The Maginot line was not an uninterrupted line like the trench system of World War I. Instead, it was a network of steel and concrete fortifications facing the Germans to the east and the Italians to the southeast. Each fort (commonly designated as an *ouvrage*, or work) was an independent structure; in all there were over 100 of these with additional minor fortifications. Using guns in a variety of calibers, each fort was within the range of another so they not only could fire on assaulting troops but could also cover other forts in the immediate area. To add further support, there were permanent garrisons of “interval troops,” infantry units that would provide support in the areas between forts.

The forts were among the most advanced technical structures of the day. Each had large storage areas for ammunition, facilities for food supplies, command centers, fire control centers, miles of tunnels, small railroads, air-conditioning, electrical power plants, and water supplies. In addition, the guns were mounted in turrets that used a series of complex, highly advanced mechanical devices to change elevation or direction.

The line was strong, it reflected state-of-the-art technologies for the 1930s, and it even made a high degree of military sense. There were, however, drawbacks. Perhaps the most significant of these was that the line did not go all the way to the North Sea. France did not extend the line for several reasons: the expense, the unsuitability of the terrain, and the appearance that France was abandoning Belgium. In fact, the French believed that while the Maginot line was holding, the newly mobilized French forces would join with the Belgians to contain the German advance. Together, probably with British assistance, they would then advance through Belgium and eventually invade Germany. At the same time, the French made an assumption that the very northern end of the Maginot line, which stopped near the Ardennes, would be safe, as the Germans would never launch a major offensive through the rough terrain there.

Although war was declared in September 1939, there was no significant action by either side on the western front until May 1940. This period, known as the phony war, allowed the British and the French to mobilize and bring their troops to hold positions

without interference by the Germans. On the morning of May 10, over 100 German divisions attacked the French, British, Belgians, and Dutch. The main German attack went through the Ardennes forests and mountains in Luxembourg, south of Liege, exactly where the French had assumed it would never take place.

Thus, the German tanks and motorized forces went around the extreme left flank of the Maginot line and straight into France. They bypassed the line and did not attack it directly until after the British evacuation from Dunkirk and the surrender of the French government. The Maginot line forts surrendered only when their mobile interval troops had retreated and they were completely surrounded.

The Germans occupied the Maginot forts but did not maintain them. They used them only briefly when the United States attacked some nearby French cities in 1944 and 1945. After the war the French army reoccupied them and used them. In the years of the cold war, they provided headquarters and communications centers that would have provided significant protection in the case of a nuclear war.

In the years between the world wars, the French were not alone in seeing the usefulness of fortifications. Although they would rely upon a highly mobile and powerful offensive, the Germans maintained two lines, one facing Poland (the East Wall) and one facing France (the West Wall, better known as the Siegfried line, which would be used in 1944 against the United States). In addition, Czechoslovakia constructed a line of defenses built with French assistance. Finally, Switzerland had built a complex of fortifications. Although not as extensive as the Maginot or German lines, it was well placed, using the mountainous terrain and command of the few lines of communications through the passes.

The Maginot line has become a symbol. On one level it represents a defense that deluded its builders into thinking they need not do anything else but rely upon what seemed to be an impenetrable defense. It has also become a symbol or a shorthand expression for all of the reasons for France’s defeat in 1940.

The irony is that had it been used properly, that is, supplemented with an acute understanding of what the enemy might do and not what the French wanted them to do, it might have been a symbol of victory. As designed, the Maginot line worked. It was the rest of France’s strategy that failed.

ROBERT N. STACY

Manchurian incident and Manchukuo

The Manchurian, or Mukden, incident occurred on September 18, 1931. It was a Japanese attack against China and resulted in the establishment of a Japanese puppet state, Manchukuo. This incident was, in fact, the opening of Japan's quest to conquer China that culminated in WORLD WAR II in Asia.

Japan had sought to control China's northeastern provinces (Manchuria) since the SINO-JAPANESE WAR of 1894–95. As a result of its victory in that war, Japan had established a sphere of influence in southern Manchuria. It had built the Southern Manchurian Railway (SMR), which linked Mukden (or Shenyang), the administrative capital of the region, with Port Arthur, a port leased to Japan at the southern tip of the Liaodong (Liaotung) Peninsula in Manchuria. Capitalizing on China's weakness during the dying years of the Qing (Ch'ing) dynasty and the early republic, Japan had obtained extensive additional mining and other rights throughout southern Manchuria.

After 1912 this resource-rich region, which is larger than Germany and France combined, had been ruled by a Chinese bandit turned warlord named Zhang Zholin (Chang Tso-lin) and his allies, who survived by complying with Japan's demands. In 1928 Zhang Zholin, known as the Old Marshal, was assassinated by Japanese officers of the KWANTUNG ARMY stationed in Manchuria, who hoped to seize the provinces in the ensuing chaos. However, astute actions of Zhang's supporters ensured a smooth transition of power to his son Zhang Xueliang (Chang Hsueh-liang), known as the Young Marshal. The Young Marshal sponsored Chinese immigration to his sparsely populated land (approximately 30 million inhabitants in 1930) and undertook economic development projects. He also threw in his lot with the newly established Nationalist government at Nanjing (Nanking) led by CHIANG KAI-SHEK. In 1930

Zhang led about 200,000 of his best troops to help Chiang defeat rebel warlords and remained in Beijing (Peking) to ensure stability in northern China.

Meanwhile, economic depression had discredited the civilian governments in Japan and swayed many people toward support for the growing rightist, ultranationalist movement centered among ambitious junior military officers. They formed the Society of the Cherry, the BLACK DRAGON Society, the National Foundation Society, and others that advocated war and expansion as an answer to Japan's problems and saw conquest of Manchuria as the first step toward eventual control of all China and other Asian lands. These Japanese imperialists feared growing Chinese nationalism and the emergence of a strong and unified China and moved to prevent it.

On September 18, 1931, field grade officers of the Kwantung Army staged a minor bombing incident along the railway track of the SMR line just outside Mukden. In a well-coordinated and well-planned act, the Kwantung Army simultaneously attacked over a dozen cities in Manchuria. Other units from Japan's colony Korea soon joined the action. Too weak to resist militarily, China appealed to the LEAGUE OF NATIONS and the United States under the Kellogg-Briand Pact. Emergency sessions of the league repeatedly demanded that both sides cease military action. Both the Chinese and Japanese governments signaled compliance, but the Kwantung Army ignored orders and continued its conquest, to popular acclaim in Japan, forcing the cabinet to fall in December 1931. Japan then set up a puppet government in Manchuria, calling it Manchukuo, meaning "country of the Manchu," and enticed the last Qing emperor, Pu-i (P'u-yi), to become its chief executive and emperor in 1934.

The league dispatched an investigative mission under British diplomat Lord Lytton to Manchuria. Its report, submitted to the league in September 1932, refuted Japanese claims that its actions in Manchuria were motivated by self-defense, branded Manchukuo a puppet state that was completely controlled by Japanese military and civilian leaders, and recommended its restoration to China. The report was endorsed by the league assembly, with one dissenting vote: Japan's. Japan then resigned from the league, signaling its failure as an effective international body. In 1933 Japanese forces added another Chinese province, Rehe (Jehol), which adjoined Manchuria, to its puppet state. The United States refused to recognize Manchukuo but took no other action.

Japan's government developed Manchuria with a network of modern industries designed to furnish raw

materials and finished products to the Japanese economy. They included coal mining, iron and steel works, and manufacturing. Roads and railways were also expanded to improve the infrastructure and facilitate the transport of goods and products to Japan. Japanese immigration was encouraged, and Japanese were granted privileged status, while the Chinese were strictly and brutally controlled. Manchuria became an arsenal and a granary for Japan. War with the United States after 1941 resulted in a reduction of the flow of equipment and financing from Japan to Manchuria, causing factory production in the area gradually to grind to a halt. In defeat the Japanese overlords abandoned Pui and other Chinese puppets. Soviet troops poured into Manchuria as World War II ended, stripped equipment and facilities worth over 1 billion 1945 U.S. dollars, and shipped them to the Soviet Union. Japanese arms captured by the Red Army in Manchuria were later transferred to the Chinese Communist army.

JIU-HWA LO UPSHUR

Manhattan Project

The Manhattan Project was a secret U.S. weapons program that applied nuclear technology to create the first atomic bombs. Although other nations, including Great Britain, Germany, the Soviet Union, and Japan, had modest nuclear research programs during WORLD WAR II, only the United States had the scientific talent, industrial capability, and financial resources to successfully create, test, and eventually use the world's most powerful weapon of the time.

In December 1938 German scientists Otto Hahn, Fritz Strassmann, and Lise Mietner discovered that bombarding an atom of radioactive uranium with neutrons caused its nucleus to split, thereby releasing an enormous burst of energy. This process would come to be called nuclear fission.

The development opened up the possibility for further research into harnessing this energy to be new sources of power as well as the possibility of new, more destructive types of weapons. In the 1930s the scientific community involved in nuclear research was international in character and included contributions from both Europe and North America. By 1939 political tensions in Europe caused many scientists to congregate in the United States and Britain, including many émigrés from Germany and Italy.

Work on using nuclear fission for military applications began in Germany on April 29, 1939, when the Reich Ministry of Education convened a secret conference and created a new research program. Germany also banned the export of uranium, an essential and rare element needed for this research.

In 1939 Leo Szilard, a Hungarian émigré physicist, understood the military potential of nuclear fission and the danger if Germany harnessed this power. Szilard went to the United States to enlist the help of ALBERT EINSTEIN, at that time the most famous scientist in the world. In August 1939 Einstein wrote a letter to President FRANKLIN D. ROOSEVELT warning that a weapon based on nuclear fission was possible and that Germany could be in the process of constructing such a weapon. Einstein further urged the president to begin a project to develop an atomic bomb. Roosevelt responded by creating a committee to study the military implications of nuclear physics.

In December 1941, after the Japanese attack on PEARL HARBOR, the United States went to war with Germany, Japan, and Italy. During the war the fundamental military strategy of the United States was to achieve complete victory at the lowest cost to U.S. lives. U.S. officials believed that an atomic bomb could shorten the war and reduce the number of U.S. casualties.

By early 1942 British scientists concluded that a uranium weapon was feasible. Based on these reports the secret weapons program was put under the auspices of the U.S. War Department and was code-named the Manhattan Engineer District, more commonly known as the Manhattan Project, because it originally was to be headquartered in New York City. In September 1942 army general Leslie Groves was named director. Groves soon appointed J. Robert Oppenheimer, a theoretical physicist from the University of California at Berkeley, scientific director.

The project soon encompassed a crew of over 100,000 people, involving 37 installations in 13 states, and more than a dozen university laboratories. Secrecy

was considered to be of the utmost importance. In fact, many of the scientists and engineers were given only information that immediately affected their work, and they therefore were unaware of the larger implications of their research.

On December 2, 1942, a team led by Enrico Fermi, a Nobel Prize-winning physicist émigré from Italy, created the first controlled, self-sustaining nuclear chain reaction at the University of Chicago. This proved that an atomic bomb many times more powerful than conventional weapons was possible.

The project focused on two main tasks. The first was the design of the bomb. Most of this work was done at the Los Alamos weapons lab in New Mexico under the direct supervision of Oppenheimer, who supervised the actual design and construction of the bomb. The other task, the production of nuclear fuel, was undertaken at a site in Oak Ridge, Tennessee, that focused on isolating uranium isotopes.

Although the Manhattan Project had originally been conceived to combat a potential German nuclear weapon, work on the bomb would continue after Germany surrendered on May 8, 1945. U.S. officials were determined to use the bomb against Japan in order to end the war at the earliest possible moment with the fewest casualties.

Secretary of War Henry Stimson told President HARRY S. TRUMAN that the bomb could create problems for the United States because it could not maintain a monopoly on the technology. Stimson requested that Truman convene a special committee to consider the implications of the new weapon.

Truman agreed, and the Interim Committee, made up of high-level advisers, held five meetings between May 9 and June 1, 1945. The committee debated the most effective use of the bomb in order to expedite a Japanese surrender. The committee determined that the weapon should be employed without prior warning, which would increase its psychological impact. The committee suggested that the purpose of the bomb should be to impede the Japanese capacity to wage war and to shock the Japanese with the overwhelming destructive power of the bomb.

POLITICAL IMPLICATIONS

The committee also debated the effects of the bomb on postwar international relations. Although the Soviet Union remained aligned with the United States and Great Britain, tensions between the Allies continued to grow, especially over Soviet control of Eastern Europe. The committee fully realized that the bomb could

increase the already tense relationship with the Soviet Union.

The committee discussed two ways of handling the issue. The first would be to offer general information to the Soviets about the bomb in order to increase cooperation between the two allies. The other approach would be to use the bomb to gain diplomatic advantages in U.S. dealings with the Soviets, at least for the short term. The committee was opposed to even providing general information on the bomb to the Soviets and determined that the United States should work to ensure that it stayed ahead of the Soviet Union in the research and production of nuclear weapons.

Truman accepted the committee's findings. For several months Truman had delayed a conference with JOSEPH STALIN and WINSTON CHURCHILL until after a successful test of the plutonium bomb, planned for July, believing that a successful test would improve his bargaining position. On July 16, 1945, the United States successfully exploded the first nuclear bomb in a test code-named Trinity at Alamogordo, New Mexico. The force of the bomb equaled 18,600 tons of TNT, approximately 2,000 times more powerful than the British "Grand Slam," the largest conventional bomb used in World War II.

ULTIMATUM

At the end of the conference the Allies presented an ultimatum to Japan in what is known as the Potsdam Declaration. The declaration called on Japan to unconditionally surrender to the Allies or face "prompt and utter destruction." The United States elected not to specifically refer to the atomic bomb by name.

After Japan refused to surrender, Truman made the decision to drop atomic bombs on the Japanese home islands. The Manhattan Project instituted Project Alberta, which involved the wartime delivery of the completed bomb. Research groups were sent to Tinian, an island in the Pacific, which was the base from which the planes carrying the atomic weapons would ultimately depart.

On August 6 at 8:15 A.M., the *Enola Gay*, piloted by Brigadier General Paul W. Tibbets, released a 15-kiloton uranium bomb nicknamed Little Boy 31,060 feet over the city of HIROSHIMA, Japan; 43 seconds later the bomb exploded 1,900 feet above the city. Witnesses reported seeing a searing flash of light, hearing a deafening roar, and feeling a massive rush of air. The 4.4 square miles surrounding the point of detonation were completely destroyed. Estimates suggest that over

60,000 people died immediately, while possibly 70,000 more were to die over the next few years, many from acute exposure to radiation.

Three days later, on August 9, *Bock's Car*, piloted by Major Charles Sweeny, dropped a 21-kiloton bomb nicknamed Fat Man on Nagasaki. Originally, the mission had been to bomb the Japanese city of Kokura, but the crew was unable to do so because of a heavy haze. Instead, the plane went to its secondary target. Estimates suggest that 38,000 were killed immediately, with an estimated 35,000 additional fatalities as a result of injuries sustained during the bombing.

In the aftermath of the bombings and the Soviet invasion of the Japanese colony of Manchuria, Emperor HIROHITO broke a deadlock in the Supreme Council to accept the Potsdam Declaration as the basis for the Japanese surrender. The sole Japanese condition was that the emperor be allowed to retain his throne as titular ruler of the people. The Japanese government accepted the terms of surrender on August 15 and formally surrendered to General DOUGLAS MACARTHUR in Tokyo Bay aboard the battleship USS *Missouri* on September 2.

MICHAEL A. RIDGE, JR.

Mao Zedong (Mao Tse-tung)

(1893–1976) *Chinese Communist leader*

Mao Zedong was the son of a prosperous farmer from the Hunan Province in central China. After graduating from normal school he worked as a library assistant at National Beijing (Peking) University, where he came under the influence of intellectuals disillusioned with Western democracies and turned to Marxism, hailing the success of the communist revolution in Russia.

A Chinese soldier guards in Tiananmen Square, Beijing, in front of a portrait of Mao. Mao held unlimited power in post-1949 China.

Mao joined a Marxist study club organized by faculty leaders of Beijing University Chen Duxiu (Ch'en Tse-hsiu) and Li Dazhao (Li Ta-chao). In July 1921 he was one of 12 men who formed the CHINESE COMMUNIST PARTY (CCP) in Shanghai; Chen was elected general secretary of the party.

In January 1923 the father of the Chinese republic, SUN YAT-SEN, formed a (First) UNITED FRONT with Soviet representative Adolf Joffe under which the Soviet Union gave advice and aid to Sun's Kuomintang (KMT, Nationalist Party) in return for admission of members of the CCP to the KMT. As a result, Mao was elected a reserve member of the Central Executive Committee of the KMT and made head of the farmers' organization in the United Front government in Canton. Mao participated in the NORTHERN EXPEDITION led by CHIANG KAI-SHEK against the warlords and helped rouse the peasants in Hunan

against the warlord regime and economic inequities. In 1927 Chiang Kai-shek purged the CCP from areas under his control. Mao escaped to the hills of Jiangxi (Kiangsi) Province in central China.

Between 1927 and 1933 Mao and other Communists who fled the Nationalist dragnet established a Chinese Soviet Republic in the hills of Jiangxi, where they implemented violent land reforms while their Red Army, under commander ZHU DE (Chu Teh), fought off KMT armies sent against them. However, decisive defeats by an army personally led by Chiang forced the battered CCP to flee in the LONG MARCH, which lasted a year (1934–35). Mao consolidated his power in a conference at Zungyi (Tsungyi) during the flight and maintained it throughout the subsequent Yanan (Yenan) period of the CCP. Although Yanan's location in remote northwestern China bought the CCP time, the outbreak of the SINO-JAPANESE WAR ensured its survival because it forced the KMT to call off its anti-Communist campaign and form a Second United Front. The CCP grew explosively during the eight-year war (1937–45). Mao wrote extensively during the war and mapped out strategies for future victory against the KMT.

Civil war broke out almost immediately after the defeat of Japan. After the United States failed to mediate a cease-fire, it withdrew support from the KMT government. A combination of many factors led to the KMT's defeat in 1949 and the establishment of the People's Republic of China, which Mao led as chairman of both the CCP and the government. China became allied with the Soviet Union, received Soviet aid, and followed its model of land collectivization and industrialization. Impatient to surpass the Soviet Union, Mao inaugurated in 1958 the Great Leap Forward, which dragooned the people into communes and wrecked the economy with wildly unrealistic programs. As a result, about 30 million people died in a Mao-made famine, the greatest in human history. Mao's pragmatic colleagues then forced him to give up his chairmanship of the government in 1959 and began repairing the catastrophically broken economy.

Mao fumed in impotence between 1959 and 1966, then formed a coalition with his wife, Jiang Qing (Chiang Ch'ing), young students, and army leader Lin Biao (Lin Piao) and launched the Great Proletarian Cultural Revolution in 1966. The student Red Guards ousted the pragmatists, wreaked havoc throughout the land, and returned Mao to power in a cult of personality that rivaled Soviet leader JOSEPH

STALIN's. China did not begin recovery from the disastrous Cultural Revolution until the increasingly sick and senile Mao died in 1976.

JIU-HWA LO UPSHUR

March on Rome

The October 1922 March on Rome entered into the mythology of BENITO MUSSOLINI's National Fascist Party as the moment when the Fascists conclusively demonstrated their power over the Italian government and people. In fact, they had already displayed their collective ability to destroy law and order, to undermine parliamentary rule, and to attract the support of Italians fearful either of falling out of the lower middle class or of losing their extensive property holdings pending a socialist revolution. Thus, the march symbolized the transfer of power and authority that had already occurred when the king had refused to proclaim martial law against the Fascists and had then invited Mussolini to become prime minister.

Immediately after WORLD WAR I, Italians received universal suffrage. Electoral politics acquired a new tone as peasants and workers began to vote. The failure of the Popular Party and the Italian Socialists (PSI) to cooperate in the chamber of deputies, despite their shared concern for Italy's poor and working class, created an opportunity for Mussolini and fatally weakened parliamentary democracy in the country.

In the elections of 1920, the PSI had acquired control over Milan, Bologna, 25 provincial councils, and 2,200 district councils. These victories dislodged and irritated traditional elites. Some smaller landed proprietors also sympathized with the Fascist efforts to eviscerate the PSI, as many had managed to secure land only in recent years and feared that they would have it taken away. Given the notable labor strife and class conflict in urban, industrialized areas, Mussolini attracted the support of major industrialists, including Alberto Pirelli and Giovanni Agnelli (Fiat).

Meanwhile, nationalists continued to harbor bitter feelings about the government that had accepted the Treaty of Versailles, which had awarded Italy almost none of the territory that it had expected to gain upon allying with the Triple Entente during World War I. They wanted to erase memories of the snubs suffered by Italy at the hands of her erstwhile war partners. A large number of veterans and lower-ranking soldiers undertook paramilitary activities on behalf of the Fascists as well as appearing in Fascist rallies.

By late 1920 the Fascists had control over life in much of northern Italy. Local Fascist leaders such as Italo Balbo used intimidation to wrest control of cities and towns from elected socialist governments. By mid-1921 the Fascist militias were often assistants to the official police forces. Conservatives and government officials generally ignored the Fascist contributions to public violence; indeed, many appreciated the militancy and virility of the Fascists as crucial to the restoration of Italian national honor.

Mussolini adeptly shifted his rhetoric and program in the interests of retaining his new group of supporters. He virtually eliminated references to class conflict and social revolution, replacing them with evocations of the need for discipline and strong leadership in Italy. The queen mother and the duke of Aosta avidly supported the Fascist movement. He also placated the Roman Catholic Church by avoiding anticlerical rhetoric and by cultivating good relations with the new pope, Pius XI (elected in 1922), who worried about communism far more than any possible threat from the Fascists.

Having amassed such support among propertied and influential Italians, Mussolini could contemplate seizing power. This proved unnecessary, however, since the existing government had already lost control over the country. While heading to Naples for the Fascist Party Congress in late October 1922, Mussolini threatened that the Fascists would seize power following a mass march to Rome if they did not receive at least five ministerial posts. Prime Minister Facta asked the king

to declare martial law in order to prevent such a march, but the king refused. Instead, he suggested a coalition government. Mussolini rejected the proposal, anticipating a complete victory if he was patient. This expectation was fulfilled on October 29, 1922, when King Victor Emmanuel asked him to form a government.

The March on Rome of approximately 30,000 Fascists thus served little practical purpose except as a celebration of having achieved power. Mussolini himself reached the outskirts of Rome by rail. Wearing a suit and walking into Rome at the head of his ill-clad band of Fascists, Mussolini looked every inch the bourgeois politician on whom the traditional elites of Italy could rely.

MELANIE A. BAILEY

Marco Polo Bridge incident

See SINO-JAPANESE WAR.

Mariátegui, José Carlos

(1894–1930) *Peruvian journalist and political activist*

José Carlos Mariátegui was the founder of the Socialist Party of Peru, which was later transformed into the Communist Party of Peru. He was also one of the more influential social theorists in Latin America. José Carlos Mariátegui was born on June 14, 1894, at Moquegua, a dry, dusty town on the outskirts of the Atacama Desert, close to Peru's southern border with Chile. It was 11 years after Peru's disastrous war with its southern neighbor.

His father was Francisco Javier Mariátegui Requejo, a grandson of Francisco Javier Mariátegui (1793–1884), one of the original signatories of Peru's declaration of independence in 1821. When José Carlos Mariátegui was a young boy, his father abandoned the family and left his mother, María Amalia La Chira Ballejos, to look after the three children. They moved to Lima and then to the town of Huacho, north of Lima, close to where San Martín had proclaimed Peru's independence. When he was eight José Mariátegui suffered a bad injury to

his left leg and spent four years in a hospital in Lima. When he was 14 he started working for the newspaper *La Prensa*, initially running errands, then becoming a linotypist, and ending up as a journalist. He also found work with the magazine *Mundo Limeno*. In 1916 Mariátegui decided to leave *La Prensa* to join a new slightly left-wing daily newspaper called *El Tiempo*. By this time he had been heavily influenced by the Spanish socialist Luis Araquistán. After two years Mariátegui had sufficient confidence to leave *El Tiempo* and try to establish his own magazine but had trouble getting anybody to agree to print it. He then decided to establish his own paper, *La Razón*, which was the first avowedly socialist paper in Peru.

In May 1919 *La Razón* supported a strike held to try to get legislation restricting work to an eight-hour day. It also wanted price controls for basic goods. This rapidly began to annoy the president, Augusto B. Leguía y Salcedo, who decided to defuse the matter by forcing Mariátegui to take a government scholarship to study in Europe. As a result, Mariátegui left to go to Europe in 1920. After a brief time in France, Germany, and Austria, he moved to Italy and there married Ana Chaippe, returning to Peru in 1923.

Very soon Mariátegui was becoming well known as a Marxist and also a friend of VÍCTOR RAÚL HAYA DE LA TORRE, who led the American Popular Revolutionary Alliance. Together they worked on *Claridad*, a Marxist magazine, and when Haya de la Torre was deported Mariátegui remained as editor, dedicating its fifth issue, in March 1924, to Lenin. Personal tragedy was to strike soon afterward when he had to have his left leg amputated. However, he struggled on and in the following year, 1925, wrote *La escena contemporánea* (The contemporary scene), a collection of essays on the problems facing the world at the time. In the next year he was running the magazine *Amauta*, which projected his ideas of socialism and Latin American culture throughout South and Central America. He was arrested in 1927 and placed under house arrest by Leguía.

Initially, Mariátegui planned to move to Buenos Aires or Montevideo but in the end he decided to stay in Lima, where he established the Socialist Party of Peru in October 1928, with himself as general secretary. This political party later became the Communist Party of Peru. As he was formalizing his ideas, also in 1928, Mariátegui wrote *Seven Interpretive Essays on Peruvian Reality*, which covered the social history of Peru from a Marxist standpoint. In 1928 and 1929 Mariátegui founded and edited the journal *Labor*, about the labor movement in Peru.

Mariátegui helped in the founding of the General Confederation of Peruvian Workers in 1929, and this body was represented at the subsequent Constituent Congress of the Latin American Trade Union Conference, which was held at Montevideo. Mariátegui died on April 16, 1930, from complications that resulted from his injury to his leg. He was 35 years old.

JUSTIN CORFIELD

Marshall in China (1945–1947)

George Marshall (1880–1959) was one of the architects of the Allied WORLD WAR II victory in Europe. In an attempt to prevent civil war in China after victory over Japan, U.S. president HARRY S. TRUMAN appointed Marshall special ambassador to China in November 1945. He was charged with helping the Nationalist, or Kuomintang (KMT), government reestablish its authority in areas that had been controlled by Japan during the war, including Manchuria, but without involving the United States in direct military intervention. He was also to urge Nationalist leader CHIANG KAI-SHEK to convene a national conference to establish a united democratic government, making U.S. aid to his government contingent on achieving that goal.

Marshall arrived in China's wartime capital, Chongqing (Chungking), in December 1945 and obtained agreement by both the KMT and the CHINESE COMMUNIST PARTY (CCP) to appoint a representative each to a committee under his chairmanship that would work out the terms of cooperation. On January 10, 1946, both sides agreed to commence an immediate cease-fire, to convene a Political Consultative Conference that would work on the terms for forming a coalition government, and to work toward the integration of KMT and CCP military units into a national army. Happy with his success, Marshall returned to the United States in March, and President Truman announced the establishment of a U.S. military mission to China to help it train a national army.

Because of a history of bitter relations, the KMT and the CCP mistrusted each other, nor did either party trust Marshall, but they paid him lip service because he

represented the powerful United States. Civil war resumed in April 1946 and initially went well for the Nationalists, who announced the convening of a national assembly in November 1946 to write a constitution for the nation. The CCP immediately announced that it would boycott the national assembly. Realizing that the United States had totally failed to mediate an end to the CHINESE CIVIL WAR, Truman recalled Marshall in January 1947 and stopped most aid to China. Marshall issued a farewell message before leaving China in which he blamed both Chinese parties for the failure of his mediation. On the other hand, each Chinese party accused Marshall of partiality toward the other. The Nationalist government felt abandoned by the United States. Marshall was appointed secretary of state upon his return. He ignored the report of a fact-finding mission led by General Albert Wedemeyer concerning a continued U.S. role in China and decided on a hands-off policy in Chinese affairs. The CCP won the civil war in 1949.

JIU-HWA LO UP SHUR

Martí, Agustín Farabundo

(1893–1932) *El Salvadoran revolutionary leader*

Martí was born on May 5, 1893, in Teotepeque, El Salvador, a small town in the region of La Libertad. He was the sixth of 14 children born to wealthy landholding parents. His family estate consisted of two haciendas and five square miles of land. He was educated at the academy of the Silesian Fathers, excelling in both studies and sports. He graduated around 1913 and entered the National University. However, he immediately got into trouble over differences of philosophy with his professors and even challenged one of them to a duel.

Martí was exiled from the country more than once because of his radical beliefs. Some sources have Martí

taking part in the Mexican Revolution as a member of the “Red Guards,” but this seems to be part of the myth surrounding him. He most likely lived in Honduras and Guatemala. In 1925 he became a charter member of the organization that began communist activity in Guatemala. However, the organization’s president did not want foreign leftists, so Martí was forced out.

In 1927 the government of El Salvador began to persecute Martí. While imprisoned he went on a hunger strike, and many university students rallied around him. Because of this pressure, he was released, and he went to New York in 1928. He was picked up in a police raid and decided to return to El Salvador. He returned via Nicaragua and came into contact with SANDINO’s anti-American campaign. During the year he was associated with Sandino and his movement, Martí tried to convert him, unsuccessfully, to communism.

After leaving the Sandino forces, Martí went to Mexico City to visit his mother. At one point he was arrested and jailed for allegedly taking part in the coup of Daniel Flores. In 1930 Martí was in Guatemala and then returned to El Salvador in May. He was arrested and put on an enforced ocean voyage. He returned in February 1931, determined to stir up trouble. Conditions were horrible in El Salvador, and Martí took advantage to lead uprisings. He led a march on the president’s house and was arrested on April 9.

After being released from jail in 1931, Martí continued his activities. He was arrested again in 1932 during an attempted major uprising. Many bombs had been found throughout the capital city, and Martí said there were many more. Because of this he was tried, found guilty, and executed by firing squad on February 1, 1932. The Farabundo Martí National Liberation Front was named after him.

JAMES E. SEELYE, JR.

Masaryk, Tomáš Garrigue

(1850–1937) *Czechoslovakian president*

Tomáš Garrigue Masaryk (Thomas Masaryk in English) was a leading campaigner for Czech independence from

Austria-Hungary both prior to and during WORLD WAR I and the first president of Czechoslovakia in 1918.

Masaryk was born in Moravia on March 7, 1850, the son of a Slovak coachman. Educated to become a teacher, Masaryk worked as a locksmith for a short time. He subsequently entered the German College at Brünn/Brno (Moravia) in 1865 and continued his studies at the University of Vienna, where he obtained a doctorate in philosophy in 1876. When studying in Leipzig for a year, he met an American student, Charlotte Garrigue, whom he married in 1878 and from whom he took his middle name. The following year Masaryk was appointed lecturer in philosophy at Vienna University. In 1882 he became a professor of philosophy at the Czech University of Prague.

Early in the same year the Austrian government had been forced to divide the former common university into a German and a Czech section, thereby offering career opportunities for Czech scholars like Masaryk.

As a philosopher, Masaryk was strongly influenced by neo-Kantianism, the British Puritan ethics, and the teachings of the Czech Hussites. Simultaneously, Masaryk showed a lifelong critical interest in the frictions of modern capitalism. His first major works were devoted to suicide in modern civilization as well as to the Czech Reformation and the Czech national revival of the first half of the 19th century.

Masaryk founded two scientific periodicals, one of which he transformed into a political review in 1889. This was the beginning of his political career. In this early phase his attention was devoted to the Slovaks in the Kingdom of Hungary. By criticizing the outdated policy of many Slovak politicians, he became the idol of the younger progressives in Slovakia. Deeply impressed by contemporary ideas of full democracy, Masaryk became increasingly estranged from the conservative and Catholic concept of the so-called Old Czech Party. He distanced himself from this party's deep loyalty toward the Habsburg monarchy and sided with the liberal Young Czech Party.

As a member of the Austrian parliament, the Reichsrat, Masaryk represented first the radical Young Czechs, but he soon disagreed with their emotional nationalism and resigned his seat in 1893, only two years after his election. In the spring of 1900, he founded his own moderate Realist Party. Both parties, however, were determined to achieve the creation of an independent Czech state. After his reelection to the Reichsrat, Masaryk became the outstanding figure of the Slav opposition to the government of Emperor Franz

Josef. Masaryk, as a parliamentarian, made himself a name as a sharp opponent of Austria-Hungary's alliance with imperial Germany. He defended the rights of the Croats and Serbs, who had come under heavy pressure after Austria-Hungary had formally annexed Bosnia-Herzegovina in 1908.

With the outbreak of WORLD WAR I in August 1914, Masaryk fled to Geneva, Switzerland, in December 1914 and then onward to London the following March. In western Europe Masaryk was recognized as the spokesman and representative of what he called the underground Czech liberation movement. He worked tirelessly to encourage and then commit Allied support for the creation of a Czech state following the war. While staying in London, he cofounded the Czechoslovak National Council, located in Paris. Masaryk's private and scientific acquaintances in France and Great Britain helped him to get in contact with leading Allied politicians. With their assistance Masaryk was able to propagate the Czech war aims: the restitution of Bohemia's historical independence, which the Habsburgs had curtailed after the Thirty Years' War (1618–1648); the establishment of a union between the Czechs and the Slovaks; and the dismemberment of the Austro-Hungarian monarchy in favor of new states to be created according to ethnic principles.

Throughout the war Masaryk worked closely with fellow Czech independence campaigner Eduard Beneš. The latter attended to political negotiations among the Allies, while Masaryk functioned in a more ambassadorial capacity. After the breakdown of the czarist monarchy in Russia in the spring of 1917, Masaryk transferred his headquarters to Russia. Shortly after the RUSSIAN REVOLUTION Masaryk set out for the United States.

Czech and Slovak groups of emigrants there welcomed him as the recognized negotiator of Czechoslovak future independence. Negotiations with President WOODROW WILSON and his secretary of state, Robert Lansing, were successful, resulting in the Lansing Declaration of May 1918. This declaration expressed the sympathy of the Wilson government with the Czechoslovak freedom movement and supported the formation of an independent Czech state after the conclusion of the war.

ALLIED POWER

On June 3, 1918, the Allied governments recognized the Czechoslovak state as an Allied power. The frontiers of this future state were demarcated according to Masaryk's proposals. Masaryk concluded the so-called

Pittsburgh Convention with the Slovak associations existing in the United States. This agreement promised the Slovaks a large measure of home rule and played a decisive role in the Czech-Slovak union in 1918–19.

The collapse of the Austro-Hungarian Empire in late October 1918 led to a firm commitment from the Allied governments to the immediate creation of a new state, Czechoslovakia, in mid-November. Masaryk was elected the new country's first president on November 14, 1918. He was reelected in 1920, 1927, and 1934. During the war Masaryk had promised that the new state would respect the minority rights of its numerous Hungarian and German ethnic groups.

Masaryk was one of the first leading European politicians to publicly express his anxiety over the future of Europe after ADOLF HITLER came to power in Germany in January 1933. Aged 85, Masaryk resigned his post as president of the republic in December 1935 and died nearly two years later, on September 14, 1937. He was succeeded by Beneš. Masaryk's son Jan served as foreign minister in the Czechoslovak government in exile (1940–1945) and in the governments of 1945 to 1948.

Although deeply involved in political fighting during the last 45 years of his life, Masaryk also wrote two monumental books before World War I. In a study on Marxism published in 1898, he dealt with the contradictions of both socialism and capitalism. In a book titled *Russia and Europe* he provided a survey of Russia's crises with respect to social, intellectual, and religious problems. Masaryk opposed racial prejudice, as shown by his publicly defending a Jew falsely accused of ritual murder. During the 1930s Masaryk's Czechoslovakia was one of the few European countries that accepted refugees of various political orientations. A huge number of refugees from Germany, Austria, and the Soviet Union found shelter in Czechoslovakia, especially in the capital, Prague.

MARTIN MOLL

May Fourth Movement/ intellectual revolution

In 1919 a student-led protest movement became the catalyst for an intellectual revolution in China. On May 4th, 1919, thousands of university students in the Chinese capital city, Beijing (Peking), gathered outside Tiananmen (Gate of Heavenly Peace) to protest the terms of the Treaty of Versailles that would transfer Germany's sphere of influence in Shandong (Shantung) province to Japan. They targeted the perfidy of the great powers and burned down the residence of a leading Chinese official, accusing the corrupt warlord-dominated government of selling out China's interests. The arrest of some students led to a brief boycott of classes. News of the incident spread to 200 other cities where students organized into unions and rallied local merchants, workers, and citizens to join a general strike and boycott of Japanese goods. The ensuing unrest led to widespread confrontations with police and mass arrests but resulted in the resignation of pro-Japanese cabinet ministers and China's refusal to sign the peace treaty with Germany. The immediate goals of the May Fourth protests were thus achieved.

The term *May Fourth Movement* first appeared in an article by Luo Jialun (Lo Chia-luen), a student leader at the National Beijing University, published in a journal named *The Weekly Review*. In Luo's words the movement "represented the spirit of sacrifice on the part of the students, . . . and the spirit of self-determination on the part of the Chinese nation." As the first mass patriotic demonstration organized and led by youthful students, it was a landmark event in 20th-century Chinese history.

During the following decades the May Fourth Movement came to denote a broader phenomenon in China's response to the challenges of the modern world. The political chaos and diplomatic weakness that followed the republican revolution of 1911 and growing Japanese imperialism exhibited in its TWENTY-ONE DEMANDS in 1915 that aimed at making China a Japanese protectorate had created a deep sense of urgency among modern educated young Chinese. In 1917 Cai Yuanpei (Ts'ai Yuan-p'ei), a distinguished scholar who had attained the highest Chinese degree and also studied in Germany, was appointed president of National Beijing University. Cai insisted on academic freedom and built up a strong and diverse faculty that attracted China's brightest students who became leaders of the intellectual revolution.

The faculty journal *New Youth* and student journal *New Tide* became the beacons of new thought and intel-

The Forbidden City in Beijing (Peking), China, in the early 20th century: Central government policy has been at odds with the values of the May Fourth Movement, which have survived to the present.

lectual debate that included such subjects as Social Darwinism and Marxism, the writings of John Dewey and Bertrand Russell, and the importance of the Bolshevik Revolution in Russia. They attacked outmoded traditions rooted in Confucianism and advocated language and other reforms in Chinese society, including the status of women. The broadened quest for reforms that lasted into the 1920s was also called the New Culture Movement, the Chinese Renaissance, or the Chinese Enlightenment.

The most visible success of this movement was the replacement of the stilted classical written style with vernacular Chinese that was led by Chen Duxiu (Ch'en Tu-hsiu), who later was a founder of the CHINESE COMMUNIST PARTY, and HU SHI (Hu Shih), who remained committed to Western liberalism. The language reforms helped to spread literacy and mass education and the development of new literary genres that brought China into the mainstream of modern world literature. The intellectual revolution brought about the introduction of Western methodologies of critical reasoning to the social and natural sciences. It also advocated individual freedoms and the democratic values of the West.

A parting of ways took place among the activists after the tumultuous events of 1919 subsided. While many of the Western-oriented liberal intellectuals

resumed their academic pursuits, the radicals turned toward Marxism and the model of Russia's Bolshevik Revolution. With the encouragement of representatives of the Comintern (Third Communist International), several faculty members of National Beijing University and some students and their allies formed the Chinese Communist Party in 1921. Other patriotic youths turned to Dr. SUN YAT-SEN, founder of the Chinese Republic, who responded to the changes by reorganizing his Nationalist Party, or Kuomintang. The Nationalist and Communist Parties would first coalesce and then split in 1927 to become locked in a life-and-death struggle for control of China that would last throughout the 20th century.

During the 20th century efforts to implement the goals of the May Fourth Movement met countless obstacles. In China after 1949, supporters of its goals suffered grievously during numerous campaigns launched by the Communist Party. Nevertheless, the values it expounded have survived to the present, and its memories have been selectively invoked during the commemorations of the movement to the present in both the People's Republic of China and the Republic of China. During the war of resistance against Japanese aggression (1937–45), May 4th was celebrated as National Youth Day; it is still designated as Youth Day

in the People's Republic of China. On its 70th anniversary in 1989, students gathered at Tiananmen Square in Beijing and hoisted the twin banners "Mr. Science" and "Mr. Democracy," slogans first raised by Chen Duxiu in 1918. Since the 1980s there has been growing interest in the study of Hu Shi, the preeminent liberal thinker of the May Fourth era; Hu had earlier been harshly criticized by the regime of the People's Republic. Ironically, Confucius, once the target of attacks by radicals among the May Fourth intellectuals and later consigned to "the dustbin of history" by Maoist extremists during the Cultural Revolution, is once again honored as China seeks to remake its image in the 21st century.

JIU-FONG L. CHANG

Mexican constitution (1917)

To many modern Mexicans the Mexican constitution of 1917 is an important document in their history, one that embodies the values of the MEXICAN REVOLUTION. It was the fourth constitution written for Mexico, and its inception occurred under the leadership of VENUSTIANO CARRANZA, president of Mexico from 1917 to 1920. It established sweeping reforms in regard to land distribution and labor, severely curtailed the power and autonomy of the Catholic Church, guaranteed the rights of Mexican citizens, and sanctioned a federal system and balance of powers. Since 1917 the constitution has been ignored, changed, and reinterpreted many times depending on the leadership and political climate, with a total of 350 amendments added to it.

Carranza initiated the creation of the 1917 constitution to bolster his claims that he would transform the ideals of the revolution into actual practice. In January

1915 Carranza embarked on a campaign to prepare Mexico for a new constitution. In his capacity as first chief during the preconstitutional period (1915 and 1916), he decreed in September 1916 that elections would be held the following month in every Mexican city and town to elect delegates to the constituent congress, which would draft the constitution. Many regional leaders and revolutionaries loyal to Carranza but dedicated to implementing the ideology of the revolution to the point of radicalism were elected to the congress.

The constituent congress convened in November 1916 in the town of Querétaro, the location of Emperor Maximilian's execution in June 1867. Given only two months to draft the document, the delegates quickly focused on the task at hand. The moderate liberals of the delegation found themselves head to head with many of the revolution's military leaders. These men attacked the Catholic Church first, focusing on its role in education and proposing article 3, which barred the church from primary education and secularized private institutions. After a spirited debate coupled with powerful speeches, the radicals passed article 3, alarming Carranza. He sent General ALVARO OBREGÓN to the congress in hopes that he would moderate the leftists. Instead, Obregón threw his powerful military and political weight behind Múgica and the other reformers.

The delegates went on to propose several articles to the constitution characterized by sweeping social and economic reform. Article 27 proposed radical new land policies that reversed Díaz's policy of encouraging foreign investment and land ownership. Article 27 attempted to restore national sovereignty by making these restrictions retroactive, allowing the president to seize land and property held by foreign owners. This opened the door for peasant communities to petition for the return of lands lost to large estates.

The relationship between the church and the state was the subject of more than one article of the Constitution of 1917. Besides article 3, which excluded the church from education, articles 27 and 130 stripped the church of much of its power in Mexico. Barred from holding or administering property, the church lost a significant portion of its revenues used to support charitable works. Clergy members could no longer vote, hold political office, or assemble for political purposes. Múgica and his supporters introduced article 130 at the very end of the constituent congress when delegates were weary of debate. Some scholars cite fatigue in the passing of the severe anticlerical provisions, as the vote was taken at 2:00 A.M. on the final meeting day of the congress.

Labor also took center stage on the radical agenda for the new constitution. Article 5 ended the system of debt peonage, the misery of many poor Mexican workers. Article 123 organized labor by authorizing labor unions and the right to strike. It also put in place several regulations to protect workers, especially women and children. It established an eight-hour day with one day of rest per week. Women and children were barred from working after 10:00 p.m., children less than six years old were forbidden to work, and those under 16 could only work six-hour days. Wages had to be paid in cash, and a minimum wage was set.

The constitution of 1917 set up a framework for radical change in Mexico. However, it also granted the president great power, and Carranza ignored many of its reforms. The provisions set forth by the constituent congress would take almost the entire 20th century to be implemented, and some would never be fully realized. The administration of LÁZARO CÁRDENAS, from 1934 to 1940, did the most work on realizing the ideals of the constitution, especially in regard to land reform, labor, and education. After 1940 some articles were deemphasized, such as article 27, which discouraged foreign investments. Despite such permutations of the constitution of 1917, it remains an important document in Mexico's modern history that cleared the way for considerable social and economic reform.

KATHLEEN LEGG

Mexican Revolution (1910–1920)

In one of the most violent, chaotic, and consequential events in modern Latin American history, from 1910 to 1920 Mexico was convulsed in a massive social revolution and civil war. The first major social revolu-

tion in postcolonial Latin America, the Mexican Revolution arose from complex origins and bequeathed an equally complex legacy. The origins of the revolution can be traced to two major trends from the late 19th century, both set in motion under the dictatorship of Porfirio Díaz (the PORFIRIATO, 1876–1910) that transformed the country's economy and society in far-reaching ways. Both trends resulted from rapid capitalist development combined with the oligarchic nature of Porfirian politics. These two trends gave the revolution its dual character as both a middle-class revolt and a mass popular uprising.

The first trend was the process by which capitalist development fostered the formation of an emergent middle and professional class that was systematically shut out of the nation's political life by the Porfirian oligarchy. Thus, the revolution began in 1910 as a middle-class revolt against the corrupt Díaz dictatorship, led by the wealthy landowner FRANCISCO MADERO under the slogan “no reelection.” In essence, this emergent middle and professional class, represented by Madero and other reformers, sought a greater political voice and an opening up of the political system, in keeping with classical liberal democratic principles. The second trend had its roots in the countryside, where the great majority of Mexicans (around 90 percent) resided. This was the process of land concentration and related forms of rural oppression, which resulted in growing landlessness, poverty, hunger, and destitution among the rural majority. Thus, when Madero launched his revolt against Díaz in 1910, it opened up an opportunity for the rural poor to press their claims and vent their accumulated grievances, principally the return of the lands that had been taken from them in the previous decades and the exaction of retribution against abusive local powerholders. These were the origins of the revolution's popular, agrarian impulse, epitomized in the figure of EMILIANO ZAPATA and his slogan “Land and Liberty.” These twin engines of revolution—a middle- and professional-class reformist impulse and a lower-class, agrarian, social-revolutionary impulse—combined to make the Mexican Revolution both a political revolt from above and a social revolution from below. The complex sequence of events from 1910 to 1920 reflects these dual and often contradictory impulses.

The most important of these events can only be summarized in capsule form here. The rigged elections of June 21, 1910, swept the 79-year-old Porfirio Díaz into his final term in office. On October 5 in San Antonio, Texas, Francisco Madero, recently released from jail, proclaimed himself in revolt against Díaz in his

Plan of San Luis Potosí, a reformist document calling for a return to the principles of the 1857 constitution. In May 1911 the combined forces of Madero, PASCUAL OROZCO, and PANCHO VILLA defeated Díaz's federal troops in the border city of Ciudad Juárez. In accord with the provisions of the Treaty of Ciudad Juárez, Díaz resigned; his foreign secretary, Francisco León de la Barra, became interim president (May–November 1911). On October 1, 1911, Madero was elected president. He served for 15 months (November 1911–February 1913). His presidency was largely a failure, his moderate reforms placating neither hardline Porfiristas nor agrarian radicals like Zapata and Orozco. On February 18, 1913, Madero was overthrown by one of his leading generals, the conservative VICTORIANO HUERTA, following the the Decena Trágica (Tragic Ten Days), a destructive battle in Mexico City between Porfiristas and Maderistas—an overthrow made possible by the “Pact of the Embassy” between Huerta and U.S. ambassador Henry Lane Wilson. Huerta, reputed for his cruelty and hard drinking, ruled for the next 17 months (February 1913–July 1914). His regime, whose policies garnered the animosity of the United States, was overthrown by the constitutionalists under VENUSTIANO CARRANZA following the U.S. occupation of the port city of Veracruz, which had begun on April 21, 1914.

The three years following Huerta's ouster were the most chaotic of the revolution, with several major and scores of minor armies wreaking havoc across the country. The most prominent figures included Pancho Villa and Pascual Orozco in the north; Zapata in the south; and the constitutionalists Carranza, PLUTARCO CALLES, and ALVARO OBREGÓN. In December 1914 Villa and Zapata briefly occupied Mexico City. Five months later—in April 1915—came the most famous military engagement of the war: the Battles of Celaya (in the state of Querétaro, April 6–7 and 13–15), in which Villa's cavalry, estimated at more than 25,000 strong, was nearly destroyed by Obregón's entrenched forces (Obregón was a keen student of European trench warfare). The battles' outcome heralded the rising fortunes of Carranza and the constitutionalists. Villa, his army severely weakened, retreated northward. After the United States recognized Carranza as Mexico's legitimate head of state in October 1915, Villa staged a series of anti-U.S. reprisals, most famously his raid of Columbus, New Mexico, on March 9, 1916, in which his forces killed 18 U.S. citizens and looted and burned the town. The United States responded with Pershing's Punitive Expedition, in which General John J. Pershing led some 6,000 U.S. troops into the northern Mexi-

can deserts in pursuit of Villa. The expedition, which cost \$130 million, failed and withdrew from Mexico in January 1917. Meanwhile, in the south the Zapatistas continued their guerrilla campaign against the Carranza government, which had not endorsed Zapata's Plan of Ayala demanding agrarian reform.

In November 1916 Carranza and the constitutionalists, entrenched in Mexico City, convened a constitutional convention in the city of Querétaro. Excluding Villistas, Zapatistas, Huertistas, and others, the meetings eventually produced the constitution of 1917, which governs Mexico to the present day. In March 1917 Carranza was elected president of Mexico, an office he assumed on May 1. Several months earlier, in January 1917, Carranza had been approached by the German ambassador with a proposal to ally with Germany in a war against the United States (following his instructions in the famous Zimmermann Telegram, sent January 16, 1917, by the German foreign secretary Arthur Zimmermann). Carranza refused the offer, but the telegram, intercepted by the British, is often cited as hastening U.S. entry into WORLD WAR I.

With the formation of a constitutional, U.S.-recognized government in Mexico City, the most violent years of the revolution were drawing to a close. While fighting still raged across much of the country, by this time many Mexicans had wearied of the violence. In the south the Zapatistas put up a stiff resistance against Carrancista forces sent down to suppress their armies. In early 1919 Carranza dispatched a hit squad to Morelos to assassinate Zapata, which it did on April 10. A year later, on May 21, 1920, Carranza himself fell to an assassin's bullet, leaving the presidency open to Obregón, one of whose allies had pulled the trigger.

When the revolution began in 1910, Mexico was home to an estimated 15 million people; 10 years later that number had dropped to an estimated 14 million. In other words, between 1 and 2 million Mexicans died during this “age of violence,” while an additional quarter million or more migrated north to the United States—marking the origins of many Mexican-American communities in major U.S. cities like Detroit, Chicago, and others. After 1917 the revolutionary regime, dominated by elites from the northern state of Sonora (especially Obregón, Calles, and Adolfo de la Huerta), entrenched itself in power. Through the 1920s the revolutionary state became increasingly institutionalized and its policies increasingly conservative. It retained power despite frequent flare-ups of violence, most notably the Cristero Revolt of 1926–29, sparked by the Catholic Church's disgruntlement with the

constitution's anticlerical provisions, in which an estimated 80,000 people died.

The revolution bequeathed a complex legacy, not only in Mexico but across the hemisphere. Radicalizing an entire generation of politicians, intellectuals, labor leaders, and activists, it also helped to create a new narrative of Mexican history that put Indians and mestizos at the center of the nation's past (as seen most graphically in the public murals of Diego Rivera), while contributing to the erosion of traditional bonds of deference and relations of domination-subordination that had been so central to the country's postconquest history. It also largely failed to deliver on the promise of agrarian reform, at least in the short term. Of the revolution's twin engines of a politically disenfranchised rising middle class and an impoverished agrarian sector, the former essentially triumphed—expressed most concretely in the dominance of the Sonorans and the formation in 1929 of the predecessor to the PRI (Institutional Revolutionary Party), a political party that was (and remains) “revolutionary” in name only, that dominated the country's politics in a “one-party democracy” for most of the 20th century. It was not until the presidency of LÁZARO CÁRDENAS (1934–40) that popular demands for agrarian reform were largely met.

MICHAEL J. SCHROEDER

Mitsui and Mitsubishi, Houses of

Before the conclusion of WORLD WAR II, Mitsui and Mitsubishi were two of the four major *zaibatsu* (family-centered banking and industrial combines) in Japan; the others were Sumitomo and Yasuda. The term *zaibatsu* refers to a particular economic and social arrangement characteristic of large capitalist enterprises in Japan in the 19th and first half of the 20th centuries. Each *zaibatsu* was controlled by a single family that owned companies in many different spheres of economic activity, including banking and industry. The *zaibatsu* developed after the Meiji restoration in 1868, when the government wanted

to encourage industrial development. The *zaibatsu* were a very strong economic and political force in early 20th-century Japan. For instance, in 1937 most heavy industry and one-third of all bank deposits in Japan were directly controlled by the four major *zaibatsu*. After Japan's surrender in World War II, the Allied occupation authorities ordered the *zaibatsu* dissolved. This meant that official individual companies were freed from the control of their parent companies. However, many reformed their ties later in a less-formal arrangement, so some aspects of the control and coordination of the *zaibatsu* lived on in reality if not in law.

MITSUI

Mitsui is one of the largest publicly traded companies in contemporary Japan. The origins of Mitsui date back to the House of Mitsui, a merchant house of the Tokugawa

The House of Mitsui began with Mitsui Takatoshi, who opened a number of successful textile shops in Edo, Japan, depicted above.

period (1603–1867). Mitsui is thus the oldest of the four leading *zaibatsu* of early 20th-century Japan. The history of the House of Mitsui begins with the enterprises of Mitsui Takatoshi (1622–94), who opened a number of successful textile shops in Edo (Tokyo) and Kyoto.

He later expanded his enterprises into financial services, including moneylending. In 1691 members of the Mitsui family were granted the status of *gyo shonin* (chartered merchants) by the shogunate, which gave them considerable influence within the government. The Mitsui family drew up a “constitution” in 1694, detailing matters such as the duties of the family council and the amount of property due each branch of the family; these arrangements remained in force into the 20th century. In 1876 the Mitsui bank became the first private bank in Japan. Minomura Rizaemon (1821–77), an orphan who worked his way up to the top position in the Mitsui exchange brokerage, became president of the Mitsui bank and helped launch Mitsui into other enterprises that allowed it to succeed in the changing financial world of modern Japan.

The Mitsui family owned more than 270 companies by the end of World War II. Although the Mitsui *zaibatsu* was officially broken up in 1946, many of the companies involved formed themselves into *keiretsu* in the 1950s. The name *Mitsui* means “three wells,” and the three wells are represented in the company logo.

MITSUBISHI

The Mitsubishi group's origins lie with Yataro Iwasaki (1835–85), who founded the shipping firm the Mitsubishi Commercial Company in 1873. This company grew to be Japan's largest shipping firm, partly due to financial assistance from the Meiji government. The second and third heads of Mitsubishi were family members: Yataro was succeeded by his brother, then by his son. The family expanded into many industries, including coal mining, shipbuilding, banking, insurance, paper, steel, oil, and real estate. In 1893 the holding company Mitsubishi, Ltd., was created to organize these diverse business interests. The principal arms of the company in the early 20th century were (1) Mitsubishi Bank, founded in 1919 and currently part of Mitsubishi UFJ Financial Group, the largest bank in Japan; (2) Mitsubishi Corporation, founded in 1893, which provides internal financing; and (3) Mitsubishi Heavy Industries, which includes the photographic equipment company Nikon and the Mitsubishi Motor Corporation. Mitsubishi was an important military contractor during World War II, building warships and the Zero aircraft used in the attack on PEARL HARBOR in 1941.

After the *zaibatsu* were required to disband in 1946, the companies forming the Mitsubishi *zaibatsu* became independent entities. However, some voluntarily recombined after the outbreak of the Korean War and formed a *keiretsu* known as the Mitsubishi group.

The name *Mitsubishi* means “three diamonds” and is not a family name. Rather, it refers to the three stacked diamonds of Yataro Iwasaki's family crest, which appear in the Mitsubishi trademark.

SARAH BOSLAUGH

Mongolian People's Republic

During the Q'ing (Ching) dynasty in China (1644–1911) Mongolia had been a part of the Chinese Empire under a theocratic government, with the ruler, the Jebtzun Damba (Living Buddha), acknowledged as the Bogd Khan (Holy King). During the Chinese revolution of 1911, the status of Mongolia was briefly in doubt until in May 1915 the Treaty of Kyakhta, signed by Chinese, Russian, and Mongolian officials, granted Mongolia limited autonomy.

During the RUSSIAN REVOLUTION in October 1917 and the subsequent Russian Civil War, Xu Shucheng (Hsü Shu-Cheng), a Chinese warlord, sent his soldiers into the area and captured Urga (modern-day Ulan Bator) in 1919. Two years later the White Russians were decisively defeated in western Russia, retreated to Siberia, and took over Mongolia, occupying Urga on February 4. Seeing the White Russians as a potential long-term army of occupation, some Mongolians contacted the Bolsheviks. This allowed the Mongolians under Damdin Sükhbaatar to take over Urga with

the aid of Russian Communists. Soon afterward the White Russian leader, Baron von Ungern-Sternberg, who claimed to be a reincarnation of Genghis Khan, was shot, and Sükhbaatar helped form the Mongolian People's Party, the first political party in the country, with Soliyn Danzan as the first chairman of the party's central committee. Sükhbaatar met VLADIMIR LENIN in November 1921, and in January 1922 serfdom was abolished throughout Mongolia. These moves gave great impetus to the proclamation of the Mongolian People's Republic on November 26, 1924, making it the second Communist nation in the world. The capital was then renamed Ulan Bator (Red Hero).

After the death of Lenin, JOSEPH STALIN was initially more anxious to assert his control over the Communist Party of the Soviet Union, allowing Mongolia some independence. However, by the late 1920s Stalin began to assert some control over the country through the renamed Mongolian People's Revolutionary Party. Stalin eventually found a willing ally in Khorloogiin Choibalsan (or Choybalsan). Born in 1895 at Tsetsenkhan Aimak, a village near a town that bears his name, Choibalsan was a monk who turned to politics. He had been a leader in a pro-Communist Mongolian revolutionary group as early as October 1919 and had supported Sükhbaatar's formation of the Mongolian People's Party. When the Bogd Khan died in May 1924, Choibalsan did not allow the discovery of his new reincarnation to take place. In that year Choibalsan became commander in chief of the Mongolian army, a post he held until 1928, and he was appointed chairman of the presidium of the state little hural (the parliament) in January 1929. In 1930 Choibalsan became the minister of foreign affairs. Choibalsan helped introduce land reform, and land seized from landlords was handed over to peasants or turned into cooperatives.

On December 27, 1933, the Japanese puppet state Manchukuo officially claimed sovereignty over Mongolia. The Japanese were anxious to expand their control in the region, and several Mongolian princes had been persuaded to move to Japan many years earlier. One of them, Prince Kanjurab, had been married to Yoshiko Kawashima, a member of the Qing (Ch'ing) imperial family and a Japanese agent who was rapidly emerging as one of the most powerful people in Manchukuo.

In November 1934 the chairman of the council of people's commissars, Peljidiyn Genden, negotiated a military alliance between Mongolia and the Soviet Union. Soon afterward Genden was executed, suspected of being a Japanese spy. Choibalsan became marshal in 1936 and in 1939 took Genden's position as

the chairman of the council of people's commissars, which became the council of ministers in 1946. In 1939 Choibalsan signed a Soviet-Mongolian mutual assistance treaty, sending Mongolian soldiers to help the Red Army when they faced the Japanese in several engagements along the Soviet Union's border with Japanese-occupied China. It was the stiff resistance that the Japanese faced at the Battle of Halhyn-gol that convinced the Japanese high command not to attack the Soviet Union but to proceed with plans to invade Southeast Asia.

In 1944 the small autonomous state of Tannu Tuva decided to officially become a part of the Soviet Union. Most of its people were Mongolian. Salchack Toka, the nominal leader of Tannu Tuva, met Choibalsan to try to persuade him to bring Mongolia into the Soviet Union. However, Choibalsan refused. He even sent 80,000 Mongolian soldiers into Inner Mongolia hoping to exploit the Japanese military weaknesses toward the end of the Pacific war but was forced to withdraw them after demands from the Soviet Union on behalf of its Chinese Communist allies.

At Yalta in February 1945, the United States and Great Britain agreed that Mongolia should belong to the Soviet sphere of influence—in the previous year U.S. vice president Henry Wallace had visited Ulan Bator. A plebiscite was held on October 20, 1946, in which nearly all the people voted for Mongolian “independence.” Nationalist China was forced to waive any claims to Mongolia and recognized the Mongolian People's Republic on January 5, 1946. Choibalsan died on January 26, 1952. Choibalsan is commemorated by a town in eastern Mongolia built during his rule in his honor, and also Choibalsan State University, founded in Ulan Bator in 1942.

JUSTIN CORFIELD

Moroccan crises

There were two major crises involving France and Germany over the control of Morocco prior to WORLD WAR I. France's interest in Morocco steadily increased after it took over neighboring ALGERIA in 1830. Having not unified until 1870, Germany came late to the

imperial game and had to content itself with attempting to secure territories that had not already been taken by other European imperial powers, particularly Britain and France. By the turn of the century, Morocco was one of the few African nations that had not been taken over by European powers, and the Germans were therefore interested in it. Although it purported to be neutral on the Moroccan issue, Britain had secretly agreed to French expansion into the area during negotiations resulting in the beginning of the Entente Cordial in 1904.

The Tangier Crisis was the first clash between France and Germany. In 1905 Kaiser Wilhelm II visited Tangier, where he proclaimed his support for an independent Morocco. This provocation irritated the French government and raised public anger toward Germany. The Moroccan sultan of the Alawi dynasty, seeking to prolong his rule, announced his support for an international conference that he hoped would result in Morocco's maintaining its independence. In 1906 13 nations, including the United States, gathered at the Algeciras Conference in southern Spain. The Spanish already had small holdings in northern Morocco around the city of Ceuta. The Spanish and French subsequently agreed to separate spheres of influence in Morocco. After protracted negotiations France was granted special status in Morocco, although it pledged to respect German interests. Secretly, Britain, fearing Germany's growing naval strength, reiterated its support for the French in Morocco. Sultan Abd al-Hafid (r. 1908–13) objected, but France continued to expand its control over Morocco's finances.

A small crisis, the so-called Casablanca Affair, broke out in 1908 when the French captured three German deserters from the French foreign legion while they were in the custody of the German consul, in violation of conventional international law. Germany protested, and the matter was referred to the Hague Tribunal. Under the following Franco-German accord, Germany briefly accepted the special position of France but gained some economic concessions.

In 1911 France moved troops deep into Morocco and took the major city of Meknes. A second major crisis erupted when the Germans reacted by deploying a gunboat, the *Panther*, off the coast of the port city of Agadir in southern Morocco. The British government publicly stated its support for France and even threatened Germany with possible war. Subsequent negotiations resulted in Germany's gaining a small piece of territory in French Equatorial Africa (in the present-day Republic of the Congo) and France's keeping its favored

position in Morocco, by far the more important of the two territories.

France established a full protectorate over Morocco in the Treaty of Fez in 1912. The sultan was forced to sign the French terms, and Marshal LOUIS HUBERT LYAUTEY was appointed the first French resident general of Morocco. France retained control until it granted Moroccan independence in 1956. The French and German rivalry over Morocco added to the mounting tensions among European nations and was a contributing factor to the outbreak of World War I in 1914.

JANICE J. TERRY

motion picture industry

The motion picture industry can be traced back to the 1890s, when Kennedy Laurie Dickson, the chief engineer at the Edison Laboratories, was credited with making celluloid strips containing a sequence of images that, when projected, would show movement. Thomas Edison himself developed this further, and in 1893 at the Chicago World's Fair he introduced the Kinetograph, the first moving picture camera, and the Kinetoscope, which used a continuous loop of Dickson's film. The Kinetoscope spread successfully around the United States and Europe. British and European inventors did work on similar systems. Work in Britain was pioneered by Robert William Paul and his partner Birt Acres. In France Auguste and Louis Lumière invented the cinematographe—a portable motion picture camera, film processing unit, and projector all in one piece of equipment—which quickly became one of the most manufactured items in France.

Until the late 1920s the producers were unable to capture sound and synchronize it with the film, so the early films were known as silent movies, whereby the film was played and sometimes live musicians and live sound effects were used, including human voices off stage. The words of the film appeared on screen, being part of the film itself.

Georges Méliès, a Paris stage magician, started shooting and exhibiting films from 1896, many of his works being science fiction, with *A Trip to the Moon* (1902) the first film to portray space travel. Gradually, there were films lasting up to 15 minutes, with Edwin

S. Porter becoming an early director for *Life of an American Fireman* (1903) and the first “western” movie, *The Great Train Robbery* (1903). The first full-length movie was *The Story of the Kelly Gang* (1906), which was made in Australia and ran for 80 minutes. Filmed mostly at Rosanna, on the outskirts of Melbourne, Australia, it told the story of the Australian bushranger Ned Kelly and was made by the Tait brothers, costing them £400 to make and netting them over £25,000. It was shown all over Australia to packed audiences and was also shown in some places overseas. As with many films, it tells the story of an event, although on many occasions it is not a reliable account of the actual historical event. Very little of the film has survived, although a large number of “stills” were released at the time, which, together with newspaper reviews, allow historians to analyze the film in considerable detail. It was later reissued as *Ned Kelly and His Gang* with some extra scenes included.

The next major films came out in Europe with *Queen Elizabeth*, produced in France in 1912, *Quo Vadis?* in Italy in 1913, and *Cabiria* in Italy in 1914. Soon longer films started to be produced in the United States with *The Birth of a Nation* (1915) and *Intolerance* (1916), both directed by D. W. Griffith (1875–1948). In 1907 the Laffite brothers launched the *films d’art* (“art films”), which were aimed at introducing wealthier people to the cinema, many of them at the time regarding films for the working class and the theater for the higher social classes.

EARLY FILM STARS

The outbreak of WORLD WAR I held up feature film production, but it did result in newsreel films being made. These were shown in movie theaters—by 1908 it was estimated that there were 10,000 of these theaters in the United States alone. After World War I Hollywood in California became the center of much of the world’s film production, with an average output of up to 800 feature films each year making up 82 percent of the total world output during the 1920s. By this time many actors and actresses were becoming famous around the world, with Charlie Chaplin (1889–1977), Buster Keaton (1895–1966), Lon Chaney (1883–1930), Douglas Fairbanks (1883–1939), Clara Bow (1905–65), Gloria Swanson (1897–1983), and Rudolf Valentino (1895–1926) all being important early film stars. Valentino became well known through films such as *The Sheik* (1921), *Blood and Sand* (1922), and *Son of the Sheik* (1926), and was the heartthrob of girls throughout the 1920s, with his death at the height of his popularity causing a mass outpouring of grief.

Other famous actors of the silent era were Tom Mix (1880–1940), who entered the film industry in 1918, joining the Selig Company, and was said to be earning up to \$30,000 per week—appearing in 270 films from *The Trimming of Paradise Gulch* (1910) until *The Miracle Rider* (1935); and Joan Crawford (1906–77), who continued through the silent era into sound films. Some of these films were controversial, with the British 1928 film *Dawn*, about Edith Cavell, evoking a storm of protest in Germany. A later film, *Nurse Edith Cavell*, was produced in 1939. Another early silent film was *Ben Hur* (1925), remade by M.G.M. in the 1959, and others that became well known were Victor Hugo’s *The Hunchback of Notre Dame* (1924) and *The Phantom of the Opera* (1925). Hollywood, near Los Angeles, was the base for American-produced films, the main companies including Columbia, M.G.M., Paramount, R.K.O., Twentieth Century Fox, and Warner Brothers. Other famous studio locations were in Britain at Ealing, in France, in Italy, and in Germany. Indian films were largely produced in Bombay.

SOVIET AND INDIAN FILM

In the Soviet Union the early directors included Yakov Protazanov, whose films included *Father Sergius* (1917–18) and *Aelita* (1924). Sergei Eisenstein (1898–1948) perfected a technique that became known as the dialectical or intellectual montage, whereby nonlinear and often clashing scenes provoke different emotional reactions in the audience. His films included *The Battleship Potemkin* (1925), *Strike* (1925), *October* (1928), *Alexander Nevsky* (1938), and *Ivan the Terrible* (1944 and 1946).

The Indian film industry also started early, with Dadasaheb Phalke, considered by many as the “Father of Indian Cinema,” producing many feature length silent films, with *Raja Harishchandra* (1913) being the most famous early Indian film. In Japan the earliest film was *The Cuckoo* (1909), produced by Shisetsu Iwafuji, with an early well-known one being *Souls on the Road* (1921). Sessue Hayakawa (1889–1973) appeared with his wife in *The Typhoon* (1914) and as the villain in Cecil B. De Mille’s *The Cheat* (1915), acting in *Tokyo Joe* (1949) alongside Humphrey Bogart and then playing other major roles in the 1950s.

With the ability to introduce accurate synchronization of sound and sufficient amplification for it to be heard in cinemas, the Hollywood studio Warner Brothers introduced Vitaphone in 1926, and in 1927 their *The Jazz Singer* had the first piece of synchronized dialogue and singing in a feature-length film. *The Lights of New*

York (1928) was the first all-synchronized sound feature film, again produced by Warner Brothers. Quickly other studios started to produce these films, with Alfred Hitchcock's detective story *Blackmail* (1929) being the first sound feature in Britain. *The Broadway Melody* (1929) was the first classic-style Hollywood musical, with French director René Clair producing *Under the Roofs of Paris* (1920) and *Le Million* (1931). Paramount produced the first film version of Somerset Maugham's *The Letter* in 1929, and the story was produced again by Warner Brothers in 1940.

Production increased with the gangster film *Little Caesar* (1931) and others on a similar theme such as *The Public Enemy* (1931) and *Scarface* (1932), based on the life of Al Capone. Other Hollywood films of this period included A. E. W. Mason's *The Four Feathers* (1929), Erich Maria Remarque's *All Quiet on the Western Front* (1930), Vicki Baum's *Grand Hotel* (1932), Ernest Hemingway's *A Farewell to Arms* (1932), *King Kong* (1933), Cecil B. de Mille's *Cleopatra* (1934), Charles Dickens's *The Tale of Two Cities* (1936), Pearl S. Buck's *The Good Earth* (1937), *The Adventures of Robin Hood* (1938), Alexandre Dumas's *The Man in the Iron Mask* (1939), and Rudyard Kipling's *The Light That Failed* (1939). There were 28 Sherlock Holmes films starting with *The Return of Sherlock Holmes* in 1929, with the most famous probably being Arthur Conan Doyle's *The Hound of the Baskervilles* (1939) starring Basil Rathbone.

SEQUELS

There were also a number of other films that were followed by many sequels: the Charlie Chan films from 1929 that continued until 1981; *The Mysterious Fu Manchu* (1929), *The Return of Fu Manchu* (1931), *The Daughter of Fu Manchu* (1931), *The Mask of Fu Manchu* (1932), and eight more films ending in 1980; Edgar Rice Burroughs's *Tarzan the Ape Man* (1932) and many other Tarzan films to the 1960s; and "The Saint" films from *The Saint in New York* (1938), which continued up until 1959 when a French-language film *Le Saint mène la danse* was released.

Perhaps the film that had the most versions made was Louisa May Alcott's *Little Women*, which was first produced in Britain in 1917 but saw American versions made in 1919, 1933, and in 1949. The height of the U.S. film industry was probably in 1939 with *The Wizard of Oz* and Margaret Mitchell's *Gone with the Wind*. In the latter Clark Gable and Vivien Leigh starred in the romantic film about life in Atlanta before, during, and after the American Civil War.

Charlie Chaplin in *A Dog's Life*, with Edna Purviance. Chaplin was one of the most recognizable faces of the early days of movies.

During World War II there were a large number of war films and ones on related spy themes, including *Went the Day Well?* (1942), *The Way Ahead* (1944), and *In Which We Serve* (1942), which starred Noel Coward and was directed by David Lean. Other British films of the prewar and early wartime period include Robert Louis Stevenson's *Treasure Island* (1934); R. D. Blackmore's *Lorna Doone* (1935); John Buchan's *The 39 Steps* (1935), starring Peggy Ashcroft (1907–91); Baroness Orczy's *The Scarlet Pimpernel* (1934), directed by Alexander Korda; *Mutiny on the Bounty* (1935), starring Charles Laughton (1899–1962) as Captain Bligh and Clark Gable as Fletcher Christian; *The Charge of the Light Brigade* (1936); Ryder Haggard's *King Solomon's Mines* (1938); *Marie Antoinette* (1938); George Bernard Shaw's *Major Barbara* (1940), starring Rex Harrison (1908–90); Daphne du Maurier's *Rebecca* (1940); Robert Louis Stevenson's *Dr. Jekyll and Mr. Hyde* (1941); and Jane Austen's *Jane Eyre* (1943).

In the United States films on war themes included *Desperate Journey* (1942), pitting Errol Flynn against

the Germans; *Casablanca* (1942), starring Humphrey Bogart, Ingrid Bergman (1915–82), and Claude Rains; *Mrs Miniver* (1942); *Forever and a Day* (1943); *Objective Burma* (1944); and *Going My Way* (1944), starring Bing Crosby. There were also a number of other great successes, including John Huston's *The Maltese Falcon* (1941), starring Humphrey Bogart, Mary Astor (1906–87), and Sidney Greenstreet (1879–1954); *Citizen Kane* (1941), directed by Orson Welles (1915–85); A. J. Cronin's *The Keys of the Kingdom* (1944); and Howard Spring's *Fame Is the Spur* (1947). Mention should also be made of Rudyard Kipling's *The Jungle Book* (1942), which starred Sabu (Sabu Dastagir, 1924–63). The impact of Walt Disney on the movie industry began with *Snow White and the Seven Dwarfs* (1937), *Pinocchio* (1940), and *Bambi* (1941).

In Europe film production during the 1920s and 1930s saw large numbers of films produced, although not on the level being produced in Hollywood. In France there were many French-language films, with actors Maurice Chevalier (1888–1972) and Jacques Tati (1908–82) being the best known abroad. Others include Jean-Louis Barrault (1910–94), who appeared in *Les Enfants du Paradis* (1944); Charles Boyer (1897–1978); Danielle Darrieux (b. 1917), who appeared in *La Ronde* (1950); and Michèle Morgan (b. 1920), who starred in *La Symphonie Pastorale* (1946). Of the many German film producers and directors of the period, Leni Riefenstahl became the most famous with her *Triumph of the Will* (1936).

Elisabeth Berner (1898–1986) was born in Poland and trained in Vienna, becoming the favorite actress of the German stage director Max Reinhardt and appearing in his first film, *Der Evangelist* (1923). Another German film star was Conrad Veidt (1893–1943), who was born in Potsdam and after also acting at Max Reinhardt's theater, starred in silent films such as *The Cabinet of Dr. Caligari* (1919), *The Student of Prague* (1926), and *The Hands of Orlac* (1926). When the Nazis rose to power he wanted to leave Germany because of his Jewish wife. Eventually, he was allowed to move to Britain, where he became a British citizen, playing German roles in *Nazi Agent* (1942) and *Casablanca* (1942).

Mention should also be made of Vienna-born Luise Rainer (b. 1910), who played a key part in *The Good Earth* along with Paul Muni; and Anton Walbrook (1900–67), also from Vienna, who starred in *Gaslight* (1940). Also from Europe were Swedish actress Greta Garbo (1905–90) and German singer and actress Marlene Dietrich (1901–92).

In Shanghai, Hong Kong, and Singapore the Shaw brothers dominated the film industry, and the Cathay Film Company was also formed covering British Malaya and Singapore. Mention should also be made of two film actresses who rose to important political positions, both by marriage.

In 1937 a film actress, Jiang Qing, left the Chinese city of Shanghai to join the Chinese Communist Party, marrying its leader, MAO ZEDONG, in the following year. In Buenos Aires actress Evita Duarte (later Evita Perón) starred in a number of films before meeting and then marrying Juan Perón, who went on to become president of Argentina.

After World War II the British at Ealing Studios produced a number of important films, including *Whisky Galore!* (1948), *Passport to Pimlico* (1949), *Kind Hearts and Coronets* (1949), and Graham Greene's *The Third Man* (1949). Mention should also be made of Italian films, one about the wartime resistance to the Germans in Rome in *Open City* (1945), directed by Roberto Rossellini (1906–77), who married Ingrid Bergman; and *Bicycle Thieves* (1948), directed by Umberto Scarparelli.

A number of Italian actors found work overseas, with Paul Henreid (1908–92), from Trieste (then a part of the Austro-Hungarian Empire), going to Hollywood, where he starred in *Casablanca*.

In the United States some important films were produced in the late 1940s, but it was not long before the House Committee on Un-American Activities turned its attention to Hollywood resulting in many actors, writers, and directors leaving for Europe, including Charlie Chaplin, Morris Carnovsky (1897–1992), and Dalton Trumbo (1905–76), and many more unable to get work. It also saw others like Ronald Reagan (1911–2004), president of Screen Actors Guild, and later president of the United States, rise to prominence.

JUSTIN CORFIELD

muckraking

During the early 20th-century heyday of America's progressive movement, many journalists published slashing articles that revealed problems and faults in U.S. business, government, and social conditions. Their exposés, most published in nationally circulated magazines, often helped to spark important reforms but arguably failed to change society in fundamental ways. Investigative journalism is still often called "muckraking."

Although this style of journalism began in the late 19th century, when author-photographer Jacob Riis showed "how the other half lived" in New York's urban slums, the term was popularized in 1906 by President THEODORE ROOSEVELT. Infuriated by a series of articles denouncing the U.S. Senate, Roosevelt publicly berated author David Graham Phillips for seeing only the bad and the corrupt in U.S. life. Like the man obsessively raking muck in John Bunyan's 17th-century religious tract *Pilgrim's Progress*, such critics, said the president, failed to acknowledge beauty and social advancement.

There was plenty of raking to do. Ida Tarbell was foremost among muckrakers who focused on the misdeeds of business and laissez-faire capitalism. Born in Pennsylvania oil country, Tarbell saw her oil refiner father lose his livelihood to an oil scheme put together by John D. Rockefeller and others.

Nevertheless, she became the first woman to graduate from Pennsylvania's Allegheny College. Between 1902 and 1904 her exhaustively researched book, *The History of the Standard Oil Company*, was serialized in *McClure's* magazine, and it was later published in book form. Her work has been credited with helping to instigate a 1911 U.S. Supreme Court ruling that broke up the Standard Oil trust.

McClure's in 1902 also began serializing Lincoln Steffens's *The Shame of the Cities*. Visiting St. Louis, Minneapolis, Pittsburgh, Philadelphia, Chicago, and New York, Steffens found ample evidence of graft, kickbacks from public utilities, unofficially sanctioned prostitution, and manipulation of police forces, all in the cause of enriching corrupt municipal officials. He also found honest workers who helped him reveal these

practices and earnest efforts at good government. Collected into a book, *Shame* created a stronger push by progressives, including JANE ADDAMS, for local government reforms.

Charles Edward Russell, the son of Iowa abolitionists, was a muckraking jack-of-all-trades, writing primarily about business misdeeds in such industries as meat packing, railroads, and housing. A declared socialist, Russell nevertheless supported WOODROW WILSON's preparations for WORLD WAR I. His investigation of the Beef Trust inspired Upton Sinclair's 1906 muckraking novel *The Jungle*, an exposé of danger and filth in Chicago's slaughterhouses and mistreatment of a largely immigrant workforce.

In 1909 Russell was a founding member, with black sociologist W. E. B. DUBOIS, of the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), but muckrakers, most of them white, paid little attention to the plight of African Americans as the nation grew more segregated.

Ida B. Wells, another NAACP cofounder, fled her Memphis home in 1892 after a white mob destroyed her newspaper office. From Chicago she continued investigating and publicizing lynching, the extralegal system of "justice" used in the South and elsewhere mainly to terrorize and control African Americans. Her *Southern Horrors: Lynch Law in All Its Phases* and many other writings and personal appearances also brought news of U.S. racial injustice to Britain and other European nations.

MARSHA E. ACKERMANN

Mukhtar, Omar

(1862–1931) *Libyan politician*

Many successive empires ruled present-day Libya until the Ottoman Turks conquered it in 1551. Libya remained under Ottoman control until the 1911 Italian invasion; the Italians desired it mainly as a strategic location. British colonial forces had control of Egypt, and the French had made claims in North Africa as well. The Ottomans, whose last North African territory was Libya, were extremely weak owing to a recent

revolution and were unable to defend against the Italian invasion. Faced with bombardment by the Italian fleet under Admiral Farafelli, the Ottoman Turks abandoned Tripolitania, which the Italians easily captured. The Italian presence was made official after a Turkish-Italian treaty was signed in October 1912 giving Italy control of Libya.

After WORLD WAR I ended in 1918, Italy expressed its desire to construct a “Second Roman Empire” that encompassed Libya. This idea was propagated under BENITO MUSSOLINI and included the resettling of Italians in the agricultural areas of Libya along the coast as well as the construction of roads, communication lines, and military facilities throughout the country. In 1929 the Italians used the term “Libya” officially, and in 1939 they made Libya an Italian colony.

The Italian occupation was immensely unpopular in Libya. Immediately after the Italian conquest in 1911, resistance groups formed to push the Italians out. One group, the Sanusiya movement, under the direction of Muhammad Idris al-Mahdi al-Sanusi, mounted resistance to the Italian occupation. Omar Mukhtar led the most famous resistance movement.

Omar Mukhtar was born in 1862 in the town of Zawia Janzour. He was from the Mnifa tribe and a Qur’anic teacher by profession. After the Italians took over in 1911, he initiated and led a campaign against the occupation that lasted for 20 years. He fought a guerrilla war against the Italians, using his extensive knowledge of the Libyan terrain to successfully attack and harass them. Mukhtar had a strong following among Libyans, receiving food, supplies, and fighting men from the local population.

Since the Italians could not capture Mukhtar, they decided to cripple his support base by incarcerating the Libyan population in concentration camps. These horrific camps interred an estimated 125,000 Libyans, of which two-thirds perished because of the appalling conditions. The resistance continued despite the concentration camps, which only served to increase anger among the Libyans. When Omar Mukhtar was around 70 years old, he was wounded in battle and captured by the Italians. He was interrogated, tortured, and hanged on September 16, 1931.

Omar Mukhtar is a hero to the Libyans and is still revered in the 21st century. After Mukhtar’s execution the Italians were able temporarily to subdue Libya until it became a battleground in WORLD WAR II, during which Libya was the scene of massive desert battles between the German-Italian armies and the British-French armies.

Munich Pact

See APPEASEMENT ERA.

Muslim Brotherhood

The Muslim Brotherhood, or the Society of the Muslim Brothers (also known as the Ikhwan), was established in Egypt by Hassan al-Banna in 1928. The new organization stressed community, games, and healthful pursuits. Although al-Banna denied it, some alleged that the brotherhood was patterned on the YMCA, which had opened branches in several Arab countries, including Egypt.

Born in 1906 in a lower-middle-class family, al-Banna was influenced by Sufi orders and took an active role in school activities. He attended school at Dar al ‘Ulum and taught at a government school in Ismailia, where the brotherhood began. A good speaker, al-Banna visited mosques and began to attract youthful members to his new organization. The organization, divided into cells with an individual leader, had a gradation of members who advanced by passing examinations.

Periodically, leaders would convene at congresses to coordinate programs. Women’s sub-branches were also established. During the 1930s and 1940s, like other political forces in Egypt, such as the WAFD PARTY with its Blue Shirts and the fascist Young Egypt with its Green Shirts, the Brotherhood also had a secret paramilitary force.

The Ikhwan sought to eradicate all foreign influences. It had pan-Islamic aims and ultimately gained a following outside Egypt, especially among Palestinians in the Gaza Strip, and in Syria and Jordan. The brotherhood advocated the unification of Egypt and Islamic nations on Qur’anic principles. The organization’s aims broadened over the years. Al-Banna sought to use science to increase national wealth and to establish social welfare programs including pension plans. The Ikhwan also considered reviving the caliphate. Initially, many observers underestimated the potential of the organization, which emphasized

the rejuvenation of the Egyptian nation through a return to Islamic principles.

In 1933 al-Banna transferred the headquarters of the brotherhood to Cairo, where he used radio broadcasts to popularize his program. He also sent letters to politicians and began to increase the brotherhood's commercial activities, including ownership of printing presses. These were used to produce a magazine, pamphlets, and various other publications.

From 1939 to 1945 the brotherhood took an active role in Egyptian politics and became a major political force. The brotherhood attracted young members who had become disenchanted with the Wafd, the major political party of the era. Generally eager for immediate results, students were dismayed and angry over the Wafd's compromises and alliances with the British. The brotherhood was also periodically courted by the palace in order to discredit and undermine the Wafd. In 1948 then prime minister Mahmud Nuqrashi arrested and imprisoned al-Banna. A member of the brotherhood took revenge by assassinating Nuqrashi in 1949. But in 1949 al-Banna was in turn killed, probably with the complicity of both the palace and the government.

Al-Banna and the brotherhood strongly supported the Palestinian cause, and many members volunteered to fight for the Palestinians in the 1930s and in the 1948 ARAB-ISRAELI WAR. By the late 1940s the brotherhood probably had close to half a million members.

After al-Banna's death, Ismail al-Hudaybi became the leader, or director general. A lawyer, Hudaybi was not as charismatic as al-Banna, but he doggedly pursued the programs of the organization. The Ikhwan quietly supported the 1952 revolution led by Gamal Abdul Nasser, but when the new regime refused to institute an Islamic state, the brotherhood became disenchanted.

After the brotherhood attempted to assassinate Nasser in 1954, its members were persecuted, imprisoned, or went into exile to other African or Arab nations. Many of the exiles became teachers and subsequently converted students to the cause.

The Muslim Brotherhood fostered an Islamic revival that had major consequences for the 20th and 21st centuries. Many contemporary Islamist movements are offshoots or were influenced by the tenets and approaches of the Muslim Brotherhood. However, many present-day Islamist leaders, believing that the policies and approaches of the brotherhood are too moderate, have adopted more radical programs and strategies to force the establishment of regimes operat-

ing in accordance with their narrow interpretations of Islamic law and tradition.

JANICE J. TERRY

Mussolini, Benito

(1883–1945) *Italian dictator*

Il Duce, "the leader," was born in Predappio, in northern Italy, on July 29, 1883. His father was a socialist blacksmith and his mother a schoolteacher. A brilliant but unruly student, he qualified for teaching in elementary schools in 1901 and soon afterward fled to Switzerland to avoid military service, where he was arrested for vagrancy and then expelled. He had repeated confrontations with the police.

Mussolini's Marxism was greatly influenced by Nietzsche's reactionary modernism and Social Darwinism, Spengler's anthropological and historical pessimism, and Sorel's revolutionary syndicalism. However, before WORLD WAR I he had remained true to the socialist commitment to pacifism, so much so that during the war between Italy and Turkey (1912) he was apprehended for pacifist propaganda.

He eventually broke away from the party in 1914, following the outbreak of World War I. The Italian government had temporarily opted for neutrality and tested the waters to see which side would offer a better deal for an Italian military intervention. The Socialist Party condemned the war, arguing that it was a carnage that would only benefit big industrialists. Initially inclined to stick to the party line, within a few weeks Mussolini made a sudden about-face and joined the prowar side.

His inextinguishable ambition, moralistic intransigence, and aggressive temperament led to his resignation from the editorship of *Avanti* and from the party.

In November 1914 he founded *Il Popolo d'Italia*, the would-be Fascist official newspaper. When Italy joined the war on the side of the Entente, Mussolini was conscripted and attained the rank of corporal. In 1917 he was wounded during grenade practice and returned to Milan, where he launched his own political party in 1919. Badly defeated at the first general elections, held in the same year, Mussolini resolved that fighting workers' militancy would earn him the respect of

the middle and upper middle classes. Consequently, he organized the rank-and-file members of the party, who were mostly war veterans, in armed squads (*squadrace*) and instructed them on how to intimidate Catholic and Socialist political activists.

When three liberal governments in a row failed to restore order, King Victor Emmanuel III asked Mussolini to form a new government in October 1922. The famous MARCH ON ROME was rather a triumphal parade of the winning side. Liberal deputies, more concerned with the unrest of the working classes than with liberal safeguards, did not object to the imposition of strict censorship and to an electoral reform that clearly favored the Fascist Party.

As a result, between 1925 and 1926, following the murder of the Socialist leader, Giacomo Matteotti, Mussolini transformed his government into a dictatorship and Italy into a police state by abolishing all other parties; controlling the press, trade unions, and youth education; centralizing the economy; and having his opponents silenced by the secret police and the Fascist Party militia.

He then propagated through the mass media the main tenets of the Fascist ideology, which was described as the third way between socialism and the market ethos. Mussolini dismissed liberal democracy as decadent and unable to stir the souls of the masses and imposed his ostensibly antimaterialistic, antipositivistic, ruralist, and at once militarist and technocratic worldview, intending to offset universalist and cosmopolitan trends as well as bourgeois hedonism and its obsession with rights to the detriment of duties. Mussolini preached the inequality of individuals, human groups, and nations and portrayed citizens as mere corpuscles immersed in the eternal stream of history and of the internal dynamics of the organic Fascist state.

Mussolini also advocated absorption of private conscience into the collective conscience of the body social, which entailed the subordination of individual welfare to the needs of communal welfare and the abolition of individual rights. Mussolini's economic policies involved autarchic neoprotectionism, centralized control of the national economy, a meticulous division of labor, large industrial cartels, and the coordination of transnational economic blocs. Mussolini's conception of totalitarian demography privileged quantity over quality, and he offered prizes for the most prolific mothers. His ruralist bent arose from his fear that industrial cities exerted devastating effects on people's health, which was intolerable for a country that was bound to revive the glories of the

Italian Fascist leader Benito Mussolini joined forces with Germany and Japan to form the Axis powers in World War II.

Roman Empire and therefore needed as many able-bodied men as possible.

In 1929, with the LATERAN TREATY, Mussolini made several important concessions to the pope in exchange for his recognition of the Italian state. This allowed il Duce to reach the height of his popularity and power.

However, fascism could not exist without the prospect of an approaching victorious war. From the start,

Mussolini had toyed with the idea of reconquering the Mediterranean basin, and this explains his decision to bombard Corfu in 1923, to exterminate the seminomadic Libyan Bedouins who refused to surrender, and to invade Abyssinia (Ethiopia) in 1935–36 and subdue it by means of mustard gas, phosgene, flamethrowers, the slaughter of civilians, forced labor camps, and scorched-earth tactics. He also bombed Red Cross encampments in Ethiopia as a retaliation for their denunciations of the Fascist atrocities.

The ensuing international sanctions drove Mussolini out of the LEAGUE OF NATIONS and into a deadly alliance with ADOLF HITLER, which was sealed by the NAZI-Fascist intervention in the 1936–39 SPANISH CIVIL WAR on the side of the future Spanish dictator, general FRANCISCO FRANCO.

A pact of mutual defense, the Pact of Steel, which paved the way to WORLD WAR II, was finally signed by Mussolini and Hitler in May 1939. After the proclamation of the empire (May 1936), he adopted segregationist and anti-Semitic legislation more extensive and stricter than that of Nazi Germany.

The German attack against Poland in September 1939 took Mussolini by surprise. In spite of Mussolini's militaristic rhetoric, the Italian army had demonstrated in Spain that it was not prepared for a full-scale conflict with the world's major powers. However, completely blinded by the prospect of a quick defeat of France, he declared war in June 1940, only to be bitterly disappointed when the United Kingdom refused to give up the fight and defeated the Italians in Egypt and Libya, and the Greeks not only halted the Italian invasion of

northern Greece but also forced the Italian army into an inglorious retreat at the end of 1940. From then on Mussolini's fate was in the hands of Germany.

Thus, the king ordered that Mussolini be placed under arrest. The former Duce was rescued by German paratroops a few months later and proclaimed the Italian Social Republic, nothing but a puppet state in German-occupied northern Italy. To prove his loyalty to Hitler, Mussolini had his son-in-law, Galeazzo Ciano, executed on the charge of treason.

By the end of 1944, approximately 16 free partisan republics had been formed in various valleys of northern Italy, and the Social Republic was quickly sliding into an all-out civil war and was being carpet bombed by the Allies. In April 1945 the German army was retreating, thousands of partisans were streaming from the valleys into the cities, and Mussolini once again attempted to seek refuge in Switzerland. He was recognized and arrested by the partisans and summarily executed along with his mistress Claretta Petacci in a village on Lake Como.

STEFANO FAIT

NAACP (National Association for the Advancement of Colored People)

Founded in 1909, the NAACP is an organization whose purpose is to use the legal system of the United States to force the government to provide civil rights equitably to U.S. blacks. It came into being in reaction to the violent racism that plagued the United States at the time.

After the end of Reconstruction allowed the imposition of de facto and then de jure segregation, African Americans lost many of the legal protections established by laws and amendments to the U.S. Constitution. Violence against blacks became common as lynching reached epidemic proportions. Economic and social discrimination increased. Blacks found themselves second-class citizens or worse in white America. Black leaders were in a quandary over how their people should handle the deteriorated situation.

In 1895 educator Booker T. Washington, the most prominent black of his time, proposed that African Americans should accommodate. They should allow segregation to continue while they used self-help to develop their own society and to improve their economic condition. Washington hoped that U.S. society would notice the gradual improvement and come to accept black participation in the white political and social systems. Washington established the Tuskegee Institute in Alabama as a segregated vocational school to teach blacks practical skills they needed for everyday life.

Not all black leaders agreed with Washington's accommodationism. Some looked at the increase in poverty and the backwardness of a Jim Crow system as separate and blatantly unequal. They also noted the outrageousness of hundreds of lynchings a year. They regarded Washington as a tool of the white system. Among the critics who engaged Washington in a long debate was the intellectual W. E. B. DuBois.

For over a decade the debate continued as black Americans suffered. Then in 1905 DuBois and William Monroe Trotter called a meeting at Niagara Falls, Canada. The meeting led to the formation of the Niagara movement, which rejected Washington's gradualist accommodationism and called for vigilance and protest. The Niagara movement was premature. Washington was too powerful. By 1908 the movement was history. Its message, however, lingered: There would be no more appeasement of white racism by black Americans.

The NAACP came into being in 1909, formed by DuBois and other blacks and whites dedicated to legal resistance of Jim Crow discrimination and segregation. Among the founders was Oswald Garrison Villard, the editor of the *New York Evening Post* and grandson of the abolitionist William Lloyd Garrison. A charter member was Mary Church Terrell, the first president of the National Association of Colored Women. Also among the founders were the lawyer Clarence Darrow and JANE ADDAMS, social worker, peace activist, and founder of Hull-House.

The NAACP campaign against the decades-old plague of lynching set the approach it would take—long,

deliberate, and difficult campaigns that would entail first bringing attention to the problem through its newspaper, *The Crisis*, then issuing lengthy and detailed reports and lobbying Congress for changes in the laws. The U.S. House of Representatives passed federal antilynching laws in 1922, 1937, and 1940, but each time the legislation died in the Senate, falling victim to actual or threatened filibusters. The NAACP persisted, but the federal government never passed such legislation.

The NAACP did not spend all of its time on the antilynching effort. It also investigated other civil rights abuses and litigated discrimination cases in areas including the segregation of streetcars and railroad trains, residential restrictive covenants, segregated schools, and general abuses of civil rights and liberties including the ban on blacks on juries and the denial of voting rights. Civil rights action through the mid-1930s included work on behalf of accused criminals who rarely enjoyed juries of their (black) peers. The NAACP was also active in working to get equal salaries for black public school teachers. Sometimes it won. Often it lost. Always it kept the issues in the public awareness.

FAIR TRIALS

On the matter of fair trials, a significant success occurred in 1919 in Arkansas. That year black farmers tried to form a union. In retaliation, a white mob killed more than 200 black men, women, and children. Local authorities arrested 79 black sharecroppers and charged them with murder.

The trial featured coerced testimony and a defense that called no witnesses. A white mob threatened during the trial to lynch any found not guilty. After a single hour of deliberation, the jury declared 12 of the defendants to be guilty of crimes warranting a sentence of death. Others received long prison terms. The NAACP appealed the case for four years before the U.S. Supreme Court agreed to hear the case. In *Moore v. Dempsey* the court overturned the convictions.

The NAACP attempted to fight restrictions on the black vote. In *Guinn v. United States* the NAACP successfully convinced the Supreme Court to overturn Oklahoma's grandfather clause, which allowed the vote to only those persons whose grandfathers had voted and effectively excluded all but a handful of blacks. Southern states found new methods of disenfranchising blacks.

A popular choice was defining political parties as private and allowing them to select their members, which meant that the parties and their primaries would be white only. In the one-party South the primary was

the election, so the white primary denied blacks access to the ballot. Decades later, in 1945, *Smith v. Wright*, brought by the NAACP, eliminated the white primary.

The NAACP had early on developed a somewhat schizophrenic character, with DuBois, as editor of *The Crisis*, stressing publicity and lobbying, and the legal staff continuing the slow and tedious work of litigation. DuBois became more radical as he aged. He was more concerned with civil liberties and the working class across race lines, and he thought that the NAACP's preoccupation with segregation was excessive.

He also thought that the NAACP was becoming increasingly conservative, moving toward Washington's accommodationism. When the NAACP shifted its focus from *The Crisis* to the courts in the 1930s as it took up segregation as its major target, it completed the split. In 1934 DuBois left the NAACP and established the National Negro Congress, a union of 600 black organizations with a focus on economic justice.

LITIGATION

With DuBois and the economic radicals out of the picture, the NAACP under president Walter White used the resources of the NAACP legal department, especially Charles Houston and Thurgood Marshall. For two decades the NAACP focused strongly on ending school segregation, lynching, and the Jim Crow system. The process entailed litigating against one city, state, or county at a time, forcing the party sued to show that it was complying with *Plessey v. Ferguson*. The NAACP forced those it sued to either upgrade their black facilities to the white standard or abandon the separate but equal myth of *Plessey*. In the 1930s and 1940s the NAACP began eroding the legal basis for segregated educational systems, and in 1954 it won its most important victory in *Brown v. the Board of Education of Topeka, Kansas*, which ruled that separate was inherently unequal and opened the door to the civil rights revolution of the 1960s.

The "Second Reconstruction" occurred thanks to, but largely without, the NAACP. After white backlash and timid enforcement of the laws by the Eisenhower and Kennedy administrations, black Americans began forcing the battle in the early 1960s with sit-ins, freedom rides, and other methods of peaceful confrontation.

The NAACP was hamstrung by state efforts such as one that occurred in Alabama. There the state used anticommunist legislation to demand the membership rolls of the NAACP. Because the NAACP was a locally based rather than a national organization, the release of its membership rolls would have proved fatal. But the

case kept it in court and unable to be an effective part of the Civil Rights movement.

JOHN H. BARNHILL

Naidu, Sarojini

(1879–1949) *Indian nationalist leader*

Sarojini Naidu was born on February 13, 1879, to Aghornath Chattopadhyaya and Varada Sundari in the city of Hyderabad, India. She began studying at the King's College of England in 1895. Her childhood love for poetry resulted in the publication of collections of poems including *The Golden Threshold* (1905), *The Birds of Time* (1912), and *The Broken Wing* (1917), written in English but with an Indian ethos. Her poetry earned her the name of “India's Nightingale.” A strong believer in the philosophy of Brahma Samaj, Sarojini took the bold step of getting married to Govindarajulu Naidu outside her caste at the age of 19 per the Brahma Marriage Act (1872). A powerful orator, she gave speeches on themes like the emancipation of women, youth welfare, and nationalism.

Sarojini Naidu plunged into the nationalist movement in 1903 and came into contact with leaders who were fighting for an India free of British colonial rule. MOHANDAS K. GANDHI and Gopal Krishna Gokhale (1866–1915) influenced her political career. At the behest of Gokhale she devoted herself to the cause of Indian nationalism. Naidu met Gandhi in 1914 and became his disciple. During her tour to Great Britain with Gandhi, she criticized colonial rule openly among the British intelligentsia.

Naidu and Gandhi opposed the British government's Rowlatt Act, enacted in March 1919 to counter Indian protests. She also supported the Indian Home Rule League. Naidu also worked for Hindu-Muslim unity. She became influential in the INDIAN NATIONAL CONGRESS (INC) and was elected its delegate to the East African Indian Congress in January 1924. She was elected president of the INC in the Kanpur session of

1925 and was the first woman to become its president. She went to the United States in October 1928 as an emissary of Gandhi, preaching his doctrine of nonviolence. Naidu joined the second civil disobedience movement that had begun in March 1930. She was arrested and released in January of the next year. She went to London along with Gandhi to participate in the ROUND TABLE CONFERENCE. During the Quit India movement of August 1942 she was imprisoned for 21 months.

After India's independence on August 15, 1947, Naidu was appointed the governor of Uttar Pradesh. She died on March 2, 1949.

PATIT PABAN MISHRA

National Congress of British West Africa

The National Congress of British West Africa (NCBWA) displayed the relatively moderate, reformist spirit of many black African professionals and intellectuals of the interwar period. Without challenging British control over their territories, the congress pressed for an increase in African representation in advisory councils, the creation of a West African university, and a respect for traditional forms of land ownership. The group's leaders, particularly JOSEPH EPHRAIM CASELY HAYFORD, promulgated a Pan-African ideology and attempted to build a sense of shared interests among the inhabitants—or at least the native-born black political leaders—of the four British colonies in West Africa: Nigeria, GOLD COAST (now Ghana), Sierra Leone, and the Gambia. The congress achieved a few of its goals, as it encountered opposition from the majority of traditional elites, from radicals in and outside the NCBWA, and from the Aboriginal Rights Protection Society, which the congress sought to supersede.

From the perspective of Casely Hayford and other future leaders of the NCBWA, the Aboriginal Rights Protection Society had failed to capitalize upon its success in

convincing the British not to impose the proposed Lands Bill in 1897. Further, its leadership remained ensconced in Cape Coast and constrained the development of branches in other areas of the Gold Coast. In 1912 Casely Hayford began to broach the notion of a West African Congress with contacts in Nigeria. This scheme attracted support, especially as delegations sent to London from Nigeria and from the Gold Coast had each failed to convince the colonial secretary either to grant Africans greater influence over administration or to include some democratically selected members on governing councils. Advocates of the NCBWA hoped that the concerted efforts of representatives from all four colonies would prove more fruitful. The Aboriginal Rights Protection Society refused Casely Hayford's 1918 request that it endorse such an organization, so the NCBWA formed under its own auspices and developed its own agenda, including PAN-AFRICANISM.

PRIMARY GOALS

The 1919 petition presented to the governor general in Accra by 11 representatives of the general committee of the Protected West African Conference offered an indication of the NCBWA's primary goals. The document was signed by Casely Hayford and presented by the Nigerian leader. After congratulating the British on Germany's defeat in WORLD WAR I and the latter's removal from the ranks of colonial powers, the petitioners requested that the British ask West Africans for their opinions on matters relevant to their governance; the people of the colonies would choose those West African councillors through free elections. They also encouraged the British to respect traditional land rights and to prohibit the importation of alcohol. The Nigerian governor-general transmitted the petition to London; the colonial secretary did not respond.

The NCBWA met for the first time from March 11 through March 29, 1920, in Accra, Nigeria. Representatives from the Gambia (1), Sierra Leone (3), Nigeria (6), and Gold Coast (42) chose Hutton-Mills as their president and Casely Hayford as vice president. They also agreed upon 83 resolutions pertaining to local governance, judicial reform, commerce, and colonial policy. They suggested that the British alter the composition of West African legislative councils to include equal parts Crown nominees and democratically elected representatives. They wanted the creation of municipal institutions, a West African university, and a West African appellate court. They advocated new medical and sanitary efforts, the end of racial segregation in housing, and the establishment of a West African press union

to promote national development throughout the four colonies. Further, they rejected the Franco-British decision to partition Togoland and the British handover of Cameroon to the French, which had occurred without any consultation with its inhabitants.

In 1920 a delegation from the new NCBWA led by Casely Hayford traveled to London and demanded elective representation for the four colonies. Unfortunately for them, the governors-general of Nigeria and Gold Coast resisted such an erosion of British control. Many of the traditional kings and chiefs in Gold Coast disliked the plan because it would diminish their status and the scope of their authority. Another three years passed before the British granted a new constitution, which included a provision for the election of representatives, to Nigeria. Soon thereafter, they granted a similar constitution to Sierra Leone and to Gold Coast. The acquisition of these new constitutions represents the most concrete achievement of the NCBWA.

The NCBWA met several more times: in Freetown in 1923, in Bathurst (now Banjul) in winter 1925–26, and in Lagos in 1930. The congress ratified its constitution at the Freetown meeting. Each meeting generated a list of resolutions, most of which the group never realized. At Bathurst the delegates discussed the possibility of a British West African Federation under a single governor-general. They pondered the establishment of schools across their territories, agricultural banks and cooperatives, and overall commercial and economic independence for West Africa. The congress never achieved any of these items.

The NCBWA remained hampered by its inability to appeal to traditional elites, a rural constituency, or radicals who wanted far more than reform. The colonial office and governors-general regarded the opinions of the congress's members as unrepresentative of African attitudes. The NCBWA's limitations were also caused by internal dissent and an overall antipathy toward tactics any more radical than petitions or newspapers. Ironically, the institution of the new, partially elective bodies that the NCBWA had so fervently advocated ultimately served to divide congress members politically; they found themselves running campaigns against each other and supporting divergent policies. When Casely Hayford died in 1930, the NCBWA disappeared too.

Despite its relative lack of concrete achievements, the NCBWA did help West African leaders in British colonies to understand the region better and to perceive the commonality of their interests. The vibrant civil society and journalism typical of British West African cities, something that did not really exist in

French West African colonies, might testify to the success of agitation by local committees of the NCBWA. The education in activism and the increased political consciousness also facilitated the rise of the next generation of Pan-Africanists and independence leaders, including Kwame Nkrumah.

