-largest producer of silver in Latin America.

Mine copper production in 2003 totaled 199,020 metric tons, up slightly from 2001's output of 191,566 metric tons, but down from 2002's level of 204,027 metric tons. Almost all copper production was from Minera Alumbrera, operating from the Bajo de la Alumbrera open pit mine, in Catamarca Province, since 1998.

Gold production in 2003, mostly from the Bajo de la Alumbrera and the Cerro Vanguardia mines, totaled 29,744 kg, down from 32,506 kg in 2002. The country's total silver mine output for 2003 was 133,917 kg, down from 152,802 kg, in 2001.

In 2003, zinc mine production totaled 29,839 metric tons, down from 2001's total of 39,703 metric tons. In that same year lead mine output totaled 12,079 metric tons down slightly from 12,334 metric tons in 2001.

In 2003, Argentina produced 545,304 metric tons of crude boron materials, ranking third in the world, after the United States and Turkey; the 1999 and 2000 totals were 245,450 and 512,624 metric tons, respectively. Among other industrial minerals, output in 2003 for limestone was 8,119,879 metric tons; dolomite, 320,116 metric tons; crushed quartzite, 284,503 metric tons; crushed quartz, 100,000 metric tons; talc, 1,759 metric tons; bentonite, 128,406 metric tons; diatomite, 24,946 metric tons; feldspar, 88,427 metric tons; crude gypsum, 387,936 metric tons; kaolin, 10,653 metric tons; and salt, 1,156,023 metric tons. The country also produced marble, clays, celestite, sodium carbonate, asbestos, barite, and vermiculite. Asphaltite, fluorspar, mica, manganese, and antimony are found mainly in the northwest. There are also deposits of lithium, beryllium, and columbium.

## 27 ENERGY AND POWER

Despite a shortage of energy resources, production of electric power has steadily increased since 1958, after more than a decade of neglect. In 2002, electrical energy production totaled 81.151 billion kWh (48% thermal, 44% hydropower, 6.6% nuclear and 1.4%

other). In the same year, consumption of electricity was 81.270 billion kWh. Generating capacity was 27.558 million kW in 2002. The government places great emphasis on the development of hydroelectric projects and nuclear power, even though installed capacity exceeds projected demand. The final stage of the Yaciretá-Aripe project on the Paraná River, with an installed capacity of 3,200 MW, was completed in 1998.

In 1974, Argentina became the first country in Latin America to install a nuclear-powered electric generating plant. (As of 2006, the only other South American country to use nuclear power was Brazil.) The Atucha power station in Buenos Aires Province has a capacity of 357 MW; Embalse (648 MW) in Córdoba Province started up in 1983. Construction of a second 692-MW reactor at Atucha began in 1980; one reactor there was operating but a second had not yet come online as of 2006.

The modern petroleum industry dates from 1907; after 1940, it became necessary to supplement domestic production with large-scale imports of foreign fuels. In 1958, ownership of all crude oil and natural gas was taken over by the state, and petroleum was then placed under the control of the state oil corporation, Yacimientos Petrolíferos Fiscales (YPF). Production of crude oil fell from 25.6 million tons in 1982 to 22.3 million tons in 1987 but rose to 37.7 million tons in 1995. Production in 1998 totaled 847,000 barrels per day; it dropped to an estimated 756,000 barrels per day in 2004. In 1978, foreign-owned companies were allowed to drill for oil, after decades of policy changes on the role of foreign companies. In August 1985, the Alfonsín government announced more liberal rules on foreign-company participation; in 1987, YPF's influence was reduced. In July 1993, Argentina privatized YPF via the largest initial stock offering on the New York stock exchange (more than \$3 billion). Large deposits have been found in the San Jorge Gulf near Comodoro Rivadavia. Production rates have exceeded the rate at which depleted reserves have been replaced by new discoveries, however. Proven reserves as of end 2003 were put at 2.7 billion barrels.

In conjunction with petroleum extraction, the significant natural gas industry, which is completely run by the private sector, has rapidly expanded. As of 2002, Argentina had the third-largest proven natural gas reserves in South America, exceeded only by Venezuela and Mexico. Production in 2004 totaled 44.9 billion cu m (1,603 billion cu ft), compared with 5.3 billion cu m (187 billion cu ft) in 1969 and 9.8 billion cu m (356 billion cu ft) in 1982. At the end of 2004, proven reserves were at 0.61 trillion cu m (21.4 trillion cu ft). Argentina has a network of over 9,900 km (6,150 mi) of gas pipelines. Since 1997 Argentina has exported natural gas to Chile, which is its major gas export customer.

A major coal deposit in Santa Cruz Province is estimated to contain 552 million tons of coal, nearly 80% of the nation's total. Production as a whole was reported at 330,000 tons in 2002, down from 505,000 tons in 1988.

## 28 INDUSTRY

Córdoba is Argentina's major industrial center. It is the center of metalworking, especially for motor vehicle production. Argentina's other principal industrial enterprises are heavily concentrated in and around the city of Buenos Aires. The plants are close to both the many raw materials imported by ship and the vast productive area of the pampas. The major industries in Buenos Aires are food

processing, motor vehicles, consumer durables, textiles, chemicals and petrochemicals, printing, metallurgy, and steel. Other industrial areas include Rosario, with important steel-producing plants and oil refineries, tractor and meat-packing plants, and chemical and tanning industries; Santa Fe, with zinc- and copper-smelting plants, flour mills, and dairy industry; San Miguel de Tucumán, with sugar refineries; Mendoza and Neuquén, with wineries and fruit-processing plants; the Chaco region, with cotton gins and sawmills; and Santa Cruz, Salta, Tierra del Fuego, Chubut, and Bahía Blanca, with oil fields and refineries.

During the 1960s, the average annual growth rate of industry was 5.9%; during the 1970s, it fell to only 1.8%. In the early 1980s, industrial production went into recession, declining by 16% in 1981 and by 4.7% in 1982. The sharp cutback in imports due to the foreign debt crisis spurred local manufacturing to growth of 10.8% and 42%, in 1983 and 1984, respectively; 1985 brought a sharp plunge of 10.5%, but 1986 saw a growth of 12.8%, aided by the "Austral Plan." In all, the 1980s saw an average annual growth rate of -1.0%. From 1988 to 1998, manufacturing grew by an annual average of 3.6%, and in 1997 alone by 9.2%, but in 1998 that rate fell to 1.6%.

Industry accounted for 16% of GDP in 2001; it was 20% of GDP in 2002, and was expected to be at least 25% of GDP in 2003. Industrial goods represented approximately 31% of exports in 2002. Seasonally adjusted manufacturing production fell 6.9% from August 2001 to August 2002, and nonseasonally adjusted manufacturing production registered a 4.5% decrease.

Packing and processing of foodstuffs is the oldest and most important industry in Argentina. Beginning in the last part of the 19th century, the great *frigoríficos*, or meat-packing plants, were founded to prepare beef for export to Europe. In recent times, the Argentine government has entered directly into the meat-processing enterprises, which for many years were under British ownership. The textile industry was also developed quite early, making use of wool from the vast herds of sheep and the cotton from Chaco Province. In addition to these traditional products, a variety of synthetic fibers are now produced.

Portland cement is the country's leading construction material. A major chemical industry produces sulfuric, nitric, and other acids and pharmaceuticals. The most important center of this industry is San Lorenzo on the Río Paraná. The petrochemical industry is related to the increasing production of oil and has received special benefits from the government. In 1985, exports of petroleum fuels exceeded imports for the first time, and by 1999 Argentina was self-sufficient in oil and gas. Natural gas annual output growth should reach 3.4% for the next decade. Output of petroleum fuels reached 800,000 barrels per day in 1999; at the same time, new oil reserves were found in Río Negro Norte. In 2002, Argentina had 10 oil refineries with a total capacity of 639,000 barrels per day.

In 1961, a giant integrated steel mill began production at San Nicolás. Dependent on steel is the automobile industry, which experienced fairly sustained growth during the 1960s and 1970s. Production rose from 33,000 units in 1959 to 288,917 in 1980. Motor vehicle production peaked at 450,000 in 1998, falling back to around 300,000 in 1999. There were 235,577 automobiles produced in 2001, a 31% decrease from the 339,632 units produced in 2000. Tractors, motorcycles, and bicycles also are manufactured. Argentina also produces electric appliances, communica-

tions equipment—including radios and television sets—motors, watches, and numerous other items.

Industry continues to restructure to become competitive after decades of protection. Capacity utilization rates have increased substantially and companies are now focusing on modernization and expansion of their plants to meet both domestic and foreign demand. New technologies are being adopted, work forces pared, and management is focusing on just what its clients want. Output of cement, trucks, machinery, plastics, petrochemicals and other chemicals all rose, while production of basic metal goods held flat or rose off a low base in the 1990s. A recession that began in 1998 was exacerbated by the economic crisis of December 2001, with Argentina's default on its foreign debt, devaluation of the peso, and conversion of dollar debts and deposits to pesos. Industrial production began to increase in late 2002, however, and the best-performing sectors were textiles, automobile tires, and oils.

In 2004, industry made up 35.8% of the economy, and was bested by services, with 53.7%; agriculture accounted for 10.5% of the GDP. The industrial production growth rate was 7.5% in 2005, underperforming the overall economic growth rate, and signaling that targeted policies are needed for troubled industries. Some of the policies implemented by the government included import licenses for footwear, toys, washing machines, paper, bicycles, and tires. In September 2005, President Kirchner announced that the launching of the automobile free trade agreement between Argentina and Brazil was postponed until 2008 (from the predicted January 2006 date), to allow more symmetry in bilateral trade flows to be established.

## 29 SCIENCE AND TECHNOLOGY

Argentina has five scientific academies: an academy of agronomy and veterinary science (founded in 1909); an academy of exact, physical, and natural sciences (1874); an academy of medicine (1822); and the National Academies of Sciences of Córdoba (1869) and Buenos Aires (1935). Numerous agricultural, medical, scientific, and technological research institutes exist in Argentina, including, as of 1996, some 51 operated by the National Council of Scientific and Technical Research (founded in 1958) and 27 by the National Institute of Industrial Technology (founded in 1957). Research and development expenditures in 2003 amounted to 0.4% of GDP. Argentina has 47 universities and colleges offering training in basic and applied sciences. In 1987–97, science and engineering students accounted for 28% of college and university enrollments.

In 2002–03, Argentina had 715 researchers and 166 technicians per million people actively involved in research and development (R&D). Spending on R&D was approximately \$1.6 million, with about 43.3% coming from government sources, 28.8% from higher education sources, 2.5% from private nonprofit organizations, and 24.2% from private business. In 2002, high technology exports amounted to \$583 million or 7% of the country's manufactured exports.

## 30 DOMESTIC TRADE

Many leading mercantile firms have their head offices in Buenos Aires and branches or agents in the other large cities. Department stores, retail shops, and specialty shops in Buenos Aires are on a par with similar establishments in most world capitals. The num-

ber of supermarkets and large outlets is increasing as consumers are becoming accustomed to such establishments and are seeking the greater convenience and lower costs that these places afford. Industrial equipment and machinery is primarily sold through agents or trade fairs.

Business hours are generally from 9 AM to 6 PM, Monday–Friday, with a one-hour lunch break. Stores are usually open from 9 AM to 9 PM, Monday–Saturday; banks are generally open on weekdays from 10 AM to 3 PM. Travelers checks are not widely accepted at business establishments. Domestic demand absorbs most of the nation's industrial production.

### 3<sup>1</sup> FOREIGN TRADE

Many industrial products imported prior to 1960 are now produced in Argentina. Argentina removed virtually all nontariff barriers to trade in 1991 and reduced tariff rates. The only nontariff barrier is the tariff/quota system applicable to auto and auto parts imports. The Argentina/Brazil auto agreement establishes preferential market access treatment for both countries.

A surge in imports during 1991/92 shifted the trade balance from a large surplus to a deficit position. The strong increase in imports is explained by several factors: first, the dynamic growth of the domestic economy which resulted in greater import demand; second, the reduction of import tariffs and elimination of nontariff barriers which released pent-up demand for imports; and third, the real appreciation of the peso which made imports much less expensive since the local currency cost of these goods rose by much less than the accumulated inflation since the beginning of the Convertibility Plan. Because exports contributed only 10% to GDP, increased foreign sales had little impact on aggregate growth, skewing the balance of payments report.

The creation of NAFTA was viewed as an extremely positive development and presented Argentina with the possibility of acceding to NAFTA as either a member of Mercosur or alone. The government remained fully committed to seeing the creation of Mercosur (a common market incorporating Argentina, Brazil, Uruguay, and Paraguay) through its completion (on 1 January 1995). Argentina's exports and imports more than doubled at comparable rates in six years, between 1992 and 1998; but the de-

valuation of the Brazilian real in 1999 was expected to significantly lower export revenues.

For the last few years of the 1990s, Argentina experienced a significant recession. In late 2001, Argentina's economic meltdown came to a breaking point, and the country was forced to default on its \$155 billion foreign debt, the largest such default in history. The resulting devaluation of the peso and the move from a fixed to floating exchange rate regime has proved disastrous for Argentina's trade situation. The peso, which was pegged to the dollar for most of the last decade, has fallen to trading less than two to the dollar, encouraging exports but making imports prohibitively expensive.

Agricultural products from Argentina, including animal feed, vegetable oil, oil seeds, wheat, maize, and produce, make up the majority of the country's commodity export market (31%). Other important exports are petroleum, and motor vehicles and parts. The top 10 exports for 2000 are as follows:

In 2005, exports reached \$40 billion (FOB—Free on Board), while imports grew to \$29 billion (FOB). In 2004, the bulk of exports went to Brazil (15.4%), Chile (10.4%), the United States (10.2%), China (8.7%), and Spain (4.4%). Imports included intermediate goods, capital goods, consumer goods, and fuels, and mainly came from Brazil (36.2%), the United States (16.6%), Germany (5.7%), and China (4.3%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Until 1952, Argentina's foreign-payments position was excellent, owing mainly to its large exports of basic commodities, principally agricultural products. In that year, however, because of widespread crop failures and unfavorable terms of trade, export value decreased sharply while imports remained high. The Argentine deficit was met by foreign credits, with dollar shortfalls partially covered by large credits from the Export-Import Bank, the IMF, and US banks. Over half of the foreign exchange earned was used

during the 1950s and 1960s to service the external debt. The strict economic controls enacted in 1967 helped curb the inflationary trend and thus stabilized the nation's economy. After a decline during the early 1970s because of the international financial crisis, Argentina registered a surplus between 1973 and 1979, but after 1981, the current account was in deficit because of heavy debt-servicing costs.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Argentina's exports was \$26.7 billion, while imports totaled \$20.3 billion resulting in a trade surplus of \$6.4 billion. In view of the liberalization of trade policies and the real appreciation of the peso, the current account deficit deteriorated sharply since 1990. This was more than offset by a large influx of foreign capital that was enticed by the government's new economic program. Since 1991, the decline in interest rates internationally and the lack of attractive alternatives for foreign direct investment helped to generate a massive inflow of foreign capital, much of which was actually owned by Argentines but held abroad. A debt restructuring plan in early 1993 permitted the investment of reserves by eliminating the threat of seizure. Nevertheless, Argentina's external public debt increased in 1995 to almost \$80 billion, due to new borrowing in capital markets and lending from international financial institutions. In 1998, external debt reached \$133 billion.

The International Monetary Fund (IMF) reported that in 2001 Argentina had exports of goods totaling \$26.6 billion and imports totaling \$19.2 billion. The services credit totaled \$4.3 billion and debit \$8.40 billion.

Exports of goods and services reached \$36 billion in 2004, up from \$33 billion in 2003. Imports increased from \$18 billion in 2003, to \$27 billion in 2004. The resource balance was consequently positive in both years, deteriorating however from \$15 billion in 2003, to \$9 billion in 2004. The current account balance was also positive, decreasing from \$8 billion in 2003, to \$1.5 billion in 2004. Foreign exchange reserves (including gold) reached \$14 billion in 2003, covering more than nine months of imports.

### 33 BANKING AND SECURITIES

In 1935, the Central Bank of the Argentine Republic was established as a central reserve bank, having the sole right of note issue, with all capital held by the state. The bank acts as the fiscal agent of the state. Its board of directors is appointed by and responsible to the government. The bank administers banking laws, regulates the volume of credit and interest rates, supervises the securities market, and applies government laws and decrees regarding banking and foreign exchange. Legislation in August 1973 increased its control over the commercial banking system. The National Mortgage Bank, founded in 1886, is the most important institution for housing credit. Other institutions include the National Development Bank, the National Bank for Savings and Insurance, and the Cooperative Credit Bank.

The Central Bank took advantage of the recovery in economic activity and relatively high rate of monetary growth in the early 1990s to further the restructure the financial system, and to strengthen it so that it would be able to withstand even severe external shocks. In late 1996, a schedule was implemented gradually to raise Minimum Liquidity Requirements (MLKs) from the current (1997) 17–20% by March 1998.

In late 1996, the role of the deposit insurance system (DIS) was broadened to allow support for troubled banks before they went bankrupt. Parallel to these measures, the Central Bank continued to encourage concentration in the financial system through mergers and acquisitions. By 2000, there were 120 financial institutions left, out of a total of 300 existing in 1990. Nine banks in 2000 owned 67% of all deposits, including public sector banks Nacion and Banco de la Provincia de Buenos Aires (accounting for 28% together); foreign owned Banco Río and Banco Frances; and the privately owned Argentinian Banco Galicia. Total assets in 1999 added up to \$15.6 billion, reflecting a growth of 7% from the previous year. Total deposits added up to 25% of GDP.

In 2001, after three years of debilitating recession and overspending by the government, Argentina was forced to default on its \$155 billion debt, the largest such default in history. The old fixed currency regime was abandoned after years of high inflation, and the architect of that original regime, Domingo Cavallo, was brought in to construct a new one. He decided to peg the Argentine peso to the US dollar and the euro when the two currencies achieved parity. However, the Argentine people were not convinced by this new scheme, and the policy did not achieve its intended results. Political upheaval resulted, with three interim presidents holding office before Eduardo Duhalde took office. He was defeated in April 2003 in a runoff election against Néstor Kirchner.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$15.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$73.2 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 25%.

The Buenos Aires Stock Exchange is one of 23 markets that form the Buenos Aires Commercial Exchange, which has over 12,000 members and is often confused with the Stock Exchange. The Commercial Exchange, founded in 1854, established the Stock Exchange, which the government subsequently separated from it. The Commercial Exchange now includes a grain market, a foreign currency exchange, a general produce exchange, and the securities exchange. There are also stock exchanges in the cities of Córdoba, San Juan, Rosario, Mendoza, and Mar del Plata, although more than 90% of stock transactions are conducted on the Buenos Aires exchange.

Between late October and early December 1996, Argentine asset prices rose under the influence of a favorable international financial environment, evidence of a recovery in domestic economic activity, and the decision of the government to deepen labor market deregulation. Between 22 October, and 5 December 1996, the Merval Stock index rose 15%, Bocon (peso-denominated) bond prices increased by 8%, and Brady bonds surged 7% (floating rate bond), 8% (discount bond), and 12% (par bond). From 1996 to 1999, while market capitalization rose from \$45 million to \$115 million, average daily market turnover fell from a high of over \$650 million to about \$200 million. As of 2004, there were 104 companies listed on the Buenos Aires Stock Exchange. Market capitalization as of December 2004 stood at \$46.432 billion. The Bolsa Indice General was up 17%, from the previous year at 56,639.1.

### 3<sup>4</sup> INSURANCE

In 1984, about 200 insurance companies were in operation in Argentina. Although various legal restrictions have been placed on foreign insurance companies, many retain offices in Buenos Aires. The insurance market is regulated by the Superintendent of Insurance of the nation, which is a branch of the Ministry of Economy.

The Argentine insurance market is characterized by a relatively large number of insurers with no single organization dominating the industry. From 1994 to 1997, there was a reduction in the number of insurers as some closed operations or were liquidated. Observers believe that there will be further reductions in the number of insurance companies as consolidation of the industry and the quest for economies of scale and critical mass continues. Observers expect the Argentine life market to develop significantly, especially under stable currency conditions. In 2003, direct premiums written totaled \$3.293 billion, of which nonlife premiums accounted for \$2.365 billion. Argentina's top nonlife insurer that same year was HSBC Buenos Aires with gross written nonlife premiums of \$167.2 million. The country's top life insurer that year was Origenes Retiro, with gross written life premiums of \$87.4 million.

### 3<sup>5</sup> PUBLIC FINANCE

Beginning in 1970, Argentina's budget picture steadily worsened. By the late 1970s, deficit spending annually ranged from 10–14% of GDP, and topped 15% in the early 1980s, when public expenditures consumed some 40% of GDP. By the late 1980s, hyperinflation and depletion of reserves necessitated a public finance reform. Since 1991, the government has considerably narrowed the deficit gap through structural reform efforts. Stricter controls on public spending and more efficient tax collection methods resulted in an overall public sector accounts deficit of only about 1% of GDP, compared to a deficit equivalent to 21.7% of GDP in 1989. The deficit grew marginally worse in the late 1990s, reaching 5% of GDP in 1998. Although tax enforcement has improved, evasion

is still a major problem. Continued heavy expenditures and low tax revenues threatened to generate a deficit in 1999 and 2000. In 2001, Argentina defaulted on its record \$155 billion external debt, the largest such default in history.

The US Central Intelligence Agency (CIA) estimated that in 2005 Argentina's central government took in revenues of approximately \$42.6 billion and had expenditures of \$39.9 billion. Revenues minus expenditures totaled approximately \$2.6 billion. Public debt in 2005 amounted to 69.7% of GDP. Total external debt was \$119 billion.

The International Monetary Fund (IMF) reported that in 2002, the most recent year for which it had data, central government revenues in were A\$42,826 million and expenditures were A\$61,070 million. The value of revenues in US dollars was us\$13,981 million and expenditures us\$19,893, based on an official exchange rate for 2002 of us\$1 = A\$3.06326 as reported by the IMF. Government outlays by function were as follows: general public services, 38.7%; defense, 3.2%; public order and safety, 4.1%; economic affairs, 5.4%; environmental protection, 0.2%; housing and community amenities, 1.3%; health, 4.9%; recreation, culture, and religion, 0.2%; education, 4.1%; and social protection, 37.9%.

### 3<sup>6</sup> TAXATION

In 2005, the principal national taxes included personal income tax (in seven brackets ranging from 9–35%), wealth tax (0.5%), value-added tax (21%; up from 18% in 1994), and excise taxes on tobacco, alcohol, soft drinks, perfumes, jewelry, precious stones, automobile tires, insurance policies, gasoline, lubricating oils, and other items. There is no inheritance tax. Corporate taxes are levied at 30% for domestic and foreign companies. Provincial and municipal governments impose various taxes.

### 3<sup>7</sup> CUSTOMS AND DUTIES

The Perón regime abolished in large measure the traditional system of exports and imports. Through the use of multiple exchange rates and through control of Argentine agricultural exports by the Argentine Institute for the Promotion of Exchange, Perón was able to obtain goods from producers at low prices and sell them abroad at great increases, employing the difference to promote the development of industry. In 1959, this cumbersome system of import permits and multiple exchange rates was abolished.

The government employed surcharges on imports to promote the growth of Argentine industries. Special import benefits were allowed to industries and regions regarded as significant contributors to the national economy. The petrochemical, cellulose, and steel industries have shared in these benefits, which include exemption from customs duties and exchange premiums on imports of machinery, spare parts, and raw materials. A common MERCOSUR auto policy of a 20% tariff applies to automobiles, as well as a quota system that will probably be eliminated by 2006. Duties of 11% were applied to raw materials and medicines and a duty of up to 30% was applied to electronic appliances. The average Common External Tax rate is 17%, but was reduced to 2.5% in 2001. There are valued-added taxes (VAT) levied on goods delivered and services performed in Argentina as well as on imported goods and services. The standard rate is 21%. A 10.5% rate applies to public transport and capital goods, while a 27% rate is applied to some services provided by utilities and telecommunications services.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

There are also advanced VATs of 10% or 5.5% on goods imported for resale. A customs administration fee of 0.5% is also charged.

Argentina, Brazil, Paraguay, and Uruguay officially established a customs union (MERCOSUR) on 1 January 1995 with a common external tariff (CET) covering 85% of traded goods, but excluding capital goods, information technology, and telecommunications equipment.

The government signed the Uruguay Round Agreements in December 1993 and congress ratified the Agreements at the end of 1994. Argentina was a founding member of the World Trade Organization. In the 1990s, Argentina nominally eliminated all non-tariff trade barriers, but customs practices remain cumbersome and time consuming. Argentine beef was exported to the US market in 1997 for the first time in 50 years.

### 38 FOREIGN INVESTMENT

During the 19th century, Argentina offered a favorable climate for foreign investment and the basic development of the nation's transportation system and shipping facilities was financed with British capital. This system placed ownership of extensive properties in foreign hands, arousing the resentment of Argentine nationalists, who advocated a policy of reducing dependence on outside interests. The organization of a national petroleum agency, YPF, in 1922 was one of the first important steps in implementing that policy. The high point in the drive for nationalization came during the Perón era, when railroads were purchased from foreign owners and numerous state-owned enterprises were established. These measures led to substantially reduced foreign investment.

In 1958, President Frondizi negotiated contracts with a number of foreign companies, allowing them to join YPF in the exploitation of Argentine petroleum. He promoted a bill designed to attract foreign capital under close government supervision. As a result, foreign companies invested over US\$387 million between 1959 and 1961, of which more than half came from the United States.

Between 1961 and 1966, direct foreign investment declined, with the question of foreign ownership constantly entering the political picture. After the military coup, President Onganía declared that his government would renew an "open door" policy and would provide legal guarantees to investors. Net capital inflow continued to grow through the late 1960s.

In the 1970s, government policies toward investors underwent a significant reappraisal. Foreign direct investment, according to a law enacted in 1973, required specific congressional approval if foreign capital exceeded 50% of the total in a company. Profit remittances and capital repatriation were limited and new foreign investments were prohibited in several major areas, including national defense, banking, mass media, agriculture, forestry, and fishing.

In the 1980s the economy was caught in the dynamics of the second oil shock and the third world debt crisis, fighting recurrent bouts of hyperinflation. In 1985, the austral replaced the peso at 1:1000, and then in 1991, the Menem administration replaced the austral with the new Argentine peso at 1:10,000, inaugurating the Convertibility Plan (designed by economy minister Domingo Cavallo) whereby every peso would be backed by at least one dollar in reserves. A currency board was created to maintain the peso's virtual 1:1 equivalency to the dollar.

In December 1989, the government eliminated all restrictions on the movement of capital in and out of Argentina, adopting a single foreign exchange market. By Decree 1853 of 8 September 1993, the government established an extraordinarily open foreign investment regime. Foreign companies could invest without registration or prior government approval on the same terms as national firms in virtually every sector, the few exceptions being real estate in border areas, air transportation (later lifted), ship building, nuclear energy, uranium mining, and some fishing. Foreign portfolio investment in the companies listed on the Argentine stock exchange required no government approval. The Argentinean-US Bilateral Investment Treaty (BIT), signed in 1991, came into full effect in 1994. The treaty provided for national treatment in virtually all sectors of the Argentine economy, although national treatment did not prevent numerous contentious and time-consuming investment disputes, particularly with provincial governments. Incentives were provided for investments in mining, shipbuilding, iron and steel, petrochemicals, forest industries, silo construction, wine, and maritime fishing. Corporate taxes were equal for foreign- and Argentine-owned companies. Argentine Law 24331 of 1994 authorized the federal government to create one free trade zone (FTZ) in each province and four others in border areas. FTZs, offering tax-free and duty-free importing and exporting, were located at Córdoba, La Plata (the most important, opened in 1997), Mendoza, Santa Fe, and Comodoro. Capital inflows were strong. Privatization generated a large source of US dollars. More than 60 state-owned enterprises were sold, most to foreign investors, raising about \$10 billion in direct sales and more, counting cancelled debt and promised post-acquisition capital investments.

Accumulated foreign direct investment (FDI) in Argentina was an estimated \$5.3 billion in 1980 rising only to \$6.56 billion in 1985 and to \$8.77 billion in 1989. However, under the liberalized investment regime, accumulated FDI reached \$25.7 billion by 1995 and \$36 billion by 1997. The rise in market capitalization on the Buenos Aires Stock Exchange (the BCBA, accounting for 95% of transactions on Argentine exchanges in equity shares, corporate bonds, and government debt instruments) was also dramatic, more than doubling from \$18.6 billion in 1990 to \$44 billion in 1993. Argentina does not keep records of foreign investment, but an accepted estimate is that total direct and portfolio foreign investment from 1990 to 1996 was about \$49 billion.

In 1997, annual foreign direct investment (FDI) inflow was over \$9 billion, but fell to \$6.85 billion in 1998 as the effects of the Asian financial crisis were felt. In 1999, FDI inflow soared to \$24.1 billion, including about \$15 billion from US investors, with most going to telecommunications, energy, petrochemicals, financial services, food processing, and motor vehicle manufacturing sectors.

In 2001–02, the Argentina economy went through the worst implosion in its history, much of it connected with the government's effort to attract foreign investment. In 2000, FDI inflow continued at a near-record total of \$11.15 billion but then plummeted to \$3.18 billion in the global economic slowdown in 2001. After the abolishment of the convertibility system in January 2002, FDI inflow fell \$2.2 billion.

In terms of portfolio investment, the total market value of companies on the BCBA, which through the vagaries of the Mexican peso crisis in 1995 and the Asian financial crisis in 1997 was only 3% ahead of the 1993 value in 1998 (\$45.3 billion), jumped to

\$83.9 billion in 1999, then to \$165.8 billion in 2000, peaking at \$203.5 billion in January 2001, a 4.5% increase since 1998 and an 11-fold increase since 1990. A rough estimate is that about half of the transactions on the BCBA are by foreigners. In 2001, average daily trading was \$200 million (up from \$11 million in 1990), 70% in government bonds, 20% in equities, and 10% in corporate bonds. In 2001, portfolio investment in Argentina by US investors amounted to \$4.5 billion, 83.5% in debt instruments (\$3.2 billion in long-term debt bonds and \$344 million in short-term debt) and 16.5% in equity (\$744 million). In 2002, although in pesos the market value of companies on the BCBA had risen to 250 million pesos, with the fall of the value of the peso to more than three to a dollar, total market capitalization of listed companies was only \$75 million, of which all but \$15 million was accounted for by three Spanish companies.

Argentina's economy, at first benefiting from the tie to the US dollar in quelling hyperinflation and attracting records levels of direct and portfolio investment, was then hurt by the tie, first when interest rates were raised in the United States in the late 1990s, making Argentina's borrowing costs and export prices uncompetitive, and then from 2001, when the dollar tie served a means of importing the US recession into Argentina's already contracting and heavily indebted economy. Government efforts to stem capital flight and shore up investor confidence in 2001 were caught between violent popular protests and a hardening of IMF policy. After five presidents in two weeks in December 2001 (the third one carried out the default and the fifth one abandoned the convertibility system on 7 January 2002, allowing the peso to float), with widespread bankruptcies and debt repayments far outpacing new loans, the economy became even more dependent on foreign investment as a means of economic recovery.

The largest sources of FDI in Argentina have been the United States (36%, 1994–2000) and Spain (11.9%). Other important sources of FDI have been France (11%), Chile (9.8%), Italy (7.1%), the United Kingdom (6.2%), Canada, and Japan. The major destinations for FDI from 1999 to 2002 were the oil industry, telecommunications, supermarkets, the automotive industry, energy, construction, banks, insurance, chemicals, and the food industry.

Although Argentina remains a net recipient of FDI, Argentinean firms have recently begun making substantial outward investments regionally, in Brazil, Paraguay, and Uruguay. The peak year for the outward flow FDI was 1997, \$3.65 billion up from \$1.6 billion in 1996. In the recession that gripped the economy from 1998, outward FDI fell to \$2.3 billion in 1998, to \$1.3 billion in 1999, and \$1.1 billion in 2000, according to the latest available UNCTAD estimates

The United States and Spain remain the largest investors in the Argentinean economy, but the pace of investment is dwindling as compared to other years. Thus, the stock of US foreign direct investments decreased from \$11.2 billion in 2002, to \$11.0 billion in 2003. In 2003 and 2004, five US power companies abandoned the Argentinean market due to continued losses. Other US firms have substantially written down the value of their investments. On the other hand, public and private companies from China have signed letters of intent to invest almost \$20 billion over the next coming decade, in transportation, mining, construction, telecommunications, and tourism.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Argentine economic policy has undergone several cycles of change since the 1940s. During World War II (1939–45), the demand for Argentine beef and wheat boosted the country's exchange reserves to their highest point in history. Under the Perón regime (1950s), however, declining terms of trade and increasing state benefits and subsidies, as well as Perón's attempt to industrialize Argentina at the expense of the agrarian sector, disrupted the nation's economic system. Although inherently a wealthy country, Argentina, with a crushing foreign debt and a shattered economy, was nearly bankrupt.

When Perón fell in 1955, steps were taken to fund foreign obligations with long-term provisions for Argentine repayment and to create a climate favorable to private investment. Complicated multiple exchange rates were abolished, and massive financial assistance was extended by the International Monetary Fund (IMF) and other foreign agencies. Staggering deficits in the railroads and other state enterprises were a constant problem. The government sought to turn over some of these to private hands, and it also encouraged livestock raising and agricultural production, the chief earners of foreign exchange.

The government abolished many of the state subsidies and at the same time tried to hold wages steady. The austerity program fell hardest on the workers, who saw wages increase sluggishly while prices skyrocketed. They sought political solutions to the economic problems through crippling strikes, which in turn robbed the government of the increased production on which it was relying for a solution to the economic crisis. Between 1960 and 1966, the problems continued, with the government fluctuating between economic nationalism and liberal policies designed to seek foreign investment. Inflation, unemployment, and commercial failures reached new highs. Economic strife formed the backdrop for the military coup of 1966 and the suspension of the constitutional government. Despite widespread opposition, steps were taken in the late 1960s to turn over some state enterprises to private owners; other measures sought to put state-owned businesses on a paying basis.

The 1970s brought a resurgence of economic and political instability. The return to constitutional government—and especially the return of the Perónists to power in the late 1960s—brought a period of increased labor influence, extraordinary wage demands, accelerating inflation, and huge government deficits, largely financed through short-term borrowing. The government's Three-Year Plan for Reconstruction and Liberation, announced in December 1973 during Juan Perón's presidency, called for more equitable distribution of income, elimination of unemployment and underemployment, better regional distribution of wealth, and extension of government housing, health, welfare, and education programs and services.

Perón's death in July 1974 and the subsequent political instability aborted this program and led to an economic crisis. In 1978, a medium-term economic adjustment plan, based on free-market principles, was announced. It included regular devaluations of the peso, cuts in public investment, and return of some state enterprises to private ownership; but instead of improving the nation's economic performance, the new policies led to triple-digit inflation and increasing unemployment. In the fall of 1982, the government began to negotiate with the IMF for a standby loan

and committed itself to an austerity program, consisting of cuts in government spending, higher interest rates on bank loans to the private sector, and continuing regular devaluations. Additional financial controls, including a temporary ban on the issuance of new import licenses, were imposed the following autumn.

The “Austral Plan,” launched in June 1985, was an attempt by the government of President Raúl Alfonsín to break out of the stagflation that characterized the economy since 1982. The combination of a wage-price freeze, a new currency pegged to the dollar, and a commitment to austerity in public spending was initially successful in curbing inflation, although somewhat at the expense of development. Since then, the government has attempted to manage price and wage increases and has offered several public corporations for sale. Multilateral assistance to Argentina totaled \$6.3 billion between 1962 and 1986, of which 51% came from the IDB and 41% from the IBRD.

In the 1990s, the industrial sector’s performance was excellent, in particular the food processing, construction, and automotive industries. Demand for consumer durable goods was strong as a result of ample credit availability. Construction activity was boosted by infrastructure projects associated with the privatization. Sweeping privatization and a wave of investment, both foreign and local, modernized old industries and nourished new ones. Farmers started to plant more profitable products, such as garlic, fruit, and olives. A new mining code brought foreign investment to a long-neglected sector. Oil and gas output doubled, attracting investment in petrochemicals, while Mercosur encouraged a boom of car exports. A recession in 1999 caused capital flight and high interest rates. Consumption was slow to pick up, and unemployment remained at around 12%. It was estimated that nearly 40% of the workforce was employed in the black market.

A combination of Argentina’s fixed exchange rate, which made its currency uncompetitive, and continuing fiscal deficits led to the country’s economic collapse and default on the bulk of its \$141 billion in foreign debt in December 2001. The IMF at that time refused to grant Argentina an emergency \$1.3 billion loan. By 2003, the government had suspended the last remaining controls on bank savings, and eased capital controls. The 2002 devaluation of the peso by 2003 had led to growth in exports and a rise in local products being substituted for imported ones. There was a good harvest that year, industry revived, and tourism rebounded as increasing numbers of foreign tourists visited Argentina’s resorts. A standby agreement with the IMF that began in January 2003 was reviewed in June, and resulted in the release of \$320 million.

2005 was expected to be the third year of continued growth, following the deep 2002 recession. This economic expansion was expected to moderate by 2006 and 2007, as the gap between actual and potential output was narrowing. Consumption, driven by higher real incomes, was one of the main growth engines. Investments were projected to be another big contributor, although they were expected to slow after 2007. Export and import values were expected to even out as the economy fell back into its prerecession tracks.

#### 40 SOCIAL DEVELOPMENT

The election of Hipólito Yrigoyen as president of Argentina in 1916 initiated a series of profound changes in the nation’s social structure. The Radical-controlled legislature enacted a series of

economic and social measures, including a measure to establish retirement funds. Despite differences between Radical leadership and labor, limited social welfare measures were continued until 1930, when Yrigoyen was expelled from office. The Conservative regime in power for the next 13 years took little cognizance of demands for social benefits.

The next major advance in the creation of social and economic benefits was made during the government of Juan Perón, who assumed power in 1946. The 44-hour workweek that had been enacted in 1933 was for the first time put into effect. New provisions established salary increases, paid holidays, sick leave, job tenure, and many other benefits. By 1945, a National Social Security Institute administered social insurance programs and the pension system. In the early 1950s, these measures continued and were extended also to the rural sector. The failure of the Argentine welfare system to live up to Perón’s promises helped to bring about his overthrow in 1955. During the 1960s, the pension funds were often diverted for other purposes, and there was a general breakdown in the system. By 1970, many of the persons eligible for welfare payments received none at all, and the secretary of social welfare under the Levingston administration, charged former government authorities with misappropriating millions of pesos.

Most of the social legislation enacted during the Perón years has remained on the statute books. The pension laws, updated in 1993, mandates that workers pay 11% of their wages into a pension fund, and this amount was supplemented by an 16% contribution from the employer. Work injury coverage is funded solely by the employer. Unemployment benefits were introduced for construction workers in 1967 and were expanded to include all employed persons in 1991. Both public and private sector employees are covered by workers’ compensation, which is being expanded to cover domestic workers and others previously excluded from the system. There is also a prenatal allowance, and grants for marriage, birth, and adoption.

Although guaranteed equality under the constitution, women are fighting for equal advancement and pay in the labor force. Despite the government’s efforts, discrimination against women in the workplace and sexual harassment continue to be important social problems. Women are more likely to work in unskilled, low paying jobs, even though, on average, they are more highly educated. Although prohibited by law, women earn less than men for similar work. Domestic abuse and violence against women are recognized as serious social problems. It was estimated in 2004 that one-fourth of the women in Argentina were victims of domestic abuse. A battered women’s shelter and 24-hour hotline are operated by the city of Buenos Aires.

The National Council on Children and Families is working to develop child protection programs and legislation. Handicapped access to public places is specified by law aimed at eliminating barriers to the disabled, and a constitutional amendment recognizes the ethnic and cultural identities of Argentina’s indigenous people. Reports of torture and brutality by police persist.

#### 41 HEALTH

In the field of health and medical care, Argentina compares favorably with other Latin American countries. National health policy is determined by the Department of Public Health, an agency of the Ministry of Social Welfare. In 2004 Argentina had an esti-

mated 301 physicians, 80 dentists, 42 pharmacists, and 239 nurses per 100,000 people. Nutritional requirements are comfortably met and, in 2000, 79% of the population had access to safe drinking water and 85% had adequate sanitation. Health and medical services for workers are provided by clinics of unions, and employers are usually required to provide free medical and pharmaceutical care for injured workers. Total health care expenditure was estimated at 8.4% of GDP. In Argentina the private sector plays a role in the provision of health services, ensuring social security through organizations called Obras Sociales. Funding for health services comes from employee payroll taxes and contributions.

In 2005, the infant mortality rate was 15.18 per 1,000 live births. As of 1999, an estimated 7% of all births were classified as low birth weight. As of 1998 maternal mortality was estimated at 38 per 100,000 live births. The overall death rate in 1999 was 7.6 per 1,000 people. Approximately, 74% of married women (ages 15–49) used contraception.

Of the major infectious diseases, smallpox, malaria, and diphtheria have been virtually eliminated and poliomyelitis has been greatly reduced. The incidence of tuberculosis in 1999 was 55 per 100,000 people, down 47% from 20 years earlier. In the same year, one-year-old children were immunized against the following diseases: diphtheria, pertussis, and tetanus, 88%; and measles, 99%. Life expectancy averaged 75.91 years in 2005.

The HIV/AIDS prevalence was 0.70 per 100 adults in 2003. As of 2004, there were approximately 130,000 people living with HIV/AIDS in the country. There were an estimated 1,500 deaths from AIDS in 2003. Argentina reported the second-highest incidence of AIDS cases (41 per million) in South America during the mid-1990s. HIV spread rapidly throughout Argentina via intravenous drug use soon after the first cases of HIV infection were reported.

## 4<sup>2</sup> HOUSING

Economic collapse in late 2001 left at least 50% of the population below the poverty line. In early 2001, it was estimated that about 17.7% of all households lived in substandard housing units. In 2005, it was estimated that 30% of the population lived in inadequate housing.

Houses in Argentina reflect the Italian and Spanish ethnic backgrounds of the population. Except for marginal rural dwellings and urban shanty towns, concrete, mortar, and brick are favored as the principal construction materials. Wood is generally considered less durable and feared as a fire hazard.

## 4<sup>3</sup> EDUCATION

Education is free, secular, and compulsory for all children at the primary level (ages 5–14). In 1993 Argentina switched from seven years of primary and five years of secondary education to a system known as EGB, consisting of nine compulsory years divided into three-year stages. This is followed by a three-year “multimodal” course of study offering either general or specialized training. In 2003, about 60% of children ages three to five were enrolled in preprimary school programs. At last estimates, primary school enrollment was about 94% (1991) while secondary school enroll-

ment stood at about 81% (2002). The academic year runs from March to November.

Private, foreign, and religious schools are permitted, but they must conform to a nationally prescribed pattern of teaching in the Spanish language.

The Ministry of Education supervises the National Council on Technical Education and the National Administration of Middle and Higher Education. The Consejo Nacional de Evaluación y Acreditación Universitaria (CONEAU), established in 1997, oversees the external evaluations of all universities. In 2003 public expenditure on education totaled about 4% of GDP.

Traditionally, university students have played an active role in campus policy, based in part on the concept of university autonomy established in the Córdoba reform movement of 1918. Student organizations have also been outspoken in national politics, denouncing the policies of the military government in the late 1970s and early 1980s. Argentina has over 46 officially accredited universities. The largest is the University of Buenos Aires. All institutions of higher learning had a combined total enrollment of 1.9 million students as of the 2001. The adult literacy rate for 2003 was estimated at about 97%, with an even distribution between men and women.

## 4<sup>4</sup> LIBRARIES AND MUSEUMS

The National Library was founded in 1810 and has occupied its present site in Buenos Aires since 1902; in 2002 it had about 1.9 million volumes. The libraries of the University of Buenos Aires have combined holdings of over 2.5 million volumes, while the library of the National Congress has two million volumes. The Catholic University of Argentina, with five campuses, has a combined collection of 90,000 volumes. The National Academy of Medicine has a library with 50,000 volumes in Buenos Aires and the Museum of Ethnography in Buenos Aires has a specialized collection of 100,000 volumes. The Buenos Aires Stock Exchange Library has a collection of 12,000 books, along with more than 200 periodicals, CD-ROMs and videotapes, covering the topics of the stock market, finances, and economics. The National Teachers Library is an initiative of the Ministry of Education, Science and Technology, designed to serve as a national reference center for knowledge and data management within the education system. There are thousands of public and school libraries and innumerable private libraries.

The National Museum of Fine Arts in Buenos Aires contains modern Argentine, American, and European works, as well as paintings attributed to old masters, paintings of the conquest of Mexico executed 300–400 years ago, and wooden carvings from the Argentine interior. Also in Buenos Aires are the National Historical Museum; the Isaac Fernández Blanco Museum of Hispanic-American Art, which contains an interesting and valuable collection of colonial art; the Mitre Museum and Library, containing the manuscripts, documents, printed works, and household objects of Gen. Bartolomé Mitre, which constitute a unique record of Argentine political development; the Natural Science Museum; and the Municipal Museum. There are several important historical museums in the provinces, including the Colonial and Historical Museum at Luján and the Natural History Museum of the University of La Plata, which is world-famous for its important collections of the skeletons of extinct pre-Pliocene reptiles (for which the Argentine pampas form one of the richest burial grounds).

#### 45 MEDIA

In 2003, there were an estimated 219 mainline telephones for every 1,000 people. The same year, there were approximately 178 mobile phones in use for every 1,000 people. Internal telegraph facilities and some international circuits to nearby countries are wholly government operated.

As of 1999 there were 260 AM and an unspecified number of unlicensed FM radio stations. There were 42 television stations the same year stations. Many of the stations are privately owned. In 2003, there were an estimated 697 radios and 326 television sets for every 1,000 people. The same year, there were 82 personal computers for every 1,000 people and 112 of every 1,000 people had access to the Internet. The number of secure Internet servers in 2004 was about 386.

Buenos Aires is one of the principal editorial centers of the Spanish-speaking world, with more than 50 publishing houses. Numerous literary magazines and reviews, as well as books, are published. Press coverage in Argentina is one of the most thorough in the hemisphere, with over 150 daily newspapers published throughout the country. At least three news agencies were operating in 2005: Noticias Argentinas, coordinated by a group of privately owned newspapers; TELAM, run by the state; and Diarios y Noticias, owned in part by Grupo Clarin. The major international news services were also represented.

*La Prensa* is probably the most famous newspaper in Latin America. Throughout the early days of the Perón regime, *La Prensa* battled the dictatorship, but it was finally taken over forcibly by Perón and given to the CGT, the dictator's central labor organization. The provisional government of Gen. Eduardo Lonardi returned *La Prensa* to its rightful owner, Alberto Gainza Paz, and it resumed publication in February 1956. In 1969, the Onganía government imposed siege regulations on the press, and in August of that year, two weekly papers were closed down. After the 1976 coup, no formal censorship was introduced, but some journalists were arrested for "subversive" articles. With the restoration of democratic government, harassment of the media stopped.

The largest dailies, with their estimated daily circulation figures in 2004, included: *La Nación*, 250,000 (down from 630,000 in 2002); *Clarín*, 300,000 (down from 560,000 in 2002); *Diario Popular*, 140,000; *El Cronista*, 65,000; *La Voz del Interior*, 100,000; *La Gaceta*, 55,000; *El Día* (La Plata), 55,000; and *El Litoral*, 37,000. The Sunday edition of *Clarín* had a circulation of about 300,000, down from the one million copies reported in 2002.

#### 46 ORGANIZATIONS

Argentine organizations fall into the following main categories: agricultural, business and industrial, social and cultural, and political and humanitarian action. The Argentine Agricultural Association, established in 1866, with a membership predominantly of owners of large ranches (estancias), occupies itself mainly with the improvement of agricultural and livestock production. The Argentine Association of Cooperatives and the Argentine Agrarian Federation also represent rural interests. The Milk Industry Center and the Argentine Meat Industry Union are based in Buenos Aires.

Social and leisure organizations are found in almost every community of any size. The Athletic and Fencing Club in Parque Palermo, a suburb of Buenos Aires, has extensive recreational facilities.

The Argentine capital also sponsors numerous clubs in the delta region. At the other social extreme is the exclusive Jockey Club of Buenos Aires, with a wealthy membership. There are several yacht clubs. The Automobile Club operates a chain of service and rest stations throughout the country, giving travel information and selling gasoline at a slight discount.

Many intellectuals belong to the Argentine Writers' Society. The Academia Nacional de Bellas Artes, Argentine Academy of Letters, the National Academy of History, and the National Arts Foundation support and encourage activities in the arts and humanities.

Industrialists and business leaders participate in the Argentine Industrial Union, which originated in 1887 and was reestablished in 1977 through the merger of the Argentine Industrial Confederation and the General Confederation of Industry. The leading chambers of commerce in 1993 were the Argentine Chamber of Commerce; the Chamber of Commerce, Industry, and Production of the Argentine Republic; the Chamber of Foreign Trade of the Federation of Trade and Industry; and the Chamber of Exporters of the Argentine Republic. Argentina also has a committee with the International Chamber of Commerce. There are three national consumers organizations and a regional office for the Consumers Association of Mercosur is in the capital. There are professional associations representing a wide variety of fields, including dozens of medical and health associations.

Youth organizations supporting a variety of political and social interests include: the Federation of Argentine University Students (FUA, founded in 1918), the Argentine Youth Hostel Federation, Argentine Student Tourism Association, Youth of the Popular Socialist Party, Youth of the Radical Civic Union, Communist Youth Federation of Argentina (FJCA), the Latin American Youth for Democracy (JULAD), Scouts de Argentina, and Asociación Guías Argentinas (Girl Guides). There are also organizations representing the Special Olympics and both the YMCA and YWCA. Organizations focusing on the rights and role of women include Equal Rights for Argentine Women, the Foundation for Women's Equality, and the Foundation for Women's Research and Studies.

Greenpeace, Amnesty International, Caritas, Friends of the Earth, and the Red Cross have organizations within the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

The government promotes tourism through the National Tourist Bureau, with headquarters in Buenos Aires. Visitors from all countries are required to have a passport to enter Argentina, although Australians and New Zealanders must also have a visa. There are no required vaccines to enter Argentina.

Mar del Plata, on the southern Atlantic coast about 400 km (250 mi) from Buenos Aires, is the most popular ocean resort. The delta of the Río Paraná, forming a series of inland waterways, is a center for pleasure boats and launches. Córdoba, with its fine colonial cathedral, and nearby Alta Gracia attracts many visitors. San Carlos de Bariloche, at the entrance to Nahuel Huapi National Park in the Andean lake region of western Patagonia, has become famous as a summer and winter resort, with some of the best skiing in the Southern Hemisphere. The Iguazú Falls, in the province of Misiones, on the border of Argentina and Brazil, is a major tourist attraction. Mendoza, situated in a fertile oasis below the towering Andes, offers such historical attractions as the Cerro de la Gloria, with its monument to San Martín, and the Historical Museum, with its collection on San Martín.

The most popular sport is football (soccer). Tennis, rugby, basketball, and golf are also played. Opportunities for gambling include a weekly lottery, football pools, horse racing at the Palermo and San Isidro tracks (in Buenos Aires), and the casino at Mar del Plata, whose profits go to the Ministry of Social Welfare.

In 2003, about 2,995,000 foreign tourists visited Argentina, 65% of whom came from other countries in South America. Receipts from tourism were estimated at \$2.4 billion. As of that year, there were 174,629 hotel rooms with 417,995 beds.

The US Department of State estimated the daily cost of staying in Buenos Aires in 2005 at \$228 per day. Expenditures at other locations averaged \$175 per day.

#### 48 FAMOUS ARGENTINES

The most famous Argentine is José de San Martín (1778–1850), known as the Protector of the South, who was principally responsible for freeing southern South America from the Spanish yoke.

The tyrannical dictator Juan Manuel de Rosas (1793–1877) ruled Argentina from 1829 to 1852. The political tactics and the pen of the statesman and essayist Domingo Faustino Sarmiento (1811–88) did much to undermine him. While in exile, Sarmiento wrote some of his best works, including *Facundo*, the story of a rival caudillo. The most literary of Argentina's statesmen was Gen. Bartolomé Mitre (1821–1906), who was president from 1862 to 1868. Mitre, the founder and owner of the newspaper *La Nación*, wrote several important historical works and biographies. The most famous Argentine political figures of modern times have been Juan Domingo Perón Sosa (1895–1974) and his second wife, Eva Duarte de Perón (1919–52), known as "Evita." Perón's third wife, María Estela ("Isabel") Martínez de Perón, was vice-president during 1973–74 and, after her husband's death, president from 1974 to 1976.

José Hernández (1834–86), one of the first Argentine literary figures to use the uncultured language of the gaucho in his writings, is the author of *Martín Fierro*, considered the greatest of gaucho poems. Ricardo Güiraldes (1886–1927) kept the "gauchesco" spirit alive in his novel *Don Segundo Sombra*, a spiritual study of an Argentine gaucho. A less romantic view of these hardy horsemen of the pampas appears in the writings of Benito Lynch (1885–1951). The works of the poet Leopoldo Lugones (1874–1938) form a panorama of all Argentine life and landscape. José Mármol (1817–71) gave a good description of life in Buenos Aires under the tyrant Rosas in his novel *Amalia*, and Enrique Rodríguez Larreta (1875–1961) wrote the first Latin American novel to win international fame, *La gloria de Don Ramiro*, a reconstruction of Spanish life during the reign of Philip II. The leading contemporary writer of Argentina is Jorge Luis Borges (1899–1986), best known for his essays and collections of tales such as *Historia universal de la infamia*. Other world-famous writers are Julio Cortázar (1914–84) and Adolfo Bioy Casares (1914–1999). Outstanding in the visual arts are the sculptor Rogelio Irurtia (1879–1950) and the painters Miguel Carlos Victorica (1884–1955) and Emilio Pettoruti (1892–1971). Argentina's foremost composers are Alberto Williams (1862–1952), founder of the Buenos Aires Conservatory; Juan José Castro (1895–1968); Juan Carlos Paz (1901–72); and Alberto Ginastera (1916–83). Ástor Piazzolla (1921–92), is regarded as the world's foremost composer of modern tango music. A bandoneon player, his compositions incorporated jazz and

classical music with the traditional tango in a style called *nuevo tango*. In Argentina, he is regarded as "El Gran Ástor" ("The Great Ástor"). Piazzolla is credited with having redefined the music of tango singer Carlos Gardel (1890–1935). Another important Argentine musician is pianist Martha Argerich (b.1941), who avoids the limelight but is recognized as one of the great piano virtuosos of the 21st century. Pianist and composer Lalo Schifrin (b.1932) composes music for film, television, and video games. He has won numerous Grammy Awards and Oscar nominations.

The most famous Argentine scientist, Bernardo Alberto Houssay (1887–1971), was awarded the 1947 Nobel Prize in medicine for his work on diabetes; French-born Luis Federico Leloir (1906–87) won the Nobel Prize for chemistry in 1970. Notable philosophers include Alejandro Korn (1860–1936), whose work marked a reaction against positivism, and Francisco Romero (1891–1962). Carlos Saavedra Lamas (1878–1959), an authority on international law, received the Nobel Prize for peace in 1936. Adolfo Pérez Esquivel (b.1931), a sculptor and professor of architecture, received the Nobel Peace Prize in 1980 for his work in the Argentine human-rights movement.

#### 49 DEPENDENCIES

Argentina continues to claim the Falkland Islands (Islas Malvinas), held by the United Kingdom, and a sector of Antarctica as dependencies.

# THE BAHAMAS

Commonwealth of the Bahamas

**CAPITAL:** Nassau

**FLAG:** Three horizontal stripes of blue, gold, and blue, with a black triangle at the hoist.

**ANTHEM:** *March on Bahamaland.*

**MONETARY UNIT:** The Bahamas dollar (B\$) of 100 cents has been in use since May 1966. As of June 1972, the Bahamas dollar ceased to be part of the sterling area and was set on a par with the US dollar. There are coins of 1, 5, 10, 15, 25, and 50 cents, and 1, 2, and 5 dollars, and notes of 50 cents and 1, 3, 5, 10, 20, 50, and 100 dollars. B\$1.00000 (or US\$1=B\$1; as of 2004).

**WEIGHTS AND MEASURES:** Imperial weights and measures are in use.

**HOLIDAYS:** New Year's Day, 1 January; Labor Day, first Friday in June; Independence Day, 10 July; Emancipation Day, first Monday in August; Discovery Day, 12 October; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, and Whitmonday.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The Commonwealth of the Bahamas occupies a 13,940 sq km (5,382 sq mi) archipelago which extends 950 km (590 mi) SE–NW and 298 km (185 mi) NE–SW between southeast Florida and northern Hispaniola. Comparatively, the area occupied by the Bahamas is slightly smaller than the state of Connecticut. There are nearly 700 islands, of which about 30 are inhabited. New Providence, 207 sq km (80 sq mi), although not the largest, is by far the most populous and most densely populated island. The total coastline is 3,542 km (2,201 mi).

The Bahamas occupy a strategic location adjacent to the United States and Cuba.

The Bahamas' capital city, Nassau, is located on New Providence Island in the center of the island group.

## <sup>2</sup> TOPOGRAPHY

The Bahamas were formed as surface outcroppings of two oceanic banks, the Grand Bahama Bank and the Little Bahama Bank. The islands are for the most part low and flat, rising to a peak elevation of about 63 m (206 ft), which is Mt. Alvernia on Cat Island. The terrain is broken by lakes and mangrove swamps, and the shorelines are marked by coral reefs.

## <sup>3</sup> CLIMATE

The climate is pleasantly subtropical, with an average winter temperature of 23°C (73°F) and an average summer temperature of 27°C (81°F). Rainfall averages 127 cm (50 in) and there are occasional hurricanes.

## <sup>4</sup> FLORA AND FAUNA

Because of a favorable combination of soil and climate conditions, the islands abound in such tropical flora as bougainvillea, jasmine,

oleander, orchid, and yellow elder. Native trees include the black olive, casuarina, cascarilla, cork tree, manchineel, pimento, and seven species of palm. There are 218 species and subspecies of birds, including flamingos, hummingbirds, and other small birds and waterfowl.

## <sup>5</sup> ENVIRONMENT

Among the government's priorities in environmental protection are monitoring industrial operations, providing potable water and regular garbage collection throughout the country, maintenance and beautification of public parks and beaches, and the removal of abandoned vehicles. Other significant environmental issues are the impact of tourism on the environment, coral reef decay, waste disposal, and water pollution. The principal environmental agency is the Department of Environmental Health Services. A rookery on Great Inagua affords protection to some 30,000 flamingos as well as to the roseate spoonbill. Land clearing for agricultural purposes is a significant environmental problem because it threatens the habitats of the nation's wildlife. Inagua National Park is a Ramsar international wetland site.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 5 types of mammals, 10 species of birds, 6 types of reptiles, 15 species of fish, and 5 species of plants. Endangered species included Kirtland's warbler, Bachman's warbler, the green sea turtle, hawksbill turtle, Allen Cays rock iguana, and Watling Island ground iguana. The Caribbean monk seal and American crocodile are extinct.

## <sup>6</sup> POPULATION

The population of Bahamas in 2005 was estimated by the United Nations (UN) at 319,000, which placed it at number 167 in popu-

lation among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 30% of the population under 15 years of age. There were 95 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.2%; while the government is satisfied with this rate, it is concerned about high adolescent fertility. The projected population for the year 2025 was 398,000. The population density was 23 per sq km (60 per sq mi).

Only 30 to 40 of the islands are inhabited, and some two-thirds of the population reside on the island of New Providence, the site of Nassau, the capital and largest city with a population of 222,000 in 2005. The UN estimated that 89% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.17%. The population of Freeport on Grand Bahama Island grew from a few hundred in 1960 to an estimated 24,423 in the 1990s.

The first census was conducted in 1838, and in 1980 a law was passed requiring one to be conducted every ten years.

## 7 MIGRATION

Emigration to the United Kingdom, considerable in the past, has fallen off since the mid-1960s. Some Bahamians migrate to the United States in search of employment. There is also inter-island migration, chiefly to New Providence and Grand Bahama islands.

Located between the United States and other Caribbean islands, the country's position has made it a transit point for migrants, including asylum seekers, trying to reach the United States. An estimated 100 Cuban nationals seek asylum in the Bahamas each month. The estimated net migration rate of the Bahamas was -2.18 migrants per 1,000 population in 2005. As of 2000 there were 30,000 migrants living in the Bahamas, including 100 refugees. There has also been an increasing number of asylum seekers from Europe, Asia, and Africa.

In 2004, the government spent us\$521, 000 repatriating 3,034 illegal immigrants, including 2,500 Haitians. An estimated us\$678,000 was spent on repatriation in 2003. Besides Haitians, there are increasing numbers of other nationalities—such as Cubans, Jamaicans, and Chinese—illegally landing in the Bahamas.

## 8 ETHNIC GROUPS

About 85% of the population are descendants of slaves brought to the Western Hemisphere from Africa. About 12% of the total is white, largely of British origin, and 3% are Asian and Hispanic.

## 9 LANGUAGES

English is the official language of the Bahamas. Haitian immigrants speak French or a Creole patois.

## 10 RELIGIONS

As of 2000, at least 90% of the population claimed religious affiliation, and most accounts indicated that these were generally active participants. The population was overwhelmingly Christian, with Baptists comprising about 35%. About 15% of the population were Anglicans and about 24% belonged to other Protestants groups such as Pentecostals (8%), the Church of God (5%), the Method-

ists (4%), the Presbyterians, Seventh-Day Adventists, and members of the Salvation Army. About 13.5% of the population were Roman Catholics. There is also a strong Greek Orthodox community. Smaller groups include Jews, Baha'is, Muslims, Hindus, and Rastafarians.

The constitution provides for the freedom of religion and this right is generally respected in practice. Religion, with a focus on Christianity, is considered an academic subject in government schools. Although students may freely choose not to participate in religious instruction or observance outside of their own faith, the topic is included in mandatory standardized tests.

## 11 TRANSPORTATION

The larger islands have modern road networks. In 2002 there were about 2,693 km (1,673 mi) of highways, of which 1,546 km (961 mi) were paved. There were 83,500 passenger cars and 27,000 commercial vehicles in 2003. About 60% of all vehicles are on New Providence. There are no railways.

The Bahamas established a shipping register in 1976. In 2005, this archipelago nation had a merchant fleet of 1,119 ships of 1,000 GRT or over. Nassau is a major port of call for cruise ships, which visit Freeport as well. Airports in 2004 totaled an estimated 63. Of that number in 2005, a total of 30 had paved runways and there was also a single heliport. There are international airports at Nassau and Freeport, with frequent connections to the United States, Canada, and the United Kingdom. In 2001, a total of 1,625,700 passengers were carried on scheduled domestic and international airline flights. Bahamas Air, a state-owned enterprise, is the national airline.

## 12 HISTORY

Christopher Columbus is believed to have made his first landfall on the island now called San Salvador (formerly Watlings Island) on 12 October 1492, but the Spanish made no permanent settlement there. Spanish traders captured the native Lucayan Indians and sold them as slaves. The Eleutherian Adventurers, a group of religious refugees, established the first permanent European settlement in 1647. They and subsequent settlers imported blacks as slaves during the 17th century. The islands were also used as bases for pirates, including the notorious Blackbeard.

The British established a crown colony to govern the islands in 1717. The first royal governor, Captain Woodes Rogers, himself an ex-pirate, drove away the privateers, leaving the slave trade as the main economic enterprise on the islands.

After the end of slavery in 1838, the Bahamas served only as a source of sponges and occasionally as a strategic location. During the US Civil War, Confederate blockade runners operated from the islands. After World War I, prohibition rum-runners used the islands as a base. During World War II, the United States used the islands for naval bases.

Like other former British colonies, the Bahamas achieved independence in stages. After self-government was established in 1964, full independence was granted on 10 July 1973. The country's first prime minister was Lynden O. Pindling, leader of the Progressive Liberal Party. Pindling ruled for nearly 20 years, during which the Bahamas benefited from tourism and foreign investment. By the early 1980s, the islands had also become a major center for the

drug trade, with 90% of all the cocaine entering the United States reportedly passing through the Bahamas. Diplomatic relations were established with Cuba in 1974. A decade later, as increased Cuban immigration to the islands strained the Bahamas' resources, Cuba refused to sign a letter of repatriation.

In August 1992, the Bahamas had its first transfer of political power, when Hubert Ingraham became prime minister. Ingraham was reelected in March 1997 for another four-year term. The principal focus of his administration was economic development and job creation. Under Ingraham's watch, a number of government enterprises were privatized. In September 1999, Hurricane Floyd did extensive damage in the Abacos and Eleuthera, causing a significant dip in tourism revenues. Tourism operations in other parts of the Bahamas were able to resume normal operations days after the Category-4 storm. Also during Ingraham's administration, a stock exchange, Bahamas International Securities Exchange, officially opened (15 December 1999); trading in local companies was initiated in May 2000 and in mutual funds in April 2001.

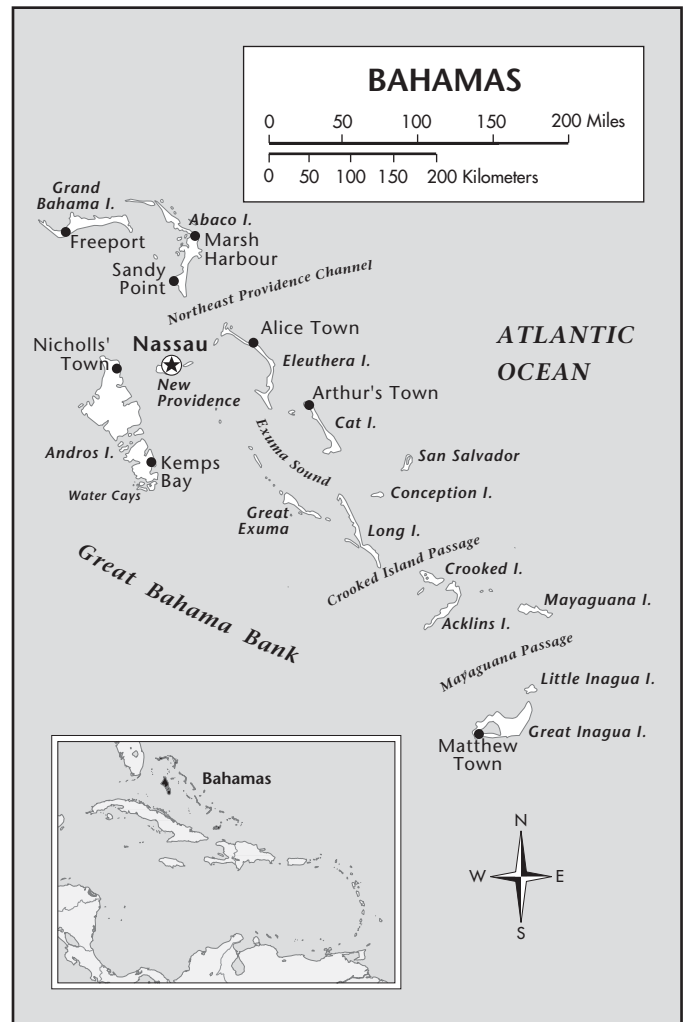

In the May 2002 election, the PLP came back to power and its leader Perry Christie became the new prime minister. Christie promised to bring about more economic development to the tourism-dependent economy. He also vowed to further develop the country's fast-growing financial industry. Christie actively broadened the Bahamian political sphere by establishing diplomatic relations with Singapore (December 2004), Pakistan (February 2005), Sri Lanka (July 2005), and the Czech Republic (July 2005), as well as, opening the door for Sino-Bahamas bilateral ties with a visit to China. On 4 February 2005, the Bahamas signed the Comprehensive Nuclear Test Ban Treaty (CTBT) banning any nuclear weapon test explosion in any environment. The total number of signatories was then 175 worldwide, with 28 in the Latin America and the Caribbean Region.

In September 2004, Hurricane Frances swept through the Bahamas, leaving widespread damage in its wake. Just three weeks later, Hurricane Jeanne flattened the islands. Jeanne uprooted trees, blew out windows, and sent seawater flooding through neighborhoods on the islands of Abaco and Grand Bahama. Receding floodwaters left boats tossed on roads and homes battered.

On 3 May 2005 Christie suffered a stroke. Although rest was indicated, within weeks he returned to a reduced schedule of official duties. General elections were scheduled for no later than 2 May 2007, but in September 2005 Christie hinted that the next elections were "not too far down the 'political highway.'"

### 13 GOVERNMENT

Under the constitution of 10 July 1973, the Bahamas adheres to a republican form of government, formally headed by the British sovereign, who is represented by a governor-general. In 2001, at age 71, Dame Ivy Dumont became the Bahamas' first woman governor-general. Executive authority is vested in a prime minister and a cabinet. The bicameral legislature consists of a 16-member Senate, appointed by the governor-general (9 on the advice of the prime minister, 4 on the advice of the opposition leader, and 3 at the governor's discretion), and an elected 40-member House of Assembly. The prime minister is the leader of the majority party in the House. The normal span of the elected legislature is five years,

LOCATION: 20°50' to 27°25' N; 72°37' to 82°32' W. TOTAL COASTLINE: 3,542 kilometers (2,201 miles) TERRITORIAL SEA LIMIT: 3 miles.

but, as in the United Kingdom, elections can be called at any time. Suffrage is universal at age 18.

### 14 POLITICAL PARTIES

The Progressive Liberal Party (PLP), a leader in the pro-independence movement, emerged as the Bahamas' majority party in the early 1970s. The Free Progressive Liberal Party, a splinter group formed in 1970, merged with another opposition group, the United Bahamian Party, to form the Free National Movement (FNM). After years of loyal opposition, the FNM took power in 1992, winning 32 seats to 17 for the PLP. In the 1997 elections, the FNM increased its majority to 34 seats and another seat was added in a by-election later the same year. Meanwhile PLP representation in the House dwindled to six seats and Lynden Pindling resigned as party leader. In 2002, under the leadership of Perry Christie, the PLP won 50.8% of the vote and 29 seats in the 40-member legislature, enough to command majority control.

## 15 LOCAL GOVERNMENT

There are 21 administrative districts, consisting of various islands and groups of islands. A commissioner responsible to the national minister of local government heads each.

## 16 JUDICIAL SYSTEM

British common law forms the basis of the Bahamas' judicial system. The highest court is the Court of Appeal, consisting of three judges. The Supreme Court is composed of a chief justice, two senior justices, and six justices. The governor-general makes High Court appointments. Ultimate appeals go to the Privy Council of the United Kingdom. In 2003 the Bahamas was not among the eight Caribbean nations that ratified a treaty to establish the Caribbean Court of Justice to handle some cases formerly heard by the Privy Council. Lower courts include three magistrates' courts on New Providence and one on Freeport. For other islands, commissioners decide minor criminal and civil cases.

The judiciary is independent. The executive branch with the advice of the Judicial and Legal Services Commission appoints judges.

Long pretrial detentions are not uncommon in cases involving narcotics. In 1993, new magistrate's courts were established in order to work toward a reduction of backlogs requiring long pretrial detentions. A new Supreme Court was established in Freeport in addition to the Supreme Court in Nassau.

The lowest level courts are magistrate's courts, which handle crimes with a maximum sentence of five years. The Supreme Court handles most major cases as the trial court. Jury trial is only available for the Supreme Court cases.

Criminal defendants have the right to an attorney, but government appointed counsel is provided only in capital cases. There is also a right to be brought before a magistrate within 48 hours, a right to bail, a presumption of innocence, and a right to appeal.

The constitution prohibits torture and other cruel punishment. However, in 1991, corporal punishment was reinstated after having been abolished for seven years. Capital punishment is still used despite protests from the United Kingdom, which has requested its former colonies to eliminate the death penalty.

## 17 ARMED FORCES

The Royal Bahamian Defence Force in 2005 consisted of 860 active personnel including 70 women. They operate 7 patrol/coastal vessels 7 logistics/support ships, and 4 transport aircraft. The defense budget totaled \$32 million in 2005.

## 18 INTERNATIONAL COOPERATION

The Bahamas joined the UN on 18 September 1973 and belongs to ECLAC and several nonregional specialized agencies. The Bahamas is an observer in the WTO (2001). It is a member of the Commonwealth of Nations, the ACP Group, CARICOM, G-77, LAES, and OAS. It is also a part of the Alliance of Small Island States (AOSIS), the Association of Caribbean States (ACS), and the Inter-American Development Bank. The Bahamas is a member the Nonaligned Movement and of the Agency for the Prohibition of Nuclear Weapons in Latin American and the Caribbean (OPANAL). The country is a signatory of the 1947 Río Treaty. In environmental cooperation, the Bahamas are part of the Basel Con-

vention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Tourism and financial services drive the Bahamas economy. Tourism, the mainstay of the economy, directly or indirectly involves about half of the population and accounts for about 40% of GDP, with an additional 10% coming from tourism-related construction. More than five million tourists visited the Bahamas in 2004, 87% from the United States.

The reliance on tourism, particularly from the United States, makes the Bahamas vulnerable not only to worldwide economic shocks such as the decline in travel that followed the 11 September 2001 attacks on the United States but also to cyclical slowdowns that occur in the US economy.

The absence of direct taxation makes the Bahamas a financial haven for banking and trust companies, mutual funds, investment firms, and offshore sales and insurance companies. The financial services sector made up about 15% of GDP in 2004, constituting the second most important activity in the Bahamas economy. According to the US State Department, the Bahamas government had 262 banks and trust companies as of 2005. However, legislative measures passed since 2000 to better regulate money laundering have led to the closure of some offshore banks and international business companies since 2002. The government is considering new legislation that would keep the financial sector competitive while continuing to comply with international standards.

Besides tourism, tourism-related construction, and financial services, other contributors to GDP include government spending (20%), manufacturing (8%), and agriculture and fisheries (3%). Local companies produce a small array of exports, including salt, aragonite, cement, timber, pharmaceuticals, petroleum products, and rum. Agricultural and fisheries products—which include fruits, vegetables, lobster and fish—are produced mainly for domestic consumption.

After a decade of slow growth, the economy began to pick up in the mid-1990s due to increased private investment in tourism, shipping, construction and the expansion of financial services. Renewed economic buoyancy followed privatization of major hotels in 1994 and completion of major renovations by the new owners since, as well as increased marketing and an improved foreign investment regime. Real GDP growth, at 3–3.5% in 1997 and 1998, increased to 6% and 5% in 1999 and 2000. The global economic slowdown in 2001 and particularly, in tourism, after the 11 September 2001 terrorist attacks on the United States, reduced growth to 3.5% in 2001. However, since 2002, the government has attempted to stabilize its tourism services base through an encouragement of large-scale private sector investments. Still, GDP growth has not kept up with its 1999 pace, and was reported at 3% in 2004 and 2005. The US State Department predicted that plans to develop tourism on the Family Islands, expand ship-repair facilities, and encourage film production would help stabilize the Bahamas economy for the long-term.

Steady economic growth has brought a steady decline in unemployment: from 11.5% in 1996 to an estimated 6.9% in 2001. Unemployment has climbed in recent years, however, and was 10.2%

in 2004. Inflation remained low, averaging 1.27% from 1996 to 2001. Inflation was 1.2% as of September 2004.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 The Bahamas' gross domestic product (GDP) was estimated at \$5.7 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$18,800. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2004 was 1.2%. It was estimated that agriculture accounted for 3% of GDP, industry 7%, and services 90%.

Approximately 32% of household consumption was spent on food, 5% on fuel, 3% on health care, and 8% on education.

## 21 LABOR

The total number of workers was put at 156,000 in 1999 (the latest year for which data was available). Of that total in that same year, an estimated 50% were employed in tourism-related activities, with another 40% in other service industries. The remaining 10% of workers were equally distributed between industrial and agricultural employment. In 2004, the unemployment rate in the Bahamas was estimated at 10.2%.

Labor unions operate with constitutional protection, and approximately 25% of the workforce belongs to a union. In the important hotel industry, 80% of the workers are union members. The three leading union federations are the Trade Union Congress, the National Workers Council of Trade Unions and Associations, and the National Congress of Trade Unions. Members of the police force, defense force, fire brigade, and prison guards are not permitted to unionize. All labor unions have the right to affiliate with international trade organizations.

In 2000 (the latest year for which data was available), the government set a minimum wage for all hourly and temporary workers in the public sector at us\$4.45 per hour, and in 2002 (the latest year for which data was available), a minimum wage for private sector employees was set at us\$4.00 per hour. The law limits the regular workweek to 40 hours, requires time-and-a-half overtime pay over that limit, and a standard 24-hour rest period. The Ministry of Labor promulgates minimum health and safety standards. It enforces these standards with routine inspections, and the standards are generally respected by employers. Children under the age of 14 are not permitted to work in industry or during school hours. Children under the age of 16 are not permitted to work at night.

## 22 AGRICULTURE

Agriculture is carried out on small plots throughout most of the islands. Only about 1% of the land area is cultivated. The nature of the terrain limits the scope of farming, which is mainly a household industry. The main crops are vegetables: onions, okra, and tomatoes, the last two raised mainly for export. Inadequate production has necessitated the import of some 80% of the islands' food supply. Among steps the government has taken to expand and improve agriculture is the reserving of 182,000 hectares (450,000 acres) exclusively for farming, 8,000 hectares (20,000 acres) of

which were converted to fruit farming. Export-oriented orange, grapefruit, and cucumber production occurs on Abaco. Agricultural products in 2004 included 55,500 tons of sugar cane, 13,000 tons of grapefruit, 8,700 tons of lemons and limes, 5,000 tons of tomatoes, and 880 tons of sweet potatoes.

## 23 ANIMAL HUSBANDRY

Except for poultry and egg production, the livestock industry is relatively insignificant. In 2004, the livestock population included 750 head of cattle, 6,500 sheep, 14,500 goats, 15,000 hogs, and 3,000,000 poultry. About 700 tons of cow's milk, 1,050 tons of goat's milk, and 900 tons of eggs were produced in 2004. Poultry production in 2004 (8,050 tons) accounted for almost all domestic meat production. In December 1991, the government banned foreign chicken, in order to protect local poultry producers from cheaper imports, mainly from the United States.

## 24 FISHING

The 2003 catch amounted to 12,736 tons, over 81% of which was spiny lobsters (crayfish). Crayfish and conch exports are commercially important. There is excellent sport fishing for wahoo, dolphin fish, and tuna in Bahamian waters. In 2003, fisheries exports totaled \$93.8 million. Since the Bahamas imports 80% of its food, the government is interested in expanding the role of domestic commercial fishing. Aquaculture and mariculture development are planned to grow into a \$150 million annual business by the government, with the anticipation of 15,000 new jobs created. In 2003, fishery exports accounted for 25% of agricultural exports.

## 25 FORESTRY

Caribbean pine and cascarilla bark are the major forestry products, but there is no commercial forestry industry. About 32% of the total land area consists of forests and woodlands. Roundwood production in 2003 totaled 17,000 cu m (600,000 cu ft). That year, the Bahamas imported \$21.3 million in wood and forest products.

## 26 MINING

The mineral sector played a minor role in the economy of the Bahamas. Salt and aragonite stone, a component in glass manufacture, were the two most commercially important mineral products. Estimated 2003 production had figures of 900,000 metric tons for salt and 1.2 million metric tons for aragonite, figures which have remained unchanged since 1999. The major salt producer on the Islands was Morton Bahamas Salt Company, the only major industry and the largest employer on the island of Inagua, where the second-largest solar saline operation in North America was located. Limestone sand was produced by Freeport Aggregate Ltd. for the local construction industry.

## 27 ENERGY AND POWER

Most electricity is produced at thermal plants owned by the Bahamas Electricity Corp. Production totaled 1.716 billion kWh in 2002 with capacity for that year at 401,000 kW. Fossil fuel accounts for all power production. Electricity consumption in 2002 was 1.596 billion kWh. In 1991, a 28,000 kW upgrade was initiated at the Clifton Power Plant on the west end of New Providence

Island. Gas turbines were added to the Blue Hill Power Station and were operational in late 2002 and early 2003.

## 2<sup>8</sup> INDUSTRY

A few Bahamas-owned industrial companies dominate this sector: the BORCO oil facility, based in Freeport; the Commonwealth Brewery in Nassau, which produces Heineken, Guinness, and Kalik beers; and Bacardi Corp., which distills rum in Nassau for shipment to US and European markets. In addition, a formerly US-owned pharmaceuticals company now operates in Freeport as PFC Bahamas and is owned by the Swiss pharmaceutical company Roche. In addition to these companies, sun-dried sea salt and aragonite (a form of limestone) are produced. Cruise ship repairs are carried out at a wet dock facility in Freeport.

Large-scale oil refining began in 1967 with the installation of a large refinery on Grand Bahama with a daily capacity of 500,000 barrels, but by 2000 no oil was being refined. The BORCO facility now services primarily as a resource for regional oil transshipments.

A duty-free zone and nearly industrial park in Freeport have been established to encourage foreign industrial investment. Through these efforts, Hong Kong-based Hutchison Whampoa opened a container port. The Bahamian Parliament approved legislation in 1993 that extended most Freeport tax and duty exemptions through 2054.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Agricultural research facilities include the Bahamas Agricultural Research Center, Central Agricultural Station, and the Food Technology Complex.

## 3<sup>0</sup> DOMESTIC TRADE

Lack of a strong production infrastructure means that most of what residents of the Bahamas consume comes from outside the country, mainly from the United States. Shopping hours are from 9 AM to 5 PM, except Sunday. Banks are open from 9:30 AM to 3 PM, Monday–Thursday, and from 9:30 am to 5 PM on Friday.

## 3<sup>1</sup> FOREIGN TRADE

The United States is the Bahamas' major trading partner and takes 77.5% of its exports. Other trading partners include EU (17.6%), Canada (1.6%) and Mexico (0.4%). Trade agreements that the Bahamas participates in the Caribbean Basin Initiative (CBI), the Caribbean-Canada Agreement (CAIBCAN), and the Lomé Convention.

Exports include pharmaceuticals, cement, rum, crawfish, and aragonite.

Foods, manufactured goods, hotel, restaurant, and medical supplies; and computers and electronics are all imported. In 2004, 83.3% of the imports came from the United States, with small amounts coming from Venezuela (5.5%), the Netherlands Antilles (2.6%), the EU (2.1%) and Japan (1.2%). Nassau is the principal distribution and import center.

## 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reported that in 2005 the GDP of the Bahamas was \$5.685 billion. Exports totaled \$1.507 billion in 2004, while imports totaled \$5.804 billion, result-

ing in a significant trade deficit. Although the Bahamas remains an import-oriented economy, income from tourism and financial services is a vital offsetting factor in the country's balance-of-payments position. The CIA described the Bahamas economy as "stable" and "developing."

An International Monetary Fund (IMF) statement on the Bahamas in 2005 reported an increase in the country's net international reserves, which strengthened the Bahamas' position on balance of payments. Net international reserves rose through early 2005, which also helped increase the size of excess bank reserves.

## 3<sup>3</sup> BANKING AND SECURITIES

Banking started in the Bahamas in 1837, when the first commercial bank opened in New Providence. The Central Bank of the Bahamas, established in 1973, is the central issuing and regula-

tory authority. Funds for local development are made available through the Bahamas Development Bank.

Low taxation and lenient regulations have encouraged the establishment of about 420 financial institutions in the country in 2000, half of which operate offshore banks, dealing exclusively with nonresidents. The banking sector accounts for more than 20% of GDP. Many of the loans of domestic banks are denominated in foreign currency. Major Bahamian banking institutions include Bank of the Bahamas Limited, Barclay's Bank, British-American Bank, Canadian Imperial Bank of Commerce (CIBC), Citibank, Commonwealth Bank, and the Royal Bank of Canada. Anti-money laundering acts have provided for the security of the banking sector.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$767.0 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.6 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 5.75%.

The Bahamas International Securities Exchange (BISX) opened in 2000. It opened in two phases; domestic stocks (from about 20 companies listing an estimated \$30 billion in shares) followed by international offerings. In April 2001 the BISX launched a mutual fund listing facility. In 2003 there were 17 public companies listed on the exchange.

### 34 INSURANCE

The establishment of a large number of insurance firms in the Bahamas has been encouraged by a 1970 law that permits companies to conduct part or all of their business out of the country while still benefiting from local tax advantages. The government is encouraging the formation of “captive” insurance companies created to insure or reinsure the risks of offshore companies. In 1997, there were approximately 30 captive insurers in the Bahamas. Supervisory jurisdiction is provided by the Ministry of Finance, Registrar of Insurance Companies. In 2003, the value of direct premiums written totaled \$405 million, with life accounting for the largest portion at \$223 million. Royal & SunAlliance was the country's top nonlife insurer with gross nonlife written premiums totaling \$84.8 million.

### 35 PUBLIC FINANCE

The Bahamian government budget receives revenues primarily from import duties (65%), but Hemispheric Free Trade scheduled for 2005 was expected to greatly reduce revenues. The government has looked for other sources of funds, including a restructuring of the banking system. Tourism remains about 60% of GDP.

The US Central Intelligence Agency (CIA) estimated that in FY03/04 the Bahamas's central government took in revenues of approximately us\$1 billion and had expenditures of us\$1 billion. Total external debt was us\$308.5 million.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues were B\$901.1 million and expenditures were B\$1,067.7 million. The value of revenues in US dollars was us\$736 million and expenditures us\$872 million, based on a principal exchange rate for 2003 of us\$1 = B\$1.2250 as reported by the IMF.

### Public Finance – The Bahamas (2003)

(...) data not available or not significant.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

Government outlays by function were as follows: general public services, 27.7%; defense, 2.9%; public order and safety, 12.1%; economic affairs, 15.6%; housing and community amenities, 1.2%; health, 16.2%; education, 18.7%; and social protection, 5.7%.

### 36 TAXATION

The absence of direct taxation has enabled the Bahamas to attract a substantial number of financial enterprises in search of tax-shelter advantages. The country has no income taxes, capital gains taxes, or profit taxes, and residents are free from succession, inheritance, gift, or estate taxes. The only indirect taxation is a real property tax, ranging from 1–2% based on appraised value, owner's nationality, location and development status.

### 37 CUSTOMS AND DUTIES

Import duties make up approximately 60% of government revenues. As of 2005, import levies range from 1–260% and average 35%, but are subject to change quite frequently. Most duties are applied ad valorem. Preferential rates apply to imports from Commonwealth countries. Exemptions are available for many basic commodities. Luxury goods are taxed at separate tariff rates, for example: cigarettes are taxed at 210% with a stamp tax of 7%, pool tables at 100%, bottled water at 70%, automobiles from 45–75%, and air conditioners at 35%.

### 38 FOREIGN INVESTMENT

The absence of corporate and personal income taxes, as well as any form of sales, estate or inheritance taxes, acts as a direct inducement to foreign capital. In addition, specific investment incentives are included through the following: the Industries Encouragement Act, providing total exception from import duties and taxes for development of approved industries; the Hawksbill Act, which provides for tax-free development of the Freeport area; the newer Bahamas Free Trade Zone Act; the Export Manufacturing Industries Encouragement Act; the Spirits and Beer Manufacturing Act,

which allows duty-free importation of construction materials and raw material; the Hotels Encouragement Act, which, as amended, exempts large new hotels from all taxes for up to 20 years with reductions for the next 10 years; the Agricultural Manufacturers Act, which allows machinery and raw materials for an agricultural factory to be imported duty-free; and recent amendments to the Tariffs Act, which allow duty exemptions for construction on some of the outer "Family Islands." Investment proposals are processed by the Bahamas Investment Authority, established under the Foreign Investment Law in 1993 to be a one-stop shop.

In 2000, in response to multilateral organizations' concerns, the government enacted stronger measures to regulate the financial sector and prevent money laundering in the country's banking sector. The measures included establishment of a Financial Intelligence Unit and enforcement of "know-your-customer" rules. By 2004, all banks without a meaningful presence in the country were to be shut down. These rules had the effect of reducing the number of offshore banks registered in the Bahamas (50) and prompted half of the international business companies to close shop. Though painful, the IMF has praised the effort as increasing the efficiency of the financial services sector and reducing the number of non-performing loans.

Net international reserves have climbed from \$484 million in 2003 to \$668 million in 2004, and were project to end 2005 at \$642 million.

The government actively seeks foreign investment in every sector of the economy, but reserves many businesses exclusively for Bahamians, including wholesale and retail operations, commission agencies in import/export trade; real estate; domestic newspaper and magazine publication; domestic advertising; local night clubs and restaurants; security services; construction; beauty parlors and barber shops; shallow water scalefish, crustacean, mollusk, and sponge fishing operations; auto and appliance service; and public transportation.

The Bahamas has the world's third-largest registry of ships, administered by the Bahamas Maritime Authority (BMA) headquartered in London. The registry has been famous for cruise ships, but with the development of the Freeport deep-water container facility and transshipment, larger vessels can be accommodated.

Foreign investment remains mainly in the tourism-related sector and the banking and related services sector. Since the enactment of a revised foreign landholding act in 1993, investment in the second-home sector has been growing. The United Nations Conference on Trade and Development estimates the inflow of foreign direct investment (FDI) for 2004 at \$206 million, compared with \$147 million in 2003. FDI stocks accounted for \$2.20 billion in 2004, or about 39.9% of the Bahamas GDP. Despite the declines in FDI in 2001 and 2002 that resulted from a global economic slowdown and worldwide declines in foreign investment and tourism after the 11 September 2001 terrorist attacks on the US World Trade Center, FDI continued to remain a significant source of revenue for the Bahamas.

The Bahamas' only stock exchange is the Bahamas International Stock Exchange (BISX) started as a private venture with a \$5 million investment in 2000. It has not developed into an efficient channel for foreign portfolio investment. By 2003, the BISX had lost an estimated \$2 to \$3 million and was being sustained by government subsidies of \$50,000 a month. In March 2003, 14 compa-

nies were listed with a market capitalization value of \$1.4 billion. In 2001, US investors held \$1.16 billion in equity in Bahamian companies.

### 39 ECONOMIC DEVELOPMENT

The promotion of tourism and financial activity by foreign firms continued as a basic tenet of the Bahamas government. Since the late 1960s, increased emphasis has been focused on development of local industry, with the liberal tax structure remaining the key incentive. In 1976, the government began a series of measures to foster greater participation by Bahamians in the economy. The new ruling included increased work-permit fees for foreigners and sharp rises in property-transfer taxes and business licensing for non-Bahamians. Since late 1979, government permission has been required for the sale of land to non-Bahamians. The Bahamas Development Bank helps provide financing for non-Bahamian entrepreneurs. In 1996, the government implemented an income tax on foreign workers. The government is attempting to diversify the economy and attract new industry, as well as to conserve and develop the country's 324,000 hectares (800,000 acres) of forest.

Economic challenges facing the Bahamas included meeting continued employment demands, encouraging privatization and keeping a rising level of government debt in check. Bahamas's residents do not pay income or sales taxes. Most government revenue comes from tariffs and import fees. This situation may change when the Free Trade Area of the Americas incorporates the Bahamas. Because trade barriers will be reduced, the country is likely to require some form of taxation.

Other future hopes for economic growth lie in continued tourism investment. Two major hotel projects were in the works in late 2004: the Atlantis Resort and Casino on Paradise Island and a \$1.2 billion hotel resort development project in the Cable Beach area of Nassau. In addition, the Baha Mar Company was to purchase three major hotels and a development site, including the last assets of the state-owned Hotel Corporation. As part of the deal, the government was to expand the Nassau International Airport. In 2004 and 2005, the government also began to expand its outreach to foreign investors, making trips to Asia, Europe, Latin America, and Canada to promote the islands. Special attention was paid to China, with the Bahamas government making multiple trips there to encourage tourism and investment.

### 40 SOCIAL DEVELOPMENT

Old age, disability, and survivorship benefits are available to all employees, self-employed individuals, and those who are voluntarily insured. Contributions are shared between employers and employees, but there are no governmental contributions. There is a maternity grant for each live birth, and a 13-week maternity benefit of 60% of the average weekly earnings. Funeral benefits are provided in a lump sum.

Bahamian women are well represented in business, the professions, and government. However, the constitution and the law have continued to discriminate against women. For example, inheritance laws mandate that in the absence of a will, a deceased person's estate be passed on to the oldest son or nearest male relative. Violence against women increased in 2004. The government was taking measures to combat the widespread problem of domes-

tic abuse. Economic difficulties prevent the government from improving standards for child welfare. Child labor laws are in effect.

Human rights are generally respected by the government, although there are occasional reports of arbitrary arrest and detention. Illegal immigrants, mainly Haitians and Cubans, are detained until arrangements are made to either leave the country or remain legally.

#### 41 HEALTH

The government operates the 436-bed Princess Margaret Hospital in Nassau and two other hospitals, the Sandilands Rehabilitation Center and the 82-bed Rand Memorial Hospital. In addition, 57 clinics and 54 satellite clinics are maintained throughout the islands, with emergency air links to Nassau. Health expenditures totaled us\$132,492,992, or 14.8% of the national budget.

In 2004, there were 105 physicians, 447 nurses, and 7 dentists per 100,000 people. In 2005, the infant mortality rate was 25.21 per 1,000 live births. In 2000, low birth weight babies accounted for an estimated 10.4% of all births. In 1999, the birth rate was 20 per 1,000 people, and the general mortality rate was 5.4 per 1,000. Average life expectancy in 2005 was 65.54 years. Approximately 28% of all deaths were attributable to diseases of the circulatory system, 20% to communicable diseases, 14% to cancer, and the remainder to other causes.

Approximately 88% of one-year-old children were immunized against measles and 91% were immunized against diphtheria. The HIV/AIDS prevalence was 3.00 per 100 adults in 2003. As of 2004, there were approximately 5,600 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

#### 42 HOUSING

Frequent severe hurricanes in the past decade have caused damage and destruction to thousands of homes. Overcrowding is a problem in some areas and adequate low-cost housing is in short supply. An estimated 70% of housing units were detached houses, nearly 15% were apartments, and more than 10% were single attached dwellings. Over 50% of all homes were stone, concrete and/or brick, and over 30% were wood. The Bahamas Housing Authority was established by the government in 1983, with a mandate to develop housing for low-income people.

To encourage construction of new homes in remote areas the government has waived customs duties on building materials to less developed islands. As of 2001, the government had also launched a "new birth" program to renovate dwellings in traditional communities and to create new housing in urban centers, particularly for low or middle-class residents. Churches, businesses, and other organizations have been called on to find ways to provide shelter for low-income families, women, and children. The government has also sponsored housing projects for senior citizens and the disabled.

#### 43 EDUCATION

Primary education begins at age five and lasts for six years. Secondary education lasts for five years and is divided into a three-year junior high school course and a two-year senior high school

course. Education is compulsory for children between the ages of 5 and 16.

In 2001, about 30% of all children between ages three and five attended some form of preschool program. Primary school enrollment in 2003 was estimated at about 86% of age-eligible students; 85% for boys and 88% for girls. The same year, secondary school enrollment was about 76%; 74% for boys and 77% for girls. The student-to-teacher ratio for primary school was at about 17:1 in 2003; the ratio for secondary school was about 15:1.

Postsecondary training is provided by the government primarily through the College of the Bahamas. The College of Bahamas (founded in 1974) provides a two-year/three-year program that leads to an associate degree. It also offers a Bachelor of Arts degree in education. Other schools of continuing education offering academic and vocational courses include the Bahamas Hotel Training College, the Catholic Continuing Education College of St. Benedicts, and the Industrial Training College. In addition, the Bahamas has been affiliated with the University of the West Indies since 1960.

Education is under the jurisdiction of the Ministry of Education and Culture and is free in all government-maintained schools. English is the official language. As of 2003, public expenditure on education was estimated at 3.7% of GDP. An IDB-funded program for the Improvement of Primary and Secondary Education is under way. The adult literacy rate in 2003 was estimated at about 95.6%; 94.7% for men and 96.5% for women.

#### 44 LIBRARIES AND MUSEUMS

The Nassau Public Library is the largest of four public libraries on New Providence, with some 80,000 volumes. The Ranfurly Out Island Library, a private institution, distributes free book packages to school libraries throughout the country. The Haynes Library is a public library on Eleuthera. The library of the College of the Bahamas in Nassau maintains a collection of 75,000 volumes. There is a Bahamas Library Association and a Bahamas Association of Law Libraries.

Most museums in the Bahamas are archaeological and historical. In Hope Town is the Wyannie Malone Historical Museum, which features the history of the town and its early American loyalist settlers. In Nassau there is the Bahamia Museum (1973), featuring ethnology and folklore; the Bahamas Historical Society Museum (1959), a public affairs museum with a Marine Salvage collection; the Nassau Public Library and Museum; the Pompey Museum of Slavery and Emancipation (1992), a historical, ethnological, and folklore museum; and Angelo Roker's Art Centre and Museum.

#### 45 MEDIA

All telephone, telegraph, and teletype service is provided by the Bahamas Telecommunications Corp. In 2003, 131,700 mainline telephones were in service, with automatic equipment in use on the major islands. A submarine cable connects New Providence with Florida, and direct dialing to the United States has been available since 1971. In 2002, there were about 121,800 mobile phones in use.

In 2004, there was one government-run radio station (ZNS Bahamas) and five privately owned radio broadcasters. The country has two television stations, one operated by the state-owned

Broadcasting Corporation of the Bahamas, and a privately owned station. In 1997 there were 215,000 radios and 67,000 television sets in use nationwide. In 2003, there were about 84,000 Internet users.

Three daily newspapers are published in the country. The *Nassau Daily Tribune* had a circulation of 12,000 in 2002 while *The Nassau Guardian* had a circulation of 14,100. The daily *Freeport News* has a circulation of 4,000. All three papers are privately owned. There are also several weekly papers.

The government is said to respect the constitution's provisions for freedom of speech and press.

## 46 ORGANIZATIONS

Commercial associations include the Bahamas Chamber of Commerce (with locations on Nassau and Grand Bahama) and the Bahamas Agricultural and Industrial Corporation (BAIC). Employers' groups include the Bahamas Employers' Confederation and the Bahamas Union of Teachers.

International amateur sports activities are coordinated by the Bahamas Olympic Association and the Bahamas Amateur Athletic Association (BAAA).

There is a Bahamas Historical Society promoting education and preservation of native culture. The Medical Association of the Bahamas promotes high standards of medical care and serves as an alliance for specialized medical professional associations.

There are about 15 prominent youth organizations throughout the country, including some which are affiliated with political parties. Other groups include the Girl Guides and the Scout Association of the Bahamas, Progressive Young Liberals, Torchbearers Youth Association, and the YMCA and YWCA. Sports associations represent a number of particular pastimes and include the Bahamas Association of Athletic Associations (track and field), the Bahamas Baseball Federation, Bahamas Lawn Tennis Association, and the Bahamas Olympic Association.

There are branches of the Red Cross, the Red Cross Youth Society, and Amnesty International. Other service groups include Kiwanis International, Rotary, and Lions Clubs.

## 47 TOURISM, TRAVEL, AND RECREATION

Tourism in the Bahamas makes up almost 40% of the economy. Visitors are attracted to the excellent climate, beaches, flora, fauna, and recreational and resort facilities. Water sports (including excellent deep-sea fishing) are the favorite pastimes. Gambling is legal for non-Bahamians. Major hotels are being renovated and built to accommodate for the growing tourism industry in the Bahamas.

Passports are not required for tourists from the United States and Canada for stays of less than three weeks. Passports but not

visas are required of most visitors from Western Europe, Commonwealth countries, and Latin America. All visitors who enter the Bahamas must possess proof of funds to support the visit and either a return or onward ticket. In 2003, approximately 1,500,000 tourists visited the islands, spending a total of us\$1.8 billion. There were 15,393 hotel rooms and 30,786 beds with a 59% occupancy rate. The average length of stay was 4.5 nights.

According to 2004 US Department of State estimates, the cost of staying in the Bahamas varied between seasons and location. Averages were as low as us\$25 per day for a stay on Andros Island to us\$350 per day on Nassau (from November to June).

## 48 FAMOUS BAHAMIANS

Lynden Oscar Pindling (1930–2000), a lawyer and leader of the PLP, was the Bahamas' first prime minister following independence in 1973 until he was succeeded by Hubert Ingraham (b.1947) in 1992. Actor Sidney Poitier (b.USA, 1924) was appointed Bahamian ambassador to Japan in 1997.

## 49 DEPENDENCIES

The Bahamas has no territories or colonies.

# BARBADOS

**CAPITAL:** Bridgetown

**FLAG:** The national flag has three equal vertical bands of ultramarine blue, gold, and ultramarine blue and displays a broken trident in black on the center stripe.

**ANTHEM:** *National Anthem of Barbados*, beginning “In plenty and in time of need, when this fair land was young. . .”

**MONETARY UNIT:** Officially introduced on 3 December 1973, the Barbados dollar (BDS\$) of 100 cents is a paper currency officially pegged to the US dollar. There are coins of 1, 5, 10, and 25 cents and 1 dollar, and notes of 1, 2, 5, 10, 20, 50, and 100 dollars. BDS\$1 = US\$0.50000 (or US\$1 = BDS\$2; as of 2004).

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year’s Day, 1 January; Errol Barrow Day, 23 January; May Day, 1 May; Kadooment Day, first Monday in August; CARICOM Day, 1 August; UN Day, first Monday in October; Independence Day, 30 November; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays are Good Friday, Easter Monday, and Whitmonday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated about 320 km (200 mi) NNE of Trinidad and about 160 km (100 mi) ESE of St. Lucia, Barbados is the most easterly of the Caribbean islands. The island is 34 km (21 mi) long N–S and 23 km (14 mi) wide E–W, with an area of 430 sq km (166 sq mi) and a total coastline of 97 km (60 mi). Comparatively, Barbados occupies slightly less than 2.5 times the area of Washington, DC.

The capital city of Barbados, Bridgetown, is located on the country’s southwestern coast.

## <sup>2</sup> TOPOGRAPHY

The coast is almost entirely encircled with coral reefs. The only natural harbor is Carlisle Bay on the southwest coast. The land rises to 336 m (1,102 ft) at Mt. Hillaby in the parish of St. Andrew. In most other areas, the land falls in a series of terraces to a coastal strip or wide flat area.

## <sup>3</sup> CLIMATE

The tropical climate is tempered by an almost constant sea breeze from the northeast in the winter and early spring, and from the southeast during the rest of the year. Temperatures range from 21–30°C (70–86°F). Annual rainfall ranges from about 100 cm (40 in) in some coastal districts to 230 cm (90 in) in the central ridge area. There is a wet season from June to December, but rain falls periodically throughout the year.

## <sup>4</sup> FLORA AND FAUNA

Palms, casuarina, mahogany, and almond trees are found on the island, but no large forest areas exist, most of the level ground having been turned over to sugarcane. The wide variety of flowers and shrubs includes wild roses, carnations, lilies, and several cacti.

Natural wildlife is restricted to a few mammals and birds; finches, blackbirds, and moustache birds are common.

## <sup>5</sup> ENVIRONMENT

Principal environmental agencies are the Ministry of Housing, Lands, and Environment, established in 1978, and the Barbados Water Authority (1980). Soil erosion, particularly in the northeast, and coastal pollution from oil slicks are among the most significant environmental problems. The government of Barbados created a marine reserve to protect its coastline in 1980.

As of 2000, the most pressing environmental problems result from the uncontrolled handling of solid wastes, which contaminate the water supply. Barbados is also affected by air and water pollution from other countries in the area. Despite its pollution problems, 100% of Barbados’ urban and rural populations have safe water.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 3 species of birds, 4 types of reptiles, 11 species of fish, 25 other invertebrates, and 4 species of plants. The Barbados yellow warbler, Eskimo curlew, tundra peregrine falcon, and Orinoco crocodile are endangered species. The Barbados raccoon has become extinct.

## <sup>6</sup> POPULATION

The population of Barbados in 2005 was estimated by the United Nations (UN) at 258,000, which placed it at number 171 in population among the 193 nations of the world. In 2005, approximately 12% of the population was over 65 years of age, with another 22% of the population under 15 years of age. There were 94 males for every 100 females in the country. According to the UN, the annual

population rate of change for 2005–2010 was expected to be 0.6%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 272,000. The population density was 600 per sq km (1,554 per sq mi).

The UN estimated that 50% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.42%. The capital city, Bridgetown, had a population of 140,000 in that year.

## **7** MIGRATION

The estimated net migration rate for Barbados in 2005 was -0.31 migrants per 1,000 population. Foreign-born residents are mainly from the other countries in the region, such as St. Lucia, St. Vincent, and Guyana. Extra-regional foreign-born residents are mainly from the United Kingdom, United States, and India. To meet the problem of overpopulation, the government encourages emigration. Most emigrants now resettle in the Caribbean region or along the eastern US coast. As of 2004, Barbados recorded a small refugee population of nine. Barbados was expected to receive greater numbers of asylum seekers in the future due to extra-regional migration to and migrant trafficking through the Caribbean.

## **8** ETHNIC GROUPS

About 90% of all Barbadians (colloquially called Bajans) are the descendants of former African slaves. Some 4% are of European descent and about 6% of the population are Asian or of mixed descent.

## **9** LANGUAGES

English, the official language, is spoken universally, with some local pronunciations.

## **10** RELIGIONS

Christianity is the dominant religion, with over 95% percent of the population claiming Christian affiliation, even if they are not active members of a particular denomination. The largest denomination is the Anglican Church, which has 70,000 members, about 65% of whom are considered active participants. The second-largest denomination is the Seventh-Day Adventists with 16,000 reported members. The Roman Catholic Church reports having 11,000 members, of whom about 20% are considered to be active participants. Pentecostals have a membership of about 7,000 with 50% active participation. There are about 5,000 Methodists with about 60% active participation. Of the 2,500 members of the Jehovah's Witnesses, 95% are active members. Other Christian denominations include Moravians, Baptists, and the Church of Jesus Christ of Latter-Day Saints (Mormons). About 17% of the population claims no religious affiliation and about 12% profess other faiths, including Islam, Baha'i, Judaism, Hinduism, and Rastafarianism (Nyabinghi school).

The constitution provides for religious freedom and the right is generally respected in practice. Interfaith associations promoting tolerance and mutual understanding include the Barbados Christian Council and the Caribbean Conference of Churches.

## **11** TRANSPORTATION

The highway system had a total length of 1,600 km (995 mi) in 2003, all of which was paved. There were 66,900 passenger cars and 13,200 commercial vehicles registered in 2003. Grantley Adams International Airport, situated 18 km (11 mi) southeast of Bridgetown, is the only airport. Barbados is served by 1 local and 14 international airlines. There is also a deep water harbor at Bridgetown, with berthing facilities for cruise ships and freighters. In 2005, Barbados had a merchant fleet of 58 ships of 1,000 GRT or over, totaling 427,465 GRT. The Barbados ships registry is the second Ships Registry worldwide that received Lloyd's Registry Quality Assurance approval under the Quality Management System Standard ISO 9002.

## **12** HISTORY

Barbados originally supported a considerable population of Arawak Indians, but invading Caribs decimated that population. By the time the British landed, near the site of present-day Holetown in 1625, the island was uninhabited. Almost 2,000 English settlers landed in 1627–28. Soon afterward, the island developed the sugar-based economy, supported by a slave population. Slavery was abolished in 1834 and the last slaves were freed in 1838.

During the following 100 years, the economic fortunes of Barbados fluctuated with alternating booms and slumps in the sugar trade. In 1876, the abortive efforts of the British to bring Barbados into confederation with the Windward Islands resulted in the "confederation riots."

In the 1930s, the dominance of plantation owners and merchants was challenged by a labor movement. Riots in 1937 resulted in the dispatch of a British Royal Commission to the West Indies and the gradual introduction of social and political reforms, culminating in the granting of universal adult suffrage in 1950. In 1958, Barbados became a member of the West Indies Federation, which was dissolved in 1962. The island was proclaimed an independent republic on 30 November 1966. Political stability has been maintained since that time. Barbados helped form CARICOM in 1973, the same year the nation began issuing its own currency. The country was a staging area in October 1983 for the US-led invasion of Grenada, in which Barbadian troops took part. In 1995 it was designated as a center for the Regional Security System, funded by the United States, which conducted military exercises in the region.

Laws enacted in the early 1980s led to the development of Barbados as an offshore business center in the 1980s and 1990s, although tourism remained the nation's primary source of revenue. The international recession of the early 1990s negatively affected the economy of Barbados, touching off a decline in tourism and other sectors, and leading to a crisis of confidence in the government. After a no-confidence vote on 7 June 1994, Prime Minister Erskine Sandiford dissolved the House of Assembly, the first time since independence that such an action had been taken, and a new government was installed following general elections in September. Economic recovery in the subsequent years helped Prime Minister Owen S. Arthur lead to BLP to a landslide victory in the 1999 elections. Prime Minister Arthur won the 2004 elections and was leading his country for the launch of a single CARICOM economic market scheduled to take place in 2005.

In 2004 Barbados and Trinidad and Tobago struggled bitterly over their maritime boundary and associated fishing rights. Barbados decided to submit the issue to binding arbitration in the United Nations. Barbados continued to experience an almost yearly rise in narcotics trafficking and violent crime. Joint patrols of the Royal Barbados Police Force and the all-volunteer Barbados Defense Force increased patrols of the island. Barbadian US-foreign policy was hampered somewhat as Barbados refused to agree to the immunity of US military personnel from proceedings in the International Criminal Court. The United States responded by suspending military equipment sales. As of late 2005, the two countries remained at an impasse over the issue.

### 13 GOVERNMENT

The constitution of Barbados, which came into effect on 30 November 1966, provides for a crown-appointed governor-general (who in turn appoints an advisory Privy Council) and for independent executive, legislative, and judicial bodies. The bicameral legislature consists of a Senate and a House of Assembly. The Senate, appointed by the governor-general, has 21 members: 12 from the majority party, 2 from the opposition, and 7 of the governor-general's choice. The 28-member House of Assembly is elected at intervals of five years or less. The voting population is universal, with a minimum age of 18. The governor-general appoints as prime minister that member of the House of Assembly best able to command a majority. The prime minister's cabinet is drawn from elected members of the House of Assembly.

### 14 POLITICAL PARTIES

The leading political groups grew out of the labor movement of the 1930s. The Barbados Labor Party (BLP) was established in 1938 by Sir Grantley Adams. The Democratic Labor Party (DLP) split from the BLP in 1955. The National Democratic Party (NDP) was formed in 1989 by dissident members of the DLP. The parties reflect personal more than ideological differences.

Errol W. Barrow, the DLP leader, was prime minister from independence until 1976. The BLP succeeded him under J.M.G. ("Tom") Adams, the son of Grantley Adams. In 1981, the BLP retained its majority by 17–10, and Adams continued in that office until his death in 1985. On 28 May 1986, Barrow and the DLP won 24 House of Assembly seats to three for the BLP. After Barrow's death on 2 June 1987, Deputy Prime Minister Erskine Sandiford, minister of education and leader of the House of Assembly, assumed the prime ministership.

Despite the resignation of finance minister Dr. Richie Haynes in 1989, and his subsequent formation of the National Democratic Party, the DLP under Sandiford continued in power, retaining 18 of the now 28 seats in the House of Assembly. The BLP won the remaining 10 seats, leaving the dissident NDP without any representation.

After losing a vote of confidence in the legislature on 7 June 1994, Sandiford dissolved the House of Assembly and scheduled a general election for September. The BLP won by an overwhelming margin, with 19 seats; the DLP won 8, and the NDP, 1. The BLP leader, Owen S. Arthur, became the new prime minister. The BLP swept the next elections, held in January 1999, winning 26 of the 28 House seats, while the DLP claimed only 2. The 2003 elections

LOCATION: 13°2' to 13°20' N; 59°25' to 59°39' W. TOTAL COASTLINE: 101 kilometers (63 miles). TERRITORIAL SEA LIMIT: 12 miles.

resulted in a slight loss for the BLP with 23 seats and the DLP with 7; the next elections were scheduled to take place in 2008.

### 15 LOCAL GOVERNMENT

All local governments, including those on the district and municipal levels, were abolished on 1 September 1969; their functions were subsumed by the national government. The country is divided into 11 parishes and the city of Bridgetown for administrative and electoral purposes.

### 16 JUDICIAL SYSTEM

The Barbados legal system is founded in British common law. The Supreme Court of Judicature sits as a high court and court of appeal; vested by the constitution with unlimited jurisdiction, it consists of a chief justice and three puisne judges, appointed by

the governor-general on the recommendation of the prime minister after consultation with the leader of the opposition party. Magistrate courts have both civil and criminal jurisdiction. On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ) to hear many of the cases formerly brought to the Judicial Committee of Her Majesty's Privy Council in the United Kingdom. The first session of the CCJ was scheduled for November 2003. Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—officially approved the CCJ, although 14 nations were planning to use the court for appeals.

The courts enforce respect for civil rights and assure a number of due process protections in criminal proceedings including a right of detainees to be brought before a judge within 72 hours of arrest. The Judiciary is independent and free from political influence.

In October 2002, Attorney General Mia Mottley announced that a National Commission

on Law and Order would be established to assist the government in achieving civil peace and harmony by promoting cultural renewal and social cohesion, thereby reducing crime and the fear of crime. The Commission published a National Plan on Justice, Peace and Security in June 2004 that included 68 recommendations on constitutional support for social institutions, governance and civil society, cultural values, law enforcement, and criminal courts.

## 17 ARMED FORCES

In 2005 the armed forces numbered 610 active personnel and 430 reservists, of which 500 were in the Army and 110 in the Navy. The Navy was equipped with five patrol boats. The defense budget in 2005 was \$14 million.

## 18 INTERNATIONAL COOPERATION

Barbados became a member of the United Nations (UN) on 9 December 1966 and belongs to several UN specialized agencies, such as the ILO, IMF, FAO, IFC, UNESCO, the World Bank, and WHO. The country joined the WTO on 1 January 1995. Barbados is also a member of the Commonwealth of Nations, ACP group, the Caribbean Development Bank, the Inter-American Development Bank, the Latin American Economic System (LAES), G-77, OAS, the Association of Caribbean States (ACS), and the Alliance of Small Island States (AOSIS). Barbados was one of the founding members of CARICOM (1973). Barbados is part of the Non-aligned Movement and Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL). In environmental cooperation, Barbados is part of the Basel Convention, the Convention on Biological Diversity, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

Sugar, rum, and molasses used to be Barbados' main sources of revenue. In recent years, however, economic activity has focused more on light industry and tourism. Offshore finance and information services also contribute to the country's gross domestic

product (GDP), providing an important source of foreign reserve holdings.

The dependence on tourism and foreign exchange makes Barbados vulnerable to shifts in the global economic climate. That became especially clear in 2002–03 when a worldwide slowdown in tourism that accompanied the 11 September 2001 attacks on the United States hit the Caribbean country's economy hard. The economy suffered a severe decline in foreign investment and went into recession as a result. Conditions began to improve with the recovery of tourism in 2003 and 2004. GDP grew at a 3.4% rate in 2004 and at a more modest 2.5% rate in 2005.

The 2005 figures indicated that Barbados still had not recovered from the earlier slowdown. Through the mid-1990s to early 2000, GDP growth averaged 3.4% annually, and hit 5% in 2000. Yet, the country has managed to keep its historically high unemployment rate in check. Inflation also has remained relatively low, coming in at a manageable 2.4% in 2004.

The transition from an economy dependent upon sugar production to one more oriented toward tourism has helped make Barbados one of the most prosperous nations in the western hemisphere, besides the United States and Canada. Per capita GDP was \$17,300 in 2005. For the short term, much of Barbados' economic activity has been focused on tourism development. The country is scheduled to host several games and the final of the World Cricket Match in 2007. Much of the country's construction work has been aimed at accommodating an anticipated influx of visitors.

Services—of which the largest sector for Barbados is tourism—comprised 83% of the country's GDP in 2004, with industry (12%) and agriculture (4%) lagging significantly behind.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Barbados's gross domestic product (GDP) was estimated at \$4.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$17,300. The annual growth rate of GDP was estimated at 2.5%. The average inflation rate in 2003 was -0.5%. It was estimated that agriculture accounted for 6% of GDP, industry 16%, and services 78%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$97 million or about \$358 per capita and accounted for approximately 3.7% of GDP.

## 21 LABOR

The total labor force as of 2001 was estimated at 128,500. In 1996 (the latest year for which data was available), it was estimated that the service sector accounted for 75% of the labor force, industry 15%, and agriculture 10%. Unemployment, traditionally high, was estimated at 10.7% in 2003.

There is one major union, the Barbados Workers' Union, and several smaller specialized ones. As of 2005, about 19% of the workforce was organized, and were concentrated in important sectors of the economy such as agriculture, transportation and the government. Workers freely enjoy the right to organize and join unions, and unions (except in certain "essential" sectors) are not restricted in their right to strike. Trade unions are affiliated

with a variety of regional and international labor organizations, and the Caribbean Congress of Labor has its center of operations in Barbados.

The standard legal workweek is five days and 40 hours, with overtime pay required for additional hours worked. In addition, all overtime is voluntary. A minimum of a three-week paid holiday each year (four weeks for those employed at least five years) is required by law. There is a legal minimum work age of 16, which is generally observed, and is reinforced by compulsory primary and secondary educational rules. The law sets the minimum wage for only household domestics and shop assistants, which (as of 2005) was \$2.50 per hour.

## 22 AGRICULTURE

About 17,000 hectares (42,000 acres), or 39.5% of the total land area, are classified as arable. At one time, nearly all arable land was devoted to sugarcane, but the percentage devoted to ground crops for local consumption has been increasing. In 2004, 361,200 tons of sugarcane were produced, down from the annual average of 584,000 tons in 1989–91. In 2004, sugar exports amounted to us\$22.4 million, or 8% of total exports. Major food crops are yams, sweet potatoes, corn, eddo, cassava, and several varieties of beans. Some cotton is also grown.

## 23 ANIMAL HUSBANDRY

The island must import large quantities of meat and dairy products. Most livestock is owned by individual households. Estimates for 2004 showed 9,000 head of cattle, 13,500 sheep, 18,500 hogs, 5,100 goats, and 3,370,000 chickens. Poultry production in 2004 included 13,300 tons of meat and 1,928 tons of hen eggs.

## 24 FISHING

The fishing industry employs about 2,000 persons, and the fleet consists of more than 500 powered boats. The catch in 2003 was 2,500 metric tons. Flying fish, dolphinfish, tuna, turbot, kingfish, and swordfish are among the main species caught. A fisheries terminal complex opened at Oistins in 1983.

## 25 FORESTRY

Fewer than 20 hectares (50 acres) of original forests have survived the 300 years of sugar cultivation. There are an estimated 5,000 hectares (12,350 acres) of forested land, covering about 12% of the total land area. Roundwood production in 2003 totaled 5,000 cu m (176,500 cu ft), and imports amounted to 5,000 cu m (176,500 cu ft). In 2003, Barbados imported us\$25.9 million in wood and forest products.

## 26 MINING

Deposits of limestone and coral were quarried to meet local construction needs. Production of limestone in 2003 amounted to 1.23 million metric tons. Clays and shale, sand and gravel, and carbonaceous deposits provided limited yields. Preliminary production figures for hydraulic cement in 2003 totaled 330,000 metric tons. Hydraulic cement output in 2002 totaled 297,667 metric tons.

## 27 ENERGY AND POWER

Electricity supply and distribution is managed by Barbados Light and Power, a private company under government concession. Production in 2002 totaled 800 million kWh, with consumption at 744 million kWh for that year. Capacity in 2002 stood at 166,000 kW. Fossil fuels met 100% of energy demand (petroleum roughly 95% and natural gas the remainder). The world oil crisis of the mid-1970s initiated an active search for commercial deposits of oil and natural gas. Limited pockets of natural gas were discovered, and oil was found in St. Philip Parish. Daily oil production in 2004 averaged 1,000 barrels; natural gas production was 1 billion cu ft in 2003. According to the Oil and Gas Journal, proven oil reserves in 2005 totaled 2.9 million barrels. Barbados's oil is refined in Trinidad. As of the beginning of 2000, Barbados was planning to privatize its energy companies, including the National Petroleum Corporation and the Barbados National Oil Company (BNOC).

## 28 INDUSTRY

Although tourism is the main economic driver, Barbados was gradually developing a healthy offshore banking and financial services sector. The sugar industry made up less than 1% of the country's GDP and employed about 800 people in a labor force of 146,300 in 2004.

Barbadian tourism has benefited from continued income growth in its major source markets and dynamic marketing efforts by the national authorities. The United Kingdom is the largest market for Barbados, providing about one-third of all overnight visitors to the island. The construction industry has grown as a result of tourism-related construction projects (such as a hotel, golf course, condominiums, and a marina), in addition to a series of public works projects. Barbados also has garment and furniture making enterprises.

## 29 SCIENCE AND TECHNOLOGY

Barbadian learned societies include the Barbados Astronomical Society and the Barbados Pharmaceutical Society, founded in 1956 and 1948 respectively. The Bellairs Research Institute, associated with McGill University in Montréal, is a center for the study of the tropical environment. The Cave Hill Campus of the University of the West Indies has faculties in medicine (located in Bridgetown, founded in 1963) and social sciences. Barbados Community College, founded in 1968, offers training in science and technology. The Barbados Museum and Historical Society, in St. Ann's Garrison, established in 1933, has collections illustrating the island's geology, prehistory, natural history, and marine life.

## 30 DOMESTIC TRADE

Domestic trade is centered on fish, fruit, and vegetable markets, as well as tourism-related shopping. Many food products and other consumer goods are imported. General business is conducted on weekdays from 8 AM to 4:30 PM. Most shops are also open Saturdays from 8 AM to noon. Banks are open Monday through Thursday from 8 AM to 3 PM and Friday from 8 AM to 5 PM.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.**3<sup>1</sup> FOREIGN TRADE**

Barbados consistently imports more than its exports, which has caused it historically to operate with a negative trade balance. That imbalance has widened in recent years, raising some concerns among international lending authorities such as the International Monetary Fund (IMF).

Exports in 2004 totaled \$278 million, with major markets being the United States (15%), Trinidad and Tobago (10%), the United Kingdom (10%), and Jamaica (4%). Primary export products include agricultural commodities such as sugar, honey, molasses, and rum; electrical equipment and small manufactures; medications, printed materials, and pesticides and disinfectants. Imports outpaced exports by a ratio of nearly 5:1 in 2004, totaling \$1.413 billion. Most trading activity occurred with the United States (36%), Trinidad and Tobago (21%), the United Kingdom (6%), and Japan (5%).

The government and private sector were both working to prepare the country for the CARICOM Single Market and Economy (CSME)—a European Union-style single market that was to begin in 2006.

**3<sup>2</sup> BALANCE OF PAYMENTS**

The consistently adverse trade balance is substantially alleviated by foreign currency remittances from various emigrants and by tourist expenditures. Furthermore, the IMF notes that the rise in imports is related to an increase in economic activity. More mortgages were being sought in Barbados and construction for the 2007 World Cricket Games was on the rise.

However, the growth in import activity has resulted in a shift in balance of payments: Barbados used to maintain a surplus but ended 2004 with a deficit accounting for 5.5% of GDP. Gross international reserves fell to approximately 3.75 months of imported goods and services.

**3<sup>3</sup> BANKING AND SECURITIES**

The bank of issue is the Central Bank of Barbados. In 1972, it replaced the East Caribbean Currency Authority (ECCA). Com-

mercial banks include the Bank of Nova Scotia, Barbados National Bank, Barclay's Bank, Broad Street, Caldon Finance Merchant Bank, Canadian Imperial Bank of Commerce, Caribbean Commercial Bank, Caribbean Financial Services Corporation, Mutual Bank of the Caribbean, and Royal Bank of Canada. Public institutions include the Barbados Development Bank and the Sugar Industry Agricultural Bank. Barbados has begun development of the offshore banking sector, including the Republic Bank of Trinidad and Tobago in 1999.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$571.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$1.9 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 7.5%.

There is no stock exchange in Barbados, although the Central Bank has established the Barbados Securities Marketing Corp. in anticipation of the future development of a securities exchange. Mutual funds provide a tax-exempt vehicle for investment in existing shares.

**3<sup>4</sup> INSURANCE**

The regulatory authority is the Supervisor of Insurance of the Ministry of Finance. The General Insurance Association of Barbados is the general trade association. A full range of life and nonlife insurance is available. Barbados Mutual Life Assurance Society and Life of Barbados Limited provided most insurance services to the nation in 1999.

**3<sup>5</sup> PUBLIC FINANCE**

Revenues are derived mostly from import duties, internal consumption taxes, and income tax. Public sector deficits grew during

the 1980s as the economy weakened. The international recession of 1990–91 magnified problems of debt service and debt management. By the end of 1990, the national debt was 9.5% higher than that of 1989. By 1991, the fiscal deficit had become unsustainable; in February 1992, the government began a stabilization program in fiscal policies with assistance from the IMF. By 2000, the deficit problem had been resolved.

The US Central Intelligence Agency (CIA) estimated that in 2000 Barbados's central government took in revenues of approximately us\$847 million and had expenditures of us\$886 million. Revenues minus expenditures totaled approximately -us\$39 million. Total external debt was us\$668 million.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues were BDS\$1,827.5 million and expenditures were BDS\$1,981.6 million. The value of revenues in dollars was us\$914 million and expenditures us\$925 million, based on a official exchange rate for 2003 of us\$1 = BDS\$2 as reported by the IMF. Government outlays by function were as follows: general public services, 28.8%; defense, 2.0%; public order and safety, 6.4%; economic affairs, 16.2%; environmental protection, 6.6%; housing and community amenities, 1.5%; health, 11.7%; recreation, culture, and religion, 2.2%; education, 19.3%; and social protection, 5.3%.

### 36 TAXATION

The top individual tax rate, as of 2005, was 37.5% and applies to incomes over BDS\$24,200. However, in 2006, that rate was scheduled to drop to 35%. The corporate income tax rate was 30% but like the top individual tax rate, was slated for reduction to 25% in 2006. There is also a 10% branch remittance tax. Other taxes were levied on insurance premiums, property transfers, land value, bank assets, and rental income. A value-added tax (VAT) was

instituted in 1997, that is levied at 15% generally, and 7.5% on hotel accommodations. Basic commodities are exempt.

### 37 CUSTOMS AND DUTIES

Most imports, except those from other CARICOM members, are subject to import duties that include a customs duty, a consumption tax, and a stamp tax. The Common External Tariff (CET) was reduced to 20% in 1999 and the 35% surtax was removed in 2000. Items that carry a higher import duty rate include fruit and vegetables (40%), jewelry (60%), watches (50%), and motor vehicles (45%). The value-added tax of 15% replaced eleven different taxes, mostly on imports. In addition to the VAT, an excise tax of 46.95–93.73 % is placed on imported vehicles. Import licenses are needed to import many agricultural products, but there are no export controls. Beer and fruit drinks may be imported only from CARICOM countries, but fruit juices may be imported from non-member states.

Barbados became a signatory to the World Trade Organization agreement in 1994, agreeing to dismantle all nontariff barriers by the year 2004.

### 38 FOREIGN INVESTMENT

Various investment incentives, administered through the Barbados Investment and Development Corporation (BIDC), are available to both domestic and foreign investors. These include exception from custom duties, tax reduction and exceptions, and training grants. The government favors productive foreign investments with an emphasis on tourism and banking because of their employment and foreign exchange generating potential. Special incentive packages exist for the hotel industry, manufacturing, and offshore business sectors. The Fiscal Incentives Act of 1974 provides for tax holidays up to 10 years for investment in manufacturing, plus a schedule of rebates on income tax is available for any manufacturing company deriving profits from exports. There is full exemption from all income and withholding taxes for investors in some offshore industries (captive insurance, foreign sales corporations), while most International Business Corporations (IBCs), provided they export 100% of their manufactured output, pay 1–2.5% corporate tax rate, can import production equipment duty free, and are free of exchange controls. Foreign ownership of Barbadian enterprises or participation in joint ventures must be approved by the Central Bank. The offshore sector offers many opportunities, particularly given the island's strong educational base. The government is stable, labor relations are comparatively tranquil, political violence is unknown, and corruption is not considered a problem.

Barbados has concluded double taxation treaties with the United States, Canada, the United Kingdom, CARICOM, Cuba, China, Venezuela, Sweden, Finland, Norway, and Switzerland.

Foreign direct investment (FDI) picked up significantly in 2003 and 2004. The UN Conference on Trade and Development reported FID inflows of \$58 million in 2003, and \$50 million in 2004. These shifts were significant compared with the slowdown in FDI that affected Barbados even before the worldwide decline in tourism that accompanied the 11 September 2001 attacks on the United States. In 2001, FDI fell to \$17.5 million, after hitting a previous peak of \$19.4 million in 2000. FDI remained at \$17 million in

#### Public Finance – Barbados (2003)

(In millions of Barbados dollars, budgetary central government figures)

<b>Revenue and Grants</b>	<b>1,827.5</b>	<b>100.0%</b>
Tax revenue	1,620.4	88.7%
Social contributions	100.4	5.5%
Grants	9.1	0.5%
Other revenue	97.6	5.3%
<b>Expenditures</b>	<b>1,981.6</b>	<b>100.0%</b>

SOURCE: Government Finance Statistics Yearbook 2004, Washington, DC: International Monetary Fund, 2004.

2002 before starting to turn around in 2003. Barbados held \$451 million in FDI stocks in 2004, which comprised 15.9% of GDP.

### 39 ECONOMIC DEVELOPMENT

Government planning, in operation since 1951, has helped Barbados make a successful transition from a sugar-based economy to one with a more globalized presence, particularly in the tourism and financial services sector.

The economy recovered well from its 1990 recession, and showed signs in 2005 of bouncing back from the post-11 September 2001 slowdown. The IMF and US State Department both describe Barbados as a healthy, open economy with steady growth rates, low inflation, and falling unemployment.

While the IMF projects that growth prospects for Barbados will remain strong through 2008, the international lending agency expresses some concern about the country's decline in foreign reserves and growing trade imbalance.

For the long-term, Barbados needs to diversify its economy to protect itself from the shock effects of worldwide recessions and other crises. As a small, open economy, the nation itself has little ability to protect itself from the vagaries of market shifts. This is particularly the case with tourism, as the economic contraction that followed the 11 September 2001 attacks showed.

### 40 SOCIAL DEVELOPMENT

A national social security system provides old age and survivors' pensions, sickness, disability, and maternity benefits, and employment injury benefits. All employed persons are covered. Unemployment insurance was introduced in 1982 and is funded by equal contributions from employers and employees. Sickness and maternity benefits are provided for employed persons. Free medical care is available in health centers and public hospitals.

Although women are well-represented in all aspects of national life, women's rights advocates cite domestic violence and abuse as a serious problem. A domestic violence law requires an immediate police response to reports of violence against women and children. There are public and private counseling services for victims of rape, domestic violence, and child abuse. Sexual harassment continued in the workplace. In 2004, the government continued to address the issues of children's rights and welfare.

Human rights are protected under the constitution. Prison conditions are inadequate consisting of one overcrowded adult facility that is more than 150 years old.

### 41 HEALTH

Barbados has a national health service. In 2004, there were 120 physicians, 13 nurses, and 23 dentists per 100,000 people. Life expectancy in 2005 was 72.59 years and the overall death rate was estimated at 8 per 1,000 people as of 2002. The infant mortality rate was 11.72 per 1,000 live births in 2005. By the mid-1990s, the under-five mortality rate had improved to only 10 per 1,000 from 1960, when it was 90 per 1,000 children. In the mid-1990s, the birth rate was 14 births per 1,000 people. As of 1994, 97% of one-year-old children were vaccinated against measles. The HIV/AIDS prevalence was 1.50 per 100 adults in 2003. As of 2004, there were

approximately 2,500 people living with HIV/AIDS in the country. There were an estimated 200 deaths from AIDS in 2003.

### 42 HOUSING

The Barbados Housing Authority is empowered to acquire land, construct housing projects, and redevelop overcrowded areas. Rising land costs continued to be a hindrance to new home construction, but since 1996, the government has been looking at new ways to help private owners finance land and home purchases. Also since 1996, the government has initiated a new building code to improve existing structures, particularly focusing on renovations that may prevent destruction from hurricanes.

At last estimate, 90% of all housing consisted of detached homes and more than 5% of apartments. About 76% of all homes were owner occupied. The average household size is 4.3 people. An important concern for the government has been to offer a supply of adequate, low-income housing to both improve and supplement the existing housing stock. In the late 1990s, it was estimated that about 30% of the population in Greater Bridgetown lived in "chattel" homes, portable makeshift homes that are built and owned by a household but placed on land rented from the government or other private landlord. As of 2004, the government was still behind schedule on completion of new housing projects.

### 43 EDUCATION

Education is compulsory for children between the ages of 5 and 16. Primary school covers six years and secondary school covers seven years. Primary school enrollment in 2003 was estimated at close to 100% of age-eligible students. The same year, secondary school enrollment was about 90% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 16:1 in 2003; the ratio for secondary school was about 15:1.

As of 2000, there were 93 government primary schools and a small number of private primary schools. Secondary education was provided in 22 government secondary schools, 15 assisted private schools, and 7 senior schools for students ages 14–16. The education program in Barbados is administered by the Ministry of Education and is free in all government-run schools. As of 2003, public expenditure on education was estimated at 7.6% of GDP.

Scholarships are awarded for study in the United Kingdom and in Caribbean institutions. The Barbados branch of the University of the West Indies opened at Cave Hill in 1963. The government pays the fees of all Barbadian students at the Cave Hill Campus of the University of West Indies. The Barbados Community College was established in 1968. The adult literacy rate for 2004 was estimated at about 99.7%.

There is also advanced education for adults at the Extramural Center of the University of West Indies, the Erdiston Teachers Training College, and the Samuel Jackman Prescod Polytechnic. There are special schools for the deaf, blind, and mentally retarded, including two residential institutions for disabled persons.

### 44 LIBRARIES AND MUSEUMS

A free library (1847) is maintained by the government in Bridgetown. There are seven branches, with bookmobile stops throughout the island. By 2002, the system had 126,000 volumes. The library of the Barbados branch of the University of the West

Indies has 179,000 volumes and serves as a depository library of the United Nations. The Law Library of the University of the West Indies holds about 110,000 books.

There were seven museums in the country in 2001. There are also 17 monuments and historic sites and 5 zoos and botanical gardens. The Barbados Museum and Historical Society (1933) in Saint Michael is a general museum with collections showing the geology, history, natural history, marine life, and plantation home furnishings of the island, as well as Arawak artifacts. Other museums include the Mallalieu Motor Museum in Christ Church, the Sir Frank Huts on Sugar Museum in Saint James, and a science museum at the Rum Factory and Heritage Park in Saint Phillip.

#### 45 MEDIA

Automatic telephone service is provided by a private firm, the Barbados Telephone Co. Ltd. In 2003, there were 134,000 main-line phones in use, as well as 140,000 mobile phones. A wireless telephone service provides overseas communications and a telex cable connects Barbados with the United Kingdom. The Congor Bay Earth Station, opened in 1972, links Barbados with the global satellite communications system.

Barbados has a government-controlled television and radio broadcasting service (The Caribbean Broadcasting System—CBS) and a commercial rediffusion service that broadcasts over a cable network. In 2004, there were nine radio stations, three of which were owned by CBS. The country's only television station is also owned by CBS. In 1997, there were about 237,000 radios and 76,000 television sets in use throughout the country. In 2003, there were 100,000 Internet subscribers.

There are two major daily newspapers (both independently operated, in Bridgetown), the *Advocate* (circulation 15,000 in 2002) and the *Daily Nation* (32,000), as well as some periodicals, including a monthly magazine, the *New Bajan*.

The Constitution of Barbados provides for freedom of expression and the government is said to uphold freedom of speech and press. The government prohibits the production of pornographic materials.

#### 46 ORGANIZATIONS

Barbados has a chamber of commerce in St. Michael. The Barbados Association of Office Professionals provides some general business training and networking options. There is also a Barbados Employers' Confederation, a Barbados Manufacturers' Association, and a Barbados Workers' Union. Associations are available a number of professionals, including lawyers, teachers, journalists, and medical professionals. Some notable medical associations include the Barbados Cancer Society, Barbados Dental Association, Barbados Family Planning Association, and the Barbados Association of Medical Practitioners.

The Barbados Museum and Historical Society is a key organization for the preservation and promotion of art and culture. The Evangelical Association of the Caribbean and the Caribbean Conference of Churches are multinational organizations based in the country.

International youth organizations include 4-H Clubs, Boy Scouts, Girl Guides, YMCA, and YWCA. Other youth organizations include the Anglican Young People's Association, the Caribbean Youth Business Network, the Caribbean Youth Environ-

ment Network, the Guild of Undergraduates of Barbados, and the League of Progressive Youth. There are a number of sports associations in the country, promoting such pastimes as track and field, weightlifting, badminton, and lawn tennis.

The Barbados Council of Women serves as an umbrella organization for women's groups. Branches of international service organizations include Kiwanis International, Lions Club, and Rotary Club. There are national chapters of the Red Cross, Amnesty International, and UNICEF.

#### 47 TOURISM, TRAVEL, AND RECREATION

Barbados, with its fine beaches, sea bathing, and pleasant climate, has long been a popular holiday resort. Cricket is the national sport, followed by surfing, sailing, and other marine pastimes. A valid passport and onward/return ticket are required of all visitors entering Barbados. Visas are not required for citizens of the United States, Canada, or Australia, but visas are required for citizens of some 78 countries.

In 2003, about 531,000 tourists visited Barbados. There were 6,210 hotel rooms that year with 10,770 beds and a 49% occupancy rate. The cost of staying in Barbados varied seasonally. According to 2005 US Department of State estimates, the daily cost of staying in Barbados between December and April was us\$394. At other times of the year, daily costs averaged us\$284.

#### 48 FAMOUS BARBADIANS

Sir Grantley Adams (1898–1971) was premier of the Federation of the West Indies (1958–62). His son, John Michael Geoffrey Manningham “Tom” Adams (1931–85) was prime minister from 1976 until his death, succeeding Errol Walton Barrow (1920–87). In 1985, Barrow again assumed the office of prime minister until his death. Erskine Sandiford (b.1938) succeeded Barrow. Barbados-born Edwin Barclay (1882–1955) was president of Liberia from 1930 to 1944. George Lamming (b.1927) is a well-known West Indian novelist. Sir Garfield Sobers (b.1936) has gained renown as the “world's greatest cricketer.”

#### 49 DEPENDENCIES

Barbados has no territories or colonies.

# BELIZE

**CAPITAL:** Belmopan

**FLAG:** The national flag consists of the Belize coat of arms on a white disk centered in a blue rectangular field with a narrow red stripe at the top and the bottom.

**ANTHEM:** *Land of the Free.*

**MONETARY UNIT:** The Belize dollar (B\$), formerly tied to the UK pound sterling and now pegged to the US dollar, is a paper currency of 100 cents. There are coins of 1, 5, 10, 25, 50 cents and 1 dollar, and notes of 1, 5, 10, 20, 50, and 100 dollars. B\$1 = US\$0.50000 (or US\$1 = B\$2) as of 2005.

**WEIGHTS AND MEASURES:** Imperial weights and measures are used. The exception is the measuring of petroleum products, for which the US gallon is standard.

**HOLIDAYS:** New Year's Day, 1 January; Baron Bliss Day, 9 March; Labor Day, 1 May; Commonwealth Day, 24 May; National Day, 10 September; Independence Day, 21 September; Columbus Day, 12 October; Garifuna Day, 19 November; Christmas, 25 December; Boxing Day, 26 December. Movable holidays are Good Friday and Easter Monday.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Belize (formerly British Honduras), on the Caribbean coast of Central America, has an area of 22,966 sq km (8,867 sq mi), extending 280 km (174 mi) N-S and 109 km (68 mi) W-E. Comparatively, the area occupied by Belize is slightly smaller than the state of Massachusetts. Bounded on the N by Mexico, on the E by the Caribbean Sea, and on the S and W by Guatemala, Belize has a total boundary length of 516 km (320 mi).

The capital city of Belize, Belmopan, is located in the center of the country.

## <sup>2</sup>TOPOGRAPHY

The country north of Belmopan is mostly level land interrupted only by the Manatee Hills. To the south the land rises sharply toward a mountainous interior from a flat and swampy coastline heavily indented by many lagoons. The Maya and the Cockscomb mountains (which reach a high point of 1,122 m/3,681 ft at Victoria Peak, in the Cockscombs) form the backbone of the country, which is drained by 17 rivers. The coastal waters are sheltered by a line of reefs, beyond which there are numerous islands and cays, notably Ambergris Cay, the Turneffe Islands, Columbus Reef, and Glover Reef.

## <sup>3</sup>CLIMATE

The climate is subtropical and humid, tempered by predominant northeast trade winds that keep temperatures between 16–32°C (61–90°F) in the coastal region; inland temperatures are slightly higher. The seasons are marked more by differences of humidity than of temperature. Annual rainfall averages vary from 127 cm (50 in) in the north to more than 380 cm (150 in) in the south.

There is a dry season from February to May and another dry spell in August. Hurricanes occur from July to October.

## <sup>4</sup>FLORA AND FAUNA

Most of the forest cover consists of mixed hardwoods—mainly mahogany, cedar, and sapodilla (the source of chicle). In the flat regions there are extensive tracts of pine. The coastal land and the cays are covered with mangrove. Indigenous fauna include armadillo, opossum, deer, and monkeys; common reptiles include iguana and snakes.

## <sup>5</sup>ENVIRONMENT

Due to its low population density, Belize has suffered less than its neighbors from such problems as soil erosion and pollution. However, substantial deforestation has occurred and water quality remains a problem because of the seepage of sewage along with industrial and agricultural chemicals into the water supply. It is estimated that 18% of the country's rural population does not have access to pure water. Pollutants also threaten Belize's coral reefs. Removal of coral, picking orchids in forest reserves, spear fishing, and overnight camping in any public area (including forest reserves) are prohibited.

Approximately 21% of Belize's total land area is protected. Natural hazards to Belize's environment include hurricanes and coastal flooding. Belize's national capital was moved 129 km (80 mi) inland from Belize City to Belmopan because of hurricanes. The Belize Barrier Reef Reserve System is a UNESCO World Heritage Site.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 5 types of mammals, 3

species of birds, 4 types of reptiles, 6 species of amphibian, 18 species of fish, and 30 species of plants. Endangered species in Belize included the tundra peregrine falcon, hawksbill, green sea and leatherback turtles, American crocodile, and Morelet's crocodile.

## 6 POPULATION

The population of Belize in 2005 was estimated by the United Nations (UN) at 292,000, which placed it at number 170 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 36% of the population under 15 years of age. There were 101 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.3%, a rate the government viewed as too high. The government is especially concerned about the growing adolescent fertility rates. The projected population for the year 2025 was 396,000. The population density was 13 per sq km (33 per sq mi).

The UN estimated that 49% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.32%. That year, the largest city was Belize City, with an estimated population of 52,600; the capital, Belmopan, had an estimated population of 9,000.

The first case of HIV infection was diagnosed in 1986; by 2005 approximately 2.4% of the population was believed to be infected. A national plan to combat HIV/AIDS was implemented in 1999.

The largest ethnic group in Belize is the Mestizo, which comprises 44% of the population. Other ethnic groups include Creole (30%), Mayan (10%), and Garifuna (6%).

## 7 MIGRATION

The population of Belize increased significantly in 1993, when 40,000 Central American refugees and other immigrants, mostly from Guatemala and El Salvador, arrived in the country. This offset the heavy Creole emigration to North America. As of 1995, Belize still had 6,000 refugees from El Salvador and 2,000 refugees from Guatemala. United Nations High Commissioner for Refugees (UNHCR) negotiations with the government produced two significant developments in 1999. First, as of February 1999 refugees are able to apply for naturalization after five years of residence in the country. Second, in May 1999 the government enacted an amnesty program, offering permanent resident status for illegal immigrants and unregistered refugees. By 30 June 1999, some 10,000 families had registered. The total number of migrants in Belize in 2000 was 17,000.

In 2005, the net migration rate was estimated as zero. Worker remittances in 2002 amounted to us\$13.8 million.

## 8 ETHNIC GROUPS

According to the latest estimates, 46.4% of the population are mestizo (mixed White and Mayan); about 27.7% are Creole (of African descent); another 10% are Mayan; 6.4% are Garifuna (Carib); and 9.5% are comprised of various other groups, including those of Arab, European, Chinese, East Indian, North American, and Syrian-Lebanese ancestry.

## 9 LANGUAGES

The official language is English. At least 80% of the people can speak standard English and/or a Creole patois. Spanish is spoken

by approximately 60% of the population; for one-third to one-half it is the first language. Although English is the language of instruction, other languages spoken include Garifuna (Carib), Mayan and other Amerindian languages, and, in the Mennonite colony, Low German.

## 10 RELIGIONS

About 58% of inhabitants are Roman Catholic. Only 7% of the populace are Anglicans; another 6% are Pentecostals. Other faiths and denominations generally have fewer than 11,000 members each. These include Methodists (4.2%), Seventh-Day Adventists (4.1%), and Mennonites (4%). There are approximately 6,000 Nazarenes and smaller numbers of Hindus, Baha'is, Baptists, Buddhists, Jehovah's Witnesses, Mormons, Muslims, Rastafarians, and Salvation Army members. About 6% of the population claim to be nonbelievers or to have no religious affiliation.

There is no state religion, however, the preamble of the constitution recognizes the religious history of the country by asserting that the nation "shall be founded upon principles which acknowledge the supremacy of God." Freedom of religion is generally respected in practice. Spirituality is a required topic in public schools as part of the social studies curriculum and all schools, both public and private, are required to provide 220 minutes per week of religious education or chapel services for students in kindergarten through sixth grade. However, students are not forced to participate in such instruction and the faith of the individual student, or their parents, is generally respected. Traditional Christian holidays are celebrated as public holidays.

## 11 TRANSPORTATION

In 2002, Belize had 2,880 km (1,789 mi) of roads, of which 490 km (304 mi) were paved. In 2003, there were 25,880 registered motor vehicles, 11,500 of which were passenger cars and 14,380 were commercial vehicles. The country had no railways. There are 825 km (513 mi) of waterways consisting of seasonally navigable river networks used by shallow-draft craft. Belize City is the main port. In the late 1970s, deepwater facilities were constructed through financing from the Caribbean Development Bank (CDB). Other ports and harbors include Big Creek, Corozol, and Punta Gorda. In 2005 Belize's merchant marine was comprised of 295 ships, totaling 1,015,270 GRT. Several shipping lines provide regular services to North America, the Caribbean, and Europe. In 2004, there were an estimated 44 airports, of which only 5 had paved runways as of 2005. International airports at Belize City (P.S.W. Goldson) and Punta Gorda handle services to the United States and Central America. Maya Airways provides domestic service, and there are various international air carriers.

## 12 HISTORY

Numerous ruins indicate that the area now called Belize was once heavily populated by Maya Indians, whose civilization collapsed around AD 900. Columbus sailed along the coast in 1502, but did not land. The first permanent settlement was established in 1638 by shipwrecked English seamen. Later immigrants included African slaves and British sailors and soldiers.

In its early colonial history the area was a virtual backwater, used only for logging and as a pirate base. A power struggle between England and Spain ensued over possession of the area, with

the British prevailing by the 19th century. In 1862 the British organized the area as the colony of British Honduras. For the next century, forestry continued as the main enterprise until eventually supplanted by sugar.

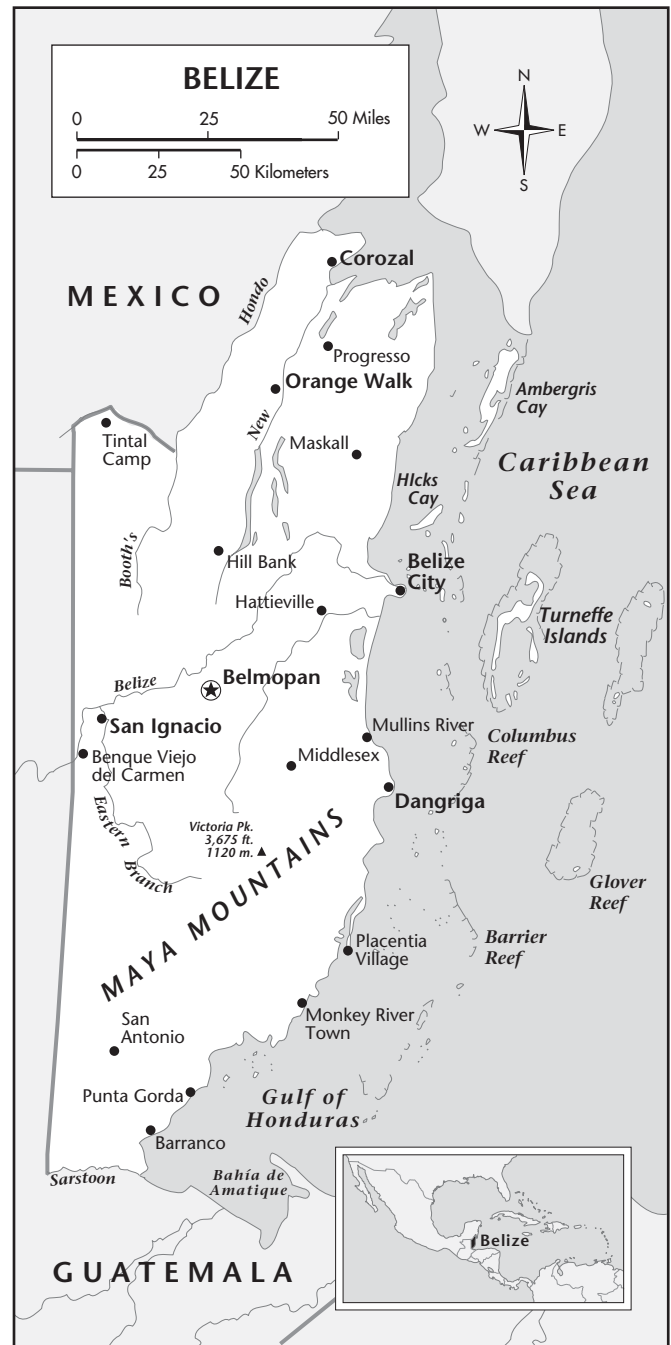

On 1 January 1964, a constitution was promulgated, providing for self-government, although the United Kingdom maintained the defense force. That force remained in place partly because of a border dispute with Guatemala, going back to an 1859 treaty. The Guatemalan government pressed territorial claims over the southern quarter of the area. A settlement guaranteeing the country's independence by 1970 seemed to resolve the dispute, but rioting in British Honduras in May 1968 led to the repudiation of the agreement by both the United Kingdom and Guatemala.

The country dropped the appearance, if not the reality, of colonial dependence in 1973, adopting Belize as the official country name. The border dispute continued unabated until 1977, when Guatemala and the United Kingdom began new negotiations on Belize. The United Kingdom, Guatemala, and Belize reached agreement on a solution in March 1981, but disagreement soon followed. Finally, the United Kingdom decided to take matters into its own hands and granted Belize independence as of 21 September 1981. Guatemala refused to recognize the new nation, severed diplomatic relations with the United Kingdom, and declared the date of independence a national day of mourning. In December 1986, the United Kingdom and Guatemala resumed diplomatic ties, but the 1,800-member British garrison remained in Belize. Since independence, control of the government has alternated between the People's United Party (PUP) led by George C. Price, which had dominated Belize's politics since the 1950s, and the United Democratic Party (UDP), led by Manuel Esquivel. The UDP won the elections of 1984 and 1993; in between, the PUP governed from 1989 to 1993. The PUP won the parliamentary elections of 1998 and 2003. Said Musa was prime minister under these PUP wins.

In 1991 Belize was admitted to the Organization of American States (OAS). The same year, Guatemala's new president, Jorge Serrano, reached an agreement with then-prime minister George Price that led to full Guatemalan recognition of Belize's independence the following year and the signing of a nonaggression pact between the two nations in 1993. The United Kingdom withdrew its troops from Belize in 1994.

Belize's tourism industry became a mainstay of the economy in the 1980s and 1990s, growing from 64,000 tourists in 1980 to 247,000 in 1992. By 1995, tourism surpassed all other sectors, including the sugar industry, as a source of foreign exchange, and it continued to grow through the remainder of the decade. Challenges facing Belize in the late 1990s included high unemployment, a growing involvement in South American cocaine trafficking, and increased urban crime, which worsened in 1998 and 1999, prompting new gun control measures.

Negotiations continued with Guatemala over territorial disputes not settled by the 1991 agreement, mainly Guatemalan claims to land in the southern part of the country. Tensions between the two countries continued into the early months of 2000, when Belize's ambassador was expelled from Guatemala, and talks scheduled for February were suspended. But a hurricane in 2001 hurt Belize and Guatemala and helped reduce tensions between both countries. After three years of rapid economic growth, Belize's econo-

LOCATION: 15°53' to 18°31' N; 87°16' to 89°8' W. BOUNDARY LENGTHS: Mexico, 250 kilometers (155 miles); Caribbean coastline, 386 kilometers (240 miles); Guatemala, 266 kilometers (165 miles). TERRITORIAL SEA LIMIT: 3 miles.

my expanded by just 3% in 2001 and 2002. Under the auspices of the OAS, both countries agreed to each having their own facilitator look into the territorial dispute. In August 2003, before facilitators' proposals were submitted to referenda in either country, the Government of Guatemala rejected the facilitators' proposals. The Guatemalan claim remained unresolved.

In January 2004, Britain's Privy Council by a split 3-2 decision dismissed an appeal to overturn the Belize government's approval of the proposed Chalillo hydroelectric dam. The then proposed dam on the Macal River at Chalillo would have created a lake

extending 20 km (12 mi) up the Macal and 10 km (6 mi) up its tributary the Ruspaculo, flooding 10 sq km (2,471 acres). The Canadian company Fortis, Inc. of Newfoundland under agreement with the Belizean government would build a 49.5 m (160 ft) high dam to provide hydroelectric power for Belize. The flooded locale would include areas designated for preservation as national environmental resources—habitat to the highest density of big cats, jaguar, puma and ocelot, in Central America, rare Morelet's crocodiles, tapirs and scarlet macaws, as well as to cultural remains. Dissent against the project was worldwide. Fires used to remove forest cover to protect the construction area were large enough to be picked up by satellite. By October 2005, the dam was tested prior to its complete start.

In January 2005, public and private sector workers went on strike over budget measures, including tax increases, and for salary increases. By April antigovernment protests in the capital resulted in rioting. Opposition political groups and trade unions called for general elections (next scheduled for March 2008) citing Musa's mismanagement of the country. Acts of sabotage deprived the population of basic services including water, electricity and communications. In his "State of the Nation" address, 19 September 2005, Musa noted that despite the fear and uncertainty of the previous months, the economy had not collapsed. He intended to pursue his tax reform measures and highlighted the effect of rising oil prices on higher domestic costs of production consumer prices and as a drain on foreign reserves.

In October 2005, Belize reported its first case of dengue hemorrhagic fever in the country. It occurred in the Cayo District.

### **13 GOVERNMENT**

The independence constitution of 21 September 1981 (based on that of 1 January 1964) vests governmental authority in a governor-general appointed by the UK monarch, a cabinet headed by a prime minister, and a bicameral National Assembly. The governor-general on the advice of the prime minister appoints the cabinet ministers. The National Assembly consists of a 29-member House of Representatives elected by universal adult suffrage to serve five-year terms, and a Senate of eight members appointed by the governor-general (5 on the advice of the prime minister, 2 on the advice of the opposition, and 1 on the recommendation of the Belize Advisory Council). Parliamentary elections must be held at intervals of no longer than five years. The voting age is 18.

### **14 POLITICAL PARTIES**

The two major parties in Belize are the current majority People's United Party (PUP) and the United Democratic Party (UDP). George C. Price dominated Belize's politics after becoming the country's premier in 1964. The PUP had dominated the electoral scene for more than 30 years and was the party in power when Belize became independent. At independence in 1981, Price became prime minister and ruled for three years. The UDP coalition, under Manuel Esquivel's leadership, took 21 House seats in 1984 and ruled until 1989, when the PUP again gained control and Price once again became prime minister. He called an early election in June 1993, which his party unexpectedly lost, placing the UDP in a dominant position, UDP 15 seats, PUP 13 seats.

Although it won a sweeping victory in the 1997 municipal elections, the opposition UDP held only three elected seats at the

national level as of 1999. The PUP had increased its position in the subsequent August 1998 elections (PUP 26 seats and UDP 3 seats), after which Said Musa succeeded Manuel Esquivel as party leader and prime minister. The elections of 2003 were the fifth National Assembly elections since independence in 1981 and the first time that a political party had been in government for two successive terms. In the March 2003 elections, the PUP won 22 seats and the UDP 7 seats. Said Musa remained as prime minister. After the death of a minister in October 2003 the PUP lost one seat in the by-election, but still retained a majority. Dean Barrow led the opposition. There was one political pressure group, the Society for the Promotion of Education and Research or SPEAR headed by Adele Catzim.

### **15 LOCAL GOVERNMENT**

Belize is divided into six administrative districts: Corozal, Orange Walk, Belize City, El Cayo, Stann Creek, and Toledo. Except for Belize City, which has an elected city council of nine members, each is administered by a seven-member elected town board. Local government at the village level is through village councils.

### **16 JUDICIAL SYSTEM**

The crown appoints the independent judiciary. The law of Belize is the common law of England, augmented by local legislation. The judiciary consists of the Magistrate's Courts, the Supreme Court, and the Court of Appeal. The Supreme Court is presided over by a Chief Justice. Appeals are to the court of appeal, established in 1968, and, until 2003, to the Judicial Committee of the Privy Council in the United Kingdom. Six summary jurisdiction courts (criminal) and six district courts (civil) are presided over by magistrates.

On 9 June 2003, Caribbean leaders met in Kingston, Jamaica, to ratify a treaty to establish the Caribbean Court of Justice (CCJ). The first session of the CCJ was scheduled for November 2003. Eight nations—Barbados, Belize, Dominica, Guyana, Jamaica, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago—had officially approved the CCJ, although 14 nations were planning to use the court for appeals. Haiti had agreed to use the CCJ for resolution of trade disputes.

The judiciary has protected individual rights and fundamental freedoms. Detainees must be brought before a judge within 72 hours of arrest. Bail is liberally afforded. A jury trial is required in capital cases. The 1981 Constitution provides a wide range of fundamental rights and freedoms. Criminal defendants have rights to presumption of innocence, protection against self-incrimination, counsel, appeal, and public trial. The constitution prohibits torture and other cruel, inhuman, or degrading treatment or punishment. The constitution also prohibits arbitrary interference with privacy, family, home, or correspondence. The government generally respects these provisions.

### **17 ARMED FORCES**

The armed forces totaled an estimated 1,050 active personnel in 2005, supported by 700 reserves. The Army was structured into 3 infantry battalions, a maritime wing with 14 patrol craft, an

air wing with 2 transports, but no combat aircraft, and 1 support group. The defense budget totaled \$16 million in 2005.

## 18 INTERNATIONAL COOPERATION

Belize was admitted to the UN on 25 September 1981, four days after independence. Belize participates in a number of UN specialized agencies, such as ILO, ICAO, IFAD, IFC, UNESCO, UNIDO, the World Bank, and WHO. Belize joined the WTO in January 1995. Belize is also a member of the ACP Group, the Commonwealth of Nations, CARICOM, the Caribbean Development Bank, the Latin American Economic System, G-77, the Association of Caribbean States (ACS), and the OAS. The country is part of the Nonaligned Movement and the Agency for the Prohibition of Nuclear Weapons in Latin American and the Caribbean (OPANAL). Belize has an unresolved boundary dispute with Guatemala. In environmental cooperation, Belize is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification. Belize is also a signatory to the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

The economy is dependent on agriculture and fishing. Sugar, bananas, and citrus fruits are the main cash crops. Until a recent depletion, the country's main export had been forest products, especially mahogany. Belize continues to import most of its consumer goods, including much of its food and all of its petroleum requirements. The tourism industry, fishing industry, and the garment manufacturing industry grew in importance during the late 1990s.

Belize started the decade of the 1990s positively. However, after five years of economic growth averaging 4.3%, the economy decelerated to 1.5% in 1996. This was largely due to a slowdown in tourism, a decline in fisheries production, and cutbacks in public spending and construction. The agricultural sector grew rapidly in that year, with banana and sugar production up by significant amounts, while production of oranges was nearly flat. Fishing was also hurt by corrective measures to overcome the taura virus, which affected farmed shrimp production and lowered lobster catches. In 1997, the government implemented austerity measures and capital projects that continued the economic depression in the short-run. The agricultural industry experienced a decline of production in 1998, but the fishing, tourism, and garment manufacturing industries gained ground. In 1997 and 1998, GDP growth hovered around 3%, but by 2004, the economy was growing at a rate of 4.5%, due to strong growth in the agriculture, fishing, and tourism industries. Inflation remained subdued at around 3% in 2004 and 2005. In 2005, the GDP growth rate was estimated at 3.8%.

Belize's future economic growth is linked to the improvement of technology and physical infrastructure. The Agency for International Development (USAID), the World Bank, the United Kingdom, the EU, the Caribbean Development Bank (CDB), Canada, and Taiwan have provided assistance to Belize for the reconstruction and pavement of major highways, and the construction of houses. Electricity has become dependable, and the telecommunications system is reliable.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Belize's gross domestic product (GDP) was estimated at \$1.8 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$6,800. The annual growth rate of GDP was estimated at 3.8%. The average inflation rate in 2005 was 3%. It was estimated that agriculture accounted for 22.5% of GDP, industry 23%, and services 54.5%.

According to the World Bank, in 2002 remittances from citizens working abroad totaled \$14 million or about \$51 per capita and accounted for approximately 1.5% of GDP.

In 2001 it was estimated that approximately 27% of household consumption was spent on food, 5% on fuel, 3% on health care, and 13% on education. It was estimated that in 1999 about 33% of the population had incomes below the poverty line.

## 21 LABOR

The Belize labor force in 2001 (the latest year for which data was available) was estimated at 90,000. Of that number in that same year, approximately 27% of the labor force was employed in agriculture, 18% in industry, and 55% in services. In 2003, the unemployment rate was estimated at 12.9%. The Belize labor market is marked by a shortage of skilled labor and technical personnel.

Labor legislation covers minimum wages, work hours, employment of young persons, and workers' safety and compensation. The National Trades Union Congress of Belize is the major union federation, and the United General Workers' Union is the leading trade union. In 2005, there were eight independent unions, comprising about 11% of the labor force, which represented a cross-section of white-collar, blue-collar, and professional workers, including most civil service employees. There are procedural requirements that a union must meet, but the government freely recognizes the right to join unions and to strike. Unions representing "essential" service workers must give an intent to strike notice two days prior to a strike.

The labor act prohibits all employment for children under the age of 12, and children between the ages of 12 and 14 are not permitted to work during school hours. The minimum age for hazardous industry employment is 17. A minimum wage of \$1.12 per hour covers all workers and is effectively enforced. This wage does not provide a decent standard of living. The legal workweek, as of 2005, was set at 45 hours or six days, with overtime pay required if work is beyond those limits. Workplace safety and health regulations are also effectively enforced by the Ministry of Labor and Public Health, particularly in Belize City.

## 22 AGRICULTURE

Only 4% (89,000 hectares/220,000 acres) of total land area is used for the production of seasonal and permanent crops. Most Mayans still practice the traditional slash-and-burn method of farming, under which at any one time some 80% of the land is left idle. More efficient agricultural colonies have been established by Mennonite immigrants. Sugar, citrus, and bananas are the leading agricultural exports. In 2004, Belize's major exports amounted to

B\$410.1 million, with sugar accounting for 20%; orange concentrate, 13.5%; bananas, 13%; and grapefruit, 5.8%. Sugarcane production, centered in the northern lowland around Corozal and the town of Orange Walk, totaled 1,149,000 tons in 2004. Citrus production is concentrated in the Stann Creek valley; the 2004 output included 213,000 tons of oranges and 56,000 tons of grapefruit. The US-based Hershey Foods Corp. has invested B\$4 million in cacao cultivation in El Cayo; production in 2004 totaled 40 tons.

Because agriculture is not sufficiently diversified, the country relies heavily on food imports. By establishing a marketing board to encourage production of rice, beans, and corn, the government hopes eventually to become self-sufficient in these crops. Rice paddy production, which averaged 9,000 tons annually during 1979–81, fell to a reported 4,000 tons in 1990 but rose to 10,600 tons by 2004. Corn production, which had been hovering at 18,000 tons per year, rose to a reported 30,500 tons in 2004. Dry bean production was 4,000 tons. Export earnings from sugar in 2004 exceeded US\$35.5 million. Belize's sugar industry is heavily dependent on preferential price markets; over 50% of its exports are sent to preferential price markets (principally the European Union). Citrus output (exported in concentrate form), expanded by 170% as new acreage planted in the late 1980s came into production and weather conditions were very favorable. In 1985, a consortium that included Coca-Cola paid B\$12 million for 383,000 hectares (946,400 acres) northwest of Belmopan for a citrus farming project. Banana production was aided by privatization and restructuring in the production and marketing areas, which has acted as a catalyst to improve technology (success in combating sigatoka disease) and infrastructure. Banana production, however, fell from 68,000 tons in 1994 to 45,000 tons in 1995 before rising back to 79,400 tons in 2004. Papaya production totaled 27,700 tons in 2004; mangoes totaled 563 tons. Peanuts, pineapples, and winter vegetables are also grown for export.

### **23 ANIMAL HUSBANDRY**

Mennonite farms account for much of Belize's dairy and poultry output. In 2004, the nation had an estimated 21,200 hogs, 5,300 horses, 4,600 mules, 6,300 sheep, and 1,600,000 chickens. Cattle suited for breeding or crossbreeding with local cattle are Red Poll, Jamaica Black, Hereford, and Brahman (zebu); there were 57,800 head of cattle in 2004. Some 14,000 tons of poultry meat and 3,600 tons of milk were produced in 2004.

### **24 FISHING**

Fishing resources and development are good. In 2003, the total catch was 15,353 tons. Lobster, squid, and conch are the leading products; US\$16.2 million in export earnings were derived from fishing in 2003. In the mid-1990s, shrimp production increased by 75% as a result of three new shrimp farms opening in 1992. Aquaculture accounted for 66% of the total catch in 2003. Fishery exports accounted for 12% of agricultural exports and almost 8% of total merchandise exports in 2003.

### **25 FORESTRY**

Although Belize is still rich in forest resources, the accessible stands of commercial timber have been depleted. Reforestation and natural regeneration in the pine forest (mainly in Cayo, Stann

Creek, and Toledo Districts) and artificial regeneration of fast-growing tropical hardwood species are creating a resurgence in forestry. About 92% of Belize's land area is covered with forests and woodlands. Timber cutting is usually done during the short dry season. Total roundwood production in 2003 was 188,000 cu m (6.64 million cu ft). The principal varieties of trees cut are mahogany, pine, cedar, and rosewood. Exports of forest produce (including chicle) in 1965 amounted to one-third of total exports; in 2003, however, the export value was US\$4.0 million.

### **26 MINING**

Clays, limestone, marble, and sand and gravel for construction were the mainstays of Belize's minerals industry; none was reportedly exported in 2003. The Belize, Sibun, and Monkey rivers, as well as North and South Stann creeks, were the sites of clay, limestone, and sand and gravel operations. Clay production amounted to 500,000 tons in 2003; dolomite, 5,000 metric tons; limestone, 400,000 tons; sand and gravel, 130,000 cubic meters; marl, 1,140 cubic meters; and gold, 1,000 grams, by stream panning.

### **27 ENERGY AND POWER**

Electric power supplied by ten diesel-powered generators is inadequate. As of 2002 Belize imported about half its electricity from Mexico. Of the remainder, 30% came from the Mollejon dam and 20% from thermal sources. A central authority, the Belize Electricity Board, supplies and operates the national power system. In 2002, total capacity stood at 0.052 million kW, including power from the Board's generators and additional wattage supplied by private industries and individuals. Production in 2002 was 0.117 billion kWh, of which 0.039 billion kWh came from thermal sources (fossil fuels) and 0.078 billion kWh from hydropower. Construction of a 7 MW, US\$50 million hydroelectric power station on the Macal River, upstream from the Mollejon dam, was under way as of 2002 despite a suit by environmental groups pending before Belize's supreme court. The dam would be privately owned until 2034, after which the plant would be transferred to the government. In 2002, the consumption of electricity in Belize totaled 0.109 billion kWh.

### **28 INDUSTRY**

The manufacturing sector is small but has been expanding. Major industrial activities include textiles and garments, and sugar, citrus, and banana processing. The Development Finance Corporation promotes private capital investment in industry.

Aside from the processing of sugar, citrus, and bananas, the manufacturing sector in Belize continues to be quite small. Garment production stabilized and grew in the late 1990s after significant declines in 1994 and 1995 that resulted from heavy competition from Mexico and the United States. Other manufacturing products—batteries, beer, and beverages—represent a minimal share and are protected by import substitution policies. Belize has witnessed increased export earnings from marine products in the late 1990s and into the 2000s. Construction projects have included a multimillion dollar housing project designed to build 10,000 units, a US\$14.7 million project to rehabilitate the country's southern highway, and US\$9.5 million in upgrading health centers and hospitals.

Tourism is the number one source of foreign exchange earnings. Offshore business in Belize is a fledgling industry with high growth potential. Attractive incentives to foreign investment have been promoted by the government in order to attract capital.

### 29 SCIENCE AND TECHNOLOGY

University College of Belize and Wesley College, both in Belize City, offer some scientific and technical training, but Belizean students must go abroad for advanced study. The National Library Service operates a Technical/Reference Library in Belize City.

### 30 DOMESTIC TRADE

Except for warehouses and shops in Belize City, open markets still predominate in Belize. The domestic market is limited by high labor and energy costs. Small industries include cigarettes, beer, dairy products, and agricultural processing. Many residents shop in Mexico and Guatemala where prices for goods and services are lower. Within the country, most consumer goods are imported from the United States and Mexico. Since 1987, the government has maintained price controls on some basic items, such as bread, flour, rice, and fuel. A 9% sales tax applies to most goods (basic food items are exempt). A 14% sales tax applies to petroleum products, alcohol, and tobacco.

Normal business hours in Belize cities are 8 AM to noon and 1 to 5 PM, Monday through Friday. Banks are open from 8 AM to 1 PM, Monday through Thursday, and from 8 AM 4:30 PM on Fridays.

### 31 FOREIGN TRADE

Belize's major partners are NAFTA, the United Kingdom, CARICOM and the European Union (EU). In 2004, the United States imported 37.2% of Belize's total exports, and supplied 30.1% of all Belizean imports.

The Belize export market depends mostly upon agriculture, in particular on the sugars, and fruit and nut trade. There are a few clothing exporters that deal in men's outerwear and undergarments. Other substantial exports include shellfish, wood, and vegetables.

### 32 BALANCE OF PAYMENTS

The visible trade deficit is counterbalanced by overseas aid, British military expenditures, foreign remittances from expatriates, and receipts from tourism. Since the end of 1998, the trade deficit has widened, due to an increase in manufactured good purchases for the industrial and construction sectors. In 2005, the value of Belize's exports was estimated at us\$349.9 million, and imports were valued at us\$622.4 million. The current-account balance was estimated at -us\$200.1 million in 2005. That year, Belize had us\$90.45 million in reserves of foreign exchange and gold. As of June 2004, the external debt burden was us\$1.362 billion.

### 33 BANKING AND SECURITIES

The bank of issue is the Central Bank of Belize. Two foreign banks, Barclay's Bank and the Bank of Nova Scotia, and two local banks, the Atlantic Bank and Belize Bank, conduct commercial banking. The Banking Ordinance was amended in 1996 to authorize offshore banking; in March 2000 over 14,000 offshore financial institutions were operating in Belize. Anti-laundering legislation was

put into effect in 1998, and a small farmers' and business bank was created with bilateral aid from Taiwan.

In the fourth quarter of 1996, the Central Bank of Belize was obliged to defend the exchange rate by selling foreign exchange to commercial banks. The quantities involved were not announced, but international reserves fell from us\$71 million at the end of September 1996, to us\$65 million at the end of December 1996. However, year-end reserves were still significantly higher than the end-of-June figure of us\$39 million. Contributing to this rise was the receipt in August of a Taiwanese government loan of us\$26 million, as well as the proceeds of a bond issue for the new Central Bank building and increased sugar export receipts.

In 1998, the new government led by Said Musa lowered the liquidity and cash reserve requirements of commercial banks, and increased government spending on capital projects, in order to increase funds. Foreign assets had declined even further, from us\$65 million in 1997 to us\$51 million in 1998. A us\$50 million loan from the Taiwanese government was granted for infrastructure development in 1998. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to us\$189.8 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small-time deposits, and money market mutual funds—was us\$505.5 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 12%.

There is no securities exchange in Belize.

### 34 INSURANCE

There are several insurance companies doing business in Belize.

### 35 PUBLIC FINANCE

About half of Belize's recurrent expenditures are financed by customs duties; nearly all capital spending is funded by foreign loans

and grants. Since an IMF standby stabilization program was implemented in 1985, fiscal responsibility has improved. The government typically budgets over 50% of projected spending to capital development, and raises 60% of current revenues from trade taxes. Government spending accounts typically for almost one-third of GDP.

The US Central Intelligence Agency (CIA) estimated that in 2005 Belize's central government took in revenues of approximately us\$262 million and had expenditures of us\$329 million. Revenues minus expenditures totaled approximately -us\$67 million. Total external debt was us\$1.362 billion.

The International Monetary Fund (IMF) reported that in 1997, the most recent year for which it had data, budgetary central government revenues were B\$322 million and expenditures were B\$362 million. The value of revenues in US dollars was us\$161 million and expenditures us\$181 million, based on an official exchange rate for 1997 of us\$1 = B\$2.0000 as reported by the IMF. Government outlays by function were as follows: general public services, 20.9%; defense, 5.4%; public order and safety, 7.1%; economic affairs, 28.1%; housing and community amenities, 2.6%; health, 8.2%; recreation, culture, and religion, 1.3%; education, 20.5%; and social protection, 5.9%.

### 36 TAXATION

Income tax is levied on companies and individuals. Corporate taxes are set at a fixed rate of 35% of the chargeable income. Personal income tax is levied on those earning more than us\$10,000 per year, at a flat rate of 25%. A company granted a development concession has a tax holiday of up to 25 years. The Sales Tax Act of 1999 implemented a 12% tax on alcohol, tobacco, and fuel, and a 8% tax on all other items.

### 37 CUSTOMS AND DUTIES

Customs duties are generally ad valorem. Belize uses the CARICOM common external tariff (CET), which ranges from 5–45%. There is also a stamp tax (normally 12%) on certain goods. Import duties on industrial products average 20% and there is a duty of 15–25% on luxury items. Certain products require import licenses to protect domestic industry, including sugar and citrus fruits, but these will be removed.

The 1990 Export Processing Zone (EPZ) Act and the Commercial Free Zone (CFZ) Act of 1995 foster the import-export industry with tax incentives. Belize is a CARICOM member state, has free trade agreements with Venezuela and Colombia, and was working on a free trade agreement with Mexico in 1999.

### 38 FOREIGN INVESTMENT

As of 2006, proposals for foreign investments and applications for incentives are processed by BELTRAIDE—Belize Trade and Investment Development Service—formerly the Trade and Investment Promotion Service (TIPS). BELTRAIDE was designed as a one-stop shop for investors. In 2006, it was identifying as priority areas for investment agroindustries and food processing, tourism, aquaculture and horticulture, light manufacturing and assembly plants, deep-sea fishing, and forestry-related industries. An Aliens Land-Holding Ordinance governs real estate investment through licensing procedures.

Several incentive packages are available, outlined in the Fiscal Incentives Act of 1990, the International Business and Pub-

lic Companies (IBC) Act, the Export Processing Zone (EPZ) Act of 1990, and the Commercial Free Zone (CFZ) Act of 1995. No sectors are closed to foreign investment, but special permits and licenses for activities mostly reserved for Belize citizens—merchandising, sugar cane cultivation, internal transportation, beekeeping, accounting, beauty salons, etc.—may not be granted to foreigners. Fiscal incentives include tax holidays up to 25 years, tax and duty exemptions, reduced rents, and guaranteed repatriation of initial investment and profits.

IBCs are offered a host of tax exemptions and other incentives. EPZs offer duty exemptions on imports of capital equipment, spare parts, office furniture, and intermediate goods; tax exemptions; tax holidays of 20 years with options to extend; and no-cost work permits for professional and technical staff and up to 20% of the workforce. CFZ businesses are offered comparable incentives tailored to commercial enterprises. Three locations are designated EPZs-CFZs: the San Andres EPZ, eight miles from the Mexican border; an area adjacent to the Philip Goldson International Airport; and Price Barracks near Belize City.

Foreign direct investment was only us\$7 million in 1987. In 1997, FDI was us\$11.9 million, but rose to us\$19 million 1998, and peaked at us\$56 million in 1999. In 2000, FDI inflow was us\$27.6 million and in 2001, us\$34.2 million. In 2004, FDI amounted to us\$254.8 million. In 1999, amendments to existing legislation and new legislation—the Gaming Control Act, the Retired Persons (Incentive) Act, the Limited Liability Partnership Act, the Mutual Funds Act, the International Insurance Act, the Belize Business Bureau Act, and the International Financial Services—provided the legal framework for expanded offshore services, e-commerce and real estate development. The government also began the sale of Belize citizenship to those willing to pay from \$35,000 up to \$50,000 for the honor, especially to those from the United States, the United Kingdom, Ireland, and Canada. More CFZs are being created in Belize City, Benque Viejo del Carmen, and Punta Gorda. E-zones, equipped with the latest information technology, were fused with the EPZs. All concessions must be negotiated through BELTRAIDE.

### 39 ECONOMIC DEVELOPMENT

The government has opted to concentrate on developing agriculture, livestock, forestry, fishing, and tourism as foreign exchange earners. The main sources of bilateral aid are the United States and the United Kingdom; of multilateral aid, the United Nations (UN), Caribbean Development Bank (CDB), Organization of American States (OAS), and the Inter-American Development Bank (IDB). Belize joined the OAS and IDB in 1992 in a move to increase its access to developing financing and external technical cooperation.

Belize undertook several fiscal adjustment measures in 1996, including the retrenchment of the public sector work force and the introduction of a major value-added tax (VAT) of 15%. These two measures caused an increase in annual inflation from 3.2% in 1995 to 4.7% in 1996 and an increase of 1.3% in the rate of unemployment, to 13.8% of the labor force. In 2005, the inflation rate was estimated at 3%. The unemployment rate stood at 12.9% in 2003.

The National Development Strategy 1996–2000 drafted by the Ministry of Economic Development stressed fiscal restraint, and identified activities to stimulate private sector development, in-

cluding physical infrastructure improvement and financial sector reforms. Belize continues to strive toward meeting these goals.

A rural electrification project was underway in 2001–02, and the government pledged \$20 million to restore essential services such as health and education facilities and transportation networks to communities harmed by Hurricane Keith. The government is investing in projects to alleviate poverty. The government has been engaged in implementing an IDB-funded project to improve the competitiveness of the country's agricultural products in foreign markets. The country aims to promote the growth of commercial agriculture through Caribbean Community and Common Market (CARICOM) although most of its trade is conducted with the United States and Europe, not with other Caribbean nations. Tourism averaged 20% of gross domestic product (GDP) from 1997–2005, but the industry was adversely affected by the September 2001 terrorist attacks on the United States and the subsequent decline in tourism to the region.

#### 40 SOCIAL DEVELOPMENT

Social security systems provide benefits to all employed persons aged 14–64. Both employers and employees make contributions towards old age pensions, disability, survivor, and health benefits. Retirement is set at age 60 for both men and women. There is a social assistance program for women aged 65 and older. Sickness and maternity benefits are available, as well as work injury. Full medical care is provided at government hospitals and clinics, and if necessary, treatment abroad is available.

Women have access to education and are active in all areas of national life, but face domestic violence and certain types of discrimination in the business sector. In 2004 domestic violence reports against women increased. The Women's Bureau of the Ministry of Labor and Social Services develops programs to improve the status of women. Despite these efforts, few women hold top managerial positions, and women generally earn less than their male counterparts. Child abuse is not a societal problem, however there are reports of families selling daughters to older men.

The rights of minority groups in Belize are generally well protected, although there have been continued reports of poor treatment of immigrant agricultural workers. Human rights are generally respected, although as of 2004 there have been reports of excessive police force and other violations. Prison conditions are improving.

#### 41 HEALTH

Belize is relatively free of endemic diseases; during 1996–2000, communicable diseases were on the decline. Cardiovascular disease, mental illness, external trauma, and HIV/AIDS are significant public health problems. In 1995, 9,413 malaria cases were diagnosed. Belize was reported as a cholera-infected country in 1996, with 25 reported cases during that year. There are eight public hospitals. The Cayo and Belize districts have two hospitals each and all the remaining districts have one. There are 40 health centers and 35 rural satellites. As of 2004, there were an estimated 105 physicians and 126 nurses per 100,000 people.

Life expectancy was 68 years in 2005 and the infant mortality rate for that year was 25 per 1,000 live births. The total fertility rate was 4.0 per woman. There were 30 births per 1,000 people in 1999. The total mortality rate was estimated at 4.6 deaths per 1,000 people as of 2002. About 90% of one-year-old children had

been vaccinated against measles by the mid-1990s. Approximately 82% of the Belize population had access to safe water and 57% had access to adequate sanitation. However, only 69% of rural households in the south of the country had safe water. The HIV/AIDS prevalence was 2.40 per 100 adults in 2003. As of 2004, there were approximately 3,600 people living with HIV/AIDS in the country. The government has implemented a strategic program to deal with the AIDS epidemic.

#### 42 HOUSING

Housing is inadequate, overcrowding is prevalent, and the situation has been aggravated by hurricane devastation (such as Hurricane Mitch 1998 and Hurricane Keith 2000). The government has put aside small sums for low-cost housing programs.

According to the 2001 census, about 83% of the population lived in undivided private homes and about 62% of all housing units were owner-occupied. About 44% of all households contained five or more members. About 32.8% of the housing stock was built in the period 1980–94; about 22% was built in 1979 or before. Only about 26% of all households had piped water leading directly into their homes. Another 17% had access to piped water to their yards. About 43.9% of the population still used outdoor pit latrines; but about 50% were linked to septic tanks or the public sewer system.

#### 43 EDUCATION

Primary education is free and compulsory for children between the ages of 5 and 14. Primary schooling covers an eight-year course of study. Secondary education covers four years and consists of either a general course of study or classes at a vocational or trade school. Most schools are church-affiliated but still supported by the government. About 28% of children between the ages of three and four attend some type of preschool program. Primary school enrollment in 2003 was estimated at about 100% of age-eligible students. The same year, secondary school enrollment was about 69% of age-eligible students. The student-to-teacher ratio for primary school was at about 21:1 in 2003. The ratio for secondary school was about 23:1.

The University of Belize was founded in 2000 by the merger of the University College of Belize (est. 1986), Belmopan Junior College, Belize School of Nursing, Belize School of Education, and Belize College of Agriculture. The University of the West Indies maintains a School for Continuing Education (SCE) in Belize. There are also several colleges providing specialized training such as the Belize Technical College, the Belize Teachers' College, and the Belize Vocational Training Center. In 2003, it was estimated that about 2% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 76.9%, with 76.7% for males and 77.1% for females.

The Ministry of Education, Youth, and Sports is the primary administrative body. As of 2003, public expenditure on education was estimated at 5.2% of GDP, or 18% of total government expenditures.

#### 44 LIBRARIES AND MUSEUMS

The National Library Service maintains a central library in the Bliss Institute, a children's library, and a branch library in Belize City. The National Library Service was established in 1966 to over-

see the nation's public library system. In 2003, the public library network included 12 branch (operating on a full-time basis) and 17 sub libraries (open only about 20 hours per month). The University of Belize Library System includes four department branch libraries and one resource center, including the Management and Social Science Library (MASS Library) and the Engineering Resource Center.

The Museum of Belize, opened in 2002, houses historical and cultural exhibits in a former prison. The remains of the ancient Maya civilization—the best known are at Xunantunich—are being excavated by the government. The Department of Archaeology in Belmopan houses artifacts thus far uncovered.

#### 45 MEDIA

Belize is connected by radiotelegraph and telephone with Jamaica, Guatemala, Mexico, and the United States. This service, along with cable and telex services, is operated by Cable and Wireless Ltd. An automatic telephone network, covering the entire country, is operated by the Belize Telecommunications, which was fully privatized in early 1992. In 2003, Belize had 33,300 mainline telephones and 60,400 mobile phones in use.

The Belize National Radio Network, a government station in Belize City, transmits in English and Spanish. The first privately owned commercial radio station began broadcasting in 1990. In 2004, there were 10 privately owned commercial radio stations and 1 British military station. There were also two privately-owned television stations and several cable stations. The Belize Broadcasting Authority regulates all broadcasting and retains the right to preview certain broadcasts. In 1997, there were 133,000 radios and 41,000 television sets in use nationwide. In 2002, there were 30,000 Internet users in the country.

There are no daily newspapers. The largest weeklies in 2002 were *Amandala* (*Black Power*, circulation 45,000) and *The Reporter* (6,500), both published in Belize City. *Belize Today*, a monthly publication out of Belmopan, has a circulation of 17,000. The Belize Press Association was formed in 1995.

Though Belize's constitution assures the freedom of speech and press, there are provisions for the curtailment of these freedoms, including a law forbidding citizens from questioning financial statements submitted by public officials. The Supreme Court has warned journalists that questioning the integrity of the court or of its members could result in criminal charges. The government makes free use of Belize's largest radio facilities to produce partisan advertisements and party propaganda. The Belize Broadcasting Authority (BBA) asserts its right to delete defamatory or libelous material from political broadcasts.

#### 46 ORGANIZATIONS

The Belize Chamber of Commerce and Industry has its headquarters in Belize City. There are active workers' unions and professional associations, including the Belize Citrus Growers' Association and the Belize National Teachers' Union.

Youth organizations include the Belize Union of Students and Youth (BUSY), YMCA, YWCA, The Scout Association of Belize,

an organization of Girl Guides, and a branch of the Red Cross Youth as part of the national chapter of the Red Cross. There are sports associations in the country for such pastimes as tennis, football (soccer), and track and field.

The United Democratic Party National Organization of Women (UPNOW) encourages involvement in party activities and educates women about political and social issues. The group also serves to defend women against discrimination and violence.

There are active chapters of Habitat for Humanity, the Lions Club, and Kiwanis International.

#### 47 TOURISM, TRAVEL, AND RECREATION

Belize is attracting growing numbers of tourists to its Mayan ruins, its barrier reef (the longest in the Western Hemisphere), and its beaches, forests, and wildlife. Tourist arrivals totaled 220,574 in 2003; mostly from the Americas. There were 5,050 hotel rooms in Belize with 8,166 beds and an occupancy rate of 41%. Visitors stayed an average of seven nights.

In 2005, the US Department of State estimated the cost of staying in Belize City at us\$183 per day.

#### 48 FAMOUS BELIZEANS

George C. Price (b.1919), leader of the PUP, became the country's first premier in 1964. Manuel Esquivel (b.1940), leader of the UDP, was prime minister from 1984–89 and from 1993–98. Said Wilbert Musa (b.1944) succeeded Esquivel in 1998.

#### 49 DEPENDENCIES

Belize has no territories or colonies.

# BOLIVIA

Republic of Bolivia  
*República de Bolivia*

**CAPITAL:** La Paz (administrative capital); Sucre (legal and judicial capital)

**FLAG:** The flag is a horizontal tricolor of red, yellow, and green stripes, representing the animal, mineral, and vegetable kingdoms.

**ANTHEM:** *Himno Nacional*, beginning “Bolivianos, el hado propicio coronó nuestros volos anhelos” (“Bolivians, propitious fate crowned our outcries of yearning”).

**MONETARY UNIT:** The boliviano (B) was introduced on 1 January 1987, replacing the peso at a rate of P1,000,000 = B1. There are coins of 2, 5, 10, 20, and 50 cents and 1 boliviano and notes of 2, 5, 10, 20, 50, 100, and 200 bolivianos. B1 = \$0.12330 (or \$1 = B8.11) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some Spanish weights are still used in retail trade.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; National Festival, 5–7 August; Columbus Day, 12 October; All Saints’ Day, 1 November; Christmas, 25 December. Movable holidays include Carnival, Ash Wednesday, Holy Thursday, Good Friday, Holy Saturday, and Corpus Christi.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated in South America just N of the Tropic of Capricorn, Bolivia has a total area of 1,098,580 sq km (424,164 sq mi), extending about 1,530 km (950 mi) N–S and 1,450 km (900 mi) E–W. Comparatively, the area occupied by Bolivia is slightly less than three times the size of the state of Montana. Completely landlocked, Bolivia is bounded on the N and NE by Brazil, on the SE by Paraguay, on the S by Argentina, on the SW by Chile, and on the W by Peru, with a total boundary length of 6,743 km (4,190 mi).

The capital city of Bolivia, La Paz, is located in the west-central part of the country.

## <sup>2</sup> TOPOGRAPHY

Bolivia has three geographic zones: the Andean highlands in the southwest, running north to south; the moist slopes and valleys on the eastern side of the Andes, called the Yungas and Valles; and the eastern tropical lowland plains, or Oriente. In Bolivia, the Andes, divided into two chains, attain their greatest width, about 640 km (400 mi), and constitute about one-third of the country. Between the Cordillera Occidental, forming the border with Chile and cutting Bolivia off from the Pacific, and the complex knots of the Cordillera Oriental lies a broad sedimentary plateau about 4,000 m (13,000 ft) above sea level, called the Altiplano, which contains about 28% of Bolivia’s land area and more than half of its population. In the north of this plateau, astride the border with Peru, lies Lake Titicaca, 222 km (138 mi) long and 113 km (70 mi) wide; with its surface at an altitude of 3,805 m (12,484 ft), it is the highest navigable lake in the world. The lake is drained to the south by the 322-km (200-mi) Desaguadero River, which empties into shallow, salty Lake Poopó. Farther south are arid salt flats.

The Cordillera Oriental has high habitable basins and valleys collectively referred to as the Puna. Bolivia’s most majestic moun-

tains are in the northern part of the Cordillera Oriental around Lake Titicaca, where the mountain sector is capped with snow; the highest of these is Ancohuma (6,550 m/21,489 ft). Illimani and Illampu, both rising more than 6,400 m (21,000 ft), overlook the city of La Paz, which is protected from cold winds by its position in the spectacular gorge formed by the headwaters of the La Paz River. The three important valleys of this region, Cochabamba, Sucre, and Tarija, are from 1,830 to 3,050 m (6,000 to 10,000 ft) in altitude.

Bolivia’s important rivers descend across the Yungas and Valles into the low tropical plains of the Oriente, which comprises three-fifths of the land but has only about one-fifth of the population. The Guaporé, the Mamoré, the Beni, and the Madre de Dios rivers cross the often-flooded northern savanna and tropical forests, all converging in the northeast to form the Madeira, which flows into Brazil. The plains become drier in the southeast, forming Bolivia’s scrub-covered Chaco. Crossing the Chaco to the southeast, the Pilcomayo River leaves Bolivia to form the border between Paraguay and Argentina.

## <sup>3</sup> CLIMATE

Although Bolivia lies entirely in the tropics, extreme differences in altitude and rainfall give it a great variety in climate. The mean annual temperature of La Paz, at 3,697 m (12,130 ft), is about 8°C (46°F); that of Trinidad, in the eastern lowlands, is 26°C (79°F). In the western highlands, cold winds blow all year round; at night the temperature often drops below freezing, but the sun is intense and the air brilliant during the day. The rainy season lasts from December to February, but during most of the year the high Altiplano plateau is parched and inhospitable. Around Lake Titicaca, rainfall is adequate, but there is less than 13 cm (5 in) a year in the

extreme southwest. The fertile valleys in the Cordillera Oriental have a warmer, semiarid Mediterranean climate.

The Yungas and Valles have a semitropical, moist climate that gradually becomes hotter as one descends from the eastern slopes of the Andes to the tropical eastern lowlands. Rainfall is heavy in the northeast, and floods are common in March and April. The lowland plain becomes drier to the south, until it reaches drought conditions near the Argentine border.

#### **4 FLORA AND FAUNA**

Bolivia shares much of the wide variety of flora and fauna found in the four countries surrounding it. Because of the wide range in altitude, Bolivia has plants representative of every climatic zone, from arctic growth high in the sierra to tropical forests in the Amazon basin. On the high plateau above 3,050 m (10,000 ft) grows a coarse bunch grass called ichu, used for pasture, thatching, and weaving mats. A reed called totora, which grows around Lake Titicaca, is used for making small fishing boats (balsas). The low bushlike tola and the resinous mosslike yareta are both used for fuel. The Lake Titicaca region is believed to be the original home of the potato.

In the tropical forest, the quinine-producing quina tree grows, as does the Pará rubber tree. There are more than 2,000 species of hardwoods. Aromatic shrubs are common, as are vanilla, sarsaparilla, and saffron plants. Useful native plants include palms, sweet potatoes, manioc, peanuts, and an astonishing variety of fruits. The Chaco is covered with a prickly scrub collectively called monte; tannin-producing quebracho trees also abound there.