MELANIE A. BAILEY

Nationalist Party of Indonesia

The Perserikatan Nasional Indonesia (PNI, Indonesian Nationalist Union), an important colonial-period party, was established on July 4, 1927, by Achmad Sukarno and Djipto Kusumey. The members of the Indonesian Union, after coming home from the Netherlands, were not satisfied with political progress in their country. Political activity in Indonesia remained at a minimum after the failure of the communist movement that had been organized by the Partai Komunis Indonesia (PKI, Indonesian Communist Party). The students involved in the movement were joined by Sukarno, who had graduated from the technical college at Bandung. Among these students, Sukarno came into contact with members of the Algemene Studies Club (General Study Club).

The PNI was formed with an agenda of noncooperation with the Dutch colonial government, mass mobilization, and complete freedom for Indonesia. The red and white flag, the national anthem *Indonesia Raya* (Greater Indonesia), and *bhasa Indonesia* (the Indonesian language) became the symbols of Indonesian nationalism. The organization changed its name from Perserikatan Nasional Indonesia to Partai Nasional Indonesia (Nationalist Party of Indonesia) in May 1928.

The PNI fought aggressively for Indonesian nationalism, and within two years its membership swelled to 10,000. Sukarno proved to be an excellent orator, and in his position as chairman of the PNI, he pushed a popular agenda that combined elements of nationalism, Marxism, and Islam. As the symbol of the movement, he chose the *marhaen*, or farmer, who he believed bore the brunt of colonial oppression. He visualized a society free from the control of foreign

capital with emphasis on *gatong rajong* (group spirit). The Dutch government realized the growing strength of the PNI, warning members in August 1929 to cease their activities. Sukarno and other leaders were arrested in December 1929 and charged with jeopardizing public order; Sukarno was given a sentence of four years in prison. The party was also declared illegal. Sukarno's sentence was commuted after two years, and he was released, then rearrested on similar charges. The PNI was dissolved in April 1931.

After the demise of the PNI, small political organizations began to flourish throughout Indonesia. These groups were met by the reactionary policy of Dutch governor-general De Jonge (1931–36), who arrested and exiled Indonesian political leaders. The Minangkabau Sutan Sjahrir (1909–66) and MUHAMMAD HATTA (1902–80), who had come back after finishing his education in the Netherlands, joined a splinter group of the PNI named Pendidikan Nasional Indonesia (Indonesian National Education Club).

After his release Sukarno amalgamated the splinter groups into a mass organization known as Partindo (Indonesian Party). The purpose of this new group was to fight for complete independence for Indonesia. It, too, became leaderless after Sukarno's exile to Flores in 1933. Hatta and Sjahrir also were arrested and sent to Boven Digul. After the independence of Indonesia, the PNI continued as a political party. It was one of the major parties in the 1955 elections aligning with the PKI. The PNI was merged into the Partai Demokrasi Indonesia (PDI, Indonesian Democratic Party) in 1973 under General Suharto (1967–98).

PATIT PABAN MISHRAA

nativism, U.S.

Nativism is antiforeign, anti-immigrant sentiment, and it has been common throughout U.S. history. Nativism is cyclical in U.S. history. Generally, when the United States is expanding and optimistic, then immigrants

are welcome. When the country is stagnating and cynical, then it turns on immigrants. U.S. nativism is more about Americans than it is about foreigners.

Benjamin Franklin was nativist when he wondered whether the Pennsylvania Germans of his time were capable of becoming assimilated. The Federalist Party of 1798 was nativist in trying to preserve an antidemocratic property-protecting system from immigrant editors and pamphleteers. The Alien and Sedition Acts were nativist as well as political. The anti-Catholicism of the 1830s was nativist. The run-up to the Civil War distracted from nativism, and the resurgence came after the war when anti-Asian sentiment, which originated on the West Coast in the 1850s, resulted in national legislation, the Chinese Exclusion Act of 1882. Anti-Asian laws would continue to pass until the 1920s, as would anti-European laws, directed against the different and impossible-to-assimilate new immigrants of the late 19th century who were seen as a threat to an American way already under pressure from the capitalism and industrialism that destroyed the traditional agrarian United States during the Gilded Age.

Organized labor, the American Protective Association, and EUGENICS groups sought immigration restrictions, English literacy laws, and restrictions on parochial schools. They outlawed the teaching of foreign languages in schools. Foreign was seen as undesirable.

RED SCARE

WORLD WAR I stimulated the nativist desire for restriction. Anti-Germanism became antiforeignism, which became antiradicalism, which culminated in the RED SCARE of 1919 and 1920 and the revival of the KU KLUX KLAN, anti-Catholic, anti-Semitic, anticommunist, and antiforeign on top of its historical antiblack prejudice. The Klan drew 5 million members. Again, organized labor asked for restriction of immigrants because they worked for substandard wages and brought the wages of natives down. Another reason for restriction was that the war had produced millions of refugees who might swamp American prosperity if left unchecked. Congress passed a temporary immigration restriction law in 1921 and followed it with the National Origins Act of 1924, which established immigration quotas based on the population profile of the United States in 1890. The law also effectively excluded all Asians.

Immigration control was not sufficient to quell the nativist urge. In the 1920s the Klan enjoyed a national presence. Although born in the South and based on racism, it took on a broader appeal. The Klan resurgence began after D. W. Griffith's *Birth of a Nation* recalled

the 19th-century Klan as heroic. In Georgia William Simmons, a former Methodist minister, reawoke the Klan. It was powerful in Indiana, Oklahoma, and Oregon, and it had a presence in other western states such as Utah. The Klan of the 1920s was opposed to the new morality, the lack of enforcement of Prohibition, and the increase in crime. It was a backlash by a segment of the United States that was losing the battle to modernity. Those who were bypassed by the changing economy, the shift to the cities, and the new ideas of modern art, psychology, and modernism lacked the means to change what was happening to them.

Anti-Semitism was strong in the first half of the 20th century, before and after the Klan. Its practitioners included HENRY FORD, whose *Dearborn Independent* had a readership of about 700,000. The *Independent* featured articles on Jewish gamblers, mobsters, and the dissipation of Jewish music. The Klan literature featured comparable complaints about Jewish jazz and short skirts. Most of all, the anti-Semites blamed Jews for communism. They accepted that the *Protocols of the Elders of Zion* announced a worldwide Jewish conspiracy, and they believed that international Jewry, wealthy and powerful, had bought the Bolsheviks and influenced allied armies to leave Russia during the civil war, thus allowing the Bolsheviks to prevail.

Anti-Semitic nativism also arose in the Military Intelligence Division, which carefully tracked Jews in the military for Bolshevik, then communist, tendencies, an activity that did not wane until the 1950s and 1960s. Nativist anti-Semites feared that the Jews were conspiring against their Christian nation.

Also active in the 1920s were the race theorists Madison Grant and Lothrop Stoddard, who feared the denordicizing of the people of the United States due to the mingling of what they regarded as superior northern Europeans with the "lesser races." White supremacist groups emerged in the 1930s and 1940s, emulating ADOLF HITLER and BENITO MUSSOLINI. Silver Shirts, Khaki Shirts, and Brown Shirts marched and made a display but failed to attract a large following. The mood of the United States in the 1920s and 1930s was isolationist. Rather than "over there," the slogans were "America First" and "Fortress America." Immigration exclusion fit the mood, even when the persecution of Jews turned fatal. The United States failed to lift immigration restrictions to help those it did not want on its shores.

Nativism became quiet after the Exclusion Law of 1924 because immigration slowed during the GREAT DEPRESSION and WORLD WAR II. Even without factoring in the deportation of half a million Mexican migrant

workers and their families (many of them U.S. citizens) in the 1930s, immigration was negative. More left than came in. World War II opened the door slightly, too much for holdover nativists from the 1930s such as Gerald L. K. Smith, who moved from HUEY LONG's Share the Wealth, through America First, to radical right Christian anticommunism in the 1950s.

Even the immigration reform of the 1950s maintained restrictions, allowing time for the southern and eastern European immigrants to assimilate and providing only token access for Chinese, Japanese, Filipinos, and other Asians. The major change came with the Immigration Reform Act of 1965, which sought to renew immigration by the old European immigrants. The act almost absentmindedly brought the third world to the United States. Demographic, linguistic, and cultural diversity generated a new feeling by some U.S.-born citizens that the country was getting away from them. The economy was in crisis due to the 1970s energy crisis and the Vietnam War, which brought about "stagflation" as well as massive increases in the foreign population. The newcomers—Vietnamese, Cubans, and South Americans—were scapegoated. The problem was bilingualism, and in the early 1980s the nativists began agitating for English-only in government and sometimes in the private sector. Some U.S. citizens thought that English-only was a tool for forcing assimilation on immigrants (for their own good), but others used English-only as an excuse to terminate bilingual access to essential services.

JOHN H. BARNHILL

Nazi Party (National Socialist German Workers' Party)

The NSDAP (Nationalsozialistische Deutsche Arbeiter partei), typically called the Nazi Party in English, was a political party in Germany from 1920 to 1945. The party was founded in Munich under a slightly different

name in early 1919, one of many political organizations formed in the wake of Germany's defeat in WORLD WAR I. In September 1919 ADOLF HITLER joined the party as a spy for German army intelligence. The party and its ideology of nationalism, authoritarianism, and anti-Semitism appealed to Hitler so much that he quit his job with the army to devote himself full time to the party. Hitler soon discovered that he was a great orator who could draw new membership to the party. He soon became the party chairman. He changed the party structure from one of elected leadership and collective decision making to that of *Fuhrerprinzip*—he was the sole leader and dictated party strategy and policy. He saw the Nazi Party as a revolutionary organization and sought to gain control of Germany through the violent overthrow of the WEIMAR REPUBLIC.

Hitler and the Nazi Party believed that the Weimar government was controlled by socialists, Jews, and the "November Criminals" who had forced Germany to surrender at the end of World War I, backstabbing the German soldiers at the front just as they were about to see victory. Hitler added a focus of national expansion and pushed policies of anti-Semitism while downplaying the socialistic ideas of the party's founders. Racialism gained prominence through the adoption of the swastika and Aryan identity politics. This racial component and the stated goal of helping the Aryan race to achieve its true destiny set Nazism apart from true FASCISM.

By 1923 party membership had risen to more than 20,000 through campaigning with this new message. To showcase their ideas, the Nazis held rallies once a year at Nuremberg. The rallies advertised Nazi power, unity, and a religious loyalty to Hitler as Germany's savior. The Nazi masses were paraded before Hitler as oaths of loyalty were taken. During the rallies the Nazis introduced new policies and party doctrine. The Nuremberg race laws were unveiled at the 1935 rally. The 1934 rally was best known for the documentary *Triumph of the Will*, created by Leni Riefenstahl to showcase the ceremonies. It became one of the best-known propaganda films of all time.

To enforce Nazi policy on the street and to protect party speakers at political functions, the *Sturmabteilung*, or SA (also known as the Brown Shirts for the color of their uniforms), was formed. They acted as a party militia and used quasimilitary ranks and organization. Their main visible function was to prevent the disruption of Nazi speeches by communist-based militias. Later they were used by the party for fundraising, political canvassing, and abuse of party enemies.

The SA came into conflict with the German army in 1934 after pushing to become the new national German army. The SA leadership was murdered, and the organization became marginalized thereafter.

In Munich on November 7, 1923, the Nazis launched an attempted coup d'état known as the Beer Hall Putsch. The coup quickly failed, and the ringleaders, including Hitler, were rounded up and sent to prison for short sentences. During his jail stay Hitler wrote a combined autobiography and political manifesto titled *Mein Kampf* (My struggle). This book outlined the ideas of a cultural hierarchy with the German Aryans at the top and with Slavs, communists, and Jews at the bottom. The lower people were to be purged from the nation so they could not impede its growth. Hitler also stated that nations grew from military power and civil order. Germany was to grow by expanding to the east into its lebensraum (living space). The people of Germany were to be led through the principles of *Ein Volk, Ein Reich, Ein Führer* (one people, one nation, one leader). The relationship between the people and the state was that of loyalty, duty, and honor for the state, while the leader was responsible for protecting the Aryan race against those who sought to destroy it.

While reflecting on politics during his prison sentence, Hitler decided to switch tactics. The Nazi Party would quit attempting to seize power by force. Power would now be achieved through legal means by winning elections. After his release Hitler's personal bodyguard unit, the SS (SCHUTZSTAFFEL), or protection squadron, became more important, and notable senior Nazi leaders such as Hess, Himmler, Goebbels, and Göring emerged. During the new political period the "Heil Hitler" greeting and the Nazi salute were adopted. Electoral success was very small in the 1924 and 1928 elections, in which the Nazi Party only won 3 percent and 2.6 percent of the votes. The party continued to grow, in part because of the fading of other right-wing political parties and because Hitler assumed leadership of right-wing German politics. The Nazis found support from all areas including small business owners, Protestants, students, rural farmers, and those attracted to paramilitary displays put on by the SA and SS.

The biggest upsurge in Nazi support came as a direct result of the GREAT DEPRESSION of 1929. The economic hardships caused by the worldwide depression compounded Germany's existing problems and set the stage for Nazi expansion by creating a receptive audience. The German left was divided, and its elements could not work together to counter Nazi propaganda. The 1930 elections gave the Nazis 18.3 percent of the

vote. In the weeks leading up to this election, Germany was blanketed by Nazi campaigning techniques, propaganda delivered by radio and through rapid travel by airplane. The continued economic chaos played into the Nazis' hands and pushed more people into the party. In March 1932, Hitler ran for president, losing to Hindenburg. During the campaign the SA and SS battled in the streets against left-wing militias; the escalating violence threatened to throw Germany into chaos. Hitler continued to gain support by promising law and order, while at the same time the Nazis were guilty of instigating most of the violence they preached against.

After the elections, neither the Nazi Party nor the communist parties were willing to form a coalition government, so new elections had to be held with much the same result. After much political manipulation, Hindenburg appointed Hitler chancellor in January 1933. This was seen as a way to solve the electoral deadlock and also as a way to shift blame to the Nazis for Germany's ongoing problems. Hitler did not play into Hindenburg and the cabal's hands. Shortly after Hitler's appointment, the Reichstag was burned down. Hitler and the Nazis used this opportunity to pass the "Enabling Act," which gave the president dictatorial powers in order to prevent a communist revolution. Hitler used his new powers to gain complete control over the government, police, and communications. The German people were lulled into complacency by the new Nazi economic practices, which were able to bring Germany out of the Great Depression by ending unemployment, stopping hyperinflation, and increasing the standard of living.

GERMAN SYNTHESIS

The period from 1933 to 1939 saw the gradual synthesis of the German state and the Nazi Party. The 1935 NUREMBURG LAWS stripped Jews of civil rights, citizenship, and economic rights and banned their marriage to non-Jews. In 1938 active pogroms began with the infamous *Kristallnacht*, which resulted in a number of Jewish murders and involved the destruction of stores, homes, and synagogues; it ended with the deportation of 30,000 Jews to the first concentration camps. During the war years the party and the state became fused, and Nazism gradually transformed into loyalty to Adolf Hitler. With Hitler's death in April 1945, there was little will to keep the party alive. The party was outlawed after the war, and its trappings were removed from society as part of the Allied occupation.

COLLIN BOYD

négritude

Négritude was a literary and then a political movement that developed from the 1930s by a number of intellectuals from French African backgrounds, the most well-known proponents being Aimé Césaire from Martinique, LEOPOLD SÉDAR SENGHOR from Senegal, and Léon Damas from French Guiana. They saw the common African heritage as a uniting force against the French colonial system and the inherent racism in French rule.

The original ideas of *négritude* drew from the HARLEM RENAISSANCE and were influenced by the works of African Americans such as Richard Wright, Langston Hughes, and James Weldon Johnson. These ideas were distilled by Aimé Césaire in the third issue of the journal *L'Étudiant Noir*, the word *négritude* being used for the first time. The magazine was established in Paris by Césaire and two other students, Leopold Senghor and Léon Damas, and became a focus for the concept of a united heritage of the black diaspora in the French colonies; a similar movement, *negrismo*, was used to describe the same ideas in former Spanish colonies.

After WORLD WAR II, the concept of *négritude* became a powerful force, with Césaire being elected as mayor of Fort de France, the capital of Martinique, and then to the French chamber of deputies. In 1948 Jean-Paul Sartre endorsed the ideas of *négritude* in an essay called *Orphée Noir* (Black Orpheus), which was published as an introduction to an anthology of African poetry compiled by Léopold Senghor, who was urging for independence for Senegal. He became its first president, remaining in office from 1960 until 1980. In 1958 the French film *Orfeu Negro* (*Black Orpheus*) was released, set around the Rio de Janeiro carnival. Sartre idealized *négritude* as a more powerful force than that of French colonial racism, but the *négritude* concept became criticized in the 1960s with some subsequent African scholars and political thinkers feeling that it never went far enough, as it defined the French African diaspora more by what it was against than standing by its own values. Nevertheless, it remained an important development in political thinking in the period of decolonization.

JUSTIN CORFIELD

Nehru, Motilal

(1861–1931) *Indian leader*

Motilal Nehru was one of the prominent leaders of the INDIAN NATIONAL CONGRESS (INC) and father of India's first premier, Jawaharlal Nehru (1889–1964). Descended from a Kashmir Brahmin family, Motilal was born on May 6, 1861, to Gangadhar and Jeorani in Agra. He studied at Muir Central College, Allahabad. After passing the law examination in 1883, he began to practice in Allahabad, where his elder brother, Nandlal, had a roaring practice. Motilal's legal practice was also very successful. In 1899 and 1900 he went to Europe and began to develop a Westernized outlook. This liberal outlook was in line with that of the moderates in congress. He began to attend the congress's annual sessions. His rise in politics was gradual: member of the U.P. council, member of the Allahabad municipal board, and ultimately president of the U.P. congress.

WORLD WAR I brought momentous changes in the Indian struggle for independence, and Motilal Nehru emerged as a prominent leader in Indian politics. The ministry (1911–15) of Herbert Henry Asquith (1852–1928) declared India at war with the Central Powers. Nationalist leaders like Nehru supported the war efforts of the British government with the hope that India would be suitably rewarded in its path toward self-government. Nehru followed a strategy of cooperation with the colonial power to achieve self-government. A resolution of self-government on December 1916 was passed by the INC.

The moderate and extremist wings of the INC were united at the Lucknow session of 1916. Nehru played an important role in this. His contribution also was present in bringing about Hindu-Muslim unity in the Lucknow Pact of 1916. This was also the time of the Home Rule League, which was founded by the English theosophist Annie Besant (1847–1933), who had emigrated to India. After much deliberation, Nehru joined the league when Annie Besant was imprisoned in June 1917. He was made the president of the Allahabad branch of the Home Rule League and demanded

home rule or self-government of India after the end of World War I. The British government initiated the Montagu-Chelmsford Reforms, and the INC wanted major changes to the British proposal. Nehru attended the Bombay session of the INC and supported the congress's demand. He also published a daily newspaper called the *Independent* beginning in February 1919.

In Indian politics events were moving fast. MOHANDAS K. GANDHI had called for a general strike in April 1919 after the enactment of the draconian Rowlatt Act, which empowered authorities to arrest and detain without trial. The Jallianwalla *bagh* massacre followed. Nehru was a member of the inquiry committee that had been constituted to investigate the massacre. He argued the cases of persons who had been booked by British authorities. Nehru became the president of the Amritsar session of the INC in December 1919. The next year he was the general secretary of the congress.

The emergence of Gandhi brought a new direction to the Indian freedom movement. It greatly affected Motilal Nehru and his family. Nehru cast his lot with Gandhi and supported the noncooperation movement. He resigned from the U.P. council and gave up his lucrative law practice. Nehru began to wear traditional Indian dress and lead a spartan lifestyle. The British government arrested him in December 1921 and put him in jail for six months.

After his release Nehru found that the noncooperation movement was in decline. Gandhi had called it off in February after the Chauri Chaura incident. Nehru gave up noncooperation and made plans for entry into the legislative councils. He was one of the founding members of the Swaraj (self-rule) Party in January 1923 and contested the elections. R. K. Shanmukham Chetty (1892–1953), the first finance minister of independent India, was the chief whip of the Swaraj Party. It became the largest party in the central legislative assembly and in some legislatures of the provinces. Nehru found it difficult to control different factions in the Swaraj Party in spite of his dominating role. He returned to the mainstream of the INC, and the Swaraj Party functioned as a political wing of the INC from 1925 onward. The INC opposed the formation of the Simon Commission of 1927, as it contained no Indians. It was boycotted, and an all-party conference appointed a committee headed by Nehru to prepare a constitution for a free India. The Nehru Report spelled out dominion status for India like that of Australia, New Zealand, and Canada.

The radical wing of the INC, led by Motilal's son Jawaharlal, opposed the Nehru Report. They wanted complete independence, and the Calcutta session of

the INC in December 1928, presided over by Motilal Nehru, witnessed heated debates. Gandhi's intervention averted a split. It was decided that the INC would launch civil disobedience for complete independence if the British would not grant dominion status within a year. Jawaharlal Nehru was the president of the historic Lahore session of the INC in 1929. Gandhi launched the salt satyagraha with his famous Dandi March in March 1930. Nehru was arrested but released, as he was not in good health. He died on February 6, 1931. Motilal Nehru was one of the important figures in the history of the INC. He was a great parliamentarian and an eloquent speaker and organizer. Although overshadowed by his famous son, Motilal Nehru had carved a niche for himself in the Indian anticolonial struggle.

PATIT PABAN MISHRA

New Deal, U.S.

In his acceptance speech at the 1932 Democratic National Convention, FRANKLIN DELANO ROOSEVELT pledged "a new deal for the American people." The term was subsequently used to describe the spate of government programs and reform laws enacted during the first months of Roosevelt's presidency in 1933; 15 major bills impacting industry, agriculture, banking, and the unemployed were passed during Roosevelt's first hundred days in office to combat the crisis of the GREAT DEPRESSION. Another round of legislation, known as the Second New Deal, was adopted in 1935. The various New Deal programs marked an unprecedented effort by the U.S. federal government to stabilize the country and improve the daily lives of Americans.

Among the most significant legislation was the National Industrial Recovery Act (NIRA) of 1933. The act attempted to stabilize the economy through careful planning, striking a balance between supply and demand. A primary cause of the depression had been the disparity between industrial productivity and consumer purchasing power: While manufacturing output, spurred by rapid technological advances, increased 50

percent during the 1920s, per capita income rose much more slowly at 9 percent, and the result was a precariously inefficient, wasteful national economy. The Roosevelt administration responded by calling for fair competitive practices, production quotas, price controls, and increased wages. To gain the crucial support of business leaders, the administration suspended antitrust laws and permitted major industries and trade associations to govern themselves by establishing compacts under the auspices of the National Recovery Administration (NRA). To gain the support of labor, the administration enforced a minimum wage, a 40-hour workweek, and the outlawing of child labor.

AGRICULTURE

The Roosevelt administration similarly sought to rationalize the agricultural sector of the economy through the Agricultural Adjustment Administration (AAA). Even during the 1920s, American farmers were faced with overproduction, low crop prices, and a heavy debt load, and their plight dramatically worsened during the depression years. The nation's net farm income, worth \$6.1 billion in 1929, plummeted to \$2 billion in 1932. Sheriff's sales were commonplace in rural areas, as farmers could not meet their mortgages; on a single day in 1932 in Mississippi, 25 percent of the land in the state was foreclosed. The AAA made payments to farmers to reduce acreage and eliminate livestock. For example, in 1933 the government subsidized the destruction of 10 million acres of cotton, 6 million piglets, and 200,000 sows. To fend off foreclosures, the Farm Credit Administration lent out \$100 million in 1933 to facilitate the refinancing of mortgages.

While the New Deal attempted to address structural problems in the American economy, there was a pressing need for immediate relief. At the time of Roosevelt's inauguration in 1933, 25 percent of the workforce was unemployed. In response, Congress appropriated \$500 million to form the Federal Emergency Relief Administration (FERA), which disbursed emergency grants to state and local agencies for direct distribution to the poor. In addition, the administration created the Civil Works Administration, a temporary organization that provided small construction and repair jobs for 4 million workers during the winter of 1933–34. As part of the National Industrial Recovery Act, the Public Works Administration (PWA) was established to sponsor large-scale public works enabling steady employment. Among other projects, the PWA completed the Grand Coulee Dam, the Triborough Bridge in New York City, and hundreds of school buildings.

The New Deal produced a hodgepodge of other programs reflecting the administration's ad hoc experimentation in the face of crisis. The Civilian Conservation Corps, one of the president's pet projects, employed approximately 3 million young unmarried men on environmental projects, such as building firebreaks and campgrounds in national parks. The Tennessee Valley Authority (TVA), another project of special interest to Roosevelt, was an effort to bring hydroelectric power to the underdeveloped Tennessee River region, where only 2 percent of farms had electricity in 1932. The TVA built 30 dams to reclaim floodplains and more than a dozen power plants to generate cheap electricity. In 1934 Congress passed the Securities and Exchange Act, which successfully reined in some of the speculative stock market practices that had contributed to the crash in 1929. The New Deal became involved in cultural efforts such as Federal Project One, a relief program established in 1935 to provide work for writers, actors, musicians, and artists. Roosevelt's administration made little effort to aid minority groups and had a particularly poor record on African-American civil rights, as the president hesitated to offend influential southern Democratic congressmen. Nevertheless, the Indian Reorganization Act of 1934 allowed Native Americans increased autonomy on their reservations.

AMERICAN LIBERTY LEAGUE

The most serious political challenge to the New Deal was mounted between 1934 and 1936. During those years, prominent conservative businessmen created a well-publicized lobby group, the American Liberty League, to denounce what they saw as the New Deal commitment to class warfare and incipient communism. The populist Louisiana governor HUEY LONG accused the Roosevelt administration of placating wealthy businessmen, advocating a "Share the Wealth" program that would force the rich to pay for social programs for the poor. A mass movement led by a retired doctor, Francis Townsend, supported the creation of an "Old Age Revolving Pension," by which every American over the age of 60 would receive a monthly federal payment. The Supreme Court dealt the New Deal a blow through several unfavorable decisions; the most significant, *Schechter Poultry Corp v. United States*, ruled unanimously that the National Recovery Administration was unconstitutional.

Always a nimble politician, the president sought to defuse populist discontent by offering moderate versions of the favored programs of his most prominent critics. Historians regard the Second New Deal

Dorothea Lange's classic photo of a migrant mother in California reveals the social cost of the depression.

in 1935 as more directly committed to assisting the unemployed, industrial workers, and the elderly than the First New Deal of 1933–34. The administration instituted the Works Progress Administration (WPA), a considerable expansion of earlier work relief programs that eventually employed more than 8 million people. The National Labor Relations Act extended the labor rights of the NIRA by establishing a National Labor Relations Board to arbitrate collective bargaining.

This guaranteed unions increased protections and served to systematize relations between mass-production workers and their employers. Perhaps the most far-reaching legislation of the New Deal era, the Social Security Act established a “safety net” for Americans, providing not only an old-age pension but also unemployment insurance and federal assistance for needy, dependent children and the disabled.

Despite its enormously ambitious agenda, the New Deal did not produce the hoped-for economic recovery. The gross national product slowly increased during Roosevelt’s first term in office, but in 1937 the country suffered through a significant downturn known as the “Roosevelt Recession,” when business profits dropped by 80 percent.

Farm prices increased by 50 percent between 1932 and 1936, but much of the scarcity in agriculture was brought on by an environmentally devastating DUST BOWL that engulfed the Plains states. The problem of unemployment remained intractable. Unemployment statistics looked much the same throughout the New Deal era: 21.7 percent of American workers were unemployed in 1934, 20.1 percent in 1935, and 19.0 percent in 1938. The general economic mobilization during WORLD WAR II—and not New Deal policy—finally enabled the country to recover from the Great Depression.

Historians have pointed to several problems with the implementation of New Deal programs that impeded their effectiveness. For example, the National Recovery Administration struggled with the unwieldy task of administering competition and production codes for more than 550 separate industries. Small businessmen complained about having no voice in the NRA, and fewer than 10 percent of the code authorities included labor representatives. Large businesses sought to protect their own self-interest and so engaged in price-fixing measures, instituting rules that forbade selling “below cost.” Consumers were thus denied the chance to buy inexpensive goods. The benefits of the Agricultural Adjustment Administration were also unevenly distributed, favoring rural landowners rather than tenant farmers and sharecroppers, who constituted one-fourth of the population in the South during the 1930s. A widespread practice by landowners was to evict their tenants, take that land out of production, and collect payment from the AAA.

The president expressed ambivalence about his administration’s relief efforts. Although these programs were established with the idea that work relief could restore a sense of dignity among the unemployed, Roosevelt was concerned that relief would become “a habit with the country.”

Historians have debated the legacy of the New Deal. During the 1950s, many viewed the New Deal as a triumph for liberalism and democracy. In the 1960s, revisionist historians argued that the New Deal consistently pushed an agenda of “corporate liberalism.” Their analysis held that the depression decade offered an unprecedented opportunity to substantively change

the American economic system. Instead, the Roosevelt administration, influenced by corporate and financial elites, used strategic moderate reforms to defuse popular discontent, thereby safeguarding capitalism.

More recent historians have countered that Roosevelt had no mandate to restructure American society through radical reform. They point to the inherent conservatism of the American people during the 1930s. Corporate interests remained hostile to the New Deal even after it introduced banking and securities reforms that effectively stabilized the financial system. Many of Roosevelt's congressional allies, particularly western and southern senators, were only willing to support the emergency measures of the First New Deal. They were deeply suspicious of expanding federal bureaucratic power and fought against non-emergency reforms.

The New Deal established the template for federal activism—but the Roosevelt administration also understood that this activism should be tempered by the desires of constituents. The New Deal philosophy insisted that Americans had the right to basic welfare protections, initiating “safety net” policies that lasted through the 20th century. Primarily, however, the New Deal was an expedient, improvisatory response to the emergency conditions of the Great Depression.

TOM COLLINS

New Economic Policy, Soviet Union

The New Economic Policy (NEP) was the transition from an inherent policy of “military communism” food surplus requisitioning to regular food taxation accompanied by liberalization of internal trade and a state monopoly on international trade and heavy industry.

The introduction of the NEP was the result of the necessity to maintain the rural population and the agricultural sector of the economy, which were exhausted

by civil war. A famine in 1921–23 in the central part of Russia due to economic as well as ecological and climatic factors was an argument in favor of the revision of existing economic policy.

The NEP was an initiative of VLADIMIR LENIN, who, by the beginning of 1921, had already realized that the young Soviet state could face a peasants' war. The 10th congress of the Russian Communist Party (of Bolsheviks) took place in March 1921 and adopted Lenin's proposal to transition from food surplus requisitioning to a regular taxation system, the starting point of the NEP, called *nepo* or *nep*. From the very beginning the NEP was perceived by Communists as a forced temporary deviation from the immediate introduction of communism based on so-called Marxist ideals.

Changes in the food taxation system (the transition from voluntaristic food requisitioning to regular food and, soon afterward, to money taxation) accompanied other reforms in the economic sphere. One of the most important of them was the introduction of the possibility for peasants to sell their surplus products at free markets, which meant the renewal of free internal trade in the country. Foreign concessions and lease and privatization of small enterprises were allowed, and trusts got permission for their activity on self-supporting bases. The organization of new collective and state farms was temporarily suspended, and private land cultivation and land lease were allowed.

Nevertheless, the building of communism was not cancelled at all, and key aspects of the economy were totally controlled by the Soviet state. It was a sort of Bolsheviks' guarantee that in the future, socialist elements would overcome capitalist ones under the proletariat dictatorship.

The first results of the introduction of the NEP were visible as early as the 1925, when in most Soviet republics grain production was already as high as before WORLD WAR I, and industry production levels were also renewed. Changes in economic policy and a general improvement of human welfare were accompanied by general liberalization in the social and cultural spheres. The end of hunger and economic disaster destroyed the basis for peasants' rebellion movements and contributed greatly to the spontaneous breakup of widely distributed armed bands, particularly in the Ukraine.

Mass repressions were stopped, and amnesty was given to members of groups and noncommunist parties. Political emigrants were allowed to return to the country. Such liberalization, alongside an improvement in general welfare, gave the population under

Bolshevik rule a desire for freedom and caused movement in social and cultural life, ethnic identification, national revival, and other processes noncoherent with proletariat dictatorship ideology.

In social and cultural spheres, signs of the end of the general liberalization of internal policy connected with the NEP appeared as early as 1926–28. Usually they are associated with the campaign against so-called nationalistic deviations in the Ukraine, which was a specific trend in the communist movement that tried to synthesize the building of communist society with national liberation movements. This campaign was accompanied by an attack on the Orthodox and Autocephal Churches and the destruction of monasteries and churches.

In spite of obvious traces of economic growth, the country remained mostly agrarian in its economic orientation and could hardly be competitive with the leading European countries in its struggle for survival. Since the very beginning, the Soviet state had been permanently preparing for the great war against the imperialists, so a well-equipped and modern army needed to be created and maintained. One of the key tasks of the Bolsheviks, headed at that time by JOSEPH STALIN, became an acceleration of heavy industry development, which was ensured by significant investments. It was proclaimed the main goal of the country's development at the 14th congress in December 1925.

The only reliable source of such investments for the Soviet state was an internal one; that is, it could be maintained by redistribution of internal gross product, guaranteed by strictly controlling all spheres of the economy, the agrarian one included. One means of such gross product redistribution—artificially created differences in prices for industrial and agricultural products, with the help of which up to half of the agricultural segment's income was cut in favor of the industrial one—was widely used during the NEP period. By 1926 it resulted in the so-called NEP crisis: Price control by the state caused a significant excess of demand.

Economic policy reorientation, which factually meant dismantling the New Economic Policy, was marked by two epochal decisions by Communist leaders: industrialization and collectivization strategy plans, which came to be known as the Great Breakdown. The first five-year plan of industry development for 1928–33, adopted by the 15th congress of the Communist Party (December 1927), envisaged a high but relatively balanced rate of industry growth. Nevertheless, soon the Communist leadership demanded

acceleration. Investment shortage was accompanied by a food crisis in 1928, which was caused by extremely poor harvests in the main Soviet granaries. It was given as the reason to reactivate food requisitioning, to destroy the agrarian market, to intensify the organization of collective farms, and to begin a campaign against relatively prosperous peasants (*kulaki*), proclaimed by Stalin at the All-Union Conference of Marxists-Agrarians in December 1929.

These decisions faced economically motivated objections, and Stalin's ideas of economic strategic development met strong opposition among Communist Party leaders, including Nikolay Bukharin, Nikolay Rykov, and others. It was a reason that Stalin started his struggle for absolute power, which implied new waves of terror, hunger, and political repressions. In fact, dismantling of the New Economic Policy was the starting point for a final totalitarian regime in the Soviet Union.

OLENA V. SMYNTYNA

Nigerian National Democratic Party

Historians widely credit the Nigerian National Democratic Party (NNDP) as the first political party in Nigeria. HERBERT MACAULAY formed the NNDP in 1922 by organizing a number of Yoruba interest groups into a cohesive single group with the intent of competing politically. In the 1922 elections for the Lagos legislative council, the NNDP won three seats and began its dominance in western Nigerian politics, which would last until the National Youth Movement (NYM) overtook the NNDP in 1938.

Politics within Nigeria during its colonial period were characterized by tribalism and geographic rivalry. The nature of the Nigerian system, along with the political culture of Nigeria, made it difficult for political parties to unite and form lasting coalitions. Obstacles to political participation traditionally included the number of rural citizens, high illiteracy rates, and the fact that Nigerians speak several hundred different languages. The dominant political parties tended to serve local interests: the Action Group is supported by the Yoruba in western Nigeria

and eastern Nigeria; the Ibos in Southeastern Nigeria follow the National Congress of Nigeria Citizens (NCNC); the Northern People's Congress (NPC) boasts support from the north and the Hausa-Fulani tribe.

Nationalism marked the period between WORLD WAR I and WORLD WAR II in Nigeria. Overall, the Nigerian variety of nationalism did not call for independence but for inclusion in the political system. Created by British colonialism, Nigeria reflected a number of different clans and tribes concentrated geographically. The 1922 constitution allowed the political Nigerian the chance to participate in the political process through the election of a number of representatives to the legislative council. One of the many to emerge from the new political opportunities was Herbert Macaulay, referred to as the "father of Nigerian nationalism." His background as a Nigerian civil servant and his education in England gave him a broad background and the experience necessary for successful activism. Macaulay used his newspaper, the *Lagos Daily News*, to awaken Nigerian nationalism.

The early political platform of the NNDP pushed for a number of reforms. Macaulay called for both economic and educational development. Other popular issues with the NNDP were the Africanization of the civil service and self-government for Lagos. The NNDP, however, only remained a force in Lagos until it was overcome by the NYM. Like other Nigerian political parties, the NNDP's inability to expand beyond the city of Lagos made it difficult for it to become a truly national party.

MATTHEW H. WAHLERT

Northern Expedition

In 1923 SUN YAT-SEN made an agreement with the Soviet Union that helped him reorganize the Nationalist Party, or Kuomintang (KMT), and provided military aid to build an army. His price was to admit members of the CHINESE COMMUNIST PARTY (CCP) to the KMT,

where many were given key posts. Sun formed a government in Canton and died in 1925, after which the KMT split, with the pro-Communist wing in command, led by WANG JINGWEI (Wang Ching-wei) and controlled by Soviet adviser Michael Borodin. Anti-Communist right-wing KMT leaders were expelled.

By July 1926 the 80,000-strong KMT army commanded by CHIANG KAI-SHEK and led by officers trained by him in the Whampoa Military Academy was ready to take on the warlords and unify China. It confronted over 800,000 men from three warlord armies. Chiang won overwhelming victories, clearing warlord armies from lands south of the Yangzi (Yangtze) River. In his wake, Wang Jingwei moved the Nationalist capital from Canton to Wuhan. Soviet leader JOSEPH STALIN's goal was to use the Nationalists to defeat the warlords. But after conquering financial centers Shanghai and Nanjing (Nanking), Chiang preempted Stalin by striking first. He purged the CCP from areas he controlled directly and established an alternate government (to Wuhan) in Nanjing in April 1927. In July the leftists in Wuhan finally realized that they were Stalin's next intended victims and, after dismissing the Soviet advisers, broke with the CCP and dissolved their "government."

Chiang resumed the Northern Expedition early in 1928. His major obstacle was Japanese intervention to prevent the unification of China. The Japanese captured provincial capital Jinan (Chinan of Shandong [Shantung] province), killing 16 Chinese diplomats sent to negotiate and several thousand civilians in the Jinan incident. Chiang avoided war with Japan, diverting his troops' advance by a longer route. In June the Northern Expeditionary army entered Beijing (Peking) peacefully. Nanjing became China's national capital, and Beijing was renamed Beiping (Peiping), which means "northern peace." By the end of 1928, the nation was reunified, though nominally for many regions; the KMT became the ruling government, and China entered a new era.

JIU-HWA LO UPSHUR

Nuremberg laws

During the annual convention of the National Socialist German Workers' Party (NSDAP) in Nuremberg on September 15, 1935, the "Nuremberg laws" were passed. This new legislation built the basis for the fascist policies of the Third Reich under ADOLF HITLER that led to the extermination of Jews in THE HOLOCAUST. The laws defined specifically who qualified as a German citizen and thus had the right to official state protection. The laws also clearly defined Jews as enemies of the state and as such stripped them of their rights of citizenship, marginalized them, and prepared for their succeeding mass extermination.

The first Nuremberg law, titled "The Law for the Protection of German Blood and German Honor," prohibited marriages and sexual relations between Germans and Jews and forbade the employment of German women under the age of 45 in Jewish households. It clearly stated a potential danger for fertile German women working in Jewish households. This cast the Jews as lustful beings with little control over their instincts. Jews were portrayed as dangerous to Germans. The first law was passed unanimously in the Reichstag and promulgated on September 16, 1935.

The second law, the so-called Reich Citizenship Law, clarified the relationship between German citizens and the state. It made clear that only Germans determined through blood counted as "nationals." As such, they were considered worthy of protection by the state, but they were also obliged to comply with the provisions that the state made for them. The Reich only considered as citizens those who showed through their behavior that they were personally fit to serve the nation and were loyal to the state. The Reich Citizenship Law was further defined by the first supplementary of the law on November 14, 1935. It used the criterion of purity of blood to distinguish citizens from individuals of mixed Jewish blood and Jews. The state granted the right of citizenship only to full-blooded Germans. Only they were allowed to vote and hold political offices. Jews were explicitly excluded from political participation, and Jews currently in political offices were ordered to retire by December 31, 1935.

The Nuremberg laws were soon followed by "The Law for the Protection of the Genetic Health of the German People," which required all persons wanting to marry to submit to a medical examination, after which a "Certificate of Fitness to Marry" would be issued if they were found to be free of disease. The certificate was required in order to get a marriage license.

The Nuremberg laws built the basis for the exclusion and later persecution of Jews in German society that eventually led to the Holocaust. The laws operated from the premise that Germans were the pinnacle of evolution and that the German blood pool was superior to that of all other races. As such, the NSDAP considered the protection of the pure German blood pool essential and wanted to ensure that German blood did not mix with that of other races.

UTA KRESSE RAINA

Nuremberg Trials

The Nuremberg Trials generally refers to the trials against members of the German leadership for war crimes committed in the period leading up to and during WORLD WAR II. The decision to try these individuals was made during the war. In 1943, President FRANKLIN D. ROOSEVELT of the United States, Prime Minister WINSTON CHURCHILL of Great Britain, and JOSEPH STALIN of the USSR proclaimed in the Moscow Declaration, the intent to hold the German leadership responsible for their actions associated with the war. That same year, the initial meeting of the United Nations War Crimes Commission met in London to address the issue. Although there were differing opinions regarding the scope of the trials, the procedural framework, and the substantive nature of the charges, the ultimate decision was made to prosecute roughly 20 members of German government, military, and industry for their involvement in the war. The main portion of the proceedings was held from November 1945 until August 1946 at the Palace of Justice in Nuremberg.

The Nuremberg Trials were an ambitious undertaking. At the time the charges were brought, there was little, if any, precedent for these charges in international law. The four-count indictment sought to hold accountable not just the individual heads of the NAZI regime, but also the various governmental units. The first count alleged, essentially, that the defendants acted in a conspiracy to commit crimes against peace, war crimes, and

Hermann Göring stands in the prisoner's dock after hearing himself accused of war crimes. Seated beside him is Rudolf Hess, 1946.

crimes against humanity. The second count claimed the defendants engaged in a war of aggression. The third count set out that the defendants had a common plan to commit war crimes. The fourth count alleged crimes against humanity, which included the claim that the defendants persecuted civilians on political, racial, and religious grounds.

Like the substantive charges in the indictment, the procedure by which the defendants would be charged and tried was something unheard of at the time. Because the British, American, French, and Soviet forces had divided the conquered Germany, each country attempted to influence the manner in which the defendants were to be tried. Four prosecutorial teams assembled to address the charges, and there were four judges, as well as alternates, from the four representative nations. The logistics of holding the proceedings were also daunting. Hundreds of thousands of pages of documents were entered into evidence, and over 100 witnesses testified. Because the prosecutors and the judges presiding over the tribunal were from the representative countries, all communications at the trial needed to be translated into English, French, German, and Russian.

The individual defendants were carefully selected so as to represent various segments of the Nazi regime. The defendants were members of the military and government and heads of industry. With Adolf Hitler having committed suicide, the most prominent defendant was Hermann Göring, the commander in chief of the Luftwaffe, or German air force, and president of the Reichstag. Wilhelm Keitel was the chief of staff of

the supreme command of the armed forces. Karl Doenitz, commander in chief of the navy, was Hitler's successor. One person charged, Robert Ley, committed suicide before he could be tried, and two were ultimately deemed unfit to stand trial. All in all, there were 22 named defendants tried, including Martin Bormann, who was tried in absentia. Although the majority of the defendants were convicted, a few were acquitted of some or all of the charges against them. Sentences ranged from death by hanging to imprisonment.

Although the Nuremberg Trials generally refer to the initial trial, there were, in fact, 12 follow-up trials involving other lesser-ranking members of the German government involved in various war crimes and human rights abuses. Although some legal scholars challenge the legitimacy of the trials, they served as a detailed review of the atrocities committed by the German government in World War II. The Nuremberg Trials have served as a model for subsequent war crimes tribunals.

DARWIN BURKE

Nyasaland (Malawi)

Nyasaland is the name for the former British protectorate that is the present-day country of Malawi. Modern Zambia, Tanzania, Mozambique, and Lake Nyasa (Lake Malawi) form the nation's borders.

A number of native ethnic groups inhabit the Nyasaland region, including the Chewa, the Yaos, the Lowmes, the Tonga, the Tumbuka, and the Ngoni. The area has been inhabited for about 12,000 years and was first visited by Europeans when the Portuguese adventurer Gaspar Bocarro explored in 1492. Like most of Africa, Nyasaland suffered the damages of the slave trade that flourished in the following centuries.

After the Scottish missionary David Livingston arrived on the shores of the lake he named Lake Nyasa in 1859, other missionaries answered his call to come to Africa and fight the slave trade. The first European trade station was built in 1884 at Karonga in the northeastern part of the territory by the African Lakes Company, owned primarily by Glasgow traders. As Britain's imperialist expansion continued, what was known as the Shire Highlands Protectorate in 1889

became a protectorate of the crown. The name was changed to Nyasaland Districts in 1891, to the British Central Africa Protectorate in 1893, and still later to the Nyasaland Protectorate. The area was called Nyasaland until its independence in 1964.

Nyasaland's people resented European rule and in 1915, led by John Chilembwe, openly revolted. Although they were unsuccessful in freeing themselves from foreign rule, the Africans continued to work for their independence. The Nyasaland African Congress (later the Malawi Congress Party) was formed in 1944 with this goal in mind. When Dr. Hastings Kamuzu Banda became leader of the party in 1959, the movement for freedom intensified.

In 1953, at the urging of Britain and of white colonial residents hoping to establish a powerful economic center in the region, the Federation of Rhodesia and Nyasaland (also called the Central African Federation) was formed. Salisbury (now Harare) in southern Rhodesia was designated the capital of the federation. Giving powers to five governments made the constitution for the federation one of the most complex ever written.

Two British administrative offices had powers: the Commonwealth Office, which managed affairs with southern Rhodesia, and the Colonial Office, which worked in northern Rhodesia and Nyasaland. In addition, each of these three territories had powerful governors, and there was a governor-general of the federation. In addition, the Africans, especially the government of northern Rhodesia now dominated by Africans, were demanding more political control of their own lives.

Nyasaland gained its independence from Britain in 1964; it was renamed Malawi in reference to the Maravi, a Bantu people who came from the southern Congo about 600 years before, and elected Dr. Banda as the new nation's first president.

JEAN SHEPHERD HAMM

Obregón, Álvaro

(1880–1928) *Mexican president*

The president of Mexico from 1920 until 1924, General Álvaro Obregón Salido was born on February 19, 1880, at the Hacienda de Siquisiva in southern Sonora, in the far northwest of Mexico. The 17th son of Francisco Obregón, who died when Álvaro was young, and Cenobia Salido, it is often claimed that his name was derived from the Irish surname O'Brian. In later life Obregón used to joke that he had so many older brothers and sisters that when the family ate Gruyère cheese only the holes were left for him.

Obregón did not take part in politics when he was young and stayed away from the clashes during the MEXICAN REVOLUTION. He spent this time working on the family farm and was said to have learned the Mayan language during this period, although some biographers claim that he could only speak a few words. He developed skills including carpentry and photography.

In 1911 Álvaro Obregón entered politics, being elected mayor of Huatabampo. He was a supporter of the then president, FRANCISCO MADERO, who was facing four separate revolts. Madero was captured and executed by two of the rebel leaders, Félix Díaz, nephew of a former longtime president, and General VICTORIANO HUERTA. Huerta was an unpopular president, and Obregón joined a revolt led by VENUSTIANO CARRANZA, which overthrew him. With Carranza in power, there were also clashes between the new government's forces and those of PANCHO VILLA. Obregón, aided by Gen-

eral Benjamin Hill, led the federal troops on April 6–7, 1915, when they defeated Villa's men. In a battle that lasted from April 29 to June 5, Obregón again defeated Villa but lost his right arm to a grenade. On July 10 in the next engagement of what became collectively known as the Battle of Celaya, Obregón's men prevailed again.

Obregón had hoped to succeed Carranza when the presidency became vacant in 1920 and was angered when Carranza named Ignacio Bonillas as his successor. This caused Obregón to plan a military revolt to put himself into power. Carranza was deposed and killed in May 1920 and was replaced by Adolfo de la Huerta, who was provisional president until elections could be held. After the elections, which Obregón won, de la Huerta stepped down, and Obregón became president of Mexico. De la Huerta had done much to reduce the fighting in the country, and most of the country was, for the first time in many years, at peace. This situation allowed for more money to be spent on education than on defense. When rebellions did break out, they were quickly crushed, and their leaders were killed.

Although the four years of Obregón's presidency saw further land and agrarian reforms and moves to reduce the power of the Roman Catholic Church, Obregón changed Carranza's hostile approach to the United States to one of establishing better trade and diplomatic relations. When he became president, the U.S. government did not extend recognition to his regime. This initial problem was made worse by the death of a U.S. citizen, Rosalie Evans, who was killed defending her farm from the governor of Puebla, José

María Sánchez. In summer 1923, talks began between Mexican and U.S. representatives and led to the Bucareli Accords, by which the Mexican government rolled back some of the measures that had been introduced by the revolutionaries. Some senators denounced it as going back on fundamental promises made by current and previous administrations. In heated debate the accords were denounced in both the Mexican senate and the chamber of deputies. However, in September 1923 the U.S. government formally recognized Obregón as president of Mexico. Trade increased quickly, especially with the improved sale of Mexican petroleum to the United States.

Obregón's main reason for overthrowing Carranza had been the latter's choice of an heir apparent. This was also going to cause Obregón trouble. He chose PLUTARCO CALLES as his successor, but Adolfo de la Huerta contested this, leading a revolt in December 1923. With U.S. support for his government, Obregón prevented guns from being sold to the rebels, and the rebellion fizzled out, but not before they had killed one of Obregón's allies, Felipe Carrillo Puerto, the governor of Yucatán. Obregón was able to step down as president on November 20, 1924, and then returned to Sonora.

Calles became the next president, and in 1926 there was a change in the constitution to allow presidents to serve nonconsecutive terms. Obregón decided that he would like to contest the next election. In November 1927 Segura Vilchis, a Roman Catholic engineer, threw a bomb at Obregón's car at Chapultepec Park in Mexico City. Obregón survived, but Vilchis and some accomplices were executed a few days later. In 1928 Obregón contested the presidential elections again—he was the only candidate—and won, although he was in bad health. Returning to Mexico City to celebrate his victory, he survived an assassination attempt, but on July 17, 1928, at the La Bombilla restaurant in the capital, he was assassinated by José de León Toral, a Catholic seminary student who opposed the anticlerical policies of Obregón. He was arrested, tried, and subsequently executed.

oil industry in the Middle East

During the 20th century oil became a major revenue source for a number of Middle Eastern nations. The first petroleum concession was signed between the Anglo-Iranian Oil Company (AIOC) and the Qajar shah of Iran in 1901. An Australian, William Knox D'Arcy, negotiated the contract, whereby the shah and the grand vizier received 50,000 shares as a gift. The government was to receive 16 percent of the profits after costs were subtracted. The contract was to last for 60 years, the company was to pay no taxes, and the prospecting covered 500,000 square miles, or five-sixths, of Iran. The British government owned half of Anglo-Iranian Oil, Burmah Oil owned 22 percent, and the rest was owned by a combination of investors. The company justified the extremely favorable terms on the grounds that at the time, prospecting for oil was extremely risky and capital intensive. Dozens of wells might be drilled at great expense before oil was found. Reza Shah managed to obtain better terms after he revoked the first concession in 1932.

The first contract set the pattern for future ones in the region for the next half century. The petroleum industry was a vertical and horizontal monopoly. Western companies controlled the prospecting, sources, transport, refining, and sale of oil. Seven major corporations, or the so-called “seven sisters,” eventually dominated the industry. These were Standard Oil of New Jersey (founded by John Rockefeller), Royal Dutch Shell, British Petroleum, Gulf, Socony-Mobil, Texaco, and Standard Oil of California. Compagnie Française des Pétroles (CFP) and an Italian company were smaller firms. Many of these companies had overlapping ownerships and directors.

Middle East governments were too weak, lacked the technology to develop the industry themselves, and willingly granted concessions giving Western companies control over their vital natural resource. With no private ownership of oil fields in the Middle East, revenues from oil went directly to the governments to be spent as each deemed appropriate. Because the oil was purchased primarily in Western nations for industrial, military, and transport use, the resource did not generate many jobs or secondary industries in the Middle East, unlike, for example, the automotive industry in the West, which created numerous secondary industries.

The second major concession in the Middle East was signed between Iraq and a consortium of Western companies. Calouste Gulbenkian negotiated the contract in exchange for 5 percent of the shares. As a result of this deal, Gulbenkian was dubbed “Mr. Five Percent”

In the 20th century, oil became a major source of revenue for many Middle Eastern nations. As oil increased in value, these Middle Eastern nations were able to become more powerful economically and thus more important to world trade.

and became one of the richest men in the world at the time. Ownership of the company was apportioned as follows: 25 percent D'Arcy, comprising Burmah and the British government and that became known as British Petroleum (BP); 25 percent CFP, of which the French government owned 40 percent; 25 percent Royal Dutch Shell, comprising British and Dutch interests; and 25 percent U.S. gas, including Standard Oil of New Jersey and Socony Mobil. These firms divided payment of the 5 percent for Gulbenkian evenly among themselves. The contract covered all of Iraq for 75 years, allowed for no taxation of the companies, and established a set payment amount per ton. Revenues to oil-producing nations did not increase with prices that were set by the oil companies.

A New Zealander, Frank Holmes, obtained the concession in Bahrain in 1925, and U.S. companies bought into that concession. Holmes also negotiated with Kuwait for a concession there, but production in Kuwait did not begin until 1945.

Standard Oil of California initiated negotiations with King ABD AL-AZIZ IBN SAUD in Saudi Arabia and obtained a concession there in 1933 under the California Arabian Standard Oil Company that was to pay the Saudi Arabian government a set amount in gold sovereigns. During the GREAT DEPRESSION the payment was renegotiated for dollars or sterling. During the 1940s

additional investments by U.S. oil firms were made, and the company became the Arabian-American Oil Company (ARAMCO). Ownership of ARAMCO was divided among Standard Oil of California (30 percent), Texaco (30 percent), Standard Oil of New York (30 percent), and Socony Mobil (10 percent). With assistance from the U.S. government, ARAMCO built a refinery and extensive facilities for the company and its employees in Ras Tanura.

ARAMCO agreed to a 50-50 split with Saudi Arabia rather than paying the 50 percent corporate taxes in the United States in 1950. Other companies, which did not enjoy the same tax benefits from their nations, were reluctantly forced to follow suit.

By 1950 Middle East oil holdings were apportioned along the following lines: AIOC in Iran, Iraq, Mosul, Basra Petroleum companies (IPC) in Iraq, ARAMCO in Saudi Arabia, Kuwait Oil Company in Kuwait, Bahrain Petroleum Company in Bahrain, and Petroleum Development Ltd. (IPC) in Qatar. However, oil production and revenues in Saudi Arabia and the Gulf states did not begin to soar until the 1960s and 1970s as demand from industrialized Western nations and Japan steadily escalated.

JANICE J. TERRY

Olympic Games

The original Olympic Games were played in Olympia, Greece, from the eighth or ninth century B.C.E. to 393 C.E. The Renaissance's renewed interest in things classical inspired occasional small-scale multievent sporting festivals in various European cities throughout the 17th, 18th, and 19th centuries, but the real revival of the Olympic Games themselves began when the site of Olympia was excavated in 1829. When the French lost the Franco-Prussian War in 1871, historian

Baron Pierre de Coubertin proposed that a revival of the games, a truly international competition would not only encourage international camaraderie, it would renew interest in athleticism among French youths, restoring physical competence to a generation. Coubertin and Demetrius Vikelas, a Greek businessman, founded the International Olympic Committee (IOC) to organize a modern Olympics Games.

Unlike the ancient games, the modern Olympics were held at a different site every four years, beginning in Athens in 1896. Athens had been the site of a number of local games held in honor of the ancient Olympics, and there is some dispute today over whether the founder of those games, Evangelis Zappas, should be considered the founder of the modern Olympics. But it was not until the IOC's games that participation became international and widespread; 14 countries competed in 43 events in 10 days, the greatest variety of participating athletes of any sporting event to that date. Greece and the United States won the majority of events. The games struggled to catch on, hampered by the competing popularity of the World's Fair and the difficulty transatlantic journeys posed. In the 1908 games in London, the modern length of the marathon was established as 26 miles and 385 yards; the highlight of the 1912 Stockholm games was the participation of Jim Thorpe, a famous all-around athlete.

In 1924, the first winter Olympics were held as an event separate from the summer games, though the 1924 event was not designated as such until after the fact. The first winter games announced as such were the 1928 games in St. Moritz, where 25 countries competed in 14 events. The 1936 summer games are perhaps the single most famous Olympics Games; they were held in Berlin at the peak of Nazism's popularity before the invasion of Poland and WORLD WAR II. Filmmaker and NAZI propagandist Leni Riefenstahl used technically advanced techniques to film *Olympia*, her chronicle of the games as commissioned by ADOLF HITLER.

Intended to demonstrate the athletic superiority of Aryans over non-Aryans, the movie instead recorded a significant number of non-Aryan victories, including those of African-American Jesse Owens, who won the gold medal in the 100-meter run, 200-meter run, and long jump and as part of the 4 x 100 meter relay team. Despite the Nazi position on his race, Owens was treated as a hero and celebrity in Berlin as much as in any other city, perhaps demonstrating a disconnect between the ruling ideology and the feelings of the people.

American athlete Jesse Owens at the start of his record-breaking 200-meter race at the 1936 summer Olympics in Berlin

BILL KTE'PI

Open Door policy

China's catastrophic defeat in the SINO-JAPANESE WAR (1894–95) and its growing political and military weakness led to a scramble for concessions by Western powers that seemed to presage its eventual partition. The movement began in 1898 with Germany's successful demand to the Qing (Ch'ing) government for a 99-year lease of Jiaozhou (Kiaochow) as a naval base in SHANDONG (SHANTUNG) Province, the right to build a railway between that port and Jinan (Chinan), the provincial capital, and numerous mining and other rights. Shandong became a German sphere of influence as a result. Russia followed by obtaining similar privileges and concessions in the northeastern provinces (Manchuria) and Mongolia, and France in the south and southwestern provinces (Guangdong, Guangxi, and Yunnan) that adjoined French Indochina. Great Britain dominated China's foreign trade, amounting to 60 percent of its total imports and exports. While it feared the division of China into spheres of influence would damage British trade, it nevertheless moved to establish a sphere in the Yangzi (Yangtze) River valley and in areas near Hong Kong.

The United States had not demanded a sphere of influence in China, did not have major trading interests in China, but feared that Western powers might impose discriminatory tariffs in areas under their influence. These concerns prompted W. W. Rockhill, private adviser on Far Eastern affairs to Secretary of State John Hay (1838–1905), to draft a memorandum, with the assistance of British diplomat Alfred E. Hippisley, that Hay sent in September 1899 to the governments of Great Britain, Russia, Germany, France, Italy, and Japan. This, the First Open Door Note, had three points: First, no country would interfere with the interests of others in its sphere of influence; second, no country would discriminate against the nationals of other countries by charging them different railway and harbor dues; and third, tariffs

stipulated by treaties would be collected by the Chinese government within Western spheres of influence. Despite receiving evasive and equivocal replies and no unqualified support from any country, Hay nevertheless announced on March 20, 1900, that all had given their "final and definitive" assent.

The BOXER REBELLION in China precipitated an international intervention in 1900 that threatened to carve up the country. Thereupon, Hay issued the Second Open Door Note on July 3, 1900, in which the United States stated its goal as: to "preserve Chinese territorial and administrative integrity, protect all rights guaranteed to friendly powers by treaty and international law, and safe guard for the world the principle of equal and impartial trade with all parts of the Chinese Empire." Hay did not solicit responses from the other powers on this declaration of principle.

The Open Door policy became one of the cornerstones of U.S. policy regarding China. It was embodied in the Washington Nine Power Treaty in 1922 and the Stimson Doctrine of Non-Recognition of Japan's conquest and installation of a puppet government in Manchuria after 1931.

JIU-HWA LO UPSHUR

Orlando, Vittorio Emanuele

(1860–1952) *Italian politician*

Vittorio Emanuele Orlando was prime minister of Italy from 1917 to 1919 following the Italian army's defeat at Caporetto. Orlando was also head of his country's delegation to the PARIS PEACE CONFERENCE in 1919. Aside from his prominent political role, Orlando, who was himself a professor of law, is also renowned for his writings on judicial issues.

Orlando was born on May 19, 1860, in Palermo, Sicily, where he was also raised and educated. He made a name for himself through his writings on government administration and electoral reform. In 1897, he was elected to the chamber of deputies, the Italian federal parliament. From 1903 to 1905, Orlando served as minister of education under King Vittorio Emanuele

(Victor Emanuel) III. In 1907, Orlando was appointed minister of justice, a portfolio he retained until 1909. He was subsequently reappointed to the same ministry in November 1914, and he became minister of the interior in June 1916.

Italy remained neutral during the initial phase of WORLD WAR I. The country was formally aligned with Germany and Austria-Hungary; a discussion started over whether Italy should enter the war on the Entente's side. Orlando was a strong proponent of Italy's entrance into the war, which took place when the kingdom declared war on Austria-Hungary in late May 1915. Always a strong supporter of Italy's participation in the war even after initial setbacks on the battlefield, Orlando was encouraged in his support of the Allies on the basis of secret promises made by the latter granting vast Italian territorial gains in the Mediterranean.

On October 30, 1917, Orlando became prime minister. It was a time of severe crisis following the disastrous defeat of the Italian troops at the Battle of Caporetto by the Austrians. With his appointment as prime minister having boosted national morale and having successfully rallied Italy to a renewed war effort, Orlando replaced the stubborn general Luigi Cadorna as chief of general staff with Armando Diaz. The following year saw Italian successes on the battlefield and the war's victorious conclusion in November.

Orlando served as prime minister until the end of the war and headed the Italian delegation at the Paris Peace Conference in 1919. However, he proved unable to obtain the expected and promised territorial concessions. Orlando had a serious clash with his allies, especially President WOODROW WILSON of the United States. Orlando's claims to formerly Austrian territory collided with Wilson's policy of national self-determination. Wilson even appealed over Orlando's head to the Italian people on the question of the Mediterranean port of Fiume/Rijeka, which was requested by both Italy and Yugoslavia. Although that maneuver failed, Orlando dramatically left the conference in April 1919, returning only to sign the resultant treaty the following month. His position rapidly undermined by his apparent inability to get concessions from the Allies and to secure Italian interests at the peace conference, Orlando resigned from office on June 19, 1919. He was succeeded by Francesco Nitti.

On December 2 of the same year, Orlando was elected president of the chamber of deputies. In the rising conflict between the new Fascist Party of BENITO MUSSOLINI and the workers' organizations, Orlando at first supported the Fascists. He remained a supporter of Mussolini's government upon its inception at the end of

1922, although he changed his position two years later when the prominent Socialist leader Giacomo Matteotti fell victim to assassination. In 1925, Orlando resigned from parliament in protest against Fascist electoral fraud, serving thereafter in the constituent assembly.

Orlando remained in retirement until Mussolini's fall in July 1943. After the liberation of Rome in early June 1944, Orlando became a leading figure of the newly established Conservative Democratic Union. He was elected president of the constituent assembly in June 1946. Orlando's objections to the peace treaty brought about his resignation in 1947. The following year saw his election to the new Italian senate. The same year he was also a candidate for the presidency of the republic, but he was defeated by Luigi Einaudi. He died on December 1, 1952.

MARTIN MOLL

Orozco, Pascual

(1882–1915) *Mexican revolutionary*

Pascual Orozco served as an important military and political leader in Mexico from 1910 to 1915, ultimately becoming a leading figure of the MEXICAN REVOLUTION. Born in the northern state of Chihuahua in 1882 to a politically active family, Orozco received a few years of primary education and worked in his father's store until becoming a muleteer, transporting ore from local mines. His transportation business prospered, and by 1910 he owned his own team of mules and a retail store and was known as a successful businessman with a good reputation as an honest man.

Orozco's political consciousness awoke with his father's opposition to the regime of Porfirio Díaz. Pascual Orozco, Sr., supported the activities of the Mexican Revolutionary Party, one of the earliest groups to oppose Díaz. In 1910 Abraham González, the revolutionary leader of Chihuahua and a supporter of FRANCISCO MADERO, picked Orozco to be the military leader of his home region of Guerrero. Orozco's reputation as an honest and efficient businessman facilitated

Pascual Orozco (center) served as an important military and political leader in Mexico from 1910 to 1915, ultimately becoming a leading figure of the Mexican Revolution. A member of a politically active family, Orozco had a reputation for success and honesty.

recruitment to the revolutionary cause. On November 10, 1910, Orozco initiated his military offensive, beginning operations the day before the official date set by Madero for the revolution to begin. On November 29 Orozco's forces took Pedernales, Chihuahua, the first significant rebel victory over the federal army. Orozco rose in the ranks to a leadership position, commanding revolutionary activities in the state of Chihuahua, which were marked by several triumphant engagements with Díaz's forces. Francisco Madero returned to Mexico and joined Orozco in February 1911, assuming command of military operations. After a devastating defeat at Casas Grandes, Chihuahua, undertaken without Orozco's knowledge, Madero recognized the talent of his Chihuahuan military leader and promoted Orozco to the position of colonel in the revolutionary army.

In May 1911 Orozco and FRANCISCO "PANCHO" VILLA prepared to attack Ciudad Juárez, a metropolitan center located on the U.S.-Mexico border directly opposite El Paso, Texas. Madero feared the attack could spill over into El Paso, leading to U.S. intervention. He subsequently ordered Orozco and Villa to call

off the attack; they ignored orders and forced the city into surrender. Orozco captured the federal commander at Juárez, General F. Navarro, with hopes that the general would be court-martialed for executing some of Orozco's troops. Madero disagreed and aided Navarro in escaping to the United States. The attack on Ciudad Juárez created tension between Madero and Orozco, tension that reached an apex when Madero failed to reward Orozco for his vital services to the revolutionary cause with the position of governor of Chihuahua or minister of war. Orozco was appointed to the position of commander of the rural guard of Chihuahua, a modest position, and later became the head of the garrison stationed at Juárez. He resigned this position in February 1912 after Madero ordered him to quell the Zapatista rebellion in the south, but Madero refused his resignation. Orozco suppressed one more uprising in the north and resigned again.

Feeling that his talents and contributions to the revolution and Madero's presidency went unrecognized and with the financial backing of oppositional political factions in Chihuahua, Orozco openly denounced the

Madero government. Madero's oversight of Orozco's contributions to his rise to power now put the new president into open rebellion with his most successful rebel leader. Chihuahua raged with violent revolt, and the governor of the state fled for his life. Madero's new government struggled to put down the rebellion and found its coffers drained and its attention taken away from reform projects by the focus on stabilizing the country, especially the north. Madero dispatched General VICTORIANO HUERTA to put down Orozco's rebellion in April 1912. Huerta succeeded in taking back Ciudad Juárez but did not capture Orozco.

A turn of events in February 1913 left Huerta president of Mexico by way of a military coup and Madero's assassination. Huerta needed military support to overcome resistance to his seizure of power and looked toward Orozco as an important ally. In exchange for financial demands and a program of agrarian reform, Orozco became a brigadier general in Huerta's army. In May 1913 Orozco began his northern campaign against Huerta's enemies, experiencing a series of victories, which led to his promotion to general of brigade. He battled Pancho Villa for control of Chihuahua, but disagreements with fellow general Salvador Mercado over political and military affairs ultimately contributed to the defeat of the federal forces. Huerta dispatched Orozco again in April 1914 to Chihuahua to create a base for guerrilla operations, but Huerta's resignation and exile in July 1914 dissolved that operation.

With this change in government, Orozco did not wait for a new administration to revolt. This time, however, he lacked popular support, and within two months he no longer represented a military threat. Now in the United States, Huerta courted Orozco in his scheme to take back the Mexican presidency. Orozco agreed to meet Huerta at Newman, New Mexico, to discuss the conspiracy.

Federal agents had been monitoring Huerta, and the two men were arrested and charged with conspiracy to violate U.S. neutrality laws on January 13, 1916. Orozco escaped federal custody on July 3 but was killed on August 30 by a posse made up of U.S. federal marshals, Texas Rangers, and U.S. Army troops. Some characterized Orozco's death as an execution, finding it odd that Orozco and his four companions were all shot, while the posse suffered no losses or injuries.

KATHLEEN LEGG

Pahlavi dynasty and Shah Reza Khan

At the end of WORLD WAR I, Iran was in desperate straits. The authority of the central government had broken down, and the country faced national bankruptcy in addition to famine in some regions. In 1919 the majlis (parliament) declined a British offer of financial and military assistance, and British support personnel left the country. Reza Khan, the commanding officer of the Persian Cossack Brigade, along with newspaper editor and political writer Sayyid Zia Tabatabai, stepped into the void and seized power in a February 1921 coup d'état. Sayyid Zia Tabatabai became premier, and Reza Khan became commander of the armed forces. On February 26, the new government signed a treaty of friendship with the Soviet Union.

Reza Khan was the true power in the new government. Within three months he had ousted Tabatabai, who went into exile. Two years later, in October 1923, with the support of loyal army forces, Reza Khan became premier, and Shah Ahmad Mirza, the last shah of the Qajar dynasty, left the country never to return. In October 1925, the majlis formally deposed Ahmad Shah, and in December Reza Khan was proclaimed the new sovereign. In an attempt to tie the new monarchy to ancient Persian history, Reza Khan took the name Pahlavi for his dynasty. He then embarked on an ambitious program of modernization.

During his reign, Reza Shah enacted educational and judicial reforms that eroded the role and influence of the mullahs (Shi'i clergy), and the clerics gradually lost their

preeminence in education, judicial administration, and document registration. The clergy opposed these and other reforms and often openly clashed with the new regime. In a push for national unification, Reza Shah banned traditional and ethnic forms of dress in favor of Western clothing. He opened the nation's schools and its first university in Tehran to women. Women were officially freed from wearing the veil in 1936, and divorce laws were also changed in their favor.

Reza Shah established an authoritarian system, suppressing political parties and restricting the press. Rebellious tribal leaders were either imprisoned or put to death. Several of Reza Shah's ministers and other prominent Iranian critics of the regime also died under suspicious circumstances.

On the other hand, Reza Shah implemented many reforms that benefited the nation. He established a national bank in 1927 and improved the tax collection process. He also transformed Iran's bureaucracy into a Western-style civil service of 90,000 people and extended the reach of the national government through reorganized ministries and administrative divisions. He instituted a form of state socialism to build a modern infrastructure. New civil, penal, and commercial codes were introduced. In 1933 Reza Khan also gained improved terms on the oil concession granted to British companies earlier in the 20th century.

External rather than internal events ended Reza Shah's reign. Fearing both increased Soviet and British influences in Iran, Reza Shah turned to NAZI Germany. After ADOLF HITLER invaded the Soviet Union in 1941,

Iran's neutrality was jeopardized as the Allies sought safe, overland passage through Iran for delivery of U.S. supplies to the Soviet front. They also wanted to ensure that Germany did not gain access to vital Iranian oil supplies. When it became evident that the shah would not cooperate, Soviet and British troops invaded Iran in August 1941. In September Reza Shah was forced to abdicate in favor of his eldest son, Mohammed Reza; he went into exile first to Mauritius and then to South Africa. He died in Johannesburg on July 26, 1994.

KEITH BUKOVICH

Pakistan resolution

The Pakistan resolution (also known as the Lahore resolution) called for the creation of one or more separate Muslim states on the Indian subcontinent. The ALL-INDIA MUSLIM LEAGUE passed the resolution on March 23, 1940, during its meeting at Lahore, India. Muslims in British-ruled India had become concerned about what would happen when Great Britain left India. As the minority population in predominantly Hindu India, they were concerned about being able to protect their rights and their religious identity. They believed that their best option was the creation of Muslim states, formed in the regions where Muslims were a majority of the population.

As India moved toward self-government during the 1930s, many people believed that it would become an independent nation with a Hindu majority and Muslim minority. Many hoped that the two civilizations could work together to form a federated government. The INDIA ACT of 1935 moved India closer to independence by turning more of the government functions over to the local population by setting up elections that took place in 1937.

The Muslim League hoped to win some positions during the election, but instead it was almost totally shut out of the government and only won control in provinces with a Muslim majority. The INDIAN NATIONAL

CONGRESS, led by MOHANDAS K. GANDHI, won control of most local legislatures and declared that it was the only national party. However, led by MOHAMMAD ALI JINNAH, the Muslim League declared that it was still an equal partner in the governing process of the country. Muslim leaders feared that the Hindus were only interested in having complete control of the government and were not interested in sharing power in governing the country.

When WORLD WAR II began the congress refused to participate in the war, claiming that it had no interest in the affairs of Europe. The congress ordered its members to resign their offices to protest India's being forced to support Britain's war effort. Hindus protested India's involvement in the war and, Gandhi said that India would only support the war effort when Britain set a date for Indian independence.

Jinnah and the Muslim League took the opposite approach. They offered Britain their support and cooperation in the hope that Britain would then support their desire for a separate Muslim nation after the war. The British were happy with the support and included Jinnah in many aspects of the government. As a result, the league enhanced its stature and gained governing experience, while many congress leaders languished in jail.

The Muslim League held its convention at Lahore, India, and on March 23, 1940, issued the Pakistan resolution calling for the creation of a Muslim state or states. They called their state Pakistan, formed from the provinces in the northwestern part of India where the majority of the population was Muslim. Pakistan became an independent state in 1947.

DALLACE W. UNGER, JR.

Pan-Africanism

Pan-Africanism originated in the late 19th century in the West Indies. The spark for its enunciation was European colonialism's impact on Africa and African-descended people around the world. In the mid-20th century, Pan-Africanism became a rallying cry for

the African independence movements. Some elements sought a unified postcolonial continentwide African nation. The Pan-African movement developed two strains. Continental Pan-Africanism dealt with the continent itself, emphasizing political union or international cooperation. Diaspora Pan-Africanism attempted to bring together all black Africans and persons of African descent.

The underlying assumption of Pan-Africanism is that all African people have common ties and objectives that can best be realized by united effort. All Africans around the world have a common future based on a common past of forced dispersal through the slave trade, oppression through colonialism and racism, economic exploitation, and denial of political rights. All Africans also share a common history, culture, and social background, all of which are denied by white racism.

"All Africans" has been variously defined as including all black Africans, all people descended from black Africans, all people in Africa regardless of color, and all African states. All people working together for a common African goal based on a common African experience are considered part of the Pan-African movement.

Originally, Pan-Africanism sought unity of all African black cultures and countries. It expanded to encompass all black-descended people in the world, those who had been forced to the Caribbean, the United States, Latin America, the Middle East, and South Asia through the transatlantic and Islamic/East African slave trades as well as later immigration. Some Pan-Africanists include the Sudroid and Australoid blacks of India. Also included are the Andamanese Island Negritos and the black aborigines of Melanesia, New Guinea, and Australia.

Colonial conquest was commonly followed by control of the native populations as a source of cheap and reliable labor in mines and on African plantations. Europeans came to dominate a market-based production of raw materials. Europeans imposed a caste system and a foreign type of governance over the tribal peoples, and the British were notable for using the local officials as pawns. Internal developments were made to facilitate the extraction of African wealth for European benefit.

Africans fought the colonialists from early on. Discontent with the system and dislike of the colonialists led to efforts to unify Africans for their own good. African rulers protested in writing to their European counterparts, and slaves rose against oppression periodically in the Americas and the Caribbean.

At the Congress of Berlin in 1884 to reduce European rivalries and friction in Africa, the European powers

prepared to divide Africa among themselves. The race for Africa led George Charles of the African Emigration Association (AEA) to declare in 1886 that the AEA intended to establish the United States of Africa. A Pan-Africanist conference in Chicago in 1893 denounced the European division of Africa, particularly the actions of the French against Liberia and Abyssinia.

In 1900 Henry Sylvester-Williams organized a Pan-African conference that brought Africans from the Caribbean and United States to London to discuss common concerns with white Britain. Initially, the meeting sought to protest unequal treatment of blacks in colonial Britain and in Britain itself. Speakers also spoke of the need to preserve the dignity of African peoples and to educate them and provide social services.

The conference also heard W. E. B. DuBois predict that "the problem of the twentieth century is the color line." Williams died in 1911, and DuBois took over management of the congresses. He organized the next several meetings. DuBois, one of the founders of the Niagara movement and the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), and other black leaders were concerned after WORLD WAR I about the treatment of African-American and African soldiers as well as the status of the former German African colonies. The first Pan-African Congress took place in 1919 in Paris, where the European powers were holding the PARIS PEACE CONFERENCE.

The 1919 Pan-African Congress had an agenda similar to that of the 1900 meeting. Africans needed education and the right to participate in their own affairs. The former German colonies were of particular interest, and a proposal was made that the LEAGUE OF NATIONS hold them in trust until they were ready for self-determination. The league did take the territories under nominal oversight but gave them to the other European states without requiring any move toward self-determination.

The congresses became larger as attendance from the United States, Africa, the Caribbean, and Europe increased. Reasons for the growth included sponsorship of delegates by international labor movements, which were growing during the 1920s. Also, the black nationalism of MARCUS GARVEY was on the ascent. Garveyites in the United States sought African unity as well as improvement of the lot of working-class blacks. They contrasted with the elite blacks who tended to support DuBois. The Jamaican Garvey formed the Universal Negro Improvement Association (UNIA) in 1914 as a vehicle for instilling black pride and improving the political and economic lot of blacks everywhere.

Garveyism also called for repatriation to Africa, the Back to Africa movement.

Garvey's movement rose rapidly, expanding beyond the United States. His UNIA had chapters in Europe, Australia, and South Africa, and his *Negro World* sold widely. The Black Star Line was Garvey's vehicle for entry into international trade as well as for transporting blacks to Liberia. In 1925 Garvey was arrested on mail fraud charges in connection with the operation of the steamship line, and the movement faded. Garvey's ideas lingered on, stimulating African students in London to create the West African Student Union (WASU) in 1929. WASU brought together the young, aggressive African and Caribbean blacks who wanted political independence for the African colonies.

Drawing attention to the problems of black people in the late 1920s and 1930s was the HARLEM RENAISSANCE, the most prominent of the black cultural movements of the time. The Harlem Renaissance, centered in New York's predominantly black neighborhood, brought public awareness of the work of such black writers as Richard Wright, Langston Hughes, and Claude McKay as well as DuBois. It also featured black artists who called for black pride and an end to racial injustice. France's African and Caribbean black artists founded the *NÉGRITUDE* movement, which stated that all Africans regardless of geographic location had a common set of traits. *Négritude* rebuffed those who alleged African inferiority. It included authors such as Aimé Césaire, Alioune Diop, Leon-Gontran Damas, and LEOPOLD SÉDAR SENGHOR, who later would serve as Senegal's first president.

The GREAT DEPRESSION of the 1930s and the world war of the 1940s set back the Pan-African movement. British and U.S. blacks remained involved, though, protesting the 1935 invasion of Ethiopia by Italy, for instance. African-American organizations established the Council on African Affairs in 1937; this was the first black-led U.S. lobbying organization. It sought to increase Americans' awareness of the problems of blacks subjected to colonialism and sought independence for the African colonies.

While in the United States as a student in the early 1940s, Kwame Nkrumah of the British colony the GOLD COAST (now Ghana) founded the African Student Organization. He moved to London in 1944 and joined the Pan-Africanist movement led by the Jamaican George Padmore and the Trinidadian C. L. R. James. Other members were Jomo Kenyatta of Kenya and Hastings Kamuzu Banda of Malawi, both of whom, like Nkrumah, would eventually lead their countries.

This group sponsored the fifth Pan-African Congress in 1945. That meeting brought together trade unionists and nationalists from England, the United States, Africa, and the Caribbean in Manchester, England, and it spurred African leadership in the Pan-African and African independence movements.

Independence came to 17 African countries in 1960; 80 percent of the continent was independent by the end of 1963. Many of the new leaders resisted Nkrumah's United States of Africa, preferring to preserve newly won autonomy. The Organization of African Unity (OAU, now the African Union), founded at Addis Ababa, Ethiopia, by 32 north and sub-Saharan African nations in 1963, was a loose federation dedicated to cooperation across the continent. Political union failed to materialize because Africa's new states were preoccupied with political differences and widespread poverty.

The last European colonies became independent between 1974 and 1980. Pan-African groups throughout the world continued to pressure governments and increase public awareness through the 1980s and early 1990s of the injustice of white minority rule in Namibia and South Africa.

Continental Pan-Africanism remains as a means of addressing Africa's severe problems. It takes the form of regional cooperative groups including the Economic Community of West African States (ECOWAS) and the Southern African Development Community (SADC, originally the Southern African Develop Coordination Council, SADCC). These trade organizations have promoted regional economic integration. They provide a counterforce to the international trade blocs led by North America, Asia, and Europe.

African-descended people throughout the world still face political, social, and economic challenges. Because their problems are similar, international cooperation and common problem-solving strategies remain essential. These approaches are the fruit of Pan-Africanism.

Critics note that Pan-Africanism fails to acknowledge that blacks around the world are not one unit. They have different cultures, ethnicities, societies, and political structures.

JOHN H. BARNHILL

Panama Canal

Ever since the Spaniard Vasco Núñez de Balboa's "discovery" of the Pacific Ocean in 1513, Europeans had dreamed of an oceanic shortcut linking the Atlantic to the Pacific. The Panama Canal, built by the U.S. government from 1903 to 1914, realized that vision at the cost of \$352 million and, by official count, 5,609 lives from accidents and disease (including some 4,500 black West Indian laborers). The canal, which extends from Colón on the Caribbean side to Panama City on the Pacific, traverses 77 kilometers through three sets of locks.

One of the most remarkable technological feats in world history and far and away the largest engineering project ever undertaken up to that time, the Panama Canal transformed markets, demographics, geopolitics, and national histories in the Western Hemisphere in myriad ways. After 1902, protection of exclusive U.S. rights to a transisthmian canal was the pivot upon which U.S. policy in the Caribbean and Central America turned. The many episodes of U.S. military, political, and economic intervention in the first three decades of the 20th century can be traced, directly or indirectly, to larger U.S. economic and geostrategic interests centered on the Panama Canal.

For many years, the Panama route had been considered impractical due to the elevation of the continental divide. That the canal ended up being built in Panama and not in Nicaragua resulted from a highly unlikely combination of circumstances, including a bloody three-year civil war in Colombia and its province of Panama (1899–1902); the 1901 assassination of President William McKinley; the imperialist inclinations of McKinley's vice president and successor, THEODORE ROOSEVELT; and an intensive last-minute campaign by the "Panama lobby" in the halls of the U.S. Congress.

The building of the canal in Panama capped more than half a century of various schemes for an interoceanic route that intensified with the U.S. victory in the Mexican-American War (1846–48) and the Cali-

fornia gold rush of 1848–49. In 1850 the U.S. and British governments signed the Clayton-Bulwer Treaty, in which both countries agreed (without consulting Nicaragua) that neither would exercise exclusive rights to the proposed Nicaragua canal. The 1850s saw two land routes built across Central America: the Panama Railroad (completed in 1855) and the Nicaragua route, brainchild of Cornelius Vanderbilt and his Accessory Transit Company (in service from 1851 to 1856). Serious surveying work for a transisthmian canal route began in the 1870s by two different groups: a French syndicate and the U.S. government. In 1878 the Colombian government granted canal rights to a French consortium under the direction of Ferdinand de Lesseps. Construction commenced in 1881, but by 1889 disease, cost overruns, and related problems led to the firm's bankruptcy and the project's abandonment. As many as 20,000 workers died during the eight-year fiasco.

In 1901 a U.S. commission unanimously recommended the Nicaragua route. In that same year the U.S. and British governments signed the Hay-Pauncefote Treaty, abrogating the 1850 Clayton-Bulwer Treaty and granting the United States exclusive rights to the proposed Nicaragua canal. The 1902 U.S. decision to build the canal in Panama shocked and dismayed the Nicaraguan elite, who had been convinced that the canal would be built in their country. In January 1903 U.S. and Colombian negotiators signed the Hay-Herrán Treaty, granting the U.S. government a strip of land across Panama for the proposed canal in exchange for \$10 million and \$250,000 per year thereafter.

The Colombian senate rejected the treaty. President Roosevelt, infuriated by those he termed the "contemptible little creatures . . . the Bogotá lot of jackrabbits," engineered a rebellion by dissident elements in Panama. The rebels declared independence on November 3, 1903. Three days later the Roosevelt administration recognized the breakaway republic. On November 17 the two nations signed the Hay-Bunau-Varilla Treaty, granting the United States exclusive and perpetual control of the canal zone under the same terms as the scuttled Hay-Herrán Treaty with Colombia. As Roosevelt later declared, "I took the Canal Zone."

Actual construction commenced in 1907, and the canal opened on August 15, 1914. In 1921 the U.S. government agreed to pay Colombia \$25 million in exchange for Colombian recognition of Panama's independence. In September 1977 U.S. president Jimmy Carter and Panama chief of government Omar Torrijos

The Panama Canal transformed markets, demographics, geopolitics, and national histories in the Western Hemisphere in many ways. Actual construction started in 1907, and the canal opened on August 15, 1914.

signed the Panama Canal Treaty, relinquishing U.S. control of the canal to Panama by the year 2000. Panama assumed formal control of the canal at noon on December 31, 1999. The technical, diplomatic, and geopolitical aspects of the Panama Canal have spawned a vast literature.

MICHAEL J. SCHROEDER

Pankhursts

British feminists

Emmeline Pankhurst, née Goulden, was born in Manchester, England, on July 14, 1858, the daughter of successful and politically progressive parents. Her education, though, followed respectable Victorian lines, which included time in a Parisian finishing school. Upon her return to Manchester in 1878, she met Richard Pankhurst, a radical lawyer and advocate of women's rights, whom she married in 1879. Her husband's political ambitions were geared to extending the 1867 Reform Act to include women, and to this end he promoted the first Women's Suffrage Bill and reform of the Married Women's Property Bills of 1870 and 1882.

The Austrian and Hungarian treaties were similar and originally were to be presented simultaneously to the empire's heirs, but that with Hungary was delayed until the Communist regime was replaced. Both states had to abjure the Habsburg monarchy and guarantee their independence. Austria had to renounce *Anschluss* (union) with Germany. Both were landlocked and severely shrunken but emerged ethnically homogeneous.

Austria's territorial losses included Galicia to Poland; Bohemia and Moravia to Czechoslovakia; the Trentino, South Tyrol, and Istria to Italy; Bukovina to Romania; and Slovenia, Bosnia-Herzegovina, Dalmatia, and coastal islands to Yugoslavia. The new Austria consisted of the vast capital of a defunct empire surrounded by uneconomic mountainous hinterlands. Psychological dislocation was also severe.

Hungary's territorial truncation was also acute but left a more economically viable state, thanks to fertile plains. Slovakia and Ruthenia went to Czechoslovakia, Transylvania to Romania, Croatia-Slavonia to Yugoslavia, and most of the Banat to Romania and Yugoslavia. A third of Hungary's prewar territory remained, and a third of the Magyars were outside its borders. Hungary never accepted the settlement but lacked the power to alter it.

BULGARIA AND TURKEY

Bulgaria was equally resentful, though its territorial losses were much smaller. However, hostile neighbors gained greatly, weakening it comparatively. Bulgaria hoped that ethnic factors would mean territorial gain, but the victors yielded nothing. Bulgaria lost to Greece its prized Aegean coastline (and thus direct access to the Mediterranean). Macedonia went to Greece and Yugoslavia, which also gained strategic border salients. Bulgaria emerged largely homogeneous but helplessly bitter.

Unlike other eastern treaties, that of Sèvres intruded in internal affairs. An international commission would control the straits from the Black Sea to the Aegean, which would be open to all ships of all nations in peace and war. The existing capitulatory regime of extraterritorial privileges for westerners was enlarged. Because territorial losses were vast, reparations would be minimal, but Europeans would exert financial control, especially of the Ottoman debt.

Some territorial losses merely ratified prewar situations, but in addition Turkey's Arabian domains were surrendered, part therefore becoming the independent kingdom of Hijaz in minimal fulfillment of wartime promises to Arabs. Syria (including Lebanon) became a French mandate, and Mesopotamia (Iraq) and Palestine

(including Transjordan) British mandates, the latter with a requirement that the BALFOUR DECLARATION (November 2, 1917) be applied to ensure "a national home" for Jewish people. Various Aegean islands went to Italy (whose hopes of Anatolian territory were dashed) and Greece. In Europe Greece gained eastern Thrace and in Anatolia effective control of Smyrna (Izmir). In clauses never fulfilled, Kurdistan was to become autonomous or independent and Armenia independent.

The Sèvres Treaty, which the captive Ottoman sultan never ratified, was a 19th-century imperial document. It was overtaken by the nationalist uprising of MUSTAPHA KEMAL ATATÜRK, who drove Greece from Anatolia, created a national assembly in Ankara and a republic, deposed the sultan, and nearly collided with British forces in the straits. The triumphant Turks rejected Sèvres. Thus, its purely Turkish portions were renegotiated at Lausanne between November 1922 and July 1923. Kemal's deputy, İsmet İnönü, ably led the Turkish delegation with periodic Soviet and American support.

Under the Treaty of Lausanne (July 24, 1923), Turkey regained eastern Thrace, Smyrna, and some Aegean islands; a forced population exchange resolved minority problems. It retained much of Armenia and Kurdistan. Financial, extraterritorial, and most military restrictions were ended, as were reparations. Turkey gained the presidency of the straits commission and could close them to belligerents if it was at war. Aside from modification of the straits convention, this treaty lasted because it was negotiated and moderate and because Turkey accepted the end of empire.

Six lengthy treaties left much undone. Plebiscites and boundary commissions would set precise borders; the peace structure of Allied commissions, committees, and supreme councils would settle details. However, eastern borders with Russia hung fire, as did the fate of the Baltic states. The future of Fiume (Rijeka), a port disputed between Italy and Yugoslavia, was unresolved, as were reparations totals and allocations. The peacemakers did not bring stability to Europe nor address its balance of power, shattered by World War I.

AMERICAN REJECTION

Rejection of the treaties by the United States (and also China) acutely dislocated from the outset a peace structure designed by men born in the late 19th century who could not rise above their nationalistic, imperialistic, Eurocentric era. Still, Poles, Czechs, and a few Arabs gained independence; Middle Eastern mandates

were designed to be brief, whereas others restricted imperialism a bit.

Europe's ethnic minorities were cut in half, and a European-dominated international organization proved useful within limits. But, as before, great powers decided matters. Since two of them, Germany and Britain, persistently pursued revision of the Versailles Treaty, it crumbled, implying Germany's eventual continental predominance and frightening its weaker neighbors. Thus, Wilson's goal of a world "made safe for every peace-loving nation" remained unmet.

SALLY MARKS

Pearl Harbor

Japan's surprise attack on the U.S. naval base at Pearl Harbor, Hawaii, on the morning of December 7, 1941, resulted in one of the most costly defeats in American history. Over 2,000 American military and civilian personnel were killed as a result of the attack, and all eight of the U.S. battleships moored in Pearl Harbor that morning were heavily damaged or destroyed. In addition, hundreds of U.S. planes on nearby airfields were destroyed or damaged in the assault. Despite Japanese hopes that such a devastating attack would force the United States to petition for peace, the events of December 7 strengthened American resolve and silenced the isolationists who had opposed the possibility of the United States' entering the war. President FRANKLIN D. ROOSEVELT's request to Congress to declare war against Japan on December 8 was almost unanimously approved, with only one dissenting voice in the House of Representatives.

Although the nature and timing of the December 7 attack took Americans completely by surprise, tension between the United States and Japan had been mounting for some time over Japanese imperialist ambitions in Asia. In July 1937 the Japanese army launched an invasion of China, having already invaded Manchuria and established the puppet regime of Manchukuo six years earlier. Relations between the

United States and Japan worsened in September 1940 when the Japanese signed the Tripartite Pact with Germany and Italy. When Japan occupied southern Indochina in July 1941, President Roosevelt responded by freezing Japanese assets in the United States and imposing an embargo on oil shipments to Japan. In a series of diplomatic exchanges in the summer and fall of 1941, the United States demanded that Japan withdraw its military forces from China and French Indochina.

As U.S.-Japanese relations worsened, Admiral Yamamoto Isoroku, commander of the Japanese combined fleet and Japan's chief naval strategist, planned a preemptive strike against the United States' Pacific fleet. Yamamoto, who had studied at Harvard, opposed war with the United States. In the event that war became inevitable, however, Yamamoto insisted that Japan ought to strike first with a massive surprise assault to immobilize the American fleet.

Commander Genda Minoru—an experienced carrier pilot and aerial tactician—helped to work out the details of the plan, which Yamamoto named Operation Z. On November 26, 1941, while U.S.-Japanese negotiations were ongoing, the strike force secretly set sail for Hawaii under the command of Vice Admiral Nagumo Chuichi.

On the morning of the attack on Pearl Harbor, U.S. code-breakers in Washington, D.C., intercepted and decoded the final part of a 14-part diplomatic message stating that Japan would break off negotiations that day. Correctly interpreting the message as an indication that Japan planned to go to war, but not knowing precisely where or when an attack would take place, General George C. Marshall attempted to radio Hawaii (among other places) to put the forces there on alert. Atmospheric static necessitated the use of commercial telegraph to relay Marshall's warning to Lieutenant General Walter Short, commander of the U.S. forces in Hawaii. General Short would not receive the message until several hours after the attack had ended.

SUBMARINE PERISCOPE

In the predawn hours on December 7 Hawaiian time, the minesweeper *Condor* was patrolling the security zone near the entrance to Pearl Harbor when Ensign R. C. McCloy sighted a submarine periscope. Japanese aviators had opposed the inclusion of submarines in Yamamoto's attack plan, fearing that the subs—if spotted—would destroy the element of surprise. The pilots were overruled, and a large fleet of submarines,

Photograph of the exact moment the USS Shaw exploded during the Japanese attack on Pearl Harbor, December 7, 1941

including five short-range “midget” submarines, accompanied the aircraft carriers. The midget submarines were deployed at midnight on December 6, 10 miles from the harbor; their two-man crews were to attack any U.S. vessels attempting to enter or leave the harbor during the aerial assault.

Upon detecting one of the midget submarines at approximately 3:45 A.M., McCloy and Quartermaster Second Class R. C. Uttrick reported their discovery via signal lamp to the crew of the USS *Ward*. The *Ward*, a destroyer also on patrol near the harbor, conducted a sonar search but found nothing out of the ordinary. Less than three hours later, however, Lieutenant William W. Outerbridge, the newly assigned captain of the *Ward*, was again summoned from his bunk; this time he spotted a midget submarine following in the wake of the USS *Antares*.

The *Ward* opened fire on the Japanese submarine and then followed up with a depth charge attack that sank the submarine. At 6:35 A.M. Outerbridge reported the incident to district command, but no general alarm was raised at the time. Admiral Husband E. Kimmel, commander of the Pacific Fleet, was awaiting verification of the report when the first wave of the aerial assault hit.

As the USS *Ward* fired the opening shots of the war in the Pacific, the first wave of 183 Japanese fighters, bombers, and torpedo planes was making its way toward the naval and air bases on the island of Oahu. Led by Commander Fuchida Mitsuo, the first

group of planes had lifted off from carrier flight decks approximately 230 miles north of Oahu at 6:00 A.M. At 7:02 A.M., two radar operators at Opana (near the northernmost tip of Oahu) detected a large body of aircraft approaching from the north. They immediately telephoned the information center at Fort Schafter, where the inexperienced duty officer Lieutenant Kermit Tyler dismissed the reports as insignificant. Tyler knew that air force B-17 bombers were due in that morning from California en route to the Philippines, and he assumed that was what the radar operators had seen on their screens. Once again, therefore, no alarm was raised.

The air strike on Pearl Harbor was planned with two different options in mind. If surprise was achieved, then dive-bombers and torpedo planes were to strike the Pacific Fleet first, and the level bombers would follow up by dropping armor-piercing bombs over the harbor. In the event that the U.S. forces had been alerted to the impending attack, then the dive-bombers in the first wave of the attack were to strike Wheeler and Hickam Airbases and the navy airfield on Ford Island. When Fuchida fired a single flare at approximately 7:40 A.M. to indicate that surprise had been achieved, the commander of the fighter escort failed to acknowledge the signal. After a brief interval, Fuchida fired a second flare.

TORA! TORA! TORA!

The commander of the dive-bombers, Lieutenant Commander Takahashi Kuichi, mistook the second flare to mean that the defenders had been alerted, and so the dive-bombers proceeded to attack the airfields while the torpedo planes and level bombers concentrated their efforts on the fleet at Battleship Row. As the first wave of Japanese planes reached Oahu at 7:53 A.M., Fuchida radioed back to the carriers the now-famous code words “Tora! Tora! Tora!” to indicate that total strategic and tactical surprise had been achieved. Nagumo relayed the message to Japan, letting forces there know that coordinated operations against Malaya, the Philippines, and the Dutch East Indies could move forward as well.

Upon nearing Oahu, the dive-bombers, or “Vals,” divided into two groups, one targeting Hickam Field and Ford Island while the other went after Wheeler Airfield in central Oahu. The first group began bombing the army air base at Hickam Field at 7:55 A.M. The fact that the U.S. planes were lined up wingtip to wingtip as a precaution against possible sabotage made them easy targets for the Japanese bombers. The army

suffered its heaviest casualties of the raid at Hickam Field, where 182 men were killed or unaccounted for. Wheeler Airfield was also heavily attacked; nearly two-thirds of the 140 planes on the ground at Wheeler were destroyed or put out of action. The naval air-base at Ford Island lost nearly half its planes in the Japanese assault, and the one at Kaneohe Bay lost all but a few. Concurrent with the airfield bombings was the two-pronged attack on the U.S. Pacific fleet. Fortunately for the United States, none of its aircraft carriers was in port that morning. The Japanese did, however, manage to inflict considerable damage to all eight of the battleships at Pearl Harbor, sinking five of them. By 8:00 A.M. Pearl Harbor was ablaze as a combination of torpedoes and armor-piercing bombs hit one U.S. vessel after another. Especially spectacular was the explosion aboard the USS *Arizona* that resulted in the deaths of 1,177 men. The *Arizona* memorial still stands to commemorate all military personnel who lost their lives in the attack on Pearl Harbor.

A second wave of 167 more Japanese aircraft was launched approximately one hour after the first; 17 Zeros (fighter planes) targeted Kaneohe Naval Air Station, while 18 others attacked Wheeler Field and the Ewa Marine Corps air base. Some 54 high-level bombers divided into three groups to attack Ford Island, Kaneohe, and Hickam Field; 80 dive-bombers attacked Pearl Harbor, including the naval yard where the dry-docked battleship *Pennsylvania* was hit along with several destroyers. Near the end of the second wave, three bombs hit the destroyer *Shaw* in dry dock, setting off a spectacular explosion. The Japanese suffered considerably more damage in the second wave than they had in the first, when they had caught the U.S. forces completely unaware; in all, Japanese losses included 29 planes, five midget submarines, and 55 men. The second and final wave of the attack was over by 9:45 A.M. Genda and Fuchida pressed for a follow-up attack, but the cautious Nagumo ordered the Japanese forces to withdraw. As a result, U.S. oil storage depots and repair facilities escaped relatively unscathed. All but three of the 19 ships damaged in the attack would eventually be returned to service, and it would take just six months for the U.S. armed forces to turn the strategic tables in the Pacific with the decisive Battle of Midway (June 3–7, 1942).

KATHLEEN RUPPERT

Pentecostalism

The Pentecostal movement burst onto the religious landscape during the 20th century as a major force within Christianity. Its adherents, scattered across many churches and denominations, came to number over half a billion worldwide, suddenly making it a Christian tradition second in size and scope only to the Roman Catholic Church.

Some historians date the origins of the contemporary Pentecostal movement to January 1, 1901, when Agnes Ozman, under the teaching of Methodist preacher Charles F. Parham, “spoke in tongues” (glossolalia) at Bethel Bible School in Topeka, Kansas. This particular event convinced many that the supernatural gifts and powers associated with the coming of the Holy Spirit at Pentecost and with the ministries of the early church in the book of Acts are still readily available to ordinary Christians who sincerely seek them. Similar teachings and manifestations gained wide attention from 1906 to 1913 during the Azusa Street Revival at the Apostolic Faith Mission in Los Angeles. William J. Seymour, an African-American Holiness preacher from Texas, was the prominent leader there.

Numerous new Protestant denominations began to form as Pentecostalism spread, beginning with the Assemblies of God, the Pentecostal Church of God, the International Church of the Foursquare Gospel, and the Open Bible Standard Churches. Still other young but established denominations such as the Church of God and the Church of God in Christ took on Pentecostal beliefs. What nearly all Pentecostal denominations shared was a conviction that Christian experience was incomplete without the sanctifying and empowering work of the Holy Spirit and that the “baptism of the Holy Spirit” is validated by the evidence of “speaking in tongues,” as well as by additional signs, including prophecy, visions, exorcism, and divine healing.

As early as 1914 several within Pentecostalism began to proclaim “Oneness,” or “Jesus Only,” a somewhat modal view of the Trinity that allows for different manifestations of God but suggests that there is ultimately

only one divine person. Oneness Pentecostalism typically insists upon rebaptism in the name of the Lord Jesus Christ alone rather than the Father, Son, and Holy Spirit. Its relationship to other Pentecostal denominations and to traditional Christian bodies concerned with theological orthodoxy remains ambiguous and controversial at best, depending in part upon how its theological claims are understood.

The Pentecostal movement was preceded by widespread, overlapping teachings among 19th-century evangelical Protestants about the need for a victorious “Higher Life” made possible by the filling of the Holy Spirit, about the importance of Holy Spirit crisis sanctification to purify the believer from sin, and about Jesus Christ as Savior, Sanctifier, Healer, and Coming King, thereby intertwining Christological and pneumatological emphases. Pentecostalism strongly affirms all four of the latter themes as basic to the Christian life—Christian conversion, the Pentecostal work of the Holy Spirit who purifies and empowers the Christian believer for service, divine healing, and the imminent return of Jesus Christ in power and great glory as a motive for holy living and missionary endeavors.

Religious demographers now recognize a third type of Pentecostalism called the Neo-Charismatic movement. It actually consists of two or more rather distinct elements. One is the so-called Third Wave of evangelicals, who wholeheartedly affirm supernatural signs yet who diligently attempt to avoid the ecclesiastical schisms, upheavals, and controversies that frequently accompanied the first two waves. A much broader, more amorphous form of the Neo-Charismatic movement numerically dwarfs every other type of Pentecostalism.

It consists of the many thousands of independent Christian groups and denominations that have sprung up across the modern world more or less independently from traditional Roman Catholic, Orthodox, or Protestant influences. Their founders often claim direct revelation from God by means of dreams or visions. Although these indigenous church bodies may prove difficult to classify, they are generally far closer to Pentecostal beliefs and practices than they are to other Christian traditions.

TIMOTHY PAUL ERDEL

phenomenology

Phenomenology is the branch of philosophy that explores phenomena (observable, experiential events) and has principally been the concern of German philosophers and 20th-century French philosophers. There are three distinct phenomenological schools: the dialectical, transcendental, and existential, all of which continue to have currency today and were prominent in the development of philosophy throughout the 20th century. Phenomenology is a descriptive approach to philosophy: It describes the world and the function of the mind, rather than prescribing the correct way to do a thing, as ethics does.

In his 1781 *Critique of Pure Reason*, perhaps the single most important text in Western philosophy, Immanuel Kant reacted to and rejected David Hume’s empiricist claim that all ideas, all thoughts, were derived from “impressions,” that is, from sensory experience. Classical metaphysics, Kant argued, could not have been derived from sensory experience, and so he distinguished between phenomena, events as we experience them and objects as we observe them, and noumena, which exist independent of our perception of them and which we cannot therefore experience. A phenomenon is a representation of a noumenon; the noumenon for Kant is important primarily as a limiter, something against which to contrast the phenomenon.

Publishing several years after Kant’s death, Georg Wilhelm Friedrich Hegel challenged Kant’s noumenon/phenomenon dichotomy, claiming in 1807’s *Phenomenology of Spirit* that sufficient knowledge of phenomena can lead to complete apprehension of absolute truth. It was Hegel who coined the term *phenomenology* and who introduced the form of logic he called speculation and that is now referred to as Hegelian dialectics.

Most of the discussion in phenomenology, though, has been between the transcendental and existential schools. Transcendental phenomenology begins with Edmund Husserl, whose mentor Franz Brentano had taught that all perception is flawed and so, too, the conclusions drawn from it. For Brentano and Husserl, absolute truths were unreachable because the mind was a flawed instrument; they recalled Hume in their description of

consciousness as always “intentional.” Intentionality in this respect includes the notion that every thought, every idea or feeling, is focused on some physical object.

In the 20th century, Martin Heidegger and the existential phenomenologists who followed him rejected Husserl’s phenomenology. Heidegger was interested in the history of philosophy and the gaps he saw in its conversation about the world, particularly its failure to address what it means to be. Altering the Husserl-Brentano model of intentionality, Heidegger said that consciousness is not simply “about” something, it is always caring about something. The experience of a thing is the feeling of that thing’s relevance and importance.

By this time, phenomenology had become a concern to philosophers at large, not simply in the German schools. The French philosopher Henri Bergson wrote about perceptions of causality—a concern that had driven the works of Hume and Kant—and on the meaning of comedy and laughter; his influence on French philosophy combined with the growing interest in German phenomenology would shape much of the next century, from Jean-Paul Sartre to Michel Foucault to Jacques Derrida.

BILL KTE’PI

Philippines, U.S. occupation of the

In 1898 the United States acquired the Philippines as a result of the Spanish-American War, undertook a mission to prepare the Philippines for independence shortly thereafter, and succeeded in that task after WORLD WAR II. Since then, the United States has had a “special relationship” with the Philippines, marked generally by warm relations and close economic, political, and social ties. The Philippine–United States War decided whether that country would gain its independence immediately, as some Filipinos asserted, or would gain its independence gradually through reform and nation building, as the U.S. government under President William McKinley and his successors argued. Throughout the periods of U.S. rule, World War II, and the independence of the Philippines, the two countries remained allies and had close bilateral relations, particularly in the areas of eco-

nomics development of the Philippines, spreading democracy, expanding free trade, and combating international and regional terrorism. The facts that the United States remains the largest trading partner of the Philippines and that Filipinos are one of the largest Asian ethnic groups in the United States have fostered further ties.