On the Altiplano, the most important animal is the llama, one of the most efficient carrier animals known; alpaca and guanaco and several varieties of cavy (guinea pig) are found there, too. Lake Titicaca has several varieties of edible fish. In the tropical Amazon region are the puma, coati, tapir, armadillo, sloth, peccary, capiguara (river hog), and ant bear, as well as several kinds of monkeys. Birdlife is rich and varied. The Andean condor, usually found in the mountain regions, is the largest flying bird in the Americas. Reptiles and an enormous variety of insects are found below 3,050 m (10,000 ft).

#### **5 ENVIRONMENT**

The chief environmental problem in the densely populated Altiplano is soil erosion, resulting from poor cultivation methods (including slash-and-burn agriculture) and overgrazing. Erosion affects about 30% of the land in Bolivia. Salinity and alkalization are also a significant problem. Inadequate sanitation and solid-waste disposal, as well as effluents from mining activities, contribute to the Altiplano's declining water quality, which poses a threat both to fish life and to human health. Bolivians have about 316 cu km of renewable water resources, but only 95% of the city dwellers and 68% of all rural people have access to improved water sources. The main sources of water pollution are fertilizers, pesticides, and mining. Most environmental legislation dates from the 1970s, when Bolivia enacted the Health Code of 1978 (which contains provisions governing water quality), the National General Forest Act of 1974, and the Law of Wildlife, National Parks, Hunting, and Fishing (Decree Law No. 12,301) of 1975.

In July 1987, the Bolivian government became the first government in history to agree to protect a part of its environment in

return for a reduction of its foreign debt, when Conservation International, a US nonprofit group, purchased \$650,000 of the debt in return for Bolivia setting aside 1.5 million hectares (3.7 million acres) of tropical lowlands in three conservation areas. As of 2003, 13.4% of Bolivia's total land area was protected. There are eight Ramsar wetland sites in the nation. The Department of Science and Technology, within the Ministry of Planning and Coordination, plans and coordinates all governmental and intergovernmental activities related to the environment.

As of 2002, there were at least 316 species of mammals, 504 species of birds, and over 17,360 species of plants. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 26 types of mammals, 30 species of birds, 2 types of reptiles, 21 species of amphibian, and 70 species of plants. Another 100 species of animals were considered to be near threatened or at a low concern of threat. Endangered species in Bolivia included the puna rhea, South American river turtle, broad-nosed caiman, spectacled caiman, black caiman, jaguar, jaguarundi, margay, ocelot, emperor tamarin, and giant anteater. The llama and the alpaca are also threatened with extinction.

#### **6 POPULATION**

The population of Bolivia in 2005 was estimated by the United Nations (UN) at 8,922,000, which placed it at number 85 in population among the 193 nations of the world. In 2005, approximately 4% of the population was over 65 years of age, with another 37% of the population under 15 years of age. There were 99 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 2.1%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 12,018,000. The population density was 8 per sq km (21 per sq mi).

The UN estimated that 63% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.50%. The capital city, La Paz (administrative capital) had a population of 1,477,000 in that year. Sucre (legal and judicial capital), had a population of 190,000. Santa Cruz, a departmental capital, had a metropolitan population of 1,352,000. Other important departmental capitals and their estimated populations include Cochabamba, 815,800; Oruro, 211,700; and Potosí, 115,000.

#### **7 MIGRATION**

Aside from Spaniards during the colonial period, European immigration has been insignificant. Small numbers of Italians, Poles, and Germans have settled mainly in the vicinity of La Paz and Cochabamba, and some Jewish refugees from Nazi Germany arrived in the 1930s. After World War II, about 1,000 Japanese settled in colonies around Santa Cruz and became successful in truck farming, and several hundred Okinawan families established themselves as rice growers in the same area.

From the 1950s to the 1980s, migration to neighboring countries increased: 30,000 left Bolivia in 1950–55; 40,000 left in 1980–85. Since the emigrants tend to have basic training or technical skills, a drain of important human resources is occurring. A number of Bolivian *braceros* (contract agricultural laborers) go to northwestern Argentina to work in rice and sugar harvests. In the 1970s, Brazilian settlers, drawn by improved railroad and high-

LOCATION: 9°40' to 22°53' s; 57°29' to 69°35' w. BOUNDARY LENGTHS: Brazil, 3,400 kilometers (2,108 miles); Paraguay, 750 kilometers (465 miles); Argentina, 832 kilometers (516 miles); Chile, 861 kilometers (535 miles); Peru, 900 kilometers (558 miles).

way links, migrated to northeastern Bolivia in growing numbers; these immigrants had a substantial influence on the region, since they continued to speak Portuguese and to use Brazilian currency as their medium of exchange. Within the country, migration is swelling the sparsely populated lowlands, particularly in Santa Cruz and its environs. High unemployment among agricultural laborers and miners has caused significant migration to the cities. The net migration rate estimated for 2005 was -1.27 migrants per 1,000 population. The government views the migration levels as satisfactory.

As of 2000, the number of migrants in Bolivia totaled 61,000. In 2004 there were 546 refugees living in Bolivia. Worker remittances for 2003 totaled \$85.5 million.

## 8 ETHNIC GROUPS

Among the Amerindian population, an estimated 30% are Quechua and 25% are Aymará. Cholos (Bolivians of mixed white and Amerindian lineage) make up another 25 to 30%, and those of wholly European background account for virtually all of the re-

mainder. One reason for the uncertainty of these estimates is that although the distinction between Amerindian, cholo, and white was at one time racial, it has gradually become at least partially sociocultural: Amerindians become cholos when they abandon their native costumes, learn to speak Spanish, and acquire a skill or trade. Not all those classified as whites are without some Amerindian mixture.

The rapidly disappearing Amerindians who populate the tropical plains in the southeast, the Chiriguano, are believed to be a Guaraní tribe that moved west from Paraguay before the Spanish conquest. The Mojenos, Chiquitanos, and Sirionós inhabit the forest-grassland border in the far east.

## <sup>9</sup>LANGUAGES

Spanish, Quechua, and Aymará are all official languages. Spanish as spoken by educated Bolivians differs less from Castilian than do the dialects of many regions in Spain itself. An increasing number of Amerindians also speak Spanish.

## <sup>10</sup>RELIGIONS

Roman Catholicism is the official religion. As such, the Roman Catholic Church receives support from the state and exercises a certain degree of political influence through the Bolivian Bishops' Conference. Courses in Catholicism are offered in public schools, but students of other faiths are not required to attend. Non-Catholic organizations register with the Ministry of Foreign Affairs and Worship for tax and legal benefits, but unregistered groups are not restricted from gathering. Freedom of religion is provided for in the constitution and this right is generally respected in practice.

According to a 2001 survey, about 78% of the population were Roman Catholic. Between 16 and 19% of the population were Protestant, including Mennonites, Lutherans, Mormons, Methodists, Seventh-Day Adventists, Baptists, Pentecostals, and various evangelical groups. There is a Mormon temple in Cochabamba which is believed to serve more than 100,000 Mormons from across the country. Less than 0.2% of the population were affiliated with other faiths such as Judaism, Bahá'ism, Islam, Buddhism, and Shintoism. There is a small Jewish community with a synagogue in La Paz, as well as a Muslim community with a mosque in Santa Cruz. Korean immigrants also have a church in La Paz.

Indigenous beliefs and rituals are exercised by the Aymará, Quechua, Guaraní, and Chiquitano, many of whom practice a blend of Roman Catholicism and traditional customs. Common traditional beliefs include a focus on Pachamama, who is a mother earth figure, and Akeko, a god of luck, harvests, and abundance.

## <sup>11</sup>TRANSPORTATION

Transportation in Bolivia has been seriously impeded both by the geographic configuration of the country and by the concentration of population and mineral wealth in the mountain regions. Railroads and highways twist along the Andean Range, and are often blocked by mudslides during the rainy season. The shortage of transportation facilities is one of the most serious barriers to economic development. Railroads are almost entirely single, 1,000 m narrow gauge track, totaling 3,519 km (2,189 mi) in 2004. The railway system, National Railway Co, is in two distinct parts separated by the eastern Andes. All of the trackage was government owned and operated until privatized in 1996. A major portion of

the railway system, the Andina, services the Altiplano, the western mountainous region, providing vital international connections with Pacific coast ports. The remaining track, the Oriental, connects the eastern city of Santa Cruz with Brazil and Argentina. An important route to Puerto Suárez eventually reaches the Brazilian port of Santos, while the line to Argentina via Villazón continues on to Buenos Aires. Two smaller lines (157 km/98 mi) are run by the Mining Corp. of Bolivia and by the Pulacayo mining enterprise.

In 2003, of a total of 60,762 km (37,794 mi) of roads, only about 4,314 km (2,683 mi) were paved, including 11 km (7 mi) of expressways. The Cochabamba-Santa Cruz highway, completed in 1963, was a major achievement in connecting lowland and highland Bolivia. In 2003 there were 493,600 motor vehicles, of which 203,500 were passenger cars, and 290,100 were commercial vehicles.

Airlines are particularly important in view of Bolivia's topography and the underdevelopment of other means of transportation. In 2004, there were an estimated 1,065 airports, only 16 of which had paved runways as of 2005. The hub of air traffic is El Alto airport near La Paz, the world's highest commercial airport; the other international airport is at Santa Cruz. Lloyd Aéreo Boliviano (LAB), with 50% government capital, services most of the country. In 2003, a total of about 1.768 million passengers were carried on scheduled international and domestic flights. Military Air Transport, operated by the air force, provides some civilian freight and passenger service, and numerous air taxi companies are also in service.

Little use has been made of Bolivia's 10,000 km (6,214 mi) of commercially navigable waterways. The merchant marine had 32 vessels (1,000 GRT or over), totaling 413,407 GRT in 2005. There are no regular riverboat services. Bolivia has free port privileges at Antofagasta and Arica (Chile), at Mollendo (Peru), and at Santos (Brazil).

## <sup>12</sup>HISTORY

By about AD 600, Amerindians (believed to belong to the Aymará-speaking Colla tribe) were settled around the southern end of Lake Titicaca. As they came into contact with coastal tribes, the highly developed classic Tiahuanaco civilization emerged, reaching its peak about AD 900. Lake Titicaca became a place of worship and a great commercial center. Then cultural and political disintegration set in, and by 1300, the Quechua-speaking Incas had conquered the region and had colonized villages in most of what is now Bolivia.

The demise of the Inca empire began in 1527 with the death of the Inca Emperor Huayna Capac. His two sons, Huáscar and Atahualpa, fought a civil war over succession. Francisco Pizarro, taking advantage of the civil war raging between the two heirs, led the Spanish conquest of the Inca Empire in 1532–33. In 1539, Pedro de Anzures established La Plata, subsequently called Charcas and Chuquisaca and now known as Sucre, Bolivia's legal and judicial capital.

The Spaniards did not become interested in the land called Alto Peru, or Upper Peru, until the discovery in 1545 of the fabulously rich silver mine called the Cerro Rico (Rich Hill) de Potosí. Three years later, La Paz was founded on the main silver transport route between Potosí and the coast. In 1559, the *audiencia* (region un-

der a royal court) of Charcas was established in Upper Peru under the viceroyalty of Lima. The mines continued to produce vast amounts of wealth for the Spanish Empire, and for years the city of Potosí was the largest city in the Western Hemisphere. In 1776, the *audiencia* was appended to the viceroyalty of La Plata (Buenos Aires).

The independence of Upper Peru came from the revolt of the small, native-born Spanish ruling class. In 1809, a year after Napoleon's invasion of Spain, the Spanish authorities in Chuquisaca (Sucre) were temporarily overthrown, and the local elite proclaimed independence. The movement was quickly put down by Spanish arms. The young government in Buenos Aires showed some interest in the region, having included delegates from Upper Peru when independence was declared at the Congress of Tucumán in 1816. However, independence came from Peru, after Simón Bolívar's victory at the battle of Ayacucho in December 1824. Bolívar then sent his young general, Antonio José de Sucre, to free Upper Peru. On 6 August 1825 a congress at Chuquisaca formally proclaimed the independence of the Republic of Bolívar, a name soon changed to Bolivia. Sucre was chosen as the first president in 1826, and Chuquisaca was renamed Sucre in his honor.

A period of instability followed, with civilians and army officers succeeding one another, usually by force of arms. The almost constant civil war retarded Bolivia's economic organization and helped bring about the loss of a large part of its land. The first of these losses came after the War of the Pacific (1879–84), pitting Chile against Bolivia and Peru. Chile's superior military force routed the Bolivians and seized what was then the Bolivian port of Antofagasta. The postwar settlement took away Bolivia's only coastal territory, as well as the nitrate-rich coastal area around it. Bolivia was forever after a landlocked country, with only rights of access to the Pacific under a 1904 treaty. Another territorial loss came in 1903 with the cession to Brazil of the Acre region, rich in natural rubber, in exchange for an indemnity and other minor concessions. Sucre was driven out of office after only two years. He was succeeded by Gen. Andrés de Santa Cruz, a man with imperial ambitions. In 1836, Santa Cruz conquered Peru and formed the Peruvian-Bolivian Confederation. In 1839, Chilean forces defeated and dissolved the confederation and ended the life term of Santa Cruz.

The economy was aided in the late 19th century by a silver boom. When prices collapsed, silver production gave way to tin mining. The dominance of mining in Bolivia's economy conditioned the political system. A few wealthy mine and plantation owners, allied with various foreign interests, competed for power. Indians, excluded from the system, found their lot unchanged after almost 400 years.

This arrangement began to unravel with yet another loss of Bolivian territory. In 1932, Bolivia warred with Paraguay over the Chaco, the lowland area believed at the time to be rich in oil. Despite their numerical superiority, the Bolivians were defeated by 1935, and Paraguay controlled about three-fourths of the disputed territory. The formal settlement in 1938 gave most of this land to Paraguay, although Bolivia was promised a corridor to the Paraguay River.

The Chaco war pointed out the weaknesses in Bolivia's political and social structure. Bolivia's loss was in part due to the poor morale of its soldiers, an army of conscripted Indians with no loy-

alty to the elite officer corps. In 1936 Bolivia's rigid caste system cracked, and Col. David Toro came to power with labor support and a vaguely socialist/nationalist platform. The government expropriated Standard Oil of New Jersey's Bolivian properties in 1937. Toro's government attempted social reform, and its efforts to control mining and banking led to fierce opposition. The tension continued after Toro was forced out of office by Col. Germán Busch. Busch challenged Bolivia's three large tin-mining interests, owned by Patiño, Aramayo, and Hochschild. With strong labor backing, Busch arranged for the constitution of 1938, a document guaranteeing the right of labor to organize, universal education, and nationalized subsoil rights. The very next year, Busch died in what was officially ruled a suicide.

World War II brought further strains to Bolivia. As world demand skyrocketed, the tin market boomed, but working conditions remained miserable, and wages remained low. In 1942, protests by tin workers against the "tin barons" and their American financiers were met with force by the government of Gen. Enrique Peñaranda, resulting in the "Catavi massacre." Wishing to retain the strategic materials in mid-war, the United States commissioned a US-Bolivian commission to study working conditions. This report confirmed the workers' grievances, but was completely ignored by Peñaranda. In December of 1943, a coalition of the army and the Nationalist Revolutionary Movement (Movimiento Nacionalista Revolucionario—MNR), which had gained considerable support among the mineworkers, engineered a coup, ousting Peñaranda and putting Maj. Gualberto Villarroel into power. The tin market collapsed at the war's end, weakening the government's power base. In 1946, Villarroel was overthrown and hanged, along with others, by a mob of workers, soldiers, and students, and a conservative government was installed.

In 1951, the MNR's candidate, Víctor Paz Estenssoro, a former associate of Villarroel, apparently won the presidential election, but a military junta stepped in, denying the legality of the vote. Paz, representing the left wing of the MNR, became president in 1952 as a result of a party-led uprising. For the next 12 years, Bolivian politics would be dominated by the MNR.

The leadership of the MNR was shared by four men: Paz, Juan Lechín Oquendo, leftist head of the miners' union, Hernán Siles Zuazo, close ally of Paz, and the right-wing Walter Guevara Arze. A pact among the four was to allow them to take turns in the presidency over the next 16 years. The Paz government made dramatic moves in an attempt to transform Bolivian society. The tin holdings of the three dominant family interests were expropriated, and a comprehensive land reform program was begun, along with wide-scale welfare and literacy programs. Industry was encouraged, the search for oil deposits was accelerated, and a new policy gave Amerindians the right to vote and sought to integrate the Amerindian community more fully into the national economy. The right to vote, previously restricted to literate Bolivian males (who constituted less than 10% of the population), was made universal for all Bolivians over 21.

In 1956, as expected, Hernán Siles succeeded to the presidency. But Siles only governed under Paz's watchful eye, and in 1960, Paz challenged the candidacy of Guevara Arze. Guevara went into exile, and Paz again assumed the presidency, with Lechín as his vice president. Paz became increasingly dictatorial, and the splits within the MNR worsened. Paz conspired to give himself yet another

er presidential term, complete with rigged elections in June 1964. Siles, now leading the right wing of the MNR, and Lechín, now leading the leftist opposition, conducted a hunger strike protesting Paz's authoritarian designs. Finally, the military defected when it became clear that Paz was without any allies. The military coup occurred in November 1964, with the junta selecting as president Paz's vice president René Barrientos Ortuño.

Barrientos moved quickly to consolidate his new government, removing Paz's old supporters and sending Lechín into exile. In the following year, a military faction forced Barrientos to allow Gen. Alfredo Ovando Candia to become his "co-president." This odd arrangement was resolved in 1966 with new elections. Barrientos and his newly formed Popular Christian Movement won a resounding victory.

In 1967, an active guerrilla movement with pro-Castro tendencies emerged in southeastern Bolivia. The Bolivian authorities imprisoned the French intellectual Jules Régis Debray, who revealed that the famous comrade of Fidel Castro, Ernesto "Che" Guevara, was leading the guerrilla movement. Later in the year, the Bolivian army apprehended and killed Guevara.

Barrientos died in a helicopter crash in April 1969, and a civilian, Vice President Adolfo Siles Salinas, became president. Siles was overthrown in September by Barrientos' former rival, Gen. Ovando, who presented himself as a presidential candidate for 1970 but then canceled the election. In October 1970, President Ovando was overthrown by rightist elements of the military, but the next day a leftist faction succeeded in making Gen. Juan José Torres Gonzales the new president.

The Torres regime was marked by increasing political instability. Backed by students and the Bolivian Labor Council, Torres expelled the US Peace Corps, permitted the expropriation of both US and privately owned Bolivian properties, sanctioned the seizure of land by landless peasants, established a labor-dominated People's Assembly, and declared his support for the reestablishment of diplomatic relations with Cuba. In a bloody three-day revolution in August 1971, the Torres government was ousted by a coalition of the armed forces and political leaders from the MNR and the Bolivian Socialist Falange (Falange Socialista Boliviana—FSB), together with other middle-class groups. The leader of the coup was Hugo Bánzer Suárez, who was installed as president later in the month. Bánzer consolidated his support with the founding of the Nationalist Popular Front, which became the political framework of the new government. Ex-president Paz returned from exile to head the MNR.

The first threats to the Bánzer government came from the left. There were reports late in 1971 of renewed activity by the Guevarist National Liberation Army. The government launched a vigorous antiguerrilla campaign and claimed nearly complete success. In 1973, however, Bánzer's coalition began to splinter. In 1974, when the MNR threatened to withdraw from the coalition, Paz went into exile again. After two coup attempts had been crushed in the fall of 1973 and two others in the summer of 1974, Bánzer formed a new all-military cabinet. In November 1974, the MNR, the FSB, and other political parties were abolished, and trade union meetings were declared illegal.

In response to industrial and political unrest, Bánzer announced the restoration of political parties in 1977 and of unions in 1978. He promised to hold new elections in July 1978. Paz again re-

turned from exile to run. The election results were annulled, however, and a new military government came to power in a bloodless coup. Another election took place in July 1979, but because no candidate received a majority and the Congress could not decide whom to select from among the three main candidates, an interim president was named. Another coup followed in November, but constitutional government was restored only two weeks later, in the wake of popular resistance. New presidential and congressional elections in June 1980 again failed to produce a majority winner, and in July there was another coup, staged by Gen. Luis García Meza, who promptly suspended the Congress, banned most political parties and all union activity, and established strict censorship in order to remove the "Marxist cancer" from Bolivia. Paz again went into exile. During the García regime there were frequent reports of arbitrary arrests, use of torture, and other human rights violations. In August 1981, García, who was suspected, along with other top officials in the government, of involvement with the cocaine trade, was deposed in a coup—the 190th in Bolivian history. He went into exile in Argentina in October 1982, and in May 1983, he was ordered arrested on charges of "corruption and economic crimes"—specifically, the fraudulent use of government funds in agricultural, construction, and oil refinery deals. Meanwhile, under two more military governments, political and union rights were gradually restored.

In October 1982, amid a worsening economic situation and increasing labor unrest, the Congress elected Hernán Siles Zuazo to the presidency. Siles, returning to office 22 years after the end of his previous presidency, could still count on electoral support, and had received a plurality of votes in the 1979 and 1980 elections. His shaky coalition faced continued economic problems, including food shortages and rampant inflation, and a right-wing threat from paramilitary groups whose activities were reportedly financed by cocaine smuggling. In November 1983, the Bolivian government announced an austerity program that included a 60% devaluation of the peso and hefty food price increases. By mid-1985, Siles had so mismanaged the economy and the political situation that labor unrest and social tension forced him to call national elections and to agree to relinquish power a full year before the expiration of his term. Bánzer won a plurality of the popular vote, but the MNR won more seats in the congressional elections, resulting in a fourth term of office for the 77-year-old Paz. In a departure from the norm, the MNR and Bánzer's party agreed to cooperate, allowing a comprehensive economic reform package to pass through the legislature.

Faced with runaway inflation, which reached an annual rate of 14,000% in August 1985, the government abandoned controlled exchange rates, abolished price controls, liberalized external trade, and instituted more restrictive monetary and wage policies. The result was sharply lower inflation and interest rates, and a more stable economy, although the shocks of this liberalization were felt through government layoffs and falling consumer buying power.

More importantly, Paz was able to forge a fundamental consensus among competing political parties in support of a continuing democracy. In 1989, despite a hotly contested presidential race, power passed from the MNR to the left-wing movement of the Revolutionary Left (MIR). The peaceful transfer of power from one party to another was a milestone in itself. An equally hopeful sign was the fact that the MIR leader, Jaime Paz Zamora, was able

to hold together a coalition with the right-wing national Democratic Alliance (ADN) to serve a full four-year presidential term. In Bolivia, this is a major accomplishment.

The elections of 1993 brought the MNR back to power, with Gonzalo Sánchez de Lozada assuming the presidency. Sánchez chose as his running mate Victor Hugo Cárdenas, an advocate for Bolivia's Aymara-speaking Amerindians. While some saw the move as a cynical ploy, others expressed hope that Bolivia's long-suffering native population might be brought into the political system. Sánchez de Lozada's administration embarked on a wide-ranging program of reforms that included decentralization of government, tariff reduction, educational reform, and most notably, a major privatization campaign. State enterprises that were privatized included the national railroad, the state-owned airline, and the nation's electric power generation facilities. Sánchez de Lozada's plans also included privatization of Bolivia's mining sector through joint ventures with foreign investors. In spite of continued economic stabilization and progress, the government's policies drew protests and labor strikes leading to the declaration of a 90-day state of siege in 1995.

In 1997, Gen. Hugo Bánzer, the former dictator who had tried unsuccessfully to regain power by legal means since his ouster in 1978, came in first in the June presidential elections and, in the absence of an electoral majority, was chosen by Congress to be the nation's next president. Bánzer, a conservative democrat, pledged to halt his predecessor's privatization program while improving basic services and expanding jobs. Shortly into his term, Bánzer faced growing social unrest resulting from an economic crisis and the government's inability to fight corruption and implement an effective anti-narcotics program. Due to health reasons, Bánzer resigned in 2001 before the end of his term and was replaced by his young vice president Jorge Quiroga who served as a caretaking president until Gonzalo Sánchez de Lozada, the plurality winner in the June 2002 election, took office for the second time in his life. After failing to win a majority of the popular vote, Sánchez de Lozada was elected by Congress over second-place finisher, indigenous and peasant activist Evo Morales.

Sánchez de Lozada's second term was marked by social and political upheaval. One year into his term, the economy was stagnant, and social and racial tensions kept the country in turmoil. Sánchez de Lozada's initiative to attract foreign investments to exploit Bolivia's large and rich natural gas reserves was met with indignant opposition by indigenous leaders. Social protests against Sánchez de Lozada turned violent and the government ordered the police to repress protestors. The vice president, Carlos Mesa Gisbert, announced his withdrawal of support for Sánchez, thus forcing him to resign. Mesa was appointed president and promised to implement social and economic reforms to mitigate poverty and bring about political reform. Mesa also took on a harder stance against Chile and promised that Bolivian natural gas would not be exported through Chilean ports. Although he did experience some positive response, Mesa soon found himself under the same heavy fire that brought his predecessor down. Mesa was forced to resign on 9 June 2005. A new care-taking government, led by Supreme Court President Eduardo Rodríguez, took charge to conduct new presidential elections.

Indigenous leader Evo Morales was widely seen as the favorite to win the presidential election. Having led the opposition against

Sánchez de Lozada and Mesa, Morales was blamed for the political instability that characterized Bolivia in the preceding years. Yet, he was also the most important indigenous political leader and represented an excluded class of Bolivians who had been historically subjected to neglect and poverty. Thus, his electoral victory was considered the only way to bring about stability and political inclusion.

Presidential elections were held in December 2005. Evo Morales won an absolute majority of the vote (53.7%) and became the first indigenous president in Bolivia's history. He defeated former President Jorge Quiroga (28.6%). Morales's strong showing was unusual for Bolivia, where presidents are usually elected by Congress after candidates fail to get an absolute majority of the vote. Evo Morales is the leader of the Movement Towards Socialism (MAS). MAS obtained a clear majority control of the Chamber of Deputies (72 seats in the 130-member Chamber) and 12 of the 27 seats in the Senate. As of this election there had been no other president in Bolivian history that had enjoyed such a clear mandate. Morales promised to bring about economic reforms to help the marginalized and poor, to fight corruption, and nationalize mining interests.

### 13 GOVERNMENT

Constitutionally, Bolivia is a centralist republic. The constitution of 3 February 1967 (amended in 1994) provides for a representative democracy, with its government divided into an executive branch, a bicameral legislature (a Congress consisting of a Chamber of Deputies and a Senate), and the judiciary. President Morales promised to call special elections in 2006 for a constitutional assembly mandated with drafting a new constitution.

Bolivia has had a spotty constitutional history. The current constitution is the result of a series of actions begun by the military junta that took control in November 1964. The junta replaced the 1961 constitution with the 1945 constitution, as amended in 1947. At the same time, it retained those sections of the 1961 constitution that dealt with universal suffrage, nationalization of the tin mines, land reform, and compulsory education. The 1967 constitution was further amended to circumscribe the power of militia forces. In practice, the constitution has not been rigorously observed. Coups and states of siege have been frequent. Congress was dissolved by the armed forces from 1969 to 1979 and again between 1980 and 1982. The constitution was amended in 1994 to give more power to the president and recognize indigenous people. If successful, President Morales would have a new constitution written. It would be the first where an indigenous majority took an active role in shaping the institutional order of Bolivia.

Under the constitution, the president and the vice president are elected by direct popular vote for a four-year term and cannot serve consecutive terms. If no candidate receives a majority in a presidential election, the Congress chooses among the three leading candidates. However, between 1966 and 1978, no presidential elections were held. The president's powers are considerable, and presidential authority often extends beyond the constitution. The president has the prerogative to declare a state of siege and may then rule by decree for 90 days. The Congress consists of 27 senators (three from each department) and 130 deputies. Deputies and senators are elected for five-year terms concurrently with the president. Bolivia utilizes a form of proportional representation to

ensure minority representation in the Chamber of Deputies and an incomplete-list system for the Senate. The regular session of Congress lasts for 90 days.

Universal suffrage, with no literacy or property qualifications, was decreed in 1952 for married persons at 18 years and single persons at 21. The constitution includes a bill of rights, which guarantees the right to express ideas freely, petition the government, and obtain a release under a writ of habeas corpus in case of illegal detention.

## 14 POLITICAL PARTIES

Bolivia's proportional representation system has encouraged the formation of several political parties. Numerous parties and coalitions have formed and dissolved over the years, usually tied to the personalities of the various leaders.

The Nationalist Revolutionary Movement (Movimiento Nacionalista Revolucionario—MNR) was founded by Víctor Paz Estenssoro, Hernán Siles Zuazo, and others in 1941. Although militant originally, the years have moderated the party's stance. The MNR came to power in 1952, with the help of the Revolutionary Workers Party, the carabineros (national police), and the miners' and peasants' militias. In the subsequent years, the MNR began to rely increasingly on foreign aid, especially from the United States, and became increasingly autocratic and corrupt. Finally, quarreling among the party leadership weakened the party, and by 1964 the MNR's monopoly on power had dissolved. In November 1964, Paz was sent into exile in Peru.

The MNR was then eclipsed by the charisma of President René Barrientos and his Popular Christian Movement. The MNR returned as part of the Nationalist Popular Front, organized by Hugo Bánzer Suárez. Bánzer then outlawed the MNR in November 1974. In the late 1970s, the MNR reappeared, along with a dissident MNRI (the "MNR of the left") headed by Hernán Siles.

With the restoration of Bolivian democracy, the MNRI won the presidency under Siles along with a coalition of leftist parties that included the Communist Party of Bolivia and the Movement of the Revolutionary Left (Movimiento de la Izquierda Revolucionaria—MIR), headed by Jaime Paz Zamora. MIR was an active partner in the Siles government; Paz Zamora was the vice president, and several MIR officials were in the cabinet. MIR won the presidency in 1989 after an extremely close election, and only after seeking support from the right wing Democratic Nationalist Alliance (Alianza Democrática Nacionalista—ADN).

The ADN was closely tied to former President Hugo Bánzer Suárez until his death. Bánzer, a former military officer, came to power in an alliance with the MNR, but eventually ruled as a military dictator. This right-wing party was denied power in 1985 by the MNR/MIR coalition. However, the ADN was instrumental in bringing Paz Zamora to power, and held half the ministerial positions in that government. In the most recent presidential election, the ADN candidate only managed to obtain 6.3% of the vote, generating doubt about the future of a party associated with the late leader, Hugo Bánzer.

In June 1997 Bánzer, whose dictatorial regime ruled Bolivia from 1971 to 1978, placed first in the nation's presidential election and, with the backing of Congress, was sworn in as president in August. Bánzer's own party, the ADN, formed a coalition government with the MIR, the UCS, and Condepa. In 2002, former

president Sánchez de Lozada narrowly edged peasant activist Evo Morales in the presidential election. As mandated by the constitution, Congress had to choose the president from among the top two vote-getters. Sánchez de Lozada, who had obtained 22.5% of the vote, won with overwhelming support from most established political parties, but new groups and party splinters supported Morales. The alternative candidates demonstrated little willingness to work with the Sánchez de Lozada administration but they also failed to mount an organized and coherent political opposition. The strength of political parties in Bolivia has been weakened by the emergence of populist activists like Morales and by the resistance of aging party leaders like Sánchez de Lozada and Paz Zamora to retire from politics. In addition to the center-left MNR, the leftist MIR, and the center-right ADN, leading political parties include the New Republican Force (NFR) and Movement Toward Socialism (MAS), both populist parties created by presidential candidates Manfred Reyes and Evo Morales respectively. Morales narrowly edged Reyes out in the 2002 presidential election to face Sánchez de Lozada in the runoff election in the electoral college. As a result of no candidate winning a majority in the June 2002 election, Sánchez de Lozada was chosen president by Congress. Morales led MAS strong parliamentary representation during the unstable Sánchez de Lozada and Mesa governments. After the 2005 elections, MAS, whose indigenous identity shapes its politics and policies, was the largest political party in the country.

Democratic and Social Power (PDS), a new alliance formed around former President Jorge Quiroga, became the second-largest party in congress after the 2005 elections. With a center-left, free market approach, PDS sought to replace the discredited and weakened rightwing MNR and ADN parties.

## 15 LOCAL GOVERNMENT

Bolivia is essentially a unitary system, with a highly centralized national government. Bolivia's nine departments—La Paz, Cochabamba, Chuquisaca, Potosí, Oruro, Santa Cruz, Tarija, El Beni, and Pando—were historically administered by prefects appointed by the president for four-year terms. However, in the 2005 elections, Bolivians also chose their provincial prefects directly. The departments are subdivided into 94 provinces, each headed by a subprefect appointed by the prefect. The provinces are further divided into 1,713 cantons, each of which is under the jurisdiction of a magistrate (*corregidor*). As of 1997, Bolivia had 312 municipalities. There are no local legislatures. Important towns and cities have more self-government. Each has a popularly elected council of from 5 to 12 members, but municipal tax ordinances must be approved by the Senate. Mayors (*alcaldes*) are also elected. The Amerindian communities, although they are not formal administrative units, are recognized by law.

## 16 JUDICIAL SYSTEM

The Bolivian judiciary usually defers to the political direction of the nation's executive. Judicial power is exercised by the Supreme Court, the superior district courts in each department (courts of second instance), and the local courts (courts of first instance). The Supreme Court, which sits at Sucre, is divided into four chambers: two deal with civil cases, one with criminal cases, and one with administrative, mining, and social cases. The 12 Supreme Court judges, called ministros, are chosen for 10-year terms by

a two-thirds vote of the Chamber of Deputies from a list of three names submitted for each vacancy by the Senate. They may be re-elected indefinitely.

Most cases that reach the Supreme Court are appellate; its area of original jurisdiction is limited mainly to decisions on the constitutionality of laws and to disputes involving diplomats or important government officials. Each district court judge is elected by the Senate for six years from a list of three submitted by the Supreme Court.

The district courts usually hear appeals from the courts of first instance. Judges of the courts of first instance (tribunales and juzgados) are chosen by the Supreme Court from a list submitted by the district courts. There is also a separate national labor court and an agrarian court, dealing with agrarian reform cases.

Defendants have a right to counsel, to confront witnesses, to present evidence, and to appeal. These rights are generally respected.

## 17 ARMED FORCES

As of 2005, Bolivia's armed forces totaled 31,500 active personnel, of which the Army numbered 25,000, the Navy 3,500, and the Air Force 3,000 personnel. The Army's equipment included 36 light tanks, 24 reconnaissance vehicles, 77 armored personnel carriers, and over 168 artillery pieces. The Navy's main naval units were 60 patrol/coastal vessels and 18 support vessels. The service also had a 1,700 member Marine force. The Air Force had 37 combat capable aircraft that included 18 fighter ground attack aircraft. Paramilitary forces consisted of a national police force of more than 31,100 and a narcotics police force of over 6,000. Bolivia participated in seven UN peacekeeping missions. The defense budget totaled \$146 million in 2005.

## 18 INTERNATIONAL COOPERATION

Bolivia is a charter member of the UN, having joined on 14 November 1945, and participates in several specialized agencies, such as the FAO, IFC, IMF, ILO, UNESCO, UNIDO, the World Bank, and WHO. Bolivia joined the WTO on 12 September 1995. The country is also a member of the Cartagena Group (G-11), G-77, Río Group, the Amazon Pact, the Latin American Economic System, the Latin American Integration Association, the OAS, the Inter-American Development Bank, and the Andean Community of Nations. Bolivia is an associate member of Mercosur.

The country is part of the Nonaligned Movement and the Agency for the Prohibition of Nuclear Weapons in Latin American and the Caribbean (OPANAL). Bolivia has offered support to UN efforts in Kosovo (est. 1999), Liberia (est. 2003), Sierra Leone (est. 1999), East Timor (est. 2002), Burundi (est. 2004), Côte d'Ivoire (est. 2004), and the DROC (est. 1999). The country is a signatory of the 1947 Río Treaty, an inter-American security agreement.

In environmental cooperation, Bolivia is part of the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Seas, Climate Change, and Desertification.

## 19 ECONOMY

Bolivia is one of the Western Hemisphere's poorest countries, despite an abundance of mineral resources. Its economy has always been dependent on mineral exports, principally of tin, but these have gradually declined since World War II. Little of the nation's great agricultural and forest potential has been developed; agriculture remains little above the subsistence level, and Bolivia must import large quantities of food. Moreover, evidence is that the coca crop eradication program, without effective crop substitution, has led to a substantial contraction in the informal market. The opening in 1999 of the \$2-billion, 3,150-km (1,969-mi) Bolivia-Brazil pipeline holds the promise of the development of new export markets—in Brazil and, eventually, in the United States, via extensions into Mexico—for Bolivia's previously untapped natural gas reserves, but the project has been fraught with controversy and delays. Originally agreed to in 1974, construction did not begin until 1994, and then it was under a contract that gave Enron Corporation a 40% share, allegedly without a proper bidding process. Protests against Enron's involvement began immediately, but after Enron's bankruptcy in 2001, many new complaints surfaced concerning its failure to meet the terms of the contract, including its failure to donate a promised \$10 million for rural electrification; its failure to supply land deeds for indigenous people whose land was being transversed by the pipeline; its failure to secure financing for the project (a task eventually taken over by Brazil), and, its failure, apparently, to make any investments in the project beyond an undocumented \$22 million in the planning stage.

In 2003, President Sánchez de Lozada, who in a previous term had sponsored the "capitalization" program that brought in private foreign investors like Enron as partners in public sector enterprises and who had won a second term in June 2002, faced violent protests that threatened to unseat the government. In February 2003, there were violent clashes with coca farmers, and in March, the police joined protests against an IMF-sponsored tax hike, which the government subsequently rescinded. Sánchez de Lozada appealed to foreign governments, particularly the United States, for \$100 million in immediate aid to help his government survive, and as of June 2003, the Bush administration had sent \$10 million. The United States gives Bolivia \$150 million a year in aid conditional on the government's satisfactory progress in the coca crop eradication and crop substitution program.

Bolivian economic production grew at a fairly steady rate of about 5% during the 1960s and 1970s; but in the 1980s, after the second oil shock, growth turned negative. Inflation, which had averaged 3.5% in the 1960s, averaged 22% in the 1970s, and then got out of control in the early 1980s, after the second oil shock. Attempts to implement IMF austerity programs to contain inflation back-fired in the face of violent protests and government efforts to their limit human costs. When world tin prices plummeted to a fraction of production costs in 1985 after the collapse of the International Tin Agreement (ITA), a consumer-producer international commodity agreement (ICA) for tin, inflation reached as high as 24,000%. After 1985, a strong anti-inflation consensus allowed the government to apply strong austerity measures that brought annual inflation down to 10.87% by 1987. In August 1985, President Paz implemented a drastic anti-inflationary program: he floated the peso, froze public-sector wages, cut public spending, eliminated controls on bank interest rates, authorized banks to make

foreign-currency loans and offer foreign-currency accounts, initiated a comprehensive tax reform, eliminated price controls, established a uniform 20% tariff, removed tariff exemptions, eliminated virtually all import and export restrictions, and modified labor laws to permit greater flexibility in hiring and firing. The immediate result was a jump in capital repatriation and retention as a result of the rise in interest rates. The government also restructured several public-sector institutions, including the Central Bank and COMIBOL, the national mining corporation. The Central Bank closed several branches and reduced staff by 70%, and COMIBOL closed numerous mines and dismissed nearly 20,000 workers. Inflation was held to double digits until 1993, after which averages have been held to single digits.

In 1994, the first Sánchez de Lozada government introduced the innovative “capitalization” plan for privatizing six major state enterprises (the national airlines, the railways, electricity, telecommunications, the ironworks, and, most controversially, the oil and gas corporation). The plan provided for a private company to take over 50% ownership plus the operation of the enterprise, with the other shares distributed to the adult population to be deposited in private pension funds. Bolivia’s high foreign debt obliged it to seek private partners in order to raise capital. The average GDP growth between 1977 and 1987 was -1.8%, but this improved during the 1990s with an average rate of 4.2%. By 1999, Bolivia was in its second decade of democratic rule and its thirteenth consecutive year of economic expansion. Market reforms were firmly in place, investment was growing steadily and inflation under control, at 4.4% in 1998. Privatization of state-owned industries had improved the investment environment of Bolivia. Growth was led by energy (particularly investments in the gas pipeline to Brazil and in hydrocarbons exploration), mining, and agriculture (particularly in soy products as a substitute for coca).

In 1999, however, real GDP growth slowed to 0.4% due mainly to the Brazilian financial crisis, which caused revenues from the newly opened Bolivia-Brazil gas pipeline to fall well below expectations. Another factor thought to be dampening growth was the success of the coca crop eradication program coupled with a lack of success in crop substitution. An estimated 50,000 to 60,000 hectares of coca had been eliminated by 2002, leaving between 5,000 and 10,000 hectares (although in 2003 there were reports of substantial increases). An improvement to 2.4% growth in GDP in 2000 was cut short by the world-wide economic slowdown in 2001, during which growth fell to 1.2%. Inflation also increased in 2000, to 4.8%, up from 2.4% in 1999, but then declined to 1.6% in 2001. Real GDP growth in 2002 was estimated at 2.5%, and average inflation at a new low of 0.9%.

On 2 April 2002, the IMF agreed to a one-year standby arrangement with the government with credit totaling about \$120 million, less than Bolivia’s IMF quota. For 2003, the government has laid out a program it hopes to see supported by a three-year arrangement under the IMF’s Poverty Reduction and Growth Facility (PRGF), established in 1999 and normally permitting borrowing up to 140% of a country’s quota. The program aims at containing public sector borrowing while increasing social expenditures, containing inflation, increasing international reserves, and adopting policies to strengthen the banking sector.

As of 2004, Bolivia’s GDP per capita remained lower than many other countries in the region (including Mexico, Chile, Venezuela, Argentina, Uruguay, Brazil, Peru, Ecuador, Colombia, and Paraguay). Its GDP growth rate was also less than all of the same countries, with the exception of Bolivia. With an inflation rate less than 5%, however, Bolivia’s consumer prices were near average for the region.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Bolivia’s gross domestic product (GDP) was estimated at \$23.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$2,700. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2005 was 5.4%. It was estimated that agriculture accounted for 12.6% of GDP, industry 35%, and services 52.4%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$126 million or about \$14 per capita and accounted for approximately 1.6% of GDP. Foreign aid receipts amounted to \$930 million or about \$105 per capita and accounted for approximately 12.3% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Bolivia totaled \$5.8 billion or about \$658 per capita based on a GDP of \$8.1 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.3%. In 2001 it was estimated that approximately 37% of household consumption was spent on food, 11% on fuel, 9% on health care, and 14% on education. It was estimated that in 2004 about 64% of the population had incomes below the poverty line.

## 21 LABOR

Bolivia’s labor force was estimated at 4.22 million in 2005. In 2000, (the latest year for which data was available), the 28.2% of the work force was in manufacturing, while 4.9% was in agriculture, and 66.8% in the services sector. As of 2005, unemployment in Bolivia was estimated to be widespread. In the country’s urban areas, the unemployment rate was estimated at 8% that year.

Workers may form and join unions, but the labor courts and inadequate government laws undermine the effectiveness of this right. The government must authorize a union, may dissolve a union, and must confirm the legitimacy of elected officers. Workers, however, are generally not penalized for union activity. The Bolivian Labor Federation theoretically represents all workers, but only one half of the employees actually belong. About 25% of the country’s workers in the formal economy belong to unions. However, the formal economy covers only about 30% of the country’s entire workforce. Strikes are prohibited in public services, although some strikes were initiated and workers were not penalized.

The law prohibits child labor under age 14, but this is generally ignored. According to statistics from UNICEF and the Bolivian government, about 32% of the country's children and adolescents between the ages of 7 and 19 were engaged in some kind of work. The minimum wage is subject to annual negotiation and in 2005 was set at \$55 per month. This does not provide a decent standard of living, and most workers earn more than the minimum. However, the minimum wage does not cover the 30% of workers in the informal sector. The workday is set at eight hours a day with a maximum of 48 hours per week, but this is not effectively enforced.

## 22 AGRICULTURE

An estimated 2.9% of Bolivia's land area is devoted to arable farming and permanent crops. Agricultural development has been impeded by extremely low productivity, poor distribution of the population in relation to productive land, and a lack of transportation facilities. Prior to 1953, about 93% of all privately owned land was controlled by only 6.3% of the landowners. The agrarian reform decree of August 1953 was aimed at giving ownership of land to those working it and abolishing the large landholdings (latifundios). By 1980, 30.15 million hectares (74.5 million acres) had been distributed to 591,310 families. In 2004, 43% of Bolivia's economically active population was engaged in agriculture.

Except around Lake Titicaca, about two-thirds of the cultivated land on the Altiplano lies fallow each year. Dry agriculture is the rule, and the most important crops are potatoes, corn, barley, quinoa (a millet-like grain), habas (broad beans), wheat, alfalfa, and oca (a tuber). The potato is the main staple; dehydrated and frozen to form chuño or tunta, it keeps indefinitely. The Yungas and Valles contain about 40% of the cultivated land. The eastern slopes, however, are too steep to permit the use of machinery, and erosion is a serious problem despite the practice of terracing. The most lucrative crop in the Yungas is coca, which is chewed by the local population and from which cocaine is extracted. The government allows up to 12,000 hectares (29,600 acres) of legal coca cultivation to supply the legitimate pharmaceutical market. The net production of coca leaf was estimated at 29,100 tons in 2003, down from 85,000 tons in 1995. Coca leaf production represents about 20% of world production. Coffee, cacao, bananas, yucca, and aji (a widely used chili pepper) are also important. In the fertile irrigated valleys, the important crops are corn, wheat, barley, vegetables, alfalfa, and oats. The Tarija area is famous for grapes, olives, and fruit. The region east of Santa Cruz de la Sierra, where most of the nation's unused fertile lands lie, is considered the "promised land" of Bolivian agriculture. Lowland rice production is increasing rapidly and already satisfies domestic need. The sugar grown there is used mostly for alcohol, but in the 1960s, the mills increased their refining capacity, thus meeting internal consumption requirements. In the tropical forests of the northeast, the Indians practice slash-and-burn agriculture.

The leading commercial crops are soybeans, cotton, sugar, and coffee. Production in 2004 for selected crops was soybeans, 1,670,000 tons; seed cotton, 80,000 tons; sunflowers, 167,000 tons; wheat, 107,900 tons; coffee, 24,000 tons; sugar, 4.8 million tons; and rice, 304,500 tons. Droughts and freezing weather in the west

during the 1990s caused harvests to fall for basic crops like quinoa, potatoes, barley, and garden vegetables.

## 23 ANIMAL HUSBANDRY

In 2004 there were an estimated 6.8 million head of cattle, 8.6 million sheep, 1.5 million goats, 3 million hogs, 635,000 donkeys, and 323,000 horses. Poultry numbered 75 million in 2004.

The main cattle-raising department is El Beni, in the tropical northeast, which has about 30% of the nation's cattle. In 1994, a joint program began with Brazil to eradicate and control hoof and mouth disease in cattle, which had caused exports of beef to fall that year. Cochabamba is the leading dairy center, and improved herds there supply a powdered-milk factory. Genetic development helped increase milk production from an average of 113,000 tons annually during 1989–91 to 233,000 tons by 2004. The Amerindians of the high plateau depend on the llama because it can carry loads at any altitude and provides leather, meat, and dung fuel. Leading animal product exports are hides, alpaca and vicuña wool, and chinchilla fur. Breeding of alpacas and llamas is by and large left to chance; disease is rampant, and production is low, considering the relatively large numbers of animals. Llamas and alpacas are grown for their wool and meat in the Altiplano of La Paz, Potosí, and Oruro. In 1995, the llama population was about two million, and the alpacas numbered 324,336. The United Nations and the Integrated Association of Camelmen in the High Andes began a program in 1994 to improve the quality of the animals' meat and wool.

## 24 FISHING

Fishing is a minor activity in Bolivia. A few varieties of fish are caught in Lake Titicaca by centuries-old methods and sent to La Paz. The catch was 6,974 tons in 2003. Bolivia has some of the world's largest rainbow trout, and Bolivian lakes are well stocked for sport fishing.

## 25 FORESTRY

Bolivia is potentially one of the world's most important forestry nations. More than half of the total area is held as public land by the state, and more than 40 million hectares (100 million acres) of forest and woodland are maintained as reserves or for immediate exploitation. About 53% of Bolivia's land area consists of forests and woodlands. Trees are mostly evergreens and deciduous hardwoods, with the richest forests on the Andes' eastern slope along the tributaries of the Amazon; humid tropical and subtropical forests account for 37% of Bolivia's forests. More than 2,000 species of tropical hardwoods of excellent quality, such as mahogany, jacaranda, rosewood, palo de balsa, quina, ironwood, colo, and cedar, abound in this area. Sawmills are few, however, and the almost total lack of transportation facilities has made exploitation expensive. Most of the sawmills are in the eastern department of Santa Cruz. Roundwood production in 2003 was 2.86 million cu m (101 million cu ft), up from 1.6 million cu m (56 million cu ft) in 1991. About 50% of Bolivia's exports are derived from forestry.

## 26 MINING

Bolivia has traditionally been a mining country—mining was the country's top industry—producing antimony, bismuth, copper, gold, lead, silver, tungsten, and zinc. It had large reserves of gold, lithium, iron ore, natural gas, and petroleum.

Production totals for 2003 were: zinc, 144,985 metric tons; gold, 9,362 kg; silver, 465,309 kg; tin, 16,755 metric tons; lead, 9,740 metric tons; antimony, 2,911 metric tons; tungsten, 556 metric tons; rough amethyst, 144 kg; hydraulic cement, 1,138,000 metric tons; and arsenic, 276 metric tons. The richest and most productive alluvial gold deposits were located in Challana and the Kaka, the Mapiiri, and the Tipuani River valleys, in the northern area of La Paz Department.

For two centuries following the discovery of silver at Cerro Rico de Potosi in 1545, the area that became Bolivia was the largest producer of silver. Cerro Rico was protected as a United Nations Educational, Scientific, and Cultural Organization site, making the use of expensive backfill mining techniques necessary to maintain the mountain's shape. New studies at the base of the mountain estimated 3.3 million kg of silver in its gravel bed channel deposits.

Bolivia's tradition of state-owned monopolies has been a highly politicized topic; the government's capitalization plan became a way to bring Bolivia the benefits of privatization, without entirely turning over state companies to private investors. Mining codes enacted in 1991 allowed foreign firms to operate with fewer restrictions and replaced royalties with a 30% tax on profits. By 1994, privately owned commercial mines became the dominant producers, responsible for 52% of the value of all mine production. In 2000, the medium-sized mining sector was responsible for 59% of the value of mine production; the small-sized mining sector accounted for 36%; and COMIBOL's share was 2%, down from 25% in 1997, and 51% in 1985. Starting in 1999, companies looking to invest in the minerals sector were granted a deferral on value-added tax and customs duty payments, representing a savings of up to 20% on investment project costs. The large number of available prospects and a new mining code have encouraged mineral exploration in the country.

## 27 ENERGY AND POWER

Capacity at Bolivian electric power plants rose from 267,000 kW in 1970 to 1.3 million kW in 2001 and stood at 1.228 million kW in 2002. Of the last amount, 25% was hydroelectric and 75% thermal. Electric power output in 2000 was 3.8 billion kWh, of which 50.1% was hydroelectric, 48.4% was from fossil fuels, and 1.5% was from other sources. In 2002, electric power output rose to an estimated 4.049 billion kWh, of which, 2.202 billion kWh was generated by hydroelectric means; 1.766 was produced by thermal sources; and 0.081 billion kWh was from geothermal or other sources. Bolivia's national electrical grid, Sistema Interconectado Nacional (SIN) connects approximately 83% of the nation's installed generating capacity. The 17% that remains is independent of the grid and is classified as "Aislados." As of 2003, SIN was supplied by nine generating firms, of which, three: Empresa Electrica Valle Hermoso (EVH); Empresa de Generacion Guaracachi (EGSA); and Compania Boliviana de Energia Electrica (COBEE), supplied 58% of the power. Consumption of electricity in 2000 to-

taled 3.6 billion kWh. In 2002, consumption was estimated at 3.8 billion kWh.

According to the Oil and Gas Journal (OGJ), Bolivia has the fifth-largest proven reserves of crude oil in South America at 441 million barrels as of January 2004. However, the estimates tend to vary. Bolivia's Ministry of Mining and Hydrocarbons reports that the nation's proven reserves stand at 462 million barrels, as of end 2003. While Bolivia's domestic oil production is able to meet the country's internal needs, the country must still import certain petroleum products, in particular, diesel. As of November 2004, refinery capacity stood at 67,000 barrels per day. Production of natural gas has gradually increased from the mid-1980s until the early 1990s. Meanwhile, estimates of Bolivia's natural gas reserves keep growing. In 2002, Bolivia's natural gas reserves were put at 680 billion cu m (24 trillion cu ft), according to an official estimate. As of January 2004, the nation's proven reserves of natural gas were placed at 27.6 trillion cu ft by the Bolivian government. If potential reserves are included, Bolivia may have the second-largest in South America. Estimated production in 2000 was 3.3 billion cu m (116 billion cu ft). In 2004, production totaled 8.5 billion cu m.

The first phase of a pipeline project linking Bolivia to São Paulo, Brazil, was completed in February 1999 at a cost of \$2.1 billion and went into operation later the same year. Future pipeline plans include a pipeline to northern Chile, and a project to run a pipeline to Asunción, Paraguay, with a possible extension to Curitiba, Brazil. In February 2002 Bolivia and Brazil signed an agreement pledging further cooperation in the energy sector, including the possibility of a new \$5 billion gas pipeline.

## 28 INDUSTRY

Historically, industrial development has been severely restricted by political instability, the small domestic market, the uncertain supply of raw materials, and the lack of technically trained labor. Domestic industry supplies less than one-fourth of the processed food and manufactured goods consumed. Over one-half of manufacturing output is in nondurable consumer goods—food, beverages, tobacco, and coffee. Handicrafts and hydrocarbons account for much of the remainder.

At their peak, Bolivia's tin mines accounted for 70% of the country's total export earnings, but in 1985 the London Metal Exchange abruptly halved the price of tin, causing economic chaos. The ensuing economic stabilization program was a mixed blessing to industry. The easing of foreign-exchange restrictions, the uniform 20% tariff, and the significant reduction in duties on nonessential consumer goods improved the availability of raw materials and semi-manufactured goods, thereby stimulating industrial growth.

In 1992, growth in the construction industry was a remarkable 15%, sustained both by the larger number of public works projects and by private investment. By 1995, this growth had slowed to 5%. The manufacturing sector grew by 3.8% in 1995, with the largest gains occurring in agriculture-based industries despite the problems resulting from the precarious state of agriculture. The mining and hydrocarbon sector contracted because of the decline in mining output and stagnation in the production of petroleum and natural gas. The drastic reduction of COMIBOL's production resulted from the closing of several mines and frequent labor dis-

putes. The slump in the hydrocarbons subsector was because of the depletion of a number of wells, lack of investment in exploring for new deposits, and the torrential rains that damaged the infrastructure of the state-owned company.

In the late 1990s, Bolivia experienced a renaissance in the mining and hydrocarbons sectors due to privatization of the state-owned interests in these sectors. This attracted foreign interest in developing the energy and minerals potential of the country. In 2002, Bolivia had three oil refineries with a production capacity of 63,000 barrels per day.

The construction and manufacturing sectors were experiencing a slowdown in 2002, after three years of a stagnant economy. The development of the country's infrastructure was expected to be an engine for industrial growth, however. The opening of a gas pipeline to Brazil in 1999 was expected to take in much of Bolivia's natural gas production.

## 29 SCIENCE AND TECHNOLOGY

The Bolivian National Academy of Sciences was founded in 1960. Notable scientific and technological research institutes and learned societies include the Bolivian Geological Service and Bolivian Petroleum Institute, both in La Paz. Bolivia has eight universities offering courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 30% of college and university enrollments. In 2002, Bolivia had 118 researchers and 6 technicians per million people actively engaged in research and development (R&D). In that same year, Bolivian expenditures on R&D totaled \$60.692 million or 0.28% of GDP. Higher education accounted for 31% of R&D expenditures in 2002, with 20% coming from the government, 14% from foreign sources, 19% from nonprofit institutions, and 16% from business. Undistributed expenditures accounted for the remainder. High technology exports in 2002 totaled \$15 million, or 7% of all manufactured exports.

## 30 DOMESTIC TRADE

La Paz is the chief marketing center. Oruro is second to La Paz as a market for imported goods and is the main distributing center for mining supplies. Santa Cruz is also quickly becoming an important market center for imported goods. Cochabamba distributes its agricultural production to La Paz and the mining districts. Though most retail is accomplished through small shops and street vendors, there are a number of large import houses and wholesalers in the major cities. In more rural areas, most buying and selling is carried on at weekly markets and village fairs and barter may still be common. Advertising has become highly developed over the past few years, with television being the most used medium, followed by newspapers and radio. There are at least 12 major market research firms active in the country.

In the past decade, the government has sponsored several programs of capitalization/privatization for public sector enterprises. Under these programs, investors receive 50% of the companies' shares and management control but are required to invest directly into the company for a number of years. However, many of these companies are controlled by foreign investors, which has made some capitalization plans nationally unpopular. In 2000, violent protests over plans to capitalize the water company of Cochabamba forced the government to cancel an arrangement with foreign investors and keep the utility under public control.

Regular retail store hours are weekdays, 9 AM to noon and 2:30 to 6:30 PM. Business hours differ somewhat by city. In La Paz and Cochabamba, hours are 9 AM to noon and 2:30 PM to 6:30 or 7 PM. In Santa Cruz, hours are generally from 7 or 8 AM to 4:30 PM with a two-hour lunch break around the middle of the workday. Bank hours are 9 AM to noon and 2 to 4:30 PM.

## 31 FOREIGN TRADE

Bolivia depends primarily on its mineral exports, especially zinc, natural gas, and gold. Tin exports, which had been an integral part of the Bolivian export schedule, have been gradually decreasing since 1946. The 1985 devaluation of tin caused major problems in the Bolivian economy, and now tin plays a minor role in Bolivia's exports, as the country moves to diversify. Exports of natural and manufactured gas and petroleum are expected to surpass those of other minerals in the future, as a new pipeline has facilitated exports of natural and manufactured gas to neighboring Brazil. In 2004, natural gas exports totaled \$619.6 million, and zinc exports totaled \$151 million. Agricultural exports include wood, oil seeds, soya, and animal feed. Principal imports include \$984.6 million in raw materials and semi-manufactures, \$498.4 million in capital goods, and \$407.4 million in consumer goods.

The United States has historically been Bolivia's chief trading partner. However, recently Bolivia has been diversifying its trade relations to include more regular trade with regional and European partners. As a member of the Comunidad Andina (CAN—Andean Community), Bolivia has been trading with the other members, including Peru, Venezuela, Colombia, and Ecuador. Since 1997, Bolivia has also been an associate member of the Mercado Comun del Sur (Mercosur—the Southern Cone customs union). Though devaluations in Brazil and Argentina (1999 and 2002 respectively) and nontariff barriers in CAN have discouraged trade somewhat, Brazil has nonetheless become Bolivia's main trading partner due to gas exports (something that China has been increasingly interested in importing, as well). Bolivia's drive to diversify its exports is assisted by Chinese demand for soybeans and other Bolivian commodity exports.

tial Norms Financial Committee (CONFIP) regulates finance companies. The Bolivian Development Corp. channels credits from the Inter-American Development Bank into industrial expansion projects.

There are 13 private banks, accounting for over 85% of the deposits and loans of the financial system. Private banks, which had been under strict control since 1953, were largely deregulated in mid-1985. Commercial banks include: Banco Boliviano Americano (BBA), Banco de Credito de Bolivia, Banco de la Nacion Argentina, Banco de La Paz, Banco de la Union, Banco Economico, Banco Industrial SA (BISA), Banco Mercantil, Banco Nacional de Bolivia, Banco Real, Banco Santa Cruz, and Citibank. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$717.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.7 billion. The money market rate, or the rate at which financial institutions lend to one another in the short term, was 6.99%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 8.5%.

The Bolivian Stock Exchange is the main stock exchange, with seven listed companies trading in 1995. There is also the Santa Cruz Stock Exchange.

**3<sup>2</sup> BALANCE OF PAYMENTS**

Unlike many nations, Bolivia has no large earnings from tourism or shipping to compensate for trade deficits. After World War II, falling exports and rising imports led to depletion of the nation's gold and foreign currency reserves. By 1969, in part because of increased US aid, the unfavorable balance had been considerably reduced; five years later, thanks to import restrictions and a sharp rise in export earnings, Bolivia had a favorable payments balance of \$72.5 million. In the late 1970s, Bolivia's international financial position again began to worsen, and by the end of 1986, the country had accumulated \$3.7 billion in foreign debt (perhaps \$100 million of it in the private sector), an amount equal to the GDP. External debt equaled \$4.4 billion at the end of 2000.

In 2000, foreign direct investment stood at \$750 million, some 25% lower than in 1999, due in part to the completion of capitalization contracts. Foreign direct investment was concentrated in the hydrocarbons and service sectors. Bolivia's inclusion in the IMF/World Bank Heavily Indebted Poor Countries (HIPC) Initiative will provide the country significant debt relief by both bilateral and multilateral creditors.

The International Monetary Fund (IMF) reported that in 2003, Bolivia had exports of goods totaling \$1.57 billion and imports totaling \$1.50 billion, making for the first positive trade balance since 1999, when the trade balance was at a \$487 million deficit. The current account balance was also positive in 2003, at \$35.6 million; the balance had been steadily decreasing annually from the deficit of \$488 million recorded in 1999.

**3<sup>3</sup> BANKING AND SECURITIES**

The Central Bank of Bolivia, established in 1928 and reorganized in 1945, is the sole bank of issue. The 1995 Central Bank Law refined the CBB's controls on the banking sector. The Superintendent of Banks regulates the operations of banks, and the Pruden-

**3<sup>4</sup> INSURANCE**

In 1995, there were over 20 insurance companies doing business in Bolivia. The insurance industry in Bolivia grew during the 1990s, as premium income increased 170% between 1988 and 1998, while the country's GDP grew only 86%. Liability insurance grew at the extraordinary rate of 555% within that same time frame. Motor vehicle insurance is the largest sector, comprising 43% of the market, and is followed by fire, engineering, and miscellaneous risks insurance. Members of the Bolivian Insurance Association accounted for 93% of all 1998 premiums.

**3<sup>5</sup> PUBLIC FINANCE**

Many of the expenditures and revenues of autonomous agencies—government development, mining, petroleum corporations, and the universities—do not appear in the central budget. Also, an estimated 15% of revenues come from illegal drug shipments. Since April 1992, comprehensive privatization has helped decrease the need for public sector expenses. In 1996, both current and capital spending had been reduced as a percentage of GDP. On the one hand, state capital spending, in the productive sector, fell overall as the privatization and capitalization programs relieved the state of responsibility for the capital spending of leading industrial enterprises; on the other, social investment rose sharply.

The US Central Intelligence Agency (CIA) estimated that in 2005 Bolivia's central government took in revenues of approximately \$2.9 billion and had expenditures of \$3.4 billion. Revenues minus expenditures totaled approximately -\$522 million. Total external debt was \$6.43 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues were B14,123 million and expenditures were B18,806 million. The value of revenues in US dollars was US\$1,844 million and expenditures US\$2,433 million, based on a market exchange

rate for 2003 of us\$1 = B7.6592 as reported by the IMF. Government outlays by function were as follows: general public services, 19.8%; defense, 6.2%; public order and safety, 7.3%; economic affairs, 15.7%; environmental protection, 0.9%; housing and community amenities, 0.8%; health, 9.6%; recreation, culture, and religion, 0.2%; education, 22.6%; and social protection, 17.0%.

**36 TAXATION**

The Bolivian revenue system contains an unusually large number of taxes, leading to complexity and confusion that make the system difficult to enforce. Income taxes are extremely low, with a flat individual rate of 13%. In December 1994, a 25% tax on corporate income was established which replaced the 3% national income tax on corporations' taxable net worth. Both local and foreign corporations can receive tax holidays, exemptions, and other benefits if they invest in new companies or in production of nontraditional exports. There is an effective tax rate of 12.5% on income and net dividends to nonresident parent companies. There are taxes on the value of particular assets, such as motor vehicles, boats, and airplanes, which can be deducted from income tax, and taxes of 10–18% on the price of a vehicle. Bolivia also levies excise taxes on alcoholic and nonalcoholic beverages (1.61 bolivianos and 0.20 bolivianos per liter, respectively) and a 50% tax on tobacco products. There is also a 20% tax on perfumes and a 30% tax on cosmetics, and other items classed as luxuries. A value-added tax (VAT) of 13%, which can be deducted from income tax, is in effect. The hydrocarbons industry, as outlined in the Hydrocarbon Law, pays an 18% royalty and tax rate for new projects, and a 60% royalty and tax rate on existing projects.

**37 CUSTOMS AND DUTIES**

Export and import duties have traditionally been an important source of government revenue, but in mid-1985, as part of a drive to stimulate the economy, the government established a uniform 20% duty (which has since been lowered to 10%) on all imports,

eliminated tariff exemptions, removed import restrictions except for those related to health and state security, and eliminated all export controls except those on dangerous substances, endangered species, and cultural treasures. Most import charges end up totaling between 30 and 45%. This is considerably higher than the 20% uniform duty due to inspection company fees (2%), customs tariffs (2% for publications, 5% for capital goods, and a 10% flat rate), customs warehouse fees, Internal Revenue Service fees (15%), a specific consumption tax (for luxury goods, up to 60%), customs broker fees (up to 2%), and monies for forms and fees. Customs brokers charge up to 20% in fees to cover their own tax liability.

The 1990 Investment Law created a number of Free Trade Zones (FTZs), including those in El Alto, Puerto Aguirre, Cochabamba, Santa Cruz, Oruro, and Desaguadero. Bolivia had free trade agreements with MERCOSUR countries (Brazil, Argentina, Paraguay, Uruguay, and Chile) starting in 1997. In 1994, Bolivia signed a free trade agreement with Mexico and continues to lower or eliminate trade barriers.

**38 FOREIGN INVESTMENT**

The Patiño, Hochschild, and Aramayo mining groups, expropriated in 1952, accounted for nearly all the foreign capital in mining at that time. In 1955, Bolivia issued the Petroleum Code, safeguarding foreign investment in the exploitation of petroleum, and US oil companies began large-scale exploration and development. Although the investment law of December 1971 granted substantial benefits to foreign investors, political instability, inadequate infrastructure, and Bolivia's poor debt-repayment record held foreign investments down. The 1990 Investment Law guaranteed basic rights to foreign investors: national treatment, free currency conversion, no restrictions on remittances, and the right to international arbitration in most industries. Under the Capitalization Program (Bolivia's version of privatization) in 1996–97, 50% ownership in five of the largest parastatals—in transportation, energy, and telecommunications—was exchanged for the pledge of \$1.7 billion in new investment by foreign "strategic partners." Subsequent laws governed activities in the mining, hydrocarbon, and banking sectors. Bolivia's economic future lies in the development of large reserves of natural gas discovered by foreign companies working in Bolivia. Plans to construct pipelines to deliver gas to Mexico and California depend on foreign investment.

Bolivia has free trade zones (FTZs) in El Alto (the Department of La Paz), Santa Cruz, and Cochabamba. In 2000, foreign investment activities were the focus of two widespread social protests. In April, protests spread nationwide over the issue of foreign investment in municipal water systems and in September/October, economically damaging roadblocks were thrown up around the country by indigenous farmers, coca growers, and a variety of labor and social movements to protest the government's policies. Relevant to the investment climate, in 2003 Bolivia remained on the US government's list of 23 "major" drug-producing and/or drug-transit countries.

Foreign direct investment (FDI) inflow to Bolivia averaged \$928 billion from 1997 to 1999 under the impetus of the Capitalization Program, but then dropped to an average of \$670 million for 2000 and 2001 mainly due to the fall in investment from Argentina (from \$158 million in 1999 to \$9.2 million in 2000) and Brazil (\$144 million to \$38.5 million). The United States has been

Bolivia's major foreign investor, accounting for a third to a half of all investment. In 1999 and 2000, other major investors were the Netherlands (\$145 million total), Italy (\$116.2 million total) and Spain (\$59 billion total). Smaller investments were made by Chile, Peru, and Canada.

As an associate member of Mercosur, Bolivia has benefited from increasing investment from regional partners and Europe. In the place of the United States, which invested in the privatized oil and electricity industries, now Brazil, Italy, and the United Kingdom are big investors. However, the Economist Intelligence Unit predicts that political uncertainty may stem foreign investment in energy in 2006.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

In 1985, Bolivia was one of the first Latin American countries to institute market liberalizations—following the model set by Chile years earlier. In 1993, newly elected President Lozada furthered these liberalizations by increasing privatizations, which were called capitalizations in order to deflect criticism, increasing money spent on education and decreasing the federal government's regulatory power.

Unrest among the large indigenous population and the difficulties of cracking down on cocoa leaf production hampered economic development in South America's poorest country. Bolivia reached the completion point of the International Monetary Fund (IMF) and World Bank's Heavily Indebted Poor Country (HIPC) debt relief initiative in 2001, becoming the second country to do so, after Uganda. Total debt-service relief under the HIPC Initiative was to amount to around \$2 billion. The HIPC assistance and bilateral debt relief was to reduce Bolivia's total external debt by one-half. A \$121 million Stand-By Agreement with the IMF was approved in April 2003, and was due to expire in April 2004. In 2003, the government was pursuing policies aimed toward poverty reduction and the stabilization of the financial system, including the enacting of a modern bankruptcy law. Many public sector enterprises have been capitalized, meaning investors in Bolivia may acquire a 50% share and management control of the public enterprises by investing in them directly over a period of years rather than paying cash to the government. The capitalization program raised foreign direct investment in Bolivia in the amount of \$1.7 billion in stock during 1996–2002. Total external debt, however, ranged between \$5.5 billion and close to \$5.8 billion from 1999–2003 with a slight dip to \$4.7 billion in 2001. In 2003, the total external debt to GDP ratio was 70.3%. In December 2005, \$232 million in debt to the IMF was cancelled.

Evo Morales became president in January 2006, and it was expected that economic policy would become more state-led during his five-year term. Increased public spending will likely cause the fiscal deficit—a deficit that had narrowed in May 2005 due to revenues generated by the new hydrocarbons law—to grow in 2006–2007.

### 4<sup>0</sup> SOCIAL DEVELOPMENT

Social security coverage, through private insurance, is compulsory for all workers, and voluntary coverage is available to the self-employed. Those covered by the program receive medical, hospital, dental, and pharmaceutical care for themselves and their families. Old age pensions begin at age 65. Maternity benefits cover female

workers and workers' wives. Family allowances include cash payments for birth, nursing, and burial and monthly subsidies for each unmarried child. Employers contribute 2% of payroll for workers' compensation and are also required to grant two months' severance pay to dismissed employees. Employees contribute 10% of earnings for old age, and additional amounts for other benefits.

Although guaranteed equal rights under the law, women by and large do not enjoy the same social status as men due to limited political power and social traditions. In most cases, women earn less than men for doing similar work. Spousal abuse and domestic violence are widespread in Bolivia. As of 2004, the government had taken little action to combat domestic abuse. Laws are in place to protect women, but they are irregularly enforced. Sexual harassment, although illegal, is considered to be common.

The government does not give priority to improve the welfare of children. Government surveys show that nearly one in three children are physically or psychologically abused. Corporal punishment is used widely at home and in schools. Child labor and prostitution continue to be major problems.

Human rights improved in 2004 but there were still problems in many areas including excessive force, extortion, and improper arrest by security forces. The prison system is harsh and life-threatening.

### 4<sup>1</sup> HEALTH

Health conditions have been notably poor, owing to poor hygiene and an insufficient number of doctors and hospitals, especially in rural areas. The most common disorders are acute respiratory diseases, tuberculosis, malaria, hepatitis, and Chagas' disease. In 1996, 618 per 100,000 people were diagnosed with malaria and in 1999 there were 238 cases of tuberculosis per 100,000 people. In 1995, cholera was reported in 2,293 cases. Malnutrition is a serious and growing problem, with 27% of children under five-years-old considered malnourished as of 2000. In the same year, 79% of the population had access to safe drinking water and 66% of the rural population had adequate sanitation. In 2004, there were an estimated 73 physicians, 107 nurses, and 8 dentists per 100,000 people. Bolivia had 3,165 public and private health care facilities, with a total of 12,554 beds, as of 2002. The country's public health care expenditures as of 1999 equaled an estimated 6.5% of GDP. The 1997–2002 Strategic Health Plan was designed to ensure universal access to primary care through a system of basic insurance.

There was a birth rate of 31 per 1,000 people in 1999. Approximately 49% of married women (ages 15–49) were using contraception as of 2000. The government of Bolivia paid 65% of vaccination costs in 1995. In 1999, one-year-old children were immunized at the following rates: diphtheria, pertussis, and tetanus, 78%, and measles, 79%. The infant mortality rate has declined from 117 per 1,000 live births in 1985 to 53 per 1,000 in 2005. As of 2000, an estimated 27% of all children were suffering from malnutrition. Life expectancy in 2005 was estimated at 65.5 years. The overall death rate was 8 per 1,000 people.

The HIV/AIDS prevalence was 0.10 per 100 adults in 2003. As of 2004, there were approximately 4,900 people living with HIV/AIDS in the country. Health conditions in Bolivia have improved since the World Health Initiative Program in 1991. The Bolivian government has taken a greater role in the health of its citizens.

## 42 HOUSING

At the 2001 census, there were a total of about 2,270,731 housing units nationwide. The majority of all housing units were detached private dwellings. About 66% of all housing units are owner occupied. According to reports from Habitat for Humanity, about 52% of all homes are built with adobe and 69% have dirt floors.

Although the government intended to provide adequate drinking water systems for all places of 2,000 or more inhabitants and to alleviate the sewage system shortage, water systems remain inadequate in some areas. In 2000, only about 79% of the population had access to improved water sources and only 66% had access to improved sanitation.

## 43 EDUCATION

Primary education, which lasts for eight years, is compulsory and free of charge. Secondary education lasts for another four years and students have the option of choosing either a general education or a technical studies track. The academic year runs from March to December. The language of instruction is Spanish.

In 2001, about 46% of all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 95% of age-eligible students. The same year, secondary school enrollment was about 71% of age-eligible students. Most students complete their primary education. The student-to-teacher ratio for primary school was at about 24:1 in 2003; the ratio for secondary school was about 24:1.

Bolivia has about 10 state-funded and 23 private universities. The University of San Andrés (founded in 1930) in La Paz is Bolivia's largest university; the University of San Francisco Xavier in Sucre, dating from 1624, is one of the oldest universities in Latin America. In 2003, it was estimated that about 39% of age-eligible students were enrolled in tertiary education programs. The adult literacy rate for 2004 was estimated at about 86.5%, with 92.9% for males and 80.4% for females.

As of 2003, public expenditure on education was estimated at 6.3% of GDP, or 19.7% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

There are a small number of public libraries throughout Bolivia, with a combined collection of 200,000 volumes. The National Archives and Library in Sucre (114,000 volumes) serves as a public library for that city and as a depository library of the United Nations. A second facility, the United Nations Information Center, is located in La Paz. Another important public library is the Mariscal Andrés de Santa Cruz Municipal Library (80,000 volumes) in La Paz. The most important university libraries are those of the University of San Andrés in La Paz (121,000 volumes) and the University of San Simón in Cochabamba (62,000 volumes). The Department of Culture operates a large library in La Paz with 140,000 volumes, as does the Institute of Bolivian Culture, housing 150,000 volumes.

The National Museum of Archaeology (1846) in La Paz is the most prominent museum. Also in La Paz are the National Museum of Art (1961) and the National Museum of Tihuanaca, featuring the art and culture of the indigenous people of Bolivia. There are several provincial museums, including the House of Liberty in

Sucre, commemorating Bolivian independence, and the Institute of Anthropology and Archaeology Museum in Cochabamba.

## 45 MEDIA

In 2003, there were an estimated 72 mainline telephones for every 1,000 people. The same year, there were approximately 152 mobile phones in use for every 1,000 people. The telegraph system is owned by the Ministry of Communications; remote parts of the country are connected by wireless.

A government-owned television station broadcasts from La Paz, but there are several privately owned stations in the country as well. There were 171 AM and 73 FM radio stations in 1999. There were 48 television stations as of 1997. In 2003, there were an estimated 671 radios for every 1,000 people. Due to low literacy rates, radio is the most important source of news and information for many rural dwellers. In 2003, there were 22.8 personal computers for every 1,000 people and 32 of every 1,000 people had access to the Internet. There were 16 secure Internet servers in the country in 2004.

In 2004 there were at least 13 major daily newspapers. The largest La Paz daily newspapers are *El Diario*, *La Razon*, *El Deber*, and *Presencia* (2004 circulation figures were unavailable). Important provincial dailies are *Los Tiempos* (Cochabamba), with 19,000 circulation, and *El Mundo* (Santa Cruz), with 15,000.

The Constitution of Bolivia provides for the freedom of speech and press, and the government is said to allow free operation of electronic and print media. However, the penal code provides that persons found guilty of slandering government officials may be jailed, though it is said that this law is infrequently enforced.

## 46 ORGANIZATIONS

Learned societies include the Institute of Bolivian Sociology, the Society of Geographic and Historical Studies, the Center of Philosophical Studies, the Bolivian Language Academy, the National Academy of Fine Arts, the National Academy of Sciences, the Archaeological Society of Bolivia, and the Tiahuanaco Institute of Anthropology, Ethnology, and Prehistory.

Youth organizations include Girl Guides, the Scout Association of Bolivia, YWCA/YMCA, and programs of the Special Olympics.

The National Chamber of Commerce and the National Chamber of Industry are both headquartered in La Paz. There are departmental chambers of commerce throughout the country.

There are national chapters of the Red Cross, Habitat for Humanity, UNICEF, and Caritas.

## 47 TOURISM, TRAVEL, AND RECREATION

The dry season (May–November) is Bolivia's peak tourist season. La Paz and Sucre have many colonial churches and buildings, and there are Inca ruins on the islands of Lake Titicaca, which also offers opportunities for fishing and sailing. The world's highest ski run is located at Chacaltaya. Mountain climbing and hiking are available on the country's cordilleras and other peaks.

In 2003, there were about 367,000 visitor arrivals in Bolivia, including 209,715 visitors from the Americas. Tourism receipts totaled \$176 million. Hotel rooms numbered 20,611 with 33,338 beds and a 20% occupancy rate. Visitors stayed an average of two nights.

In 2005, the US Department of State estimated the cost of staying in La Paz at \$109 per day. Costs in Santa Cruz were an estimated \$127 per day and in Cochabamba, \$98 per day. In other areas, daily expenses averaged \$83 per day.

#### 48 FAMOUS BOLIVIANS

Pedro Domingo Murillo (1757–1810) was the precursor and first martyr of Bolivian independence. Andrés de Santa Cruz (1792–1865), who considered himself the “Napoleon of the Andes,” dominated the early years of the independent nation. The most infamous of the 19th-century Bolivian dictators was Mariano Melgarejo (1818–71). Ismael Montes (1861–1933), who was president of Bolivia from 1904 to 1909 and from 1913 to 1917, is identified in Bolivian history as the “great president.” Simón Patiño (1861–1947), the richest of the “big three” tin barons, began his career as a loan collector and acquired his first mine by chance; he later became one of the world’s wealthiest men. Víctor Paz Estenssoro (1907–2001), architect of the national revolution of 1952 and founder of the MNR, served as president during from 1952 to 1956 and was reelected in 1960 and 1964; he was deposed shortly thereafter by a military junta but returned to office from 1985 to 1989. Hernán Siles Zuazo (1914–1996), also connected with the MNR and later founder of the MNRI, was president in 1956–60 and again in 1982–85. Juan Lechín Oquendo (1914–2001), a leader of the 1952 uprising, led the powerful Bolivian Workers’ Federation from its formation in 1952 until 1987. Juan Evo Morales Ayma (b.1959) became the first Amerindian president of Bolivia in 2006.

Bolivia’s outstanding literary figure is Gabriel René-Moreno (1836–1909), a historian, sociologist, and literary critic. The highly original poet and philosopher Franz Tamayo (1879–1956), although belonging to the landed aristocracy, was a champion of the downtrodden Amerindian. Tamayo was elected president in 1935, but an army revolt prevented him from taking power. Alcides Argüedas (1879–1946) achieved fame throughout Latin America with his historical works on Bolivia and his novels *Wata wara* and *Raza de bronce*, concerned with the plight of the Indian; his critical sociological study *Pueblo enfermo* provoked an enduring con-

troversy. The archaeologist and anthropologist Arturo Posnansky (1874–1946), born in Austria, did pioneering work in studying the civilization that once flourished at Lake Titicaca. Jaime Laredo (b.1941) is a world-famous violinist.

#### 49 DEPENDENCIES

Bolivia has no territories or colonies.

# BRAZIL

Federative Republic of Brazil  
*República Federativa do Brasil*

**CAPITAL:** Brasília

**FLAG:** The national flag consists of a green field upon which is a large yellow diamond twice as wide as it is high. Centered within the diamond is a blue globe showing constellations of the southern skies dominated by the Southern Cross. Encircling the globe is a white banner bearing the words *Ordem e Progresso*.

**ANTHEM:** *Hino Nacional Brasileiro*, beginning “Ouviram do Ipiranga” (“Listen to the cry of Ipiranga”).

**MONETARY UNIT:** On 1 July 1994, the real (R\$), a paper currency of 100 centavos, replaced the cruzeiro real (CR\$). R\$1 = US\$0.40161 (or US\$1 = R\$2.49) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local units also are used.

**HOLIDAYS:** New Year’s Day, 1 January; Tiradentes, 21 April; Labor Day, 1 May; Independence Day, 7 September; Our Lady of Aparecida (Patroness of Brazil), 12 October; All Souls’ Day, 2 November; Proclamation of the Republic, 15 November; Christmas, 25 December. Movable holidays include the pre-Lenten carnival, usually in February, Good Friday, and Corpus Christi.

**TIME:** At noon GMT, the time in Fernando de Noronha is 10 AM; Rio de Janeiro, 9 AM; Manaus, 8 AM; Rio Branco, 7 AM.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

Situated on the east-central coast of the continent, Brazil is the largest country in South America and the fourth-largest in the world in coterminous area, ranking after Russia, Canada, and China (the United States is larger with Alaska, Hawaii, and the dependencies included). Occupying nearly half of the South American continent, it covers an area of 8,511,965 sq km (3,286,488 sq mi), extending 4,395 km (2,731 mi) N–S and 4,320 km (2,684 mi) E–W. Contiguous with all continental South American countries except Ecuador and Chile, Brazil is bounded on the N by Venezuela, Guyana, Suriname, and French Guiana, on the NE, E, and SE by the Atlantic Ocean, on the S by Uruguay, on the SW by Argentina and Paraguay, on the W by Bolivia and Peru, and on the NW by Colombia, with a total boundary length of 14,691 km (9,128 mi). Brazil is divided into 26 states and one federal district. The federal district, including the capital of Brasília, inaugurated on 21 April 1960, is surrounded on three sides by the state of Goiás and on the fourth by Minas Gerais.

Brazil’s capital city, Brasília, is located in the southeastern part of the country.

## <sup>2</sup> TOPOGRAPHY

The northern part of Brazil is dominated by the basin of the Amazon River and its many tributaries, which occupies two-fifths of the country. The Amazon Basin itself occupies 7,049,975 sq km (2,722,000 sq mi), or about 40% of South America’s total area. The Amazon River (Río Amazonas) is, at 6,436 km (4,000 mi), the world’s second-longest river after the Nile, although the Amazon ranks first in volume of water carried; rising in the Peruvian Andes, the Amazon eventually empties into the Atlantic Ocean at an average rate of about 198,000 cu m (7 million cu ft) per second. The Amazon lowlands east of the Andes constitute the world’s

largest tropical rain forest. In the northernmost part of the Amazon Basin lies a series of mountain ranges, known as the Guiana Highlands, where Brazil’s highest mountain, Pico da Neblina (3,014 m/9,888 ft), is located. South of the Amazon Basin is a large plateau called the Brazilian Highlands, ranging in elevation from 300 to 910 m (1,000 to 3,000 ft) above sea level. From the city of Salvador (Bahia) southward to Pôrto Alegre, the highlands meet the Atlantic Ocean in a steep, wall-like slope, the Great Escarpment, which in southeastern Brazil is surmounted by mountain ranges with elevations from 2,100 to 2,400 m (7,000 to 8,000 ft) above sea level.

The Atlantic coast of Brazil has no real coastal plain, but there are stretches of lowlands along the northeast coast, and there are many bay-like indentations, where Brazil’s principal cities are located. Along the southwest border is a small portion of the upper Paraguay lowlands. The Paraná, Paraguay, and Uruguay rivers flow through southern Brazil; the São Francisco flows 3,199 km (1,988 mi) through northeastern and central Brazil; and the Tocantins (2,698 km/1,677 mi) empties into the Pará and from there into the Atlantic Ocean at an estuary south of the Amazon proper.

## <sup>3</sup> CLIMATE

Brazil is a tropical country but extends well into the temperate zone. The Amazon Basin has a typically hot, tropical climate, with annual rainfall exceeding 300 cm (117 in) in some areas; the Brazilian Highlands, which include roughly half of the total area, are subtropical. The narrow coastal lowland area ranges from tropical in the north to temperate in the south. The cool upland plains of the south have a temperate climate and an occasional snowfall. The coolest period is from May to September, and the hottest is from December to March. October to May is the rainy season. Rainfall is excessive in the lowlands and in the upper Amazon Ba-

sin, along the northern coast, at certain points on the east coast, and in the southern interior, while there are periodic droughts in the northeast. The average high temperature in Rio de Janeiro in February is 29°C (84°F); the average low in July is 17°C (63°F).

#### 4 FLORA AND FAUNA

As of 2002, there were at least 394 species of mammals, 686 species of birds, and over 56,000 species of plants. About one-fourth of the world's known plant species are found in Brazil. The Amazon Basin, the world's largest tropical rain forest, includes tall Brazil nut trees, brazilwood, myriad palms, kapok-bearing ceiba trees enlaced with vines and creepers, rosewood, orchids, water lilies, and the wild rubber tree.

South of the vast Amazonian forest is a mixture of semideciduous forest (*mata*) and scrub forests. The characteristic flora of the northeast interior is the carnauba wax-yielding palm in the states of Ceará and Piauí. To the east there are big areas of thorn scrub, the result of generally poor soils and periodic devastating droughts. Along the humid coast are many mango, cajú, guava, coconut, and jack-fruit trees, as well as large sugar and cotton plantations, the latter indigenous. Within the savanna, sparse forests, and "campos cerrados" (enclosed fields of badly deforested, populous Minas Gerais), there are various woody shrubs, lianas, and epiphytes, the staghorn fern, and an abundance of herbs, especially grasses. Brazil has many fair to good pasturage grasses, on which millions of beef cattle, not always of high grade, and some dairy cattle in the favored southern states graze.

In the southern states are exotic flowers, such as papagaias; flowering trees, such as the quaresma, which blossoms during Lent; and the popular ipê tree with its yellow petals, planted on some São Paulo streets. In the southernmost part of the Brazilian plateau forests, where temperate climate prevails, is found a mixture of araucarias (umbrella pines) and broadleaf species. The pampas of Rio Grande do Sul are extensive grasslands. Maté, of economic importance as a beverage, is made from the roasted, powdered leaves of a tree harvested extensively in the southern states.

The Amazon rain forest is host to a great variety of tropical fauna, including hundreds of types of macaws, toucans, parrots, and other brightly colored birds; brilliant butterflies; many species of small monkeys; anacondas, boas, and other large tropical snakes; crocodiles and alligators; and such distinctive animals as the Brazilian "tiger" (onca), armadillo, sloth, and tapir. The rivers in that region abound with turtles and exotic tropical fish, and the infamous "cannibal fish" (piranha) is common; in all, more than 2,000 fish species have been identified.

#### 5 ENVIRONMENT

A 20-year US-Brazilian project, initiated by the World Wildlife Fund, in Washington, D.C., and the National Institute for Research on Amazonia, in Manaus, studied the Amazon forest since 1978 in order to recommend appropriate measures for its protection. In 1986, it was estimated that the forests of the Amazon were being cleared for colonization, pasturage, timber development, and other commercial purposes at a rate of up to 20 million hectares (50 million acres) a year. From 1990 to 2000, the average annual rate of deforestation was 0.4% per year. A Brazilian law requiring

that developers leave 50% of each Amazon land parcel untouched is erratically enforced.

Other environmental problems in Brazil include water pollution and land damage. Rivers near urban industrial centers are polluted by mercury, toxic industrial wastes, and untreated waste. Brazil lacks fertile soil for agriculture, and the existing soils are threatened by erosion from the clearing of the forests.

Federal agencies with environmental responsibilities include the National Environment Council of the Ministry of the Interior, the Brazilian Institute of Forest Development, and the Ministry of Planning.

Only 6.7% of Brazil's natural areas were protected in 2003, including seven natural UNSECO World Heritage Sites and eight Ramsar wetland sites.

The damage to the rain forest environment is reflected in the number of endangered species which inhabit the region. Between 1900 and 1950, 60 species of birds and mammals became extinct. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 74 types of mammals, 120 species of birds, 22 types of reptiles, 24 species of amphibian, 42 species of fish, 21 types of mollusks, 13 other invertebrates, and 381 species of plants. The list of endangered species includes Lutz's coastal frog, the Lear's macaw, the guayaquil great green macaw, the American crocodile, two species of marmoset (buffy-headed and white-eared), three species of tamarin (golden lion, golden-headed lion, and golden-rumped lion), the black saki, the woolly spider monkey, and the maned sloth. At least 13 species have become extinct, including the Glaucous macaw.

#### 6 POPULATION

The population of Brazil in 2005 was estimated by the United Nations (UN) at 184,184,000, which placed it at number 5 in population among the 193 nations of the world. In 2005, approximately 6% of the population were over 65 years of age, with another 29% of the population under 15 years of age. There were 97 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 1.4%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 228,874,000. The population density was 22 per sq km (56 per sq mi).

The population is concentrated in the Atlantic coastal region, especially in the southeast, with the states of Rio de Janeiro, São Paulo, and Minas Gerais containing approximately 41% of the total; the states of Bahia, Rio Grande do Sul, Pernambuco, and Ceará have about 23%, and the remaining units about 36%.

The UN estimated that 81% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.63%. The capital city, Brasília, had a population of 3,099,000 in that year. Other major metropolitan areas and their estimated populations are: São Paulo, 18,333,000; Rio de Janeiro, 11,469,000; Belo Horizonte, 5,304,000; Porto Alegre, 3,795,000; Recife, 3,527,000; Salvador, 3,331,000; Fortaleza, 3,261,000; Curitiba, 2,871,000; Campinas, 2,640,000; Belém 2,097,000; Manaus, 1,673,000; Santos, 1,600,000; Goiânia, 1,878,000; São Luís, 978,824; and São José dos Campos, 949,000. The vast interior of the country is sparsely populated, with the indigenous population somewhat concentrated near the Amazon River Basin.

LOCATION: 5°16'19" N to 33°45'9" S; 34°45'54" to 73°59'32" W. BOUNDARY LENGTHS: Venezuela, 2,200 kilometers (1,367 miles); Guyana, 1,119 kilometers (695 miles); Suriname, 597 kilometers (370 miles); French Guiana, 673 kilometers (418 miles); Atlantic coastline, 7,491 kilometers (4,655 miles); Uruguay, 985 kilometers (612 miles); Argentina, 1,224 kilometers (761 miles); Paraguay, 1,290 kilometers (802 miles); Bolivia, 3,400 kilometers (2,113 miles); Peru, 1,560 kilometers (969 miles); Colombia, 1,643 kilometers (1,021 miles). TERRITORIAL SEA LIMIT: 12 miles.

## 7 MIGRATION

Between 1821 and 1945, approximately 5.2 million European immigrants entered Brazil, most of them settling in the south. Brazil has the largest expatriate Japanese colony in the world, numbering more than one million. In recent years, because of the increasing

prosperity of Europe and Japan, there has been less desire to migrate to underdeveloped rural Brazil or its inflation-harassed industrial cities. Moreover, immigration is controlled by laws limiting the annual entry of persons of any national group to 2% of the total number of that nationality that had entered in the preceding

50 years. The total number of migrants in 2000 was 546,000. As of 2004, Brazil was hosting some 3,833 refugees, 80% of whom came from Africa. In 2004, 1.5 to 3 million Brazilians were abroad, most in the United States. Remittances in 2004 were estimated at \$6 billion, equivalent to earnings from soybean exports. In 2005, the net migration rate was estimated as -0.03 per 1,000 population.

## <sup>8</sup>ETHNIC GROUPS

The indigenous inhabitants were Amerindians, chiefly of Tupi-Guaraní stock, and other small groups in the Amazon Basin and the lowlands of the Paraguay and Paraná rivers. The Portuguese settlers had few taboos against race mixture, and centuries of large-scale intermarriage have produced a tolerant and distinctly Brazilian culture. Within the Brazilian nationality are blended the various aboriginal Indian cultures; the Portuguese heritage, with its diverse strains; the traditions of millions of persons of African descent; and European elements resulting from sizable immigration since 1888 from Italy, Spain, Germany, and Poland. The influx of Japanese and some Arabs during the 20th century has contributed to the complex Brazilian melting pot.

According to the 2000 census, 53.7% of Brazil's population are white; 38.5% are mixed white and black; and 6.2% are black. The remainder are comprised of Japanese, Arab, and Amerindian groups.

## <sup>9</sup>LANGUAGES

The official language of Brazil is Portuguese, which is spoken by virtually all inhabitants except some isolated Indian groups. Substantial variations in pronunciation and word meaning, however, distinguish it from the language as it is spoken in Portugal. Spanish is also spoken. A large percentage of the educated have learned either French or English. German, Italian, and Japanese are used in immigrant communities.

## <sup>10</sup>RELIGIONS

The 2000 census indicated that about 74% of the population were affiliated with the Roman Catholic church. Protestants constituted roughly 15% of the population, the majority of whom (about 85%) were Pentecostal/Evangelical; Lutherans and Baptists accounted for most of the remaining Protestants. Other denominations included the Assemblies of God, the Christian Congregation of Brazil, the Universal Church of the Kingdom of God, Lutheran, Presbyterian, and Baptist. About 374,000 respondents to the census were members of "oriental religions," which include several branches of Buddhism, Messianism, Seicho No-Ie, Perfect Liberty, Hare Krishna, Oshoo Disciples, Tenrykyo, Mahicari, Baha'i, Shintoism, and Taoism. There were about 27,239 Muslims, primarily of the Sunni and Shia branches. About 2,905 Brazilians were Hindus. About 7% of the population did not claim any religious affiliation. Muslim leaders estimated that about 3 million citizens were nominally Muslims; however, only about 700,000 were active participants in religious practices. About 100,000 Brazilians are Jewish.

Followers of traditional African and syncretic religions make up about 4% of the populace. Candomble, which focuses on traditional African deities, is a predominant religion among Afro-Brazilians. Xango and Macumba include practices of animism as well as the veneration of Catholic saints and African deities. About 1.3% of the population adhere to a spiritism doctrine known as

Kardecism, which was introduced in the 19th century by Allan Kardec of France.

The constitution provides for freedom of religion and the right is generally respected in practice. There is no official state religion; however, the government of Brazil maintains a Concordat with the Vatican. Several Roman Catholic holidays are celebrated as public holidays.

## <sup>11</sup>TRANSPORTATION

Roads are the primary carriers of freight and passenger traffic. Brazil's road system totaled 1.98 million km (1.23 million mi) in 2002. The total of paved roads increased from 35,496 km (22,056 mi) in 1967 to 184,140 km (114,425 mi) in 2002. Motor vehicles registered as of 2003 included 16,650,000 passenger cars, and 4,200,000 commercial vehicles. Although the bulk of highway traffic is concentrated in the southern and central regions, important roads have been constructed to link the northeastern and northern areas with the industrialized south. Roads of all types have been built with federal aid, the most important being the network of more than 14,000 km (8,700 mi) of paved roads south of Brasília; aid is also supplied for their maintenance. In September 1970, construction began on the 5,000-km (3,100-mi) Trans-Amazon Highway, possibly the most ambitious overland road project undertaken in this century, linking Brazil's Atlantic coast with the Peruvian border; when completed, a 4,138-km (2,571-mi) north-south section will link Santarém, on the Amazon River, with Cuiabá. The project has had a profound effect on the Amazon Basin, among the world's last great wildernesses. However, a World Bank study in the early 1990s showed that 28% of the country's existing highways were in bad condition, up from only 10% in 1979. Lack of proper road maintenance possibly adds 10–15% to total transportation costs in Brazil. As of 2002, the government had privatized or turned over to the states most of the federal highway system.