The social and political forces that compelled the United States to enter the Pacific world and the Philippines in particular stemmed from a variety of American interests: the popular compulsion to spread American culture, the desire to expand and to develop commercial relations, the economic goal of gaining access to raw materials and markets, and strategic objectives to increase national security.

The outbreak of the Spanish-American War in 1898 placed the United States on a direct path toward major involvement in the Philippines. Aroused by allegations of Spanish aggression in its colony of Cuba, the disruption of U.S. trade with Cuba, and the explosion of the USS *Maine* in Havana Bay, the United States went to war with Spain and conducted military operations in both the Caribbean and the Pacific theaters. In order to negate the sea power of the Spanish fleet, Commodore George Dewey engaged the Spanish fleet in Manila Bay and decisively defeated them. Following victories in the Caribbean over Spain and the arrival of 8,500 American troops in the Philippines, the Spanish authorities in the Philippines surrendered. On August 13 the U.S. flag flew triumphantly over Manila.

The Treaty of Paris, signed by representatives of the United States and Spain on December 10, 1898, effectively ended the fighting between these two nations but left the question of rulership of the Philippines in some dispute. By the terms of the treaty, the United States gained possession of the Philippines as well as Cuba, Puerto Rico, and other island holdings in exchange for a payment of \$20 million to Spain. Shortly after the acquisition of the Philippines by the United States, Filipino insurgents resisted the transfer of authority to the United States and claimed that the Philippines should immediately become independent.

EMILIO AGUINALDO, a patriotic and energetic revolutionary who had led his forces against Spain both before and during the Spanish-American War, turned his military prowess against the American occupiers and conducted a guerrilla war that used the dense jungles and difficult terrain against the American military. Although the U.S. military was not prepared to fight against guerrilla tactics, U.S. forces prevailed against the rebels, captured Aguinaldo, gained his allegiance, and effectively won the support of many Filipinos.

The United States, acting on information gained from the First Philippine Commission appointed by President McKinley in 1899, adopted a policy of “tutelage,” which aimed at preparing the Philippines for independence. In July 1901 the Philippine Constabulary was established as a countrywide police force for the purpose of maintaining order and suppressing the remaining rebel activities. The Second Philippine Commission, headed by William Taft, implemented broad economic, social, and political programs that expanded economic development and opportunity, free public education, and political representation of the Filipino people. Despite the successes, major obstacles to reform remained apparent, evidenced in the reluctance of the *ilustrados*, the wealthy aristocrats, who obstructed or reluctantly granted concessions to the lower classes. The emergence of a multiparty system and the indigenous political leadership of MANUEL QUEZON and Sergio Osmena indicated the growing independence of the Philippines. In 1913, the U.S. Congress passed the Underwood Tariff Act, which removed all trade restrictions on Philippine goods, an act that provided valuable markets for the Philippines but also allowed a high degree of economic dependency.

The TYDINGS-McDUFFIE ACT, passed by the U.S. Congress in 1934, established the Philippines as a commonwealth with a constitution, an autonomous political system, and most importantly a 10-year period during which the Philippines would make the transition to independence. The agreement was approved by the Philippine legislature, even though it allowed the United States considerable authority in matters pertaining to foreign policy, immigration, foreign trade, and currency regulation.

On December 8, 1941, the Japanese army invaded the Philippines and disrupted the transitory period. General DOUGLAS MACARTHUR led American and Philippine military forces. MacArthur fell back to the Bataan Peninsula and the island of Corregidor to take a defensive position against the advancing Japanese army, which outnumbered MacArthur’s troops. The defeat of his troops in April and May 1942 allowed the Japanese to force the 80,000 prisoners of war taken at Bataan to march to a prison camp 105 kilometers to the north. This death march caused approximately 10,000 fatalities as prisoners faced abuses, malnutrition, disease, and the harsh tropical climate. MacArthur, under orders from U.S. president FRANKLIN D. ROOSEVELT, evacuated to Australia, vowing to return again to the Philippines. On October 20, 1944,

MacArthur led his forces back to the Philippines, landing at the island of Leyte. Fierce fighting followed that eventually led to the capitulation of Japanese forces after defeats in Northern Luzon and a last-ditch effort to defend the city of Manila.

After World War II the U.S. government faced the difficult task of aiding the Philippines in its recovery from the war. Despite contention regarding the issue of collaboration with the Japanese and political amnesty, on July 4, 1946, the Philippines became independent, and Manuel Roxas emerged as the first president of that republic. During the early years of the cold war, the period of renewed tensions between the Soviet Union and the United States, the Philippines proved to be a valuable ally of the United States. Manila signed the Military Bases Agreement in 1947 and thereby granted to U.S. naval and air forces base rights to 23 bases including Clark Air Base and naval facilities at Subic Bay.

In addition to allowing U.S. access to bases, the Philippines played an active role in the containment of communism, both in the Philippines and in Southeast Asia. In 1954 the government of the Philippines joined the South East Asia Treaty Organization, a collective security arrangement led by the United States to secure democracies in the region and to contain the expansion of the communist movement. Philippine president Ramon Magsaysay won the praise of many Americans for his bold leadership, economic reforms, and effective anticommunist policies, which subdued the Huks—a Marxist-Leninist organization that revolted against the government of Manila and demanded collectivization of farms.

The post-cold war era brought new challenges and new opportunities for partnership in U.S.-Philippine relations. The United States and the Philippines worked together to fight terrorism, expand global trade, and develop regional trade organizations such as the Association of Southeast Asian Nations. The U.S. Congress has taken a keen interest in the stability of the Philippines for its own good, its role as a regional ally, and its regional influence on developing democracies such as Indonesia.

SCOTT CATINO

Platt Amendment

The United States occupied Cuba in 1898 and passed the Platt Amendment in 1901. A condition for ending the U.S. occupation of Cuba was the inclusion of an amendment that made Cuba a protectorate of the United States. Although the Cuban constitutional convention delegates opposed the inclusion of the amendment, the United States was adamant, and it had armed forces on Cuba and warships available offshore. Given the choice between limited independence and no independence at all, Cuba accepted the Platt Amendment.

Senator Orville Platt (1827–1905) of Connecticut, a pro-U.S. nationalist expansionist who advocated high protective tariffs and helped to annex Hawaii and occupy the Philippines, authored the Platt Amendment, which was the brainchild of Secretary of State Elihu Root.

The Platt Amendment was a rider to the Army Appropriations Bill of 1901. It provided that Cuba must have U.S. consent for all Cuban trade agreements and treaties with any other nation. It also gave the United States the right to intervene in Cuban affairs to preserve Cuban independence and maintain a government sufficient to preserve life, liberty, and property. It remained in effect until abrogated in 1934. As well as stipulating the terms under which the United States could intervene in Cuban affairs, the amendment also authorized U.S. lease of land for a naval base and prohibited Cuban transfer of land to any other nation. The amendment made Cuba a virtual U.S. protectorate.

The Teller Amendment of 1898 had stated that the United States did not intend to annex Cuba after the Spanish-American War. U.S. expansionists worried that German expansionists might seize the opportunity to harm U.S. interests by filling the void left by U.S. disinterest in the area. The Platt Amendment compromised between outright imperialism and the repudiation of the Teller Amendment. The compromise prevented Cuba from making treaties, assuming debt, or stopping the U.S. sanitation program on the island. It guaranteed the United States the right to intervene in Cuban affairs whenever the United States deemed U.S. interests were at stake. Additionally, because the United States had sought to control Guantánamo Bay, Cuba's best harbor,

since 1899, it allowed the United States to lease sites for naval and coaling stations.

Thomas Estrada Palma, an advocate of the annexation of Cuba to the United States, took power in a 1902 Cuban election characterized by fraud and abuse of his position. Estrada Palma's term expired in 1905, but he attempted to return to power. Rebels dissatisfied with the Cuban government and the U.S. involvement in Cuba resisted Estrada Palma. To thwart the liberal revolt, THEODORE ROOSEVELT sent in troops on September 29, 1906. The revolt ended in a negotiated peace and reoccupation of Cuba. The United States occupied Cuba militarily in 1906 under the terms of the Platt Agreement, remaining there for three years. The United States removed Cubans from government during its occupation. U.S. forces left in 1909 but returned in 1912. Another occupation lasted from 1917 until 1933.

Throughout the life of the Platt Amendment, in the interest of maintaining Cuban stability the United States refused to recognize any revolutionary government and sent warships to Cuban waters as necessary.

In 1934 circumstances had changed. Cuban nationalism was rising, and Cubans were increasingly critical of the U.S. dominance of their society. The United States was preoccupied with the GREAT DEPRESSION. In addition, FRANKLIN ROOSEVELT had instituted a GOOD NEIGHBOR POLICY toward Latin America. Thus, the United States and Cuba signed a treaty abrogating the Platt Amendment. However, the United States retained its naval base at Guantánamo.

JOHN H. BARNHILL

Porfiriato

The Porfiriato corresponds to the period in which Porfirio Díaz served as president of Mexico from 1876 to 1880 and from 1884 to 1911. The origins of Porfirio Díaz's political power can be traced to his participation in the military and political battles of the 1850s and 1860s. Díaz embraced liberalism as the ideological foundation of his regime. Inspired by the American

and French Revolutions, he aimed to establish a federal republic where democratic institutions would represent an egalitarian and secular society. Nevertheless, he was to build his career through an incipient patronage network, starting with the local priest's recommendation that he be accepted in the local Catholic seminary school in Oaxaca.

During the Mexican-American War in 1847, 16-year-old Díaz joined the army to help repel the invasion but in the end did not engage in combat. Soon after, he met Benito Juárez, already an elected governor of Oaxaca, who inspired him to study law. However, the military coup that restored the flamboyant and corrupt dictator Antonio López de Santa Anna to power to undertake his 11th—and final—term in office caused Díaz to abandon his studies again to join the resistance. In March 1854 a group of dissidents met in Ayutla, Guerrero, to plot the downfall of Santa Anna.

CALL FOR OUSTER

There the group launched the Plan de Ayutla, a manifesto calling for the ouster of Santa Anna. News of the plan spread throughout Mexico, and soon the country was in open revolt. Juárez and Díaz, who were sent into exile by Santa Anna, returned to Mexico and eagerly joined in the insurrection. Santa Anna fled the country in August 1855, and Álvarez took over as provisional president. Juárez became minister of justice, and Díaz, only 25, was named subprefect of the town of Ixtlán in Nayarit. A new constitution was adopted on February 5, 1857, containing provisions restricting the power of the church. These infuriated clerics and conservatives, and thus began the bloody Reform War of 1858–61, so named because of the “Reform Laws” that were so objectionable to fervent Catholics. During both the Reform War and the 1864–67 war against Maximilian and the French intervention, Díaz distinguished himself as a strong right arm of the liberal cause. He was wounded twice, escaped being captured three times, and during 1864–67 led forces that inflicted nine defeats on the imperialists. When caught by Maximilian's forces, he refused a pardon and then made a daredevil escape from jail in 1865, after which he became a liberal hero. As Maximilian's empire collapsed, Díaz commanded a formidable army, which on July 15, 1867, made its triumphal entry into Mexico City.

After running for the presidency in 1867—and losing to Juárez—Díaz went back to Oaxaca to cultivate sugarcane in his “La Noria” hacienda. While his brother served as governor in Oaxaca, and Porfirio Díaz concentrated on regaining political power, he crafted

the La Noria insurrection plan, which defied Juárez's government and initiated an uprising anticipating the presidential elections of 1871. However, the La Noria plot did not succeed, and the insurrection was suffocated in a few months. After Benito Juárez's sudden death in 1872, interim president Sebastián Lerdo de Tejada granted amnesty to rebellious Porfiristas to gain political control over the country. Tejada ruled for a short period since he failed to see the implications of reducing federal autonomy to the states and for pursuing reelection again. Along with the social uprising, the supreme court's president, José María Iglesias, advocated for the reestablishment of the rule of law and the legitimacy of democratic elections and headed for the presidency. Nevertheless, his refusal to share power with the Porfiristas led Díaz to occupy the capital as the head of the “constitutional army.”

Porfirio Díaz took office in 1876 and assumed as his first endeavor to “pacify” the country after so much revolt. However, his methods of establishing the Porfirian Pax were grounded on intimidation, coercion, and repression strategies. Another factor that contributed to establishing order as the basis for progress was the systematization of daily life through various civil, judicial, and commercial codes and regulations.

ANOTHER TERM

When his first presidential term ended in 1880, Díaz went back to Oaxaca to become governor and a cabinet minister, while his friend General Manuel González was elected president. González rewarded his friends and was on good terms with others, gaining political support in his own right. He had the constitution amended to allow Díaz to be elected to another term. In 1884 the Central Railway was completed, connecting Mexico to the United States. President González recognized Mexican debts to Great Britain, an action that proved to be essential to the country's establishing good credit. There was substantial economic development under González, but he left the presidency under suspicion of extended corruption. With the constitution amended to allow his reelection, Díaz returned to save the nation from the misrule of González and was reelected president in 1880 and would remain until 1911.

Under Díaz's rule infrastructure and public works spread all over the country, multiplying the rail system, telegraphs, and other communications networks, which built Díaz's image as the builder of a progressive and modern Mexico.

The regime also supported the creation of primary and secondary schools, where the values of patriotism,

order, freedom, and progress were to be cultivated. However, technical and professional education was not prioritized, as if progress would not require specialized skills in order to be achieved. It was with external financial resources that Díaz stimulated the internal market through industrial development, while mining extraction was intended for the external market's demand. However, it is worth stating that agriculture never kept the pace of development at large, even when the 6,000 hacienda owners were favored by the regime, which favored feudal practices that allowed the formation of huge concentrations of land.

Moreover, inequity was reflected in every area of society, as in professional education, which was concentrated in a few major cities. So eager was Díaz to attract foreign capital that he adopted discriminating policies for Mexican mining employees, which later accounted for a major strike—which was ruthlessly suppressed—at the Cananea Consolidated Mining Company in Sonora. Díaz also cleverly played one side against the other, encouraging British and European capital as a counterbalance to U.S. capital.

The end of Díaz's regime (1904–11) was marked by foreign investments flowing into the country, which fostered the production of goods and services. Likewise, the oil industry grew from 5,000 to 8 million annual barrels by the first decade of the 20th century. However, at the time a growing critique by young, middle-class intellectuals started to manifest. This group was headed by Camilo Arriaga, Juan Sarabia, and the FLORES MAGÓN brothers and started to craft an antireelection campaign. Even when the repression of opposition leaders was a priority, Díaz was serene enough to supervise the Centenario celebration (the 100-year anniversary of independence); to attend the inauguration of public works, schools, hospitals, and monuments; and even to lead parades.

Two months later FRANCISCO MADERO led an uprising that marked the beginning of a decade-long revolutionary civil war and through the Plan de San Luis proclaimed the nonreelection of Díaz. After several months of insurrection, Porfirio Díaz resigned and headed for exile in France, where he died some years later. During the Porfiriato, progress materialized in infrastructures and communications within major cities. However, the economy became totally dependent on the United States due to major investments in industries. Foreign domination extended over technical and economic domains, contrasting with the profound patriotism that Juárez, Lerdo, and Díaz professed. During the liberal age nationalistic propaganda succeeded in transmitting

to the general public a national sense and a conscience that bonded race, history, and territory within a cultural symbolism that defined national identity for years to come.

ALFONSO VALENZUELA AGUILERA

Portsmouth, Treaty of (1905)

The Treaty of Portsmouth of September 1905 marked the end of the Russo-Japanese War and was the first international treaty to be signed in the United States. It ended a war that had occurred because of the colliding ambitions of the Russians and the newly industrialized Japanese in the Far East. Russia saw Manchuria, part of the crumbling Qing (Ch'ing) dynasty of China, as ripe for expansion. Port Arthur offered a port that could be used all year and the opportunity to build a railroad. The Russians also had designs on Korea and had received territorial concessions from the Chinese. From Japan's point of view, Manchuria also seemed ripe for development, and Japan believed that Korea should be part of its sphere of influence. Russia also had gained control of part of China, which Japan had been forced to give up after the recent SINO-JAPANESE WAR.

Japan initiated hostilities in March of 1904 by attacking Russian forces in Korea and later in Manchuria and besieging Port Arthur. The result of these battles and other actions was a string of Japanese victories. Though Russia could call upon more troops, the Japanese possessed far better equipment and weapons. In fact, many regard this conflict as a laboratory of the

Members of the Japanese delegation, Jutaro Komura and Kogoro Takahira, arrive for negotiating the Treaty of Portsmouth, which ended the war between Russia and Japan in 1905. Theodore Roosevelt received the Nobel Peace Prize for brokering the peace.

kind of combat that would occur in WORLD WAR I a few years later. At sea the Japanese also inflicted severe losses on the Russian navy. Having found that their Far Eastern fleet had been sunk by the Japanese at Port Arthur, a large Russian fleet arrived in the area from Europe in May 1905 at the Battle of Tsushima Straits, met the Japanese fleet, and suffered a disastrous defeat. Many Russian capital ships were destroyed with high loss of life. This was the first great naval contest involving the new super battleships. The Japanese had defeated the Russians, the first victory of an Asiatic power over a European, but they were in desperate financial shape. The moment was at hand for peace.

The peace treaty was brokered by U.S. president THEODORE ROOSEVELT, who received the Nobel Peace Prize for his efforts. Interestingly, Roosevelt never attended any of the sessions. Portsmouth, a pleasant New Hampshire city, was chosen as the site of the negotiations, and a number of the delegates stayed at a local

resort, Wentworth by the Sea. The talks took place at the Portsmouth Shipyard in Kittery, Maine, for the sake of security. During their time off, the delegates mingled with Portsmouth citizens.

The delegations were headed by Serge Witte for Russia and Jutaro Komura for Japan. The negotiations stopped a number of times when the two sides disagreed but finally came to a conclusion brought about through compromise and through Roosevelt's intervention. According to the treaty, Russia conceded that Korea was in the Japanese orbit and that Russia should withdraw from southern Manchuria, leaving it under symbolic Chinese control. In addition, the Russian right to build the South Manchurian Railway was handed over to Japan, as well as Liaodong (Liaotung) Peninsula and Port Arthur at its southern tip, along with the southern part of Sakhalin Island. The Japanese also received fishing rights near the Russian coast. Both Russia and Japan were dissatisfied with

the results, and there were riots in Japan. Nonetheless, the treaty did mark Japan's emergence as a power in the Far East.

MARC SCHWARZ

Prestes, Luís Carlos

(1898–1990) *Brazilian revolutionary*

One of the leading Communists in Brazil, Louís Carlos Prestes has been regarded by many as one of Brazil's most charismatic yet tragic figures for his leadership of the 1924 *tenente* revolt and his subsequent work with the Brazilian Communist movement.

Prestes was born on January 3, 1898, at Porto Alegre, a port 400 kilometers from the Uruguayan border, and attended the Escola Militar in Rio de Janeiro. As a cadet he had a brilliant academic record but led the 1924 revolt against the government, forming what became known as the Prestes Column, a guerrilla group that sought to overthrow President Artur da Silva Bernardes. It was an attempt to overthrow the oligarchy that had entrenched itself in power after the declaration of Brazil as a republic in 1889. Unfortunately for Prestes, he was ill with typhoid on the day of the revolt, and the defeated rebels fled to Bahia.

The Communists fought 56 battles and also negotiated treaties with Indian tribes, and, when the Brazilian army moved against them, Prestes led what became known as Brazil's equivalent of the Chinese LONG MARCH. They escaped from the soldiers and managed to get to the south of Brazil, resettling in the remote area along the Bolivian border. After operating there for three years, they moved into Bolivia, where they were interned. Prestes, however, managed to escape to Buenos Aires. The revolt was to foreshadow the 1930 revolution, which ended the "Old Republic" of Brazil, with GETÚLIO VARGAS becoming provisional president.

Becoming increasingly influenced by communism, Prestes went into exile, by now totally disenchanted with Vargas. In Argentina and Uruguay Prestes met with Marxists in Buenos Aires and Montevideo and then was contacted by COMINTERN officials, who persuaded him to go to the Soviet Union, where he was named the Comintern representative for the Brazilian

Communist Party (PCB). In 1935 Prestes and his German wife, Olga Benária, returned to Brazil in secret, and the two worked for a popular front that was known as the Aliança Nacional Libertadora (National Liberation Alliance). By now Vargas was strongly anticommunist and used the Brazilian congress to legislate against the Communists—in 1937 Vargas was to close the parliament down. He was seen as becoming increasingly profascist, and the police uncovered Prestes's network and arrested the couple in late 1935. Olga, who was pregnant, was deported to Germany as a foreign alien. Because she was Jewish, she was jailed after her return to Germany and died in a concentration camp. Prestes was found guilty of sedition and sentenced to 17 years in jail.

After his release Prestes started organizing the newly legalized Brazilian Communist Party. He saw that Vargas was an opportunist who had supported fascism during the 1930s but was now embracing liberal democracy in an attempt to win favor with the United States. Many Brazilian Communists despaired of Prestes, who was seen as working with Vargas for concessions. When asked why he could support the man who had his wife deported, Prestes replied that he felt that he should not allow personal disputes to get in the way of his attempt for social reform. In 1945 Prestes contested the presidency in the elections and on December 2, 1945, was elected to the Brazilian senate for the Federal District. However, two months earlier, Vargas had been deposed, and the military set about trying to stop Communist political influence in the country. Two years later the PCB was again outlawed, and Prestes returned to his earlier life of organizing secretly. He died on March 7, 1990.

JUSTIN CORFIELD

progressivism, U.S.

The progressive movement is best viewed as a series of shifting coalitions motivated by the problems caused by rapid industrialization in the United States. The composition of these coalitions varied on federal and state levels and from region to region, and progressive reform was not specifically connected to either of the major

political parties. What distinguished progressive reform was the movement's belief in the importance of professional expertise. Progressives understood that government could be an agent of positive change, believed that environment is the key to social behavior, and relied on statistics to support their causes.

Progressive reform was initially directed toward the problems of urban life. The growth of the suburbs took the wealthy away from the cities, which were increasingly populated by people who in many cases spoke a different language and proved impervious to Protestant conversion efforts. Reform efforts were geographically centered in the cities of the East, Midwest, and West and attracted support from agrarian Midwesterners and the moderate wing of southern populism.

Progressive reformers were inspired by thoughts of cultural nationalism and the perfectibility of society. They accepted industrialism but were critical of its oppressive aspects. The movement was publicized by a group of journalists termed the muckrakers, a group of moderate men and women who exposed problems caused by industrial capitalism but did not intend to propose radical remedies for the problems they exposed.

Politically, progressivism occupied the center of the U.S. political spectrum. At the state level, governors like ROBERT LAFOLLETTE of Wisconsin and Hiram Johnson of California were able to implement reforms that placed democracy in the hands of the people and took it away from corporations that appeared to control state politics.

Progressives urged the use of and in many states passed laws that adopted the secret ballot and implemented direct primaries, the initiative, referendums, recalls of elected officials, and direct election of senators. They also formed commissions to regulate utilities and railroads; they restricted lobbying and raised corporate taxes. To correct the worst features of industrialization, progressives advocated worker compensation, child labor laws, minimum wage and maximum hours legislation, and widows' pensions.

Progressivism entered national politics via the presidency of THEODORE ROOSEVELT, who became president after the assassination of William McKinley in 1900. He was conservative in outlook but feared the excessive power of corporate wealth and the danger of working-class radicalism. He became the undisputed spokesman for national progressivism. Roosevelt gained a reputation as a "trustbuster" when in 1904 the Supreme Court ruled that Northern Securities Company had violated the Sherman Anti-Trust Act.

In 1903 Congress created the Bureau of Corporations, housed in the Department of Commerce, to publicize and investigate the behavior of giant companies. In 1906 Roosevelt signed both the Pure Food and Drug Act, which empowered the Department of Agriculture to fine and imprison producers found selling adulterated or misbranded goods, and the Meat Inspection Act, which sent federal inspectors into packinghouses to prevent bad meat from coming to market.

Roosevelt's successor, William Howard Taft, was unable to hold the progressive and the conservative wings of the Republican Party together, leading Roosevelt to run as the presidential candidate of the Progressive Party, or Bull Moose Party, in 1912. Both Roosevelt and Taft lost to Democrat WOODROW WILSON, who himself was sympathetic to progressive reform. Wilson signed the FEDERAL RESERVE Act of 1913, which reorganized the monetary system of the country, and in 1914 he signed both the Clayton Antitrust Act and the Federal Trade Commission Act, which strengthened government's ability to regulate corporations. In 1916 Wilson signed the Keating-Owen Act, which prohibited the sale of products made using child labor.

Progressivism also had a religious aspect, known as the Social Gospel, an attempt by mainstream Protestantism to restore some of its lost authority and social prestige through a sort of secular leadership. It hinged on the belief that every Christian had a dual obligation to self and to society and combined a critique of individualism with a commitment to social justice and reform. This was significant because by the beginning of the 20th century, many Americans looked to science rather than to faith for expertise on problems of the day.

WORLD WAR I redirected the energy of progressive reformers, and the Republican administrations of the 1920s had no interest in reviving the movement. Its reforms persisted into the 21st century, but many of the social initiatives favored by progressives were not enacted until the NEW DEAL.

Prohibition (North America)

A century of antialcohol agitation paid off in the early 20th century when the United States and most Canadian provinces passed laws against the sale and use of alcoholic beverages ranging from weak beer to high-proof whiskey. Enacted in the aftermath of WORLD WAR I, the United States' "noble experiment" in nationwide alcohol prohibition proved highly controversial and was repealed in 1933. As in the United States, Canadian restrictions on liquor intensified during World War I, but most were revised or repealed by 1930.

Advocates of Prohibition both responded to and benefited from the social turmoil of late 19th- and early 20th-century America. As immigrants, many of them Jewish and Roman Catholic, flooded into rapidly expanding cities, the anti-immigrant, antiurban, and antisaloon tendencies of Protestant, small-town America and Canada intensified. Business titans like John D. Rockefeller, Andrew Carnegie, and HENRY FORD supported Prohibition in the interest of the industries' need for sober machine operators.

One effective tool used by Prohibition supporters was local option, allowing towns, counties, or entire states to limit or eliminate the consumption of alcohol. By 1915, more than half of all Americans were already living under Prohibition statutes; 18 states were entirely "dry," as were parts of many others, predominantly in the South, Midwest, and West.

Prohibitionists used World War I to crusade against breweries, many owned by German Americans. They cited the need to divert grain supplies from making beer to baking bread for troops fighting in Europe. Congress approved the Eighteenth Amendment prohibiting the manufacture and sale of intoxicating liquor in December 1917; it became law on January 29, 1920. The federal Volstead Act provided guidelines for enforcement. It defined "intoxicating liquors" as containing 0.5 percent or more alcohol; alcohol for industrial, religious, and medicinal use was allowed, as were grape beverages like Vine-Glo that were prepared at home.

From the beginning, enforcement proved difficult. There were many loopholes and too few federal agents to cover the coastlines. Smugglers were extremely successful at importing booze from Mexico, the Caribbean, and, ironically, Canada, where Prohibition restrictions were looser, and almost nonexistent in Quebec. Ships filled with liquor anchored outside the three-mile international limit and awaited speedy bootlegging rumrunners who returned to the mainland with an illegal cargo bound for "speakeasies" and "blind

A police raid in Washington, D.C. With the passing of the Eighteenth Amendment, alcohol became illegal in the United States.

pigs" catering to women as well as men. President Warren G. Harding kept liquor in the White House. Other Americans who relished a drink brewed moonshine or bathtub gin; ill-tasting concoctions were mixed with fruity juices to create cocktails. Tainted alcohol, intended for industrial use or "spiked" with derivatives like nerve gas, caused blindness, paralysis, or death. Despite Prohibition's mounting problems, in the 1928 presidential election, which pitted "dry" Republican HERBERT HOOVER against "wet" New York Democrat ALFRED E. SMITH, the U.S. dry heartland voted overwhelmingly for Hoover.

Historians argue about the actual impact of Prohibition on drinking habits and law enforcement. In cities like New York, Detroit, and Chicago, where the dry crusade had never taken hold, illegal drinking probably exceeded pre-Prohibition levels. But there is compelling evidence that overall arrests for drunkenness and hospitalizations for alcoholism declined in the 1920s. In Canada, too, although illegal alcohol production soared, there were fewer reports of public intoxication and associated criminal behavior. Critics of Prohibition certainly had much to complain about, including the proliferation of gangsters like Al Capone and the Purple Gang, along with increased governmental corruption and general disrespect for laws. Criminalizing brewing and distilling, a huge formerly legal industry, meant loss of tax revenues and jobs.

In Michigan, the first state to ratify Prohibition, German-American beer maker Julius Stroh kept his workers employed making ice cream in what had been his brewery. Civil libertarians decried Prohibition's encroachment on states' rights and individual freedoms. By the early 1930s many formerly dry business leaders

were opposing Prohibition's heavy-handed and unsuccessful focus on law enforcement.

FRANKLIN D. ROOSEVELT made repeal of Prohibition a campaign issue in the 1932 election. By April 1933 the newly elected president had persuaded Congress to quickly allow beer with 3.2 percent alcohol, while Congress initiated the Twenty-first Amendment repealing the Eighteenth. By December Prohibition was no more. Enforcement of liquor policies and restrictions was mostly returned to the states. For a while some continued Prohibition as a statewide pol-

icy; today jurisdiction tends to be at the local level, and dry counties still exist.

JOHN M. MAYERNIK

Quezon, Manuel

(1878–1944) *Philippine president*

Manuel Quezon was the oldest child of Spanish mestizo parents living in the small town of Baler on the east coast of Luzon island. At nine the young Quezon was sent to San Juan de Letran College, where he completed his secondary education and finished his bachelor of arts degree. He then went on to the University of Santo Tomás to study law.

In 1899, Quezon interrupted his studies to join EMILIO AGUINALDO in the nationalist struggle against the United States, which had gained the Philippines from Spain after the Spanish-American War. After Aguinaldo surrendered to the United States in 1901, Quezon returned to law school and passed the Philippine bar in 1903. He subsequently set up his own law firm in his home province of Tayabas. Quezon's populist leanings were evident in the way he made wealthy clients pay high fees while he provided free legal services to the poor.

Quezon entered politics in 1905 when he ran for the office of provincial governor in Tayabas. Two years later he won a seat in the newly created Philippine assembly. He became the majority floor leader, with Sergio Osmena from Cebu as speaker. This marked the beginning of a long political collaboration with Osmena. The next year Quezon and Osmena established the Nacionalista Party, although Osmena remained its recognized leader through the early 1920s.

Quezon traveled outside the Philippines during this period, attending the International Congress of Navigation in St. Petersburg in 1908, visiting New York, and lunching with President THEODORE ROOSEVELT.

In 1909, the Philippine assembly elected Quezon resident commissioner to the United States. He would hold this post for the next seven years. During this time he learned English and focused his energies on winning independence for the Philippines. By the time he returned to the Philippines in 1916, his efforts had helped lead to the passage of the Philippine Autonomy Act, commonly known as the Jones Act.

The Jones Act led to a reorganization of the Philippine legislature on the U.S. model and opened up new avenues for Quezon's political advancement. In 1916, having first won a senate seat, he was elected president of the senate by his fellow senators, a position he held until 1935. Exploiting the preamble of the Jones Act and inspired by the rhetoric of President WOODROW WILSON, Quezon led a team to Washington, D.C., in 1919 to lobby for independence. A new presidential administration in the United States in the post-WORLD WAR I period doomed Quezon's mission.

In 1934 Quezon returned from yet another mission to the United States after the passage of the TYDINGS-MCDUFFIE ACT by the U.S. Congress, which created a 10-year transitional Philippine Commonwealth prior to full independence. The following year Quezon was elected president of the commonwealth, with Osmena as his vice president.

Manuel Quezon was a leading figure in Philippine independence and served as the country's leader in exile during World War II.

In 1935, President FRANKLIN D. ROOSEVELT approved Quezon's request for the assignment of General DOUGLAS MACARTHUR to help create a Philippine

army as the country prepared itself for eventual independence in 1946. Quezon and MacArthur had a long-standing relationship dating back to 1903. In fact, in 1929 Quezon had lobbied hard for MacArthur to succeed Henry Stimson as governor-general of the Philippines. Quezon named MacArthur field marshal and military adviser to the Filipino president.

In November 1941, as the threat of war loomed, Quezon was reelected president, with Osmena as his vice president. A month later the Japanese military swept into Southeast Asia and invaded the Philippines. Quezon and Osmena were evacuated to Corregidor, from which they were taken to the United States.

In Washington, D.C., Quezon and Osmena established a commonwealth government in exile. Manuel Quezon would not return to the Philippines. He became bedridden by the tuberculosis that had plagued him for years and died in Saranac Lake, New York, on August 1, 1944. He was survived by his widow, Aurora Aragon Quezon, and his three children. His body was carried back to the Philippines and interred at the Manila North Cemetery. It was then moved to the Quezon Memorial Circle in Quezon City.

SOO CHUN LU

racial segregation and race riots, U.S.

Segregation is physical separation based on race, gender, class, or religion. It can occur by law (de jure) or by actual practice (de facto). It may be voluntary, involuntary, or somewhere between the two. In the U.S. context, segregation historically has meant the separation of blacks involuntarily from white society.

In the antebellum United States, the North and cities in the South were more segregated than was the rural South, where an agricultural economy based on plantations and farms reduced opportunities or incentives for segregation. Northern segregation became more pronounced in the 1820s through the 1840s due to the large European immigration and the increase in white male voting. Northern urban segregation was occasionally de jure, but usually it was due to white preference. Blacks were removed from jobs, schools, public accommodations, churches, neighborhoods, and voting booths. Blacks responded by creating their own churches, lodges, and communities.

In the South the plantation economy required a large labor force—mostly slave. Slaves, it was thought, were better kept behind the big house where they could be observed than in towns or elsewhere where they might plot against the white near-minority. Free and slave blacks had access to churches, theaters, and other facilities, but only in their own sections. Blacks and whites did not ordinarily mingle. Schools and social welfare were forbidden to blacks. After the Civil War,

the South developed de facto segregation similar to that of the antebellum North. The key concept was separate but equal. Prisons were segregated, as were militia units, cemeteries, trains and boats, streetcars, and general public accommodations. Blacks initially accepted separate but equal, however unequal, as superior to having no access at all. Where segregated institutions were totally inadequate, as they had in the North, southern blacks developed their own segregated facilities. Residential segregation developed as freedmen left the plantations for freedmen's camps, the outskirts of cities, and rural black communities.

After Reconstruction, Redeemer governments abandoned all pretense of equality. The approach was validated by *Plessey v. Ferguson* (1896), and for decades the courts ruled against black efforts to mitigate if not overturn segregation. Only in *Buchanan v. Warley* (1917), a residential segregation case, did blacks win a victory against segregation. Even that ruling was overwhelmed by white prejudice and a limited amount of black preference that combined to segregate most U.S. neighborhoods. Where blacks and whites integrated, usually both were poor.

In the North, Reconstruction meant that black voters had a voice. Most jurisdictions abandoned de jure segregation, but de facto segregation was similar to that in southern cities. Residential areas were segregated, and so were job sites. Some accommodations were off limits not by law but by custom. The GREAT MIGRATION of blacks northward after the turn of the century and particularly during and after WORLD WAR I led to

State troopers, some posing with riot guns, stand ready for rioters in 1919. Racial conflict occurred because of a loss of employment, rumors of violent crime, and questionable election results—all causes of mass riots that left hundreds dead across the country.

competition and conflict between black migrants and old-time and immigrant whites for jobs, housing, and other basics of life. Blacks became restricted to urban ghettos with their own schools, facilities, and business districts. By the 1920s segregation in the North and South was comparable.

When the federal government instituted a *laissez faire* policy regarding states' treatment of their black populations after Reconstruction, the states implemented disenfranchisement, discrimination, and peonage. Blacks without rights were second-class citizens. White supremacy generated race hatred and lawlessness, and the result was a massive outbreak of lynching. Although lynching occurred throughout the United States and involved whites as well as blacks, it was predominantly a southern act against blacks. Between 1882 and 1951, of the 4,730 persons lynched, 3,437 were black.

The shift began in the decade prior to World War I. Rather than attacking an individual, white mobs began attacking entire communities. Wanting to preserve white power and vent frustrations against the helpless, white mobs went into black neighborhoods, beat and killed large numbers of blacks, and damaged a great deal of black property. Blacks commonly fought back, but the preponderance of casualties were black. Because the North was more urbanized than the South, most riots occurred in the North.

Blacks began migrating to northern cities as the South's segregation became tighter and urban industrialization offered alternative employment to debt peonage on southern farms. Blacks seemed a threat to northern white jobs and neighborhoods. World War I exacerbated the situation, and it also raised the specter of black soldiers returning and refusing to accept second-class citizenship. The summer of 1919 saw 26 race

riots, not only in Chicago and Washington, D.C., but in such cities as Charleston, South Carolina; Longview, Texas; Omaha, Nebraska; and Elaine, Arkansas. Black deaths exceeded 100, injuries were in the thousands, and thousands more were left homeless.

The most serious riots were in Wilmington, North Carolina (1898); Atlanta, Georgia (1906); Springfield, Illinois (1908); East St. Louis, Illinois (1917); Chicago, Illinois (1919); Tulsa, Oklahoma (1921); and Detroit, Michigan (1943).

Wilmington's riot was the first major outbreak since Reconstruction. An election rife with fraud and intimidation of black voters produced a white racist city administration resolved to control the city's black population. Whites began rampaging two days after the election, killing about 30 blacks and forcing many others to leave. The Atlanta riot of 1906 occurred after months of inflammatory press treatment of black crime in an effort to disenfranchise blacks. Reports that 12 white women were raped in a week provoked a white riot. White mobs murdered blacks, destroyed homes and businesses, and overwhelmed police and black resistance. After four days, 10 blacks and two whites were dead, and hundreds were injured. Over 1,000 left Atlanta.

The rioters in Springfield, Illinois, reacted to a white woman's claim that she had been molested by a black man. After lynching the alleged attacker, the crowd began dragging blacks from homes and streetcars. The National Guard restored order only after four whites and two blacks had been killed. White liberals, shocked by the violence in the hometown of Abraham Lincoln, met the next year with blacks and formed the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE).

Illinois was the scene of another riot in 1917 in East St. Louis. White workers feared black competition for jobs and attendant status. An aluminum plant brought in black and white strike breakers and, with militia and court injunctions, broke a white strike. The union blamed the blacks. The result was a riot, including beatings and destruction of property. After the riot, harassment and beatings continued for several months. In June a new riot began, and this time, along with the beatings, burnings, and the destruction of over 300 buildings, the official death toll was nine whites and 39 blacks.

Chicago's riot was the worst in the postwar years. A black swimmer entered the whites-only section of the water, leading white swimmers to stone him until he drowned; 13 days of rioting by thousands of blacks and

whites produced 15 white and 23 black deaths and 178 white and 342 black injuries. Property destruction left over 1,000 families homeless.

The Tulsa riot was in response to a white girl's allegation that a black man had attempted to rape her in a public elevator. Rumors that the suspect was to be lynched led an armed black mob to the jail. Whites and blacks fought, and the riot was under way. A mob of over 10,000 rampaged through the black neighborhood. Machine guns and airplanes were used to help the white mob, and by the time four companies of the National Guard had restored order, 150 to 200 blacks were dead.

Rioting eased after that, but WORLD WAR II brought a massive black migration to the war jobs of the nation's cities. Detroit's blacks and whites competed for the same jobs and the same houses. On June 20, 1943, fighting began in an integrated recreational area, Belle Isle. Fighting became rioting, with the customary looting and burning of the black neighborhoods. The white mobs spread through the city seeking blacks downtown as well as in the ghettos. Cars full of whites were shot at by black snipers. Federal troops quelled the riots, but 25 blacks and nine whites were dead.

The riots inevitably started when whites attacked blacks. This occurred at times of social dislocation. Riots grew due to the spread of rumors. The police consistently either were a precipitating factor or assisted in the growth of the riots. The location of the riots was always in the black community. Blacks reacted to white violence either by retaliating violently, leaving the cities, or engaging in peaceful protest. The NAACP publicized the riots and continued to work for legislative reform.

World War II altered the civil rights landscape. The NAACP had won a series of victories from the 1920s, slowly tearing down the legal structure supporting unequal facilities. The Supreme Court overturned the white primary in 1944, making black access to the political process theoretically possible. Between 1940 and 1952 southern black voter registration rose from 150,000 to over 1 million.

Ralaimongo, Jean

(1884–1942) *Malagasy activist*

In 1898, the French decided to interpret the “friendship treaty” signed with the last Malagasy queen as an invitation to transform Madagascar into a protectorate. Not everyone on the island objected to the changes, especially if, as in the case of future nationalist and socialist Jean Ralaimongo, they had been sold into slavery and released only upon the abolition of slavery effected by the French. Many longed for revolutionary changes to the traditionally rigid hierarchy that structured Malagasy society.

Ralaimongo absorbed French republican ideals enthusiastically and wanted to see them become practice in Madagascar. In the era before WORLD WAR I, the majority of intellectuals optimistically expected that they would have the opportunity to advance toward independence and civilization under France’s aegis. The Sadiavahe resistance movement (1915–17) drew its adherents almost exclusively from the ranks of the peasantry in the southwest of the island, and their economic grievances were caused as much by the weather as by the French-imposed cattle tax.

Many Malagasy men chose to join the French army in World War I. In return for their service, they received educational opportunities in the metropole and French citizenship. Ralaimongo remained in France until 1922, during which time he encountered various European radicals and future nationalist leaders from French colonies in Asia and Africa. With his roommate, the man later known as Ho Chi Minh, Ralaimongo attended the seminal meetings for the formation of the French Communist Party. They also collaborated on the production of a newspaper meant to raise political consciousness among colonial peoples.

Those who remained in Madagascar during World War I lived through an incident that displayed the French will to remain in control of the island. After having repeatedly heard rumors of a revolt planned for late in 1915, the administration ordered a series of arrests on December 12. The ensuing judicial processes concluded quickly. Those arrested belonged to the VVS (Vy Vato Sakelika, roughly Iron Stone Network), a group that had started to articulate an intellectual nationalism and that sought to prepare their compatriots for the distant day when they might take control of their own affairs. The majority of those convicted for their associations with the VVS were lower-middle-class youths from varying ethnic groups, though the leaders of the group were generally students at the medical school, white-collar workers, and teachers.

Soon after the VVS affair and the end of World War I, France granted a degree of representative government to Madagascar. Those war veterans who returned to the island brought with them radical ideas and an intensified sense of nationalism. In the 1920s, leaders adhered to the strategy employed by other African nationalists of the interwar period: Demand increased self-rule and the extension of European civil rights but not complete autonomy. Ralaimongo initiated his agitation from a base in Diego Suarez. They demanded the creation of a council-general with real powers and a significant portion of Malagasy members, along with the abolition of the government-general and representation in the French parliament. Financially backed by members of the business community, Ralaimongo allied former members of the VVS, French socialists, and Malagasy labor leaders in a single movement. From 1927, the group published two newspapers: *L’Opinion* (in Diego Suárez [now Antsirana]) and *L’Aurore Malagache* (in Tananarivo).

The first mass demonstration occurred on May 19, 1929, after the French governor-general refused to receive any Malagasy to discuss the recent *Pétition des Indigènes*, which had presented the nationalists’ requests. The unrest signified the existence of an embryonic sense of nationality. Little changed, however, and the administration did not listen to recommendations.

As a response to this inaction, nationalists became more radical in their demands. Ralaimongo, exiled to Port Beigé, started to advocate peasant resistance following the model popularized by MOHANDAS K. GANDHI. In 1931 he first suggested that Madagascar should break with France entirely. New groups and a more explicitly nationalistic, proindependence periodical press appeared after 1935. However, the nationalist movement had lost much of its momentum by the later 1930s as the effects of the global GREAT DEPRESSION caused traders to withdraw financial support. Many middle-class Malagasy simply preferred the benefits they would accrue as French citizens to the uncertainty of independence.

The mutations in French politics and foreign policy triggered by WORLD WAR II yielded a new situation for colonies such as Madagascar. The administration decided to acknowledge calls for self-government. To start, the Malagasy elected two representatives to the constituent assembly in Paris. French settlers and Malagasy each had their own electoral colleges, a situation that the Malagasy representatives actively criticized. Once in Paris, these two men, Joseph Raseta and Joseph Ravoahangy, along with Paris-based writer Jacques Rabemananjara, started the Democratic Movement for Malagasy Restoration (known by its French acronym MDRM). This political

party attracted some 300,000 members from various ethnic and social groups. Raseta and Ravoahangy rejected any identity for Madagascar other than that of a sovereign nation-state, so they did not support the territory's inclusion in the French union. Provincial elections in 1946 returned a large MDRM majority in the provincial and the national representative assemblies.

These political reforms did little to mitigate the various causes of tension that sparked the revolt of 1947. Together, the return of soldiers who had fought for France in World War II, food shortages, economic scandals, and ethnic disputes contributed to the deterioration of relations with the French administration. The nationalists who challenged French rule on March 20, 1947, managed to gain support across about one-third of the island before reinforcements could arrive from France. The French outlawed the MDRM, despite its protestations of innocence, and military courts ordered the execution of 20 military leaders of the revolt. Trials of others involved in the uprising resulted in 5,000 to 6,000 convictions and sentences of either imprisonment or death. Malagasy independence remained to be won.

MELANIE A. BAILEY

rape of Nanjing (Nanking), the

On July 7, 1937, Japanese forces attacked a town called Wanping in northern China near Beijing (Peking) in what came to be called the MARCO POLO BRIDGE INCIDENT. On August 13 they attacked Shanghai, China's major port and financial center. This was the beginning of the SINO-JAPANESE WAR, which became part of WORLD WAR II in Asia. Japan boasted that China would surrender within three months. However, Chinese troops defended Shanghai heroically for three months before falling back, opening the road to Nanjing, China's capital. Meanwhile, the Chinese had moved their capital to Chongqing (Chungking) in Sichuan (Szechwan) province up the Yangzi (Yangtze) River.

Nanjing fell to Japanese troops on December 13, 1937. For the next eight weeks the civilians and surrendered Chinese troops in the city were subjected to monstrous barbarity perpetrated by over 50,000 Japanese officers and soldiers. The world knows it as the rape of Nanjing and the Chinese call it the great Nanjing massacre. The massacre was condoned by the high command and the commander of Japanese forces in Nanjing, Prince Asaka Yasuhito, uncle of Emperor HIROHITO. Soldiers were encouraged to commit the most horrendous atrocities and competed to kill the most people in the least time. Babies were bayoneted, and no female escaped gang rape, sexual torture, and death. All Chinese prisoners of war were massacred. The city was thoroughly looted, and large sections were burned down.

The only help for the desperate victims came from several Americans and Europeans who selflessly chose to remain in the city. They formed the International Committee for the Nanjing Safety Zone and established an area called the International Safety Zone around the campus of Nanjing University, the Ginling Women's Arts and Science College, the U.S. embassy, and some Chinese government buildings. These Western men and women stood up to the crazed Japanese soldiers, often risking their own lives. One of the bravest was a German businessman and member of the NAZI PARTY, John Rabe, who opened up his home as a refuge and put on his Nazi swastika armband to bolster his authority in stopping Japanese soldiers from violating the safety zone. He was so admired by the Chinese that they called him the "Buddha of Nanjing." Others later called him the Oskar Schindler of Nanjing. Another was Wilhelmina Vautrin, head of the education department of the Ginling Women's College. She protected thousands of women from Japanese soldiers, which won her accolades as the "Living Goddess of Nanjing." There were many others who worked valiantly and at enormous personal risk to protect the Chinese and who kept diaries of the horrific events.

The worst was over by the spring of 1938, and Japanese authorities began damage control in an attempt to prevent international outrage. One outcome of the rape of Nanjing was the creation of a vast network of military brothels staffed by several hundred thousand young women from Korea, China, Taiwan, and later the Philippines and Indonesia, who were kidnapped and forced to serve as sex slaves to the Japanese soldiers so that they would be less likely to rape women in conquered territories. These victims were called "comfort women." The first official "comfort house" was opened near Nanjing

in 1938. These crimes were revealed in the International War Crimes Tribunal in Tokyo after the war.

JIU-HWA LO UPSHUR

Red Scare (1920)

Red Scare was a term applied during the 1920s to a period of extreme anticommunism in the United States from 1917 until 1920. It started with the Russian Revolution in October 1917 which saw the Bolshevik Party taking power in Russia. The result was that there was a fear in the United States that Communists might try to take power—initially through the Socialist Party of America and the Industrial Workers of the World, who led strikes in 1916 and 1917, and then through the Communist Party of the United States of America, which was established in 1919. There was also a fear of the rise in anarchist groups.

In April 1919 a series of letter bombs were posted to a number of prominent Americans including Oliver Wendell Holmes, a Supreme Court justice. The man who tried to bomb the home of the attorney general, A. Mitchell Palmer, Carlo Valdinoci, was killed as he placed the device on the porch of Palmer's house. It was a period of intense xenophobia, and the police started arresting people they thought were involved. During the arrests, there were strikes throughout the United States that led to some people fearing that there was a nationwide conspiracy to overthrow the U.S. government.

The terms of the Espionage Act of 1917 had been strengthened through the Sedition Act of 1918, as arrests continued, with some 10,000 people being arrested over the two-year period. The man appointed by Palmer to be in charge of organizing the arrests was J. Edgar Hoover, aged 24. Many people alleged that they were beaten by the police during and after their arrests and also denied access to their attorneys, although the tough attitude had the support of many people and some newspapers. U.S. senator Kenneth

A group is photographed in front of the home of Attorney General A. Mitchell Palmer after the attempted bombing in 1919.

D. McKellar raised the idea of establishing a penal colony in Guam for subversives. However, a number of jurists, including Felix Frankfurter, later a judge in the Supreme Court, published their criticisms of the arrests.

In early 1920 Attorney General Palmer announced that he had received evidence that the Communists were planning to take over the United States on May 1, but Palmer's attempt to win the Democratic Party nomination for the presidency failed soon afterward. In spite of the arrests, which also saw several hundred people being deported, bombings continued, with one device, which had 100 pounds (45 kilograms) of dynamite and 500 pounds (230 kilograms) of steel fragments, exploded in front of J. P. Morgan Company's office on Wall Street, killing 38 and injuring 400 others. In the 1920 U.S. presidential election, Eugene V. Debs of the Socialist Party of America, who had stood in the U.S. presidential elections on four occasions, was arrested and fought his fifth election campaign from prison. The hysteria reached its peak when two Italian anarchists, Nicola Sacco and Bartolomeo Vanzetti, were arrested for their role in the death of a paymaster and security guard on April 15, 1920, and were sentenced to death, being executed in 1927. The Red Scare of 1919–20 served to have a negative effect on progressive political parties and union membership in

America, as both experienced severe declines in membership in the next decade.

JUSTIN CORFIELD

reparations, World War I

Since WOODROW WILSON rejected indemnities, WORLD WAR I's victors required reparation for civilian damage done from the losers, ostensibly to ease reconstruction costs. All of the 1920 treaties written at Paris contained reparations clauses, although only Germany could pay appreciably. Article 231 of the Versailles Treaty with Germany, as limited by article 232 and similar clauses in the Austrian and Hungarian treaties, laid the legal basis. Only Germany saw this as a war guilt clause. At Paris, reparations were stretched to cover war pensions to enable Britain and its empire to gain a share. As the total set in 1921 was based on estimates of German capacity to pay, the British share, not the total, was thereby increased.

Germany was to pay 20 milliard (U.S. billion) gold marks (\$5 billion) by May 1921. Meanwhile, the victors would assess damage claims and arrive at a total sum. Actual German payments to May 1921, chiefly in credits for state properties in transferred territories and battlefield salvage, were deliberately overestimated by the Allies at 8 milliard, which did not cover prior charges, including provisioning Germany. The total figure set in April and May 1921 was ostensibly 132 milliard gold marks, but actually 50 milliard, including the unpaid balance on the interim payment. Figures were always misleadingly inflated so victor politicians could claim great accomplishments and German politicians could orchestrate outrage. A schedule of continuing payments in cash and kind (chiefly coal and timber) was established but soon were in virtual abeyance as Germany claimed inability to pay.

Battles over reparations dominated the postwar decade. If the victors had to pay vast reconstruction costs as well as domestic and foreign war debts while Germany, which had no foreign war debt and eradicated its domestic debt through inflation, paid nothing, Germany would be the victor. Berlin sought to reverse the military verdict by paying little and inflat-

ing its currency, blaming reparations for the inflation. Repeated German defaults on coal deliveries led to the 1923 Ruhr encirclement to force Germany to honor the treaty. France won that battle but lost the war, since in 1924 at British insistence, reparations payments and the total were reduced in the Dawes Plan, which provided a large loan to Germany and slowly rising payments. When these became onerous, Germany gained another reduction and loan in the 1929 Young Plan. After ADOLF HITLER's September 1930 electoral triumph, foreign, liberal, and Jewish capital fled Germany, creating a spreading economic crisis that led to the July 1931 one-year Hoover Moratorium on all intergovernmental debts. When it expired, the July 1932 Lausanne Agreement effectively ended reparations without saying so.

In all, Germany paid about 21.5 milliard gold marks, chiefly in kind. Cash was mostly borrowed, and the Dawes and Young loans were defaulted and not settled until 1995. Reparations could not be collected without German cooperation, which was not forthcoming. Of all Germany's battles to escape the Versailles Treaty, that over reparations was the most prolonged, bitter, and devious.

SALLY MARKS

Rhodesia, Northern and Southern (pre-1950)

In 1911, Northern Rhodesia, a wealthy protectorate of the United Kingdom with borders that corresponded roughly to modern Zambia, was created from a combination of North West Rhodesia and North East Rhodesia. Both of these areas were under the control of the British South Africa Company, which had acquired the area in 1899 by dint of a royal charter. This empowered the company with complete administrative control over what became known as Southern Rhodesia and Northern Bechuanaland. While the charter gave the company power in the south, it soon expanded northward, extending its activities across the Zambezi River into what eventually became Northern Rhodesia.

The name of the area was derived from the name of Cecil John Rhodes, renowned British empire builder and

the most influential figure in the European expansion into southern Africa. Rhodes gained influence for the British in the area through negotiations with local chiefs for mineral rights in 1888. These negotiations, while questionable in terms of fairness to the indigenous population, were so successful that later the same year both Northern and Southern Rhodesia were proclaimed a part of the British sphere of influence. Southern Rhodesia was formally annexed and was granted self-government in 1923. Northern Rhodesia remained under the complete administrative and legislative control of the British South Africa Company until the same year, at which time the company surrendered all of its buildings, assets, land, and other monopolistic rights aside from mineral rights in return for a cash payment from the British government.

Thus, Northern Rhodesia became a British protectorate, and in 1924 executive and legislative councils were established along with the office of the governor of Northern Rhodesia. Seeing the situation of the white population in nearby South Africa, the Colonial Office promoted the immigration of white settlers to the area, reserving huge stretches of prime farmland taken from important tribal areas. This appropriation of land clashed with the land rights of the local population, who had little recourse for complaining about the situation.

The outbreak of WORLD WAR II saw Northern Rhodesia playing an important role for the British. As soon as the war began, citizens of Northern Rhodesia signed up to fight for the British army in both the European and African theaters. Arguably as important, the vast copper resources of Rhodesia were used to create vital munitions for the British war effort. This desperate need for copper caused an upswing in the price of the material, which saved the failing Rhodesian economy. Northern Rhodesia was considered as a possible location for the settlement of European Jews fleeing the political repression of the NAZI regime in Germany, particularly following the *Kristallnacht*, a massive anti-Semitic pogrom launched by fascist organizations on November 9, 1938.

Following the war, Northern Rhodesia took steps toward democratization with the establishment of an African Representative Council in 1946. Again following the lead of South Africa, white Rhodesia settlers opposed any policy that would allow the larger African population to gain greater representation in the political process or better access to education. Most of the white population pushed for an amalgamation with the more prosperous Southern Rhodesia. In spite

of the strong opposition of the white population, two African members were appointed to the Northern Rhodesian legislative council in 1948, the first step toward enfranchising the indigenous peoples. Northern Rhodesia became the independent nation of Zambia on October 24, 1964.

The area known as Southern Rhodesia corresponds roughly to modern Zimbabwe. After the split in 1923, Southern Rhodesia became known simply as Rhodesia. Previously, in 1922, nearly 30,000 white settlers in Southern Rhodesia voted for the area to become self-governing rather than integrated into the Union of South Africa. Very soon after the annexation by the British government in 1923, Southern Rhodesia became a self-governing colony. As with Northern Rhodesia, the right to vote was tied primarily to property qualifications. While a few black Africans were elected to the assembly, the legislature was predominantly white.

In 1930, the Southern Rhodesian Land Act was passed, excluding black Africans from owning the best farmland and creating a situation similar to the one experienced by the native people in South Africa at the same time. Four years later, a labor law excluding black Africans from entering the skilled trades and professions was passed. Additional legislation of the time continued to discriminate against the native population.

The indigenous peoples suffered repeated shrinking of areas set aside for them, the constant confiscation of the best, most arable lands, and continued exclusion from any professions that required specific skills. Education tended to be private schools that catered to the white minority, with the education of the native Africans relegated to missionaries. However, with the onset of World War II, the social conditions of Southern Rhodesia were forced to change. During the war, many young white men enlisted to serve in the British army; this meant that black African natives had to fill the vacated jobs to prevent the complete collapse of the economy. This, more than anything, started to empower the natives.

The black population of Southern Rhodesia was not unrepresented in the legislature but was significantly under-represented. Dissatisfaction with the local political situation began to grow in the native community, and many social and political organizations advocating the demands of the local black population sprang up. Following the war, the British Colonial Office attempted to assuage the situation with constitutional changes, increasing the size of the electorate and granting political representation to the African majority. Naturally, the powerful white minority opposed these

measures, believing that the Colonial Office had no authority; Southern Rhodesia had been self-governing since 1924. This position was enhanced by the return of white Rhodesian servicemen following the end of the war; veterans wanted their jobs back, a situation that permitted the environment of pushing aside the grievances of the black African population and increasing racial policies that closely resembled those of neighboring South Africa.

Southern Rhodesia would remain relatively peaceful by African standards until the 1960s.

RIAN WALL

Rif rebellion

For centuries Spain controlled the mountainous areas from Ceuta to Melilla in northern Morocco. In March 1912 Sultan Mulai Hafid signed a treaty in which he recognized a French protectorate over Morocco. The French and Spanish then negotiated the Treaty of Fez; Spain would continue to control the mountainous areas of the Rif in the east and the Jibala in the west. France would control the rest of Morocco, and the Rif Mountains would serve as the border between the two protectorates.

When Spain began moving troops into the region, it caused unrest among the peoples of the Rif, who were used to living independently under the rule of the sultan. Two Berbers from the largest tribe in northern Morocco united all the tribes against the Spanish into what became the Rif rebellion of 1921–26. Muhammad Ibn Abd el-Krim el-Khatabi, also known as Abd el-Krim, became the leader of the revolt. Abd el-Krim was the eldest son of a *qadi* who received an education superior to that available to most in the Rif. His younger brother M'hammad became his chief adviser and commander of the Rif army. Abd el-Krim was appointed chief *qadi* in the Melilla region and quickly became an important figure in the administration of the Spanish zone. He also was an editor for *El Telegrama del Rif*, where he took anti-French stances during WORLD WAR I, for which

he was imprisoned in 1917. After being released from prison in 1919, he was reinstated in the Office of Indigenous Troops and Affairs. Shortly afterward, Abd el-Krim left the Spanish administration, and his brother came home from Madrid, where he had been studying to become a mining engineer. They then began to form an intertribal military force with the intention of creating an independent state in the Rif.

Abd el-Krim and the Rif army won several decisive battles against the Spanish. They used brief military engagements to ambush the Spanish and then retreat. Because of this, the Spanish soldiers were at a large disadvantage. They were trained to engage another European army and not to fight a guerrilla-style war. Abd el-Krim also took advantage of the region's steep mountainous terrain and the inaccessibility of the Rifian coastline. General Manuel Sylvestre, the commander of the Spanish forces in the region, was defeated and killed in battle at Annual. The fighting continued after the Spanish retreat, as the Rifians cut off Spanish escape routes. It was estimated that the Spanish suffered between 9,000 and 15,000 casualties, including General Sylvestre, in this battle.

Shortly after the battle, Abd el-Krim established a government and began making changes in the Rif in an attempt to better the lives of his people. The Rifian army continued to win battle after battle until the majority of northern Morocco was under the control of Abd el-Krim. In an attempt to stop him, the Spanish resorted to massive bombing campaigns with TNT and incendiary and chemical bombs, but to no avail. Abd el-Krim and the Rifian army continued to advance. Marshal LOUIS-HUBERT LYAUTEY, the top administrator of the French zone of Morocco, kept a close eye on the events in the north.

The French authorities had pursued a successful policy of divide-and-rule against the local tribes to keep control, but Abd el-Krim's influence began to penetrate into the French zone. By April 1925 he launched an offensive into French territory. For a short time his attacks forced a French retreat until a joint Spanish-French operation caught Abd el-Krim, now fighting a two-front war, in a pincer attack. By late October 1925 the Spanish were advancing, and Abd el-Krim was forced to retreat toward the French. In May 1926 Abd el-Krim negotiated a surrender with the French. France pardoned Abd el-Krim and then exiled him to the island of Reunion in the Indian Ocean. In 1947 he was granted asylum in Egypt, where he lived in Cairo until his death in February 1963.

BRIAN M. EICHSTADT

Rommel, Erwin

(1891–1944) *German general*

Born into a middle-class family with no military background in 1891, Erwin Rommel went on to become one of the most decorated and senior generals in the German army during WORLD WAR II. He is most famous for commanding the German Afrika Korps from 1941 to 1943. He proved such a competent commander during this period that the British nicknamed him the “Desert Fox.”

Rommel first distinguished himself as a leader in a number of combat missions during WORLD WAR I in France, Italy, and Romania. For his exceptional military prowess he was awarded two Iron Crosses and became the youngest recipient of a Pour le Merite, Germany’s highest military honor. Following the war he served as an instructor at the Dresden Infantry School from 1929 to 1933 and the Potsdam War Academy from 1935 to 1938.

He also wrote a well-received textbook on military theory, *Infantry Tactics*, in 1937. *Infantry Tactics* caught the attention of ADOLF HITLER. Rommel was subsequently promoted to colonel and given command of the Hitler Youth paramilitary force and later Hitler’s bodyguard battalion in 1939–40. By now a major general, Rommel took command in February 1940 of Germany’s 7th Panzer Division and led his new unit to war against France on May 10. Despite having no previous experience in tank warfare, Rommel displayed an uncanny instinct for coordinating large and fast-moving armored formations. He outperformed his more experienced colleagues in the blitzkrieg assaults. In a six-week campaign, Rommel’s unit captured over 450 tanks and over 100,000 Allied prisoners.

In an effort to relieve the beleaguered Italian units fighting in North Africa, Hitler promoted Rommel once again and awarded him a new command in January 1941. Rommel landed in Libya with the two divisions that would form the foundation of the Afrika Corps (Korps). Violating his orders from Wehrmacht high command to consolidate his new units, he attacked the British forces in North Africa in March and caught them off

balance, which allowed him to retake all of Cyrenaica except Tobruk. Promoted to full general in the summer of 1941, Rommel and his Panzer Group Africa held off British counterattacks until he was eventually forced to withdraw in November.

After receiving new supplies and reinforcements, he launched a series of offensives against the British, concluding in the Gazala battles through which he regained all of the lost ground and captured Tobruk. He was promoted once more to field marshal on June 22, 1942, in recognition of his success.

Rommel’s panzer group was defeated by the British at the first Battle of EL ALAMEIN in July, defeated again by British general Bernard Montgomery at Alam Halfa in September, and crushed at the second Battle of El Alamein in October. Facing competent and far better supplied Allied troops, Rommel’s forces were hampered by fuel shortages and his own debilitating medical problems. Despite his achieving a notable victory over the U.S. 2nd Army Corps at the Battle of the Kasserine Pass in February 1943, Rommel’s campaign in Africa was ultimately a failure. Against Hitler’s orders he organized an orderly withdrawal from North Africa. He flew to Germany on extended sick leave, leaving many of his subordinates to be captured by the Allies.

Following the Allied victory in North Africa, Rommel was appointed commander in chief of German Army Group B in August 1943 and tasked with planning operations in northern Italy. When Rommel failed to defend Sicily or the Italian mainland from Allied invasion, Hitler ordered him to France in November 1943 to organize the defense of that country against further Allied invasion.

There he launched a massive construction effort to strengthen the Atlantic wall, particularly with his own innovative design of beach obstacles nicknamed “Rommel’s asparagus.” In addition, he ordered that thousands of tank traps and other obstacles be set up on beaches and throughout the countryside and that millions of mines be laid.

Rommel disagreed with the strategy of his superior, General Rundstedt, for defending France. Rundstedt believed that a large proportion of the German army should be held in reserve to provide a flexible means of reinforcing front line units and plugging gaps opened by the Allies, while Rommel argued that the German tank units should be deployed right at the beaches to repel the Allied invasion forces immediately. The former won out, but following the Allied invasion of Normandy on D-DAY, both struggled in vain to stop the Allied advance across France toward Germany.

Plane wreckage is all that remains after Erwin Rommel's Afrika Corps retreated through Libya to the Tunisian coast. Despite his inexperience with tanks at the beginning of World War II, Rommel soon gained the respect of the Allies for his tactical leadership.

Rommel was severely wounded on July 17, 1944, when his staff car was strafed by an RAF fighter. He was also implicated in a failed assassination attempt against Hitler on July 20. The investigators discovered numerous connections between Rommel and the conspiracy, including the deep involvement of many of his closest aides. He was offered a choice of poison or a lengthy show trial and a promise of reprisals against his family. Predictably, he took the former course of action on October 14, 1944.

SCOTT FITZSIMMONS

Roosevelt, Eleanor

(1884–1962) *American first lady*

Anna Eleanor Roosevelt was the wife of FRANKLIN D. ROOSEVELT and first lady of the United States from 1933 until 1945, becoming a United Nations diplomat and a major political figure in her own right.

She was born on October 11, 1884, in New York, the daughter of Elliott and Anna Hall Roosevelt and niece of THEODORE ROOSEVELT, who became the 26th president of the United States. Both her parents died when she was young—her mother when she was eight and her father when she was nine, and as a result she was raised by relatives, rapidly becoming Theodore Roosevelt's favorite niece. It was the childhood of a wealthy girl, and she quickly developed a social conscience and keenness to help with charitable works.

She was educated at Allenswood, near London, England, and later described the three years she spent there as the happiest in her life. In 1902 she returned

to New York, and three years later, on March 17, 1905, she married a distant cousin, Franklin Delano Roosevelt. They were to have six children: Anna Eleanor, born in 1906; James, born in 1907; Franklin Delano, Jr., born in 1909 (died aged seven and a half months); Elliot, born in 1910; Franklin Delano, Jr., born in 1914; and John Aspinwall, born in 1916.

Even before her marriage, Eleanor Roosevelt had been active in charity and volunteer work, and she adapted easily to the task of accompanying her husband as he entered politics. The family moved to Albany after Franklin won a seat in the New York senate in 1911, and two years later they moved to Washington, D.C., when he was appointed assistant secretary of the navy. During WORLD WAR I, Eleanor worked in a Red Cross canteen for the Navy-Marine Corps Relief Society. A particularly traumatic time came about in 1918 when Eleanor discovered that her husband was having an affair with her social secretary, Lucy Mercer. She offered a divorce, which he rejected, promising to end the affair. The two would remain married, but their relationship was badly strained.

In 1921 Franklin Roosevelt was struck with poliomyelitis, and it looked as though his political career was over. However, Eleanor stood by him, and gradually both of them became active in grass-roots politics, with Eleanor playing a major role in the Democratic Party in New York State. When Franklin was elected governor of New York in 1929, Eleanor remained an adept political hostess but also continued to run a Manhattan girls' school, Todhunter, which she and two friends had recently bought. Eleanor taught at the school and enjoyed her independence from political life.

When Franklin Roosevelt was elected president, Eleanor became a leading advocate for liberal causes, especially women's rights and equal rights for African Americans. She held a regular White House press conference restricted to women journalists. This ensured that many major newspapers had to hire women correspondents, if only, some would later admit, to get the news from her. With Franklin crippled, Eleanor toured the United States many times in his absence and was able to tell him about the success or otherwise of social programs.

Eleanor Roosevelt's championing of the rights of African Americans quickly became famous throughout the United States and overseas. In 1939 the Daughters of the American Revolution refused to allow Marian Anderson, an African American operatic singer, to perform in Constitution Hall, so Eleanor resigned her membership of the organization and held the concert

at the Lincoln Memorial, with 75,000 people attending. Once, when attending a public meeting in Alabama with the public segregated by race, Eleanor sat in a folding chair in the central aisle.

In 1945 Franklin Roosevelt died, and his successor, HARRY S. TRUMAN, who called Eleanor the "First Lady of the World," appointed her to be a delegate to the United Nations, where she was chair of the Commission on Human Rights from 1946 until 1952, playing a major role in the drafting and then the adopting of the Universal Declaration of Human Rights in 1948. She was appointed in 1961 by President John F. Kennedy to chair the Commission on the Status of Women, and she came to support the Equal Rights Amendment. From 1945 Eleanor Roosevelt traveled around the world many times, unveiling a statue of Franklin Roosevelt at Grosvenor Square, London, in April 1948 and going to Yugoslavia and the Soviet Union, as well as most Western countries.

Eleanor Roosevelt died on November 7, 1962, from tuberculosis, and was buried at Hyde Park, New York, where her husband had been buried 17 years earlier.

JUSTIN CORFIELD

Roosevelt, Franklin Delano

(1882–1945) *U.S. president*

Franklin Roosevelt, known as "FDR," was the 32nd president of the United States (1933–45) and was the only president elected to that office four times. He led the United States through two major crises: the GREAT DEPRESSION of the 1930s and then WORLD WAR II, which saw the emergence of the United States as a world power. His NEW DEAL programs were extremely controversial at the time, and Roosevelt's moves, although nowadays seen as progressive and necessary, were subject to bitter criticisms when enacted.

Franklin Roosevelt was born on January 30, 1882, at Hyde Park, New York, the only child of James and

Sara Delano Roosevelt. The family was wealthy but discreet, spending much of their time at their estate in the Hudson River valley, New York State, or traveling in Europe. As a boy, Franklin Roosevelt attended Groton Preparatory School in Massachusetts and in 1900 went to Harvard University, where his academic results were mediocre, but he made a major impression on the social scene. He also came to know his fifth cousin THEODORE ROOSEVELT, marrying Theodore's niece, ELEANOR ROOSEVELT, on March 17, 1905. It was through his wife's work that Franklin came to see the condition of the poor in New York.

PROGRESSIVE REFORM

After graduating from Columbia University Law School and passing the New York bar exam, Roosevelt worked as a clerk for Carter, Ledyard, and Milburn of Wall Street, but by this time he had decided to enter politics. In 1910 Franklin Roosevelt was elected for the state senate seat for Dutchess County, New York. It was not long before he achieved national attention in opposing the choice of a candidate for the U.S. Senate by Tammany Hall, the New York City Democratic Party organization. Soon Roosevelt started to urge for progressive reform and supported the 1912 presidential bid of New Jersey governor WOODROW WILSON. When Wilson became president, he appointed Roosevelt assistant secretary of the navy in March 1913.

With the outbreak of WORLD WAR I in 1914, Roosevelt supported the rearmament of the United States, which entered the war in 1917. In 1918 he toured naval bases and battlefields. It was on his return from his major tour in summer 1918 that Eleanor realized that Franklin had been having an affair with Lucy Mercer, her social secretary. Franklin rejected the divorce that Eleanor offered and agreed to end the affair and not see Mercer again, but he was to break this promise 20 years later. Although the marriage held, Franklin and Eleanor were never close again. Franklin Roosevelt had supported U.S. membership in the LEAGUE OF NATIONS and in 1920 was nominated as the Democratic vice presidential candidate, running on a ticket with James M. Cox. However, the Republicans won convincingly, and Roosevelt became disenchanted and went into business as vice president of Fidelity and Deposit Company of Maryland.

Soon after this, while on holiday at Campobello Island, New Brunswick, Canada, Franklin Roosevelt discovered that he had poliomyelitis. Paralysis set in, but Roosevelt believed that he would be able to walk again, although he had to withdraw from active politics. In 1924 he appeared at the Democratic Convention,

amid cheers, to support the nomination of ALFRED E. SMITH as the Democratic presidential candidate. Roosevelt supported Smith's second bid in 1928, and Smith urged Roosevelt to run for the governorship of New York, which Roosevelt did, winning even though New York voted Republican in the presidential election on the same day.

Roosevelt learned to campaign from his car and soon was making many appearances in public, often holding on to one of his sons as he literally dragged himself from engagement to engagement.

As governor of New York, Roosevelt gained much support from farmers for whom he gave tax relief. In 1930 he turned his original majority of 25,000 votes into one of 725,000 votes. His public works programs were becoming increasingly popular as the Great Depression forced more and more people out of work. In 1931 he established the Temporary Emergency Relief Administration, giving unemployment assistance to up to 10 percent of all the families in New York. The popularity of this quickly made Roosevelt a likely contender for the 1932 presidential elections. He won the election comfortably, with 472 of the Electoral College seats, to Hoover's 59, and with 22,829,277 votes, as against 15,761,254 for Hoover. He also had good Democratic majorities in both the Senate and the House of Representatives.

The economy declined considerably between the election and the inauguration, with industrial production at 56 percent of its 1929 level and unemployment running at 13 million. In his first "Hundred Days" he sought to massively boost the economy by public spending through poor relief and other reforms in the economy. He declared a bank holiday, closing all banks until Congress could pass legislation to support the banking system, which was facing the possibility of widespread destruction, with "runs" on many banks. This restored public confidence in the banking system, and Roosevelt explained his actions in regular radio broadcasts that became known as the "fireside chats."

Roosevelt guided into law the Agricultural Adjustment Act (AAA) and the National Industrial Recovery Act (NIRA). The former resulted in the establishment of the Agricultural Adjustment Administration, which helped provide subsidies for wheat, corn, cotton, and some other goods in exchange for reduced production levels. This raised the prices of these commodities and hence the income of small farmers. Although there were some immediate successes, many critics saw it as immoral to destroy fields of crops at the same time that some people were going hungry and while there

were famines overseas. However, it was not until 1941 that farm income reached the level of 1929. The NIRA started public works programs, but many of these began slowly, with Roosevelt anxious that none of the \$3.3 billion allocated to them should be wasted. A major part of this was the Tennessee Valley Authority (TVA), with a massive hydroelectric scheme established to improve flood control and generate power in the Tennessee River basin. There was also the establishment of the National Recovery Administration (NRA), which set minimum wage levels and guaranteed workers could bargain collectively. However, in May 1932 it was declared illegal by the Supreme Court, resulting in a bruising battle between the administration and the Court.

Roosevelt's initial programs were very successful, but because of his wanting to moderate them and cautious of critics seeing the country's debt expanding rapidly, they only mitigated the effects of the depression rather than ending it. However, in November 1936 Roosevelt was reelected, winning every state except Maine and Vermont with 27,752,648 votes as against 16,681,862 for his opponent, Kansas governor Alfred Landon.

SUPREME COURT

Seeing that the main opposition to the New Deal programs was from the Supreme Court, Roosevelt came up with a very controversial program to nominate another new justice for each existing one aged 70 years or more. This bill was voted down, but the Supreme Court was nervous and upheld the constitutionality of the Social Security Act and the National Labor Relations Act (known as the "Wagner" Act). In 1937 the economy recovered, and Roosevelt was able cut back government spending to create a balanced budget. However, this produced a recession, and Roosevelt immediately increased spending.

The outbreak of World War II started to overshadow the last year of Roosevelt's second term as president. He had recognized the Soviet Union, improved relations with Latin America, but did nothing to oppose the rising power of Germany, Italy, and Japan. The latter's sinking of a U.S. gunboat in December 1937 led to a Japanese apology to avoid war. In June 1940, with the German capture of France, Roosevelt was keen to aid the British with "all aid short of war." He managed to send 50 old ships to Britain in exchange for naval bases. Most people in the United States remained isolationist, with the 1940 presidential election being fought largely on home issues. Roosevelt decided to break with the tradition set by George

Washington, and he was nominated for a third term—his Republican opponent, Wendell L. Willkie, also supporting Roosevelt's policy of supporting Britain. Although Roosevelt won comfortably with 449 to 82 Electoral College seats and 27,313,945 to 22,347,744 in the popular vote, there was a great fear of Roosevelt drawing the United States into war.

Tensions rose when in March 1941 Roosevelt ordered the navy to fire at German submarines, and in August 1941 he met with the British prime minister WINSTON CHURCHILL on a battleship off Newfoundland, Canada. The result was the Atlantic Charter. The close personal trust between the two men was to be the keystone of the Allied war effort. However, it was the attack on PEARL HARBOR on December 7, 1941, that would result in the United States going to war with Japan and Germany.

By restricting the export to Japan of certain war supplies, essentially the Japanese felt that their only way out of the impasse was to attack. It now seems accepted that Roosevelt saw that the Japanese would attack—U.S. intelligence having broken the Japanese ciphers—but was uncertain about the place and the time of the attack. The bombing of Pearl Harbor "on December 7, a day that will live on in infamy," took the U.S. government by surprise, and on December 8 Congress, at the request of Roosevelt, declared war on Japan. Three days later Germany and Italy declared war on the United States, which was now committed to war in Europe.

Massive war production programs began immediately, ending the depression and seeing the industrial might of the United States dedicated to the war effort. Roosevelt met with Winston Churchill and the other Allied leaders at various conferences, the most famous being Casablanca (January 1943), Teheran (November 1943), CAIRO (November-December 1943), and YALTA (February 1945). Roosevelt saw that peace in the postwar world would depend on friendly relations with the Soviet Union, and a strong but brief alliance resulted.

By this time, however, Roosevelt was becoming increasingly ill. He defeated New York's governor, Thomas Dewey, in the 1944 presidential election, with Roosevelt standing for a fourth time. He won the Electoral College comfortably, with 432 against Dewey's 99 and 25,612,916 votes to 22,017,929 for the Republicans. After returning from Yalta, Roosevelt was forced to give his address to Congress while sitting down. In early April he went to Warm Springs, Georgia, to rest and had a massive cerebral hemor-

rhage while sitting for a portrait on April 12, 1945; he died soon afterward.

JUSTIN CORFIELD

Roosevelt, Theodore

(1858–1919) U.S. president

The only 20th-century president carved into Mount Rushmore, Teddy Roosevelt turned the presidency into his “bully pulpit,” significantly expanding federal executive power. A progressive Republican, he used his popularity to launch the modern conservation movement, build the PANAMA CANAL, and broker a treaty in the 1904–05 Russo-Japanese War, for which he won the Nobel Peace Prize.

The second child in an old New York Dutch family, Teddy suffered from asthma and was extremely near-sighted. He responded with a strenuous exercise regime that included hunting and ranching in the Dakotas. His legendary triumph over ill health shaped his lifelong energetic masculinity.

A stand-out at Harvard University, Roosevelt studied law but soon turned to politics. A year after marrying Alice Lee, the brash young Republican was elected to New York’s assembly and joined the National Guard. Plunged into depression by the deaths of his mother and wife on the same day in 1884, Roosevelt took time to write a well-received history of the War of 1812 and then, as commissioner of the new U.S. Civil Service, won appointments from presidents of both parties.

Soon happily remarried to childhood friend Edith Carrow, Roosevelt reconnected with his political base as New York City’s police commissioner but quickly returned to Washington as assistant secretary of the navy in William McKinley’s first administration. When the Spanish-American War erupted in 1898, Roosevelt, already an outspoken imperialist, quit his navy post to muster 1,000 fighters for his 1st Volunteer

Theodore Roosevelt was the first American president to consider the environment to be a valuable topic of political discussion.

Cavalry. These “Rough Riders” won a crucial battle at Cuba’s San Juan Hill in which Lt. Col. Roosevelt suffered minor wounds but became this “splendid little war’s” national celebrity. Months later Roosevelt narrowly won New York’s governorship. As McKinley’s reelection campaign approached, state political enemies were happy to propose Roosevelt’s promotion to the harmless job of vice president. McKinley strategist Mark Hanna considered Roosevelt a “madman” but reluctantly agreed. In September 1901 McKinley was shot by anarchist Leon Czolgosz at Buffalo’s Pan American Exposition. When he succumbed on September 14, Roosevelt became the 26th president and youngest ever at 42.

“TR” soon put his own stamp on the presidency. That October he invited African-American leader Booker T. Washington to dine at the White House, drawing a storm of protest. Facing a 1902 coal strike, Roosevelt made labor history by insisting that owners and mine workers negotiate. He followed his secret acquisition of Panama Canal territory with his ROOSEVELT COROLLARY, restating the 1823 Monroe Doctrine to justify military intervention in the hemisphere.

Promoting a “Square Deal” for all Americans, Roosevelt easily won his own term in 1904. Even Democratic cousin FRANKLIN DELANO ROOSEVELT, husband of Teddy’s niece Eleanor, voted for him. Roosevelt created the National Forest Service and placed 230 million acres, including the Grand Canyon, under federal protection. In 1906 he signed the landmark Pure Food and Drug Act. Acclaimed as a trustbuster, Roosevelt used

the long-ignored Sherman Anti-Trust Act to rein in dishonest business practices, but historians still argue over whether he effectively brought big business to heel.

Disappointed in his hand-picked successor, William Howard Taft, Roosevelt sought the Republican nomination in 1912, creating his own Progressive (Bull Moose) Party when rebuffed. Roosevelt placed ahead of Taft by winning a third-party record of 88 electoral votes but thereby assured Democrat WOODROW WILSON's election.

In failing health but still rambunctious, the former president advocated U.S. entry into WORLD WAR I on the Allied side and offered Wilson his military services. Denied, he considered leading a Canadian unit but settled for promoting War Bonds. Three of Roosevelt's four sons served in the war; his youngest, Quentin, a fighter pilot, died in battle in July 1918.

Generally considered America's first truly modern political figure, Roosevelt died at 60 of a coronary embolism in January 1919. He is buried in an Oyster Bay cemetery near his beloved Sagamore Hill family compound.

MARSHA E. ACKERMANN

Roosevelt Corollary to the Monroe Doctrine

Under President James Monroe, the United States expressed its belief that the Western Hemisphere was, essentially, off limits to European powers, a policy expressed in the Monroe Doctrine. Under THEODORE ROOSEVELT, the doctrine was expanded to state that the United States would act as a police power in the event that a nation in the Western Hemisphere conducted its affairs irresponsibly. This corollary came when Germany and England attempted to force the repayment of loans made to Venezuela. When Venezuela refused repayment, England and Germany sent their navies to force repayment. Before sending ships, both governments consulted with Roosevelt, who initially consented to the action. However, American public opinion disagreed with European powers taking military action in the West; many felt this was a direct violation of the Monroe Doctrine. Roosevelt addressed Congress on December 6, 1904, laying out his corollary, stating that it was the job of the United States to act as a policing force for the Western

Hemisphere, and, when necessary, to intervene on behalf of other nations.

On December 3, 1901, Roosevelt had stated the U.S. position as protector of the Western Hemisphere but had also said that the United States would not protect countries that did not conduct themselves in a proper manner. Specifically, he was referring to countries, in this case Venezuela, that did not make payments on their debts. Roosevelt felt that as long as the punishment did not involve occupation of any land, enforcement should be done by the country that had been wronged. In the case of Venezuela, this meant letting Germany and England deal with Venezuela's nonpayment on its debt. What Roosevelt did not count on was the strong reaction of the U.S. people and media against this policy. Roosevelt pressured Germany and England to submit their claims to the International Tribunal at The Hague for resolution. The court ruled on February 22, 1904, in favor of Germany and England. When Roosevelt issued his corollary, it allowed the United States to step in and try to take control of the situation.

Roosevelt was concerned with more than just Venezuela. The Dominican Republic was in financial trouble and could not make payments on its loans. Having suffered through several revolutions, the country was in chaos, and collection of tariffs was not happening, so the republic could not make its loan payments. After talks between the republic and the U.S. State Department, it was decided that the United States should take control of collecting the tariffs to ensure that the holders of the loans received their payments. The agreement was signed on February 7, 1905, but immediately ran into opposition in the Senate from Democrats. Refusing to act on the treaty, Roosevelt, who was concerned about European intervention, went around Congress and implemented control of the customs houses without Senate approval. Roosevelt and the Senate Democrats spent most of 1906 arguing whether Roosevelt was subverting the Constitution or not. Finally, in 1907, a new treaty was negotiated that the Senate approved and passed.

Roosevelt's corollary was later replaced by DOLLAR DIPLOMACY under President William Howard Taft.

Round Table Conferences

The Round Table Conferences were a series of three conferences held in London from 1930 to 1932 between British and Indian leaders to form a new constitution for India, which was formalized in the 1935 Government of India Act. The Indian National Congress and Mohandas K. Gandhi wanted immediate and complete self-rule for India, while the British wanted to grant India dominion status eventually and keep India as part of the British Empire.

The conference was held in London from November 12, 1930, to January 19, 1931. Gandhi and the congress boycotted the conference. Moderate Indian leaders, Muslims, and representatives of the princely states attended the conference. Prime Minister Ramsay MacDonald represented Great Britain. By the end of the conference, the idea of a federation was under consideration as the form of government suitable for India. Because the congress had boycotted this conference, Great Britain was anxious to get it involved in the next round.

In order to get the congress to participate in the next conference, Lord Irwin, the viceroy of India, met with Gandhi and concluded the Delhi Pact on March 5, 1931. Gandhi agreed to end the ongoing civil disobedience, and Irwin agreed to release most of the political prisoners. Most importantly, Gandhi agreed that the congress would participate in the second Round Table Conference.

The second Round Table Conference began on September 7, 1931. Gandhi attended the conference as the only representative of the congress. The congress and Gandhi believed that they represented all of India and that only they should deal with the British. The British, on the other hand, wanted other Indians to be represented in part perhaps in order to influence and control the events. Little was accomplished during the conference, and when no plan could be agreed upon on how different groups would be represented, the British government issued its own Communal Award on August 16, 1932, that outlined how minority groups, especially the Muslims and the untouchables, would be represent-

ed. The award did have the provision that it could be overruled if the congress and the minority groups could come to an agreement on their own. A separate agreement, the Poona Pact, was eventually reached between the untouchables and the congress about the representation of the untouchables. However, no agreement was reached with the ALL-INDIA MUSLIM LEAGUE. The final conference, held from November 17, 1932, to December 25, 1932, also achieved little.

The British parliament passed the Government of India Act in August 1935. The act set up an India Federation, which was to be given control of parts of the Indian government while other parts remained under the control of the British.

Russian Revolution (1905)

On January 9, 1905, a vast but orderly crowd of Russian workers approached the Winter Palace to present Czar Nicholas II with a list of both economic and political grievances. The petition included among its demands an eight-hour workday, increased wages, improved working conditions, and an immediate end to the Russo-Japanese War. In addition, at the suggestion of liberal intellectuals, the petition urged the czar to convene a constituent assembly. The demonstrators, most of whom regarded Nicholas II as a father figure who would redress their grievances, carried with them portraits of the czar and of Orthodox saints. Father Georgii Gapon—a Russian Orthodox priest and the head of a police-sponsored trade union—led the procession, which included approximately 150,000 unarmed workers.

As the procession approached the Winter Palace, it found its way blocked by armed troops. When the crowd failed to disperse as ordered, the troops opened fire, killing nearly 200 and wounding several hundred more. The events of that day, which came to be known as Bloody Sunday, sparked riots and demonstrations across Russia and marked the onset of the 1905 Russian Revolution.

Until that point, the Russian masses had played little if any role in the political turmoil that beset late-tsarist Russia. In the months that followed, however, the working classes would play a key role in the revolutionary movement.

To protest the massacre of unarmed demonstrators, thousands of workers across Russia went on strike. Liberals used the occasion of worker unrest to press for constitutional reform, urging the czar to abandon autocracy in favor of a constitutional monarchy. For the next several months the czar's regime was variously confronted with student demonstrations, workers' strikes, peasant disorders, unrest among ethnic minorities, and even mutinies in the armed forces.

Efforts to restore order were not helped by the fact that Russian troops remained in the Far East fighting the Japanese. Hoping to appease popular opinion, Nicholas II decided in late August to grant freedom of assembly to university students for the first time since 1884. As part of the concession, the czar forbade police even to enter university grounds. The efforts at conciliation backfired; the universities became more of a radical hotbed than ever as students recruited workers from nearby factories to participate in political rallies without fear of police intervention.

By the second week of October, a general strike encompassing workers in several key industries forced the czar to make further concessions. Russia had negotiated a peace treaty with Japan (the TREATY OF PORTSMOUTH) in late August, but with the railway workers on strike the troops could not be brought home. Meanwhile, with the autocracy apparently unable to restore order, the Russian economy was grinding to a halt. The minister of finance, Sergei Witte, convinced Nicholas II to grant concessions in the hopes of dividing the liberals from their more radical counterparts. According to Witte, there was no other way to save the monarchy. In the October Manifesto, dated October 17, Nicholas pledged to grant civil liberties and to create a parliament (the *duma*) based in part on popular elections. Laws passed over the next several months abolished censorship and guaranteed freedom of assembly and association.

As a result of the October Manifesto, the liberals were divided into two factions: the Octoberists, who accepted the terms set forth in the proclamation, and the Constitutional Democrats (Cadets), who held out for further reform. Both groups, however, withdrew from revolutionary activity, at least in the short term, to prepare for the upcoming *duma* elections. Witte's objective of separating the liberals from the radicals

was therefore accomplished, but order was by no means restored.

Workers became increasingly militant throughout the remainder of the year, and the socialist intelligentsia was further radicalized. In addition, bloody pogroms against Jews and intellectuals followed the proclamation of the manifesto. In the countryside peasants continued to riot, sacking and burning manor houses and attacking landowners and officials. By the following winter much of rural Russia was under martial law, and over 1,000 peasants were executed in a campaign of village-by-village pacification.

The constitution promised in the October Manifesto was published in April 1906. The so-called Fundamental Laws (which continued to refer to the czar as an autocrat) established a two-chamber parliament, the lower house of which was made up of elected officials. While this represented progress to many who favored liberal reform, the effects of the constitution were limited in practice. The franchise system for *duma* elections favored the propertied classes over ethnic minorities, peasants, and workers.

In addition, the Crown reserved the right to dissolve the *duma* at any time, and article 87 of the Fundamental Laws enabled the Crown to rule by decree when the *duma* was not in session. After the first two *dumas* were arbitrarily dissolved, the government took advantage of article 87 to enact a new electoral law that further skewed electoral representation in favor of the propertied classes. Meanwhile, the continued activity of the secret police at least partially undermined any concessions that had resulted from the 1905 revolution.

KATHLEEN RUPPERT

Russian Revolution and Civil War (1917–1924)

Like most revolutions, the Russian Revolution of 1917 had a combination of political and social causes. At the beginning of the 20th century, Russia was the last of the great powers to retain an autocratic system of

government. Educated Russians, many of them influenced by liberal ideas from the West, resented the lack of civil and political rights under the Russian system and pressed for political change. Progress was made following the 1905 revolution; an elected parliament (the *duma*) was established, censorship was abolished, and political parties were finally legalized. Nevertheless, Czar Nicholas II continued to rule as an autocrat, dissolving the *duma* at will, and political and civil liberties remained circumscribed by the pervasive presence of the secret police. The absence of an effective forum for political participation, even after 1905, furthered the development of a radical intelligentsia determined to overthrow the autocratic regime. The intelligentsia became more, rather than less, radical after 1905, viewing the events of that year as an episode on the road to full-scale revolution.

In addition to political grievances, social and economic discontent helped pave the way for revolution. Russia was comparatively late to emerge from feudalism, serfdom having been abolished only in 1861. Peasants, who made up 80 percent of Russian society at the beginning of the 20th century, pressed for the redistribution of land from private landowners to the peasant communes. Rural overpopulation exacerbated peasant discontent, and the czarist regime was confronted with ongoing agrarian disturbances in the years leading up to 1917. Compared to the other great powers, Russia was also late to industrialize. Rapid industrialization beginning in the 1890s put tremendous strains on Russian society and produced a nascent working class with great revolutionary potential. Through political rallies and educational circles, the radical intelligentsia turned to the workers for support in fostering a socialist revolutionary program. The Social Democrats in particular preached that the industrial workers were the only truly revolutionary class. In reality, most workers were probably more interested in seeing their economic grievances (low wages, poor working conditions, etc.) redressed than in seeing the autocratic regime toppled. Nevertheless, since the authorities typically responded to strikes and demonstrations by sending in police and Cossack troops, economic issues were easily politicized.

The long-term social, economic, and political discontents that confronted Russian society in the early 20th century were exacerbated by Russia's involvement in WORLD WAR I. Crushing defeats at the hands of the German armies, together with the glaring inefficiency of a bureaucracy confronted with the demands of total war, discredited the czarist regime in the eyes of the

Russian people. The czar's wife, Empress Alexandra, was extremely unpopular due to her German origin and her association with Rasputin, a peasant healer from Siberia who treated the heir to the throne for hemophilia. When Nicholas II left for the front to take control of the Russian armed forces, Rasputin gained considerable influence at court. False rumors about a romantic affair between the czarina and Rasputin contributed to the desacralization of the monarchy and the further erosion of czarist authority. Meanwhile, growing inflation and lengthening bread lines revitalized the workers' strike movement during the war and provided the spark that would ignite the February revolution.

The first phase of the 1917 revolution began on February 23 (International Women's Day), when women workers from Petrograd textile mills took to the streets demanding an end to the bread shortage. The strike quickly spread to nearby factories; by the following day more than 200,000 workers had gone on strike. On February 25 students and members of the middle classes joined the demonstrators, demanding an end both to the war and to the czarist government. By that point the workers' movement had developed into a general strike, paralyzing the normal functioning of the Russian capital. On February 26 armed troops, acting on orders from the government, fired on the demonstrators, killing hundreds. The massacre sparked a mutiny within the Petrograd garrison. Early on the morning of February 27, soldiers of the Volynskii regiment shot their commanding officer, then rushed to nearby regiments and persuaded soldiers there to revolt as well. Many soldiers joined the insurgents on the streets, while others simply disobeyed any further commands to fire on civilians. What began as two physically separate revolts—the soldiers' mutiny in the city center and the workers' demonstrations in the outlying districts—became joined by the afternoon of February 27 as insurrection spread to all parts of the city.

Members of the Duma (the Russian parliament) anxiously watched the street violence of late February from their meeting place at the Tauride Palace and debated how best to restore order. When Nicholas ordered the *duma* dissolved, Duma leaders decided to form a "Temporary Committee of the State Duma" to take over the reins of government in Petrograd. On the same evening in a different room of the Tauride Palace, workers, soldiers, and socialist intellectuals met to form the Petrograd Soviet. Over the course of the next several days, the two bodies worked together to consolidate the revolution and establish a new government. The provisional

government was formed on March 2; it was to govern until a constituent assembly based on universal elections could be convened.

With the exception of ALEXANDER KERENSKY, a moderate socialist who sat on both the provisional government and the Soviet Executive Committee, the socialists initially declined to join the provisional government. The leaders of the Petrograd Soviet pledged to support the new government, however, as long as the government pursued policies of which the Soviet approved. This decision ushered in an era of “dual authority” characterized by tense and often uneasy cooperation between the Soviet and the provisional government.

SPREAD OF REVOLUTION

Meanwhile, the revolution spread quickly and with relatively little bloodshed (there were exceptions such as Tver, where considerable violence occurred) to the provincial cities and then to the countryside. On March 2 the military high command convinced Nicholas II to abdicate in favor of his brother Michael. (The czar initially decided to abdicate in favor of his son Alexis but changed his mind due in part to his son’s poor health.) When Grand Prince Michael refused the crown on March 3, the three-centuries-old Romanov dynasty, and with it Russia’s monarchical system of government, came to an end.

The extreme optimism that accompanied the February revolution began to fade after several weeks as the provisional government dragged its feet on the urgent issues of land reform, peace, and elections to the constituent assembly. Returning to Russia on April 3 after almost 16 years of exile, Bolshevik leader VLADIMIR LENIN issued the April Theses, in which he outlined his plan for the course of the revolution. Among other things, Lenin called for the overthrow of the provisional government and its replacement by a socialist government based on that of the Soviets. He also rejected cooperation with nonsocialist political groups, demanded an immediate end to the war, and called for radical social and economic reforms. In mid-April the provisional government faced a political crisis when Foreign Minister Paul Miliukov’s controversial policy of continuing the war to victory, rather than seeking a negotiated peace, led to massive street demonstrations and violence. In the wake of the April Crisis, the government was reorganized; several leaders from the Petrograd Soviet were brought in to form the first coalition government of moderate socialists and nonsocialists. The Bolsheviks, under Lenin’s leadership, continued to remain aloof from the provisional government.

Throughout the summer of 1917, food shortages and continued economic hardship contributed to growing disillusionment with the provisional government. Discontent over Russia’s involvement in the war continued to increase, particularly after the government launched an unsuccessful military offensive in June. The summer months were characterized by almost continuous government instability. Workers and garrison soldiers once again took to the streets during the July Days (July 3–5), demanding that all governmental power be passed to the Soviets. The demonstrations were suppressed on July 5, and Bolshevik leaders were forced into hiding. In the aftermath of the July Days, a second coalition was formed, with Kerensky as prime minister. That government collapsed as well after suspicions of an attempted coup in late August (the Kornilov Affair) seemed to confirm fears of a counterrevolutionary movement. The threat of counterrevolution, coupled with popular disillusionment over the provisional government’s failure to end the war and enact promised reforms, increased the popularity of the radical left and paved the way for the October Revolution.

In the fall of 1917, with a political climate favorable to the radical left, Bolshevik leaders debated how and when to take over the government. Lenin favored an immediate insurrection, while more moderate Bolsheviks preferred to wait for the second Congress of the Soviets when, they believed, power would pass to the Soviets by democratic means. The question resolved itself on the morning of October 24, when Kerensky shut down the leading Bolshevik newspapers in an effort to suppress the radical left. The Bolsheviks could then move forward with plans to overthrow the government, justifying their seizure of power as a necessary step to defend the revolution. Unlike the February revolution, the October Revolution was not characterized by massive street demonstrations. Instead, small groups of soldiers and Red Guards took control of bridges, railway stations, and other strategic points throughout Petrograd. Unable to summon troops to resist the insurgents, Kerensky fled. On the afternoon of October 25, Lenin announced that the provisional government had been overthrown. Significantly, the insurrection was carried out in the name of the Petrograd Soviet and not the Bolshevik Party. However, Menshevik and Social Revolutionary delegates walked out of the Congress of Soviets on the night of October 25 to protest the insurrection, leaving the Bolsheviks with a majority in the congress. The following day Lenin announced decrees on peace and land and the formation of an all-Bolshevik government, the Council of People’s Commissars (or Sovnarkom).

An official celebration of the Russian Revolution in Vladivostok. The Russian Revolution of 1917 saw the end of the czarist era in Russia and heralded the first Communist regime in the world.

Once in power, the Bolsheviks decided to go forward with elections to the constituent assembly in mid-November. The Socialist Revolutionaries were the clear winners in the election, gaining 40 percent of the popular vote against the Bolsheviks' 25 percent (the remainder of the votes were divided among the Constitutional Democrats [Kadets], the Mensheviks, and non-Russian nationality candidates). Recognizing that its hold on power was precarious, the Bolshevik government took steps to consolidate its authority and quash any resistance.

After ordering the arrest of leading Kadets in late November, the government established the All-Russia Extraordinary Commission for the Struggle with Counterrevolution and Sabotage (or Cheka) on December 7. The Cheka, which could arrest and execute without trial anyone suspected of counterrevolutionary activities, quickly became one of the most powerful organs of the state. The constituent assembly opened as planned on January 5, 1918, but the Bolshevik government forcibly dispersed the assembly after only one day. By circumventing the democratic process and choosing instead to rule by force, the Bolsheviks laid the foundation for the authoritarian dictatorship that would follow. The decision to suppress the constituent assembly also opened the door to civil war.

The Russian Civil War was a complex affair that is perhaps best seen as two or even three distinct civil wars occurring between 1918 and 1922. The first serious challenge the Bolsheviks faced came from the Komuch, a group of Right Socialist Revolutionaries (SRs) who opposed the Treaty of Brest-Litovsk and sought to restore the constituent assembly. In June 1918 with the aid of insurgent Czechoslovak legions, the Right SRs set up a regional government for the Volga based on the platform of the Socialist Revolutionary Party.

The conflict between the Bolsheviks and the so-called "patriotic socialists" was upstaged by the decision of the "Whites" (Russian nationalist officers, supported by industrialists and former landowners) to stage a coup in Omsk in November 1918. Despite Allied intervention on behalf of the White forces, the Bolsheviks' Red Army was able to suppress the attempted counterrevolution, but only after two years of bloody conflict. After the final defeat of the Whites in the autumn of 1920, the focus of fighting shifted to widespread peasant insurrections, collectively referred to as the Green movement.

Many of the peasant guerrilla leaders had been allied with the Red Army in defeating the White forces;

once the threat of a White victory (which would have meant the return of the landlords) disappeared, however, peasant revolts against Bolshevik policies—most notably the forced requisitioning of grain—erupted across Russia on a massive scale. It took a combination of concessions and brutal repression to quell the peasant revolts and finally end the civil war.

Throughout the civil war years Lenin and the Bolsheviks employed ruthless measures to eradicate any political opposition, thus creating the first one-party state and providing a model for later totalitarian regimes. Upon Lenin's death in January 1924, JOSEPH STALIN succeeded him (after considerable party infighting) as leader of the Communist Party.

KATHLEEN RUPPERT

Sacco-Vanzetti trial

Fernando (Nicola) Sacco (1891–1927) and Bartolomeo Vanzetti (1888–1927) are best remembered as the victims of injustice following the wave of U.S. antiradical persecution in the years immediately following WORLD WAR I. Both men were Italian immigrants with revolutionary anarchist political beliefs. It is in the context of this political background that their legal difficulties began and led, it was claimed, to their prosecution. They were ultimately condemned to death for murder and executed by electric chair on August 23, 1927.

The circumstances behind their arrest, trial, and conviction were the gunshot murders on April 15, 1920, of Frederick Parmenter and Alessandro Berardelli during the commission of a shoe factory payroll robbery in South Braintree, Massachusetts. Cash boxes containing \$15,766.51 were taken, and a .32 Colt automatic pistol was the primary weapon used. Initially, the police linked the crime to an earlier robbery of December 1919 in Bridgewater, Massachusetts.

The U.S. political climate following the RUSSIAN REVOLUTION and World War I produced a fear of radical subversion that became known as the RED SCARE of 1919–20. Sacco and Vanzetti were followers of Luigi Galleani (1861–1931), a revolutionary anarchist who published the *Cronaca Sovversiva*. Galleani's writings promoted many forms of violent insurrection, including the use of bombs, terrorism, and assassination. One member of this organization and an acquaintance of Sacco and Vanzetti, Carlo Valdinoci, was accidentally

killed while attempting to bomb the Washington home of A. Mitchell Palmer (1872–1936), the attorney general. Palmer was involved in the government's antiradical policy pursuits. He was aided in this campaign by the young J. Edgar Hoover (1895–1972), who was director of general intelligence in the Department of Justice.

Sacco and Vanzetti were arrested on May 5, 1920, and were initially questioned about their radical activities. Although they denied such associations and the ownership of any guns, both had pistols and ammunition. Sacco had a .32 Colt and Vanzetti had a revolver, which was of the same type as that taken from the guard at the time of the murder. This record of deceit helped create an atmosphere of suspicion that brought about their eventual linkage with the Braintree robbery.

Although both were tried for the 1919 South Bridgewater robbery, only Vanzetti was convicted, and he received a 15-year sentence. It was the May 21 murder trial that was to prove most controversial and serious. Both men claimed innocence and produced alibi witnesses, but the prosecution challenged their reliability. It was, though, the possession of weapons that was their undoing, along with the negative trial atmosphere allowed by Judge Webster Thayer. The gun evidence from the .32 Colt in Sacco's possession ultimately convinced the jurors that it was the murder weapon. After a six-week trial Sacco and Vanzetti were found guilty of first degree murder and sentenced to death on July 14, 1921.

Their convictions marked the beginning of a lengthy legal struggle for an appeal and a new trial. In 1924

the defense's legal team was taken over by William Thompson, and the emphasis shifted from politics to one of fairness. Motions were raised concerning bias, the defendants' and their witnesses' poor command of English, political intrigue, perjury, and illegal police activities. Many leading lights within the liberal and socialist set, such as Bertrand Russell, George Bernard Shaw, H. G. Wells, Upton Sinclair, and John Dos Passos saw the conviction as a travesty of U.S. values and sense of justice. In 1925 a Portuguese immigrant, Celestino Madieros, confessed to the crime, which he claimed was part of the criminal activities of the well-known Morelli gang. But this confession failed to persuade the courts, and the death sentences were upheld. Sacco and Vanzetti went to their deaths on August 23, 1927.

The controversy over their innocence or guilt persists. In some quarters there remains the general notion that the Sacco and Vanzetti case produced a gigantic stain on the U.S. conscience and was a gross miscarriage of justice. There are others who question this view. Insiders within the anarchist community years after the trial indicated that the pair was guilty but that the case offered a great propaganda opportunity that could be exploited. This group includes some whose claims exonerate Vanzetti but state that Sacco was guilty. In 1927, 1961, and 1983 ballistics tests, making use of improved technology, have matched Sacco's gun to the murders. Most tellingly, there appeared in 2005 an Upton Sinclair letter from 1929 that claimed that Sacco and Vanzetti's attorney, Fred Moore, told him that they were guilty and that their alibis were invented.

THEODORE W. EVERSOLE

Saionji Kimmochi

(1849–1940) *Japanese political leader*

Prince Saionji Kimmochi (or Kinmochi) was born into the Takudaijii *kuge* (Japanese court nobility) and was later adopted by the Saionji *kuge*. He grew up near the Imperial Palace in Tokyo and was a childhood friend of the emperor Meiji. Saionji participated in politics

from an early age, as was expected, given his family lineage. He was influential in advocating that the Japanese imperial court take part in the Boshin War (1868–69) between the Tokugawa Shogunate and the proimperial forces in Japan. The Tokugawa Shogunate's defeat in this war made the Meiji Restoration possible.

Saionji had more exposure to European ideas than most Japanese of his time: He lived in France for 10 years (1870–80), during which time he took a law degree at the Sorbonne and became friends with many French intellectuals and politicians, including GEORGES CLEMENCEAU, the authors Edmond de Goncourt and Jules de Goncourt, and Théophile and Judith Louis Gautier. As a result of his travels, Saionji became more liberal and less nationalistic in his approach to life than many of his Japanese peers, and he advocated the establishment of strong links between Japan and Europe.

Upon his return to Japan in 1881, Saionji founded the newspaper the *Oriental Free Press* to popularize democratic ideas but abandoned the paper in favor of government service. He served as education minister of Japan under Ito Hirobumi, advocating a liberal and international approach to education, and was influential in the founding of Kyoto University in 1897. Saionji was one of the cofounders of the Rikken Seiyukai (Friends of Constitutional Government) political party in 1900. He held a number of other government positions over the years, serving in several cabinets, as president of the privy council, and twice as foreign minister. He served as prime minister for two terms, in 1906–08 and 1911–12. In 1919 Saionji was the head of the Japanese delegation to the PARIS PEACE CONFERENCE. He also served as tutor to HIROHITO, grandson of Emperor Meiji, who became emperor on his father's death in 1926 and may be best remembered today for announcing Japan's surrender to the United States in 1945 (ending WORLD WAR II) and renouncing his claim to divinity in 1946. Saionji remained influential at the Japanese court through his position as a genro, or elder statesman, advising the emperor on political appointments in his cabinet and military leadership.

SARAH BOSLAUGH

Salazar, António de Oliveira

(1889–1970) *Portuguese prime minister*

António de Oliveira Salazar was prime minister of Portugal from 1932 to 1968 and the creator of the New State (Estado Novo).

Salazar was born on April 28, 1889, in Santa Comba Dao, near Viseu, in central Portugal, the son of an estate manager. He received his education at the Catholic seminary at Viseu and at Coimbra University, graduating in law in 1914. Salazar became a professor of political economics at the University of Coimbra. In 1921 he was among the founders of a new Catholic party and was elected to the federal parliament, the cortes. After only one session, however, he returned to the university.

After WORLD WAR I (in which Portugal had chosen the side of the Entente but gained nothing from the common victory), the country was a republic. In 1926, the army overthrew the civilian government and subsequently offered Salazar the ministry of finance, but he rejected the offer. Two years later, the president, General António Óscar de Fragoso Carmona, made a new offer to Salazar: As minister of finance he would be granted complete control over all expenditures. This time Salazar accepted. He immediately stopped Portugal's long tradition of state deficits and managed to create a budget surplus for the first time in decades. These surpluses, one of the hallmarks of Salazar's forthcoming regime, were invested in various development plans. The mismanagement of the former era contrasted sharply with Salazar's success at reorganizing the country's finances. Salazar's reputation as minister of finance paved the way for his power grab, since the church, monarchists, aristocrats, the army, the upper classes, and the parties of the right preferred Salazar to the previous military government. Salazar gained support for his course of reform from different groups of Portuguese society. The overall basis of his regime was a platform of stability. Salazar's politics privileged the wealthy classes to the detriment of the poorer sections of society. For example, education for the masses was not regarded as a priority and therefore not heavily invested in.

On July 5, 1932, President Carmona named Salazar prime minister of Portugal and handed power to him. In 1933, Salazar introduced a new constitution to Portugal, which gave him wide but not unlimited powers and established an authoritarian regime that would last four decades. This constitution and the regime based upon it sharply distanced themselves from any kind of democracy and parliamentary government, although

the existing parliament was not completely abolished. As prime minister, Salazar was nominated for a seven-year-term. Legally, he was subject to dismissal only by the president of the republic. Based on the new constitution, Salazar propagated and inaugurated the Estado Novo (New State). On the whole, all efforts were concentrated on economic stability and recovery. Salazar's regime was much less bloody than other contemporary European dictatorships, such as FRANCISCO FRANCO's in neighboring Spain, not to mention NAZI Germany. This was partly because the death penalty was not introduced in Portugal.

There is an ongoing scholarly debate about the nature of the political regime established by Salazar in Portugal. The main question is whether this regime was typical for the 1920s and 1930s, when apparently similar or at least closely related regimes came to power in many European countries. While some historians and political scientists argue that Salazar's dictatorship had many aspects in common with MUSSOLINI's FASCISM in Italy, others find it more accurate to describe his rule as only old-style conservative and authoritarian. The style of politics created by Salazar in Portugal differed completely from the ways by which HITLER and Mussolini communicated with German and Italian society: Salazar lived a life of frugal simplicity and shunned publicity; he rarely made any public appearances. There was no cult around his "ingenious" leadership. His life exclusively devoted to the task of modernizing Portugal, he paid little attention, if any, to the reactions and feelings of the Portuguese people.

Salazar's political philosophy was based upon authoritarian Catholic social doctrine, similar to the contemporary regime of Chancellor Engelbert Dollfuss and his Christian-Social Party in Austria. The economic system adopted by Salazar was known in Europe as corporatism; it was based on the papal encyclicals "Rerum Novarum" (1891) and "Quadragesimo Anno" (1931).

During the crisis occasioned first by the SPANISH CIVIL WAR and then by WORLD WAR II, Salazar steered Portugal down a middle path. Although the dictator supported Franco's Nationalist Spain (Salazar sent aid to the Nationalists against the Republicans), he did not side with any of the contenders in the Spanish civil war. The Iberian Neutrality Pact was put forward by Salazar to Franco in 1939. During World War II, Salazar maintained a policy of severe, if benevolent, neutrality. Indeed, Portugal provided aid to the western Allies, giving permission to them to use the Azores Islands in the Atlantic as a military base for fighting the German navy. Between 1940 and 1945, Portugal, and

particularly Lisbon, was one of the last European exit points toward the United States. Remaining neutral, Portugal continued to export goods to both the Axis and the Allied countries.

After the war, Salazar continued and even intensified his policy of economic reform. Portugal's whole transportation system, the railroads, road transport, and the merchant navy were reequipped. A national airline was instituted for the first time in the country's history. The electrification of the country was extended, and a huge number of rural schools were developed. A corporate organization, expressed in the corporative chamber as a second house of parliament, was of lesser importance.

Salazar (who personally never left Portugal) wanted his country to be relevant internationally. At the same time, Portugal itself rejected any influence from the Western world. Portugal was the only non-democratic country among the founding members of the North Atlantic Treaty Organization (NATO) in 1949. This reflected Portugal's position as an important ally against communism during a period when the cold war reached its peak. Salazar's dictatorship never had to survive in total isolation like Franco's Spain had. Portugal was invited to accept economic help within the framework of the Marshall Plan, but Salazar refused.

By around 1950, Salazar's regime was firmly established. One major problem remained: the country's large overseas provinces. At that time, Portugal was in control of the Azores, Madeira, the Cape Verde Islands, São Tomé e Príncipe, Angola, Portuguese Guinea, and Mozambique in Africa; Goa, Damão, and Diu in India; Macau in China; and Portuguese Timor in Southeast Asia. Almost everywhere, independence movements challenged Portugal's rule over its colonies. Salazar was determined to retain Portuguese control of these territories. The 1933 constitution and various colonial acts had provided for the integration of the provinces. Portugal became increasingly isolated from other Western countries, which were gradually releasing their colonies into independence. Around 1960, Salazar faced a broad movement of anticolonialism that united the Soviet Union and the United States. In that situation, Salazar personally took over the ministry of war and proclaimed that Portugal would defend its possessions no matter what the price. From the capture of Portuguese ports in India in 1961 until after Salazar's death, the overseas territories remained a continual source of trouble for Portugal, especially when the country had to fight the African colonial wars.

Salazar's stubbornness regarding the status of the colonies, understanding the changing world order, and grasping the impossibility of his regime's outliving him marked the final years of his regime. "Proudly alone" was the motto of his final decade. In September 1968, Salazar became seriously ill with brain damage after falling from a chair. According to some sources, he suffered a stroke. Salazar's physical condition made him unable to continue his duties and forced President Américo Tomás to dismiss him as prime minister. When he died in Lisbon two years later on July 27, 1970, he left neither property of his own nor a family. A special train carried the coffin to Salazar's hometown of Santa Comba Dao, where he was buried. Thousands paid their last respects at the funeral.

MARTIN MOLL

San Remo Treaty (1920)

The San Remo Treaty was signed at the San Remo Conference in April 1920 following WORLD WAR I. The 1919 Treaty of Versailles ended World War I but did not resolve many complex issues surrounding the end of hostilities. The San Remo Conference, held in April 1920, was one of several conferences commissioned to address unresolved postwar issues. The most pressing problem facing the Allied powers at the conference was the breakup of the Ottoman Empire. Although the Treaty of Versailles recognized the independence of Mesopotamia, Syria, and Palestine, former Ottoman territories, and created the LEAGUE OF NATIONS' mandate system, it did not assign oversight mandatory powers. Based on WOODROW WILSON's ideals, the mandate system classified these former territories according to the approximate time the Allied powers believed it would take each to achieve independent statehood. The San Remo Treaty designated Allied countries as man-

datory powers to assist territories with political, economic, and nation-building initiatives. Once a country was able to govern itself, the mandatory power would withdraw from the country, but in practice the mandatory powers kept control over the territories until circumstances forced them to leave.

France was assigned mandates for Syria and Lebanon. Britain was assigned mandates for Iraq (Mesopotamia) and Palestine. One of the San Remo Treaty's most important provisions regarded the Palestinian mandate. The World Zionist Organization, established by Theodore Herzl in 1897 to organize Jews throughout the world, wanted a Jewish state with Jerusalem as its capital. On the other hand, SHERIF HUSAYN, a descendant of the prophet Muhammad, desired an autonomous Arab state. During the war, Britain had entwined itself in several secret yet conflicting agreements with the rival sides. In 1915 Henry McMahon, Britain's high commissioner in Cairo, agreed to support Arab independence if Sharif Husayn assisted the Allied cause by leading an Arab revolt against the Turks. In contrast, the 1917 BALFOUR DECLARATION declared Britain's support for the establishment of a national home for Jewish people in Palestine.

Against Arab protests, the San Remo Treaty explicitly incorporated the Balfour Declaration within the Palestinian mandate by assigning the mandatory power responsibility for executing the declaration. Although it did not specify the creation of Palestine as a Jewish state and sought to guarantee the civil and religious rights of the non-Jewish population, the declaration and the Palestinian mandate itself did demonstrate British prime minister DAVID LLOYD GEORGE's affinity for the Zionist desire for statehood. British control over Palestine lasted until 1948, when Britain unilaterally terminated the mandate and withdrew its troops from Palestine, and Israel declared statehood, which resulted in the first ARAB-ISRAELI WAR.

MICHELLE DONNELLY

Sandino, Augusto C.

(1895-1934) *Nicaraguan rebel and patriot*

Augusto César Sandino was the supreme chief of the Defending Army of Nicaraguan National Sovereignty (Ejército Defensor de la Soberanía Nacional de Nicaragua), which waged a rebellion against U.S. military intervention in Nicaragua from May 1927 to January 1933. To his supporters, Sandino was a patriotic hero and symbol of resistance against U.S. imperialism. To his detractors, he was a bandit engaged in pillage and criminality in the mountainous north-central part of the country bordering Honduras, where his rebellion was based, a region called Las Segovias. He was assassinated during peace negotiations on the outskirts of the capital city of Managua on February 21, 1934, by the Nicaraguan National Guard (Guardia Nacional), acting under the orders of its chief director, ANASTASIO SOMOZA GARCÍA. Henceforth, Sandino was considered by many a martyr who died defending the cause of Nicaraguan national sovereignty.

In the 1960s a new generation of Nicaraguan revolutionaries, led by Carlos Fonseca Amador, resuscitated the image of Sandino to launch a prolonged struggle against the Somoza dictatorship under a politico-military organization called the Sandinista National Liberation Front (Frente Sandinista de Liberación Nacional). This second generation of Sandinistas ousted the Somoza dictatorship on July 19, 1979, initiating the period of the Sandinista Revolution (1979-90). The Sandinista party continued to play a leading role in the nation's political life after 1990, as seen in the election of Sandinista leader Daniel Ortega to the Nicaraguan presidency in 2006.

Born in Niquinohomo, Masaya Department, on May 18, 1895, the illegitimate offspring of Gregorio Sandino, a moderately well-to-do landowner, and his Indian servant Margarita Calderón, Augusto Calderón was, by his own account, excluded from the family patrimony until age nine, when he confronted his father with the injustice of his exclusion. Henceforth, he became Augusto Calderón Sandino, was brought into his father's household on an equal footing with his half-brother Sócrates Sandino, attended school, and became administrator of his father's property and a grain trader. In 1920 he shot and wounded a man in a personal dispute, compelling him to flee the country—first to Honduras and Guatemala and then to the oil fields of Tampico, Mexico, where he worked as a mechanic from 1923 to 1926.

In the ferment of postrevolutionary Mexico, Sandino imbibed revolutionary ideologies that shaped his

stance toward U.S. imperialism and his belief in the need to defend Nicaragua's sovereignty by force of arms.

In mid-1926, on learning of the outbreak of civil war in Nicaragua, he returned to his homeland and journeyed north to the U.S.-owned San Albino gold mine, where he worked as a pay clerk. Organizing the workers in the mine, he formed a small revolutionary army that from November 1926 fought against the troops of the ruling Conservative government of Adolfo Díaz, one among many such liberal bands. His military successes led him to become one of the top liberal generals. With the U.S.-brokered Espino Negro Accord (or Treaty of Tipitapa) of May 4, 1927, Sandino became the only liberal general who refused to disarm. Instead, he launched his rebellion against the U.S. Marines and National Guard, which remained confined principally to the region of Las Segovias. A provisional peace accord between Sandino's Defending Army and the Nicaraguan government was negotiated in February 1933, a year before Sandino's assassination. Most scholars agree that Sandino was motivated by patriotism and a complex revolutionary ideology. His rebellion and political thought have spawned a voluminous literature.

MICHAEL J. SCHROEDER

Sarekat Islam

The Sarekat Islam (Islamic Association), established in 1911, was one of the earliest political parties to have broad appeal in Indonesia. There was need for an organized merchant association in the face of competition from the Chinese mercantile community.

A religious motivation was also present because of increasing proselytizing activities of Christian missionaries. Sarekat Islam had many able leaders, and the most notable was Umar Sayed Tjokroaminoto (1882–1935), the *ratu adil* (savior prince). His charismatic personality and his message of improving happiness and the religious lives of people attracted many followers. His

house became a center of political, social, and cultural activities.

Leaders like Tjokroaminoto, Abdul Muis, Abikusno Tjokrosujoso, and Hadji Agus Salim carried on a mission of fostering economic cooperation of indigenous merchants against the Chinese, uplifting material happiness, and defending Islam against missionaries. The Sarekat Islam had a moderate program of socialism with emphasis on *gatong rajong* (group spirit). Capitalism was viewed as responsible for the woes of Indonesia, which was essentially a Chinese and European enterprise. Initially, the party did not venture into the political realm so as not to incur the wrath of the Dutch, and at its first congress, held at Solo (Surakarta) in 1913, it declared in clear-cut terms that it was not against the colonial government. As a heterogeneous organization, it had among its followers peasants, batik traders, bankers, the *santri*, or orthodox, Muslim sect, *priyai* (lesser nobility), traditionalist *abangans* of Java, and others. The Sarekat Islam was blamed for the agitation that occurred in Java in 1919.

With members professing divergent aims, the direction of Sarekat Islam became varied, and splinter groups arose. The traditional leadership's commitment to religion came under criticism by the left-leaning members of Indische Sociaal Democratische Vereeniging (the Indies Social Democratic Association), which endeavored toward a communist agenda. The Bolshevik Revolution had triumphed in Russia in 1917, and the first communist state had become a reality, which encouraged communist movements in various parts of the globe.

The Democratic Association itself was divided in 1920 with the formation of Partai Komunis Indonesia (Communist Party of Indonesia), which wanted the Sarekat Islam to renounce its moderate policies. At the sixth congress of the Sarekat Islam in 1921, Salim brought out a resolution prohibiting the members of Sarekat from joining other parties. The Communists were expelled. A Red Sarekat Islam was formed within the fold of the Communist Party, and this later became Sarekat Rakjat (Peoples Association). A turning point had occurred in the Indonesian nationalist movement, and it was accepted that traditional concepts and Western ideologies could not go together. The Sarekat attempted to broaden its base and adopted measures of noncooperation with the colonial government. It organized movements of youth and women.

The leadership of Sarekat tried its best to interpret Marxist doctrine in its own way; Salim was of the opinion that the Prophet had followed Marxist ideas. Even

Tjokroaminoto took a mystical approach, saying that the *ratu adil* would appear in the form of socialism. But the savior did not appear, and many members joined different parties according to their ideologies. Sarekat members flocked to the Communist Party, Nahdatul Ulama (1926), and the Indonesian Nationalist Party (1927). In the 1930s there were more divisions over the question of collaborating with the colonial government. The absence of the development of a clear-cut ideology became the most important factor in the party's failure. It continued to function as a minor party with the new name of Partai Sarekat Islam until 1973.

PATIT PABAN MISHRA

Schlieffen Plan

The Schlieffen Plan was one of the most controversial military plans ever conceived. Devised as imperial Germany's blueprint for victory in WORLD WAR I, it ironically contributed to Germany's defeat.

The Schlieffen Plan was named after its creator, Count Alfred von Schlieffen (1833–1912), third chief of the German general staff. The genesis of the Schlieffen Plan was in the strategic position Germany faced in 1905. Germany's enemies, France and Russia, had formed a military alliance in 1894, while France and Great Britain had formed their own alliance. If war erupted, Germany potentially faced multiple enemies on two fronts. The strategic question of the era was how Germany could win such a two-front war.

Observing the enemy from a German trench in World War I: The devastating trench warfare of the “war to end all wars” was partially the result of German leaders adopting the Schlieffen Plan in the early 1900s.

German military leaders hoped that, like German military legend Frederick the Great, by employing speed and maneuverability they could defeat one opponent and quickly confront the other. Initial plans called for a limited defensive war against France and a major assault against Russia. Schlieffen inverted this strategy in his 1905 “memorandum” by focusing German power against the French while deploying a defensive force against Russia.

To defeat France, the Schlieffen Plan relied on speed and power. An offensive against France required a rapid mobilization before Russian forces arrived on Germany’s eastern frontier. German forces for the French offensive would be deployed along three wings, the left and central wings composed of defensive forces on the Franco-German border and a gigantic right wing on the Belgian border. By placing the bulk of Germany’s forces against France, Schlieffen gambled that Russia’s vast territory and inefficient railroad system would result in a protracted mobilization.

Finally, Schlieffen called for the ruthless invasion of neutral Belgium, France’s northern neighbor. By having the right wing cross through Belgium and northern France, Germany bypassed France’s fortified eastern border. The right wing would encircle the French while it engaged the left wing, crushing them between the “hammer” of the right and the “anvil” of the left. If the plan was successful, the French would surrender, and German forces could be diverted to face Russia. Schlieffen predicted the fall of France some 35 to 40 days after German mobilization.

The ramifications of Schlieffen’s strategy were profound. First, by relying on rapid mobilization, the plan committed Germany to striking first in the event of war. This rigidity limited Germany’s diplomatic options in 1914. Germany could not seek a peaceful settlement to the diplomatic crisis in fear that France and Russia would mobilize their armies first. Also of great importance was the invasion of Belgium. The Treaty of London (1839) bound the European powers to guarantee Belgian independence and neutrality. German violation of this treaty triggered British entry into World War I and caused significant damage to Germany’s international prestige. Finally, relying on Russia’s slow mobilization was a considerable risk. If Russia successfully deployed its sizable armies while fighting continued in the west, eastern Germany was threatened with what was ominously described as the “Russian steamroller.”

Schlieffen retired from active military service in 1906. His successor, Helmuth von Moltke (or “Moltke the Younger,” 1848–1916), made significant alterations to the Schlieffen Plan. Moltke employed Schlieffen’s

same basic strategy when World War I erupted in 1914. Indeed, the plan nearly worked. Its failure, however, came from numerous causes. Among these were delays, Belgian resistance, the deployment of British Allied Expeditionary Forces, and German exhaustion during the rapid advance. These factors allowed France to assemble a force to meet the powerful right wing at the first Battle of the Marne. Russia also mobilized more quickly than anticipated, threatening eastern Germany.

As a result, the western front stabilized into static trench warfare, while German forces scrambled to decisively defeat Russian armies at the Battle of Tannenberg. Despite this triumph, the Schlieffen Plan’s promise of quick victory transformed into a German nightmare of protracted wars on both borders.

The Schlieffen Plan’s failure had ominous repercussions for Germany. Designed to prevent a two-front war against superior forces, Schlieffen’s deficient strategy led to exactly that fate. The western front was characterized by four years of stalemate, a battle of attrition that led to German defeat in 1918.

DANIEL HUTCHINSON

Scopes trial

Often known as the “Monkey Trial,” this face-off between free speech and state educational prerogatives pitted “modern” science against “old-time” religion. A major fault line in U.S. society was exposed when two of the United States’ most famous figures—lawyer Clarence Darrow and three-time presidential candidate WILLIAM JENNINGS BRYAN—clashed in the tiny town of Dayton, Tennessee.

Although Charles Darwin’s theory of evolution had been provoking controversy since 1859, not until the postprogressive 1920s did five states, including Tennessee, legislate how, or even whether, evolution could be taught in taxpayer-funded public schools. The actual legitimacy of evolution was not at first the main issue. Rather, the recently formed American Civil Liberties

Clarence Darrow (above) led the defense of John Thomas Scopes, basing his case on free speech and scientific authority.

Union (ACLU) challenged Tennessee's new law as a violation of free speech. A test case required a defendant, and that role was pressed on 24-year-old John Thomas Scopes (1900–70), a math teacher and football coach at Dayton's high school. Substituting for an absent biology teacher, Scopes had read a passage on evolution to his class from a textbook formerly approved for use in Tennessee. Scopes clearly had violated the new state law, but what did that mean? More than 100 reporters, including *Baltimore Sun* gadfly H. L. Mencken, converged on Dayton for an eight-day July trial to answer that question. The proceedings were carried nationally on radio.

The four-man defense, led by Darrow, sought a broad discussion of free speech and scientific authority; the prosecution's aims were less clear. Bryan, assisted by his son, Will Jr., knew that Scopes had broken the law, but he also wanted a chance to defend religious beliefs

against godless modernism, including what he saw as the unacceptable Social Darwinist idea that the weak be allowed to fall by the wayside. Presiding Judge John T. Raulston allowed only one of the ACLU's scientific experts to testify. He found Scopes guilty before allowing Darrow's and Bryan's plea for closing arguments, during which both hoped to make their larger cases to a national audience.

On Monday, July 20, 3,000 people were on hand to hear the debate on the lawn outside the hot, cramped courthouse. Darrow, an admitted agnostic and skilled litigator, peppered Bryan with questions regarding the literal truth of the Bible. Bryan was the finest public speaker of his generation, but he was no theologian and seemed poorly prepared. His defense of the Bible was feeble and often laughable. Although Judge Raulston expunged Bryan's testimony from the court record, millions had heard it via the media. Mencken's newspaper paid Scopes's \$100 fine. (His conviction was later voided on a technicality and never refiled.) Six days later Bryan died in Dayton of diabetes.

The Monkey Trial revealed how hard it was for urban secularists and rural believers to find common ground. In 1955 a lightly fictionalized courtroom drama, *Inherit the Wind*, introduced this "trial of the century" to new generations as a huge victory for science. It was, but it also was not. Tennessee repealed its statute in 1967. But controversy over evolution would reemerge as religious Protestants and others began expressing themselves more forcibly in school, state, and national politics.

MARSHA E. ACKERMANN

Scottsboro Boys

The Scottsboro Boys, as they were called by American newspapers, were nine young African-American men, all of them between the ages of 13 and 21, who became the defendants in an infamous, overtly racist criminal case. On March 25, 1931, a fracas broke out between white and black vagrant men riding a freight train through Alabama. When the train was stopped by

local authorities, two white women were also discovered onboard. These women had worked as prostitutes and feared arrest; to avert suspicion, they claimed the black men had raped them.

Two weeks later, the men went on trial in the town of Scottsboro, where a throng of white onlookers gathered. Following hasty legal proceedings in which the men received a minimal defense, they were found guilty, and most were sentenced to death.

The Scottsboro case was widely discussed in the northern press. A communist-affiliated legal group, the International Labor Defense, agreed to handle the appeals process. In subsequent trials, prominent defense attorney Samuel Leibowitz offered ample evidence that the accusers were lying, and one of the women disavowed her story and even testified as a defense witness. Nevertheless, the various Scottsboro defendants were found guilty by 11 southern juries, and their convictions were upheld by the Alabama Supreme Court. In 1937 four of the men were released in a plea bargain agreement, and the others were eventually paroled. The last defendant was released in 1950.

As a result of the case, southern mores and Jim Crow justice were held up to national and international scrutiny. African-American church and civic groups were galvanized. Demonstrations were held in Harlem, and the mothers of some of the defendants—women who had passed their lives in obscurity in the rural South—found themselves addressing crowds across the country to win support for their sons. The NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), which had been slow to defend the Scottsboro Boys, was criticized by many African Americans.

Two important U.S. Supreme Court decisions resulted from the Scottsboro case. In *Powell v. Alabama* (1932), the Court ruled that the defendants had been denied their right to adequate counsel. In *Norris v. Alabama* (1935), the Court found that African Americans in Alabama had been systematically and arbitrarily excluded from jury rolls. These decisions—and the activism in response to the Scottsboro case—became important precursors to the Civil Rights movement of the 1950s and 1960s.

TOM COLLINS

SEASIA (Southeast Asia)

The term *Southeast Asia* came to be used during WORLD WAR II, when the region was placed under the command of Lord Louis Mountbatten (1900–79). It includes the area to the east of the Indian subcontinent and to the south of China. In 2006 the countries of the region were Brunei, Cambodia, East Timor, Myanmar, Indonesia, Laos, Malaysia, the Philippines, Singapore, Thailand, and Vietnam. In the first half of the 20th century, all of Southeast Asia except Thailand was under foreign domination. Southeast Asia is a region of ethnic, cultural, linguistic, and historical diversity. It has retained its own identity in spite of cultural influences from different areas. The first half of the 20th century witnessed momentous events and new ideas that transformed the history of the region. WORLD WAR I, World War II, Japanese occupation, the rise of anticolonialism, the growth of communist ideas, and the onset of the cold war had varied impacts on the countries of the region.

In a geographical sense, before 1950 Southeast Asia comprised two broad groups. The mainland comprised the British colony of Myanmar (formerly Burma), the French colony of Indochina (Laos, Cambodia, and Vietnam), and Thailand. Island Southeast Asia consisted of the British colony of Malaya, the Netherlands East Indies, and the Philippines under U.S. domination.

Thailand survived without becoming a colony of either Britain or France due to the sagacious policies of the kings. It did not succumb to colonial subjugation by signing unequal treaties of friendship and commerce or allowing extraterritoriality rights to France, Great Britain, the United States, or Germany. Rama V (1853–1910) maintained friendly relations with the colonial powers even at the cost of Thai territory. King Vajiravudh (1881–1925) joined with Allied powers and was able to revoke extraterritorial rights. In 1932 there occurred for the first time in the history of Thailand a bloodless coup, which ended absolute monarchy there. Pridi Phanomyong (1900–83) and Pibul Songgram (1897–1964) were important leaders. The military dominated the affairs of government. Thailand gave the Japanese passage to invade the British colony of Malay. But after the defeat of Japan, Thailand gave up the newly acquired territories to Malay, Burma, and Cambodia.

The British colony of Burma was governed as a province of British India until 1937. The Japanese drove out the British in 1942. Burmese nationalism, which had been given a boost after World War I, was in full swing. The days of the British were numbered. Leaders like AUNG SAN (1915–47), who had collaborated

with the Japanese, sided with Great Britain in 1945. On January 4, 1948, the country became independent. The three Indochinese states of Cambodia, Laos, and Vietnam rebelled against French colonial rule. Ho Chi Minh (1890–1969) had pleaded in vain with the Allied countries to give independence to the Indochinese countries at the PARIS PEACE CONFERENCE. The Indochinese freedom struggle had communism as one of its ideologies for a sizable number of people. When the French came back again, the Democratic Republic of Vietnam (DRV), or North Vietnam, had already been established on September 2, 1945. The Khmer Issarak, or the Free Khmers, of Son Ngoc Thanh (1907–76) and Souphanouvong's (1901–1995) Pathet Lao (Land of Lao) had been aligned with the Vietminh. The First Indochina War began in 1946 and continued until the French defeat eight years later. The communist faction had not accepted the limited independence given to Laos, Cambodia, and South Vietnam in 1949.

The Philippines was annexed by the United States after the Spanish-American treaty in December 1898. After the Philippine-American War (1898–1901) military occupation was replaced by civilian governments. In principle, the independence of the Philippines was recognized by the U.S. Congress in the Jones Act of 1916. On July 4, 1946, it got complete independence. British Malaya had three types of administration: Crown colonies, protected federated states, and protected unfederated states. The Japanese had faced tough opposition from the Malay Chinese, who had formed the Malayan People's Anti-Japanese Army. The British created the Malayan Union in April 1946, which faced problems from the Malayan Communist Party. The pan-Malayan party called the United Malay National Organization was established in May of the same year. The British created the Federation of Malay in February 1948, which became a stepping stone to independence in 1957.

In World War II Japan occupied Singapore on February 15, 1942. General disillusionment with British rule and the growth of political consciousness accelerated. After the abolition of Straits Settlement, Singapore became a separate Crown colony on April 1, 1946. Elections to its legislative council were held in March 1948. The British government was compelled to give greater self-government to Singapore in 1953. Singapore attained self-government in 1959, with Britain retaining control of its defense and foreign affairs.

The Dutch established direct rule over the whole of modern Indonesia by 1909. Nationalism grew out of the country's glorious historical past, colonial exploitation,

Western education, anticolonial movements in Asia, and miserable social conditions. The first nationalist organization was Budi Utomo (Noble Conduct), founded in May 1908. The SAREKAT ISLAM (Islamic Association), established in 1912, became a mass organization with membership running above 2 million. In 1920 a group of radicals formed the Partai Komunis Indonesia (PKI, Communist Party of Indonesia). The Partai Nasional Indonesia (PNI, Indonesian Nationalist Party), with its motto of one nation (Indonesia), people (Indonesian), and language (Bhasa Indonesia), was established in 1927. It was led by Sukarno (1901–70). The nationalist struggle was suppressed by policies of repression and by sending leaders to prison camps. On August 17, 1945, Sukarno and MUHAMMAD HATTA (1902–80) proclaimed independence and established the Republic of Indonesia. But it took five years of guerrilla warfare and diplomatic offensives to establish its independence unchallenged, as the Dutch came back. At last, on August 17, 1950, the Unitary State of the Republic of Indonesia was restored.

In the second half of the 20th century this historical legacy, along with new developments, shaped Southeast Asia. In the 21st century Southeast Asian countries had increasing importance among the nations of the world.

PATIT PABAN MISHRA

Selassie, Haile

(1892–1975) *Ethiopian ruler*

Tafari Makonnen was born in Ethiopia in 1892, the son of a general who was a trusted adviser and grand-nephew of Menelik II. In 1911 he married Wayzaro Menen. As Ras (prince) Tafari, he quickly became a rival of Menelik's grandson for the throne. The grandson was unreliable politically and supportive of Muslims, and Ras Tafari was progressive and Christian. Tafari deposed him in 1916. He became regent and heir to Menelik's daughter, Empress Zauditu (Judith), in 1917. Between 1917 and 1928 he traveled in Europe, becoming the first Ethiopian ruler to travel abroad. He became

The leader of Ethiopia in the years before World War II, Haile Selassie attempted to modernize his nation.

king in 1928. Zauditu died in November 1930, and Ras Tafari became the 111th emperor in the succession from King Solomon. He took the name Haile Selassie, Amharic for “Might of the Trinity.”

Selassie inherited a land rich in culture and resources and recognized as sovereign by European colonial powers since 1900. It had grown under Menelik II and established treaties with Italy. Britain and Italy agreed, however, that Ethiopia should be under Italian influence. Tensions erupted occasionally, but when Selassie took the throne, Ethiopia was free and independent.

Selassie’s travels in Europe convinced him that he needed to modernize Ethiopia. He reformed the laws, bureaucracy, schools, and health and social services while serving as regent. He applied to the LEAGUE OF NATIONS for Ethiopian membership in 1919 but was rebuffed because Ethiopians still practiced slavery. After abolition of the slave trade in 1923, the league accepted Ethiopia.

In 1928 Ethiopia and Italy signed a 20-year treaty of friendship. In 1930 Ethiopia outlawed the sale of illegal arms and established the government’s authority to purchase arms for protection against external enemies and internal unrest.

In 1931 Selassie gave Ethiopia its first constitution. He established his bloodline as the only princely line eligible to inherit the throne and fought for four years before getting the princes to accept it. He continued to modernize schools, universities, and newspapers while

establishing electricity, telephones, currency, banking, and other modern benefits.

Selassie’s modernization occurred in the shadow of BENITO MUSSOLINI, who took power in Italy in 1922. Italy had a colony in Eritrea, where Mussolini instituted segregation. He also used Eritrea as a base for expansion in Africa. In 1934 Italian forces provoked an incident in Welwel, Ethiopia. The League of Nations failed to condemn the aggression, and Mussolini invaded Ethiopia in October 1935. Selassie personally led his forces into battle. After seven months of fighting, Italian forces, gas warfare, and league inaction forced Selassie into exile on May 2, 1936. On June 30 he spoke passionately at the league about how league inaction would promote international lawlessness instead of collective security.

Ethiopians continued to resist the Italian occupation throughout Selassie’s exile in Britain. Once Italy entered WORLD WAR II against Britain, Britain recognized the strategic asset of an ally on the Red Sea, so it helped Selassie to return to Khartoum. With a force of British, African, South African, and Ethiopian troops, he returned to Addis Ababa on May 5, 1941. Fighting continued in Ethiopia until January 1942.

After the war Ethiopia was a founder of the United Nations and the Organization of African Unity. As his relationship with Britain waned in 1953, Selassie sought U.S. support. And he later received assistance from Italy, West Germany, Sweden, Taiwan, China, and the Soviet Union. Internally, he attempted to bring peace among Ethiopia’s many religious, ethnic, and economic factions. His reforms of the government continued in the 1950s, as did the internal factionalism. In 1960 he quashed a coup led by his son, among others, but internal discord grew as economic and social reforms failed to match their promises. From the mid-1960s to 1974 Ethiopia was plagued with inflation, corruption, and famine. Selassie’s attempts to divide and weaken his enemies failed in 1974 as uprisings broke out in several provinces, and the coup leaders united into the Derg, which, under the pretense of allegiance to Selassie, took effective control of the government. After taking his resources and charging him with intentionally provoking the famine of the early 1970s, the Derg arrested Selassie and deposed him on September 12. Selassie died in August 1975 under questionable circumstances.

During his lifetime Selassie inspired Nelson Mandela, Martin Luther King, Jr., and Malcolm X with his commitment to civil disobedience as a path to social justice and redress. He also inspired the Jamaican-born religion of Rastafarianism. Rastafarians generally believe that Selassie is the messiah and Ethiopia is heaven on earth.

JOHN H. BARNHILL

Senghor, Leopold Sédar

(1906–2001) *Senegalese writer and politician*

Leopold Senghor was born into a wealthy merchant family in 1906 in a small fishing village south of Dakar in present-day Senegal. He was educated in Catholic mission schools. Senghor studied in Paris on a state scholarship and during the 1930s taught in several French lycées. He was granted French citizenship in 1932, and when WORLD WAR I broke out Senghor enlisted in the French army and was captured by the Germans, spending over one year as a prisoner of war.

Senghor and Aimé Césaire are credited with developing the ideas of *NÉGRITUDE*, a glorification of African history and culture that was also a revolt against imperial control. Although he presented highly romanticized visions of Africa and its peoples, particularly women, Senghor was also highly assimilated into French culture. Senghor's descriptions of Africa as a region of feeling and Europe as one of reason were criticized by later African nationalists and intellectuals.

Poetry was Senghor's preferred medium of expression. Writing in French, Senghor published a collection of poetry, *Chants D'Ombre*, dealing with memories and loss of homeland in 1945. Senghor was well known in French intellectual circles, and Jean-Paul Sartre wrote the introduction to his *Anthologie de la nouvelle poésie nègre et mangache de langue française* in 1948. In 1944 Senghor became a professor of African languages at the École Nationale de la France d'Outre-Mer.

Senghor married a Guyanese woman, with whom he had two children, but the marriage ended in divorce. He then married a French woman from Normandy. From 1945 to 1946 Senghor represented Senegal in the French constituent assemblies, and he continued to serve in the French national assembly into the 1950s. With Alioune

Diop, another Senegalese intellectual, Senghor established *Présence Africaine*, a renowned intellectual cultural journal.

When Senegal broke off from the federated Sudanese Republic and became an independent nation in 1960, Senghor was elected its first president. Although he was a practicing Catholic from a small ethnic group, Senghor ruled over a majority Muslim nation that was mostly Wolof. However, Senghor maintained cordial relations with Muslim leaders.

Senghor served as president until 1980, when he willingly stepped down from office. In retirement he divided his time between Senegal and France. Senghor was honored with many awards, including the Dag Hammarskjold Prize in 1965. He was appointed to the prestigious Institut Française, Académie des Sciences in 1969. In 2001 Senghor died in France.

JANICE J. TERRY

Shandong (Shantung) Question (1919)

Shandong (Shantung) is a province on China's northern coast. It is the birthplace of two great sages, Confucius and Mencius, and is therefore called China's Holy Land. Dramatically weakened after its defeat by Japan in 1895, Germany set off the "scramble for China" in 1898 by seizing Jiaozhou (Kiaochow), a port in Shandong, for a German naval base and forcing the Qing (Ch'ing) government to lease it to Germany for 99 years. Germany also received the right to build and control two railways in Shandong and gained other mining and financial concessions. Shandong became a German sphere of influence.

Japan entered WORLD WAR I as an ally of Great Britain with a goal of destroying German influence in East Asia; by November 1914 it had ousted all German interests in Shandong. In 1915 the Japanese government presented Chinese president YUAN SHIKAI (Yuan Shih-k'ai) with the TWENTY-ONE DEMANDS, aimed at establishing its hegemony in China. One group stipulated the transfer of German interests in Shandong to Japan. Although Yuan agreed to the demands in May 1915, they were never ratified by the Chinese parliament,

which he had dissolved. In 1917 Japan's allies (Great Britain, France, Russia, and Italy) agreed to the transfer of German rights in Shandong to Japan after the war. After joining the war the United States also agreed to Japan's special rights in China.

China joined World War I in 1917 as an associated power and thus won a seat at the PARIS PEACE CONFERENCE in 1919. Its broad goal, the rescinding of the unequal treaties China had been forced to sign with Western powers since 1842, was never discussed. Japan had three goals at Paris: (1) the Micronesian Islands (Carolines, Marianas, and Marshalls) in the northern Pacific as mandates under the LEAGUE OF NATIONS, which was granted; (2) a clause in the covenant of the League of Nations on racial equality, which was controversial and withdrawn; and (3) obtaining German rights in Shandong. China's legal position was compromised when Japan revealed a secret agreement with Yuan's successor in China that acknowledged Japan's rights in Shandong in return for Japanese loans.

The loss of Shandong provoked enormous public anger in China, directed mainly against its politicians, who were seen as incompetent and traitorous. Protests led by students, called the MAY FOURTH MOVEMENT, won widespread support from merchants and workers. The government was pressured into not signing the Treaty of Versailles with Germany.

JIU-HWA LO UPSHUR

Shaarawi, Huda

(1879-1947) *Egyptian feminist*

Huda Shaarawi was a prominent Egyptian women's rights activist and arguably the most important Arab feminist of the 20th century. She began her career of political activism by organizing lectures for mostly upper-class women of the harem and later became a member of the WAFD PARTY women's committee, which gained recognition because of substantive all-women's demonstrations in the 1919 revolt. Shaarawi was from an upper-class background, with extensive political

connections—her husband was one of the founders of the Wafd Party in 1919, and she was the daughter of the president of Egypt's first national assembly.

However, Shaarawi fought the upper-class institution of the harem by removing her veil in 1923 when she disembarked from a train station in Cairo, marking the beginning of the end of the harem in Egypt. In 1923 she also formed Egypt's first women's organization, the Egyptian Feminist Union, whose agenda focused on women's political rights, including the right to vote and the right to stand for parliamentary elections. In her activism Shaarawi reflected two ongoing social and political movements, Islamic modernism and secular nationalism, challenging both British colonial rule over Egypt and Egyptian patriarchy by claiming that they concurrently served to eclipse women's voices. She was the founder and president of the Arab Feminist Union and vice president of the International Women's Union. She was a strong advocate for girls' education and participated in more than 14 international women's gatherings on behalf of Egyptian women.

RANDA A. KAYYALI

Sherif Husayn-McMahon Correspondence

The Sherif Husayn-McMahon Correspondence was a secret agreement between Sherif Husayn, representing the Arabs, and the British over the future of Arab territories in the Ottoman Empire. Sherif Husayn was sherif, or ruler, over the Muslim holy city of Mecca. A member of the Hashemite family, Husayn was a direct descendant of the prophet Muhammad and consequently had both political and religious influence. An Arab nationalist, Husayn wanted one unified, independent Arab state. Personally ambitious, he also wanted to be the ruler of that state.

In 1915 Sherif Husayn sent a secret letter to the closest high-ranking British official, Henry McMahon, the British high commissioner in Egypt, proposing that the Arabs would fight on the side of the British in WORLD WAR I in exchange for an independent state when the

war was over. Because the letters had to be hand delivered by secret agents from Mecca to Cairo and back, the correspondence extended from July 1915 to January 1916. Although McMahon, who did not speak Arabic or know much about the Middle East, had nothing to do with the British responses that were written by government officials in London, as the highest-ranking British official in Cairo his name was affixed to the texts. After Husayn's letters were translated into English, they were put into secret code to be transmitted to London for final decisions as to what responses the government wished to make.

In his first letter, Husayn delineated the borders for the proposed Arab state. The boundaries were to run along the Red Sea and include the Arabian Peninsula, but not Aden, which was already a British colony; the state would also include present-day Iraq, Syria, Lebanon, Israel-Palestine, Jordan, and the area around Alexandretta, in present-day Turkey. All this territory was overwhelmingly Arab ethnically, linguistically, culturally, and historically. Husayn also sent his son Faysal to ascertain whether Arab nationalists in greater Syria would support the proposed Arab state.

They agreed to back Sherif Husayn's plans. As an excuse for this fact-finding mission, Faysal also visited Istanbul to meet with the Committee of Union and Progress, the virtual rulers of the Ottoman Turkish Empire, which was fighting on the side of Germany and the Central Powers in the war. This was a highly dangerous mission, as in Turkish eyes Sherif Husayn's proposals were treasonous. In the summer of 1915, the Turks publicly hanged several Arab nationalists in downtown Beirut. The square where the executions took place is still known as Martyrs Square in present-day Lebanon.

The British responded that discussion of the borders of the Arab state was premature. Sherif Husayn then ceded Alexandretta, and Britain replied that it wished to omit most of the area in present-day Lebanon because the French had interests there. They also wanted to omit most of present-day Iraq. Throughout the letters, the territories were referred to by the Turkish administrative terms of *vilayets*, or provinces, which did not precisely conform to the boundaries of present-day nations in the Middle East. Although the British did not communicate their interests to Sherif Husayn, they knew about the oil reserves in Iraq and were anxious to maintain control over Iraq for economic and strategic reasons. Nor was Sherif Husayn informed about the secret negotiations simultaneously taking place between the British and the French regarding Arab territories. These secret negotiations resulted in the SYKES-PICOT AGREEMENT of May

1916, which in part seemed to contradict the agreement the British government was making with Husayn.

By early 1916 Sherif Husayn had essentially agreed to fight on the side of the British in exchange for what he believed would be one Arab state, possibly minus Lebanon and parts of Iraq, which, as predominantly Arab, he believed would ultimately become part of that state. Palestine was not specifically mentioned by name in the exchange, but Sherif Husayn clearly believed that it would be included in the proposed Arab state. On the basis of this correspondence, the Arabs rose up in armed revolt against the Turks in June 1916 and fought on the side of the British for the duration of the war. Husayn's forces immediately secured Mecca and much of the coast along the Red Sea but failed to take Medina, which remained in Ottoman Turkish hands until the end of World War I. The British supported the revolt with money, supplies, and advisers, including T. E. LAWRENCE, who was known as Lawrence of Arabia. The Arab forces used mostly guerrilla warfare tactics, attacking the Ottoman Turkish flanks and blowing up railway and communication lines as the British army advanced northward through Palestine and into Syria and Lebanon in 1917 and 1918.

The publication in late 1917 of the BALFOUR DECLARATION giving British support to Zionist aspirations for an independent Jewish nation in Palestine was immediately opposed by Sherif Husayn and the Arabs on the grounds that the area was Arab and that the declaration contradicted the earlier agreement made with Sherif Husayn. The controversy over the conflicting terms of the three wartime agreements—the Sherif Husayn–McMahon Correspondence, the Sykes-Picot Agreement, and the Balfour Declaration—became a point of contention at the PARIS PEACE CONFERENCE and continued to be debated into the 21st century.

JANICE J. TERRY

Shidehara Kijuro

(1872–1951) *Japanese diplomat and politician*

Shidehara Kijuro was born in Osaka and educated at the Imperial University of Tokyo. He began his career as a

diplomat in 1899; his postings included Korea, the United Kingdom, the Netherlands, and the United States. In his capacity as ambassador to the United States (1919–22), he argued (without success) for the repeal of laws restricting Japanese immigration to the United States. Shidehara led the Japanese delegation at the Washington Naval Conference (also known as the International Conference on Naval Limitation) in 1921–22, called by the United States to establish security and arms limitations agreements in the Pacific. He assumed the post of minister of foreign affairs in 1924 and served in this capacity in the years 1924–27 and 1929–31. Shidehara's foreign policy approach was notable for his pursuit of peace and reconciliation rather than aggression and territorial expansion, an approach that became known as Shidehara diplomacy. This conciliatory approach brought Shidehara into conflict with those individuals in the Japanese government who wanted to pursue more militaristic, expansionist goals, particularly toward China. Shidehara was forced out of office in 1931 after the MANCHURIAN INCIDENT, when the bombing of a Japanese railway near Shenyang (Mukden) became a pretext for the Japanese capture of Manchuria from China.

Shidehara was held in high regard abroad even after he left office in Japan. He was well known and popular within the United States. He appeared on the cover of *Time* magazine in 1931 with the caption "Japan's Man of Peace and War." After the Japanese surrender in 1945 that concluded WORLD WAR II, Shidehara, with the approval of the U.S. military occupation authorities, became the first prime minister of postwar Japan. Shidehara appointed Matsumoto Joji to head a commission to draft the new constitution. However, the result was rejected by the U.S. authorities as too similar to the Meiji constitution. A new constitution that included women's right to vote and a renunciation of war was produced by General DOUGLAS MACARTHUR's staff and was adopted in 1946. Shidehara was elected to the house of representatives of the diet in 1947, became speaker of the house in 1949, and held this post until his death in 1951.

SARAH BOSLAUGH

Sino-Japanese War

The Nationalist government in China faced two major challenges after completing the NORTHERN EXPEDITION in 1928: domestically, the Communist rebellion, and internationally, Japanese aggression. While warlords ruled China Japan could exploit Chinese disunity by extorting concessions. Japanese militarists bent on preventing the formation of a strong China had tried and failed to halt the advance of the Nationalist Northern Expedition in May 1928 by landing troops in Shandong (Shantung). They failed again in December 1928 to prevent the young warlord of Manchuria from acceding to the Nationalist government.

The MANCHURIAN INCIDENT demonstrated the ascendancy of Japanese militarists over the civilian government. On September 18, 1931, junior officers of the KWANTUNG ARMY (a unit of the Japanese army stationed in Manchuria, a Japanese sphere of influence) attacked many cities in Manchuria (called the Northeastern Provinces in China). China appealed to the LEAGUE OF NATIONS, which passed resolutions ordering Japan to halt its aggression, in vain. The league then sent a commission of inquiry (the LYTTON COMMISSION) to investigate the legitimacy of the puppet government that Japan set up in Manchuria. When the commission report rejected Japanese claims and ordered Manchuria's rendition to China, Japan resigned from the league.

Emboldened by the league's impotence and the indifference of the United States, Japan stepped up its aggression against China. Its troops conquered Rehe (Jehol) province, which adjoined Manchuria, in 1933 and attacked the Inner Mongolian provinces in 1934. Fearing an all-out war where it would be crushed and beset by the Communist rebellion, the Nationalist government, led by CHIANG KAI-SHEK, sought piecemeal resistance and negotiations with Japan in order to buy time to build up Chinese infrastructure and defenses. Successes against China made the Japanese militarists heroes at home, and their tactic of assassinating their opponents silenced the opposition. Their avowed policy was to control all of China, then move by sea to conquer South and Southeast Asia and by land to conquer the Soviet Far East and then all of Central Asia. These ambitions would lead to the formation of an Axis between Japan, NAZI Germany, and Fascist Italy in 1938 that aimed at world domination by these three nations. In 1935 Japan initiated a program to create another puppet state, called North Chinaland, to include five provinces in northern China.

The acceleration of Japanese aggression led to widespread demand in China that all Chinese unite and that the government cease its anti-Communist campaigns. In response to that prospect, Japan initiated the MARCO POLO BRIDGE INCIDENT on July 7, 1937, by attacking a town in northern China at a railway junction near the Marco Polo Bridge (called Lukouchiao or Lugouqiao in Chinese). Realizing that the incident was part of a large design, the Chinese government decided to resist to the end. A UNITED FRONT was formed with the CHINESE COMMUNIST PARTY (CCP) and other parties and groups, all pledged to support the war of resistance led by the Kuomintang (KMT). Japan had expected to conquer China in three months. The war would last eight years and become part of WORLD WAR II in Asia.

CHINA FIGHTS ALONE

The modern Japanese army, aided by air and sea power, inflicted heavy losses and conquered the entire coastal region by the end of 1938. However, Japanese attempts to destroy Chinese morale by bombing schools, destroying industries, and treating the civilians in conquered areas with extreme brutality only forged an iron will among the Chinese to fight on. The RAPE OF NANJING (NANKING), in which the Japanese soldiers raped, tortured, and slaughtered upward of 300,000 Chinese in the surrendered former capital, was one of the most despicable acts of brutality in World War II. Millions of Chinese civilians were killed in the war, but more millions trekked to Free China in the interior, moving schools, libraries, and factories to continue resistance. To slow the Japanese advance, in 1938 the Chinese even breached the Yellow River dikes, at a horrendous toll to the local population. The Chinese government moved too, up the Yangtze (Yangzi) River first to Wuhan and finally to Chongqing (Chungking) in Szechuan (Sichuan) Province, deep in the interior, where the mechanized Japanese military could not penetrate, though its bombs did inflict heavy damage. Chongqing was repeatedly destroyed by Japanese incendiary bombs, but life and factory production continued in caves excavated in the surrounding mountains, which served as air-raid shelters. Despite great odds, the government persisted in its goal of resistance combined with reconstruction. China fought alone with little outside aid until Japan attacked PEARL HARBOR in December 1941. Japan could not entice prominent Chinese leaders to collaborate. The only man of national prominence to defect and form a quisling regime was WANG JINGWEI (Wang Ching-wei) in 1938.

But he had become so discredited by then because of his previous political machinations and because Japan so obviously dominated the several puppet regimes in China that few followed him.

The United Front with the Communists was ill fated and a lifesaver for the besieged remnant Communist forces, down to about 30,000 men in 1937. From the beginning the CCP used it to increase their numbers and territory, while the KMT army was mauled by superior Japanese forces. As Communist leader MAO ZEDONG (Mao Tse-tung) told his men, "Our fixed policy should be 70 percent expansion, 20 percent dealing with the Kuomintang, and 10 percent resisting Japan." In the light of these policies, it is not surprising that even nominal cooperation between the two parties had broken down by 1941. In April 1941 Japan and the Soviet Union signed a neutrality pact that allowed the Soviet Union to focus on preparing for war against Germany. This pact also removed the doctrinal basis for CCP-KMT cooperation. Their standoff continued throughout the war. The CCP continued its expansion, and the KMT maintained a military blockade of CCP-controlled areas around its capital, Yanan (Yenan). The war also provided the CCP an opportunity to restructure its party and its army and provided Mao and other leaders time to develop new social, political, and economic institutions and strategies.

CHINA GAINS ALLIES IN WORLD WAR II

China fought alone between 1937 and 1941 except for Soviet aid in its air defenses in the initial years, some small loans from the United States and Great Britain, and an Air Volunteer Corps (Flying Tigers) of U.S. airmen under General CLAIRE CHENNAULT. After Japan attacked PEARL HARBOR and British and Dutch colonies in Asia in December 1941, World War II expanded to include all Axis powers against China and all Allies against Japan. China became part of the China-Burma-India theater of war, and Chiang Kai-shek became supreme commander of the China theater. China also began to receive expanded U.S. aid. 1942 was a bleak year for the Allies in Asia as Japan conquered most Western holdings—the Philippines, Hong Kong, Singapore, Malaya, Burma, and the Dutch East Indies. In contrast, China had stood alone against Japan for over four years. China's international prestige soared. In 1943 treaties were signed between China and the United States and Great Britain that ended 100 years of unequal treaties. Chiang and Madame Chiang Kai-shek traveled to Cairo, Egypt, to meet with British leader WINSTON CHURCHILL and U.S. president FRANKLIN

D. ROOSEVELT. The leaders agreed that Japan would have to surrender unconditionally, return its conquests since 1895 to China, and grant Korea independence.

War also brought disagreements between the Allies. Churchill and Roosevelt had agreed that they would give first priority to defeating the Nazis in Europe, then the Japanese in the Pacific, with the Chinese theater coming third. Friction developed between China and its allies over expectations. In exchange for China's receiving U.S. Lend-Lease aid, the United States expected China to expand its role in the war, while exhausted China expected the United States to bear a greater burden in the fighting. There were also disputes over Lend-Lease. Roosevelt appointed newly promoted general Joseph Stilwell, the chief of U.S. forces in China, Chiang's U.S. chief of staff, and gave him control over Lend-Lease materiel in China (whereas Lend-Lease materiel in Britain was under British control). China was also disappointed that it received the least amount of Lend-Lease, although the logistics of transportation were a factor in the limited amount reaching China. The worst thorn in the side of Sino-U.S. relations was Stilwell's abrasive personality, for which he was called Vinegar Joe and his insulting attitude toward the Chinese leaders. Stilwell also clashed with Claire Chennault, an advocate of air power, and finally demanded that he be handed total command of Chinese troops. Convinced that Stilwell's goal was to subordinate rather than cooperate with the Chinese, Chiang demanded his recall, which was endorsed by General Patrick Hurley (secretary of war under President Hoover), Roosevelt's special emissary to China to mediate between Stilwell and Chiang. He was recalled in October 1944 and replaced by General Albert Wedemeyer, who was not given command of Chinese troops. Relations between the two nations improved as a result. Hurley, however, was unsuccessful in mediating between the KMT and the CCP.

In February 1945 Roosevelt met with Churchill and Soviet leader JOSEPH STALIN at Yalta to obtain Soviet entry into the war against Japan after Germany's surrender. The terms included important concessions to the Soviet Union in Manchuria and Chinese recognition of the independence of Mongolia (a Chinese possession that had become the first Soviet satellite state in 1924). These agreements were made without prior consultation with the Chinese government, which was forced to agree. World War II ended in Asia on August 10, 1945, after the United States dropped the second atomic bomb on Japan. China was Japan's first victim and had suffered most from Japanese aggression. The Chinese rejoiced in their victory, and in China's new

international status as one of the Big Four Powers, a founding nation of the United Nations (UN), and a permanent member of the UN Security Council.

JIU-HWA LO UPSHUR

Smith, Alfred E.

(1873–1944) *U.S. political leader*

Al Smith was born in Manhattan into a working-class family of partly Irish ancestry. He had no formal education past grade school because he had to go to work at age 12 when his father died. Smith took various jobs, including a well-paying job at the Fulton Fish Market, which brought him to the attention of Tammany Hall, New York's political machine, and at the age of 22 he became a clerk in the office of the commissioner of jurors. He was elected to the New York state assembly as a Democrat in 1904 and elected speaker in 1913.

Smith gained even greater prominence when he was appointed vice chairman of the New York State Factory Investigating Commission, formed to investigate the fatal 1911 TRIANGLE SHIRTWAIST FIRE. This familiarized him with industrial conditions in New York State and encouraged him to support progressive policies. By 1915 Elihu Root, a Republican senator who had won the Nobel Peace Prize in 1912, could call Smith "the best informed man on the business of the State of New York."

In 1915 Smith was elected to the office of sheriff of New York. Three years later he was elected governor. He lost the position in the Republican landslide of 1920, regained it in 1922, and kept it through two more election cycles. As governor he assisted in the creation of the New York Port Authority, run jointly by New York and New Jersey, and he sponsored legislation on rent control; tenant protection; workers' compensation; aid

Alfred E. Smith (center) was the first Roman Catholic nominated for president by a major political party.

to mothers, infants, and dependent children; and regulating women's work hours. He also put Robert Moses in charge of the state park system.

During his tenure as governor he feuded with newspaper publisher William Randolph Hearst and the mayor of New York. Smith's reelection victory in 1926 against a very strong Republican candidate made him the foremost Democrat holding public office in the country.

Smith had been nominated as a candidate for the presidency at the Democratic National Convention in 1924, but the combination of a late start in the hunt for delegates, his Roman Catholic faith, and a fight over a platform plank denouncing the KU KLUX KLAN by name led to a deadlock with a southern candidate, William McAdoo, and neither received the nomination. In 1928 FRANKLIN DELANO ROOSEVELT presented Smith to the convention as "The Happy Warrior," and he was nominated on the first ballot, making him the first Roman Catholic ever nominated for president by a major party. His New York accent, his religion,

his association with a big-city political machine, and his stand against PROHIBITION led to a sound defeat by HERBERT HOOVER in a campaign characterized by appeals to religious bigotry.

After his defeat Smith became involved in the project of erecting the Empire State Building, and he became president of the firm that owned and operated it, a position he held until his death. Although he supported the nomination of Franklin D. Roosevelt in 1932, he became a critic of the NEW DEAL and government regulation of industry. He later joined in the formation of the American Liberty League, a nonpartisan organization devoted to protection of the rights of property and opposition to the "political experiments" being conducted by the Roosevelt administration. Smith supported Republican presidential candidates in 1936 and 1940.

DAVID MILLER PARKER

Smuts, Jan Christiaan

(1870–1950) *South African general and statesman*

Jan Christiaan Smuts was born on his family's farm in the Cape Colony on May 24, 1870. The second child in the Smuts family, Jan grew up working on the farm and roaming the Afrikaner, the countryside dominated by Dutch-speaking colonizers in South Africa. At the age of 12 he attended school at Riebeck West, and after graduating he attended Victoria College in Stellenbosch. Smuts graduated with an emphasis on science and literature from Victoria College. Upon graduation Smuts traveled to England on scholarship to study law at Christ's College, Cambridge University. Though he passed the legal examinations that allowed him to practice law in England, Smuts decided instead to return to the Cape Colony and practice law in Cape Town.

Upon Smuts's return to South Africa he practiced law and later wrote for the Cape Town newspaper, the *Cape Times*. He worked in Cape Town as a lawyer and writer until the Jamison Raid, where a militia from the British South African Company led by Colonel Jamison tried to lead a revolt of the Uitlanders, the term for British mining workers in the Transvaal. In protest, Smuts moved to Johannesburg to practice law. After

successfully establishing himself in the mining city of Johannesburg, he was appointed state attorney of the Republic of Transvaal in 1898 by President Kruger, which cemented Smuts's loyalty to the Boer nation-state.

His loyalty to the Republic of Transvaal was strongly evinced during the second BOER WAR (1898–1902). As the war began to erupt, Smuts helped write a polemic essay, *A Century of Wrong*, to instill support for the Boer cause and to vilify British imperialism. Smuts gained a distinguished notoriety in South Africa for leading a band of Boer fighters in the war. Smuts was a participant at the Vereeniging Peace Conference that led to the Vereeniging Peace Treaty, signed on May 1, 1902, which formally ended the war.

Smuts continued to be politically successful in South Africa after the war. He teamed up with Louis Botha in 1905 to create Het Volk, an Afrikaner political party to counteract the British governing elites. In 1906 Het Volk won the majority in the independent elections in the Transvaal. As a cabinet appointee as education secretary and the colonial secretary, Smuts slowly climbed up the echelons of political power in South Africa. At the constitutional convention in Durban in 1908, Smuts drafted and reworked the South African constitution, which unified South Africa in December of 1909.

With the unification of South Africa, which led to a majority Afrikaner voting population among whites, Louis Botha became the prime minister of United South Africa in 1910. Under Botha Smuts was appointed to positions as the secretary of the interior, secretary of mines, and secretary of defense for South Africa. Smuts came under pressure from his own political party and the press for his numerous cabinet positions, later including secretary of finance.

Although he fought against the British in the second Boer War, Smuts fought alongside the British in WORLD WAR I. He created the South African Defense Force, which helped with the defeat and subsequent acquisition of German East Africa and South West Africa. As a member of British prime minister DAVID LLOYD GEORGE'S war cabinet, Smuts was one of the masterminds of the Royal Air Force. Smuts helped lead negotiations toward the end of the war at the PARIS PEACE CONFERENCE of 1919. Smuts also helped conceive and support the LEAGUE OF NATIONS.

Smuts was the prime minister of South Africa from 1919 until the Afrikaner-dominated National Party defeated him in 1924. After his tenure as prime minister Smuts dabbled in academia, especially philosophy, publishing his book *Walt Whitman: A Study in the Evolution of a Personality*. Smuts returned to politics in 1933 when he again

became the prime minister of South Africa. As an ardent anti-NAZI he led the South African effort in WORLD WAR II, joining British prime minister WINSTON CHURCHILL'S war cabinet. After World War II ended Smuts signed the Paris Peace Treaty on February 10, 1947.

In 1948 the National Party, which supported apartheid, government based upon the separation of races, ousted Smuts as prime minister in the national election. At that point he officially retired from South African politics. Jan Christiaan Smuts died soon thereafter on September 11, 1950, on his family's farm in Doornkloof, Irene, South Africa.

BRETT BENNETT

Somaliland

Somaliland is an area along the northeast Horn of Africa bordering the Gulf of Aden, Djibouti, Somalia, and Ethiopia. It is roughly the territory formerly known as the British Somaliland Protectorate and has had a history of unrest and adversity.

In the mid-19th century France gained control of part of the Somaliland territory. At about the same time, Britain became interested in Somaliland as a source of supplying meat to troops stationed in the colony of Aden, where its ships refueled as they sailed to India. When the opportunity arose to take control of strategic parts of Somaliland because Egyptian forces were busy fighting in the Sudan, Britain acted quickly. Negotiations with local Somali leaders led to the formation of the protectorate in 1887. Treaties with France in 1888 defined the borders between the two colonies. The next year Italy established its presence in other parts of Somaliland.

Throughout its rule by European colonial forces, Somaliland was divided by the whim of nations, often causing hardship for the inhabitants. In 1899 the "mad mullah" Sayid Maxamed Cabdulle Xasan began a Somali rebellion against British rule that was to last almost two decades. When the British withdrew to their coastal outposts in 1910, they left the interior in chaos. There was constant fighting among the Somalis and little food available. As much as one third of Somaliland's male population may have died from fighting or starvation.

Britain returned to the interior in 1920 and began a series of administrative and social reforms that were halted by WORLD WAR II. In 1925 Jubaland, a region in Kenya, was added to Italian Somalia. Shortly before World War II Italian-speaking regions of Ethiopia were joined with the Somali territories to become Italian East Africa. During the war Somalia saw a great deal of fighting, with the British taking control of the Italian districts and ruling a combined Somaliland Protectorate from 1941 until 1950, when the Italian districts came under the auspices of the United Nations.

In 1956 Italian Somaliland was granted autonomy, and in 1960 it was granted total independence. In the same year Britain gave its ill-prepared protectorate independence. At the time, Somaliland had only one secondary school and only a few college-educated individuals. An infrastructure was almost nonexistent, and the indirect rule system used by Britain had not trained Somalis for positions of authority. For a period after 1960 Somalia and Somaliland were united as the United Republic of Somalia.

JEAN SHEPHERD HAMM

Somoza García, Anastasio

(1896–1956) *Nicaraguan president and dictator*

Founder of the Somoza dynasty, which ruled Nicaragua for 43 years (1936–1979), Anastasio “Tacho” Somoza García became chief director of the Nicaraguan National Guard (Guardia Nacional de Nicaragua) in November 1932, despite his lack of military experience. His rise to political and military prominence can be attributed primarily to his political and family connections and his capacity to charm U.S. policy makers with his fluency in English. Born in San Marcos, Nicaragua, to a wealthy Liberal coffee planter, in his teens he traveled to Philadelphia to live with relatives. There he honed his English skills, taking classes at the Pierce School of Business Administration. In Philadelphia he also met his future wife, Salvadora Debayle Sacasa, a member of one of Nicaragua’s most prominent Liberal families. Returning to Nicaragua, he engaged in a number of unsuccessful business enterprises, including a stint as a used car salesman. With the outbreak of

civil war in 1926, he joined the Liberals on the side of ousted president Juan Bautista Sacasa, his wife’s uncle. A minor Liberal chieftain who led a failed assault on the Conservative garrison at San Marcos, he gained prominence in U.S. military and diplomatic circles by serving as interpreter during U.S.-brokered negotiations between Liberal and Conservative factions.

Under the administration of José María Moncada (1928–1932), he was appointed governor (*jefe político*) of León department and later foreign minister and consul to Costa Rica. Principally by ingratiating himself with U.S. officials and exploiting his family ties, by 1932 he had become the assistant director of the Guardia Nacional, whose main task was suppressing the six-year insurrection led by nationalist rebel leader AUGUSTO C. SANDINO in the mountainous north. After being appointed director of the National Guard on the strong recommendation of U.S. ambassador Matthew E. Hanna, Somoza engaged in a series of unsuccessful peace talks with Sandino. On February 21, 1934, in the capital city of Managua, he had Sandino and members of his entourage assassinated, soon followed by a series of massacres of Sandino’s supporters, most notably at the Río Coco cooperative near the Honduran border.

Tensions mounted between Somoza and President Sacasa, elected in 1932. In June 1936, Somoza orchestrated a coup against Sacasa and in December, in a rigged election, was elected president with over 99.9 percent of the vote. The same year he published an important book, *The True Sandino (El verdadero Sandino)*, demonizing Sandino as a criminal psychopath. After 1936 his Nationalist Liberal Party dominated the country’s politics. His regime can be characterized as a populist, patrimonial dictatorship that ruled through a combination of shrewd co-optation and violent suppression of opposition. Amassing enormous wealth through exploiting his political power, by the mid-1940s he had become the country’s largest landowner, in part by expropriating the properties of German nationals. A staunch ally of the United States in WORLD WAR II, he responded to mounting domestic opposition in 1944 by reorganizing his ruling bloc, permitting limited opposition, and orchestrating the passage of a progressive labor code in 1945 intended to defuse opposition among the country’s incipient urban working class.

In the late 1940s he ruled through a number of puppet presidents elected in his stead (Leonardo Argüello, Benjamin Lacayo Sacasa, and Victor Román Reyes) until his rigged reelection in 1950. On September 21, 1956, the poet Rigoberto López Pérez shot him dead in the city of León. He was succeeded by his sons Luis

Somoza Debayle (dictator, 1956–1963) and Anastasio “Tachito” Somoza Debayle (dictator, 1963–1979), both of whom governed with strong U.S. support. The latter, more avaricious and less prone to compromise than his elder brother or father, was overthrown on July 19, 1979, in the Sandinista revolution and later assassinated in Paraguay by a Sandinista hit squad. Within Nicaragua, popular memories of Somocista rule remain overwhelmingly negative, emphasizing especially the three dictators’ cruelty, corruption, and cupidity.

Chapel Hill: University of North Carolina Press, 1993; Somoza, Anastasio. *El verdadero Sandino, o el calvario de Las Segovias*. Managua: Tipografía Robelo, 1936.

MICHAEL J. SCHROEDER

South African Native National Congress (pre–1950)

The South African Native National Congress was the predecessor of the African National Congress (ANC). It changed its name in 1923 to reflect a growing demographic that included members outside of South Africa. The South African Native National Congress was founded on January 8, 1912, in Bloemfontein, Orange Free State (now the Free State), by John Dube, Pixley Seme, and Sol Plaatje in opposition to the South African Native Land Act. The group had existed for almost a century under various auspices with similar goals. However, it was not until 1912 that the group was able to formally gain recognition in South Africa and abroad as a counter to the repressive white rule.

Opposition to the land act began in 1909 when a group of black delegates met in Bloemfontein to object to the act’s predecessor, the South Africa Act. This act and those that would come after centered on South Africa’s land tenure system. The land act, eventually passed in 1913, was the first law in the 20th century to create group areas. It declared that the whole of South Africa would be exclusively for white South Africans, with the proviso that certain “scheduled areas” would be kept in trust solely for the welfare and benefit of black South Africans. The scheduled areas made up approximately 13 percent of the total land area and were mainly occupied by tribal communities. The act facilitated the formal establishment of African reserves, which would

later become a political behemoth under apartheid’s separate development policies as Bantustans. Although the population of black South Africans vastly outnumbered white South Africans, only 7 percent of South Africa’s land area was set aside as reserve land. The economy of South Africa during this period was highly dependent on the gold discovered in the high veld.

With little else to sustain the growing South African economy, the South African government encouraged mining companies and the resulting offshoots in big cities such as Johannesburg to draw migrant labor from the reserves. In addition to addressing the labor needs of the mines, the act also set out to eliminate independent rent-paying African tenants and cash croppers residing on white-owned land by restricting African residence on white land to labor tenancy or wage labor and prohibiting African land ownership outside of the reserves. Initially, the South African Native National Congress aimed to express dissatisfaction with the Native Land Act as well as the treatment of black South Africans during the South African BOER WAR.

The founding members of the congress were of an educated and elite background. John Dube was a minister and a schoolteacher; Sol Plaatje (the secretary-general) was a court translator, author, and newspaper editor; and Pixley Seme was a lawyer with degrees from Columbia University in the United States and Oxford University in Great Britain. In contrast to later calls by the African National Congress, the trio was not pushing for the end of British rule in South Africa, just the beginning of equality and representation.

In order to express the group’s discontent with the present government in South Africa, they sent a delegation led by W. P. Schreiner to London to try to convince the British government not to accept the Union of South Africa that was being put forward by the Afrikaner government in Pretoria. While it was a futile effort on the part of the South African Native National Congress, it did strengthen the bonds of the members of the new organization. Although initially the organization was elitist, only representing those black Africans with education, it did attempt to represent both traditional and modern elements of African society. Like most groups and organizations worldwide at the time, however, women were not admitted.

The draft constitution of the South African Native National Congress that was put forth in 1912 outlined five basic aims:

- To promote unity and mutual cooperation between the government and the South African black people

- To maintain a channel between the government and the black people
- To promote the social, educational, and political uplift of the black people
- To promote understanding between chiefs and loyalty to the British Crown and all lawful authorities, and to promote understanding between white and black South Africans
- To address the just grievances of the black people

Although the contents of the constitution were not radical, the official constitution was not passed until 1919. The South African Native National Congress would send another delegation to Britain in 1913 led by Sol Plaatje to officially protest the Native Land Act. Plaatje would travel later to Canada and the United States, where he would meet MARCUS GARVEY and W. E. B. DUBOIS. The efforts of the group would have little effect until the group became the African National Congress.

Soviet Five-Year Plans

The Five-Year Plans (which existed from 1928 to 1990 with the exception of a break from 1965 to 1971) were the means by which the Soviet Union managed its centralized economy. Using the plans, the Soviet Union devised priorities, assigned resources, determined objectives, and then measured the results. What is more, the Five-Year Plans were not only used to achieve objectives in a given time period but were the means by which the Soviet government took and maintained complete control over all economic matters.

The Five-Year Plans came into existence in the Soviet Union in the 1920s. In the years after WORLD WAR II, this method of top-down planning and control was more or less forcibly adopted by the Eastern European nations that came under Soviet control.

Starting in 1928, there were 11 Five-Year Plans (1928–32, 1932–37, 1938–42 [interrupted by the begin-

ning of World War II in 1941], 1946–50, 1951–55, 1956–60, 1959–65 [designated the Seven-Year plan], 1971–75, 1976–81, 1981–85, and 1986–90).

Immediately after the revolution of 1917 and through the Russian Civil War, the Soviet leadership attempted to manage the economy through what it referred to as War Communism. All industrial and agricultural enterprises were nationalized by the state to better manage what was produced and distributed. War Communism lasted until 1921, when it was replaced by the NEW ECONOMIC POLICY (NEP). NEP represented a significant change in the structure of the economy. While heavy industry remained under direct state control, smaller concerns could operate on an entrepreneurial basis. It was, essentially, a small-scale, partial return to private enterprise. Farms were not to be appropriated by the state; they had to deliver a tax but could keep the rest to sell or use as they wished.

NEP was extremely popular not only among the citizens who saw its tangible benefits but among a large percentage of the Soviet leadership. There was, however, a faction that believed that the Soviet Union was so far behind the West that NEP was unsatisfactory. Building the Soviet Union to the point where it could ensure its military, economic, and political survival required effective management of all resources. In addition, as would be made clear by the Stalinist policies of the late 1920s on, exercising control over every aspect of life was considered to be essential.

By 1927, as JOSPEH STALIN assumed a more secure position and could begin to impose his policies, NEP's days were numbered. State control would return but in a more effective way than had existed under War Communism. Under this imperative the Five-Year Plans began, the first to be performed from 1928 to 1932.

From the beginning, the Five-Year Plans mainly emphasized heavy industries. First raw materials such as oil, coal, timber, and iron ore had to be extracted. Then factories and even factory cities had to be constructed. The most famous, but not the only one of these, was the city of Magnitogorsk, built to be a major steel producing center. From these factories and centers, capital goods to manufacture other goods would be made and distributed. Population movements to support these efforts, the construction of roads and railroads, and the building of ships, all to support the industrialization component of the plan, were considered and included.

Lighter industries and consumer goods were assigned a very low priority but were factored in to the plan. Every aspect of economic activity was subject

to planning and control, even agriculture, important because although the Soviet Union comprised a huge landmass, only 10 percent of it was suitable for growing crops. The scarcity of food in the years of the civil war through the 1920s was a major source of unrest and possible destabilization.

Each plan was different in that it would emphasize different objectives. In the first two plans (1928 to 1937), creating heavy industry for the Soviet Union was the single most important goal, and all of the plan components were coordinated to support that goal. In later years, there was an increased emphasis on making consumer goods available to the general population. The plans after World War II focused on rebuilding and repairing the immense destruction that had occurred during the war. In the postwar years, there was once again a very heavy emphasis on increasing agricultural production.

The planning of each Five-Year Plan was a process with defined stages, objectives, and roles to be played by the designated participants. Although planning through the years evolved and each was different, a look at how it was done for the second Five-Year Plan gives a good general sense of how it was done.

In 1931 general work on drafting the second Five-Year Plan began. Each department or industry would develop its targets to be reached during the period under consideration. The State Planning Commission (GOSPLAN) acted as coordinating agency. It worked with all departments to adjust targets and prepare a cohesive nationwide plan. In preparing the planners would have to take into account the Politburo's grand objective and required resources. The plan's general provisions with substantial detail were completed by early 1933.

In November 1934, the plan received its final approval by the XVII Party Congress. After approval there might be some changes to the plan, but there were no significant departures. In 1935 and 1936, the changes made to the plan were primarily to increase quota quantities to be produced. In this phase, Stalin often took a more or less direct role in encouraging increases in expectations. There were changes to the objectives in 1936 and 1937.

Officially in 1937, the plan came to an end, and the objectives were considered to have been met. Stalin, however, attacked the alleged success of the plan, stating that the goals and objectives were set so low that no satisfaction could be taken from meeting them. What is significant about this statement is that 1937 was considered to be the worst of the purge years. As perceived political enemies were being rounded up, sabotage and lack of commitment to the fulfillment of the Five-Year Plan was one of the "crimes."

Quotas, or norms, were an integral part of the plans, and the assignment of objectives to an industry or factory percolated down to teams and the individual workers. Meeting one's goals was an important responsibility. In the prison camps of the Gulag, whether one ate or not would depend on whether one met a norm in construction, cutting timber, or mining gold. Outside the Gulag, however, the rewards for production could result in significant rewards. In 1935 a miner named Stakhanov dramatically increased his team's output by reorganizing its work. Stakhanov was made into a hero, and workers who excelled in production were known as Stakhanovites. They were rewarded with bonuses and recognition. A significant problem with this, however, was that often, to exceed the goals, the quality declined.

By the mid-1930s, Soviet steel manufacturing capacity was not far behind Germany. There were, however, many problems that existed throughout the existence of the plans. While remarkable progress was made, there were areas in which the plans did not succeed. Reporting was not always accurate. Inaccuracy was a systemic problem but one that was exploited by managers who could not meet their quotas and so falsified their accomplishments. While the planning was supposed to be coordinated on a national scale, not everything went as intended.

Also, even though everything was theoretically controlled by the state, workers still had a degree of freedom that could make life a nightmare for managers. The workers had to be managed, often with tact and rewards, such as one might have seen in capitalist countries. In the years after World War II, opposition from workers could require sending in the army to use violence to get workers back into the factories.

Soviet purges

Soviet purges were JOSEPH STALIN's systematic elimination of dissenters and potential opponents when he was general secretary of the Central Committee of the Communist Party of the Union of Soviet Socialist Republics (USSR) during the 1930s. Stalin and the Politburo sought to ensure the adherence of the members of the Communist Party to the orders of the Central Committee by eliminating divergent ideologies within the party, creating a monolithic Communist ideology. The Communist Party had regularly used repression against perceived enemies to increase a state of fear in order to establish a pretext for increased social control, yet it had not used this strategy on itself on a massive scale while it was the established governmental authority in the country. The purges resulted in Stalin's complete subjugation of the Communist Party and the Soviet regime, monolithic unity, and loss of intellectualism, leadership, and millions of lives.

After the RUSSIAN REVOLUTION, which overthrew the monarchy, the Bolsheviks, or Communists, eventually seized control of the country during a brutal civil war and established the Soviet Union. VLADIMIR LENIN emerged as the leader of the new regime and began the suppression of non-Bolshevik socialist parties. Following the elimination of rival political parties, Lenin expelled and purged opponents of his own party, using terror as state policy to establish a totalitarian state. He introduced a decree on party unity to thwart future deviations in every possible manner and forbade members to enter factions advocating policies different from those of the established leadership. The Party Central Control Commission was established to maintain political discipline. Lenin did not favor the parliamentary system and created the Orgburo to allocate forces and the Politburo to decide policy to bypass the larger and less manageable Central Committee. In 1917 Stalin was elected to the Central Committee, retaining the position for the rest of his life. Stalin worked to establish the myth that he and his Party Center directed the October Revolution, which resulted in the Communists' rise to power. In 1922 Stalin became general secretary, a position whose influence he increasingly expanded.

Lenin's death in 1924 created a power vacuum for control of the Communist Party and the Soviet Union. Stalin continued Lenin's methods of consolidating power. As general secretary, he kept in touch with Communist officials throughout the country. Stalin removed threats to his power base from within

the party. He formed a moderate coalition with Grigori E. Zinoviev (1883–1936) and Lev B. Kamenev (1883–1936), both prominent Communists, to govern the party and maneuvered against LEON TROTSKY, his major rival and the leader of the left-wing Communists. Stalin favored establishing communism in the Soviet Union first, rather than the theory of permanent revolution favored by both Lenin and Trotsky. Trotsky was soon expelled from the Communist Party and was exiled in 1929. Stalin then established an alliance with the right-wing members of the Communist Party, led by Nikolai Bukharin (1888–1938), against Kamenev and Zinoviev, who unsuccessfully attempted to counter Stalin.

Those opposed to Stalin favored Leningrad party chief Sergei Kirov (1886–1934), one of Stalin's close associates and advocate of a moderate policy toward the peasantry. Kirov's assassination in 1934 initiated a purge of the local Leningrad party and mass deportations to hard labor camps, known as gulags, in Siberia. Zinoviev and Kamenev, former allies of Stalin, were arrested and executed for their alleged participation in Kirov's murder. The further announcement of the discovery of an alleged plot by the exiled Trotsky to overthrow the Stalinist regime initiated a series of purges in the Soviet Union that reached their peak during 1936–38.

Stalin destroyed the upper echelon of the original committed Communists, replacing them with loyal appointees. Stalin had an effective secret police force, known as the People's Commissariat for Internal Affairs (NKVD). Through intense surveillance provided by a network of informers, the NKVD claimed to uncover numerous anti-Soviet conspiracies. All allegedly dissident persons were accused of crimes, usually fabricated, and were forced to sign confessions that led to sentences of death or to long terms of hard labor. Many of the arrests and sentences were carried out in secret, although some of those charged with crimes received public "show trials," which were trials meant to provide an illusion of justice but in fact had predetermined outcomes.

In 1937, the Politburo issued an order allowing physical coercion, which was used to justify torture and extrajudicial executions by the NKVD. Although the NKVD chief was Genrikh Yagoda (1891–1938) when the purges began, Nikolai Yezhov (1895–1940), nicknamed the "Bloody Dwarf," was chief of the NKVD during the height of the purges; consequently, this period is sometimes called the Yezhovshchina, or Yezhov Era. Toward the end of the purges, Yezhov, arrested on

charges of espionage and treason, was executed and soon replaced by Lavrenty Beria (1899–1953), who became a longtime associate of Stalin.

During the height of the purges, three trials of former senior Communist Party leaders were held; they were accused of participating in conspiracies to assassinate Stalin and other Soviet leaders and of attempting to dismantle the Soviet regime. The first trial in 1936 involved 16 defendants, chief among them Zinoviev and Kamenev. All of the accused were convicted and executed. Zinoviev and Kamenev granted confessions under the condition that their lives and the lives of their family members would be spared. Although Stalin relayed assurances to both men that the conditions would be granted, not only were Zinoviev and Kamenev executed, but most of their family members were arrested and executed as well. The second trial, held in 1937, involved 17 defendants, including Karl Radek (1885–1939) and Grigori Sokolnikov (1888–1939); 13 of the defendants were executed, and four received sentences of hard labor. The third trial, in 1938, included 21 defendants, including Bukharin, former head of the Communist International, former prime minister Alexei Rykov (1881–1938), Christian Rakovsky (1873–1941), Nikolai Krestinsky (1883–1938), and Yagoda. Bukharin agreed to confess under the condition that his wife would be spared; after his execution, she was sentenced to hard labor.

The purges conducted of the military resulted in the execution or incarceration of more than half of all officers. A group of military generals, including Mikhail N. Tukhachevsky (1893–1937), were tried in secret in 1937. The military was left weak, leaving the Soviet Union vulnerable to attack, as demonstrated in the German invasion during WORLD WAR II (1939–45).

The purges spread to the general population, and the NKVD charged countless commoners with alleged crimes. Amid the Great Terror, Stalin introduced a new Soviet constitution in 1936. Promoted as an instrument of democracy, the constitution stipulated free, secret elections based on universal suffrage. It also guaranteed all citizens a range of civil and economic rights. However, other provisions within the constitution nullified these new rights.

Purges in the non-Russian republics were particularly brutal. The NKVD carried out a series of national operations during 1937–40, targeting specific minority groups and members accused of attempting to destabilize the country. NKVD local officials were assigned quotas for arrests and executions.

In 1938, legislation was passed to halt NKVD operations of systematic repression and executions. However, such actions did not completely end Stalin's use of mass arrest and exile, for he sporadically continued such practices until his death in 1953. Trotsky, the last of Stalin's enemies, was murdered with an ice pick in Mexico in 1940, presumably by the NKVD.

By 1939, all power rested with Stalin and his inner circle. Millions of people had died in the purges. Several hundred thousand had been executed, and millions had been exiled, tortured, and sent to hard labor camps, where they died from starvation, disease, and overwork. Stalin's exact reasoning for initiating the purges is unclear. Although the purges succeeded in consolidating Stalin's control over the Communist Party and the Soviet regime, they severely weakened the country's military, cultural and intellectual accomplishments, and leadership ability. Party congresses met with increasing infrequency, and state power increased. A cult of personality developed around Stalin. During his lifetime, the adoration and reverence among the common people toward Stalin eclipsed that shown toward Lenin.

ERIC MARTONE

Soviet society: social and cultural developments

Traditionally interpreted in “Western” and “Eastern” (i.e., Soviet and post-Soviet) historiography, the process of social and cultural development of Soviet society reflects the main phases of Soviet societal evolution and all its lacks and advantages.

Strong ideology and total control by Communist Party authorities usually are identified as the main trends in the social and cultural history of Soviet society, and recent years have brought new insight

connected with unofficial (underground, or dissident and samizdat) cultural phenomena studies.

The first decade after the October Revolution was a time of transformation of cultural stereotypes connected with the introduction of Marxist-Leninist ideology that demanded revision of mental reference points and human behavior.

Milestones of cultural and social revolution of that time were introduced by VLADIMIR LENIN, among them liquidation of cultural backwardness and illiteracy in the majority of the Soviet Russian population, creation of socialist intelligence, and promotion of Communist ideology. These ideas were realized step by step through the introduction of a new education system based on new genres of higher and secondary education institutions, through activation of wide publication activity, and in the course of the establishment of tight and sometimes friendly connections with old Russian intelligence.

New tendencies in art and literature appeared at that time, the most striking and well-known of them represented by Kazimir Malevich in painting; Sergei Eisenstein in cinematography; Maxim Gorky, Mikhail Bulgakov, Isaac Babel, and Mikhail Zoshchenko in prose; and Anna Akhmatova, Vladimir Mayakovsky, and Sergei Yesenin in poetry. These works concentrated mainly on the process of adaptation to the new life among different population groups.

It is worth mentioning that many representatives of the Russian intelligentsia could not adapt to their post-revolution motherland; more than 2 million voluntarily emigrated from the Soviet Union, including composers Sergei Rachmaninoff and Igor Stravinsky; ballerina Anna Pavlova; painters Marc Chagall and Konstantin Korovin; writers Ivan Bunin, Vladimir Nabokov, and Alexander Kuprin; and others whose works have become part of world cultural heritage.

A problem of special importance at that time was relationships with the Orthodox Church, which greatly influenced the mentality of a major part of the population. In February 1918, a law separated the church from the state and schools from the church, which caused fundamental religious opposition led by the patriarch Tikhon. Bolsheviks and church opposition resulted in the plunder of church property and utensils, destruction of churches, repression of church leaders and friars, and broad atheist propaganda.

At the period of the NEW ECONOMIC POLICY (1921–27), the politics of *korenization* implied increasing attention to national minorities, whose language and traditional culture were introduced in Soviet republics.

Reflecting the general liberalization of internal policy inherent to that time, *korenization* was dismantled with the improvement of the totalitarian system and was replaced by a general tendency toward Russification and repression of minority cultures.

During the period of active promotion of socialism in all spheres of human life, significant results were achieved in the area of social and cultural developments. By 1937 overall elementary education had been introduced in the country, the average level of literacy was already as high as 81 percent, and the task of overall secondary education (in villages, shortened up to seven years) had been put forward as had the necessity of medical service in the country. The new so-called Stalin Constitution, adopted in 1936, guaranteed Soviet citizens democratic civil rights and freedoms. Nevertheless, its statements in practice were totally ignored by JOSEPH STALIN, who successfully created a totalitarian system based on the physical destruction of his opponents and competitors. This tendency was displayed also in the cultural sphere, where artistic works of different genres were evaluated mainly subjectively, and many artists and representatives of science and education were repressed or lost the chance to be published because Stalin did not like their works.

Soviet culture gradually gained a strong ideology based on a new artistic method and style introduced by Nikolay Bukharin and later called socialist realism. Its main idea was that an artist must provide a precise and true picture of real life in its historical development; this picture should be used as an instrument to encourage socialist ideas among working people. To make control over Soviet artists easier, they were united in hierarchical professional organizations totally controlled by party bureaucracy. Nevertheless, even in this hard situation of ideological control, Soviet writers and poets, composers, and cinematographers enriched world cultural heritage by their works.

The struggle against fascists had caused a revision of the ideological implications of the sociocultural internal policy of the Communist Party. The necessity to maintain a unified Soviet society had resulted in slogans of patriotism, unity, and friendship among all Soviet peoples, and the mass media had actively and effectively contributed to the dissemination of these ideas. Theater, literature, and visual art (also in the form of political placards) were used as potent instruments to maintain the Red Army warriors' inspiration and motivation. In this situation Stalin even met with the leadership of the Russian Orthodox Church, and this fact reflects a general amelioration of party-church

relations. Scientific research was concentrated on the improvement of already-existing arms and the creation of the nuclear bomb.

The obvious success of many artists was caused also by the fact that their ideas fit well with the inspirations of the Soviet people. In spite of measures undertaken by the Soviet government to move its most valuable art objects to remote territories or to mask nonportable objects in their places, the cultural heritage in the Soviet Union was seriously damaged during WORLD WAR II, and many objects were lost for eternity.

Victory over fascism and the general aspirations of the Soviet people had made the World War II the main subject of art in the first postwar decade. At the same time, the destroyed national economy demanded urgent restoration, and this need could be satisfied only by highly educated specialists. Education and science became the subject of special attention in economic development.

At the same time, Stalin started a new phase of totalitarian system improvement that resulted in a new series of repressions and meant the end of the liberalization of ideology. Soon, typical Stalinist forms of culture and society control were restored.

The 20th Congress of the Communist Party and the following dismantling of the personality cult of Stalin following his death caused democratization of social and cultural processes in the Soviet Union and revision of basic ideas, highlighted by literature and art. Responsibility for past mistakes and comprehension of the lessons of the past have become an important subject of discussion, tightly connected with the general problem of fathers and children. For many recognized representatives of Stalinist culture this process was disastrous, and a series of suicides stressed Soviet intelligence.

Phenomena that were principally new in Soviet culture sprang up, including samizdat (i.e., nonofficially printed literature) produced by Soviet dissidents. Artistic comprehension of repression and Stalinist terror became a striking subject of discussion, and rehabilitation of the works of many repressed writers, artists, and scientists took place during these years.

Nikita Khrushchev, the leader of the Communist Party and initiator of the dismantling of Stalin's personality cult, actively influenced the cultural process, trying to outline what he saw as appropriate frontiers of mental freedom. One of the greatest reformers in the history of Soviet culture, he had inspired the abolition of avant-gardist and abstractionist visual art, including the works of Soviet poet, Jew, and Nobel

laureate Joseph Brodsky and Boris Pasternak's novel *Doctor Zhivago*.

General liberalization of life displayed itself mainly in big cities (in the "center"), where the majority of the well-educated population was concentrated. Inhabitants of the countryside, in spite of the political rights and social freedoms proclaimed in the Soviet constitution, could hardly explore them in full measure. In most cases they could not even move from their villages because they had no official identification documents at their disposal. Even to apply for study at the university in the regional center, they had to ask special permission to get their passports from local Soviet and party authorities.

OLENA V. SMYNTYNA

Spanish civil war

The Spanish civil war raged from July 17, 1936, until April 1, 1939, when the Nationalists, led by General FRANCISCO FRANCO (1892–1975), overcame the ruling Republican, or Loyalist, government to take control of Spain's future. The origins of the war can be found in Spanish political instability, which characterized the early decades of the 20th century, beginning during the rule of Alfonso XIII (1886–1941), who became monarch in 1902.

A military coup led by Miguel Primo de Rivera in 1923 saw the constitution suspended. Further attempts at economic and social change failed to reverse long-term negative trends. After the army withdrew its support, Rivera resigned, and Alfonso XIII was forced to accept free elections in 1931. As a result, Alfonso

relinquished the crown and went into exile, and a republic was declared. In the June 1931 elections the Socialist Party (PSOE) and assorted left-wing parties won a major victory that made Alcalá Zamora (1877–1949) prime minister, but he was soon replaced by the more radical Manuel Azana (1880–1940).

A series of reforms that challenged the land-owning agricultural elites and the dominating position of the Catholic Church followed. The 1933 elections saw the right-wing parties, led by the Spanish Confederation of the Autonomous Right (Confederación Española de Derechas Autónomas, CEDA), regain control of parliament (the Cortes); they abolished the earlier reforms. A general strike followed in 1934, and armed rebellion occurred in Asturias. To overcome these divides and in a hope of establishing legitimacy, Manuel Azaña established a broad coalition of the left, which included the communists (PCE, known as the Popular Front).

In opposition to this movement, the right-wing parties formed the National Front, which included CEDA and the Carlists (monarchists) as well as the Falange Española, a nationalist party with fascist sympathies. The February 1936 general election saw a narrow Popular Front victory. The Popular Front won 34.3 percent of the votes, and the National Front gained 33.3 percent. With control of 263 seats out of 473 in parliament, the Popular Front attempted a reform program in agriculture. They also freed political prisoners, banned the Falange, and sent several prominent military officers, such as Francisco Franco, to overseas outposts.

POLITICAL MANEUVERING

Important sections of the military leadership, led by General Emilio Mola, began to discuss what could be done about this government. The issue became more serious when in May 1936 the conservative Niceto Alcalá-Zamora was removed as president and the more left-wing Manuel Azana replaced him. Azaña made Diego Martínez Barrio prime minister on July 18, 1936. Barrio failed to reach a compromise with the opposition, and he was replaced by the more radical José Giral, who armed left-wing groups for possible resistance.

General Mola declared the army in revolt on July 19, 1936, and gained initial but somewhat blundering success in the Canary Islands, Morocco, Navarre, Seville, and Aragon. Francisco Franco, commander of the Army of Africa, joined the revolt and began his conquest of southern Spain. General Mola concentrated his forces in the northwest and took the important naval base at Ferrol. Mola would be killed in a plane crash in June 1937.

Franco commanded the superior Army of Africa, which contained the Spanish foreign legion and over 34,000 men. He moved his forces with the help of the German Luftwaffe to control practically all of southwestern Spain. Most of the Civil Guard and the Assault Guard joined with the Nationalists.

The Popular Front's army was larger than that of the Nationalists and had gained the support of a variety of overseas left-wing recruits, primarily led by communists, who were organized into International Brigades. This also included U.S. volunteers, who served under the Abraham Lincoln Brigade banner. This mix of various national groups and ideologies produced friction among left-wing factions.

The Nationalist side also attracted international support in the form of Lieutenant Colonel Walther Warlimont (1894–1976), a member of the German General Staff. Warlimont became an adviser to General Franco and arranged for the creation of the Condor Legion of volunteers, numbering 19,000 men by war's end, to fight for the Nationalist cause. The Luftwaffe put in the field squadrons of bombers, fighters, and other aircraft to support ground operations. In August 1936 the border area with Portugal fell to the Nationalists after General Juan Yagüe overran Badajoz city, gaining in the process the epithet "Butcher of Badajoz." President ANTÓNIO SALAZAR of Portugal gave his support to the Nationalists and closed the border to the Republicans.

In September 1936 Francisco Largo Caballero (1869–1946), a left-wing socialist, became Republican prime minister. It was during this time that General Franco assumed total control of the army, becoming generalissimo as well as head of the Nationalist state, a position strengthened with the fall of Toledo to Nationalist armies. By November 1936 Nationalist troops under General José Varela, supported by the Condor Legion, began their siege of Madrid, which lasted for nearly three years and ultimately forced Caballero's government to leave the capital.

BENITO MUSSOLINI came to the aid of the Nationalists with men and supplies. The Italian Blue Shirt Militia, numbering 30,000, joined 20,000 Italian army soldiers as part of the Nationalist Front. There were also pro-Catholic Irish Blue Shirts who joined the Nationalist side. This Italian force included air force squadrons that joined with the Germans in bombing missions for the Nationalists. In March 1937 the Italian contingents were amalgamated as the Italian Corps. The intensity of the fighting increased at and near Madrid in 1937 in an effort to take the city and cut off Republican

supplies. Battles in the Jarama Valley and at Guadalupe were costly for all sides but left the Republicans hanging on.

In April 1937 Franco brought all the Nationalist groups together under Falange Española control with himself as a supreme leader, or *caudillo*, an imitation of the titles *Duce* and *Führer* used by Mussolini and Hitler. On April 26 the Germans bombed the Basque city of Guernica, made famous by Picasso's painting that became a tribute to the city's losses. The city was captured by the Nationalists two days later, and the regional capital, Bilbao, fell in June. Santander and Aragon were taken in August, and by October Asturias, including Gijón, had surrendered, giving the Nationalists control of the north.

Tensions mounted in the Republican camp because of Communist Party demands, which Caballero refused to meet. With the coalition threatened, President Azaña removed Caballero and replaced him with Juan Negrín (1892–1956), who allowed the Communists greater influence in the cabinet. This internal strife became outright conflict in Barcelona when in May 1937 the Communists challenged other left-wing elements, such as the anarchists and Trotskyites, for control of local institutions. Death squads killed an estimated 400 people until troops from Valencia arrived.

This event lost the National Front credibility, and Negrín's pro-Communist sympathies gave more and more influence and control to Stalin and his agents. With its intensive bombing campaigns and its more unified military command, the Nationalists in April 1938 broke out of their pocket, advancing to the sea toward Valencia, and appeared ready to encircle Madrid. Negrín launched the Ebro offensive in July in order to reverse these advances, but the losses were very heavy, particularly in International Brigade ranks. The International Brigade elements were eventually totally withdrawn from Spain in September 1938. The Ebro battles also cost the Nationalists dearly; 6,000 were killed and 30,000 wounded. Yet the Republican inability to reverse the tide of war meant that they were now essentially a spent military force without hope of victory.

Negrín's efforts at reform and reorganization also proved futile. When the Nationalist army took Barcelona on January 26, 1939, the Republican government withdrew to the French border. In February 1939 the British prime minister, Neville Chamberlain, recognized General Franco and the Nationalists as the legitimate Spanish government. President Azaña now had no option other than to resign and flee to France.

Splits also occurred on the Madrid front when Republican forces led by Segismundo Casado (1893–1968) formed an anti-Negrín junta. These internal divides saw Communists fight anarchists in the heart of Madrid. Casado realized the situation was hopeless and attempted negotiation with the Nationalists. However, Franco refused anything less than total surrender. The Nationalist Army entered Madrid on March 27 without significant opposition, and on April 1, 1939, Franco declared the civil war over.

The civil war proved costly for Spain in economic, military, and social terms. Although estimates of deaths vary considerably, a general view is that approximately 500,000 were killed, tens of thousands on both sides were murdered for their political associations, and an estimated 10,000 civilians were killed through German and Italian bombing. The end of the war also saw the Nationalists extract a sizable revenge, executing 100,000 Republican prisoners; thousands more died from the conditions of their imprisonment.

The civil war left in its wake a legacy of bitterness. Spanish democracy did not return until the restoration of the monarchy under King Juan Carlos following the death of Franco in 1975. Franco remained the longest-serving fascist dictator of the era. He eventually normalized relations with his neighbors and joined the NATO alliance in the postwar period. Even his sending troops to fight with the Nazis on the Russian front during WORLD WAR II was forgotten, for he never officially joined the Axis powers.

For many, the Spanish civil war was a precursor to the World War II struggle against fascism. The conflict also revealed the ineffectiveness of the LEAGUE OF NATIONS in stopping such actions, which were made worse by the neutrality and nonintervention policies of the democratic states. The civil war in military terms became a testing ground for equipment and tactics that would be used in World War II, such as the carpet bombing of cities and the idea of total war.

SS (Schutzstaffel)

The SS was the abbreviated form of the German *Schutzstaffel*, meaning “protection squadron,” which began as a small personal bodyguard for ADOLF HITLER and grew into a large multipurpose arm of the NAZI PARTY by the end of WORLD WAR II. In 1925 the Stosstrupp Adolf Hitler was formed as a group of eight men with the task of protecting Adolf Hitler at rallies, speeches, and other events after the failed Beer Hall Putsch. In 1926 the group was renamed the Schutzstaffel, expanded, and given the role of protecting Nazi Party leaders. The SS remained a small force for the first few years but expanded rapidly after the appointment of Heinrich Himmler in 1929 as its leader. Under Himmler the SS expanded from 280 to 209,000 members in five years. After 1932 the SS wore distinctive black uniforms, changing to army grey uniforms prior to the beginning of World War II. Admittance to the SS was restricted by race to Germans, and the organization had a special interest in attracting “Aryans,” blonde-haired, blue-eyed Germans who were viewed as the vanguard of the Germanic peoples.

Under Himmler and his right-hand man Reinhard Heydrich, the power of the SS grew, and it became a branch of the German government under Hitler. The SS assumed the role of guards of the Reichschancellery and later expanded into the first Waffen-SS Division. The Waffen-SS became a second German army (in addition to the Wehrmacht), which was first loyal to Hitler. The SS first exercised its power by carrying out purges in the Nazi Party during the Night of the Long Knives.

Shortly after the Nazis came to power, the SS expanded its role in German politics and society. In 1934 the SS took control over the Geheime Staatspolizei (the German secret state police, known as the Gestapo). The Gestapo was combined with the SS intelligence service, or Sicherheitsdienst (SD), to form the Sicherheitspolizei (security police). Two years later all German federal, state, and local police were absorbed into the SS. The newly established concentration camps came under the control of the SS-Totenkopfverbände (SS Deathshead Unit, or SS-TV). The SS-TV continued to expand with Nazi conquests, establishing new concentration camps. During the war, disabled Waffen-SS veterans often moved into SS-TV units and were sent to work at the concentration camps. Once Germany began to expand, Einsatzgruppen (special action squads) were formed by the SS on an as-needed basis to neutralize threats to Germany. In 1941, as a precursor to the final solution, the Einsatzgruppen moved into

the Soviet Union and began the extermination of Jews, Gypsies, and communists.

The Allgemeine-SS, also established in 1934, was responsible for race, security, finance, administration, and personnel. Officers were established to help SS officers who had suffered during the struggle for power. Other offices oversaw party and military awards, press and information, and liaison between Himmler and the Four-Year [economic] Plan. Another office controlled the teaching of ancestral heritage, genealogy, and biological research; still another oversaw the welfare of SS mothers and children. Later the Allgemeine-SS took on a reserve role, with many of its members serving in other Nazi organizations. The SS Medical Corps provided medical care to SS units in the 1930s. After the establishment of the concentration camps, the SS Medical Corps began experimentations on human prisoners. The most notorious of these crimes occurred at Auschwitz under the leadership of SS doctor Joseph Mengele.

During the war the Allgemeine-SS was responsible for executing SS policy in the occupied territories. These were added to the Weimar government records that the Nazis had inherited, making the Nazi regime the most heavily documented government and society in history. Shortly after the Reichstag fire, the Allgemeine-SS provided help to the police forces during the roundup and imprisonment of Germany’s communists and potential Nazi Party opponents.

The Waffen-SS continued to grow after the outbreak of war and eventually reached 38 divisions. Many were made up of foreign volunteers from occupied Europe. The racial restrictions were relaxed because of a manpower shortage. Some foreign units ended up defending Berlin and Hitler’s bunker during the final Russian offensive. Because of their fanatical loyalty to Hitler and the Nazi Party, SS combat formations were given priority when new equipment and new weapons were issued. They also had priority in receiving replacements to cover casualties. Waffen-SS units were feared by the Allies because of their fanatical indoctrination and cruel treatment of civilians and prisoners.

Stalin, Joseph

(1878–1952) *Soviet leader*

Joseph Stalin seems to have dedicated himself to acquiring and maintaining political power in the manner of Machiavelli's prince. Unlike the prince, however, Stalin subscribed to an ideology that suggested his priorities while foreclosing certain policy options. As the leader of the Soviet Union from 1925 until his death in 1952, he defended the achievements of the Bolshevik Revolution, pushed through an accelerated and brutal industrialization, successfully waged war against NAZI Germany, and contributed to the division of Eastern from Western Europe in the 1940s.

The man who later earned the name of "Stalin" (meaning "steel" in Russian) grew up in a Christian area of Georgia, in Russian Transcaucasia. Born Josif Vissarionovich Dzhugashvili in December 1878 to parents who both belonged to the legal estate of peasant, he had little money and few opportunities as a child. His alcoholic father left the household during Stalin's childhood and died a vagabond in 1909. Stalin maintained a close, if not affectionate, relationship with his mother.

A good, though not brilliant, student, Joseph initially pursued his coursework diligently, and he continued to improve his Russian. He became critical of the "humiliating regime" maintained by the extremely conservative Russian Orthodox priests who ran the school, however. Around 1895 he became involved in the social democratic discussion circles that had begun to form in Tblisi. His earlier belief in Georgian nationalism was increasingly replaced by a devotion to Marxist internationalism.

Before he left seminary in 1899 (without completing his training), he had organized strikes and protests. In 1902 he was arrested by the czar's police for his activities. He spent the first of several terms in prison or internal exile (usually in Siberia). He attracted the attention of VLADIMIR LENIN and other leading revolutionary Communists for his ruthless effectiveness as an organizer as well as for his intellectual work on nationality and nationalism. On the other hand, his methods often caused schisms and rendered him unpopular.

When the revolutionary year of 1917 began, Stalin was in Siberia. The Bolsheviks were distancing themselves from the *duma*, which had been created by the czar in 1905 to placate protesters but which lacked legitimacy. The destruction of life and property during WORLD WAR I fatally undermined the czar's authority, as it revealed that Russian industrial backwardness meant not only a poor standard of living for the people

but also an inability to supply troops or to sustain infrastructure during war. In addition to ending the war, the Bolsheviks promised to build industry and improve agriculture through communist principles.

Stalin generally, though often cautiously, supported Lenin while the Bolshevik leader proposed a radical strategy to bring his party to power. Although important as an adjutant, Stalin did not enjoy the name recognition of Lenin, LEON TROTSKY, or Lev Kamanev. Nevertheless, he joined the Central Committee and the Politburo as soon as they were created; he was also appointed people's commissar of nationalities.