Brazil's railway system has been declining since 1945, when emphasis shifted to highway construction. The total extent of railway trackage was 29,412 km (18,294 mi) of broad, standard, and narrow gauge right of way in 2004, as compared with 31,848 km (19,789 mi) in 1970. Of that total, 1,000-m narrow gauge track accounts for the largest portion at 23,915 km (14,875 mi), followed by broad gauge track (1.6 m) at 4,907 km (3,052 mi). Standard gauge track (194 km/121 mi) and a dual broad/narrow gauge track system (396 km/246 mi) make up the remainder. Most of the railway system belongs to the Federal Railroad Corp., with a majority government interest. There are also seven lines that the government privatized in 1997.

Coastal shipping links widely separated parts of the country. Of the 36 deep-water ports, Santos and Rio de Janeiro are the most important, followed by Paranaguá, Recife, Vitória, Tubarao, Macaíó, and Ilhéus. Bolivia and Paraguay have been given free ports at Santos. Although there are 50,000 km (31,070 mi) of navigable inland waterways, most as of 2004, were remote from the country's population and industry. In 2005, the merchant shipping fleet, which included 150 vessels (1,000 GRT or over), had a total GRT of 2,961,431.

Air transportation is highly developed. In 2003, local and international airlines transported about 32.372 million passengers. In 2004 there were an estimated 4,136 airports, of which 709 had paved runways as of 2005. There were also 417 heliports (as of

2005). Of the 48 principal airports, 21 are international; of these, Rio de Janeiro's Galeao international airport and São Paulo's Guarulhos International Airport are by far the most active. The main international airline is Empresa de Viação Aérea Rio Grandense (VARIG). Other Brazilian airlines are Transbrasil Linhas Aéreas, Cruzeiro do Sul, (associated with VARIG since 1983), and Viação Aérea São Paulo (VASP), which handles only domestic traffic and is run by the state of São Paulo. All except VASP are privately owned.

## 12 HISTORY

The original inhabitants of Brazil were hunter-gatherers, except in the lower Amazon, where sedentary agriculture developed. There are no reliable population estimates from pre-European times, but probably there were no more than one million.

After the European discovery of the New World, Spain and Portugal became immediate rivals for the vast new lands. Portugal's claim was established by a papal bull of Pope Alexander VI (1493) and by the Treaty of Tordesillas (1494), which awarded to Portugal all territory 370 leagues west of the Cape Verde Islands. On Easter Sunday in 1500, the Portuguese admiral Pedro Álvares Cabral formally claimed the land for the Portuguese crown. Cabral's ship returned to Portugal with a cargo of red dyewood, which had been gathered along the shore, and from the name of the wood, pau-brasil, the new land acquired the name Brazil.

In 1532, the first Portuguese colonists arrived, bringing cattle, seed, and the first slaves from Africa. In 1549, the Portuguese governor-general, Tomé da Souza, founded the city of São Salvador, and established the first Portuguese government in the New World. The same year marked the arrival of the missionary Society of Jesus (the Jesuits) to begin their work among the Indians.

Other Europeans began to move in on the Portuguese colony. In 1555, the French established a settlement in the Bay of Rio de Janeiro. In 1624, the Dutch attacked Bahia and began to extend throughout northeastern Brazil. Under the Dutch, who remained until ousted in 1654, the area flourished economically. Colonists planted sugarcane, and during the 17th century, the large sugar plantations of northeastern Brazil were the world's major source of sugar.

In 1640, Portugal appointed a viceroy for Brazil, with his seat first in Bahia and after 1763 in Rio de Janeiro. The discovery of gold in 1693 and of diamonds about 1720 opened up new lands for colonization in what are now the states of São Paulo, Minas Gerais, Paraná, Goiás, and Mato Grosso. From their base in São Paulo, Brazilian pioneers (Bandeirantes) pushed inland, along with their herds of cattle and pigs, in search of Indian slaves and mineral riches. By the 1790s, when the primitive surface gold and diamond mines were largely exhausted, the Brazilian plateau became thinly populated.

Brazil's first attempt at independence came in 1789 in the mining state of Minas Gerais. A plot, known as the Miners' Conspiracy (Conjuração Mineira) was led by Joaquim José da Silva Xavier, a healer known as Tiradentes ("tooth-puller"). The plot was betrayed and crushed, and Tiradentes was captured and eventually executed, but Tiradentes remains a national hero. In 1807, the invading armies of Napoleon forced the Portuguese royal family and 15,000 Portuguese subjects to flee to Brazil. Rio de Janeiro became the seat of the Portuguese royal family until 1821, when

King John (João) VI returned home, leaving his son Pedro to rule Brazil as regent. Meanwhile, Portugal's monopolistic trade practices, the suppression of domestic industry, and oppressive taxation had brought about a strong movement for independence, which Pedro supported.

Pedro proclaimed Brazil's independence on 7 September 1822, and later that year was crowned Emperor Pedro I. In 1831, a military revolt forced him to abdicate. The throne passed to his five-year-old son, Pedro. In 1840, Pedro was crowned Emperor. Under Pedro II, Brazil enjoyed half a century of peaceful progress. New frontiers were opened, many immigrants arrived from Europe, railroads were built, and the gathering of rubber in the Amazon Basin stimulated the growth of cities, such as Belém and Manaus. The abolition of slavery in 1888 brought about an economic crisis that disrupted the Brazilian Empire. In 1889, a bloodless revolution deposed Pedro II and established the Republic of the United States of Brazil. A new constitution modeled after the US federal constitution, was promulgated by the Brazilian government in 1891. At first, the republic was ruled by military regimes, but by 1894 constitutional stability was achieved.

Meanwhile, empty areas of good soil were settled in the southern plateau by over 2.5 million Italian, Portuguese, German, Polish, and Levantine immigrants. The rapid spread of coffee cultivation in the state of São Paulo transformed Brazil into the world's largest coffee-producing country. By the end of the 19th century, coffee had become the nation's principal source of wealth. Brazil soon entered a period of economic and political turmoil. Malayan and Indonesian rubber plantations had overwhelmed the Brazilian rubber market, while coffee revenues were reduced by falling world prices of coffee. Regionalism and military rivalries contributed to instability, and by 1930, the nation was in a state of unrest. In that year, a military coup with widespread civilian support placed into power Getúlio Vargas, the governor of Rio Grande do Sul.

Vargas' ideology was a blend of populism and corporatism. He sought reforms for Brazil's middle and lower classes, but discouraged dissent and was often repressive. Between 1930 and 1937 Vargas brought a minimum wage and social security to Brazil, but also crushed a leftist uprising in 1935. Vargas formalized his system in 1937, calling it the New State (Estado Novo). For eight years, Vargas attempted to industrialize Brazil, while organizing both workers and their employers into state-run syndicates. Vargas was nationalist in foreign policy, although he encouraged foreign investment. He exploited the US-German rivalry over Latin America to get large amounts of aid until joining the allies in 1942.

Conservative elements of the military, convinced that Vargas was a dangerous force, removed him from office, and promulgated a new constitution in 1946. The "Second Republic" was initiated with the presidency of Eurico Dutra. Vargas was returned to the presidency in the election of 1950 and did not attempt to rejuvenate the New State. He did continue to press for industrialization under state control, establishing a National Development Bank and a state petroleum company. Eventually he ran afoul of the military, which demanded his resignation. He committed suicide in August 1954, a few months before his term of office was due to expire.

He was succeeded from 1955 to 1961 by Juscelino Kubitschek de Oliveira. Kubitschek embarked on an ambitious program of development, spending huge amounts of money and attracting large foreign investments in Brazil. Kubitschek's most ambitious program was the building of a new federal capital, Brasília, in the highlands of central Brazil. Inflation and a burdensome national debt proved to be his undoing, and in January 1961 Jânio da Silva Quadros was inaugurated after a campaign promising an end to corruption and economic stability. The situation proved too difficult for Quadros, and he resigned after only seven months. João Goulart, who had been vice president under both Kubitschek and Quadros, became president only after the conservative Congress combined with the military to reduce his powers and institute an unwieldy form of parliamentary government. In January 1963, in a national plebiscite, Brazil chose to restore presidential powers. But Goulart was caught between pressures from the left, demanding the acceleration of social programs, and the right, increasingly alarmed by trends toward populism.

On 1 April 1964 the military deposed Goulart and arrested 40,000 people, including 80 members of Congress. In the same month, Congress appointed Humberto de Alencar Castelo Branco to the presidency, and in July it approved a constitutional amendment extending Castelo Branco's term of office to March 1967. National elections were postponed, and Brazil entered an era of military supremacy.

In March 1967 Arthur da Costa e Silva, a former army marshal, took office under a new constitution. That constitution was suspended in December 1968, and military hard-liners took the upper hand. Costa e Silva suffered a stroke in September 1969 and died in December. Gen. Emilio Garrastazú Médici, former head of the secret police was chosen to replace him. In March 1974, Gen. Ernesto Geisel, a high official in the Castelo Branco government, became president.

The military governments of the previous 10 years had brought Brazil rapid economic expansion, but there was a dramatic reversal during the oil crisis of 1973–74. Opposition began to mount, encouraged by religious and trade union leaders. President Geisel gradually instituted some degree of political liberalization (*abertura*), but the military split on the wisdom of this policy.

During the late 1970s, continuing economic difficulties led to labor unrest and numerous strikes, including a strike of 300,000 metalworkers in metropolitan São Paulo in April and May of 1980 that ended only after troops in tanks and trucks occupied the region. Meanwhile, Gen. João Baptista de Oliveira Figueiredo became president in March 1979. That August, Figueiredo continued Geisel's policy of liberalization by signing a political amnesty law that allowed many political exiles to return home. Also in 1979, censorship of the press and the controlled two-party system were abolished. In November 1982, Brazil had its first democratic elections since 1964. Opposition parties won the governorships of 10 populous states and a majority in the lower house of Congress, but the ruling party remained in control of the upper house and the electoral college, which was to choose the next president. Moreover, the military retained broad powers to intervene in political affairs under national security laws.

The 1985 election was indirect, yet the opposition managed to turn the campaign in 1984 into a reflection of popular choice and capture the presidency. The ruling party chose São Paulo governor

Paulo Maluf, who proved unable to distance himself from the unpopularity of the military-controlled regime. The opposition capitalized on the groundswell of hostility and coalesced behind the paternal figure of Tancredo Neves, a senator from Minas Gerais who had held office under Vargas and who campaigned as if the ballot were direct. The election went against the government, and in January 1985, the electoral college duly chose Neves as Brazil's first civilian president in a generation. In March, however, just before his inauguration, Neves fell gravely ill, and he died in April without having been formally sworn in. Brazilians feared another military strike, but Vice President José Sarney was allowed to take office as president. Sarney, who represented a small center-right party allied with Neves's party, consolidated his position after an impressive showing in regional and legislative elections in November 1986.

A new constitution, passed in 1988, was followed by elections a year later. Brazil's first direct presidential elections in 29 years resulted in the victory of Fernando Collor de Mello. Collor received 53% of the vote in the runoff elections. Collor took office in March 1990 and launched an ambitious liberalization program that attempted to stabilize prices and deregulate the economy. Collor was in the process of renegotiating Brazil's huge debt with foreign creditors and the IMF when massive corruption was revealed inside the Collor administration. Allegations implicated Collor himself, who was forced to resign in December 1992. Itamar Franco took over, promising to continue Collor's programs, but long-standing structural problems continued. The nation's chronic inflation was finally brought under control through the Real Plan launched in 1994 by finance minister Fernando Henrique Cardoso (and named for the new currency, linked to the US dollar, which was introduced under the plan).

On the strength of the plan's success, Cardoso, a leading social scientist, was elected to the presidency in October 1994. His policies, which continued to keep inflation under control, reduced tariffs, and included major privatization measures, earned him sufficient support for the passage in January 1997 of a constitutional amendment by the lower house of Congress overturning the nation's ban on consecutive presidential terms and making it possible for Cardoso to seek reelection in 1998. He won reelection in October of 1998 with 53% of the vote in the first round. Worker's Party candidate Luiz Inácio "Lula" da Silva came second with 31.7%. Cardoso also commanded the support of a loose center-right coalition of parties. One of the major challenges tackled by the Cardoso administration was the privatization of the state-owned mining company, Vale de Rio Doce, which drew strong opposition from nationalist, leftist, and religious forces. In May 1997 a \$3.2 billion controlling stake in the mining and transport conglomerate was sold to private investors. Cardoso's parties also won a majority of the state governor races. Shortly after the election, as a result of the economic crisis, Brazil was forced to devalue its currency, the *real*. Previously pegged to the US dollar, the *real* lost more than 60% of its value within days, sending the country into a deeper crisis. Some recovery was observed starting in 1999, but social discontent resulting from high unemployment and growing poverty also flourished. Cardoso was constitutionally prevented from seeking a third consecutive presidential term in 2002.

In the 2002 election, Lula da Silva, the runner-up in the previous two elections and the founder of the Worker's Party, final-

ly succeeded in winning the presidency. After placing first in the first-round election, Lula went on to win more than 61% of the vote to defeat José Serra, Cardoso's candidate, and become the first factory worker ever to be elected president of Brazil. Although many observers feared that Lula would adopt policies detrimental to sound fiscal management and would favor redistribution of wealth over fiscal discipline, during his first months in office Lula demonstrated his ability to be a clever, reliable, trustworthy leader who sought to balance sound macroeconomic policies with an active but responsible commitment to reduce poverty and use government resources to help those most in need. The economy recovered after the 1998 crisis, but poverty and inequality remained widespread and fighting them was Lula's first priority as president. Lula's Zero Hunger plan, aimed at devoting state resources to help the most impoverished Brazilians, received enthusiastic support from political actors and international observers.

In 2004, Brazil—along with Germany, India, and Japan—launched an application for a permanent seat on the United Nations Security Council. Those in favor of expanding the Security Council from its current five permanent members (the United States, Russia, the United Kingdom, France, and China) argued such expansion would remedy the democratic and representative deficit from which the Council suffers. African leaders also wanted permanent African representation in the Council.

During the summer of 2005, corruption allegations plagued the governing Workers' Party (PT). The PT was accused of paying monthly bribes of \$12,000 to lawmakers from other parties, and of manipulating the system of appointments to state-run companies. A wave of resignations ensued. President Lula da Silva made a televised apology and claimed he knew nothing about the corruption. His popularity, however, suffered a blow as a result of the corruption scandal.

### 13 GOVERNMENT

The Federative Republic of Brazil is a constitutional republic composed of 26 states and the Federal District. This district surrounds the federal capital, Brasília. The constitution of October 1988 established a strong presidential system.

The president and vice president are elected to four-year terms and can be reelected once. In 1985, the previous constitution was amended to allow for direct popular election as opposed to an electoral college system. Between 1964 and 1978, presidents were pre-selected by the military. The president is the head of the armed forces and is in charge of the executive branch, assisted in that task by a cabinet of ministers. He also appoints justices to the Supreme Federal Tribunal, the highest court in Brazil.

The Congress consists of the Senate and the Chamber of Deputies. The Senate has 81 members, 3 for each state plus the Federal District. Senators serve for eight-year terms, with half the members retiring every four years. The 513 deputies are elected for four-year terms by a system of proportional representation in the states, territories, and Federal District. The constitution stipulates that Congress meet every year from 15 March to 15 December. In practice, from 1964 to 1985, the military used the office of the president to dominate the Congress and the state legislatures, suspending them from time to time.

Voting is compulsory between the ages of 18 and 70 and optional for persons over 70, and those between 16 and 18 years of

age. Illiterates were permitted to vote in 1985. Military conscripts may not vote.

### 14 POLITICAL PARTIES

During the last days of the Brazilian Empire, a group of positivists advocating abolition of the monarchy organized the Republican Party (Partido Republicano—PR) along military lines. After the fall of the empire in 1889, the government was controlled by PR-supported military regimes and opposed locally by the established Conservative and Liberal parties. An opposition group, the Civilian Party (Partido Civilista), organized by Ruy Barbosa, overcame the military regime but was soon absorbed into the Conservative and Liberal groups from Minas Gerais and São Paulo, which instituted a system of alternating the presidency between the two states.

Getúlio Vargas was responsible for the success of three successive parties, one of which survives to this day. In 1930, Vargas formed the Liberal Alliance Movement (Aliança Nacional Liberal—ANL). After Vargas resigned the presidency in 1945 his supporters formed the Social Democratic Party (Partido Social Democrático—PSD). Eurico Dutra, who succeeded Vargas, ran under this party. In 1950, Vargas was elected under the banner of the Brazilian Labor Party (Partido Trabalhista Brasileiro—PTB). Finally, Vargas inspired the National Democratic Union (União Democrática Nacional—UDN) to put up candidates against him. The UDN won the presidency in 1961 for Quadros.

The PSD continued on without Vargas, but formed a coalition with the PTB in 1955. The PSD candidate, Kubitschek, became president, while the PTB's leader, Goulart, became vice president. In the 1958 congressional elections, however, the PTB broke with the PSD. The PTB survives as a small party, having lost many of its members to other laborite parties.

After the military takeover in 1964, parties disappeared. In 1966, the military allowed the formation of two official parties: the Alliance for National Renewal (Aliança Renovadora Nacional—ARENA) and the Brazilian Democratic Movement (Movimento Democrático Brasileiro—MDB). ARENA was created as the ruling party, with the MDB playing the role of "loyal opposition." ARENA began with two-thirds majorities in both houses of Congress and increased its majorities in the elections of 1970, while also maintaining control of nearly all state legislatures. ARENA scored further gains in the 1972 municipal elections. However, beginning in November 1974, the MDB began to score legislative gains. Moreover, in the 1974 election the MDB was able to raise issues of social justice and civil liberties.

In November 1979, in accordance with the government's liberalization policy, Congress passed a law abolishing ARENA and the MDB and permitting the formation of new parties. Over the next decade, a number of groups emerged. The government created the conservative Social Democratic Party (Partido Democrático Social—PDS) to replace ARENA. The Democratic Workers' Party (Partido Democrático Trabalhista—PDT) is headed by Leonel Brizola, a frequent critic of the military regime and leader of a similar party before 1964. The Party of the Brazilian Democratic Movement (Partido de Movimento Democrático Brasileiro—PMDB) is a moderate successor to the MDB. The Brazilian Social Democracy Party (PSDB) was founded in 1988 by former PMDB members, including future president Fernando Enrique Cardo-

so. The Workers' Party (Partido dos Trabalhadores—PT) is led by Luis Inácio da Silva, also known as “Lula,” the popular leader of the metalworkers' union. In 1989, Lula placed second in the presidential race, running under a coalition of laborite parties called the Popular Front. Lula lost the runoff election to Collor, receiving 47% of the vote. He ran again unsuccessfully in 1994 and 1998 before winning the 2002 presidential election. The Brazilian Workers' Party (Partido Trabalhista Brasileiro—PTB) is a populist party with working-class appeal, but is conservative on a variety of economic issues. The PT is currently the party with most legislators in congress and its ability to govern will be tested during Lula's presidential term (2003–07).

In 1985, the Liberal Front Party (PFL) was organized by dissident PDS members. It formed the National Alliance with the PMDB, an alliance that won the 1985 elections. Although the PFL lost the 1989 presidential elections, it soon allied with President Collor, although the scandal of 1992 did little to help its fortunes. In the 2002 election, the PFL placed second, behind the PT; and PFL had 84 deputies in the 513-member Chamber and 19 senators in the 81-member Senate.

The Communists had been banned since 1957, but were allowed to organize after 1985. The Brazilian Communist Party (Partido Comunista Brasileiro), founded in 1922, is now a Euro-Communist party firmly committed to conventional politics. The Communist Party of Brazil (Partido Comunista do Brasil) is a more radical faction, Maoist in its origins but now expressing solidarity with any socialists who resist reforms.

Fernando Henrique Cardoso of the PSDB was elected president in October 1994, in Brazil's second direct presidential election since 1960, winning 53% of the vote to 26% for the PT candidate, Inácio da Silva (known as Lula), his closest rival. In October 1998 Cardoso won reelection in a first-round election with 53.1% of the vote, defeating Lula who came second with 31.7%. In 2002, Lula won in a runoff election with 61% of the vote, but his PT only captured about one out of every five seats in Congress. Through alliances and coalitions with other parties, Lula secured majority control of both chambers, but Brazilian politics is characterized by the lack of discipline, and party allegiance responds more to provincial and local interests than strong central party discipline. Yet, under Lula's leadership, the PT has successfully become a national party and is currently the largest and most important party in the country. Party loyalty by legislators has remained weak as most members of the legislature show more loyalty to their state governors than national party leadership. But the success of the PT helped foster a higher degree of party discipline and cohesiveness. The corruption scandal that rocked the PT in 2005, however, caused the party to lose a significant amount of public trust.

## 15 LOCAL GOVERNMENT

Brazil is a highly centralized system, in which local units have very little authority. Each of Brazil's 26 states has its own constitution and popularly elected legislature and governor. The states are divided into about 5,500 municipalities, which are, in turn, divided into districts. Each municipality has its own elected council and mayor. The state and municipal legislative bodies are subordinate to the federal government. Municipal authorities are responsible for the construction and maintenance of roads, the creation and upkeep of public parks and museums, and for the program of pri-

mary education. As districts increase in population, they, in turn, become municipalities. The large municipalities are important political units and may rival the state in political power. The largest city in each municipality serves as the capital, and usually the largest city in the largest municipality serves as the state capital. The Federal District government in Brasília is appointed by the president with Senate approval.

In 1960, after Brasília became the new capital, the former Federal District, comprising Rio de Janeiro and the 1,165 sq km (450 sq mi) surrounding it, became the state of Guanabara. Eventually this state was amalgamated into the state of Rio de Janeiro. From 1979 on, a few previously unincorporated territories became states.

## 16 JUDICIAL SYSTEM

The legal system is based on continental European principles. Although the jury system has been used in criminal cases for more than 100 years, there is a general tendency away from the use of juries. The Supreme Federal Court is composed of 11 justices, chosen by the president with Senate approval, who serve until age 70. It has final jurisdiction, especially in cases involving constitutional precepts and the acts of state and local authorities. The Federal Appeals Court deals with cases involving the federal government. Immediately below it are federal courts located in the state capitals and in the Federal District, as well as military and labor courts. Codes of criminal, civil, and commercial law are enacted by Congress, but in order to preserve the jurisdiction of state courts, the federal courts will not accept original jurisdiction solely because a law of Congress is involved. Electoral tribunals deal with registration of political parties, supervision of voting, infractions of electoral laws, and related matters.

Each state and municipality has its own judicial system. Justices of the peace and magistrates deal with commercial and other civil cases of the first instance. Decisions from state or municipal courts may be appealed to the federal courts and on up to the Supreme Federal Court.

There is also a system of specialized courts dealing with police, juveniles, and family matters.

The judiciary is independent from the executive and legislative branches. Judges are appointed for life and may not accept other employment.

Criminal defendants have a right to counsel.

## 17 ARMED FORCES

The Brazilian armed forces had 302,909 active personnel, with reserves of 1,340,000 in 2005. The Army had 189,000 personnel, whose equipment included 178 main battle tanks, 286 light tanks, 409 reconnaissance vehicles, 803 armored personnel carriers, and over 1,554 artillery pieces. The Navy had 48,600 personnel, including 14,600 Marines and 1,150 naval aviation personnel. The Navy's major fleet units included 1 aircraft carrier, 14 frigates, 4 corvettes, 50 patrol/coastal vessels, and 6 mine warfare ships. The naval aviation arm had 26 combat capable aircraft that included 23 fighter ground attack aircraft in addition to 26 antisubmarine warfare helicopters. The Air Force had 69,309 active personnel, with 9 combat capable aircraft, consisting of P-3A Orion maritime patrol aircraft. Brazil's paramilitary force was under Army control and consisted of a public security force of more than 385,600

members. Brazil participated in five UN peacekeeping missions in 2005. The defense budget in 2005 totaled \$13.08 billion.

## 18 INTERNATIONAL COOPERATION

Brazil is a charter member of the UN, having joined on 24 October 1945; it belongs to the ECLAC and several specialized agencies, such as the FAO, IAEA, IFC, ILO, IMF, UNESCO, the World Bank, and WHO. Brazil joined the WTO on 1 January 1995. The country also participates in G-15, G-19, G-24, G-77, the Río Group, the Latin American Economic System, and the Latin American Integration Association. Brazil is also a member of the OAS. In 1991, Brazil together with Argentina, Uruguay, and Paraguay created the Mercosur trade and strategic alliance.

Brazil is an observer of the Nonaligned Movement and a member of the Nuclear Suppliers Group (London Group) and the Agency for the Prohibition of Nuclear Weapons in Latin American and the Caribbean (OPANAL). The nation contributed a battalion of troops to the UNEF in the Gaza area after the Suez crisis of 1956 and also sent troops to the Congo (now Zaire) in the early 1960s. It has also supported UN efforts in Kosovo (est. 1999), Liberia (est. 2003), East Timor (est. 2002), Côte d'Ivoire (est. 2004), and Haiti (est. 2004). Brazil serves on the United Nations Monitoring, Verification, and Inspection Commission, which was originally established in 1999 as the Special Commission for the Elimination of Iraq's Weapons of Mass Destruction. The country is a signatory of the 1947 Río Treaty, an inter-American security agreement.

In environmental cooperation, Brazil is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The history of the Brazilian economy before World War II was characterized by six principal cycles, each centered on one export particular commodity: brazilwood, livestock, sugar, gold, rubber, and coffee. At the height of each cycle, Brazil led the world in production of that commodity. Even during the postwar era, variations in price and market conditions for coffee largely determined the degree of national prosperity.

Attempts to diversify the economy through rapid industrialization made Brazil one of the two leading industrial nations of South America, but spiraling inflation thwarted many of the economic advances. The rising inflationary trend of the mid-1960s was due mainly to public budgetary deficits resulting from losses incurred by the government-owned railroads and shipping lines and by official subsidy expenses for imports, such as wheat and petroleum. At the same time, wages increased at a higher rate than productivity; expansion of credit to private enterprises also lagged. The pace of further industrial expansion was determined largely by the availability of foreign exchange, derived chiefly from the sale of coffee, to buy the necessary equipment and raw materials, especially wheat and crude oil.

After the period of what some called an economic miracle (1968–73), during which GDP growth averaged more than 11% annually; the economy cooled to an annual growth rate of 6% between 1974 and 1980, mainly because of increased costs of import-

ed oil. Throughout this period, industrial growth rates outstripped those for the economy as a whole, and industrial products claimed an increasingly large share of GDP.

Inflation was so chronic that in the late 1960s, the government instigated monetary correction, whereby fixed payments were indexed to past inflation. Thus, interest rates, pension payments, mortgage payments, and so forth, kept pace with rising prices, but inflation fed on itself. Even as economic growth surged in the mid-1980s, triple-digit inflation persisted. In February 1986, as the projected inflation rate for the year approached 500%, the government imposed a package of sweeping economic reforms, the Cruzado Plan, which created a new currency (the cruzado), eliminated monetary correction, and froze wages and prices. While inflation plunged to near-zero initially, by mid-1987, it had surged beyond 100%, fueled by increased customer spending due to the price freeze. The government then imposed an austerity program and began negotiations with the IMF for a rescheduling of the staggering foreign debt.

The Brazilian economy was hit by a deep recession and record inflation in 1990. The GDP fell by an unprecedented 4%, while inflation hit an all-time high of 2,938%. In March 1990, upon assuming office, President Collor announced sweeping economic reforms designed to stop inflation and integrate Brazil into the developed world economy. In addition, the Collor Plan imposed a price freeze, as well as a freeze on bank deposits, resulting in a precipitated capital flight. Trade barriers were significantly reduced but the attempt to reduce Brazil's large fiscal deficit resulted in the continual resurgence of inflation and a lack of confidence in the government's economic policies.

The Collor government introduced on 31 January 1991 another package, Collor II, attempting to reduce inflation. The package included wage and price controls and eliminated the overnight market. The economy experienced a lackluster recovery with GDP growth of 1.2%. However, the failure to reduce the structural fiscal deficit, inconsistent monetary policy, the unfreezing of prices and wages by the third quarter, and the unfreezing of remaining blocked accounts undermined the efforts to reduce inflation.

Under IMF guidance, monetary policy continued to tighten liquidity in 1992. The failure of the government's stabilization efforts produced a new inflationary spiral with monthly inflation rates in the mid-20% range. High real interest rates combined with the acceleration of inflation and the political uncertainty over the outcome of the impeachment proceedings produced another recession with GDP decline of 1.5% for 1992.

Inflation continued to rage in the early 1990s. In 1994 it peaked at 2,700%. That year, the finance minister, Fernando Henrique Cardoso (later president), introduced a new currency, the real, and a new economic plan called the Real Plan. The plan featured privatization of state-owned industries, lowering of tariffs, and the abolition of Brazil's unique and counterproductive wage-inflation indexing, which had sent prices on a seemingly endless upward spiral. By ending the hyperinflation of the past decades, the government greatly increased the standard of living of millions of Brazilians, allowed businesses to plan for the medium term in an environment of stability, and created a class of economically stable consumers. Inflation had dropped to only 6.9% by 1997, and has since remained in single digits.

From 1988 to 1998, GDP growth averaged 2.4%. The Real Plan had to be abandoned in early 1999, however, as the Brazilian economy became engulfed in the aftermath of the Asian financial crisis of 1997 and the Russian financial crisis of 1998. Brazil lost an estimated \$50 billion in foreign reserves in the resulting capital flight. Steps were taken by the Group of Seven and the international financial institutions to try to reassure foreign investors. On 2 December 1998, a two- and-three-quarter-year standby agreement with the IMF went into effect, buttressed by a credit line of about \$18.2 billion, as well as a one-year standby under the Supplementary Reserve Facility (SRF) with a \$12.6 billion credit line, both part of an international support package totaling \$41.5 billion. The support package had been designed as a precaution against Brazil catching the "Asian flu," as it were, but it did not prevent the Brazilian currency crisis of 1999. On 13 January 1999 the Central Bank devalued the real by 8%; on 15 January 1999, the Cardoso government announced that the real would no longer be pegged to the US dollar, ending the Real Plan. Immediately, the real lost more than 30% of its value, and subsequent devaluation made the real lose a total of 45% of its value. Despite the devaluation, the economy showed positive, if weak, growth in both 1998 (0.2%) and 1999 (0.8%), and inflation remained under control, at 3.2% in 1998 and 4.9% in 1999. However, Brazil's debt service ratio soared to an untenable 113.1% of export earnings in 1999, up from 62.7% in 1997 and 76.2% in 1998. To some extent, the problem was self-correcting, as the devalued real made Brazilian exports more competitive, which increased export earnings in 2000, and helped reduce the debt service ratio to 90.8% by 2000 and to 78.5% by 2001. GDP grew 4.5% in 2000, led by exports, while inflation picked up to 7%. Growth then fell to 1.4% in 2001 as the US recession and the global economic slowdown dampened export demand.

At the expiration of the 1998 IMF standby agreement in September 2001, two other one-year standbys were put in place with credit lines totaling about \$30 billion. In 2002, debt service payments were running at over 80% of exports (a debt service ratio of 80.3%) as export markets continued slow after the 11 September 2001 terrorist attacks on the United States, and as investors became increasingly anxious about the economic consequences of a victory by Luiz Inácio Lula da Silva in the October presidential election. There were also questions about whether the administration of US president George W. Bush would support another standby arrangement with the IMF for Brazil. On 6 September 2002 the expiring 2001 arrangements were replaced by two more one-year standby arrangements with a \$30 billion line of credit just as the currency exchange rate and the Brazilian stock market index—the Bovespa index—were reaching historic lows. Both the exchange rate and the Bovespa index improved after the election and into the first quarter 2003; the improvements were in part because the sell-off had preceded the election and in part because the Lula government was proving less radical than had been feared. Overall, real GDP is estimated to have grown 1.5% in 2002, while inflation increased to 8.4%, up from 6.8% in 2001.

Although hyperinflation in Brazil has ended, and the economy has to a great extent been liberalized, public-solvency indicators deteriorated in the midst of low growth and stalled fiscal reforms in the mid-2000s. President Lula da Silva by 2006 had won market confidence by showing commitment to stability and reform, and improved public-debt ratios, but the tightness of macroeconomic

management frustrated industrialists and alienated da Silva's traditional supporters. Brazil uses inflation-targeting as a framework for monetary policy in the context of a floating exchange rate. The central bank has set a target inflation rate of 5.1%, and by 2006, inflation was on the decline. After the trade balance swung back into surplus in 2001 for the first time since 1993, the export to GDP ratio rose further in 2003, to 17.2%, following consecutive years of record export earnings in 2002–03. Primary products performed strongly by 2005, prompted by robust Chinese demand for soya and iron ore, but exports of manufactures also increased, led by automobiles. Underinvestment, particularly in infrastructure, has led to high costs and inefficiencies in services such as transportation, energy provision, and communications. Construction, which accounts for two-thirds of investment, was weak in 2005, partly because of high interest rates. There is also a heavy corporate tax burden. In 2004, the economy grew by 4.9%. Growth was likely to slow to 3% in 2005 before picking up again in 2006. Real GDP growth averaged 2.6% from 2000–04. Inflation averaged 8.7% during that period. Brazil was the world's 14th largest economy in 2004, according to the World Bank.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Brazil's gross domestic product (GDP) was estimated at \$1.6 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$8,500. The annual growth rate of GDP was estimated at 2.6%. The average inflation rate in 2005 was 6.8%. It was estimated that agriculture accounted for 10% of GDP, industry 39.4%, and services 50.6%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$2.821 billion or about \$16 per capita and accounted for approximately 0.6% of GDP. Foreign aid receipts amounted to \$296 million or about \$2 per capita and accounted for approximately 0.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Brazil totaled \$291.57 billion or about \$1,647 per capita based on a GDP of \$505.7 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 3.4%. In 2001 it was estimated that approximately 22% of household consumption was spent on food, 18% on fuel, 15% on health care, and 34% on education. It was estimated that in 1998 about 22.0% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Brazil had an estimated work force of 90.41 million. In 2003, it was estimated that 20% were engaged in agriculture, 66% in services, and 14% in industry. As of 2005, an estimated 9.9% of the workforce was unemployed.

The law provides for union representation of all workers except the military, uniformed police, and firemen. Union financing depends largely on a mandatory tax administered by the gov-

ernment, which applies to nearly all workers and employers. The number of strikes has decreased in recent years, with 1,250 strikes recorded in 1996 compared to 84 in the year 2000. Union organizers, especially in rural areas, continue to be violently harassed and even killed. About 16% of Brazil's workforce is unionized. However, most workers in the informal economy, including those not registered with the Ministry of Labor and Employment (MLE) and those who are self-employed, remain outside of the union structure. Around 50% of the country's labor force worked in the informal sector, while the percentage was even higher in the agricultural sector, where 70% were unregistered with the MLE.

Brazilian law limits the workweek to 44 hours, with a weekly rest period of 24 consecutive hours. Excessive compulsory overtime is prohibited with overtime hours at time-and-a-half rate of pay. The minimum wage is adjusted annually. In May 2005, the monthly minimum wage was set at us\$130. These laws generally apply to workers in the formal economy.

Children under 16 are generally forbidden to work by law except in certain apprentice programs. However, this law is not effectively enforced. Estimates in 2004 put the number of children laborers between the ages of 5 and 17 who were working at 5.1 million.

Although Brazilian law prohibits compulsory or forced labor, forced, even slave labor, continues to be a problem. According to estimates by the International Labor Organization, there were about 25,000 slave laborers in Brazil, most of whom were in the states of Mato Grosso and Para. In addition, unsafe working conditions are prevalent throughout the country.

## 2<sup>2</sup> AGRICULTURE

In 2003, 15% of Brazil's economically active population worked in agriculture, down from 23.3% in 1990. Total arable and permanent crop area comprises 66.5 million hectares (165 million acres). Although agriculture's share of exports has declined relative to industrial goods, the value has continued to increase, so that Brazil in 1977 became the world's second-largest exporter of agricultural products. Except for grain (particularly wheat), of which some 6.3 million tons had to be imported in 2004, Brazil is virtually self-sufficient in food. The growth rates for agriculture as a whole averaged 2.8% during 1980–90, and 3.2% for 1990–2000. By 2003, agricultural production was 13.7% higher than during 1999–2001. In 2003, agriculture accounted for 8% of the total GDP. Export crops are significant—in addition to the traditional exports of coffee and cocoa, Brazil is also a major exporter of soybeans and orange juice. In 2004, Brazil ranked sixth in the production of cocoa beans at 169,400 tons, or 4.7% of the world's cocoa bean production. In recent years production has been devastated by the effects of the witches-broom fungus.

The Land Statute Law of 1964 was designed to modify the agrarian structure and increase agricultural output in selected regions over a 20-year period. The law empowered the federal government to expropriate unused or underutilized land by offering indemnification in bonds in the case of large properties and cash payment for smallholdings. In redistributing expropriated lands, priority is given to those who work the land under tenancy, sharecropping, or ordinary labor agreements. Responsibility for implementing the law is divided between the Brazilian Agrarian Reform Institute and the National Institute of Agricultural Development.

In October 1984, a law was passed to facilitate the distribution of 43.1 million hectares (106.5 million acres) of state-owned land and nonproductive private estates to 1.4 million peasant families, primarily in the impoverished northeast, through 1989. The formation of cooperatives was encouraged.

Coffee, until 1974 preeminent among export earners, has been declining in importance since the early 1960s, while soybeans, sugarcane, cotton, wheat, and citrus fruits have shown dramatic increases. Brazil led the world in coffee production in 2004, at 2,475,000 tons. Sugarcane production, in which Brazil ranked first in the world in 2004, is grown not only for refined sugar but also as a source of alcohol for fuel, and totaled 410,983,000 tons that year. In 2004, production included 18,256,500 tons of oranges, 24,039,000 tons of cassava, and 211,800 tons of cashews. At 28,500 tons, Brazil was not the world's leading producer of Brazil nuts in 2004—it trails Bolivia. Tobacco production in 2004 totaled 928,338 tons, 14% of world production. Agricultural production in 2004 (in millions of tons) was corn, 41.9; soybeans, 42.9; rice, 13.3; wheat, 6.0; and cottonseed, 2.2. Further agricultural reforms have been carried out under the Carta de Brasília of 1967. The Carta included an incentive program for the construction of storage facilities, to permit farmers to hold products off the market in expectation of better prices. Agricultural research in Brazil is conducted by the Agriculture and Cattle Raising Institute of Research. The expansion of power, transportation, and communications systems during the 1970s further contributed to agricultural development.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Brazil is a leading livestock-producing country, and 197,000,000 hectares (487,000,000 acres—more than one-fifth of the total national area) are devoted to open pasture. Since World War I, cattle production has become one of the country's major sources of wealth. Hereford and polled angus are raised in the southern states of Rio Grande do Sul and Santa Catarina, and Dutch and Jersey cattle supply dairy products in the uplands of Minas Gerais, Rio de Janeiro, São Paulo, and Paraná. The humped zebu was first introduced in Minas Gerais, where intense crossbreeding produced the Hindu-Brazil breed that is now most common throughout Brazil because it resists tick fever and heat. There were an estimated 192 million head of cattle in 2004, as compared with an annual average of 147.8 million during 1989–91 and 116.6 million during 1979–81.

Hog raising, marked by an improvement in breeds, has doubled since 1935, making Brazil the world's third-largest producer. In 2004 there were an estimated 33 million hogs. Berkshires and Poland Chinas have been introduced in quantity, and, since vegetable oils are increasingly replacing lard, the emphasis is on production of pork, ham, and sausages. Brazil is not a major sheep country, since most of the area is too tropical. The bulk of Brazil's 14.2 million sheep are in Rio Grande do Sul. Of the other domestic animals raised commercially in 2004, there were some 9.1 million goats, 5.9 million horses, 1.4 million mules, and some 1.1 billion chickens. Brazil is the world's third-largest exporter of broiler meat.

The government encourages production and seeks more efficient methods of conservation and distribution of meat products. Meat production was 19.1 million tons in 2004, including 7.8 mil-

lion tons of beef and veal. The dairy industry is most highly developed in the vicinity of large cities. Estimated output of dairy products in 2004 included 23.3 million tons of fresh cow's milk and 1.6 million tons of eggs.

During the years of high inflation, ranchers and farmers looked at their herds and land as assets whose value increased in line with inflation and were less challenged to make investments and increase productivity. With inflation now under control, cattle prices have remained fairly stable, and some meat packers have started turning to the export market.

## 24 FISHING

Although Brazil has a seacoast of some 7,400 km (4,600 mi) and excellent fishing grounds off the South Atlantic coast, the nation has never fully utilized its commercial potential. Traditionally, fishing has been carried on by small groups of individual fishermen using primitive techniques and equipment and seldom venturing out of sight of land. Lack of storage facilities, canneries, and adequate methods of distribution have limited the supply and led to the importation of dried fish. Swordfish is caught in large quantities off the coast of Paraíba and Rio Grande do Norte, and shrimp is caught and dried along the coasts of Maranhão, Ceará, and Bahia. The fish resources of the Amazon River are not exploited, except for the commercial processing of the pirarucú and an aquatic mammal, the sea cow. The annual fish catch is so modest that there has traditionally been a scarcity during Holy Week, about the only time when Brazilians eat much fish. The total catch in 2003 was 1,086,504 tons, 36% from inland waters. Exports of fish products were valued at \$419.1 million in 2003. Small quantities of lobster are exported.

A fisheries development agency was established in the early 1970s to exploit Brazil's coastal potential. The discovery of large quantities of tuna off the coast of Rio Grande do Sul has interested foreign fishing companies, and Japanese and US concerns have obtained the right to fish in Brazilian waters and to establish storage and canning facilities. Normally, foreign fishing rights are reserved to the Portuguese. Aquacultural production consists primarily of carp and tilapia.

## 25 FORESTRY

Over 50% of South America's forests and woodlands are in Brazil, with an estimated 412 million hectares (1,018 million acres). Sylvan areas in Brazil are nearly three-quarters as large as the forests of all African nations combined. Brazil's forests cover 49% of the country's land area and are among the richest in the world, yielding timber, oil-bearing fruits, gums, resins, waxes, essential oils, cellulose, fibers, nuts, maté, and other products. The Amazon region contains almost 80% of the national forest resources. In the rain forest, as many as 3,000 different species per sq mi (2.6 sq km) may coexist. However, only a limited percentage of forestland is being exploited, in part because of a lack of adequate transportation. Commercial tropical hardwood forests covered 238,000 hectares (588,000 acres) in 2005, or about 58% of the forested area. Brazil accounts for 20% of the world's tropical hardwood resources and is one of the leading producers of tropical hardwood products. Brazilian timber is of fine quality, ranging from wood as light as cork to the wood of the Brazilian pepper tree, with a density one and one-half times that of water. By 1991, rapid deforestation dur-

ing the previous 30 years in the Amazon (from migration, road building, mining, and tax incentives) had caused the rain forest to shrink by an estimated 8.5% since colonial times. However, the annual rate of deforestation in the 1990s was 0.4%. Government incentives for reforestation projects ended in 1986. Most reforestation is carried out by private companies. The average annual reforested area in Brazil during 1999–2004 was 150,000 hectares (371,000 acres). The hardwood trees of the Amazon rain forest are of excellent quality, but because of a thriving domestic furniture industry, they are used mainly locally; furniture manufacturing is responsible for 40% of the wood consumption in Brazil. The Paraná pine (*Araucaria angustifolia*) is in greatest demand. It grows in the southern states in stands that comprise about 420 million trees. A Brazilian ban on log exports has focused exports on value-added products (mostly lumber, plywood, hardboard, and veneers). Policies to develop forest resources have changed recently, and the utilization of native species has become very restricted, mainly in the southern region. In July 2004 the government lifted the prohibition on exports of mahogany and other Amazon species such as virola and imbuia, but these exports are under rigid control.

Production of roundwood in 2003 was estimated at 238.5 million cu m (8.4 billion cu ft). Production of paper and woodpulp has expanded considerably since 1975; exports of paper intensified between 1981 and 2000, from 337,000 tons to 1,815,000 tons. Production amounts in 2004 included 31.8 million cu m (11.2 billion cu ft) of tropical hardwood logs and 8.4 million cu m (20.6 million cu ft) of softwood lumber. The total value of Brazilian forest product exports in 2003 reached \$2.7 billion, with the United States, Belgium, and China as the primary markets. The Amazon region accounted for 40% of the total Brazilian exports of wood products, while the rest of Brazil accounted for 60% (of which Paraná represented 20%). Exports of plywood in 2003 totaled 1.3 million cu m (3.2 million cu ft), with 47% going to the European Union, 39% for the United States, 4% for the Dominican Republic, and 10% going to other markets.

Brazil's production of rubber in 2004 was 55,000 tons; the natural rubber industry, once a world leader, was dealt a strong blow by the development of cheaper synthetics. Forest products like rubber, Brazil nuts, cashews, waxes, and fibers now come from plantations and no longer from wild forest trees as in earlier days. Maté, derived from a species of South American holly, is steeped to make a popular form of tea. Production totaled 560,000 tons in 2004.

## 26 MINING

Brazil was Latin America's leading producer of iron ore, manganese, aluminum, cement, ferroalloys (ranking third in the world), tin (fourth in the world), gold (sixth in the world), and steel (eighth in the world), and produced 92.4% of the world's columbium, whose deposits contained 90% of the world's pyrochlore reserves. Brazil continued to be one of the world's largest gemstones producers and exporters, and the only source of imperial topaz and Paraiacuteba tourmaline. Iron ore was Brazil's second-leading export commodity in 2002, and production of cement, iron ore, tin, and steel were among its top eight industries. Brazil's 19,500 million tons of iron ore reserves ranked it sixth in the world, and recent discoveries of platinum indicated that Brazil could have

half the world's reserves. Brazil produced 72 mineral commodities—22 metal, 46 industrial, and 4 fuel—including large deposits of the metals alumina, bauxite, beryllium, chromium, columbium (niobium), copper, lead, nickel, silver, tantalum, thorium, titanium, zinc, and zirconium; of the industrial minerals anhydrite, asbestos, bentonite, diamond, dolomite, fluorite, fluorspar, graphite, gypsum, kaolin (4,000 million tons of reserves, 28.2% of world total), limestone, magnesite (630 million tons of resources with 180 million tons of magnesium content identified), marble, mica, phosphate rock, potash, potassium, prophyllite, quartz (crude, common, crystal, and powder, reserves of 53 million tons), marine salt, rock salt, and talc; and of the fuel mineral coal. In 2000, Brazil also produced sizable quantities of cobalt, tungsten, barite, basalt, calcite, hydraulic cement, diatomite, feldspar, gneiss, granite, kyanite, lime, lithium, nitrogen, mineral pigments, quartzite, industrial sand, calcareous shells, silica, slate, caustic soda, soda ash, sulfur (Frasch and pyrites), and vermiculite.

Brazil's economy was the world's eighth-largest and the largest in Latin America, making up one-third of the region's economy. However, GDP fell in 2003 by 0.2% versus growth of 1.5% in 2002. The mineral-based industries accounted for \$38 billion or 8.4% of Brazil's GDP in 2003. Mineral production, including gas and crude oil, came to nearly \$13 billion, or around 2.8% of GDP. In 2003, Brazil's workforce was almost 80 million, of this total, about 5% or 960,000 were employed by the minerals sector, not including nearly 650,000 active *garimpeiros* (independent miners).

Gross iron ore and concentrate output for 2003 was 234,478,000 tons. Eight firms accounted for 96% of iron ore production, with CVRD accounting for 48%. The second-largest producer, *Mineracões de Ilhéus Brasileiras Reunidas S/A (MBR)*, opened three new mines, *Capatildeo Xavier*, *Tamanduacutê*, and *Capatildeo do Mato*, in Minas Gerais, to increase capacity to 32 million tons per year by 2004 and to offset depletion at the *Aguas Claras* and *Matuca* mines.

In 2003, an estimated 2.5 million metric tons in gross weight of marketable manganese ore and concentrate were mined. Brazil's output of mined tin in 2003 was estimated at 12,000 metric tons.

Major deposits of high-quality bauxite have been discovered in the Amazon region. As a result, output has risen rapidly, from 6.5 million metric tons in 1987, to 13,147,900 metric tons in 2003.

Brazil in 2003 produced 41,300 metric tons of pyrochlore in concentrates, 24,875 tons of columbium in alloys, and 5,064 tons of columbium in oxides from two open pits—*Araxá* (Minas Gerais) and *Catalão* and *Ouro Preto* (Goiás). The two columbium producers, *Mineração Catalão de Goiás Ltda. (MCGL)* and *Companhia Brasileira de Metalurgia e Mineração (CBMM)*, had capacities of 65,000 tons per year pyrochlore and 1.9 million tons per year columbium ore. Tantalum production totaled 249 tons in 2003, and increased world demand was expected to maintain an upward trend.

Diamonds, along with other precious and semiprecious stones, were mined primarily in Minas Gerais, Goiás, and Bahia. Other gemstones, found throughout the country, were emerald, aquamarine, amethyst, citrine, chrysoberyl, opal, topaz, agate, tourmaline, ruby, and sapphire. In 2003, total estimated yield was 500,000 carats of gem-quality diamond (up from 100,000 in 1998) and an estimated 600,000 carats of industrial diamond. Fewer *garimpeiros* and increased environmental restrictions have caused a de-

cline in production. Despite government closure of high-content gem placers and high taxes on domestic sales of jewelry, Brazil had great potential, with its 600 million cu m of sedimentary rocks containing diamond grading between 0.01 and 0.1 carat per cu m (15 million carats), which represented 1.2% of the world's diamond reserve base. Belgium received 95% of the uncut stones.

Gold production was estimated at 39,400 kg in 2003, including 5,000 *garimpeiros*. Deposits found at *Serra Pelada* in 1980 raised gold production to 103,000 kg by 1989; production averaged 90,380 kg in 1987–91, and output in 1996 was 60,011. Higher production costs, depletion of shallower deposits, lower world prices, and much higher environmental standards caused the drop-offs. Gold output could increase significantly with the growth of copper production and increased interest by domestic and foreign investors in largely unexplored areas; more than 2000 gold occurrences were known, mostly Precambrian vein deposits and alluvial placers.

The discovery of gold in Minas Gerais (general mines) in 1693 made Brazil the world's leading gold producer; rapid exploitation under the Portuguese colonial system exhausted the mines in less than a century. The dissipation of the nation's gold wealth for the benefit of a foreign power, instilled in Brazilians a protective attitude toward mineral reserves, resulting in government control. The 1988 constitution forbade foreign majority participation in direct mining operations. Lack of capital has long restricted development by domestic firms, and Brazilian mining laws and adverse geographic conditions have discouraged foreign capital. The major portion of the mineral industry was partially or wholly owned by private Brazilian investors, Brazilian corporations, and/or foreign companies, the exceptions being the natural gas and petroleum industries. The structure of the industry continued to change to a privately owned/government-regulated regime. Two 1995 constitutional amendments opened the way for participation of the private sector (domestic and foreign), through privatization, joint ventures, and deregulated investment, in the sectors of coastal and river shipping, mining, natural gas, petroleum, telecommunications, and transportation. By the mid-1990s, investment was on the rise, as a result of aggressive economic policies, the diversity of mineral resources, and the constitutional reform that eliminated restrictions on foreign investment in mining. In 2000, the import tax for minerals was reduced, with varying rates, and the export tax would no longer apply to exported mineral products, nor would the tax on industrialized products apply to mining activities.

## 27 ENERGY AND POWER

In 2001 drought created an energy crisis in Brazil, which is strongly dependent on hydroelectric power and also the third-largest consumer of electricity in the Western Hemisphere. As of 2002 the country's per capita energy consumption was equal to that of all other South and Central American countries combined. From June 2001 through March 2002, power was rationed allowing the country to avoid rolling blackouts. Brazil is one of the world's leading producers of hydropower.

Total installed electrical capacity increased from 4.8 million kW in 1960 to 8.5 million kW in 1968 and to 73.4 million kW in 2001. In 2003, installed capacity stood at 82.5 GW. Production for 2000 was 339.5 billion kWh, of which hydropower contributed 89%.

By 2003, production increased to 359.2 billion kWh. Consumption of electricity in 2000 was 360.6 billion kWh, which increased to 371.4 billion kWh in 2003. Hydroelectric power accounted for 84% of the nation's electric power in 2003, at 302.9 billion kWh. Construction of the Itaipu Dam on the Paraná River took place between 1975 and 1982; this joint Brazilian-Paraguayan project, the world's largest hydroelectric plant, attained its full capacity of 12.6 million kW in 1986, at a cost of \$15 billion. About 70% of Brazil's population is served by Itaipu, which generates about 75 billion kWh per year. Each of Brazil's nine turbines (Paraguay controls the other nine) at Itaipu has a capacity of 700,000 kW, which can be transmitted up to 1,000 km (620 mi) away. Brazil regularly purchases a large portion of Paraguay's half of its Itaipu electricity production. Conventional thermal generation in 2003 accounted for only 7.4% of Brazil's total supply of electricity. Nuclear power is provided by two plants: Angra-1 (630 MW) and Angra-2 (1,350 MW). A decision to complete an unfinished third facility, Angra-3, was promised to have been made before the end of 2005. Angra-3, began operations in May 1985. It was followed by Angra-2, which took 23 years and \$10 billion to complete and became operational in 2000. As of 2002, it was estimated that five more years would be needed to finish Angra-3 and bring it online. Nuclear generation of electricity accounted for 13.840 billion kWh in 2002, or 4% of production for that year. Estimates of uranium reserves were put at 163,000 tons in 1991, the fifth-largest in the world.

Brazil's proven oil reserves, according to the Oil and Gas Journal, are estimated to total 10.6 billion barrels, as of 1 January 2005, making the country second only in South America to Venezuela in the size of its proven reserves. The government-owned *Petróleo Brasileiro* (Petrobrás), established in 1953, formerly had a monopoly over the exploration and development of petroleum reserves. The 1988 constitution guaranteed the maintenance of state monopolies in the petroleum and electricity sectors, despite rampant privatization. In 1995, however, Brazil's Congress and Senate approved a constitutional amendment ending the government's oil monopoly, and allowing foreign companies to drill, prospect, import, export, refine, and transport oil. The government was to maintain at least 50% of Petrobrás' voting shares, plus one. In August 2000 the government sold a 29% stake in the company but remained the majority shareholder. Brazil's government hopes to raise large amounts of money and attract foreign investment through the privatization of the oil sector, in order to pay off the national debt.

Foreign participation and investment had been forbidden by Brazilian law. However, in the mid-1970s, exploration was opened to foreign companies through risk contracts, and the petrochemicals industry was opened to foreign participation. The National Petroleum Agency (ANP), created in 1997, is charged with opening up the oil industry to both foreign and domestic private interests. By 2004, estimated production totaled 1.8 million barrels per day. However, at 2.2 million barrels per day, consumption still outstripped production, and oil imports were necessary, mostly from Argentina and Venezuela. As of 2002 Brazil had 13 crude oil refineries.

Estimated production of natural gas in 2003 production was reported at 310 billion cu ft. As of 1 January 2005, proven reserves of natural gas were estimated at 8.8 trillion cu ft. In 1975, the government initiated a program to develop alcohol from sugarcane as

an energy source. In the 1980s, 80% of the country's cars and light vehicles were powered by alcohol, although slumping oil prices and persistent financial problems within the alcohol industry prompted the government to freeze production at the 1985 level of 11.1 billion liters (2.9 billion gallons). By 1995, the production of gasoline-powered vehicles had shifted to 95% from the almost entirely alcohol-powered production of 1989. Alcohol still has an important function to maintain diverse sources of fuel for the transportation sector. Most transportation fuel sold in Brazil is a mixture of 22% ethanol and 78% gasoline. As of 1999, Brazil produced 200,000 barrels per day of ethanol.

The absence of good coking coal is a handicap to industrial plans, and Brazil must import coal for its steel industry. As of 2002 it was estimated that coal imports could double within the following ten years. Coal consumption in 2002 was estimated at 22.09 million tons.

## 28 INDUSTRY

Major industries include iron and steel production, automobile assembly, petroleum processing, chemicals production, and cement making; technologically based industries have been the most dynamic in recent years, but have not outpaced traditional industries. Peak industrial growth was achieved in 1973, when the manufacturing sector grew by 15.8%; growth rates averaging about 7% were posted during 1978–80, rising to 8.3% in 1985 and 11.3% in 1986. Growth slowed significantly during the 1990s. According to the Brazilian Statistical Institute (IBGE), manufacturing rose an annual average of only 0.7% between 1988 and 1998. Growth in 2002 was particularly pronounced in the construction industry, but by 2005 high interest rates had put a drag on construction. The industrial production rate was estimated at 6% in 2004.

In 1969, 3.7 million metric tons of crude steel were produced; by 1985, this had reached 20.5 million metric tons. In 2004, crude steel production amounted to 32.9 million metric tons, making Brazil the eighth-largest steel producer in the world, just ahead of India. Vast reserves of accessible, high-grade ore, plus rapidly expanding domestic and foreign demand for these products, favor continued expansion of the steel industry. By 2006, China had become a key market for Brazilian steel. The major negative factor is lack of domestic soft coal. *Companhia Vale do Rio Doce* (CVRD) is the world's largest producer of iron ore and pellets and the largest Brazilian mining company, responsible for more than 30% of the iron ore transoceanic market share of Brazil. It is the country's largest investor, responsible for 14% of all Brazilian trade.

Motor vehicle production, Brazil's industrial backbone, experienced a drop of nearly 27% from 1998 to 1999 because of the country's financial difficulties. Production of automobiles went from about 2 million units in 1997, down to 1.6 million units in 1998. In 2001, Brazil produced 1.8 million automobiles, an increase of 7% over 2000. In 2000, the country produced more than 70,000 heavy trucks, an increase of 27% over 1999. In 2005, approximately 2.3 million vehicles were produced in Brazil. Thirty percent of all automobiles produced in Brazil are exported to Mexico. The automobile industry is expanding rapidly with major sources of foreign investment and the construction of new manufacturing plants.

Brazil mines and refines petroleum products. Because of increased domestic refining capacity during the 1970s, imports of

petroleum products were less needed, and by 1979, Brazil was a net exporter of petroleum derivatives. Brazil's petrochemical industry emphasizes the production of synthetic rubber. There are also over 500 pharmaceutical laboratories and plants in Brazil, the majority in São Paulo. Over 80% of the industry is foreign-owned. Increased construction demands boosted Brazil's cement production during the 1980s and 1990s. Brazil's electrical equipment industry manufactures computers, television sets, transistor radios, refrigerators, air conditioners, and many other appliances. Brazil has the largest textile industry in South America in terms of installed capacity and output, with nearly half of the spindles and looms in operation on the continent. The manufacture of footwear is an important industry. The Brazilian pulp and paper sector is also large, consisting of more than 220 companies, which together employ approximately 80,000 people in industrial operations, as well as another 57,000 in forestry work and operations. The pulp and paper sector is almost fully privately-owned. The government allowed foreign investment in vital industries since 1995, and supports the sale of any residual parastatal enterprises.

## 29 SCIENCE AND TECHNOLOGY

The National Council of Scientific and Technological Development, created in 1951 and headquartered in Brasília, formulates and coordinates Brazil's scientific and technological policies. The Brazilian Academy of Sciences was founded in 1916 and is headquartered in Rio de Janeiro. In 1996, there were 25 specialized learned societies and 52 research institutes covering virtually every area of scientific and technological endeavor. Among the most important scientific institutions are the Oswaldo Cruz Foundation for biological research in Rio de Janeiro and the Butantan Institute in São Paulo, which produces serums for the bites of venomous snakes, a field in which Brazil leads the world. Government expenditures on research and development (R&D) in 2000 amounted to \$13.078 billion or 1% of GDP. In that same year, Brazil had 352 researchers and 339 technicians actively engaged in R&D per million people. Government spending in 2002 accounted for 60.2% of R&D expenditures, while business accounted for 38.2% and higher education 1.6%. Brazilian high technology exports in 2002 totaled \$6.007 billion, or 19% of the country's manufactured exports.

Brazil entered the space age in 1973, with the launching of the SONDA II rocket as part of a program to determine electron density in the low ionosphere, a question of practical importance for aircraft navigation. Under the government's Amazon development program, Humboldt City, a scientific and technological center, has been established in Mato Grosso. Atomic research is conducted at the Energetics and Nuclear Research Institute of São Paulo; other research reactors are located at Belo Horizonte and Rio de Janeiro. The Nuclear Energy Center for Agriculture was established in 1966. A total of us\$550 million was allocated to the nuclear energy program under the 1975–79 development plan, but the program languished in the 1980s.

In 1996, Brazil had approximately 100 universities and colleges offering courses in basic and applied science. In 1987–97, science and engineering students accounted for 27% of college and university enrollments.

## 30 DOMESTIC TRADE

Rio de Janeiro and São Paulo are the principal distribution centers; the largest numbers of importers, sales agents, and distributors are located in these cities, having branch offices in other areas. Other major commercial centers are Recife and Porto Alegre, in the northeast and the south; Belém, which serves as a distribution center for the whole Amazon River Valley; and Salvador, which is the main distribution center for Bahia and the neighboring states.

The Brazilian commercial code permits the exercise of trade by all persons who make trade their habitual occupation and register with the appropriate government body. Goods are sold in department stores, in specialty shops, by street vendors, and in supermarkets in the larger cities, but most commercial establishments have fewer than six employees. There are a number of consumer cooperatives that are generally sponsored by ministries, trade unions, and social security institutes. Producer cooperatives are found mostly in agriculture and fishing. The franchising sector by 2006 was booming: franchising accounts for about 25% of the retail revenues. There are some 800 franchise chains and 56,000 franchise units in Brazil, which generate more than 350,000 jobs. Credit is extended to higher-income customers on open accounts and to lower-income groups on installment payment plans. Since 1994, the government has enacted constitutional reforms to remove obstacles for privatization and foreign investment.

Business hours are from 8 or 8:30 AM to 5 or 6 PM, Monday through Friday, with a two-hour lunch period from 12 to 2 PM. Banks transact business from 10 AM to 4:30 PM, Monday through Friday. Shopping hours are from 9 AM to 7 PM, Monday through Friday, and from 9 AM to 1 PM on Saturdays. Stores are usually closed on Sundays. Department stores are open from 10 AM to 10 PM, Monday through Saturday. In many smaller cities and towns, stores are closed for over an hour at lunchtime.

Since 1947, the advertising sector (in all the various media) has increased its expenditures many times over. Most advertising agencies maintain headquarters in São Paulo; some major agencies have branch offices in other large cities. Advertisements are presented on television and on all radio stations, with the exception of the special broadcasting system of the Ministry of Education. Newspapers, magazines, periodicals, motion pictures, billboards, posters, and electric signs are used for advertising. Mobile advertising units equipped with loudspeaker systems are common in the larger cities.

## 31 FOREIGN TRADE

Brazil's long-favorable foreign-trade balance deteriorated substantially between 1958 and 1974 as a result of industrial expansion, which necessitated increased imports of industrial capital goods and petroleum. During 1975/76 and again from 1978 to 1982, the foreign-trade balance was in deficit. Beginning in 1983, Brazil recorded trade surpluses: \$5.1 billion in 1983, \$11.8 billion in 1984, and \$11.3 billion in 1985. This achievement was the result of policies that restricted imports and offered substantial incentives to exporters.

Between 1963 and 1981, exports expanded at an average annual rate of 17%, but they grew by only 9.1% between 1982 and 1985. Coffee has long been Brazil's dominant export, but the propor-

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

tion of its export earnings declined from 41.3% in 1968 to 3.2% in 2000. As a result of an ambitious energy development program, Brazil's reliance on imported oil dropped from 70% of its needs in 1980 to 45% in 1985.

The notable accomplishment of former President Fernando Collor de Mello to open the Brazilian market remains the cornerstone of Brazil's economic and trade policies. However, after almost 30 years of import substitution, which initially brought high growth and short-term industrialization in the 1960s–1970s, this policy was finally recognized in the late 1980s as the principal culprit of Brazil's economic woes, particularly high inflation and industrial decline.

By the early 2000s, most of Brazil's nontariff barriers to trade, which for many years were the hallmark of Brazil's restrictive trade regime, were eliminated or drastically reduced. Import duties were reduced from an average of about 50% in the late 1980s to 14.2% and a maximum of 35%. While the overall level and pervasiveness of nontariff barriers have been drastically reduced, some import duties remain high in comparison with other countries. While the depression/inflation problems of the late 1990s reduced purchasing power by about 50% among the working and lower middle classes and further skewed the already highly uneven distribution of income, the Brazilian market remains enormously attractive to US businesses.

Although trade barriers continued to recede with the government of former President Itamar Franco who assumed office in 1992, trade liberalization lost some of its momentum, and there were serious concerns regarding automobile, telecommunications, and information technology sectors. The reforms gained new momentum under the administration of the next president, Cardoso.

In 1995, Brazil joined with Argentina, Paraguay, and Uruguay to form the Mercosur common market, made up of 200 million people worth over \$1 trillion. The agreement covered tariffs for over 85% of some 9,000 items with the remaining 15% to be covered by 2003 and complete coverage to be achieved by 2006. Brazil has an almost symbiotic relationship with Argentina, in which the latter supplies natural gas, automobiles, and other products; while the former exports steel, shoes, and paper products.

In 1999, Argentina implemented trade restrictions on certain Brazilian products because prices were ridiculously low from the currency devaluation. Brazil replied by putting its own trade barriers in place. Such measures did not bode well for the Mercosur community. Argentina had been in recession for several years, and the global economic slowdown, which began in 2001 further, worsened Mercosur's situation. In addition, Brazil has had considerable problems with its electrical distribution system, forcing the rationing of electricity and complicating production.

By 2006, Brazil and other members of the G-20 group of developing nations had called the most recent trade concessions from the United States and the European Union insufficient. The group was pressing for deeper cuts in farm subsidies. At the same time, Brazil found itself in a separate trade dispute with the United States, after accusing it of failing to obey a WTO ruling outlawing some of its cotton policies. The United States threatened to remove trade preferences worth more than \$2 billion if Brazil insisted on asking the WTO for the right to impose \$1 billion in sanctions on American goods.

The most popular export commodities from Brazil are road vehicles, iron, and steel. Brazil also exports footwear and textiles. The country exports a substantial amount of iron ore, soybeans, meat, and coffee. Productivity gains, especially in agriculture, have contributed to a surge in exports. Brazil imports machinery, electrical and transportation equipment, chemical products, and oil.

Brazil's leading markets in 2004 were the United States (21.1% of all exports), Argentina (7.6%), the Netherlands (6.1%), and China (5.6%). Leading suppliers included the United States (18.3% of all imports), Argentina (8.9%), Germany (8.1%), and China (5.9%).

**32 BALANCE OF PAYMENTS**

After a decline in the mid-1960s, Brazil's reserve holdings grew spectacularly, reaching \$6.5 billion by 1974. The prime reason was a steadily rising inflow of long-term capital investment, coupled

with trade balances that were favorable or only minimally unfavorable. In 1974, however, a decline in the value of coffee exports and a doubling of import costs (partly attributable to increased oil prices) more than offset a further rise in capital investment, resulting in Brazil's first payments deficit in nearly a decade. Between 1976 and 1978, Brazil had a positive balance of payments, but large deficits were registered in 1979 and 1980. A surplus was achieved in 1981, in part because of Brazil's excellent trade showing. The surpluses in 1984 and 1985 were sufficient to pay all interest on the foreign debt.

During the 1970s and early 1980s, Brazil increasingly came to rely on international borrowing to meet its financing needs. The foreign debt grew rapidly after 1974 as the government pressed for continued economic growth without regard for balance of payments pressures generated by the oil shocks of the later 1970s and without increasing domestic savings or improving the tax base. The huge trade surpluses of 1984 and 1985 halted the upward trend. However, the 1986 surge in consumer spending drained reserves to such an extent that by early 1987, the government was forced to suspend payments on \$68 billion of the estimated \$108 billion debt, the highest of any developing nation. An agreement was reached in April 1991 on 1989–90 arrears. In 1992, Brazil and the advisory committee representing foreign commercial banks agreed to a debt and debt service reduction for \$44 billion. Under the Real Plan, the balance of payments dropped from a surplus of \$10.5 billion in 1994 to a deficit of \$3.1 billion in 1995, -\$5.5 billion in 1996, and -\$8.4 billion in 1997. This transformation in Brazil's trade position was due to an overvalued exchange rate, market opening, and suppressed demand for capital and consumer goods. A devaluation of the currency in 1999 led to a reduction of the trade deficit in 1999 and in 2000.

The period of high net capital inflows and currency strength came to an end in 2001. Import compression in 2002–03, and an increase in export earnings after 2003, brought about a large adjustment on the current accounts: the trade surplus ballooned from \$2.7 billion in 2001 to \$33.7 billion in 2004, which transformed the current account from a deficit of 4.6% of GDP in 2001 to a surplus of 1.9% of GDP in 2004. In the first half of 2005, the trade surplus continued to grow.

### 33 BANKING AND SECURITIES

A banking reform enacted in December 1964 provided for the establishment of the Central Bank of the Republic of Brazil (changed in 1967 to the Central Bank of Brazil), with powers to regulate the banking system and the stock market. The Central Bank serves as the financial agent of the federal government and functions as a depository for the reserves of private banks. The reform also created the National Monetary Council, which formulates monetary policies for the Central Bank.

The Bank of Brazil primarily finances projects in the agricultural sector. The National Economic and Bank (BNDES) provides long-term financing and administers the privatization program.

There once were about 340 commercial banks in Brazil, with hundreds of branch offices. However, banking reforms reduced that number to 233 in 1998. The largest banks are the federal banks Bank of Brazil, the Federal Savings Bank, and BNDS; private banks Bradesco, Itau, Unibanco, Safra, and Banespa; the Real Bank, and the state bank of Rio Grande do Sul, Banrisul. Since

January 1994, banks and other financial institutions must publish constant-currency financial statements. The major banks are considered to be sophisticated and competitive, many operating online, and offer a broad range of financial services.

The 1996 rise in international reserves and the fall of the dollar against the real falsely portrayed an improvement in the financial market. In an attempt to calm the financial markets' worries about exchange rate risk, the government began issuing bonds indexed to the exchange rate. The bonds were supposed to be a guarantee that exchange rate policy was not going to change. The Central Bank curbed the expansion of the monetary base, thus controlling inflation, while the volume of money controlled by banks increased with the initial relaxation of credit. This enlarged monetary base, which included the stock of federal bonds and deposits at the Central Bank, rose at a faster rate than nominal GDP. At the end of 1996, the enlarged monetary base was equivalent to 23% of GDP compared with 18% of GDP at the end of 1995. The expansion of monetary aggregates resulted from the rise in public debt through bond financing of the fiscal deficit. The relaxation of credit policy after the end of 1995 caused borrowers to overdraw, resulting in liquidity problems during 1996 and 1997. This presented a precarious situation for the Brazilian economy, especially when the 1998 financial crisis occurred. The Central Bank decided to let the real float in relation to the US dollar, severely depreciating the value of the real by about 45%; and the bonds that were supposed to have guaranteed a fixed exchange rate were also devalued. These issues led to a number of bank mergers and closures in 1999 and 2000. The 2001 collapse of the Argentine economy forced down the value of Brazil's currency, although it has since recovered somewhat. An energy crisis has also caused some trouble in the Brazilian economy, leading to and overall downturn in 2002. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$35.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$149.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 17.47%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 21.43%.

Brazil opened its market to foreign portfolio investment in 1991. Brazilian tax laws provide incentives for investment in stocks and bonds. Profit and dividend remittances are subject to a 15% income withholding tax. Up to 24% of individual tax liability may be invested annually in share certificates from authorized financial institutions. Furthermore, individuals may deduct from gross income up to 42% of capital subscription in companies or agencies involved in developing the northeastern or Amazon regions, up to 25% of amounts invested in open capital companies, up to 20% of investments in approved forestation or reforestation projects, up to 13.5% of investments in mutual funds, and up to 4% of savings under the National Housing System. Earnings from all the above investments are also excluded from gross income, up to certain limits. The stock market is a source of financing for all listed companies in Brazil, regardless of ownership. All public issues require the approval of the Securities Commission (CVM). There are nine regional stock exchanges, although over 90% of transactions are carried out in São Paulo and Rio de Janeiro. In 2004, there were

357 companies listed on the São Paulo exchange. As of December 2004, the total market capitalization of the São Paulo Stock Exchange was \$330.347 billion, up from \$234.560 billion in 2003. In 2004 the IBOVESPA Index rose 17.8% from the previous year, ending at 26,196.3.

### 3<sup>4</sup> INSURANCE

Brazil has a low rate of insurance compared to developed countries. 2.3% of its GDP in 2001 was insurance compared to an average of 7% in most developed countries. The operations of insurance companies in Brazil are supervised by the Superintendency of Private Insurance (SUSEPO), the National Private Insurance Council (CNSP), and the Institute of Reinsurance of Brazil (IRB), a company which is 50% owned by the government and 50% by the insurance companies operating in Brazil. The IRB was privatized in the second half of 2000. Motor-vehicle third-party liability, workers' compensation, fire, cargo/truck, and inland marine insurance are compulsory.

With the lifting of restrictions on foreign insurance companies operating in Brazil, several companies made major investments in the market during 1997 and 1998. The United States is the top investor, with 40% of the market. Nearly half of the insurance policies are sold in the city of São Paulo.

The Brazilian insurance market is characterized by two large groups of insurance companies. The top five groups occupied approximately 50% of the insurance market, including Sul America, Bradesco, Itau Porto Seguro, and American International Group (AIG-Unibanco). The balance of the market is shared among approximately 80 additional groups. As of 2003, direct premiums written totaled \$14.565 billion, with nonlife premiums accounting for the largest portion at \$8.259 billion. Bradesco and Bradesco Vida were Brazil's top nonlife and life insurers with gross nonlife (including healthcare) and gross life premiums written in 2003 of \$663.2 million and 1,953.6 million, respectively.

### 3<sup>5</sup> PUBLIC FINANCE

The Brazilian fiscal year coincides with the calendar year. The budget, prepared under the supervision of the Ministry of Planning and Economic Coordination, represents the government's plans for financing administrative operations and capital expenditures. Budgetary deficits increased considerably in the 1960s. The government's objective—to hold total expenditures fairly constant while raising the share of capital outlays—was achieved by an austerity policy. Although the federal budget deficit was reduced in real terms during the late 1960s, fiscal problems continued to be a major source of inflationary pressure, with revenues hovering between 14.5% and 16.5% of GNP and total government expenditures in the range of 17.5–19%. Government revenue increased considerably, and each year the real deficit was reduced below the previous year's level both absolutely and relatively. Public spending was stepped up, particularly transfer payments; transfers of capital to decentralized agencies increased, although direct investment by the central government fell off. Thus, more capital was invested in basic infrastructural projects. Increases in both revenues and expenditures were rapid during the 1970s, but the pattern of decreasing deficits continued. The budgets for 1973 and 1974 actually showed a surplus, although the realized surplus in 1974 fell far short of the budgeted surplus. There was a budget deficit

#### Public Finance – Brazil (1998)

(In millions of reals, central government figures)

<b>Revenue and Grants</b>	<b>221,604</b>	<b>100.0%</b>
Tax revenue	111,086	50.1%
Social contributions	77,492	35.0%

in 1975, but surpluses were recorded annually during 1976–80. One of the principal causes of Brazil's financial instability in the 1980s was the rate at which public spending exceeded revenues. Following another stabilization program in 1990, a budget surplus of 1.4% of GDP was recorded, but deteriorated to a deficit of 1.7% of GDP by 1992. During the 1990s, the budget remained in deficit by about 4.0% of GDP, but in 1999, the budget recorded a deficit equal to 9.5% of GDP due to the devaluation of the real. This figure had declined to about 4.2% by 2002. Public spending accounts for about one-third of GDP in Brazil.

The US Central Intelligence Agency (CIA) estimated that in 2004 Brazil's central government took in revenues of approximately \$140.6 billion and had expenditures of \$172.4 billion. Revenues minus expenditures totaled approximately -\$31.8 billion. Public debt in 2005 amounted to 50.2% of GDP. Total external debt was \$211.4 billion.

The International Monetary Fund (IMF) reported that in 1998, the most recent year for which it had data, central government revenues in millions of reals were 221,604 and expenditures were 245,032. The value of revenues in millions of US dollars was \$190,873 and expenditures \$211,619, based on a principal exchange rate for 1998 of 1.161 as reported by the IMF. Government outlays by function were as follows: general public services, 28.4%; defense, 3.5%; public order and safety, 3.2%; economic affairs, 4.8%; housing and community amenities, 0.6%; health, 6.2%; recreation, culture, and religion, 0.1%; education, 6.1%; and social protection, 47.3%.

### 3<sup>6</sup> TAXATION

Brazil's tax structure has been modified repeatedly in recent years, and traditional tax evasion has come under strong attack. A series of income tax reforms, during the 1960s and 1970s closed many loopholes and expanded the roster of taxpayers, mainly through wider use of withholding taxes.

The basic income tax rate on corporations and other legal entities in 2005 was 15%, with an added 10% surtax if profits exceed a certain limit. In addition, there is a 9% social contribution tax. Firms may effectively reduce income tax liability by investing part of the tax due in government-approved incentive projects or by purchasing quotas in funds that invest in such projects. Resident companies are taxed on their worldwide income.

Brazil has a progressive personal income tax that rises to 27.5%. Numerous exclusions from ordinary taxable income include profits on sales of shares, profits from certain real estate sales, and interest on stocks and bonds up to certain limits.

A value-added tax is payable on sales and transfers of goods at varying rates in accordance with the nature of the production (generally 10–15%). All corporations are subject to a social contribution tax at rates ranging from 8% for corporations to 18% for financial institutions. Other taxes include a financial operations levy; taxes on the production and distribution of minerals, fuels, and electric power; a real estate transfer tax; and municipal service and urban real estate taxes. There is a social security tax of 2%, and from 10–20% of employee payroll.

### 37 CUSTOMS AND DUTIES

Since the late 1980s, the government has reduced import duties incrementally to encourage trade. Tariffs are based on the MERCOSUR common external tariff, known in Brazil as the TEC. The average applied tariff rate was 13.7% in 2000, down from 32% in 1990. There is an industrial products tax (IPI) that usually ranges from 0–15%, but goes up to 365% on cigarettes and alcoholic beverages. There is also an ICMS (merchandise and service circulation) tax on goods moved through Brazil, at 18% in São Paulo, and 12% in other Brazilian states. There is also a Social Security product tax that varies by product but is generally around 10%. All imports and exports are controlled by SECEX, the Foreign Trade Secretariat, with the help of the SISCOMEX computer system.

Certain sectors, including petroleum products and weapons, require departmental or ministerial approval for imports. Importers must pay state and federal value-added taxes at ports, but these may be recovered for goods to be manufactured or sold in Brazil. There are eight free trade zones, including the oldest one in Manaus, and others in Macapa/Santana, Tabatinga, Guajaramirim, Bonfim, Paracaima, Brasileia, and Ebitaciolandia. These zones and some energy development projects are exempted from import duties, as long as they export at least 90% of production.

Brazil and its MERCOSUR partners implemented a common external tariff in 1995, which increased by 3% in 1997 to 23%, to cover all tariff items by 2006. However, the 3% increase is being phased out.

### 38 FOREIGN INVESTMENT

Brazilian law gives the same protection and guarantees to foreign capital investments that it gives to investments made by Brazilian nationals. Special incentives are offered for investments in mining, fishing, tourism, shipbuilding, and reforestation and for projects undertaken in the northeast and Amazon regions. Brazil's Foreign Capital and Profit Remittance Law of 1962, as amended, regulates the registration of foreign capital and of reinvestment, profit remittance, interest, royalties, and payments for technical assistance, as well as repatriation of foreign capital. There is no limita-

tion on the repatriation of capital; reinvestment of profits is considered an increase of the original capital for the purposes of the law. Prohibitions on remittances for royalty and technical service payments between related parties were removed under the 1992 tax code. The base tax rate on profits and royalty remittances was reduced from 25% to 15%.

In 1995, Brazil amended its constitution to eliminate the distinction between foreign and national capital. Foreign investors have been allowed to trade on the Brazilian stock market since 1991. The petroleum, telecommunications, mining, power generation, and internal transportation sectors were opened up to foreign investment in 1995.

The growth in the attractiveness of Brazil as a recipient of foreign investment is directly attributed to the economic liberalization implemented under finance minister, and later president, Fernando Enrique Cardoso in 1994. He instituted a new currency, reined in the hyperinflation that had plagued the country for decades, and opened up previously closed industries to private ownership. However, although Brazil embarked on the world's largest privatization drive in 1991, by 2002 privatization had virtually stopped. With the exception of the power-generation sector, most of the largest state enterprises have been sold, and thus privatization has died down.

The Cardoso Administration's liberalization provisions saw foreign portfolio investment go from \$760 million the year it was enacted to \$30 billion in 1997. Foreign direct investment rose from \$19 billion in 1997 to \$28.9 billion in 1998 and \$28.5 billion in 1999, and then to a record \$32.8 billion in 2000. Brazil's surplus on its capital account was over \$19 billion in 2000, but not quite enough to prevent a balance of payments deficit of \$2.3 billion because of a \$10.4 billion debt servicing payment on official development assistance (ODA). A plunge in FDI to \$22.5 billion in 2001, in the context of the global economic slowdown and worldwide decline in foreign investment after the 11 September 2001 terrorist attacks on the United States, presented the Brazilian government with serious difficulties in making its debt servicing obligations. The gap would have to be filled through a combination of IMF loans, foreign borrowing, and sales in shares of state-owned enterprises (SOEs).

Investment comes mainly from the United States and EU countries. Investment from the Cayman Islands is thought to represent mainly repatriation of Brazilian capital through FDI, but it is also increasingly a conduit for US-based companies. Investment from Spain and Portugal increased in 1998 due to investment in the telecommunications and banking sectors. The stock of FDI in Brazil was \$130.7 billion as of December 1998, of which the US share was 30% (\$39 billion); Spain, 8.4% (\$10.9 billion); and Germany, 8.1% (\$10.5 billion). Four US companies—GM, Ford, Texaco, and Exxon—were among Brazil's top ten domestic enterprises. Four of its top ten exporting firms were foreign, all car manufacturers—Fiat, Ford, GM, and Volkswagen—while five of its top ten importers were foreign companies—Fiat, GM, Mercedes-Benz, Ford, and Ericsson Telecommunications.

Since 2001, the trade balance has improved significantly, helping to produce current-account surpluses in 2003 and 2004. This trend enabled Brazil to weather a steep continuing decline in FDI inflows from \$22.5 billion in 2001 to \$16.6 billion in 2002 and just \$10.1 billion in 2003. FDI inflows in 2004 increased to approxi-

mately \$17 billion. Brazil had undertaken a significant reduction in trade barriers in the early 2000s. In 2004, Brazil's average Normal Trade Relations (NTR) tariff was 10.8%, down from 32% in 1990. However, Brazil has a poorly-structured revenue system marked by heavy tax burdens. The corporate and indirect taxation systems are particularly complex, porous, and unwieldy, but they do not discriminate between foreign and domestic firms.

### **39 ECONOMIC DEVELOPMENT**

Economic policy since the late 1960s has had three prime objectives: control of inflation, gradual improvement of the welfare of the poorest sector, and a high economic growth rate. Generally, under the stewardship of finance ministers Roberto de Oliveira Campos and, later, Antonio Delfim Netto (who became minister of planning in 1979), Brazilian policy sought to prevent inflation from eroding economic growth by a process of monetary correction—that is, by the legal revaluation of fixed assets, such as real estate, debits in arrears, and the face value of bonds, to reflect inflation. This technique, which requires extensive government control over the economy, was intended to prevent inflation from distorting the relative values of various types of holdings. It was also disastrously inflationary.

The central stress of the 1975–79 development plan was on economic growth. Economic infrastructure (energy, transportation, and communications) received top priority, with a 25% share of the total investment. A special development plan, known as *Palomazonia* (the Program for Agriculture, Cattle Raising, and Agrominerals for the Amazon), concentrated on expansion of agriculture, forestry, mineral exploitation, and hydroelectric power in the region. The third national plan (1980–85) placed the greatest emphasis on agricultural development, energy, and social policies. Its main aim was improvement of the public welfare through continued economic growth and more equitable income distribution.

The First National Plan of the New Republic (1986–89), sought to maintain high levels of economic growth, introduce a wide range of basic institutional and fiscal reform in the public sector, and reduce poverty significantly. When inflation continued to mount, however, the Cruzado Plan was introduced; it froze wages and prices for a year, and introduced a new unit of currency, the cruzado. While inflation did drop dramatically, the ensuing consumer spending boom, caused by the desire to take advantage of the price freeze, rekindled inflation. By 1987, Brazil had reverted to orthodox austerity and monetary correction in an attempt to bring the economy under control.

In 1994, finance minister (and later president) Fernando Henrique Cardoso implemented the Real Plan, an economic liberalization named for the newly launched currency, the real. The plan called for the abolition of state control of wages and all indexing to inflation, lowering of tariffs and barriers to international investment, and a massive selloff of state-owned enterprises in nearly every sector. The plan was almost immediately successful, and attracted huge amounts of international investment while raising the living standards of million of Brazilians. Unfortunately, the 1997–1998 international financial crisis caused the Central Bank to let the real float, devaluing the currency by 45%. Instead of immediately falling into a recession, the economy reported modest gains in 1999 and 2000. In 2001, however, economic growth slowed, in part due to the raising of interest rates by the Central

Bank to counteract inflationary pressures (Brazil's real interest rates remain among the highest in the world). Brazil was also adversely affected by a domestic energy crisis and the 2001 economic crisis in Argentina, and the real depreciated almost 20% that year. Brazil has been the recipient of successive Stand-By Arrangements with the International Monetary Fund (IMF). The controversial election of the left-wing Workers' Party candidate Luiz Inácio Lula da Silva as president in October 2002 brought jitters to international financial markets, but as of 2006, investors had been impressed with the president's tight fiscal and monetary policies.

Brazil is on the path toward a new development strategy, that of export substitution, which, it is hoped, will allow local government to address Brazil's severe problem of unequal income distribution. As of 2006, the government was committed to structural reforms and tight fiscal management to increase economic efficiency and reduce the fiscal debt. It was running a primary fiscal surplus (excluding interest payments) of more than 4% of GDP in 2005; however, government debt remains high, at 51% of GDP in 2004. Brazil uses inflation-targeting as a framework for monetary policy in the context of a floating exchange rate. Progress on reforms in 2006 was slowed by the government's need to negotiate support in a fragmented Congress.

Since the early 1960s, the government has offered special incentives to agricultural and industrial enterprises that further the development of the northeastern and northern regions of the country. The development of these areas is under the supervision of the Development Superintendency of the Northeast, whose activities cover the states of Maranhão, Piauí, Ceará, Rio Grande do Norte, Paraíba, Pernambuco, Alagoas, Sergipe, Bahia, the zone of Minas Gerais located within the Drought Polygon, and the territory of Fernando de Noronha. The Superintendency for the Development of Amazonia, the Superintendency for the Development of the West-Central Region, and the Superintendency for the Development of the Southern Region are the other regional development agencies.

### **40 SOCIAL DEVELOPMENT**

The Organic Social Security Law of Brazil, passed during the Vargas reform years of the 1930s, covered only some four million urban workers by the 1960s, including metallurgical, textile, and other industrial workers and commercial, bank, and store clerks. In 1976, social security laws were consolidated, and in the following year, the National System of Social Security and Welfare was established. Benefits include modest insurance against accidents; old age, invalids', and survivors' pensions; funeral insurance; and medical, dental, and hospital coverage. The system is financed by contributions from the employer, the worker, and the government. In urban areas the retirement age is 65 for men and 60 for women. Assistance programs and unemployment insurance are funded solely by the government. Sickness and maternity benefits are available to almost all workers. A family allowance is provided for low-income workers with one or more children.

Perhaps the most significant social challenge facing Brazil is caring for the millions of children who lack sufficient education, housing, health care, and nutrition. It has been estimated that over one-third of all children live in poverty. Thousands of children live and work on the streets in deplorable conditions; some

are homeless, but a greater number have homes they return to at night. Many street children abuse drugs and they are often forced to resort to crime and prostitution to make a living. As a result, many shopkeepers have taken action against street children, and there is a widespread tendency to regard the problem as a security concern rather than a human rights issue.

Sexual and domestic violence is common and often goes unreported. According to a 2004 survey, 23% of women were subjected to domestic violence. The government has implemented women's stations to address crimes against women, with counseling, shelter, hospital treatment, and information on criminal redress. Although a criminal offense, sexual harassment in the workplace remains a problem.

Racial discrimination is pervasive in Brazil. Most Afro-Brazilians work in low paid jobs and live in poor housing. They have fewer opportunities for higher education and professional employment. Indigenous tribes of the Amazon are increasingly being threatened by mining, logging, and ranching, which encroach on their lands.

Serious human rights abuses by the police have been reported, including the beating, torture, and killing of detainees.

#### 41 HEALTH

A health and welfare program, *Prevsau*, introduced by the government in 1981, was intended to double health services by 1987. In 1993, however, Brazil's national health care system came to an end, chiefly due to extensive fraudulent activity by hospitals, physicians, and state and municipal health secretariats. The new Brazilian Minister of Health planned to implement a new system and supported legislation to increase funds for the public health sector. As of 1998, public health services, complemented by private services, covered 75% of the population. The Ministry of Health has made efforts to encourage the federal district and 26 states to participate in some quality of care projects. Initiatives include certification by the International Standards organizations, consulting services, total quality management, patient satisfaction, and development of new technologies to increase efficiency. Total health care expenditure was estimated at 6.5% of GDP.

Health and sanitary conditions vary widely from region to region. The large cities have competent physicians, generally with advanced training abroad, but there is a dearth of doctors, hospitals, and nurses in most towns in the interior. In 2004, there were approximately 237,000 physicians, 145,000 dentists, and 77,000 nurses in Brazil. As of that year, there were an estimated 1.3 physicians and 3.1 hospital beds per 1,000 people.

In 2000, 87% of the population had access to safe drinking water and 77% had adequate sanitation. As part of a pilot program, Brazil is fortifying sugar with vitamin A and is currently investigating the feasibility of fortifying foods with vitamin A or iron. As of 1999, children one year old and under were immunized as follows: diphtheria, pertussis, and tetanus, 90%; and measles, 99%. Cholera affected many Brazilians. The HIV/AIDS prevalence was 0.70 per 100 adults in 2003. As of 2004, there were approximately 660,000 people living with HIV/AIDS in the country. There were an estimated 15,000 deaths from AIDS in 2003.

The infant mortality rate is high, but it has declined over the last 20 years. In 2005, the infant mortality was 29.61 per 1,000

live births. Many Brazilian women die during childbirth. In 1998, 160 maternal deaths occurred for every 100,000 live births. An estimated 77% of married women between the ages of 15 and 49 years used contraception. The average life expectancy in 2005 was 72 years.

#### 42 HOUSING

Despite major urban developments, both the housing supply and living conditions in Brazil remain inadequate. Large, sprawling slums are endemic in the large cities, while most rural dwellers live without amenities such as piped water and electricity. In 2000, there were 44,776,740 residences. Roughly 75% of all dwellings were owner occupied. Roughly half of the housing stock was considered to be in semi-adequate condition. Only about 44% of all housing was considered to be adequate. At last estimate, more than 80% of all housing units were detached houses of brick, stone, wood or concrete; less than 10% were apartments; less than 10% were rural dwellings of wood or clay; and less than 5% were semiprivate units called *quartes*. In 2000, the housing deficit was estimated at 6.6 million houses.

In 1964, the federal government enacted the National Housing Act and suspended rent controls, with the stipulation that rents could be brought in line with private market levels. The law provided for the establishment of the National Housing Bank (*Banco Nacional de Habitação*, or BNH), whose main purposes are to stimulate savings to finance home construction through lending institutions, to coordinate the activities of both the public and private sectors, and to introduce financial incentives. The BNH can raise funds through bond issues and may also receive deposits from governmental agencies, public cooperatives, and mixed companies.

#### 43 EDUCATION

Education in colonial times was carried on first by the Jesuits and then by a few royal schools. Brazil's public school system, always weak, was under the Ministry of Justice and Interior until 1930, when the Ministry of Education and Health was created by Vargas. Responsibility for public education, as defined by the 1946 constitution and the 1961 directives and standards for national education, is divided between the federal, state, and municipal governments. Public elementary and secondary instruction is almost exclusively a function of the municipalities and states, while higher education is the responsibility of the federal Ministry of Education. Public education is free at all levels and nonprofit private schools also receive public funding. The federal government has been active, however, on all three levels through the Federal Council of Education, established in 1961 to coordinate the implementation of the 1961 directives and to advise the Ministry of Education.

The 1961 directives required the federal government to contribute at least 12% of its tax revenues to education, and state and municipal governments were required to contribute a minimum of 20% of their tax revenues for this purpose. The first National Plan of Education, formulated in 1962, called for the extension of compulsory elementary education to five and, eventually, six years, and by 1980 eight years of schooling was required. The 1988 Brazilian constitution allocates 25% of state and local tax revenues to educa-

tion. As of 2003, public expenditure on education was estimated at 4.2% of GDP, or 12% of total government expenditures.

Primary courses last for eight years. The general secondary lasts for three years; however, students may choose to participate in technical or vocational programs at the secondary level, with programs lasting from three to five years. In 2001, about 67% of all eligible children had been enrolled in some types of preschool program. Primary school enrollment in 2003 was estimated at about 97% of age-eligible students. The same year, secondary school enrollment was about 75% of age-eligible students. Most students complete their primary education. The student-to-teacher ratio for primary school was at about 24:1 in 2003. The ratio for secondary school was about 19:1.

There are more than 90 universities, including the Federal University of Rio de Janeiro (founded 1920) and the universities of Minas Gerais (1927), São Paulo (1934), Rio Grande do Sul (1934), Bahia (1946), Recife (1946), Paraná (1946), and Brasília (1961). The federal government maintains at least one federal university in each state. Entrance to a college or university is through an examination called the “vestibular”; students may either earn a “bacharel” degree or, with an additional year spent in teacher training, obtain a “licenciado” degree. There are at least 902 institutions at the postsecondary level. In 2003, about 21% of the tertiary age population were enrolled in some type of higher education program.

Adult education campaigns have functioned sporadically since 1933, backed by the federal government with some assistance from social, fraternal, Catholic, Protestant, professional, and commercial organizations. Although millions of Brazilians have received literacy training, the adult literacy rate for 2004 were estimated at 88.4%, with a fairly even rate for men and women.

#### 44 LIBRARIES AND MUSEUMS

Of Brazil's many hundreds of public libraries, the largest municipal library system is that of São Paulo, with over one million volumes. The National Library in Rio de Janeiro (founded in 1810) houses 1.4 million bound volumes, more than eight million documents, and many rare manuscripts. Included in the collection are 60,000 volumes brought to Brazil by the Royal Family of Portugal in 1808. Various government ministries maintain separate libraries in Brasília. The largest academic library is the São Paulo University Integrated Library System with three million volumes in 39 libraries, while the Federal University in Rio de Janeiro houses one million volumes. The Brazilian Federation of Librarians Associations, Information Scientists and Institutions (FEBAB) was established in 1959.

Brazil has nearly 200 museums. The National Museum (founded in 1818), one of the most important scientific establishments in South America, is especially known for its Brazilian ethnographic collections. Other important museums in Rio de Janeiro include the National Museum of Fine Arts, the Museum of Modern Art, the Historical Museum, the Museum of Mineralogy, the Museum of the Bank of Brazil, the Getúlio Vargas Gallery, and the Indian Museum. The most important museums in São Paulo are the Paulista Museum and the São Paulo Museum of Art. Also in São Paulo is the Museum of Japanese Immigration, detailing Japan's impact on the country. The Goeldi Museum in Belém is famous for

exhibits covering every aspect of Amazonian life and history and there is a well-known museum of religious art in Vitória.

#### 45 MEDIA

The principal telegraph network is operated by the Brazilian Postal and Telegraph Administration, in which the government holds part ownership. National trunk routes and international connections are also operated directly by another mixed corporation, the Brazilian Telecommunications Corp. (EMBRATEL), which inaugurated an earth satellite station in 1969 linking the Brazilian network with member countries of INTELSAT. EMBRATEL has rapidly modernized and extended the domestic telecommunications system with the introduction of microwave networks, including long-distance direct dialing, throughout much of the country. In the Amazon region, the company relies on a tropodiffusion system because of the area's large empty spaces. In 2003, there were an estimated 223 mainline telephones for every 1,000 people; about 200,000 people were on a waiting list for telephone service installation. The same year, there were approximately 264 mobile phones in use for every 1,000 people.

Brazil has one of the largest television broadcasting systems in the world. As of 1999, Brazil had 1,365 AM and 296 FM radio stations. There were also 138 television stations. The primary news agencies are Agencia Brasil (state-owned), Agencia Estado (private, in São Paulo), and Agencia Globo (private). In 2003, there were an estimated 433 radios and 369 television sets for every 1,000 people. About 13.4 of every 1,000 were cable subscribers. The same year, there were 74.8 personal computers for every 1,000 people and 82 of every 1,000 people had access to the Internet. There were 2,001 secure Internet servers in the country in 2004.

There are over 100 daily newspapers published in Brazil. The leading dailies in Rio de Janeiro, with their political affiliation and 2002 circulation, include *Globo* (conservative), 350,000; *Jornal o Dia* (labor), 250,000; and *Jornal do Brasil* (conservative), 196,000 (in 2004). The sports daily, *Jornal dos Sports*, had a circulation of 150,000 in 2004. In São Paulo, the leading dailies (with 2004 circulation figures) included *Folha de São Paulo* (independent) 1.2 million (up from 640,407 in 2002); *Estado de São Paulo* (conservative) 491,070 (in 2002); *Gazeta Mercantil*, 106,000; and *Noticias Populares*, 100,000. In Belo Horizonte, the independent *Estado de Minas* had a circulation of 170,000 in 2004, up from 65,000 in 2002. Porto Alegre's *Zero Hora* had a circulation of 270,000 in 2004, down from 528,000 in 2002. In Recife, the independent *Diário de Pernambuco* had a 2004 circulation of 90,000, up from 31,000 in 2002.

The largest Brazilian-owned magazine, which competes with the Portuguese-language edition of the *Reader's Digest*, called *Seleções*, is the popular illustrated *Manchete* of Rio de Janeiro (1995 circulation 100,000).

Freedom of the press is guaranteed under the constitution of 1967 and no license is required for the publication of books, newspapers, and periodicals. However, under the newspaper code of 19 September 1972, newspapers were forbidden to publish “speculative” articles on politics or unfavorable reports on the economy. The interests of Brazilian journalists are defended by the Inter-American Press Association and the influential Brazilian Press Association.

## 46 ORGANIZATIONS

Owners of large farms and plantations, particularly coffee plantation owners, usually belong to one or more agricultural associations. The largest of the national agricultural organizations is the National Confederation of Agriculture, but, in general, local member groups of the federation, such as the Paraná Coffee Producers' Association, the Association of Coffee Farmers, and the Brazilian Rural Society, are more powerful than the national organization. Agricultural societies are organized for the primary purpose of promoting favorable legislation toward agriculture in the Congress, and they have become important political units over the years. Other agricultural groups include cattlemen's associations, dairymen's associations, and rice growers' and grain producers' organizations, usually organized on a statewide basis. Professional organizations exist for a wide variety of trades, professions, and interests. These are strongest in São Paulo, Minas Gerais, Paraná, Goiás, and Rio Grande do Sul. Chambers of commerce function in every state.

The Brazilian Academy of Letters, the Brazilian Academy of Sciences, and the Brazilian Society for the Advancement of Science are among the many cultural and scholarly organizations. The *Associação Médica Brasileira* serves as a physicians network as well as a national forum for the promotion of high standards in healthcare and medical research. There are also several organizations involved in specialized medical research for a wide variety of conditions and diseases.

Most international service, social, and fraternal organizations are represented in Brazil. The Rotary International is well organized in the industrial cities of the south and there are Lions clubs and societies of Freemasons. The Catholic Church and the growing number of Protestants maintain various organizations. Catholic Action and the Catholic hierarchy have actively addressed themselves to combating misery and disease, especially in the big-city slums and in the northeast.

Youth organizations include the Boy Scouts of Brazil and the Federation of Girl Guides of Brazil, which are active nationwide. There is a Junior Chamber organization and active chapters of YWCA. There are numerous sports associations, including many that are affiliated with international organizations.

Brazil has chapters of the Red Cross, ActionAid, Habitat for Humanity, HOPE, World Vision, Defense for Children, Amnesty International, and Greenpeace.

## 47 TOURISM, TRAVEL, AND RECREATION

Rio de Janeiro is one of the leading tourist meccas in South America. Notable sights include Sugar Loaf Mountain, with its cable car; the Corcovado, with its statue of Christ the Redeemer; Copacabana Beach, with its mosaic sidewalks; and the Botanical Gardens. Large numbers of visitors are also drawn to the churches of Bahia; the historic city of Ouro Preto in Minas Gerais; and the colorful Amazon Valley cities of Belém and Manaus. Brazil is also famous for its vibrant celebrations of Carnival, especially in Rio de Janeiro; neighborhood samba groups rehearse all year for this occasion. Brazil's African heritage can best be savored at the Carnival in Salvador. Ecotourism attracts growing numbers of visitors to the world's largest rain forest in the North, the Iguacu Falls in the South, and the Mato Grosso wetlands in the Central West region.

Football (soccer) is by far the most popular sport. Brazil hosted the World Cup competition in 1950, and Brazilian teams won the championship in 1958, 1962, 1970, 1994, and 2002. The Maracanã soccer stadium in Rio de Janeiro seats more than 180,000 spectators. Other favorite recreations include water sports, basketball, tennis, and boxing.

A valid passport and visa are required of all tourists to enter Brazil. All visitors must secure a visa in advance. Yellow fever vaccination certificates are required if a visitor is from an infected area. Malaria prevention is also recommended.

In 2003, a total of 4,090,590 tourists visited Brazil. As of that year, tourism receipts totaled \$2.6 billion. There were 212,580 hotel rooms in 2000, with 425,160 beds.

In 2003, the US Department of State estimated the daily cost of staying in Rio de Janeiro at \$213. Costs in other cities were lower, with Belo Horizonte at \$96, Belém at \$173, and Campo Grande at \$105.

## 48 FAMOUS BRAZILIANS

Joaquim José da Silva Xavier, also known as Tiradentes (d.1792), led an unsuccessful uprising in 1789 against Portuguese colonial rule. The patriarch of Brazilian independence was José Bonifácio de Andrada e Silva (1763–1838), a geologist, writer, and statesman. Pedro I (Antonio Pedro de Alcântara Bourbon, 1798–1834), of the Portuguese royal house of Bragança, declared Brazil independent and had himself crowned emperor in 1822; he became King Pedro IV of Portugal in 1826 but gave up the throne to his daughter, Maria da Gloria. His Brazilian-born son, Pedro II (Pedro de Alcântara, 1825–91), emperor from 1840 to 1889, consolidated national unity and won respect as a diplomat, statesman, and patron of the arts and sciences. Other famous Brazilians during the imperial period include the Brazilian national hero, Luís Alves de Lima e Silva, Duque de Caxias (1803–80), a patron of the Brazilian army; and Joaquim Marques Lisboa, Marques de Tamandaré (1807–97), a naval hero, soldier, and statesman. In the field of international politics, Joaquim Nabuco (1849–1910) won distinction as a diplomat, journalist, and champion of the abolition of slavery; José Maria de Silva Paranhos, Barão de Rio Branco (1847–1912), was a famous minister of foreign affairs, who represented Brazil at many international conferences; and Ruy Barbosa (1849–1923) was a lawyer, diplomat, statesman, and jurist. A leader of industrial and economic development was Irineu Evangelista de Souza, Barão de Mauá (1813–89). Brazilian aviation pioneer Alberto Santos Dumont (1873–1932) is called the father of flight for his invention of a gasoline-powered airship in 1901. Oswaldo Cruz (1872–1917) founded the Brazilian Public Health Service and helped eradicate yellow fever in Rio de Janeiro. Marshal Cândido Rondon (1865–1957), an explorer of Amazonia, organized the Brazilian Indian Bureau. Dr. Vital Brasil (1865–1950) developed São Paulo's snakebite serum institute at Butantã.

Joaquim Maria Machado de Assis (1839–1908), author of *Memórias Póstumas de Braz Cubas* and other novels and poems, is generally considered the greatest Brazilian literary figure. The poet Euclides da Cunha (1866–1909) wrote *Os Sertões* (1902), one of the foremost works by a Brazilian. Other literary figures include Antônio Gonçalves Dias (1824–64), a romantic poet who idealized the Brazilian Indian; Castro Alves (1847–71), who influenced the abolition of slavery; and contemporary writers such as Gilber-

to de Mello Freyre (1900–1987), José Lins do Rego (1900–1959), Erico Verissimo (1905–1975), and Jorge Amado (1912–2001).

Aleijadinho (Antônio Francisco Lisboa, 1739–1814) was an 18th-century church architect and carver of soapstone religious statues in Minas Gerais. Contemporary artists include the painter Emiliano di Cavalcanti (1897–1976); the painter and muralist Cândido Portinari (1903–62), considered the greatest artist Brazil has produced; and the sculptor Bruno Giorgi (b.1905). Lúcio Costa (b.France, 1902–85), regarded as the founder of modern Brazilian architecture, designed the new capital city of Brasília, and Oscar Niemeyer (b.1907) designed most of the government buildings. Robert Burle Marx (1909–94) originated an unusual form of landscaping to complement modern architectural form. Another Brazilian architect of note, Alfonso Eduardo Reidy (b.France, 1909–64), designed the Museum of Modern Art in Rio de Janeiro.

The greatest figure in Brazilian music is the composer and educator Heitor Villa-Lobos (1887–1959), who wrote prolifically in many styles and forms. Other musicians include the composers Carlos Gomes (1836–96), Oscar Lorenzo Fernandez (1897–1948), Francisco Mignone (1897–1987), and Camargo Guarnieri (1907–1993); the concert pianist Guiomar Novaes Pinto (1895–1979); the operatic soprano Bidu Sayao (Balduina de Oliveira Sayao, 1902–99); and the folklorist and soprano Elsie Houston (1900–1943). One of the best-known Brazilians is soccer star Edson Arantes do Nascimento (b.1940), better known as Pelé.

Other noted figures are Getúlio Vargas (1883–1954), president-dictator in the period 1930–45, who increased the power of the central government; Francisco de Assis Chateaubriand Bandeira de Melo (1891–1966), a publisher, diplomat, and art collector; Oswaldo Aranha (1894–1960), president of the UN General Assembly during 1947–49; and Marcelino Candau (1911–83), director-general of WHO during 1953–73. Gen. Ernesto Geisel (1907–96) and his presidential successor, Gen. João Baptista de Oliveira Figueiredo (1918–99), guided Brazil through a period of political liberalization. Luis Inácio Lula da Silva (b.1945) was elected president in 2002, the first socialist president to be elected since 1964.

#### 49 DEPENDENCIES

Brazil has no colonies, but three national territories are contiguous with or incorporated within the national domain. The con-

stitution provides for the creation of a territory from part of an established state, the incorporation of a territory into an established state, or the organization of a territory into a new state if that territory can demonstrate its ability to meet the requirements of statehood.

The territories of Amapá, on the French Guiana border, and Roraima (formerly Rio Branco), on the Venezuelan border, became states on 5 October 1988. The Fernando de Noronha island, off the northeastern coast, was annexed to the state of Pernambuco in 1988. Territorial governors are appointed by the president of the republic, and each territory has one representation in the federal Chamber of Deputies. Territories have no representation in the federal Senate. Trindade, Atol das Rocas, Penedos de São Pedro e São Paulo, and the Ilhas Martin Vaz, small islands in the Atlantic, also belong to Brazil.

# CANADA

**CAPITAL:** Ottawa

**FLAG:** The national flag, adopted in 1964, consists of a red maple leaf on a white field, flanked by a red vertical field on each end.

**ANTHEM:** Since 1 July 1980, *O Canada* has been the official anthem.

**MONETARY UNIT:** The Canadian dollar (c\$) is a paper currency of 100 cents. There are coins of 1, 5, 10, 25, and 50 cents, 1 dollar and 2 dollars, and notes of 2, 5, 10, 20, 50, 100, and 1,000 Canadian dollars. Silver coins of 5 and 10 dollars, commemorating the Olympics, were issued during 1973–76. c\$1 = us\$0.82645 (or us\$1 = c\$1.21) as of 2005. US currency is usually accepted, especially in major cities and along the border.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Good Friday; Easter Monday; Victoria Day, the Monday preceding 25 May; Canada Day, 1 July; Labor Day, 1st Monday in September; Thanksgiving Day, 2nd Monday in October; Remembrance Day, 11 November; Christmas Day, 25 December; Boxing Day, 26 December. Other holidays are observed in some provinces.

**TIME:** Newfoundland, 8:30 AM = noon GMT; New Brunswick, Nova Scotia, Prince Edward Island, and Québec, 8 AM = noon GMT; Ontario east of 90° and western Québec, 7 AM = noon GMT; western Ontario and Manitoba, 6 AM = noon GMT; Alberta and Saskatchewan, 5 AM = noon GMT; British Columbia and Yukon Territory, 4 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Canada consists of all of the North American continent north of the United States except Alaska and the small French islands of St. Pierre and Miquelon. Its total land area of 9,976,140 sq km (3,851,809 sq mi) makes it the second-largest country in the world (slightly larger than China and the United States), extending 5,187 km (3,223 mi) E–W from Cape Spear, Newfoundland, to Mt. St. Elias in the Yukon Territory and 4,627 km (2,875 mi) N–S from Cape Columbia on Ellesmere Island to Pelee Island in Lake Erie. Canada is bounded on the N by the Arctic Ocean, on the E by Kennedy Channel, Nares Strait, Baffin Bay, Davis Strait, and the Atlantic Ocean, on the S by the United States, and on the W by the Pacific Ocean and the US state of Alaska. The coastal waters of Canada also include the Hudson Strait and Hudson Bay. The country's total land boundary length is 8,893 km (5,526 mi). Its total coastline length is 202,080 km (125,566 miles). Canada's capital city, Ottawa, is located in the southeastern part of the country.

## <sup>2</sup>TOPOGRAPHY

Canada's topography is dominated by the Canadian Shield, an ice-scoured area of Precambrian rocks surrounding Hudson Bay and covering half the country. This vast region, with its store of forests, waterpower, and mineral resources, is being increasingly developed. East of the Shield is the maritime area, separated from the rest of Canada by low mountain ranges pierced by plains and river valleys, and including the island of Newfoundland and Prince Edward Island. South and southeast of the Shield are the Great

Lakes–St. Lawrence lowlands, a fertile plain in the triangle bounded by the St. Lawrence River, Lake Ontario, and Georgian Bay.

West of the Shield are the farmlands and ranching areas of the great central plains, some 1,300 km (800 mi) wide along the US border and tapering to about 160 km (100 mi) at the mouth of the Mackenzie River. Toward the north of this section is a series of rich mining areas, and still farther north is the Mackenzie lowland, traversed by many lakes and rivers. The westernmost region of Canada, extending from western Alberta to the Pacific Ocean, includes the Rocky Mountains, a plateau region, the coastal mountain range, and an inner sea passage separating the outer island groups from the fjord-lined coast. Mt. Logan, the highest peak in Canada, in the St. Elias Range near the Alaska border, is 5,959 m (19,551 ft) high. The Arctic islands constitute a large group extending north of the Canadian mainland to within 885 km (550 mi) of the North Pole. They vary greatly in size and topography, with mountains, plateaus, fjords, and low coastal plains.

The central Canadian Shield area is drained by the Nelson-Saskatchewan, Churchill, Severn, and Albany rivers flowing into the Hudson Bay. The 4,241-km (2,635-mi) Mackenzie River—with its tributaries and three large lakes (Great Bear, Great Slave, and Athabasca)—drains an area of almost 2.6 million sq km (1 million sq mi) into the Arctic Ocean. The Columbia, Fraser, and Yukon rivers are the principal drainage systems of British Columbia and the Yukon Territory. The Great Lakes drain into the broad St. Lawrence River, which flows into the Gulf of St. Lawrence. Other rivers flow laterally from the interior into Hudson Bay or the Atlantic or Pacific ocean.

### **3 CLIMATE**

Most of northern Canada has subarctic or arctic climates, with long cold winters lasting 8 to 11 months, short sunny summers, and little precipitation. In contrast, the populated south has a variety of climatological landscapes. The greatest temperature range is in the Northwest Territories, where the average temperature at Fort Good Hope ranges from  $-31^{\circ}\text{C}$  ( $-24^{\circ}\text{F}$ ) in January to  $16^{\circ}\text{C}$  ( $61^{\circ}\text{F}$ ) in July.

Cool summers and mild winters prevail only along the Pacific coast of British Columbia. There the mean temperatures range from about  $4^{\circ}\text{C}$  ( $39^{\circ}\text{F}$ ) in January to  $16^{\circ}\text{C}$  ( $61^{\circ}\text{F}$ ) in July, the least range in the country. On the prairies there are extreme differences in temperature between day and night and summer and winter. In Ontario and Québec, especially near the Great Lakes and along the St. Lawrence River, the climate is less severe than in western Canada. This region has abundant precipitation that is highly uniform from season to season. The growing season is short, even in the south. Much of the interior plains area does not get enough rain for diversified crops.

East of the Rockies across the flat prairie lies the meeting ground for air from the Arctic, Pacific, and American interior. The mixing of air masses leads to a turbulent atmosphere and the emergence of cyclonic storms, producing most of the rain and snow in the country. The northwest and the prairies, having fewer or weaker storms, are the driest areas, although the prairies are the site of some heavy blizzards and dramatic thunderstorms. The windward mountain slopes are exceptionally wet; the protected slopes are very dry. Thus, the west coast gets about 150–300 cm (60–120 in) of rain annually; the central prairie area, less than 50 cm (20 in); the flat area east of Winnipeg, 50–100 cm (20–40 in); and the maritime provinces, 115–150 cm (45–60 in). The annual average number of days of precipitation ranges from 252 along coastal British Columbia to 100 in the interior of the province.

### **4 FLORA AND FAUNA**

A great range of plant and animal life characterizes the vast area of Canada, with its varied geographic and climatic zones. The flora of the Great Lakes–St. Lawrence region resembles that of the adjacent US section, with white pine, hemlock, sugar and red maples, yellow birch, and beech trees. Coniferous trees—particularly red spruce—predominate in the Maritime region, black spruce in the eastern Laurentian zone, white spruce in the western. In the east are also found the balsam fir, white cedar, tamarack, white birch, and aspen, with jack pine in the drier areas. From the prairie grassland to the Arctic tundra there are aspen, bur oak, balm of Gilead, cottonwood, balsam poplar, white birch, and other deciduous trees. Conifers dominate the northern section. Many types of grasses grow on the interior plains. The wet area along the west coast is famous for its tall, hard conifers: western hemlock and red cedar, Douglas fir, Sitka spruce, and western white pine. Subalpine forests cover the Rocky Mountain area, where there are such conifers as alpine fir, Engelmann spruce, lodgepole pine and aspen, and mountain hemlock. The great Arctic region is covered with low-growing grasses, mosses, and bushes.

The fauna of the Great Lakes–St. Lawrence region includes deer, black bear, opossum, gray and red squirrels, otter, beaver, and skunk; birds include eastern bluebird, red-winged blackbird, rob-

in, wood thrush, woodpecker, oriole, bobolink, crow, hawk, bittern, heron, black duck, and loon. In the boreal forest area there are moose, caribou, black bear, lynx, timber wolf, marten, beaver, porcupine, snowshoe rabbit, red squirrel, and chipmunk. Typical mammals of the Rocky Mountain area are grizzly bear, mountain goat, moose, wapiti, cougar, and alpine flying squirrel. In the plains are rabbits, gophers, prairie birds, and waterfowl. Abundant on the west coast are deer, Cascade mountain goat, red squirrel, mountain beaver, various species of mice, and Puget striped skunk; common birds include northern Pigmy-owl, band-tailed pigeon, black swift, northern flicker, crow, rufous-sided towhee, and black brant. Over the stretches of the Arctic are the musk ox and reindeer, polar bear, caribou, white and blue fox, arctic hare, and lemming, as well as the snowy owl, ptarmigan, snow bunting, arctic tern, and other birds. Walrus, seals, and whales inhabit Canada's coastal waters.

### **5 ENVIRONMENT**

Canada's principal environmental agency is the Department of the Environment, established in 1971 and reorganized in 1979. Responsibilities of this department, also known as Environment Canada, include air and water pollution control, land-use planning, and wildlife preservation. Responsibility for maritime resources was vested in the Department of Fisheries and Oceans under the 1979 reorganization. Air pollution and the resulting acid rain have posed a threat to lakes and forests in an area of eastern Canada about 2.6 million sq km (1 million sq mi). Canadian sources estimate that about 14,000 lakes in eastern Canada are acidified and another 300,000 lakes will remain in danger if adequate emission reductions are not implemented. As of the mid-1990s, acid rain had affected a total of 150,000 lakes throughout Canada. Waterfowl populations have already been depleted. About half the acid rain comes from emissions from Canadian smokestacks, but Canada has blamed US industry for 75% of the Ontario pollution.

Canada's rivers and ocean waters have been contaminated by toxic pollutants from agricultural, industrial, mining, and forestry activities. As of the mid-1990s, 50% of Canada's coastal shellfish areas were closed because of the dangerous levels of pollutants.

Canada has more than 90 bird sanctuaries and 44 National Wildlife Areas, including reserves in the western Arctic to protect waterfowl nesting grounds. In May 1986, Canada and the United States signed an agreement to restore the breeding habitat of mallard and pintail ducks in the midcontinental regions of both countries. The project, which spanned 15 years and cost c\$1.5 billion, was meant to protect and improve 1,200,000 hectares (3,000,000 acres) of duck habitat in order to reverse the decline in waterfowl populations and raise the average annual fall migration to 100 million birds—the level of the 1970s. The project also called for the protection of waterfowl habitats in the lower Mississippi River and Gulf Coast region, and the black duck habitat in eastern Canada and the East Coast of the United States.

The annual Newfoundland seal hunt, producing seals for pelts and meat, drew the ire of environmentalists chiefly because of the practice of clubbing baby seals to death (adult seals are shot). Approval by the European parliament of a voluntary boycott on seal-skin imports undercut the market, and the Newfoundland seal

LOCATION: 41°41' to 83°7' N; 52°37' to 141° W. BOUNDARY LENGTHS: Total coastline, 243,791 kilometers (151,492 miles); United States (excluding Alaska), 6,416 kilometers (3,987 miles); Alaska, 2,477 kilometers (1,539 miles). TERRITORIAL SEA LIMIT: 12 miles.

catch dropped from about 1,400 in 1981–82 to 360 in 1982–83. In 1987, Canada banned the offshore hunting of baby seals, as well as blueback hooded seals.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 16 types of mammals, 19 species of birds, 2 types of reptiles, 1 species of amphibian, 24 species of fish, 1 type of mollusk, 10 other invertebrates, and 1 species of plant. Endangered species in Canada include the Vancouver Island marmot, eastern puma, wood bison, sea otter, right whale, St. Lawrence beluga, Acadian whitefish, mountain plover, piping plover, spotted owl, leatherback turtle, cucumber tree, Furbish's lousewort, Eskimo curlew, Kirtlands warbler, American peregrine falcon, whooping crane, and the southern bald eagle. The longjaw cisco, the Labrador duck, and the great auk have become extinct.

## 6 POPULATION

The population of Canada in 2005 was estimated by the United Nations (UN) at 32,225,000, which placed it at number 36 in population among the 193 nations of the world. In 2005, approximately 13% of the population was over 65 years of age, with another 18% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–10 was expected to be 0.3%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 36,027,000. The population density was 3 per sq km (8 per sq mi).

Statistics Canada is the Canadian government bureau that conducts the census; every five years, forms are included with the annual income tax returns that are sent to every mailing address. The population doubled between 1945 and 1993, although the

growth rate has been declining since the 1970s, when it was 12.9% (1971–81).

The UN estimated that 79% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.05%. The capital city, Ottawa, had a population of 1,093,000 in that year. The Toronto metropolitan area had an estimated population of 5,060,000; Montréal, 3,511,000; Vancouver, 2,125,000; Edmonton, 1,005,000; and Calgary, 1,074,000. Other large cities and their estimated populations include Winnipeg, 706,900; Québec, 670,000; Hamilton, 662,401; Kitchener, 450,100; London, 432,451; St. Catherines-Niagara, 377,009; Halifax, 375,000; Victoria, 335,000; Windsor, 307,877; Oshawa, 296,298; and Saskatoon, 236,000. Ontario, with 81.8% of its population classed as urban, was the most urbanized province, followed by British Columbia (80.4%), Alberta (79.8%), and Québec (77.6%). Only New Brunswick (47.7%), Prince Edward Island (39.9%), and the Northwest Territories (36.7%) have less than half their population in urban areas.

The population is unevenly distributed, ranging from 0.045 per sq km (0.02 per sq mi) in the Northwest Territories to 59 per sq km (22.8 per sq mi) on Prince Edward Island. Nearly 85% of the people live within 150 km (93 mi) of the US boundary. All except the Maritime provinces have large areas virtually uninhabited.

## 7 MIGRATION

Canadians of French origin are descendants of about 10,000 settlers who arrived in the 17th century and in the first half of the 18th century. Black slaves were brought to Canada as early as 1608. Later in the 18th century, thousands of British settlers came to Canada from New England and other colonies to the south. By 1850, 500,000 persons had left the British Isles for Canada; between 1846–54, an additional 500,000 arrived, mainly from Ireland. The Underground Railway, a network of people and safe houses that helped runaway slaves reach freedom, operated from 1840–60, and enabled about 30,000 blacks to reach Canada. The peak year for immigration was 1913, when 400,870 people arrived. From 1921–30, there were 1,230,202 immigrants; in 1931–40, 158,562; in 1946–65, 2,504,120. Many re-emigrated, mainly to the United States; by 1950, Canadian-born persons formed the second-largest group of foreign-born US inhabitants. Between 1951–56, however, the excess of immigration over emigration was almost 600,000. After a lull in the early 1960s, immigration reached a peak of 222,876 in 1967. In 1974, immigration controls were tightened, and between 1975–85, the number of immigrants per year averaged 118,656, and between 1986–93, 193,881. In 1993, total immigration was 252,042. Of these, immigrants from Asia numbered 134,532; from Europe, 50,050; Africa, 19,033; the Caribbean, 19,028; the United States, 6,565; and South America, 11,327. Emigration is mainly to the United States.

The Immigration and Refugee Protection Act, which became law in 2001, determines admissibility, emphasizing education, language, and skills. As of May 2001, 18.4% of Canada's population was foreign born. Over half was made up of immigrants from Asia and the Middle East. In 2004 Canada led the G-8 nations (Canada, the United States, the Russia, the United Kingdom, Germany, France, Italy, and Japan) in gains in migratory exchanges, with the highest international migration rate of any G8 country.

In 2005, the net migration rate for Canada was estimated as 5.9 migrants per 1,000 population.

Interprovincial migration is generally from east to west. During 1990–91 British Columbia gained 37,620 more people from other provinces than it lost, and Alberta 7,502, while provinces experiencing net population loss were Ontario (lost 22,301), Saskatchewan (9,941), and Québec (7,690). However, from 1996–2001, the Northwest Territories, Yukon Territory, and Nunavut, respectively, had the greatest percentage population increases among the provinces, and Québec and Ontario had the lowest.

In 2004, Canada had 168,688 applications for asylum, primarily from Afghanistan, Sri Lanka, Pakistan, Colombia, China, Iran, and Sudan. There were 141,398 refugees in the country in 2004, and 27,290 asylum seekers.

## 8 ETHNIC GROUPS

More than 80% of the population is Canadian-born. In general, the percentage of the population born outside Canada increases as one goes westward from Newfoundland to British Columbia. Persons of whole or partial British (including Irish) origin make up about 28% of the total population; those of whole or partial French origin (centered mainly in Québec, where they constitute some 80% of the population) make up 23%. Other European groups account for 15% of the total populace. About 26% of the population are from mixed backgrounds. Others, mostly Asian, African, and Arab, make up about 6% of the population.

Amerindians constituted about 2%. These Amerindians were classified into ten major ethnolinguistic groups; the métis, of mixed European and Indian extraction, were recognized as an aboriginal people in the Constitution Act of 1982. Most of the Inuit (Eskimos) live in the Northwest Territories, with smaller numbers in northern Québec and northern Newfoundland (Labrador). Since 1959, Inuit cooperatives have been formed to finance fishing, fish processing, retail, housing, and tourist enterprises, and to promote the graphic arts.

## 9 LANGUAGES

English and French are the official languages of Canada and have equal status and equal rights and privileges as to their use in all governmental institutions. The federal constitution also gives the English and French minorities the right to publicly funded education in their own language at the primary and secondary levels, wherever the number of children warrants it.

The constitution provides for bilingualism in the legislature and courts of Québec, New Brunswick, and Manitoba. Although there are no similarly entrenched constitutional rights in Ontario and Saskatchewan, these provinces have made English and French the official languages of the courts. In 1984, the Northwest Territories Council adopted an ordinance providing for the use of aboriginal languages and establishing English and French as official languages.

English was proclaimed the sole official language of Manitoba in 1890, and French was made the official language of Québec in 1974. However, the 1890 Manitoba legislation was declared unconstitutional in 1979, as was a Québec law passed in 1977 declaring French to be the sole language of the legislature and the courts.

Although Canada is frequently referred to as a bilingual country, only a minority are able to speak both English and French. In Québec, more than 80% of the people speak French as a native language; in the other provinces, most of the people speak only English, although there are sizable proportions of people able to speak French in New Brunswick and parts of Ontario and Manitoba. Some 60% of Canadians report that their only mother tongue is English, and only about 24% say that is French. About 15% report a single mother tongue other than English or French. Italian, German, Chinese, Ukrainian, Portuguese, and Polish are spoken by small numbers of people. There are at least 58 different Indian languages and dialects, in 10 major language groups. Cree is the most common Indian language.

## 10 RELIGIONS

About 74.6% of the Canadian population belong to Christian denominations. Roman Catholics constitute the largest single group, with 43% of the population. Other Catholic groups include Eastern Orthodox and Ukrainian Catholics. Protestants make up 29% of the populace; the largest denominational groups include the United Church; Anglicans, Presbyterians, Lutherans, Baptists, and Pentecostals. Members of other religions include Jews (1.1% of the population), Muslims (2%), Buddhists, Hindus, and Sikhs. There are a number of parareligious faiths, including Scientology, Kabbalism, and Rastafarianism. Shintoism and Taoism are also represented within the country. Approximately 16% of the population has no religious affiliation.

Freedom of religion has been specifically protected by the constitution and the Charter of Rights and Freedoms. The right has generally been respected in practice. Certain Christian holidays are observed as public holidays. In 2003, a group of Muslims in Ontario established an Islamic Court of Civil Justice, designed to rule on civil disputes between Muslims using the tenets of Shariah law.

## 11 TRANSPORTATION

With such a vast land area, and with most production inland, all forms of transportation are vital. Since 1945, with the rapid growth of road, air, and pipeline services, the trend has been away from railways for carrying both freight and passengers. But because they can supply all-weather transportation in large volume over continental distances, railways are still important. The federal government, through the Canadian Transport Commission, has allowed a few rate rises and has insisted on a slow curtailment of services; nevertheless, the companies have traditionally operated at a deficit or very low margin of profit because of competition and rising costs. In 2004, the Canadian railway system consisted of 48,683 km (30,281 mi) of all standard gauge track. Two great continental systems operate about 90% of the railway facilities, the formerly government-owned Canadian National Railways (CNR), which was privatized in 1995, and the privately owned Canadian Pacific Ltd. (CP). They compete in some areas but cooperate where duplication of service is not profitable. In addition to their railway operations, CNR and CP maintain steamships and ferries, nationwide telegraph services, highway transport services, and hotel chains.

The populated sections are generally well supplied with roads and highways, but because of difficult winter weather conditions,

road maintenance is a recurring and expensive task and puts a tremendous strain on road-building facilities. As of 2002, there are about 1,408,800 km (876,273 mi) of roads, 493,080 km (306,696 mi) of which are paved, including 16,906 km (10,516 mi) of expressways. The 7,820-km (4,860-mi) paved Trans-Canada Highway, a c\$500-million project financed jointly by the federal and provincial governments, was completed in 1962. Canada ranks next to the United States in per capita use of motor transport, with one passenger car for every 2 persons. Motor vehicles in use in 2003 totaled 18,495,531, including 17,755,075 passenger cars and 740,456 commercial vehicles.

Bounded by water except for the Alaskan and southern land boundaries with the United States, Canada has many inland lakes and rivers that serve as traffic arteries. In addition, there is also the 3,769-km (2,355-mi) Saint Lawrence Seaway (which includes the 3,058 km/1,911 mi Saint Lawrence River) and Canada's portion of the Great Lakes, each of which are shared with the United States. Canada has access to three oceans, the Pacific, the Atlantic, and the Arctic. Canada's merchant fleet was comprised of 169 ships, totaling 1,784,229 GRT, in 2005. Most overseas commerce is carried by foreign ships. Montréal is Canada's largest port and the world's largest grain port. Others among the many well-equipped ports are Toronto, Hamilton, Port Arthur, and Fort William on the Great Lakes, and Vancouver on the Pacific Coast. The Montréal and lake ports are closed by ice from December to April, during which time Halifax on the Atlantic and Saint John on the Bay of Fundy are the only Atlantic Ocean traffic terminals.

The St. Lawrence Seaway and Power Project, constructed jointly by Canada and the United States, and its many canals provide an 8-m (27-ft) navigation channel from Montréal to Lake Superior. The Athabasca and Slave rivers and the Mackenzie, into which they flow, provide an inland, seasonal water transportation system from the end of the railway in Alberta to the Arctic Ocean. The Yukon River is usually open from mid-May to mid-October. All Canadian inland waterways are open on equal terms to the shipping of all nations.

Canada had an estimated 1,326 airports in 2004. As of 2005, a total of 508 had permanent runways and there were also 319 heliports. Principal airports include Calgary International at Calgary, Edmonton International at Edmonton, Halifax International at Halifax, Lester Pearson at Toronto, Vancouver International at Vancouver, Winnipeg International at Winnipeg, and Dorval International and Mirabel International at Montréal. International air service is provided by government-owned Air Canada and Canadian Airlines. Regional service is provided by some 570 smaller carriers. Air transport is the chief medium in the northern regions for passengers and freight. Canadian airlines transported 35.884 million passengers in 2003.

## 12 HISTORY

The first inhabitants of what is now Canada were the ancient ancestors of the Inuit. Exactly where they originated or when they arrived is uncertain, but they probably crossed from eastern Siberia to Alaska, Canada, and Greenland between 15,000 and 10,000 BC. Their descendants, the Dorset people, who inhabited the central Canadian Arctic region from about 700 BC to AD 1300, were primarily hunters of walrus and seal. The shorter-lived Thule culture, which may have assimilated the Dorset, lasted from about 1200 to

the first arrival of the Europeans. Although most Inuit lived near the coast, some followed the caribou herds to the interior and developed a culture based on hunting and inland fishing.

Although the Norse had occupied a settlement at L'Anse aux Meadows in Newfoundland by AD 1000, the first fully documented arrival by Europeans was in 1497 by the Italian-born John Cabot, who led an English expedition to the shore of a "new found land" (Newfoundland) and claimed the area in the name of Henry VII. In 1534, the French, under Jacques Cartier, planted a cross on the tip of the Gaspé Peninsula; the following year, his expedition discovered and ascended the St. Lawrence River. By 1604, Pierre du Guast, Sieur de Monts, along with Samuel de Champlain had founded the first permanent French colony, Port Royal (now Annapolis Royal, Nova Scotia). Four years later, Champlain established the town of Québec. The great St. Lawrence waterway led Étienne Brulé and others after him to the Great Lakes and the rivers flowing south through the center of the North American continent. Missionaries and fur traders soon arrived, and an enormous French territory was established. Between 1608 and 1756, about 10,000 French settlers arrived in Canada. In the hope of protecting French settlers and the fur trade, Champlain supported the Huron Indians against their enemies, the Iroquois. When the Iroquois demolished the Hurons, the French colony was almost destroyed.

In the 17th century, England pressed its claim (by virtue of Cabot's expedition) to the rich fur-trading colony, and during the frequent skirmishing between New France and New England the English conquered Québec (1629). Restored to France in 1632, Québec, together with the rest of New France, was placed under the absolute control of a chartered commercial organization, the Company of One Hundred Associates, with the twofold purpose of exploiting the fur trade and establishing settlements. In 1663, New France became a royal province of the French crown. Thereafter, three important officials—the royal governor, the intendant, and the bishop—competed in exercising control of the government. Under the seigneurial system, which had been founded in 1598, large land grants were made to seigneurs, who made other grants to settlers. The actual farmers owed some quasi-feudal dues and could sell the property only by paying a large duty to the seigneur.

The movement of exploration, discovery, commercial exploitation, and missionary enterprise, which had begun with the coming of Champlain, was extended by such men as Jacques Marquette, Louis Jolliet, and Robert Cavelier, Sieur de la Salle, reaching its climax in the last three decades of the 17th century. At that time, French trade and empire stretched north to the shores of Hudson Bay, west to the head of the Great Lakes, and south to the Gulf of Mexico. Meanwhile, a British enterprise, the Hudson's Bay Company, founded in 1670, began to compete for the fur trade.

The European wars between England and France were paralleled in North America by a series of French and Indian wars. The imperial contest ended after British troops commanded by James Wolfe defeated Marquis Louis Joseph de Montcalm on the Plains of Abraham, bringing about the fall of Québec in 1759. The French army surrendered at Montréal in 1760, and the Treaty of Paris in 1763 established British rule over what had been New France. The Québec Act of 1774 established English criminal law but secured seigneurial tenure, a modified oath of office allowing

Roman Catholics to serve in the conciliar governments, and the right of the Roman Catholic Church to collect tithes.

These concessions, which reflected the sympathy of the British ruling class for the French upper classes, instituted the separateness of French-speaking Canada that has become a distinctive feature of the country. It also secured the loyalty of the French clergy and aristocracy to the British crown during the American Revolution. Although the poorer French settlers (*habitants*) sympathized with the Revolutionists, efforts to take Canada by arms for the revolutionary cause failed in the Québec campaign. Some 40,000 Loyalists from the colonies in revolt fled northward to eastern Canada and did much to change the political character of their new country. The Constitutional Act of 1791 divided Lower Canada (now southern Québec) from Upper Canada (now southern Ontario) and provided for elected assemblies with limited powers, the first organs of self-government in the territory.

In the 1780s, the newly organized North West Company began to challenge the Hudson's Bay Company's fur-trade monopoly. The period was one of expansion, marked by Alexander Mackenzie's journey to the Arctic Ocean in 1789 and his overland voyage to the Pacific Ocean in 1793. British mariners secured for Britain a firm hold on what is now British Columbia.

The War of 1812, in which US forces attempting to invade Canada were repulsed by Canadian and British soldiers, did not change either the general situation or the US-Canadian boundary. After amalgamating the North West Company in 1821, the Hudson's Bay Company held undisputed sway over most of the north and west. Eastern border problems with the United States were resolved by the Webster-Ashburton Treaty in 1842; in the west, however, US expansionists sought to fix the border at 54°40'N. In 1846, the border was resolved at 49°N, and since then, except for minor disputes, the long border has been a line of peace.

The continuing influx of immigrants stimulated demands for political reforms. In Nova Scotia and New Brunswick the reformers had some early success, but in the two Canadas it was not until groups led by Louis Joseph Papineau in Lower Canada and William Lyon Mackenzie in Upper Canada had conducted separate futile rebellions in 1837–38 that the British government acted. John George Lambton, Earl of Durham, was sent to Canada as governor-general in 1838; he resigned later that year, but in 1839 submitted a report to the crown in which he recommended the granting of some forms of self-government. He also advised the immediate union of the two Canadas for the express purpose of Anglicizing the French Canadians. Union of the two provinces was approved in 1840, but responsible government was not achieved until 1849, after strenuous efforts by leaders in the various provinces. There was, however, no single unified nation—only a string of provinces in the east and the Hudson's Bay Company domain in the west and north.

The movement for Canadian confederation—political union of the colonies—was spurred in the 1860s by the need for common defense and the desire for a common government to sponsor railroads and other transportation. John Alexander Macdonald and George Brown, rival political leaders, agreed in 1864 to unite Upper Canada and Lower Canada under a common dominion government. Already the Maritime provinces were seeking union among themselves; their Charlottetown Conference in 1864 was broadened to admit delegates from the Canadas. After two more

conferences, in 1864 and 1866, the dominion government was established under the British North America Act of 1867. The dominion was a confederation of Nova Scotia, New Brunswick, and the two provinces of Canada. There had been much opposition, and Nova Scotia and New Brunswick were brought to accept the union only through the efforts of Sir Charles Tupper and Sir Samuel Leonard Tilley and by the fear and indignation roused by the invasion of Canada by Fenians (militant Irish nationalists) from the United States in 1866. Since the name Canada was chosen for the entire country, Lower Canada and Upper Canada became the provinces of Québec and Ontario, respectively.

In 1869, the Hudson's Bay Company relinquished its territorial rights to Rupert's Land and the Northwest Territories. In 1870, the province of Manitoba was established and admitted to the confederation, and the Northwest Territories were transferred to the federal government. In 1871, British Columbia, on the Pacific shore, joined the confederation, largely on the promise of a transcontinental railroad. Prince Edward Island did not join until 1873. Pushing through the Canadian Pacific (CP) Railway was a main achievement of Macdonald's Conservative administration. The CP was given large grants of land in return for its promise to aid in settling these lands, a policy that is still being carried on. Objection in the west to being taken over by the east led to two métis rebellions, headed by Louis Riel, in 1869–70 and 1885, but the west was opened to settlement nonetheless.

Under the long administration (1896–1911) of the Liberal Party under Sir Wilfrid Laurier, immigration to the prairie provinces was greatly accelerated. The prairie agricultural empire bloomed. Large-scale development of mines and of hydroelectric resources helped spur the growth of industry and urbanization. Alberta and Saskatchewan were made provinces in 1905. In 1921, Manitoba, Ontario, and Québec were greatly enlarged to take in all territory west of Hudson Bay and south of 60°N and all territory east of Ungava Bay. In February 1931, Norway formally recognized the Canadian title to the Sverdrup group of Arctic islands (now the Queen Elizabeth Islands); Canada thus held sovereignty in the whole Arctic sector north of the Canadian mainland. Newfoundland remained apart from the confederation until after World War II; it became Canada's tenth province in March 1949.

Canadian contributions of manpower and resources were immensely helpful to the Allies when Canada joined the British side in World War I; more than 600,000 Canadians served in Europe, and over 60,000 were killed. The war contributions of Canada and other dominions helped bring about the declaration of equality of the members of the British Commonwealth in the Statute of Westminster of 1931. The wartime struggle over military conscription, however, deepened the cleavage between French Canadians and other Canadians. After the war, the development of air transportation and roads helped weld Canada together, and the nation had sufficient strength to withstand the depression that began in 1929 and the droughts that brought ruin to wheat fields. The farmers developed huge cooperatives, especially in Nova Scotia and the prairie provinces, and also took up radical political doctrines, notably through the Social Credit and the Socialistic Cooperative Commonwealth Federation parties.

Canada was again vitally important in World War II, under the premiership of William Lyon Mackenzie King. More than one million Canadians took part in the Allied war effort, and over 32,000

were killed. The nation emerged from the war with enhanced prestige, actively concerned with world affairs and fully committed to the Atlantic alliance.

Domestically, a far-reaching postwar development was the resurgence in the 1960s of French Canadian separatism, symbolized by a series of cultural agreements between France and Québec. In 1970, terrorist acts by the Québec Liberation Front led to the banning of that organization and to the federal government's first invocation in peacetime of emergency powers under the War Measures Act. The emergency measures, imposed on 16 October, were not lifted until 30 April 1971. Although administrative reforms—including the establishment of French as Québec's official language in 1974—helped meet the demands of cultural nationalists, separatism continued to be an important force in Canadian politics. In the 1976 provincial elections, the separatist Parti Québécois came to power in Québec, and its leader, Premier René Lévesque, proposed that Québec become politically independent from Canada, in a relationship termed sovereignty-association. In a referendum on 20 May 1980, in which 82% of those eligible voted, the proposal was defeated, 59.5% to 40.5%. Meanwhile, other provinces had their own grievances, especially over oil revenues. Alberta objected to federal control over oil pricing and to reduction of the provincial share of oil revenues as a result of the new National Energy Program announced in late 1980; the failure of Newfoundland and the federal government to agree on development and revenue sharing hindered the exploitation of the vast Hibernia offshore oil and gas field in the early 1980s.

Since 1927, when discussions first began on the question of rescinding the British North America Act, disagreements between the provinces and the federal government over constitutional amendment procedures had stood in the way of Canada's reclaiming from the United Kingdom authority over its own constitution. In 1980, Liberal Prime Minister Pierre Elliott Trudeau made "patriation" of the constitution a principal priority of his administration. Initially he faced considerable opposition from 8 of the 10 provincial premiers, but a compromise on amending procedures and a charter of rights eventually proved acceptable to all but Québec. The Constitution Act, passed in December 1981 and proclaimed by Queen Elizabeth II on 17 April 1982, thus replaced the British North America Act as the basic document of Canadian government. In 1987, Québec was to sign the new constitution, after winning the inclusion of a clause acknowledging that Québec is a "distinct society." The Meech Lake Accord of 1987, however, failed to compel Québec into signing the constitution, and Québec's status has been in limbo ever since. New Brunswick and Manitoba failed to ratify the Accord because of the perceived preferential status Québec would have received. The Charlottetown Accord also proposed recognizing Québec as a "distinct society" in addition to acknowledging aboriginals' inherent right to self-government and converting the senate into an elected and more effective legislative body. On 26 October 1992, however, the majority of Canadians chose not to support the Charlottetown Accord in a national referendum.

Canada joined with the United States and Mexico to negotiate the North American Free Trade Agreement (NAFTA), which was built upon the US-Canada Free Trade Agreement (FTA). The three nations came to an agreement in August 1992 and signed the text on 17 December 1992. NAFTA created a single market of 370

million people with a combined GNP exceeding US\$6 trillion and was implemented in 1994.

Like the French Canadians of Québec, Canada's native peoples have also challenged the federal government on issues of identity and autonomy. In 1992 the Inuits approved an agreement by which the country's Northwest Territories would be divided in two, with the eastern part comprising the semiautonomous Nunavut territory, which would serve as an Inuit homeland. Other native groups also advanced land claims.

On 30 October 1995, the province of Québec held a referendum on secession from Canada; the measure was defeated by the narrowest of margins—a majority of less than 1%. As the 1990s ended, the province remained deeply divided over the secession issue, and the constitutional impasse over the status of Québec persisted. In 1998, Canada's Supreme Court ruled that in order for Québec to secede from the country, it had to reach agreement with the other provinces and the federal government on issues including a common currency and payment of the national debt. In 2003, the Liberal Party defeated the Bloc Québécois in provincial elections in Québec, ending nine years of rule by the pro-independence party.

After ousting the Progressive Conservatives in the 1993 national election, the Liberal party, led by Prime Minister Jean Chrétien, won a second consecutive parliamentary victory for the first time in 40 years in June 1997. However, the party's majority was significantly reduced from its previous size, and the right-wing Reform Party replaced the Bloc Québécois as the leading opposition group, a development that added to the regional fragmentation posing an increasing threat to the national unity of Canada. To overcome regional divisions within their own ranks, Canada's conservatives voted to create the new Canadian Alliance party early in 2000, in an attempt to unite the western-based Reform Party with the Progressive Conservatives. In 2003, the Canadian Alliance and the Progressive Conservatives voted to disband and form the new Conservative Party of Canada.

In the late 1990s, Canada's native peoples achieved two historic milestones in their quest for autonomy. In 1998 the Nisga'a Indians ratified a treaty according them 1930 sq km (745 sq mi) of land in British Columbia. The following year, the Nunavut territory—occupying an area larger than Western Europe—was officially founded as a homeland for the Inuit in the Northwest Territories.

In March and April 2003, Toronto was the site of the largest outbreak of the deadly severe acute respiratory syndrome (SARS) virus outside Asia. The World Health Organization (WHO) imposed a travel advisory to Toronto which lasted a week. Some 300 people were affected and 33 died. That August, Toronto, Ottawa, and other parts of Ontario as well as many cities in the United States were affected by the largest power outage in North American history.

On 12 December 2003, former finance minister and member of the Liberal Party Paul Martin was sworn in as prime minister, ending 10 years of leadership by Jean Chrétien. In February 2004, a financial scandal erupted over the misuse of government funds being used for advertising and sponsorship. The Liberal Party was accused of receiving kickbacks from advertising contracts awarded in Québec in the late 1990s. Paul Martin ordered an official inquiry. In June 2004, Martin was returned to power in parliamentary elections, but the Liberal Party was no longer in the ma-

majority. In February 2005, Martin and Chrétien appeared before a commission set up to investigate the financial scandal involving the misspent government funds. That May, the government won a confidence motion in parliament by only one vote.

In July 2005, Canada became the fourth nation in the world to legalize same-sex marriages. The other countries having such laws at that time were Belgium, the Netherlands, and Spain.

Canada has collaborated with the United States in its war against international terrorism. Securing the long border shared between the two countries in order to prevent possible terrorist infiltration has been a challenge, and has caused Canada and the United States to cooperate on sharing intelligence. However, Canada did not join the US-led coalition in the war in Iraq which began in 2003, prompting much domestic debate and US criticism of Jean Chrétien, who was prime minister at the time.

### 13 GOVERNMENT

Canada is a federation of 10 provinces and three northern territories (including the Nunavut territory formed in 1999). Under the British North America Act of 1867, which united the four original provinces of Québec, Ontario, Nova Scotia, and New Brunswick into one dominion under the name of Canada, the federation was provided with a powerful central government, which, besides its areas of exclusive authority, held residual authority in matters beyond the powers of local or private concern specifically assigned to the provincial legislatures. The British North America Act—which effectively served, together with a series of subsequent British statutes, as Canada's constitution—could be amended only by the British Parliament. In 1982, the British North America Act was superseded by the Constitution Act (or Canada Act), the principal innovations of which are the Charter of Rights and Freedoms and the provision for amendment. For passage, an amendment requires approval by the federal parliament and the legislative assemblies of at least two-thirds of the provinces, which must hold an aggregate of at least half the population of all the provinces. However, when an amendment derogates from provincial rights, it will not apply in any province in which the legislative assembly dissented by majority vote. When such an amendment deals with education or other cultural matters, the federal government must pay compensation to any dissenting province, to make up for the funds that would have been transferred had the province accepted the amendment.

Under the Constitution Act, the British sovereign remains sovereign of Canada and head of state; for the most part, the personal participation of Queen Elizabeth II in the function of the crown for Canada is reserved to such occasions as a royal visit. The queen's personal representative in the federal government is the governor-general, appointed by the crown on the advice of the prime minister of Canada; the governor-general is usually appointed for a term of five years. Active executive authority resides in the cabinet, or ministry, headed by the prime minister.

The federal parliament is made up of the House of Commons and the Senate. A new House of Commons, with 308 members as of 2005, is elected at least once every five years by all Canadian citizens 18 years of age or older. Representation by provinces and territories is based on population, ranging from one for the Yukon Territory to 106 for Ontario.

The leader of the party that wins the largest number of seats in a newly elected House of Commons is asked to form the government. The governor-in-council (cabinet), responsible for determining all important government policies and for securing the passage of legislation, financial measures, and administrative provisions, is chosen by the prime minister.

The 105 members of the Senate, or upper house, are appointed for life, or until age 75, by the governor-general on the nomination of the prime minister, with equality of representation for regional divisions. There are roughly equal proportions of senators from the Maritime provinces, Ontario, Québec, and the western provinces. In October 1992, Canadian voters declined a constitutional amendment that would have made the Senate an elected body.

## 14 POLITICAL PARTIES

Throughout most of the 20th century and into the 21st, national unity has been the primary aim of every Canadian government: leaders of both the English-speaking majority and the French-speaking minority have cooperated to develop a united Canada with a great destiny to which differences arising from national origin were subordinate. In the 1970s, this unity was challenged by a growing demand for French Canadian autonomy. Despite cultural division, national unity has remained a basic factor in Canadian foreign policy. Two elements have contributed to the growth of Canadian nationalism—deliberate government policy and reaction against overidentification with either the United Kingdom or the United States.

Continuity of policy characterizes party relationships. The Liberal Party (LP), which held office from 1935 to 1957, from 1968 to 1984 (except for part of 1979), and since 1993, is nationwide in its representation but has its main strength in Québec. It traditionally emphasizes trade and cultural relationships with the United States. Its principal rival, the Conservative Party (formerly the Progressive Conservative Party or PC), which held power from 1957 to 1968, from May to December 1979, and from 1984 to 1993, stresses Canada's relationships with the United Kingdom. In economic policy, the Liberals generally champion free trade, while the Conservatives favor a degree of protection; but practical political considerations have modified this distinction.

The Cooperative Commonwealth Federation (CCF) was a farmer-labor party with its main strength in Saskatchewan. Its foreign policy was much like that of the British Labour Party, but with an admixture of traditional Canadian prairie radicalism. It merged with the Canadian Labour Congress to form the New Democratic Party (NDP) in 1961. The Social Credit Party (SCP) has headed governments in Alberta and British Columbia but has not done well nationally. In June 1962, the group collapsed into independent factions, leaving only five representatives in the Commons. In September, the Québec wing of the party united to form the *Ralliement des Créditistes*, which after the 1965 elections became the new focal point of French Canadian interests.

After 22 years of uninterrupted rule, the Liberals were defeated by the PC in the 1957 elections. This was widely interpreted as a vote of protest against individual Liberal ministers and high taxes, as a reflection of concern over US economic penetration, and as a demonstration of widespread feeling that it was "time for a change." In the general election on 31 March 1958, the PC was returned to power with an unprecedented majority, taking 208 of

the 265 seats. The LP was reduced to 49 seats, the smallest number in its history. In the election of June 1962, the PC lost 92 seats. The following February, the PC government lost a vote of confidence, the major issue being defense policy and the refusal of the prime minister to accept nuclear weapons from the United States. In the election of April 1963, the resurgent Liberals gained an additional 29 seats for a total of 129 (four short of a parliamentary majority). With some support from the SCP, Liberal leader Lester B. Pearson formed a new government.

In April 1968, the new Liberal Party leader, Pierre Elliott Trudeau, was elected prime minister in a colorful campaign emphasizing personality more than specific issues. In the June general election, which he called for almost immediately, the LP took 155 seats and the PC 72; the SCP lost all five of its seats. In the general elections of 30 October 1972, the Liberals lost their parliamentary majority, winning only 109 seats to the PC's 107. The NDP increased its representation from 22 seats to 31, and the *Créditistes*, who had resumed calling themselves the SCP in 1971, won 15 seats. When the NDP decided to support the continuance of Liberal rule, Prime Minister Trudeau formed a new cabinet. The Liberal-NDP alliance collapsed on 8 May 1974 when, for the first time in Canadian history, the government received a vote of no confidence on a budget bill. Elections were called, and the campaign was fought largely on the issue of inflation, with the PC calling for a system of wage and price controls. In the elections of 8 July 1974, the Liberals regained their majority.

In the general elections of 22 May 1979, the Liberals lost to the PC, taking 114 seats of the now 282-seat parliament to the PC's 136, and were unable to form a government in any province. However, on 13 December 1979, the government of Prime Minister Joe Clark was defeated by a Liberal and NDP coalition on a vote of no confidence on a budget bill that called for an increase of 18 cents a gallon in the excise tax on gasoline. Trudeau, who in November had announced his planned retirement, decided to continue as Liberal leader, and again became prime minister after elections on 18 February 1980 gave the Liberals 147 seats. Four years later, on 29 February 1984, Trudeau again announced his impending retirement, and his party chose John Turner as successor. Brian Mulroney became prime minister following a landslide PC victory in the September 1984 elections, which gave the PC 211 seats, the Liberals 40 (their lowest number ever), the NDP 30, and an independent 1. However, the Liberals regained strength over the next year and in 1985 won the Québec general election and, in a coalition with the NDP, ended 42 years of PC government in Ontario.

In 1993, the PC fell from power, primarily due to one of the worst Canadian recessions in nearly 60 years and the failure of the PC government to implement constitutional reforms. Brian Mulroney resigned and was succeeded by Kim Campbell. Liberals soundly defeated the PC in the October 1993 election, with 177 of the 295 seats (up from only 80 in 1988). The PC retained only two of their 157 seats. The Liberal party named Jean Chrétien as the new prime minister.

The Liberal Party's majority in parliament was reduced to 155 in elections called by Chrétien in June 1997. The majority of opposition seats were won by the right-wing populist Reform Party, formed in Alberta in 1988 and led by Robert Manning, which increased its representation to 60 seats, winning broad support in the western provinces. Other party totals were Bloc Québécois,

44; New Democratic, 21; Progressive Conservative, 20; and Independent, 1. In 2000, members of the Reform Party voted to create a broader conservative grouping called the Canadian Alliance, uniting the western-based, populist Reform Party with the eastern-based Progressive Conservatives in an attempt to eventually unseat the dominant Liberals. In 2003, the Canadian Alliance and the Progressive Conservatives disbanded to create the Conservative Party of Canada.

On 12 December 2003, former finance minister and member of the Liberal Party Paul Martin was sworn in as prime minister, ending 10 years of leadership by Jean Chrétien. Parliamentary elections were held in June 2004. The distribution of the vote by percentage and seats was as follows: Liberal Party, 36.7%, (134 seats); Conservative Party, 29.6% (99 seats); New Democratic Party, 15.7% (19 seats); Bloc Québécois, 12.4% (54 seats); Greens, 4.3% (no seats); independents held 2 seats in the new House of Commons.

### **15 LOCAL GOVERNMENT**

Canada is made up of 10 provinces and three territories. Each province has a premier and a legislature. They function like those of the central government. However, the provincial parliaments are unicameral. In each province, the sovereign is represented by a lieutenant-governor appointed by the governor-general. The provinces are empowered to regulate their own affairs and dispose of their own revenues. Civil and property rights, civil law, education, health, labor conditions, licenses, management and sale of public land, municipal government, and direct provincial taxation are within the jurisdiction of the provinces. Although the federal government still exercises considerable authority over the northern territories, they now have elected legislative bodies. In Yukon, the powers of the federal commissioner have been greatly reduced, and the newly formed Nunavut territory, an Inuit homeland, is semiautonomous.

Each province is divided into municipalities, the number and structure of which vary from province to province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario, and Québec the first order of municipalities consists of counties, which are further subdivided into cities, towns, villages, and townships, although there are minor variations. In Newfoundland and the four western provinces there are no counties; municipalities are either rural or urban, the latter being made up of cities, towns, and villages, but again with minor variations. Municipalities are usually administered by an elected council headed by a mayor, overseer, reeve, or warden. Local governments are incorporated by the provinces, and their powers and responsibilities are specifically set forth in provincial laws.

### **16 JUDICIAL SYSTEM**

The civil law follows English common law everywhere except in Québec, where it follows the Napoleonic Code. The main body of criminal law is derived from English sources; most criminal statutes, being federal, are uniform throughout the country. Police magistrates and justices of the peace are appointed by the provincial governments. Civil and criminal courts exist on county, district, and superior levels; all judges of the superior, federal, tax, district, and county courts are appointed for life (but not beyond age 75) by the governor-in-council (the cabinet) and are paid by

the federal parliament. The Supreme Court in Ottawa has appellate, civil, and criminal jurisdiction throughout Canada; its chief justice and eight associate (“*puisne*”) justices (at least three of whom must come from Québec) are appointed by the governor-general. The Federal Court of Canada (formerly the Exchequer Court), organized into trial and appeal divisions, hears cases having to do with taxation, claims involving the federal government, copyrights, and admiralty law. Its appeal jurisdiction includes review of rulings by federal boards and commissions. The Tax Court, with seats in major cities throughout the country, rules on cases involving tax and revenue matters.

The death penalty in Canada was abolished in 1976; that decision was upheld in a vote by the House of Commons in June 1987.

The judiciary is independent of the legislative and executive branches. The Canadian Charter of Rights and Freedoms, part of the 1982 revised constitution, guarantees a number of individual fundamental rights.

Criminal defendants are afforded a wide range of procedural due process protections including a presumption of innocence, a right to counsel, public trial, and appeal.

Canada accepts compulsory jurisdiction of the International Court of Justice with reservations.

### **17 ARMED FORCES**

In 2005 the armed forces numbered 62,000 active and 36,900 reserve personnel. The army (land forces) consisted of 33,000 active and 15,500 reserve personnel. Equipment included 114 main battle tanks, 303 reconnaissance vehicles and 1,278 armored personnel carriers. The air force (air command) had a strength of 14,500 active personnel, and 2,600 reservists with 140 combat aircraft. The navy (maritime command) had 12,000 active personnel and 4,00 reservists, with 4 guided missile destroyers, 12 frigates, and 2 submarines. Major deployments of Canadian troops include Bosnia and Afghanistan. Canadian personnel are also deployed in nine other overseas peacekeeping operations. Paramilitary organizations had 9,350 members and consisted of the Canadian Coast Guard and Department of Fisheries and Oceans. Defense spending in 2004 totaled c\$15 billion.

### **18 INTERNATIONAL COOPERATION**

A Commonwealth nation, Canada became a charter member of the UN on 9 November 1945 and participates in ECE, ECLAC, and several nonregional specialized agencies. A Canadian, Lester B. Pearson, served as president of the General Assembly in 1952/53. Maj. Gen. E. L. M. Burns of Canada was chief of staff of the UN Truce Supervision Organization in the Middle East from August 1954 to November 1956, when UNEF was established, and he served as UNEF commander for the next three years. Canada has contributed to UN peacekeeping efforts in Cyprus (est. 1964), Sierra Leone (est. 1999), and the DROC (est. 1999).

The country is a member of NATO and other intergovernmental organizations, such as the Asian Development Bank, APEC, ASEAN (dialogue partner), OECD, the OSCE, the OAS, and the WTO (1995). Canada participates in G-7, G-8, the Paris Club (G-10), the European Bank for Reconstruction and Development, the Euro-Atlantic Partnership Council, and the Inter-American

Development Bank. The country is an observer in the Council of Europe.

Canada cooperates with the United States in North American defense through the North American Air Defense Command (NORAD). A free-trade agreement with the United States signed in 1988 was extended to include Mexico with the 1992 signing of the North American Free Trade Agreement (NAFTA), creating a free trade bloc among the three countries. The agreement was ratified by the governments of all the countries in 1993 and went into effect the following year. Canada supported joint military actions with the United States in Afghanistan throughout 2002–05, with plans for ongoing support as necessary. Canada is a member of the United Nations, Monitoring, Verification, and Inspection Commission, which was originally established in 1999 as the Special Commission for the Elimination of Iraq's Weapons of Mass Destruction. Though Canada did not participate in the 2003 military coalition in Iraq, it has offered financial support for reconstruction efforts.

Canada is part of Nuclear Energy Agency and the Nuclear Suppliers Group (London Group). In environmental cooperation, Canada is part of the Antarctic Treaty, the Basel Convention, Conventions on Biological Diversity and Air Pollution, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The Canadian economy is the eighth-largest in the world (measured in US dollars at market exchange rates), behind the United States, Japan, Germany, the United Kingdom, France, China, and Italy. The postwar period saw a steady shift from the production of agricultural goods toward increased emphasis on manufacturing and services. The service sector employed three-fourths of the workforce in 2006, compared to only half of the workforce in 1960. Canada is a world leader in the production and export of asbestos, nickel, silver, zinc, uranium, cadmium, cobalt, magnesium, gypsum, molybdenum, potash, aluminum, gold, iron ore, copper, fluorspar, and lead. Although no longer the foremost sector of the economy, agriculture is of major importance to the economy as a whole and still is basic in many areas; Canada is the world's second-largest wheat exporter, after the United States. Canada is also the world's leading producer of newsprint and ranks among the leaders in other forestry products.

Canada in the postwar period changed from a country producing and exporting mainly primary products to one that increasingly produced and exported manufactured goods. In the 1980s, machinery and equipment joined automotive products among the country's leading exports; at the same time, the importance of natural resource products declined (partly reflecting the 1986 collapse of oil prices). However, by 2006, the engines of growth for the Canadian economy—automobiles and high-tech industries—slowed or had shrunk considerably. In their place, such perennial industries as mining had gained in importance. By that year, natural resources, construction, and business services (including work by architects and engineers) were the three fastest-growing sectors of the economy. Natural resources, and particularly energy,

account for more than 60% of Canada's exports. With oil prices high in the mid-2000s, Canada's wealth increased.

Canada was hard hit by the recession of the early 1980s, with interest rates, unemployment, and inflation all running higher than in the United States. The effects of the recession on minerals and manufacturing were especially severe. By the end of 1982, all mining operations in the Yukon were closed, and throughout the country more than 70,000 of 115,000 miners were unemployed. The economy recovered during the mid-1980s, and Canada's economic growth rate was among the highest of OECD countries during 1984–86. However, differences in prosperity among the provinces increased during the 1980s, with the central provinces relatively robust, the western provinces suffering declines in growth because of lower prices for oil and other natural resources, and the Atlantic provinces depressed. Although the 1990s were marked by continued high rates of unemployment and restrained domestic spending, the economy posted an average growth rate in GDP of about 3%. From 2001–05, real GDP growth averaged 2.5%. GDP growth was forecast at 2.7% in 2006 and 2.8% in 2007.

Unemployment was rated at a peak of about 12% in 1992 but had gone down to 8% in 1999. The unemployment rate stood at 7% in 2004, but was considerably lower in rural areas and in the western provinces, where employment in the natural resource sector had increased; blue-collar work grew more rapidly than white-collar employment in urban areas after 2000. As of 2006, the unemployment rate in Alberta was half the national average.

The Canadian economy is highly integrated with the US economy, which absorbed nearly 85% of Canada's exports and was the source of 64% of its imports in 2004. Most Canadians live in a narrow strip north of the US border, which makes them vulnerable to potential US economic and cultural domination.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Canada's gross domestic product (GDP) was estimated at \$1.1 trillion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$32,800. The annual growth rate of GDP was estimated at 2.8%. The average inflation rate in 2005 was 2.3%. It was estimated that agriculture accounted for 2.2% of GDP, industry 29.1%, and services 68.7%.

Foreign aid receipts amounted to \$50 million and accounted for approximately 4.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Canada totaled \$407.97 billion or about \$12,910 per capita based on a GDP of \$856.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 2.8%. Approximately 14% of household consumption was spent on food, 10% on fuel, 4% on health care, and 21% on education. It was estimated that in 2003 about 15.9% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Canada's labor force numbered an estimated 17.35 million workers. In 2004, the service sector accounted for 75% of all workers, with 14% in manufacturing; 2% in agriculture, 5% in construction, and the remaining 3% in various other occupations. The rate of unemployment was estimated at 6.8% in 2005.

In 2005, about 30% of the civilian workforce was unionized. All workers have the right to strike except those in essential services.

Child labor legislation, standard work hours, and minimum wage rates vary from province to province. Most provinces prohibit employment for children under the age of 15 or 16 from working without parental consent, at night, or in hazardous conditions. However, Alberta allows minors between the ages of 12 and 14 to work for limited periods in certain sectors of the economy, without a permit from the director of employment standards. In British Columbia minors between 12 and 14 can be employed with the written consent of the parent or guardian. The province also allows children under 12 to be employed in "exceptional circumstances," such as in the entertainment industry, with the permission of the director of employment standards.

All provinces limit the regular workweek to 40 or 48 hours, with at least 24 hours of rest. Minimum wage rates in 2005 ranged from c\$5.90 to c\$8.00 per hour. A family with only one wage earner at the minimum level would fall below the poverty line. Federal and provincial laws effectively protect the health and safety of workers.

## 2<sup>2</sup> AGRICULTURE

Until the beginning of the 1900s, agriculture was the predominant occupation, and farmers and their families made up the majority of the population. Since then, however, the farm population has been shrinking both relatively and absolutely. Even in Saskatchewan, the province with the highest proportion of farm population, farm families account for no more than 25% of the total population. For Canada as a whole, agriculture engaged only 2.1% of the economically active population in 2000. Farm production continues to increase, as have the size of holdings, crop quantity, quality and variety, and cash income. Canada is still one of the major food-exporting countries of the world; agriculture engages about 362,000 people and generates about 2% of GDP. Farm cash receipts for crops totaled almost c\$14.5 billion in 2004, or 40% of total farm receipts.

Of Canada's total land area, about 5% is classified as arable land; another 3% is considered as permanent pasture land. More than 90% of the cultivated area is in the three prairie provinces. The trend is toward fewer and larger farms and increased mechanization and specialization. Ontario and Saskatchewan together account for about half of all farm cash receipts. Sale of field crops provide more than 50% of farm cash income in the prairie region, but less than 10% elsewhere in Canada.

The estimated harvest of principal field crops in 2004 (in thousands of tons produced per thousand hectares) was wheat, 25,860 produced on 9,862; barley, 13,186 on 4,050; corn, 8,388 on 1,072; oats, 3,680 on 1,320; and rapeseed (canola), 7,728 on 5,564.

Formerly, Canada imported only such items as could not be grown domestically—coffee, tea, cane sugar, spices, and citrus fruits—while exporting large surpluses of wheat, barley, and live-

stock. However, food imports have risen sharply in recent years. Nevertheless, Canada remains a significant food exporter; in 2004, Canadian grain exports totaled 18,984,000 tons, fifth after the United States, France, Australia, and Argentina.

Federal and provincial departments of agriculture provide guidance and aid to farmers in almost every field of operation. Activities include research and experimentation, protection of animals and crops, irrigation and reclamation, and price stability and farm credit measures. The government can stabilize the price of any agricultural product (except wheat, for which separate provision is made) by outright purchase or by supporting the market with guarantees or deficiency payments.

The departments of agriculture apply fundamental scientific research to soil management and crop and animal production, promote agricultural production, and enact financial measures to ensure greater stability of the farm economy. Long-term and short-term mortgages are made available; other loans are granted for equipping, improving, and developing farms. Various federal acts assist the marketing of produce. Governments, working with product organizations, also set limits on the production of milk, eggs, tobacco, chicken, and turkey meat. Price supports may be given to any designated natural or processed product but are mandatory for cattle, sheep, hogs, dairy products, wheat, oats, and barley. Farmers who have suffered severe crop losses through drought may obtain compensation, and prairie farmers who cannot deliver all their grain to market are given temporary financial assistance. The rail freight rates paid by western farmers to ship their grain to eastern markets, basically unchanged since 1897, increased five-fold between 1983 and 1991. The increase, partially subsidized by the federal government, would pay for improvements in the western rail system.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Canada traditionally exports livestock products, producing more than the domestic market can use. Animal production (livestock, dairy products, and eggs) now brings in about half of total farm cash income. Stock raising is the foundation of agricultural economy in the foothills of the Rockies, across northern Alberta and Saskatchewan and southern Manitoba, on the interior plateaus of British Columbia, in the Georgian Bay district of Ontario, in Prince Edward Island, and in western Nova Scotia. One of the great ranching sections is located in the Palliser Triangle of southern Saskatchewan and Alberta.

Livestock on farms in 2004 numbered 14,660,000 head of cattle; 14,623,000 pigs and hogs; 1,005,000 sheep; and 160 million chickens. In 2004, meat production included 1,460,000 tons of beef, 1,930,000 tons of pork, and 16,100 tons of mutton and lamb. Poultry production totaled 969,716 tons. Milk production in 2004 was 8 million tons; butter production amounted to about 88,400 tons, and cheese production to 366,355 tons. Most dairy products are consumed within Canada. In 2004, 376,560 tons of eggs were produced. Cash receipts in 2004 for cattle amounted to c\$5,069 million; for dairy products, c\$4,598 million; for hogs, c\$4,261 million; and for poultry, c\$1,845 million.

The wild fur catch, which was important in Canada's early history, is now limited to the northern parts of the provinces, Nunavut, the Northwest Territories, and the Yukon. In 2003, the value

of fur production totaled c\$103.6 million, with ranch-raised pelts accounting for 82% and wildlife pelts for 18%.

## 24 FISHING

With a coastline of nearly 29,000 km (18,000 mi) and a lake-and-river system containing more than half the world's fresh water, Canada ranked 20th among the world's major fish producers in 2003 and was the world's fifth-leading exporter of fresh, chilled, and frozen fish by value. That year, Canada exported \$3.3 billion in fishery commodities, accounting for 15.8% of agricultural exports.

Two of the world's great fishing grounds are located off Canada. One lies along the Atlantic coast of the Maritime provinces, and in this region the Grand Banks of Newfoundland constitute the largest area. More than one billion pounds of cod, haddock, halibut, pollock, and other fish are caught every year along the Atlantic in deep-sea and shore operations. Most of the cod and about a third of the total catch is dried and salted for export to Mediterranean and Latin American countries; another third is sold fresh; the rest is canned. Vast numbers of lobsters and herring are caught in the Gulf of St. Lawrence and the Bay of Fundy. The other great fishing region includes the bays, inlets, river mouths, and fjords of British Columbia. Salmon, the specialty of the Pacific fisheries, is canned for export and constitutes the most valuable item of Canadian fish production. Also exported are fresh halibut and canned and processed herring. Other important export items are whitefish, lake trout, pickerel, and other freshwater fish caught in the Great Lakes and some of the larger inland lakes. Feed and fertilizer are important by-products.

Canada's total fish and seafood landings were estimated at 1,229,925 tons in 2003, of which all but 45,876 tons were from marine fishing. Pelagic species and other finfish (primarily salmon and herring) accounted for 33% of the 2003 marine catch; shellfish (mostly shrimp, oysters, and crabs), 42%; and groundfish (mostly hake and redfish), 25%. The United States imported about 58% of Canada's fish product exports by volume in 2003. Japan is the second most important market for fish exports.

Canadian aquacultural production in 2003 consisted of 151,264 tons, primarily salmon. Canada's aquaculture industry faces many federal and provincial regulatory impediments that restrict its growth, such as regulations on the introduction and transfer policy of new species and salmon tagging. However, in 2002, the British Columbia government announced that new environmental standards would allow for a managed expansion of salmon aquaculture, ending a moratorium on fish farms in effect since 1995. In 2004, gross output of aquaculture amounted to c\$726.1 million, primarily from British Columbia and New Brunswick.

The government protects and develops the resources of both ocean and inland waters and helps expand the domestic market for fish. It extends loans to fishermen for the purchase of fishing craft. Canadian-US action has helped restore Pacific salmon runs and halibut stocks and the Great Lakes fisheries, but pollution represents a threat to freshwater sport fishing, especially in Ontario.

## 25 FORESTRY

Canada's National Forestry Database (CNFD) reports total forestland area at 417.6 million hectares (1,031.9 million acres), equivalent to 42% of the total land area. Only about 6% of Canada's

forests are privately owned. Of the 94% under crown (public) control, provincial governments manage 71% and the federal government manages 23%. Some 9.6 million hectares (23.7 million acres) of the public forest land are for uses other than timber production, including parks, game refuges, water conservation areas, and nature preserves. Most of the provincial crown forestland is in Québec, British Columbia, and Ontario. The crown forests are leased to private individuals or companies. Each province and territory regulates and controls the harvest rate on crown land through an allowable annual cut.

In 2003, an estimated 194.7 million cu m (6.9 billion cu ft) of roundwood was harvested. Canada ranks as the third-largest producer of coniferous wood products (after the United States and Russia), and is the leading supplier of softwood products to world markets. Chief forest products in eastern Canada are pulp and paper manufactures, especially newsprint. Canada leads the world in newsprint production, with 8,201,000 tons in 2004, accounting for 21% of the world's production. Exports of newsprint were valued at over c\$4 billion, with about three-fourths going to the United States. In the west, the chief product is sawn timber. The value of Canada's forestry exports in 2003 amounted to over \$24 billion, or 16% of the world's forestry exports that year. In 2003, production for leading export commodities included: sawnwood, 57.5 million cu m (2 billion cu ft); wood pulp, 26.2 million cu m (925 million cu ft); industrial roundwood, 191.7 million cu m (6.8 billion cu ft); wood-based panels, 16.7 million cu m (590 million cu ft); and paper and paperboard, 20.1 million tons. About 75% of forestry exports are sent to the United States. Exports of wood products contribute about 14% to the value of all Canadian exports.

Other well-known Canadian forestry sector products include Christmas trees and maple syrup. Québec accounts for about 35% of the annual Christmas tree production and 90% of maple syrup production.

With such a large annual forestry output, conservation and reforestation are stressed. Both government and industry promote improvements in management practices and in the use of forest products. New manufacturing methods permit the use of inferior classes of wood. The government estimated there were 5,400 forest fires in 2000, 57% due to human activities.

## 26 MINING

The world's largest exporter of minerals and metals, Canada's mining sector was considered a pillar of the economy and a way of life for Canadians. Canada was the leading producer and exporter of potash (world's largest and richest reserves), the leading supplier of uranium, the second-largest producer of asbestos (possibly the largest deposits) and sulfur (17% of world output and 38% of world trade), the third-largest in titanium, platinum-group metals (PGMs) and mine zinc, fourth in aluminum (from imported oxide), fifth in copper, lead, silver, and gold, and among the leading producers of nickel, salt, and nitrogen in ammonia. Yet, the country only recently began to fully develop many of its most important mineral resources, and resources developed earlier continued to display great growth potential. This was reaffirmed by discoveries such as the huge and rich nickel, copper, and cobalt deposit

at Voisey's Bay, and the Ekati diamond mines—diamond was expected to be the most sought-after mineral in the country.

The production, by value, of minerals, metals, and coal in 2003, totaled us\$14.4 billion, up 1.2% from 2002. In addition, Canada's minerals industry played an integral part in Canada's new-technology-driven and knowledge-based economy. The value of non-fuel minerals production increased to us\$13.4 billion in 2003, up 2.3% from 2002.

In terms of value, the top nonfuel mineral commodities in 2003 were: gold us\$1.6 billion; nickel, us\$1.4 billion; diamonds us\$1.2 billion; cement, coal, and potash, at us\$1.1 billion each; iron ore us\$1.0 billion; copper, us\$929 million; sand gravel, and stone us\$714 million each; and zinc, us\$643 million. Exports of minerals, and mineral products (excluding crude oil and natural gas), and metals (including smelted and refined), totaled us\$35.3 billion in 2003.

Mined nickel (metal content) output in 2003 was 162,756 metric tons. The world's biggest newsmaker in nickel continued to be Inco Ltd.'s nickel-copper-cobalt project at Voisey's Bay. Proved reserves at the site totaled 30 million tons (2.85% nickel and 1.68% copper); indicated resources were 54 million tons (1.53% nickel, 0.70% copper); inferred resources, 16 million tons (1.60% nickel, 0.80% copper).

Gold output in 2003 was 140,559 kg, down from 151,904 kg in 2002. Gold has lost some of its luster. Three mines opened, while 13 closed, a result of low gold prices and/or depletion. Operating mines accounted for 92.5% of Canada's output, with the remainder coming from 19 base-metal mines (gold as a by product) and a number of placers. Ontario produced 49% of Canada's gold, followed by Québec at 21%, British Columbia at 15% and Manitoba at 4%, with the remaining provinces and territories accounting for the remainder.

Mined zinc output (metal content) was 788,328 metric tons in 2003, down from 923,931 metric tons in 2002. Zinc prices remained depressed in 2003 as a result of continued poor demand in Japan, slow growth in Europe, and increased mine production worldwide. The country's proven and probable reserves totaled 10.2 million tons, 35% of which was in New Brunswick.

Mined copper output (metal content) was 534,287 metric tons in 2003, down from 584,195 metric tons in 2002. Proven and probable reserves for the country totaled 8.4 million tons, 50% of which was in Ontario, and 35% in British Columbia.

The output of iron ore and concentrate (metal content) was 32,957,000 tons in 2003, up from 30,902,000 tons in 2002. Exploration continued in Roche Bay (Northwest Territories), the Peach River area of Alberta, and Ungava Bay and Schefferville (Québec). Total proven and probable reserves in Canada were 1,261 million tons.

Mined silver output (metal content) was 1,309,274 kg, down from 1,407,558 kg in 2002. Silver, the value of whose output dropped by almost 7% in 2003 versus 2002, was mainly a by-product of base-metal and gold mining. Proven and probable reserves in Canada totaled 15,738 tons.

Lead output (metal content) was 81,268 metric tons, down from 101,330 metric tons in 2002. Proven and probable reserves amounted to 1.85 million tons; 76% were in New Brunswick. In addition, Canada mined the metals antimony, arsenic trioxide, bismuth, cadmium, magnesium, molybdenum (121,000 tons of

proven and probable reserves, all in British Columbia), pyrochlore, selenium, spodumene, tantalite (from Niobec, the world's third-largest producer, and the only operating columbium mine in North America), tellurium, and titanium. Calcium may have been produced as well.

Among industrial minerals, diamonds have been attracting much attention. Total output was 11.2 million carats in 2003, up 127% from 4.937 million carats in 2002. By value, diamond production in 2003 totaled us\$1.2 billion versus us\$552 million in 2002. Canada's first commercial production of diamonds—by BHP Diamonds Inc., in the Ekati Mine—began in 1998, when production totaled 300,006 carats; 2000 was Ekati's first full year of operation, and it has become a factor in world markets. BHP Diamonds reported that the quality of diamonds recovered from the five kimberlite pipes at its Lac de Gras property, northwest of Yellowknife, compared favorably with the best pipes in the world. De Beers, which bought 35% of Ekati's output, has discovered 220 kimberlites, several of which had the potential to become diamond mines; one, the Snap Lake project, is due to start production in 2008, and is De Beers's first mine outside of Africa. Diavik Diamond Mines Inc.'s Diavik Mine began production in January 2003. At least 90% of Diavik's output is estimated to be of gem quality. More than 500 companies have been exploring for diamonds, on an off and on basis. The First Canadian Diamond Cutting Works, in Montréal, became the country's first fully integrated cutting and polishing factory, with the aim of handling Canada's diamond production at lower cost than European competitors; artisans came from Belgium.

Potash output was 9,131,000 tons in 2003, up by 9.2% from 8,361,000 tons in 2002. However, potash output by value increased only slightly in 2003 from 2002, to around us\$1.65 billion versus us\$1.63 billion. The 63%-government-owned Potash Corp. of Saskatchewan Inc. was the largest publicly held potash producer in the world, with an annual capacity of 8.2 million tons, 61% of Canada's total capacity. An area extending from central Saskatchewan southeast into Manitoba was probably the largest and richest reserve of potash in the world, and could probably supply all the world's needs for 1,000 years. Known national reserves amounted to 14 billion tons.

Asbestos output in 2003 was 240,500 metric tons, down slightly from 242,241 metric tons in 2002. The world's largest deposits of asbestos (including chrysotile, crocidolite, and amosite) were believed to be in a region of eastern Québec that included the Black Lake open pit and the Bell underground mines and the town of Asbestos. The nation's proven and probable reserves of fiber asbestos totaled 35.8 million tons.

Output totals for other industrial minerals in 2003 were: salt, 12,390,000 tons, with 264 million tons of proven and probable reserves; sulfur, 8,509,000 tons, with 130 million tons of proven and probable reserves; nitrogen (content of ammonia), 3,440,000 metric tons; and sand and gravel, 235,574 tons. In addition, Canada produced amethyst, anhydrite, barite, brucite, hydraulic cement, clay and clay products, diatomite, dolomite, gypsum (482,000 tons of proven and probable reserves), jade, lime, mica (scrap and flake), nepheline syenite, pyrite, pyrophyllite, pyrrhotite, silica (quartz), soapstone, sodium carbonate (soda ash), natural sodium sulfate (81.3 million tons of proven and probable reserves),

and stone (including crushed, building, ornamental, and paving). Canada also had capacities to produce graphite and limestone.

Mining has been conducted in Canada since the seventeenth century, but the remarkably rapid development of mineral exploitation dates from the end of World War I. Petroleum has been found in the Midwest; iron ore deposits in Labrador, Québec, and Ontario; and uranium in Ontario and Saskatchewan. Ontario led the provinces, producing 30.8% of nonfuel mineral commodities, followed by Québec (19.5%), Saskatchewan (11.9%), and British Columbia (11.2%).

Land use, which had not been given much attention, has become an issue, with First Nation rights receiving consideration. Canada's provincial governments regulated most aspects of exploration and mining, and the exceptions, the Yukon Territory and the Northwest Territories, have been accumulating more independent powers. Federal agencies recently became able to review mining activity for environmental impact. Exploration for metals and petroleum has tended to move north in recent years, into the new territory Nunavut, which was created in 1999 out of the Northwest Territories; Nunavut included Baffin, Ellesmere, and the Queen Elizabeth islands, one-fifth of Canada's landmass. The Inuit have generally been receptive to mining proposals, including the new Nanisivik lead-zinc mine on Baffin Island, north of the Arctic Circle.

The Standards of Disclosure for Mineral Projects, which was to be enacted in 2001, covered all technical public disclosure on mineral projects and was intended to preserve Canada's preeminent position in world mining, exploration, development, and financing. The mineral industry consisted of 3,000 domestic and 150 foreign companies; 10% were actively engaged in mining; the rest were engaged in exploration, in advanced stages of development, or dormant, in search of financing. More than 200 mine sites, including coal sites, were active, and 3,000 mines and quarries produced sand, gravel, and other construction materials. Total employment in mining and mineral manufacturing in 2000, including coal, was 400,000, and 55,750 were employed in coal, metal, and nonmetal mining and quarrying. Most of the mineral industry was privately owned; an exception was government participation in potash and petroleum, which were transitioning to private ownership. Mining had the prospect of diversifying and strengthening Canada's economy. Canada was well positioned in terms of its mineral-resource base and its access to markets in the United States.

## 27 ENERGY AND POWER

Abundantly endowed with fossil fuels and hydroelectric resources, Canada was the world's seventh-leading energy producer, as of 2004. Energy production is exceeded only by manufacturing as a percent of Canada's gross domestic product (GDP).

In the late 1990s, Canada's oil industry made a strong recovery from low prices in the preceding years. Petroleum production in quantity began in 1947 with the discovery of oil 29 km (18 mi) south of Edmonton. Output of oil in 2004 was estimated at 3.1 million barrels per day (2.4 million barrels per day was crude oil). Canada's oil reserves were estimated in 2005 to total 178.8 billion barrels, of which 95% are oil sands. Petroleum is now the largest single contributor to mineral output. Heavy crude oil is produced entirely in western Canada, with 60% coming from Alberta

and 40% from Saskatchewan. It is transported to eastern Canada and the United States through two major oil pipeline systems, both originating at Edmonton; one extends east to Toronto, and the other southwest to Vancouver and the state of Washington. On the east coast of Canada, oil exploration has been focused on the Jeanne d'Arc Basin off Newfoundland. Terra Nova, the second major project in the region, began production at the beginning of 2002, with a capacity of 115,000 barrels per day over six years. The White Rose oil field, in the same basin, was expected to become operational in 2004. There are potentially up to 300 billion barrels of synthetic crude oil available from western Canada's oil sands. Reserves at Athabasca in northern Alberta are among the world's two largest oil sand deposits.

Canadian natural gas reserves were estimated at 56.6 trillion cu ft as of 1 January 2005. Natural gas production was estimated in 2002 to have totaled 6.6 trillion cubic feet, and according to British Petroleum (BP), to have totaled 182.8 billion cu m in 2004. Gas production is mostly centered in Alberta, which accounts for about 80%. The 3,017 km (1,875 mi) Alliance Pipeline, which carries natural gas from western Canada to the Chicago region, is the longest pipeline in North America.

Canada ranks among the top producers of electric power in the world and first in the production of hydroelectricity. In 2002, Canada's installed capacity was estimated to have reached 111.0 million kW. In that same year, Canada generated an estimated total of 548.9 billion kWh of electricity, of which: 57% came from hydropower sources; 28% from conventional thermal; and 13% from nuclear sources, with geothermal making up the remainder. The marked trend toward the development of thermal stations, which became apparent in the 1950s, is due in part to the fact that most of the hydroelectric sites within economic transmission distance of load centers have already been developed. When the Churchill Falls project reached completion in 1974, the capacity of the plant was 5,225 MW, making it, at the time, the largest single generating plant of any type in the world. It has since been surpassed by Hydro-Québec's 5,328 MW generator, the first completed station of the massive James Bay project. Electricity consumption was estimated in 2002 to have totaled 487.3 billion kWh.

Low-cost electricity generated from waterfalls and fast-flowing rivers has been a major factor in the industrialization of Québec, Ontario, and British Columbia, most significantly in the establishment of metal-smelting industries. In other areas, hydroelectric power is not as abundant, but all provinces have turbine installations. As of 2002, Canada's hydroelectric resources still included substantial untapped potential.

Atomic Energy of Canada Ltd. is responsible for research into reactor design and the application of nuclear power in the electric power field. In 1962, commercial electric power was first generated in Canada by a nuclear reaction when the Nuclear Power Demonstration Station at Rolphton, Ontario, became operative. Canada's first full-scale nuclear power station, completed in 1956 at Douglas Point on Lake Huron, produced its first power early in 1967. Nuclear power production declined from 102.4 billion kWh at its peak in 1994 to 69.8 billion kWh in 2000. However, in 2002, Canada's output of electrical power from nuclear sources rose to 71.750 billion kWh. In 1999, Canada had 14 nuclear reactors operating at five power facilities. Spurred by a desire to meet its obligations under the Kyoto Protocol, which Canada has signed, plans

were put forth in 2004 by the government to build a new nuclear power plant in Ontario. It would be the first such plant in two decades.

Coal production in 2002 is estimated to have reached 73.2 million short tons in 2002, with reserves estimated at 7.3 billion short tons, for that year. About 90% of coal consumption is for electricity generation, and most of the remainder is for steel production. The increase in total output since 1970, especially the increased output from Alberta and British Columbia, is almost entirely due to the growth of the Japanese and South Korean export markets. In eastern Canada, however, domestic coal must be augmented by US coal imports.

## 28 INDUSTRY

Industry accounted for 26.4% of GDP in 2004, with approximately 15% of the labor force employed in manufacturing and 5% in construction. The leading industrial sectors are foods and beverages, transport equipment, petroleum, natural gas, coal products, paper and paper products, primary metals, chemicals, fabricated metals, electrical products, and wood products.

Canada's automotive industry is the nation's largest manufacturing sector, accounting for 12% of manufacturing GDP and 25% of manufacturing trade. It employs more than 170,000 people in automotive assembly and component manufacturing, and nearly 335,000 people in distribution and aftermarket sales and service. Canada in 2005 manufactured approximately 2.5 million passenger and commercial vehicles. Canada currently ranks eighth in the world in motor vehicle production. Canada's automotive sector is closely integrated with that of the United States.

More than 150 communities in Canada depend on mining. Canada is one of the largest mining nations in the world, producing more than 70 minerals and metals. Exports of minerals and mineral-based products are close to \$50 billion a year, averaging 13% of Canada's total domestic exports. (These figures include all minerals and mineral products excluding oil and natural gas.) The production of fabricated metals is one of Canada's leading industries, with about 50 nonferrous smelters, refineries, and steel mills in operation.

Of the total manufacturing output, about half is concentrated in Ontario, which not only is the center of Canadian industry but also has the greatest industrial diversification. Some important industries operate there exclusively. Québec ranks second in manufacturing production, accounting for some 25% of the value of Canadian manufactured goods. British Columbia ranks third. Manufacturing is also the leading industry in Manitoba, New Brunswick, Nova Scotia, and Newfoundland.

## 29 SCIENCE AND TECHNOLOGY

In 2000, Canada had 3,487 researchers and 1,105 technicians per million people actively engaged in scientific research and development (R&D). In 2004, Canadian R&D expenditures were provisionally set at c\$24.487 billion. Of that amount, 46.2% came from business, with 35.4% from government sources. Higher education accounted for 17.8%, with foreign sources and private nonprofit organizations accounting for 7.9% and 3.2%, respectively, in that

same year. In 2002, high technology exports totaled \$22.662 billion, or 14% of manufactured exports.

The Ministry of State for Science and Technology, established in 1971, is the chief federal policymaking body. In 1986, the National Advisory Board for Science and Technology, chaired by the prime minister, was created, and merged with the ministry. In the following year, a National Science and Technology Policy (NSTP) was approved by ministers of the federal, provincial, and territorial governments. The NSTP has emphasized a strong push linking national research to national needs.

The Royal Society of Canada, founded in 1882 and headquartered in Ottawa, is the most prestigious learned society; there are 53 specialized societies in the fields of agriculture, medicine, science, and technology. The National Research Council of Canada, founded in 1916 and headquartered in Ottawa, coordinates research and development in the country; one of its major facilities is the Dominion Astrophysical Observatory, established in 1918 at Victoria, British Columbia. The Geological Survey of Canada (founded in 1842) is headquartered in Ottawa.

The National Museum of Science and Technology in Ottawa, founded in 1967, shows Canada's role in science and technology. The Ontario Science Centre, established in North York in 1965, has over 800 exhibits. In 1996, Canada had 49 universities offering courses in basic and applied science. In 1987–97, science and engineering students accounted for 16% of college and university enrollments. In 2000, of all bachelor's degrees awarded, 20% were in science (natural sciences, mathematics and computers, and engineering).

## 30 DOMESTIC TRADE

Wholesalers' and manufacturers' sales branches are the most prominent wholesale and distribution agencies. Wholesaling is particularly prominent in foodstuffs, lumber and building supplies, hardware, coal, clothing, dry goods, automotive equipment, and machinery. In producer goods, however, direct relations are often maintained by resident or traveling agents.

Large-volume outlets, including department stores, large mail-order houses, and chain stores, often buy direct from the manufacturer. A wide variety of local and imported goods is available in all major towns and cities. Vast indoor shopping complexes have been developed in the larger cities, including Eaton Centre in Toronto with over 300 stores and the West Edmonton Mall in Alberta. A 7% goods and service tax (GST) applies to most consumer products and services.

Due to Canada's size and its regional economic differences, distribution is essentially regional. Toronto and Montréal dominate merchandising, are the headquarters of much of Canada's trade and financial apparatus, and do by far the greatest share of import business. Winnipeg is the business center for grain and agricultural implements. Vancouver is the center of the growing British Columbia market. As of 2006, about three-quarters of the labor force was employed in the service industry, which accounted for some 70% of the GDP.

There is considerable advertising overflow from the United States. Business hours are 9 AM to 5 PM, Monday through Friday. Shopping hours are 9:30 AM to 6 PM, Monday through Saturday; many stores stay open to 9 PM on Thursday and Friday nights and have Sunday hours. Normal banking hours are from 10 AM to 4:30

PM, Monday through Thursday, and from 10 AM to 5 or 6 PM on Fridays. Some banks are open on Saturday mornings.

**31 FOREIGN TRADE**

Canada's exports are highly diversified; the principal export groups are industrial goods, forestry products, mineral resources (with crude petroleum and natural gas highly important), and agricultural commodities. Imports are heavily concentrated in the industrial sector, including machinery, transport equipment, basic manufactures, and consumer goods. Trade balances are almost invariably favorable.

In 1989, the United States and Canada signed a free trade agreement; and in 1994 the United States, Canada, and Mexico signed the North American Free Trade Agreement (NAFTA). Currently, trade between the United States and Canada is essentially unhindered. In fact, the US-Canada trade relationship is the largest such economic association in history.

Cars, trucks, and automobile parts were the second-largest exports of Canada in 2004 (totaling 21.1%), behind machinery and equipment (21.3%). Wood, paper, and paper products follow Canada's vehicle exports closely. Canada's leading markets in 2004 were the United States (88.4% of all exports), Japan (2.1%), the United Kingdom (1.7%), and China (1.7%). Canada's leading suppliers in 2004 were the United States (64.5% of all imports), China (7.5%), Mexico (4.2%), and Japan (4.1%).

**32 BALANCE OF PAYMENTS**

Canada's merchandise balances, although fluctuating, showed consistent surpluses between 1961 and 2005, except for 1975. These, however, were offset by persistent deficits from other transactions. Sources of these deficits include Canada's indebtedness to other countries, travel of Canadians abroad, payments for freight and shipping, personal remittances, migrants' transfers, official contributions, and other Canadian government expenditures abroad.

In 2000, Canada recorded a current account surplus of US\$12.8 billion, the first such surplus since 1996. Merchandise trade was responsible for most of the improvement, in part due to the then-thriving US economy, which received 86% of Canada's total merchandise exports. Canada at that time received 22% of total US

merchandise exports, making it the largest single-country export market for the United States.

Merchandise exports on a balance-of-payments basis rose by 7.2% to c\$429 billion in 2004 as growth in the US economy remained strong and bilateral trade with China increased exponentially. Merchandise imports rose by 6% to c\$363 billion. The merchandise trade surplus rose to c\$66.1 billion in 2004 from c\$57.6 billion in 2003. In 2004, the current-account balance amounted to US\$28.2 billion. From 2001-05, the current-account balance averaged 1.9% of GDP.