During the civil war that followed Bolshevik victory, Stalin was sent by Lenin to Czaritsyn (later Stalingrad) in summer 1918 as special plenipotentiary. His assignment was to secure food from southern Russia with the assistance of a small armed detachment. Stalin butted heads with Trotsky over the conduct of operations against the Cossacks. Before being recalled to Moscow, Stalin had carried out the executions of Red Army officers with noble blood or ties to the old czarist army. Stalin's fears—occasionally but not always entirely paranoia—of betrayal by members of the military and party were already manifest in 1921.

HISTORICAL DEBATE

Historians have debated whether Lenin wanted to prevent Stalin from succeeding him. Certainly Lenin was concerned about Stalin's readiness to use torture and violence instead of persuasion. In the years immediately after Lenin's death in 1924, Stalin consolidated his hold on power by discrediting rivals such as Trotsky and by emphasizing his respect for Lenin's legacy. In fact, he immediately began to distance himself from that legacy by ordering the immediate imposition of agricultural collectivization and by elevating himself above the Communist Party. Furthermore, unlike Lenin, Stalin asserted that the Soviet Union could effect "socialism within one country" and so did not need to await socialist revolutions elsewhere.

Stalin's long tenure as leader of the Soviet Union was characterized by immense gains in industrial production, especially in the decade prior to WORLD WAR II, often at the expense of human life and of agriculture. He ordered citizens to build enormous steel factories and industrial towns, such as Magnetogorsk; when foreigners visited the Soviet Union, they typically expressed amazement that Stalin had achieved such results while the rest of the world struggled to cope with the GREAT DEPRESSION. Indeed, industrial production quadrupled between 1929 and 1938.

Meanwhile, Stalin collectivized approximately 80 percent of Soviet agricultural land and deported, exiled, or executed millions of peasants who resisted state expropriation of their land and produce. Stalin's determination to acquire foreign currency in order to support industrialization led him to authorize grain exports even in years of crop failure and dearth. Famines occurred, especially in the "breadbasket" republic of the Ukraine. As many as 4 million people died in the Ukraine alone during the 1932–33 famine. Incompetent management and flawed policies, not a lack of grain supplies, caused the deaths from starvation.

Aside from industrialization and collectivization, Stalin also strived to reform the educational system and culture. He made it possible for generations of young people from poor and working-class backgrounds to acquire higher education and respectable jobs. Men who benefited from Stalin's egalitarian measures included several, such as Nikita Khrushchev, who in turn became leaders of the Soviet Union. Within the sphere of culture, Stalin promoted socialist realism, an aesthetic that encouraged artists and writers to idealize peasants, workers, and everyday life under Communism while achieving a certain degree of verisimilitude. Stalin attempted to uproot the Russian Orthodox Church from its place in Russian life, replacing it with the "religion" of Communism. However, neither Christianity nor Islam disappeared from the Soviet Union.

For much of the 1930s, Stalin prepared for imminent war against Germany. Despite the signing of the Molotov–von Ribbentrop pact between the Soviet Union and Nazi Germany, Stalin expected that war between the countries was inevitable. Soviet armament production increased, as did fear of treason and the exile or execution of supposed traitors. During the period known as the Great Terror, in the immediate aftermath of the December 1934 assassination of Leningrad party chief and Stalin confidant Sergei Kirov, Stalin pursued all suspected terrorists and promulgated an edict that enabled an accelerated execution timetable for terrorists. With the assistance of NKVD head Nikolai Ezhov, Stalin organized the arrest of 1.3 million political criminals, of whom almost three-quarters were executed. Approximately 90 percent of all death sentences assigned to pre–World War II convictions for political crimes were imposed in 1937 and 1938. The Great Terror affected enormous numbers of ordinary citizens, but Communist Party elites were also imprisoned or executed in large numbers. Stalin also eliminated officers in the Red Army: 412 of 767 members of high command in 1936 were killed.

Stalin may initially have been shocked by the Nazi invasion of the Soviet Union in 1941, but he quickly recovered and marshaled his infamous strength of will. He spoke to Muscovites about the ideological meaning of the war and the Russian history of valiantly resisting invasions by seemingly superior armies. The "Great Patriotic War" cost an average of 7,050 Soviet lives each day, with a total of 8.6 million soldiers and 17 million civilians killed.

After 1945 an aging Stalin gradually reduced his active involvement in day-to-day government. He oversaw the creation of an eastern bloc of countries sympathetic to the Soviet Union. He also prevented any war hero from gaining widespread popularity and thus from becoming an alternative ruler. He did not appoint a successor before he died in 1952. The de-Stalinization campaigns of the later 1950s and early 1960s could not, however, remove the imprint left by Stalin over several decades.

In fact, opinion polls taken after the fall of communism indicated that a large percentage of Russians continued to admire him, despite the opening of archives that revealed the magnitude of the human tragedy that accompanied the triumph of industrialization.

MELANIE A. BAILEY

Stalingrad, Battle of (1942–1943)

The Battle of Stalingrad was one of the decisive battles of WORLD WAR II. Lasting from August 1942 to February 1943, the battle pitted the forces of the Soviet Union against those of NAZI Germany amid the ruins of the city of Stalingrad. Soviet victory in February 1943 proved a major Allied triumph and a turning point of the war.

On June 28, 1942, the German High Command launched Operation Blau (blue) against the Soviet Union. Blau's objectives were to capture the oil fields and agricultural resources of the Caucasus region and

The difficult Russian winter helped stall the advance of the German Wehrmacht around Stalingrad. The lengthy siege proved disastrous for Germany and began the slow shift of fortunes in favor of the Allies in World War II.

the city of Stalingrad. This task was assigned to Army Group South, a coalition of German, Italian, Romanian, and Hungarian armies. Army Group South advanced through heavy Soviet resistance throughout the summer of 1942 and by August had reached Stalingrad.

German forces unleashed a devastating bombardment against Stalingrad and reduced much of the city to rubble. As German infantry units entered the city, Soviet forces and even Stalingrad's citizens fiercely resisted. Seemingly endless street-to-street and house-to-house combat resulted in heavy casualties on both sides. Snipers hid amid the ruins and inflicted numerous casualties, with both Russian and German snipers earning renown for their marksmanship and lethality.

The Soviet commander charged with the defense of Stalingrad was Vasily Chuikov. Chuikov had strict orders from JOSEPH STALIN to hold the city at any cost; indeed, Stalin had issued similar instructions to all Soviet soldiers in the famous Order No. 227 forbidding retreat. Particular Stalingrad landmarks were fought over continuously, such as the Red October fac-

ories, "Pavlov's House," and a large hill overlooking the city, the Mamayev Kurgan. Although Soviet forces tenaciously defended these sites, by November German forces held 90 percent of Stalingrad.

While Stalingrad's defenders held fast, the Soviet High Command launched a counterattack, Operation Uranus. Uranus called for an assault on the northern and southern flanks of Army Group South. The Soviets deemed these flanks particularly vulnerable because ill-equipped and unenthusiastic Romanian units guarded them. On November 19 Soviet forces assaulted the Third Romanian Army in the north. The following day Soviets attacked the Romanian 4th Army Corps in the south. The Romanians quickly gave way, allowing Soviet armies from both flanks to meet at the town of Kalach and successfully execute a pincer movement that encircled 250,000 Axis soldiers within the Stalingrad sector.

The German commander of Axis forces within Stalingrad, Sixth Army's general Friedrich Paulus, sought permission to fight through the encirclement and escape. Hitler refused, assuring Paulus that Ger-

man relief would soon break the siege. Hermann Göring pledged that his Luftwaffe could supply Stalingrad via an “air bridge,” delivering over 300 tons of food, fuel, and ammunition daily. His boasts, however, were wildly exaggerated and only a trickle of the supplies arrived.

The bitter Russian winter, dwindling supplies, and constant fighting severely reduced Axis resistance in Stalingrad. Soviet troops inexorably inched forward, pushing the Germans back to the city center. Paulus was captured by Soviet forces on January 31, along with 22 other German generals. Axis forces finally surrendered on February 2. Soviet forces captured over 90,000 German soldiers; only 6,000 would survive the war and return home.

Germany’s defeat at Stalingrad proved the turning point of the war. Germany’s reputation for invincibility was shattered, and after Stalingrad the Germans endured a defensive position on the eastern front. The Soviets gained an important strategic and psychological triumph and pushed steadily toward Berlin. Soviet victory came at great sacrifice, however; the Battle of Stalingrad is considered World War II’s bloodiest battle, with over 2 million deaths on both sides.

DANIEL HUTCHINSON

Stilwell mission

Joseph Stilwell (1883–1946) was assigned to China between 1920 and 1923 and between 1926 and 1928 as a military intelligence officer in the U.S. legation in Beijing (Peking). He learned spoken Chinese. Between 1932 and 1939 he served as U.S. military attaché to China. China fought Japan alone between 1937 and 1941, but the United States and China became allies against Japan after PEARL HARBOR. The Allies established the China-Burma-India theater of war, and Chinese leader CHIANG KAI-SHEK became supreme commander of the China theater. Since Stilwell was one of the few U.S. military officers who spoke Chinese, he was promoted from colonel to lieutenant general and

appointed commander of U.S. forces in China, administrator of U.S. Lend-Lease aid to China, and chief of staff to Chiang in 1942. Although he was a brave soldier, he was the worst possible choice for these positions because he was abrasive, stubborn, and entirely lacking in diplomacy, for which he was called “Vinegar Joe.” His earlier experiences in China had also made him contemptuous of Chinese leaders.

Relations between Stilwell and Chinese leaders were bad from the beginning. His first campaign in 1942 to keep open the Burma Road, which supplied China overland, was a disaster and led to mutual recriminations. Stilwell complained that the Chinese forces were unwilling to engage the Japanese, while Chiang countered by complaining about the little aid that he was receiving and expressing unwillingness to step up his efforts until he received more aid. With his tactless ways, Stilwell became the lightning rod in Sino-American relations and caused divisions within the U.S. administration.

He also quarreled with CLAIRE CHENNAULT, a proponent of air power, the commander of the volunteer airmen called the Flying Tigers, and later the commander of the Fourteenth U.S. Air Force, who had Chiang’s support for building airfields to bomb Japan. The friction came to a head in September 1943, when Stilwell demanded that Chiang lift the blockade against CHINESE COMMUNIST PARTY (CCP)–held regions and use the freed-up troops against Japan.

In the midst of a major Japanese offensive, Stilwell received U.S. president FRANKLIN D. ROOSEVELT’s endorsement that Chiang hand over to him total command of all Chinese troops, and he delivered the ultimatum to Chiang in the most offensive manner, intending to humiliate the Nationalist government.

Both Vice President Henry Wallace and special presidential envoy general Patrick Hurley deemed the way Stilwell handled the situation with Chiang unacceptable. Although the difficult military situation compelled Chiang to accede to the U.S. demand for a U.S. commander for the Chinese forces, he rejected Stilwell as the man for the job, charging that he wanted not to cooperate with the Chinese as allies but to dominate them.

Hurley agreed, reporting to Roosevelt that “there is no issue between you and Chiang except Stilwell,” adding “my opinion is that if you sustain Stilwell in this controversy, you will lose Chiang Kai-shek and possibly you will lose China with him.” Roosevelt recalled Stilwell on October 29, 1944. His replacement, General Albert Wedemeyer, did not command Chinese forces.

The Stilwell episode was unfortunate because of its effect on Chinese-U.S. relations.

JIU-HWA LO UPSHUR

Sudan under British rule (1900–1950)

After the area of present day Sudan was conquered by Muhammad Ali of Egypt in the 1820s, Great Britain began to exert pressure on Egypt to halt the flourishing slave trade that was prevalent in the area. Strong resistance arose among the Sudanese, who had grown wealthy and powerful from the slave trade. They harassed the Egyptian officials who administered the Sudan until 1883. The British became more involved both due to fears of French expansionism in the area and after the massacre of British troops under General Charles Gordon in 1885 by followers of the Mahdi. Great Britain viewed its interests in Egypt to be under threat and set about to uproot the Mahdist regime.

British forces under General (Lord) HORATIO HERBERT KITCHENER concocted a plan to rout the Mahdist forces in the Sudan and bring the Sudan under joint Egyptian and British control in response to French aggression in Fashoda. By September of 1898, the British forces had uprooted the Mahdist regime and stopped the French march. In 1899 the Anglo-British condominium was established, stating that England and Egypt would jointly administer the Sudan. In reality, British officials and Egyptian officials selected by the British administered the Sudan. The British dominated the condominium and crushed many small uprisings throughout the country.

Lord Kitchener became the first governor-general of the Sudan and was followed by his former aide, Sir Reginald Wingate, who served as governor-general from 1899 to 1916. Wingate was knowledgeable about the Sudan and kept taxes light to allow the economy

to grow. Railway, telegraph, and steamer services were expanded, although they were heavily dependent on Egyptian subsidies. In 1902 the Gordon Memorial College was founded, which produced a highly educated Sudanese class. However, this new class was not able to find positions in the government, nor were they able to function within the traditional Sudanese society. Frustrated and disillusioned, it is from this class that Sudanese nationalism was born.

These educated Sudanese nationalists were encouraged and assisted by their Egyptian counterparts, who also sought to rid themselves of British control. In 1921 a Gordon Memorial College graduate, 'Abd al-Latif, formed the United Tribes Society and was arrested by the British. After his release he formed the White Flag League in 1924 with the specific goal of pushing the British out of the Sudan. Demonstrations in Khartoum followed in the summer of 1924 but were ruthlessly suppressed by the British. On November 19, 1924, the British governor-general of the Sudan, Sir Lee Stack, was assassinated in Cairo. The British, suspicious that the Egyptians provoked unrest in the Sudan, forced the Egyptians to withdraw from the area. A Sudanese battalion rallied to support the Egyptians but was wiped out by the British. This ended the revolt, and the British ruled the Sudan alone until 1936.

In 1936 Britain and Egypt reached a semi-agreement that allowed the Egyptians to return and once again administer the Sudan jointly. The newly educated class of Sudanese were angered that they were still not involved in the administration of their country and publicly expressed their discontent through the Graduates' General Congress, a Gordon Memorial College alumni association. The congress split into two factions, a moderate and radical branch. The radical faction was led by Isma'il al-Azhari and actively sought Egyptian help in expelling the British. In 1943 al-Azhari's faction was in full control of the congress and organized the Ashiqqa' Party, the first Sudanese political party.

They were opposed by another party formed under Sayyid 'Abd al-Rahman al-Mahdi, the son of the Mahdi. His party, the Ummah Party, used his father's reputation and following to gather a strong base. Both the Ashiqqa' Party and the Ummah Party sought to unify other minority groups under their respective banners. Sayyid 'Ali al-Margahani of the Khatmiyyah Brotherhood supported al-Azhari's party, both factions uniting under the umbrella National Unionist Party in 1951. The rivalry between al-Azhari's party and the Mahdist party would affect politics for years, even after British domination in the region ended.

Anglo-Egyptian Sudan. A camel soldier of the native forces of the British army stands ready. Both the British and Egyptians ruled the Sudan throughout the first half of the 20th century. It was not until 1956 that the country was declared an independent republic.

The British, aware of Sudanese nationalistic aspirations, attempted to incorporate some Sudanese into the government. They established an advisory board for Northern Sudan led by a governor-general and 28 Sudanese, but this was not a legislative body. The Sudanese agitated for more power and for the inclusion of Southern Sudan in the legislative body. Under the British administration, the Christian and animist sects of the south had been ruled and administered separately from the Muslim Arab sects of the north. This division would prove fatal when the British established a legislative body (under pressure) that encompassed all of the Sudan, north and south, in 1947.

This move angered the Egyptians, who then threw out the Anglo-Egyptian Treaty of 1936 and

proclaimed sole Egyptian rule over the Sudan. The Sudanese agitated until the Egyptian revolution in 1952 under Gamal Abdel Nasser prompted both the Egyptians and the British to sign an agreement granting the Sudanese self-determination within three years. Elections followed in 1953, and al-Azhari's National Union Party won the majority. Al-Azhari declared the Sudan an independent republic on January 1, 1956.

KATIE BELLIEL

Sun Yat-sen

(1866–1925) *father of the Chinese republic*

Sun Yat-sen was the son of a farmer from southern China, a region that had the most contact with Westerners. In 1879 he went to Hawaii with his successful elder brother and studied in a Christian missionary school. Later he received a medical degree in British Hong Kong, where he came into contact with anti-Manchu secret societies.

Dr. Sun soon abandoned his medical practice for politics. He first sought out Li Hongzhang (Li Hung-chang), the leading reformer in the Qing (Ch'ing) government, with a detailed letter outlining his ideas. Because Li was too busy with international problems to respond, Sun was discouraged and became a revolutionary, forming the Xingzong hui (Hsing-chung hui), or Revive China Society, in Honolulu in 1895; it quickly expanded among overseas Chinese worldwide and secretly in China.

The society's declared goal was to "expel the Manchus, restore Chinese rule, and establish a federal republic." Its uprising in 1895 failed miserably, and Sun fled to England with a price on his head. In London he was lured into the grounds of the Chinese legation and arrested, but he escaped shipment to China and execution when his teacher, Dr. Cantlie, alerted the British authorities, who forced the Chinese authorities to free him.

A wanted man in China, Sun traveled widely in Japan, Southeast Asia, and the United States to recruit followers and raise funds. Japan had become a magnet for Chinese students, many on government scholarships. It also gave refuge to opponents of the Qing dynasty. There Sun formed the Tungmeng hui (T'ung-meng hui), or League of Common Alliance, in 1905. His ideology crystallized as the Three People's Principles—nationalism (overthrow of the Manchus and international equality for China), democracy (a republic where the people enjoyed the same rights as in Western democracies), and livelihood (land to the tiller and industrialization)—that became the goal of his organization. The Tungmeng hui propagated its ideas in a paper called the *Min Bao* (Min Pao), or People's Report, and competed with Kang Youwei (K'ang Yu-wei) and members of his Emperor Protection Society, which advocated a constitutional monarchy for China.

Sun Yat-sen agreed to step down as provisional president; the following period was marred by warlords in China.

Sun's followers staged 10 failed uprisings against the Qing dynasty. Then on October 10, 1911, army officers who were secret members of the Tungmeng hui rose up in revolt in Wuchang, the capital of Hubei (Hupei) Province on the lower Yangzi (Yangtze) River. The revolution spread quickly through southern and central Chinese provinces. Sun was in Denver, Colorado, on a fundraising tour when the revolution happened, and he hastened homeward. He arrived in Shanghai on Christmas Day to hear that the provisional national assembly meeting in Nanjing (Nanking) had elected him provisional president of the Chinese Republic. He took his oath of office on January 1, 1912. Meanwhile, the Qing court had appointed YUAN SHIKAI (Yuan Shih-k'ai) commander of its best divisions to defeat the revolutionists. Yuan, however, negotiated with both sides to ensure the abdication of the Qing dynasty, on the condition that he would become president of the republic. Sun agreed to step down because the revolutionaries could not win militarily against Yuan.

Yuan, however, betrayed the republic because he wanted to be emperor. He outlawed the Kuomintang

(KMT, the name adopted by the Tungmeng hui in 1912), which opposed his ambitions, failed to win acceptance for himself as emperor, and was forced to resign. Warlords divided China after Yuan's death in 1916. Sun suffered frustration until 1923, when he made an agreement with Adolf Joffe, agent of the Comintern in China, whereby in return for Russian Communist assistance he would accept members of the infant CHINESE COMMUNIST PARTY into the KMT. This agreement began the first UNITED FRONT. Sun was able to establish an opposition government in Canton, where Russian advisers helped him to reorganize the KMT on the Soviet model. He died in 1925 during a trip to Beijing (Peking), where he made a failed attempt to negotiate with the warlords to unify China.

Sun was a revolutionary and a visionary. He succeeded in overthrowing the Qing dynasty but died before his other ideals could be realized. He is honored as the father of the Chinese Republic.

JIU-HWA LO UPSHUR

Sykes-Picot Agreement (1916)

The Sykes-Picot Agreement was a secret agreement between the British and the French regarding the dispensation of Ottoman territory in the Middle East. François Georges-Picot represented the French and Mark Sykes represented the British. Formalized in May 1916 at the height of WORLD WAR I, the agreement was based on the assumption that the Allies would win the war (by no means certain in 1916), and as a result, the Ottoman Empire that had sided with the Germans would be dismembered.

Under the Sykes-Picot Agreement, France was to gain spheres of influence, or direct control, over most of the Arab territories of present-day Syria and Lebanon as well as southeastern Turkey, including the area around Alexandretta. The British were to gain control

over much of present-day Iraq and Jordan and areas in Palestine around the northern port of Haifa. The rest of Palestine, including the holy cities of Jerusalem and Bethlehem, was to fall under international control. At the time none of these areas existed as independent states but had been ruled as provinces of the Ottoman Empire since the 16th century.

Under later terms, Russia, an ally in the war at the time, was to receive Armenia and parts of Kurdistan. Russia also hoped that this would mean the realization of its long-held dream to control access into the Mediterranean from the Black Sea through the Strait of the Dardanelles. The Italians, also allies, were to expand in the Aegean and western Turkey around the major city of Izmir. The area of present-day Saudi Arabia was not included in the arrangement because in 1916 oil had not yet been discovered there and the territory was not considered of economic or political importance.

The portions of the agreement involving Russia were nullified when Russia dropped out of the war early through a separate treaty with Germany. Owing to MUSTAFA KEMAL ATATÜRK's successful military defense of the Anatolian Peninsula, Turkey was not partitioned after the war, nor was it occupied for any length of time. As some British foreign office officials warned at the time, portions of the Sykes-Picot Agreement contradicted the secret agreements made with the Arabs in the SHERIF HUSAYN-McMAHON CORRESPONDENCE. The BALFOUR DECLARATION regarding Zionist, or Jewish national, aspirations in Palestine, issued publicly in 1917, further complicated the issue of control over that territory.

The terms of the Sykes-Picot Agreement involving Arab territories were formalized in the 1920 SAN REMO TREATY and in the LEAGUE OF NATIONS in 1922, whereby Syria and Lebanon became French mandates and Palestine, Jordan, and Iraq became British mandates. Consequently, in the post-World War I era, the Arabs not only failed to receive independence, but they were also divided into separate nations ruled by two different imperial powers. Nor did the Zionists realize their dreams of an independent Jewish state. The consequences of these decisions continued to cause conflict in the region into the 21st century.

JANICE J. TERRY

Taisho

(1879–1926) *emperor of Japan*

Emperor Taisho, whose personal name was Yoshihito, was the emperor of Japan from 1912 to 1926, the 123rd ruler of the Japanese imperial line, and the son of the hero-emperor Meiji and an imperial lady-in-waiting, Yanagiwara Naruko. The Empress Shoken Haruko was appointed his official mother. In 1912, he became emperor and took the reign name Taisho.

Taisho's father, the emperor Meiji, was a hard act to follow. Meiji had brought Japan's economy into the modern world, and by the time of his death, Japan was an industrialized nation and a world power. His charisma and achievements transformed Meiji into a persona that was difficult to separate from the institution of the imperial system. His blend of humanity and heroism bolstered the belief in the emperor as a living deity.

On the other hand, Taisho was a sickly man whom many considered not of the same caliber as Meiji. He was expected to have strength and intellectual acumen, to make quick, strong decisions, and to put Japan above all else. Advisers, intellectuals, and officers of the state felt that Taisho bore none of these traits and considered him indolent and impulsive. Taisho lacked knowledge of military strategy and negotiation skills.

Taisho's reign marked the attainment of universal male suffrage, the decrease of monarchical power, and greater freedoms. Historians mark the post–Russo-Japanese War period and the 1912 imperial change as the beginning of the Taisho democracy, meaning universal

male suffrage, cabinet governments, and politics based on parties rather than the older fief-based political cliques. After WORLD WAR I, the Taisho democracy also came to mean the influx of Western lifestyles, individualism, and cultural products. This influx of Western culture challenged the idea that the state was responsible for defining and enforcing proper moral life.

As a child, Yoshihito had suffered from meningitis, said to have affected him throughout his entire life. When he was around 10 years old, his medical condition had worsened and his performance as a student had suffered miserably. Court attendants who had recognized his limitations eventually devised a program consisting of three parts learning to seven parts physical education. He withdrew from the school so as not to damage the carefully constructed image of an institution that did not allow for human failure.

Despite these failings, there were high hopes upon his assumption of the throne. The reign name *Taisho* means “great rectification and reform,” and he was pledged to correctness, rectification, and adjustments.

In 1919, Japan attended the peace conference at Versailles that ended World War I as one of the great military and industrial powers of the world. It participated in the proceedings as one of the Big Five powers. Japan also earned a seat on the council of the LEAGUE OF NATIONS.

In 1921, Japan, the United States, Britain, and France signed the Four Power Treaty on Insular Possessions. They agreed to recognize the status quo in the Pacific region. Japan and Britain also agreed to terminate their

Under the reign of Emperor Taisho, Japan moved toward universal male suffrage and greater influence of political parties.

Treaty of Alliance. It signed the Five Power Naval Disarmament Treaty of 1922 that established an international ship ratio for the United States, Britain, Japan, France, and Italy. It also limited the size and armaments of capital ships already built or under construction. Although the ratio 5 : 5 : 3 : 1.75 : 1.75 allowed the U.S. and Britain larger fleets, it gave the Japanese navy superiority in the Pacific. The original five countries, along with Belgium, China, the Netherlands, and Portugal, signed the 1922 Nine Power Treaty to prevent war in the Pacific by agreeing to respect China's independence and not to interfere with China domestically. Japan also agreed to

withdraw its troops from Shandong (Shantung) in China and evacuated troops from Siberia.

The most noteworthy change during the Taisho democracy was the rise of the political parties and the growth of universal male suffrage. Despite the rise of the political parties, the Taisho democracy remained highly elitist and shallowly rooted, resulting in the eventual downfall of the idea of democratic institutions. Emperor Taisho's mental incapacity led to his oldest son, HIROHITO, being appointed regent in 1921. Taisho died in 1926.

MELISSA BENNE

Tanganyika

Tanganyika is the name applied to a section of East Africa given over to British rule after WORLD WAR I. The territory had been part of German East Africa, which was captured by Britain. After WORLD WAR II the United Nations made Tanganyika a trust territory still under British authority. The Republic of Tanganyika gained its independence from Britain in 1961 and joined with Zanzibar in 1964 to form the country of Tanzania.

Tanganyika was bordered by Lake Tanganyika, from which it received its name, the Indian Ocean, Lake Victoria, and a number of African countries. Tanganyika was also home to Africa's highest peak, Mount Kilimanjaro.

The Indian Ocean along the eastern coast of Tanganyika provided ports that proved extremely valuable for the East Indian spice trade and the slave trade. One of the most important ports was that of Zanzibar, which received ships from many European nations. By the mid-1800s the coastal towns became important starting points for Arab trading caravans going to the interior. Recognizing its strategic importance and having taken part in the Berlin Conference of 1885 deciding

Mount Kilimanjaro in Tanzania, formerly Tanganyika

the rules by which Europe would colonize Africa, Germany annexed the territories of Tanganyika, Burundi, and Rwanda as German East Africa.

During World War I Britain invaded and occupied the German colony. In 1914 the Royal Navy took possession of the port of Mafia, and by 1916 the British had spread their presence throughout the colony. German opposition to the British during World War I was led by Commander Paul Emil von Lettow-Vorbeck. His tactics of guerrilla warfare and a scorched earth campaign left the territory in chaos.

The LEAGUE OF NATIONS gave Britain authority over the Territory of Tanganyika and Belgium authority over the Rwandan and Burundian sections of German East Africa. The Colonial Office in London appointed General Sir H. A. Byatt the first administrator-general in 1921. In 1922 Britain outlawed slavery in Tanganyika, a practice that had continued in spite of earlier attempts to stop it. Indirect rule, which placed native leaders in positions of authority but under the British governor, was Britain's policy in Africa. A legislative

council was convened, but it was not until 1926 that it had significant African representation. Britain undertook considerable economic improvements in the area, building schools and hospitals and opening two major rail lines in 1928–29. The capital city was maintained in Dar-es-Salaam.

Economic stability for Tanganyika continued during British rule. The discovery of diamonds by Canadian John Williamson in 1940 and the importance of Tanganyika's rubber plantations during World War II helped the economy. Britain divested itself of many of its colonies and territories during the 1960s, and Tanganyika was given its independence in 1961.

JEAN SHEPHERD HAMM

Tenente rebellion (1924)

The Tenente rebellion took place in Brazil in 1924 and had the aim of overthrowing the oligarchy that was ruling the country at that time. The revolt rose out of “Tenentismo” politics—the name coming from lieutenants in the Brazilian army who wanted the country to have new leadership. These lieutenants and some others of higher rank took their inspiration from the overthrow of the Brazilian emperor in 1889 and the subsequent establishment of the republic. They viewed the Brazilian armed forces as needing to take on the social function of defending the constitution. To some extent, their beliefs resembled those of the YOUNG TURKS and other army reform movements of the 20th century.

During WORLD WAR I the inability of European countries to supply Brazil with imported goods had led to the enlargement of many factories in Brazil catering to the home market. This led in turn to a large-scale increase in the industrial urban working class and a rise in trade union activism. At the end of the war, the increasingly powerful labor movement was anxious for social changes, and in 1919 a mass walkout by 150,000 textile workers led to rising tensions throughout the country. Three years later soldiers in the Copacabana barracks on the outskirts of Rio de Janeiro openly rebelled under Antonio Siqueira Campos and Eduardo Gomes. Although this rebellion was quickly suppressed, the junior officer corps was becoming increasingly sympathetic to the demands of the trade unions.

In July 1924 there was a mutiny among soldiers in São Paulo, Brazil’s second city, instigated by Major Miguel Costa, the commander of the São Paulo state militia. The soldiers declared that they were acting to save the country from corrupt politicians. The actions rapidly turned into a rebellion and drew support from many army officers, including General Isidoro Dias Lopes and junior officers in São Paulo at the time, including Joaquim and Juarez Tavora, Cordeiro de Farias, João Alberto, and Eduardo Gomes. For a month these soldiers were able to hold São Paulo while forces loyal to the government surrounded the city. The government, desperate for a way to break the revolt, used the newly created Brazilian air force to bomb parts of São Paulo. The resulting casualties led to an increase in sympathy for the rebels. A second revolt then broke out at Rio Grande do Sul, the southernmost state in Brazil. There rebel soldiers under Captain Luís Carlos Prestes declared themselves in support of the soldiers in São Paulo. Again, the area sympathetic to the rebellion was surrounded by government troops.

Both the Costa forces in São Paulo and the Prestes forces from Rio Grande do Sul managed to break through the government lines, and they were able to join forces near Iguasu Falls, where Brazil, Paraguay, and Argentina have a common border. At a meeting there, the two forces were formally merged, Costa became the commander in chief, and Prestes was elected chief of the general staff. Soon the force had shrunk to only a few hundred men, with Prestes the acknowledged leader. The surviving rebels soon became known as the Prestes Column, and these men fought their way through Brazil for the next three years in a feat that would be compared to the later LONG MARCH of the Communists in China.

Not only were the members of the Prestes Column trying to evade their opponents, they were also eager to gain recruits and mobilize the people against the government. A few town militia groups were formed, but these were no match for the government. The Prestes Column was never able to attack a major city. The Tenente rebellion was a failure, and as the number of rebels dwindled, it began to be seen overseas as a romantic episode in Brazilian history. Prestes himself was to be important in Brazilian politics for years to come. Juarez Távora became governor of northeastern Brazil, and João Alberto went on to become chief of the federal police. Eduardo Gomes subsequently took over the Brazilian air force and contested the presidency in 1945 and again in 1950.

JUSTIN CORFIELD

Tojo Hideki

(1884–1948) *Japanese prime minister*

With his bald, bullet-shaped head and large eyeglasses, Hideki Tojo was a definitive image of Japanese militarism writ in human form. But to many of his colleagues in Japan Hideki Tojo was a detail-obsessed, jumped-up filing clerk who led Japan in its largest and bloodiest war without any strategic vision.

Hideki Tojo was born on December 30, 1884, the son of a career soldier who rose to the rank of gen-

eral. Short-sighted and short-built, young Tojo entered military school at age 15, showing no exceptional abilities except one for tackling hard work right away and with a driving purpose.

In 1904 newly commissioned 2d Lt. Tojo was sent to Manchuria, arriving just too late to see battle in the SINO-JAPANESE WAR. He spent two dull years on garrison duty in Manchuria. In 1909 he married Katsu Ito, a 19-year-old student at a Kyushu women's college, who was educated. They were a love match. They had seven children.

Tojo served in staff jobs, including with the Japanese intervention in Siberia, before being posted to Switzerland and then Germany as a military attaché, where he admired German toughness in the face of defeat. En route home in 1922, Tojo went through the United States and drew a different conclusion from this brief journey: Americans lacked the spiritual strength of the Japanese.

Hot tempered and with close-cropped hair, Tojo was known to his pals as Kamisori, or "Razor." He worked long hours on his paperwork. Ferocious in discipline, he showed a softer side by providing his men with money when they retired to civilian life.

Tojo rose steadily, if not spectacularly, through the Japanese army. In 1933 he was assigned to head the general affairs bureau of the war office, the army's public relations unit. His message repeated his own beliefs: With Russia, China, and the United States as enemies, Japan had to be on its guard. Tojo got his general's star in early 1935. In late 1935 he got his second star and was given command of the KWANTUNG ARMY's military police, or Kempei Tai, in charge of law and order in Japan's Manchurian puppet state, where he suppressed internal and Chinese opposition to Japanese rule with ruthlessness and efficiency. When Japanese officers attempted a coup d'état in Tokyo in February 1936, Tojo stayed loyal to the government and acted swiftly, jailing numerous dissident officers and civilians.

In 1937 Tojo was promoted to lieutenant general and appointed chief of staff of the Kwantung Army. When the Japanese invaded China, Tojo led Japanese troops on a drive that outflanked Beijing (Peking) and resulted in the seizure of Inner Mongolia. It was the only time he commanded troops in battle. He then returned to the Kwantung Army to build up Manchuria's defenses against the Soviet invasion that Japan feared. Tojo was appointed deputy war minister. Japan was now on the warpath, driving bloody fists deep into China, blasting cities, massacring civilians, and attacking U.S. and British ships on the Yangzi (Yangtze) River.

MINISTER OF WAR

In 1940, when Prince Konoye became prime minister, Tojo was appointed minister of war. That September he ordered Japanese troops into French Indochina, then wrote new regulations for the army that stressed Bushido ferocity, and purged the army's pro-British and United States officers, replacing them with his own supporters.

As Japanese-U.S. negotiations over peace in the Pacific collapsed, so did the Konoye government. As the only man who had the all-important army's loyalty and the only one capable of leading Japan through the war he was planning to launch against the United States and Britain, Tojo was appointed prime minister on October 17, 1941. His contempt for the United States and Britain manifested itself in the attack on PEARL HARBOR. As Japan's war leader, Tojo took everything on himself in the best clerkish style. He also appointed himself minister of the interior, foreign affairs, education, commerce, industry, and munitions and chief of the army general staff. He appointed his Kwantung Army cronies as deputies, assuring loyalty if not efficiency.

Tojo's management style stressed details, memoranda, and paperwork. He cleared his desk by the end of each day, worked late, slept only four hours, and worried over small details—even peering into garbage bins on Tokyo streets to see how food rationing was working out.

BANISHED RIVALS

Tojo also spent a lot of time battling his personal enemies. Many of those were of his own creation—officers and subordinates who brought him bad news. He banished potential rivals, like Lieutenant General Tomoyuki Yamashita, the conqueror of Malaya, dispatching him to Manchuria. As the war continued, Tojo concentrated power in his own hands, granting large contracts to cronies and relying on his secret police to maintain order and eliminate dissidents. Yet for all his power, Tojo was not the absolute dictator ADOLF HITLER was. As Japan suffered defeat after defeat, his position became precarious. By early 1944 he was jailing right-wing opponents. His roof collapsed when the United States invaded the Marianas, conquered the islands, and defeated the Imperial Navy at the Battle of the Philippine Sea. Tojo kept this news from his citizens, but he could not keep it from his government colleagues. Saipan, coming after the first B-29 raids on Japan, and the British victory at Kohima in Burma, were the final straw. Tojo's opponents now included members of the general staff, admirals, and the imperial privy council.

General Hideki Tojo was instrumental in the rise of the militaristic policy in Japan that culminated in World War II.

They forced him to resign in July 1944, replacing him with General Koiso Kuniaki, who remained committed to the war.

Not invited to serve on the imperial privy council, Tojo returned to his home. He emerged from obscurity on February 28, 1945, at the request of the emperor, to assess the increasingly grim military situation. True to form, Tojo insisted that despite the numbers, Japan's chances were better than 50-50. Events proved him wrong. After a failed suicide attempt, Tojo became the only head of an Axis government to stand trial before the International Military Tribunal for the Far East in Tokyo. On May 3, 1946, Tojo stood before the tribunal, determined to protect the emperor from any blame in

the war and refuting the accusations of waging aggressive war, torturing and mistreating POWs, and murdering civilians with a 250-page deposition, which blamed the United States and Britain for the war, claiming the attacks on China, French Indochina, and Pearl Harbor were all self-defense, and showing no remorse for the millions of dead and maimed—only for losing the war. That was his fault, not the emperor's. Tojo called no witnesses.

DAVID H. LIPPMAN

Tokyo International Court

The Tokyo International Court was appointed by the supreme commander for the Allied powers, General DOUGLAS MACARTHUR, to implement the terms of surrender for Japan in WORLD WAR II. Also known as the International Military Tribunal for the Far East (IMTFE), it held proceedings from 1946 to 1948 at Ichigaya, the hilltop headquarters of the Japanese armed forces during the war.

The accused were divided into three categories: Class A included those accused of crimes against peace, that is, planning, initiating, and waging aggressive war; class B included those accused of violating the laws of war; and class C referred to those accused of committing, with orders from above, torture, enslavement, and other crimes against humanity. The IMTFE at Tokyo tried only class A war criminals. Indictments were served against 28 out of 80 suspects in this category. Among them were four former prime ministers, three former foreign ministers, four former war ministers, two former navy ministers, six former generals, two former ambassadors, and three former economic and financial leaders. Others included an ideologue, an imperial adviser, a colonel, and an admiral.

Trials of class B and class C suspects were held by military commissions of the Allied powers, individually and sometimes jointly, across Asia. From 1945 until 1951, about 2,000 trials were held by the United States, the Netherlands, France, China, Australia, and Britain.

In these trials, 920 Japanese were executed and 3,000 were sentenced. Thousands were released with the end of the occupation of Japan in 1952.

In Tokyo, the IMTFE sentenced 16 of the defendants to life imprisonment, seven to death by hanging, and two to varying lengths of time in prison. Of the remaining three, two had died of natural causes, and one was declared mentally unfit to stand trial. The prosecution proved that Japan's domestic politics had been controlled by militarists since the 1920s; that they had conspired, initiated, and waged aggressive war against China, the United States, Britain, and the Soviet Union; and that they had inflicted and condoned violence against prisoners of war and innocent civilians. An appendix to the indictment named 47 treaties, protocols, and international agreements that Japan had violated.

The defense comprised a team of U.S. attorneys and Japanese lawyers. Chief defense counsel captain Beverly Coleman resigned during the trial. Japanese-American lawyer George Yamaoka took on a leadership role thereafter. The defense challenged the legality of the tribunal, arguing that it imposed *ex post facto* law on the defendants in the form of crimes against peace and crimes against humanity, that judges drawn from Allied nations could not guarantee a fair trial for the defendants, and that Japan's war had been in self-defense after suffering from economic embargo.

The prosecution rebutted the arguments, and the bench dismissed these motions by the defense. The bench comprised 11 judges, one each from the United States, Canada, Britain, France, the Netherlands, the Soviet Union, Australia, New Zealand, China, the Philippines, and India. Sir William Webb, then chief justice of the supreme court of Queensland in Australia, was president of the tribunal. Over the course of the trial, there were 419 witnesses, 779 depositions and affidavits, and 4,336 exhibits. Both in its proceedings and in its judgment, the IMTFE was influenced by the precedent set by the international court at Nuremberg, which had tried war criminals of NAZI Germany in 1945–46.

The bench at the IMTFE arrived at its decisions on the basis of a majority vote. The majority decision on the judgment was signed by nine of the 11 judges. The defense appealed to General MacArthur, who upheld the sentences. The defense appealed again, this time to the U.S. Supreme Court, which voted to hear the case but on review decided it had no jurisdiction.

CONSEQUENCES

The Tokyo trial had important consequences. It served as a vital source of information to the Japanese people

about the machinations of military cliques and financial interests within prewar and wartime governments. It formally acknowledged Japan's crimes in the war and laid the basis for vast changes in Japan's new constitution and foreign policy.

Though evidence of atrocities committed by Japanese soldiers in the RAPE OF NANJING, the Bataan death march, construction of the Burma-Siam railway, and the rape of Manila horrified observers, the trial humanized the nation, as it became clear that ordinary people had been ignorant of the atrocities.

The Tokyo trial has been subject to multiple criticisms. On the one hand, from the point of view of victims of Japan's wartime policies, particularly China and Korea, the IMTFE elided issues such as the emperor's responsibility for the war, Japan's suspected biological weapons program, and the sexual slavery of "comfort women" because the United States needed Japan as an ally in the rapidly emerging cold war. On the other hand, according to some scholars, the trial had no basis in existing law at that time.

For Japanese ultranationalists, it was punishment for Japan's challenge to "liberate" Asia from European imperialism. The Tokyo trial was seen as "victor's justice" because the United States was not brought to account for dropping atomic bombs on HIROSHIMA AND NAGASAKI in August 1945.

ANURADHA CHAKRAVARTY

Trans-Siberian Railway

Construction on the Trans-Siberian Railway began in May 1891. The main part of the system connected Moscow with the port of Vladivostok on the Pacific. Today that system runs between the two cities and a web of other cities for 9,297 kilometers (5,578 miles).

This monumental achievement was undertaken under very difficult conditions. The climate in Siberia and the dense forests, rivers, lakes, and mountains all

presented obstacles to the builders. Materials often had to be transported for thousands of miles. In addition, most of Russia where the rails were being laid was sparsely populated. The railway required thousands of Russian workers, many of them peasants, convicts, and soldiers. During 1895 and 1896 it is estimated that 85,000 individuals were at work on the railway.

Initially, a section of the railway ran through Manchuria, avoiding the difficult construction that would have been faced if the system had been totally within Russian territory. However, after the Russo-Japanese War of 1904–05, officials decided that the route through China was too vulnerable to disruption. An alternate Russian route for this section was completed between 1908 and 1914. A connection between the Pacific coast and Chelyabinsk was opened in October 1916.

At the turn of the 20th century, as links of the railway were completed, the Russian people quickly accepted its usefulness. The number of passengers grew from 609,000 in 1897 to 3.2 million by 1912. WORLD WAR I slowed the growth of the railway and damaged many of the connections. Transport of troops and supplies clogged the single rail line, which could run only 13 trains a day. A special commission was appointed to make recommendations concerning the rail line. The major recommendation of the commission was construction of a double line. By 1908 over 3,000 kilometers of the second line had been built, and the project was completed in 1918, but not before other events disrupted rail service.

The civil war within Russia did more damage to the railway system than foreign invaders might have. Up until the 1917 RUSSIAN REVOLUTION, an international company had a contract with Czar Nicholas to manage the legendary Trans-Siberian Express between Moscow and Manchuria. The trip took nine days aboard a luxurious train equipped with sleeping cars, restaurant cars, a chapel, a music room, and a library. Staff aboard the train included nurses and a hairdresser. The fighting during the revolution not only stopped this train but also destroyed many other railcars and locomotives. Bridges were blown up, and miles of track were ruined. Even with the heavy rebuilding that was needed, the railway was able to reopen in March 1925 and was not seriously interrupted after that.

During the 1920s Soviet dictator JOSEPH STALIN was able to use the existing railway system to intensify his industrialization of the Soviet Union. However, this plan was carried out by exploiting the resources of rural areas, leading to a near collapse of agriculture and to mass starvation in some of the republics. During

WORLD WAR II, by transporting troops and supplies, the Trans-Siberian Railway and its connecting lines were again to prove essential in the Soviet resistance to German invasions.

JEAN SHEPHERD HAMM

Triangle Shirtwaist Fire (1911)

The Triangle Waist Company, which manufactured women's cotton and linen blouses (known in the early 20th century as shirtwaists) was the site of New York City's worst factory fire on Saturday, March 25, 1911. The company occupied the top three floors of the 10-story Asch Building on Washington Square in Greenwich Village; its workforce consisted of some 500 young seamstresses, mainly Jewish and Italian immigrants between the ages of 13 and 23, and fewer than 100 men. It had been the scene of a successful strike by the International Ladies Garment Workers Union (ILGWU) in 1909 and early 1910.

The fire began on the eighth floor at about 4:45 P.M. and soon became a conflagration. Because the doors and windows had been locked to keep the workers from sneaking out or stealing and because maintenance had been lax, the new, supposedly fireproof factory turned into a furnace. Most of the workers on the eighth and 10th floors escaped, but on the ninth floor the rear door, which had been bolted, could not be opened. When the rear fire escape collapsed there was no escape route. Many women remained in the building to burn or to suffocate; others jumped nine floors to their deaths with their clothing and hair on fire. The fire companies that responded to the five-alarm fire could do little since their ladders and hoses reached only to the sixth floor and their safety nets ripped under the weight of three or four women at a time. In fewer than 15 minutes 146 workers, almost all women, died.

The fire produced widespread revulsion and rage. The day after the fire over 100,000 people visited the morgue. The owners of the company, who were themselves Jewish immigrants, were brought to trial for manslaughter and acquitted, but in 1914 a judge ordered them to pay \$75 in damages to each of the 23 families

who had brought a civil suit against them. The fire also provoked reform measures. New York City established the Bureau of Fire Investigation, which gave the fire department authority to improve factory safety. It also formed a Committee of Safety headed by former secretary of war Henry Stimson.

At Henry Morgenthau's urging, the state of New York empanelled a Factory Investigating Commission led by Robert F. Wagner and ALFRED E. SMITH; its secretary was Frances Perkins (later FRANKLIN D. ROOSEVELT's secretary of labor), and it was assisted by investigators from the ILGWU. By the end of 1911, the commission had proposed new laws concerning fire safety, factory inspection, and woman and child labor, eight of which were enacted. In 1913 the commission's work prompted the legislature to pass 25 bills that mandated fire drills, unlocked and outward-opening doors, and building inspections. These laws also increased protection for women and children and limited the practice of piecework. The fire also accelerated efforts to organize factory and sweatshop workers, especially by the ILGWU.

DAVID MILLER PARKER

Trotsky, Leon

(1879–1940) *Russian revolutionary*

Leon Trotsky, born Lev Davidovich Bronstein, was a principal participant in the RUSSIAN REVOLUTION of 1917, which brought the Bolsheviks to power. Trotsky was born in the Ukraine to Jewish parents. His father, although illiterate, became a successful farmer and landowner, which enabled Trotsky to attend a good school in Odessa. In 1896 he became a committed student of Marxism and joined the Social Democratic Party. Because of his political activities he was sent to Siberia in 1898, where he served four years before escaping. He assumed his jailor's name, Trotsky, secured a false passport under that name, and traveled abroad.

Trotsky joined VLADIMIR LENIN in London and contributed to the revolutionary journal *Iskra* (spark). After the 1903 split of the Social Democratic Party into Menshevik and Bolshevik factions, Trotsky initially joined the Mensheviks. Upon his return to Russia in

1905, he became active with the St. Petersburg Soviet but again was arrested and sent to Siberia. During that internal exile he developed his notion of permanent revolution, which argued that communist revolution would consume the world as it spread from nation to nation. He believed that since Russia lacked a developed capitalist bourgeois stage it could immediately advance to a proletarian revolutionary state without historical hindrance.

Siberia again failed to hold Trotsky, and he fled to Vienna. He worked as a journalist and between 1907 and 1914 was an editor of *Pravda* (truth). After the outbreak of WORLD WAR I, he moved to Switzerland and later Paris, where he continued his agitation until expelled from France. He then went to New York City in early 1917 and along with Nikolai Bukharin and Aleksandra Kollontai worked on the journal *Novy Mir* (new world).

However, the overthrow of Nicholas II made real revolution seem a possibility. Trotsky returned to Russia in 1917 and joined Lenin and the Bolsheviks, becoming a critical component in the overthrow of the Menshevik-Kerensky government. What followed was the establishment of the Bolshevik October Revolution under Lenin's direction.

In November 1917 Lenin made Trotsky the people's commissar for foreign affairs, and he was responsible for negotiating with the Central Powers the humiliating peace treaty of Brest-Litovsk, which ended Russia's participation in World War I. He then assumed the position of commissar of war in 1918 and was charged with the creation of the Red Army to defend the revolution. The Bolsheviks faced an unfolding civil war that threatened to end their rule as an assortment of conservative forces attempted to overthrow the October Revolution. To resist, Trotsky built a formidable force of 3 million soldiers. His Red Army fought a brutal war on numerous fronts to a successful end and preserved the revolution so that Communist power could be consolidated.

It was during these years that Trotsky clashed over matters of policy with both JOSEPH STALIN and Lenin. Yet Trotsky was needed, and his harsh suppression of the antiparty Kronstadt Revolt of 1921 brought him back into Lenin's fold. However, Lenin's health was in permanent decline. Stalin assumed more party roles. He proved himself adept at political intrigue and manipulation, all assets that helped him become general party secretary in 1922. Lenin had reservations about Stalin, but his medical state left him too weak to intervene and save the Soviet Union from a painful dictatorship.

When Lenin died in 1924, power was transferred to a triumvirate of Stalin, Lev Kamenev (Trotsky's brother-in-law), and Gregori Zinoviev. Although Trotsky's Red Army had ensured Communist success, his lack of control of the party apparatus and his failure to gain support in the triumvirate allowed Stalin to isolate him. As part of this process, he was fired as commissar of war in 1925. Stalin moved to centralize authority in his own hands, and Trotsky and the other members of the triumvirate were a threat to him. Kamenev and Zinoviev realized the seriousness of the situation and now sought Trotsky's cooperation in an effort to stem Stalin's rise to total power. This effort failed, and Trotsky was removed from the Politburo in 1926 and eventually the party in 1927. Kamenev and Zinoviev were shot in 1936.

Trotsky's fall from grace was not complete, for Stalin still saw him as a major threat to his own authority and in 1928 had him internally exiled to Kazakhstan. He was then permanently exiled from the Soviet Union in 1929. Trotsky's reputation as a revolutionary made finding a refuge difficult. He initially went to Istanbul, then to France in 1933 and Norway in 1935. Stalin strove to purge the party of all real and imagined Trotsky influences, which led to the great treason trials and purges of 1936–38. In 1936, because of pressure from the government of the Soviet Union, Trotsky was again forced to flee Norway. He moved to Mexico City, where he had the support of some prominent Mexicans, including the artist Diego Rivera.

In Mexico Trotsky continued his attack on Stalin's perversion of the revolutionary dictatorship, and in 1938 he established with other left-wing followers the Fourth International as a socialist opposition to Stalinism. Because he remained a thorn in Stalin's side, he was viewed as a beacon for espionage. Trotsky's days were clearly numbered. On August 20, 1940, he was assassinated by Ramon Mercader, who mortally wounded Trotsky with a blow to the head with an ice pick. Mercader (1914–78), a Spanish communist, was a suspected Stalinist GPU agent who was given support by the Communist Party of Mexico.

He served 20 years for his crime and upon his release lived in Cuba before moving to the Soviet Union, where he became a hero. The Trotsky family, who remained in the Soviet Union, did not survive Stalin's paranoid revenge. Trotsky blamed Stalin for the deaths of his daughters and son. His brother Alexander, although he renounced Trotsky, was shot in 1938, and his sister Olga, the wife of Kamenev, saw her sons shot in 1936 and was herself murdered in 1941.

Trotsky became an influential 20th-century figure, and his intellectual standing and prolific writings made him a figure of importance in revolutionary circles. He remained a symbol for many extreme left-wing parties in the West who found themselves in opposition to both capitalism and the Soviet brand of communism.

THEODORE W. EVERSOLE

Trujillo, Rafael

(1891–1961) *Dominican dictator*

One of the longest-serving Latin American dictators, Rafael Trujillo ran the Dominican Republic from 1930 until his assassination in 1961. For some of that period he was president of the country, and for the rest he was the effective dictator of the Caribbean nation, ruling through hand-picked presidential candidates. Rafael Leónidas Trujillo y Molina was born on October 24, 1891, the son of poor parents from San Cristóbal in the Dominican Republic. In 1918 he joined the country's national guard, which was trained by the U.S. Marines. The United States, having invaded two years earlier, remained in occupation of the country until 1924. Rising to the rank of major in 1924, Trujillo became chief of staff in 1928, ousting President Horacio Vásquez in a coup d'état in February 1930.

In the elections that followed the coup, Trujillo was the major candidate. Trujillo took office on August 16, 1930, establishing a ruthless dictatorial regime that utilized the severe repression of political opponents. After a hurricane destroyed the capital, Santo Domingo, in September 1930, Trujillo set about rebuilding it—it was then renamed Ciudad Trujillo (Trujillo City). In the 1930s, when many European Jews were desperate to leave Germany and other countries, Trujillo encouraged Jewish migration to the Dominican Republic. At the end of the SPANISH CIVIL WAR he also allowed many Republicans to migrate to the Dominican Republic. Although many people hailed this humanitarianism of

the regime, others saw it as an attempt to increase the “white” population of the country at the expense of the blacks. Certainly the black Haitian sugarcane workers were treated harshly. In 1937 Dominican troops were involved in massacring between 15,000 and 20,000 of them, following Trujillo’s claims that Haiti—which occupied the other half of the island of Hispaniola—was supporting Dominican Republic exiles.

When Trujillo stepped down as president on August 16, 1938, a friend, Hacinto Peynado, became president, and the ex-president remained commander in chief of the army. In February 1940, Manuel de Jesús Troncoso took office, and on May 18, 1942, Trujillo returned as president. On December 8, 1941, the Dominican Republic, supporting the United States, declared war on Germany. Trujillo’s strident anticommunism made him a useful ally for the United States after the war, and U.S. vice president Richard Nixon visited the country in 1955.

Although Trujillo was a brutal dictator and a corrupt administrator, the country prospered under his rule. The Dominican Republic’s small middle class essentially arose during his rule. He tried to rule with a veneer of democracy, although his Partido Dominicano allowed very little room for opposition in the political arena. In elections, the Partido Dominicano was usually the only party to put forward candidates.

On May 16, 1952, Trujillo stepped down as president, and his younger brother, Hector Bienvenido Trujillo y Molina, succeeded him. Rafael Trujillo, however, continued to wield the real power in the Dominican Republic. Pressure on Trujillo over human rights abuses escalated.

On March 12, 1956, Dr. Jesús de Galíndez, a Basque who had moved to the Dominican Republic, where he had worked for the government, was kidnapped in New York and disappeared. He had written a book called *The Age of Trujillo*, which was about to be published. It was believed that Galíndez had been taken back to the Dominican Republic and executed there. Trujillo was blamed for this, and the Organization of American States imposed economic sanctions.

On May 30, 1961, Rafael Trujillo was assassinated when machine gun fire raked his car on a highway in the southwestern outskirts of the capital. He was hit five times and died in the street after having managed to get out of the car.

Rumors point to U.S. interests being involved in the assassination to get rid of an international pariah whose repression might have led to a communist revolution as in nearby Cuba. The plot was organized by Antonio de la Maza, brother of pilot Octavio de la Maza, who was

murdered in 1957. Many of the family were killed in the wake of Trujillo’s assassination, including General J. T. Díaz, who was said to have masterminded it. Trujillo’s body was taken to France, where he was buried in the Père Lachaise Cemetery in Paris.

JUSTIN CORFIELD

Truman, Harry S.

(1884–1972) U.S. president

Harry S. Truman was the 33rd president (1945–53) of the United States at a time when momentous events were taking place around the globe. WORLD WAR II was nearly over, and other wars loomed on the horizon, while the specter of Soviet communism haunted U.S. policy makers. It fell to Truman to take on these issues while attempting to guide the United States into its role as an emergent superpower.

Truman was born on May 8, 1884, in Lamar, Missouri, the eldest son of John and Martha Truman. Truman studied law at Kansas City Law School but did not earn a degree. His political career began in the year 1922, when he began his association with Thomas Pendergast, a leading Democrat of Kansas City. Truman was elected a judge in Jackson County in the same year. In 1934 he became the Democratic senator from Missouri and supported most of the policies of President FRANKLIN D. ROOSEVELT (1882–1945). Truman became prominent due to his work on the Committee on Defense Expenditure, where he exposed corruption and profiteering. He was selected as the Democratic vice presidential nominee in 1944 and became president after the death of Roosevelt on April 12, 1945.

When Truman took office, World War II was not yet over. Germany capitulated on May 7, 1945, but the war against Japan in the Pacific continued with mounting casualties on both sides. Still, the Allied forces pressed on, sending strategic bombing runs against Japanese cities from forward Pacific bases. Truman met British premier Clement Attlee (1883–1967) and JOSEPH STALIN (1879–1953) at Potsdam,

As the 33rd president of the United States, Truman oversaw the end of World War II and the war in Korea.

Berlin, from July 17 to August 2, 1945, to map out the post-World War II world. To accelerate the end of the war, Truman authorized the use of the atomic bomb on Japan, and consequently, on August 6 and August 9, the cities of HIROSHIMA AND NAGASAKI witnessed the devastating impact of nuclear weapons. On September 2 Japan surrendered formally on the USS *Missouri* in Tokyo harbor.

Immediately following the war, Truman was forced to take a hard-line approach against international communism, particularly with regard to events in Iran, Greece, and Turkey. In Iran the oil-rich province of Azerbaijan was a prize greatly desired by the Soviet Union; its moves were checked by Truman. At the same time, Truman sent U.S. ships to the Mediterranean to prevent Soviet advances in Turkey. Greece, on the verge of a communist takeover after the withdrawal of British troops, was the subject of the Truman Doctrine issued on March 12, 1947. With this, Truman proclaimed that the United States would continue to “support free peoples,” a claim backed up with a \$400-million aid package for both Turkey and Greece. The doctrine was further buttressed by U.S. diplomat George F. Kennan (1904–2005) with the Kennan Thesis, which called for the containment of Soviet designs. To further prevent Soviet expansion in Europe, the Marshall Plan, created by secretary of state George C. Marshall, provided \$12 billion in aid to various European countries, with the thought that American assistance might help reduce Soviet influence. In response, the Soviet Union consolidated its hold on Eastern Europe and claimed

that the U.S. was attempting to divide the world into two blocs, further intensifying the cold war rivalry between the two superpowers.

At home, Truman was faced with the massive reconstruction of the American economy following World War II. The transition to a peacetime economy was beset with many problems, including inflation, a shortage of consumer goods, and labor problems. The efforts to stem the earlier depression now came under harsh criticism as both Republicans and conservative Democrats no longer saw the need for the government’s involvement in the American economy. In response, Truman presented the Fair Deal to Congress on September 6, 1945. This plan called for increased social security, full employment, public housing projects, the clearance of slums, a permanent Fair Employment Practices Act, and public works projects. It did not meet with congressional approval, and much of the plan was eliminated or reduced in scope.

Truman’s agenda hit further snags when in the mid-term elections, the Republican Party won control of both the House of Representatives and the Senate. The new Republican Congress failed to pass the proposal for education, social security, the minimum wage, and power projects. Instead, Congress passed the Labor-Management Relations Act of 1947 (also known as the Taft-Hartley Act), which restricted union activities and removed some restrictions on employers. Truman did not sign the bill.

It seemed that the president would not win a second term, but he curried favor with unions, African Americans, urban dwellers, and others. He initiated the civil rights bill in February 1948. Truman also racially integrated the armed forces by an executive order. The Democratic Party was divided, and Truman, with much difficulty, won the nomination to face the Republican Party candidate, Thomas E. Dewey (1902–71). Truman launched a blistering attack on the Republicans and led a vigorous campaign. Few expected him to win, but he proved the predictions of political pundits wrong.

SECOND TERM

In his second term, Truman faced serious crises in domestic and external affairs. The Fair Deal was presented once again. The 81st Congress was also not amenable to his reform agenda. However, the president scored victories in raising the minimum wage from 40 to 75 cents, passing the National Housing Act of 1949 to build low-income houses, and establishing the Civil Rights Commission of 1948. Truman could not

implement many of his preferred programs such as limiting discrimination in hiring due to opposition by some southern Democrats.

Truman's second term witnessed an anticommunist hysteria that swept the nation. The president was charged with being soft on communism. Persons from the movie industry, intellectuals, liberal Democrats, and scientists came under investigation for being suspected communists or communist sympathizers. The Republican-controlled House Un-American Activities Committee (HUAC) investigated persons with flimsy charges. Alger Hiss, a diplomat, was charged with espionage. Truman launched the Federal Loyalty Program to investigate the loyalty of federal employees. Congress passed the McCarran Internal Security Act in 1950, which barred communists from working in defense plants, and registration of communist organizations became mandatory. J. Edgar Hoover (1895–1972), the Federal Bureau of Investigations (FBI) director, and Republican senator Joseph McCarthy conducted the anticommunist crusade, initiating proceedings against alleged radicals and communist sympathizers.

FOREIGN POLICY

Truman recognized the state of Israel in 1948, and it remained an ally of the United States during the cold war period. Formation of military alliances was another means to shore up the defenses of Western Europe against any future Soviet invasion, and the United States initiated the North Atlantic Treaty Organization (NATO) in April 1949. Article 5 of the treaty stated that an attack against one would mean an attack against all.

Meanwhile, MAO ZEDONG (Mao Tse-tung) proclaimed the Peoples Republic of China on October 1, 1949. Truman's containment policy was of no avail there, and international communism had expanded with the inclusion of the most populous nation of the world. The Soviet Union and China signed a formal treaty on February 14, 1950, cementing their friendship. For Truman the task was to check the further onward march of communism. In Indochina a nationalist-communist battle was being waged against French colonialism in the first Indochina War (1946–54) under the guidance of Ho Chi Minh. It was the United States that supported 40 percent of France's military budget in the war and recognized the noncommunist associate state of South Vietnam in 1950.

During the Korean War, the world was on the brink of a global war. Truman faced a serious crisis when Communist North Korea crossed the 38th parallel and invaded South Korea. Truman ordered the Seventh Fleet

to move into the straits between China and Taiwan. The United Nations army operation, which consisted of 90 percent U.S. and South Korean forces, was commanded by General DOUGLAS MACARTHUR. In November the Chinese interfered, and MacArthur advocated invading mainland China. He was relieved of his command amid much public outcry, and General Matthew Ridgway (1895–1993) retook the South Korean capital of Seoul from Sino–North Korean forces. The war dragged on until July 1953. Truman's popularity diminished, and he decided not to seek reelection in 1952.

He spent his time in Missouri after leaving Washington, writing his memoirs and addressing meetings. He died on December 26, 1972, due to medical complications.

PATIT PABAN MISHRA

Tunisia

France controlled Tunisia from 1881 but, unlike in ALGERIA, maintained the local ruler, Bey Muhammad al-Sadiq, who officially continued to rule. By the end of the 19th century, wealthy, urban Tunisians were already seeking more equality under the French regime.

Abdul Aziz al-Tha'alibi became the leader of this group, many of whom were graduates of the elite Sadiqiyya College. Prior to WORLD WAR I France declared martial law over Tunisia. After the war, al-Tha'alibi attended the PARIS PEACE CONFERENCE but failed to gather international support for Tunisian independence.

Although some French and Italians settled in Tunisia, their numbers were far smaller than in Algeria. Most colons lived in cities, not rural agricultural areas, so they had much less impact on the majority indigenous population than in Algeria, where many colons engaged in agriculture. Also, Tunisia, unlike Algeria,

was not considered an integral part of France. In Tunisia the French established a form of joint sovereignty, much as Britain had in Egypt.

Nationalism continued to rise during the interwar years, and in the 1920s, a Tunisian union of workers, the Confédération Générale des Travailleurs Tunisiens (CGTT), was established. A rival political party, the Neo-Destour, also emerged; its leader, Habib Bourguiba, a graduate of Sadiqiyya and French law school, had been a member of the older Destour Party. Bourguiba's Neo-Destour attracted a younger membership. Bourguiba recognized that the Tunisians would not be strong enough to oust the French by force of arms and advocated a gradual approach. However, the French imprisoned Bourguiba for his nationalist activities.

Tunisia was a major battleground during WORLD WAR II. After mainland France fell to the German invasion, the pro-Axis VICHY French government continued to rule North Africa, and in 1942 both Allied and German troops landed in Tunisia. The bey and the Neo-Destour Party under Bourguiba both adopted pro-Allied stances in hopes of gaining independence after the war ended. When the Free French took over in the spring of 1943, they deported the bey. Bourguiba escaped to gather support for the nationalist cause. After the war France granted some reforms, to the dismay of the colons, but it did not grant Tunisia independence until 1956.

Twenty-one Demands (1915)

The Twenty-one Demands of 1915 were Japan's most comprehensive and aggressive plan to control China up to that date.

Immediately after Japan declared war against Germany in August 1914, it sent troops to the German

sphere of influence in Shandong (Shantung) Province in China and conquered it. It was part of Japan's plan to take advantage of the preoccupation of Western powers in WORLD WAR I to expand its control of China. On January 18, 1915, it delivered the Twenty-one Demands to Chinese president YUAN SHIKAI (Yuan Shih-k'ai). They were divided into six groups as follows:

1. China recognizes Japan's assumption of all of Germany's privileges in Shandong, including control of ports, railways, mines, and other interests.
2. China grants Japan a special position in Manchuria and Inner Mongolia including rights to develop mines and factories, an extension of the existing Japanese lease of Port Arthur and Dairen, and railways in the region from 25 to 99 years.
3. Joint operation of China's iron and steel industries.
4. Non-alienation of coastal areas to any other country.
5. Japan to control the Chinese police and military, and to provide advisers to other branches of the Chinese government.
6. China ordered to keep the demands a secret.

Yuan Shikai was in a quandary because he realized the seriousness of the demands but was at the same time trying to become emperor. He realized that he could not succeed without Japan's blessing. He thus tried to temporize while at the same time leaking the provisions to the press. Yuan was unsuccessful in his attempt to enlist Western support. Japan had already assured its allies Great Britain and Russia that it would not infringe on their rights in the Yangzi (Yangtze) valley and Mongolia, respectively, and the United States merely reiterated its commitment to the OPEN DOOR POLICY in China. Japan offered Yuan a carrot, expressing its willingness to restrict the activities of anti-Yuan Chinese in Japan if he cooperated, then sent him an ultimatum demanding acceptance of the first four groups of its demands while agreeing to postpone discussion of group five to a later date. Yuan capitulated, signing an agreement on May 25, 1915.

Japan's Twenty-one Demands inflamed the Chinese public and stirred Chinese nationalism. In protest, many Chinese students studying in Japan returned home, while merchants in China organized an anti-Japanese boycott. Yuan Shikai's ineffectual response contributed to his unpopularity and the defeat of his imperial ambitions. It also demonstrated the retreat of Western imperialism in China beginning with World War I and the rise of Japan as the imperialist power in Asia.

JIU-HWA LO UPSHUR

Tydings-McDuffie Act (1934)

With the Tydings-McDuffie Act of 1934 the U.S. Congress created the Philippine Commonwealth and promised self-rule for the Philippines within a decade. Propelled by economic self-interest and xenophobia, the act marked a new stage in U.S. control of the Philippines, a shift from a period of political training to a period of transition toward full independence. It came at a difficult moment—just as imperial Japan was flexing its muscles in the entire Far East—and thus even Filipino nationalists hesitated about independence.

The Philippines had been under colonial rule since 1571, when it first became a Spanish colony. Filipino nationalists, including the general EMILIO AGUINALDO, fought and lost a war for independence with the Spanish in the mid-1890s. As part of a larger war against the Spanish, the United States intervened in the Philippines in May 1898 and, after defeating the Spanish, took official control of the country through the Treaty of Paris, signed in December 1898 and ratified by the U.S. Senate in February 1899.

Under William Howard Taft, the head of the first civil commission in charge of the Philippines, the United States retained ultimate control of the country but began a period of political tutelage for the Filipinos. Taft's goal was to develop the political institutions and leadership of the Philippines to allow for a modicum of self-government. Taft, however, favored not eventual independence but “indefinite retention,” giving Filipinos control of the local government and an elected Philippine legislature that shared lawmaking duties with a governing body, the Philippine Commission, appointed by the U.S. president.

Philippine control was expanded under the Jones Act of 1916, but executive power remained in U.S. hands. Eventually, political parties coalesced. The Spanish-speaking planter elite, the *ilustrados*, formed the Federalista Party, later renamed the National Progressive

Party. The Nacionalista Party was established in 1907. Two Nacionalista leaders—Sergio Osmeña and MANUEL QUEZON—would dominate Filipino politics for the entire colonial period.

During the early 1930s two factors spurred a reconsideration of U.S. relations with the Philippines, neither of which related to the best interests of the Filipinos. First, economic pressures within the United States during the GREAT DEPRESSION encouraged many economic competitors of Filipino business to push for Filipino independence. After the U.S. takeover of the Philippines in the late 1890s, Filipino businesses had enjoyed duty-free trading with the United States. As the U.S. economy slumped during the 1930s, however, U.S. businessmen began to push for measures that would curtail competition from Filipino businesses.

Second, a number of anti-Asian activists wanted to see the Philippines gain its independence in order to reduce Filipino immigration to the mainland United States. As part of a resurgence of U.S. racism and nativism, the Immigration Restriction Act of 1924 had closed the doors of the United States to immigrants from China, Japan, India, and the rest of Asia. Filipinos, however, could continue to move to the United States because they came from a possession of the United States, not an independent country. Opponents of Asian immigration to the United States thus supported Filipino independence because it would close this loophole.

In 1933 the U.S. Congress passed the Hawes-Cutting Act despite the veto of President HERBERT HOOVER. This act provided for Philippine independence following 12 years of commonwealth government. Despite its passage by the U.S. Congress, the act was denied by the Philippine legislature, which objected to the tariff provisions. These had been put in place to protect American farmers, who feared the tariff-free import of Philippine sugar and coconut oil. In response, the Philippine legislature advocated a new bill and secured the support of the recently elected FRANKLIN DELANO ROOSEVELT. This would become the Tydings-McDuffie Act.

Public Law 127, the Tydings-McDuffie Act, passed in 1934. The act promised full Philippine independence within 10 years and reorganized the Filipino political system into the Philippine Commonwealth. Under this system the United States administered Philippine foreign relations, defense, and major economic affairs but granted the Philippine legislature and the newly elected president the power to manage internal affairs. But Quezon won a concession: After independence

the United States would only retain control of military bases if the Philippines consented.

In 1935 Manuel Quezon was elected the first president of the Philippine Commonwealth. The autocratic Quezon dominated the commonwealth period, solidifying his hold on power and dealing ruthlessly with political opponents. During his tenure he did little for the rural poor, crushing their protest movements with force. He led the commonwealth until forced to flee the Japanese invasion in late 1941 and died in exile in 1944.

After WORLD WAR II the United States fulfilled its commitment to grant the Philippines independence.

The United States handed over full sovereignty to the Philippines on July 4, 1946, thereby fulfilling the promise made by the Tydings-McDuffie Act 12 years earlier.

THOMAS ROBERTSON

Ubico y Castañeda, Jorge (1878–1946) *Guatemalan president*

The president of Guatemala from 1931 until 1944, Jorge Ubico y Castañeda was one of the major political figures in Central America, inheriting the caudillo, or “strongman,” tradition from predecessors such as Manuel Estrada Cabrera. Jorge Ubico was born on November 10, 1878, the son of Arturo Ubico, a wealthy lawyer and an active member of the Guatemala Liberal Party. There is a tradition that his surname came from the English name Wykam, and the family originated in Dorsetshire. Jorge Ubico was educated in Guatemala and then studied in the United States and in Europe.

In 1897 Ubico was commissioned second lieutenant in the Guatemalan army; he was subsequently gazetted lieutenant colonel and then became a full colonel in 1916 at the age of 28. He had already gained a formidable reputation for rooting out banditry and smuggling over the Guatemalan-Mexican border. In 1920 he returned to Guatemala City to take part in the coup d'état that propelled General José Orellana into power. Orellana rewarded Ubico by making him a general two years later. However, in 1923, Ubico resigned from the army, disillusioned by what Orellana had been doing.

Deciding to enter politics, Ubico helped form the Political Progressive Party in 1926. A liberal, he campaigned to improve the lot of poor people in Guatemala. He worked in various parts of Guatemala and became the chief of staff of the armed forces and then minister of war before, on February 14, 1931, becoming

president for a six-year term of office. His election was unopposed and unanimous. The Guatemalan constitution at the time had a clause forbidding reelection, and this would normally have meant that he would have had to step down in 1936. However, the constitution was amended, and Ubico remained in office until July 4, 1944. Essentially, he was the dictator of the country, presiding over an authoritarian regime.

Ubico's political allies became known as the “Ubiquatas,” and they quickly took over the running of the country. To raise Guatemala's foreign revenue, Ubico concentrated on the production of coffee, but the worldwide GREAT DEPRESSION caused major financial problems. In spite of this Ubico was able to massively extend the network of roads throughout the country and improve health and educational facilities. He also passed decrees abolishing debt slavery and introduced strict vagrancy laws, which saw all Guatemalans given identity cards for the purpose of enforcing employment. Many were forced to work on banana plantations for very low wages, and the fact that they could leave did not mean that they could find another job.

As the depression eroded the income that Guatemala was earning, Ubico became more pro-United States. Under his presidency, the UNITED FRUIT COMPANY became the major economic force in the country, coming to dominate many sectors of the economy, not just the growing and harvesting of bananas. It operated the telegraph system, the only railway in the country, its own electricity generators, and the port of Puerto Barrios on the Atlantic seaboard.

Throughout the period when Ubico ran Guatemala, he was determined to ensure that his government did not become corrupt and was said to have pored over the account books of government departments throughout the country. He also let it be known that anyone found guilty of corruption was to be instantly punished. His father had promised to shoot him if Ubico was ever involved in corruption himself. However, detractors pointed out that he did not need to be involved in graft. His salary as president was U.S. \$120,000 a year—at that time the U.S. president was being paid \$75,000 annually. The Guatemalan congress also once met and voted him \$160,000 *ex gratia* payment for services to the country.

Ubico also ensured strong press censorship in the country. On a personal level he was interested in radios and broadcasting, and he regularly made speeches on the radio.

A strong ally of the United States, Ubico was a firm anticommunist. During WORLD WAR II Ubico was a keen supporter of the Allies and was distrustful of the large German minority in the country. Guatemala did eventually declare war on Germany on December 9, 1941.

After 1939 his regime became more unpopular, with the president reacting harshly in paranoid fear of his political opponents. A general strike in June 1944 led to his resignation. He was replaced by General Jorge Ponce Vaides on July 4, and a military coup on October 20, 1944, swept away his entire regime. He fled to the United States and died on June 14, 1946, in New Orleans, Louisiana.

JUSTIN CORFIELD

Union of South Africa

The southern regions of Africa were colonized by the Dutch (Boers), who moved inland after the British capture of the area around the Cape of Good Hope in 1806. The discoveries of diamonds and gold in the region during the late 19th century prompted a wave of European immigration, especially by the British, and led to increased oppression of the indigenous people. The Boers resented the growing numbers of settlers and tried to drive them out. As a result, British troops were

sent to fight the BOER WAR. In the end Britain gained control of several territories on the southern tip of Africa. Eight years after the Boer War, four of Britain's territories became the Union of South Africa, uniting through a constitution that allowed each state to maintain its current franchise qualifications and issuing in the apartheid that was to continue until the 1990s. The union comprised Cape Colony, Natal, Orange River Colony, and Transvaal.

It had taken almost a decade to reach a compromise on the constitution. The Dutch Afrikaners were still a powerful force in the area; in fact, Louis Botha and JAN CHRISTIAAN SMUTS, generals from Kruger's army, were influential in the design of the new government. Each of the four territories wanted to maintain as much autonomy as possible, while Britain wanted a unified country that could be self-supporting and maintain its own defense. In addition, there were many, including a number of black and white liberal leaders, who felt that the racial separation embedded in the constitution was unacceptable. The constitution that was approved legally recognized apartheid by allowing each of the four states to establish its own policy and required the approval of a two-thirds majority of parliament to effect changes. The constitution also established a British style of government and designated both English and Dutch as official languages. Stipulations allowing for the future incorporation of other British territories into the union were also included. In 1915 South Africa captured Southwest Africa (Namibia) from the Germans. This territory was placed under union rule by the LEAGUE OF NATIONS after WORLD WAR I.

In May 1910 Botha became the prime minister, and Smuts became his deputy. The racial mix of the population was approximately 68 percent African, 21 percent white, 8 percent colored, and 3 percent Indian. In spite of their minority in the general population, whites controlled the government and enacted a number of laws that further denied rights to the majority. In 1911 three significant acts contributed to the legalization of racial discrimination. The Native Labour Regulation Act made it a criminal offense for an African, but not for a white, to break a labor contract. The Mines and Work Act legalized the practice of employing Africans in only semiskilled and unskilled jobs. The Dutch Reformed Church Act of the same year prohibited Africans' becoming members, disallowing Africans full participation in the state-established church. The most devastating obstruction to racial equality, however, came in 1913 with the passage of the Natives Land Act. This law, which designated the land areas that could be

A scene from Maritzburg, South Africa, in the early 1900s. As the apartheid system continued, nonwhites received only the most basic education, could not socialize with whites, could live only in specifically designated areas, and had virtually no voice in government.

owned by separate races, gave over 92 percent of the land to the white population. In addition, the legislation made it illegal for blacks to live outside their own lands unless employed by whites as laborers.

Black South Africans had been organizing in opposition to discrimination and were not silent during these years. The African Political Organization was formed in 1902 in Cape Town, elected Abdullah Abdurahman its president in 1904, and had grown to 20,000 strong by 1910. The years immediately before the ratification of the constitution were filled with protests and demonstrations, and in March 1909 a massive South African Native Convention charged those writing the constitution to give all races equal rights.

In 1912 educated leaders of the African population gathered in Bloemfontein to discuss means of protesting discrimination and establishing civil rights for all

citizens. Many of these leaders had been educated in England and the United States and believed that the continent had benefited from Western influences, especially Christianity. Although the congress did not call for an end to British authority, it was fully committed to bringing about an end to the systematic inequality in South Africa in a nonviolent manner. John Dube, the first president, believed that they could rely on the “sense of common justice” that was part of the British character. However, Britain was not willing to interfere. A delegation from the Native Congress traveled to England in 1914 to protest the Natives Land Act. They were told by the colonial secretary that there was nothing he could do. In 1919 another group of representatives met in London with Prime Minister DAVID LLOYD GEORGE, who said that this was a problem that would have to be dealt with in South Africa.

As the apartheid system continued, nonwhites received only the most basic education, could not socialize with whites, and had virtually no voice in government. In addition, they were required to carry “pass books” that contained records of their movements outside their designated areas. In 1948 apartheid laws were enacted that created 10 “homelands,” or Bantustans, where black ethnic groups could live under self-rule but were still under the authority of the central government. The Population Registration Act of 1950 further tightened the bands of discrimination by requiring that every person in South Africa register as a member of one of three racial groups: white, black (African), or colored (of mixed descent). The government assigned blacks and coloreds to one of the homelands. Political rights were restricted to the homeland. In this way the government of South Africa hoped to designate nonwhites as citizens of the homeland and not citizens of South Africa, keeping their control of the nation. In essence, nonwhites became aliens in their own country.

In 1931 the Union of South Africa was recognized as an independent nation within the commonwealth of nations, and in 1961 it gained full independence. In 1994 a black majority was finally elected to parliament, and apartheid was abolished.

JEAN SHEPHERD HAMM

United Auto Workers

Officially, the United Auto Workers Union (UAW) is called the United Automobile, Aerospace & Agricultural Implement Workers of America International Union. It is one of North America’s largest unions, with 950 locals in the United States, Canada, and Puerto Rico and 700,000 members. It was founded in Detroit, Michigan, in May 1935 as an American Federation of Labor (AFL) union.

In 1935 the crafts-oriented American Federation of Labor succumbed to years of demands that it be more aggressive in organizing by industry, not by trade. A caucus of industrial unions under the leadership of JOHN L. LEWIS of the United Mine Workers formed the Committee of Industrial Organizations (CIO). Within a

year the AFL suspended the CIO unions, leading them to form the Congress of Industrial Organizations.

The UAW was one of the first to organize black workers. Black and white UAW members staged the FLINT SIT-DOWN STRIKE that began on December 30, 1936, and ended in February 1937 after Michigan governor Frank Murphy mediated and won GM recognition of the UAW. In March Chrysler workers sat down and won recognition of the UAW.

Next to organize was Ford Motor Company, where HENRY FORD had vowed that the UAW would organize his workers over his dead body. Harry Bennett got the job of repulsing the union. He set up the Ford Service Department to provide internal security, espionage, and intimidation of union organizers and sympathizers. The UAW fought Bennett and Ford until 1941, when Ford finally accepted collective bargaining with the UAW.

In December 1941, after PEARL HARBOR, the UAW executive board enacted a no-strike pledge, and the membership later affirmed the pledge.

After nearly a decade of political infighting between conservatives and progressives in the UAW, the social democrat Walter Reuther became president and held the position for nearly 25 years. His presidency coincided with the peak years of U.S. unionism. Walter Reuther led the UAW as part of the liberal democratic alliance that brought significant improvement to millions of Americans in fulfillment of the promise of the United States. Reuther sought to establish labor as the equal of management and government. He fought to give UAW workers a say over working conditions. Reuther also made the UAW a bureaucratically efficient organization. He surrendered political independence and became a stalwart backer of Lyndon B. Johnson and liberal causes. His dreams fell short as the Democrats split over the Vietnam War and domestic issues and proved unable to complete the promises of the Great Society.

After Reuther died in 1970, the UAW had a series of presidents, none of whom matched his success or tenure. They included Leonard Woodcock, Douglas Fraser, Owen Bieber, Stephen Yokich, and Ron Gettelfinger.

JOHN H. BARNHILL

United Front, first (1923–1927) and second (1937–1941)

The Bolshevik Revolution in Russia in 1917 had two major impacts on China: establishment of the CHINESE COMMUNIST PARTY (CCP) in 1921 and reorganization of the Nationalist Party, or Kuomintang (KMT), in 1923. The result was the formation of the first (in retrospect) United Front. The Japanese invasion of China in 1937 led to the second United Front.

SUN YAT-SEN, father of the Chinese Republic, and his Nationalist Party were out of power as warlords carved up China after 1913. Sun was living in Shanghai in 1919 when patriotic students rose up to demand government reforms in the MAY FOURTH MOVEMENT. To tap into student patriotism and learn the formula of Soviet success, Sun met Soviet representative to China Adolf Joffe. Their joint communiqué (January 23, 1923) became the basis for the first United Front. It provided for Soviet aid to reorganize the KMT, and in return Sun agreed to allow members of the CCP to join the KMT as individuals. It also declared that Sun's Three People's Principles, not Marxism, would be the ideology for China. A political change allowed Sun to form an opposition government (to the recognized one in Beijing) in Canton later in 1923. Soviet political and military advisers, headed by Michael Borodin and General Galen (Blucher), arrived in Canton.

Borodin dominated the first KMT Congress, held in Canton in 1924, where the platform mandated alliance with the Soviet Union and collaboration with the CCP that allowed CCP leaders to join the KMT's top councils. Sun sent his chief military aide, CHIANG KAI-SHEK, to Russia to study Soviet military techniques. Chiang returned home to head the new Whampoa Military Academy, which trained officers in warfare and political ideology. The first United Front survived Sun's death in 1925 and the first phase of the successful NORTHERN EXPEDITION to unify China, led by Chiang. After capturing Shanghai and Nanjing (Nanking) in 1927 Chiang purged the Communists from the government and expelled the Soviet advisers, preempting Soviet leader JOSEPH STALIN's plans to eliminate the KMT and catapult the CCP to power. Thus ended the first United Front. Chiang went on to complete the Northern Expedition and unify China in 1928.

Negotiations for a second United Front began in 1937 as a result of rising public sentiment that all Chinese civil wars should end and that the KMT should

lead a united China in resisting Japanese aggression. The movement was begun by students in 1935, picked up by the CCP, and then hard pressed by KMT forces at the end of the LONG MARCH. Japan attacked China on July 7, 1937 (the MARCO POLO BRIDGE INCIDENT). The all-out war ensured the negotiations, which concluded in September 1937. The agreement provided for two separate Communist armies: the Eighth Route Army of 20,000 men in northern China under commander ZHU DE (Chu Teh) and the 10,000-man New Fourth Army in Jiangxi (Kiangsi) under Ye Ting (Yeh T'ing). Both units would fight under overall Nationalist command. The CCP agreed to abolish their Soviet government, cease class struggle in areas they controlled, and obey the Nationalist central government. However, the CCP goal was to exploit the United Front for expansion, as its leader MAO ZEDONG (Tse-tung) announced: "Our fixed policy should be 70 percent expansion, 20 percent dealing with the Kuomintang, and 10 percent resisting Japan." The United Front collapsed in January 1941 when the New Fourth Army disobeyed orders, and a major clash with KMT forces resulted. Negotiations between the two sides ended in 1943, and the conflict between them remained unresolved at the end of WORLD WAR II.

JIU-HWA LO UPSHUR

United Fruit Company

United Fruit was one of the largest multinational companies in the early 20th century. In 1954 it lobbied the U.S. government to overthrow the elected government of Guatemala. Formed in 1898 by the merger

Workers at the United Fruit Company. The company dominated the banana trade from Latin America to the United States.

of Boston Fruit Company and Tropical Trading and Transport Company, United Fruit dominated all aspects of the banana trade from Latin America to the United States. Because of this control the company was able to dictate terms and conditions regarding taxes and land purchases to the governments of Latin America. This began coming to an end after WORLD WAR II. With the end of the war, workers unionized, and countries wanted more control of their resources. The harshest response to this trend was the coup that unseated the democratically elected government of Guatemala. United Fruit's share of the banana market slid from 80 percent in 1950 to 34 percent in 1973.

When United Fruit was founded in 1898, the two companies that merged brought mutually beneficial resources to the merger. The Boston Fruit Company controlled banana sales along the northeast coast of the United States, had a fleet of steamships, and owned land in the Caribbean. Tropical Trading and Transport Company owned land in South and Central America, had a railroad there, and controlled much of the sales of bananas along the southeast coast of the United

States. The newly created company had control of the banana from growth to sale. The company used bribes and threats of U.S. government intervention in Latin American countries. The company also bought rival businesses to increase its control of the industry, and by the early 1900s, United Fruit controlled at least 8 percent of all banana imports in the United States.

With the end of World War II, United Fruit began to have problems. One of these was Guatemala. The first leftist government was elected by the people in 1951. The government, led by Jacobo Arbenz Guzmán, wanted to develop a broader base for the economy, which included land reform.

United Fruit and the U.S. government claimed that Arbenz was a communist. In 1953 the company supported a coup by a small part of the Guatemalan army, which the government was able to put down. Then, in 1954 the Central Intelligence Agency (CIA) got involved. Fearing the spread of communism, a fear shared by United Fruit, the CIA supported a coup against the government, which succeeded. Arbenz resigned his position, and Guatemala returned to rule by a right-wing dictator.

The coup did not have the effect United Fruit had hoped for. President Dwight Eisenhower faced criticism from other nations over the CIA's involvement in the coup. Then the U.S. Justice Department took United Fruit to court under the Sherman Anti-Trust and Wilson Acts because of its monopoly on the banana market. Ultimately, the company was forced to divest itself of part of its banana business and was prohibited from buying any other banana production companies.

After the coup, United Fruit found that it was viewed with hostility by other Latin American countries. Workers' rights were now being supported by local governments, which increased the costs United Fruit incurred to grow and harvest the bananas. In an attempt to improve its position, United Fruit began selling off land and buying more bananas from local producers. The company continued to move away from controlling the entire process of bringing the bananas to market and moved to diversify its business.

DALLACE W. UNGER, JR.

urbanization

The term *urbanization* is commonly misused. Frequently and mistakenly, urbanization is employed to mean urban growth. When used correctly, however, urbanization refers to the increased degree of urban development within a region or a nation, that is, a defined geographical area, while urban growth, when used in its proper form, relates to the rate at which an urban area or urban population increases within a given timeframe relative to its size at the beginning of that time period. Furthermore, what makes urbanization different from urban growth is that urbanization has two marked urban features. The first characteristic is that urbanization can be used to describe the proportion of a total area or total population in urban situations such as towns and cities. Second, the term refers to an increased urban proportion during a given timeframe relative to its size at the start of the defined chronological era.

Irrespective of geographical location, the impact and effects of urbanization can be extremely troublesome. In Britain, for instance, although rapid urban growth and urbanization occurred beginning in the late 1800s and continued into the 1900s, its effects were still being felt in the 20th century. To illustrate this point, by as late as 1945 large parts of British cities contained poor-quality housing within which the laboring population resided, often in cramped conditions with few amenities. Furthermore, problems such as dirt, disease, and social deprivation can be exacerbated by urbanization, and such were the effects of urbanization that by as early as 1842 the British parliament debated its management due to its already perceived threat to national economic development. Consequently, the British embarked on a process of public health and new, privately built housing so as to make living conditions better. Importantly, by about 1900, this system had not only incorporated slum clearance but had expanded to such a degree as to include the arranging of the urban form, which in Britain became known as “town planning.”

One of the largest influences on the increasing degree of urban development in a given place is industrialization, which has to some extent affected all the world's continents. The process of social and economic change

that leads a society to shift from a largely agrarian to an industrial nature began in 1700s England and was closely associated with the development of new technologies and business practices, particularly the application of power-driven machinery within factory units. Although it is not necessary to describe in detail the history and evolution of industrialization, it is necessary to emphasize that it has led to many fundamental changes within societies, including:

- The rise of manufactured goods.
- A decline in the significance of the agricultural industrial sector.
- A rise (per capita) in income.
- Increased rates of urban growth.
- Increases in population sizes as a result of changing birth and death rates.
- Changes in social structures and the erosion of pre-industrial social hierarchies.
- A growth in the influence of towns and cities over their hinterland, that is, the land that borders an urban settlement.
- The appearance of new lifestyles and attitudes, which may become apparent by influencing the composition of the political system. In many countries political systems have been reshaped as a result of urban development.
- Environmental degradation in and around urban places, such the hinterland. This can mean the destruction of flora and the death of animals such as fish or woodland creatures due to increased levels of water or air pollution and the clearing of animal habitats to provide new land for urban construction as part of the process of suburbanization.
- Marked levels of growth of preexisting urban problems, such as waterborne disease.
- The erection of often large-sized districts of poor-quality, overcrowded housing units in proximity to sources of employment. Regardless of the geographical location, a major effect of urbanization is lowering of the environmental quality. Even new housing can become subject to environmental degradation, which in time may in turn lead to its becoming a slum.

With regard to the effects of urbanization, it would be wrong to assume that although the 1900s was a time of much social, cultural, and economic development, the effects of urbanization were less than in prior historic times. Indeed, in spite of the actual time when urban problems occur, their nature can still be powerful and

can have major repercussions for not only the quality of the environment but also the quality of people's lives. Where problems affect large numbers of people throughout a region or a nation, the potential for social unrest is increased, and consequently those in positions of authority may have to respond to the threat by altering the nature of a nation's political system. However, it is also important to comprehend that urban difficulties arising from urban growth, especially rapid urban development, may influence the economic, social, and cultural values of a nation as well, and this can be expressed in many distinct ways.

By way of example, the shifting nature of a society due to urbanization may result in both the changing appearance and the urban morphology of existing towns and cities. Furthermore, it may also lead to the swamping of existing administrative structures used to protect the urban environment, as problems like poverty, poor sanitation, dirt, disease, and overcrowding show. As a consequence of these and other problems, governments at both the local and national levels may be required to quickly establish new means to deal with urban problems so as to help improve the public's quality of life. These effects have also been the source of academic research, and their study has led to the making of many urban study schools, such as the Chicago School of Urban Sociology in the 1930s.

In time, though, the broadening of policies by governments can begin to include wider social and environmental measures, including the protection of land surrounding urban settlements, the establishment of national parks, and the creation of rigid systems of regulation relating to new urban development so that not only can the local ecology be protected but also urban dwellers as a right can enjoy a clean, healthy, and safe living environment, something that was once a privilege of the urban rich only.

Global society has fundamentally changed since the rise of industrialization, which as noted previously

first occurred in Britain. One such change has been the altering of patterns of urbanization to such a degree that many of the world's industrial societies are also predominantly urban societies. Urbanization has thus been a major global cultural change following the growth of the manufacturing industry in Europe. This urban development process has been fueled in many places by other changes, like the development of transportation technologies that have helped increase the distance between home and the workplace, and thus has led to significant increases in the amount of suburbanization occurring throughout the world. The growth of transportation means like the tram, train, and car have, since the early 1900s, broken traditional relationships that existed between urban space and time as people have over time become increasingly able to commute from one urban district to another. In addition, government policies relating to the lowering of ticket prices for public transport systems in the metropolitan context have allowed people with less disposable finance to still have the freedom to live and work in places often a great distance from each other. However, as public transport has become more widely available to all social classes, it has consequently increased the urban sprawl of settlements and therefore the impact of the local place upon its surrounding environments.

IAN MORLEY

Valera, Éamon de

(1882–1975) *Irish nationalist and president*

Éamon de Valera was the dominant Irish nationalist leader for much of the 20th century. De Valera was born in New York City but was raised in Ireland by his mother's family. After attending a university he joined the Irish Volunteers. He participated in the Easter Rebellion of 1916. De Valera was captured and sentenced to death, but legal delays saved his life. He was released in a general amnesty in 1917.

He was elected to the British House of Commons and served as president of Sinn Féin. In 1918 he won election to the Irish parliament. The Irish conflict with the British broke out into the Irish War of Independence. Michael Collins was de Valera's main political rival during this era. De Valera became president of the republic in 1921. De Valera vigorously opposed the treaty with the British, particularly the oath of allegiance to the king of England. De Valera's inflamed rhetoric against the treaty contributed to the outbreak of civil war in 1922. The war lasted one year until the pro-treaty Free State forces defeated the anti-treaty IRA.

In 1926 de Valera established the Fianna Fáil (Soldiers of Destiny) political party, which remained the dominant political force for the next 50 years. De Valera served as the first Taoiseach from 1937 to 1948. He lost the 1948 election but returned to power in the 1950s. He forced through a new constitution in 1937 whereby *Eire* became the new name for the nation, the president of Ireland was elected in a popular vote, and

the "special position" of the Roman Catholic Church in Ireland was recognized. The Irish language, along with English, became the official national language. De Valera maintained Irish neutrality in WORLD WAR II. His final term ended in 1973, when he was 91. De Valera died in Dublin in 1975.

JANICE J. TERRY

Vargas, Getúlio

(1883–1954) *Brazilian president*

Getúlio Vargas served as president of Brazil for almost 20 years. Between 1930 and 1945 he filled the role of provisional president, elected leader, and dictator. Between 1951 and 1954 he held the presidential office by means of a democratic election. During his tenure he worked to modernize Brazil, advancing social reform programs, extended suffrage, and organized labor. However, Vargas's government also gained a reputation as a repressive state as he disbanded congress, cancelled elections, gained state control over newspapers and labor unions, and even overthrew his own government to install himself as dictator.

Vargas was born in 1883 in rural Rio Grande do Sul to a wealthy cattle ranching family. As a young man he served briefly in the army before entering law school, where he distinguished himself as a student politician. He entered politics in 1909 and was elected to the state legislature. By 1922 he was a state representative in the Brazilian congress in Rio de Janeiro. By 1926 he found himself appointed finance minister of Brazil, and just two years later he became state governor of Rio Grande do Sul. Vargas became president of Brazil in 1930 as a result of a revolution that ousted President Washington Luís Pereira de Sousa in hopes of a new government devoted to national progress and social reform.

Vargas took office just one month after the revolution began. He set about a program of national reconstruction based upon a centralized government. He dissolved the national congress and state and city legislatures and suspended the federalist constitution of 1891. He replaced state governors with his own officials, called *interventores*, who reported directly to him. The centralized power of the Vargas government did not go unchallenged. In 1932 a constitutionalist revolt erupted in the coffee growing state of São Paulo. The rebellion ended after three months as São Paulo found itself isolated in its attempts to overthrow Vargas.

Despite a new constitution, the Vargas administration steadily moved toward authoritarianism. As the presidential elections of 1938 grew closer, Vargas was not ready to give up power. He consequently overthrew his own government on November 10, 1937, initiating the Estado Novo, or New State, dictatorship. This new period of Vargas's tenure as leader of Brazil did not translate into radical change, but rather denoted a culmination of the centralizing tendencies Vargas had demonstrated since 1930. The Estado Novo was a repressive dictatorship, and politicians, intellectuals, and leftists who challenged Vargas's power were harassed, detained, tortured, and exiled.

Vargas centralized not only the government but also education, labor, and the Brazilian economy. He felt that national progress could only be accomplished through the industrial modernization of Brazil. To achieve this goal, his administration implemented new education programs aimed at reforming secondary education and establishing vocational schools to train an industrial workforce. Vargas launched new labor policies that consolidated unions under state control, allowing only one union per category of workers. Vargas instituted minimum wage laws, pension plans, safety regulations, maternity leave, childcare, paid vacations, training programs, and job security. Vargas's labor ini-

tiatives resulted in enormous popular support for his presidency.

During WORLD WAR II Vargas linked his country to the Allies, allowing Brazil to profit from exports to the United States. Vargas also suspended the country's payments on foreign debts in order to carry out public investments. With the defeat of authoritarian governments in Europe after World War II, growing pressure against the Vargas dictatorship emerged among citizens ranging from high-ranking army generals to student protesters. Vargas eventually bent to this pressure, and elections were held on May 6, 1946. He did not run as a candidate. But Vargas would once again be president of Brazil, elected democratically in 1950 due to his broad base of popular support. However, inflation, labor strikes, dissent in the military, and other problems made it difficult for Vargas to fulfill his campaign promises, especially in regard to labor programs. As political opposition grew and the threat of a military overthrow loomed, Vargas committed suicide in the presidential palace on August 24, 1954, by shooting himself in the heart. In a suicide letter left to the Brazilian people, he identified himself as a servant of the masses and lashed out at those who drove him to despair.

KATHLEEN LEGG

Vasconcelos, José

(1882–1959) *Mexican politician and writer*

José Vasconcelos was born on February 28, 1882, in Oaxaca, in the south of Mexico. His family later moved to the far north of Mexico. For his education Vasconcelos attended primary school at Eagle Pass, Texas, crossing the U.S.-Mexican border each day. After the U.S. invasion of Cuba in 1906–09, the Vasconcelos family feared a similar invasion of Mexico, and they moved to Campeche in eastern Mexico. Vasconcelos became worried about the seeming permanence of the Porfirio Díaz presidency. He ended up studying law, graduating in 1907, and in 1909 going to work for the Anti-Reelectionist Movement. Vasconcelos became the

editor of *El Antireeleccionista*, the movement's newspaper, and was forced to flee to the United States during the political climate of 1910. He returned to Mexico City when FRANCISCO MADERO became president.

When Madero was assassinated in 1913, the United States took over the Mexican port city of Veracruz. Vasconcelos was involved in the subsequent Niagara Falls Conferences, at which the United States agreed to pull out its soldiers. In November 1914 Eulalio Martín Gutiérrez Ortiz became provisional president of Mexico and appointed Vasconcelos his minister of public instruction to oversee the education service. However, when VENUSTIANO CARRANZA became president in October 1915, Vasconcelos was forced to return to the United States in exile. It was during this time that he wrote his first two books, *La intelectualidad mexicana* (1916) and *El monismo estético* (1919). He came back to Mexico City in May 1920 when Carranza was overthrown and replaced by Adolfo de La Huerta, who made Vasconcelos the rector of the National University of Mexico.

Vasconcelos urged for a federal ministry of education rather than allowing schools to be run by individual states. As a result, on October 12, 1921, President ÁLVARO OBREGÓN appointed Vasconcelos the secretary for public education. This new department was quickly divided into schools, libraries, and fine arts. Although Vasconcelos started work on building more rural schools, his long-term aim was to develop the thinking of children so that they could enjoy philosophical concepts rather than just settling for learning how to read and write. This was further encouraged by the libraries department, which produced cheap editions of many major works of literature and provided them at low cost to schools and interested members of the public. The fine arts section was particularly central to promoting muralists, who were allowed to paint in schools and in other public buildings

On June 30, 1924, Vasconcelos resigned as secretary of public education and decided to enter opposition politics. He campaigned for the post of governor of Oaxaca but then had to go into exile in the United States. He then went to other parts of Latin America and to Europe, returning to Mexico after the overthrow of Obregón. The new president, PLUTARCO CALLES, promised free elections, and Vasconcelos decided to contest the election in what became known popularly as the Campaign of 1929. He portrayed himself as an inheritor of the tradition of Francisco Madero. The official results showed that the government candidate, Pascual Ortiz Rubio, won 1,948,848 votes and Vasconcelos got only 110,979 votes. The supporters of Vas-

concelos claimed that the election was fraudulent, and Vasconcelos himself fled to the United States, where he called for an armed rebellion. The beliefs and attitudes of Vasconcelos lurched heavily to the right.

In 1940 Vasconcelos, by now a strong anticommunist, returned to Mexico, where he ran a newspaper, *Timón*, that received support from the German government. His new stance was at odds with the radicalism he had espoused in the 1920s. His new philosophy was "aesthetic monism," which saw the world as a cosmic unity where the future lay with the mestizo rather than the whites. He set forth his ideas in two books, *La raza cósmica* (The cosmic race, 1925) and *Todología* (1952). Beginning in the 1930s José Vasconcelos wrote an extensive autobiography: *Ulises criollo* (A creole Ulysses, 1935), *La tormenta* (The torment, 1936), *El desastre* (The disaster, 1938), *El proconsulado* (The proconsulship, 1939), and *La flama* (The flame, 1959). Many have hailed these books as some of the greatest works of Mexican literature covering the period from the 1910 revolution through the tumultuous 1920s and 1930s. José Vasconcelos was appointed director of the Biblioteca Nacional (national library) in 1940 and from 1948 was in charge of the Mexican Institute of Hispanic Culture. Vasconcelos spent his last years in quiet retirement and died on June 30, 1959, in Mexico City.

JUSTIN CORFIELD

Vichy France

Vichy France is the name given to the right-wing, authoritarian government that succeeded the Third Republic after the fall of France to the NAZIS in 1940. It was named for the French spa town to which many of its leaders fled after the occupation of Paris. The government immediately sought an armistice and an ill-defined "collaboration" with the Nazis. Under the leadership of Marshal Henri-Philippe Pétain and Pierre Laval, the regime attempted to bring about what it called a "national revolution" for France to cleanse the nation of the decadence of the Third Republic and the humiliation of military defeat. Vichy ruled more or less

autonomously over the southern, nonoccupied portion of France until late 1942, when the Nazis invaded this territory and brought it under the direct control of the Reich. Even then, the Vichy government retained some control over governmental affairs and did not finally capitulate until weeks before the liberation of Paris. Even today Vichy is inseparable from its collaboration with the Nazis, in particular its complicity in THE HOLOCAUST.

The Vichy “national revolution” was a direct result of the fall of France in 1940, but its spiritual roots lay in the instability and perceived decadence that wracked the Third Republic. Many intellectuals and politicians blamed the Third Republic—and parliamentarianism in general—for a variety of political and social problems in the interwar period.

The German Wehrmacht, fresh off their conquest of the Netherlands and Belgium, crossed the French border on May 13, 1940, and, despite the gallant resistance of some components of the French army, were in Paris a month later. The government of Premier Paul Reynaud, which had fled the city for Bordeaux on June 10, resigned and was replaced by a government headed by Marshal Pétain, a general and hero of WORLD WAR I.

FULL GOVERNMENTAL POWER

Before this point, certain elements of the Reynaud government, backed by British prime minister WINSTON CHURCHILL, had advocated withdrawing to either Brittany or French North Africa to continue the fighting. However, both Pétain and Pierre Laval were staunch proponents of an armistice and negotiated peace with the Germans. That peace recognized the German occupation of most of the north and west of France, leaving Pétain’s government in control of the south. Fervent resisters like Brigadier General Charles de Gaulle escaped to Britain, but the lion’s share of French politicians and military leaders seemed resigned to the defeat. On July 4 the national assembly voted overwhelmingly to give Marshal Pétain full governmental powers.

Pétain and his colleagues set about the task of remaking and regenerating France. Though its approach was corporatist and very conservative in nature, and though it articulated itself in racial and quasi-scientific terms, it is important to note that the Vichy “national revolution” was not fascist per se. Pétain was a devout Catholic who believed that France was being punished for a century and a half of corrupt republicanism and that the country needed to be saved. A full-fledged personality cult sprung up around Pétain, based primarily on his reputation as war hero, grandfather figure (he

was 84 upon assuming full powers), and moral paragon. This cult served a double purpose in the context of the war. To the Allies Pétain was the gallant old French patriot, he and his government providing the shield that prevented ADOLF HITLER from occupying the rest of France and its empire. To the Nazis he was the stern moralist and antiparliamentarian, seeking to help build Hitler’s “New World Order” by cleansing France and purging her of “undesirables.” This double game prevented either side from fully knowing what to make of Vichy until quite late in the war.

“NATIONAL REVOLUTION”

It was also meant to achieve some breathing room for Pétain to bring off his “national revolution,” whose motto was “Work, Family, Fatherland.” Legislation was passed that forbade women from working outside the home and made divorces much more difficult to obtain. Compulsory military service was partially replaced by a youth work program that was meant to instill solid “peasant” values in France’s young people. Further measures taken to reestablish an agrarian society included a system of subsidies allotted to small farmers, the organization of local agricultural syndicates, and a supposedly simplified scheme for dividing and distributing parcels of farmland.

Finally, the “national revolution” demanded that France be purified of the “disease” of “outsiders”—a term that applied to freemasons and communists, but primarily to Jews. Exclusionary measures were passed that barred Jews—defined by the ethnicity of the father—from being government ministers, civil servants, doctors, or teachers. Far more pernicious, however, was Vichy’s collaboration with the Germans with regard to the Holocaust. Much has been made of the regime’s eagerness to assist the Nazis by delivering France’s Jews to the concentration camps on the eastern front. An additional 55,000 to 60,000 Jews were interned in the unoccupied zone and in ALGERIA; these internments were thus not technically part of the Final Solution but an independent outgrowth of Vichy policy.