**33 BANKING AND SECURITIES**

The Bank of Canada, which was established in 1934, is a government-owned institution that regulates the total volume of currency and credit through changes in the cash reserves of eight domestic chartered banks and 45 foreign bank subsidiaries. The Bank of Canada also acts as the government's fiscal agent, manages the public debt, and has the sole right to issue paper money for circulation in Canada. It is empowered to buy and sell securities on the open market, to fix minimum rates at which it will make advances, and to buy and sell bullion and foreign exchange.

The Federal Business Development Bank, established as the Industrial Development Bank in 1944 as a subsidiary of the Bank of Canada, has operated as a separate entity since 1974. It does not engage in the business of deposit banking but supplements the activities of the chartered banks and other agencies by supplying medium- and long-range capital for small enterprises.

The eight domestic chartered banks are commercial and savings banks combined, and they offer a complete range of banking services. Canada's banks were reorganized in 1992 under the Banking Act. Every 10 years the banks' charters are subject to renewal and the Banking Act is revised to keep abreast of changing trends, a practice unique to Canada. The banks were reorganized into Schedule I and II banks. The Schedule I banks are

banks whose ownership is public. No one shareholder in Schedule I banks controlled more than 10% of the shares until the law was revised in 2000. Schedule II banks are subsidiaries of foreign or domestic banks that are held privately or semiprivately. In 1999, foreign banks were given the right to operate branches in the full-service and lending sectors. Schedule I banks include the Bank of Montréal, Bank of Nova Scotia, Canadian Imperial Bank of Commerce, Canadian Western Bank, Laurentian Bank of Canada, National Bank of Canada, Royal Bank of Canada, and the Toronto-Dominion Bank of Canada.

Canada's four biggest banks—Royal Bank of Canada (RBC), Canadian Imperial Bank of Commerce (CIBC), Bank of Montréal, and Bank of Nova Scotia—were all among the top 10 in North America in the 1980s. In 1997, only RBC and CIBC qualified. The Canadian banks began in mid-1996 to speak out in favor of liberalized ownership rules if they were to maintain their competitive edge. In October 1996, the Bank of Montréal chairman, Matthew Barrett, said domestic banks should have the freedom to merge, and that serious thought should be given to dropping the 10% ownership limit. In 1999, banks with equity of over c\$5 billion were allowed to merge, and the ownership limit was raised to 20% on vote-taking shares, and 30% on nonvote taking shares. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to us\$163.9 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was us\$463.9 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.11%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 2.5%.

The Toronto Stock Exchange (TSE) was founded in 1852 and incorporated in 1878. The Standard Stock and Mining Exchange, incorporated in 1908, merged with it in 1934. Its members have branch offices in principal Canadian cities and in some US financial centers.

The Montréal Stock Exchange was incorporated in 1874. In 1974, it merged with the Canadian Stock Exchange, which was organized in 1926 as the Montréal Curb Market. Other securities exchanges were: the Winnipeg Stock Exchange, founded in 1903; the Vancouver Stock Exchange, founded in 1907; and the Alberta Stock Exchange (formerly Calgary Stock Exchange), founded in 1913.

In 1999, the TSE took over all senior equity exchanges from the Montréal market. Also in that year, the TSE and the Canadian Venture Exchange combined to create the TSX Group. The Vancouver and Alberta stock exchanges also merged to form the Canadian Equities Exchange, handling only junior exchanges. As of 2004, there were 3,597 companies listed by the TSX Group. Total market capitalization as of December 2004 stood at \$1,177.518 billion. The TSX in 2004 was up 12.5% from the previous year at 9,246.7.

### 34 INSURANCE

Of the billions of dollars worth of coverage that Canadians buy every year, most is either life and health insurance or property and casualty insurance. Canadians buy more life and health insurance on a per capita basis than any other group except the Japa-

nese (the United States is third). Compulsory insurance for Canadians includes automobile insurance and workers' compensation, on which the government holds a monopoly. Manitoba, British Columbia, Québec, and Saskatchewan also operate a monopoly on primary automobile policies.

Since 1978, the Canadian property and insurance market has continued to experience underwriting losses. The return on equity fell to 13.1% in 1997, to 6.8% in 1998, and to 5.4% in 1999. Since the industry continues to pay more in claims and expenses than it earns in premium revenue, overall profitability is ultimately determined by revenues generated from investment earnings. A high rate of natural disasters coupled with a low rate of crime in 1999 influenced industry intake. In 2000, government restructuring of the financial sector refused to allow bank branches to distribute insurance policies, supporting the insurance industry. In 2003, direct premiums written in Canada totaled us\$59.144 billion, of which us\$36.303 billion was nonlife insurance and us\$22.841 billion life insurance. In that same year, ING Canada was the country's top nonlife insurer, with gross written nonlife premiums of us\$2,119.0 million, while Sun Life of Canada was the nations top life insurer, with gross written life insurance premiums (excluding segregated funds) of us\$2,495.8 million.

### 35 PUBLIC FINANCE

By far the largest item of expenditure of the federal government is for social services, including universal pension plans, old age security, veterans benefits, unemployment insurance, family and youth allowances, and assistance to disabled, handicapped, unemployed, and other needy persons. Through the early 1970s, federal budgets remained relatively in balance, fluctuating between small surpluses and small deficits. Since then, however, the budget has been in continuous and growing deficit. The federal debt rose from 18% of GDP in 1974 to 70% of GDP in 1993, and about 65% in 1999. Government options to reduce the deficit are constrained by the high level of nondiscretionary spending in the federal budget. Sources

#### Public Finance – Canada (2003)

(In billions of Canadian dollars, central government figures)

<b>Revenue and Grants</b>	<b>240.98</b>	<b>100.0%</b>
Tax revenue	168.71	70.0%
Social contributions	57.98	24.1%

of provincial revenue include various licenses, permits, fines, penalties, sales taxes, and royalties, augmented by federal subsidies, health grants, and other payments. Federal grants and surpluses and federal payments to the provinces under the federal-provincial tax-sharing arrangements constitute a major revenue source of the provinces. Corporation and personal income taxes provide a considerable portion of the revenue of Québec. The largest provincial expenditures are for highways, health and social welfare, education, natural resources, and primary industries. Real property taxes account for more than two-thirds of revenue for municipalities and other local authorities. Almost one-third of their expenditures go to supporting local schools.

The US Central Intelligence Agency (CIA) estimated that in 2004 Canada's central government took in revenues of approximately us\$159.6 billion and had expenditures of us\$152.6 billion. Revenues minus expenditures totaled approximately us\$7 billion. Public debt in 2005 amounted to 68.2% of GDP. Total external debt was us\$600.7 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in billions of Canadian dollars were 240.98 and expenditures were 224.4. The value of revenues in millions of US dollars was \$172 and expenditures \$159, based on a market exchange rate for 2003 of 1.4011 as reported by the IMF. Government outlays by function were as follows: general public services, 30.3%; defense, 5.8%; public order and safety, 3.0%; economic affairs, 6.0%; environmental protection, 0.6%; housing and community amenities, 1.3%; health, 2.7%; recreation, culture, and religion, 1.5%; education, 2.1%; and social protection, 46.6%.

### 36 TAXATION

As with most industrialized democracies, Canada's tax system is complex, reflecting the impact of numerous social and economic policy goals. There are both federal and provincial taxes on corporate and individual income. Ontario, Québec, and Alberta administer their own corporate tax systems, but in the other provinces, the federal government levies both. As of 2005, Canada's federal corporate income tax rate is 21%, with a surtax adding another 1.12%. However, additional taxes by Canadian provinces/territories, can add 11.5% to 17%. Québec has a rate of 8.9% for active income. Canada is also slated to further reduce the corporate rate. Effective January 1, 2008, the corporate rate will be lowered to 20.5%, while the surtax (as of that date) will be abolished. As of January 1, 2009, the corporate rate will be cut further to 20%, and will be reduced on January 1, 2010 to 19%. Nonresidents of Canada are also subject to a 15% withholding tax for services performed in Canada. Individual income taxes are based on a progressive system, for which the top federal rate is 29%. Individual income tax rates imposed by the provinces/territories vary from 4–24%.

### 37 CUSTOMS AND DUTIES

Customs duties, once the chief source of revenue, have declined in importance as a revenue source as Canada's economy has grown and developed. The tariff, however, still is an important instrument of economic policy. There is a wide range of duties, progressing from free rates on raw materials to higher duties as goods become more highly processed. Producer goods, including ma-

chinery of a kind not made in Canada, are subject to lower rates or are admitted free. Imports from the United Kingdom, most Commonwealth countries, and some crown colonies receive a tariff preference on a basis of reciprocity. Imports from nonmembers of the World Trade Organization (WTO) that have not negotiated a trade agreement with Canada are subject to the general or highest duty category. A federal goods and services tax, excise tax, and provincial retail sales taxes add to the cost of importation.

In October 1987, Canada and the United States reached agreement to establish a free trade area between the two countries, which came into force in 1989 with all tariffs being eliminated within 10 years. Today, there are essentially no tariffs on US goods, although there remain a few nontariff barriers to trade. Canadian commercial policy is generally opposed to the use of quantitative restrictions except as permitted by the WTO, or for sanitary reasons, in emergencies, to allocate scarce supplies, or to meet balance-of-payments problems. Canada does not adhere to a general system of import licensing but does require permits for a limited number of products, such as electric power, petroleum, and natural gas and by-products. There are no free ports, but bonded facilities are operated at many ports. Except in grain, for which storage facilities are extremely large, customs warehousing is not extensive.

The United States, Canada, and Mexico signed the North American Free Trade Agreement (NAFTA) in December 1992. Approved by the legislatures of all three countries in 1993, NAFTA replaced the existing free trade agreement between Canada and the United States in 1994 but retained many of its major provisions and obligations. Canada and Chile signed a free trade agreement in 1997. NAFTA members are working towards a Free Trade Area of the Americas to incorporate Central and South America.

### 38 FOREIGN INVESTMENT

With few exceptions, Canada offers foreign investors full national treatment within the context of a developed open market economy operating with democratic principles and institutions. However, Canada is one of the few OECD countries that still have a formal investment review process, and foreign investment is prohibited or restricted in certain sectors of the economy.

The federal corporate tax is 21%. The federal capital tax will be eliminated for all businesses by 2008. Provincial governments charge corporate taxes at rates from 10% upwards; the federal government allows a tax credit of 10% against these provincial levies.

By the beginning of 2003, foreign direct investment (FDI) in Canada, which has increased steadily since the early 1950s, amounted to us\$349.4 billion. This was only 4.7% above the level in 2001, the lowest rate of increase since 1993. FDI inflow in 2002 was us\$33.6 billion, about 20% lower than 2001. The US share in annual FDI inflow declined from 91% in 2001 to 74.7% in 2002. The second-largest source of inward FDI was the European Union. Canada's relative share of global inward FDI remained unchanged in 2001 and 2002, at about 4% of the world total. The inflow of foreign portfolio investment (foreign purchases of Canadian stocks and bonds) declined from us\$30.1 billion to us\$17.9 billion.

Outward FDI by Canadians has grown at an even faster average rate than inward FDI over the last 10–15 years. FDI assets held by Canadians reached us\$432 billion in 2002. Outward FDI flow was us\$43.8 billion down about 20% from 2001. Direct investments in

the United States accounted for 47% of outward FDI, down from 60% in 2001. As in 2001, Canada accounted for about 6% of the world total outward FDI in 2002. Outward portfolio investment in 2002 was us\$24.7 billion, down from us\$37.7 billion in 2001 in 2002, up 10.8% from 2001.

By 2006, the soaring price of oil and other commodities had prompted a surge in investment. Some us\$39 billion of new investment was announced early in 2005 in Alberta's oil sector alone. Railway lines are being built, ports expanded, and oil and gas pipelines laid. From 2001–05, FDI inflows averaged 2% of GDP.

### **39 ECONOMIC DEVELOPMENT**

Basically, Canada has a free-enterprise economy. However, the government has intervened in times of economic crisis and to accomplish specific social or economic goals. For example, in October 1963, the Canadian government announced a plan, involving tariff rebates, designed to induce US automobile companies to increase the export of vehicles and parts from their plants in Canada; subsequently, US companies markedly increased the scale of their Canadian operations. To dampen speculative buying of the Canadian dollar, the government permitted the dollar to float in the foreign exchange markets as of 31 May 1970; the government's intent was also to make imports cheaper in terms of Canadian dollars, and thereby to dampen domestic inflation. Another attempt at economic intervention, the Canada Anti-Inflation Act, became effective on 16 December 1975. This legislation established an Anti-Inflation Board and an Anti-Inflation Appeal Tribunal to monitor wage and price guidelines, which are mandatory for key sectors of the economy. The act was part of a government program to limit the growth of public expenditures and public service employment, to allow the money supply to increase at a rate consistent with moderate real growth, and to establish new agencies and policies to deal with energy, food, and housing.

A recurrent problem for Canada has been the dominant position of US corporations and investors. Attempts to limit US influence have included tightened tax policies, the Foreign Investment Review Act, and, in 1980, the National Energy Program (NEP), which aimed at reducing foreign ownership of Canada's oil and gas industry, principally through assisting Canadian companies to take over foreign holdings. One beneficiary of the NEP was the government-owned Petro-Canada, created in the mid-1970s; by the end of 1985, Petro-Canada had become the country's second-largest oil company, ranked by assets. However, much of the NEP was eliminated in the mid-1980s by the Conservative government, which sought to encourage foreign investment and to privatize government-owned enterprises. Between 1984 and 1991, the government sold or dissolved over 20 federal corporations, deregulated much of the energy, transportation, and financial sectors, and removed many controls on foreign investment.

In 2000, after more than 10 years of the bilateral trade agreement with the United States, and six years under the North American Free Trade Agreement (NAFTA), Canada's economy was growing at a comfortable pace, unemployment was falling, and inflation was low; but nationals were still dissatisfied with the size of the Canadian economy as compared to US affluence. The economic downturn that began in the United States in 2001 negatively impacted the Canadian economy. In addition, the 2003 out-

break of Severe Acute Respiratory Syndrome (SARS) worldwide harmed tourism and exports in Canada, as Toronto was struck by the worst outbreak of the disease outside Asia. In addition, a cow in Alberta was diagnosed with mad-cow disease (bovine spongiform encephalopathy) in May 2003, and the United States and four other countries placed a ban on the import of Canadian beef. (Canada is the world's third-largest exporter of beef, after Australia and the United States.) However, shipments of most Canadian beef to the United States were resumed in late 2003, and trade in live cattle under 30 months resumed in July 2005.

By 2006, federal finances were holding up well and federal debt as a share of GDP was forecast to continue on a downward trend. In the medium term, the government planned to cut taxes and increase expenditures. Immigration and internal security remain key policy issues. Canada's close bilateral relationship with the United States had been soured by a number of security and trade disputes, such as the United States' imposition of tariffs on shipments of Canadian softwood lumber and over the United States' approach to climate change.

### **40 SOCIAL DEVELOPMENT**

Federal programs include family allowances, old age security, and earning-related disability and survivors' pensions. There is a universal pension for all residents, and an earnings related pension for most employed persons. The universal pension is funded by the government, while the employment based program is financed with employer and employee contributions. There is a family allowance for low-income families for each child under the age of eighteen. The amount of these child allowances declines as family net income increases. Benefits are provided for the disabled, and the benefit is adjusted for changes in the consumer price index.

Sickness and maternity benefits are available for all wage earners and salaried workers. Virtually the total population is covered for physician and hospital services. Workers' medical benefits include general medical and maternity care, as well as specialty and laboratory services. There are additional benefits available to residents of some provinces. There is a funeral grant that varies according to province.

The first work injury laws were enacted in 1908. Employees in industry and commerce are covered, and the employer funds the program. Unemployment is funded by both the employer and employee contributions. All wage earners and salaried workers are covered by the program. The government funds a social assistance system for all residents based on total family income.

Women participate fully in the Canadian labor force, including business and the professions, although government reports show that their average earnings are still less than those of men. There is equality in marriage and property rights. The law prohibits sexual harassment and criminal harassment. The government spends considerable funds to prevent domestic violence and to provide services to victims. Incidences of violence against women declined in 2004.

The government protects human rights, and the law and judiciary are effective in addressing incidence of abuse. There has been an increase in anti-Semitic harassment in recent years, as well as a rise in trafficking in women.

## 41 HEALTH

Canada adopted a national health insurance scheme in 1971. It is administered regionally; each province runs a public insurance plan with the government contributing about 40% of the cost (mostly from taxes). Government regulations ensure that private insurers can only offer particular types of health care provision. Drug prices are low. Most hospitals and doctors operate privately. Hospitals are paid by allocated budgets and doctors receive fees per treatment. The system offers considerable choice, but there is little competition and the government has used rationing measures to limit health care expenditures. Access to health care and cost containment are good, but there are strains on the budget, increased by an aging population. In 1997, the National Forum on Health, created by the government three years earlier, released a report on ways to improve Canada's health system. It recommended several initiatives, including formation of a Health Transition Fund to support provincial and territorial health programs.

Major health planning is carried on by provincial governments, most of which offer substantial free care for patients suffering from tuberculosis (7 cases reported per 100,000 people in 1999), poliomyelitis, venereal diseases, and certain types of cancer. They also assume responsibility for mental health treatment. Municipalities are responsible for sanitation; communicable disease control; child, maternal, and school health care; public health nursing; health education; and vital statistics. In some cases, they supply hospital care and medical service to the poor. The federal government provides consultant and specialist services to the provinces, assists in the financing of provincial programs, provides services to veterans and Indians, exercises control over the standard and distribution of food and drugs, maintains quarantine measures, and is responsible for carrying out certain international health obligations. The federal Department of National Health and Welfare provides financial assistance for provincial health and hospital services through the National Health Program and for provincial hospital insurance programs through the Hospital Insurance and Diagnostic Services Act of 1957, under which the federal government shares the provinces' costs (since 1977, by means of tax transfers and cash payments). By 1973, this program had been established in all provinces and territories, covering more than 99% of the total population of Canada. Federal and provincial governments contribute toward construction costs of new hospitals. Total health care expenditures for 1995 were us\$1,899 per capita. Public insurance pays about 80% of the Canadian population's health bills. The total expenditure on health is second only to the United States, with an estimated 9.3% of GDP going toward health as of 1999. As of 2004, there were an estimated 209 physicians, 1,010 nurses, 80 pharmacists, and 56 dentists per 100,000 people.

The Canadian death rate of 7.5 per 1,000 people in 1999, the maternal death rate (1998) of 6 per 100,000 live births, and the infant mortality rate (2005) of 5 per 1,000 live births are among the lowest in the world. In 1999, 6% of all births were low birth weight. Diseases of the heart and arteries account for nearly 40% of all deaths and cancer accounts for about 28%; the proportion of deaths from causes related to old age is rising. Tobacco consumption, which was 2.8 kg (6.2 lbs) a year per adult in 1984–86, was 2.3 kg (5.1 lbs) in 1995. Accidents are the leading cause of death in childhood and among young adult males and rank high for other population groups. In 2005, life expectancy at birth was

estimated at 80 years. Canada had a birth rate of 11.9 per 1,000. Approximately 73% of married women (ages 15 to 49) were using contraception. Children up to one year of age were immunized as follows: diphtheria, pertussis, and tetanus, 93%; polio, 89%; and measles, 98%.

The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 56,000 people living with HIV/AIDS in the country. There were an estimated 1,500 deaths from AIDS in 2003.

## 42 HOUSING

According to the 2001 census, there were about 11,562,975 occupied private dwellings in Canada and 25,755 collective dwellings. The average number of persons per household is about 2.6. The most active period of housing construction of private homes was during the period 1971–80, when about 21% of the existing housing stock was built. In the period 1996–2001, there were 819,865 private dwellings built. The average value of a private home was about \$162,709 in 2001. In 2003, about 57% of all households were in single, detached homes, about 30% were in apartments, and 10% were in single, attached housing. About 65% of all dwellings are owner occupied.

## 43 EDUCATION

The age limits of compulsory school attendance are roughly from age 6 to age 16. Primary schools lasts for six to eight years and secondary or high school another six years. Each province is responsible for its own system of education. While the systems differ in some details, the general plan is the same for all provinces except Québec, which has two parallel systems: one mainly for Roman Catholics and speakers of French, the other primarily for non-Catholics and speakers of English. Québec, Newfoundland, Alberta, Saskatchewan, and, to a lesser extent, Ontario provide for public support of church-affiliated schools. Primary and secondary education is generally free, although nominal fees are charged for secondary education in some schools or provinces. Public elementary and secondary schools are administered by the provinces and Yukon Territory. As of 2003, public expenditure on education was estimated at 5.2% of GDP, or 12.5% of total government expenditures.

In 2001, about 64.7% of all children between the ages of four and five were enrolled in some type of preschool program. Primary school enrollment in 2000 was estimated at about 99.6% of age-eligible students. The same year, secondary school enrollment was about 94% of age-eligible students. The student-to-teacher ratio for primary school was at about 17:1 in 2003. The ratio for secondary school was about 17:1.

Canadian higher education began with the founding of the Collège des Jésuites in Québec City in 1635. The Séminaire de Québec, another Jesuit institution, established in 1663, became Laval University in 1852. Other early institutions on the French collegiate model were the Collège St. Boniface in Manitoba (1827), the University of Ottawa (1848), and St. Joseph's University in New Brunswick (1864). Although many French institutions survive—most notably the University of Montréal, which separated itself from Laval in 1920—most university-level instruction is conducted in English on the Scottish, British, or US model. The first

English-language college in Canada was King's College in Halifax, Nova Scotia (1789). Two private universities on the Scottish model are Dalhousie University in Halifax (1818) and McGill University in Montréal (1821). The first state-supported institution, founded in 1827 on the principles of Anglicanism and loyalty to the British crown, was King's College at York in Upper Canada, which became the University of Toronto, the largest and one of the most distinguished of Canadian institutions. Universities in each of the four western provinces—Manitoba, Saskatchewan, Alberta, and British Columbia—founded in the late 19th century, represent a Canadian adaptation of the US state land-grant universities.

Canada also has numerous community colleges, teachers' colleges, technical institutes, nursing schools, and art schools. Adult education is sponsored by universities, colleges, school boards, government departments, and voluntary associations, each of which has some other primary function. The Canadian Broadcasting Corp., the National Film Board, and many museums, art galleries, and libraries engage in adult education as part of their work. Instructors are represented by the Canadian Association of University Teachers, and students by the Canadian Federation of Students. In 2001, about 59% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate has been estimated at about 97%.

#### 44 LIBRARIES AND MUSEUMS

Municipal public libraries serve the large cities and many small towns and rural areas; regional units supply library service to scattered population areas. Traveling libraries, operated by provincial governments or university extension departments, also provide mail services for more isolated individuals and communities. Although public libraries are organized and financed by municipalities, in most provinces the provincial government supervises library services and makes grants to the municipal units. Special libraries of various kinds and at various levels serve limited groups.

In 2004, Library and Archives Canada (LAC) was established through a government act which essentially merged the services of the National Library of Canada with the National Archives of Canada. The massive collection of the new LAC includes over 300,000 hours of film archives; over 2.5 million architectural drawings, plans, and maps; 21.3 million photographic images; 343,000 works of arts; 200,000 music recordings; the Canadian Postal Archives; and millions of books, among other materials.

Canada also has a number of major academic libraries, most notably at the University of Toronto, which itself has over 14 million volumes. In 2002, Canada had a total of 3,932 libraries, including 1,673 public libraries, 484 academic libraries, 380 government libraries, and a variety of special libraries.

There are about 2,000 museums, art galleries, and related institutions in Canada. Major museums located in Ottawa include the National Arts Center, the National Gallery of Canada (including the Canadian Museum of Contemporary Photography), the Canadian Museum of Nature, and the National Museum of Science and Technology (including the National Aviation Museum and the Agriculture Museum). Other notable Canadian museums include the Royal Ontario Museum in Toronto and the Fine Arts Museum in Montréal. The major museums and art galleries, located in the principal cities, provide valuable educational services

to adults and children; many supply traveling exhibitions for their surrounding areas or regions. The National Gallery conducts extension work throughout the country and sends many exhibitions on tour.

#### 45 MEDIA

The 10 public and private companies in Telecom Canada provide a major share of the nation's telecommunications services, including all long-distance service, and link regional networks across Canada. In 2003, there were an estimated 629 mainline telephones for every 1,000 people. The same year, there were approximately 417 mobile phones in use for every 1,000 people. Telegraph services are operated by the two transcontinental railroads and by the federal government to outlying districts. All external telecommunication services are operated by the Canadian Overseas Telecommunication Corp., a crown agency. The Post Office became a crown corporation in 1981.

The Broadcasting Act of 1968 entrusted the Canadian Radio-Television Commission with the regulation and supervision of all aspects of the broadcasting system. The publicly owned Canadian Broadcasting Corp. (CBC) provides the national broadcasting service in Canada. Its radio and television facilities extend from the Atlantic Ocean to the Pacific and north to the Arctic Circle. The CBC has broadcasting stations in the principal cities and operates both English- and French-language national networks. Privately owned local stations form part of the networks and provide alternative programs. In 2005, there were nearly 2,000 licensed radio stations in the country. There are at least 80 television stations. Radio Canada International, the CBC's shortwave service, broadcasts in seven languages to Europe, Africa, Latin America, Asia, the Middle East, the South Pacific, and the United States.

The Canadian communication satellites play an increasingly significant role in efforts to bring radio and television services to the more remote parts of the country, particularly in the north. Beginning in late 1980, a new television network began broadcasting programs in the Inuit language via satellite, offering viewers the opportunity to "talk back" through their television sets to people in other communities. In 2003, there were an estimated 1,047 radios and 691 television sets for every 1,000 people. The same year, there were 487 personal computers for every 1,000 people and 513 of every 1,000 people had access to the Internet. There were over 15,000 secure Internet servers in the country in 2004.

In 2004 there were over 100 major daily newspapers across the country. Although some newspapers in Montréal, Québec, Toronto, Winnipeg, and Vancouver have more than local influence, most circulate only on a regional basis and have a limited number of readers. Rural areas are served by over 2,000 monthly and weekly publications. There are many consumer magazines, but only *Maclean's* is truly national. Three large news-gathering organizations are the Canadian Press, a cooperatively owned and operated venture, the British United Press, and United Press International of Canada.

Canada's leading English-language newspapers (with their 2004 daily circulations) include *Toronto Star* (464,838), *Globe and Mail* (317,954), *National Post* (243,966), *Toronto Sun* (194,011), *Vancouver Sun* (172,486), *The Province* (in Vancouver, 154,590), *The Gazette* (in Montréal, 135,471), *Ottawa Citizen* (129,175), *Edmonton Journal* (125,848), *Winnipeg Free Press* (117,608), *Calgary*

*Herald* (114,213), *The Chronicle-Herald* (in Halifax, 110,033), *The Hamilton Spectator* (102,574), and *The London Free Press* (90,043). The leading French-language dailies (with their 2002 daily circulations) include *Le Journal de Montréal* (265,168), *La Presse* (in Montréal, 188,216), *Le Journal de Québec* (97,805), and *Le Soleil* (in Québec, 76,307). The *Mail Star* of Halifax merged with the *Chronicle-Herald* on 2004. The *Times Colonist* in Victoria is a fairly substantial regional paper with a daily circulation of about 69,855.

In 2004, there about 765 community weekly newspapers in the country. A few of the largest include the *Brampton Guardian* (circulation 113,032 in 2004), *The Scarborough Mirror* (110,000), *Eto-bicoke Guardian* (69,500), and *The Cambridge Reporter* (52,000). *Le Soleil du St. Laurent* is a French weekly based out of Chateauguay, Québec with a circulation of 51,560. Some prominent alternative newspapers in Canada include *Le Journal Voir* (Montréal, 107,161 weekly in 2004), *Now* (Toronto, 106,296 weekly), *Mirror* (Montréal, 66,494 weekly), and *Monday Magazine* (Victoria, 40,000 weekly). Prominent ethnic weeklies with their language, city, and average circulation in 2004 were *Il Cittadino Canadese* (Italian, Montréal, 40,000), *Corriere Italiano* (Italian, Montréal, 40,000), *Deutsche Press* (German, Toronto, 27,500), *El Expreso* (Spanish, Toronto, 20,000), and *Kanada Kurier* (German, Winnipeg, 19,500). *The Canadian Daily News* of Don Mills, Ontario, has a weekly circulation of 48,700.

The law provides for freedom of expression, including speech and press, and the government supports these rights. The banning of journalists from reporting on some court cases until after a trial in concluded enjoys widespread public support, in favor of a defendant's right to a fair trial.

## 46 ORGANIZATIONS

Cooperatives are very important in Canadian agriculture and fishing, and also provide housing, medical insurance, transportation, and other services. Trade unions and professional organizations exist for a wide array of professions. The Confederation of National Trade Unions and the Canadian National Federation of Independent Unions serve as umbrella organizations for some unions. Almost every city has a chamber of commerce, affiliated with the national Canadian Chamber of Commerce. The Canadian Council of Better Business Bureaus and the Consumers' Association of Canada are based in Ottawa.

Among organizations active in general education are the Canadian Association for Adult Education, the Canadian Association of University Teachers, Project READ Literacy Network, and the Industrial Foundation on Education, a research organization aiming to promote aid to education by business. There are numerous associations for educators in various fields. The Canada Council is the official national agency for promotion of the arts, humanities, and the social sciences. The Royal Canadian Academy of Arts is the oldest arts organization with national prestige. The Canada Arts Council, a federation of professional cultural organizations, includes the Royal Architectural Institute of Canada, the Canadian Authors' Association, the Canadian Music Council, the Sculptors' Society of Canada, and similar societies. The Royal Canadian Geographical Society promotes the study of Canadian history and culture. There are also numerous associations for hobbyists.

Such organizations as the Canadian Medical Association, the Canadian Dental Association, the Canadian Nurses Association, and the Canadian Mental Health Association serve as both as networks for medical professionals and a resource for education and public action and awareness on health issues. There are hundreds of health and medical associations dedicated to education and research in specialized fields of medicine, such as the Canadian Lung Association and the Heart and Stroke Foundation of Canada. Many voluntary societies are active in the field of health.

There are numerous national, regional, and local organizations dedicated to concerns of social welfare and public affairs. These include the National Council of Women of Canada, National Action Committee on the Status of Women, Canadian Human Rights Foundation, and the Canadian Civil Liberties Association is based in Toronto. The Canadian Red Cross Society, affiliated with the International Red Cross Society, has branches in all 10 provinces. The country has chapters of UNICEF, Habitat for Humanity, CARE, Amnesty International, and Greenpeace.

Youth organizations exist for a variety of interests. The Canadian Federation of Students (CFS), founded in 1981, has over 400 000 individual members and 65 student association voting members. The Canadian Council on Children and Youth (CCCY), established in 1958, works to defend the rights of youth. Other youth organizations include Big Brothers/Big Sisters of Canada, the Boys and Girls Clubs of Canada, Canada World Youth, Canadian 4-H Council, YMCA/YWCA, Canadian Hostelling Association, Girl Guides of Canada, National Canadian Girls in Training Association, and the Progressive Conservative Youth Federation of Canada. Sports organizations exist for nearly every sport and leisure-time activity.

## 47 TOURISM, TRAVEL, AND RECREATION

One of Canada's principal attractions for tourists is its extraordinary geographic variety: from the polar ice cap to the mountains, fjords, and rain forests of the west coast, from the lakes, forests, and ranchlands of the interior to the rugged shores and fine beaches of the east, Canada offers a remarkable range of scenic wonders. The excavation of L'Anse aux Meadows in Newfoundland, with its Norse artifacts and reconstructed dwellings, has been designated a world heritage site by UNESCO, as have Nahanni National Park in the Northwest Territories and Dinosaur Park in Alberta's Red Deer Badlands. Among the most spectacular parks are the Kluane National Park in the Yukon and the Banff (with Lake Louise) and Jasper national parks in the mountains of Alberta. Other attractions include the Cabot Trail in Nova Scotia; the Bay of Fundy, between New Brunswick and Nova Scotia; and the Laurentians and the Gaspé Peninsula in Québec.

The arts and crafts of the Dene Indians and the Inuit may be seen in cooperative workshops in Inuvik in the Northwest Territories; and of the North West Coast Indians, at the reconstructed Indian village Ksan in British Columbia. Québec City is the only walled city in North America; picturesque old fishing villages are to be found in the Atlantic provinces. Fishing and hunting attract many sportsmen to Canada, and ice hockey attracts many sports fans, particularly to the Forum in Montréal. In 1992, the Toronto major league baseball team, the Blue Jays, became the first non-American team to both play in and win the World Series. In 2004, the Montréal Expos played their final major league baseball season

in Canada; the team relocated to Washington, D.C., where they opened the 2005 baseball season as the Washington Nationals.

One of the world's foremost summer theatrical events is the Shakespeare Festival at Stratford, Ontario. Toronto is known for its many theaters, the CN Tower, and a fine zoo; Montréal, the second-largest French-speaking city in the world (after Paris), is famous for its fine French cuisine, night life, vast underground shopping and entertainment network, and its excellent subway system.

Montréal in 1967 hosted a major world trade exhibition, EXPO 67; the Summer Olympics took place in that same city in 1976. A world's fair, EXPO 86, was held in Vancouver in 1986, and Calgary was the site of the 1988 Winter Olympics. The Winter Olympics were scheduled to be held in Vancouver in 2010.

In 2003, Canada was the third most popular tourist destination in the Americas after the United States and Mexico. In that year, 17,534,298 tourists arrived from abroad, 14,232,370 of them from the United States. In 2003, tourist receipts totaled us\$12.2 billion.

Citizens of the United States do not need passports but should carry documents attesting to their citizenship, such as birth certificates or voter registration cards. Alien residents should carry their green cards. Nationals of other countries must have valid passports and may require visitor visas; they should check with the nearest Canadian embassy, consulate, or high commission. In 1991, a 7% Goods and Services Tax went into effect; however, it is refundable to foreign tourists.

In 2005, the US Department of State estimated the daily cost of staying in Vancouver at us\$207 from the months of May through October. That same year, the daily cost of a visit to Toronto was estimated at us\$295.

## 48 FAMOUS CANADIANS

### Political Figures

Because of their exploits in establishing and developing early Canada, then known as New France, a number of eminent Frenchmen are prominent in Canadian history, among them the explorers Jacques Cartier (1491–1557), Samuel de Champlain (1567?–1635), Étienne Brulé (1592?–1633), Jacques Marquette (1637–75), Robert Cavalier, Sieur de la Salle (1643–87), and Louis Jolliet (1645–1700); François Xavier de Laval de Montigny (1623–1708), first and greatest bishop of Québec; Jean Baptiste Talon (1625?–94), first and greatest intendant, who re-created the colony on a sound economic basis; and Louis de Buade, Comte de Palluau et de Frontenac (c.1622–98), greatest of the French royal governors. Great explorers of a later period include Pierre Gaultier de Varennes, Sieur de la Vérendrye (1695–1749), Sir Alexander Mackenzie (1764–1820), David Thompson (1770–1857), Simon Fraser (1776–1871), Joseph E. Bernier (1852–1934), and Joseph Burr Tyrrell (1858–1957). Louis Riel (1844–85), of Indian and French-Irish ancestry, led the métis in rebellion in 1869–70 and 1885, when he was captured and hanged for treason.

Fathers of confederation and other important 19th-century political figures include Louis Joseph Papineau (1786–1871) and William Lyon Mackenzie (1795–1861); Sir John Alexander Macdonald (1815–91), first prime minister of the confederation; George Brown (1818–80), Sir Samuel Leonard Tilley (1818–96), and Sir Charles Tupper (1821–1915). The greatest political leader at the

turn of the century was Sir Wilfrid Laurier (1841–1919), prime minister from 1896 to 1911. The outstanding national leader of the first half of the 20th century was William Lyon Mackenzie King (1874–1950), Liberal prime minister for over 21 years (1921–26, 1926–30, 1935–48), who retired with a record of the longest service as prime minister in Commonwealth history. Charles Vincent Massey (1887–1967), governor-general from 1952 to 1959, was the first Canadian to represent the British crown in Canada. Lester Bowles Pearson (1897–1972), prime minister and Canada's longtime UN representative, won the Nobel Prize for peace in 1957. Pierre Elliott Trudeau (1919–2000) served as prime minister from 1968 to 1979 and again from 1980 to 1984, when he was succeeded by Brian Mulroney (b.1939). The best-known French-Canadian separatist was René Lévesque (1922–87), leader of the Parti Québécois, who became premier of Québec in 1976.

### Artists

Highly regarded Canadian painters include James Edward Hervey MacDonald (1873–1932), Thomas John ("Tom") Thomson (1877–1917), Frederick Horsman Varley (1881–1969), and Lawren Stewart Harris (1885–1970) of the Group of Seven; James Wilson Morrice (1864–1924); and Emily Carr (1871–1945). Paul-Emile Borduas (1905–60) and Jean-Paul Riopelle (1923–2002) both were part of the Montréal School; however, after settling abroad, they probably became better known in France and the United States than in their native country. Two other artists of distinction are James W. G. MacDonald (1897–1960) and Harold Barling Town (1924–90). The portrait photographer Yousuf Karsh (b.Armenia-in-Turkey, 1908–2002) was a longtime Canadian resident.

### Musicians

Well-known Canadian musicians include the composer Healey Willan (1880–1968); the conductor Sir Ernest Campbell MacMillan (1893–1973); the pianist Glenn Gould (1932–82); the singers Edward Johnson (1878–1959), Jon Vickers (b.1926), and Maureen Forrester (b.1931); the bandleader Guy Lombardo (1902–77); and, among recent popular singers and songwriters, Gordon Lightfoot (b.1938), Paul Anka (b.1941), Joni Mitchell (b.1943), Neil Young (b.1945), Celine Dion (b.1968), and Shania Twain (b.1965).

### Actors

Canadian-born actors who are known for their association with Hollywood include Marie Dressler (Leila Koerber, 1869–1934), Walter Huston (Houghston, 1884–1950), Mary Pickford (Gladys Mary Smith, 1893–1979), Raymond Hart Massey (1896–1983), Walter Pidgeon (1897–1984), Norma Shearer (1904–83), Lorne Greene (1915–87), Raymond Burr (1917–93), William Shatner (b.1931), and Donald Sutherland (b.1935). Stage personalities include Beatrice Lillie (1894–1989), Hume Cronyn (1911–96), and Christopher Plummer (b.1929). Atom Egoyan (b.1960 in Egypt) is a filmmaker of Armenian descent, known for his film *The Sweet Hereafter* (1997).

### Sports

Notable in the world of sports are ice-hockey stars Maurice ("Rocket") Richard (1921–2000), Gordon ("Gordie") Howe (b.1928), Robert Marvin ("Bobby") Hull, Jr. (b.1939), Robert ("Bobby") Orr (b.1948), and Wayne Gretzky (b.1961).

### Authors

Thomas Chandler Haliburton (1796–1865), author of *Sam Slick*, was the first Canadian writer to attain more than a local reputation. Sir Charles George Douglas Roberts (1860–1943) and Bliss Carman (1861–1929) were widely read poets and short-story writers. Archibald Lampman (1861–99) wrote sensitive poems about nature. Narrative poems about the northwest frontier by Robert William Service (1874–1958) achieved mass popularity, as did the backwoods novels of Ralph Connor (Charles William Gordon, 1860–1937). The animal stories and bird drawings of Ernest Evan Thompson Seton (b.UK, 1860–1946) are still highly regarded. Stephen Butler Leacock (1869–1944), economist and essayist, is regarded as Canada's leading humorist. The *Anne of Green Gables* novels of Lucy Maud Montgomery (1874–1942) have been popular with girls of several generations. Mazo de la Roche (1885–1961) achieved fame for her romantic *Jalna* novels about an Ontario family. Well-known contemporary novelists include Morley Edward Callaghan (1903–90), Hugh MacLennan (1907–90), Farley McGill Mowat (b.1921), Alice Munro (b.1931), Margaret Lawrence (1926–87), Mordecai Richler (1931–2001), and Marian Passmore Engel (1933–1985). The novels and plays of Robertson Davies (1913–95), newspaper editor, actor, music critic, and university administrator, crackle with wit. Lorne Albert Pierce (1890–1961) was a prominent editor and literary critic. Herbert Marshall McLuhan (1911–80) was a communications theorist and cultural critic. Herman Northrop Frye (1912–91) was a well-known literary critic, and Margaret Atwood (b.1939) is a noted novelist and poet. Jewish-American novelist Saul Bellow (1915–2005), was born in what is now Montréal; he won the Nobel Prize for Literature in 1976. The British newspaper publisher William Maxwell Aitken, 1st Baron Beaverbrook (1879–1964), was born in Canada.

The *Histoire du Canada* (1845) of François Xavier Garneau (1809–66) stimulated a great interest in French Canada's heritage. Joseph Octave Crémazie (1827–79) was the first notable French Canadian poet. The poems of Louis Honoré Fréchette (1839–1908) were crowned by the French Academy. Louis Hémon (1880–1913), a French journalist who came to Canada in 1910 and spent only 18 months there, wrote the classic French Canadian novel *Maria Chapdelaine* (1914). Authors of realistic novels dealing with social and economic problems of French Canada include Claude-Henri Grignon (1894–1976), author of *Un Homme et son péché* (1933); Jean-Charles Harvey (1892–1967), author of *Les Démi-civilisés* (1934); Ringuet (Dr. Philippe Panneton, 1895–1960), author of *Trente Arpentés* (1938); Germaine Grignon Guevremont (1900–1968); Roger Lemelin (1919–92), author of *Au pied de la pente douce* (1944); and Gabrielle Roy (Carbotte, 1909–93). Gratien Gélinas (1909–1999) is an actor, director, and dramatic satirist. Abbé Félix Antoine Savard (1896–1982) wrote a poetic novel of pioneer life, *Menaud, maître-draveur*.

#### Scientists and Inventors

Among the famous Canadian scientists and inventors are Sir Sanford Fleming (1827–1915), inventor of standard time; Sir William Osler (1849–1919), the father of psychosomatic medicine; and Sir Charles Saunders (1867–1937), who developed the Marquis wheat strain, which revolutionized wheat growing in northern latitudes. The codiscoverers of insulin, Sir Frederick Grant Banting (1891–1941) and John James Richard Macleod (1876–1935), were awarded the Nobel Prize for medicine in 1923. George Brock Chisholm

(1896–1971) was an eminent psychiatrist and former head of WHO. Gerhard Herzberg (b.Germany, 1904–1999) won the 1971 Nobel Prize for chemistry for his work on molecular spectroscopy. Marius Barbeau (1883–1969), anthropologist and folklorist, was an authority on totem poles and Canadian folk music. David Hubel (b.1926 in Windsor, Ontario) shared the Nobel Prize for physiology or medicine in 1981 for discoveries concerning information processing in the visual system. Henry Taube (1915–2005) was born in Saskatoon; he won the 1983 Nobel Prize in chemistry. Canadian John C. Polanyi (b.1929) shared the Nobel Prize in chemistry in 1986. Sidney Altman (b.1939), shared the 1989 Nobel Prize in chemistry. Richard E. Taylor (b.1929), shared the 1990 Nobel Prize in physics for discoveries regarding the development of the quark model in particle physics. Rudolph A. Marcus (b.1923), born in Montréal, won the 1992 Nobel Prize in chemistry for his contributions to the theory of electron transfer reactions in chemical systems. Michael Smith (1932–2000) shared the 1993 Nobel Prize in chemistry for contributions to the developments of methods within DNA-based chemistry. Bertram N. Brockhouse (1918–2003) shared the 1994 Nobel Prize in physics for contributions to the development of neutron scattering techniques. William Vickrey (1914–96) was born in Victoria, British Columbia; he shared the 1996 Nobel Prize in economics. Myron S. Scholes (b.1941) shared the 1997 Nobel Prize in economics. Robert Mundell (b.1932) won the 1999 Nobel Prize in economics for his analysis of monetary and fiscal policy under different exchange rate regimes.

## 49 DEPENDENCIES

### Northwest Territories

Prior to its division with Nunavut in 1999, the Northwest Territories constituted all of Canada north of 60°N except the Yukon and the northernmost parts of Québec and Newfoundland. Total land area was 3,293,020 sq km (1,271,438 sq mi). After the 1999 division, the territory encompassed 1.17 million sq km. The division ran along the Saskatchewan-Manitoba border through the Arctic Archipelago to the North Pole. Most of the people who live in the territories are aboriginal. The population of the new Northwest Territories in 2000 was 42,083. Over half the population is spread out among 33 communities, and the other half is located in the capital of Yellowknife.

The Mackenzie River and its tributaries, the Athabasca and Slave, provide an inland transportation route of about 2,700 km (1,700 mi). There is some traffic on Lakes Athabasca, Great Bear, and Great Slave. Most of the settlements in Mackenzie are linked by scheduled air service.

The new territory is governed by a commissioner and by a 19-member elected territorial assembly. Six ministers and a premier are elected to serve as an executive council. Following the approval by voters in April 1982 of a proposal to divide the territory, the federal government scheduled the division in 1999. The Inuit of the east called their eastern jurisdiction Nunavut; Indians of the west—where opinion on the proposal was sharply split—called their proposed division Deneden. Land claims of Dene Indians and the Inuit overlapped. Nunavut was created in 1999, and the name “Northwest Territories” for the other half of the area was to be used until such time as residents would be asked to vote on

a new constitution, or the territorial assembly would be asked to vote on a new name.

Northwest Territories' mineral resources include rich deposits of gold, silver, lead, tungsten, and zinc. The Northwest Territories contain some of Canada's total mineral resources. It was the Yukon gold rush in 1897 that triggered a large migration of people northward. In one year 30,000 people from the lower parts of Canada were in the Northwest and Yukon Territories looking for gold.

Today, Canada leads in the production of oil, natural gas and coal. Canada's mining industry contributes US\$20 billion annually to the economy and employs 145,000 people. In 1989 Canada's oil and gas industry was valued at US\$19 billion with 55% of the revenue coming from oil production. Whitefish and trout are caught in Great Slave Lake; the 100,000 or more lakes of the territories provide an "angler's last frontier" in North America for sport fishermen. Fur production is a sizable industry in the Northwest Territories.

### Nunavut

The territory of Nunavut, meaning "Our Land" in Inuktitut, was created on 1 April 1999, when the Northwest Territories divided in two. Nunavut encompasses 1,994,000 sq km in the eastern Arctic region of Canada. The islands in the Hudson and James Bays are included. The population in 1999 was approximately 27,500, of whom 20,500 were Inuit. Languages spoken are Inuktitut (many dialects), Inuinnaqtun, English, and French. Iqaluit is the capital and the largest community in Nunavut, with more than 4,200 residents in 1996. The territory is divided into three regions (Qikiqtaaluk, Kivalliq, and Kitikmeot) and 28 communities. Government departments and agencies are located in the various communities in a decentralized fashion. There are an elected legislative assembly, a cabinet, and a territorial court. As of 2003, the government of Nunavut was assuming the responsibilities formerly controlled by the government of the Northwest Territories for programs in culture, public housing, and health care to be completed by 2009. The territory has 21 km of roadways, none of them paved. A handicrafts industry supplies Inuit-made sculpture and prints to the Canadian Handicrafts Guild. Most of the richest and well-developed parts of the Northwest Territories were not included in Nunavut, which now relies largely on developing its mineral resources. Hunting, fishing, fur trapping, and sealing also contribute to the economy.

### Yukon Territory

The Yukon Territory, located north of British Columbia and east of Alaska, has a land area of 478,970 sq km (184,931 sq mi) and had an estimated population in the mid-1990s of more than 30,000, of whom some one-fifth were of Indian origin. The principal town is Whitehorse, the capital. An all-weather roadway connects the territory with Alaska and British Columbia, and a railroad connects Whitehorse with ocean shipping at Skagway, Alaska. Air service is available to and from Edmonton, Vancouver, and Fairbanks, Alaska. There are local telephone services in the three chief towns. The territory was separately constituted in June 1898. Since 1978, the Yukon has had a legislative assembly, consisting of 16 elected

members. In late 1982, the federal government gave its consent for the Yukon cabinet to call itself the Executive Council and officially to take over some powers hitherto reserved by the federally appointed commissioner, as representative of the governor-general-in-council, or by the minister of Indian affairs and northern development. The Yukon government has recently pressed for provincial status.

Mineral resources include rich deposits of gold, silver, lead, tungsten, and zinc. Mining and tourism are Yukon's principal industries.

# CHILE

Republic of Chile  
*República de Chile*

**CAPITAL:** Santiago

**FLAG:** The flag, adopted in 1817, consists of a lower half of red and an upper section of white, with a blue square in the upper left corner containing a five-pointed white star.

**ANTHEM:** *Canción Nacional (National Song)* beginning “Dulce Patria, recibe los votos.”

**MONETARY UNIT:** The peso (P) of 100 centavos replaced the escudo as the nation’s monetary unit in October 1975. There are coins of 1, 5, 10, 50, 100, and 500 pesos, and notes of 500, 1,000, 5,000 and 10,000 pesos. P1 = us\$0.00196 (or us\$1 = P511.45) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but local measures also are used.

**HOLIDAYS:** New Year’s Day, 1 January; Labor Day, 1 May; Navy Day (Battle of Iquique), 21 May; Assumption, 15 August; Independence Day, 18 September; Army Day, 19 September; Columbus Day, 12 October; All Saints’ Day, 1 November; Immaculate Conception, 8 December; Christmas, 25 December. Movable religious holidays include Good Friday and Holy Saturday.

**TIME:** 8 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated along the southwestern coast of South America, Chile has an area of 756,950 sq km (292,260 sq mi). Comparatively, the area occupied by Chile is slightly smaller than twice the size of the state of Montana. A long string of land pressed between the Pacific and the towering Andes, Chile is 4,270 km (2,653 mi) long N–S; it is 356 km (221 mi) wide at its broadest point (just north of Antofagasta) and 64 km (40 mi) wide at its narrowest point, with an average width of 175 km (109 mi) E–W. It is bordered on the N by Peru, on the NE by Bolivia, on the E by Argentina, on the S by the Drake Passage, and on the W by the Pacific Ocean. At the far SE, at the end of the Strait of Magellan (Estrecho de Magallanes), it has an opening to the Atlantic Ocean. Chile’s boundary length (including coastline) is 12,606 km (7,833 mi).

Included in the national territory are the Juan Fernández Islands, Easter Island, and other Pacific islands. A dispute with Argentina over three small islands in the Beagle Channel almost led to war between the two countries in 1978, but papal intervention prevented hostilities. The issue was resolved peacefully by a treaty signed in the Vatican on 29 November 1984 and ratified on 2 May 1985, granting Chile sovereignty over the three islands, giving Argentina rights to waters east of the Strait of Magellan, and dividing the territorial waters south of Cape Horn between the two countries. There is another outstanding boundary problem with Bolivia over its claim for an opening to the sea. Chile also claims the Antarctic Peninsula and other areas of Antarctica, comprising 1,250,000 sq km (482,500 sq mi).

Chile’s capital city, Santiago, is located in the center of the country.

## <sup>2</sup>TOPOGRAPHY

Chile is divided into three general topographic regions: the lofty Andean cordillera on the east; the low coastal mountains of the west; and the fertile central valley between. The Andes, occupying from one-third to the entire width of the country, stretch from the Puna de Atacama in the north, a high plateau with peaks averaging 4,600 m (15,000 ft), to middle Chile, where, on the border with Argentina, rises the highest peak in the Western Hemisphere, Aconcagua (6,960 m/22,834 ft), and then, diminishing in height, run south into the Chilean lake country, with its snowcapped volcanoes and several passes.

The region of the Andes is a seismically active area with low magnitude earthquakes occurring on a regular basis, even to about a dozen a month. Situated on the South American Tectonic Plate, the country has recorded over 100 major earthquakes (magnitude 7 or higher) since such record keeping began in 1570. On 13 June 2005, a 7.8 magnitude earthquake occurred in Tarapaca that was felt as far away as Santiago and Brasília, Brazil. At least 11 people died.

The coastal range, verging from 300 to 2,100 m (1,000 to 7,000 ft) in height, rises from the sea along most of the coast. In the extreme north, the coastal mountains join with the Andean spurs to form a series of plateaus separated by deep gorge like valleys. In the south, the valleys and the coastal range plunge into the sea and form a western archipelago; fjords reach into the range at about 42°S.

The central valley, an irregular alluvial plain 965 km (600 mi) long, 73 km (45 mi) wide at its maximum, and up to 1,200 m (4,000 ft) high, begins below the arid Atacama Desert of the north and ends at Puerto Montt in the south. Fertile between the Aconcagua and Bío-Bío rivers, this valley is the center of agriculture

and of population. Although some 30 rivers rise in the Andes and descend to the Pacific, cascades and great waterfalls severely limit navigation; the ocean itself facilitates transportation between the different regions of this narrow country.

The northern side of the Strait of Magellan, part of Patagonia (a region shared by Chile and Argentina), and part of the island of western Tierra del Fuego (divided between Chile and Argentina) is low, glaciated, morainal country.

### 3 CLIMATE

Climatic zones range from the subtropical deserts in the north to the temperate rain forests of Aisén and the tundras of Magallanes in the extreme south. The cold Humboldt Current, traveling northward from the Antarctic, affects the climate of the coastal regions of central and northern Chile. Generally, however, Chile is divided into three climatic regions: (1) The north, which contains the Atacama Desert, one of the driest regions in the world, is characterized by hot and arid weather in the lowlands and occasional summer showers in the Andean highlands. (2) The middle, extending about 1,450 km (900 mi) from 30–43°s, has a Mediterranean climate, with mild, wet winters, averaging 11°C (52°F), and long, dry summers, averaging 18°C (64°F). (3) The south, a region of mountains and fjords, has high winds and heavy rains. Annual rainfall ranges from no recorded precipitation in some parts of the north to 50–100 cm (20–40 in) around Concepción, in south-central Chile, to more than 406 cm (160 in) in some southern regions. South of the Bío-Bío River, rains occur all year round. The Andean highlands, even in the tropical north, are cold and snowy.

### 4 FLORA AND FAUNA

Chile's botanical zones conform to the topographic and climatic regions. The northernmost coastal and central region is largely barren of vegetation, approaching most closely an absolute desert of any place in the world. On the slopes of the Andes, besides the scattered tola desert brush, grasses are found. The central valley is characterized by several species of cactus, the hard espinos, the Chilean pine, and the copihue, a red bell-shaped flower that is Chile's national flower. In southern Chile, south of the Bío-Bío River, heavy precipitation has produced dense forests of laurels, magnolias, and various species of conifers and beeches, which become smaller and more stunted to the south. The cold temperatures and winds of the extreme south preclude heavy forestation. Grassland is found in Atlantic Chile (in Patagonia). The Chilean flora is distinct from that of Argentina, indicating that the Andean barrier existed during its formation. Chilean species include the monkey-puzzle tree and the pine-like araucaria, also found in Australia. True pines have been introduced from the Northern Hemisphere.

Chile's geographical isolation also has restricted the immigration of faunal life, so that only a few of the many distinctive Latin American animals are found. Among the larger mammals are the puma or cougar, the llama-like guanaco, the Andean wolf, and the fox-like chilla. In the forest region, several types of marsupials and a small deer, known as the pudu, are found.

There are many species of small birds, but most of the larger common Latin American types are absent. Few freshwater fish are native, but North American trout have been successfully introduced into the Andean lakes. Owing to the vicinity of the Hum-

boldt Current, ocean waters abound with fish and other forms of marine life, which in turn support a rich variety of waterfowl, including different penguins. Whales are abundant and some six species of seals are found in the area.

### 5 ENVIRONMENT

The principal responsibility for environmental matters is vested in the environmental programs department in the Ministry of Health and in the National Planning Office, as well as in the ecological advisory office in the Ministry of National Welfare and the department of the environment in the Ministry of Foreign Affairs.

Chile's main environmental problems are deforestation and the resulting soil erosion, and the pollution of its air, water, and land. Air pollution from industry and transportation and water pollution are especially acute in urban centers, where the population has doubled in the last 30 years. In 1996, Chile's industrial carbon dioxide emissions totaled 48.7 million metric tons. In 2000, the total of carbon dioxide emissions was 59.5 million metric tons. Untreated sewage poses the major threat to the nation's water quality. While 99% of its urban dwellers have pure drinking water, only 59% of its rural dwellers have the same access.

About 18.9% of the total land area is protected. According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), the number of threatened species included 22 types of mammals, 32 species of birds, 20 species of amphibians, 9 species of fish, and 40 species of plants. Endangered species in Chile included the South Andean huemul, tundra peregrine falcon, puna rhea, Chilean woodstar, ruddy-headed goose, and the green sea turtle.

### 6 POPULATION

The population of Chile in 2005 was estimated by the United Nations (UN) at 16,136,000, which placed it at number 60 in population among the 193 nations of the world. In 2005, approximately 7% of the population was over 65 years of age, with another 24% of the population under 15 years of age. There were 98 males for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.0%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 19,078,000. The overall population density was 21 per sq km (55 per sq mi); over 80% of the people live in the central region between La Serena and Concepción, although this area covers little more than a quarter of the country's area.

The UN estimated that 87% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.43%. The capital city, Santiago, had a population of 5,478,000 in that year. Other large cities and their estimated populations include Concepción, 379,860; Antofagasta, 318,779; Viña del Mar, 318,489; Temuco, 300,000; Valparaíso 276,737; Talcahuano, 250,348; and Rancagua, 206,971.

### 7 MIGRATION

After the Spanish conquest, there were three main waves of immigration: Germans during 1800–50; Spaniards, Italians, Swiss, Yugoslavs, Syrians, Jordanians, and Lebanese around 1900; and

Spaniards and European Jews during the 1930s and 1940s. Since World War II, permanent immigration has been minimal.

In the years immediately preceding and after the Allende victory in 1970, about 10,000 political refugees (largely Brazilians, Bolivians, and Argentines) came to Chile. After the military coup of 1973, however, the bulk of them were expelled. The 1970s also witnessed two successive waves of Chilean emigration when, as a reaction to the Allende victory and, later, as a result of the military coup, several hundred thousand Chileans departed the country for political and economic reasons. Many of them later returned. In 1990 a National Office of Refugees was established to facilitate the reincorporation of returning exiles into Chilean society. In its first three years this office assisted more than 13,000 of the 26,000 exiles who returned in this period. In 1996, the United Nations High Commissioner for Refugees (UNHCR) office closed after 22 years of operation in Chile, as it was determined that the need for asylum for Chileans no longer existed. The net migration rate for Chile in 2005 was estimated as zero. The government viewed the migration levels as satisfactory.

In 1999, the Chilean Minister of Foreign Affairs signed a resettlement agreement for refugees from the former Yugoslavia. The project was being implemented by the Vicariate of Social (Catholic Church). As of 2004, the total refugee population in Chile numbered 654, asylum seekers numbered 85 (mainly from Colombia), and 569 were refugees. In that year there were 185,000 migrants living in Chile, 21% of whom were Peruvian.

There is a seasonal pattern of trans-Andean immigration to Argentina by Chilean agricultural workers; for many years the presence of several thousand Chilean settlers in the Argentine part of Patagonia created a minority problem.

## 8 ETHNIC GROUPS

Ethnically, the Chilean population is estimated at nearly 95% white and Mestizo (mixed white and Amerindian); 3% Amerindian; and 2% other. Mixtures between the conquering Spaniards, largely Andalusians and Basques, and the Mapuches (Araucadians) produced the principal Chilean racial type. An indigenous population of perhaps as many as 800,000 Mapuches live mainly in Temuco and in the forest region south of the Bío-Bío River. The Aymara and Diaguita groups can be found mainly in the northern desert valleys. Remnants of other small tribal groups are found on the archipelagos and islands of the extreme southern coast. A small minority of Germans and their descendants live in the Valdivia-Puerto Montt area.

## 9 LANGUAGES

Spanish is the national language. A sizable segment of Mapuche (Araucanian) Amerindians use Spanish in addition to their native tongue. The only other language of any importance is German, spoken mainly in the Valdivia region.

## 10 RELIGIONS

Roman Catholicism remains the principal religion. According to a 2002 census, about 70% of the population are at least nominally Roman Catholic. About 15% of the population describe themselves as Evangelical, a term which includes most non-Catholic churches, with the exception of Orthodox Churches, the Church of Jesus Christ of Latter-Day Saints, Seventh-Day Adventists, and

LOCATION: 17°31' to 56°33' s; 66°25' to 80°47' w. BOUNDARY LENGTHS: Peru, 169 kilometers (105 miles); Bolivia, 861 kilometers (535 miles); Argentina, 5,308 kilometers (3,298 miles); coastline, 5,338 kilometers (3,317 miles). TERRITORIAL SEA LIMIT: 12 miles.

Jehovah's Witnesses. Other traditional Protestant denominations included Lutheran, Wesleyan, Reformed Evangelical, Presbyterian, Methodist, and Anglican. The Jewish community had about 14,976 members. Islam, Buddhism, and the Baha'i Faith were also

represented. Amerindians still practice an indigenous religion involving shamanism. About 8.3% of the population claimed to be atheists or indifferent concerning religious affiliation.

Traditionally, the Roman Catholic Church has held a privileged status in the country. In 1999, however, a new law on religion, *ley de culto*, was adopted to allow non-Catholic churches certain rights and permissions. For instance, churches are allowed to set up affiliate organizations, such as schools and clubs, without establishing them as separate, independent corporations. Under the 1999 law, non-Catholic religious groups leaders are permitted to have chaplains in public hospitals, prisons, and military units. However, a 2004 report indicated that implementation of these laws had been somewhat lax and there were complaints of discrimination against non-Catholics in military and political employment.

## 11 TRANSPORTATION

In 2004, Chile had 6,585 km (4,096 mi) of broad and narrow gauge railways, of which narrow gauge right of way accounted for 3,754 km (2,335 mi). Rail lines in the desert area are used mainly for mineral transport. In the period 2000-03, cargo transportation by rail averaged 1.317 million ton km annually. There are five international railroads from Chile: a line to Tacna, Peru; two to La Paz, Bolivia; and two to Argentina. In 1975, the first section of a new subway was opened in Santiago; the second section was opened in 1980.

There were 79,800 km (49,588 mi) of roads in 2002, 11,012 km (6,843 mi) of which were paved. The Pan American Highway, extending 3,460 km (2,150 mi) from the Peruvian border to Puerto Montt, is Chile's principal road artery. In 2003 there were 1,373,121 passenger cars and 749,914 commercial trucks, buses, and taxis. The Carretera Austral Presidente Augusto Pinochet, a highway, is under construction in the south; when complete it will link Cochrane in Coyhaique with Puerto Montt.

Chile has some 20 ports, 10 of which are used principally for coastal shipping. Valparaíso, the principal port for Santiago, is by far the most important. Arica, Iquique, Tocopilla, Antofagasta, Coquimbo, San Antonio, Talcahuano, and Punta Arenas are other important ports. In 2005, the Chilean merchant marine had 47 vessels over 1,000 tons and a total GRT of 725,216.

Air transportation has become increasingly important. As of 2004 there were an estimated 364 airports in Chile, 72 of which had paved runways as of 2005. Santiago hosts the principal international airport, Arturo Merino. Chile's largest airline is the state-owned National Airlines of Chile (LAN-Chile), which provides both domestic and international service. LAN-Chile's only significant domestic competitor is Copper Airlines (LADECO), a privately owned company. In 2003, airlines carried 5.247 million passengers on domestic and international flights.

## 12 HISTORY

Before the Spanish conquest, several small groups of Amerindians lived in Chile. Araucanian Amerindians, who came under the influence of the Incas in the early 15th century, inhabited central and southern Chile. The conquistador Pedro de Valdivia founded Santiago in 1541, and brought Chile north of the Bío-Bío River under Spanish rule. The Araucanians resisted Spanish rule and killed Valdivia in battle. Amerindian resistance continued for 350 years, effectively barring Spanish settlement south of the Bío-Bío.

The Araucanians (also known as Mapuches today) were not subjugated until the early 1880s.

During Spanish rule, Chile was subject to the viceroyalty of Peru. Later, the territory was given the status of captaincy-general and was largely administered from Santiago.

Chile had one of Latin America's first independence movements. A *cabildo abierto* (town meeting) declared independence in 1810 in response to the French usurpation of the Spanish crown. Rival independence leaders Bernardo O'Higgins and José Miguel Carrera fought each other, then were overcome by Spanish troops. Eventually, Gen. José de San Martín, with O'Higgins as his chief ally, defeated the Spanish in 1817. In 1818 Chile formally proclaimed independence. O'Higgins ruled from 1818 to 1823, during which time he built a navy and consolidated the Chilean government under his dictatorial regime. However, his anticlerical and anti-nobility policies proved to be his undoing.

The next few years saw the growth of two political parties, the Conservative and the Liberal. While both were narrow elite factions, they differed in that Liberals favored a parliamentary, secular, federal system, while Conservatives wanted a traditional, religious, centralized system. The two groups fought bitterly, plunging Chile into civil strife until 1830 when Conservative Diego Portales assumed control of the political system.

Portales ruled as behind-the-scenes dictator from 1830 until his assassination in 1837. He launched a successful three-year war with Peru (1836-39), which destroyed a threatening Bolivian-Peruvian confederation. He also initiated a Conservative rule, which was to last until 1861. During that period, Chile's territory expanded with new claims to Patagonia and the island of Tierra del Fuego, and in 1847, the founding of Punta Arenas on the Strait of Magellan.

Between 1861 and 1891, the Conservatives were forced to share power with the Liberals, who had won several legislative victories. A wave of liberal reforms curtailed the power of the Roman Catholic Church and the presidential office. At the same time, both parties suffered a series of splits and realignments. But most notable during this period was Chile's greatest military achievement. In the War of the Pacific (1879-83), Chile again fought Peru and Bolivia, this time over possession of the Atacama Desert and its nitrate deposits. After victories on land and sea, Chilean forces entered Lima in 1881. By a treaty signed in 1883, Peru yielded Tarapacá, while Bolivia surrendered Antofagasta. The disposition of the other contested areas, Tacna and Arica, was not finally settled until 1929, when, with US mediation, Tacna went to Peru and Arica to Chile.

In 1891, Jorge Montt, a naval officer, led a revolt that resulted in eight months of civil war. The triumph of Montt marked the beginning of a 30-year period of stable parliamentary rule. Bolstered by nitrate revenues, Chile's national treasury grew, especially during World War I. At the same time the seeds of revolt were sown. Miners, farm workers and factory workers, sharing none of this prosperity, began to agitate for change. After the war ended, there was a recession and the country was on the verge of civil war. In 1920, a coalition of middle and working class groups elected Arturo Alessandri Palma as president. Alessandri, the son of an Italian immigrant, found himself in between the left's demands for change and the right's intransigence. He was deposed in a coup in 1924 but recalled in a countercoup in the following year. His sec-

ond administration lasted only six months, but he left the legacy of a new constitution passed on 18 October 1925. The new system created a strong, directly elected executive to replace the previous parliamentary system. The military strongman Gen. Carlos Ibáñez del Campo ruled Chile from behind the scenes until 1927, then served formally as president until 1931. US banks loaned large sums to Chilean industry, and efforts were made to salvage the foundering nitrate trade and boost the copper sector. World depression struck, however, bringing an end to foreign loans and a catastrophic drop in world copper prices. A general strike caused Ibáñez to flee in 1931. After two years marked by short-lived juntas and presidencies and a 100-day “socialist republic,” Alessandri was again elected.

Chile pulled out of the depression by 1938, but popular demand for social legislation remained unsatisfied. The 1938 election was narrowly won by Radical Party member Pedro Aguirre Cerda, running under the banner of a catchall coalition called the “Popular Front.” His ambitious “new deal” program was never enacted, as Aguirre found himself in the crossfire of Chilean politics. His coalition dissolved formally in January 1941, and Aguirre died in November. In 1942, the Radicals won election easily over former dictator Ibáñez.

Juan Antonio Ríos governed moderately amid political conflict aroused by World War II. Ríos at first cooperated with Argentina in toning down the US-sponsored anti-Axis program but later led his country into a pro-Allied position, entering the war on the side of the United States in 1944. After World War II, Chile went into an inflationary cycle and riots and strikes broke out throughout the country. Ríos died in 1946, and a special election brought to power a coalition of Communists and former Popular Front supporters under Gabriel González Videla. González’s coalition soon broke down, as the Communists organized demonstrations and strikes. Within months, González fired the three Communists he had appointed to cabinet positions. He then broke off relations with the Soviet Union, and outlawed the Communist party. Strikes and violence grew, and Chile, an example of stability by Latin American standards for so long, seethed with tensions. Chile’s pursuit of industrialization, which had started with the Aguirre and Ríos administrations, had led to increasing social problems as the cities bulged with unemployable rural workers. As the cost of living soared, the radicalism of the workers intensified.

The 1952 election brought the 75-year-old Carlos Ibáñez del Campo back to power. The ex-dictator, who had been plotting to return to power for years, defeated González Videla by exploiting a split among the Radicals and the disaffected Communists. Despite his reputation as an authoritarian and his connection with Argentina’s Perón, Ibáñez ruled democratically until 1958.

By 1958, the cost of living had soared and Chile’s trade balance had moved from a large surplus to a deficit. Evidence of a general discontent could be seen in the 1958 presidential election. A narrow victory was won by Jorge Alessandri Rodríguez (a son of President Arturo Alessandri Palma), who received support from both Liberals and Conservatives. The Socialist Salvador Allende Gossens, supported by his own party and the newly legalized Communist Party, won 29% of the vote (compared with only 5% in 1952), and Eduardo Frei Montalva, candidate of the new Christian Democratic Party (Partido Demócrata Cristiano—PDC), ran third with 20% of the vote.

Aware of popular pressure for reform, Alessandri drew up a 10-year development plan, initiated in 1959 with construction projects, tax reforms, and a token start at agrarian reform. A devastating earthquake and tidal wave in 1960 cut drastically into Alessandri’s programs, and his government was unable to regain momentum. In 1964, the traditional parties of the right and center lost strength to a wave of reform sentiment that shifted public attention to a choice between the socialist Allende and the moderate reformer Frei. In September 1964, Frei was elected by an absolute majority, and congressional elections in March 1965 gave the PDC a majority in the Chamber of Deputies and a plurality in the Senate.

The Frei government implemented numerous social and structural reforms. These included educational reform, land reform, and a scheme to create a majority Chilean interest in Chile’s copper mines. Frei became a cornerstone of the Alliance for Progress, a harsh critic of communism, and a leading exponent of Christian democracy. However, the reforms did not deliver as hoped and overall economic growth was sporadic. The Frei administration was not able to control the endemic inflation that had plagued Chile for more than 80 years.

In the 1970 presidential election there were three contenders: Jorge Alessandri, PDC candidate Radomiro Tomic, and the Socialist Senator Salvador Allende. Allende, who was supported by Popular Unity, a leftist coalition that included the Communist Party, received 36.5% of the total vote. Alessandri followed with 35.2%, and Tomic with 28%, with 0.3% of the ballots left blank as a protest. Since no candidate received a majority of the popular vote, congress was required by the constitution to select the president from the two leading candidates. The PDC supported Allende in exchange for a promise of full constitutional guarantees. The victory was unique in that for the first time in the Western Hemisphere, a Marxist candidate took office by means of a free election. Allende, inaugurated on 3 November 1970, called for a socialist economy, a new leftist constitution, and full diplomatic and trade relations with Cuba, China, and other Communist countries. It was later revealed through US congressional investigations and independent journalistic inquiries that the United States, with the help of the International Telephone and Telegraph Corp. (ITT), had secretly worked to thwart the election and confirmation of Allende.

The first full year of rule by Allende witnessed a rise in economic prosperity and employment, as well as an improvement in the standard of living of the poorer elements of the population. Allende expropriated US copper interests and turned large rural landholdings into peasant communes. By 1972, however, the economy began to lag, and the situation was aggravated by middle- and upper-class resentment over the government’s seizures of industrial and agricultural property. In June 1973, against a backdrop of strikes and street brawls beginning in the previous year, an abortive coup attempt was staged by a rightist army contingent. Throughout this period, the US Central Intelligence Agency had secretly supported the 1972 and 1973 strikes and disturbances, especially the truckers’ strike, which had caused nationwide shortages of food and consumer goods.

On 11 September 1973, the Allende government was violently overthrown. Allende himself died—officially reported as a suicide. A four-man junta headed by Gen. Augusto Pinochet Ugarte

seized power, dissolved congress, banned all political activities, and declared that Marxism would be eradicated in Chile. At least 3,000—and possibly as many as 10,000—people were killed or “disappeared” without a trace during and immediately after the coup. The military declared a state of siege and assumed dictatorial powers.

During its 16 years in power, the military attempted to eradicate not only Marxism, but all vestiges of leftism, trade unionism, reformism, and, for that matter, any other deviation from the official military line. High on their list of priorities was the privatization of the Chilean economy, which had gradually become more dependent on the state over three decades, a movement that had accelerated dramatically under Allende. This included the attracting of foreign investment, virtually untouched by government regulations or requirements. With unions under siege, workers’ rights rapidly eroded under the regime.

This powerful dose of economic liberalization was administered within a continuously authoritarian political system. After the original state of siege was lifted in 1978, Chile continued under a “state of emergency” until another state of siege was declared from November 1984 to June 1985. A third state of siege was in effect from September 1986 to January 1987, after a failed assassination attempt against Pinochet. At each denial of democracy, the Pinochet government insisted that it was not yet done with the task of “redeeming” Chile, and that full political rights could not be restored until then. A constitution that outlawed the advocacy of Marxism and gave Pinochet eight more years of rule was passed in a controversial plebiscite by 67% of voters in 1980.

Although forced to operate clandestinely, an opposition nevertheless emerged. A collection of political factions found common cause with the Roman Catholic Church, forming a group called the Civic Union. The Church had become increasingly critical of the Pinochet regime, despite the latter’s insistence that Catholicism was the cornerstone of the new Chile. When Pope John Paul II visited Chile in 1987, he brought accusations of torture and other human rights abuses. Finally, in 1988, Pinochet was pressured to call for a plebiscite to determine whether he should become president for another eight years. In February 1988, 16 political parties came together to form the “Coalition for the ‘No.’” In October 1988, Pinochet was soundly defeated, and in 1989 new elections were held. Christian Democrat Patricio Aylwin, running as the candidate of a 17-party Concert of Parties for Democracy (Concertación de Partidos por la Democracia) received 55.2% of the vote and assumed office in 1990. The election was hailed as a victory for democracy, but Chile remained under the watchful eye of the military. Pinochet, who remained head of the armed forces, retained enormous power.

The general resisted Aylwin’s efforts to place the military firmly under civilian control, and threatened a return to military rule if any of his officers were prosecuted for human rights violations. The Truth and Reconciliation Commission, established during the Aylwin administration, recorded 1,102 disappearances and 2,095 executions and death from torture during the dictatorship years. Those figures did not include thousands of others who were detained, tortured, and exiled.

Little could be done to prosecute military abuses. Aylwin’s administration was hampered by the constitution approved during the military regime. Pinochet had engineered the constitution to

his favor, allowing the regime to appoint eight senators for life in the new government. With eight pro-military senators, the Senate’s democratic coalition was unable to reach a majority and make constitutional changes. Military leaders also pushed through an amnesty law, which covered human rights abuses between 1973 and 1978. The Supreme Court remained under the control of judges sympathetic to the former military regime.

In the December 1993 presidential elections, the Concertación backed Christian Democratic Party candidate Eduardo Frei Ruiz-Tagle, the son of former President Eduardo Frei Montalva. With more than 58% of the vote, Frei continued the economic policies of his predecessor, with an even greater emphasis on social spending. By the end of the decade, poverty had declined to less than 20% from a high of 38% when democracy was restored. The Frei regime also emphasized privatization of state-owned enterprises, protection of foreign investment, and trade liberalization. Chile remained the world’s leading producer and exporter of copper, but with a greatly diversified export base. By 1998 the nation had achieved 15 consecutive years of economic growth. After a short recession in 1999, growth resumed in 2000 but at lower rates.

While the country’s commitment to democratic, representative government appeared secure and stable, Pinochet remained an impediment to real democratic reforms. In 1998, Pinochet retired as head of the military and became a senator for life. Despite eight years of democratic government, relations between the government and the military, which continued to assert its independence, remained tense. In October 1998, Pinochet traveled to London for back surgery. At the request of Spanish authorities, British police arrested Pinochet, who was recovering at a private hospital. Baltazar Garzón, a Spanish judge wanted Pinochet extradited to Spain to face charges of crimes against humanity. The arrest became a major international incident and shocked Chileans, most of whom thought Pinochet was untouchable. Following a lengthy legal battle that stretched across two continents and three nations, a London court in October 1999 ruled Pinochet could be extradited to Spain to stand trial. Back in Chile, the armed forces remained loyal to Pinochet and his arrest raised tensions between the military and the government. Yet, in his absence, Chilean politics were changing dramatically. While he languished in detention in England, the cause in favor of prosecuting human rights violators and finding out the whereabouts of individuals killed during the dictatorship moved forward in Chile. Several judges felt strengthened by the events in London and dared to indict active and retired military officers for human rights violations, contravening a amnesty passed by the military dictatorship in 1978. Some military leaders acknowledged that victims’ families had a right to know what happened to the “disappeared.” In March 2000, after 16 months in detention, the 84-year-old Pinochet was released. British authorities cited humanitarian reasons, saying Pinochet was medically unfit to stand trial. Pinochet returned to Chile, where he faced more than 70 criminal charges and efforts to remove him as senator for life. Chilean courts eventually ruled that he was unfit to stand trial in Chile for health reasons. He was forced to resign from the Senate and retired from public life. He currently lives in Santiago but does not appear in public or make public statements.

During his absence, the Concertación had backed the Socialist Ricardo Lagos for president. Joaquín Lavín, the conservative can-

didate, distanced himself from the hard politics of Pinochet and appealed for votes among Chile's poorest. Strains were beginning to show in the center-left coalition, which had ruled the country since 1990. Early in the campaign, Lavín, a former member of Pinochet's government, was not considered a strong candidate against Lagos. But both men finished tied in the December 1999 election, forcing a runoff election a month later. In the second round, Lagos captured 51.3% to narrowly defeat Lavín, who obtained 48.69% of the vote. With the victory, Lagos became the first Socialist to hold office since Allende. Lagos is a reformed Socialist who distanced himself from Allende's Marxist ideas. More of a social democrat similar in political style to England's Tony Blair, Lagos promised moderate policies and no changes to the nation's free-market economy. During the 1999 presidential campaign, the Chilean economy faced its worst recession in 20 years, with unemployment reaching 11%. But Lagos had ambitious programs of new infrastructure, health reform, judicial reform and educational reform. Yet, in 2002 the government was hurt when accusations of corruption surfaced that resulted in the indictments of several government coalition legislators and former cabinet ministers. The signing of a free trade agreement with the European Union and a much-awaited free trade pact with the United States helped boost Lagos's popularity in 2003. During his presidency, Chile was the most open economy in the region. Lagos's opposition in the United Nations Security Council, where Chile had a two-year period, to US president George W. Bush's intention to attack Iraq in early 2003 positioned him as strong regional leader committed to strengthening the UN and the international rule of law. Lagos finished his six-term with the highest approval ratings of any president since democracy was restored. A constitutional reform approved in 2005 stripped all pending authoritarian enclaves from the Pinochet-imposed Constitution. It also reduced the presidential term to four years with no immediate reelection.

Michelle Bachelet, a socialist and the candidate of the ruling Concertación center-left coalition won the 2005 presidential elections. In addition to electing its first woman president, Chileans ratified the same ruling coalition for the fourth consecutive presidential election and fifth consecutive parliamentary election. The conservative camp divided its support among two candidates, Joaquín Lavín and Sebastián Piñera. Lavín, who narrowly lost in 2000, failed to catch on with the electorate and ended up third. Piñera, a more moderate rightwing politician and wealthy businessman, went on to lose the runoff against Bachelet. Yet, he successfully positioned himself as the new leader of the conservative camp. The fact that former dictator Pinochet was involved in a secret bank accounts corruption scandal uncovered in the United States hurt the conservative parties, still associated with the Pinochet legacy in the 2005 elections.

Bachelet inherited a stable economy, but her challenges included renewing her coalition and projecting a platform for future growth. Because she is the daughter of a victim of the military dictatorship and suffered herself arrest and exile during the Pinochet era, Bachelet—who served as Lagos's defense minister—has also symbolized reconciliation for many Chileans. She started her four-year term with unprecedented opportunities to help Chile move forward as the most developed country in Latin America by 2010, Chile's bicentennial.

### **13 GOVERNMENT**

After the restoration of democracy in 1990, Chile continued to feel the legacy of the Pinochet regime. The Constitution of 1980 is still in effect, even though it was created with a different Chile in mind. In 1989, a series of amendments went into effect, reducing the influence and power of the military and consolidating the power of elected authorities. The 1980 constitution, as amended, is the third Chilean constitution. The first two were the original 1833 constitution, and the 1925 chart. The 1980 constitution was custom-made for the Pinochet military dictatorship, but it did not come fully into effect until after Pinochet left office in March of 1990. In 2005, new reforms stripped most of the remaining authoritarian provisions from the constitution.

The constitution provides for a strong executive serving a four year term (although Lagos and Frei served for six years, before the 2005 constitutional reform). The president has the authority to proclaim a state of emergency for up to 20 days and the power to introduce legislation and control the legislative agenda. There is a bicameral National Congress, consisting of a 120-member Chamber of Deputies and a 38-member Senate. Until 2005, the Senate included nine appointed members, as well as all ex-presidents, who had life membership. But starting in 2006, all senators were democratically elected. The constitution also provides for an independent judiciary, headed by a 21-member Supreme Court.

The 2005 constitutional reforms eliminated the active participation of the armed forces in government, although there remained some limitations on the right to strike and on freedom of information and expression. The Constitution institutionalizes a free-market economy. Although the Constitution was adopted under the Pinochet military dictatorship, several reforms starting in 1990 and, ending in a comprehensive package in 2005, made it more compatible with democratic standards.

### **14 POLITICAL PARTIES**

Except for an initial period of political disorder, independent Chile's first century of political life was dominated by the aristocratic Liberal and Conservative parties. Segments of the two parties split, shifted, entered into new alliances, regrouped, and took on new names. Since electoral law permitted the registration of parties with relatively small popular bases, coalitions were usually formed to elect presidents and control the congress. Many cabinets had a fleeting existence. After 1860, the Radicals emerged from the Liberal party, and over the next six decades, they increased their following with the rise of the middle class. In the meantime, the Liberals became conservative, and moved close to that party. Although the Conservatives and Liberals disagreed over the status of the Roman Catholic Church and over the matter of relative congressional and presidential powers, they were united in opposing the Radicals.

Designation of Chilean parties as being of the right, center, or left has been a function of shifting national political climates. Parties and party alliances have tended to appear and disappear over time. During the 1950s and 1960s, there were fewer, but much larger parties. Before the 1973 military coup there were five major parties in Chile: the Christian Democratic Party, founded in 1957, the Socialist Party, founded in 1931, the Communist Party, founded in 1921 (and outlawed during 1948–58), the National Party,

formed in 1966 by members of the Liberal and Conservative parties, and the old Radical Party, which saw its strength greatly diminished after 1964. The ruling Allende coalition of Popular Unity consisted of Socialists, Communists, and several smaller leftist parties. The most radical political group, the Revolutionary Movement of the Left, was not a coalition member.

In September 1973, all the Allende coalition parties were abolished. The other parties were initially suspended and then banned in March 1977.

The reemergence of political parties in the aftermath of Pinochet's ouster was dramatic. In 1990, to ensure that Pinochet's preferred presidential candidate would not take office, several center-left parties came together as the Coalition of Parties for Democracy (Concertación) and backed a single candidate. Today, the coalition includes four major parties: the Christian Democrats (PDC), the Party for Democracy (PPD), the Radical Party (PR), and the Socialist Party (PS). The Concertación has won four consecutive presidential elections, five consecutive parliamentary elections, and four consecutive municipal elections, becoming the most successful and lasting political coalition in Chile's history. The opposition from the right comes from the Independent Democratic Union (UDI), and the National Renewal (RN), which, bolstered by the influence of most Senate appointees held sway in the Senate since the restoration of democracy in 1990 until 2005. In the left, a coalition of the Humanist Party and Communist Party has attracted as much as 10% of the vote but has failed to gain parliamentary representation because of the electoral system—known as binominal—that favors the two largest coalitions.

## 15 LOCAL GOVERNMENT

After the military government came to power in September 1973, local authorities yielded power to the armed forces, and the nation was divided into military districts. The traditional 25 provinces, as well as all municipalities, were placed under military control.

Today, the country is divided into 13 regions, including the metropolitan area of Santiago, which is not numbered like the other 12 regions, beginning with Region I at the northern border with Peru and continuing in sequence to Region XII at the southern end. The regions each have a capital and are subdivided into provinces. Regions and provinces are administered by regional intendants and provincial governors. The nation's 345 municipalities, headed by mayors, form the smallest units of local government. Mayors and local councilors are elected every four years in concurrent elections.

In 1991, a constitutional amendment was passed granting some autonomy to local areas, but compared to other countries in the region; local governments in Chile remained weak. Legislation was introduced to create two new regions and to allow for the direct election of regional legislatures.

## 16 JUDICIAL SYSTEM

The Chilean civil code of 1857, although modified and amended, remained in use until 1973. Although not eliminated by the military in the wake of the 1973 coup, the judicial system had almost all of its major powers removed, with the military code of justice in force as the effective law of the land. In 1975, the junta began to

restore some of the traditional powers exercised by the 13-member Supreme Court.

The 1980 constitution, which came into full effect in 1989, provides for an independent judiciary. The Supreme Court, whose 21 members are appointed by the president with Senate approval, has authority over appellate and lower courts but does not exercise jurisdiction over the ten-member Constitutional Court and the five-member Electoral Court, which supervises all elections.

Although independent in theory, the judiciary remains subject to criticism for inefficiency and lack of independence. The Court's unwillingness to prosecute human rights violations during the military dictatorship cost the judicial system dearly and hindered its reputation. Appointees of the former military regime dominated the courts for most of the 1990s. By 2000, turnover had diminished the number of pro-Pinochet judges, and some judges were asserting their independence. In addition, a comprehensive reform adopted in 1997 effectively strengthened the judiciary and made it more autonomous of the military and civilian authorities. A criminal legal reform initiated in 1997 was completed in 2004 with the separation of the role of judge and prosecutor. A similar reform was likely to occur for civil cases, where the judge currently also serves as the prosecutor.

Military tribunals have jurisdiction over the military officers. Military courts have also authority to charge and try civilians for defamation of military personnel for sedition. In such cases, appeals can be made to the civilian Supreme Court. Reforms passed in 1991 (the "Cumplido" laws) transferred some of the jurisdiction of the military tribunals to the civilian courts.

There is no jury trial. The legal system is mainly based on Napoleonic Code. The constitution provides for the right to counsel.

## 17 ARMED FORCES

The Chilean armed forces in 2004 had 78,098 active and 50,000 reserve personnel. Military service became voluntary beginning in 2005. The Army numbered 47,700 active personnel (20,700 conscripts). Equipment included 260 main battle tanks, 157 reconnaissance vehicles, 20 armored infantry fighting vehicles, 1,066 armored personnel carriers, and over 615 artillery pieces. The Navy had 19,398 personnel (1,660 conscripts; 600 naval aviation personnel and 3,500 Marines). Major naval units included 4 tactical submarines, 2 destroyers, 4 frigates and 25 patrol/coastal vessels. The naval aviation arm's six combat capable aircraft consisted of the PC-7 Turbo Trainer. The Air Force had 11,000 personnel (700 conscripts). The service had 87 combat capable aircraft including 18 fighters and 69 fighter ground attack aircraft. In addition, there is a 38,000 member paramilitary national police force, the Carabineros. Chile participated in UN peacekeeping missions in the Middle East, Haiti, and India/Pakistan. The defense budget in 2005 totaled \$1.66 billion.

## 18 INTERNATIONAL COOPERATION

Chile is a charter member of the UN, having joined on 24 October 1945, and participates in several nonregional specialized agencies. The headquarters of ECLAC and the Latin American office of the FAO are located in Santiago. In 2002, Chile signed a free trade agreement with the European Union, becoming the first Latin American nation to do so; in 2003, Chile signed a free trade agreement with the United States, becoming the second Latin Ameri-

can nation, after Mexico, to do so. Chile is a member of APEC, G-15, G-77, the Latin American Economic System (LAES), the Latin American Integration Association (LAIA), the OAS, and the Río Group. The country is an associate member of Mercosur.

Chile is part of the Nonaligned Movement, the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL), and the Organization for the Prohibition of Chemical Weapons. Chile has offered support to UN peacekeeping and administrative efforts in Kosovo (est. 1999), India and Pakistan (est. 1949), and Haiti (est. 2004). The country is a signatory of the 1947 Río Treaty, an inter-American security agreement.

In environmental cooperation Chile is part of the Antarctic Treaty; the Basel Convention; Conventions on Biological Diversity, Whaling, and Antarctic Marine Living Resources; Ramsar; CITES; the London Convention; the Kyoto Protocol; the Montréal Protocol; MARPOL; and the UN Conventions on the Law of the Sea, Climate Change, and Desertification.

## 19 ECONOMY

The Chilean economy is strongly oriented toward commerce and industry, although minerals, chiefly copper and iron ore, provide most of the country's foreign exchange earnings. Chile's leading industries are engaged in the processing of local raw materials; they include mineral refining, metal manufacturing, food processing, paper processing, and textiles. Chilean agriculture, dwarfed in value by mining and manufacturing, supports less than one-seventh of the population. Arable land is limited and livestock raising is the dominant rural enterprise.

The economy suffered profound economic disruptions during the Allende period (1970–73). Legal nationalization of industries and expropriation of large agricultural holdings by the military government were accompanied by illegal seizures of property. The chaotic situation was exacerbated by acts of economic sabotage perpetrated by the opposition, by covert destabilization by agents of the United States, and by denial of commercial credit by foreign banks and corporations. By the time of the military coup in late 1973, the nation's manufacturing and farm production had fallen by about 10% from 1972 levels, and inflation had soared to 350%.

After the Pinochet coup, the military government attempted to revitalize the economy by adopting the principles of a free marketplace, although without reversing Allende's nationalization of the copper industry. Subsidies were removed and tariffs were lowered to increase competition. A policy of privatization of industries and utilities was instituted, including the return of companies nationalized under Allende to their previous owners (again, excepting the copper industry, which remained nationalized), the sale of government-owned companies to individuals and conglomerates, and the sale of percentages of companies to employees and the public on the stock exchange. The GDP fell by 12% in 1975, but Chile's economic performance began to improve thereafter. The average annual rate of increase in GDP between 1977 and 1981 was 7.8%, and the inflation rate dropped from 174% in 1976 to 9.7% in 1981. In 1982, however, a severe economic slump (caused by the worldwide recession, low copper prices, and an overvalued peso) led to an inflation rate of 20.7%, a drop in the GDP of 15% in real terms, and jump in unemployment to 30%. Chile had been caught in the Third World debt crisis that followed the second oil shock of 1978–79.

Beginning in 1984, growth returned, averaging 7% for the next five year (1984–88), constrained somewhat by persistently depressed world copper prices. An economic adjustment program introduced in 1985 aimed at strengthening exports other than copper, increasing domestic savings and investments, and strengthening the financial and corporate sectors. Inflation remained high, averaging almost 21% (1985–88), but unemployment dropped from 12% to 6%. In 1989, GDP growth rose to 10% and unemployment fell to 5%, although inflation remained in double digits (17%). Civilian rule, starting in 1990, implemented positive monetary policies that continued to lower inflation and attract investment. Inflation was down to 6% by 1997, and growth of GDP averaged over 8% between 1988 and 1997. By 1995, unemployment had fallen to 4.7%. In 1998, however, growth was slowed to 3.2% and then turned negative (-1.0%) in 1999 in the first contraction since 1983, as the effects of the Asian financial crisis of 1997, the Russian financial crisis of 1998, and the Brazilian financial crisis of 1999 were felt. Unemployment increased to 6.2% in 1998, and then to 9.7% in 1999. Inflation, however, remained low at 4.7% (1998) and 2.3% (1999), the lowest yearly rate yet achieved since the 1960s. Growth returned in 2000 at 4.4% and unemployment eased to 9.2% while inflation edged up to 4.5%. However, a more robust recovery was short-circuited by the global slowdown that began in 2001, aggravated by the aftermath of the 11 September 2001 terrorist attacks on the United States. The GDP growth rate fell to 2.8% in 2001 and was estimated at 3% for 2002. Inflation remained under control at 2.6% in 2001 and 3% in 2002. Chile's official unemployment rate remained above 9%.

On 6 June 2003 Chile signed a free trade agreement with the United States, making it the second Latin American country to do so (after Mexico). The United States had delayed the signing because of Chile's opposition as temporary member of the Security Council to the US-led invasion of Iraq in March 2003.

The GDP growth rate was 6.1% in 2004, up from 3.7% in 2003, and 2.2% in 2002; in 2005, the economy was estimated to have expanded by 5.8%. The inflation rate dropped to 1.1% in 2004 and it did not pose any problems to the economy. The unemployment rate was fairly stable, but it registered a long term downward trend—in 2005, it was estimated at 7.4%. The engines of growth in 2004–05 were high copper prices, booming exports (especially for mining, forestry, and fishing), and increased foreign investments. In November 2005, Chile signed a free trade agreement with China.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Chile's gross domestic product (GDP) was estimated at \$180.6 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$11,300. The annual growth rate of GDP was estimated at 5.9%. The average inflation rate in 2005 was 4%. It was estimated that agriculture accounted for 6.2% of GDP, industry 46.5%, and services 47.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$13 million or about \$1 per capita. Foreign aid receipts amounted to \$76 million or about \$5 per capita

and accounted for approximately 0.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Chile totaled \$43.94 billion or about \$2,781 per capita based on a GDP of \$72.4 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 5.8%. In 2001 it was estimated that approximately 17% of household consumption was spent on food, 24% on fuel, 20% on health care, and 15% on education. It was estimated that in 2000 about 20.6% of the population had incomes below the poverty line.

## 2<sup>1</sup> LABOR

In 2005, Chile's labor force was estimated at 6.3 million workers. Of the employed workforce in 2003, service occupations accounted for 63%, while 13.6% were in agriculture, and 23.4% in the industrial sector. Unemployment and underemployment have plagued successive governments during recent decades, reaching nearly 22% (unofficially) by the end of 1990. As of 2005, Chile's unemployment rate was 7.4%, down from 10.1% in 2001.

Workers have the right to form and join unions without the need to obtain prior approval. Although private sector employees have the right to strike, it is regulated by the government. Public employees are denied the right to strike. Although it is allowed to replace striking workers, employers must pay a cash penalty that is divided among the strikers. Employers must also pay severance benefits to dismissed striking workers and show cause for dismissal. Union membership dropped from about 30% of the labor force in 1975 to about 10% in 2005.

Although child labor is restricted by law, in Chile's informal economy it is a problem. Minors between the ages of 15 and 18 can work but must have parent or guardian approval. In addition, they must also attend school. There are also other requirements regarding the type of labor opened to them and how long they may work. Work in underground mines is limited to those 21 and over, although 18 to 21 year olds can work at other types of mining sites.

The law sets the minimum wage and it is adjusted annually. As of end 2005, it was set at \$245 per month. The minimum wage is designed as a starting wage for an unskilled single worker and does not provide a decent standard of living for a family. The legal workweek is 45 hours and 10 hours per day (which includes overtime pay) with limited exceptions. There are also occupational safety and health standards. The government is putting expanded resources into enforcement of these measures and compliance is increasing.

## 2<sup>2</sup> AGRICULTURE

Of the total land area of 74.8 million hectares (184 million acres), 2.3 million hectares (5.7 million acres) is arable land. Until 1940, Chile was substantially self-sufficient in most basic foodstuffs. Since World War II (1939–45), serious food deficits have developed, adding to the nation's external payments burden.

Agricultural production of major crops in 2004 (in tons) was as follows: sugar beets, 2,370,483; wheat, 1,921,652; corn, 1,320,606;

oats, 538,600; barley, 81,000; rapeseed (canola) 18,500; and rice, 119,265.

Agriculture was one of the sectors most adversely affected by the recession of 1982, but it quickly recovered by the mid-1980s. Poor results in the traditional agricultural sector inhibit a more rapid expansion in agriculture. One of the areas of most rapid growth is in fresh fruit, with the production of grapes rising by 235% between 1981 and 1985. The fruit harvest in 2004 (in tons) included grapes, 1,900,000; apples, 1,250,000; peaches and nectarines, 304,000; pears, 205,000; oranges, 125,000; and lemons and limes, 160,000. Avocado production for 2004 was estimated at 160,000 tons, up from 39,000 tons during 1989–91. Most of the avocado orchards are in central Chile.