The historiography on Vichy has been less than unanimous on whether collaboration was forced on the regime by the Nazis or was an independent choice. The armies under Vichy’s control fought at times as though they were allied with the Germans. The most obvious example of this came during Operation Torch, the Allied invasion of North Africa in November 1942. The Allies had been led to believe by Vichy’s commanders on the ground that Vichy’s forces would allow the Allied landing. Instead, although Vichy did not actually open

fire on the Allies, Darlan delayed long enough in cooperating that word got to the Germans, who did resist the landings. The Allies eventually landed and signed an armistice with Darlan, but the Germans, enraged by Vichy’s vacillation, invaded and occupied the unoccupied French zone shortly thereafter.

Historians have also disagreed on who was really the driving force behind Vichy—Pétain or Laval. It is a stated fact, however, that Laval was fired from the government several times from 1940 to 1944 (either by Pétain or later by the Nazis). By contrast, Pétain’s stint as the head of the government continued uninterrupted until finally, in July 1944, in the wake of the Allied advance on Paris, the Nazis removed him to Sigmaringen Castle on the German border. There Pétain sat as head of a rump Vichy government until after the liberation, when the marshal gave himself up to Allied authorities after refusing asylum in Switzerland.

Pétain, Laval, and other Vichy leaders were placed on trial in August 1945 in a decidedly downmarket version of the NUREMBERG TRIALS. At this trial Pétain claimed that, as the Allies had thought, he had been the only thing keeping the Nazis from occupying the whole country, that the purpose of Vichy was to stall for time, and that his government had only collaborated because they were forced to. “If I could not be your sword,” he said famously, “I tried to be your shield.” These ministrations proved unsuccessful, however, and Pétain, Laval, and numerous other former Vichy leaders were condemned to death. Although Laval was executed, the marshal saw his sentence commuted to life imprisonment by General de Gaulle, who was now the head of the French provisional government.

The Vichy government’s legacy for France has been murky at best. In the aftermath of the war, successive French governments propagated a myth created by de Gaulle himself, which asserted that Vichy was an aberration and that the vast majority of the French had been resistant from the start. This myth had its political purpose, to be sure, but it kept the French people from accurately coming to terms with what had happened from 1940 to 1944 until many years later. Above all, France’s reluctance to fully address Vichy’s complicity in the Holocaust was probably the most disturbing legacy of a government born of humiliation and defeat.

ANDREW KELLETT

Villa, Francisco “Pancho”

(1878–1923) Mexican general

Francisco “Pancho” Villa was a general in the MEXICAN REVOLUTION from 1911 until 1920; he commanded troops mostly in the northern part of Mexico. Villa joined an antigovernment group in 1910 and started recruiting fighters. Villa could be vicious and was willing to kill those who opposed him. He also made sure his men were taken care of, which inspired loyalty in them. He was also interested in education and learned to write as an adult.

Born Doroteo Arango in 1878 at Rancho de la Coyotada in the state of Durango, Villa’s parents were sharecroppers on a hacienda. Villa worked at the El Gorgojito ranch for a while as a teen. Then at age 13 he shot someone for reasons unknown, fled into the countryside, and became a bandit. During the following 20 years Villa spent time as a bandit and a cattle butcher. There is no clear record of exactly what he did and when. It was during this period that he changed his name to Francisco “Pancho” Villa.

Villa met Abraham González in 1910. González was working to defeat the reelection of Mexican President José de la Cruz Porfirio Díaz in Chihuahua, who was running against FRANCISCO MADERO. When Díaz won the election, Madero fled the country and called on his followers to rise up and overthrow Díaz. Díaz was slow to react to events in northern Mexico, where Villa was, and in May 1911 his government collapsed. Madero was elected president. Madero soon had to fight his own revolution. Villa was unwilling to turn against Madero, who he respected. During the campaign in 1912, Villa ran afoul of General VICTORIANO HUERTA, who had him arrested and almost executed for insubordination. Villa received a reprieve from Madero and instead was jailed. In December Villa escaped from the prison and made his way to the United States. In February 1913 Huerta, with support from the United States, turned against Madero. He had Madero arrested and shot and then made himself president.

Villa returned to Mexico to fight against Huerta. Throughout 1913 Villa won a number of battles with

Francisco “Pancho” Villa (center, right) operated throughout the northern territories of Mexico for many years. His actions nearly led to a war between the United States and Mexico as the United States sent troops into Mexican territory to apprehend him.

Huerta’s forces and was chosen to command the Division of the North. In December Villa captured Chihuahua and made himself governor. During 1914 Villa’s forces drove south and eventually opened the way for the rebels to march on Mexico City. The fighting had badly damaged the federal army, and seeing that his cause was lost, Huerta resigned on July 15. An interim president was appointed, but the power was really with the three most powerful chiefs, of whom VENUSTIANO CARRANZA was named first chief. Villa hated Carranza and spent the remainder of 1914 trying to remove Carranza from power. In December Villa and EMILIANO ZAPATA joined forces to take control of Mexico City.

Villa had Carranza on the run, but instead of finishing Carranza off, Villa chose to not attack directly; Carranza was able to rebuild his army. Villa would be defeated repeatedly in 1915 and pushed farther north by Carranza’s rebuilt army. On July 10 Villa’s Division of the North was soundly defeated and ceased to exist. Then, on October 19, with the continued decline of Villa’s power, the United States recognized Carranza’s government. On March 9, 1916, Villa led a raid against Columbus, New Mexico. Under pressure from the people of the United States, President WOODROW WILSON launched an expedition led by Brigadier General John Pershing to capture Villa. The expedition was never able to find Villa and nearly caused a war between

Mexico and the United States. Having recovered from the wound he received while fighting Carranza’s forces, Villa continued to raid northern Mexican cities controlled by Carranza. When Carranza did not follow through on promised reforms, a rebellion broke out against him. After Carranza was killed, an offer was made to Villa that if he would lay down his arms, he would be allowed to retire. The negotiations continued until Villa finally agreed to surrender on July 28, 1920. Villa spent the remaining years of his life working the hacienda and making improvements to it. He added a school, put in a road to the nearby town, and paid for the education of some of the sons of his bodyguards and employees. During his retirement a number of attempts were made to assassinate him, and finally, on July 20, 1923, one succeeded.

DALLACE W. UNGER, JR.

Wafd Party (Egypt)

The Wafd was the major political party in Egypt from its inception in 1918 to the military-led revolution in 1952. In the fall of 1918, shortly before the end of WORLD WAR I, a delegation, or Wafd, of Egyptian nationalists, led by SA'D ZAGHLUL, met with Reginald Wingate, the British high commissioner, to discuss the future of Egypt. In the course of the meeting, the delegates demanded complete independence (Istiqlal Tam). Wingate told the delegates that the matter would be referred to officials in London, and in his correspondence with the Foreign Office he recommended that negotiations should be held. However, the Foreign Office was occupied with more pressing matters involving Germany and what should be done in Europe after the war, nor was the government willing to give up its control over the Suez Canal.

Consequently, the demands of the Wafd were flatly rejected, and the delegates were denied permission to attend the PARIS PEACE CONFERENCE. When Zaghlul and others were arrested and deported in the spring of 1919, demonstrations broke out all around the country. A massive full-scale revolution resulted as Egyptians from all classes, both sexes, all religions, and all professions joined in strikes, boycotts, and demonstrations demanding independence and the release of the Wafd leaders. Hundreds were killed, and the British were forced to bring in troop reinforcements to put down the revolt.

Wingate was recalled and replaced by General Edmund Allenby, a hero of World War I. The Foreign Office anticipated that Allenby would take a hard line

and crush the nationalist movement. Allenby recognized that it was impossible to quell nationalist demands and demanded that Zaghlul be allowed to meet with officials in London. The Wafd traveled to the Paris Peace Conference and to London, but negotiations failed. Upon their return, the demonstrations continued, and the Wafd retained the support of the majority of Egyptians.

The British granted nominal independence under a constitutional monarchy of King Fuad in 1922, but Britain retained widespread power, continued to station troops in Egypt, and interfered in Egyptian politics.

The interwar years were characterized by a tricorn struggle between the monarchy, the British, and the Wafd for political power. The Wafd won every honest election. In the 1924 elections it received a resounding victory, and Zaghlul became prime minister. However, he was forced to resign following the assassination of Lee Stack, British sirdar (ruler) of the SUDAN, while he was visiting his close friend Allenby in Cairo in 1924. Furious, Allenby demanded, without direct permission from London, a public apology, a huge indemnity, the withdrawal of Egyptian troops from the Sudan, and prosecution of the killers. King Fuad, who disliked both the Wafd and the constitution, then appointed a more malleable cabinet.

Allenby was replaced by Lord George Lloyd, a hard-line imperialist. Both Lloyd and the king worked to weaken the Wafd, encouraging the creation of a number of rival parties, but Lloyd's arrogance incited further Egyptian discontent. Zaghlul died in 1927, and Mustafa Nahhas became the Wafd president. Nahhas briefly became prime minister in 1929, and in 1934 the new

British high commissioner, Sir Miles Lampson (later Lord Killern), recommended that the constitution be reinstated. In 1936 the Wafd, led by Nahhas, won the elections and entered negotiations with the British. The Anglo-Egyptian Treaty of 1936 provided for the withdrawal of British troops except along the Suez Canal and was hailed as a victory for the Wafd. In 1937 the Montreux Convention abolished the capitulations, extraterritorial rights and privileges enjoyed by foreigners living in Egypt, and gradually phased out mixed courts, which had given foreigners greater judicial privileges than Egyptian citizens received.

However, negotiations over the status of the Sudan, ruled by Britain with nominal Egyptian input, constantly deadlocked. Egypt had helped to pay for the conquest of the Sudan and had soldiers stationed there, but the British refused to link the issues of the Sudan and Egypt.

During the 1920s and 1930s more extreme political parties on the left and right emerged. A number of paramilitary groups such as the Green Shirts, patterned on BENITO MUSSOLINI's paramilitary Blackshirts in Italy, engaged in terrorism and assassinations of political leaders. The Wafd had its own Blue Shirts, who publicly fought rival groups. A growing gap between the rich and the poor contributed to the discontent. After Fuad's death in 1935, his son Faruk became king. Faruk was notably anti-British and also attempted to undercut the popularity of the Wafd.

When WORLD WAR II broke out many Egyptians adopted a pro-German stance, not owing to any belief in NAZI ideology but on the basis of "an enemy of my enemy is my friend." Egyptians hoped that a British defeat would end the occupation. To counter palace opposition, the Wafd under Nahhas adopted a more flexible position vis-à-vis the British. With the German army led by General ERWIN ROMMEL advancing toward Egypt and the Suez Canal from North Africa, Britain was determined to protect its interests in Egypt. In February 1942 the British ambassador, Sir Miles Lampson, surrounded Abdin Palace in central Cairo with British troops and tanks. He issued an ultimatum that the king either appoint Nahhas prime minister or abdicate. Faruk capitulated, Nahhas was appointed prime minister, but Faruk never recovered from the public humiliation. He became increasing, corpulent and earned a worldwide reputation for gamblingly, womanizing, and racing fast cars. The king gradually lost what public support he may have had among Egyptians.

However, having been put in power by the British, the Wafd was also discredited. Many young Egyptians turned to more radical movements, especially the

MUSLIM BROTHERHOOD. The wartime Wafdist government failed to keep prices down, while mounting inflation and shortages caused more unrest, just as they had in World War I. In 1944, amid charges of corruption and nepotism, Nahhas was forced to step down.

The postwar era was marked by assassinations of top Egyptian politicians and armed attacks on the British army along the Suez Canal. The Arab loss in the 1948 ARAB-ISRAELI WAR further alienated Egyptians, who viewed both the Wafd and the palace as inept and as having failed to meet their demands for the complete withdrawal of British troops from Egyptian soil.

However, Nahhas kept his popular image with flamboyant oratory, and the Wafd won the 1950 elections. By this time many of the old guard Wafdists had left the party to form other parties, but Nahhas failed to bring in new cadres with dynamic programs. Negotiations with the British were reopened but stalled over the issue of the Sudan and the stationing of British troops along the Suez Canal. Demonstrations and attacks against the British escalated, and in 1952 the king was overthrown in a military-led revolution. The revolution also marked the end of the Wafd. Nahhas and Fuad Siraq ad-Din, another key Wafdist, both resigned, and all political parties were formally dissolved in January 1953. Wafdist leaders were tried on charges of corruption, and some were jailed. Nahhas died in 1965.

Under the presidency of Anwar el-Sadat in the 1970s, the Wafd reconstituted itself as the New Wafd with Siraq ad-Din as president. Although the party attracted members from the urban upper and middle class, it never regained the mass popular support it had enjoyed in the first half of the 20th century.

JANICE J. TERRY

Wang Jingwei (Wang Ching-wei)

(1883-1944) *Chinese politician*

Wang Jingwei's given name was Zhaoming (Chaoming), but he was better known by his revolutionary name, Jingwei. The son of a poor government official,

he was educated in traditional schools in China and then studied law in Japan, where he met Chinese revolutionary leader Dr. SUN YAT-SEN and joined his cause to overthrow the Manchu Qing (Ch'ing) dynasty. Wang was sentenced to death for a failed assassination attempt on the prince regent in Beijing (Peking) in 1910, which was commuted to a life sentence, but he was freed at the outbreak of the revolution in 1911.

Wang initially opposed Sun's UNITED FRONT with the Soviet Union but nevertheless joined the United Front government in Canton in 1923. In the power struggle after Sun's death in 1925, Wang and the left-wing Kuomintang (KMT) won leadership of the government. They collaborated with Soviet adviser Michael Borodin and the CHINESE COMMUNIST PARTY (CCP) and ousted the right-wing KMT leaders led by HU HANMIN (Hu Han-min) from Canton. Centrist KMT leader CHIANG KAI-SHEK focused on training a modern army. In 1926 Chiang was appointed commander in chief of the National Revolutionary Army in the NORTHERN EXPEDITION against the warlords to unify China. In the wake of Chiang's victories, Wang moved the KMT government from Canton to Wuhan in the lower Yangzi (Yangtze) River valley. Early in 1927 Chiang allied with the right-wing KMT, purged the CCP in areas under his control, and expelled the Soviet advisers. Wang continued collaborating with the Soviets and the CCP until it became clear that the Soviets intended to eliminate his government and install the CCP in power. Thus, he was forced to dissolve the Wuhan government and go into exile.

Wang returned to China in 1930. He subsequently switched sides several times in a quest for power. He first joined a coalition of warlords (called the Reorganizationists) against the Chiang-led government in 1930; it quickly collapsed. Japan's invasion of Manchuria in 1931 forced the factions of the KMT to cooperate, and Wang headed the civilian government as president of the executive *yuan* (premier) and foreign minister between 1932 and 1935. However, he became the junior partner to Chiang, who led the military and had more support among KMT leaders. Wang became unpopular because he espoused appeasing Japan. A disgruntled army officer wounded him for his pro-Japanese stance in 1935, and while he convalesced abroad, Japan attacked China in 1937. Chiang's popularity soared as he led China to war as director-general of the KMT and commander in chief of the armed forces. Wang was dissatisfied with being number two man in the party and was defeatist over China's chances in the war. In 1938 he secretly left China's wartime capital, Chongqing (Chungking),

surfaced in Hanoi in French Indochina claiming to lead a "peace movement," and then headed for Tokyo, where he gained Japanese support for his leading a puppet government. Although Japan installed him in 1940 as puppet leader in Nanjing (Nanking) for occupied southern China, it also established other puppets in areas it controlled in northern China and Inner Mongolia. Few Chinese of renown in or outside the KMT joined his quisling regime. Wang's physical and mental health deteriorated as Japan's war fortunes sank. He went to Japan for medical treatment in March 1944 and died there in October. His demoralized regime collapsed with Japan's defeat. His politically active widow and other supporters were tried and convicted of treason after the war.

warlord era in China (1916–1927)

Although the warlord era in China officially lasted only a decade, its roots went back to the late Qing (Ch'ing) dynasty, and it persisted after 1927. A warlord, *junfa* (*chun-fa*) in Chinese, was a military leader with a personal army ruling autonomously over a region. Warlords were a diverse group; some were well educated, while others were not, for example, Zhang Zolin (Chang Tso-lin), who began as a bandit, and Feng Yuxiang (Feng Yu-hsiang), who enlisted as an illiterate boy. Some harbored national ambitions, while others were content to be "local emperors."

However, all warlords shared certain important characteristics: a personal army with close ties between the important officers; secure control over a territory and its revenues, which provided for independence; and alliances with other warlords to provide security or secure a balance of power.

Personal armies or militias can be traced to the mid-19th century, when large-scale rebellions raged and the Banner and Green Standard Armies of the Qing

government proved inadequate. Stalwart defenders of the dynasty such as Zeng Guofan (Tseng Kuo-fan) met the crisis by raising personal armies in their home provinces that defeated the rebels and restored order. After its resounding defeat in the SINO-JAPANESE WAR (1894–95), the Qing government commissioned a rising star, YUAN SHIKAI (Yuan Shih-k'ai), to train a New Army, also called the Beiyang (Pei-yang) Army.

The loyalty of this army to Yuan enabled him to secure the abdication of the Qing dynasty in 1912 and to force SUN YAT-SEN, the father of the revolution, to concede to Yuan the presidency of the new Republic of China. This army retained its cohesiveness under Yuan but split apart after his death in 1916. Two factions emerged among Yuan's subordinates, the Chihli Clique under Feng Guozhang (Feng Kuo-chang) and the Anhui Clique under Duan Qirui (Tuan Chi-jui). Another powerful warlord clique was headed by Zhang Zolin of Manchuria. Other lesser warlord groups included those headed by Yen Xishan (Yen Hsi-shan) of Shanxi (Shansi) province, Feng Yuxiang of the Northwestern Provinces, and an uncle and nephew duo surnamed Liu who controlled Sichuan (Szechuan) province.

There were literally hundreds of wars fought singly and in coalition among the warlords, ranging from local to national in scale. While most warlords accepted the ultimate reunification of China as inevitable, each wanted to enjoy and expand his power during the interim, form coalitions to postpone the eventual unification, and perhaps emerge finally as the unifier.

Thus, they formed alliances, usually unstable, and sought foreign loans and sometimes protection for which they were willing to sell out Chinese interests. The central government in Beijing (Peking) was unstable and powerless during this era: seven men served as head of state who were either the dominant warlord who controlled the capital region at the time or their proxies. The constitution of the early republic and the parliament became the toys of the clique in power.

The warlord era brought extreme chaos to China. Military men replaced civilian officials, and fixed taxation was replaced by forced levies to satisfy the never-ending demands for revenue. Paradoxically, this bitter period in Chinese history provided for the intellectual diversity and experimentation that led to the intellectual revolution, the revitalization of the Kuomintang, or Nationalist Party, and the formation of the CHINESE COMMUNIST PARTY. The era ended with the triumph of the NORTHERN EXPEDITION led by CHIANG KAI-SHEK of the Kuomintang in 1928.

Washington Conference and Treaties (1921–1922)

In 1921 President Warren Harding of the United States called an international conference in Washington, D.C., and invited representatives of Great Britain, France, Italy, Japan, China, Belgium, the Netherlands, and Portugal to attend. The issues at hand were a looming naval race between the United States and Japan, the uneasiness felt by Great Britain and among some Commonwealth nations over the continuation of the ANGLO-JAPANESE TREATY, and failure to settle the SHANDONG (Shantung) QUESTION between China and Japan at the PARIS PEACE CONFERENCE.

U.S. secretary of state Charles Evans Hughes and British foreign secretary Sir Arthur Balfour cooperated to achieve the following results:

1. The Four-Power Pact between the United States, Britain, France, and Japan, in which each pledged mutual respect of each others' interests and to consult and seek diplomatic solutions to problems that concerned them. This pact replaced the Anglo-Japanese treaty and would last 10 years.
2. The Five-Power Treaty (also called the Naval Limitations Treaty), in which the United States, Britain, Japan, France, and Italy pledged a 10-year naval holiday in capital ship building, to limit the tonnage of individual battleships, and other provisions. The five principal naval powers' respective naval strength would be based on the 5:5:3:1.75:1.75 ratio. Although this ratio gave the United States and Britain naval superiority, it made Japan supreme in the western Pacific. It was to last through December 31, 1936.
3. The Nine-Power Treaty (which included all nine countries represented at the conference), in which

all eight powers other than China pledged to respect the OPEN DOOR and territorial integrity of China and to refrain from seeking special privileges in China. This treaty took a historic principle of U.S. diplomacy (the Open Door policy) and made it international law. China failed to win an immediate end to the unequal treaties and to gain tariff autonomy but was permitted to raise its import tariffs from 3.5 percent to 5 percent. Britain, the United States, France, and Japan agreed to close down the independent postal systems they had established in China, and Britain agreed to return to China its naval base at the port of Weihaiwei.

In addition, Hughes and Balfour acted as intermediaries in bringing together the delegates of China and Japan to settle the Shandong Question, which had been unresolved at the Paris Peace Conference. The controversy was whether China should regain sovereignty over Shandong, which had been abridged since 1898 by Germany, or whether Japan should be allowed to maintain a sphere of influence over the province. British and U.S. diplomats served as observers in 36 meetings between Chinese and Japanese delegates that culminated in the Sino-Japanese treaty in February 1922.

Japan agreed to evacuate from Shandong, return the Jiaozhou (Kiaochow) naval base, and sell the Jinan-Qingdao (Chinan-Tsingtao) Railway to China over a 15-year period. Japan agreed to these concessions largely as a result of Anglo-American pressure, adverse world public opinion, and a moderate government under Prime Minister HARA KEI, who was, however, assassinated just as the conference opened. Taken together, the Washington Treaties forestalled a naval race and improved international relations in East Asia.

Weimar Republic

The term most commonly used for the government of Germany from 1919 until 1933, named after the town in central Germany where its constitution was drafted,

the Weimar Republic was Germany's first experiment with a liberal democratic government. Throughout its existence the Weimar Republic faced almost constant attacks from the radical left and radical right and had to deal with unstable governments and severe economic crises. It ended in 1933 when ADOLF HITLER assumed dictatorial power and effectively revoked the republic's constitution.

The origins of the republic can be traced to the final months of WORLD WAR I. As it became increasingly clear that Germany was going to lose the war, its generals set in motion plans to negotiate an armistice with the Allied powers. In order to gain favor with the Allies as well as avoid associating the military with the defeat, the generals permitted the creation of a liberal civilian cabinet to carry out the talks. What began as an experiment in constitutional monarchy quickly collapsed as soldiers and workers rose up against the imperial government in November 1918. On November 9 Emperor William II was forced to abdicate. A republic was soon proclaimed. Friedrich Ebert of the Social Democratic Party (SPD) became chancellor and immediately set in motion the election of a constituent assembly. However, before the assembly could meet to draft a new constitution, Ebert was forced to put down the large number of socialist revolutions erupting throughout Germany.

As the parliament convened at Weimar to draft a new constitution, the Allies presented Germany with the terms of the Treaty of Versailles. The signing of the treaty dealt a severe blow to the new republic's legitimacy. Even moderate Germans considered the loss of territory, reparations, and the war guilt clause as unjust and unnecessarily punitive. With the German army apparently undefeated on the battlefield, many Germans, especially on the political right, came to believe the so-called Stab in the Back Legend, which blamed Germany's defeat and humiliation on the liberal civil government, socialists, and Jews.

The constitution of the Weimar Republic guaranteed civil liberties, granted universal suffrage, and strengthened the German parliament, the Reichstag. However, the political upheavals led those drafting the constitution to seek a strong executive authority. The office of the president was thus given the right to dissolve the Reichstag and, under the provisions of article 48, the ability to issue emergency decrees. The constitution also allowed for proportional representation, giving smaller parties representation in the Reichstag. The constitution was adopted on August 14, 1919, with Ebert as first president.

Upon ratification of the constitution, the republic's most pressing challenge was paying the reparations instituted by the Versailles Treaty. As a consequence of the German Empire's deficit spending during World War I and mismanagement of the economy after the war, the mark rapidly decreased in value to the point that it was effectively worthless by 1923. French and Belgian troops occupied the Ruhr Valley to force reparations payments. Mass political violence was common throughout German cities, as right- and left-wing paramilitary units clashed in the streets and attempted to seize power. On November 9, 1923, Adolf Hitler and the National Socialist (NAZI) Party made a failed attempt to overthrow the government of Bavaria in the Beer Hall Putsch. At the same time the mark had sunk to 4.2 trillion marks per dollar. A new government under Gustav Stresemann of the German People's Party (DVP) helped stabilize the situation with the creation of a new currency, called the Rentenmark. By 1924 the German currency and economy had stabilized. However, the shock to many Germans caused by the hyperinflation was severe and would not be forgotten when Germany faced another economic crisis in 1929.

STABLE PERIOD

Between 1924 and 1929 the Weimar Republic was relatively stable. However, it continued to face weak administrations, as a substantial number of Reichstag deputies were from parties that sought to either undermine or overthrow it. To the parties of the right, the republic was a weak, vacillating, treasonous government dominated by Jews and socialists. The most radical of these parties, Hitler's Nazis, was steeped in a racist, anti-Semitic ideology. It sought a right-wing anticommunist revolution that would end the republic and create a new authoritarian regime that would purge Germany of socialist and Jewish influence and redress the humiliation of the Versailles Treaty. To the radical left the parliamentary democracy was an unacceptable compromise with capitalism that inhibited the proletarian revolution sought by the German communists. In 1925 Friedrich Ebert died, robbing the republic of a strong supporter in the president's office. To replace him German voters elected the old general Paul von Hindenburg.

The republic was not without its supporters, however, and the period between 1924 and 1929 was one of consolidation and many diplomatic victories. The SPD, the German Democratic Party (DDP), and the Catholic Center Party remained the only parties consistently supportive of the republic, and they formed what was known as the Weimar Coalition. These parties,

along with the right-of-center DVP, formed most of Weimar's governing cabinets. However, even the SPD, the republic's chief supporters, chose to serve as an opposition party during much of Weimar's existence.

In foreign affairs the republic achieved several diplomatic successes under the leadership of Stresemann, who served as foreign minister in all of Weimar's cabinets until his death in 1929. Stresemann pursued a policy of fulfillment, by which he publicly declared Germany's willingness to adhere to the Versailles Treaty while at the same time working to gradually revise most of its provisions. In 1925 Germany signed the LOCARNO AGREEMENTS and the Treaty of Berlin, and in 1926 the country was admitted to the LEAGUE OF NATIONS.

The worldwide GREAT DEPRESSION, which erupted as a consequence of the New York stock market crash, caused irreparable damage to the republic's stability and legitimacy. Whatever gains it had made since 1924 were reversed as German voters, recalling the hyperinflation and facing an even worse crisis, became disillusioned with the current governing parties. The depression hit Germany particularly hard. Unemployment in many regions reached over 33 percent. A center-right coalition was assembled under Heinrich Brüning, whose orthodox economic policies failed to combat the depression. Lacking both economic imagination and a majority in parliament, Brüning relied on emergency decrees through the office of President Hindenburg. Brüning's support in parliament suffered a critical blow during the elections of 1930, which saw a marked increase in votes for antidemocratic parties. The Nazis, who before the depression had held just 12 seats in the Reichstag, saw their numbers rise to 107. In 1932 Adolf Hitler ran for the presidency but was defeated by Hindenburg; Hitler won 37 percent of the vote.

NAZI PLURALITY

In 1932 Brüning resigned and was replaced by the aristocratic, reactionary Franz von Papen. Von Papen was even less capable of maintaining support from the Reichstag than Brüning had been, and Hindenburg called for elections in July, which produced a stunning Nazi plurality of 37 percent.

When Hindenburg offered Hitler a position in the government, Hitler declined, insisting that as leader of the Reichstag's largest party he should be chancellor. Still unable to effectively govern without enlisting the aid of the SPD, Hindenburg and von Papen called for yet another round of elections in November. Von Papen

fell from office and was replaced by Reichswehr minister Kurt von Schleicher.

The decline in votes for the Nazis to 33 percent led to concerns within the ranks of the Nazi Party about sustaining their popularity, and Hitler became amenable to some type of deal with Hindenburg. On January 30, 1933, Hindenburg agreed to appoint Hitler chancellor and von Papen vice-chancellor. Intending to box Hitler in with a majority of non-Nazi ministers, von Papen hoped to be able to control the government.

However, the Nazis controlled several important posts, such as the Reich and Prussian ministries of the interior. Following the Reichstag building fire in February 1933, Hitler pressed the Reichstag to pass an Enabling Law, granting him full dictatorial powers. This act was followed by the dissolution of civil liberties, the banning of political parties, Nazi control of the press, and incarceration of political opponents in concentration camps. In August 1934, upon the death of President Hindenburg, Hitler combined the office of president and chancellor and became Führer. Although the republic had been effectively dead for over a year, this act finalized its dissolution.

NICHOLAS J. SCHLOSSER

Weizmann, Chaim

(1874–1952) *Zionist leader, first president of Israel*

Chaim Weizmann was one of the founders of the modern state of Israel. Born in Motol (now in Belarus) when it was under Russian rule, Weizmann studied chemistry in Switzerland, where he met his future wife, Vera Chatzman, a medical student. In 1904 they moved to England, where Weizmann taught at the University of Manchester. He became a British citizen in 1910.

During WORLD WAR I Weizmann worked at the British Admiralty laboratories and was instrumental in using

industrial fermentation for the production of acetone, used in explosive propellants. A leading figure in the World Zionist Organization (WZO), Weizmann advocated so-called practical ZIONISM, which encouraged Jewish settlement in Palestine coupled with an active diplomatic program to gain international support for the creation of a Jewish state. Weizmann's skills as a diplomat were as great or greater than his skills as a chemist. He became acquainted with many high-ranking British politicians, including Arthur Balfour, foreign secretary during World War I, and WINSTON CHURCHILL. He was instrumental in the issuance of the BALFOUR DECLARATION in 1917, whereby Britain publicly expressed support for some form of Jewish state in Palestine.

After World War I Weizmann represented the Zionists at the PARIS PEACE CONFERENCE; he met with Emir Faysal, Sherif Husayn's son and future king of Iraq in 1918 and 1919. These meetings resulted in the Faysal-Weizmann agreement of January 1919 wherein Faysal recognized the Balfour Declaration and also agreed to Jewish immigration into Palestine.

Weizmann agreed to foster economic development for Arabs in Palestine. Faysal stressed in a written codicil at the end of the agreement that his commitments would be null and void if full Arab independence was not granted. When the Arabs failed to achieve national independence after the war, Faysal considered the agreement invalid.

Weizmann served as head of the World Zionist Organization from 1920 until 1931 and again from 1935 to 1946. However, his generally pro-British stance angered some Zionists in Palestine, who felt Weizmann was too conservative and not aggressive enough in pushing for the creation of a Jewish state. As a result, Jewish leaders in Palestine, especially DAVID BEN-GURION, emerged as the actual political powers of Israel after it was established in 1948.

However, Weizmann's diplomatic skills and his cordial relationships with Western leaders were highly prized, and he met with President HARRY S. TRUMAN in 1948 to urge U.S. recognition and support for the Jewish state of Israel. After Israel's independence Weizmann was elected to the largely ceremonial post of president; he held the position from 1949 until his death in 1952. After his death Weizmann was buried in his home of Rehovoth, where he had founded a research institute, now known as the Weizmann Institute of Science.

JANICE J. TERRY

Wilson, Woodrow

(1856–1924) *U.S. president*

Thomas Woodrow Wilson was born in Staunton, Virginia, in 1856. Wilson's father, a Presbyterian minister, moved the family during the Civil War to Georgia, where his son witnessed the devastation wrought upon the South by Northern troops; this left a lifetime impression on him.

Wilson graduated from the College of New Jersey (Princeton) and the University of Virginia Law School before earning a doctorate at Johns Hopkins University. After teaching at Bryn Mawr and Wesleyan, he became the first lay president at Princeton in 1902. He implemented policies directed at restructuring and modernizing instructional techniques and discouraged student discrimination by eliminating elite eating clubs.

Entering politics, he became the Democratic governor of New Jersey, where he distinguished himself as a reformer while pursuing a progressive strategy that alienated the entrenched political machine of Boss James Smith, Jr. Wilson's support for finance reform, worker's compensation, a direct primary, and public service commissions elevated him to a national figure and a presidential hopeful.

In the presidential election of 1912, the Republican vote split between William Howard Taft and Bull Moose Party candidate THEODORE ROOSEVELT, who also received support from the National Progressive Republican League. Wilson, having obtained the Democratic nomination on the 46th ballot, prevailed with an overwhelming majority of the electoral votes and implemented his New Freedom agenda. This innovative progressive program advanced women's suffrage, reduced tariffs, and instituted an income tax as well as creating the FEDERAL RESERVE Act of 1913 with a central bank in 12 reserves, the legality of unions under the Clayton Antitrust Act, a low rate of loans for farmers under the Federal Farm Loan Act of 1916, and the regulation of child labor under the Keating-Owen Act of 1916.

Although his administration had not hesitated on military interventions in Latin America, two years after

WORLD WAR I began in 1914 Wilson was reelected on the slogan "He Kept Us Out of War." At the beginning of World War I, isolationist sentiment in the United States was very strong, and Wilson was determined to follow a policy of neutrality. But as trade with Great Britain and the Allies increased almost fourfold and as Germany refused to discontinue submarine warfare, sentiment changed. When the inflammatory Zimmermann Note regarding Mexican intervention against the United States at the behest of Germany was intercepted, Wilson asked Congress for a declaration of war to "Make the World Safe for Democracy." His was to be a peace without victory.

Woodrow Wilson's vision of an enduring world peace was set forth in his Fourteen Points, presented before the peace conference at Versailles. They called for:

- I. Open covenants of peace
- II. Freedom of navigation
- III. Equality of trade conditions
- IV. Armament reductions
- V. Impartial adjustment of colonial claims
- VI. Evacuation of Russian territory
- VII. Restoration of Belgium
- VIII. Restoration of French territories, including Alsace-Lorraine
- IX. Readjustment of Italy's borders
- X. Autonomous development of Austria-Hungary
- XI. Evacuation and restoration of Romania, Serbia, and Montenegro
- XII. Sovereignty for Turkish portions of the Ottoman Empire and free passage through the Dardanelles
- XIII. Creation of an independent Polish state
- XIV. Formation of an association of nations to guarantee political independence

The Allies did not share Wilson's vision and only accepted the plan for a LEAGUE OF NATIONS. At home the "Irreconcilables," 16 senators and representatives who were led by Henry Cabot Lodge, refused to sign the Versailles Treaty and campaigned vigorously against the League of Nations.

Wilson embarked on a demanding national tour to take his message to the U.S. public, who responded with enthusiasm, but no congressional vote changed. Exhausted, the president suffered a stroke and served out his term as a virtual invalid before dying in 1924. The United States never signed the Versailles Treaty and never joined the League of Nations.

President of the United States during World War I, Woodrow Wilson fought for the adoption of his Fourteen Points to maintain international peace. He is seen here throwing the first ball on the opening day of the baseball season, a political ritual.

Despite his impressive efforts toward achieving and maintaining world peace, Wilson's legacy is tarnished by his views on race. He allowed his cabinet members to segregate their respective offices, leading to the first widespread segregation in Washington, D.C., since the American Civil War. In later years, as president of Princeton University, Wilson discouraged African Americans from even bothering to apply. Perhaps the greatest indictment of Wilson's racial views come in the movie *Birth of a Nation*, a film that depicts the KU KLUX KLAN in a positive light. Wilson's *History of the American People* endorses the southern version of Reconstruction, that is, the victimization of southern whites.

JANICE J. TERRY

women's suffrage and rights

It took civil disobedience and a world war, but after 1900 new campaigns in the long struggle for woman suffrage finally succeeded. By 1950 most of the world's women could vote, although holdout nations remained. Legal restrictions and customs also discouraged women from seeking political office. Success made some important changes in women's lives. Yet many feminist leaders in the United States and elsewhere viewed these changes as inadequate and proposed additional reforms to achieve true gender equality.

Despite bruising internal struggles, a new generation of suffragists attracted thousands of supporters, including working women. Mass demonstrations became more confrontational. After she was advised by Britain's prime minister to "be patient," suffrage leader Emmeline Gould PANKHURST (1858–1928) became less so, leading her adult daughters and throngs of supporters into confrontations that included hunger strikes and vandalism. More peaceful rallies were mounted by Millicent Garrett Fawcett (1847–1929), Pankhurst's

Women in the United States received suffrage as a result of the Nineteenth Amendment to the Constitution.

movement rival. When WORLD WAR I erupted in 1914, both organizations patriotically dropped their protests for the duration. In 1918 British women aged 30 could vote; men voted at age 21. The disparity ended 10 years later.

In the United States new leaders, including Carrie Chapman Catt (1859–1947), revived a splintered movement by reaching out to immigrant and working women. Stymied in many states, suffragists refocused their efforts on Washington, D.C., proposing what became in August 1920 the Nineteenth Amendment to the Constitution.

Their hard-fought battle included protests in which women dressed in white, chained themselves to the White House gates, and held hunger strikes. When the United States entered the war in 1917, most suffragists supported the war effort, but pacifist Jeannette Rankin of Montana, the first woman elected to Congress, voted against the war resolution.

Suffrage for Canadian women, enthusiastically promoted by temperance groups, first succeeded in Manitoba in 1916. All Canadian women could vote in federal elections after 1918; not until 1940 did Quebec drop its opposition to women voting on provincial issues.

In North America the 1920s were nominally the era of the “flapper,” a brash young woman who scandalized with her seeming freedom of dress, speech, and behavior. Although U.S. women college graduates doubled in the decade and a quarter of women held

paying jobs, it soon became clear that voting was no magical passport to equality.

By 1923 U.S. feminist Alice Paul (1885–1977), who had been jailed in both British and U.S. prewar suffrage protests, was calling for an Equal Rights Amendment. Paul was not alone. Charlotte Perkins Gilman (1860–1935), grandniece of Harriet Beecher Stowe, advocated women’s economic independence free of female stereotypes. English writer Virginia Woolf in her 1929 *A Room of One’s Own* argued that managing money made women freer than did voting.

The meaning of equality was contentious. Some hoped that women and men would eventually be treated exactly alike. Others believed that women still occupied a separate sphere in modern society. Many nations enacted special protections for working women. Newly elected Reichstag deputy Marie Juchacz told her WEIMAR REPUBLIC colleagues in 1919 that women’s grievances should be considered resolved. Many women made their mark by continuing to bring femininity to bear on such issues as child welfare, education, healthful housing, and world peace. By the 20th century, birth control and abortion had become issues of intense public controversy. U.S. nurse Margaret Sanger (1870–1966), one of 11 children, was arrested for distributing information about contraception and opening a Brooklyn clinic in 1916. Her movement, later named Planned Parenthood, remained controversial even though Sanger took pains to target only married women. Inspired by Sanger, Scots botanist Marie Stopes (1880–1958) wrote *Wise Parenthood* in 1918 and became Britain’s foremost birth control advocate. In Europe, where political parties and religions were closely tied, the movement struggled. The 1917 Bolshevik Revolution initially promised Soviet women reproductive choices, but by 1936 abortion was recriminalized.

The worldwide GREAT DEPRESSION of the 1930s and the subsequent outbreak of WORLD WAR II had contradictory effects on women. Hard times prompted leaders in many countries to try to prevent married women from “stealing” work from men. The idea that women should refocus on “Kinder, Kirche, Kuchen” (children, church, cooking), attributed to the emerging regime of ADOLF HITLER, was broadly accepted by many conservative political parties. Since women were paid less and their employments, like cleaning, teaching, and clerical chores, were not as endangered as “male” manufacturing jobs, depression-era women often became their families’ main breadwinner.

In the United States FRANKLIN D. ROOSEVELT’S NEW DEAL brought women into important govern-

ment positions. Frances Perkins, who had worked at JANE ADDAMS's Hull-House and with ALFRED E. SMITH in the aftermath of New York's TRIANGLE SHIRTWAIST FIRE, became secretary of labor, the first woman to hold a cabinet post. Roosevelt's wife, Eleanor, held no paid position but reached out to depression victims, including African Americans, in her role as first lady. Nevertheless, most New Deal programs heavily favored male workers.

This changed dramatically as the United States entered the war. Women in Europe and North America had played important roles during World War I, but World War II offered even more opportunity. As more men went to war, it fell to women to maintain or even increase their homelands' agricultural and manufacturing production.

In the United States an elaborate propaganda effort persuaded women that they could become "Rosie the Riveter," a pert and muscular young woman who could wield a welding torch as effectively as she could type a letter. Women, including married women, became a third of the U.S. workforce. Although most female war workers continued to do "women's jobs," 350,000 joined the armed forces, and 3 million worked in defense industries. Despite problems with child care and other issues, most were proud of their work and pay. In 1945, as troops began mustering out to resume civilian lives, so did female defense workers. By 1950 Rosie seemed a distant memory as the United States (and most other nations) returned to gender "normalcy."

MARSHA E. ACKERMANN

World War I

In the spring of 1914 President WOODROW WILSON sent his chief adviser, Colonel E. M. House, on a fact-finding mission to Europe. Greatly disturbed by the obvious escalating tension generated by international rivalries House reported: "The situation is extraordinary.... It only needs a spark to set the whole thing off." The incident that triggered the explosion was the assassination of the heir apparent to the Austrian throne, Franz Ferdinand, and his wife on June 28, 1914, as they drove

in an open car through the streets of Sarajevo, the sleepy capital of Bosnia.

The assassin was Gavrilo Princep, a young Bosnian Serb who belonged to a secret terrorist Serbian society pledged to the overthrow of Habsburg control in south Slav territories. Austrian statesmen assumed erroneously that the Serbian government was involved in the murderous deed. Here was an opportunity to settle accounts with the Serbs, who had long fanned political unrest among the Slavic population within the Austrian Empire. Assured of German support, Vienna fired off a harsh ultimatum to the Serbian government. Belgrade's reply was conciliatory; it accepted all but one of the demands. The Austrian government deemed the reply unsatisfactory, broke off diplomatic relations, and on July 28 declared war on Serbia.

Austria's hope that the conflict could be localized was dashed when the rival alliances, which had divided Europe since 1907, immediately came into play. Within a week Austria and Germany were pitted against Serbia, Russia, France, Belgium, and Britain. The former belligerents came to be known as the Central powers and the latter as the Allies. From the beginning both sides tried to enlist allies. In November 1914 the Ottoman Empire cast its lot with the Central powers, as did Bulgaria in October of the following year. The Allies enticed many more nations, with Italy, Romania, Greece, and the United States as the chief ones.

German strategy, devised by Count Alfred von Schlieffen in 1905, was intended to avoid a war on two fronts. It called for a holding action against the slowly mobilizing Russians in the east while striving for a quick knockout victory over France. Swinging through Belgium to outflank French border defenses, German forces would encircle Paris and destroy the French army by falling upon its rear. Once France was eliminated, the Germans would unite their troops and deal with the Russians at their leisure. In executing their plan the Germans had no compunctions about violating their pledge to respect Belgian neutrality, contemptuously referring to it as "a scrap of paper."

All went well for the Germans in the beginning. Their armies overran southern Belgium and by early September had reached the Marne River, 40 miles from Paris. The Allied forces rallied and counterattacked, forcing the Germans to retreat and dig in along the Aisne River. The opposing armies now tried to outflank one another in what came to be called "the race to the sea." By the end of 1914, the conflict had entered a new phase. The war of movement had become one of position as hundreds of thousands of men faced each other in two

long lines of trenches that stretched from the English Channel across northeastern France to the Swiss border. None of the commanders understood that modern weapons, particularly the machine gun and fast-firing artillery, gave the defenders a decided advantage over the attackers. Massive assaults by both sides resulted in terrible loss of life without shifting the trench lines more than a few miles.

EASTERN FRONT

The war on the eastern front was mobile, in contrast to its western counterpart, with considerable gain and loss of territory. The Russian army fought on two fronts in the early months of the conflict, one against Germany and the other against Austria. In responding to their French ally's plea for help, the Russians mobilized faster than German planners had thought possible and invaded East Prussia. Although the Russian army was the largest among all the combatants, it suffered from overhasty preparation, inadequate logistical support and war matériel, and poor leadership. The small German army, reinforced by divisions from the west, destroyed a Russian army at Tannenberg and routed another one two weeks later at the Masurian Lakes. Despite suffering horrendous losses, the Russians had upheld their end of the bargain, forcing the Germans to divert troops to the eastern front and thus easing the pressure on their allies in the west.

The Russian moves began auspiciously against the Austrians in the fall of 1914. They overran Galicia, inflicted heavy casualties, and threatened to break across the Carpathian Mountains into Hungary. Reeling, and with the Czechs and other Slavic conscripts deserting in droves, Austria seemed almost on the verge of collapse. But the Russians were unable to administer the coup de grâce because of overextended supply lines and because the Germans sent reinforcements to stiffen the demoralized Austrian armies. During the spring of 1915, a combined German-Austrian force launched a surprise attack against the Russian front and broke through between Tarnov and Gorlice. By the end of the summer, the Central powers had recaptured Galicia, conquered nearly all of Poland, and inflicted on the underequipped Russians severe losses from which they never fully recovered.

WESTERN FRONT

Heavily involved in operations in the east, the Germans were forced to remain on the defensive in the west throughout 1915. This gave the British and the French the opportunity to seize the initiative and mount a series of attacks in the spring and summer. Each operation

began with a preliminary bombardment designed to break up wire entanglements and flatten the trenches. But German fortifications were solidly built and able to withstand the bombardment, so when it stopped, machine gunners returned to their posts and raked the attacking troops with an incessant deadly fire, cutting down wave after wave. For all their suicidal courage, the British and French armies had nothing to show except a massive casualty list.

In 1915 the British, with French assistance, sought to get around the deadlock in the west by attacking the Dardanelles. Successful action here would knock Turkey out of the war, open a southern sea route to Russia, and wreak havoc in Austria's backyard. An Anglo-French fleet was sent to force the strait, but the attempt in March was abandoned when six ships were sunk or disabled by undiscovered mines. Toward the end of April, French troops landed on the Asiatic side of the strait, while the main thrust was carried out by British and empire forces on Gallipoli. As the element of surprise had been compromised by the naval attack, the landing forces on the peninsula met fierce Turkish resistance and were pinned down on the beaches. A long, bloody, and inconclusive campaign developed and drew in more and more Allied troops with no end in sight. Finally, in December 1915 the Allies began the process of withdrawal after suffering a quarter of a million casualties. The operation had been poorly planned and executed, and WINSTON CHURCHILL, the moving spirit behind it, was ousted as first lord of the admiralty.

Both sides turned back to the west in 1916. The Germans struck first. In February General Erich von Falkenhayn, chief of the German General Staff, picked Verdun for the site of a great offensive that he calculated would bleed the already weakened French army to death in a war of attrition. The fortress had no real strategic value, but the battle turned into a test of will, with great losses on both sides. After months of bitter fighting, the French line held. In July the British army, under the command of General Douglas Haig, opened its greatest offensive of the war along the Somme. The week-long bombardment that had preceded the assault had little effect on the German defenders, who were sheltered in meticulously constructed dugouts some 40 feet below the surface. As the British went "over the top" and raced across no man's land, the Germans scrambled from their dugouts, set up their machine guns, and cut them down as they approached.

On the first day alone the British sustained slightly over 57,000 casualties, of whom some 19,000 were

Australian infantry wear small box respirators for protection against gas attacks during World War I.

killed—the highest daily casualty rate of any battle in history. Despite mounting losses, Haig persisted in pushing his men in the face of murderous fire until the November rains compelled him to terminate the operation. The Battles of Verdun and the Somme had attained a level of horror and destructiveness that were matched the following year by the French failure in Champagne and especially the British defeat at Passchendaele. There was no science to these battles of attrition, the object of which was to exhaust the enemy's human and material resources. Commanders felt justified in feeding their men into the mincing machine as long as they were convinced they were inflicting greater casualties on the enemy.

While the Anglo-French armies continued to hammer away in vain at the enemy's impregnable position in the west, the Russians achieved a breakthrough in 1916. Although stunned and staggering after the blows of 1915, they pulled things together and had stabilized the line by the latter part of the year. Eager to profit from Russia's inexhaustible reservoir of manpower, the western Allies drove their high command to undertake

an offensive to draw German troops away from the western front.

Unable to make progress against the Germans, the Russians turned against the Austrian army. Beginning in 1916 four Russian armies under the newly appointed commander of the southwest sector, General Alexei Brusilov, achieved instant and spectacular success. The Austrian army, caught by surprise, dispirited, and weakened by withdrawals for operations against Italy in the Trentino, "broke like a piecrust" along a 200-mile front. Throughout July and August and into September, Brusilov's offensive rolled forward with little resistance, bagging 450,000 Austrian prisoners and inflicting losses of 600,000. It was the greatest victory scored by any of the Allied armies since the onset of trench warfare two years earlier. Had Brusilov possessed the means to bring up reinforcements and supplies at top speed to exploit his gains, he might have driven Austria from the war. As it was, the enforced delay allowed the Germans, with their superior communications, to come to the rescue of their beleaguered ally. Transferring massive reinforcements from France to the east, they halted Brusilov and restored the Austrian front by October. The Brusilov offensive had the effect of compelling both the Germans to abandon the siege of Verdun and the Austrians to divert troops from the Italian front. But the cost had been heavy. Brusilov's forces had sustained an estimated 1 million casualties. It was the last great Russian effort in the war. The following year the Russian army began to disintegrate, opening the way for the Bolsheviks to seize control of the government in the RUSSIAN REVOLUTION and carry out their promise to make peace. By the end of 1917, Russia was out of the war.

If victory eluded the Allies on land, their control of the seas would prove decisive in the long run. At the outset Britain's Royal Navy drove German shipping from the ocean, making it possible to isolate and later occupy its overseas colonies. Sea power, moreover, allowed the Allies to stop and search neutral ships and confiscate any goods that they judged to be of value to the enemy. It may have violated the principles of international law in naval warfare, but it was highly effective. The Allied naval blockade shut off Germany from badly needed overseas resources, not just military supplies for its armies but also food for its civilian population.

The most surprising element in the naval war during the first two years was the absence of a major confrontation between the British and German fleets. Admiral Sir John Jellicoe, commander of the Royal Navy, was content to maintain a blockade from afar and pursue a cautious policy, unwilling to risk a defeat that could

endanger Britain's security. As Churchill once remarked, "Jellicoe was the only man on either side who could lose the war in an afternoon." On the other hand, the German High Seas Fleet remained stationed in home ports, although occasionally conducting night raids on British ports. Single-minded and aggressive, Admiral Reinhard Scheer, who replaced Admiral Alfred von Tirpitz as the naval commander early in 1916, was no more anxious than his predecessor to provoke the larger Royal Navy in an all-out battle.

Instead, Scheer hoped to weaken the British blockade by luring a portion of the Royal Navy into the main body of the High Seas Fleet, where it could be destroyed. But owing to poor scouting, the greater part of the Royal Navy was at sea when the Germans tried one such sortie at the end of May 1916. What followed was the one great naval battle of the war, fought in the North Sea off Jutland. When it was all over after a day and night of furious action, the British had suffered somewhat heavier losses in terms of tonnage and casualties, but the relative strength of the two navies remained much the same. From the point of view of gunnery and seamanship, the Germans had shown themselves to be superior, but their ships were outclassed by the heavier guns of and inferior in numbers to the British dreadnoughts. Sensing impending disaster, Scheer turned and made for home, escaping practically unscathed under the cover of darkness. The German High Seas Fleet would not venture out of its home ports again for the rest of the war.

THE LUSITANIA

The Germans next pinned their hopes on the submarine to evade Britain's control of the sea's surface. Early in the war German submarines, cruising undetected, had attacked unarmed ships carrying cargoes vital to Britain's war effort. In May 1915 a British liner, *Lusitania*, was sunk off the coast of Ireland with the loss of 1,200 lives, many of them Americans. Although the ship was carrying munitions and other contraband goods, the shocking toll of lives among women and children caused a storm of indignation in the United States. Further sinkings of unarmed ships led to stronger protests by President Wilson, who threatened to rupture relations with Berlin.

To mollify the Americans, the Germans agreed to suspend attacks against liners and neutral merchant ships. But by the end of 1916, the effect of the Allied blockade was beginning to cause serious food shortages in Germany and Austria. The new military leaders in Germany, General Paul von Hindenburg and his brilliant chief of staff, General Erich Ludendorff, were convinced that defeat was inevitable if the war lasted

much longer. Their solution was to resume unrestricted submarine warfare, even though they knew that such a policy was likely to bring the United States into the war on the side of the Allies. They reasoned, however, that it would take the United States many months to train and transport its military forces to the battlefield, by which time they expected to have starved the British into submission.

On February 1, 1917, a new phase of unrestricted submarine warfare went into effect after Berlin announced that all ships, including those of neutral nations, sighted within a specified zone around Great Britain or in the Mediterranean would be sunk without warning. Since the U.S. government could not stand idly by and accept the wanton destruction of U.S. property, it declared war on Germany on April 6. At first the submarine campaign met and exceeded the expectations of its planners. In February U-boats sank 540,000 tons of Allied shipping; in March 594,000 tons; and in April a whopping 881,000 tons. Thereafter the toll of tonnage began to subside but remained sufficiently high in the summer to cause British statesmen considerable anxiety. Faced with a new and destructive offensive weapon, the British gradually developed countermeasures in the form of detection devices, depth charges, mines, and especially the convoy system. Collectively, they brought the submarine menace under control by the end of 1917.

Since the submarine had failed to break the blockade, the Germans were confronted with the necessity of forcing a decision on the western front. By then Germany's population was war weary and starving, and its allies were dispirited and largely spent. Ludendorff, who was really in full charge of the German war effort, decided to stake everything on a final drive for victory before the United States could reach the front in large numbers. Russia's withdrawal from the war the preceding winter had enabled the Germans to transfer large forces from the eastern to the western front. Between March 21 and July 15 Ludendorff delivered five massive blows, which brought the war to a climax. The first (March 21–April 5) fell upon the British in the Somme sector, close to where their lines joined the French army. Ludendorff aimed to isolate the British army from the French and then drive it into the sea.

GENERAL FOCH

Using effective tactics pioneered by General Oskar von Hutier, the Germans overwhelmed the badly outnumbered British forces, inflicting an estimated 178,000 casualties and advancing up to 40 miles. The British line bent ominously but did not break. In the midst of the

crisis British and French political leaders met and decided to entrust at once control of all forces in the west to General Ferdinand Foch, the most able of the French generals. At the same time, the British government strained every nerve to reinforce its badly depleted forces. By diverting units from other theaters, sending boys 18½ instead of 19 into combat, and returning 88,000 men on leave to their units, a total of 170,000 men were sent immediately to France with others to follow.

Having narrowly failed to capture Amiens and divide the two allies, Ludendorff again struck at the British, this time at Lys, south of Ypres (April 9–April 29), where there seemed a possibility of breaking through to the channel ports to cut off their evacuation route. Although the British were driven back 15 to 20 miles in places, the Germans lacked the reserves to convert their initial success into a major victory. Ludendorff's next attack was directed at the French between Soissons and Reims and, like the other two, got off to a fast start (May 27–June 3).

The Germans sent the French reeling back and advanced a record 12 miles in a day. By May 31 they had fought their way to the Marne and were less than 40 miles from Paris. But the offensive stalled because of the exhaustion of the German troops and the timely arrival of U.S. forces, who proved their mettle in their baptism of fire. Ludendorff's fourth drive (June 9–June 14) on a 22-mile front between Montdidier and Noyon was intended to convert the two German salients threatening Paris into one. Foch had anticipated the strategy, and the French army, ready and reinforced, resisted firmly and limited the advance to only six miles. Time was running out for Ludendorff. His final drive (July 15–July 18), more a measure of desperation than a bid for victory, succeeded in crossing the Marne but soon bogged down. Ludendorff's gamble had failed, and in the process he had broken the morale and exhausted the manpower of the German army. The initiative now passed to the Allies.

Thanks to the ever-increasing number of U.S. divisions, Foch was in a position to undertake a counter-offensive. Beginning on July 18, Foch allowed the Germans no respite, hitting different parts of their line in succession and forcing them back on a broad front. On August 8, which Ludendorff called "the black day of the German army," the British Fourth Army, backed by 430 tanks, pierced the line east of Amiens. What troubled Ludendorff was not the ground lost but the large number of German soldiers who offered only token resistance before surrendering. As the fighting ability of the German army had clearly collapsed, Ludendorff

recognized that the war could no longer be won. His only option was to continue to fight a defensive action to keep Allied soldiers off German soil until an armistice could be arranged. Germany's allies were in an even worse predicament. Bulgaria capitulated on September 30, Turkey on October 30, and Austria on November 3. After some negotiation an Allied commission presented German leaders armistice terms that fell little short of unconditional surrender.

The Germans were in no position to hold out for better terms. Their army was rapidly disintegrating; many citizens were suffering from malnutrition, and the death rate among children and the elderly was soaring; a full-fledged revolution had broken out in Munich; and the kaiser had abdicated and sought refuge in the Netherlands. The armistice was signed at 5:00 A.M. on November 11 and went into effect at 11:00 A.M. After four years and three months the guns fell silent in Europe.

The effects of the war on the political, economic, and social fabric of Europe were devastating. Not since the Black Death in the 14th century had so many people perished in such a brief period of time. About 10 million of the most able-bodied people of the belligerent nations died in battle, and at least twice that number were wounded, many maimed permanently. Moreover, the loss of civilian life due directly to the war equaled or may even have surpassed the number of soldiers who died in the field. The direct cost of the war, when added to the indirect cost of property damage, diverted production, and trade interruption was incalculable, not only dissipating the national wealth of the European belligerents but leaving them deeply in debt.

The war led to the overthrow of the German, Austrian, and Russian Empires, where the substitution of Bolshevism for the rotting czarist regime would have profound consequences, affecting the world for the next 75 years. The conflict deprived Europe of the primacy it had enjoyed in the 19th century. Never again would it be able to decide the fate of distant countries or, for that matter, be master of its own destiny. Finally, from the tensions and economic dislocation caused by the events of 1914–18 emerged the NAZI state, which provoked the outbreak of WORLD WAR II in 1939.

GEORGE H. CASSAR

World War II

The eventful years between September 1, 1939, and September 2, 1945, form a landmark in world history. From the march of the German war machine into Poland to the Japanese surrender, the world witnessed the most destructive war in human history, fought on land, in the air, and on the sea worldwide. The causes of the war were to be found partially in the provisions of the PARIS PEACE CONFERENCE of January 1919, which was convened after the end of WORLD WAR I. In spite of the pious declarations of ideas like self-determination and international cooperation by U.S. president WOODROW WILSON (1856–1924), the world system that emerged witnessed social unrest, proliferation of revolutionary activities, and a sense of anger in the vanquished powers. National self-interest, the arms race, the failure of collective security, a dismal performance by the LEAGUE OF NATIONS, economic upheavals, and the rise of aggressive nationalism in some countries made the interwar period from 1919 to 1939 one of disillusionment and foreboding.

PREWAR YEARS

The rise of authoritarianism in Italy, Germany, and Japan, along with the Anglo-French policy of APPEASEMENT, took the world on an ominous course toward instability and conflict. The stock market crash in New York resulted in the worldwide GREAT DEPRESSION. The isolation of the United States from European affairs tilted the balance in favor of fascist states. The rise of fascism in Italy and the aggressive foreign policy of BENITO MUSSOLINI (1883–1945) started a series of crises leading to World War II. Mussolini exploited the social and economic chaos of post-1919 Italy. The doctrine of fascism was *credere, combattere, obbedire* (believe, fight, obey). League of Nations sanctions failed when Italy invaded Abyssinia and occupied the capital, Addis Ababa, in May 1936. He annexed Albania in April 1939. Mussolini had an ally, ADOLF HITLER (1889–1945), in his ventures, and the two formed the Rome-Berlin Axis in October 1936. The Versailles Treaty contained the seeds of future conflict, and after becoming chancellor in January 1933, Hitler abrogated the provisions of the treaty with impunity. He and his NAZI PARTY (NSDAP, Nationalsozialistische Deutsche Arbeiterpartei) spelled out a program of

abrogation of the Treaty of Versailles, lebensraum (living space), a greater German Reich, and anti-Semitism.

The collapse of the New York stock market on October 23, 1929, brought about worldwide depression, massive unemployment, inflation, and poverty. It struck the German economy severely. Conscription was introduced, and three wings of armed forces underwent expansion. In March 1936 the Nazi army occupied the Rhineland. Italy was brought into the anti-COMINTERN pact of Germany and Japan. The policy of lebensraum led to the forcible occupation of Austria in March 1938. The republic of Czechoslovakia, with its minority population of 3.25 million Sudetan Germans, was the next to come under the control of the Third Reich. The Sudetan area was given to Germany at the Munich conference of September 29, 1938. Hitler annexed the whole of Czechoslovakia in March 1939. Neville Chamberlain (1869–1940) and Edouard Daladier (1884–1970) of France believed that Hitler would remain satisfied with chunks of territory in his neighborhood and that peace would be maintained in Europe.

Germany and Japan left the League of Nations in 1933, and Italy did so four years afterward. Hitler signed the “Pact of Steel” with Mussolini in May 1939. Great Britain and France were aghast when Hitler and JOSEPH STALIN signed a nonaggression pact on August 23, 1939, that included a secret clause for the division of Poland. Germany was now secured against an impending attack from the east. Moscow gladly concluded an alliance with Berlin and awaited an opportunity to invade Poland. Britain realized belatedly that appeasement had failed, began to build up its armed forces, and signed a mutual assistance pact with Poland on August 25, 1939. It had introduced conscription on April 27 under the Military Training Act.

When the German war machine marched into Poland in a blitzkrieg (lightning attack) on September 1, 1939, World War II began. Hitler did not care for an Anglo-French ultimatum that he withdraw within two days. Great Britain and France declared war on Germany on September 3. The Soviet Union invaded Poland from the east on September 17. In October Estonia, Latvia, and Lithuania fell to the Red Army. On November 30, Finland was attacked, and the Soviet Union was expelled from the League of Nations a month later.

THE SITZKREIG

There was a lull during the first few months on the western front. This period, known as the *Sitzkrieg* (phony war), lasted until April 1940. Hitler’s Wehrmacht (armed force) overran Denmark and Norway in

April 1940, and the following month the army and the Luftwaffe (air force) invaded and took control of the Netherlands, Belgium, and Luxembourg. The French had depended on the impregnable line of fortifications known as the MAGINOT LINE for protection against a German attack, but the latter avoided it and advanced into France through Ardennes in June. The triumphant Nazi army entered Paris on June 14. An armistice was signed on June 22, and Marshal Henri-Philippe Pétain (1856–1951) became the premier of the puppet VICHY government. General Charles de Gaulle (1890–1970) organized the Free French government in exile, and Britain recognized it on June 28. A resistance movement against the Nazis also developed among exiles from Poland, Norway, the Netherlands, Yugoslavia, Belgium, and other countries. The German air force began to attack military installations in the south of Great Britain and in September began to bomb London and other cities. In the Battle of Britain, from August to October, the Royal Air Force held against the Luftwaffe. The Tripartite, or Axis, pact was signed between Germany, Italy, and Japan.

JAPAN MOVES FORWARD

Japan, like its Axis partners, had followed an aggressive foreign policy. Militarism was in ascendancy in the country. The era of acquiescence of the Paris conference and the Washington agreements was coming to an end. The extension of naval disarmament to cruisers, destroyers, and submarines at the London conference of 1930 was disliked by the army and the extreme rightists. An agenda of military expansion and territorial acquisition was in the offing. From the 1930s the military acted as a force above the law, and there were a series of political assassinations of Japanese politicians by army officers. The issue between Japan and China that began over the MANCHURIAN INCIDENT propelled Japan toward the war. Manchuria would be a prized possession because its abundance of iron and coal could provide raw materials to the Japanese heavy industries. The vast land area could also solve to an extent the problem of overpopulation. In September 1931 the Japanese KWANTUNG ARMY marched unilaterally to occupy Manchuria. The client state of Manchukuo (1932–45) was established.

The League of Nations had not done anything substantial to check the Japanese aggression. Japan withdrew from the league in 1933. The second SINO-JAPANESE WAR began in July 1937 after a Japanese attack on five northern provinces in China. The Nationalist capital, Nanjing (Nanking), was sacked with brutality. Anti-Comintern

alliance and Japanese endorsement of German and Italian policies changed the situation. Japan received full support from the two countries. The Rome-Berlin-Tokyo Axis was formed after the Tripartite Pact, with the provision of political, economic, and military assistance in case of attack against a signatory by a country not involved in the present European or Sino-Japanese wars. The provision obviously referred to the United States. With the support of Germany and Italy, the Japanese war machine moved into Southeast Asia, incorporating it with the GREATER EAST ASIA CO-PROSPERITY SPHERE.

Balkan countries like Hungary, Romania, and Bulgaria joined with the Axis powers on March 25, 1941. Greece and Yugoslavia capitulated to Axis control in April. The Nazi plan of lebensraum had looked toward the east, and Operation Barbarossa against the Soviet Union began on June 22, with Hungary, Romania, Finland, and Bulgaria joining in. Hitler was confident of a victory before the winter, and the Nazi blitzkrieg almost worked. Troops reached Leningrad within three months, overrunning the Ukraine region and nearing Moscow. But the Red Army fought back, and national spirit was high. The winter set in, and the Soviet Union regained much ground.

Meanwhile, relations between Japan and the United States were taking a nosedive, which would result in a change in the course of the war. The Allied powers would gain an upper hand. The attack on Manchuria in 1931 and the second Sino-Japanese War, beginning in 1937, convinced the United States that Japan was on a mission to dominate the Far East. The Japanese were ready to invade the Dutch East Indies. The United States demanded the withdrawal of Japanese troops from China and Southeast Asia.

Japan countered with a proposal that the United States should not interfere with the government set up in Nanjing. After the beginning of World War II, Washington had followed a policy of pro-Allied neutrality and was involved in the war through the Lend-Lease program. It was also fully prepared in case it was forced to join the war. U.S. president FRANKLIN D. ROOSEVELT (1882–1945) had called a special session of Congress in September 1939 and revised the neutrality laws.

British premier WINSTON CHURCHILL (1874–1965) met Roosevelt on August 14, 1941, and both signed the Atlantic Charter, which called for international peace. Negotiations between the Japanese government, headed by TOJO HIDEKI (1884–1948), and Roosevelt were not successful. The Japanese attack was imminent, but the United States was in the dark about where the Japanese would strike. The assumption was that it would be in

Hitler accepts the ovation of the Reichstag in Berlin after announcing the “peaceful” acquisition of Austria in March 1938. This set the stage to annex the Czechoslovakian Sudetenland, largely inhabited by a German-speaking population.

Southeast Asia. Admiral Isoroku Yamamoto (1884–1943) made the strategic decision to attack the U.S. naval base in Hawaii, PEARL HARBOR, where the damage would be greatest in a minimum amount of time. The imperial conference of December 1, 1941, ratified the decision to go to war. The mission aimed at inflicting maximum damage and surprised the United States by attacking in their home base.

The Japanese move made the decision to enter the war easier for the United States. The whole of the United States directed all its might against Japan. If the attack would have come either on the British Malay or in the Netherlands Indies, the United States might not have found it a sufficient reason to go to war with Japan. On December 6 President Roosevelt made a final appeal to the Japanese emperor, but it produced no result. At 7:55 the next morning (3:25 A.M. Japan Standard Time,

December 8), Japanese warplanes struck the military and naval installation of Pearl Harbor. The air strike leader of the Japanese carrier force, Commander Mitsuo Fuchida (1902–76), spearheaded the 183 planes of the first attack. The well-executed and surprise Japanese attack resulted in a dramatic tactical victory, stunning the United States and the Allies. Simultaneously, there were Japanese attacks on Hong Kong, the Philippines, and Guam. On December 8 Roosevelt declared war on Japan. Germany and Italy declared war on the United States three days later. The United States went ahead with a massive mobilization plan. It became “an arsenal of democracy,” as Roosevelt had commented.

THE WAR HEATS UP

Within six months Japan expanded over a large area in Southeast Asia. Singapore fell to the Japanese in

February 1942 with the surrender of British troops there, and three months afterward U.S. and Filipino troops surrendered in Manila Bay. The Japanese reached the borders of India after occupying British Burma (Myanmar). SUBHAS CHANDRA BOSE (1897–1945) had taken the freedom movement against British colonial rule beyond India's border and formed the Indian National Army (INA) in Singapore. The INA collaborated with the Japanese in the latter's battles in Singapore and Burma. In March 1942 the Nazi army began a drive toward Caucasia to capture oil fields.

The German Sixth Army was bogged down on the outskirts of Stalingrad in terrible urban warfare. The German army faced Soviet counterattacks throughout the winter of 1942 and surrendered to the Red Army in February 1943. The Germans were driven out of Caucasia. By the end of the year, the Red Army had occupied portions of Ukraine. The Red Army was in Poland by 1944. In 1942 and 1943 the Axis armies were on retreat on many fronts of the war. The Japanese navy suffered a crushing defeat by the U.S. Navy in June 1942 in the Battle of Midway. The Allies had been victorious over the Germans and the Italians in the Battle of EL ALAMEIN in North Africa.

Unlike World War I, when the powers met for the Paris Peace Conference after the war was over, the leaders of the Grand Alliance met frequently to formulate plans and devise strategies while the war was still going on. After the Atlantic Charter Roosevelt and Churchill met in Casablanca between January 14 and 24, 1943, to discuss the surrender of the Axis countries and plan the Italian campaign. At the 1943 CAIRO CONFERENCE, from November 22 to 26, both leaders, along with Kuomintang leader CHIANG KAI-SHEK (1887–1975), pledged to defeat the Japanese, stripping Japan of its acquisitions in the war and gaining independence for Korea. The Tehran Conference, held between November 28 and December 1, was the first meeting of the "Big 3." Roosevelt, Churchill, and Stalin decided to open a second front in western Europe, Operation Overlord. There were heated debates regarding the date and place of attack.

ALLIED VICTORY

The Allied invasion of Sicily took place in May 1943, and Italy surrendered in September. Mussolini set up a puppet government in northern Italy with Nazi help, but it was short lived because the advancing Allied army occupied Rome on June 4, 1944. Mussolini was captured and executed by communist partisans while fleeing in April 1945. The D-DAY invasion began on

June 6, 1944, with the Allied landing in Normandy, France. Thus, the second front was opened against Germany. Paris fell to the Allied army on August 25, after the surrender of German forces.

In the latter half of 1945, the Japanese were defeated several times. General DOUGLAS MACARTHUR, commander of the Allied forces in the southwest Pacific area, invaded the Solomon Islands, New Guinea, and the Philippines. By May 1945 the Japanese imperial army had lost Iwo Jima, Okinawa, the Philippines, Borneo, and Myanmar. Pressure on Germany continued with carpet bombing and Allied advances. Romania and Bulgaria had surrendered in August and September 1944, respectively.

The Red Army was advancing from Poland. Hungary fell in February 1945, and after two months the city of Berlin was surrounded by Russian troops. In April Leipzig and Munich fell to U.S. troops. Hitler committed suicide on April 30, and on May 7 the Germans signed surrender terms at Rheims, France. The next day (V-E day) the German commanders surrendered to the Red Army in Berlin.

On July 26 the Japanese were asked to surrender and refused. On August 6 and 9 atomic bombs were dropped on the cities of HIROSHIMA AND NAGASAKI, with devastating effects. Japan surrendered after signing the instrument of surrender on the USS *Missouri* in Tokyo Harbor on September 2, 1945. Japan was placed under international control by the Allies and lost all its overseas possessions. For the first time in its history, Japan was under occupation by a foreign power.

THE AFTERMATH

In the wartime conferences of YALTA (February 1945) and Potsdam (July 1945), differences were emerging between the Soviet Union on the one hand and the United States and Great Britain on the other. Once the war was over and the common enemy was defeated the cold war began. A process of decolonization began, and the postwar period witnessed the emergence of new nations in Asia, Africa, and Latin America as well as the strengthening of anticolonial movements. There was also a need for new international peacekeeping machinery, and the idea for the United Nations was born during the war. The charter of the United Nations was drafted at the San Francisco Conference of April 25, 1945. It was officially born on October 24, 1945.

World War II left a legacy of homeless persons, casualties, maimed soldiers, damaged monuments and cities, political instability, economic chaos, and a sense of gloom. About 20 million military personnel and 30

million civilian had perished in the war. The death toll for the Soviet Union was the largest, with 20 to 28 million soldiers and civilians having died. The loss of property amounted to a billion dollars. The United States launched the aid package called the Marshall Plan to help with economic recovery in Europe.

The saga of the war will hold a place in the history of the world as a story of savagery, violence, and the cruelty of human beings to their fellow men, women, and children. Hitler stands out as villain number one with his Jewish ghettos, concentration camps, gas chambers, and scientific experiments on the Jews, Gypsies, and Slavs. THE HOLOCAUST remains a dark chapter, with the death of about 6 million Jews and 4 million Poles, communists, dissidents, gays, Afro-Germans, Soviet prisoners, and others. War crime tribunals like the NUREMBERG TRIALS and the Tokyo war crimes trial brought the guilty to justice.

PATIT PABAN MISHRA

Xi'an (Sian) incident (1936)

The LONG MARCH (1934–35) severely damaged the Chinese Communists, who continued to fight from their new base in northern Sha'anxi (Shensi) province in northwestern China. Pursuing his policy of “first domestic pacification, then resisting Japan,” CHIANG KAI-SHEK, leader of the Nationalist government, appointed Zhang Xueliang (Chang Hsueh-liang), the ousted warlord of Manchuria, and his Manchurian army units to complete the task of finishing off the Communists. But Zhang and his troops had been persuaded by rising popular sentiment that all Chinese should unite against Japan, and the campaign ground to a halt.

In December 1936, Chiang convened a military conference at Xi'an, a city in northern China, where he planned to fire Zhang and send in fresh troops willing to fight. Fearful that his plan to form an anti-Japanese united front would be thwarted, Zhang, a recently recovered heroin addict, seized Chiang and his aides on the night of December 12. This was the Xi'an incident that shocked China and the world.

Zhang presented Chiang with eight demands that included immediate cessation of the anti-Communist campaign and reforming of the Nationalist government to form a united front against Japan. Chiang refused to comply, choosing death if necessary. He also allowed Zhang to read his diary, which revealed his plans to resist Japan. Zhang was completely at a loss on what to do next. Across China popular support rallied around Chiang as the only leader capable

of leading the nation against Japan. At their headquarters at YAN'AN (Yenan) one faction of Communist leaders advocated killing their enemy Chiang. Another led by Zhou Enlai (Chou En-lai) pushed for a peaceful settlement. The Soviet Union had also concluded that Chiang was the only Chinese leader capable of uniting China against Japan. Under NAZI German pressure in Europe, JOSEPH STALIN supported a Chinese leader capable of resisting Japan. Zhou flew to Xi'an, as did Madame Chiang and a number of leaders from Nanjing (Nanking), and the parties negotiated and came to an unwritten agreement.

On December 25, Chiang and his party were released, flying back to Nanjing in triumph accompanied by Zhang. Chiang submitted his resignation, which was rejected. Zhang was tried for mutiny by a military court, received a 10-year sentence, was pardoned, but was put under house arrest; his Manchurian army was reorganized. Importantly, a session of the Nationalist Party leadership convened in the spring of 1937 agreed to stop the anti-Communist campaign, reform and reorganize the government, and negotiate with the CHINESE COMMUNIST PARTY to form a united front against Japan. Zhou Enlai arrived in Nanjing to conduct talks on behalf of the Chinese Communist Party. Chinese moves toward unity propelled Japan's militarists to speed up their agenda of aggression, resulting in the MARCO POLO BRIDGE INCIDENT on July 7, 1937. This attack developed into an all-out war, which pushed the two parties in China to conclude a second UNITED FRONT against their

common enemy. Thus, the Xi'an incident changed the course of Chinese history.

JIU-HWA LO UPSHUR

Yalta Conference (1945)

The Yalta Conference, also called the Crimea Conference or the Argonaut Conference, was a meeting of the leaders of the Grand Alliance in WORLD WAR II. The meeting took place from February 4 until February 11, 1945, in Yalta in the Soviet Union. The Grand Alliance included the countries of the United States, the United Kingdom, and the Soviet Union. The delegations consisted of over 700 people in total and were headed by President FRANKLIN D. ROOSEVELT, Prime Minister WINSTON CHURCHILL, and the first secretary of the Soviet Communist Party, JOSEPH STALIN. The Yalta Conference is considered to be one of the three most important wartime meetings of the Grand Alliance (the other two being the Teheran Conference, which took place from November 28 until December 1, 1943, and the Potsdam Conference, which took place from July 17 until August 2, 1945). The main purpose of the Yalta Conference was to discuss further strategies for military operations against the Axis powers, the establishment of occupation zones in defeated Germany and Austria, the postwar border settlement of Poland, the creation of the United Nations, and the Soviet Union's military entry in the war in the Far East. The agreements reached at the conference were included in the Protocol of Proceedings of the Crimea Conference.

A major goal of the U.S. delegation at the Yalta Conference was to ensure the Soviet Union's participation in the establishment of the United Nations (UN). Stalin declared the Soviet commitment to take part in

the founding conference of the UN in San Francisco in April 1945. He received guarantees that the Security Council of the UN would include five permanent members equipped with veto powers. Also, he received guarantees that Ukraine and Belarus, which at that time were Soviet republics, would be included as separate members of the General Assembly, giving the Soviet Union three votes instead of one.

Roosevelt proposed that the Protocol of Proceedings of the Yalta Conference should include the Declaration of Liberated Europe, which asserted the principles of democratic governance and self-determination of European nations freed from the NAZI occupation. In the declaration the participants obliged themselves to facilitate the postwar process of European liberation through supporting conditions of internal peace, providing relief measures, and assisting in the organization of free, democratic, and secret national elections.

The participants at the Yalta Conference reconfirmed their demands for the unconditional surrender of the Axis powers. They also agreed that subsequent to their surrender Germany and Austria would be subject to strict demilitarization and de-Nazification policies. The issue of war criminals was to be subject to further inquiry by the foreign ministers of the United States, the United Kingdom, and the Soviet Union. The members of the Grand Alliance agreed also on the division of Germany. This meant that the German territory would be divided into four zones of military occupation controlled by the United States, the United Kingdom, the Soviet Union, and France. The postwar

Winston Churchill (left), Franklin Roosevelt (center), and Joseph Stalin (right) at the Yalta Conference in 1945. The three powerful leaders discussed plans for the creation of new boundaries throughout Europe following the conclusion of World War II.

occupation would be governed by the Allied Control Council, consisting of the three states of the Grand Alliance and France. Stalin was initially opposed to Churchill's demands for the inclusion of France into the Allied Control Council and consented only under the condition that the French zone would not be carved out of the Soviet one. The Soviet Union also became entitled to half of all the postwar reparation payments, which were approximated at US \$20 billion. In order to work out specific reparation policies, a commission was established in Moscow, which included representatives of the United States, the United Kingdom, and

the Soviet Union. At the Yalta Conference it was also confirmed that after the war all individuals accused of desertion or treason would be made to return to their countries of national origin.

The issue of the Polish borders and the Polish government received a great deal of attention at the Yalta Conference. By then, the United States and the United Kingdom had officially recognized the Polish government-in-exile, which had moved to London after the German invasion of Poland in 1939. The Soviet leaders recognized the provisional Polish government established by the Polish Committee of National Liberation, which was created in

1944 in the city of Lublin in the territory controlled by the Soviet Army. The provisional Polish government mostly included members of the former Polish socialist political organizations. Another controversy during the Yalta Conference was the issue of the revision of the Polish borders. Stalin insisted that in this respect the Western allies should recognize the Soviet-German Boundary Treaty from 1939 (also known as the Ribbentrop-Molotov Pact). The treaty had pushed the border approximately 200 kilometers to the west, thus giving the Soviet Union the western territories of Ukraine and Belarus. Roosevelt and Churchill agreed to recognize the legitimacy of the Polish Committee of National Liberation, even though they also insisted that after the war the Polish government should be reorganized on a more democratic basis. Stalin promised to facilitate democratic elections in Poland and to include in the government members of the London government-in-exile. Also, Roosevelt and Churchill consented to the proposed revision of the Polish eastern border. The participants of the Yalta Conference decided to compensate Poland's territorial loss at the expense of Germany. Thus, the prewar Polish-German border was pushed west to lines formed by the Rivers Oder and Neisse. The result of the revisionist border policies was the creation of a much more ethnically and religiously homogenous Poland than before the war, as the areas inhabited by the Ukrainian or Belarusian Orthodox minorities were assigned to the Soviet Union and as over 7 million German residents were forcefully expelled westward.

An important goal of the U.S. delegation was to obtain Soviet agreement to join the war with Japan in the Far East. Stalin made a commitment that the Soviet Union would enter the war two or three months after the German surrender had been obtained. In return for its involvement, the Soviet Union demanded (1) the recognition of the independence of the Mongolian's Peoples Republic from China, while China would regain sovereignty over the territory of Manchuria; (2) the return to the Soviet Union of the territories of southern Sakhalin and the neighboring islands that Russia had lost to Japan in the 1904–05 war; and (3) the surrender of the Kurile Islands to the Soviet Union. In return, Stalin made a commitment to start negotiations with the National government of China of CHIANG KAI-SHEK in order to facilitate the Chinese war of resistance against Japan. The Western allies expected Stalin to expedite the peace agreement between Chiang Kai-Shek and MAO ZEDONG. Controversially, all these agreements were kept secret from China.

The importance of the Yalta Conference was that it sealed the future of postwar Europe as divided between two spheres of influence. Among the most controversial decisions made in Yalta was the acceptance by the United States and the United Kingdom of Soviet dominance over the countries of Eastern Europe, which legitimized the expansion of the Communist ideology. It paved the path for the establishment of Soviet-style authoritarian regimes in East Germany, Poland, Czechoslovakia, Hungary, Romania, and Bulgaria. It also meant that the Baltic states of Estonia, Latvia, and Lithuania, which had lost their state sovereignty in 1940, became republics of the Soviet Union.

Although the conference in Yalta was characterized by an atmosphere of agreement and cooperation among the three allies, it also marked the initial stages of the cold war. With the demise of the Axis powers, conflicts arose among the former allies due to their divergent political interests, irreconcilable ideological differences, and the escalating economic and military competition between the United States and the Soviet Union.

MAGDALENA ZOLKOS

Yamagata Aritomo

(1838–1922) *Japanese political leader*

Yamagata Aritomo was a Japanese politician who was prime minister on two occasions (1889–91 and 1898–1900) and an elder statesman during the first decades of the 20th century, when he played an important role as an adviser to other politicians.

Born in Hagi in the town of Choshu, he was the son of a low-ranking samurai. He started working as an errand boy for the treasury and also for the police. As a youth he was influenced by the Sonno Joi movement, which operated under the slogans “Revere the Emperor”

and “Expel the Barbarians.” At the age of 30 he played a minor role in the Meiji Restoration.

In 1869, Yamagata was sent to Europe to study the system of military training in the West. On his return in 1870, he was appointed the assistant vice minister of military affairs. Two years later the army ministry subsumed the ministry of military affairs, and in the following year Yamagata was put in charge of the new ministry. As a result, he was involved in the Conscription Ordinance of 1873 but did not take part in the decisions over whether Japan should send a punitive expedition to Taiwan, a province of China. In 1878, he reorganized the Japanese army along the model of the Prussian armed forces and led it in the defeat of the Satsuma Rebellion four years later. One of the important units that Yamagata established was the Goshimpei (“Imperial Force”), which later became the Konoe (“Imperial Guard”).

In December 1878, Yamagata resigned as minister of the army and became the first chief of the Japanese general staff. This was part of his move to separate the military from politics, which he confirmed in 1882 in the Imperial Rescript to Soldiers and Sailors that urged soldiers to follow the orders of the emperor and not the politicians. However, it was not until 18 years later that Yamagata was able to get a law passed that allowed only active generals and admirals to serve as cabinet ministers of war and the navy. Although this was aimed at ensuring separation, it did not prevent the military governments of the 1930s and early 1940s, where rapid promotion ensured that newly created generals could become ministers.

Made a count in 1884, Yamagata resigned as chief of the general staff later in the same year to become minister for home affairs, a post he held from 1883 until 1889. During this time he remodeled his department, changing the system of running the police force. He also ensured that the police came under the direct control of the minister. In 1888, Yamagata, still a minister, went to Europe and after a year there returned with new ideas. He became the first prime minister of Japan on December 4, 1889, under a newly established Japanese diet. Political infighting led to Yamagata's resignation on May 6, 1891. He became minister of justice from 1892 until 1893, and then president of the privy council for two more years.

With the outbreak of the SINO-JAPANESE WAR in 1894, Yamagata returned to the army as commander of the First Army, which was deployed to Korea.

On November 8, 1898, Yamagata became prime minister again. He had just been promoted to field marshal and appointed many generals and admirals to the

cabinet, emphasizing his view that Japan should take a far more aggressive foreign policy. He also issued a government regulation that only officers in active service could become the army or navy minister. This coincided with the outbreak of the BOXER REBELLION in China; Yamagata immediately sent over a large military force, which was to play a role in the allied attack on Beijing (Peking) and ensured Japan's role in subsequent negotiations.

However, Yamagata was worried about Russia's territorial ambitions. As a result, he drew up a contingency plan in which Japan would be prepared to fight both Russia and the United States simultaneously. Part of the plan was implemented in WORLD WAR II. By this time, Yamagata's service was recognized, and he was raised to the dignity of a prince.

When Ito Hirobumi was assassinated in 1909, Yamagata, as the “elder statesman,” became the most powerful politician of Japan, and cabinet ministers sought advice from him. During the Chinese Revolution of 1911, Yamagata was keen on preserving the Qing (Ch'ing) dynasty. Three years later he led Japan into WORLD WAR I as an Allied power. Yamagata overplayed his influence in 1921 and was publicly censured for his criticism of the marriage of the crown prince (later Emperor HIROHITO). He had wanted the prince to take a bride from the Satsuma family. He was still in disgrace when he died on February 1, 1922.

JUSTIN CORFIELD

Yan'an (Yenan) period of the Chinese Communist Party

Yan'an is a small town in northern Sha'anxi (Shensi) province that became the headquarters of the CHINESE COMMUNIST PARTY (CCP) from 1936 after the LONG MARCH until 1949. The Yan'an period referred to the years between 1937 and 1945; it was crucial in preparing the CCP for power.

Japan's total war against China in July 1937 propelled the Nationalist, or Kuomintang (KMT), government to stop its campaign against the CCP. The two sides formed a second UNITED FRONT on September 12, 1937. In a manifesto titled “Together We Confront the National Crisis,” the CCP agreed to obey

Dr. SUN YAT-SEN'S Three People's Principles (the ideology of the KMT), cease all anti-KMT activities, abolish the Soviet-style government in areas it controlled, and reorganize the Red Army to integrate it into the National Army. In reality, the CCP retained control of areas where it was already established, only changing the name of its government, and also control of its military units, renaming the Red Army the Eighth Route Army in the northwest and the New Fourth Army in Jiangxi (Kiangsi).

With the Nationalist government bearing the brunt of Japan's assault, the CCP was freed from KMT attacks and used the unprecedented opportunity to grow. The CCP priority, as Communist leader MAO ZEDONG (Mao Tse-tung) ordered his cadres, was "70 percent expansion, 20 percent dealing with the Kuomintang, and 10 percent resisting Japan." His goal was to expand the CCP forces from 30,000 men to 1 million by the end of the war. He also mapped out a three-step strategy: first to manage the compromise with the KMT, next to attempt to achieve parity with it, and third to infiltrate to new areas and establish new guerrilla bases. The United Front had broken down completely by 1941 with a major clash in the New Fourth Army incident. Negotiations during the remainder of the war never resolved the conflicting goals of the two sides. A war within the war enmeshed the two Chinese parties, with the CCP continuing to expand its bases and the KMT blockading the Yan'an area.

The Yan'an period was also important for laying down the principles of Chinese communism. Mao spent much time thinking and writing, as did his second in command, Liu Shaoqi (Liu Shao-ch'i). Mao's essays included "On the Protracted War," "Problems of Strategy in Guerrilla War against Japan," "On New Democracy," and "On Liberalism." Liu's works included "How to be a Good Communist" and "On Inner-Party Struggle." Mao's works formed the basis of his later claim to be an original contributor in the development of Marxist-Leninist ideology.

The Yan'an period was also marked by the training and education of workers and peasants to be active supporters of the CCP, moderate land reform policies, and improvements to the rural economy. As a result the few Westerners (mostly reporters and not trained specialists on China) who were able to avoid the KMT blockade or were permitted to make brief chaperoned visits reported glowingly of their Yan'an experience. From journalist Edgar Snow's book *Red Star Over China*, the result of his visit in 1936 and his interviews with Mao and other leaders, and from the accounts of shorter visits by other

journalists, Westerners learned that the CCP leaders were not like the Soviet Communists but were agrarian reformers. They compared Yan'an favorably with the Nationalist capital, Chongqing (Chungking), which they described as corrupt. Moscow also fostered this view when JOSEPH STALIN called the CCP "margarine" or "radish" Communists.

JIU-HWA LO UPSHUR

Young Turks

Young Turks is the name given to Ottoman dissidents who from the end of the 19th century through WORLD WAR I sought to reform the Ottoman Empire; the Young Turks were strongly influenced by the earlier Young Ottoman movement of the 1870s. Turkish exiles in Paris were first known as Young Turks until various other dissident factions throughout the Ottoman Empire, Europe, and North Africa united under the banner of the Ittihat ve Terakki Cemiyeti, or Committee of Union and Progress (CUP) in 1907.

Although the groups were varied and widespread, they were all opposed to the autocratic rule of the sultan and sought to restore parliament and the constitution. Sultan Abdul Hamid II (1842-1918) originally introduced the constitution and parliament in 1876, among other reforms initiated by his predecessors during the Tanzimat period, but suspended them in 1878 and moved toward a severely autocratic and repressive regime. In 1908 CUP-led troops marched to the capital city, Istanbul, and demanded the restoration of parliament and the constitution. The sultan acquiesced, and elections were held for the first time in 30 years. Exiled Young Turks, notably men from Salonica who primarily led the organization and formed the leadership base, returned as prominent members of the CUP. The CUP allowed Sultan Abdul Hamid to remain in

control of politics while they acted as a watchdog over the government. This changed when a counterrevolution, staged by Islamists, conservatives, and those loyal to the sultan, occurred in 1909. The counterrevolutionaries drove the CUP out of Istanbul, but the CUP reorganized in Macedonia and recaptured Istanbul by force. After quelling the counterrevolution, the Young Turks deposed Sultan Abdul Hamid II and replaced him with his brother Murad V, officially changing the government to a constitutional and parliamentary regime. The Young Turks did not (nor did they wish to) abolish the sultanate but instead viewed their roles as guardians of the constitution and reformers of the empire and not as leaders of the country (until WORLD WAR I). The sultan maintained his powers as caliph (leader of the Muslim world), along with the right to appoint a grand vizier and Sheik al-Islam.

International events strongly affected the policies of the Young Turks and the CUP. The Balkan provinces of the Ottoman Empire and the Great Powers of Europe took advantage of the weakened state of the empire caused by the revolution and the counterrevolution. Austria-Hungary, Greece, and Italy made significant claims on Ottoman territories, and the CUP-led government was unable to offer much resistance. Montenegro, Serbia, and Bulgaria declared war on the Ottoman Empire, resulting in the loss of most of the European provinces, notably the city of Edirne. The loss of Edirne stunned the Ottomans (it was the former capital) and inadvertently brought about a coup d'état from within the CUP inner circle (known as the Bab-I Ali coup) in 1913. The loss of Edirne exposed the weakness of the CUP, prompting the leading faction to take control of the party. Three figures emerged at the forefront, Enver Pasha, Talat Pasha, and Cemal Pasha. After Enver (who controlled the military) led the successful recapture of Edirne (and became a hero), he was promoted to the position of minister of war. Talat Pasha, a former postman, became minister of the interior, and Cemal Pasha became the military governor of Istanbul. They were informally known as the leading triumvirate. After the coup the CUP took on a more dominant role in domestic and international government policies.

The start of World War I changed the role of the CUP. The Young Turks entered into an alliance with Germany and joined the conflict in 1914. The Germans used the empire as a buffer against Russia, while the Ottomans needed German protection from Russian encroachment. The fear of Russian (and later Greek) advancement led to terrible atrocities committed against the Armenian and Christian communities of Anatolia,

inspired by the CUP and still controversial to this day. The German alliance proved disastrous for the CUP, whose leaders were forced to flee after signing the armistice in 1918.

Despite their failures, the Young Turks contributed significantly to reforms within the Ottoman Empire that directly inspired the independence movement and the formation of modern Turkey. The CUP was able to consolidate power, free the economy from the control of minority groups, abolish the centuries-old system of capitulations, and set the stage for economic independence. They initiated basic rights for women, which were expanded and enhanced in the later Republic of Turkey. The Young Turks sought a synthesis of Western and Eastern ideals, fanned the flames of nationalism, and introduced the idea of pan-Turkism, later expanded upon by MUSTAFA KEMAL ATATÜRK (the founder of modern Turkey) and his supporters. The CUP laid the groundwork for a successful resistance movement. Due to this foresight the Turkish army and the Turkish people were able to fight off the occupying forces of the Great Powers and the Greeks, who after WORLD WAR II attempted to annex the western coast of Turkey. They were soundly defeated in 1922. The present-day Republic of Turkey continued many of the reforms and the ideology propagated by the Young Turks and enhanced these ideals in the formation of a state with a democratic emphasis.

KATIE BELLIEL

Yuan Shikai (Yuan Shih-k'ai)

(1857–1916) *Chinese general and politician*

Yuan Shikai was a skilled general and unprincipled politician who rose to be president of China but failed to become emperor. He is remembered among Chinese as the triple traitor for his treachery toward the reforming emperor in 1898 and for betraying the Qing (Ch'ing) dynasty in the revolution of 1911 and the republic after he became president.

Yuan first gained recognition as China's representative to Korea in 1882. He remained in Korea until

1894, where he trained the Korean army and upheld China's suzerainty against Japanese aggression. When war over Korea with Japan became inevitable and realizing Japan's military strength, Yuan resigned from his post and fled home. China's catastrophic defeat in the SINO-JAPANESE WAR of 1894–95 led the Qing court to establish a modern army (called the New Army) under Yuan. It also led the young emperor Guangxu (Kuanghsu) to embark on fundamental reforms in 1898. The emperor's policies went against the reactionary faction at court headed by his aunt the dowager empress Cixi (Tz'u-hsi), who had ostensibly retired but continued to dominate the government.

The showdown focused on Yuan, who controlled the troops in the capital, Beijing (Peking), and he betrayed the emperor to Cixi who imprisoned the emperor and rescinded all reforms. The reformers were either captured and executed or fled abroad. Yuan's reward was appointment as acting governor of Shandong (Shantung) province, where in 1899 ignorant and xenophobic people popularly known as the Boxers began to harass foreigners.

Yuan realized the folly of the Boxer movement and suppressed them in Shandong in defiance of Cixi's orders. Both Guangxu and Cixi died in 1908, and the childless Guangxu was succeeded by his brother's three-year-old son, Pu-i (P'u-yi), as Emperor Xuantong (Hsuan-tung). Yuan was forced to retire but kept in touch with the New Army that he had helped to organize and train.

On October 10, 1911, on his 11th attempt, Dr. SUN YAT-SEN's followers instigated a revolution in Wuhan that spread rapidly in southern China. Since Yuan held the loyalty of the New Army, the panicked Qing court begged him to lead it against the rebels, acceding to his demands for money and total control. Yuan defeated the revolutionaries but did not destroy them, proceeding to bargain with both sides to ensure the abdication of the Qing emperor and agreement by Sun Yat-sen

to step down as provisional president of the Chinese Republic in his favor.

Once president, his next goals were to wield absolute power, then to become emperor. When parliamentary elections in 1912 resulted in Dr. Sun's Nationalist party winning a majority in both houses, Yuan had the incoming Nationalist party's designated premier assassinated. When anti-Yuan governors in southern provinces revolted to protect the constitution in 1913, his superior forces defeated them. He then ruled as a ruthless dictator, dismissing all elected local assemblies and using censorship and the army to enforce obedience. Yuan's ultimate goal was to become emperor.

With the European powers engaged in WORLD WAR I, he only needed to secure Japan's support, which he hoped to do by agreeing to its infamous TWENTY-ONE DEMANDS in 1915. However, his proclamation to become emperor on January 1, 1916, met with widespread opposition. The governors of southern provinces not under his direct control rose in revolt, and his own lieutenants refused to come to his aid, perhaps because they feared that the realization of his ambitions was detrimental to their own. On March 22, 1916, he canceled his imperial plans and announced that he would resume his presidency, which was widely resisted. The issue was solved when he died suddenly in May. Yuan's dictatorial rule destroyed China's chance of establishing a constitutional republic after 1912. His death left a legacy of political fragmentation that led to a decade of civil wars and warlordism.

JIU-HWA LO UPSHUR

Zaghlul, Sa'd

(1860–1927) and Safia Zaghlul (d. 1946)
Egyptian nationalist leaders

Sa'd Zaghlul was the founder and leader of the WAFD PARTY, the leading nationalist party in Egypt after WORLD WAR I. Zaghlul was born in the Delta area and was a scholarship student at al-Azhar University. He was influenced by the reformers Jamal al-Din al-Afghani and Muhammad Abdu, with whom he worked on the *Egyptian Gazette*. He became a lawyer and worked as a judge before being appointed minister of education in 1906. Zaghlul's abilities and hard work earned the praise of Lord Cromer, the British de facto governor of Egypt. Zaghlul was elected to the legislative assembly and served as vice president of the assembly from 1913 to its closure by the British at the outbreak of World War I in 1914. A gifted orator, Zaghlul was an outspoken critic of the government and an ardent nationalist.

In 1896 he married Safia Fehmy, the daughter of Mustafa Fehmy, a wealthy aristocrat and former prime minister. The marriage was childless, but Safia became a close confidante and a supporter of her husband's political work. Their large villa in Cairo became known as Beit al-Umma, or House of the People. Sa'd Zaghlul was also politically close to Makram Ebeid, a Coptic Christian, whom he called his "adopted son."

Encouraged by Allied statements regarding self-determination and freedom, Zaghlul gathered together a group of like-minded Egyptian nationalists to form a delegation, or Wafd, shortly before the end of World

War I. The Wafd presented its demands for complete independence to Reginald Wingate, the British high commissioner, who forwarded their request to London. However, the British, who had no intentions of relinquishing control over Egypt, refused to meet or negotiate with Zaghlul.

As national unrest increased throughout Egypt, Zaghlul and several other Wafdists were arrested and deported to Malta in 1919. The arrests led to a full-scale revolution that the British put down by force. In her husband's absence Safia Zaghlul became a leading spokesperson for the Wafd and was called Um Misr (mother of Egypt). She addressed striking students from the balcony of her home and in 1919 led the first political demonstration of women in the Middle East.

In the face of unending demonstrations and strikes, the British were forced to release Sa'd Zaghlul, who then traveled to the PARIS PEACE CONFERENCE and London but failed to secure Egyptian independence. Zaghlul was a national hero in Egypt, and the Wafd was the dominant political party. In 1922 Britain ended the protectorate over Egypt and declared it independent, but it was symbolic rather than actual independence. When nationalist discontent continued, Zaghlul was deported to the Seychelles via Aden. More demonstrations predictably ensued, and he was freed after more than a year in captivity. Zaghlul won the open and free 1924 elections with a large majority, but he was forced to resign following the assassination of Sir Lee Stack, the British sirdar (ruler) of Sudan, in Cairo several months later.

Sa'd Zaghlul died in 1927 after a short illness. Safia assumed a more important role in the Wafd. As Wafdists met to discuss who should replace Sa'd Zaghlul, Safia Zaghlul announced that she intended to withdraw from the political arena but supported Mustafa Nahhas to assume leadership of the party. With Safia Zaghlul's support, Nahhas became the Wafd's second president.

JANICE J. TERRY

Zapata, Emiliano

(1879–1919) *Mexican revolutionary leader*

Ranking high in the pantheon of Latin American heroes, the Mexican revolutionary Emiliano Zapata gained widespread popular acclaim for his uncompromising demand for "Land and Liberty" (Tierra y Libertad) and for his courageous, principled, and shrewd leadership of his Zapatista army during the MEXICAN REVOLUTION (1910–1920). During the revolution and after, Zapata came to symbolize the hopes and aspirations of Mexico's poor and downtrodden in their struggle for land, dignity, and social justice. Zapata embodied the agrarian and Indian impulses of the revolution.

Born in the Indian village of Anenecuilco, Morelos, to smallholding parents Gabriel and Cleofas Salazar Zapata, in 1909 he was elected president of the village council, a rare honor for a man only 30 years old. These were troubled times in Morelos. In the previous decades under the presidency of Porfirio Díaz, the process of capitalist transformation had led to growing landlessness and poverty among the village's nearly 400 residents, as it had across Morelos and much of the rest of Mexico. When wealthy liberal reformer FRANCISCO MADERO announced his Plan of San Luis Potosí on November 20, 1910, calling for "no-reelection" of the dictator Díaz, Zapata did not immediately endorse the plan. Within a few months, however, he allied with the Maderistas, achieving several victories against federalist troops in Morelos.

Mexican revolutionary Emiliano Zapata fought against the corrupt leaders of his government.

After Madero's forces toppled the Díaz regime, Zapata insisted that lands stolen in previous decades be restored to their rightful owners. Madero balked, requiring demobilization of the Zapatista forces. When one of Madero's generals, VICTORIANO HUERTA, launched a campaign against the Zapatistas in Morelos in August 1911, Zapata was infuriated. He soon withdrew support for Madero. Henceforth, Zapata pursued an independent course, fighting for what he understood to be the revolution's core issues: land and liberty for the poor, landless, and oppressed.

In November 1911 the Zapatistas issued their famous Plan of Ayala, which guided Zapata's army for the remainder of the revolution. Excoriating Madero

as a tyrant and traitor, the plan declared that “the fields, timber, and water which the landlords, *científicos*, or bosses have usurped, the *pueblos* or citizens who have the title corresponding to those properties will immediately enter into possession of that real estate of which they have been despoiled by the bad faith of our oppressors. . . .” The Plan of Ayala met fierce resistance from both Madero and the Huerta regime that followed Madero’s overthrow in February 1913.

The Zapatistas became the most powerful revolutionary force in southern Mexico after 1911, at one point dominating not only Morelos but Puebla, Oaxaca, and Guerrero states. When “Constitutionalist” leader VENUSTIANO CARRANZA seized power in August 1914, Zapata and FRANCISCO “PANCHO” VILLA allied against him. Three times Zapata’s forces occupied Mexico City. After most of the fighting had subsided, Zapata returned to his home state, where he was assassinated by Carranza’s emissaries at the Chinameca hacienda on April 10, 1919. His name and legacy remain popularly revered throughout Mexico, as seen most recently in the Zapatista National Liberation Army in the mostly Maya Indian state of Chiapas, whose rebellion against the Mexican government, launched in 1994, still simmered more than 13 years later.

MICHAEL J. SCHROEDER

Zelaya, José Santos

(1853–1919) *Nicaraguan leader*

The president of Nicaragua from 1893 to 1909, José Santos Zelaya was leader of the Liberal Party in Nicaragua for many years and a critic of U.S. foreign policy in the region.

Zelaya was born on November 1, 1853, and on May 20, 1893, he became one of the three members of the junta, with Joaquín Zavala and Eduardo Montiel, that took power in Nicaragua, ending the presidency of Roberto Sacasa. The conservatives had taken over after the defeat of William Walker, and prominent families

had rotated the presidency around a small oligarchy largely occupied with plans for a canal through Nicaragua, at the time thought of as easier than the route running through Panama. The overthrow of the government in Nicaragua in May 1893 was also ammunition for people supporting the Panama route.

On June 1 Salvador Machado became the acting president, followed on July 16 by Joaquín Zavala. On July 31 Zelaya became president, and, inspired by the Mexican revolutionary Benito Juárez, he tried to carry out some of the measures introduced by Juárez in Mexico in the 1860s and 1870s. This led to a new constitution for the country on December 10, 1893. This for the first time unequivocally separated church and state. The supporters of Zelaya quickly became the Zelayistas, the name of his political movement. In Washington, D.C., lobbyists supporting the canal through Panama painted Zelaya as an extremist radical bent on ending contact with the United States.

In fact, Zelaya was a keen social reformer and anxious to make up for the previous decades, when little money had been spent on the infrastructure of the country. Zelaya immediately increased spending on public education and on erecting government buildings, roads, and bridges. Political rights were also extended to all citizens of the country, including women, who were allowed to vote. Civil marriages and divorce were both made legal, and strong moves to end bonded servitude were enacted. Zelaya oversaw the paving of the streets of Managua, Nicaragua’s capital, and the erection of street lights. In January 1903 Zelaya was the first living Nicaraguan to appear on one of that country’s postage stamps, commemorating the 10th anniversary of the revolt against Sacaza.

Zelaya encouraged foreign trade but sought relations with more countries than just the United States and Mexico. An early foreign policy problem for Zelaya was not dealing with Britain. For the previous 300 years, British settlers, descendants of Britons, and former British-owned slaves had been settling on the Mosquito Coast—Nicaragua’s Caribbean coast. Britain had ceded sovereignty in 1860, but the area was an autonomous part of Nicaragua. Zelaya managed to get the area formally incorporated into the Republic of Nicaragua in 1894, but until 1912 the area continued to use a different currency. Good relations with Britain resulted, and Zelaya even brought over British businessmen to survey for a canal through Nicaragua.

In February 1896 the first coup attempt to overthrow Zelaya failed. It ensured that he was more careful about personal security. Another coup attempt

by soldiers in 1904 failed, and in 1905 the Rebellion of the Great Lake was also unsuccessful. In 1906 Zelaya decided not to send delegates to the San José Conference, which was being held in Costa Rica to discuss ways of maintaining peace in Central America. Instead, Zelaya was keen on pushing forward with his plans for a united Central America. Zelaya's idea did not include Costa Rica and was to be a merging of Nicaragua, El Salvador, and Honduras. The only concrete results were the establishment of a Central American Bureau in Guatemala City and a teacher training institute in San José, Costa Rica—both places outside Zelaya's planned country. Nicaraguan soldiers invaded Honduras, overthrowing its president, Policarpo Bonilla, and then were involved in plans to start a revolution in El Salvador. The United States and Mexico intervened, and at the Washington Conference of 1907 Zelaya and the presidents of Costa Rica, El Salvador, Guatemala, and Honduras all signed an agreement whereby they pledged themselves to the maintenance of peace in their region.