The traditional land system, inherited from colonial times, has retarded maximum use. Chile's first agrarian reform law, passed in 1962 and supplemented by a constitutional reform in 1963, enabled the government to expropriate and subdivide abandoned or poorly cultivated land and compensate the landowner in installments. Another agrarian reform law was passed in 1967 to clarify expropriation and settlement procedures and to permit an increased turnover rate. By the end of the Frei administration in November 1970, some 1,400 agricultural estates, representing 3.4 million hectares (8.4 million acres), had been confiscated and converted to *asentamientos* (agricultural communities).

The pace of expropriation was accelerated by the Allende government, which by 1972 had doubled the previous administration's figure for land acquisitions. By taking over virtually all of the land subject to redistribution under the 1967 reform act, the Allende government effectively transformed the Chilean land tenure system. In addition, agricultural laborers, often led by militants to the left of the Allende government, illegally seized some 2,000 farms. Following the 1973 coup, the military regime returned almost all farms in the last category to their original owners; the expropriated land was redistributed to 45,000 smallholders. In 1978, the land reform law was replaced by new legislation that removed restrictions on the size of holdings.

## 2<sup>3</sup> ANIMAL HUSBANDRY

Stock raising is the principal agricultural activity in most rural areas. In 2004 there were an estimated 3.7 million sheep, 4 million head of cattle, 3.2 million hogs, 725,000 goats, and 790,000 horses, mules, llamas, and alpacas. The extreme south of Chile is noted for sheep production, while cattle are raised in the central regions. Meat products must be imported from Argentina to fulfill domestic demand. In 2004, 208,258 tons of beef and veal, 363,305 tons of pork, and 19,539 tons of mutton and lamb were produced. In north-central Chile, the hills afford pasturage during the rainy season, and fodder or irrigated pasture provides feed during the dry months. In the south-central regions, natural pasturage is available throughout the year.

The dairy industry is small; milk production totaled 2,309,750 tons in 2004. Production of raw wool in 2004 was an estimated 15,100 tons.

## 2<sup>4</sup> FISHING

With 1,016 species of fish within Chilean waters, its commercial fisheries have long been important. The low temperatures and Antarctic current supply the purest and most oxygenated ma-

rine waters in the world. Since 1959, their growth has been rapid, largely owing to the development of a fish-meal industry, centered around Iquique. Anchovies are predominant along the northern coast, whiting and mackerel in the central waters, and shellfish in the south.

Leading fish and seafood caught commercially are Spanish sardines and yellow jacks, as well as anchovies, whiting, eels, sea snails, mackerel, and mussels. Tuna fishing has increased, as have catches of clams and lobsters. The total fish catch soared from 340,000 tons in 1960 to 1,237,000 tons in 1976 and 4,185,188 tons in 2003, but down from 7,720,578 tons in 1994. Chile is ranked seventh in the world in total landings of fish. In 2003, Chile contributed 3.4% to the world's exports of fish products, valued at \$2.13 billion. Exports of fish and fish-meal account for about 9% Chile's total exports.

Increasingly, salmon production is playing an important role in Chile's fishing industry. The Chilean salmon and trout industry consists of more than 70 companies employing directly and indirectly over 40,000 workers. Aquaculture is conducted in 234 coastal operations for which the companies pay user fees to the government. In 2004, exports of salmon and trout products were valued at \$996.2 million and were projected to top \$2 billion by 2010.

## 25 FORESTRY

Chile has extensive forests, estimated at some 15.5 million hectares (38.3 million acres), or about 20.7% of the total land area. In 2004, the total area of commercial forests increased by 32,000 hectares (79,000 acres). The average annual deforestation rate during 1990–2000 was 0.1%. Logging operations are concentrated in the areas near the Bío-Bío River. Softwoods include alerce, araucaria, and manio; hardwoods include alamo, laural, lenga, and olivillo. The establishment of radiata pine and eucalyptus plantations, largely as a result of government assistance, has helped Chile to become an important supplier of paper and wood products to overseas markets. Chile is a major source of hardwood in the temperate zone. Native forests—in addition to the radiata pine and eucalyptus—are as yet under-utilized and could become an important factor in Chile's growing competitiveness. Most wood products from Chile are exported as logs, chips, and lumber.

The total roundwood harvest in 2004 was 44.3 million cu m (1.56 billion cu ft). About 65% of the roundwood output is used by the forestry industry, and the rest is used as firewood. Commercial uses for roundwood include pulp, wood chips, sawnwood, and lumber production. At least half of Chile's population uses firewood for heating and cooking.

Government incentives also resulted in an increase of forestry product exports from \$36.4 million in 1973 to \$468 million in 1980; by 1991, forestry exports rose to \$836 million. In 2004, the forestry sector generated exports of \$3.4 billion, or 11% of Chilean exports. Export demand has especially strengthened for sawnwood and wood pulp. Production from 1987 to 1991 increased by nearly 60% as a result of maturation of trees planted in the 1970s. Chile's forest products sector has expanded through commercial planting, especially radiata pine and eucalyptus. The major markets for Chilean wood are the United States, China, Japan, Mexico, Netherlands, and Italy. The Chilean-German Technology Transfer

Center in Concepción assists in contributing to the technological development of forestry in the Bío-Bío region.

## 26 MINING

In 2003, Chile produced around 36% of the world's mined copper, was home to the largest copper mine in terms of production, and continued to be a top producer and exporter of copper by volume and value. Copper Refined copper accounted for 35.4% of the country's exports in 2003. Chile's copper mines accounted for 36% of the world's production in that year. Chilean mining activities were also concentrated in coal, iron, precious metals, and industrial minerals. Traditionally dependent on copper exports, Chile also produced iodine and lithium, molybdenum, potassium nitrate, sodium nitrate, gold, silver, rhenium, and selenium. Iron ore was another primary export mineral. Chile also exported ferromolybdenum, potash, and zinc. In addition, Chile produced arsenic trioxide, lead, manganese, barite, natural borates (ulexite), bentonite, kaolin, other clays, diatomite, dolomite, feldspar, crude and calcined gypsum, lapis lazuli, hydraulic lime, phosphate rock (apatite), pigments (mineral, natural, and iron oxide), pyrite, potassium chloride, pozzolan, pumice, common quartz, salt, sodium compounds (including natural sodium sulfate and anhydrous sodium sulfate), sand and gravel (silica), limestone (calcium carbonate), marble, sulfur, and talc.

The mineral industry employed 95,222 people in 2003, including office personnel, administrators, staff, and mining personnel.

Copper output totaled 4.9 million tons in 2003, up from 4.58 million tons in 2002.

Gold production increased to 38,954 kg, in 2003, up slightly from 38,688 kg in 2002. Silver production—derived from the gold and copper mining—totaled 1,313 metric tons, up from 1,210 metric tons in 2002.

Chile is a world leader in natural nitrate production. The Salar (salty marsh) de Atacama, which held significant nitrate reserves, also contained 58% of the world reserves of lithium. In 2003, lithium carbonate output was 41,667 metric tons, up from 35,242 metric tons in 2002. In 2003, Chile produced 15,580 metric tons of elemental iodine, up from 11,648 metric tons in the previous year. Chile also produced 215,000 tons of potassium nitrate and 919,000 tons of sodium nitrate in 2003.

Production totals for other minerals in 2003 were: manganese, 19,461 metric tons; molybdenum, 33,375 metric tons, up from 29,467 metric tons in 2002; zinc, 33,051 metric tons; and iron ore and concentrate (gross weight), 8,011,000 tons, up from 7,269 tons in 2002.

A cross-border mine treaty between Chile and Argentina, ratified by the countries' presidents in 2000, lifted restrictions on property ownership and access rights for mining and exploration along most of the border and simplified customs and taxation procedures. It was reported that the agreement should result in \$6 billion worth of new mining investment over five years. Legislation passed in 1966 initiated a "Chileanization" policy for the copper industry, which provided for government ownership of a controlling share of the sector; US management of the large mines was permitted to continue. Agreements signed in 1967 with the three US-owned companies that produced most of Chile's copper provided for an increase of Chilean participation, expanded investment, and a stable tax and exchange rate; the government was

to acquire an equity position in the mines. A law passed unanimously by the Chilean congress in 1971 provided for the nationalization of the copper holdings of the Kennecott and Anaconda corporations. Copper production grew significantly in the following years, despite the emigration of a large number of trained specialists. The military government of 1973–1990 subsequently compensated US interests for their expropriated holdings and sold many state-owned companies; the three democratic governments since 1990 have continued privatization at a slower pace. Foreign investment in copper has since resumed. The largest recent investment projects were the \$2.342 billion La Escondida expansion copper oxides project, which started in 1998; the \$2.185 billion Collahuasi copper cathode project, begun in 1998; the \$1.8 billion Al Abra copper project, which started in 1997; the \$1.307 billion Los Pelambres copper expansion project, which started in 1999; and the \$1.33 billion Cerro Casale copper/gold project, whose start-up date had not been determined.

## 27 ENERGY AND POWER

Chile's limited domestic energy sources means that the country will have to rely upon imports to meet its rapidly expanding demand for energy. Electric power generation reached 39.8 billion kWh in 2000, up from 6.9 billion kWh in 1968. Output was estimated for 2003 at 45.3 billion kWh. Hydroelectric power accounted for 53% in 2003, with conventional thermal sources at 43%. Electricity consumption was 37.9 billion kWh in 2000, which increased to an estimated 44.1 billion kWh in 2003. Installed capacity in 2001 was 9.7 million kW. By 2003, it was estimated that installed capacity had risen to 10.5 GW. Within South America, Chile is exceeded only by Brazil in its hydroelectric power potential, much of it located in the heavily populated central part of the country between La Serena and Puerto Montt. The quick descent of Andes-born rivers, together with the narrowness of the country, makes production and transportation of electricity comparatively inexpensive. A severe drought in 1997–1999 created serious power shortages, including rolling blackouts in Santiago, and spurred Chile to try diversifying its power supply. As of 2002, the 570 MW Ralco hydropower project on the Bío-Bío River was slated for possible completion in 2003.

The state lays claim to all petroleum deposits, and a government agency, the National Petroleum Co. (Empresa Nacional del Petróleo—ENAP), manages oil fields in Region XII. ENAP's oil production only meets around 8% of Chile's needs and reserves are decreasing. Production, which began in 1945, is concentrated around the Strait of Magellan, both onshore and offshore. The crude petroleum is transported by sea to the refinery at Concón, north of Valparaíso. A second refinery was completed near Concepción in 1965 and, later, a third at Gregorio-Magallanes. In 2002, production totaled 14,000 barrels per day. By 2004, output had risen to an estimated 18,400 barrels per day. However, consumption in 2004 was estimated at 225,000 barrels per day. As of 1 January 2005, proven reserves were estimated at 150 million barrels. Chile's primary sources for imported oil are Argentina, Brazil, Angola, and Nigeria, respectively.

ENAP also controls all of Chile's production of natural gas. Since 1997, when Chile began to import natural gas on a large scale, consumption has increased an average of 21.7% annually. In 2003, the consumption of natural gas in Chile totaled an estimated

249.3 billion cu ft. According to the Oil and Gas Journal, Chile's proven reserves of natural gas in 2005 stood at 3.5 trillion cu ft. Argentina is Chile's main source for imported natural gas.

Chile's recoverable coal reserves have been boosted by recent discoveries in the Bío-Bío area. Recoverable reserves were estimated in 2003 at 1,301.8 million short tons and are now believed adequate to supply Chile's needs for 100 years. A number of petroleum-fired electric generators have recently been converted to coal.

## 28 INDUSTRY

Chile ranks among the most highly industrialized Latin American countries. Since the 1940s, manufacturing has contributed a larger share of GDP than has agriculture. About one-third of the value added by manufacturing comes from the production of food, beverages, and tobacco products. During the last decade of the 19th century, food product exports soared, with growth of 85% up to 1,000%.

The basic industrial pattern, established in 1914, included food processing, beverage production, sugar refining, cotton and woolen mills, a hosiery mill, a match factory, an iron foundry, and a cement factory. During the next decade, industrial production rose about 85%, but from 1949 to 1958 the level of output was virtually stationary. With the establishment of the Huachipato steel mill in 1950, the groundwork was laid for the development of heavy industry. Chile's first copper refinery was inaugurated in November 1966. The major industrial region is the Santiago-Valparaíso area. Concepción is in the center of an industrial complex. The state-owned firm CODELCO is the world's second-largest copper mining company, but the private sector generally produces more copper than the state (two-thirds of the total).

During 1970–73, 464 domestic and foreign-owned plants and facilities were nationalized by the Allende government. These included the copper installations of the Anaconda and Kennecott corporations and other companies owned by US interests. By 1982, the military government had returned most expropriated installations to their original owners. The free-market policies of the junta, together with a worldwide recession, resulted in a 25.5% drop in manufacturing output in 1975. After the mid-1970s, Chilean industry moved away from concentration on import substitution to become more export-oriented. Over 20% of the 1985 value of industrial production came from exports, and in 1998, the value of exports exceeded the value of imports for the first time. Key sectors include textiles, automobiles, chemicals, rubber products, steel, cement, and consumer goods.

The industrial sector grew at an average rate of 7% between 1976 and 1982. Industrial output grew by an average of 3.7% per year between 1980 and 1990, and by 6.6% annually during 1988–98. Manufacturing output grew on average by 3.4% annually during the 1980s, and by 5.8% per year between 1988 and 1998. Chile has three oil refineries, with a production capacity of 205,000 barrels per day. It has a fledgling automobile industry: in 2001, Chile produced 10,519 units, up from 5,245 in 2000. It also produces some heavy trucks.

In 2005, industry accounted for 46.5% of the GDP (about the same figure as in the previous year), and was bested by services, with 47.3% (which was also the largest employer in the country); agriculture made up only 6.2% of the economy. The industrial

production growth rate was 6%, overperforming the GDP growth rate in the same year.

## 29 SCIENCE AND TECHNOLOGY

The Academy of Sciences, which promotes research in the pure and applied sciences, and the Chilean Academy of Medicine, which promotes research and disseminates information in the health sciences, were both founded in 1964 in Santiago and are part of the Institute of Chile. In addition, there were, as of 1996, 64 specialized learned societies in the fields of medicine; the natural, biological, and physical sciences; mathematics and statistics; and technology. The government agency responsible for planning science and technology policy is the National Commission for Scientific and Technological Research. Total expenditures on research and development (R&D) totaled \$799.218 million in 2001 or 0.54% of GDP. Government spending accounted for 68.9% of R&D expenditures in 2001, with business accounting for 24.9%, foreign sources 4.1% and nonprofit institutions at 2.1%. In that same year, Chile had 419 researchers and 307 technicians actively engaged in R&D. High technology exports in 2002 totaled \$107 million in 2002, or 3% of manufactured exports.

Chile has 22 institutes conducting research in agriculture, medicine, natural sciences, and technology, as well as the European Southern Observatory. At least 27 colleges and universities offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 42% of college and university enrollments.

## 30 DOMESTIC TRADE

The best market for manufactured and imported goods is heavily concentrated in central Chile, particularly in Santiago, Valparaíso, and Viña del Mar. Valparaíso, which serves as the shipping outlet for Santiago, is Chile's chief port. Concepción provides direct access to the markets of southern Chile and Antofagasta to those in northern Chile.

The predominant elements in the pattern of retail merchandising are the independent merchants. They sell their wares in small specialized stores, in municipally owned markets, or in free markets (*ferias libres*). There is a growing number of chain groceries and supermarkets. As of 2002, there were about 80 franchises supporting about 300 stores throughout the country. Shopping malls are showing up in major cities. Stores are owned primarily by Chileans, although foreign interests are represented in retail merchandising.

Some large segments of the economy are still controlled by business groups, but the number of small and medium-sized private companies is growing. An 18% value-added tax applies to most goods. Government policies toward privatization have been in effect since the 1970s and both foreign and domestic investments have been encouraged.

The usual retail business hours are from 10:30 AM to 7:30 PM, with half a day on Saturday. Business hours run from 9 AM to 6 or 7 PM, Monday through Friday, with a one hour lunch break at one. Normal banking hours are from 9 AM to 2 PM, Monday through Friday. It is common practice for stores and factories to close for about 15 days sometime between 1 December and 1 April for summer vacation. The business language is Spanish, but most business people also know English.

## 31 FOREIGN TRADE

Copper remains Chile's largest commodity export (28%) and the country has the highest percentage of the world export market of that mineral (16%). Other significant exports include wood pulp and waste paper (6.1%), fruit and nuts (6.5%), and fish (6.5%). Chile claims 7.2% of the world's wood chip exports.

In 2005, exports reached \$38 billion (FOB—Free on Board), while imports grew to \$30 billion (FOB). In 2004, the bulk of exports went to the United States (14%), Japan (11.4%), China (9.9%), South Korea (5.5%), the Netherlands (5.1%), Brazil (4.3%), Italy (4.1%), Mexico (4%). Imports included intermediate goods, capital goods, and consumer goods, and mainly came from Argentina (16.8%), the United States (13.7%), Brazil (11.2%), and China (7.5%).

## 32 BALANCE OF PAYMENTS

Between 1982 and 1984, the combination of world recession, slumping copper prices, rising foreign interest rates, and an unexpected rise in imports prompted the Pinochet regime to impose domestic austerity measures in order to meet IMF fiscal and monetary targets. The unrest that followed forced the government to request a 90-day moratorium on some debt repayments and seek rescheduling of \$3.4 billion due in 1983–84. The current account balance averaged -\$2 billion from 1980 to 1995, but fell again to -\$4.5 billion in 1998. Following the 1998 recession, Chile applied tight monetary policies to push the current account into a small surplus in 1999. By 2000, however, the current account posted a \$1 billion deficit.

The International Monetary Fund (IMF) reported that in 2001 Chile had exports of goods totaling \$18.5 billion and imports totaling \$16.4 billion. The services credit totaled \$3.81 billion and debit \$4.81 billion. The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of Chile's exports was \$18.5 billion while imports totaled \$18 billion resulting in a trade surplus of \$500 million.

Exports of goods and services reached \$34 billion in 2004, up from \$25 billion in 2003. Imports increased from \$24 billion in 2003, to \$28 billion in 2004. The resource balance was conse-

quently positive in both years, improving from \$2 billion in 2003, to \$6 billion in 2004. The current account balance however was negative, deteriorating from -\$594 million in 2003, to -\$1.7 billion in 2004. Foreign exchange reserves (including gold) reached \$15 billion in 2004, covering more than five months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

During the Allende period, almost all private banks were taken over by the government, mainly through the purchase of stock. The military government reversed its predecessor's policy, making the financial market essentially private. In 1999, Chile had, in addition to the Central Bank, 29 banks and 3 finance societies (which have less capital than banks and cannot perform foreign trade operations). There was one state-owned bank; the Banco del Estado is the country's second-largest bank, with 13% of loans and 14% of deposits in 1998. Six US banks, twelve Chilean banks, and eleven foreign banks operated in Chile. The Central Bank and the Superintendent of Banks and Financial Institutions (that reports to the Finance Minister) both regulate the financial industry.

Following government intervention in a number of financial institutions in 1983, the Central Bank introduced three major measures: the issue of \$1.5 billion in emergency loans; a provision by which banks could sell their risky portfolios to the Central Bank for 10 years with an obligation to use their profits to buy them back; and the "popular capitalism" program, announced in April 1985, which allowed, among other things, a new share issue for banks in which there had been intervention.

A working group was formed in December 1996 to iron out the remaining technical obstacles to a new banking law so that it might be approved by both houses of congress before February 1997. Several deadlines were missed regarding bank liberalization, which has been under discussion since 1991. The Central Bank kept its main monetary policy instruments unchanged in

1995, but it lifted its target range for interbank rates from 7–7.5%. In 1997, a new banking law relaxed some of the restrictions by allowing banks to provide factoring and leasing services.

Securities trading has been traditionally inhibited by the Chilean investors' preference for real estate investment. There is free sale of securities, the largest groups of which are in mining, banking, textile, agricultural, metallurgical, and insurance stocks. All corporations with more than 100 shareholders must register with a stock exchange. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$6.5 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$30.9 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 6.81%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

In 2004, there were 239 companies were listed on the Bolsa de Comercio de Santiago, (BCS), which was founded on 27 November 1893. It is a private company comprised of 48 shares held by single shareholders. Chile's first stock exchange dates from 1892 and was established in the Port of Valparaíso. It closed in 1982. Stock operations on the Santiago exchange are regulated by the Insurance and Value Superintendency. Total market capitalization in 2004 stood at \$1.200 billion. As of end 2004, the IGPA index stood at 8,962.6, up 22.2% from the previous year.

In November 1996 the foreign ministry and the Central Bank, together with the superintendence for banks (SBIF) and for securities and insurance (SVV) completed a draft bill for the launch of an offshore stock market in Santiago. It would operate in foreign currency, not convertible into pesos, and would give access to the local capital and credit markets to all Latin American and other foreign borrowers. The offshore stock market began operations in 2000.

### 3<sup>4</sup> INSURANCE

The insurance market is regulated through the Superintendent of Security Markets and Insurance Companies. Accounting practices reflect generally accepted accounting principles, and, in addition, the requirements as established by the Superintendent. These differ from generally accepted accounting principles in the United States in respect to accounting for monetary correction which takes into consideration the changing price levels in Chile.

The Chilean insurance market is characterized by a relatively large number of insurers for its size and a very competitive environment. The market was opened to foreign organizations, the government insurers were privatized, and the market liberalized under the military government. An increasing number of foreign insurers operate in Chile either in association with domestic organizations or independently. Workers' compensation and automobile personal accident insurance for drivers, passengers, and third parties are compulsory.

In 2003, direct insurance premiums written in Chile totaled \$3.396 billion, with \$2.117 billion comprised of life insurance and \$1.225 billion comprised of nonlife insurance. The country's top nonlife insurer in 2003 was Ceuz del Sur, with \$158.5 million

in gross nonlife premiums written. ING was Chile's top life insurer that same year, with \$387.7 million of gross life premiums written.

### 35 PUBLIC FINANCE

Chile experienced budget deficits from the early 1960s through the mid-1970s. Expenditures grew steadily with the expansion of public-sector participation in social welfare and economic activities and with increasing government investment in development projects; the resulting deficits were covered by Central Bank loans and foreign borrowing. Budgetary surpluses were recorded from 1975 through 1981, after which the pattern reverted to deficits. From 1985 to 1993, Chile reduced its external debt by \$11.3 billion through debt-equity conversions.

The US Central Intelligence Agency (CIA) estimated that in 2005 Chile's central government took in revenues of approximately \$29.2 billion and had expenditures of \$24.7 billion. Revenues minus expenditures totaled approximately \$4.4 billion. Public debt in 2005 amounted to 8.1% of GDP. Total external debt was \$44.8 billion.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, central government revenues in billions of pesos were P10,604.4 billion and expenditures were P10,884.1 billion. The value of revenues in US dollars was us\$15 million and expenditures us\$16 million, based on a market exchange rate for 2003 of us\$1 = P691.43 as reported by the IMF. Government outlays by function were as follows: general public services, 10.2%; defense, 6.3%; public order and safety, 6.2%; economic affairs, 12.4%; environmental protection, 0.3%; housing and community amenities, 0.9%; health, 13.9%; recreation, culture, and religion, 0.8%; education, 17.6%; and social protection, 31.4%.

### 36 TAXATION

Prior to 1920, government revenue was derived largely from export and import taxes, but since then, a more varied tax base has been achieved.

During the Allende period, the congress, which was strongly influenced by opposition parties, resisted government efforts to introduce redistributive income tax policies. At the end of 1974, the military government eliminated the capital gains tax and established a 15% taxation rate for income from real estate, investments, and commercial activities, which has since been reduced to 10%. In 2002 corporate income was paid in two stages: first on declared profits, called the first category income tax (FCIT); and then on distributed profits. The rate for the FCIT was increased from 15% to 16.5% in 2003, and was raised in 2004 to 17%. The rate on distributed profits is 35% minus the FCIT credit. Dividends and interest payments to nonresidents are taxed at 21.69% and 35%, respectively. Royalties and fees paid to nonresidents are subject to withholding taxes of 30%, though this may be modified through tax treaties.

Personal income is progressively taxed up to 40%. Other direct taxes include a housing tax, assessments on real estate, and inheritance and gift taxes.

### Public Finance – Chile (2003)

(In billions of pesos, central government figures)

	10,604.4	100.0%

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

Consumption taxes include a value-added tax (VAT) with a standard rate of 19%, various stamp taxes, entertainment taxes, and excise on gasoline, alcoholic beverages, and tobacco.

### 37 CUSTOMS AND DUTIES

As of 1 October 2003, most imported goods are subject to an 19% value-added tax. Automobiles were subject to a luxury tax of 85% on any value above \$15,834.65. Other luxury items, such as jewelry, furs, and yachts were taxed at 50%. Import and export licenses are mandatory, but easily obtainable. In 1977, free trade zones were established in Iquique and Punta Arenas. Chile has free trade agreements with Canada, Mexico, Colombia, Venezuela, Ecuador, Costa Rica, MERCOSUR, and as of 1 January 2004, with the United States. Under the agreement, items originating in the United States would have a tariff between 0% and 6%, although the Chilean tariff rate on nearly all products from most countries is 6%. Chile also places a 50% tax surcharge on used goods/products in addition the current tariff rate. However, the surcharge does not apply to those items originating in the United States, as well as exempting armored cars, prison vans, ambulances, public road cleaning vehicles, cement-making vehicles, and mobile homes. Cigars, cigarettes and processed tobacco are subject to taxes of 51%, 60.4%, and 57.9%, respectively.

### 38 FOREIGN INVESTMENT

Through the Decree Law 600 of 1974 (and its subsequent modifications) and the Chilean Foreign Investment Committee, Chile seeks to encourage foreign direct investment. However, broadcasting, fishing, shipping, and hydrocarbon production usually require majority national control. Foreign investors have purchased many of the assets privatized by the Chilean government over the last decade. Chile has the highest credit rating of all Latin American countries. From 1997 to 2001, \$28.2 billion of foreign direct

investment (FDI) went into Chile. FDI flow peaked in 1999 at \$9.2 billion but dipped to \$3.67 billion in 2000. In 2001, FDI inflow was at a near average level of \$5.5 billion. The principal source of FDI has been the United States, but in 2002, FDI from the United States amounted to a negative flow of \$1 billion. Other principal sources of FDI have been Canada, Spain, the United Kingdom, South Africa, Australia, and Japan. In 2002, the lead areas for FDI were transportation, telecommunications, and mining.

In terms of portfolio investment, by 2001 the number of companies listed on the Chile Stock Exchange and their market valuation had dropped from their peak in 1997 (before the Brazilian currency crisis) of 295 listed companies valued at \$72 billion to 249 listed companies valued at \$56.3 billion. As of 31 December 2001, US investors held \$5.4 billion in Chilean securities, \$1.92 billion in equity shares, \$3.5 billion in long-term debt, and only \$1 million in short-term debt.

With \$64.4 billion invested between 1974 and 2003, had the highest FDI per capita and the highest FDI to GDP ratio of the major economies in Latin America. Capital inflows as a percentage of GDP reached a yearly average of 6.4%. In the first three quarters of 2004, FDI totaled \$6.5 billion—a 219% increase over the same period in 2003. This was however an exceptional year and the result of two large investments made by Spanish companies.

### **39** ECONOMIC DEVELOPMENT

Chile established two free trade zones: the Free Zone of Iquique (ZOFRI) in the northern tip (Region I), and the Free Zone of Punta Arenas (PARANEZON) in the southern tip (Region XII) during the 1970s to encourage trade. Chile has been negotiating for admission into the North American Free Trade Agreement (NAFTA) since 1994, but the process has been stalled by the US Congress. Chile is a member of the South American Mercosur free-trade bloc. Through its concentration on value-added exports and increased foreign direct investment, Chile has become one of Latin America's most-developed nations. Economic growth had averaged over 5% annually since 1985, and was 7.9% during 1988–98. Under the Aylwin administration, the population living in poverty dropped by 800,000 to 4.5 million and real incomes of the poorest workers increased by 20%.

Chile's debt management has been very effective. The government negotiated a favorable rescheduling with its creditor banks of its 1991–94 debt maturities. The government's economic policies also kept consumer price inflation limited to an average of 13.6% during 1990–95, down from the annual average of 20.6% during the 1980s, lowering the rate to 4.7% by 1998. Social expenditures, especially those aimed at improving human capital, rose since 1991 to 15% of gross national product (GNP), and were funded through increased surtaxes. For example, the Program for Youth Labor Training focuses on the high levels of poverty and unemployment among youth. President Lagos, inaugurated in 2000, aimed to bring public accounts into balance by 2001 (after the 1998 financial crisis).

The Lagos government increased consumption taxes (VAT and duties on alcohol, diesel, and tobacco) to finance its healthcare plan and a program aimed at supporting the 225,000 families living in extreme poverty. In late 2003, a gradual tightening of monetary policy was expected, as was a narrowing of fiscal deficits. Corruption scandals adversely affected the business climate, yet

investment in Chile has been strong. The government's role in the economy is limited, and Chile's economy is open and market-oriented. The finance sector has grown faster than other areas of the economy in recent years. The country's large service sector is thriving, with services being modern and competitive (especially telecommunications). Economic activity remains concentrated in the central region of the country, around Santiago and the Valparaíso region.

Economic growth was slower in 2005 as compared to the previous year—a decrease in copper exports (due to a switch by mining companies to ores rich in molybdenum) was the main cause of this decrease. Imports of good and services, on the other hand, have risen by more than 14%. Growth rates were expected to continue a downward trend in 2006 (as a result of slow investment growth), but were likely pick-up again in 2007 (owing to an increase in exports).

### **40** SOCIAL DEVELOPMENT

Prior to the 1973 coup, Chile had built one of the most comprehensive social welfare systems in the world, with over 50 separate agencies participating in programs. Following the military's accession to power in 1973, many of the welfare benefits were suspended, and regulations lapsed. From 1974 to 1981, the junta remodeled the welfare system along the lines of private enterprise.

A mandatory private insurance system was introduced in 1981. Pensions are financed exclusively by workers, whose contributions can amount to over 20% of earnings; employers are not required to contribute, and the government provides subsidies for a guaranteed minimum pension. Retirement is set at age 65 for men and at age 60 for women. Medical benefits are available to wage earners and salaried employees. Workers medical benefits include necessary medical, dental, and pharmaceutical, hospitalization, and rehabilitation. The government funds the Unified Family Allowance system, which provides family allowances.

Sexual abuse and domestic violence are becoming increasingly addressed by the government. It was estimated that over half of Chilean women experience some form of domestic abuse. Legislation implemented in 2004 specifically targeted child pornography. There were no laws regarding sexual harassment in the workplace, although it is recognized as a problem. The average earnings of women with university training were only 60% of those of men with equivalent backgrounds. The labor code provides benefits for pregnant workers.

Excessive use of force by police has been reported, as well as failure to observe due process of law and other human rights abuses toward detainees. The indigenous population continued to suffer discrimination.

### **41** HEALTH

As of 1999, total health care expenditure was estimated at 5.9% of GDP. In 1995, the public health system included 187 hospitals, 230 urban outpatient clinics, 146 rural outpatient clinics, and over 1,000 rural health posts.

Chile made considerable progress in raising health standards. The infant mortality rate declined from 147 per 1,000 live births in 1948 to 8.80 in 2005. The maternal mortality rate was 20 per 1,000 live births in 1998. The birth rate was an estimated 16 per 1,000 people as of 2002. Approximately 43% of married women (ages

15 to 49) used contraception. Average life expectancy in 2005 was 76.58 years. In 1995, the leading causes of death per 100,000 were diseases of the circulatory system (150), cancer (116), injuries or accidents (64), and respiratory diseases (61).

In 2004, Chile had an estimated 109 physicians, 63 nurses and 43 dentists per 100,000 people. In the same year, there were 196 general hospitals in the public sector, as well as 526 primary care clinics and 1,840 rural outpatient clinics. There were 223 private-sector hospitals with 11,000 beds.

An estimated 15% of Chileans, including 10% of children under the age of five, fell below the minimum nutritional requirements established by the UN Food and Agriculture Organization. Protein deficiency among the general population has induced an abnormally high rate of congenital mental handicap. In 2000, 94% of the population had access to safe drinking water and 97% had adequate sanitation.

The HIV/AIDS prevalence was 0.30 per 100 adults in 2003. As of 2004, there were approximately 26,000 people living with HIV/AIDS in the country. There were an estimated 1,400 deaths from AIDS in 2003. Altogether, 90% of the country's AIDS victims have been men and 10% have been women; the incidence among women is increasing.

## 42 HOUSING

The Allende government expanded the housing program following the 1970 housing census, which enumerated 1,860,111 housing units in the country. In 1971, 6.5% of the national budget was expended on public housing, mainly for the poor, and the state built 76,079 new housing units. The military government, on the other hand, stressed the role of the private sector in the housing market. In 1974, the number of new units built by the public sector was 3,297, compared to 17,084 units built privately; the corresponding figures for 1984 were 276 and 46,493. From 1981 through 1985, the number of new units built was 201,244. The number of new dwellings completed jumped from 88,000 in 1991 to 106,000 in 1992.

In 2001, the government had pledged to build at least 25,000 basic homes per year for low-income and poverty stricken residents. The government also set up a subsidy program for those who could not obtain a mortgage. With such assistance, the government estimates that about 130,000 families currently living in squatter villages or slums can be relocated to permanent dwellings by 2007.

As of 2002, there were about 4,399,952 dwellings across the country; about 90% of all housing units were occupied. The majority of all housing (81.6%) were detached homes. About 84.9% of all dwellings were located in urban areas. About 98% of all housing was privately owned; about 73% were owner occupied. Of the privately owned housing stock, about 96% were permanent structures. As of 2003, the housing deficit was estimated at 1,164,629 homes.

## 43 EDUCATION

Chile's present educational system stems from a 1965 reform program that called for curriculum modernization (with new texts for all grade levels), teacher training, and professional educational planning and management. There are both state-run and private schools; all state schools provide free education. As of 2004, gener-

al education was compulsory for 12 years (for students between the ages of 6 and 18). This includes eight years of primary school and four years of secondary school. At the secondary level, students choose to follow a humanistic-scientific course of study or a technical-professional program. The academic year runs from March to December. The primary language of instruction is Spanish.

In 2001, about 77% of all children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 86% of age-eligible students. The same year, secondary school enrollment was about 79% of age-eligible students. Nearly all students complete their primary education. The student-to-teacher ratio for primary school was at about 34:1 in 2003. The ratio for secondary school was about 33:1. In 2003, private schools accounted for about 46.5% of primary school enrollment and 48.2% of secondary enrollment.

The University of Chile (founded as Universidad Real de San Felipe in 1738) and the University of Santiago de Chile (founded as Universidad Técnica del Estado in 1949) are national universities with branches in other cities. There are numerous institutions which provide vocational and technical education. There are also several Roman Catholic universities. In 2003, about 42% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 95.6%, with a fairly even rate between men and women.

As of 2003, public expenditure on education was estimated at 4.2% of GDP, or 18.7% of total government expenditures.

## 44 LIBRARIES AND MUSEUMS

Chile's principal libraries and museums are in Santiago. The three most notable libraries are the National Library (3,700,000 volumes in 2002), the central library of the University of Chile (41 libraries with an aggregate of over 1,000,000 volumes), and the Library of Congress (750,000). Other significant collections include the Severín Library in Valparaíso (101,000) and the library of the University at Concepción (420,000). The Catholic University of Chile in Santiago has more than a dozen branches holding 500,000 volumes. Public libraries are coordinated through the Directorate of Libraries, Archives and Museums. In 2003, there were about 319 municipal libraries and smaller 45 branch libraries nationwide. The Directorate also sponsored 19 prison libraries and 17 hospital libraries.

Chile's most outstanding museums are the National Museum of Fine Arts, the National Museum of Natural History, and the National Museum of History, all in Santiago, and the Natural History Museum in Valparaíso. The Chilean Museum of Pre-Columbian Art in Santiago has one of the hemisphere's finest collections of indigenous artifacts, including textiles, ceramics, metals, and stonework from the Mapuche, Aymara, Tiahuanaco, Atacoma, and Araucanian cultures. There are dozens of historical, public affairs, and ethnographic museums throughout the country.

## 45 MEDIA

An extensive telegraph service, about three-fourths of which is state-owned, links all the principal cities and towns. International links are supplied by worldwide radiotelephone service and by international telegraph companies. In 2003, there were an estimated 221 mainline telephones for every 1,000 people; about 32,300

people were on a waiting list for telephone service installation. The same year, there were approximately 511 mobile phones in use for every 1,000 people.

Radio Nacional de Chile is a publicly owned station, but numerous private stations exist. As of 1999 there were 180 AM and 64 FM radio stations and 63 television stations. The National Television Council is in charge of monitoring the content of broadcasting for violence and sexually explicit materials. In 2003, there were an estimated 759 radios and 523 television sets for every 1,000 people. About 57 of every 1,000 people were cable subscribers. In 2003, there were 119.3 personal computers for every 1,000 people and 272 of every 1,000 people had access to the Internet. There were 274 secure Internet servers in the country in 2004.

There are over 30 major daily newspapers, the largest of which are in the Santiago-Valparaíso area, where the most important magazines are also published, including the state funded *La Nación*. Among the best-known magazines are *Caras*, (1995 circulation 18,000) and *Qué Pasa?* (20,000). The newspaper *El Mercurio* (founded in 1827) claims to be the oldest newspaper in the Spanish-speaking world. The *El Mercurio* chain includes *La Segunda* and *Las Últimas Noticias* of Santiago, *El Mercurio* of Valparaíso, and *El Mercurio* of Antofagasta.

In Santiago, the leading daily newspapers (with 2004 circulation) are *La Tercera* (180,000), *La Cuarta* (NA), *Las Últimas Noticias* (120,000), *El Mercurio* (112,000), *La Nación* (NA), *La Segunda* (25,000), and *Diario Oficial* (NA). In Valparaíso the leading daily is *El Mercurio de Valparaíso*, with a 2004 circulation of about 65,000. The leading daily in Concepción is *El Sur*, which had a 2004 circulation of 20,000.

Many of Chile's newspapers and periodicals were closed for political reasons in the aftermath of the 1973 military coup. The lifting of the second state of siege in mid-1985 brought a significant improvement in the area of the freedom of the press. Opposition magazines resumed publication, and editors were no longer required to submit copy to government censors prior to publication; radio and television programs featuring political debates reappeared in the last half of 1985. The print and broadcast media, as of 1999, is largely independent, and the government is said to fully support a free press and free speech.

#### 46 ORGANIZATIONS

The members of many workers' organizations have formed consumer cooperatives. Producer cooperatives also are common, particularly in the dairy industry. The National Society of Agriculture has been politically very influential, and the minister of agriculture has been frequently drawn from its ranks. Representative of the many industrial, commercial, and professional organizations are the National Mining Society, Society of Industrial Development, Commercial Union Society, National Press Association, Medical Society, Chilean Medical Association, Agronomers' Society, Geographical Society of Chile, the Computer Science Society and Scientific Society.

The Consumers International Regional Office for Latin America and the Caribbean is located in Santiago. The Confederation for Production and Commerce is an official organization representing the country's industrialists and traders. The Chilean Chamber of Commerce, with its headquarters in Santiago, is the central organ for all chambers of commerce and most trade associations.

The National Academy of Fine Arts was established in 1964. Other educational organizations include the Academy of History and the Center for Investigation and Development of Education. There are several organizations for medical research and education in specialized fields.

Among fraternal organizations, the Masonic Order is prominent. Among the more politically potent organizations are the professional middle-class guilds (*gremios*), which were instrumental in bringing down the Allende government. Social development corporations, comprising mainly business people, have been organized regionally to deal with various welfare problems. Rotary and Lions clubs are also active among the business community.

The National Council of Sports is the overall confederation of athletic associations. Many of the national sports associations are affiliated with international organizations as well. There are youth organizations affiliated with major political parties. The Council of Student Federations of Chile (CONFECH) is a coordinating body for student unions. Scouting programs are active through the Guide and Scout Association of Chile. There are also chapters of the YMCA and YWCA. National women's organizations include the Association of University Women and the Centro de Estudios para el Desarrollo de la Mujer.

There are chapters of Greenpeace, Amnesty International, Defense for Children, Habitat for Humanity, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include the Andean lakes of south-central Chile and the famed seaside resort of Viña del Mar, with casinos rivaling those of Monaco. Also popular is Robinson Crusoe Island in the Pacific. Another Pacific dependency, Easter Island (Isla de Pascua), with its fascinating monolithic sculptures, is a major attraction. The giant Christ of the Andes statue, which commemorates the peaceful settlement of the Chilean-Argentine border dispute in 1902, is located on the crest of the Andes overlooking the trans-Andean railway tunnel. Santiago is noted for its colonial architecture, as well as the largest library in South America. Popular national parks include Parque Nacional Lanca in the north, the Nahuelbuta Park near Temuco, and Terres del Paine in the far south. Chilean ski resorts, notably Portillo near Santiago, have become increasingly popular.

The most popular sport in Chile is football (soccer). Other pastimes include skiing, horse racing, tennis, fishing in the Pacific for marlin and swordfish, and some of the world's best trout fishing in the Lake District.

Tourists need a valid passport to enter Chile. A visa is not required for a stay of 90 days or less. There were about 1.6 million tourist visits reported in 2003; around 63% were by visitors from South America. Tourism receipts totaled \$1.3 billion. That year there were 52,362 total hotel rooms with 117,905 beds and an occupancy rate of 32%. The average length of stay per visit was two nights.

In 2004, the US Department of State estimated the daily cost of staying in Chile at \$198.

#### 48 FAMOUS CHILEANS

Chile's first national hero was the conquistador Pedro de Valdivia (1500?-53), who founded Santiago in 1541. The Indian leader Lautaro (1525-57), another national hero, served Valdivia as sta-

ble boy and then escaped to lead his people to victory against the Spanish. His exploits are celebrated in the great epic poem *La Araucana* by Alonso de Ercilla y Zúñiga (1533?–96), a Spanish soldier. Bernardo O'Higgins (1778–1842), a leader of the fight for independence, was the son of the Irish soldier of fortune Ambrosio O'Higgins (1720?–1801), who had been viceroy of Peru. Diego Portales (1793–1837) helped build a strong central government. Admiral Arturo Prat (1848–79) is Chile's most revered naval hero because of his exploits during the War of the Pacific. Arturo Alessandri Palma (1868–1950), who became president in 1921, initiated modern sociopolitical reform. Salvador Allende Gossens (1908–73), the Western Hemisphere's first freely elected Marxist head of state, served three years as Chile's president (1970–73), initiating a broad range of socialist reforms and dying in the throes of a violent military coup in September 1973. The coup's leader was Gen. Augusto Pinochet Ugarte (b.1915), a former commander-in-chief of the army. Outstanding church figures have been Crescente Errázuriz (1839–1931), archbishop of Santiago, and his successor, José Cardinal Caro (1866–1958). Benjamin A. Cohen (1896–1960) was an undersecretary of the United Nations.

Three distinguished historians, Miguel Luis Amunátegui (1828–88), Diego Barros Arana (1830–1907), and Benjamin Vicuña Mackenna (1831–86), brightened the intellectual life of the second half of the 19th century. José Toribio Medina (1852–1930) gained an international reputation with works ranging from history and literary criticism to archaeology and etymology. Important modern historians include Francisco Antonio Encina (1874–1965), Ricardo Donoso (1896–1985), and Arturo Torres Riosco (1897–1971), who was also a literary critic. Benjamín Subercaseaux (1902–73) was a popular historian as well as a novelist.

The first indigenous literary movement was that of the "generation of 1842." One of its leaders was the positivist writer José Victorino Lastarria (1817–88). The novelist and diplomat Alberto Blest Gana (1830–1920) wrote panoramic novels about Chilean society in the tradition of Balzac. Twentieth-century writers include novelist Eduardo Barrios (1884–1963), an explorer of the abnormal psyche; Joaquín Edwards Bello (1887–1968), an author of realistic novels of urban life; the symbolic novelist, poet, and essayist Pedro Prado (1886–1952); and novelist José Donoso (1925–96). Isabel Allende (b.1942) is a world-famous novelist and niece of Salvador Allende; her novel *The House of Spirits* (1982) was made into a film. Ariel Dorfman (b.1942) is a Jewish Argentine-Chilean novelist, playwright, essayist, and human rights activist: *Death and the Maiden* is his most famous play. He teaches at Duke University but divides his time between the United States and Santiago.

Poets of note include Gabriela Mistral (Lucila Godoy Alcayaga, 1889–1957), who won the Nobel Prize in 1945; Pablo Neruda (Nefthalí Ricardo Reyes, 1904–73), the nation's greatest poet, who was awarded a Stalin Prize as well as the Nobel Prize (1971); and the poet-diplomat Armando Uribe Arce (b.1933).

The nation's first native-born composer was Manuel Robles (1780–1837); Silvia Soubllette de Valdes (b.1923) is a leading composer, singer, and conductor; and Gustavo Becerra (b.1925) is a composer and teacher. Claudio Arrau (1903–91) was one of the world's leading concert pianists. Well-known painters are Roberto Matta (1911–2002) and Nemesio Antúnez (1918–1993),

while sculptors include Lily Garafulic (b.1914) and Marta Colvin (1917–1995).

## 49 DEPENDENCIES

### Easter Island

About 3,700 km (2,300 mi) w of Chile is Easter Island (Isla de Pascua or Rapa Nui), a volcanic island roughly 24 km (15 mi) long by 16 km (10 mi) wide. Easter Island is inhabited by a mostly Polynesian-speaking population and a few hundred people from the mainland. Easter Island's population exceeded 2,000 in the mid-1990s. The people raise bananas, potatoes, sugarcane, taro roots, and yams. The island is famous for its *moai*, the massive monolithic stone heads of unknown origin, carved from tufa (a soft volcanic stone). The cryptic sculptures have attracted increasing numbers of visitors to the island from both mainland Chile and around the world. In 1975, the government engaged Spanish consultants to undertake major tourist development on the island. The number of tourist arrivals has been increasing since the 1980s. In 1986, about one-third of the island was a national park.

Easter Island was discovered by Edward Davis, an English buccaneer, in the late 1680s and was named on Easter Day 1722 by Roggeveen, a Dutch navigator. Claimed by Spain in 1770, the island was taken over by Chile in 1888 and is now administered as part of Valparaíso Province.

### Diego Ramírez Islands

About 100 km (60 mi) sw of Cape Horn, at 56°30' s and 68°43' w, lies the small, uninhabited Diego Ramírez archipelago.

### Juan Fernández Islands

Some 580 km (360 mi) w of Valparaíso, at 33°36' to 48' s and 78°45' to 80°47' w, is a group of rugged volcanic, wooded islands belonging to Chile. The two principal islands, about 160 km (100 mi) apart e–w, are Robinson Crusoe, formerly Más a Tierra (93 sq km/36 sq mi), and Alejandro Selkirk, previously Más Afuera (85 sq km/33 sq mi); the smaller island of Santa Clara (or Goat Island) is off the southwest coast of Robinson Crusoe. The chief occupation is lobster fishing. Discovered by Juan Fernández around 1563, the islands achieved fame in 1719, when Daniel Defoe wrote *Robinson Crusoe*, generally acknowledged to have been inspired by the experiences of Alexander Selkirk, a Scottish sailor who quarreled with his captain and was set ashore at his own request on Más a Tierra, where he lived alone until he was rescued (1704–09). The islands are administered by Valparaíso Province.

### Sala-y-Gómez Island

About 3,380 km (2,100 mi) w of Chile and some 400 km (250 mi) ENE of Easter Island, at 26°28' s and 105°28' w, lies arid, volcanic Sala-y-Gómez Island. Almost 1,200 m (4,000 ft) long and about 150 m (500 ft) wide, this uninhabited island belongs to and is administered by Valparaíso Province.

### San Ambrosio Island

Volcanic San Ambrosio Island, uninhabited, lies 965 km (600 mi) w of Chile, at 26°21' s and 79°54' w, rising to 479 m (1,570 ft).

### San Félix Island

Situated 19 km (12 mi) ESE of San Ambrosio Island, at 26°17' s and 80°7' w, is small, uninhabited San Félix Island (about 8 sq km/3

sq mi). Of volcanic origin, the island rises to about 180 m (600 ft). The islet of González is at its southeastern tip. San Félix, along with San Ambrosio, was discovered in 1574.

#### Chilean Antarctic Territory

Chile claims the section of Antarctica lying between 53° w and 90° w, the Antarctic (or O'Higgins) Peninsula, parts of which are also claimed by Argentina and the United Kingdom.

# COLOMBIA

Republic of Colombia  
*República de Colombia*

**CAPITAL:** Bogotá

**FLAG:** The national flag consists of three horizontal stripes; the yellow upper stripe is twice as wide as each of the other two, which are blue and red.

**ANTHEM:** *Himno Nacional*, beginning “O gloria inmarcesible, júbilo inmortal” (“O unwithering glory, immortal joy”).

**MONETARY UNIT:** The Colombian peso (c\$) of 100 centavos is a paper currency. There are coins of 10, 20, and 50 centavos and of 1, 2, 5, 10, 20, and 50 pesos, and notes of 100, 200, 500, 1,000, 2,000, 5,000 and 10,000 pesos. Commemorative gold coins of various denominations also have been minted. c\$1 = us\$0.00043 (or us\$1 = c\$2,324.08) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the official standard, but Spanish units such as the botella, vara, fonegada, arroba, and quintal also are used.

**HOLIDAYS:** New Year’s Day, 1 January; Epiphany, 6 January; St. Joseph’s Day, 19 March; Labor Day, 1 May; Day of St. Peter and St. Paul, 29 June; Independence Day, 20 July; Battle of Boyacá, 7 August; Assumption, 15 August; Columbus Day, 12 October; All Saints’ Day, 1 November; Independence of Cartagena, 11 November; Immaculate Conception, 8 December; Christmas, 25 December. Movable religious holidays include Holy Thursday, Good Friday, Holy Saturday, Ascension, Sacred Heart, and Corpus Christi. In addition there are six official commemorative days.

**TIME:** 7 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Colombia is the only South American country with both Caribbean and Pacific coastlines. The fourth-largest country in South America, it has a total area of 1,138,910 sq km (439,736 sq mi), including insular possessions, and extends 1,700 km (1,060 mi) NNW–SSE and 1,210 km (750 mi) NNE–SSW. Comparatively, the area occupied by Colombia is slightly less than three times the size of the state of Montana. Bordered on the N by the Caribbean Sea, on the NE by Venezuela, on the SE by Brazil, on the SW by Peru and Ecuador, on the W by the Pacific Ocean, and on the NW by Panama, the Colombian mainland is located entirely within the tropics. Its total boundary length is 6,004 km (3,731 mi). Its coastlines extend 3,208 km (1,993 mi).

Also held by the Republic of Colombia (though claimed by Nicaragua) are the archipelago of San Andrés and Providencia in the Caribbean Sea, about 190 km (120 mi) off the coast of Nicaragua, and the islands of Malpelo, Gorgona, and Gorgonilla in the Pacific Ocean. (In 2001 Nicaragua filed a claim in the International Court of Justice regarding these islands.) Colombia also holds the uninhabited Caribbean islands of Quita Sueño Bank, Roncador Cay, and Serrana Bank, to which the United States renounced all rights under the Treaty of Quita Sueño, ratified by the US Senate in July 1981; Nicaragua also disputes this claim. Colombia has a dispute with Venezuela over maritime rights in the Gulf of Venezuela. Negotiations have been going on unsuccessfully since 1970, and in August 1987, a Colombian naval vessel entered the disputed region in an apparent attempt to make Venezuela more responsive.

Colombia’s capital city, Bogotá, is located in the center of the country.

## <sup>2</sup>TOPOGRAPHY

The Andes Mountains divide just north of Colombia’s southern border with Ecuador into three separate chains, or cordilleras, known as the Cordillera Occidental (western), the Cordillera Central, and the Cordillera Oriental (eastern). The western and central cordilleras run roughly parallel with the Pacific coast, extending northward as far as the Caribbean coastal lowlands. They are alike in geological structure, both being composed of massive crystalline rocks. The Cordillera Central is the highest range of the Colombian Andes, with several volcanic cones whose snow-covered peaks rise to about 5,500 m (18,000 ft), notably Huila (5,750 m/18,865 ft). The third chain, the Cordillera Oriental, runs north-eastward, bifurcating into an eastern branch, the Sierra de los Andes, which slopes down to Venezuela, and a second branch, the Sierra de Perijá, which continues northward to terminate on the border between Venezuela and Colombia just south of the Guajira Peninsula. This range is composed of folded stratified rocks over a crystalline core.

On the margin of the Caribbean stands the Sierra Nevada de Santa Marta, an isolated block of mountains composed of a triangular massif of granite, whose highest elevation is Pico Cristóbal Colón (5,775 m/18,947 ft), the tallest peak in Colombia. In the town of Arboletes in the Sierra Nevada de Santa Marta, there are a number of active mud volcanoes, one of the largest of which fills

a volcanic crater and attracts many locals and tourists who swim and bathe in the mud lake. West of the Cordillera Occidental but not geologically a part of the Andean chain is the low Serranía de Baudó, which skirts the Pacific and extends into the Isthmus of Panama.

Separating the three principal Andean ranges are Colombia's two major rivers, the Cauca (1,014 km/630 mi), which flows northward between the western and central cordilleras, and the Magdalena (1,553 km/965 mi), which divides the central and eastern cordilleras. After emerging from the mountains, the two rivers become one and descend through marshy lowlands to the Caribbean. The area south and east of the Andean ranges is largely composed of river plains divided among the effluents of the Orinoco and Amazon rivers. Open plains immediately adjoin the mountains, but as the distance from the cordillera increases, the plains give way to largely uninhabited and unexplored jungle. The Pacific coastal area is also characterized by jungle vegetation. Principal rivers on the Pacific coast include the Baudó, San Juan, and Patía.

### 3 CLIMATE

Colombia's climatic variations are determined by altitude, and seasons are periods of lesser or greater rainfall, with little or no temperature change. The country may be divided vertically into four regions. The hot country, or *tierra caliente*, is the tropical zone, reaching from sea level to roughly 1,100 m (3,500 ft), where the mean annual temperature is 24°C to 27°C (75–81°F); at sea level, temperatures have a mean maximum of 38°C (100°F) and a minimum of 18°C (64°F). Between 1,100 m (3,500 ft) and 2,000 m (6,500 ft) is the temperate zone, or *tierra templada*, where the average year-round temperature is about 18°C (64°F). Between 2,000 m (6,500 ft) and 3,000 m (10,000 ft) is the cold country, or *tierra fría*, with temperatures averaging a little over 13°C (55°F). Above the 3,000-m (10,000-ft) level the temperature varies from 13°C to -17°C (55°F to 1°F), according to altitude. The annual mean temperature at the capital, Bogotá (altitude 2,598 m/8,525 ft), is 14°C (57°F).

Rainfall is heaviest on the west coast and in the Andean area; rainy and dry seasons, or "winter" and "summer," generally alternate in three-month cycles, as in Bogotá, where precipitation occurs most heavily and consistently during the periods of April to June and October to December. Northern areas have only one long rainy season, from May through October. The annual average rainfall is 107 cm (42 in).

### 4 FLORA AND FAUNA

More than 45,000 species of plants have been identified in Colombia, but it is predicted that when the region is thoroughly explored that number may be doubled. At the highest (3,000–4,600 m/10,000–15,000 ft) and coldest level of mountain meadows, called páramos, the soil supports grasses, small herbaceous plants, and dense masses of low bushes. In the intermontane basins some vegetables, European-introduced grains, and corn are found, along with the bushes, trees, and meadow grasses indigenous to the region. The temperate areas support extensive and luxuriant forests, ferns, mosses, trees of the laurel family, Spanish cedars, vegetables, and grain crops. The tropical zone may be divided into four main groups according to the amount of rainfall received: desertlike areas supporting arid plants, deciduous forests, rain for-

ests, and grass plains. Palm trees of various species abound in the tropics and there are many edible fruits and vegetables.

Animal life is abundant, especially in the tropical area. Among carnivorous species are puma, a variety of smaller cats, raccoons, and mustelids. Herbivores include the tapir, peccary, deer, and large tropical rodents. Sloths, anteaters, opossums, and several types of monkeys are also found, as well as some 1,665 species and subspecies of South American and migratory birds. As of 2002, there were at least 359 species of mammals, 708 species of birds, and over 51,200 species of plants throughout the country.

### 5 ENVIRONMENT

Colombia's main environmental problems are soil erosion, deforestation, and the preservation of its wildlife. Soil erosion has resulted from the loss of vegetation and heavy rainfall, and the soil has also been damaged by overuse of pesticides. Deforestation has resulted from the commercial exploitation of the country's forests, which cover approximately 47.8% of the country. Between 1981 and 1985, 820,000 hectares (2,260,000 acres) were lost each year, and 8,000 hectares (20,000 acres) were reforested. Between 1983 and 1993, Colombia lost another 5.8% of its forest and woodland. From 1990–2000, the rate of deforestation was estimated at 0.4% per year. Air pollution from vehicle emissions is also a problem, especially in Bogotá. Safe drinking water is available to 99% of urban dwellers and 70% of the rural population.

The Colombian government has initiated several programs to protect the environment. By 1959, the Amazon forests, the Andean area, and the Pacific coast were protected. In 1973, the government created the National Resources and Environment Code. The main environmental agency is the Institute for Development of Renewable Natural Resources and the Environment (INDERENA), established in 1969. Among other activities, it has undertaken extensive projects in the training of personnel in conservation, fishing, and forestry. The Colombian Sanitary Code, in force since January 1982, establishes pollution control standards. The National Environmental Education Plan for 1991–94 introduces environmental issues in the elementary schools. In 2003, about 10.2% of the total land area was nationally protected. Los Katios National Park is a natural UNESCO World Heritage Site. There are three Ramsar wetland sites.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 39 types of mammals, 86 species of birds, 15 types of reptiles, 208 species of amphibians, 23 species of fish, and 222 species of plants. Endangered species in Colombia include the tundra peregrine falcon, Cauca guan, gorgeted wood-quail, red siskin, pinche, five species of turtle (green sea, hawksbill, olive ridley, leatherback, and arrau), two species of alligator (spectacled caiman and black caiman), and two of crocodile (American and Orinoco). The Colombian grebe and the Caribbean monk seal have become extinct.

### 6 POPULATION

The population of Colombia in 2005 was estimated by the United Nations (UN) at 46,039,000, which placed it at number 28 in population among the 193 nations of the world. In 2005, approximately 5% of the population was over 65 years of age, with another 32% of the population under 15 years of age. There were 98 males

LOCATION: 12°27'46" N to 4°13'30" S; 66°50'54" E to 79°1'23" W. BOUNDARY LENGTHS: Caribbean Sea, 1,760 kilometers (1,094 miles); Venezuela, 2,050 kilometers (1,274 miles); Brazil, 1,643 kilometers (1,021 miles); Peru, 2,900 kilometers (1,802 miles); Ecuador, 590 kilometers (367 miles); Pacific Ocean, 1,448 kilometers (900 miles); Panama, 266 kilometers (140 miles). TERRITORIAL SEA LIMIT: 12 miles.

for every 100 females in the country. According to the UN, the annual population rate of change for 2005–2010 was expected to be 1.7%; the government sought to reduce adolescent fertility, which it viewed as too high. The projected population for the year 2025 was 58,294,000. The population density was 41 per sq km (105 per sq mi), with about 95% of the population residing in the mountainous western half of the country.

A rapid transfer of population to urban centers has taken place since the 1950s, and during the 1990s, over a million people were internally displaced. The UN estimated that 75% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 1.96%. The capital city, Bogotá, had a population of 7,290,000 in that year. The populations of other major metropolitan areas were as follows: Medellín, 3,236,000; Cali, 2,583,000; and Barranquilla, 1,918,000. Other metropolitan areas include Cartagena, Bucaramanga, and Cúcuta.

## 7 MIGRATION

Despite government inducements, such as the granting of agricultural land in the eastern plains, immigration has been insignificant, partly because of guerrilla activity and violence. Emigration is small but significant, since many of those who leave the country are scientists, technicians, and doctors. Between 1951 and 1985, some 218,724 Colombians settled in the United States. In 1990 there were more persons in the United States of Colombian birth—304,000—than of any other South American nationality.

As of May 1997, more than 900,000 people had been internally displaced by the violence between the leftist guerrillas and government forces. Though estimates varied, studies agree that displacement is pan-national and on the rise. Twenty-seven provinces within Colombia have been affected by the internal displacement in as far as most of the displaced people have moved to the cities of Colombia. According to SISDESC (System of Information on the Families Displaced by Violence in Colombia), in 1997, every two hours two families were displaced by violence in the country. Between 1985 and 2004, Colombia's internally displaced population numbered 3,100,000.

While the level of external displacement does not match the level of internal displacement, there is a steady outflow of people fleeing the country. The three neighboring countries most affected by cross-border movements are Panama, Ecuador, and Venezuela. In 1999, about 3,000 Colombians from the north of Santander Department fled to Venezuela in response to the armed conflict in the region. In 2004, there were 141 refugees in Colombia, 85 asylum seekers, and 2,000,000 internally displaced persons. As of 2005, the net migration rate of Colombia was estimated as 0.31 migrants per 1,000 population. The government views the migrant levels as satisfactory.

## 8 ETHNIC GROUPS

The predominant racial strain in Colombia is the mestizo (mixed white and Amerindian), constituting about 58% of the total population. An estimated 20% of the inhabitants are of unmixed white ancestry; 14% are mulatto (black-white); 4% are black; 3% are *zambo* (black-Amerindian); and 1% are pure Amerindian. Blacks and mulattoes are concentrated in the coastal regions and tropical valleys. Pure Amerindians are rapidly disappearing; the remaining few live mainly in inaccessible and barren regions. The

principal Amerindian culture of Colombia during the pre-Columbian period was that of the Chibcha, whose descendants are today chiefly concentrated in the departments of Cundinamarca, Boyacá, Santander, and Norte de Santander. The Mutilones, one of the few surviving Amerindian groups untouched by civilization in South America, inhabit the region west of Lake Maracaibo and the Venezuelan border; they are famous for their lethal weapon, the black palm bow and arrow. Small, diverse Amerindian groups also inhabit the eastern extremities of the Colombian plains region, the south, and the western coastal jungles.

## 9 LANGUAGES

The official language, Spanish, is spoken by all but a few Amerindian tribes. Spanish as spoken and written by educated Colombians is generally considered the closest to Castilian in Latin America.

## 10 RELIGIONS

Roman Catholicism was the country's official religion until the adoption of the 1991 constitution. The current law states that there is no official or state religion but adds that the state is "not atheist or agnostic, nor indifferent to Colombians' religious sentiment." Some have interpreted this as meaning that the Roman Catholic Church retains a privileged position; however, a 1994 constitutional court decision declared unconstitutional any official government reference to religious characterizations of the country.

According to a national poll commissioned by the nation's leading newspaper, *El Tiempo*, 81% of the people are Roman Catholic and about 14% belong to other Christian denominations. Officials from the Roman Catholic Church, however, estimate that 90% of the population is Roman Catholic. Protestant groups such as the Seventh-Day Adventists, Jehovah's Witnesses, and the Church of Jesus Christ of Latter-Day Saints make up less than 1% of the population. Other religious faiths or movements include Judaism, Islam, animism, various syncretic beliefs, agnosticism, and atheism. A number of Afro-Colombians, particularly those residing in the department of Choco, practice a syncretic religion which combines elements of Catholicism with African animism. About 1.9% of the population claimed no religious beliefs.

According to a 1997 public law agreement, non-Catholic religious organizations must receive special permission from the state in order to provide chaplains to public institutions such as hospitals or prisons or to perform marriages recognized by the state. Total membership, social popularity, and the content of an organization's statutes and required behavioral norms are considered before permission is granted. As of 2004, only 13 non-Catholic churches had received the necessary status to perform legal marriages.

A 2004 report indicated that religious leaders and followers were regular targets of killings, kidnappings, and extortion by the Revolutionary Armed Forces of Colombia (FARC) and the National Liberation Army (ELN). However, many of the incidents in question seemed to be motivated primarily by political and economic issues.

## 11 TRANSPORTATION

Transportation lacks integration, owing to the mountainous terrain. For this reason, air transportation has become the most important means of travel for most passengers. Despite the develop-

ment of roads and railways, river travel has remained the chief mode of transportation for cargo since the trip up the Magdalena River in 1536 by the Spanish conqueror Gonzalo Jiménez de Quesada. Inland waterways navigable by riverboats totaled 9,187 km (5,742 mi) in 2004. The Magdalena, the fourth-largest river in South America, is navigable for 950 km (590 mi) and carries almost all of Colombia's river traffic.

The railroads, which were nationalized in 1954 and deregulated in 1989, had a combined 3,304 km (2,053 mi) of standard and narrow gauge track in 2004. Of that total, narrow gauge accounted for 3,154 km (1,962 mi).

Also in 2002 there were about 110,000 km (68,354 mi) of roads, of which only about 26,000 km (16,156 mi) were paved. Many roads are plagued by landslides and washouts. The 2,800-km (1,700-mi) Caribbean Trunk Highway, completed in 1974, links the Atlantic ports of Cartagena, Barranquilla, and Santa Marta with the Pan-American Highway (south of Panama) and the Venezuelan highway system. In 2003 there were 850,000 passenger cars and 534,500 commercial motor vehicles.

Owing to inadequate land transport, air service is essential and well developed. A flight from Bogotá to Medellín takes only half an hour, while a truck requires 24 hours over a winding mountain road. In 2004 there were an estimated 980 airports. As of 2005, only 100 had paved runways, and there were also 2 heliports. Colombia's airline, Avianca, is the second-oldest commercial airline in the world and one of the largest in Latin America. Avianca handles about two-thirds of the domestic and international movement of passengers. Most of the country's air transportation is handled by the six principal airports at Bogotá, Barranquilla (E. Cortissoz), Medellín, Cali, Cartagena (Rafael Núñez), and San Andreas. In 2003, these airports serviced about 9.143 million passengers.

Colombia's merchant marine is dominated by the Grand Colombian Merchant Fleet (Flota), a stock corporation owned by the Colombian Coffee Federation. In 2005, merchant marine companies had an aggregate of 15 vessels with 1,000 GRT or over, totaling 35,427 GRT. The nation's chief ports on the Caribbean are Barranquilla, Cartagena, and Santa Marta. Buenaventura is the only important Pacific port.

## 12 HISTORY

Archaeological studies indicate that Colombia was inhabited by various Amerindian groups as early as 11,000 BC. Prominent among the pre-Columbian cultures were the highland Chibchas, a sedentary agricultural people located in the eastern chain of the Andes.

The first Spanish settlement, Santa Marta on the Caribbean coast, dates from 1525. In 1536, Gonzalo Jiménez de Quesada and a company of 900 men traveled up the Magdalena River in search of the legendary land of El Dorado. They entered the heart of Chibcha territory in 1538, conquered the inhabitants, and established Bogotá. As a colony, Colombia, then called New Granada, was ruled from Lima, Peru, until it was made a viceroyalty. The viceroyalty of New Granada, consolidated in 1740, incorporated modern Colombia, Panama, Venezuela, and Ecuador. The area became Spain's chief source of gold and was exploited for emeralds and tobacco.

In the late 1700s, a separatist movement developed, stemming from arbitrary taxation and the political and commercial restric-

tions placed on American-born colonists. Among the Bogotá revolutionaries was Antonio Nariño, who had been jailed for printing a translation of the French Assembly's Declaration of the Rights of Man. Independence, declared on 20 July 1810, was not assured until 7 August 1819, when the Battle of Boyacá was won by Simón Bolívar's troops. After this decisive victory, Bolívar was tumultuously acclaimed "Liberator" and given money and men to overthrow the viceroyalty completely.

After 1819, Bolívar's Republic of Gran Colombia included Colombia, Venezuela, Ecuador, and Panama. Venezuela and Ecuador seceded, but Panama remained part of Colombia. In 1831 the country became the State of New Granada. Political and financial order was attained under Francisco de Paula Santander, Bolívar's vice president, who took office in 1832. During Santander's four-year term and in the subsequent decade there was intense disagreement over the relative amount of power to be granted to the central and state governments and over the amount of power and freedom to be given to the Roman Catholic Church. Characterized by Bolívar as Colombia's "man of laws," Santander directed the course of the nation toward democracy and sound, orderly government.

By 1845, the supporters of strong central government had organized and become known as the Conservatives, while the federalists had assumed the Liberal label. The respective doctrines of the two parties throughout their history have differed on two basic points: the importance of the central governing body and the relationship that should exist between church and state. Conservatism has characteristically stood for highly centralized government and the perpetuation of traditional class and clerical privileges, and it long opposed the extension of voting rights. The Liberals have stressed states' rights, universal suffrage, and the complete separation of church and state. The periods during which the Liberals were in power (1849–57, 1861–80) were characterized by frequent insurrections and civil wars and by a policy of government decentralization and strong anticlericalism.

As effective ruler of the nation for nearly 15 years (1880–94), the Conservative Rafael Núñez, a poet and intellectual, restored centralized government and the power of the church. During his tenure as president, the republican constitution of 1886 was adopted, under which the State of New Granada formally became the Republic of Colombia. A civil war known as the War of a Thousand Days (1899–1902) resulted in more than 100,000 deaths, and the national feeling of demoralization and humiliation was intensified by the loss of Panama in 1903. After refusing to ratify without amendments a treaty leasing a zone across the Isthmus of Panama to the United States, Colombia lost the territory by virtue of a US-supported revolt that created the Republic of Panama. Colombia did not recognize Panama's independence until 1914, in exchange for rights in the Canal Zone and an indemnity from the United States.

Conservative presidents held power between 1909 and 1930, and Liberals from 1930 to 1942. During World War II, which Colombia entered on the side of the Allies, social and political divisions within the country intensified.

The postwar period was marked by growing social unrest in the capital and in the countryside. Politics became much more violent, especially after the assassination of Jorge Eliécer Gaitán, the leftist Liberal mayor of Bogotá. This sparked protests that devel-

oped into riots, the “Bogotazo,” in Bogotá, the end of which only led Liberals and Conservatives into sporadic guerrilla fighting. This extended and bloody period is commonly known as La Violencia, it claimed 150,000 to 200,000 lives. The political system in the 1950s had become irrelevant in the midst of the violence. Three years of Conservative government were followed by a populist military government under Gen. Gustavo Rojas Pinilla, who managed a slightly successful recovery of arms from guerrillas. Rojas ruled as an absolute dictator, but could not quell the violence still raging in the field. Overthrown largely by a coalition of Conservatives and Liberals who used newsprint as their weapon, Rojas gave up power in May 1957 to a military junta, which promised and provided free elections.

When the fall of Rojas was imminent, Liberal and Conservative leaders met to discuss Colombia's future. The period of La Violencia had convinced Colombia's elite that there was a need to bring the rivalry between Liberals and Conservatives under control. Determined to end the violence and initiate a democratic system, the parties entered into a pact establishing a coalition government between the two parties for 16 years. This arrangement, called the Sitges Agreement, created the National Front and was ratified by a plebiscite in December 1957. Under the terms of this agreement, a free election would be held in 1958. The parties would then alternate in power for four-year terms until 1974. Thus, Liberals and Conservatives would take turns in the presidency. Parties were also guaranteed equal numbers of posts in the cabinet and in the national and departmental legislatures.

In 1958, the first election under the National Front, was won by Liberal Alberto Lleras Camargo. As provided in the agreement, he was succeeded in 1962 by a Conservative, National Front candidate Guillermo León Valencia.

During this time another civil war period began. A group of leftist liberals who had established small independent agrarian republics during La Violencia and who were cut out of the power-sharing Sitges Agreement, were attacked by the government in 1964. Two years later the survivors formed the FARC (Fuerzas Armadas Revolucionarias de Colombia) with the stated goal of overthrowing the government. A year earlier in 1965, another group with roots in La Violencia, the ELN (Ejército de la Liberación Nacional), formed the second major revolutionary group after receiving training in revolutionary war tactics in Cuba.

In May 1966, Colombia held another peaceful election, won by Carlos Lleras Restrepo, a Liberal economist. Although lacking the necessary two-thirds majority required under the Colombian constitution to pass legislation, Lleras came to power with the firm support of the press and other important public sectors. His regime occupied itself with increasing public revenues, improving public administration, securing external financial assistance to supplement domestic savings, and preparing new overall development plans. In April 1970, Conservative Party leader Misael Pastrana Borrero, a former cabinet minister, was elected president, narrowly defeating former President Rojas. The election results were disputed but later upheld. A third major revolutionary group, the urban guerrilla M-19 (Movimiento 19) formed a few years later, taking their name from the 19 April 1970 elections dispute.

In August 1974, with the inauguration of the Liberal Alfonso López Michelsen as president, Colombia returned to a two-party

system for presidential and congressional elections. As provided by a constitutional amendment of 1968, President López shared cabinet posts and other positions with the Conservative Party. In 1978, another Liberal candidate, Julio César Turbay Ayala, won the presidency, but because his margin of victory was slim (49.5% against the Conservatives' 46.6%), he continued the tradition of giving a number of cabinet posts to the opposition. In June 1982, just before leaving office, Turbay lifted the state of siege that had been in force intermittently since 1948.

Because of a split in the Liberal Party, the Conservatives won the 1982 elections, and a former senator and ambassador to Spain, Belisario Betancur Cuartas, was sworn in as president in August. He continued the tradition of including opposition party members in his cabinet, however, Betancur's most immediate problem was political violence. Since the late 1970s kidnappings and political murders by both left- and right-wing organizations had become common. In 1983, it was estimated that some 6,000 leftist guerrillas were active in Colombia in at least four guerrilla groups. The Betancur government pursued a policy of negotiation with the guerrillas. He offered amnesty and political recognition in exchange for the cessation of activity and for joining in the electoral process. Betancur's last year in office was marred when M-19 seized the Palace of Justice. Troops stormed the building; it was completely destroyed by fire and over 90 people were killed.

The 1986 election went resoundingly to the Liberals under the longtime politician Virgilio Barco Vargas, who campaigned on a platform of extensive economic and social reform that focused on poverty and unemployment. Barco won with a significant majority and the Conservative Party broke from the tradition started by the National Front by refusing cabinet and other government posts to the Liberals. President Barco did not match the rhetoric of his campaign with policies of any substance, and the economy continued to stagnate. Barco made no progress with drug traffickers, who arranged for the murder of his attorney-general. However, he was able to initiate a plan aimed at bringing guerrilla groups into the political system.

Also, in the 1980s a new military force came into being in Colombia, the paramilitary organizations. These were started by narcotics traffickers, wealthy civilians, businesses, political parties, and the military. This myriad of founders hired their paramilitaries for an equally variable number of violent ends: to assassinate, terrorize, protect from kidnappers, cleanse the country of socially unwanted peoples (such as drug addicts, thieves, prostitutes, beggars, street children, and others), and to fight against the rebels (such as the FARC, the ELN, and the M-19). By 1989 all paramilitary organizations were outlawed, but continued to operate with impunity. The complicated balance of military power in Colombia was then exercised through the government, the rebels, the narcotics traffickers, and the paramilitary organizations. It was estimated that during the 1980s Colombian drug traffickers controlled 80% of the world's cocaine trade.

The election of 1990 brought another Liberal, César Gaviria Trujillo, to the presidency. In that election, three candidates were assassinated. Gaviria continued Barco's outreach to the various leftist guerrilla groups, and in 1991 the notorious M-19 group demobilized and became a political party. The other groups chose to remain active. Gaviria responded to their intransigence in November 1992 by announcing new counterinsurgency measures

and a hard-line policy against both guerrillas and drug traffickers. A constitutional assembly was also held to create a new constitution, which was promulgated on 5 July 1991. It included a number of reforms aimed at increasing the democratization of Colombia's elite-controlled political system.

The powerful Medellín cartel stepped up its terrorist attacks, including car bombings and political assassinations, but the new constitution strengthened government control and the leaders of the cartel surrendered to the Gaviria government in 1991. However, head boss Pablo Escobar escaped from government custody the following year, and was eventually hunted down and killed in 1993. Most top leaders of the Cali cartel, which had taken over much of the Medellín market, were arrested in 1995 and subsequently imprisoned. Even with the arrests, Colombia's lucrative drug trade continued to flourish.

In the 1994 elections, Colombians continued their preference for Liberal candidates, with Ernesto Samper Pizano winning a runoff election against Conservative TV newscaster Andrés Pastrana. In the general election, only 18,499 votes separated the two candidates. The campaign was again marked by widespread political violence. Samper's government was weakened by charges that he and other senior government officials had accepted money from drug traffickers during the 1994 election campaign. (Congress formally exonerated the president of these charges in 1996.)

As of 1996, there was a guerrilla presence in over half the country's villages and towns, and it was estimated that about one million Colombians had fled their homes between 1987 and 1997 as a result of rural violence. With forces estimated at 10,000, there was no apparent prospect that guerrilla groups would succeed in taking over the country, but they continued to thrive, relying heavily on funds from the drug cartels following the collapse of the Soviet Union.

In 1998, the Conservative Party came back to power when Andrés Pastrana won the presidential election with 50.5% of the vote, defeating Liberal Horacio Serpa. Pastrana was committed to negotiations, but the absence of peace kept interrupting any progress. In November 1998, Pastrana ceded a large area in south-central Colombia to FARC's control as a goodwill gesture, but the rebels continued to mount attacks, until finally Pastrana ordered the military to attack rebel positions and reassert control over the rebel zone. The FARC felt betrayed and withdrew into the jungle. Similarly, Pastrana sought more collaboration from the United States to fight the war, but his efforts proved fruitless. What would have been an aid package turned into the adoption of Plan Colombia in 2000, a multibillion dollar initiative funded by the US government aimed at combating drug production. This generated criticism for its heavy focus on military action rather than economic incentives that could lead peasants to abandon coca leaf production.

In the 2002 presidential election, former Liberal Party leader turned independent Álvaro Uribe won with 53.1% of the vote. Campaigning on a tough platform against guerrilla leaders and drug traffickers, Uribe promised a relentless fight against organized crime if elected. In the first term Uribe's government increased the military and police presence throughout the country, increased social spending and health care, nationalized or reorganized many state-owned companies, and increased the number of indicted and extradited narcotics traffickers.

The two major developments in Uribe's first term were the demobilization of the paramilitary groups and the constitutional amendment to allow a president to run for a second term in office. The demobilization of the paramilitaries was controversial internationally because the leaders were penalized very lightly for their involvement in the drug trade, for the violent acts which they perpetrated, and because there appeared to be few guarantees that they would completely disarm or completely demobilize. Plan Colombia was pushed forward but the drug trade was not subdued. During his first term in office, Uribe enjoyed popular support and was able to build a coalition of Liberal and Conservative legislators to push through his tough plans against the guerrillas, as well as to amend the constitution to allow for a second term in office. As of December 2005, initial peace talks were ongoing with the ELN.

### 13 GOVERNMENT

Colombia is a unitary republic, organized democratically under the constitution of August 1886, substantially amended in 1910, 1936, 1945, 1957, 1959, 1968, and 1979, and superseded by the constitution of 1991, which included provisions guaranteeing health care, social security, and human rights protection.

The Congress consists of a 161-member Chamber of Representatives and a 102-member Senate. Members of both houses are elected directly for four-year terms. Colombian congressional representation is determined by the size of the population. Some seats are reserved for blacks, Indians, and other minorities. The chief executive is granted the initiative in fiscal policies and the power to declare a state of emergency during times of economic and social stress. Under such a declaration, the president may rule by decree for a period of not longer than 90 days in any one year. There is universal suffrage for those 18 years of age and over.

Historically, Colombia had an officer called the *designado* (designate), elected by Congress every two years, who served as a sort of vice president and was responsible for exercising the executive function in the president's absence. The 1991 constitution introduced a formal vice presidency. The Constitution was amended in 2005 to increase the number of terms a president is allowed to serve, from one to two consecutive four-year terms.

### 14 POLITICAL PARTIES

For many years, the Colombian constitution allowed only two political parties, the Liberal and the Conservative, to participate in the national government. These two parties consistently dominated Colombian politics. Recent changes allow for more parties, and several have emerged, but the Conservative and Liberal parties control the majority of elected offices.

The Liberal Party (Partido Liberal—PL) continues to support religious toleration and a positive response to the social and economic demands of the masses. The Liberals theoretically support separation of church and state, though in practice a strong church is accepted. Federalism, while important in theory, has been abandoned in practice by Liberal leaders. In general, Liberals have been more successful in elections since the end of the National Front than the Conservatives and have controlled the majority of seats in both houses.

The policy of the Conservative Party (Partido Conservador Social—PCS) has been characterized by close cooperation with the

Roman Catholic Church, a lack of tolerance for non-Roman Catholic religious beliefs, maintenance of class privileges, and highly centralized government with local authority strictly subservient to national rule. Before universal suffrage, the Conservatives sought to allow only heads of families to vote. Under the leadership of Andrés Pastrana, the son of former Conservative president Misael Pastrana, the PCS regained the presidency in 1998.

Despite the spread of suffrage and the rise of industrialization and a middle class, both parties continue to be dominated by a wealthy oligarchy. Both are controlled at the national level by a convention and a directorate, and congressional discipline is strong. Since the National Front agreement of 1958, the two parties have become increasingly similar ideologically.

Congressional and presidential elections from 1958 through 1982 primarily constituted votes of confidence in the National Front. Perhaps as a means of protest, 60% of eligible voters abstained from the presidential election in 1978, and 80% of the electorate abstained from the municipal and local elections of March 1980. In 1982 and 1986, however, Colombian voters turned out in record numbers, with 55% of the electorate participating in the presidential ballot in 1982 and 57% in 1988.

The Colombian Communist Party (Partido Comunista de Colombia—PCC), a traditional, Marxist-oriented party, combined with the nation's largest guerrilla group, the Colombian Revolutionary Armed Forces (Fuerzas Armadas Revolucionarias de Colombia—FARC), to form the Patriotic Union (UP); the group has not become a major force in electoral politics.

There is considerable independent party activity in Colombia, and it has been increasing. Traditionally, the third force in Colombian politics was provided by former dictator Rojas Pinilla, whose National Popular Alliance (Alianza Nacional Popular—ANAPO), now defunct, was a strong party movement. The election dispute of 19 April 1970 gave rise to the extremist rebel group M-19, which stood for the April 19th Movement. After over two decades of military action against the government, M-19 demobilized in 1991. M-19 is part of a coalition of leftist parties and other dissident groups, called Democratic Alliance M-19, which no longer had a presence in Congress as of 2006. Several militant leftist groups remain outside the political system, including the National Liberation Army (Ejército de Liberación Nacional—ELN) and the Revolutionary Armed Forces of Colombia. Although officially a member of the Patriotic Union political party, the FARC also refuses to demobilize. The People's Liberation Army (EPL) began to demobilize in 1993, but a dissident faction refused orders to lay down arms, and returned to the field.

The traditional parties have lost so much power that President Uribe was elected as an independent. It was the first time since 1957 that the president was not elected under the Liberal or Conservative party tickets.

## 15 LOCAL GOVERNMENT

Colombia is divided into 32 departments (states) and the Bogotá federal district, and subdivided into 1,011 municipalities. Departments control their own finances, as well as administration, within the limits set by the constitution. Governors of departments, once appointed by the president, are now elected. Each departmental assembly meets yearly for a session of two months. As-

sembly members are elected by universal suffrage, one for each 40,000 inhabitants.

The departments have the power to establish municipal districts and to review the acts of the municipal governments to determine their constitutionality. Each municipality has a popularly elected municipal council. Another reform from the 1991 constitution is the direct election of mayors; previously mayors were chosen by the president and were directly under the control of their respective governors. Mayors are elected for a two-year term by direct vote.

## 16 JUDICIAL SYSTEM

The judicial system is comprised of a Constitutional Court, Supreme Court of Justice, Council of State, the Higher Judiciary Council, and superior and municipal courts. The Supreme Court in Bogotá is composed of 24 magistrates selected for lifetime terms by justices already in office. The Supreme Court reviews state and municipal laws, frames bills to be submitted to Congress, and proposes reforms. It acts as an advisory board to the government and can veto decrees. It has original jurisdiction in impeachment trials and constitutional interpretation and appellate jurisdiction in ordinary judicial matters. The court is divided into four chambers—civil cassation, criminal cassation, labor cassation, and constitutional procedure.

The 1991 constitution extensively revised the judicial system. It established an independent prosecution system and a national people's defender office to investigate human rights cases. Traditional courts on Indian reservations were validated. A Constitutional Court reviews the constitutionality of proposed legislation.

There is a superior court of three or more judges in each of the judicial districts and a number of municipal courts. A judge of minors in the capital of each department has jurisdiction throughout the department. There are also special labor courts. In criminal cases, the judge chooses a five-member jury; jury duty is obligatory. There is no capital punishment and the maximum penalty for crimes is 20 years in prison. Although the right of habeas corpus is guaranteed by the constitution, suspects in security cases have been detained incommunicado for 10 days or longer.

The judiciary is independent, both in theory and in practice, from the executive and legislative branches. In 1991, the government set up five regional jurisdictions to handle narcotics, terrorism, and police corruption cases in which anonymous judges and prosecutors handle the major trials of narcotics and terrorists. However a 1996 law dictated that the regional justice system would cease to exist by 30 June 1999.

The jurisdiction of the regional justice system included drug-related crimes, crimes against the state and constitutional order, arms manufacturing and trafficking, terrorism, and membership in illegal armed groups, but in practice, a wide array of cases were processed by the regional justice system. The inadequate description of the crimes which fell within its competence and the imprecise jurisdiction of the regional justice system elongated processing and led to situations in which either influential individuals avoided this jurisdiction or less fortunate individuals were unable to do so, and often served the applicable sentence for the crime charged before the case even went to trial.

## 17 ARMED FORCES

Colombia's armed forces in 2005 had 207,000 active personnel, with 60,700 reservists. The Army had 178,000 active members. Equipment included 12 light tanks (all in storage) 135 reconnaissance vehicles, over 192 armored personnel carriers and 639 artillery pieces. The Air Force had 7,000 active personnel. Equipment included 22 combat capable aircraft under the service's Air Combat Command and another 30 under the Tactical Air Support Command. The Navy had 22,000 personnel, including 14,000 Marines and 100 naval aviation personnel. Major naval units included four tactical submarines, four corvettes and 179 patrol/coastal vessels. The naval air arm had seven transport and two utility fixed wing aircraft and one antisubmarine warfare and two utility helicopters. The country's paramilitary forces consisted of an 8,000 member rural militia and a 121,000-member national police force.

Colombia's defense forces are frequently occupied in opposing rural violence, often stemming from militant guerrilla groups and drug lords' armies. Opposition forces include the *Coordinadora Nacional Guerrillera Simón Bolívar* (CNGSB) which is in collaboration with guerrilla groups numbering around 18,000. The right-wing paramilitary group *Autodefensas Unidas de Colombia* (AUC) has approximately 10,600 members. The defense budget in 2005 totaled us\$3.5 billion.

## 18 INTERNATIONAL COOPERATION

Colombia is a charter member of the UN, having joined on 5 November 1945, and participates in ECLAC and many specialized agencies, such as FAO, ILO, IMF, IAEA, UNESCO, UNHCR, the World Bank, and WHO. Colombia became a member of the WTO on 30 April 1995. The nation is a member of the Andean Community of Nations and a nonregional member of the Central American Bank for Economic Integration (BCIE). It also participates in the Caribbean Development Bank, G-3, G-24, G-77, the Latin American Economic System (LAES), the Latin American Integration Association (LAIA), the Association of Caribbean States (ACS), OAS, and the Río Group. Colombia is an observer in CARICOM and an associate member of Mercosur.

The nation is part of the Nonaligned Movement, the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL), and the Organization for the Prohibition of Chemical Weapons. It is a member of the Permanent Court of Arbitration. The country is a signatory of the 1947 Río Treaty, an inter-American security agreement. In environmental cooperation, Colombia is part of the Antarctic Treaty, the Basel Convention, the Convention on Biological Diversity, Ramsar, CITES, International Tropical Timber Agreements, the Kyoto Protocol, the Montréal Protocol, MARPOL, the Nuclear Test Ban Treaty, and the UN Conventions on Climate Change and Desertification.

## 19 ECONOMY

With the expansion of the manufacturing sector, Colombia has become more dependent upon industry (34.3% of GDP in 2005) than agriculture (12.5% of GDP). Historically, coffee was by far the most important crop: its share of total exports ranged from about 40–65% of the annual total between 1964 and 1986, depending on crop yields and international commodity prices. In 1997, this share had dropped to only 21%, and by 2000, to 8%. A

fall in coffee prices in 2001 reduced coffee's share further, to 6.2%. Nontraditional exports, however, increased 5% in 2001. Colombia's policy has been to reduce its dependence on coffee exports because of widely fluctuating world market conditions, and to encourage other agricultural exports, especially sugar, bananas, rice, potatoes, and cotton. The government has also attempted to attract investment in manufacturing and mining projects. Colombia became a net exporter of petroleum in 1986, and coal has become a major export as well. New oil output from the Cusiana field and other fields helped Colombia reach a record production level in 1999—830,000 barrels per day. By 2002, production had been reduced to 591,250 barrels per day. The share of oil exports to total exports dropped from 34.8% in 2000 to 24.9% in 2001. There is concern that without substantial new crude oil discoveries, Colombia will revert to being a net importer of crude oil again within a few years. Exploration of vast areas of likely territory is inhibited by the occupation of about 40% of the country by groups (mainly the FARC and the ENL) that are not only trying to overthrow the government, but which have made the oil industry infrastructure the prime target of their guerrilla attacks. The Trade Development Bureau's PROEXPO Fund (since renamed the Foreign Trade Bank) was established in 1967 to increase the volume of nontraditional exports and to provide a flexible exchange rate and special tax incentives. Foreign direct investment (FDI), which reached a yearly rate of us\$5.56 billion in 1997, fell to a little over us\$2 billion a year in 2001 and 2002, as the guerrilla attacks continued unabated (an estimated 3,500 persons were killed in attacks in 2002, with another 2000 kidnapped), reaching into urban areas and targeting prominent politicians. In February 2002, the government broke off negotiations that had been going on for three years with no progress towards a resolution.

During the 1970s, Colombia's economy struggled with an inflationary spiral that rose from a rate of 15.4% in 1972 to 25% during the following decade. Inflation remained close to 20% annually through the 1980s and much of the 1990s. After 1983, however, the economy improved significantly, and growth rates rose above the world and hemispheric averages—an average of 4% between 1988 and 1998. In 1990, President Cesar Gaviria instituted an economic restructuring plan known as *apertura* (opening). The program emphasized trade expansion through tariff reduction, free trade agreements, and privatization of state-owned enterprises, including banks, power plants, airports, seaports, roads and telecommunications networks. After the initial burst, the pace of privatization was slowed.

In 1995, domestic political considerations constricted Colombia's economic liberalization. In 1996 and 1997 the administration of US president Bill Clinton decertified Colombia as a country fully cooperative with US narcotics policy. The move was taken in response to continued narco-guerrilla activity in the countryside and to allegations that President Samper had solicited and received campaign contributions from drug cartels. The decertification made it difficult for US companies to further invest in the country, and halted the growth of trade; though the United States remained the biggest foreign investor in the country. The decertification was lifted in 1998, but by then the economy was being impacted by intensified guerrilla activity, fiscal shortfalls, and external shocks—the Asian financial crisis in 1997, the Russian financial crisis in 1998, and the Brazilian financial crisis in 1999. In

1998, GDP growth fell to 0.6% and then in 1999, Colombia experienced its first contraction (-4.2%) since 1983. Growth returned in 2000, but only at the anemic level of 2.7%. Domestic instability and the external economic slowdown combined to reduce growth to 1.4% in 2001 and 1.6% in 2002. In December 1999, the government entered into a three-year arrangement with the IMF under its Extended Fund Facility (EFF), and there was a marked decline in the inflation rate across this period: inflation fell from 18.7% in 1998 to 5.7% in 2002. Unemployment in 2002 was estimated at 17.7%, with subemployment at 35%.

In 1999, due to economic instability in 1998, Colombia signed its first agreement with the IMF for a us\$3 billion approved standby line of credit. The government also unveiled plans to renew the privatization many state-owned enterprises to revitalize the economy. Nevertheless, guerrilla warfare put off potential investors.

In late 2002, the government offered reform legislation in five areas: taxes, pensions, labor, public administration, and banking. In January 2003, the government entered into a us\$2.5-billion standby arrangement with the IMF to support these reforms.

From 2000, the annual average GDP growth was 2.9%; in 2004, it was 4.1%, the highest level since 1995 (as reported by the Economist Intelligence Unit). Figures show that GDP growth continued at this pace in 2005, as well. This growth could be tied to the increases in private investment and household consumption during Alvaro Uribe's term, in which he sought to boost investor confidence in the country. The increase in growth rates was also aided by good international economic conditions.

As of May 2004, Colombia had begun to negotiate a free-trade agreement with the United States (as did Peru and Ecuador). The talks were expected to culminate in a deal in 2006–07 that would increase liberalization by reducing tariffs and restrictions on trade and capital flows, and strengthening property rights protection (including intellectual property rights).

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Colombia's gross domestic product (GDP) was estimated at us\$303.1 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at us\$7,100. The annual growth rate of GDP was estimated at 4.3%. The average inflation rate in 2005 was 5%. It was estimated that agriculture accounted for 12.5% of GDP, industry 34.3%, and services 53.3%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled us\$3.076 billion or about us\$69 per capita and accounted for approximately 3.8% of GDP. Foreign aid receipts amounted to us\$802 million or about us\$18 per capita and accounted for approximately 1.1% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Colombia totaled us\$50.79 billion or about us\$1,139 per capita based on a GDP of us\$80.0 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consump-

tion grew at an average annual rate of 1.8%. It was estimated that in 2001 about 59% of the population had incomes below the poverty line.

## 21 LABOR

In 2005, Colombia's labor force was estimated at 20.52 million. As of 2000, the service industry employed an estimated 58.5% of the workforce, with 22.7% in agriculture and 18.7% in industry. The unemployment rate in 2005 was estimated at 11.8%.

The right to organize unions is provided by the constitution, although violence and discrimination against union members are major obstacles to engaging in union activities. Less than 5% of the workforce was unionized in 2005, with the vast majority of these workers in the public sector. The right to strike is guaranteed by the constitution with the exception of essential workers, such as those in the armed forces or the police.

The basic source of Colombian labor legislation is the Substantive Labor Code. The standard workday is eight hours with a 48-hour workweek. A minimum eight-hour rest period is also required per week. The minimum wage is reviewed each January to set the standard for wage negotiations. As of 2005, the minimum wage was us\$167 per month. This amount does not provide a decent standard of living for a family.

The law prohibits children under the age of 12 from working. Those in the age 12 to 13 category are severely limited as to the kind of work they can perform. Minors between the ages of 14 and 17 are limited in the number of occupations they can enter. In spite of these regulations, child labor remains a significant problem especially in the informal sector and in agriculture. Only 38% of children that worked also attended school.

## 22 AGRICULTURE

Agriculture, despite an endemic problem of poor productivity, remains the most important segment of the Colombian economy. In 2005, agriculture accounted for 12.5% of the GDP.

Only about 3.7% of Colombia's land area is cultivated, most of it in elevated regions of the temperate zone. The small area of cultivation is due in part to the rugged Andean terrain and in part to lack of irrigation. In 2000–02, 21.5% of cropland was irrigated, up from 13.1% during 1989–91. The flat, fertile valleys are generally devoted to livestock, limiting cultivation to the slopes, an unecological practice that is gradually being changed. Hand cultivation, especially by machete and hoe, predominates, but mechanization is making headway on the larger farms. Fertilizer is expensive and not sufficiently used. The small size of farms is another constraint on agricultural growth: in the mid-1980s, farms of less than 20 hectares (50 acres) accounted for 80% of all agricultural land.

Coffee, by far the most important crop, is grown mainly on the Andean slopes at altitudes of 1,300–1,800 m (4,200–6,000 ft). Colombia, the world's second-largest coffee grower, contributes 13–16% of the total world production each year. In 2004, coffee-growing farms, many under 6 hectares (15 acres), accounted for about 800,000 hectares (2 million acres), about 40% of the land under permanent crops. In 1992, despite a severe drought, the amount of coffee exported increased by over 30% as a result of a successful strategy for expanding the external markets. In 1993, coffee production increased to 1,080,000 tons, but dwindled to only 678,000

tons in 1994. Production in 2004 was 663,660 tons. In 2004, coffee accounted for 28% of agricultural exports.