Zelaya, still worried about the potential domination of Nicaragua's economy by U.S. interests, believed that the U.S. government was encouraging a revolt in the east of the country. By this time U.S. cartoonists were caricaturing him; he was an easy target with his penetrating eyes and elegantly twirled moustache. Zelaya moved against some U.S. lumber and mining companies, either canceling their concessions or reducing the scope of their activities. The U.S. chargé d'affaires in Managua was recalled in 1909, when Zelaya made moves to end a lumber concession that had been granted to a Massachusetts-based company, G. D. Emory.

Some Nicaraguan conservatives did try to stage a putsch to get rid of Zelaya, hiring U.S. mercenaries. These forces were led by one of Zelaya's former allies, Juan José Estrada. Zelaya managed to overcome the rebels, but he made the tactical mistake of executing the U.S. mercenaries. As a result, the United States broke off diplomatic relations with Nicaragua, which led to the collapse of Zelaya's government. On December 1, 1909, U.S. secretary of state Philander Knox sent a letter to the Nicaraguan ambassador in Washington pledging U.S. government action against the Nicaraguan government. Zelaya offered to compromise and in a telegram to Taft on December 4 said he was prepared to resign and go into exile if that would solve the problem. He resigned on December 21, and in the following year he escaped to Mexico. In Nicaragua his supporters opposed the U.S. marines

who were sent into the country, some under Benjamin F. Zeledon, and in 1912 waged a small-scale guerrilla war inspired by the MEXICAN REVOLUTION. In exile Zelaya wrote *The Revolution in Nicaragua and the United States*. The largest province in the country, along the east coast of Nicaragua (formerly the Mosquito Coast), was named Zelaya after the president, who died on May 17, 1919, in New York City.

JUSTIN CORFIELD

Zhu De (Chu Teh)

(1886–1976) *Chinese Communist military leader*

Zhu De was the founder of the Red Army (later, People's Liberation Army) and its de facto leader in the resistance against Japan and in the Chinese civil war against the Nationalists during the 1930s and 1940s. He played an important role in the development of a theory of guerrilla warfare. In the People's Republic of China after 1949 he served as vice chair and later chair of the Standing Committee of the National People's Congress.

Zhu De was born the son of a wealthy landlord in Sichuan (Szechwan) Province. He received a classical Chinese education and obtained a degree in 1904. After studies in Chengdu (Chengtú) and practice as a sports teacher, he visited the military academy in Kunming from 1908 to 1911. Influenced by revolutionaries, he joined the army of General Cai E (Tsai Ao) shortly before the 1911 revolution and participated in the overthrow of the Qing (Chi'ng) government in Yunnan province. In 1916 he reached the rank of general, commanded a brigade of the Yunnan army, and took up the habit of opium smoking.

In 1919 Zhu changed his life radically. Probably he was influenced by the MAY FOURTH MOVEMENT, when Chinese students demonstrated against the Treaty of Versailles. Zhu then managed to get rid of his opium addiction in a French hospital in Shanghai. In addition, he started to study socialist theory and traveled to Europe in 1922. After a short stay in France he went to

Germany and studied at Göttingen University in 1924–25. In Germany he also met Zhou Enlai (Chou En-lai) and joined the CHINESE COMMUNIST PARTY (CCP). Soon the German authorities became suspicious about his political activities. He was arrested twice and expelled in 1925.

Zhu went to Moscow and after some studies returned to China. After CHIANG KAI-SHEK ended the alliance with the Communists in April 1927, Zhu took part in the Nanchang Uprising. After its failure he joined MAO ZEDONG and his partisans in the Jinggang Mountains in Jiangxi (Kiangsi) province. In the following years the Communist guerrillas were able to hold and even expand their areas until they were forced on the LONG MARCH in 1934.

During the Long March Zhu separated from Mao's troops and joined the western wing of the Red Army under Zhang Guotao (Chang Kuo-tao). Zhu arrived with his remaining soldiers at Mao's newly established base of operations in Sha'anxi (Shensi) province in late 1936, where he again became supreme commander of the Communist forces. After the UNITED FRONT of the Communists with the Kuomintang against Japanese aggression was concluded in August 1937, Zhu formally became a commander in the Nationalist army. In reality, the Red Army led a very independent war of resistance against the Japanese occupation until August 1945. Zhu made good use of his experience in guerrilla warfare, and it is likely that Mao's writings on the theory of guerrilla war were partially developed by Zhu. Changing to a more conventional style of warfare after the Japanese surrender—equipped mostly with Japanese matériel—Zhu's army was victorious in the following civil war against the Kuomintang armies.

In addition to his military position, Zhu also served on the CCP's central committee in 1930 and as a member of the Politburo in 1934. In 1945 he was made vice chair of the CCP. Zhu stepped down as commander in chief in 1954 and became vice chairman of the state council. He became chair of the standing committee of the National People's Congress in 1959. Like so many prominent leaders of the CCP, Zhu was denounced by Red Guards during the Cultural Revolution in 1966. He had to step down and was only restored to his positions in 1971. Zhu De died in 1976.

CORD EBERSPAECHER

Zionism

From the beginning of the 20th century to the establishment of Israel in 1948, the World Zionist Organization (WZO) struggled to create a Jewish state in Palestine.

After Theodor Herzl, the father of modern Zionism, died in 1904, CHAIM WEIZMANN assumed leadership of the WZO for most of the following three decades. A moderate, Weizmann had excellent connections among ranking politicians and diplomats in Britain as well as continental Europe. The WZO sought to gain support among Jews in the diaspora (Jews scattered throughout the world), to increase Jewish immigration to Palestine, to obtain funding for the purchase of land in Palestine, and to provide assistance for new Jewish settlers.

The Right of Return, whereby all Jews in the diaspora could, if they wished, become automatic citizens of the Jewish state, was a cornerstone of the Zionist movement. Jews were encouraged to make aliyah (immigration) to Palestine and to settle there permanently. The ingathering of Jews attracted mostly Jews from eastern Europe and Russia, where anti-Semitism was often the most virulent. There were several waves of Jewish immigration into Palestine. The first, from 1881 to 1903, was composed mostly of Russian Jews; the second, from 1903 to 1914, attracted mostly eastern European Jews who sought to create a socialist state along Marxist lines. Another major wave of immigration occurred in the aftermath of THE HOLOCAUST and WORLD WAR II.

Not all Jews supported the WZO. Orthodox Jews opposed Zionism as a political movement counter to divine will. Some Zionists in Palestine also disliked the movement because they saw it as dominated by socialists and liberals who wanted to use only Jewish labor in businesses and farms in Palestine, whereas they employed Arab labor.

In 1929 Weizmann led the creation of the Jewish Agency, based in Palestine, as an adjunct to the WZO. By virtue of his leadership of the WZO, Weizmann also became head of the Jewish Agency. However, he gradually lost control of the Jewish Agency as Zionists in Palestine secured key leadership positions. Gradually,

Jewish immigrants on their way to a settlement in Palestine in 1946. The World Zionist Organization sought to gain support among Jews in the diaspora to increase legal and illegal Jewish immigration to Palestine.

DAVID BEN-GURION and the Labor Party became the dominant forces in Palestine, while Weizmann continued to represent the international Zionist movement.

The 1917 BALFOUR DECLARATION, providing public support by Britain for a Jewish homeland, was a major step toward the creation of a Jewish state. After the war the British incorporated the Balfour Declaration into their new mandate over Palestine. During the mandate, from the 1920s to the 1940s, the Jewish population in Palestine increased from less than 20 percent to approximately one-third of the total population. By the end of the war, Jews owned about 17 to 22 percent of the total arable land in Palestine.

Zionists aimed to create a renaissance of pioneering Jews who would work their own land. Moshavim (cooperatives) were established, and the Jewish National Fund, which was responsible for land purchases, gave plots of land to settlers who paid rent for a hereditary lease. Land could not be sold, and by the 1930s

settlers had to work the land themselves. The policy of Jewish-only workers further separated the Jewish and Palestinian Arab populations. On collective farms, or kibbutzim, property was owned communally, decisions were made in democratic “town meetings,” and work and resources were shared equally. Many kibbutzim were established along egalitarian lines between men and women, although women often worked primarily in the traditional jobs of childcare and cooking.

Although the Zionist movement sought to increase the amount of land owned and worked by Jews, the majority of new immigrants settled in the urban coastal areas, the Tiberias region, Hebron/Safed, and Jerusalem. In 1909 Tel Aviv was founded as the first Jewish city. A Hebrew school system was established, and Hebrew was to be the language of the new state. The Israel Institute of Technology in Haifa (Technion) was created in 1912, and the Hebrew University in Jerusalem was begun in 1918. A Women’s Zionist Organization

supported the Hadassah Medical Organization, which provided health services. In 1920 the Histadrut was established in an attempt to unify workers into a single labor organization; David Ben-Gurion became its primary spokesperson. Although more conservative workers' movements evolved, the Histadrut became the major Zionist force in Palestine. In 1919 the HAGANAH was established to defend Jewish settlements against Palestinian Arab attacks. It evolved into the Israel Defense Force (IDF) after Israeli independence. The Labor Party under David Ben-Gurion became the major political party.

However, the Zionist movement was not a monolith, and other more radical parties also evolved. Ze'ev Vladimir Jabotinsky (1880–1940) founded the Revisionist Movement, which had a maximalist position regarding the future borders of the Jewish state. The Revisionists claimed all of historic Israel including land on both sides of the Jordan River. In contrast, Ben-Gurion and the majority of Zionists were willing to accept the territory west of the Jordan River for the Jewish state. Jabotinsky split from the mainstream Zionist movement in 1935 to establish the New Zionist Organization. Jabotinsky argued that Zionists would have to use violence to establish a Jewish state because the Palestinian Arabs would not willingly cede their national rights over territory they considered theirs. The Revisionist youth movement, Betar, attracted young Jews, especially in eastern Europe. Political differences over tactics and goals also resulted in several groups breaking away from Jabotinsky.

A Revisionist underground military group, the Irgun Zvei Leumi (Etzel), was founded by David Raziell and, in retaliation for attacks on Jewish settlements, used terrorist tactics (attacks on civilians) against Palestinian Arabs as early as 1937. Members of the Irgun also opposed the liberal economic programs espoused by Labor Zionists and most members of the Haganah. After Raziell was killed assisting the British in crushing a revolt in Iraq in 1941, Menachem Begin became the Irgun's leader.

In spite of their opposition to the mandate and British policies limiting endeavors to create a Jewish state in Palestine, the Haganah and mainstream Zionists led by David Ben-Gurion supported Britain in the struggle against the NAZIS during World War II. Britain somewhat reluctantly accepted some Jewish volunteers from Palestine into its fighting forces.

More radical Zionists argued that Britain was also the enemy. Avraham Stern led a splinter group that adopted an extremely anti-British position in 1940. This group, known as the Stern Gang after its founder or as Freedom Fighters for Israel (LEHI), assassinated Lord Moyne, the deputy British minister of state for the Middle East, while he visited Cairo in 1944. The assassins were caught, tried, and, after considerable pressure from Britain, executed by the Egyptian government. LEHI also killed some Jewish opponents in Palestine. The Haganah condemned the Stern Gang, and many of its members, including Stern, were killed or imprisoned by the British.

In the midst of World War II, the WZO met at the Biltmore Hotel in New York City in the fall of 1941 to decide on the future direction for the Zionist movement. In the so-called Biltmore Program Zionists wisely agreed to shift the focus of their political propaganda and recruitment from Great Britain and the rest of Europe to the United States. Zionist leaders worked throughout the war to publicize the need for a Jewish state and to gather political and popular support in the United States for the creation of a Jewish state in Palestine. During the war leading Zionists visited both President FRANKLIN ROOSEVELT and Vice President HARRY S. TRUMAN to brief them on the need for a Jewish state and to secure their support.

By the time the British withdrew from Palestine in 1948, Jews had created the infrastructure for an independent state complete with political parties, economic institutions including labor unions, schools, hospitals, cultural centers, and a military force. The Zionist dream for a Jewish state came to fruition with the establishment of Israel in 1948.

ABOUT THE EDITORS

Marsha E. Ackermann received a Ph.D. in American culture from the University of Michigan. She is the author of the award-winning book *Cool Comfort: America's Romance with Air-Conditioning* and has taught U.S. history and related topics at the University of Michigan, Michigan State University, and Eastern Michigan University.

Michael J. Schroeder received a Ph.D. in history from the University of Michigan and currently teaches at Eastern Michigan University. Author of the textbook *The New Immigrants: Mexican Americans*, he has published numerous articles on Latin American history.

Janice J. Terry received a Ph.D. from the School of Oriental and African Studies, University of London, and is professor emeritus of Middle East history at Eastern Michigan University. Her latest book is *U.S. Foreign Policy in the Middle East: The Role of Lobbies and Special Interest Groups*. She is also a coauthor of the world history textbooks *The 20th Century: A Brief Global History* and *World History*.

Jiu-Hwa Lo Upshur received a Ph.D. from the University of Michigan and is professor emeritus of Chinese history at Eastern Michigan University. She is a coauthor of the world history textbooks *The 20th Century: A Brief Global History* and *World History*.

Mark F. Whitters received a Ph.D. in religion and history from The Catholic University of America and currently teaches at Eastern Michigan University. His publications include *The Epistle of Second Baruch: A Study in Form and Message*.

FOREWORD

The seven-volume *Encyclopedia of World History* is a comprehensive reference to the most important events, themes, and personalities in world history. The encyclopedia covers the entire range of human history in chronological order—from the prehistoric eras and early civilizations to our contemporary age—using six time periods that will be familiar to students and teachers of world history. This reference work provides a resource for students—and the general public—with content that is closely aligned to the *National Standards for World History* and the College Board’s Advanced Placement World History course, both of which have been widely adopted by states and school districts.

This encyclopedia is one of the first to offer a balanced presentation of human history for a truly global perspective of the past. Each of the six chronological volumes begins with an in-depth essay that covers five themes common to all periods of world history. They discuss such important issues as technological progress, agriculture and food production, warfare, trade and cultural interactions, and social and class relationships. These major themes allow the reader to follow the development of the world’s major regions and civilizations and make comparisons across time and place.

The encyclopedia was edited by a team of five accomplished historians chosen because they are specialists in different areas and eras of world history, as well as having taught world history in the classroom. They and many other experts are responsible for writing the approximately 2,000 signed entries based on the latest scholarship. Additionally each article is cross-referenced with relevant other ones in that volume. A chronology is included to provide students with a chronological reference to major events in the given era. In each volume an array of full-color maps provides geographic context, while numerous illustrations provide visual contexts to the material. Each article also concludes with a bibliography of several readily available pertinent reference works in English. Historical documents included in the seventh volume provide the reader with primary sources, a feature that is especially important for students. Each volume also includes its own index, while the seventh volume contains a master index for the set.

CHRONOLOGY

1950 USSR and China Sign Pact

China signs a 30-year Treaty of Friendship with the Soviet Union.

1950 North Korea Invades the South

The Korean War begins with an attack on June 24 made by North Korean forces across the 38th parallel dividing North and South Korea.

1950 Truman Announces National Emergency

To respond to the strain on economic and military resources caused by the Korean War, U.S. President Truman announces a National Emergency.

1951 King Abdullah Is Assassinated

King Abdullah of Jordan (formerly Transjordan) is assassinated while praying at the Al-Aqsa Mosque in Jerusalem.

1951 H-Bomb

On May 12, the United States detonates a hydrogen bomb on a Eniwetok Atoll in the Pacific.

1951 First Electronic Computer

The Remington Rand Corporation unveils the first commercial digital computer, called the UNIVAC.

1952 King George VI Dies

King George VI of Great Britain dies on February 6. Elizabeth is crowned queen.

1952 Mau Mau Begin Terrorist and Nationalist Actions

A state of emergency is declared by the British governor of Kenya as the Mau Mau begin an open uprising against British rule.

1952 King Farouk Abdicates

Young army officers, disgusted by widespread corruption in Egypt, stage a revolt against King Farouk. The revolt is led by General Mohammed Naguib and Colonel Gamal Abdel Nasser.

1952 Revolt in Bolivia

A revolt takes place in Bolivia when the Movimiento Nacional Revolucionario is deprived of the election of its leader as president.

1952 Polio Vaccine Is Invented

A vaccine against the disease polio is developed by Jonas Salk.

1952–57 First Five-Year Plan in People's Republic of China follows the Soviet model.

1953 Korean Armistice

On July 27, the signing of an armistice between the United Nations and North Korea ends the fighting of the Korean War.

1953 Stalin Dies

Joseph Stalin, leader of the Soviet Union, dies at the age of 73. Stalin is succeeded by Georgy Malenkov and, later, Nikita Khrushchev.

1954 U.S.–South Korea Mutual Defense Treaty

The United States signs a military accord with South Korea.

1954 Dien Bien Phu

On May 7, Dien Bien Phu falls to Communist Vietnam forces, and with it so do French hopes of victory in Vietnam.

1954 Geneva Accords

The Geneva Accords end the French war in Indochina. Under the terms, the country is divided into a communist north and noncommunist south. Laos and Cambodia also become independent.

1954 SEATO Is Formed

In an additional collective security alliance, modeled on the North Atlantic Treaty Organization, eight nations form the South East Asia Treaty Organization.

1954 Republic of China–U.S. Mutual Defense Treaty

The United States provides the Republic of China protection against the People's Republic of China.

1954 Revolt in Algeria

The National Liberation Front (FLN) begins a revolt against French rule.

1954 Segregation Is Ruled Illegal

The U.S. Supreme Court, in the case of *Brown v. Board of Education*, rules that segregation is unconstitutional.

1954 U.S. Backs Coup in Guatemala

The Guatemalan government of Jacobo Arbenz Guzman is overthrown by military forces led by Colonel Carlos Castillo Armas. Armas receives direct support from the U.S. Central Intelligence Agency.

1955 Bandung Conference of Nonaligned Nations

A conference is held in Bandung, Indonesia, under People's Republic of China and India's leadership.

1955 Military Coup in Argentina

President Juan Perón of Argentina is ousted by the military. Following the death of his wife, Eva, he loses much of his support.

1956 Mao Zedong (Mao Tse-tung) Launches 100 Flowers Campaign

Intellectuals in China are punished for criticizing the Chinese Communist Party

1956 Soviet Troops March into Hungary

Rioting against the Soviets erupts throughout Hungary. Soviet troops are called in to put down the revolt.

1956 Tunisia and Morocco Become Independent

Large-scale opposition to French rule forces the French to grant independence to Morocco.

1956 Sudan Becomes Independent

Sudan had been under joint Egyptian-British rule. The Sudanese vote for independence, and on January 1, the country's independence is declared.

1956 Suez War

After sustained terrorist attacks launched from Egyptian territory, Israel, in coordination with Britain and France, attack and capture the Sinai Peninsula from Egypt. At the same time, Britain and France seize the Suez Canal, which has been nationalized by Egypt.

1957 Common Market Is Formed

An economic union is formed by six European countries.

1957 Britain Grants Independence to Malaysia

Malaysia is granted independence from British colonial rule and becomes a centralized federation with a constitutional monarchy.

1957 *Sputnik* Is Launched

On October 4 the Soviet Union launches the first artificial satellite into space.

1957–75 Second Indochina War

A war of national liberation in the wake of World War II is fought by nationalist Vietnamese against French, American, and Chinese forces.

1957 Military Dictatorship Ends in Venezuela

A nine-year military dictatorship in Venezuela is ousted in 1957. Large-scale rioting leads to its fall.

- 1958 Imre Nagy Is Executed in Hungary**
The Hungarian Communist regime executes Imre Nagy, the leader of the Hungarian revolution of 1956.
- 1958 Egypt and Syria Join United Arab Republic**
Gamal Abdel Nasser successfully negotiates the merger of Egypt and Syria into the United Arab Republic.
- 1958 U.S. Troops Land in Lebanon**
President Dwight Eisenhower orders 5,000 U.S. Marines to Lebanon to help maintain order after the ouster of the pro-Western Lebanese government, and the revolution in Iraq brings down a pro-British regime.
- 1958–60 Mao Zedong’s Great Leap Forward**
Mao Zedong (Mao Tse-tung) launches an economic and social plan with the goal of transforming mainland China into a modern communist society.
- 1959 Singapore Gains Independence**
Singapore becomes an independent state in the British Commonwealth on June 3.
- 1959 Uprising in Tibet**
Fighting breaks out between Communist Chinese troops and the population in Lhasa, who are rebelling against Communist rule. Dalai Lama flees to India.
- 1959 Castro Seizes Power in Cuba**
On January 1, Fidel Castro marches into Havana after Cuban dictator Batista flees.
- 1960 Syngman Rhee Is Ousted**
President of South Korea Syngman Rhee is ousted by student protests.
- 1960 Sino-Soviet Split**
An ideological split develops between Communist China and the Soviet Union. Armed border conflict occurs between the two nations.
- 1960 African Independence**
Niger, Mauritania, Mali, French Congo, Chad, and Madagascar all become independent.
- 1960 Nigerian Independence**
On October 1, Nigeria becomes independent.
- 1960 Belgian Congo Independence**
On June 30, an independent Republic of the Congo is created, with Joseph Kasavubu as president and Patrice Lumumba as premier. A civil war subsequently breaks out when Moïse Tshombé declares Katanga Province independent.
- 1961 Kennedy Is Inaugurated**
President John Kennedy gives a brief but stirring inaugural speech that signifies the birth of a new era.
- 1962 Agreement Establishes Malaysia Federation**
An agreement is reached on the establishment of a Malaysian federation comprising Malaysia, Singapore, Sarawak, Brunei, and British Borneo.
- 1962 Border War Between China and India**
Battles break out between the two countries over disputed territory.
- 1962 Burundi Independence**
Burundi was a part of Belgian Mandated Territory. It petitions the United Nations for full independence, which is granted in 1962.
- 1962 Algeria Is Granted Independence**
On July 1 Algerians vote overwhelmingly for independence from France. On July 3 Algeria officially declares its independence.
- 1962 Environmental Movement Is Launched**
Rachel Carson’s book *Silent Spring* is published in September. By describing the effects of the use of pesticides and other chemicals on the environment, Carson helps launch the environmental movement.
- 1962 Cuban Missile Crisis**
The Soviets secretly place medium-range missiles in Cuba. When the U.S. government finds out, it blockades Cuba. The Soviets pull out the missiles, ending the crisis.
- 1963 Kenya Declares Independence**
On December 12, Great Britain grants Kenya independence within the Commonwealth.
- 1963 OAU Is Founded**
Representatives of 30 of the 32 independent nations of Africa meet in Addis Ababa, Ethiopia, to form the Organization of African Unity (OAU).
- 1963 Nuclear Test Ban Agreement**
The first test ban agreement between the United States

and the Soviet Union is ratified by the Senate on October 10. The agreement bans the above-ground testing of nuclear weapons.

1963 March on Washington, D.C.

Two hundred thousand people participate in the largest nonviolent demonstration ever held to support the passage of civil rights legislation.

1963 President Kennedy Is Assassinated

On November 22 while visiting Dallas, Texas, President Kennedy is shot and killed by Lee Harvey Oswald.

1964 China Explodes A-Bomb

On October 16 the Chinese explode their first atomic weapon.

1964 Nikita Khrushchev Is Ousted

Nikita Khrushchev is ousted as leader of the Soviet Union and is succeeded by Leonid Brezhnev.

1964 Tonkin Gulf Resolution

The U.S. Congress passes the Tonkin Gulf Resolution, which gives the president the authorization to “take all necessary steps and measures to repel any armed attack against the forces of the United States and to prevent further aggression.” It leads to increased U.S. military involvement in the Vietnam War.

1964 Civil Rights Act of 1964

After a long fight the civil rights legislation of 1964 is passed. It gives the U.S. federal government broad powers to fight racial discrimination.

1965 War Escalates in Vietnam

In March the United States initiates the first sustained attacks against North Vietnam, in an action named Rolling Thunder.

1965 Indo-Pakistani War

The war is the second skirmish between India and Pakistan over control of Kashmir.

1965 Gambia Gains Independence

On February 18 Gambia becomes an independent country.

1965 Singapore Becomes Independent

Singapore secedes from Malaysia and gains independence.

1965 Rhodesia Declares Independence

Rhodesia declares its independence from Great Britain, in defiance of the British government.

1966 Botswana Gains Independence

On September 30 Botswana, formerly called the Bechuanaland Protectorate, becomes independent.

1966 Lesotho Gains Independence

On October 4, the British colony of Basutoland becomes independent, and is renamed Lesotho.

1966 Sukarno Resigns

Sukarno resigns as president of Indonesia, after a failed coup. He is succeeded by General Suharto.

1966 Nigerian Civil War

In January a series of insurrections in the Nigerian army brings chaos to the country.

1966 Great Proletarian Revolution

Mao Zedong (Mao Tse-tung) launches another effort to reform Chinese society.

1966 National Organization of Women Is Founded

The National Organization of Women is founded in the United States by Betty Friedan, who becomes its first president.

1967 ASEAN Is Formed

The Association of South-East Asian Nations (ASEAN) is formed by Indonesia, Malaysia, the Philippines, Singapore, and Thailand to aid economic growth, progress, and cultural development, and to promote peace in Southeast Asia.

1967 Military Coup in Greece

The Greek military stages a coup against the civilian government. All moderate and leftist politicians are arrested. When King Constantine refuses to support the military, he is sent into exile.

1967 Six-Day War

After being threatened with attack, Israel attacks its Arab neighbors. In six days it gains victory over Egypt, Jordan, and Syria.

1967 Antiwar Protests

Amid growing opposition to the war in Vietnam, large-scale antiwar protests are held in New York, San Francisco, and other U.S. cities.

- 1967 Che Guevera Is Killed in Bolivia**
Ernesto “Che” Guevera is killed by Bolivian troops hunting down Bolivian rebels.
- 1968 Rioting in France**
French students take to the streets, bringing Paris to a virtual standstill. Fighting breaks out between the students and the police.
- 1968 “Prague Spring” in Czechoslovakia**
Alexander Dubček becomes first secretary of the Communist Party in Czechoslovakia; his reforms are crushed by Soviet-led Warsaw Pact troops.
- 1968 Martin Luther King, Jr., Is Assassinated**
On April 4, a lone assassin kills Dr. Martin Luther King, Jr., America’s leading civil rights activist.
- 1968 Robert Kennedy Is Assassinated**
Robert Kennedy, brother of the late President John F. Kennedy, is killed on June 5, after winning the Democratic primary for the presidency in California.
- 1969 Non-Proliferation Agreement Is Signed**
The United States and the Soviet Union sign the Nuclear Non-Proliferation Treaty, which pledges the two nations would not divulge secret information that would allow additional countries to build nuclear weapons.
- 1969 Clashes on Soviet-Chinese Border**
In March the ideological rift between the Soviet Union and Communist China deteriorates into fighting along the border. Thirty Soviet soldiers are killed in one clash on a small, uninhabited island in the Ussuri River.
- 1969 War Between Honduras and El Salvador**
Rioting after a lost soccer match leads to a brief war between Honduras and El Salvador.
- 1969 *Apollo 11***
Apollo 11, with Neil Armstrong, Michael Collins, and Edwin Aldrin, Jr., lifts off for the Moon on July 16. Four days later Neil Armstrong sets foot on the Moon.
- 1970 War in Vietnam Spreads to Cambodia**
On April 30 President Richard Nixon announces that U.S. troops would join with South Vietnamese troops to invade the border area of Cambodia and eliminate Communist sanctuaries.
- 1970 Four Are Killed at Kent State**
American campuses erupt in protest against the Vietnam War. At Kent State University, in Ohio, National Guardsmen kill four unarmed protesters.
- 1970 Salvador Allende Becomes President of Chile**
Salvador Allende Gossens is elected president of Chile. He is the first Marxist ever elected in free elections.
- 1971 Communist China Joins UN, Replacing Taiwan**
On October 25 the United Nations approves the membership of Communist China, replacing Taiwan.
- 1971 Idi Amin Seizes Power in Uganda**
In January, while Ugandan President Milton Obote is out of the country, Colonel Idi Amin stages a coup to oust the president.
- 1972 Arab Terrorists Attack Israeli Olympic Team**
Palestinian terrorists, who are members of the Black September Organization, attack the Israeli team at the 1972 Summer Olympics.
- 1972 Nixon Visits China**
On February 21, 1972, President Richard Nixon arrives in Beijing for a seven-day stay. Although no major agreements are reached during the summit, its occurrence ushers in a new era of diplomacy for the United States.
- 1973 U.S. Completes Withdrawal from Vietnam**
On January 27 the United States and North Vietnam sign the Paris peace accords. Under the terms of the accords, U.S. troops withdraw from Vietnam.
- 1973 Severe Drought**
A seven-year drought in sub-Saharan Africa brings starvation to over 100,000 people in the countries of Chad, Ethiopia, Mali, Mauritania, Senegal, and Burkina Faso.
- 1973 Fourth Arab-Israeli War**
On October 6, the Jewish holiday of Yom Kippur, the Egyptians and the Syrians launch a surprise attack against Israel to retake territory occupied since 1967.
- 1973 Allende Is Killed in Coup**
A military coup, purportedly supported by the U.S. Central Intelligence Agency, deposes President Allende of Chile and replaces him with Augusto Pinochet Ugarte.

1974 Military Government of Greece Resigns

The military junta in Greece resigns, turning control of the government over to Constantine Karamanlis. Martial law is lifted, and elections are held.

1974 Military Coup in Portugal

A leftist military coup takes place in Portugal. It unseats the right-wing dictatorship in power for 40 years.

1974 India Explodes Nuclear Device

On May 18 the Indians detonate a nuclear bomb in an underground explosion.

1974 Emperor Haile Selassie Is Deposed in Ethiopia

The 44-year reign of Haile Selassie comes to an end when he is deposed by the army.

1974 President Nixon Resigns

On August 8, 1974, Richard Nixon becomes the first president in U.S. history to resign. Nixon resigns as the House of Representatives is poised to vote on the articles of impeachment against him. He is succeeded by Gerald Ford.

1974 Soyuz-Apollo Mission

The meeting of the American Apollo and the Soviet Soyuz on July 19, 1975, marks the first cooperative space mission between the United States and the Soviet Union.

1975 Helsinki Accords

Thirty-five nations sign the Helsinki Accords. The accords recognize the borders of Europe as they had been at the end of the World War II, thus recognizing Soviet domination of the Baltic States (Estonia, Latvia, and Lithuania).

1975 Franco Dies

On November 20 Francisco Franco dies. His death ends a dictatorship that had lasted since the Spanish civil war.

1975 Pol Pot in Cambodia

On April 17, Communist forces capture Phnom Penh, the capital of Cambodia. The new Communist regime is headed by Pol Pot, who commits genocide in Cambodia.

1975 Communists Defeat South Vietnam

On April 30 North Vietnamese Communist forces capture Saigon, ending the Vietnam War.

1975 Mozambique Gains Independence

Portugal grants independence to Mozambique on June 25.

1975 Angola Independent

Angola declares its independence from Portugal. Two separate governments are proclaimed.

1975 King Faisal Is Assassinated

King Faisal ibn Abd-al-Aziz of Saudi Arabia is assassinated by a family member.

1976 Mao Zedong Dies

Chairman Mao dies, the Cultural Revolution ends, and the Gang of Four is ousted.

1977 First Elections Are Held in Pakistan

The first general elections held under civilian rule take place on March 7.

1978 Chiang Ching-kuo Is Elected President

Chiang Ching-kuo is elected president of the Republic of China, beginning democratization.

1978 Sandinista Guerrillas Seize Hostages

Sandinista guerrillas capture the National Palace in Managua, Nicaragua. They seize 1,500 hostages, including members of the legislature.

1978 Deng Xiaoping in Power

Deng Xiaoping comes to power in China and begins economic reforms.

1978 John Paul II Is Elected Pope.

John Paul II is the first Pole to be elected pope.

1979 SALT II

The SALT II Accord is reached in June, allowing both the United States and the Soviet Union to build up to 2,250 missiles, of which 1,320 could be MIRVD (Multiple Independent Re-entry Vehicles).

1979 U.S. and China Establish Relations

In January 1979 the United States and Communist China establish formal diplomatic relations.

1979 Vietnamese-China War

In January 1979 Vietnamese troops capture Phnom Penh in an attempt to overthrow the government of Pol Pot. In response, the Chinese invade North Vietnam.

- 1979 Zulfikar Ali Bhutto Is Hanged**
A military coup led by General Zia unseats President Bhutto in Pakistan. Bhutto is charged with corruption and sentenced to death.
- 1979 Soviets Invades Afghanistan**
Soviet troops pour into Afghanistan to support Hafizullah Amin, who has recently unseated Mohammed Taraki. The Soviets quickly send 40,000 troops but are unable to put down the rebellion launched by Taraki loyalists.
- 1979 Idi Amin Is Overthrown**
The despotic rule of Idi Amin comes to an end when a joint force of Ugandan rebels and Tanzanian troops enters the Ugandan capital of Kampala. Amin flees to Saudi Arabia.
- 1979 War Between Somalia and Ethiopia**
On August 8 Somalia invades Ethiopia, the latest chapter in the ongoing dispute over the Ogaden.
- 1979 Southern Rhodesia Becomes Zimbabwe**
The white-controlled government, under Ian Smith, successfully holds against majority rule until 1976. Robert Mugabe becomes president of Zimbabwe.
- 1979 Shah of Iran Is Ousted**
On January 16, the shah leaves Iran for exile. One week later, the Ayatollah Khomeini returns from exile and forms an Islamic revolutionary government.
- 1979 Peace Treaty between Egypt and Israel**
On March 26, in Washington, D.C., a peace agreement is signed between Egypt and Israel, brokered by U.S. President Jimmy Carter.
- 1979 Militants Seize U.S. Embassy**
Angered by the arrival of the shah in the United States for medical treatment, militants attack and seize the American embassy in Tehran. Forty-nine embassy employees are held hostage for 444 days.
- 1979 Sandinistas Revolution Triumphant**
A multi-class insurrection against the Somoza dictatorship results in the coming to power of the Sandinistas in Nicaragua, initiating the 11-year Sandinista revolution (1979–90).
- 1979 Civil War in El Salvador**
Civil war breaks out in El Salvador. A military coup unseats the incumbent President Carlos Humberto Romero.
- 1980 Strikes Across Poland**
Polish workers, led by Lech Wałęsa, strike the Gdańsk shipyards. The workers win a major victory when the government agrees to demands made by the newly formed Solidarity Trade Union to legalize unions as well as affirm the right to strike.
- 1980 Gang of Four on Trial**
The Gang of Four, consisting of Jiang Qing (Mao's fourth wife) and other important leaders in the Cultural Revolution, go on trial in China. The Gang of Four fell from power after Mao Zedong's death in 1976.
- 1980 Libyan Troops Intervene in Chad Civil War**
Civil war breaks out in Chad between the forces of President Goukouni Oueddei and Prime Minister Hissène Habré.
- 1980 Iraq-Iran War**
Iraq invades Iran. The war lasts until 1988, and it is estimated that almost one million people die.
- 1980 Leftists Seize Embassy in Colombia**
Members of the Colombian April 19th movement take over the Dominican Republic's embassy during a reception.
- 1981 Mitterrand Is Elected French President**
François Mitterrand is elected as the first French socialist president in a surprise win over incumbent Valéry Giscard d'Estaing.
- 1981 Martial Law in Poland**
Martial law is imposed in Poland by Polish leader General Wojciech Jaruzelski in an attempt to repress the Solidarity movement.
- 1981 Anwar Sadat Is Assassinated**
Egyptian President Anwar Sadat is assassinated by Muslim extremists who oppose his peace agreement with Israel and the increasingly repressive regime in Egypt.
- 1981 Reagan Arms Buildup**
President Ronald Reagan proposes a \$180 billion expansion of the American military over the next six years.

1981 Assassination Attempt

On March 30 President Reagan is shot and gravely wounded by a lone gunman, John Hinckley, Jr.

1982 Israel invades Lebanon

Israel invades Lebanon on June 6, advancing to Beirut, and continues to hold South Lebanon until 2000.

1982 War in the Falklands

On April 2 the Argentinean military seizes the Falkland Islands off the coast of Argentina. On May 21, the first British troops land on the Falklands and rapidly defeat the Argentinean forces.

1983 Northern Chad Is Seized

Libya continues its involvement in Chad. The government requests and receives aid from both the U.S and French governments.

1983 U.S. Invasion of Grenada

Under the guise of an invitation by the Organization of Eastern Caribbean States, U.S. troops intervene and take control of the island.

1984 Indira Gandhi Is Assassinated

Indian Prime Minister Indira Gandhi is killed by two of her Sikh bodyguards in revenge for her armed raid on their temple. She is succeeded by her son Rajiv Gandhi.

1984 United Kingdom and China Agree on Hong Kong
Great Britain and the People's Republic of China agree on terms for the return of Hong Kong to China when the 99-year lease of portions of Hong Kong expires in 1997.

1984 Poison Gas Tragedy in India

Gas escapes from the Union Carbide plant in Bhopal, India. The gas, which is methyl isocyanate (used in the manufacture of insecticides), kills 2,000 people; 200,000 suffer long-term harm.

1984 Moderates Win Election in El Salvador

Free elections held in El Salvador bring José Napoleón Duarte to power as president. Duarte is considered a moderate.

1984 AIDS Epidemic Begins

French research scientists report isolating the HIV virus that causes acquired immunodeficiency syndrome (AIDS).

1985 Gorbachev Becomes Soviet Leader

Mikhail Sergeyevich Gorbachev is named the new leader of the Soviet Union. He begins reforms and brings in Boris Yeltsin, who later replaces him.

1985 Nimeiri Is Ousted in the Sudan

General Nimeiri is ousted in the Sudan after serving as the head of government since 1969.

1985 TWA Flight 847 Is Hijacked

A TWA Boeing 727 is hijacked by two Shi'i terrorists; 153 people are held hostage. After Israel releases 31 of its Shi'i prisoners, the hostages are released.

1985 United States Becomes Debtor Nation

For the first time since 1914, the United States owes more money to foreigners than it is owed.

1986 Nuclear Disaster at Chernobyl

A Soviet nuclear reactor at the Chernobyl nuclear plant in Ukraine not far from Kiev explodes, releasing fatal radiation to the surrounding areas.

1986 Summit at Reykjavík

A two-day summit is held in Reykjavík, Iceland, between Ronald Reagan and Mikhail Gorbachev. At the summit, the Soviets make major concessions in negotiations on strategic arms.

1986 Marcos Is Deposed

Filipino leader Ferdinand Marcos has parliament declare him the winner in a fraudulent election, even though his opponent has actually won. Mass demonstrations ensue, and Marcos is forced to flee when the army refuses to put down the demonstrations. He is succeeded by the true winner of the election, Corason Aquino.

1986 Iran Contra

The Reagan administration confirms that it has been selling arms to Iran, which is fighting a war with Iraq, in an effort to obtain the release of American hostages in Lebanon.

1987 Reagan and Gorbachev Meet

The signing of the INF (Intermediate-range Nuclear Forces) treaty in 1987 marks the beginning of the end of the cold war.

1987 Libyan Troops Are Driven Out of Chad

Chad takes the offensive in its civil war. The army of

- Chad attacks Libyan forces in the northern village of Aozou and routs them.
- 1987 Intifada Begins**
When an Israeli truck in the Gaza Strip hits and kills four people, Palestinians respond with protests.
- 1988 Gorbachev Announces Unilateral Troop Cuts**
Soviet Premier Gorbachev announces at the UN that the Soviet Union is unilaterally cutting back its conventional forces in eastern Europe by 500,000 troops.
- 1988 Benazir Bhutto Is Elected**
Benazir Bhutto is elected prime minister of Pakistan, the first woman in a Muslim country to hold the position.
- 1988 Soviets Out of Afghanistan**
The Soviets agree to remove troops from Afghanistan.
- 1988 Ten-Day Siege of Golden Temple**
Thirty-six are killed during the siege of the Sikh Golden Temple by the Indian army.
- 1988 Free Elections Held in Soviet Union**
Free elections are held in the Soviet Union for the first time in its history. Boris Yeltsin is elected president of the Russian Federation.
- 1989 Solidarity Wins Election in Poland**
On June 5 the Solidarity movement wins by an overwhelming majority in the first free election in Poland.
- 1989 Berlin Wall Comes Down**
On October 18, the regime of Erich Honecker, the Communist leader of East Germany, falls. It succumbs to increasing riots, as well as a flood of East Germans leaving via the open borders of Hungary.
- 1989 Czechoslovakia Elections**
The Communist regime of Czechoslovakia yields to popular demands and allowed free elections.
- 1989 Ceaușescu Ousted in Romania**
In the only bloody revolt in eastern Europe, Communist Romanian strongman Nicolae Ceaușescu is deposed.
- 1989 Tiananmen Square**
In April students in Beijing begin a series of demonstrations demanding democratization of China. They are bloodily put down by the Chinese Communist Party.
- 1989 U.S Troops Invade Panama**
When Panamanian strongman Manuel Noriega clamps down on the limited democracy existing in Panama, the United States intervenes and ousts the Noriega-led government.
- 1989 Chileans Vote to End Military Rule**
Elections held in December bring Patricio Aylwin to power as president of Chile.
- 1990 Lithuania Independent**
On March 11 the Lithuanian Parliament declares its independence from the Soviet Union.
- 1990 Germany Is Reunited**
On October 3 East and West Germany reunite, ending the division created at the end of World War II.
- 1990 Free Elections in Poland**
Lech Wałęsa is elected president of Poland. He receives 74 percent of the vote.
- 1990 Elections in Myanmar**
In the first free elections in 30 years, the voters of Myanmar (formerly Burma) repudiate the military government, which is ignored.
- 1990 Nelson Mandela Is Freed**
Nelson Mandela, leader of the African National Congress, is released after 27 years in prison by President F. W. de Klerk as the first step in the creation of a multiracial democracy.
- 1990 Namibia Independent**
After being occupied by South Africa for nearly 70 years, Namibia becomes independent.
- 1990 Gulf War Begins**
On August 2 Iraq attacks Kuwait. In response the United States leads an international coalition that frees Kuwait.
- 1991 Airlift of Ethiopian Jews to Israel**
In a period of 36 hours, Israel airlifts 14,500 Jews from Ethiopia to Israel.
- 1991 Failed Kremlin Coup**
On August 21, hard-line Communists stage a coup

against the government of Mikhail Gorbachev. It fails when Boris Yeltsin, the leader of the Russian Federation, rallies popular support against it.

1991 Rajiv Gandhi Is Assassinated

Rajiv Gandhi, prime minister of India and son of Indira Gandhi, is killed by an ethnic Tamil from Sri Lanka.

1991 Cambodian Civil War Ends

Under pressure from the world's powers, the Vietnamese-controlled Cambodian government and rebel forces reach a peace agreement.

1991 Eritrea Independent

After a 30-year armed struggle against Ethiopian domination, Eritrean forces defeat the Ethiopian military and gain independence.

1991 End of the Soviet Union

On December 21 representatives of 11 former Soviet Republics meet in Alma Ata and sign Declaration of the Commonwealth of Independent States.

1992 Civil War Begins in Former Yugoslavia

Civil war breaks out in Yugoslavia after the fall of the Communist regime. Among its former components are Serbia, Bosnia-Herzegovina, Macedonia, Croatia, and Slovenia.

1992 End of Military Rule in South Korea

Kim Young Sam becomes the first nonmilitary candidate to be elected president of South Korea.

1992 Security Council Votes Sanctions on Libya

The UN Security Council votes to impose sanctions on Libya for refusing to surrender two suspects in the bombing of a Pan Am flight over Scotland.

1992 El Salvador Signs Peace Agreement

The guerrilla movement and the El Salvador government sign an agreement, ending a 13-year civil war.

1993 Terrorists Attack World Trade Center

In February a powerful bomb explodes in the World Trade Center in New York, killing seven and injuring 1,000. The bombers are Islamists.

1993 Israel and PLO Reach Accord

Israel and the Palestine Liberation Organization reach an accord on an Israeli withdrawal from the Gaza Strip and the West Bank town of Jericho.

1994 Mandela Is Elected President of South Africa

Nelson Mandela is elected the first black leader of South Africa in its first free multiracial election.

1994 Civil War in Chechnya

A civil war breaks out in the Russian province of Chechnya after Chechens demand independence.

1995 Israeli Prime Minister Is Assassinated

Yitzhak Rabin, Israel's prime minister, is assassinated on November 3 by a right-wing Israeli opponent of the peace process.

1996 Elections in Bosnia

The Dayton Accords are signed, ending armed hostilities between hostile religious groups and mandating elections in Bosnia.

1996 Taliban Gains Control of Afghanistan

The Taliban, a Muslim fundamentalist group, captures Kabul, the capital of Afghanistan.

1996 Suicide Bombers Hit Israel

A series of suicide bombings strike both Jerusalem and Tel Aviv, seriously affecting the peace process.

1997 Britain Returns Hong Kong to China

British rule over Hong Kong comes to an end on July 1, with the region returning to China. China agrees to maintain extensive autonomy for Hong Kong.

1998 Northern Ireland Peace

Representatives of Catholics and Protestants of Ireland, together with representatives of the Irish Republic and the United Kingdom, sign a major peace accord.

1998 U.S. Embassies Are Bombed Simultaneously

On August 7 bombs explode at U.S. embassies in Nairobi, Kenya, and Dar es Salaam, Tanzania.

1999 Free Parliamentary Elections in Indonesia

On June 7 Indonesia holds free parliamentary elections. The opposition leader, Megawati Sukarnoputri, wins the most support.

1999 President Clinton Is Impeached

U.S. President Bill Clinton is impeached by the House of Representatives but is acquitted by the Senate.

2000 Camp David Summit Fails

Chances for peace between Palestinians and Israel

are dashed when a summit hosted by President Clinton fails. Palestinians begin another uprising against Israeli occupation.

2000 Bush Becomes U.S. President

Republican George W. Bush wins a contested election against Democrat Al Gore. The U.S. Supreme Court decides in favor of Bush.

2001 9/11 Terrorist Attack

Terrorists crash two planes into the World Trade Center in New York and a third into the Pentagon.

2001 U.S. Forces to Afghanistan

A U.S.-led coalition invades Afghanistan, fighting against and ousting the Taliban government for giving sanctuary to Osama bin Laden, leader of the 9/11 terrorism group al-Qaeda.

2003 U.S. Invades Iraq

U.S. troops invade Iraq and overthrow the regime of Saddam Hussein. Conflicts continue.

2004 Madrid Terror Attacks

On March 11 a series of coordinated terrorist attacks take place, aimed at the Madrid commuter train system. The attacks kill a total of 192 people and wound 2,050.

2004 Genocide Begins in Darfur

After a rebellion breaks out in western Sudan the government instigates militias and turns on the local population.

2005 Hurricane Katrina

Hurricane Katrina strikes New Orleans. One million people are forced to flee and more than 1,800 are killed.

2006 North Korea Explodes A-Bomb

North Korea becomes a member of the nuclear club when it reportedly tests an atomic bomb.

2007 Iraq War Continues

U.S. forces continue fighting in Iraq, a war now lasting longer than World War II.

MAJOR THEMES

1950 to the Present

FOOD PRODUCTION

Between 1950 and 2000 the world population increased from about 2.5 billion to over 6 billion people. Throughout this era food shortages and malnutrition persisted in parts of eastern and southern Asia, Central and South America, and throughout sub-Saharan Africa. Famines were caused by human factors such as war, civil strife, and failed economic and political policies, while sometimes being exacerbated by natural disasters such as drought. In the 1970s an almost decade-long drought in the Sahel region of Africa south of the Sahara contributed to the death of millions. Hundreds of thousands of others left their homes, walking long distances to neighboring countries in search of food. These refugees then became dependent on subsistence aid from governments or relief agencies.

In the early 21st century, a peanut-based paste (Plumpy'nut), developed by a French scientist, André Briend, offered high nutritional value at very low cost and seemed a promising means of alleviating severe malnutrition among children in Africa. A human-made famine caused by the communist regime under Mao Zedong resulted in the deaths of 27 million people in China from 1958 to 1960. The reversal of Mao's agricultural policies in the 1980s under Deng Xiaoping increased agricultural production by 50 percent in only eight years. Inefficiencies and waste on collective farms also resulted in food shortages in the Soviet Union.

In the Middle East, some oil-rich nations such as Libya and Saudi Arabia devoted huge amounts of money to subsidize agricultural and livestock production in order to avoid total dependence on food imports. Vast agricultural projects, some using hydroponics (growth in water), irrigation, and other techniques increased production but were not cost-effective. Nations in the region with large populations and little oil, such as Egypt, were unable to adopt such expensive technologies to increase productivity.

Subsistence production in Central and South America declined as commercial agriculture grew; rural producers everywhere became increasingly linked to national and international markets. Overall, imports of food increased as the 20th century progressed. United States foreign aid was often tied to the acceptance of U.S. food imports that sought to dump excess production

overseas. Most poor countries remained dependent on the export of low-priced single crops, such as coffee from Brazil, bananas and other fruits from Central America, and cocoa and peanuts from West Africa.

By the 21st century, privatization and globalization had further lowered the prices of agricultural products from nations in the Global South, leading to greater rural poverty. The United States and others also sought to export wheat; hence, in Mexico and other South American nations wheat bread gradually began to undermine the popularity of the traditional corn tortillas that provided more complete nutrients. Similarly, mothers in much of the Global South were encouraged to buy manufactured milk formulas rather than nursing their infants. The degradation of the environment also made it harder for the rural poor to eke out livelihoods on depleted and deforested soils with insufficient water supplies. In contrast, heavy government subsidies and protectionist policies protected farmers and the agricultural sector in Europe, North America, and Australasia.

Technological and political developments led to the increase of food production and distribution in many regions. Improved transportation and communication systems allowed food from rich agricultural nations, especially the United States, Canada, and Australia, to be distributed in poor regions. International humanitarian aid organizations and aid benefits by rock stars and others helped to provide needed relief. Scientific and technological advances and chemical fertilizers also increased the yields of vital grains per acre.

However, the application of these developments was uneven. Poor countries used the least amount of fertilizers; ranging from 200 grams per hectare of arable land in the Central African Republic to 535,800 grams per hectare in South Korea. Pesticide use was similarly uneven. The “green revolution” begun in the 1960s introduced high-yielding rice, corn, and wheat; as a result of the use of these high-yield crops, the world’s rice production doubled between 1967 and 1992, and India went from being a grain-importing nation to an exporter of rice. Harvests in Mexico and other nations also increased. Thus, formerly famine-prone nations such as India, Bangladesh, China, and Mexico were able to produce sufficient food to feed their growing populations, although pockets of hunger and malnutrition remained. By the 1990s scientists had also successfully genetically modified (GM) key crops and livestock to increase production.

Vast irrigation projects such as the Aswān Dam in Egypt, the Three Gorges Dam in China, and the Atatürk Dam in Turkey also brought new land into agricultural production, as well as generating electrical power for civilian use and industry. Unfortunately, these projects came at high ecological and human costs. Some argued that smaller, more technologically appropriate projects might have produced the same results at lower human and economic costs.

The development of new and less perishable foodstuffs was sometimes driven by wars or the military. For example, during World War II, instant eggs and Spam were adopted as rations to feed troops. After the war, many in the West adopted these products as part of their usual diets. The space program also contributed to the development of high-energy drinks and dehydrated foods. A wide variety of easily available and inexpensive frozen foods provided convenience to Western homemakers who eagerly fed TV dinners and other “fast foods” to their families. These new foodstuffs altered the eating habits of many in the West and freed homemakers, mostly women, from long hours spent in food preparation. Fast-food franchises proliferated from the West to Russia, the Middle East, India, and China. The wealthy around the world adopted Western eating styles and foodstuffs, including soft drinks, hamburgers, and pizza. Conversely, Asian cuisine from India, Thailand, and China became popular in the United States and Europe. Other new foodstuffs, including a wide variety of soft drinks, were popular worldwide.

Health concerns, especially among the middle and upper classes in the West, contributed to the popularity of organic foods and eating locally grown products that were close to nature. Many also adopted the Mediterranean diet heavy with fruits and vegetables with little meat. The poor in the West and the rest of the world were generally unable to afford these more expensive foodstuffs or diets.

Hence although much of the world’s population was better fed by the beginning of the 21st century, people in Europe, North America, Japan, and Australasia consumed about one-third more

calories per day than people in poor nations. The discrepancy in consumption of protein, particularly meat, was even greater. Whereas obesity was an increasing problem among the wealthy, malnutrition and hunger continued to threaten the health and longevity of the poor.

SCIENCE AND TECHNOLOGY

The pace of scientific and technological discovery surged in the second half of the 20th century and showed no sign of ebbing in the 21st. Although most discoveries further enriched the world's wealthiest nations, as had been true since the onset of the Industrial Revolution, other countries, including China, India, South Korea, Taiwan, Brazil, Argentina, Chile, and South Africa, began to pose an energetic challenge to the West and Japan.

For the United States and Soviet Union, the cold war was for many years the engine that drove innovation. Both nations' huge spending on military projects often also yielded important scientific information and an array of new consumer products. Among innovations that began in the defense sector were jet aircraft, lasers and global positioning devices, electronic computers, and the Internet. "Big Science" and "Big Technology," carried out in government agencies, major universities, and huge corporate laboratories, created what U.S. President Dwight D. Eisenhower criticized in a 1961 speech as the "military-industrial complex." Eisenhower was not the only American, or human, to fear a world led by the "scientific-technological elite." During this period, the legitimacy of science and invention would be undercut by growing environmental degradation, chemical and atomic disasters, the emergence of dangerous new diseases, and troubling ethical questions.

The Space Frontier. Both Britain and Germany flew jet-propelled airplanes into battle during World War II, but commercial use of these much faster planes grew slowly in the postwar years. By 1955, the Soviets had jets in service; an early passenger was Premier Nikita Khrushchev. The U.S. airline industry, profitably flying propeller planes, took longer to introduce jet engines. But by 1959, Pan American World Airways was flying Boeing 707 jets from New York to Paris, halving the time of the trip.

Meanwhile, military pilots were testing the limits of terrestrial flight. In 1947, American pilot Chuck Yeager, piloting a Bell X-1 jet, officially exceeded Mach 1, the speed of sound (approximately 660 miles per hour). Although supersonic flight led to outer space programs, it failed commercially. Concorde, the British-French luxury passenger plane, could fly at twice the speed of sound but was expensive to operate and limited to certain airports. The Concorde fleet was withdrawn from service in 2003, three years after its only fatal crash.

The Space Race began on October 4, 1957, when the Soviet Union launched *Sputnik*, the world's first artificial satellite, into earth orbit. *Sputnik* was no bigger than a basketball, but its successful 98-minute trip was seen by alarmed Americans as a huge Soviet victory. Within months, the United States kicked its embryonic space program into high gear. In June 1958, Congress authorized the creation of NASA, the National Aeronautics and Space Administration.

Although the Soviet Union and United States were the main competitors in the space program, France, under Premier Charles de Gaulle, and other nations were also motivated by *Sputnik*. The Soviets were first to put humans in space; only American missions set humans on the Moon, the first time in 1969. As the cold war waned, national prestige missions mostly gave way to scientific space exploration and commercial ventures. The U.S. Space Shuttle program began in 1972. The Soviet Union manned a space station, which later became an international endeavor. Europe's Ariane program in 1980 became a private venture that marketed space opportunities, including satellite launches. In 2003, China successfully launched an astronaut.

Astronomers and cosmologists sought more basic information about the universe—its age, origins, and size. American Edwin Hubble and Briton Stephen Hawking were among those seeking to define the beginning of the universe. The so-called big bang theory, now accepted by virtually all scientists, posits an explosion 10 to 15 billion years ago, with Earth's solar system appearing about 5 billion years ago. Hubble (1889–1953) was honored in 1990 when the *Hubble Space Telescope* began sending back images of the universe unimpeded by Earth's atmosphere. Unmanned missions

to the Moon, Mars, and other planets have also resulted in new information and recategorizations of planets and other heavenly bodies.

Energy. Finding sufficient energy for a growing and industrializing world population proved to be a major challenge. Soon after the United States dropped its two atomic bombs in 1945, some physicists and business interests began to promote peaceful uses of atomic energy. Although hundreds of nuclear-fueled power plants are operating around the world, especially in Japan and Europe, an atomic age of abundant clean energy did not come to pass in the 20th century.

Nuclear energy's beginning as a fearful weapon that caused not only instant deaths but lingering radiation sickness did not help its image. Nor did the United States's development of an even more destructive hydrogen bomb. In 1963, the United States and Soviet Union acknowledged some of these concerns, signing a treaty that required weapons tests underground to minimize atmospheric contamination

Electric utilities using fossil fuels—coal and petroleum—produce greater air pollution than nuclear power plants, but they enjoyed several advantages. Less heavily regulated, they also did not need to store or process radioactive waste that could last for thousands of years, as spent plutonium fuel did. Nuclear plants also required constant cooling. Cooling water inevitably got hot as it circulated through reactors. Although this water was not radioactive, it could cause thermal pollution if dumped into local rivers and was implicated in the deaths of fish and other aquatic life. By the 1960s, ecologists were describing these adverse effects and enthusiasm for nuclear plants was waning. A near disaster at Three Mile Island in Pennsylvania in 1979, followed in 1986 by a reactor meltdown in Chernobyl, Ukraine, that spread high levels of radiation across much of western Europe, brought new nuclear projects almost to a halt.

Late in the century, evidence of global warming mounted as ice sheets in the Arctic and Antarctic began melting rapidly. Carbon dioxide levels climbed, and the protective ozone layer shrank. Although Earth had experienced cycles of abnormal warmth and cold even before humans appeared, most scientists and some political leaders feared that human activity was seriously disrupting the world's climate. They urged energy conservation and alternatives to carbon-rich oil and coal, such as solar and wind power, hydrogen, and synthetic fuels. In 2005, 140 nations ratified the Kyoto Protocols, designed to limit destructive emissions. The United States, proportionally the world's largest energy user, declined to sign the treaty.

Chemistry and Material Science. New synthetics enabled the construction of cheaper, better-insulated houses, taller office buildings, and safer roads and bridges. Plastics, along with resins and epoxy, came into their own in the 1950s, usually replacing traditional natural materials. From non-iron polyester clothing to nonstick cookware, from fireproofing to mold-proofing, companies like Monsanto, BASF, and DuPont promised “better living through chemistry.” Pharmaceutical chemists, like Germany's Bayer, engineered new medicines and made them easier to use. Agricultural pesticides significantly improved crop yields.

But side effects rose in tandem with chemistry's proliferating consumer and industrial applications. Nearly indestructible, plastics soon glutted landfills. In 1962, scientist Rachel Carson blamed DDT, a powerful insecticide formulated by Swiss scientists in the 1930s, for bird deaths. At Love Canal in Niagara Falls, New York, industrial wastes left behind by a chemical company were blamed in 1978 for illnesses affecting both adults and children, whose school was built atop a toxic dump. In the Indian industrial city Bhopal in 1984, a Union Carbide plant leaked the pesticide methyl isocyanate, exposing 500,000 people to sickening fumes and killing thousands. The Bhopal area was still contaminated 20 years later.

The Information Age. ENIAC, the first electronic computer, was completed in 1945 at the University of Pennsylvania under a military contract. Engineer J. Presper Eckert and physicist John W. Mauchly's enormous device was powered by 18,000 vacuum tubes and performed 5,000 calculations per second. Hungarian refugee John von Neumann soon after developed what became the basic architecture of computer systems. The invention of transistors by lab scientists at Bell Laboratories in 1948 eventually eliminated clumsy vacuum tubes and paved the way for microchips that

would make computers and many other digital devices much smaller, cheaper, and more powerful. While computers allegedly reduced paper documents, new copying and printing technologies only increased the flood. The process that would eventually be trademarked by the Xerox Corporation was invented in 1938 but did not become commercially viable until the 1960s. As computers found ways to “talk” to each other, old-line consumer businesses like Corning Glass became suppliers of fiber-optic technology, carrying millions of data and voice messages around the world.

New opportunities for instant worldwide communication proved to be both a promise and a threat. Despite unequal access across national and class lines, these devices were readily adapted in most societies. It seemed that the Internet might do to printed books and newspapers what automobiles had done to railroads.

Human Engineering. Deoxyribonucleic acid—DNA—might be the most important biological breakthrough in human history. Identified and decoded in 1953 by researchers James Watson, Francis Crick, Maurice Wilkins, and Rosalind Franklin, this double helix composed of four protein building blocks has been used to identify criminals, trace ancestors, and pinpoint disease processes. The Human Genome was “mapped” in 2000 by multinational efforts involving both university geneticists and commercial DNA scientists. DNA holds out the promise of eradicating genetic diseases but has also raised troubling ethical issues of privacy, eugenics, and equality of medical care.

New reproductive technologies are especially controversial. In Britain in 1978, the first healthy “test tube” baby was born after her father’s sperm and mother’s eggs were mixed by physicians in a laboratory. In vitro fertilization, as it is now called, became a relatively routine technique for couples struggling with infertility. Controversy grew as some fertilization techniques produced multiple births, and a few women past menopause used medical techniques to carry babies to term. So-called boutique babies also raised ethical questions. At least theoretically, parents could choose their child’s sex or sexual orientation, their height and looks, or their IQ and mental proclivities. Some ethicists are disturbed by these developments, seeing them as a form of prenatal eugenics.

In 1955 doctors Jonas Salk and Albert Sabin independently developed vaccines to end polio, a waterborne viral disease that crippled or killed. Franklin D. Roosevelt, who contracted polio in 1920, was America’s most famous victim of the prevaccine disease. A few years later, smallpox was declared eradicated. For a while, it looked as though medical advances would soon end most human disease. New drugs, including medications for mental illnesses, indeed prolonged and improved lifespans. But access to medical care was extremely inequitable, even in wealthy nations like the United States, and more so in less-developed societies. America’s “War on Cancer” made progress but found few certain cures. The shocking emergence in the 1980s of previously unknown diseases—particularly HIV/AIDS—convincingly showed that human scientific knowledge had not yet created a perfect world.

SOCIAL AND CLASS RELATIONS

Major social and class changes occurred around the world in the post–World War II era. In the United States, the GI Bill enabled hundreds of thousands of young veterans to attend university, thereby opening up white-collar and professional jobs for an entire generation of working class or rural youth. After the war, there was also a huge baby boom in the United States, Europe, and Australasia. In the United States, many families moved from agricultural or urban areas to the suburbs, often buying new homes with loans provided for veterans. Road systems, shopping malls, schools, and hospitals were constructed to provide services for these new residents. The same trends were followed by the peoples in western Europe, Canada, and Australia.

In Asia, Africa, and the Middle East, many young people and families flocked to the cities to find work and better ways of life. Urbanization became a global phenomenon in the last half of the 20th century. By 2006 more than 8 million Chinese peasants annually were moving into cities to find work. Whereas Great Britain had five cities of over a million people, China by 2000 had 90. In Central and South America, where social and class relations were most starkly contrasted, urban populations swelled and vast slums sprang up in major cities like São Paulo, Bogotá, and Lima. Similarly

large slums, inhabited mostly by migrants from rural regions, also surrounded many African and Asian cities. Higher population density also made many more people vulnerable to natural disasters such as the 2004 tsunami that devastated parts of Southeast Asia, or the periodic earthquakes that have killed tens of thousands in Turkey, Iran, and Indonesia.

During the 1950s and 1960s, the struggle for independence in Asia and Africa led to the creation of a host of newly independent states that often turned toward the Soviet model of a planned economy in attempts to foster rapid development. In Central and South America working-class peoples' organizations began to emerge in both rural and urban areas. In contrast, in industrialized nations such as the United States trade union membership dropped. With end of the cold war, most formerly Communist nations, as well as those like India that had emulated the socialist model, dismantled state-owned enterprises in favor of capitalism and privatization. After the death of Mao Zedong, China also abandoned most state-owned enterprises in favor of free-market ones.

The gap between the rich and poor globally, and within many nations, widened in the later part of the 20th century. In the post-cold war era, the International Monetary Fund (IMF) and World Bank often demanded privatization and opening up of markets as prerequisites for loans and assistance to African, Asian, and Latin American nations. As socialist economies in eastern Europe collapsed or were dismantled, many workers lost the social safety net that socialist states had once provided. Nations in western Europe continued to provide a wide range of social benefits including healthcare for their citizens, while some oil rich Middle Eastern nations such as Kuwait and Libya implemented sweeping welfare states to provide free education, health care, and a host of other benefits for their citizens. In contrast, although one of the richest and most powerful nations on Earth, the United States failed to implement universal health care for its citizens.

By 2006 almost a billion people (out of a world total of over 6 billion)—mostly in Africa, Central and South America, and parts of Asia—lived below the extreme poverty line of \$1 per day. Although wealthy European nations, the United States, and Japan talked about and implemented some debt renegotiations or cancellations, huge debts continued to burden the poorest countries.

The status of women and family life also continued to undergo major changes in the second half of the 20th century. Beginning in the 1960s, women in Western nations again entered the workforce in large numbers. The development of the birth control pill and other forms of contraception in the 1950s and beyond opened new social horizons for women, while the Kinsey Report on Sex in 1948 resulted in a more open attitude on sexuality. Laws that made abortion legal were enacted in many Western nations and Japan. To prevent a continuing population explosion, China had enacted a strict one-child-per-couple rule by 1980. Abortion also became a major issue of social and political conflict in the United States and some other nations. Likewise, homosexual and lesbian demands for equal rights exacerbated political differences between liberals and conservatives, especially in the United States.

New generations of feminists also demanded the extension of equal rights and fuller political and economic participation for women around the world. For example, Doria Shafik in Egypt campaigned for voting rights for women and better educational opportunities, while Simone de Beauvoir of France, Betty Friedan in the United States, and Germaine Greer from Australia called for equality in jobs, equal pay for equal work, and changes in social mores on housework and child care and other traditional female roles. Old stereotypes of “women’s” versus “men’s” work were challenged. Women also played important roles in revolutions in the developing nations, as in Vietnam and Algeria. While many women have risen to lead their governments, many others failed to gain equal rights in their post-independence countries. Women’s international congresses in Mexico, China, and elsewhere have continued to address the problems of persistent inequality of payment for work, human rights, and access to education. Women’s rights have also been set back in the United States by the failure to gain ratification of the Equal Rights Amendment and in many Muslim countries because of fundamentalist interpretations of Islam.

On the positive side, Wangari Muta Maathai in Kenya, a government minister and activist, championed environmental and women’s rights; she empowered women by providing seedlings to women

to plant in public and private lands in exchange for small remuneration and won the 2004 Nobel Peace Prize. Muslim women feminists Fatima Mernissi of Morocco and Shirin Ebadi of Iran (the 2003 Nobel Peace Prize winner) both wrote about rights of Muslim women; their work provided liberal interpretations of Islamic tradition and law and promoted feminism as part of Islam. Nawal al Sad-dawi of Egypt and others also spoke out against crimes of honor and physical domestic abuse, which is a global problem. The Grameen Bank, begun by the economist Mohammad Yunus from Bangladesh, has made hundreds of thousands of microloans to women to empower them economically. This model has been copied in several countries, and Yunus was awarded the Nobel Peace Prize in 2006.

Women have been elected as president or prime minister in Great Britain, Germany, Turkey, Pakistan, India, and a host of other nations. In 2006, Michelle Bachelet was elected as president of Chile, and Ellen Johnson Sirleaf as president in Liberia—nations whose political systems had previously been dominated by men.

The populations of Western countries, Japan, and even China also became older as life spans extended, owing to better health care, lowering of birth rates, and new treatments for a host of physical problems. Japanese men and women enjoyed the longest life span worldwide. In contrast, from the 1970s on, many in Africa were condemned to early deaths that were, in part, caused by poverty, high infant mortality, and disease, especially HIV and AIDS. In Africa over a dozen nations had higher under-five infant mortality rates in 2006 than in 1990, and India had one of the highest numbers per capita of maternal deaths per year. The rights of children also continued to be imperiled in many poor nations, where they often had to work in dangerous conditions in order to provide food for their families. To ameliorate such abuses, the United Nations launched campaigns against child exploitation, while international nongovernmental organizations (NGOs) such as the Bill and Melinda Gates Foundation in the United States devoted vast sums of money to address problems of international public health, especially such diseases as polio and AIDS.

In the 1960s, university students led a young people's movement in the West that challenged old traditions in social behavior, fashion, music, and politics. The hippies of the era advocated a lifestyle of "making love not war" and urged their peers to "drop out and tune in" with drugs, rock and roll music, and sex. The civil rights movement in the 1950s and 1960s in the United States struggled to achieve equal rights for African Americans, long a social and economic underclass. Martin Luther King, Jr., led a nonviolent struggle against segregation and helped to achieve more equal political and legal rights. But riots and protests, coupled with mounting opposition to U.S. involvement in the war in Vietnam, polarized American society. King and other leaders were assassinated, and protesting students at Kent State University in Ohio were shot by the National Guard in the 1960s.

Blacks in South Africa also waged a protracted struggle against the apartheid system of total racial segregation. The African National Congress (ANC) led by Nelson Mandela ultimately resorted to violence to dismantle apartheid; it finally gained full political and social rights in 1990s. Indigenous peoples in Latin and South America and Canada, Australia, and New Zealand also sought and often gained improved rights and status. Rigoberta Menchú was awarded the 1992 Nobel Prize for Peace for her struggle for the rights of indigenous peoples in the Western Hemisphere. Because inequities continued to exist, the struggles for social and class equality appeared certain to continue well into the 21st century.

TRADE AND CULTURAL EXCHANGES

World War II provided full employment and production to the U.S. economy, which allowed it to dominate world trade and industry in the war's immediate aftermath. In contrast, the infrastructures of all of the other major manufacturing nations in Europe and Japan had been largely destroyed by the war.

These factors allowed U.S.-based corporations to enjoy an almost total monopoly in the manufacturing of steel, automobiles, and a host of other consumer goods for the domestic and international markets in the 1950s. However, as Europe and Japan recovered from the effects of the war in

the 1960s, the U.S. trade advantages began to diminish. The oil shocks of the 1970s revealed U.S. energy dependency on foreign sources, while its aging industrial infrastructure made it difficult to compete with modern and more efficient manufacturers overseas. In addition to western Europe, Japan emerged as a major economic competitor, followed by the “little dragons,” namely South Korea, Singapore, and Taiwan, which also began to compete for international markets. Partly in response to lower labor costs, U.S. corporations began to move production facilities from union-protected plants in the United States to plants in those countries. At the same time the European Common Market, begun after World War II, evolved by the late 1990s into the European Union (EU), which included most of the nations of western Europe. The EU became a third major economic powerhouse, along with the United States and Japan.

The development and improvement of computers from the mid-1950s helped to revolutionize global trading and business. The computer revolution also made it possible for U.S. companies to outsource jobs to lower-cost English-speaking countries such as India or Ireland. The development of copiers in the 1970s and then faxes helped to facilitate trading and business transactions across vast distances. Late in the 20th century, the World Wide Web, satellites, and cell phones made business and trade communications almost instantaneous.

With the end of the cold war by the early 1990s, Western capitalist countries led by the United States moved to globalize and privatize the world’s economic system. The IMF and World Bank made economic restructuring conditions for aid and loans to poor countries in the Global South. Nations seeking loans also had to lower protective tariffs and open their markets to goods from the West. This increased trade of goods from the West but often led to the further impoverishment of already poor nations.

The most important world trade organization was the World Trade Organization (WTO), which included most industrialized nations, although Russia and India had not been admitted as of 2007. Important regional trading organizations promoting free trade were established; they included the EU, North American Free Trade Agreement (NAFTA), Andean Group (AG), Asia-Pacific Economic Cooperation (APEC), Commonwealth of Independent States (CIS) in the former Soviet Union, and the Gulf Cooperation Council (GCC) in the Middle East. There was also a standardization of “floating currencies,” but the continued strength of the dollar favored the United States, although the growth of European currency (the euro) emerged as a possible rival in the early 21st century.

Africa lagged behind the world economically. It remained a source for raw materials and sometimes was used as a dumping ground for both low-quality goods and waste products from the industrialized countries. The gap between wealthy and poor nations continued to grow in the latter part of the 20th century despite economic conferences attended by leaders of wealthy nations that called for the refinancing of global debt, especially for poor nations in Africa. In the Millennium Summit in 2000, rich nations promised assistance to help poor nations out of the cycle of poverty by increasing education and health care and eradicating hunger while fighting virulent diseases such as malaria and AIDS by working with poor nations.

However, by 2006 much remained undone, while the rich continued to grow richer and the poor continued to eke out livings through trade in raw materials and inefficiently produced food products. Increasing populations continued to undermine economic growth in many nations, especially in Africa but also in some parts of Asia. However, by the early 21st century, India and China, both previously low-income nations, had emerged as new economic and manufacturing giants, exporting a wide range of goods around the world and accumulating trade surpluses. They were followed by Vietnam, Thailand, and Malaysia, which also enjoyed rapid economic growth. The United States, in particular, had a huge trade deficit with China.

The 20th century was also marked by the globalization of Western culture. The United States led the way as American movie and television stars, music, fashion, and even advertising became increasingly popular around the world. However, film industries in Egypt and Mumbai (Bombay), India, known as Bollywood (three times larger than Hollywood production), also enjoyed great popularity for audiences in the Middle East and Asia. Beginning in the 1980s, color television, sat-

elite systems, videocassettes, and cell phone networks all provided easy and relatively inexpensive access to wide a range of musical, artistic, and dramatic productions throughout the world. International hotel and fast food chains also helped to popularize Western tastes. Tourism, boosted by cheap jet airplane travel, enabled millions to see and enjoy other cultures.

The 1960s was a decade of major cultural changes, especially among Western youth and the elites worldwide. The Woodstock rock festival in 1969 was a centerpiece of the hippie generation, which advocated “turning on, tuning in, and dropping out” and rock and roll music and dance. Cultural fusions were particularly apparent in music. Western rock-and-roll musicians helped to popularize Africa, Caribbean, and other traditional music and sometimes brought indigenous artists from Africa and South America to the attention of international audiences for the first time. Jazz, hip hop, Latin influences, and rai (a fusion of traditional Arabic and urban Western motifs) from North Africa attracted music lovers from around the world. Similar fusions of indigenous materials and motifs, along with eco-friendly styles, in art and architecture also became popular.

While English became the universal second language, attempts were made to preserve and revitalize indigenous languages. The Nigerian author, Wole Soyinka, spoke widely on the awareness among Africans of their own rich cultural heritage. For example, the Kenyan novelist Ngugi wa Thiong’o wrote in his native language Gikuyu, which had been banned in his school while the British ruled Kenya. Similarly, Amadou Hampate Ba of Mali spoke impassionately at UNESCO to preserve African oral traditions, or, as he expressed it, “In Africa, when an old man dies, it is like a whole library burning down.”

The tensions between secularism and religion apparent at the beginning of the 20th century intensified at its end. While western European societies became increasingly secular, by the 1970s militant Islamists across the Muslim world wanted to return to early Islamic practices and governments that operated under Islamic law and challenged Western cultural hegemony. Some Christian fundamentalists in the West, especially in the United States, Hindus in India, and Jews in Israel also wanted to create religiously based governments and judicial systems in their nations. Although the conflict of secular Westernization with tradition and religion promised to continue in the Islamic world, other leaders in these nations expressed their desires for the preservation of the best of their own traditional cultures with the adaptation of what they considered the best of Western civilization.

Hence, ongoing and seemingly endless technological advances made the world smaller, enabling peoples to travel, trade, and communicate almost instantaneously. It also provided the means through which the rich industrialized nations could dominate and largely control world trade and communications and popularize Western culture worldwide. At the same time, peoples around the world attempted, with varying degrees of success, to preserve their ancient traditions, languages, and religions. Some sought to maintain their individual societies through divisive and sometimes violent racism, sectarianism, and ethnocentrism. However, as the 21st century progressed, many others struggled to maintain their individuality, taking the best of other cultures while sharing the best of their own.

WARFARE

Warfare in the second half of the 20th century was dominated by the cold war, which for 45 years pitted nuclear superpowers, the United States and Soviet Union, against one another. At the same time, this era also experienced extensive ethnic, religious, and territorial conflict. This often meant that military forces equipped with technologically advanced weapons of mass destruction found themselves in battle with guerrilla fighters armed with makeshift or outdated weapons. The well-equipped warriors did not always win.

The waning days of World War II set new hostilities in motion as the Soviets competed with their Allies to be the first to liberate Axis-held territories in both Europe and Asia. At a 1945 conference at Yalta, three months before Germany surrendered, Soviet leader Joseph Stalin, U.S. president Franklin D. Roosevelt, and British prime minister Winston Churchill agreed to a buffer zone between the USSR and Germany. By 1946, Churchill, speaking at a Missouri college, was decrying

a Soviet “Iron Curtain” that was turning eastern European nations, including the Soviet sector in eastern Germany, into satellite states while projecting communist influence around the world. The cold war was under way.

Although the United States and Soviet Union never directly attacked one another—hence the term “cold” war—the superpowers engaged in a costly arms race and spent blood and treasure in a series of “proxy” wars in Korea, Vietnam, and Afghanistan. Wars of decolonization that included French Algeria, Dutch Indonesia, and French, British, Belgian, and Portuguese sub-Saharan Africa erupted in many regions still trying to throw off Western imperialism. The United States and the Soviet Union regularly used independence movements as opportunities to outdo one another by providing intelligence, arms, and covert assistance to their presumed allies. Both “proxy” and “decolonizing” wars played out in a bipolar world in which the Americans and Soviets each pressed the rest of the world’s nations to take their side. Many did so; others, including India, precariously maintained nonaligned status.

Both the United States and the Soviet Union were permanent members of the United Nations Security Council, but they also took steps to secure their own allies. NATO—the North Atlantic Treaty Organization—founded in 1949, became a mutual security body prepared to respond militarily to possible Soviet incursions. Moscow responded in 1955 to NATO’s admission of West Germany by creating the Warsaw Pact, a mutual defense agreement between the Soviet Union and most eastern European nations in the Soviet orbit.

The Soviet Union intervened militarily to crush revolts in Hungary (1956), Czechoslovakia (1968), and Poland (1981) and built the Berlin Wall to prevent East Germans from escaping to the West. The United States also intensified efforts to control client nations in Central America, sometimes intervening militarily to prevent the emergence there of reform movements that were, or seemed to be, inspired by communism. Cuban revolutionary leader Fidel Castro’s embrace of the Soviet Union after 1959 was a rare failure of U.S. influence in the Western Hemisphere.

Arms Race. The most significant but least-used weapon of the cold war era was the nuclear bomb and its associated adaptations. After the Soviets fabricated their own A-bomb in 1949, other nations were soon preparing to join the nuclear “club.” Since then, Britain, France, China, India, Pakistan, Israel, South Africa, and North Korea have built bombs or are believed to have developed bomb technology, despite international efforts to check nuclear weapons proliferation. In 1951, the United States tested an even more powerful hydrogen, or H-, bomb and began expanding its fleet of nuclear-powered submarines. As the arms race intensified, both sides turned to rocket technology to create intercontinental ballistic missile systems; virtually all of these were designed to drop nuclear warheads on enemy targets or fire them from submarines.

Many historians now agree that this bilateral binge of nuclear weapons stockpiling was a major reason why the United States and the Soviet Union managed to avoid going to war with each other. The cold war weapons buildup that produced what came to be called MAD—mutually assured destruction—certainly caused anxiety. Americans were urged to build backyard fallout shelters to protect their families from radiation.

During the Cuban missile crisis in 1962, U.S. President John F. Kennedy and Premier Nikita Khrushchev squared off over Soviet installation of nuclear weapons in Cuba. War was narrowly averted, but the likelihood that both nations could suffer deaths and damage of unprecedented magnitude helped to defuse the impasse. In 1963 Kennedy and Khrushchev signed a treaty banning above-ground nuclear testing; by the 1970s, the two nations were negotiating agreements to slow or even reduce nuclear weapons development.

After 1950, the U.S. Air Force emerged the big winner in the internal Pentagon race for respect and resources. The biggest, most expensive improvements in both offensive and defensive weaponry focused on manned and unmanned aircraft and missiles. Aircraft carriers and submarines dominated the seas, while versatile armored helicopters took on important combat roles. After the Soviet Union successfully launched *Sputnik* in 1957, the first satellite in orbit, the idea of “air” power took on an outer space dimension. Although the perceived *Sputnik* military threat fizzled, in 1983 Ronald

Reagan, America's last cold war president, proposed a strategic defense initiative, dubbed "Star Wars," to shoot down Soviet missiles from positions in space.

Proxy Wars. Three major conflicts between 1950 and 1989 demonstrated attempts by the two superpowers (and Communist China) to "win" the cold war militarily and ideologically. These were the Korean War (1950–53) and Vietnam War (1954–75), in which U.S. troops played a leading role, and the Soviet invasion of Afghanistan (1979–89). None of these conflicts proved very productive for the superpowers.

With the blessing of the United Nations (during a Soviet boycott of the Security Council), the United States assembled a multinational force to repel efforts by Communist North Korea to conquer pro-Western South Korea. Soon, the new Chinese Communist regime came to the aid of North Korea, complicating any chance for a United Nations–led victory. This war ended with an armistice that never became a peace treaty. Hostilities continued to break out along the DMZ (demilitarized zone) separating North and South Korea.

Soviet intervention in a civil war–wracked Afghanistan ended 10 years later in a failure so profound that it became a factor in the breakup of the Soviet Union soon after. The U.S. government, interpreting the Afghan conflict through a cold war lens, provided the latest weapons, including Stinger missiles, to local warlords. A decade later, these weapons would reappear as disaffected ethnic and religious groups in Asia and the Middle East mounted anti-American and anti-Russian attacks.

Vietnam was the longest of these "proxy" contests and, for a time, made Americans question national power and the U.S. role in a world of nations. As Japan withdrew from its Asian conquests at the end of World War II, the French tried to resume colonial control in Indochina. Vietnamese leader Ho Chi Minh, a Communist, sought independence. By the time France withdrew in 1954 after a major defeat at Dien Bien Phu, the United States had assumed the role of protecting the southern sector of politically divided Vietnam from its "red" brethren in North Vietnam.

For 10 years U.S. involvement in South Vietnam drew little public attention and was carried out by relatively small numbers of military advisers and intelligence agents. These Americans were supposed to strengthen South Vietnam's military and political structures to prevent what President Dwight D. Eisenhower called the "domino effect." This was the idea that communism had to be contained—ideologically if possible, militarily if necessary—wherever it appeared. The U.S.-backed South Vietnamese government headed by Ngo Dinh Diem was corrupt and unpopular. In 1963 a U.S.-instigated military coup assassinated Diem. In 1964, an apparent clash between North Vietnamese vessels and a U.S. warship spying in North Vietnam's Gulf of Tonkin gave President Lyndon B. Johnson a free hand in Vietnam, despite his having no congressional declaration of war.

Militarily, Vietnam was a conflict between a massively armed superpower and guerrilla fighters known as the Vietcong. Aided by regular North Vietnamese troops and outfitted with Chinese and Warsaw Pact–supplied weapons, these fighters used their knowledge of Vietnam's terrain, jungle climate, and people to fight on, despite U.S. attacks with napalm, a deadly defoliant, and air raids that dropped 8 million tons of bombs on Vietnam, more than any other country had ever experienced.

One collateral casualty of Vietnam for the United States was the end of its system of universal military service. After World War II, the United States continued mandatory military training for young men. As a result, the U.S. Army expanded to 3.5 million soldiers. As manpower needs in the undeclared war in Vietnam required more American troops—peaking at 541,000 in 1969—resistance to the war also increased. College students used generous deferment policies to postpone conscription; when that failed, a friendly doctor might issue a diagnosis of disease or mental illness. Draft protesters publicly burned their Selective Service documents, and thousands fled, mostly to Canada and Sweden, to avoid the draft.

Warfare in a Postcolonial and Post–Cold War World. As the Soviet Union unraveled between 1989, when the Berlin Wall came down, and 1991, when its last premier, Mikhail Gorbachev, resigned, some thought, briefly, that a time of peace might be at hand. In fact, the demise of a world order shaped by two superpowers helped intensify existing ethnic, religious, and political rivalries

and created new “hot spots” around the globe. As old-style colonialism collapsed, especially after 1960, new wars over boundaries and resources erupted in Africa and other formerly colonized regions where Western control had distorted national development. Tribal massacres in Rwanda and the Darfur region of Sudan were only the bloodiest outcomes of warfare also afflicting Congo, Liberia, and much of West Africa. “Ethnic cleansing” occurred in Europe, as Yugoslavia, once an independent socialist state, broke into warring religious and ethnic groups. India and Pakistan clashed over the disputed territory of Kashmir, becoming competing nuclear powers in the process. Persistent conflict between Israel, founded in 1948 as a Jewish state, and its Arab neighbors remained a major danger to world peace.

Indeed, events in the oil-rich Middle East became even more central in the post-cold war years. Religious conflicts between some Islamist organizations and other world religions were at the heart of warfare conducted not by national armies but by small, dedicated groups using terrorist tactics, including suicide bombing, to achieve their aims. Terrorism was not a new method of warfare—Irish nationalists for years had used terror tactics against Britain—but it seemed especially effective against nations whose strength lay in conventional methods of warfare.

Russian troops laid waste to the separatist Islamic region of Chechnya, but found that this neither ended Chechen guerrilla actions nor protected Russian civilians from terror attacks, even in Moscow. On September 11, 2001, al-Qaeda, an Islamist group based in Afghanistan, used 19 operatives, armed only with box cutters and just enough training to pilot commercial jets, to bring down New York City’s World Trade Center and seriously damage the Pentagon outside Washington, D.C. Smaller deadly attacks in Madrid and London were later perpetrated by al-Qaeda or similar non-national terrorist groups. The U.S.-led 2003 Second Gulf War against Saddam Hussein’s regime in Iraq in 2003 was a triumph for America’s sophisticated weapons but faltered amid low-tech attacks committed by warring factions upon each other and U.S. forces.

As the 21st century got under way, the rapid spread of technology and almost uncontrolled sales of arms and possible “weaponized” biological and chemical agents seemed to be changing warfare from nation-state projections of power within formal rules of engagement into a dangerous free-for-all among disgruntled nations, regions, and even small groups of individuals destabilizing the world.

Afghanistan

Afghanistan is a predominantly Muslim, landlocked country bordered by Iran, Pakistan, and the former Soviet republics of Turkmenistan, Uzbekistan, and Tajikistan. It is not a nation-state along European lines—it shares no common language or ethnic heritage. Instead, it consists of a host of different groups, including Pashtuns, Hazaras, Tajiks, and Uzbeks. It also occupies rugged, divided terrain. This diversity has translated into a weak central state prone to interventions from the outside. From the 19th to early 20th centuries Afghanistan was caught between the Russian and British Empires as each expanded into Central Asia.

During the second half of the 20th century Afghanistan again found itself a buffer between large empires, in this case between the Soviet Union and the United States. In 1933 Afghanistan's king, Mohammed Zahir Shah, began what would become a 40-year reign, during which he would only rule directly during the final decade. Just before the end of World War II, in which Afghanistan was neutral, one of Zahir Shah's uncles, Shah Mahmud, gained control of the country. In the immediate postwar years Shah Mahmud saw the breakdown of relations with Pakistan and Afghanistan's subsequent movement toward the Soviet Union.

Tensions with Pakistan, especially over the border issue, would characterize postwar Afghanistan's history. The 1,300-mile border with Pakistan, the so-called Durand Line, had been established by the British decades earlier to divide the fractious Pashtun tribe. Pashtuns

ended up on both sides of the border. The departure of the British in 1947 gave Shah Mahmud and other Pashtuns in Afghanistan hope for Pashtun unification. Mahmud and others called for an independent "Pashtunistan" and encouraged rebellion on the Pakistan side of the border. In 1950 in retaliation, Pakistan halted shipments of petroleum to Afghanistan. Crippled without oil, Afghanistan turned to the Soviets and signed a major trade agreement. Pakistan, meanwhile, became an important part of the American military alliance.

In 1953 Mohammed Daoud, the king's cousin and brother-in-law and a young, Western-educated modernizer, came to power. His vigorous pursuit of Pashtun unification created more tensions with Pakistan and pushed Afghanistan further toward the Soviets. Interested in spreading and consolidating power along its border regions, the Soviet Union was eager to assist. At the same time, though, the United States also tried to win influence in Afghanistan. As part of COLD WAR strategy, the United States wanted to create an alliance of nations along the Soviet Union's border—Afghanistan, Iran, Iraq, Pakistan, and Turkey. Daoud refused to join the resulting Baghdad Pact but accepted U.S. aid.

During his 10 years in power, Daoud pursued a cautiously reformist agenda, in which economic development became the chief goal of the state. To help with modernizing projects, Daoud skillfully played the Soviets and the United States off of each other. Afghanistan received \$500 million in aid from the United States and \$2.5 billion from the Soviets. Daoud used this aid to consolidate his own power.

In the early 1960s Daoud, obsessed with Pashtun unification, made payments to tribesmen on both sides of the border and spread propaganda. In 1960 he sent troops across the border. As a result the two countries severed relations in September 1961 and the border was closed to even nomadic shepherders. In 1963 as it became clear that an extended showdown with Pakistan would only hurt Afghanistan, King Zahir Shah dismissed Daoud and took direct control of the country.

The king ruled from 1963 to 1973. Within two months of taking power he had reached an agreement reestablishing diplomatic and trade relations with Pakistan. He also began an experiment in liberalization called “new democracy.” At the center of this was a new constitution, promulgated in 1964. It barred the royal family—except the king—from politics, created a partyless system of elections, extended full citizenship to all residents of the country, including non-Pashtuns, and created a secular parliament and an independent judiciary. Although Afghans voted in elections in 1965 and 1969, the king held most of the power.

After a decade of economic stagnation and political instability, the king was deposed while in Europe in 1973 by Mohammed Daoud. The economy continued to stagnate and Daoud could only maintain stability through repression. In April 1978 a communist coup forced Daoud from power.

In December 1979 intending to support the pro-Soviet communist regime and install Soviet favorites in power, 75,000 to 80,000 Soviet troops invaded Afghanistan. The decadelong war that resulted killed approximately 1 million Afghans and forced another 5 to 6 million into exile in Iran and Pakistan.

The United States, under JIMMY CARTER, responded strongly. It withdrew consideration of the Soviet-American Strategic Arms Limitation Treaty (SALT II) in the U.S. Senate, boycotted the 1980 Moscow Olympics, leveled economic sanctions against the Soviet Union, and increased U.S. aid to Pakistan. The United States committed to protecting the greater Persian Gulf region from outside intervention. The United States also started to funnel millions of dollars of aid through the CIA to rebel groups in Afghanistan.

The Soviets pulled out of Afghanistan in 1988 and 1989. By this time Soviet president MIKHAIL GORBACHEV, who had come to power in 1985, had decided that the costs of the Afghan war in both soldiers and finances outweighed the benefits. The Soviets faced a fierce insurgency within Afghanistan and a growing antiwar movement at home, as well as continued international pressure. The last Soviet troops left in February 1989.

Afghan and U.S. Army soldiers patrol a road outside of Forward Operating Base Kalagush, Afghanistan.

The communist regime in Afghanistan collapsed in April 1992. The early 1990s saw a struggle for control between the various forces within Afghanistan. In 1996 the TALIBAN—an extremist Islamic regime backed by Pakistan—captured power. The Taliban consisted of religious students and ethnic Pashtuns, as well as roughly 80,000 to 100,000 Pakistanis. They espoused an antimodernist plan to create a “pure” Islamic society in Afghanistan, which included repressive treatment of women. The Taliban allowed AL-QAEDA, an anti-American Islamic fundamentalist terrorist organization led by the Saudi Osama bin Laden, to establish bases in Afghanistan in return for moral and financial support.

In November 2001 after the Taliban rejected international pressure to hand over al-Qaeda leaders, the United States attacked al-Qaeda and the Taliban. Joining forces with the Northern Alliance—minority Tajiks and Uzbeks from the northern part of the country—

the United States defeated the Taliban and destroyed the al-Qaeda bases, although it failed in its mission to capture Osama bin Laden or to destroy al-Qaeda or the Taliban completely.

The December 2001 Bonn Agreements handed temporary power to HAMID KARZAI, a moderate Pashtun from a prominent and traditionalist family. A new constitution, written by the Loya Jirga (national assembly), was ratified in early 2004. In October 2004, an overwhelming popular vote elected Karzai president of the Islamic Republic of Afghanistan.

After 2001 the country saw dramatic changes. Hundreds of thousands of refugees returned, pushing the population of Kabul from 1 million to 3 million. In 2005 5 million girls were attending school; four years earlier fewer than 1 million had been in school. The economy, however, was still weak and dependent upon international aid. Indeed, despite this aid in 2005, Afghanistan was moving toward becoming a narco-state. In that year roughly 2.3 million Afghans (out of a population of 29 million) were involved in the production of poppies for opium and heroin. Poppy profits equaled 60 percent of the legal economy. Warfare also continued in isolated pockets of the country as U.S. soldiers tried to mop up remnant Taliban and al-Qaeda forces.

THOMAS ROBERTSON

African National Congress (ANC)

Following a decade of political activism for the rights of blacks, Coloreds, and Indians in South Africa, the South African Native National Congress—later renamed the African National Congress (ANC)—was formed on January 8, 1912, in Bloemfontein. It unified the fragmented efforts of various organizations in the struggle against racial discrimination, political disenfranchisement, and economic exploitation of the majority of blacks in South Africa. Over the course of almost 80 years, the ANC used various means ranging

from writing letters to the British king, negotiations, strikes, and boycotts to armed struggles and nonviolent mass actions to fight the apartheid system. Change came only after South African president F. W. de Klerk outlawed the discriminatory apartheid laws in 1990. As the ban against the ANC was lifted, the organization became the first ruling party in a free and democratic South Africa in 1994 with NELSON MANDELA as its first black president.

The ANC began its long battle against the political disenfranchisement and socioeconomic marginalization of blacks in courts of South Africa. As an economic upswing hit South Africa and intensified the need for a black work force in the early 1920s, the ANC attempted to include the dwindling rights of workers in their agenda. But the economic depression and new legislation prevented this. New laws released by the government systematically stopped the economic rise of a small black bourgeoisie. With the Land Act, the government denied black Africans the right to own land and pushed them into economically dependent positions. The government initialized the foundation of the Native Representative Council, which was meant to represent the Africans but which was effectively controlled by the white government. It actually decentralized and weakened the movement to such an extent that some pronounced the ANC literally dead in the early 1930s.

The repressive legislation introduced by the government of Prime Minister Hertzog in 1935 led to renewed political activism on behalf of the ANC. In conjunction with 39 other organizations including those of coloreds, Communists, and Trotskyists, the ANC became active in the All Africa Convention (AAC) that fought racial discrimination and economic exploitation.

The conservative approach of the ANC lasted until the late 1940s. With the candidacy of Jan Smuts in the presidential race of 1948, there was hope that discrimination would cease and real change would take place. This hope evaporated when Smuts was defeated and an even more discriminatory legislation was introduced. With this new legislation racial discrimination was officially legitimized and the apartheid system was born. Marriages between whites and individuals of color were prohibited (1949) and the Immorality Act (1950) forbade interracial sexual relations. The new legislation required a national roll according to racial classifications in the Population Registration Act (1950), and the Group Areas Act (1950) enacted demarcation of land use according to race, which secured the most fertile, resourceful, and beautiful

land for the whites and assigned marginalized areas of land to blacks as homelands.

When the apartheid laws were introduced in 1948, a conflict between the older and younger generations in the ANC deepened. While the old guard wanted to continue their struggle with the same methods, but only broaden its base, the ANC Youth League envisioned a much more radical change.

In 1952 the old guard of the ANC adopted the approach of the youth and joined other organizations in the National Defiance Campaign. In these campaigns the ANC activists deliberately broke the unjust apartheid laws to draw attention to them and have them examined in the courtroom. On June 26, 1955, the Congress of the People, which consisted of the ANC and other civil rights and antiapartheid organizations, formulated the so-called Freedom Charter at Kliptown. It demanded equal rights for people of all skin colors and no discrimination based on race. In 1956 the government arrested 156 leaders of the ANC and its allies and charged them with high treason using the Freedom Charter as the basis of its charge. All the accused were eventually acquitted.

In the spring of 1960, the ANC began its campaign against the pass laws, which had required all blacks to carry their identification card with them at all times to justify their presence in "white areas." On March 21 about 300 demonstrators marched peacefully against the law. The police first fired tear gas and then aimed directly at demonstrators; 69 people were killed and 180 injured. This incident became known as the Sharpeville Massacre.

Internationally, the apartheid regime of South Africa faced increasing opposition in the 1950s and 1960s. The newly independent states in Africa, organized since 1963 in the Organization of African Unity (OAU), used diplomatic and political pressure to help end apartheid. In the United States, the CIVIL RIGHTS MOVEMENT shed attention on global issues of segregation and discrimination. The leader of the ANC, Albert Lutuli, led millions of activists in the nonviolent campaigns and believed in the compatibility of the African and European cultures.

However, some of the ANC members concluded that nonviolent acts were not suitable for South Africa and that more aggressive actions had to be applied. In 1961 the ban on the ANC forced the movement to go underground. The military wing, Umkonto de Sizwe ("Spear of the Nation"), was formed to commit acts of sabotage. Mandela and nine other leaders of the ANC were arrested in 1962 and charged in the so-called Rivo-

nia Trial with 221 acts of sabotage initiated to stage a revolution. Mandela's verdict was imprisonment for life plus five years beginning in 1964. The rest of the leadership of the ANC was forced into exile.

The ANC had the backing of the masses and was able to stage actions of mass resistance against apartheid in the late 1970s and 1980s. It trained its guerrilla force in neighboring countries. In 1973 workers' strikes beginning in Durban spread to other parts of the nation. At the segregated black universities a new movement, similar to the black consciousness movement in the United States, emerged. Strikes and class boycotts at the University of Western Cape, at Turfloop near Pietersburg, and at the University of Zululand erupted. Resistance against the so-called Bantu education, which ordered that Africans were to be taught in Afrikaans, the language of the white oppressors, exploded in June 1976 in the Soweto Uprising. In the Soweto Uprising thousands of black students marched to protest the governmental decree. The police shot and killed at least 152 demonstrators. By the end of 1977, the government had killed over 700 young students in similar incidents. In the same year, the government retreated and decided that African schools did not need to instruct their students in Afrikaans any more.

During the 1980s the fight against apartheid included all areas of life. The armed wing of the ANC received increasing support for the guerrilla fight within South Africa and the organization used propaganda to create a mood for resistance. Grassroots organizations emerged all over South Africa and created the mass organization called the United Democratic Front (UDF) in 1983. Finally, on February 2, 1990, new president F. W. de Klerk introduced change to the system. He had held secret conversations with the imprisoned Mandela before assuming the presidency. Once in office, he lifted the ban on the ANC and announced Nelson Mandela's imminent release after 27½ years of imprisonment. De Klerk not only ended the censorship of the press but also invited former liberation fighters to join the government at the negotiation table and to help prepare for a new multiracial constitution. Both Mandela and de Klerk were honored with the Nobel Peace Prize in Oslo in 1993.

Still, in the early 1990s, even after the end of apartheid, the armed struggle in South Africa had not ended. The black organization Inkatha, led by Gatsha Buthelezi, challenged the ANC. In 1994 the ANC became a registered political party and won the first elections, which were open to individuals from all races, with over 60 percent of the votes. Nelson Mandela became South

Africa's first postapartheid president and Thabo Mbeki followed him in 1999.

UTA KRESSE RAINA

African Union

The Organization of African Unity (OAU) was formed on May 23, 1963, in Addis Ababa, Ethiopia, by 32 decolonized African nations. Built on Ghana's president KWAME NKRUMAH's dream of Pan-Africanism, the OAU brought the opposing groups of African nations together in a single African organization. The founding members of the OAU envisaged this unity among African states as transcending racial, ethnic, and national differences. The main goal was not only to build an alliance between the African nations but also to provide financial, diplomatic, and economic assistance for those movements that were still fighting for liberation. OAU members guaranteed each other's national sovereignty, territorial integrity, and economic independence and aspired to end all forms of colonialism and racism on the continent. The OAU officially agreed with the charter of the UNITED NATIONS and the Universal Declaration of Human Rights. By the time it was replaced by the African Union (AU) in 2002, the OAU counted 53 out of the 54 African nations as its members.

In the context of decolonization and the COLD WAR, the OAU saw itself as alternative. The alliance, cooperation, and unification of the numerous newly independent African states in the 1960s signified a period of emancipation and empowerment of Africa. It drew attention to the fact that solutions to problems that single member states faced after decolonization were transferable to others and made problem solving easier. It also decreased the possibility of Africa's falling back into political or economic dependency on the former European colonizing nations. The OAU wanted to provide newly liberated African nations with a platform of their own. In conjunction with the young nations of Asia that had achieved

national liberation they saw themselves as providing a third option beyond the ones of the superpowers.

While the organization promoted African culture, the agreements of cooperation also included other major fields such as politics, diplomacy, transport, and communication. Matters of health, sanitation, nutrition, science, defense, and security also became issues of joint concern. The agreement stated that disputes between states would be settled peacefully through negotiation, mediation, conciliation, or arbitration, while the organization condemned all forms of political assassination, any subversive activities of one state against another, and stood united in its battle against apartheid.

The OAU acted as referee in various border conflicts between neighboring African nations. For example, it helped to prevent the division of the national territory of Nigeria into separate countries due to armed battle between distinct ethnic groups in the BIAFRAN WAR from 1967 to 1970. The OAU used its diplomatic power to strongly condemn Israel's intervention in Egypt in the Six-Day War of 1967. It used political pressure, diplomacy, and economic boycotts to help end apartheid in South Africa. The democratic nation of South Africa joined the OAU in 1994 as the 53rd member nation.

Addis Ababa, Ethiopia's capital and the host of the first OAU meeting, became the permanent headquarters of the OAU. The OAU assembly was made up of the heads of the individual African states. The organization employed over 600 staff members that were recruited from over 40 of its member states. The OAU had an annual budget in the range of \$27–\$30 million. In 1997 the OAU established the African Economic Community, which envisioned a common market for the entire continent of Africa.

After 39 years of existence, the OAU was criticized broadly for not having done enough for the African people. In its view it should have protected them from their own leaders who promoted corruption, persecuted political opponents, and created a new class of rich in their respective nations while the masses remained impoverished.

AIDS crisis

The AIDS epidemic has been considered one of the most important health emergencies in the contemporary world due to the destabilizing social, economic, and political consequences of its global spread and the unsuccessful attempts to develop vaccination against it. At the same time, some scientists have argued that the problem in tackling AIDS is not so much the insufficient scientific and medical developments, but the politics of the global response to the disease.

The acronym AIDS stands for acquired immunodeficiency syndrome. From a medical perspective, AIDS is not a singular disease, but a series of symptoms that occur for an individual person who has acquired the human immunodeficiency virus (HIV). HIV belongs to the family of retroviruses, first described in the 1970s. The characteristic trait of viruses from that family is that their genetic material is encoded in ribonucleic acid (RNA), which is located in the inner core of the viruses and surrounded by an outer membrane made up of the fatty material taken from the cells of the infected person. Furthermore, HIV belongs to the virus group of lentiviruses, which produce latent infections. This means that in the initial state of HIV infection, the virus remains inactive and asymptomatic, and its genetic material is hidden in the cell for a period of time. In some cases, HIV has remained inactive indefinitely. In most of the cases, after the inactive period, HIV does progressive damage to the immune and nervous systems.

The first stage of HIV activity in the body of an infected person is called AIDS-related complex (ARC). In ARC, only a partial deficiency of the immune system occurs. The second state of HIV activity is AIDS, which is a more advanced immunodeficiency. There are three main transmission modes of HIV: through sexual penetrative intercourse, the transfusion of blood or blood-related products, and from infected mother to child during birth or breast-feeding. Furthermore three important characteristics of the HIV infection have been identified. First, the condition is incurable. Second, the person with HIV is infectious for life, including during the initial (inactive) HIV infection period. Third, the effect of the HIV infection is the increased vulnerability to various infections due to the undermined immune system. Therefore HIV/AIDS has been linked with a series of other diseases such as pneumonia, various fungal and protozoa infections, lymphoma, and Kaposi sarcoma (a rare form of skin tissue cancer).

It is believed that the origins of HIV are linked to an HIV-related virus located in Africa. There are two different types of HIV: HIV-1 and HIV-2 (the latter is present almost exclusively in Africa). The first cases of AIDS infection were observed in 1977–80 by doctors in the United States, who identified clusters of a previously rare health disorder among members of the gay communities in San Francisco and New York. Because the first AIDS cases were diagnosed in gay communities, the condition was initially termed Gay-Related Immune Deficiency Syndrome (GRID). AIDS-related diseases were later observed also among hemophiliacs and recipients of blood transfusions, prostitutes, intravenous drug users, and infants of drug-using women. In 1984, the virus causing AIDS was identified by the French researcher Luc Montagnier of the Pasteur Institute in Paris and confirmed by an American researcher, Robert Gallo of the National Cancer Institute. Also in 1984 the first test for AIDS was developed. The first commonly used tests for AIDS were the ELISA test and the Western blot test.

After the 1980s the statistics of HIV epidemiology showed a constant rise in the number of infected persons and those directly affected by AIDS. The major group at risk was identified by the Joint UN Programme on HIV/AIDS (UNAIDS) as sexually active adults and adolescents between 15 and 50 years. According to UNAIDS in 2005 there were approximately 40.3 million people living with AIDS, and over 150 million directly affected by AIDS. It is also important to place the HIV/AIDS epidemic in a broader demographic context. The statistics of the HIV/AIDS Department of the World Health Organization (WHO) showed that in sub-Saharan Africa, in Asia, and in the former Soviet republics young women with low incomes and living in rural areas constitute a particularly vulnerable social group, with the highest rate of new HIV infections.

Global and national responses to AIDS included various prevention and treatment policies. After 1996 the so-called antiretroviral drugs (ARVs), compounds that treat the virus infections, were in use. Antiretroviral drugs were available in single therapies, double therapies, and triple therapies. One example of an antiretroviral therapy was the Highly Active Anti-retroviral Therapy, which had a relatively high cost of between US\$10,000 and \$20,000 per patient per year. Most of the populations of the North American and western and central European regions could gain access to antiretroviral drugs and antiretroviral therapies. This systematically decreased the number of deaths due to AIDS-related diseases. As a result, in the Western

world living with AIDS was gradually transformed into an enduring and nonfatal condition. The costs of the drugs and treatments made them inaccessible for most of the world.