Sugar, also important, is grown chiefly in the Cauca Valley, with its center at Cali. Many varieties of bananas are grown; bananas for export are produced in the Uraba and Santa Maria regions. Colombia is the world's third-largest banana exporter (after Ecuador and Costa Rica) and supplies about one-sixth of the world export market. Corn, yucca, plantains, and, in high altitudes, potatoes have been traditional food staples since before the Spanish conquest. Beans, rice, and wheat, introduced in the 19th century, are also important in the diet. Other export crops include fresh-cut flowers, cotton, and tobacco. Cocoa is produced in limited amounts for domestic consumption. Colombia produces much of its domestic food requirements, but it has to import wheat, barley, fats, oils, and cocoa.

Since 1940, the government has taken an increasing part in the control, organization, and encouragement of agriculture. Through the Colombian Institute of Agrarian Reform (Instituto Colombiano de la Reforma Agraria—INCORA), farmers are given financial support, technical aid, and social assistance for better housing, education, and health facilities. INCORA acquires land for equitable distribution to farmers and helps to develop potentially valuable but uncultivated land and to increase agricultural productivity. The production-oriented Rural Development Program, begun in 1976, gave technical assistance and credit to about 30,000 small landholders. Farmers have also benefited from the US\$150-million rural electrification program, introduced in 1981, and from a program to extend irrigation and drainage systems, initiated in the early 1980s.

Agricultural production (in thousands of tons) for major crops in 2004 was: sugarcane, 37,100; plantains, 2,950; potatoes, 2,959; rice, 2,663; cassava, 2,218; bananas, 1,450; corn, 1,458; sorghum, 285; cotton, 52; palm kernels, 144; cocoa, 49; and dry beans, 135. Marijuana, coca leaf, and opium are also grown for the production of illicit drugs. In 2003, there were an estimated 144,000 hectares (356,000 acres) producing coca leaf, generating 680 tons of cocaine base, 80% of the world estimate.

### 23 ANIMAL HUSBANDRY

Occupying about 42 million hectares (104 million acres) of pasture, livestock farming (especially cattle breeding) has long been an important Colombian industry. Of this total area, about 19 million hectares (46.9 million acres) are actually used for livestock production. The Ministry of Agriculture maintains experimental stations in Antioquia and Bolívar departments to improve breeds, but the quality of livestock is still low. Cattle are driven to market by truck. This practice often entails crossing high mountains, with much wastage; accordingly, there has been a movement to construct slaughterhouses and meat-packing plants near the ranges. Dairy farming, not important in the past, expanded in the 1970s, especially near the big cities. Colombian sheep produce about one-third of the wool used by the country's textile industry. The government maintains an experimental station for sheep in Cundinamarca and for goats in Norte de Santander. In 2004 there were 25 million cattle, 2.2 million sheep, and 2.3 million pigs. The production of beef and veal was 690,000 tons in 2004.

### 24 FISHING

Colombia has an abundance of fish in its Caribbean and Pacific coastal waters and in its innumerable rivers. Lake Tota in Boyacá and Lake La Cocha in Nariño abound in trout, as do the artificial reservoirs of Neusa and Sigsa in Cundinamarca. About half of the annual catch consists of freshwater fish. Tarpon are caught in the delta waters of the Magdalena, and sailfish, broadbills, and tuna in the Caribbean. The 2003 fish catch was 157,794 tons. The development of crustacean aquaculture has expanded since the mid-1980s, especially for Penaeid shrimps. Aquaculture production totaled 60,895 tons in 2003 and consisted primarily of tilapia and rainbow trout.

### 25 FORESTRY

Colombia's forested area is some 50 million hectares (123.6 million acres), or nearly 50% of the total area. Although much timberland is inaccessible or of limited value, the nation is self-sufficient in lumber. Roundwood production was 9.9 million cu m (350 million cu ft) in 2003; exports of roundwood were valued at US\$3 million that year. The soft tropical woods that predominate are also suitable for plywood production, for paper pulp, and for furniture manufacture; total export of forest products amounted to US\$142.8 million in 2003.

### 26 MINING

Historically, Colombia has been the world's leading exporter of emeralds, although the fuel sector now dominates the country's mineral production. It also produced a significant amount of gold (ranking second in the region), was Latin America's only producer of platinum, was the third-largest producer of cement, and was a leading producer of nickel. In terms of value, the main minerals produced in Colombia (after petroleum) were coal, emeralds, gold, and platinum, respectively, in 2003. Colombia also produced sizable amounts of common clay, kaolin, dolomite, gypsum, limestone, hydrated lime and quicklime, magnesite, nitrogen (content of ammonia), rock and marine salt, sand, gravel, marble, feldspar, phosphate rock, and sodium compounds (sodium carbonate), as well as small quantities of sulfur (native, from ore), asbestos, bauxite, bentonite, calcite, diatomite, fluorite, mercury, mica, talc, soapstone, prophyllite, dolomite, and zinc.

Production figures for principal nonfuel minerals in 2003 were: gold, 46,515 kg, up from 20,823 kg in 2002; emeralds, 8.963 million carats, up from 5.390 million carats in 2002; nickel, 70,844 metric tons, compared with 58,196 in 2002; iron ore and concentrate, 625,002 metric tons, down from 688,106 metric tons in 2002; silver, 9,511 kg, up from 6,986 kg in 2002; and feldspar, estimated at 55,000 tons. Production of nickel content of ferronickel increased to 47,868 metric tons in 2003, up from 43,987 metric tons in 2002.

According to estimates by the Colombian government, 90% of emerald production is destined for exports. Emerald deposits are located in the sedimentary basin of the Cordillera Oriental, in Boyacá in the Cinturón Esmeraldífero Oriental and Cinturón Esmeraldífero Occidental; more than 60 production licenses were active. Most gold production came from small- and medium-sized alluvial operations, which employed artisanal methods of extraction. All platinum was mined by small mining cooperatives or in-

dividual prospectors, at Río San Juan, Choco. Silver was produced in Segovia and Río Nechi, Antioquia.

The country's substantial copper, iron, nickel, and lead reserves were of major importance to the future development of the economy. The El Roble copper mine produced output for Japan. A copper deposit with reserves estimated at 625 million tons was discovered at Pantanos, Antioquia, in 1973. Cerro Matoso S.A., a subsidiary of BHP Billiton PLC, was the country's sole producer of nickel and ferronickel, near Monetlibano, Córdoba. Reserves of the lateritic nickel mine were estimated to be 39.9 million tons with a nickel content of 2.3%. A second production plant, completed in 2001, ahead of schedule, doubled Cerro Matoso's ferronickel production capacity to 55,000 tons per year of nickel.

Under Article 332 of the 1990 constitution, the state retained the rights to all surface and subsurface nonrenewable and natural resources; the government granted concessions for exploration and production. In 1989, a new mining code sought to encourage mineral exploration and development by expediting the processing of claims, improving the security of mineral occupancy and tenure, and providing financial aid to small- and medium-scale miners. The mining code of 2001 sought to encourage exploration and production of mineral resources and limit the role of the government to one of a regulatory and administrative entity, with more production transferring to the private sector. The law also clarified the provisions for establishing mining contracts.

## 27 ENERGY AND POWER

Colombia's mountainous terrain and network of rivers offer one of the highest potentials in the world for the generation of hydroelectric power. These resources remain largely undeveloped, despite intensive government efforts. In addition, the nation's energy sector, particularly oil, has had to deal with an ongoing civil war involving a pair of leftist insurgent groups: the Fuerzas Armadas Revolucionarias de Colombia (FARC) and the Ejercito de Liberacion Nacional (ELN); and the Autodefensas Unidas de Colombia (AUC), a right-wing paramilitary group. Further complicating the security situation has been the problem of narcotics trafficking.

Electric generating capacity was estimated for 2002 to stand at 13.1 GW, of which hydropower accounted for 63.3% and thermal 36.7%. The output of electricity has been estimated for 2002 at 44.9 billion kWh (77% hydroelectricity; 21% thermal), up from 2000, in which output stood at 42.9 billion kWh. Colombia's heavy reliance upon hydroelectric power makes the country vulnerable to drought, such what happened in 1992, when a severe drought led to power blackouts and rationing. Although the government has attempted to encourage the construction of natural gas and coal-fired plants to diversify the nation's electric power supply, since the early 1990s, hydropower has continued to increase its share as a source of power generation. Estimated consumption of electricity rose in 2002, from 2000, to 41.1 billion kWh. In the latter year, consumption of electricity totaled 40.3 billion kWh. Colombia in 2003 had an estimated 7.3 billion short tons in recoverable coal reserves. For the same year, coal production totaled 52.5 million short tons.

According to the Oil and Gas Journal, Colombia has estimated proven petroleum reserves of 1.54 billion barrels and an estimated oil refining capacity of 285,850 barrels per day, as of 1 January 2005. Production of oil rose rapidly from 7.4 million tons in

1982 to 30.1 million tons in 1995. In 1999 it hit an all-time high of 826,000 barrels per day, before declining to 616,000 barrels per day in 2001. In 2004, oil output was estimated at 530,000 barrels per day, of which crude oil accounted of 508,000 barrels per day. Domestic oil consumption was estimated for 2004 at 261,000 barrels per day. The Colombian government since 1999 implemented new measures to encourage increased exploration and production, and to attract foreign investment. While these moves have spurred an increase in the upstream sector, a major contributing factor in the revival of interest, has been an improvement in the nation's security situation. In 2004, the number of kidnappings fell by 60% and attacks against Colombia's oil infrastructure fell significantly in 2003. For example, attacks against the Cano-Limón oil pipeline dropped from 170 in 2001 to 34 in 2003.

The production and consumption of natural gas have grown since the mid-1970s. According to the Oil and Gas Journal, as of 1 January 2005 Colombia had estimated proven natural gas reserves of 4.0 trillion cu ft, down from 4.5 trillion cu ft in 2004. In 2003, production and consumption of natural gas were each estimated at 215 billion cu ft. As with the oil sector, the nation's gas sector has been targeted by saboteurs and guerrillas. However attacks against the natural gas infrastructure and the costs associated with lost production and repairs have been cut, due to increased security measures.

## 28 INDUSTRY

The National Association of Manufacturers (Asociación Nacional de Industriales—ANDI) represents firms engaged in some 40 different branches of manufacturing. ANDI was founded in 1944 to assist both large and small businesses. Since 1940, the Industrial Development Institute (Instituto de Fomento Industrial—IFI), a government-operated finance corporation, has been investing in enterprises that otherwise might not be undertaken because of high risk or lack of capital. It provides direct financing for construction, acquisition of essential machinery and equipment installation services, and working capital. Most of the industrial activity is concentrated in and around Bogotá, Medellín, Barranquilla, and Cali. Industries in Medellín produce textiles, clothing, chemicals, plastic, and printed materials.

Manufacturing accounted for 15% of GDP in 1950, 24% at its peak in 1977, and 14% in 1998. Colombia is almost self-sufficient in consumer products, which represent about half of total industrial production. The 1970s witnessed a shift in industrial development policies from import substitution to expansion of exports. While the pace of industrial growth declined slightly in the mid-1970s, it increased by 2.5% between 1977 and 1987. This growth continued into the early 1990s, but slowed by mid-decade. Industry declined by 2.3% in 1998. Manufacturing growth began to pick up after the 1997–99 recession, registering a 9.7% growth rate in 2000.

Export-oriented industries include coal and oil derivatives, chemicals, porcelain, and glass. In 1995, mining and hydrocarbons grew by 17%, the highest growth sector in the Colombian economy. That the rest of the industrial economy has been sluggish in recent years is due to a cluster of factors, including the lack of infrastructure, labor difficulties, and most significantly, the civil unrest in the countryside caused by bands of paramilitaries loyal to drug traffickers and political extremists. The decline in indus-

try also reflects an ebb in the country's construction boom. The construction sector grew by nearly 10% a year through the early part of the 1990s, but fell to just 5.3% in 1995. Due to the effects of the recession, construction saw negative growth rates of 14.4% and 19.9% in 1998 and 1999, respectively. The construction sector began to stabilize in 2000, contracting by only 1.5%.

Colombia has five oil refineries. Hydrocarbon production decreased by 15.5% in 2000, but due to the rise in international oil prices, revenues were maintained. Though industrial growth was fairly widespread from 2000–2005, the construction industry appeared to have benefited the most.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

The government of President Turbay Ayala (1978–82) emphasized research in farming in order to help raise agricultural production. The Academy of Exact, Physical, and Natural Sciences (founded in 1933) and the National Academy of Medicine (founded in 1890), are both located in Bogotá. As of 1996, there were 24 specialized agricultural, medical, scientific, and technical learned societies, and 13 scientific research institutes in Colombia, and the country had 43 universities offering degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 28% of college and university enrollments.

In 2002, Colombia had 81 researchers and 46 technicians per million people engaged in research and development (R&D). For 2001 (the latest year for which data is available), Colombia's R&D expenditures totaled us\$450.758 million, accounting for 0.17% of GDP. Of that amount, business accounted for 46.9%, followed by higher education at 38.3%, the government at 13.2%, and non-profit institutions at 1.7%. High technology exports in 2002 totaled us\$319 million, or 7% of manufactured exports.

## 3<sup>0</sup> DOMESTIC TRADE

There are four primary marketing areas: the Caribbean coast region, the Antioquia region, the Cauca Valley region, and the Bogotá region. Firms desiring distribution of their products to all important national markets generally appoint agents in the leading city of each of the four regions (Barranquilla, Medellín, Cali, and Bogotá, respectively). Most small purchases are made for cash, but many stores offer installment credit facilities. A 16% value-added tax applies to most goods and services. As of 2002, there were about 80 franchise companies operating stores through the country. These are primarily foreign-based fast-food establishments.

Small, individually owned retail establishments predominate, although chain stores are increasing. Variety stores and department stores on the pattern of those in the United States are becoming popular, and food supermarkets are increasing in larger cities. Local farmers' markets, however, are still more generally patronized even in the cities, and in rural areas they are often the only trading centers. Direct marketing is gaining in popularity.

Business hours vary largely with climatic conditions; however, the usual workday is from 7:30 or 8 AM to noon and from 1 to 4:30 or 5 PM. Most businesses close on Saturday afternoons, Sundays, and on state or religious holidays. Banking hours are generally from 9 AM to 3:30 PM. Retail establishments are generally open from 9 AM to 7 or 8 PM on weekdays and from 9 AM to 9 PM on Saturdays. Restaurants and other food stores may be open on

Sundays and some holidays. Major credit cards are now generally accepted in most cities and ATM machines are prevalent.

The principal advertising media are newspapers, magazines, radio, and television; in motion picture theaters, it is also customary to display advertisements on the screen between features. There are a number of advertising and public relations firms.

## 3<sup>1</sup> FOREIGN TRADE

Beginning in 1990, Colombia opened up its economy to greater international trade and investment. The program of liberalization resulted in mass privatizations and lifting of restrictions on foreign investment; and substantially reduced import tariffs while eliminating most import licensing requirements. The government also signed the Andean Free Trade Agreement (ANCOM) with Venezuela, Peru, Ecuador, and Bolivia; the Latin American Integration Association (LAIA) with Argentina, Bolivia, Brazil, Chile, Ecuador, Mexico, Paraguay, Peru, Uruguay, Venezuela, El Salvador, Costa Rica, Guatemala, Nicaragua, and Honduras; a Bilateral Free Trade Agreement with Chile; and an agreement with Mexico and Venezuela called the Group of Three (G-3).

Colombia also has several free-trade zones, the largest of which is Barranquilla, on the Caribbean. Other free-trade zones providing benefits for importers and exporters, as well as for manufacturers located within the zone boundaries, are the Buenaventura Harbor, Cúcuta, Palmaseca (near Cali's international airport), and the Caribbean port of Santa Marta. The illicit trade in marijuana and cocaine, especially to the United States, is known to be substantial, but there are no reliable estimates of its volume or its value. The Colombian government estimated in 1999 that drug traffickers smuggled us\$5 billion annually in contraband into the country.

Colombia exports 10–20% of the world's coffee, which is the country's second-largest commodity export. Fuels contribute largely to the export market, including crude and refined petroleum; and coal, lignite, and peat. Agricultural exports like fruit, nuts, vegetables, sugar, and honey account for a smaller percentage of Colombia's exports.

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

In 2004, Colombia exported 42.1% of its products to the United States, 9.7% to Venezuela, and 6% to Ecuador, totalling over us\$23 billion. On the other hand, 29.1% of its imports came from the United States, 6.5% from Venezuela, 6.4% from China, 6.2% from Mexico, and 5.8% from Brazil.

### 3<sup>2</sup> BALANCE OF PAYMENTS

When President Carlos Lleras Restrepo took office in August 1966, the economy of Colombia was unstable; inflation was spiraling, and there was a lack of centralized economic planning. Lleras embarked on an austerity program that included trade and exchange controls, tight credit policies, tax reforms, a balanced budget, and the determination of priorities in the field of public investment. The cutback in imports had repercussions in the industrial sector, but controls were then loosened and business activity stepped up rapidly.

Colombia succeeded in building up a national account surplus during the 1970s, 1980s, and early 1990s. Emphasis on export expansion, import substitution, and continuation of foreign assistance led to further progress. The second half of the 1990s, though, brought a consistently negative balance of payments of about 5% of GDP. The Pastrana government implemented austerity measures through an IMF us\$2.7-billion loan in the hopes of cutting the fiscal deficit to 3.6% by 2000 and 1.5% by 2003. In 2000, Colombia had a trade surplus of us\$1.5 billion, in contrast with a us\$3.8 billion deficit in 1988. Recent rises in exports have focused on nontraditional exports such as bananas, flowers, gold, emeralds, chemical products, machinery, textiles and apparel, and plastic products. In 2000, due to lower international commodity prices for coffee and coal, those exports decreased.

The CIA estimated that in 2005, the current account balance was in deficit at -us\$917 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Bogotá, founded in 1879, was the first Colombian credit establishment. The Bank of the Republic was established in 1923 as the semiofficial central bank. This bank is the sole note-issuing authority. The notes must be covered by a reserve in gold or foreign exchange of 25% of their value. The Bank of the Republic also operates the mint for the government. It rediscounts and makes loans to official and semiofficial institutions. In 1963, the Monetary Board was set up to assume from the bank the responsibility for setting required reserve rates for managing general monetary policy; this board, which formulates monetary, credit, and exchange policy, is thus the most influential financial agency in Colombia. The government supervises the banking system by means of a special governmental body, called the Superintendency of Banks.

In 2000, the Colombian financial system included 29 commercial banks (four of them state-owned), the Colombian Export Promotion Bank (BANCOLDEX), 107 foreign bank offices, six savings and loans corporations (CAVs), 10 development banks, 32 commercial finance companies, 37 trust companies, 33 insurance companies, and a state-owned mortgage bank. The Bank of the Republic and the commercial banks supply mainly short-term loans, and investment corporations make long-term loans.

In 1982, in the wake of a scandal that led to the liquidation of a commercial bank and a finance company, the government moved to reform the banking sector by placing limits on the equity any individual (or his family) could hold in a financial institution and on the credit any lending institution could extend to any individual or entity. Several more crises in the ensuing years shook public confidence in the financial system, but tight government control over the sector has brought it back to a state of partial recovery.

Beginning in 1989, the government began to privatize the banks. Several bank liquidations took place in 1999, including Pacifico, Andino, and Selfin. Two government owned banks merged (Estado and Uconal), while the largest government bank, Caja Agraria, was liquidated and replaced by the new Banco Agrario. The goal was to reduce the number of banking institutions to about 17. The Central Bank devalued the peso by 9% in 1998 and by 10% in 1999 in an effort to stimulate economic growth. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to us\$8.0 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was us\$22.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 10.4%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 16.4%.

The Bogotá Stock Exchange, organized in 1928, is the largest official stock exchange in the country. The Medellín Exchange was established in 1961, and the Occidente Stock Exchange in Cali was established in 1983 and began operations in 1993. The Bogotá exchange accounts for about 57%, the Medellín 28%, and the Cali exchange 15%. In 2004, a total of 114 companies were listed by the combined Bogotá, Medellín and Cali stock exchanges (Colombia Stock Exchange), which had a market capitalization of us\$25.223

billion. The IGBC rose 86.2% from the previous year in 2004 to 4,345.8.

### 34 INSURANCE

The government regulates the insurance industry through the Insurance Section of the Superintendency of Banks. A social insurance system, the Institute for Social Insurance (Instituto para Seguros Sociales-ISS) established by law in 1946, was organized by the Ministry of Labor to provide life and disability insurance, a pension plan, and a health program for employees in the modern private subsector. In 1999, there were 27 insurance companies in operation, two of which were governmental. In Colombia, third-party automobile liability, workers' compensation, personal accident, professional liability, earthquake, and aviation third-party insurance are compulsory.

During 1995, regulations were issued that require insurance companies to adjust investments to market or equity values and to account for such changes through the income statements. Prior to 1995, any such unrealized adjustments were adjusted directly to policy holders' surplus funds. A relatively modest number of insurers, a competitive environment, and a few dominant companies in terms of market share characterize the Colombian market. A number of foreign insurers operate in Colombia, but foreign insurance companies may not establish local branch offices in lieu of opening major offices. Foreign investment in domestic insurance companies is now up to 100%, although a few restrictions may apply. In 2003, direct premiums written totaled us\$1.998 billion, with nonlife premiums accounting for us\$1.449 billion. Colombia's top life insurer that year was Previsora, with us\$144.5 million in gross nonlife premiums written. The country's top life insurer that same year was Suramericana, with us\$224.7 million in gross life premiums written.

### 35 PUBLIC FINANCE

Much of Colombia's foreign debt has been accumulated by financing infrastructural rather than industrial projects, the latter being more common among Latin American nations during the 1970s and 1980s. Considerable sums were spent in the 1990s to stimulate the development of industry, and higher than normal military expenditures were necessitated by the continuing and disruptive guerrilla activity. The inflationary conditions that prevailed from 1961 into 2000 also stimulated government expenditures. For political reasons, the national government was unable to raise tax revenues sufficient to cover sharply expanding investment outlays. Loans from external financial agencies (including the IMF, IDB, and IBRD) were substantial, but insufficient to permit a buildup in the level of public investment operations. The recession of the early 1980s brought another round of deficits as spending increased far more rapidly than revenues. By the 1990s, reforms in the public sector had greatly improved the efficiency of public expenditures.

The US Central Intelligence Agency (CIA) estimated that in 2005 Colombia's central government took in revenues of approximately us\$46.8 billion and had expenditures of us\$48.7 billion. Revenues minus expenditures totaled approximately - us\$1.9 billion. Public debt in 2005 amounted to 44.2% of GDP. Total external debt was us\$37.06 billion.

SOURCE: *Government Finance Statistics Yearbook 2004*, Washington, DC: International Monetary Fund, 2004.

The International Monetary Fund (IMF) reported that in 2003, the most recent year for which it had data, budgetary central government revenues in pesos were c\$42,446 billion. The value of revenues in US dollars was us\$15 million, based on a principal exchange rate for 2003 of us\$1 = c\$2,877.65 as reported by the IMF.

### 36 TAXATION

In addition to income taxes, Colombia levies a value-added tax (VAT), as well as municipal and property taxes. Many stamp taxes are imposed on legal documents. Personal income tax rates are based on income and there is a flat tax on corporate income. Indirect taxes include a tax on exported goods and services, surcharges on imports, a gasoline tax, and local taxes on vehicles and property.

Colombia's corporate income tax, as of 2005, stood at 35%. However, a 10% surcharge also applies. Branches of foreign companies resident in Colombia are taxed at the same rate as domestic companies, but there is a remittance tax of 7% for foreign companies. A 0.3% tax is charged on debit transactions in the financial system. In 2002, a one-time 1.2% tax on companies and individuals with assets over c\$170 million (about us\$65,000) was assessed to fund increased military spending.

Individual income is taxed according to a progressive schedule with 35% as the highest marginal rate. The main indirect tax in Colombia is its value-added tax (VAT), with a standard rate of 16%. The VAT applies to most transactions, although items such as utilities, insurance, financial and property leasing, and health-care are exempt. The VAT also varies, with higher rates of 20–40% applied to certain items, such as vehicles, alcoholic beverages (including wine) and pleasure boats. The VAT for automobiles ranges from 22% for nonluxury vehicles and 40% for luxury automobiles. A lower VAT rate of 10% is applied to nuts and almonds, while games of chance (excluding lotteries) have a 5% VAT.

### 37 CUSTOMS AND DUTIES

Colombian import tariffs have been significantly reduced and simplified. There are four tariff levels: 5% for raw materials, and intermediate and capital goods not produced in Colombia; 10% and 15% for goods in the first category but with domestic production in Colombia; 20% for finished consumer goods; and 35% and 40% for automobiles and some agricultural products. The average tariff lies between 11% and 13.5%. The four-tariff system also acts as the common external tariff for the Andean Community, which became effective for Colombia in 1995.

Nontariff barriers to trade include restrictions on poultry parts, powdered milk, wheat, and other agricultural products. Tariff rates for some of these selected basic commodities ranged up to 119% in 1999. Import and export licenses are required for most items.

Colombia maintains free trade agreements with Venezuela, Ecuador, Bolivia, and Mexico. There are also international agreements for preferential duty rates with the Caribbean Common Market and the Central American Common Market, and Colombia has requested consideration for NAFTA accession and entry into the future Free Trade Area of the Americas (FTAA). Several free trade zones are in operation.

### 38 FOREIGN INVESTMENT

After the serious crisis in Colombia's capital markets in the 1980s, the Gaviria administration implemented an aggressive economic liberalization program known as *apertura*, or opening, in the early 1990s, including increased promotion of foreign investment. Under Law 9 of 1991, together with administrative resolutions from the Council on Economic and Social Policy (CONPES) and Resolution 21 of the Board of Directors of the Central Bank, foreign companies were put on an equal legal footing with local ones and most sectors were opened to foreign investment, barring only investments touching on security and the disposal of hazardous wastes.

In order to continue boosting the economy, the government has negotiated free trade agreements with several countries. A free trade pact among Colombia, Venezuela, and Central America (except Costa Rica) came into operation on 1 July 1993. In addition, an agreement was signed between Colombia, Venezuela, and Mexico (G-3) on establishing a free trade zone in 1994. In 1993, Colombia, Venezuela, Ecuador, and Bolivia achieved a customs union, with free trade between the four countries under the auspices of the Andean Pact. Effective 1 January 1994, pact members implemented a common external tariff (CET) based on a four-tier tariff range. In June 1999, the clause in the Colombian constitution permitting expropriation without indemnification was repealed opening the way for ratification by Colombia of bilateral investment agreements (BITS) with Peru, the United Kingdom, Spain, Cuba, and France. Colombia ended its monopoly over telecommunications in 1998, limiting foreign ownership to 70%. In 2003, the US Trade Representative (USTR) was raising objections that restrictions on foreign entry into Colombia's telecommunications sector violated its obligations under the World Trade Organization.

The petroleum industry is one industry that has enjoyed significant foreign investment; international investment grew from

us\$458 million in 1993 to us\$890 million in 1997. In 1996, CONPES eliminated the requirement of government authorization for investment in public services, mining, and hydrocarbons. Despite this allowance, investment in the hydrocarbons sector requires an association contract with the state-owned oil company ECOPETROL. Due to the *apertura* program, the sectors that have seen the largest growth in international investment have been infrastructural. Investment in the utilities sector (electricity, gas, and water) leapt from us\$145 million in 1996 to us\$2.3 billion in 1998. The transportation and communications sectors, which have been mostly privatized in recent years, grew from us\$5.7 million in 1993 to us\$360 million in 1997. The increased foreign investment coincided with increased borrowing in foreign financial markets (enabled by the opening of the financial sector in 1991) and a large inflow of capital from increased petroleum exports. The excess liquidity led to a credit boom and a sharp increase in interest rates, which rose further as the Central Bank tried to support the peso's exchange rate. Aggravated by political uncertainty, the economy was in another financial crisis by 1998.

Annual direct foreign investment (DFI) inflow reached a peak of us\$5.56 billion in 1997 and then fell to us\$2.83 billion in 1998 and to us\$1.47 billion in 1999. For 2000 to 2002, average annual FDI inflow was about us\$2.2 billion. FDI inflow from the United States in 2002 was us\$317 million.

Security concerns remained a major deterrent to foreign investment in 2003 as the government continued its 40-year fight against two major leftist guerrilla groups that had come to control about half of the country. In 2003, hostage taking and hostage execution involving increasingly prominent individuals and a bombing in a Bogotá nightclub indicated the penetration of guerrilla activity into major urban centers. In June 2003, as part of a us\$98 million military aid package, the United States sent about 60 Special Forces members to train local soldiers to guard the Occidental Petroleum pipeline; the Cano Limón pipeline, which had been bombed 40 times in 2002 and 170 times in prior years.

In terms of portfolio investment, the total market valuation of companies listed on the Colombia Stock Exchange peaked in 1997 at us\$19.5 billion (189 listed companies) and had fallen to us\$9.56 billion in 2000 (126 listed companies). In 2001, total market valuation had risen to us\$13.2 billion with 123 listed companies, but turnover was at a record low of 3.2%.

### 39 ECONOMIC DEVELOPMENT

In 1974, President Alfonso López outlined to Congress a long-range development plan with a major objective of achieving maximum growth while raising the living standards of the poorer half of the population. Efforts were to be concentrated in four main areas: exports, agriculture, regional development, and industry. An economic program published in 1980 during the administration of President Julio César Turbay, listed investment in energy, economic decentralization, regional autonomy, improvements in communications and transportation, mining development, and social improvement as its principal aims. A national development plan for the years 1981–84 provided for acceleration of public works. In 1982, during the Belisario Betancur presidency, economic emergencies were declared so that decrees to revise banking and fiscal policies could be issued without the need of congressional approval. The Virgilio Barco administration formu-

lated an economic program similar to that proposed in 1974 by López, whose objectives were to attack unemployment and poverty while encouraging growth.

In 1990, President Cesar Gaviria instituted a national system of economic liberalization known as *apertura*, or opening. The system called for greatly increased international investment, a lowering of trade barriers, and massive state sell-offs. These began in earnest in the early 1990s as the government sold off seaports, airports, power plants, telecommunications networks, banks—even roads. In addition to these measures, the government aggressively pursued the creation of regional trading blocs and became a major voice in support of a hemispheric free trade area. Colombia became a member of Latin American Integration Association (LAIA), a bilateral free-trade pact with Chile and the G-3.

Liberalizations secured Colombia as a reliable regional market. The country saw positive growth every year for over two decades and was one of the only Latin American countries not to default on its international loans during the 1980s. Impeding further development are domestic political scandals, poor infrastructure, and narco-terrorism. In 1998, growth slowed, and even turned negative in 1999.

A us\$2.7 billion International Monetary Fund (IMF) loan in 1999 was needed in order to save the shrinking economy, which improved from the inflow and austerity measures during the next year. In 2000, the US government gave us\$1.3 billion in aid to Colombia's government and army, chiefly to help the war against drugs, but guerrilla armies continued to operate in at least two-fifths of the country.

President Uribe, elected in 2002, pledged to restore order to the country and to increase security measures. He planned to raise defense spending from 3.5% of gross domestic product (GDP) to 5.8% by the end of his term in 2006, and the government in 2003 was training 10,000 new police and 16,000 part-time “peasant soldiers” to secure close to 200 towns previously lacking police. US troops were also enlisted to guard Colombia's main oil pipeline. Uribe employed crop-dusting aircraft supplied by the United States, which in 2002 resulted in a 30% fall in coca cultivation. The government in 2003 also pledged to raise social spending, and depended on lending from international bodies such as the Inter-American Development Bank, World Bank, and Andean Development Corporation to augment the lack of sufficient revenue. In exchange for the assistance, the government was planning to implement structural reforms, such as pension and labor reforms to cut costs, and other spending cuts to reduce the deficit. In January 2003, Colombia negotiated a two-year, us\$2.1-billion Stand-By Arrangement with the IMF.

Though Colombia has been embroiled in armed conflict, the economy has managed to take a turn for the better, possibly due to export promotion and government budgets designed to decrease public debt. Business confidence in Colombia has increased due to Uribe's economic and democratic strengthening. Also, Colombian coffee has been earning greater market shares in developed countries, raising the price of the prized export. Furthermore, from 2002 to 2005, unemployment dropped slightly—from 15.7% in 2002 to 15.2% in July 2005, as reported by the Economist Intelligence Unit. The CIA had slightly more optimistic predictions for Colombia's 2005 unemployment, at 11.8%. However, unemployment, along with pension reform and the need to increase oil

production, continued to be challenges to be faced by President Uribe. Yet, as of 2005, Uribe was praised by various international financial institutions for the benefits that had come of the administration's economic policies. In addition to unemployment, the inflation rate was also on the decline—a rate that previously had persisted at a near 20% throughout the 1990s (with the exception of the recessionary years of 1998–99, when inflation was less than 10%). In 2002, inflation dropped further due to weak domestic demand. Throughout the increase in economic growth in 2003–05, inflation still remained consistently low—near 5%—due to the strengthening currency.

#### **40 SOCIAL DEVELOPMENT**

Social security coverage extends to all employees with the exception of some agricultural workers. Coverage is voluntary for the self-employed. Both employers and employees contribute to the program, while the government guarantees a minimum pension. All private-sector employees are covered by unemployment, and there is voluntary coverage for public workers. A worker's compensation program is funded fully by employers and provides benefits in proportion to the degree of incapacity. Employers also fund the family allowance benefits available to low income families.

The law provides women with extensive civil rights and prohibits any form of discrimination against women. However, there is still discrimination against women, especially in rural areas. They earn less than men for doing similar work, and occupy few of the top positions in government. Sexual harassment is pervasive. Rape and other acts of violence against women are widespread, and traditionally the law has not provided strict penalties for offenders. Trafficking in women for sexual exploitation continues to be a major problem.

Urban Colombia, and especially Bogotá, has acquired a reputation for street crime: pickpockets and thieves are a common problem. Drug trafficking flourishes on a large scale, despite government efforts to suppress cocaine smuggling and to eradicate the coca and marijuana crops. Kidnapping, both for political reasons and for profit, is widespread.

Human rights excesses by security forces continue with reports of extrajudicial killings and disappearances. Human rights abuses are committed by many groups, including guerrillas, narcotics traffickers, paramilitary groups and the military. Prison conditions are harsh, but international monitoring of conditions is allowed by the government. The constitution provides for special rights and protection for Colombia's many indigenous minorities, but these are not always respected in practice.

#### **41 HEALTH**

Health standards have improved greatly since the 1950s, but malaria is still prevalent in areas up to 1,100 m (3,500 ft) in altitude. In the mid-1990s, malaria was at epidemic numbers with nearly 130,000 cases reported. Many Colombians suffered from intestinal parasites. Malnutrition, formerly a very serious problem, with nutritional goiter, anemia, scurvy, and pellagra frequent, had become less severe by the early 1980s, when the per capita calorie supply was estimated at 102% of requirements. As of 2000, an estimated 15% of children under five years old were considered to be malnourished. In 2000, 91% of the population had access to safe drinking water and 85% had adequate sanitation. In 1990, the gov-

ernment began an initiative to improve the national health system at every level. Health care provisions (doctors and beds) do not compare favorably with other countries of the region. As of 1999, total health care expenditure was estimated at 9.4% of GDP.

In 1993, Colombia departed from its older health care system to one of payment by capitation and structured competition among integrated health care service delivery systems; 5 million people in the poorest groups, previously excluded from the medical system, were given access to health services. Approximately 87% of the population had access to health care services. As of 2004, Colombia had an estimated 135 physicians, 237 nurses and 78 dentists per 100,000 people.

Average life expectancy in 2005 was 71.72 years. The infant mortality rate decreased from 99.8 per 1,000 live births in 1960 to 20.97 in 2005. As of 2002, there were an estimated 22 births per 1,000, with 77% of married women (ages 15 to 49) using contraception in 2000. In 1999, children up to one year of age were immunized against the following: diphtheria, pertussis, and tetanus, 74%, and measles, 74%. Colombia's estimated death rate as of 2002 was 5.66 per 1,000 inhabitants. Between 1986 and 1992, there were approximately 22,000 civil war-related deaths.

The HIV/AIDS prevalence was 0.70 per 100 adults in 2003. As of 2004, there were approximately 190,000 people living with HIV/AIDS in the country. There were an estimated 3,600 deaths from AIDS in 2003.

The disease is mostly spread by sexual activity. The first case of perinatal transmission occurred in 1987 and there have been 195 cases reported since then.

## 42 HOUSING

Colombia's housing shortage is largely a result of the rapid growth of the urban population. With the annual urban population growth rate at over 5%, the housing deficit was estimated to be around 800,000 units in the early 1980s and is expanding annually. Total housing units numbered approximately seven million in the mid-1990s. About 6,923,945 units were privately owned. About 81% of privately owned units were detached homes; about 13% were apartments, and the remainder were mobile units, natural shelters, and nonresidential housing. Roughly 70% were owner-occupied, and 25% were rented. Three-fourths of all dwellings were made of bricks, adobe, mud or stone; nearly 15% had external walls of wattle or daub; 7% were wood; and 3% were mostly cane.

In 2005, Habitat for Humanity reported that about 11.5 million homes are still without basic necessities. About 40% of these homes are overcrowded and of inadequate structures. The housing deficit is at about 900,000 and growing. In rural areas, poverty-stricken residents often construct their own tin huts called *cambuches*. Rural housing problems in Colombia are dealt with primarily by the Credit Bank for Agriculture, Industry, and Mining, and by the Colombian Institute of Agrarian Reform.

Public resources are channeled into urban housing through the Central Mortgage Bank, whose mortgages, because of interest rates, down-payment requirements, and repayment terms, have usually been accessible only to upper-middle-income groups; and the savings and loan corporations, whose interest rates are pegged to inflation through daily monetary correction factors known as

units of constant purchasing power value (UPACs). In addition, through AID, substantial private funds from US investors have been used for various housing programs.

## 43 EDUCATION

The constitution provides that public education shall not conflict with the doctrines of the Roman Catholic Church; courses in the Roman Catholic religion are compulsory, and the Church is in virtual control of the public schools. Private schools have freedom of instruction, and there are a number of Protestant schools, principally in Bogotá. The national government supports secondary as well as university education and maintains a number of primary schools throughout the country.

Education is free and compulsory for nine years, beginning with one year of preschool starting at age five or six. Primary school covers five years of study and is followed by four years of basic secondary school. For their remaining two years of secondary school, students may choose a general course of studies or a technical school program. The government has established two basic programs for improving secondary education—the integration of practical training into high-school academic curricula and the training of agricultural experts at the secondary level—so that students who do not go on to college are prepared to receive further technical training or to earn a living. The National Apprenticeship Service offers technical and vocational training in fields that contribute to national development; the program is financed by compulsory contributions from private enterprises and employees.

In 2001, about 36% of children between the ages of three and five were enrolled in some type of preschool program. Primary school enrollment in 2003 was estimated at about 87% of age-eligible students. The same year, secondary school enrollment was about 55% of age-eligible students. Dropout rates are high at the primary level, particularly in rural areas, where the students frequently live at considerable distances from their schools. Almost all secondary schools are in the larger cities; thus, little educational opportunity is open to rural children, except those reached by educational radio and television broadcasting. The student-to-teacher ratio for primary school was at about 27:1 in 2003. The ratio for secondary school was about 21:1.

By law, Colombia must spend at least 10% of its annual budget on education. Financing and supervision of public education is the joint responsibility of the Ministry of Education, the departments, and the municipalities. Secondary and technical education and universities are administered by the Ministry of Education. The central government also pays teachers' salaries. As of 2003, public expenditure on education was estimated at 5.2% of GDP, or 15.6% of total government expenditures.

The National University in Bogotá, founded in 1572, is one of the oldest in the Western Hemisphere. Other important universities include the Universidad Javeriana (founded 1622), which is operated by the Jesuits; the Universidad de los Andes, a private institution based on a US model; and the Universidad Libre, a private university with active liberal leanings. In 1964, the Colombian Overseas Technical Specialization Institute (ICETEX) was formed to coordinate scholarship and fellowship funds for Colombians wishing to study abroad. Graduates of foreign schools who return to Colombia reimburse ICETEX from their subsequent earnings.

In 2003, about 24% of the tertiary age population were enrolled in some type of higher education program. The adult literacy rate for 2004 was estimated at about 94.2%.

#### 44 LIBRARIES AND MUSEUMS

The National Library, founded in 1777 in Bogotá, has over 800,000 volumes. It also acts as a public library, maintaining a small circulating collection and a children's room, and serves as a depository library of the United Nations. The cities have municipal libraries and the towns have village libraries, which are under the control of the Colombian Institute of Culture. There are two valuable private libraries in Bogotá, established by Dr. Luis Augusto Cervo and Dr. Antonio Gómez Restrepo, respectively; each contains about 50,000 volumes. The Bank of the Republic maintains the Luis Angel Arango Library, an important cultural center holding some 400,000 volumes. The library of the National University in Bogotá has approximately 230,000 volumes. The University of the Andes in Bogotá has 210,000 volumes. The Library of Congress holds 140,000 volumes. There are over 1,000 local branches of the public library.

The most notable of Bogotá's museums are the National Museum, which concentrates on history and art since the Spanish conquest, the founding of Bogotá, and the colonial period; the National Archaeological Museum, which exhibits indigenous ceramics, stone carvings, gold objects, and textiles; the Museum of Colonial Art, formerly part of the National University, which specializes in art of the 16th, 17th, and 18th centuries; and the Gold Museum, located in the Bank of the Republic. There are more than 50 provincial museums, including many archeological and anthropological sites.

#### 45 MEDIA

Telephone and telegraph networks link all provincial capitals and connect these centers with surrounding rural areas. Each local system is independent; most are municipally owned, but a few are in private hands. Long-distance service is provided by the national government and is based on an agreement among local and departmental systems. In the early 1980s, the National Telecommunications Enterprise (TELECOM) had one of the largest automatic telephone service networks in Latin America. Its high-capacity microwave system connected the 40 largest cities in the country. Colombia launched its own communications satellite in 1985. In 2003, there were an estimated 179 mainline telephones for every 1,000 people; nearly one million people were on a waiting list for telephone service installation. The same year, there were approximately 141 mobile phones in use for every 1,000 people.

Most of the nation's 498 (463 AM, 35 FM) radio stations are privately owned. In 1997 there were 60 television stations. Color television was introduced in 1979. Radiodifusora Nacional de Colombia is the government owned radio station. Intravision is a government-owned television station that operates two commercial and one educational station. Caracol is a prominent private commercial station for both television and radio. In 2003, there were an estimated 548 radios and 319 television sets for every 1,000 people. The same year, there were 49.3 personal computers for every 1,000 people and 53 of every 1,000 people had access to the Internet. There were 159 secure Internet servers in the country in 2004.

Almost every town publishes at least one daily newspaper. The press varies from the irregular, hand-printed newspapers of the small towns of the interior to such national dailies as *El Tiempo*, one of the most influential newspapers of the Spanish-speaking world. The leading newspapers in Bogotá, with their political orientation are *El Tiempo*, liberal; *El Espacio*, liberal; and *El Nuevo Siglo*, conservative. *La Republica* in Bogotá reported a 2004 circulation of 55,000. In Cali, the leading newspapers are *El País*, conservative, 60,000 circulation in 2004 and *Occidente*, conservative, 25,000. In Medellín, the conservative *El Colombiano* had a 2004 circulation of 90,000. The same year, the Barranquilla *El Heraldito* (liberal) had a circulation of 70,000, and the Bucaramanga *El Vanguardia liberal* had a circulation of 48,000.

In general, the authorities are said to respect free speech and free press; most media are able to resist pressure from the government concerning sensitive issues, though censorship has been exercised occasionally in times of national emergency, and journalists exercise some self-censorship.

#### 46 ORGANIZATIONS

The National Federation of Coffee Growers, organized in 1927, is a semiofficial organization partly supported by tax revenue. The organization carries great weight as the representative of Colombia's leading industry, and its influence is felt in many spheres. Other trade associations include the National Association of Manufacturers, the People's Association of Small Industrialists of Colombia, and chambers of commerce in the larger cities. The Bank Association is an association of both national and foreign banks in Colombia. The Colombian Livestock Association, the National Federation of Cotton Growers, and the National Association of Sugar Growers serve their respective industries. Most farmers belong to the Agricultural Society of Colombia.

Learned societies include the Academy of History, the Colombian Academy of Language, the Colombian Academy of Exact, Physical, and Natural Sciences, the Academy of Medicine, the Colombian Academy of Jurisprudence, the Colombian Geographical Society, the Colombian Institute of Anthropology, and a number of regional bodies. The National Association of Colombian Writers and Artists includes most of the country's writers, painters, sculptors, and composers. Journalists have national and local organizations.

There are a number of youth organizations, some of which are affiliated with political or religious groups. Scouting programs are active throughout the country as are organizations of the YMCA and YWCA. A wide variety of sports organizations are active in the country.

In 2004, there were over 60,000 human rights and civil society nongovernmental organizations in the country. The Center for Popular Research and Education, sponsored by the Jesuits, is a prominent human rights organization. Others include the Colombian Commission of Jurists and the Jose Alvear Restrepo Lawyers' Collective. There are national chapters of the Red Cross, UNICEF, and Habitat for Humanity.

#### 47 TOURISM, TRAVEL, AND RECREATION

Colombia has mountains, jungles, modern and colonial cities, and resorts on both the Pacific Ocean and the Caribbean Sea, all of

which the Colombian Government Tourist Office (CORTURISMO) has aggressively promoted.

Football (soccer) is the most popular sport, followed by basketball, baseball, boxing, and cockfighting; there are also facilities for golf, tennis, and horseback riding, and bullrings in the major cities. Visas are not required, but all visitors need a valid passport and an onward/return ticket for entry.

The tourist industry in Colombia developed greatly in the late 1970s but declined in the 1980s. Spurred by the government's economic liberalization program, earnings from tourism rose from us\$755 million in 1993 to us\$955 million in 1997. In 2003, about 625,000 tourists arrived in the country and tourism receipts reached us\$1.1 billion. There were 54,820 hotel rooms with 109,940 beds and an occupancy rate of 50%.

In 2005, the US Department of State estimated the cost of staying in Cartagena at us\$234 per day; in Bogotá, us\$184; in Cali, us\$186; and in Medellín, us\$160.

#### 48 FAMOUS COLOMBIANS

Outstanding political and military figures in Colombian history include Francisco de Paula Santander (1792–1840), who served as a general in the war of independence and was the first president of independent Colombia, and José María Córdoba (1800?–1830), a brilliant young soldier of the war of independence, who was made a general at 22 by Simón Bolívar.

Colombia, famous for its literary figures, has produced three outstanding novelists widely read outside the country: Jorge Isaacs (1837–95), whose most famous work, *María*, is a novel in the Romantic tradition; José Eustacio Rivera (1880–1929), whose outstanding novel, *La Vorágine (The Vortex)*, written after World War I, is a drama of social rebellion; and Gabriel García Márquez (b.1928), a Nobel Prize winner in 1982, who is best known for *Cien años de soledad (One Hundred Years of Solitude)*. Colombia has had a number of noteworthy poets. The 19th-century Romantic school included Julio Arboleda (1814–92), José Eusebio Caro (1817–53), Gregorio Guitiérrez Gonzales (1826–72), and Rafael Pombo (1834–1912). Caro, who was influenced by the English poets, is generally rated as the most important Colombian Romantic. José Asunción Silva (1865–96) is regarded as the father of Latin American symbolism; his *Nocturnos* are among the finest poems in the Spanish language. Guillermo Valencia (1873–1945), the author of *Anarkos*, was a polished poet of the classical school, and León de Greiff (1895–1976) was a well-known poet. Miguel Antonio Caro (1843–1909) and Rufino José Cuervo (1844–1911) were philologists and humanists of great erudition who influenced scholars and students in the 19th century. The Instituto Caro y Cuervo in Bogotá is devoted to the study and publication of their works. Well-known literary critics include Baldomero Sanín-Cano (1861–1957) and Antonio Gómez-Restrepo (1868–1951).

Colombia's most notable painter was Gregorio Vázquez Arce y Ceballos (1638–1711), whose drawing and coloring have been compared to the work of the Spanish painter Murillo. Fernando

Botero (b.1932) is a contemporary painter and sculptor whose human and animal subjects are known for their corpulence and exaggerated proportions. Francisco José de Caldas (1770–1816) was a brilliant botanist who discovered a system for determining altitude by the variation in the boiling point of water and began the scientific literature of the country. Guillermo Uribe-Holguín (1880–1971) and José Rozo Contreras (1894–1976) are noted composers. The works of historian Germán Arciniegas (1900–99) are well known to the English-speaking world through translation.

#### 49 DEPENDENCIES

The archipelago of San Andrés and Providencia, administered as an intendency, is located 729 km (453 mi) from the Caribbean coast northwest of Cartagena and about 190 km (118 mi) off the Nicaraguan coast. Grouped roughly around the intersection of longitude 82° W and latitude 12° N, the archipelago consists of the islands of San Andrés and Providencia and 13 small keys. The population is mostly black. Both English and Spanish are spoken. The principal towns are San Andrés, San Luis, and Loma Alta on the island of San Andrés and Old Town on Providencia.

# COSTA RICA

Republic of Costa Rica  
*República de Costa Rica*

**CAPITAL:** San José

**FLAG:** The national flag consists of five horizontal stripes of blue, white, red, white, and blue, the center stripe being wider than the others.

**ANTHEM:** *Himno Nacional*, beginning “Noble patria, tu hermosa bandera” (“Noble native land, your beautiful flag”).

**MONETARY UNIT:** The colón (c) is a paper currency of 100 céntimos. There are coins of 1, 5, 10, 25, and 50 céntimos and of 1, 2, 5, 10, and 20 colones, and notes of 5, 10, 20, 50, 100, 500, and 1,000 colones. c1 = \$0.00209 (or \$1 = c479.28) as of 2005.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but local measures also are used.

**HOLIDAYS:** New Year’s Day and Solemnity of Mary, 1 January; Day of St. Joseph (Costa Rica’s patron saint), 19 March; Anniversary of the Battle of Rivas, 11 April; Labor Day, 1 May; Day of St. Peter and St. Paul, 29 June; Anniversary of the Annexation of Guanacaste, 25 July; Feast of Our Lady of the Angels, 2 August; Assumption (Mother’s Day), 15 August; Independence Day, 15 September; Columbus Day, 12 October; Immaculate Conception, 8 December; Abolition of Armed Forces Day, 1 December; Christmas, 25 December. Movable religious holidays include Holy Thursday, Good Friday, Holy Saturday, and Corpus Christi.

**TIME:** 6 AM = noon GMT.

## <sup>1</sup> LOCATION, SIZE, AND EXTENT

The third-smallest country in Central America, Costa Rica has an area of 51,100 sq km (19,730 sq mi), including some small islands. Comparatively, the area occupied by Costa Rica is slightly smaller than the state of West Virginia. Its length is 464 km (288 mi) N–S, and its width is 274 km (170 mi) E–W. Costa Rica is bordered on the N by Nicaragua, on the E by the Caribbean Sea, on the SE by Panama, and on the SW and W by the Pacific Ocean; the total boundary length is 1,929 km (1,199 mi), which includes the coastline of 1,290 km (805 mi). Costa Rica’s capital city, San José, is located in the center of the country.

## <sup>2</sup> TOPOGRAPHY

Costa Rica has three main topographic regions. The central highlands, extending from northwest to southeast, reach elevations of more than 3,660 m (12,000 ft) south of San José; the highest point in the country is Chirripó Grande (3,810 m/12,500 ft). Four volcanoes, two of them active, rise near the capital city; one of these volcanoes, Irazú (3,432 m/11,260 ft), erupted destructively during 1963–65. Nestled in the highlands is the Meseta Central, with an elevation of 900–1,200 m (3,000–4,000 ft), covering some 2,000 sq km (770 sq mi) of fairly level, fertile terrain. Half of the population, the centers of culture and government, four of the six main cities, and the bulk of the coffee industry are found on the plateau.

The Atlantic coastal plain, on the Caribbean side of the highlands, comprises about 30% of Costa Rica’s territory and is low, swampy, hot, excessively rainy, and heavily forested. The Pacific slope, some 40% of the country’s area, resembles the Caribbean

lowlands, but to the northwest is a dry area producing cattle and grain. Fifteen small rivers drain Costa Rica.

The country lies in a moderately seismic area that experiences occasional earthquakes, some of which have been severe. On 22 April 1991, an earthquake in the Limón–Pandora area caused the death of 47 people, as well as severe damage to homes, buildings, and some roads. The quake triggered minor tsunamis in the Cahuita–Puerto Viejo area and at Portobelo and Cristobal in Panama.

## <sup>3</sup> CLIMATE

Costa Rica has only two seasons: the wet season, from May to November, and the dry season, from December to April. There are three climatic zones. The torrid zone (tierra caliente), which includes the coastal and northern plains to an altitude of 457 m (1,500 ft), is characterized by heavy rains, almost continuous on the Atlantic watershed, and by a temperature range of 29–32°C (84–90°F). The temperate zone, including the central valleys and plateaus, has altitudes ranging from 457 to 1,524 m (1,500 to 5,000 ft), with regular rains from April through November and a temperature range of 24–27°C (75–80°F). The cold zone, comprising areas higher than 1,524 m (5,000 ft), has a temperature range of 10–27°C (50–81°F) and is less rainy but more windy than the temperate regions. The average annual rainfall for the country is more than 250 cm (100 in).

## <sup>4</sup> FLORA AND FAUNA

Costa Rica supports varied flora and fauna. From the coast to an altitude of about 900 m (3,000 ft) are tropical forests and savannas;

oaks and chaparrals are found between 2,070 and 3,050 m (6,800 and 10,000 ft); and sub-Andean and subalpine flora characterizes the highest mountains. The dense tropical forests contain rich stands of ebony, balsa, mahogany, oak, laurel, campana, and cedar. Plant life is abundant. The country has more than 1,000 species of orchids.

Most of the wild mammals common to South and Central America, such as jaguar, deer, puma, and varieties of monkeys, are found in Costa Rica. There are over 600 species of birds and 130 species of snakes and frogs; fish and insects are plentiful.

## 5 ENVIRONMENT

Nearly all of Costa Rica was once covered by forests, but deforestation for agricultural purposes and cattle ranching has reduced forested areas to only 38% of the total area. Between 1990 and 1995, the country lost an average of 3% of its forests and woodlands annually. Most of the wood was wasted by burning or rotting, and there has been little incentive for conservation or reforestation. The result has been soil erosion and the loss of soil fertility. Another serious problem, according to the UN, has been contamination of the soil by fertilizers and pesticides used in growing important cash crops, such as bananas, sugarcane, and coffee. Costa Rica's use of pesticides is greater than that of all the other countries in Central America added together. Under the General Health Law of 1973, the Ministry of Health has broad powers to enforce pollution controls, and the Division of Environmental Health has attempted to set standards for air and water quality. However, trained personnel and equipment are lacking.

Carbon dioxide emissions from industrial sources totaled 4.6 million metric tons in 1996; in 2000, the total emissions increased to 5.4 million metric tons. As of 2001, Costa Rica has 112 cu km of renewable water resources with 80% of the total used for farming activity. Of the nation's urban dwellers 99% have safe drinking water, as do 92% of the rural population.

Costa Rica's national park system is among the most extensive and well developed in Latin America. The system, covering nearly 4% of the total land area, includes 12 parks, 6 nature reserves, 4 recreation areas, the Guayabo National Monument archaeological site in the Turrialba region, and the International Peace Park established jointly by Costa Rica and Panama on their common border. There are 3 natural UNESCO World Heritage Sites and 11 Ramsar wetland sites. Altogether, 23% of Costa Rica's total land area is protected.

According to a 2006 report issued by the International Union for Conservation of Nature and Natural Resources (IUCN), threatened species included 13 types of mammals, 18 species of birds, 8 types of reptiles, 60 species of amphibians, 13 species of fish, 9 species of invertebrates, and 110 species of plants. Threatened species include the red-backed squirrel monkey, tundra peregrine falcon, spectacled caiman, American crocodile, and four species of sea turtle (green sea, hawksbill, olive ridley, and leatherback). The golden toad has been listed as extinct since 2001.

## 6 POPULATION

The population of Costa Rica in 2005 was estimated by the United Nations (UN) at 4,331,000, which placed it at number 118 in population among the 193 nations of the world. In 2005, approximately 6% of the population was over 65 years of age, with another

30% of the population under 15 years of age. There were 103 males for every 100 females in the country. According to the UN, the annual population growth rate for 2005–10 was expected to be 1.3%, a rate the government viewed as satisfactory. The projected population for the year 2025 was 5,568,000. The population density was 85 per sq km (220 per sq mi).

The UN estimated that 59% of the population lived in urban areas in 2005, and that urban areas were growing at an annual rate of 2.49%. The capital city, San José, had a population of 1,085,000 in that year. Other large cities and their estimated populations are Alajuela, 791,900; Cartago, 475,100; Puntarenas, 397,700; Heredia, 390,400; and Limón, 380,200.

## 7 MIGRATION

In 1995, 24,600 refugees were in Costa Rica. Of these, 4,200 were from El Salvador and 19,500 were from Nicaragua. Large numbers of Nicaraguans migrate seasonally to Costa Rica seeking employment opportunities. Illegal migration is a major national concern, with estimates of people illegally in the country ranging from 300,000 to 500,000 in 1999, most of whom were thought to be from Nicaragua. In the aftermath of 1998's Hurricane Mitch, Costa Rica declared an amnesty on illegal immigration, which expired on 31 July 1999. While intended primarily for aliens from Belize and Panama, the United Nations High Commissioner for Refugees (UNHCR) secured a provision that extended the amnesty to refugees. Under the amnesty, some 160,000 people applied for permanent residence. In 2004, there were 10,413 refugees living in Costa Rica and 223 asylum seekers. The net migration rate in 2005 was estimated as .5 migrants per 1,000 population.

## 8 ETHNIC GROUPS

The population is fairly homogeneous, primarily of European (mainly Spanish) descent. Whites and mestizos (mixed white and Amerindian) account for 94% of the total population. The remainder are blacks (3%), Chinese (1%), and Amerindians (1%). The blacks for the most part are of Jamaican origin or descent, and some mulattoes live mainly in the Limón port area. Most of the Amerindians reside on isolated reservations.

## 9 LANGUAGES

Spanish is the official language, but English is also spoken around Limón and among members of the middle class. Descendants of the Jamaican blacks speak an English dialect.

## 10 RELIGIONS

Roman Catholicism, the predominant religion, is the official religion of the state; however, the constitution guarantees religious freedom and this right is generally respected in practice. About 69% of the population is nominally Roman Catholic; only about 40% of Roman Catholics are active members. About 18% of the population belong to other Christian churches. Of these churches, the primary Protestant denominations include Methodist, Baptist, Evangelical, Episcopalian, Mormon, Jehovah's Witnesses, and Seventh-Day Adventists. There is a Mormon temple in San José which serves members from Costa Rica, Panama, Nicaragua, and Honduras. San José is also the site of the Continental Headquarters for Latin America of the Unification Church. There are small communities of Quakers, Mennonites, and Beechy Amish. Other reli-

LOCATION: 8°2'26" to 11°13'12" N; 82°33'48" to 85°57'57" W. BOUNDARY LENGTHS: Nicaragua, 309 kilometers (192 miles); Panama, 330 kilometers (205 miles); Caribbean and Pacific coastlines, 1,290 kilometers (802 miles). TERRITORIAL SEA LIMIT: 12 miles.

gions include Judaism, Islam, Taoism, Hare Krishna, Scientology, Tenrikyo, and Baha'ism.

Representing the official religion of state, the Roman Catholic Church enjoys some privileges that are not automatically conferred on other religious organizations. For instance, Catholic marriages are automatically recognized by the state; couples of other faiths must have marriages legalized through a civil union. The Catholic Church also has more opportunity to be in open dialogue with the government concerning economic, social, and political causes, such as the 2003 CAFTA negotiations. Catholic holidays are celebrated as public holidays. The government does not impose any major restrictions on the activities of non-Catholic groups.

## 11 TRANSPORTATION

San José is linked to both coasts by railroad and by highway. The Inter-American Highway, 687 km (427 mi) long, connects Costa Rica with Nicaragua and Panama. Another major highway runs from San José to the Caribbean coast beyond Limón. As of 2003 there were 35,889 km (22,323 mi) of roads, of which 8,075 km (5,022 mi) were paved. Motor vehicle registrations in 2003 included 367,832 passenger automobiles and 230,048 commercial vehicles.

As of 2004, Costa Rica had 278 km (173 mi) of railroad, all of it narrow gauge.

Principal ports are Limón on the Caribbean Sea and Puntarenas, Caldera, and Golfito on the Pacific. As of 2005, Costa Rica had two merchant vessels of more than 1,000 GRT totaling 1,716 GRT. There are about 730 km (454 mi) of seasonally navigable waterways.

There were an estimated 149 airports in 2004, only 31 of which had paved runways as of 2005. Líneas Aéreas Costarricenses, S.A. (LACSA), the national airline, provides domestic and international services centered at Juan Santamaria International Airport near San José. Service was also provided by fifteen international passenger lines and 22 cargo lines. In 2003, about 781,000 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

There were about 25,000 Amerindians in the region when Columbus landed in 1502. He named the area Costa Rica ("Rich Coast"), possibly because he saw gold ornaments on some of the indigenous people. European settlement of Costa Rica began in 1522, the Spanish conquered the Ticos, as the Costa Rican natives called themselves, and Spain organized the area into a colonial province in 1540; it was eventually placed under the provincial administration in Guatemala. Cartago, the colonial capital, was founded in 1563.

When independence came to Central America in 1821, Costa Rica had fewer than 70,000 inhabitants. In the following year,

it was absorbed into the short-lived Mexican Empire proclaimed by Agustín de Iturbide. Following the collapse of Iturbide's rule, Costa Rica became a member of the United Provinces of Central America in 1823. At the same time, the provincial capital of Costa Rica was moved to San José. The United Provinces fell apart in 1838, and Costa Rica proclaimed itself sovereign. In 1848, the Republic of Costa Rica was established. The new state was threatened by William Walker, a US military adventurer who invaded Central America in 1855, but his troops were repelled in 1857. In 1860 Walker was captured and executed. In 1871, General Tomás Guardia, dictator from 1870 to 1882, introduced the constitution that, though frequently modified, remained Costa Rica's basic law until 1949. Although Guardia's rule was characterized by decreased liberty and rising debt, it also brought increased sugar and coffee exports, as well as increased education.

In the late 19th and early 20th centuries, there was a series of boundary disputes with Panama and Nicaragua, in the course of which Costa Rica annexed Guanacaste Province from Nicaragua. In World Wars I and II, Costa Rica was a US ally, but not a military participant.

Meanwhile, the success of coffee cultivation, introduced in the early 1800s, had encouraged rapid population growth, progress in education, and the beginnings of modern economic development, through the construction of a coast-to-coast railroad from Limón on the Caribbean through San José to the Pacific. Banana cultivation was started in 1871, and at the turn of the century, the US-owned United Fruit Company (now United Brands) made Costa Rica a major producer of bananas.

Costa Rica's first major political crisis of the 20th century came when President Teodoro Picado Michalski annulled the 1948 elections in order to impose Rafael Ángel Calderón Guardia as president rather than the legally chosen president-elect Otilio Ulate Blanco. José Figueres Ferrer, a socialist landowner, led a civilian uprising, installed his own junta for 18 months, and restored democratic government, turning over the presidency to Ulate. The 44-day civil war was Costa Rica's bloodiest event of the 20th century, leaving 2000 dead and resulting in the prohibition of a standing army in the new constitution. Based on the constitution of 1871, the 1949 constitution reinstated free elections and banned the army, replacing it instead with a Civil Guard. However, it was not until 2000 that a professional Coast Guard was established in addition to domestic police and internal security forces.

Figueres was himself elected president by an overwhelming majority in 1952 (with women voting for the first time), and under his leadership, Costa Rica was one of the most democratic and prosperous countries in Latin America. Figueres was strongly opposed to all dictatorships, and Costa Rica proceeded to sever diplomatic relations with several Latin American countries. A socialist, Figueres nationalized the banks and threatened the holdings of the United Fruit Co. and other large-scale utilities. Border skirmishes with Nicaragua in 1955 were resolved through the mediation of the Organization of American States.

In 1958, the candidate of the opposition National Unification Party, Mario Echandi Jiménez, was elected by a bare majority vote. He was unable to enact his program of minimizing the government's role in social and economic matters because the legislature was dominated by other parties. In 1962, Francisco J. Orlich Bolmarich, a candidate of Figueres's National Liberation Party (Parti-

do de Liberación Nacional—PLN), won the elections and continued Figueres's progressive program. Costa Rica joined the Central American Common Market (CACM) in 1963 and has benefited from Central American economic integration, especially through increasing industrialization. Figueres served as president again from 1970 to 1974 and was succeeded by the PLN candidate, Daniel Oduber Quirós. An internal split within the PLN opened the gap for a conservative, Rodrigo Carazo Odio, to be elected president in 1978. However, after facing economic and political strains from Nicaraguan refugees, as well as the destabilization from surrounding Central American conflicts and civil wars, Carazo's administration left spiking inflation and unemployment for the presidency of Luis Alberto Monge Álvarez of the PLN in 1982.

During the 1980s, Costa Ricans were confronted with a severe economic crisis and with increasing political violence in the region, including sporadic terrorist activities in San José. The Monge government, on the insistence of the World Bank and International Monetary Fund, introduced an austerity program of devaluation, budget cuts, and other fiscal contraction to help economic recovery. Monge also tried to avoid being drawn into the war in neighboring Nicaragua between the insurgents known as "contras" and the Sandinista government. Nevertheless, the government resisted pressure from the United States to support the contras or to accept US aid toward the building of a military establishment.

In February 1986, the PLN won another presidential election when Oscar Arias Sánchez defeated Rafael Ángel Calderón Fournier. An important factor in the PLN victory was Monge's popularity. As the surrounding countries of Central America descended into war, drug trafficking, corruption, and further economic distress, Arias focused on his role in international affairs, leading a peace movement to bring stability to the region. In August 1987, a peace plan for Central America was signed in Guatemala by Nicaragua, Guatemala, Costa Rica, El Salvador, and Honduras. With little support from the United States, Arias's accomplished provisions were free elections in all countries, a guarantee of basic democratic freedoms in Nicaragua, a cease-fire by both Sandinistas and contras, an end to outside aid to the contras, amnesty for the contras, repatriation or resettlement of refugees from all countries, and an eventual reduction in the armed forces of all countries. For his efforts, Arias won the Nobel Prize for Peace later that year.

In 1990, amid continued economic troubles, Rafael Ángel Calderón Fournier was elected, and his Social Christian Unity Party (Partido Unidad Social Cristiana—PUSC) won a paper-thin majority in the Legislative Assembly. Although he campaigned on a platform of liberalization, economic equality, and welfare reform, little change was accomplished. The economy nevertheless rebounded, with peace settlements easing some of Costa Rica's demographic problems.

On 6 February 1994, Costa Ricans returned the PLN to power, as José María Figueres Olsen, son of former president Figueres, was elected president of Costa Rica, though the PLN failed to win an outright majority in the assembly. In response to the nation's weakening economy, Figueres introduced an economic reform package in 1995 that focused on government-spending cuts and the privatization of state-owned enterprises. These measures, which represented a reversal of the traditional policies of Figueres's PLN ruling party, drew stiff opposition from labor leaders, who

feared cutbacks in Costa Rica's large public sector, and touched off a month-long strike by the nation's teachers. Although the government responded by modifying some of its proposed plans, public support for Figueres plummeted as the nation's economy continued to slip, officially entering a recession in 1996. The economic crisis led to cooperation between the PLN and PUSC in order to enact fiscal reform. In December 1996 Figueres announced plans to raise taxes, privatize parts of the state-owned banking and telecommunications systems, and end the state insurance monopoly. Costa Rica's economic issues increased with the damage caused by Hurricane Cesar.

Elections were held again in February of 1998 and Social Christian (PUSC) leader Miguel Angel Rodríguez won with 46.9% of the vote, narrowly defeating National Liberation Party candidate José Miguel Corrales who obtained 44%. Rodríguez's party also won 29 of out 49 seats in the unicameral Congress. The sweeping Social Christian Union Party victory was attributed to popular discontent with Figueres's administration between 1994 and 1998. Rodríguez was a popular president and his government had some important achievements in an environment of increased tourism and foreign investment. That helped PUSC candidate Abel Pacheco de la Espriella win the 2002 presidential election with 58% of the vote; however, the previous two-party political system was toppled with the arrival of three presidential candidates, with no candidate garnering at least 40% of the vote. Therefore, Pacheco was the first president since 1948 to have to win a runoff election for the presidency, and the Citizen Action Party (Partido Acción Ciudadana—PAC) won 14 seats in the Legislative Assembly, denying an overall majority to either the PLN or the PUSC. In 2003 the Supreme Court annulled the 1969 constitution amendment limiting presidents to a single four-year term, which reverted back to the 1949 rule enabling a former president to be elected again after an eight-year period out of office.

Although it has a reputation as one of the most stable and least corrupt countries, Costa Rica has not been immune to government corruption and profiteering amidst the current trend of worldwide corporate and government depravity. In October 2004, former presidents Miguel Angel Rodriguez and Rafael Angel Calderón Fournier, along with several top government officials, were implicated in a corruption scandal involving a multimillion-dollar "commission" from a pharmaceutical company. Both were incarcerated in 2004, and released to house arrest in March 2005, with the former obliged to step down as secretary general of the Organization of American States. That same month former president José María Figueres was also forced to resign as executive director of the World Economic Forum in Geneva. This led to investigations in 2005 of corruption and illegal receiving of gifts, including free airline tickets, by President Pacheco and other government officials.

Because of the corruption tainting their government, Costa Rican voters approached the 2005 presidential election lacking enthusiasm. The candidates were former president and Nobel laureate Oscar Arias, who was not among the politicians implicated in the 2005 investigation. His opponent, Otto Solís, was the candidate of the PAC. Arias won, in one of the closest elections in Costa Rica's history. Arias and his vice president, Laura Chinchilla took office 8 May 2006

### 13 GOVERNMENT

For the most part, Costa Rica has held to a tradition of orderly, democratic rule. The nation is a republic organized under the constitution of 1949, based on the constitution of 1871. A president, two vice presidents, and a unicameral congress (the Legislative Assembly) of 57 members (in 2003), apportioned by provinces, are all directly elected for four-year terms. Runoff provisions are in place in case no candidate wins an outright majority in the first round vote. The cabinet (composed of 15 members in 2005) is appointed by the president, who may also remove any of its members. For every three assembly deputies, one substitute deputy (*suplente*) is elected to obviate any subsequent need for by-elections. After each population census, the Supreme Electoral Tribunal proportions the number of deputies for each province. This body, consisting of three magistrates elected by the Supreme Court for six-year terms, also supervises all other aspects of the electoral process. Suffrage is universal and obligatory for all persons of 18 years or more.

The constitution bars all high government officials from running for the legislature or the presidency while already in office. The president, cabinet ministers, and all government employees are forbidden to interfere with or to participate in election campaigns or to hold party office. The constitution guarantees equality before the law, as well as freedom of speech, assembly, press, and organization. In addition, it guarantees foreigners the same rights as Costa Rican citizens. However, foreigners may not participate in political affairs, nor may members of the clergy. In the presidential election held 5 February 2005 Oscar Arias Sanchez of the Partido de Liberación Nacional—National Liberation Party (PLN) was elected president in a close contest, winning 40.9% or the vote to the PAC's Otto Solís's 39.8%. Arias and his vice president, Laura Chinchilla, took office 8 May 2006.

### 14 POLITICAL PARTIES

The largest political grouping is the PLN (Partido de Liberación Nacional—National Liberation Party), a reformist party that has been the nation's leading party since its formation in 1948. The other major party is the more conservative Social Christian Unity Party (Partido Unidad Social Cristiana—PUSC), which held the presidency during 1978–82, 1990–1994, and was in power during the 1998–2002 period. The PUSC has ties to Christian Democratic parties in the Western Hemisphere and Europe. Toward the end of the 20th century and the beginning of the 21st, elections were closer than in the past, and saw the rise of additional political parties. In the 1994 elections, José María Figueres of the PLN was elected president with 49.7% of the vote, to 47.5% for PUSC candidate Miguel Angel Rodriguez. In 1998, Rodríguez became president with 46.9% of the vote, defeating PLN's José Miguel Corrales. The PUSC also won a majority in Congress with 29 seats, followed by the PLN with 22, the remaining 6 seats went to small and provincial parties. In 2002, however, the PUSC presidential candidate, Abel Pacheco, obtained only 38.6% of the vote in the first round due to the increased presence of other parties. Pacheco won 58% in the runoff election on 7 April 2002 to become president. The PUSC only clinched 19 of the 57 seats of the National Assembly, with the PLN with 17 and the Citizen Action Party (Partido Acción Ciudadana—PAC) 14, depriving Pacheco of a legislative

majority. Legislative elections left the composition of the assembly as of January 2005 with the PUSC holding 19 seats, the PLN 16, PAC 8, the PML (Libertarian Movement Party) with 5, and the PRC (Costa Rican Renovation Party), 1. PUSC's power dropped significantly in the legislative assembly after elections held 5 February 2005; PUSC lost 15 seats, winning just 4. The election also resulted in the PLN gaining 8 seats (for a total of 25); PAC gaining 3 (for a total of 18); and PML gaining 1 (for a total of 6). Oscar Arias Sanchez of the PLN was narrowly elected president in that same election with 40.9% of the vote to the PAC's Otto Solís's 39.8%. Arias and his vice president, Laura Chinchilla, took office 8 May 2006.

## 15 LOCAL GOVERNMENT

Costa Rica is divided into seven provinces, which are further subdivided into 81 cantons and 429 districts. The governor of each province is appointed by the president and is responsible to the minister of government. There are no provincial assemblies, and no elected provincial officials. The chief city of each canton elects a council (*municipalidad*), which possesses legislative powers and cooperates with a presiding officer appointed by the national executive. In December 2002, the first mayoral elections in Costa Rican history were held; prior to 2002 the office of mayor did not exist. A police agent appointed by the national government oversees each district.

## 16 JUDICIAL SYSTEM

The judiciary consists of justices of the peace, lower courts, labor courts, a court of cassation, two civil courts of appeal, two penal courts of appeal, and the Supreme Court, the highest court in the land. The Supreme Court is composed of 22 justices chosen for renewable eight-year terms by the Legislative Assembly. A Constitutional Chamber of the Supreme Court was established in 1989 to review the constitutionality of legislation, executive decrees, and habeas corpus warrants. Justices are automatically reelected for an additional eight-year term unless the Legislative Assembly votes to the contrary by a two-thirds majority. The Assembly also names 25 alternates from a list of 50 names submitted by the Supreme Court, and vacancies on the court are then filled by lot from the list of alternates. Relatives of incumbent justices are ineligible for election. The Supreme Court, by a two-thirds majority, can declare legislative and executive acts unconstitutional. Justices of lower courts are appointed by the Supreme Court, but justices of the peace are appointed by the minister of government acting for the president. Capital punishment has been abolished. The judiciary is independent of the legislative and executive branches and assures fair public trials. Public security forces generally observe procedural safeguards established by law and the 1949 constitution. The constitution prohibits arbitrary interference with privacy, family, home, or correspondence. Judges may approve use of wiretaps in limited cases, primarily to combat narcotics trafficking.

## 17 ARMED FORCES

The 1949 constitution prohibits the establishment of military armed forces. However, the country did have an 8,400 member paramilitary force in 2005. This force included the 4,400 member Civil Guard, the 2,000 member Border Security Police, and the

Rural Guard which had 2,000 members. The security budget was \$101 million in 2005.

## 18 INTERNATIONAL COOPERATION

Costa Rica is a charter member of the United Nations, having joined on 2 November 1945, and participates in ECLAC and several nonregional specialized agencies. It is one of five members of the Central American Bank for Economic Integration (BCIE) and the Central American Common Market (CACM). In 2004, Costa Rica, the United States, El Salvador, Guatemala, Honduras, Nicaragua, and the Dominican Republic signed the US–Central America Free Trade Agreement (CAFTA). The agreement must be ratified by all participating countries before it enters into force. Costa Rica also participates in G-77, the Inter-American Development Bank, the Latin American Economic System (LAES), the Río Group, the Association of Caribbean States (ACS), and OAS. The nation has observer status in the Latin American Integration Association (LAIA) and the Nonaligned Movement.

Costa Rica is part of the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL) and the Organization for the Prohibition of Chemical Weapons. San José is the seat of the Inter-American Human Rights Court. In August 1987, a peace plan for Central America proposed by Costa Rica was signed by Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua. In 1999, the United States and Costa Rica signed the Maritime Counter-Drug Agreement as a cooperative effort to stop drug trafficking through Costa Rican waters. It is first of its kind in Central America. The country is a signatory of the 1947 Río Treaty, an inter-American security agreement.

In environmental cooperation, Costa Rica is part of the Basel Convention, Conventions on Biological Diversity and Whaling, Ramsar, CITES, the London Convention, the Kyoto Protocol, the Montréal Protocol, the Nuclear Test Ban Treaty, and the UN Conventions on the Law of the Sea, Climate Change, and Desertification. Costa Rica is also signatory to the Central American-US Joint Declaration (CONCAUSA).

## 19 ECONOMY

The economy of Costa Rica, like that of all other countries in Central America, was originally based on the production of tropical agricultural commodities for export. There is some forestry in Costa Rica but very little mining, although steps have been taken to exploit bauxite, sulfur, and petroleum. Since about 1961 there has been a significant expansion of manufacturing activity, but most industrial plants remain small, concentrating on simple consumer goods to displace more expensive imports. Government efforts to promote diversification of agricultural production have resulted in notable expansion of cattle and dairy farming, second in value only to coffee among agricultural sectors. The opening of an Intel chip-making factory in 1998 spurred high growth rates and an influx of high technology companies, and increasing tourism revenues supported the growing economy. GDP growth, based on increases in tourism and industrial output, rose to 8.2% in 1999, while the official unemployment fell to 5.6%. There is relatively little underemployment in Costa Rica. From 2000 to 2002, however, economic growth turned sluggish, averaging a little under 2% per year, the result of both a weakened external environment—

in which tourism, export demand, and foreign investment were all declining—and slackness in the domestic economy, reflected an average yearly inflation rate of 10.4% and a yearly combined government deficit amounting, on average, to 4.7% of GDP. Costa Rica's unemployment rate, however, has remained at a relatively unproblematic 6%. (with underemployment estimated at 7.8% for 2002), which relieves some of the pressure for reform.

Through the 1960s, prospects for economic expansion were promising, particularly in view of progress toward economic integration in Central America. However, in the 1970s, increases in import prices for raw materials (particularly oil) and finished goods caused an inflationary surge (reaching 100% in 1982), to which some internal policies, such as credit expansion and wage increases, also contributed significantly. Chiefly because of a decline in coffee prices in 1978 and the doubling of oil import costs in 1979, the economic growth rate fell sharply from 8.9% in 1977 to -8.8% in 1982. Costa Rica normally spends the whole of its export revenues from coffee on importing petroleum.

Positive growth rates averaging 3.8% resumed in 1983 and continued through 1985, largely due to government-imposed austerity under IMF standby agreements. Unemployment declined from an official high of 9.1% in 1982 to 6.7% in 1986, the year world oil prices finally collapsed. The annual inflation rate dropped from 90% to 11.8% in the same period. Foreign debt, rescheduled in 1983 and 1985, remained high at \$3.67 billion at the end of 1985. The overall growth rate between 1978 and 1988 was 4.1%.

Although per capita income slipped in the early 1990s, Costa Ricans still enjoyed the highest per capita income in Central America. Following a structural adjustment period, real GDP grew by 7.3% in 1992. In 1993, however, economic growth slowed to 4.5%; continually declining until the rate hit -0.8% in 1996. The decline was attributed to lingering negative expectations in the private sector, adverse effects of increasing international competition, and unfavorable weather. Tight fiscal and monetary policies adopted under an IMF standby agreement April 1993–February 1994 also contributed to the mild recession. The government entered into another standby agreement with the IMF, which ran from November 1995 to February 1997. By 1998, annual inflation was down to 12%, a significant improvement on the 22.5% recorded in 1995, and GDP growth rose to 6.2%, above the 3.7% recorded in 1997, reflecting increased tourist and export trade, and new investment activity. Inflation dropped to 10.1% in 1999, the year of Costa Rica's strongest recent growth. In 2000 GDP growth fell to 2% and in 2001 to 1.1%. In 2002, GDP growth was estimated at 2.8% and inflation at 10%.

In 2004, the economy expanded by 4.2%, down from 6.5% in 2003; in 2005, the GDP growth rate was estimated at 2.7%. The inflation rate was fairly stable, but in 2004 it grew to 12.3%, and was expected to continue this trend in 2005 (increasing to 13.6%). The unemployment rate was also stable, and remained under the 7% marker. The main economic growth engines remain agriculture, tourism, and electronics exports. Costa Rica's economy is attractive for investors as it is framed within a stable political system; it benefits from high education levels and a booming tourism sector. However, the government has to struggle with substantial internal and external deficits, and a sizable internal debt.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2005 Costa Rica's gross domestic product (GDP) was estimated at \$40.3 billion. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange based on current dollars. The per capita GDP was estimated at \$10,000. The annual growth rate of GDP was estimated at 3.2%. The average inflation rate in 2005 was 13.8%. It was estimated that agriculture accounted for 8.6% of GDP, industry 28.3%, and services 63.1%.

According to the World Bank, in 2003 remittances from citizens working abroad totaled \$321 million or about \$80 per capita and accounted for approximately 1.8% of GDP. Foreign aid receipts amounted to \$28 million or about \$7 per capita and accounted for approximately 0.2% of the gross national income (GNI).

The World Bank reports that in 2003 household consumption in Costa Rica totaled \$11.72 billion or about \$2,925 per capita based on a GDP of \$17.5 billion, measured in current dollars rather than PPP. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the period 1990 to 2003 household consumption grew at an average annual rate of 4.2%. It was estimated that in 2004 about 18% of the population had incomes below the poverty line.

## 21 LABOR

As of 2005, Costa Rica's labor force was estimated at 1.82 million workers. In 2003, the services sector accounted for 62.1% of the workforce, followed by industry at 22.2%, agriculture at 15.1%, and various other occupations at 0.6%. Unemployment was estimated at 6.6% in 2005.

The law provides workers with the right to join and form unions, although this is limited in practice. Unionization was about 9% of the total workforce in 2005. *Solidarismo* (solidarity associations), a Costa Rican alternative to traditional trade unions, have grown popular and have around 330,000 workers, 95% of whom are in the private sector. *Solidarismo* are *nondues* collecting associations and work to promote cooperative labor/management relations by offering workers practical benefits (like credit unions), in exchange for which workers renounce their striking and collective bargaining rights. *Solidaristas* are established with mutual contributions from the employer and the workers, so that the fund serves as savings plan, benefits, and severance pay. Private sector workers have the right to strike, but public employees are prohibited from striking.

A minimum wage is set up by a National Wage Council. The private sector minimum wage ranged from \$150 per month for domestic servants to \$588 for university graduates in 2005. The workweek was set at 48 hours. Overtime pay is required for work in excess of that. Occupational health and safety standards are inconsistently enforced, especially outside of San José. Although child labor remains a problem, the government is working to eradicate abuses. The minimum working age is 15 years, while minors between the ages of 15 and 18 may work up to six hours per day and 36 hours per week. Night work and overtime for minors are prohibited.

## 2<sup>2</sup> AGRICULTURE

About 10.3% (525,000 hectares/1,297,000 acres) of the total land area is used for crop production. Nearly half of all farms average less than 10 hectares (25 acres) in size. Over 326,000 persons, or about 19% of the economically active population, were engaged in farming in 2003.

Corn and sugar crops are usually sufficient to meet domestic needs, but beans and rice must be imported from time to time. Agriculture accounted for about 9% of the GDP in 2004. The principal cash crops are coffee, bananas, cocoa, and sugar. Coffee and bananas together accounted for 12% of exports in 2004, with values of \$199.5 million and \$545.4 million, respectively.

Over 85% of coffee properties belong to Costa Ricans. The banana industry has been producing more than one million tons of bananas annually since the 1970s. The principal marketer of Costa Rica's bananas is Standard Fruit Co. Corn, rice, potatoes, beans, sisal, cotton, citrus fruits, pita (used to make hats, baskets, and mats), yucca, vegetables, pineapples and other fruits, tobacco, abaca (hemp), and vegetable oils (especially African and coconut palms) are produced primarily for domestic consumption. Estimated crop production in 2004 (in tons) was sugarcane, 3,945,000; bananas, 2,230,000; rice, 222,000; coffee, 126,000; corn, 12,000; dry beans, 10,500; and cocoa, 700. In 1999, agricultural output was 26% higher than the annual average during 1989–91. During 2002–04, it was 20% higher than during 1999–2001.

## 2<sup>3</sup> ANIMAL HUSBANDRY

About 46% of Costa Rica's total land area was devoted to livestock raising in the early 1990s as the result of a major conversion of land to pasturage during the 1970s. In the past, Costa Rica had to import meat, but improvements in animal husbandry have made the country self-sufficient and provided a surplus for export. However, low productivity, low international prices, and high domestic interest rates affected profitability of the beef cattle sector in 1993 and 1994. National milk production in 2004 was an estimated 790,000 tons, enough to permit exports of excess production. Exports of meat were worth \$37.3 million in 2004. In 2004, there were an estimated 1,080,000 head of cattle, 550,000 hogs, 115,000 horses, and 19,500,000 chickens.

## 2<sup>4</sup> FISHING

Fish abound in Costa Rican waters, particularly in the Pacific Ocean, where 89% of the annual harvest is caught. Tuna, herring, and shrimp are the most valuable commercial fish; they are caught, processed, and shipped abroad by US firms. A small native fishing industry contributes to the domestic food supply and exports shark, mollusks, and live lobsters. Pearl fishing, once an important industry on the Pacific coast, has declined. In 2003, the total volume of fish landed was an estimated 29,327 tons. Aquacultural production added another 20,546 tons to the 2003 total.

## 2<sup>5</sup> FORESTRY

Costa Rica's forestland has declined from about 75% of the total land area in 1940 to 39% in 2000. About 18% of the area still forested is lightly exploited, while 82% is virgin forest. Varieties of commercial woods include laurel, cedar, oak, quina, espavel, campana, cristobal, pochote, maca wood, cedro macho, cedar, and

caoba (mahogany). In the Golfo Dulce rain forest of the southern Pacific coast, 135 families of trees embracing some 1,315 species in 661 genera have been identified. Forest products include rubber, chicle, ipecac, roots, medicinal plants, seeds, and other plant products. Although lumber exports have declined, overall timber output increased to 5.1 million cu m (181 million cu ft) of roundwood cut in 2003, of which about 67% was used for fuel. Forestry product exports in 2003 totaled \$21.7 million.

## 2<sup>6</sup> MINING

The production of minerals contributed less than 1% to the GDP. Mineral production in 2003 included cement, 1.3 million tons; common clays, 420,000 metric tons; sandstone, 3.25 million tons; and limestone, 920,000 tons. Diatomite, lime, pumice, silver, marine salt, crushed stone, and sand and gravel were also mined in 2003. Except for clays, fertilizers, and lime, most mineral commodities were produced for domestic use. In May 2002, the president of Costa Rica issued a decree that placed a moratorium on oil exploration, open pit mining, and cyanide processing. While the moratorium was not expected to affect the open-pit heap-leach Bellavista and Cerro Crucitas gold projects, which were approved prior to the moratorium, other gold projects could be severely affected. Gold production in 2003 totaled 110 kg, up from 100 kg in 2002.

## 2<sup>7</sup> ENERGY AND POWER

Costa Rica, with no proven reserves of oil, natural gas, or coal, relies heavily upon electric power to meet the bulk of its energy needs. In 2002, the country had an electric power generating capacity of 1.715 million kW, with production and consumption for that same year at 7.360 billion kWh and 6.420 billion kWh, respectively. The nation's generating capacity, and output is primarily hydroelectric. Hydropower accounted for 1.226 million kW or 71.4% of generating capacity, and for 5.871 billion kWh or almost 80% of the power produced in 2002. Additional capacity and production comes from geothermal/other and conventional thermal sources. In 2002, geothermal/other sources accounted for 0.207 million kW or 12% of capacity, and 1.374 billion kWh or 18.6% of production. Conventional thermal sources accounted for 0.282 million kW or 16.4% of capacity, and 0.115 billion kWh or 1.5% of production. Costa Rica has no nuclear power generating capacity.

Costa Rica relies mostly on imports to meet its hydrocarbon-based needs. All crude oil is imported. In 2002, crude imports averaged 9,680 barrels per day. Costa Rica however, does have limited refining capacity. According to data from the Energy Information Administration, updated as of October 2005, of the seven countries that comprise Central America, Costa Rica is among only three (El Salvador and Nicaragua are the others) to have refining capacity. Of the three, Costa Rica's refining capacity is the largest, at 24,000 barrels per day, and is handled by a single refinery, the Limón facility. In 2002, refinery output totaled 9,280 barrels per day and consisted of: distillates (2,920 barrels per day); residual product (4,500 barrels per day); liquefied petroleum gas (800 barrels per day); and unspecified products (1,780 barrels per day). However the country's demand for refined product far outstrips the capacity of this single facility, so imports are necessary. In 2002, demand for refined petroleum products averaged 39,670 barrels per day. Costa Rica must also import all of the coal it con-

sumes. In 2002, these imports consisted of hard coal and amount-  
ed to 54,000 tons.

## 28 INDUSTRY

Costa Rica is one of the most industrialized countries in Central America, although industries are predominantly small-scale and primarily involve assembling or finishing imported semifinished components. Of the few larger-scale manufacturing enterprises, the majority are in chemical fertilizers, textiles, coffee and cocoa processing, chemicals, plastics, electronics, and computer chips. The Intel Corporation opened a chip-manufacturing plant in 1998. The garment assembly and tuna processing industries are important. Other manufacturing projects include aluminum processing, a petrochemical plant at Moin, a tuna-processing plant at Golfito, and an oil refinery at Limón with a production capacity of 15,000 barrels per day. Major infrastructure construction projects were planned as of 2002, but with the exception of road repair, most had not progressed. Industry represented 37% of GDP in 2000. The Costa Rican Investment and Development Board (CINDE), is designed to attract high quality foreign investment oriented toward exports.

The share of industry in the GDP decreased to 28.3% in 2005, and was bested by services with a 63.1% share (which was also the country's largest employer). The industrial production growth rate was 2.6%, similar to the GDP growth rate in the same year—an indicator of unspectacular development in this sector. Manufacturing and mining continue to account for most of the industrial output.

## 29 SCIENCE AND TECHNOLOGY

The principal scientific policymaking body in Costa Rica is the General Directorate of Geology, Mining, and Petroleum (founded in 1951). Several institutes specialize in tropical sciences, including the Organization for Tropical Studies in San Pedro, the Tropical Science Center in San José, and the Tropical Agronomy Center in Turrialba, as well as medicine, nuclear energy, technology, geology, agriculture, and meteorology. The University of Costa Rica in San José, founded in 1843, has faculties of agronomy, science, pharmacy, engineering, medicine, microbiology, and dentistry. The National University in Heredia, founded in 1973, has faculties of exact and natural science, earth and sea sciences, and health sciences. The Technological Institute of Costa Rica in Cartago, founded in 1971, has numerous attached research centers. In 1987–97, science and engineering students accounted for 20% of college and university enrollments.

For the period 1990–2001, there were 530 researchers per million people engaged in research and development (R&D). In 2002, high technology exports by Costa Rica were valued at \$1.146 billion, which accounted for 37% of manufactured exports. In 2000, R&D expenditures totaled \$131.417 million, or 0.39% of GDP.

## 30 DOMESTIC TRADE

San José is the commercial center, and most importers, exporters, and manufacturers' agents operate there. Though there are a number of small merchants and traditional public markets; modern shopping centers, malls, supermarkets, and franchise outlets are becoming the norm. E-commerce is slowly becoming

popular but has been hindered by the lack of appropriate telecommunications.

In recent years, the economy has made a major shift from agricultural production and exports, primarily of bananas and coffee, to high-tech industries and tourism. As of 1999, 58% of the work force was employed in service industries. In 1998, the opening of an Intel Corporation microprocessor assembly and testing plant accounted for half of the nation's economic growth the following year. Subsequent large foreign investment companies include Abbott Laboratories and Procter and Gamble.

Shops are open on weekdays from 8:30 to 11:30 AM and from 2 to 6 PM, and on Saturday in the morning only. Business hours are from 8 AM to 12 PM, and 2 to 6 PM, Monday through Friday. Normal banking hours are 9 to 11 AM and 1:30 to 3 PM, Mondays through Friday, and 8 to 11 AM on Saturday. Advertising agencies in Costa Rica, all located in San José, offer advertising services through newspapers, radio, television, and direct mail.

## 31 FOREIGN TRADE

Among Costa Rica's major exports are coffee, bananas, sugar, cocoa, and cattle and meat products—all commodities vulnerable to world market prices. The major markets for Costa Rican exports are the United States, the United Kingdom, Germany, Italy, Guatemala, El Salvador, Honduras, and Belgium.

Imports consist mainly of raw materials for industry and mining, followed by consumer goods and capital goods for industry, mining, and transportation. Major suppliers include the United States, Mexico, Venezuela, Japan, Spain, Guatemala, and Germany.

In 1996, falling terms of trade due to lower international prices for coffee, beef, and sugar, and the drop in banana production, caused traditional exports to perform less well than in previous years. However, the growth of nontraditional exports picked up part of the slack, despite some adverse effects from much-enhanced competitiveness of competing Mexican exports. Despite the economic recession, the value of imports of goods increased by 16% in 1996, well above the 8% for the previous year. A major factor was the substantial increase in international fuel prices and a relatively strong local currency. As a result, the trade deficit worsened from 1995 by almost 117% to \$76 million.

### Principal Trading Partners – Costa Rica (2003)

(In millions of US dollars)

Country	Exports	Imports	Balance
World	5,800.4	7,388.2	-1,587.8

SOURCE: 2003 *International Trade Statistics Yearbook*, New York: United Nations, 2004.

The value of imports continued to rise into 1998; after 1997 the value of imports as compared to exports was balanced. Exports in 1999 climbed above imports because of the sale of computer chips, but in 2000 the trade deficit returned.

Costa Rica relied mostly on agriculture to sustain its commodity export market in 1996. Fruits and nuts made up almost a third of exports (30%) and coffee was the second-largest export (15%). Other agricultural exports included nonedible vegetable oils (4.6%), fruit (2.5%), edible vegetables (2.4%), meat (2.0%), and sugar (1.5%). Small amounts of medicines and gold were exported from Costa Rica (2.1% and 1.7%).

In 2005, exports reached \$7 billion (FOB—Free on Board), while imports grew to \$9.7 billion (FOB). In 2004, the bulk of exports went to the United States (46.9%), the Netherlands (5.3%), and Guatemala (4.4%). Imports included raw materials, capital goods, and consumer goods, and mainly came from the United States (46.1%), Japan (5.9%), Mexico (5.1%), and Brazil (4.2%).

### 3<sup>2</sup> BALANCE OF PAYMENTS

Costa Rica has traditionally experienced balance-of-payments difficulties because of the vulnerability of its main sources of exchange earnings to fluctuations in world markets. The nation's payments problems in the late 1970s were aggravated by domestic inflationary policies and rising trade imbalances, despite increases in foreign capital receipts. The deficit on capital accounts declined in the mid-1980s due to increases in capital investment from foreign loans and credits and favorable renegotiation of the foreign debt. During the early 1990s, an unfavorable trade balance resulted from fluctuating coffee prices and high oil prices, but the balance of payments leveled out by 1999. Costa Rica's chronic trade and current account deficits have been offset by foreign direct investment in the form of capital goods, which is reflected in the offsetting figures for the current and capital accounts. The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing

power parity of Costa Rica's exports was \$5 billion while imports totaled \$6.5 billion resulting in a trade deficit of \$1.5 billion.

The International Monetary Fund (IMF) reported that in 2001 Costa Rica had exports of goods totaling \$4.91 billion and imports totaling \$6.12 billion. The services credit totaled \$2.05 billion and debit \$1.28 billion.

The current account balance was negative in 2004, slightly improving from -\$967 million in 2003 to -\$960 million in 2004. Foreign exchange reserves (including gold) decreased to \$1.4 billion in 2004, covering almost two months of imports.

### 3<sup>3</sup> BANKING AND SECURITIES

The Central Bank (Banco Central de Costa Rica), an autonomous governmental body established in 1950, issues currency, holds the nation's gold reserves, formulates general banking policy, and regulates commercial banks. Three commercial state banks, which dominate the banking system, are operated as autonomous government corporations: the Banco Nacional de Costa Rica, Banco de Costa Rica, and Banco Crédito Agrícola de Cartago. The banking monopoly was surrendered in 1995. There are also nearly 70 private banks and financial groups operating in Costa Rica.