The 13th World AIDS Conference in Durban in 2000 marked a significant shift of global attention to AIDS treatment. In 2002 the UN set up the Global Fund to Fight AIDS, Tuberculosis and Malaria (GFATM) in order to spawn more generous international funding of AIDS-related programs and to increase the supplies of ARVs. GFATM functions as a platform for cooperation between the public sector, the private sector, and the civic society. Between 2003 and 2005 GFATM granted \$4.3 billion to various projects in 128 countries, including \$1.9 billion specifically to HIV-related projects. Other key donor organizations are the WORLD BANK's Multi-Country HIV/AIDS Program (MAP), the U.S. President's Emergency Plan for AIDS Relief (PEPFAR) and the European Union HIV/AIDS Programme. There are also numerous private foundations, charities, and private-sector support networks that participate in the global struggle against HIV/AIDS. In 2003 UNAIDS and the World Health Organization initiated a campaign known as the "3 by 5" initiative, which aimed at making ARVs available to 3 million people in poor- and middle-income countries by 2005.

In 2003 an HIV vaccination clinical trial proved unsuccessful. The obstacles to developing a vaccination against HIV included mutability of the virus, what effective immunological reaction the vaccination should generate, and various practical problems in the testing of the vaccine. The Global HIV Vaccine Enterprise created a forum for public and private organizations, as well as research institutes, to cooperate and generate funding for the development of an HIV vaccine. Important organizations working on an HIV vaccine included the International AIDS Vaccine Initiative in New York.

In the Western world, in particular in the United States, where AIDS was initially linked to marginal social groups, it raised prejudices and contributed to their stigmatization and discrimination in employment, education, residence, and health care. The religious standpoint created a link between liberal sexual patterns and the spread of AIDS, which framed AIDS as an issue of personal morality, guilt, and punishment. In contrast, leftist standpoints phrased the AIDS issue as a problem of the protection of civil liberties and non-discrimination. In spite of contrary medical evidence, it was a widespread public belief in the 1980s that AIDS could be contracted by casual contact. This raised a

number of social and legal controversies where individual rights to privacy were weighed against the collective right to protection from the spread of the disease.

The main site of the AIDS epidemic remains sub-Saharan Africa, where the virus spread primarily through unprotected heterosexual intercourse and reuse of medical instruments and contaminated blood supplies. Experts suggested that the dynamics of the spread of AIDS and its social and geographical distribution in sub-Saharan Africa both reflected and exacerbated the systemic characteristics of the migration and mobility patterns, the social sexual behaviors, the social inequalities and impoverishment, and the breakdown of family structures in the region. A study by the investment bank ING Barings indicated that in South Africa HIV/AIDS policies cost over 15 percent of the country's GDP. The personal and collective consequences of the AIDS epidemic in Africa were equally disruptive. One of the most serious consequences of HIV/AIDS in Africa was the increased number of orphans, whose parents died due to AIDS-related diseases. It was predicted that by 2010 the number of orphans in Africa would reach 40 million, out of which approximately 50 percent would be orphaned by causes related to HIV/AIDS.

MAGDALENA ZOLKOS

Akihito

(1933–) *emperor of Japan*

Akihito became Japan's 125th reigning emperor in 1989 upon the death of his father, Hirohito. According to Japanese mythology, the emperors, beginning with the legendary Jimmu, descendant of the sun goddess Amaterasu, had ruled over the country since 660 B.C.E. Although the emperors had de jure powers, it was the shoguns who ruled over most of Japanese history. With the Meiji

Restoration in 1868, Emperor Meiji became the head of state, holding sovereign power. The postwar constitution of 1947 again reduced the role of the emperor to one of symbolism.

Akihito was born on December 23, 1933, the first male child of Emperor Hirohito and Empress Nagako. In keeping with the royal tradition, Akihito at the age of three was separated from his parents and was brought up by court attendants, tutors, chamberlains, and nurses. However, in a departure from custom, at the age of six Akihito was sent to school along with commoners. During World War II when the Allied countries, led by the United States, attacked Japan, Akihito was moved to other provincial cities far away from Tokyo for safety.

At the end of the war in 1945, when the U.S. Army occupied Japan, Akihito attended high school and college with the sons of the elite class. A Philadelphia Quaker, Elizabeth Gray Vining, was made Akihito's personal tutor and taught him Western customs and values. He also briefly studied politics and civics at Gakushuin University in Tokyo.

Akihito was invested as a crown prince in 1952, when he was 18. In 1959 he married Shoda Michiko; she was the first commoner to marry into the imperial family.

When his father died on January 7, 1989, at the age of 87, Akihito became the emperor and took his assigned role as the symbolic head of state.

MOHAMMED BADRUL ALAM

Algerian revolution

The Algerian war against French colonialism lasted from 1954 to 1962, when Algeria gained its independence. In 1954 armed attacks occurred at 70 different points scattered throughout the nation. Having just suffered a humiliating defeat by the Vietnamese at Dien Bien Phu, the French army was determined to win in Algeria. The French colons (colonists) in Algeria were also determined to keep "Algérie Française." The tactics adopted by the Algerians and Vietnamese and the French

and the Americans were remarkably similar and brought similar results as well.

The Front de Libération Nationale (FLN) was an outgrowth of earlier nationalist movements. Ahmad Ben Bella (1916?–), in addition to Belkacem Krim, Muhammad Khidr, and Hussein Ait Ahmad, led the movement. Under the FLN Algeria was divided into six *wilayas*, or districts, each with an FLN organization and leader acting within a cell system. The top echelon of FLN leaders met periodically to coordinate strategy. The *wilayas* and the cell system provided flexibility and some degree of security in a war where the French enjoyed military superiority. As with other revolutions in developing countries the FLN adopted guerrilla warfare tactics, avoided direct confrontation with French troops, and attacked civilian targets as well as French military sites. With few advanced weapons, the FLN used the so-called bombs-in-baskets approach to inflict maximum damage on the French army and colons. Algerian women were also active in the movement, serving as lookouts, distributing food and arms to fighters, and sometimes participating in the fighting as well.

In 1954 the French had 50,000 soldiers in Algeria, by the war's end they had over half a million soldiers in Algeria and they were still not winning. The French had clear-cut superiority in armaments, including planes and advanced firepower, but the Algerians knew the terrain, had popular support, and were determined to fight in spite of high costs until they achieved the goal of independence.

The French used air strikes, napalm, pacification projects of rounding up civilians in rural areas and imprisoning them in internment camps, and burning villages. These tactics only increased local support for the FLN. The French army also tortured FLN captives. When word of the torture reached mainland France many turned against the war. In an attempt to focus their power in Algeria, the French granted Morocco and Tunisia independence in 1956, but when FLN fighters took refuge in these neighboring countries, the French attacked them. The war expanded much as the fighting in Vietnam spread into Laos and Cambodia. In 1956 French agents skyjacked the Moroccan plane carrying Ben Bella to a meeting of FLN leaders in Tunis and imprisoned him. One of the first skyjackings, the tactic was condemned by the international community but became more commonplace in subsequent decades. French forces defeated the FLN in Algiers but the FLN merely moved its operations elsewhere in the country, forcing French troops to move. Then the FLN slow-

ly reconstituted itself in Algiers and the French were forced to return to fighting in the same city where they had previously declared victory.

In 1958 General CHARLES DE GAULLE came to power in France with the support of the army and the colons, who believed he would win the war in Algeria. De Gaulle traveled to Algeria, where he pointedly did not speak about “Algérie Française.” De Gaulle realized that short of a full-scale, long-term war the French could not win in Algeria. Although he hoped for some sort of alliance between the two nations and access to the petroleum and mineral reserves in the Sahara, by 1960 de Gaulle was speaking of an Algerian Algeria. He opted for negotiations with the FLN at Evian in 1961. The negotiations dragged on and the war escalated as both sides attempted to improve their positions at the negotiating table by gaining victories on the battlefield. Furious with what they believed to be de Gaulle’s betrayal, dissident army officers led an abortive coup in 1961. The colons organized into the extremist Secret Army Organization (OAS) and attempted to bring the war home to France by trying to assassinate de Gaulle in 1961. The OAS even attempted to bomb the Eiffel Tower, a move that was thwarted by French intelligence services.

The war polarized French society between those who opposed the war—including intellectuals such as Jean-Paul Sartre, students, and labor unions—and those, especially in the army, who supported the war effort.

In 1962 Algeria became formally independent, and Ben Bella returned as the first premier and later as president. The economy of Algeria was in ruins. As many as a million Algerians had perished in the war and another million had been made homeless. Refusing to live in independent Algeria, the colons left en masse, many moving to Spain rather than to France under de Gaulle.

Immediately following independence a form of spontaneous socialism, or *autogestion*, had evolved as homeless and unemployed Algerians took over abandoned farms and businesses and began to run them and share the profits. Initially Ben Bella supported the *autogestion* movement, but gradually the FLN-led government took over farms and factories along the Soviet state capitalism model. Ben Bella and his minister of defense, Houari Boumedienne (1925?–1978), championed the formal army rather than the more loosely organized guerrilla fighters and they outmaneuvered or eliminated potential rivals within the FLN leadership. Algeria adopted a neutral position in the COLD WAR and

sometimes, as in the 1979 U.S. hostage crisis in Iran, served as a mediator in disputes, as it was respected by both sides. Some of the Algerian infrastructure was rebuilt using petroleum revenues but the economy failed to keep pace with the population growth.

In 1965 Boumedienne ousted Ben Bella, who then spent number of years in Algerian prisons; he was not released until after Boumedienne’s death, when Chadli Benjedid became president. His regime was marked by economic stagnation and privatization. As unemployment rose—particularly among the youth born after independence—many young Algerians opposed the authoritarian FLN regime and turned increasingly toward ISLAMIST MOVEMENTS. When the Islamists seemed poised to win in the open and fair 1991 elections the FLN, with the support of France and the United States, cancelled the elections, thereby setting off a bloody civil war that lasted through the 1990s.

JANICE J. TERRY

Allende, Salvador

(1908–1973) *Chilean politician*

Longtime politician, medical doctor, self-proclaimed Marxist, and president of Chile’s Popular Unity (Unidad Popular) government from 1970 to 1973, Salvador Allende occupies a highly controversial place in Chilean history. The country’s only democratically elected Marxist president, Allende instituted a range of reforms that sharpened the polarization of Chilean society and led to a series of economic and political crises. He was overthrown and died in office on September 11, 1973, by a coalition of military officers backed by the country’s leading economic interests, and in collusion with the U.S. Central Intelligence Agency (CIA). His ousting and death ushered in the period of military dictatorship led by army general AUGUSTO PINOCHET (1973–89).

Born in Valparaíso, Chile, on July 26, 1908, to a prominent leftist political family, Allende entered medical school and became active in the movement opposed

to the dictatorship of General Carlos Ibáñez (1927–31). Cofounder of the Chilean Socialist Party in 1933, he won a seat in the country's national legislature in 1937 and became minister of health in 1939. Making his first bid for the presidency in 1952, in which the former dictator Ibáñez triumphed, he finished a distant fourth. He ran again for president in 1958 and 1964 as the leader of the Communist-Socialist alliance (Frente de Acción Popular), founded in 1957, losing the elections but gaining a loyal political following that by 1964 comprised 39 percent of the electorate. Calling for socialism in Chile, sympathetic to the Communist regime of FIDEL CASTRO in Cuba, and in the context of the COLD WAR, Allende came to be viewed with deep suspicion by both the Chilean landowning and copper oligarchy and the U.S. government.

In the hotly contested 1970 elections, Allende and his Popular Unity coalition won with a slim plurality of 36.5 percent, defeating Conservative Jorge Alessandri (34.9 percent) and Christian Democrat Radomiro Tomic (27.8 percent). On taking office, Allende instituted a populist strategy of freezing prices and hiking wages, which boosted consumer spending and redistributed income to favor the urban and rural poor. He also followed through on his campaign pledge to pursue a "peaceful road to socialism" by nationalizing some 200 of the country's largest firms, many U.S.-owned, including banks and insurance companies, public utilities, and the copper, coal, and steel industries.

By 1971 opposition to the reforms grew, especially among the military, large landholders, and leading industrialists. By 1972 runaway inflation compounded the political backlash, the result of higher wages, a bloated government bureaucracy, and the growth of an underground economy in response to price controls. As popular discontent mounted and the Popular Unity coalition fractured into groups divided over the pace of change, pro-Allende guerrilla groups launched an armed campaign against conservative elements. From spring 1973 a wave of strikes by copper miners, truck drivers, shopkeepers, and others compounded the regime's mounting problems. Meanwhile, the U.S. administration of RICHARD NIXON and the CIA worked to undermine the regime, funding opposition groups and plotting with rightists for Allende's overthrow. On September 11, 1973, the military assaulted the presidential palace in Santiago. By the end of the day Allende was dead—whether by his own hand or the military's remaining a matter of dispute. Upwards of 5,000 people were killed in the coup and its aftermath, making it the bloodiest regime change in

20th-century South America. Revered by some, reviled by others, Allende and his short-lived socialist experiment, and the U.S. role in assisting the overthrow of a democratically elected president, left an enduring mark on modern Chilean and Latin American history.

MICHAEL J. SCHROEDER

Alliance for Progress

Announced by U.S. President JOHN F. KENNEDY on March 13, 1961, the Alliance for Progress was a massive U.S. foreign aid program for Latin America, the biggest aimed at the underdeveloped world up to that time. Likened to the MARSHALL PLAN in postwar Europe, its express intent was to promote economic and social development and democratic institutions across the Western Hemisphere; to raise living standards for the poorest of the poor; and to make leftist social revolution an unattractive alternative. "Those who make democracy impossible," warned President Kennedy in announcing the plan, "will make revolution inevitable."

Most commonly interpreted in the context of the COLD WAR between the United States and the Soviet Union, as a response to FIDEL CASTRO and the CUBAN REVOLUTION of 1959, and as the U.S. foreign policy establishment's effort to thwart the aspirations of leftist revolutionaries, the Alliance for Progress, despite some successes, is widely considered to have failed to meet its lofty goals. Pledging \$20 billion in aid over 10 years, the program actually distributed an estimated \$4.8 billion, the remainder of the approximately \$10 billion overall U.S. contribution from 1961 to 1969 going toward loan repayment and debt service. The program came to an effective end in 1969 under President RICHARD NIXON, who replaced it with a new agency called Action for Progress. A refurbished version was formulated by President RONALD REAGAN in 1981, in his CARIBBEAN BASIN INITIATIVE, which suffered many of the same shortcomings as its predecessor.

In August 1961 representatives from the United States and Latin American countries (save Cuba) met at

Punta del Este, Uruguay, to formulate specific objectives and targets for the program and ways to implement them. The most important of these objectives included raising per capita incomes by an average of 2.5 percent annually; land reform; trade diversification, mainly through export production; industrialization; educational reforms (including elimination of illiteracy by 1970); and price stability. The program's theoretical underpinnings owed much to the work of U.S. economist Walter W. Rostow, and his notion of "economic take-off" (articulated in his 1960 book, *The Stages of Economic Growth*). He was a member of the inter-American "board of experts" (dubbed "the nine wise men") that had final authority on the program's specific content.

The reasons for the program's overall failure have been the subject of much debate among scholars. Most agree that deepening U.S. commitments in the VIETNAM WAR diverted attention and resources away from Alliance programs and initiatives. Another frequently cited limitation concerns the difficulties inherent in promoting democratic institutions and land reform in societies dominated by stark divisions of social class and race, entrenched landholding oligarchies, and small groups of privileged economic and political elites. Another criticism concerns the top-down nature of the programs, which relied almost exclusively on active state support and failed to incorporate local community or grassroots organizations into their design and implementation. For these and other reasons, the Alliance for Progress achieved some successes but on the whole failed to achieve the goals articulated by President Kennedy in 1961.

MICHAEL J. SCHROEDER

American Federation of Labor and Congress of Industrial Organizations (AFL-CIO)

In 1955 the American Federation of Labor (AFL) and the Congress of Industrial Organizations (CIO) joined to create the American Federation of Labor and Congress

of Industrial Organizations (AFL-CIO). The 54 national and international federated labor unions within the AFL-CIO are located in the United States, Canada, Mexico, Panama, and U.S. dependencies. Membership in the United States as of 2005 was over 9 million.

The major functions of the AFL-CIO are to lobby for the interests of organized labor and to mediate disagreements between member unions. A long-standing campaign of the federation is against the right-to-work laws that ban closed or union shops. A related issue is repeal of the Taft-Hartley Labor Act, which authorized right to work half a century ago. The AFL-CIO also works against other antilabor legislation and candidates.

The first leader of the AFL was Samuel Gompers, who modeled the AFL on the British Trade Union Congress. He was conservative politically and believed that unions should work within the economic system as it was rather than trying to alter it. Gompers was followed by William Green and George Meany. Under their guidance, the AFL grew to over 10 million members by the time of its merger with the Congress of Industrial Organizations in 1955. The union's early accomplishments were significant. Union men gained higher wages, a shorter work week and work day, workers' compensation, laws regulating child labor, and exemption from antitrust laws.

The CIO dates only to the 1930s. Green had replaced Gompers as leader of the AFL in 1924, but he maintained Gompers's business unionism, based on crafts. By then the old crafts approach seemed outdated to some AFL members. The United States had industrialized, and mass production had replaced craftsmanship. Production workers in major industries such as steel, rubber, and automobiles lacked union protections. A strong minority of the AFL wanted the federation to begin organizing industrially. Within the AFL was a union leader with experience organizing an industry, John L. Lewis of the United Mine Workers (UMW) of America. In 1935 Lewis led the dissidents in the formation of the Committee for Industrial Organization. With the sympathetic New Deal Democrats in the White House, the unions had a rare opportunity to organize American labor with the government on their side. The committee organized, winning significant victories in automobiles and steel. The CIO challenged the authority of the AFL, and the AFL revoked the charters of the 10 CIO unions. The CIO became the Congress of Industrial Organizations in 1938.

The independent CIO, under Lewis until 1940 and then under Philip Murray until 1952, was more militant than the AFL. It had a Political Action Committee, led by Sidney Hillman of the Amalgamated Clothing Workers Union, that encouraged membership political

President Gerald Ford (left) meeting with AFL-CIO president George Meany at the White House in 1974.

activism. The CIO attempted a major southern organizing campaign that proved fruitless in the 1940s and internal discord led to the loss of the International Ladies Garment Workers Union in 1938 and the mine workers in 1942. Still, in 1955, the CIO had 32 affiliated unions with approximately 5 million members.

Both unions had internal difficulties in the 1940s. The AFL had member unions dominated by organized crime. The CIO's radicalism brought into its member unions a number of communists. The CIO expelled 11 supposedly communist-dominated unions in 1949–50.

The end of World War II was the end of the close relationship with the federal government that had allowed the AFL to grow during the 1930s. The Republicans in Congress reversed that relationship, covering unions as well as employers under unfair labor practices legislation and prohibiting the closed shop as well as the organization of supervisors and campaign contributions by unions. Union leaders had to swear that they were not communists. Passed over Truman's veto, Taft-Hartley was a major blow to unionism. Clearly, the union leaders had reason to worry about the new Republican administration, and repeal of Taft-Hartley was an ongoing desire of the AFL-CIO.

Throughout the period of separation, at least some within both unions retained an interest in reuniting the two. After the election of Eisenhower, the two leaderships agreed that the first Republican administration in 20 years would probably be unfavorable to labor. Unity was desirable. George Meany, as head of the AFL, and Walter P. Reuther, as head of the CIO, worked to bring about a merger, which occurred in 1955.

The first AFL-CIO convention elected Meany as president. In 1957 it enacted anti-racket codes and expelled the Teamsters Union for failure to meet ethical standards. In 1961 the AFL-CIO implemented mandatory arbitration of internal disputes. That failed to prevent a dust-up between Meany and Reuther, who regarded Meany as dictatorial and wanted the AFL-CIO to involve itself in civil rights and social welfare issues. Reuther wanted to be president of the AFL-CIO and felt that Meany had outlived his usefulness.

Reuther's United Automobile Workers (UAW) left the AFL-CIO in 1968. In 1969 the UAW and the Teamsters formed the Alliance for Labor Action (ALA), which sought to organize the unorganized, students, and intellectuals. Reuther died in a plane crash in 1970. Without his strong leadership, the ALA disbanded in December 1971 after proving unsuccessful as an alternative to the AFL-CIO.

Meany retired in 1979, and his replacement was Lane Kirkland, the secretary-treasurer. Kirkland inherited a union in decline in an economy turning away from organized labor. It brought the UAW back into the fold in 1981, the Teamsters in 1988, and the UMW in 1989. The tide would not turn, however, and Kirkland retired under pressure in 1995.

Thomas R. Donahue, secretary-treasurer become interim president, was challenged by John J. Sweeney of the Service Employees International Union (SEIU), who won the first contested election in AFL-CIO history. Sweeney and United Mine Workers president Richard Trumka represented a new generation of activist union leaders, potentially a force for changing the decline of organized labor. Under Sweeney the AFL-CIO supported Democratic candidates, including BILL CLINTON, and gained a sympathetic ear in the White House. Sweeney proved unable to reverse the decline in unionism due to deindustrialization and the loss of high-paying or skilled jobs in traditional union industries. Critics charged that Sweeney was exhausting the union's funds without anything substantial to show for it.

In 2005 Andrew Stern of the SEIU led an effort to force Sweeney's retirement. Stern proposed consolidating the AFL-CIO's member unions into 20 super unions organized by sector of the economy. He also wanted reemphasis on the organization of unrepresented workers. Failing to reform the AFL-CIO or force Sweeney out, the SEIU left the federation and created the Change to Win Federation.

JOHN H. BARNHILL

American Indian Movement (AIM)

Relations between Native peoples and U.S. federal and state governments soon after World War II swung between paternalism and indifference. Native Americans responded with a new militancy that echoed the CIVIL RIGHTS MOVEMENT and, by 1968, produced the American Indian Movement (AIM). “Red power,” expressed in lawsuits, sit-ins, and demonstrations—some of them violent—created greater awareness of Native rights and fostered new economic and educational initiatives. But many Indians remained desperately poor and isolated.

In the 1950s federal policies reverted to a pre-New Deal relationship with Native tribes. Indians were once again urged to assimilate, giving up tribal political rights and long-standing land claims. Natives were encouraged to relocate from reservations to urban areas. More than 100 tribes were stripped of their sovereignty and benefits. The federal Bureau of Indian Affairs (BIA), never beloved but still useful to Native groups, lost much of its mission.

This again changed dramatically in 1962 when President JOHN F. KENNEDY ushered in what became known as the Self-Determination Era. Kennedy was first in a series of presidents of both parties to take Indian cultural and economic claims more seriously. Natives benefited from GREAT SOCIETY programs. President RICHARD NIXON played a major role as a proponent of the 1974 Indian Self-Determination and Education Assistance Act.

By then the American Indian Movement was well under way. In 1969 AIM members occupied Alcatraz, the San Francisco Bay island formerly used as a federal prison. They would remain there, reclaiming Alcatraz as Indian land, for almost two years. In 1971 protesters briefly occupied Mount Rushmore, the South Dakota presidential monument near the 1876 site of a Sioux rout of General George Custer.

Not all AIM protests were peaceful. In 1973 a violent clash at Wounded Knee, South Dakota, killed two activists and badly wounded a federal agent. It ended

after 73 days when the Nixon administration promised to review an 1868 treaty. AIM activist Leonard Peltier, who grew up on North Dakota’s Anishinabe Turtle Mountain Reservation, received two life sentences for murdering two federal agents during a 1975 shoot-out on the Pine Ridge Indian Reservation. Human rights groups maintain his innocence.

The overall trajectory of U.S.-Native relations was toward greater autonomy and respect. Some “terminated” tribes, like the Menominee of the northern Great Lakes, had their authority restored. A 1971 Alaskan Native Claims Settlement Act and a 2000 restoration of 84,000 acres to Utah’s Ute tribe (accompanied by an official apology) advanced self-determination. During the presidency of GEORGE H. W. BUSH, almost 90 percent of BIA staff had tribal roots. U.S. courts, dusting off long-ignored treaties, restored many Native rights related to fishing, farming, travel, and sovereignty.

In 1979 Florida’s Seminole were the first to use court-affirmed rights to run bingo games. By the mid-1990s more than 100 casinos were operating on reservation lands across the United States. Gaming and other new businesses, including tax-free sales of tobacco and other highly taxed products, enriched many tribes. Some assimilated Natives reaffiliated with their tribes to participate in this new economy. But reliance on the greed of non-Indians proved no solution for fundamental inequities. Approximately 28,000 residents of Pine Ridge, the 3,500-square-mile Oglala Sioux reservation, live with high unemployment and annual family incomes below \$4,000. High suicide and infant mortality rates have made life expectancy at Pine Ridge the nation’s shortest.

MARSHA E. ACKERMANN

Angola, Republic of

The Republic of Angola is situated in south-central Africa. The country is bounded by the Democratic Republic of the Congo to the northeast, Zambia to the east, Namibia to the south, and the Atlantic Ocean to the west. It has an area of 1,246,700 square kilometers and its capital city is Luanda. It is divided into 18 provinces,

but one of them, Cabinda, is an enclave, separated from the rest of the country by the Democratic Republic of the Congo.

The topography varies from arid coastal areas and dry savannas in the interior south to rain forests in the north and a wet interior highland. On the plateau, heavy rainfall causes periodic flooding. Overuse and degradation of water resources have led to inadequate supplies of potable water. Other current environmental issues are deforestation of the tropical rain forest, overuse of pastures, soil erosion, and desertification, which results in a loss of biodiversity.

Angola had approximately 12,127,071 inhabitants in 2006. There were around 90 ethnic groups in the country, and although Portuguese was the official language, Bantu and other African languages were spoken by a high percentage of the population. Although Roman Catholicism remained the dominant religion, there were evangelist and indigenous religions that were very strong.

Angola's socioeconomic conditions rank in the bottom 10 in the world. Health conditions are inadequate because of years of insurgency. There is a high prevalence of HIV, vectorborne diseases like malaria, and other waterborne diseases. Although the agricultural sector was formerly the mainstay of the economy, it contributed only a small percentage of GDP, because of the disruption caused by civil war. The products derived from this sector are bananas, sugarcane, coffee, sisal, corn, cotton, manioc (tapioca), tobacco, vegetables, and plantains. It also has forest products and fish. Food must be imported in large quantities.

Angola is one of Africa's major oil producers. The oil industry is the most important sector of the economy and it constitutes the majority of the country's exports. Angola has minerals: diamonds, iron, uranium, phosphates, feldspar, bauxite, and gold. But Angola is classified as one of the world's poorest countries despite abundant natural resources. The reasons lie in the history of this country, which has suffered a 27-year civil war that was caused not only by ethnic factors but also by disputes over natural resources.

Angola was a Portuguese colony. In the 1960s liberation movements such as Popular Movement for the Liberation of Angola (MPLA) and National Liberation Front of Angola (FNLA) began to call for independence. In 1961 the native Angolans rose in a revolt that was repressed. In 1964 a group inside of the FNLA separated and created the National Union for Total Independence of Angola (UNITA). During the mid-1960s and 1970s there were a series of guerrilla actions,

which finished with the negotiation for independence in 1975.

But the postindependence period was distinguished by instability. The MPLA declared itself the government of the country so soon after independence that a civil war broke out between MPLA, UNITA, and FNLA, exacerbated by foreign intervention during the COLD WAR. Angola, like many African countries, became involved in the struggle between the superpowers and many African political leaders resorted to U.S. or Soviet aid. The MPLA government received large amounts of aid from Cuba and the Soviet Union, while the United States supported first the FNLA and then UNITA.

In 1976 the FNLA was defeated by Cuban troops, leaving the competition for government control and access to natural resources to MPLA and UNITA. By the end of the cold war era, in 1991, a cease-fire was signed between the government and UNITA and both agreed to make Angola a multiparty state and called for elections. In 1992 the MPLA was elected to lead the nation but UNITA disagreed and charged MPLA with fraud. This situation caused tensions and the war continued until 1994, when negotiations began, helped by South Africa and the UNITED NATIONS (UN). The war finished in 2002 when Jonas Savimbi, the president of UNITA, was killed in battle.

As a result of the civil war, up to 1.5 million lives were lost and 4 million people were displaced. Since the war Angola has been slowly rebuilding, increasing foreign exchange and implementing reforms recommended by the INTERNATIONAL MONETARY FUND.

VERÓNICA M. ZILLOTTO

ANZUS Treaty

The ANZUS Security Treaty binds together Australia, New Zealand, and the United States. ANZUS was signed in San Francisco on September 1, 1951, and

took effect on April 28, 1952. It remains in force, although it has increasingly come under attack by both Australia and New Zealand since the 1980s and New Zealand has essentially withdrawn from the alliance.

Beginning in the late 1940s the United States abandoned the isolationist impulse that had directed its foreign policy in previous decades to form and maintain a global network of alliances. U.S. policy makers in the COLD WAR were especially interested in opposing the rise of communism. Following the outbreak of the KOREAN WAR in 1950, the United States became concerned with constructing a series of regional security arrangements to guard against communist attacks. For Australia and New Zealand, alliances were a necessity because of their need for protection, particularly from Communist China, the Soviet Union, and due to the problems associated with decolonization in Asia and the Pacific. Both countries were also concerned about the return of Japan to sovereign status, and sought a replacement for Great Britain as a dependable security guarantor. The United States offered exactly what both sought.

The ANZUS Treaty stipulates that an armed attack on New Zealand, Australia, or the United States would be dangerous to each signatory's own peace and safety. Accordingly, each country would act to meet the common danger in step with its constitutional processes. In the early and mid-1950s the United States rejected Australian efforts to move toward more security cooperation such as cooperative and systematic military planning and the designation of national security units that might fall under the ANZUS name and assignment, similar to the NORTH ATLANTIC TREATY ORGANIZATION (NATO) model.

After the ANZUS pact was signed, nonsecurity ties between the three countries grew, paralleling the building of their security relations. Commercial, cultural, and other forms of U.S. influence were largely welcomed during the cold war years. The great disparity of size and power generated irritation within Australia and New Zealand, however, and both countries complained about the way they were treated by the United States, although both developed close military cooperation with the United States. Australia, in particular, became a valuable site for U.S. communication and surveillance facilities and naval ship visits.

As the cold war began to wind down in the 1980s, the threat from outside sources lessened. Citizens of the two nations, particularly among members of the labor, began to question the elaborate security ties with the United States. Citizens of New Zealand and Australia

challenged ANZUS as more a method for the United States to enlist support for its military agenda than a means of providing security for them.

In 1984 New Zealand banned the entry of U.S. Navy ships into its ports in the belief that the ships were carrying nuclear weapons or were nuclear powered. The United States argued that New Zealand's action compromised U.S. military operations. Additionally, Americans were offended by the manner in which New Zealand presented its differences with U.S. policy makers.

When President RONALD REAGAN announced in 1986 that the United States would decline to abide by the provisions of the unratified Strategic Arms Limitation Treaty (SALT) II that restricted nuclear weapons, New Zealand stated that the United States had not been negotiating in good faith. The United States responded by rescinding its ANZUS-based security obligations toward New Zealand in 1986.

The future of ANZUS is in doubt. New Zealand has shown no indication that it wants to resume the partnership. For Australia, the alliance with the United States has continued to be a foundation of its defense policy.

CARYN E. NEUMANN

appropriate technology

Appropriate technology is an approach of using environmentally conscious, cost-effective, small projects rather than high technology and huge expensive projects to improve the lives of people around the world. Mohandas K. Gandhi was an early advocate of appropriate technology use, arguing that the massive Indian population could not afford the waste and expense involved with many development projects advocated in the West. Gunnar (d. 1987) and Alva Myrdal (d. 1986), an economist and a diplomat from Sweden, also supported the use of appropriate technology in

Third World or Global South development projects. In *Asian Drama: An Inquiry into the Poverty of Nations and the Challenge of World Poverty: A World Anti-Poverty Outline*, Gunnar Myrdal focused on ways to break out of the cycle of poverty whereby low productivity led to low income that in turn contributed to low savings and low capital.

A number of countries and individual development experts have successfully utilized appropriate technology. In the poor West African nation of Burkina Faso numbers of young people were given short training courses in administering shots; they then went out to rural centers in the countryside, where they gave shots to children. Thus at low cost the nation's children were inoculated for the five major childhood diseases.

The Egyptian architect Hassan Fathy (d. 1989) attempted to solve the problem of providing low-cost housing by using cheap mud brick that was easily available and aesthetically pleasing. After World War II he built an experimental village, Gournia, in southern Egypt, entirely of mud brick structures; unfortunately the project was mired in bureaucratic and political problems, and Fathy's approach was only adopted by some artists in Egypt and wealthy Americans in the Southwest.

In 1977 Wangari Muta Maathai of Kenya initiated the Green Belt movement, in which women were mobilized to reforest degraded land; she also fought for the cancellation of African debt and an end to political corruption. Her work for the environment was recognized with the 2004 Nobel Peace Prize. In another small but successful project pest-resistant grasses were planted around crops to increase productivity and the grasses were fed to livestock, increasing profits from both crops. In the field of health care President Carter's center in Atlanta, Georgia, aimed to eliminate guinea worm disease, which afflicted many poor people, especially in western Africa. The Bill and Melinda Gates Foundation, the richest private philanthropic organization, established programs to raise vaccination rates and eliminate other virulent diseases.

In Asia microfinance projects such as the Grameen Bank provided loans for poor women (who had a more reliable rate of repayment than men) for start-up money for small businesses or the purchase of farm animals such as chickens, goats, and cows that provided much-needed income and protein to supplement meager diets.

Until late in the 20th century the WORLD BANK and other aid organizations tended to fund high-tech projects such as dams, factories, or roads. Toward the end of the century agencies shifted their priorities but, politi-

cians preferred larger, more visible projects with investment from the top rather than on the grassroots level. Although advocates of appropriate technology and environmentalists argued that bigger was not always better, that it was not necessary to build the world's highest skyscraper or biggest dam, nations as diverse as Egypt, Turkey, and China went ahead with the huge ASWĀN DAM, Atatürk Dam, and Three Gorges Dam, and others continued the construction of environmentally damaging projects.

JANICE J. TERRY

Arab-Israeli-Palestinian peace negotiations

Five major wars and numerous peace negotiations have failed to resolve the ongoing conflict between the Israelis and Palestinians over land and statehood. Israel declared its independence and won the first war against opposing Arab states and the Palestinians in 1948. The 1949 armistice mediated by Ralph Bunche, a U.S. diplomat to the United Nations, ended the hostilities but did not result in an actual peace treaty, and technically a state of war still existed. Although the Arab states refused to recognize Israel, GAMAL ABDEL NASSER of Egypt supported behind-the-scenes secret negotiations in the early 1950s, but when Israeli Prime Minister David Ben-Gurion demanded face-to-face negotiations, the diplomatic efforts failed.

After the 1956 war, the United Nations, with Egypt's agreement, placed peacekeeping forces in the Sinai Peninsula (Egyptian territory) at strategic locations along the borders between Israel and Egypt. Their removal at Egypt's request was the ostensible cause of the 1967 war in which Israel decisively defeated the surrounding Arab nations and occupied East Jerusalem, the West Bank, the Gaza Strip, the Golan Heights (Syrian territory), and the Sinai Peninsula (Egyptian territory). Following this major victory, Israel expected the Arabs to

sue for peace and that some border modifications would be made. However, the Arabs refused to negotiate until Israel had withdrawn from all the territory occupied in the 1967 war and that some resolution of the Palestinian refugee issue and demands for self-determination had been achieved. Following the 1967 war, the Palestinians concluded that only armed struggle against Israel would achieve their national aspirations, and the PALESTINE LIBERATION ORGANIZATION (PLO) emerged as their sole political and military representative. Israel and its U.S. ally both considered the PLO a terrorist organization and refused to negotiate with it. Various diplomatic settlements were suggested but all failed to break the impasse.

SHUTTLE DIPLOMACY

To regain the Sinai and to bring the United States in as a mediator to the dispute, Anwar Sadat of Egypt launched a surprise attack against the Israeli forces occupying Sinai in 1973. Although Israel suffered some initial defeats, its military soon recovered and regained the offensive. With U.S. and UN diplomacy, a cease-fire was declared, and both sides announced they had won the war. The U.S. secretary of state, Henry Kissinger, then embarked on shuttle diplomacy between Israel, Egypt, Jordan, Syria, and Israel in an attempt to reach a settlement to the conflict. He envisioned a step-by-step process that the U.S. would control. As a result, various phased withdrawals of Israeli forces from the Sinai were agreed upon and were to be guaranteed by U.S. forces stationed in the peninsula, but the overall cause of the conflict, namely the conflicting claims of Israel and the Palestinians, remained unresolved.

Sadat attempted to revive the process by making a dramatic visit to Israel, where he spoke before the Knesset, the Israeli parliament, in 1977. Sadat was the first Arab leader publicly to visit Israel, and his gesture altered the psychological dimensions of the conflict and made it appear that peace between the Arabs and Israel was possible. In 1978 the U.S. president JIMMY CARTER brought Israeli prime minister Menachem Begin and Sadat together for 13 days of occasionally acrimonious negotiations at Camp David. These negotiations led to the 1979 peace treaty between Egypt and Israel that was signed at a well-publicized ceremony hosted by Carter on the White House lawn in 1979. The treaty provided for the gradual withdrawal of Israeli forces from the Sinai and full diplomatic recognition between the two states. Carter anticipated that further negotiations to resolve the differences between Israel and the Palestinians, the cessation of Israeli settlements in the

Occupied Territories, and the return of some land for an overall peace settlement would follow. The Arab states and the Palestinians rejected the treaty because it did not resolve most of the basic issues, and Israel continued to build settlements in the territories, further angering the Palestinians. In 1981 Egyptian Islamists who opposed the treaty assassinated Sadat; however, his successor, Hosni Mubarak, maintained the treaty in what has been called a "cold peace" between Egypt and Israel. In 1984 a full peace treaty between Israel and Jordan under King Hussein was signed. Hussein and then Israeli prime minister YITZHAK RABIN, both military officers, had a cordial relationship, and this treaty has also held.

During the 1970s the PLO also gained recognition from a number of nations around the world. In spite of Israel's opposition, YASIR ARAFAT even addressed the UN General Assembly in New York City. Israel attempted to eliminate the PLO by attacking its power base in Lebanon in 1982. The war seriously damaged the PLO infrastructure but did not destroy the organization that, with international assent, moved its base of operations to Tunisia. UN peace-keeping forces remained in southern Lebanon along the Israeli border, but a new indigenous Lebanese Islamist movement, HIZBOLLAH, then began attacks on Israeli forces both in Lebanon and Israel.

As early as 1974 the PLO hinted at the acceptance of a two state solution, or the so-called Palestinian mini-state comprising East Jerusalem, the West Bank, and the Gaza Strip, occupied by Israel in the 1967 war. The Arab governments also made gestures regarding acceptance of Israel; the Fahd Plan of 1982, sponsored by Saudi Arabia, called for all the states in the region to live in peace. The Fez Plan of 1982 reiterated the Arab states' willingness to consider trading land for peace as long as some form of Palestinian self-determination was achieved. These overtures were largely ignored by both Israel and its major ally, the United States, although the United States did have some secret contacts with the PLO. After 1988, when the PLO and Arafat agreed to recognize Israel's right to exist, to recognize UN Resolution 242, and to renounce terrorism, the United States agreed publicly to negotiate with it as the representative of the Palestinians.

The PLO and Arafat were further weakened by their support for Saddam Hussein during the First Gulf War; in retaliation the Gulf States, especially Kuwait, halted financial support for the PLO, and Kuwait ousted tens of thousands of Palestinians who then generally took refuge in Jordan. With the collapse of the Soviet Union the PLO also lost a key ally. With the end of the

COLD WAR, the United States became the major mediator in the long-running dispute. In 1991 U.S. Secretary of State James Baker succeeded in bringing all of the parties to the conflict—Jordanians, Syrians, Israelis, and Palestinians—together for the first time for direct negotiations. The Palestinians were represented by a delegation from the Occupied Territories who unofficially represented the PLO. The Israeli prime minister, Yitzhak Shamir of Likud, the hard-line Right party, was a reluctant participant, and the negotiations dragged on without appreciable progress until 1993.

DIRECT NEGOTIATIONS

At the same time, in 1993 the new Israeli Labor Party government under Yitzhak Rabin and Shimon Peres agreed to direct negotiations with PLO representatives. These top secret talks were held in Norway, a respected neutral party, and resulted in the first Oslo Accords. The accords included the Declaration of Principles (DOP) and letters of mutual recognition that were publicly signed in September 1993 on the White House lawn with President BILL CLINTON as host. The occasion culminated with a famous handshake between the two old enemies, Israeli prime minister Yitzhak Rabin and Yasir Arafat. Under Oslo I, Israel agreed to withdraw from Jericho and most of the Gaza Strip, and a five-year process of negotiations for further withdrawals was to result in the creation of what the Palestinians believed would be an independent Palestinian state. The PLO was to maintain order in its territories and prevent attacks on Israelis.

The territories were then turned over to the Palestine Authority under the PLO. In 1994 a Jewish settler massacred Palestinian worshippers in the Ibrahimi Mosque in Hebron; and Hamas, the main Palestinian Islamist group, retaliated with a car bomb in Israel that killed Israeli civilians. Arafat condemned suicide attacks, but they continued. Meanwhile, the PA was also charged with corruption and inefficiency and lost much popular support among the Palestinians.

Under Oslo II in 1995, Israel began a phased withdrawal from Ramallah, Nablus, and Bethlehem on the West Bank. However, the issues of Israeli settlements, the final status of Jerusalem, and the refugees remained undecided. Militants on both sides opposed these agreements, and in 1995 an Israeli radical assassinated Rabin. Meanwhile, violence in the territories continued. None of these negotiations settled the dispute between Israel and Syria regarding the Golan Heights.

The Likud, under Binyamin Netanyahu, won the elections following Rabin's death, and once again the

negotiations stalled. Israel withdrew from Hebron in 1997, one year past the agreed upon time frame. In the Wye Memorandum of 1998 (named after the Wye Plantation in Maryland where the talks were held) the United States mediated further Israeli withdrawals, and Arafat pledged to combat terrorism and to take steps to ensure further Israeli security. However, Netanyahu's government collapsed owing to mounting opposition from within his own party, and the withdrawals were delayed. Thus the expected deadline of 1999 passed without the establishment of a viable independent Palestinian state on the 22 percent of historic Palestine proposed for it. In addition, new Jewish settlements continued to be built or enlarged within the territories still held by Israel.

In a popular move within Israel, Prime Minister Ehud Barak withdrew Israeli troops from southern Lebanon in spring 2000. In the summer Barak met with President Clinton and Arafat at Camp David. At Camp David Barak presented an offer for a final settlement that involved the Israeli withdrawal from much of the West Bank and the Gaza Strip; Israeli control over the airspace, water aquifers and all of Jerusalem; the denial of the right of return of Palestinian refugees; and the continuation of some of the settlements. Although Clinton pressured Arafat to accept the proposal, Arafat knew he could not agree to give up the right of return and some Palestinian control over East Jerusalem, particularly the holy site of Haram al-Sharif, and survive politically. He rejected the offer but failed or refused to present a counter offer, and the talks failed.

Shortly thereafter a Palestinian uprising, the AL-AQSA INTIFADA, broke out. As the violence mounted, many Israelis lost confidence in the peace process and Barak. A last attempt to revive the process was made at Taba (in the Sinai Peninsula close to the Israeli border) in January 2001. Under the Taba proposals, Israeli would retain about 6 percent of the West Bank, reduce the number of settlements, and the Palestinians would receive a state. But the two sides could not agree on the status of Jerusalem, the right of return, or the Israeli settlement near Jericho that effectively split the Palestinian West Bank into two parts. The Likud Party under Ariel Sharon won the ensuing Israeli elections, and Sharon became the new prime minister in 2001; he supported the crushing of the al-Aqsa uprising by military means.

The Arab states adopted the Saudi peace initiative whereby they would recognize Israel in exchange for the creation of a Palestinian state in the territories in 2002. In 2003 some former Israeli officials and leading PLO

members proposed the Geneva Plan. Rather than adopting the step-by-step process that had not succeeded, this plan was a full comprehensive agreement, in which the end game was known.

The plan provided for a Palestinian state in most of the West Bank and all of the Gaza Strip and Israeli control over three settlement blocs in the West Bank and around Jerusalem. Palestinians would control the Haram al-Sharif in East Jerusalem, and Jews would control the Wailing Wall.

The refugees would receive some compensation and the freedom to return to the Palestinian state. Provisions were made for mediation of disputes, and the Palestinians were to have a security force, not an army. Israel would keep two monitoring posts as an early warning system on the West Bank for no more than 15 years. Sharon rejected the plan although it received some muted political support within Israel. Arafat did not give full assent for the plan but did not openly reject it. Nor did other states, especially the United States, adopt the plan, and it died for want of support.

Sharon and his successor, Ehud Olmert, adopted a policy of unilateral disengagement whereby Israel made decisions without negotiations or discussions with the Palestinians. Israel withdrew from the Gaza Strip and dismantled the settlements, but periodically launched military attacks into the territory and retained control over its borders, thereby cutting it off from trade and outside support. The Bush administration's support for Israel and Sharon lessened the credibility of the U.S. as a neutral mediator to the dispute among Palestinians and other Arabs. After Hamas won the Palestinian elections in 2006 negotiations broke down entirely. Although Hamas suggested implementing a long-term cease-fire, it refused to recognize Israel's right to exist. Israel considered Hamas, which continued suicide bomb attacks against Israelis within the territories and Israel proper, a terrorist organization and rejected all negotiations with it.

As the peace process dragged on, a generation of disillusioned and angry Palestinians grew up under Israeli military occupation. Conversely, many Israelis knew the Palestinians only as suicide bombers or violent opponents.

JANICE J. TERRY

Arab-Israeli War (1956)

The nationalization of the Suez Canal was the ostensible cause for the 1956 Arab-Israeli War. After the United States refused aid for building the ASWĀN DAM on July 26, the anniversary of the 1952 revolution, GAMAL ABDEL NASSER nationalized the Suez Canal to finance building of the dam, Nasser's dream project. Egypt managed to keep the canal running, much to the consternation of France and Britain. In announcing the canal's nationalization, Nasser had carefully adhered to international law. The United States, especially the secretary of state, John Foster Dulles, an expert in international law, opposed the use of force to retake the canal and instead proposed a diplomatic settlement.

The oil shipped through the canal was vital to the British and French economies, and it was apparent that the United States, then self-sufficient in oil, did not intend to supplement any possible oil losses to its European allies. Great Britain and France were determined to take back the canal by force. The British prime minister, Anthony Eden, personally detested Nasser, and his conservative Tory government was reluctant to cede British imperial control. The French were angry over Nasser's support for the Algerians in the ongoing war there. Israelis feared Nasser's growing popularity in the Arab world and wanted him removed from power before he could unify the Arabs and possibly form a united front to attack them. The Israelis secretly approached the French with a proposal for a joint military action against Egypt; the French then brought Great Britain into the plan. Although some British cabinet members opposed joining the alliance, Eden was determined to bring Nasser's regime down, and the tripartite agreement of the French, British, and Israelis was concluded.

According to the plan Israel was to launch a tri-pronged attack across the Sinai Peninsula, quickly take the territory, and stop the offensive prior to reaching the canal. The British and French would bombard Egyptian airfields and parachute forces along the canal on the supposed excuse that they were there to stop the war between Egypt and Israel. The Israelis launched the attack in October 1956, quickly

cut through Egyptian defense lines, took the Sinai, but then stopped before reaching the banks of the canal. The British and French were late in launching their attack but ultimately took control of the canal. The war was a clear-cut military victory for Israel, Britain, and France, but Nasser immediately accused the three nations of collusion. Although Eden and the French for years publicly denied any collusion, ultimately firsthand accounts by Israeli and other military and political leaders revealed the secret agreement.

With some justification, Nasser argued that the attack proved that Britain and France still had imperialist designs on the Arab world and that Israel was also a threat to its Arab neighbors. Nasser thus turned a military defeat into a political victory and became the most popular man in the Arab world. Contrary to Western and Israeli hopes, Nasser was not overthrown, and he consolidated power after the 1956 war.

The war placed the United States in the awkward position of having to condemn its closest allies in the UNITED NATIONS. The Soviets gained popularity in the Arab world by supporting Egypt. The war also diverted world attention away from the brutal suppression of the 1956 HUNGARIAN REVOLT by Soviet forces. In the face of international condemnation, Britain and France were forced to withdraw in December 1956, and the canal reverted to Egyptian control. Subsequently Eden, suffering from ill health in part brought on by the stress of the conflict, stepped down as prime minister. The Israelis were reluctant to withdraw from the strategic area of Sharm al-Sheikh in the south of Sinai and the Gaza Strip. President Eisenhower intervened and threatened to cut off all U.S. economic aid if they did not return all the territories to Egypt. Israeli forces finally left in March 1957. However, Israel did gain a unilateral agreement from the United States that the Gulf of Aqaba up to the southern Israeli port of Elath was to be considered an international waterway. Egypt and the Arab states never recognized the legality of Aqaba as an international waterway but for a decade did not challenge Israeli shipping through the gulf. Israel made it clear that any future closure of the waterway would be *casus belli*, or cause for war, and its threatened closure was one cause of the 1967 ARAB-ISRAELI WAR.

JANICE J. TERRY

Arab-Israeli War (1967)

The 1967 Arab-Israeli War lasted six days and was a resounding military victory for Israel but failed to achieve a resolution to the Arab-Israeli conflict. In 1966 border incidents and incursions into Israel by Fatah Palestinian guerrilla fighters increased, and Israeli launched a major military raid into Jordan in the fall of 1966. In spring 1967 the Israeli prime minister, Levi Eshkol—a dove by Israeli political standards—responded to demands for a stronger stance against Arab provocations by agreeing to the cultivation of demilitarized zones along the border with Syria. Predictably Syria opened fire, and Israel retaliated by shooting down a number of Syrian jet fighters. The Syrians, presumably encouraged by their Soviet allies, believed they were about to be attacked by Israel and appealed to their ally GAMAL ABDEL NASSER in Egypt for help.

In an attempt to gain diplomatic support and to look like he was doing something for his Arab allies, on May 16 Nasser asked that the UN withdraw its peacekeeping troops from the frontier posts in the Sinai Peninsula. Nasser mistakenly believed that a protracted period of negotiations would follow; however, according to the UN Charter troops could only be placed in a territory at the invitation of the host country. Consequently, the UN secretary-general U Thant promptly acceded to the Egyptian request and ordered the withdrawal of the peacekeeping force. Egyptian units occupied the posts including the vital Sharm al-Sheikh position along the Gulf of Aqaba, on May 21. Nasser then gave conflicting statements as to whether the waterway would be closed to shipping going to the southern Israeli port of Elath. After the 1956 ARAB-ISRAELI WAR, Israel had announced that it would view any closure of the waterway as *casus belli*, or cause for war. On May 23 U.S. president LYNDON B. JOHNSON publicly announced that the United States considered the waterway an international one, thereby supporting the Israeli position.

Eshkol advised caution in an attempt to avoid full-scale war, but military leaders and hawks in Israel favored immediate action. A flurry of diplomatic activity ensued, with Nasser seeing UN and U.S. representatives in Cairo and Abba Eban of Israel touring the Great Powers to secure their support in the event of

war. The Soviets feared a full-scale war that might escalate into a confrontation between the superpowers and used the hotline to Washington to prevent either power from becoming directly involved.

After receiving notes from both Johnson and the Soviets urging calm, Eshkol convinced most of the Israeli cabinet ministers on May 28 that all diplomatic measures should be used before recourse to war. However, irresponsible rhetoric by Arab leaders inflamed fears among Israelis that they were about to be overrun by Arab forces and also convinced Arabs that their militaries would win any war with Israel. Although the CIA and other experts predicted that Israel, with its military superiority, would quickly win any war with its Arab neighbors, the general public in the West, especially in the United States, was also convinced that Israel was in peril.

On May 30 Egypt and Jordan joined in a joint defense pact, and the PLO was allowed to open offices in Jordan. Iraq also joined the pact. Nasser was approached by both the Soviets and the United States urging a diplomatic settlement and apparently believed that Israel would not attack as long as diplomatic negotiations were in process.

On May 31 General Moshe Dayan, a noted hawk, became the Israeli defense minister, and war seemed likely. On June 5 the Israeli air force launched surprise attacks against Egypt, Jordan, Iraq, and Syria. Within two hours over 400 Arab planes had been destroyed, almost all on the ground. In spite of the boasts by Arab leaders, their militaries had not been prepared for war. With total air superiority Israel launched a three-pronged attack (almost a repeat of the military action in the 1956 war) and easily cut through the Egyptian forces, taking the Gaza Strip (administered by Egypt) and also moved across Sinai to the east bank of the Suez Canal. On June 8 Israel and Egypt agreed to a cease-fire in the Sinai. On June 5 Israeli forces also moved against Jordanian forces in the West Bank, taking all of the West Bank and East Jerusalem by June 7. Over 100,000 more Palestinians became refugees as thousands fled across the Jordan River to escape the war. On June 27 the Knesset agreed to a proclamation that Jerusalem was one city.

On June 8 Israeli forces moved against Syria in the north while the UN was still negotiating a cease-fire. In a still unexplained attack, Israel, on the same day, torpedoed the USS *Liberty*, a spy ship deployed in the eastern Mediterranean. By June 9 Israel had taken the Golan Heights from Syria, and a cease-fire was agreed to on June 10.

Taking responsibility for the disastrous defeat, Nasser resigned on June 9 but was brought back to power by popular acclaim. In support of their Arab allies the Soviet bloc severed diplomatic relations with Israel in the following days. In the war, the Arabs suffered over 26,000 killed, wounded, captured, or missing and lost over 1,200 tanks. Israel lost 6,000 killed, wounded, captured, or missing; 100 tanks; and 40 airplanes.

UN Resolution 242 called for the return of territories taken in war but pointedly did not specify all of the territories; this would become a point of contention in future negotiations. The war had been a humiliating loss for the Arab states. Owing to its decisive victory, Israel expected a full settlement, but no Arab government could hope to survive if it accepted an agreement with Israel that did not provide for the return of the newly conquered territory and the recognition of some form of Palestinian state. The impacts of the war were far-reaching and continue to reverberate in the region to the present day.

After the war, Israel announced that it would only accept face-to-face negotiations with the Arabs. From June 14 to 16, Arab leaders met at Khartoum, Sudan, and forged a united front. They announced that there would be no negotiations with Israel until it withdrew from the Occupied Territories and that no separate peace would be made by any individual Arab state. This caused Egypt's ostracism from the Arab world following Sadat's unilateral peace treaty with Israel in 1979. As a consequence of the impasse, Israel continued to occupy all of the Sinai Peninsula (Egyptian territory), the Gaza Strip, the West Bank, East Jerusalem, and the Golan Heights (Syrian territory).

The Soviets rearmed Egypt and Syria and increased their presence in the region. From 1968 to 1970 Nasser waged a war of attrition along the canal, and the Israelis built what they believed to be an impregnable defense line on the east bank of the canal. The line was breached by an Egyptian offensive in the 1973 ARAB-ISRAELI WAR.

Initially Israel was probably willing to return most of the Occupied Territories in exchange for a full peace and recognition by the Arab states. The longer Israel held the territories and the more Israeli settlements were established, the less land it was willing to trade for peace.

As a result of the war Palestinians concluded that the Arab governments would not be able to achieve their goal of an independent Palestinian state and that they would have to rely on themselves. This directly contributed to the growth of the PALESTINE LIBERATION

ORGANIZATION (PLO) as the sole representative of the Palestinian people. It also set the stage for a cycle of violence between Palestinian and Israeli forces that continued into the 21st century.

JANICE J. TERRY

Arab-Israeli War (1973)

The 1973 Arab-Israeli War (October 6–26), known as the Yom Kippur War in Israel and the Ramadan War among Arabs, was the fourth major military conflict between Israel and its Arab neighbors. During the 1967 ARAB-ISRAELI WAR, Israel occupied Egyptian, Syrian, and Jordanian-Palestinian territories; despite international efforts by U.S. secretary of state William Rogers and UN special envoy Gunnar Jarring, no peace agreement was reached, and Israel continued to occupy the territories taken in 1967. Although in March 1972 Syrian president HAFEZ AL-ASSAD publicly expressed his readiness to accept UN Resolution 242 recognizing Israel with the return of all of the Syrian Golan Heights, Israeli policy remained unchanged.

Syria and Egypt, with the support of Saudi Arabia, therefore decided to initiate a limited war in order to break the political stalemate. The Egyptian president, Anwar el-Sadat, was also anxious to relieve domestic discontent and to force the Soviet Union to supply Egypt with more advanced weaponry. It appears that Sadat and al-Assad began the secret planning of a joint strategy in 1971 and by the end of the year had reached an agreement on a broad strategy of action. In August 1973 the Egyptian chief of staff, Lieutenant General Saad el-Shazly, and his Syrian counterpart, Yusuf Shakkur, formally agreed on two possible dates for the war: September 7–11 or October 5–10. Less than a week later Egypt and Syria agreed on October 6. At the time, in spite of Arab military preparations, Israeli military

intelligence did not believe that war was imminent. The possibility of Israel's being taken by surprise was not seriously considered, nor was the thought accepted as valid that Arabs might launch a limited war to force serious political negotiations.

The Egyptian and Syrian attack on October 6 was therefore an unpleasant and shocking surprise for Israel. Hostilities began when the Syrians attacked the Golan Heights and the Egyptian army surprised Israel by crossing the Suez Canal on a pontoon bridge and by breaching the supposedly impregnable Israeli Bar Lev Defense Line in Sinai. Syrian armored and infantry divisions stormed the Golan plateau but were stopped several miles from the eastern shore of Lake Tiberias and the River Jordan.

On October 8 the Israeli defense minister, Moshe Dayan, ordered the deployment of Israeli nuclear weapons, fearing that the “third temple” (the state of Israel) might be in danger. His fears proved premature; the Israeli army regained the initiative, and General Ariel Sharon launched a counteroffensive and established a bridgehead on the east bank of the Suez Canal, only 60 miles from Cairo. A cease-fire was agreed upon on October 24. The situation was similar in the north, where Syrian advances on the Golan were reversed, and the outskirts of Damascus came into range of Israeli artillery.

Three major factors enabled the Israeli forces to reverse their initial losses. First, once the superior Israeli military forces had been fully mobilized they retook initiatives on both fronts. Second, a crucial role was played by an enormous airlift of U.S. military supplies. The airlift, larger than the Berlin airlift, provided Israel with some 24,000 tons of arms, ammunition, tanks, missiles, and howitzers. A third and crucial factor was the differing political and strategic goals of Sadat and al-Assad. Sadat had started a limited war to shatter the status quo and pressure the United States to mediate the dispute in order to regain the Sinai Peninsula. Assad wanted to retake the entire Golan and put pressure on Israel to give up the occupied Palestinian territories. After two days of successful advances, the Egyptian forces were ordered to adopt a defensive stance by Sadat, but, in reaction to Syrian setbacks in the north and the U.S. airlift, Egyptian forces reinitiated the attack against Israel on October 14. However, they failed to regain the initiative.

The Soviet Union was reluctant to become further involved, and U.S. secretary of state Henry Kissinger's skillful diplomacy resulted in a political gain for

the United States and the drawing closer together of the United States and Sadat. On October 22 the UN Security Council passed Resolution 338 calling on “all parties to the present fighting to cease all firing and terminate all military activity . . . to start immediately after the cease-fire the implementation of the Security Council Resolution 242 in all of its parts aimed at establishing just and durable peace in the Middle East.” Sadat accepted the cease-fire, and Syria officially recognized it on October 23.

Israel continued its military action against Egypt, however, and on the evening of October 23 Soviet leader LEONID BREZHNEV sent a letter to U.S. president RICHARD NIXON proposing joint U.S.-Soviet intervention to ensure the cease-fire. He also threatened that if the United States did not take action, the Soviet Union would be faced with the urgent necessity to “consider taking appropriate steps unilaterally.” In response Kissinger put U.S. forces on full nuclear alert on October 24.

The Soviets did not intervene and over the next few days the cease-fire was implemented. Although Israel proved victorious in the end, the war had been a great shock to the state. For the Arabs, the war was a limited success and seemed to rehabilitate the Egyptian army after its disastrous defeat in the 1967 war.

In May 1974 Syria and Israel reached a disengagement agreement, and Israel agreed to withdraw from parts of the Golan and the town of Quneitra but continued to occupy the rest of the Golan. Assad’s achievements improved his image in Syria. The war also increased U.S. power and weakened Soviet influence in the region. The United States subsequently mediated negotiations between Egypt and Israel, leading toward the Camp David accords and the Egyptian-Israeli peace treaty in 1979.

Arab-Israeli War (1982)

In 1982 Israel invaded Lebanon in an attempt to eliminate the PALESTINE LIBERATION ORGANIZATION (PLO) once and for all. In 1970, following Black September, when Palestinian forces were defeated in Jordan, the PLO moved its base of operations to Lebanon. The presence of large numbers of Palestinians further disrupted the fragile Lebanese political system, which was based on a confessional system reflecting the many different religious communities in the country. When the PLO launched attacks from southern Lebanon, Israel often retaliated by attacking Lebanon and demanding that Lebanon control the PLO. Some Lebanese, particularly the Maronite Christians who held the preponderance of political power, blamed the PLO for the problems with Israel and for Lebanon’s domestic instability. They also wanted the PLO out of the country.

After civil war broke out in Lebanon in 1975 the central government ceased to be effective, and the PLO was able to establish a state within a state. Although the PLO was not the major cause for the civil war—internal political contradictions in Lebanon were—it was a contributing factor. Initially the PLO attempted to remain neutral in the war, but as violence throughout the country escalated, it was drawn into the fighting on the side of the Sunni Muslims, who, unlike other groups in Lebanon, largely lacked their own military militias. The PLO also provided social services and militarily trained some Shi’i in the south, who traditionally had been the poorest and least powerful group in the country. However, PLO fighters were often arrogant, and gradually Shi’i communities came to resent their presence.

Following increased attacks by the PLO, including terrorist attacks against Israeli civilians in the north, Israel occupied southern Lebanon for 120 straight days in 1978. During this time Israel trained and financed a surrogate force, the South Lebanon Army (SLA), commanded by a former officer of the Lebanese army. It continued to operate as a pro-Israeli force in South Lebanon into the 1990s. The Israeli attacks depopulated much of South Lebanon, as over 200,000 people, mostly Shi’i villagers, fled to South Beirut, where they settled in slum areas and refugee camps. During the LEBANESE CIVIL WAR Israel also established direct ties with Maronite Christian forces, the Phalange or Kataeb, led by Bashir Gemayel, who was intent on removing the Palestinians from Lebanon and establishing Maronite control over the government.

By 1982 the PLO feared a major Israeli attack in Lebanon and moderated its incursions across the border. But the hard-line Likud government, under Prime Minister Menachem Begin, was determined to crush the PLO. In June 1982 the Palestinian terrorist Abu Nidal organization, whose leader had been condemned to death by Arafat and the PLO, attempted to assassinate the Israeli ambassador, Shlomo Argov, in London. The Israelis retaliated with a full-scale invasion of Lebanon. Although the Israeli cabinet had approved an invasion 25 miles into Lebanon, the hawkish Israeli defense minister and war hero General Ariel Sharon ordered troops that had little difficulty securing the south to advance directly on to Beirut. As the Israelis advanced, the PLO forces also moved north toward Beirut. Within a week Israeli forces had linked up with Bashir Gemayel's militia in East Beirut and besieged West Beirut, home to about 1 million civilians and also the PLO headquarters. The Israeli air force and navy bombarded the city, and as the siege dragged on, the Israeli military attempted but failed to take the city.

The war resulted in a heavy loss of civilian life, and the international community, appalled by the carnage, demanded a cease-fire. Negotiations led to the withdrawal of PLO leaders, including Yasir Arafat and many fighters, to Tunis on August 16. International forces, including French, U.S., and Italian, moved in to protect the civilian population in West Beirut, but within two weeks president RONALD REAGAN declared the war over and removed U.S. troops.

On August 23 Bashir Gemayel was elected president of Lebanon, but to the dismay of Sharon, he refused to sign a peace treaty with Israel. Several days later Gemayel was killed in his headquarters, and his brother ultimately became the new Lebanese president. In retaliation for the killing—which they blamed on the Palestinians—Lebanese militias, under the observation of Israeli troops, entered the refugee camps of Sabra and Shatila in Beirut, and from September 16 to 18 massacred several thousand people, mostly Palestinian women and children. In Israel major demonstrations against the government erupted for having allowed such attacks. Although Sharon was held accountable for the massacre and forced to resign, he returned to politics and in 2001 became the Israeli prime minister. In the aftermath of the massacre international forces, including U.S. Marines, returned to Lebanon. They, too, were drawn into the Lebanese civil war and became targets for suicide bombers. Thus, even without the presence of the PLO, the war continued.

In 1983 suicide bombers killed 17 Americans and 40 others at the U.S. embassy, 58 French soldiers in a car bomb, and 241 U.S. Marines in a truck bombing at the supposedly safe Beirut airport. When more attacks and kidnappings followed, the international forces withdrew. Israeli forces also gradually withdrew from Beirut but remained in South Lebanon. Lebanon descended into greater anarchy until the civil war ended under the 1989 Taif Agreement, brokered by Saudi Arabia and supported by other Arab states. The 1982 war was a military defeat for the PLO and damaged much of its social and welfare infrastructure in Lebanon, but it did not destroy the organization. Tunisia remained the PLO headquarters until the signing of the 1993 Oslo Accords, when it moved to Gaza and Jericho in the West Bank.

Initially the Shi'i in South Lebanon welcomed the Israelis but gradually they turned against them when the troops remained. HIZBOLLAH (Party of God), which formed as a result of the 1982 war, became the major Shi'i group to fight against the Israeli occupation. Israel was to sustain more deaths and casualties from the struggle with Hizbollah in Lebanon than from the PLO. In May 2000 Israel pulled out of southern Lebanon except for Shaba Farms claimed by Syria and as Lebanese territory by Hizbollah. However, confrontations between Israeli and Hizbollah forces continued over the disputed area and in 2006 Israel again bombarded and invaded Lebanon, this time in an attempt to destroy Hizbollah.

JANICE J. TERRY

Arafat, Yasir (Yasser Arafat)

(1929–2004) *Palestinian leader*

Yasir Arafat (full name, Muhammad Abdul Rauf Arafat al-Qudwa) was born to Palestinian parents in Cairo in 1929, although he claimed Jerusalem as his birthplace. Educated in Egypt, Arafat earned an engineering degree in 1956. While a student he met other Palestinians, especially Salah Khalaf (1932–91) and Khalil al-Wazir (1935–88), who would become leaders

in the nationalist movement. Although it is not certain that Arafat ever became a full-fledged member, he had contacts with the Muslim Brotherhood, and some of his associates did join the brotherhood. Arafat served as president of the Union of Palestinian Students and, later, the larger General Union of Palestinian Students (GUPS) from 1952 to 1956.

After graduation Arafat, along with several other key allies, moved to Kuwait, where in 1957 he cofounded, with Khalaf and al-Wazir, Fatah (Harakat Tahrir Filastin, or Palestine National Liberation Movement). In Arabic the acronym meant victory. Al-Asifah was its military arm. Wazir's wife, Intissar, also took an active role in the group. Fatah's first operation against Israel was an attack on a water pump station in 1965. Along with many other nationalist leaders in the mid-20th century, Arafat and Fatah members were influenced by the Algerian War. On the basis of that struggle they concluded that an independent Palestinian state could only be established through armed struggle with Israel. Arafat's stated goal was the establishment of an independent Palestinian state in all of historic Palestine. He took the name Abu Ammar as his *nom de guerre*; al-Wazir became Abu Jihad; and Khalaf became Abu Iyad. The three leaders were known among Arabs as the *abus*, or fathers.

The Battle of Karameh in 1968 was a major turning point for Arafat and Fatah. In an attempt to crush Fatah, Israeli forces moved into Jordan and attacked the Fatah base at Karameh. Surprised when Fatah fighters fought back, the Israelis withdrew somewhat hastily. Young Palestinians and others who had been dispirited after the major defeats in the 1967 ARAB-ISRAELI WAR then flocked to join Fatah in the struggle against Israel. As a result Fatah became the largest and most powerful of the Palestinian factions and in 1969 Arafat became chairman of the PALESTINE LIBERATION ORGANIZATION (PLO), the umbrella organization for a number of diverse Palestinian groups. He served in that capacity until 2004. Under Arafat's leadership the PLO accommodated political factions on the Left and Right and refused to be aligned with any one Arab government.

The mounting power of the PLO posed an open challenge to the Jordanian monarchy. Consequently in September 1970 King Hussein's forces attacked the PLO forces and Palestinian refugee camps, driving the PLO and Arafat out of Jordan. Black September, the group that subsequently attacked and assassinated Jordanian officials and Israelis, took its name from the war in Jordan. Although Israel and others alleged that Black Sep-

tember and other organizations that engaged in terror attacks were controlled by Arafat, he denied the charges. By 1974 Arafat ordered that PLO attacks be concentrated only in Israel and the Occupied Territories of the Gaza Strip and the West Bank. In 1974 Arafat achieved international recognition and spoke before the General Assembly of the UNITED NATIONS. In subsequent years Arab states and most other countries, with the notable exceptions of Israel and the United States, recognized the PLO as "the sole legitimate representative of the Palestinians."

After being ousted from Jordan, Arafat and the PLO moved the headquarters of their military, political, and social welfare activities to Lebanon. As the central Lebanese government imploded in the course of the civil war in the mid-1970s, the PLO became a state within a state. The PLO infrastructure of schools, hospitals, businesses, and cultural institutions grew. Fearing major Israeli attacks into Lebanon, Arafat attempted to moderate PLO invasions into Israel along Lebanon's southern borders, but as the PLO's political and diplomatic efforts became more effective, Israel was determined to eliminate the dangers the PLO posed.

In June 1982 Israel launched a full-scale invasion into Lebanon with the purpose of destroying the PLO. Arafat and the PLO were quickly besieged in Beirut, where they held out against massive Israeli bombardments from the sea, land, and air. Negotiations by the international community resulted in the withdrawal of Arafat and the PLO leadership from Lebanon and their relocation to Tunis.

Israel attacked PLO headquarters in Tunis in 1985, but Arafat escaped; he also was almost killed in a plane crash in 1992. He and the PLO remained headquartered in Tunisia until 1993. Late in life Arafat married Suha Tawil, from a notable Palestinian Christian family, with whom he had one daughter. His brother Fatih Arafat, a medical doctor, headed the Palestinian Red Crescent for many years.

Arafat was a master at maneuvering among the Arab leaders, with whom he often had difficult relations, as well as among conflicting Palestinian factions, often playing one against the other. In 1988 the Palestine National Council (the equivalent of the Palestinian parliament) declared a Palestinian state with Arafat as the president. By this time Arafat supported the so-called ministate solution, whereby the Palestinian state would include the West Bank, the Gaza Strip, and East Jerusalem, all territory taken by Israel in the 1967 war and occupied by its military forces since that time.

Following secret talks between Israeli and PLO representatives in Norway, Arafat agreed to the 1993 Oslo Accords, which provided for the phased withdrawal of Israeli forces from parts of the Occupied Territories and PLO recognition of Israel. The accords were signed by Arafat and Israeli leaders YITZHAK RABIN and Shimon Peres in a much-publicized ceremony in Washington, D.C. Arafat shared the 1994 Nobel Peace Prize with Rabin and Peres.

Israel withdrew from portions of the Gaza Strip and Jericho, and Arafat returned to what Palestinians hoped would be the gradual creation of a fully independent state. Arafat was elected president of the new Palestinian National Authority (PNA) in 1993 and held the position until his death. Although he personally lived a simple life, Arafat was accused of allowing corruption among high-level Palestinian officials in the PNA and within Fatah. He retained a patriarchal hold on power.

As negotiations faltered, Arafat became increasingly isolated. At the 2000 Camp David negotiations Israeli prime minister Ehud Barak offered to return much of the Occupied Territories in return for an end to conflict, with no terms for the resettlement of the refugees. Arafat rejected the offer but failed to make a counteroffer. Negotiations broke down completely, and many young Palestinians turned to the Islamic nationalist organization HAMAS, which launched attacks—including suicide missions—within Israel and the Occupied Territories. In 2000 and 2001 a new intifada (the AL-AQSA INTIFADA), or Palestinian uprising, broke out. Israel retaliated by reoccupying territory it had previously vacated. Israeli forces surrounded Arafat in his compound in Ramallah, and for the last two years of his life, he remained under what amounted to house arrest.

After some time of failing health he was moved to a hospital in Paris, where he died of uncertain causes in 2004. After Israel rejected Arafat's wish to be buried in Jerusalem, his body was brought back to Ramallah for burial amid massive scenes of mourning among Palestinians. Although Arafat had failed to achieve an independent Palestinian state, he remained the leader who had made the existence of the Palestinian people and their quest for self-determination a matter of international concern.

JANICE J. TERRY

Arévalo, Juan José

(1904–1990) *Guatemalan president and reformer*

From 1944 to 1954 Guatemala experienced an unprecedented democratic opening that began with the overthrow of the 13-year dictatorship of Jorge Ubico (1931–44) and ended with a coup d'état against president Jacobo Arbenz (1951–54), orchestrated by the U.S. Central Intelligence Agency (CIA). Serving as president during the first six years of that democratic opening (March 15, 1945, to March 15, 1951), and instituting far-reaching constitutional, social, and labor reforms, was the former university professor and “spiritual socialist” Juan José Arévalo. In the early 1940s a protest movement against Ubico erupted in Guatemala, centered on the cities and spearheaded by university students, professionals, and disgruntled military officers. Ubico resigned on July 1, 1944. The three-man military junta that assumed power oversaw national elections, widely considered the fairest in Guatemalan history up to that time. Arévalo won around 85 percent of the vote.

Arévalo was born in Taxisco, Guatemala, on September 10, 1904. At age 30, he traveled to Argentina, earning a doctorate in philosophy and teaching at the University of Tucumán. With Ubico's overthrow, Arévalo returned to Guatemala and became the favorite of the protest movements that had ousted Ubico. In his inaugural address he outlined his vision of the “spiritual socialism” that would guide his administration. A complex and not entirely coherent political philosophy, Arévalo's spiritual socialism emphasized the interests of working people, social justice, individual and collective rights, and respect for the dignity of ordinary people, including Guatemala's large indigenous population. One of his administration's first steps was to promulgate the constitution of 1945, which expanded the franchise to all illiterate males and literate females age 18 and older; forbade presidential reelection; and guaranteed the autonomy of Guatemala City's University of San Carlos, with funding at 2 percent of the national budget.

There followed a series of broad-ranging reforms in public health, social security, education, and labor relations akin to the New Deal in the United States. Gov-

ernment expenditures on public health, including rural health clinics and potable water projects, expanded dramatically. The Social Security Law of 1946 created the Guatemalan Social Security Institute. Spending on education, literacy programs, and school construction rose 155 percent from 1946 to 1950.

The 1947 Labor Code guaranteed workers' rights to unionize, strike, and bargain collectively; mandated minimum wages; and limited child and female wage labor. An especially delicate issue on which Arévalo tread lightly was land reform. Most of the country's arable land was owned by a small landowning elite and, on the Caribbean littoral, by the United Fruit Company, with its huge banana plantations. Establishing an Agrarian Studies Commission in 1947, and guaranteeing certain rights for rural laborers in wages, rents, and housing, for the most part Arévalo left the land tenure issue alone. His successor, Jacobo Arbenz, instituted major agrarian reforms, provoking the opposition of powerful conservative elements within Guatemala, the United Fruit Company, and the Eisenhower administration. Arbenz was ousted in a coup in June 1954, ushering in a prolonged period of military dictatorship. Arévalo died in Guatemala City on October 6, 1990.

MICHAEL J. SCHROEDER

Argentina, Madres de Plaza de Mayo

One of the best-known human rights organizations to emerge in response to the dirty wars in Latin America in the 1970s and 1980s, the Asociación Madres de Plaza de Mayo (Association of Mothers of the Plaza de Mayo) began its silent vigils on April 30, 1977, protesting against and demanding accountability for the disappearance of their children during the Argentine military dictatorship (1976–83; it is estimated that during this period the military disappeared between 15,000 and 30,000 persons).

Every Thursday afternoon, from 3:30 to 4:00 P.M., the Mothers would gather at the May Pyramid (Pirámide de Mayo) in the Plaza de Mayo in front of the presidential palace, wearing white head scarves, often carrying

photographs of their missing children, and walk slowly in circles, demanding government accountability for their disappeared sons and daughters. The founding members of the organization included Azucena Villafior Devinenti (its first president); Berta Braverman; Haydée García Buelas; the four sisters María Adela Gard de Antokoletz, Julia Gard, María Mercedes Gard, Cándida Gard; Delicia González; Pepa Noia; Mirta Baravalle; Kety Neuhaus; Raquel Arcushin; and Señora De Caimi. The Mothers' Association slowly grew, despite the detention and disappearance of some of its founding members, including its first president, Azucena Devinenti. By the early 1980s the Madres had grown to several thousand members and garnered the support of key international human rights groups, including Amnesty International and the United Nations Human Rights Commission.

Many consider that the Madres played an important role in delegitimizing the military dictatorship and helping to usher in the period of democratic rule from 1983. The Madres have continued their weekly vigils from 1977 to the present writing, demanding that the government account for their missing children and that the responsible parties be subjected to criminal prosecution, and refusing government offers of monetary compensation (*reparación económica*) if not accompanied by acknowledgment of responsibility. In 1986 the group split into two main factions: the Mothers of the Founding Line (Linea Fundadora), led by Hebe de Bonafini, and the Madres; each currently maintains its own Web site. The group has received international accolades for advancing the cause of human rights, including the Sakharov Prize for Freedom of Thought (1992), the United Nations Prize for Peace Education (1999), and the United Nations Prize in the Field of Human Rights (2003).

The Mothers of the Founding Line has been criticized by some for its lack of internal democracy, cults of personality, and other factors. The Madres also spawned the formation of related groups, including the Association of Grandmothers of the Plaza de Mayo (Asociación Abuelas de Plaza de Mayo). Both factions of the Madres continue to demand government accountability for crimes perpetrated during the dirty war, and remain active in the field of human rights.

MICHAEL J. SCHROEDER

Aristide, Jean-Bertrand

(1953–) *Haitian priest, politician, and president*

A major and highly controversial figure in the modern history of Haiti, Jean-Bertrand Aristide was born in Douyon in southern Haiti on July 15, 1953. After being orphaned as an infant, he was raised by the Society of Saint Frances de Sales (the Salesians), a Roman Catholic religious order. Educated at Salesian schools, including the Collège Notre-Dame, from which he graduated with honors in 1974, he continued his education at a number of religious schools in Europe, North America, the Middle East, and elsewhere, and at the University of Haiti, before his ordination as a Roman Catholic priest in 1982. A gifted orator and organizer, he was especially influenced by liberation theology, a strand of Roman Catholicism that became prominent from the 1960s and emphasized issues of social justice and political activism in alleviating the poverty and oppression of the poor and marginalized. In 1983 he was appointed to a parish in a Port-au-Prince slum, where he worked in a medical clinic and a halfway house for street children. His activism and charisma attracted a large following and helped him build a social base for his subsequent political career. In 1986 popular uprisings led to the end of the DUVALIER DICTATORSHIP, creating a political opening Aristide would soon exploit. His fiery oratory and social radicalism alienated the church hierarchy, leading to his expulsion from the Salesian order in 1988.

In 1990 in the first genuinely democratic elections in Haitian history, Aristide captured the presidency with two-thirds of the popular vote. He called his supporters “Lavalas,” which translates from the Haitian Creole as “cleansing flood” or “avalanche.” His first tenure as president lasted less than eight months—from his inauguration on February 7, 1991, to the military coup that ousted him on September 30. Going into exile in Venezuela and the United States, he was returned to power following a U.S. military intervention in 1994. During the same year he renounced his priesthood, marrying U.S. citizen Mildred Trouillot two years later. Constitutionally barred from running in the elections of December 1995, won by Raoul Cédras, in 2000 he won a second term. Political gridlock followed, and after a long period of political unrest, he was overthrown in a

Jean-Bertrand Aristide returns triumphantly to the National Palace at Port-au-Prince, Haiti, during Operation Uphold Democracy.

military coup in February 2004 and compelled to leave the country. From exile in South Africa he proclaimed himself the legitimate president of Haiti. Denounced by his opponents as a self-serving agitator who advocates violence in the pursuit of political power, and revered by his many supporters as the embodiment of the aspirations of Haiti’s poor and oppressed, he remains a polarizing and controversial figure in the modern history of the Western Hemisphere’s poorest country.

MICHAEL J. SCHROEDER

Armenia and Azerbaijan

The Armenian Soviet Socialist Republic and the Azerbaijan Soviet Socialist Republic were constituent members of the Soviet Union until its collapse in 1991 when

the former became the Republic of Armenia and the latter the Azerbaijani Republic.

Armenia, as a part of the Soviet Union, saw a considerable period of peace. However, the intelligentsia of the area had suffered greatly during the rule of Joseph Stalin, with tens of thousands of Armenians being executed or deported. The tensions eased with the death of Stalin and the emergence of NIKITA KHRUSHCHEV. The next 25 years saw rising standards of living, with improvements in education and health care. Many of those exiled were also able to return. From the 1970s Western tourists started to visit Yerevan and some other parts of Armenia. With glasnost during the 1980s, the situation improved considerably.

Similarly, in Azerbaijan, there was suffering under Stalin, with some Azerbaijanis having supported the Germans during World War II. This also led to mass executions and deportations. During the 1950s Azerbaijan was transformed with the enlarging of the oil industry. This continued throughout the 1960s and helped provide money for an increase in civil engineering projects and infrastructure.

In 1988 the governing council of Karabakh, officially the Nagorno-Karabakh Autonomous Oblast, an enclave in Azerbaijan with 180,000 people, voted for unification with Armenia. Azerbaijanis, largely Shi'ite Muslims, then attacked the predominantly Christian Armenians at the Azerbaijani town of Sumgait. There was an upsurge in nationalist sentiment in both republics, with 250,000 Azerbaijanis living in Armenia and 500,000 Armenians in Azerbaijan at the start of the dispute. Many of these fled, and to make the situation worse still, in December 1998, an earthquake hit northern Armenia, destroying most of the town of Spitak, and also hitting Leninakan and Kirovakan, killing 25,000 and leaving 500,000 homeless.

With a rise in Azerbaijani nationalism in 1989, the local government started blockading Nagorno-Karabakh and Armenia. In January 1990 the border between Nakhichevan and Iranian Azerbaijan was torn down, and Armenians in Baku, Azerbaijan's capital, were massacred. With weapons stolen from army bases and depots, Armenian and Azerbaijani militia were soon fighting each other. The Soviet army was sent in and managed to fight its way into Baku, with hundreds dying. The Communists won the elections for the Azerbaijan Supreme Soviet (parliament) in 1990, and on August 30, 1991, Azerbaijan declared independence. Armenia followed suit on September 23. Full independence came about on December 25, with the formal dissolution of the Soviet Union.

In Azerbaijan, Ayaz Mutalibov, leader under the Communists, became president, remaining in that position until May 18, 1992, when Isa Gambarov took over as acting president. On June 16, 1992, Abulfaz Elchibey became president, being replaced on June 24, 1993, by Heydar Aliyev, who was acting president until September 1, when he became president in his own right. The former Soviet politician Aliyev started to exploit the oil reserves of the country. He managed to reduce unemployment and establish closer relations with Turkey. As he was dying, on October 15, 2003, his son, Ilham Aliyev, won the presidential election, for which he was the only candidate, and was sworn in as president 16 days later. In 1994 Azerbaijan became a member of the NATO Partnership for Peace, allying itself closely with the West, and since 2001 has been a member of the Council of Europe. In 2004 Azerbaijan joined the NATO Individual Partnership Action Plan.

Nearly 99 percent of the 94 percent who voted in the 1991 referendum supported independence for Armenia. It became an independent country later that year but suffered greatly from a blockade by Azerbaijan. This was made worse when Turkey also blockaded the country in April 1993 after Armenian forces launched a military offensive against Azerbaijan. As Azerbaijan sought closer ties with the West, Armenia sought more engagement with the Russian Federation. Through intermediaries from the Organization for Security and Cooperation in Europe (OSCE), there has been an end to fighting in Nagorno-Karabakh, although there has been much political ferment with increasing unemployment and some 600,000 people leaving the country between 1992 and 1998.

Robert Kocharyan became acting president when Levon Ter-Petrosyan stepped down and has been president from April 9, 1998. During his time in office, there has been increasing dissatisfaction with the authoritarian way in which the country has been run, with dissidents being jailed and opposition parties banned. In recent years, with economic problems plaguing the country, there has been the emergence of the Union of Right-Wing Forces that was founded in Yerevan on May 29, 2000. On March 21, 2002, at the Permanent Council meeting of the OSCE, Armenia once again reiterated its claims to Nagorno-Karabakh, with both governments now determined on a peaceful solution.

JUSTIN CORFIELD

arms race/atomic weapons

Atomic weapons and the arms race were inseparable from the inception of the former: Developments in physics in the 1930s led physicists to believe that nuclear fission could be used as a weapon, and when World War II began, scientists stopped publishing on the topic of fission in order to avoid sharing information with the enemy. No one was yet sure what form a fission-based weapon would take, but the Allied nations were concerned that Nazi Germany would develop it first. In the United States the Manhattan Project was supported by enormous resources beginning in 1942. Research occurred at various sites across North America and was overseen and organized at Los Alamos, New Mexico, where the desert provided safe sites for weapons testing. Though British scientists participated, as did many European exiles, the Soviet Union was not included in the project.

Not until after Germany's surrender did the Manhattan Project finish its work. The first test, code-named Trinity, was conducted on July 16, 1945. The first nuclear explosive, a nondeployable bomb nicknamed the Gadget, was a sphere of high explosive covered with surface detonators that directed the explosion inward, compressing a plutonium core in order to start a nuclear chain reaction that grew at an exponential rate. The Gadget exploded with a blast equal in force to about 18 thousand tons of TNT—tonnage of TNT became the standard measure of nuclear bombs thenceforth.

The test was a success. Aural and visual evidence of the explosion reached as far as 200 miles away. Almost immediately two bombs were prepared for the ongoing war in the Pacific: Fat Man, a plutonium bomb like the Gadget, was dropped on Nagasaki, Japan, on August 9; three days earlier at Hiroshima, Little Boy, a uranium "gun-type" bomb that worked by shooting one piece of uranium into another to start the chain reaction, had been dropped. Little Boy was the first gun-type nuclear bomb used, and while it seemed likely to work, it was

U.S. troops witness an atomic bomb test. Atomic weaponry shaped the international political landscape of the cold war.

at that time untested. Hundreds of thousands died at Hiroshima and Nagasaki, prompting a Japanese surrender a week later.

Future warfare would have to acknowledge the existence of nuclear weapons. Though the Soviets had been left out of the Manhattan Project and the United States was the only country with the capability to produce nuclear arms, the Soviet Union had been receiving information about the project throughout its duration thanks to its espionage efforts. Development of Soviet nuclear weapons had to be conducted without the extraordinary brain trust of Los Alamos, but had the advantage of requiring less innovation. Penal mining provided uranium, and on August 29, 1949, the Soviets successfully detonated First Lightning, a 22 kiloton Fat Man-style fission bomb. Four years after the start of the "Atomic Age," and years before U.S. military intelligence had predicted the Soviets would succeed, the nuclear arms race was under way.

In the aftermath of World War II the United States and the Soviet Union became the most significant and resourceful superpowers. New international alliances like the NORTH ATLANTIC TREATY ORGANIZATION (NATO) and the WARSAW PACT transpired along ideological lines as much as geographical ones. The arms race was, on one level, simple one-upmanship: a competition through

which tensions could be worked out, as they were in the Olympics and the space race. Though both the United States and the Soviet Union quickly acquired the necessary means to do significant and catastrophic damage to their opponents, escalation continued as the arms race drove them both. The United States countered the Soviet acquisition of “the bomb” by developing the hydrogen bomb—also called the fusion bomb or the thermonuclear bomb. While the first generation of nuclear weapons used fission, the hydrogen bomb relied on nuclear fusion: the process of nuclei fusing into a larger nucleus and releasing energy as a by-product, the same process that fuels the Sun.

On May 9, 1951, in the United States, Operation Greenhouse detonated a thermonuclear device code-named George, with an explosive yield of 225 kilotons. Like the Gadget, George was a nondeployable device used to test the basic principles that would be involved in the design of its successors; a year later, Ivy Mike was detonated with a yield of 10.4 megatons (10,000 kilotons), and the hydrogen bomb officially became part of the U.S. nuclear arsenal. The Soviets kept pace, detonating a preliminary fusion device in the summer of 1953 and a full-scale thermonuclear bomb in 1954. The destructive force of these new bombs was commonly measured in megatons, making the first atomic bombs seem almost trivial in comparison. A Fat Man-type bomb could eliminate a smaller city like Nagasaki; a hydrogen bomb could eliminate a major city and its infrastructure and produce considerably more fallout.

Secrecy was part of the world of nuclear weaponry from the start. In the COLD WAR years, new policies regulated information relevant to the design of nuclear arms: The 1946 Atomic Energy Act put nuclear technology under civilian control and banned the divulging of information related to such to any foreign nation. Eight years later a new act went substantially further: All nuclear technology was “born secret,” which is to say that it was automatically classified without need for evaluation. Nuclear technology was deemed to be a matter of national security. It is widely speculated that the born secret policy is unconstitutional, but the Supreme Court has yet to hear a case pertaining to it.

Throughout the 1950s much of the innovation of the arms race was concerned with methods of deployment. The B-47 Stratojet and B-52 Stratofortress—strategic U.S. bomber jets designed to penetrate Soviet borders—and interceptor aircraft designed to intercept and eliminate bombers were early examples of such innovations. Bomb deployment was also made more user-friendly, requiring fewer specialists and bringing the utility of

nuclear weapons closer to that of conventional explosives, which required limited instruction on the part of the soldiers deploying them. Intercontinental Ballistic Missiles (ICBMs) allowed rival nations to deploy nuclear payloads without needing a pilot at all, and the United States proceeded to build missile installations throughout Europe, while the threat of Soviet missiles in Cuba sparked the CUBAN MISSILE CRISIS of 1962.

Some attention, of course, was paid to defense against nuclear attacks, not only the fallout shelters and cautionary films that became prevalent in the 1950s, but also antiballistic missiles to shoot down ICBMs before they struck their target, anti-aircraft artillery and fighter jets to intercept bombers, and increasingly sophisticated radar systems to detect incoming attacks. These preventative measures could not keep up with the offensive capabilities of a nuclear arsenal, though, and the development of nuclear submarines, which could launch a missile from the ocean—far from tactical targets—provided each side in the cold war with second-strike capability: the ability to ensure a retaliatory attack in the event of the other side’s first strike. Given the destructiveness of megaton bombs and the amount of fallout that would result from their wide-scale implementation, second-strike capability led to a state of what was called mutually assured destruction (MAD).

As a defense strategy, MAD calls for the development and stockpiling of weapons of mass destruction in order to force a situation in which it is infeasible for either side to attack, because of the certainty of devastating retaliation. What may have at first seemed counterintuitive was nevertheless a critical component of cold war thinking that led to the détente, or eased tensions, of the 1970s. Meanwhile, as the United States and the Soviet Union remained dominant in the nuclear field, other nations developed programs of their own: Among the NATO allies, the United Kingdom and France both became nuclear powers by the end of 1960, while the PEOPLE’S REPUBLIC OF CHINA followed suit in 1964, at a time when Sino-Soviet relations were at enough of an ebb that China was a potential threat to either the United States or the Soviet Union.

During détente, the 1968 Nuclear Non-Proliferation Treaty (NNPT) was signed by by a number of states, though it was not until 1992 that France and the People’s Republic of China signed. The NNPT limited the spread of nuclear capability by permitting only those five states then possessing them—which also happened to be the five permanent members of the United Nations Security Council—to own nuclear weapons. It further permitted the use of nuclear power by other states, but

only under conditions that would limit their ability to manufacture nuclear weapons. Any states not explicitly granted rights under this treaty would have to apply to the International Atomic Energy Agency, a regulatory branch of the UNITED NATIONS, to pursue any nuclear technology activity.

The easing of tensions also led to armament control treaties in the late 1960s and early 1970s. SALT I (Strategic Arms Limitation Talks), held in Helsinki, Finland, between the Soviet Union and the United States, restricted the production of strategic ballistic missile launchers and submarine-launched ballistic missiles, and further treaties limited nuclear testing and forbade nuclear weapons in space. Détente ended when the Soviets invaded AFGHANISTAN in 1979. When RONALD REAGAN was elected president in 1980 he returned anti-Soviet rhetoric to pre-détente levels, calling for massive escalations in order to force the Soviet Union into economic collapse as a result of defense spending.

One of his initiatives threatened the balance of MAD: The Strategic Defense Initiative, nicknamed Star Wars, would employ a space-based system to deflect missiles en route to the United States, thus limiting the Soviet second-strike capability. Though the system was never fully developed or employed, aspects of it were adopted by every subsequent administration, even after the cold war ended.

The Strategic Arms Reduction Treaties (START) further limited nuclear arms, and periodic treaties continue to reduce the number of nuclear warheads in operation. The arms race effectively ended when the Soviet Union collapsed in 1991. Though no one possesses the resources of the cold war superpowers, the rest of the world has begun to catch up to the nuclear states: In the post-cold war years India, Pakistan, and North Korea have all tested nuclear devices (North Korea withdrew from the NNPT in 2003; India and Pakistan never signed), and more are sure to follow. The International Atomic Energy Agency estimates that, as of 2006, 40 nonnuclear countries possessed the capability to manufacture nuclear weapons if they desired to.

BILL KTE'PI

art and architecture

World War II had changed the nature of the world, and after postwar reconstruction had finished, there were important new trends in art and architecture that were to influence the latter half of the 20th century and the first years of the 21st century.

From about 1950, a large number of artistic movements started flourishing in the United States and elsewhere. An early one was the abstract expressionism movement, which started in New York—the phrase first being coined by the art critic Robert Coates in 1946. Drawing from surrealism and also from Mexican social realists such as Diego Rivera and David Siqueiros, it was stylistically similar to some of the work of the Soviet artist Wassily Kandinsky. Abstract expressionism tended to rely on a spontaneous or subconscious creation, with early painters in this style being Jackson Pollock and Max Ernst. Mark Tobey from the northwest United States also produced paintings that developed further from some of Pollock's style. Developing from abstract expressionism, and especially from the work of Jackson Pollock, the abstract style of color field painting involved covering canvases with large areas of solid color. The canvases, such as those by Mark Rothko, tended to be large, with other artists such as Clyfford Still, Hans Hofmann, Morris Louis, and Larry Zox using the same style.

The beginning of pop art emerged in Great Britain in the mid-1950s, and quickly spread to the United States. The term *pop art* was coined by the art critic Lawrence Alloway. As well as paintings, the field included advertising material and comics. Many pop art works were made from plastic, and subsequently become regarded as kitsch, being aimed at a large audience. Notable pop artists include David Hockney, Roy Lichtenstein, George Segal, and Andy Warhol. Developments in pop art often spring from the availability of new materials or old materials in new forms.

The name op art, derived from pop art but totally different in style, was a contraction of the term *optical art*, which highlights styles in geometric abstraction, often developing interesting optical perspectives. This grew, in some ways, from the Bauhaus movement of the 1930s, with the term being first used in October

1964. The Hungarian-born artist Victor Vasarely was perhaps one of the better-known artists in this field. Op art used straight and curved edges, and the next trend was Hard-Edge painting, which was largely a reaction to abstract expressionism. With its creative center being California through the 1960s, artists include Lorser Feitelson, his wife Helen Lundberg, and was heavily promoted by Peter Selz, a professor at Claremont College in California.

Minimal art was introduced in the late 1960s by Donald Judd, Carl Andre, Richard Serra, and others at the same time that Robert Bresson was directing films and Samuel Beckett was writing plays, also in a minimalist way. The trend toward minimalism continued through the early 1970s, being mirrored in architecture and design. The influence of minimalism led to a new trend of postminimalism, with grids and seriality adding a human element to the work. Tom Friedman, Eva Hesse, Anish Kapoor, Joel Shapiro, and Richard Tuttle were some whose work conveyed the essence of postminimalism.

From the late 1960s a new trend of lyrical abstraction started to emerge from the abstract art movement, primarily in New York and Los Angeles, developing in Toronto, Canada, and London. It drew from *tachisme*, which had been popular as a French art style from 1945 until 1960, and also from abstract impressionism, the term *lyrical abstraction* being first coined by Robert Rauschenberg in 1969.

A greater environmental awareness from the late 1950s and early 1960s helped influence land art, which started in the late 1960s, whereby artworks were made from rocks, sticks, plants and soil from nature. Many of these works were made outdoors and have not survived, although they were recorded in photographs. Some artists were influenced by the photographs brought back from the Moon by Apollo missions, and there have been extensive outdoor projects by Latin American artists. Some ideas from this field have been expressed in conceptual art, which involved objects taking precedence over many aesthetic concerns. By the late 1960s the concept of photorealism

Campbell's Soup Cans by Andy Warhol, 1962, displayed in the Museum of Modern Art in New York. Warhol was an American artist who became a central figure in the movement known as Pop Art.

painting saw a return to the styles of the 17th and 18th centuries, in trying to create the look of a photograph in a painting.

From the 1970s the trends were toward new fields called either contemporary art or postmodern art. This involved adapting the modernist ideas, and often incorporated some elements of popular culture, and even performance art, into newer designs or incorporating new material.

ARCHITECTURE

The period immediately after World War II saw the construction of many war memorials and the painting of artwork commemorating sacrifice in war. Gradually this gave way to civil engineering projects for Olympic and other sporting occasions and also many ambitious airport complexes. Architects were also involved in designing large bridges, such as those over the Bosphorus (Turkey), the Tagus (Portugal), the Humber Bridge (UK), and from the Malaysian mainland to Penang Island. There has also been the construction of large numbers of buildings for international organizations, such as the UNITED NATIONS buildings in New York, the European Parliament in Strasbourg, the headquarters of UNESCO in Paris, Interpol in Paris, and the headquarters of the World Health Organization in Geneva. The period also saw many countries and cities competing to have the tallest habitable building, the tallest telecommunications tower, the tallest mast, and even the highest public observatory. But New York remained the city with the most skyscrapers, followed by Chicago, and then Hong Kong, Shanghai, Tokyo, Houston, Singapore, Los Angeles, Dallas, and then Sydney, Australia.

The starting of UNESCO World Heritage listing helped preserve architecture in some parts of the world but did not prevent major damage to some important structures, such as the Mostar Bridge (Bosnia) in 1992 and the Bamiyan Buddhas (Afghanistan) in 2001. Mention should also be made of UNESCO's involvement in the moving of ancient Egyptian structures at Abu Simbel to construct the Aswān Dam, and the restoration of the Borobudur Buddhist monument in Java, Indonesia.

WESTERN EUROPE

After World War II, there was a major change in British architecture. Many new buildings were required due to war damage. The government focused initially on schools, as only 50 of the 1,000 schools in London survived the war undamaged. Additionally, the private sector involved itself in what became known as dormitory suburbs such as Basildon, Crawley, Harlow and Stevenage. The building

After World War II, many buildings were built for international organizations, such as the United Nations buildings in New York.

of Slough, near Windsor, to the west of London, became celebrated when the British poet laureate Sir John Betjeman denounced the city, suggesting that the easiest way of improving it was to bomb it, writing poetry to that effect. Other developments at the time included Telford, a large conurbation to the west of Birmingham, bringing together a number of villages; and the council flat developments in many inner cities, including some in central Glasgow, Scotland; and the Poplar housing estate in London built after the Festival of Britain in 1951.

Gradually the trend became the construction of large numbers of modernist buildings. The four new cathedrals built in Britain incorporated much of the modern design, as seen in Liverpool Cathedral (started in 1903, completed in 1978, the architect Giles Gilbert Scott having died in 1960), Guildford Cathedral (started in 1936, consecrated in 1961), Coventry Cathedral (consecrated in 1962), and the Roman Catholic cathedral at Liverpool (consecrated in 1967). Sussex and York Universities were also functional in their design, with the stepped nature of parts of the University of East Anglia giving rise to it being known as the typewriter building. A reaction against this type of

design arose in 1984 when Prince Charles was critical of a “ultra-modern wing” to be added to the National Gallery on London’s Trafalgar Square—he called it a “monstrous carbuncle on the face of a much-loved friend”—resulting in an outcry from some architects who felt that Prince Charles should not have spoken out against the project and support from many people who disliked the new design. Other important landmark architectural projects in London include the Telecom Building, Canary Wharf, the London Eye, and the new Wembley Stadium.

British sculpture during this period revolved around Henry Moore (1898–1986), and a number of painters emerged, with the most famous probably being the Anglo-Irish figurative painter Francis Bacon (1909–92) and L. S. Lowry (1887–1976), who painted the industrial north of England. Peter Blake, R. B. Kitaj, and David Hockney became innovators in pop art.

In Europe, the designs ranged from the traditional to the modernist. In France, the most famous modern designs included the Pompidou Center, also known as the Centre Beaubourg. It was designed by architects Renzo Piano and Richard Rogers, and engineers Peter Rice and Edmund Happold. Named after the former president of France, it was opened in 1977 and is well known for its exterior. Also controversial was the glass pyramid that marks the entrance to the Louvre Museum, 21 meters tall, designed by the China-born American architect I. M. Pei. Other important architectural sites include the new National Library of France, opened in 1996; refurbishment of the Gare du Nord into a gallery; and the building of the satellite town and business district of La Défense to the west of Paris. In Brussels, the capital of Belgium, the Atomium, built for the 1958 Brussels World Fair, is unique.

In Spain, art and architecture were intensely conservative until the death of the dictator Francisco Franco in 1975. The Valle de los Caídos, outside Madrid, has a massive cross dominating a hill, with a basilica tunneled into the rocks at its base. A memorial to the dead of the Spanish civil war, it also became the resting place of Franco when he died. The entrance to the Queen Sophia Art Center in Madrid, where Picasso’s *Guernica* (1937) is displayed—the painting returning to Spain in 1981—is an example of post-Francoist modernism. The gallery also exhibits some of the more famous pictures by Salvador Dalí (1904–89). Work also began again on completing Gaudi’s La Sagrada Família in Barcelona, before the Olympic Games in the city in 1992, and the Guggenheim Museum in Bilbao, designed by U.S. architect Frank Gehry, opened in September 1997 with both the building and its contents receiving much acclaim. In

southern Spain, the tourist developments at Marbella, the Costa del Sol, and other places have also been an important part of Spain’s recent architectural development. Similar apartment complexes have also been built in Greece, Malta, and other tourist sites around the Mediterranean.

The postwar Italian governments have been active in urban development in many parts of the country, but have aimed at retaining the Renaissance core of cities such as Florence. The Palazzetto dello Sport and Stadio Flaminio, constructed for the 1960 Rome Olympics, are still used. The Pirelli Tower in Milan, built in 1958, and the tomb of Pope John XXIII (d. 1963) and Rome Railway Station are all important architectural statements. Pier Luigi Nervi, introducing the use of concrete reinforced with mesh, helped influence architectural design around the world. After World War II, the rebuilding of Monte Cassino was notable; and in recent years the cleaning of the Sistine Chapel, and the work on preserving early modern artwork such as Leonardo da Vinci’s *The Last Supper* have been important. Mention should also be made of the art of the surrealist Giorgio de Chirico (1888–1978), Sandro Chia (b. 1946), and Francesco Clemente (b. 1952).

In Germany, the rebuilding of the country saw a large number of new buildings, many functional civic buildings, or repairs to others, such as the reconstruction of the Berlin Cathedral, opened again in 1993, and the rebuilding of the Reichstag with a glass dome completed in 1999, overseen by the architect British Norman Foster. After the end of Nazi rule, artwork became much freer, with the graffiti and painting on the Berlin Wall being part of the new expressive artistic climate. The construction of the Jewish Museum in Berlin, designed by Daniel Libeskind, incorporated many new architectural features aimed at not responding to functional requirements in the same manner as many other museums. In Austria, the maverick architect Friedensreich Hundertwasser worked in Vienna, where he applied his modernist principles in his design of the Hundertwasserhaus, an apartment block, trying to challenge existing architectural designs by not having straight lines. He has also been involved in painting and in designing some Austrian postage stamps.

EASTERN EUROPE

In eastern Europe and the Soviet Union, devastated by World War II, the rebuilding of many of the cities required large housing estates to be hurriedly built. With the city planners in Moscow anxious to restrict the growth of the city, some of these apartment blocks were built taller than the original architects had planned. For

civic buildings, there were many in what became known as Stalinist Gothic, the most famous outside the Soviet Union being the Palace of Culture and Science in Warsaw. The most grandiose was undoubtedly the Palace of the People in Bucharest, Romania, which is one of the largest buildings in the world. Art during the Communist era hailed socialist endeavor or, within the exiled communities or underground, championed the resistance to the Communist government. In an effort to break away from this, there was a recent effort expended in Tiranë, Albania, to paint the graying apartment buildings in bright colors. The breakup of former Yugoslavia saw the shelling of Dubrovnik, which led to an international outcry—the international community contributing to the rebuilding of the Mostar Bridge.

In the Soviet Union, the Communist government embarked on massive building projects, with war memorials, television towers, and civic buildings, as well as apartment blocks being built throughout the country, often decorated with revolutionary art. The *Motherland* statue in Volgograd (formerly Stalingrad) is perhaps the most famous work of revolutionary art. Since the end of the Soviet Union and the collapse of communism, there has been a trend to adopt pre-1917 artistic styles. Great care and expense was lavished on restoring the czarist palaces and monuments, which, in Moscow, was reflected in the rebuilding of the Cathedral Church of Christ the Savior in the same style and on the same site as the building destroyed by Stalin.

ASIA

In China, the victory of the Communists in the Chinese civil war saw major changes throughout the country, the first being the destruction of the city walls around Beijing and numerous other cities. Large numbers of hospitals, schools, and other modest buildings were constructed throughout the country, with a number of important Communist landmarks—the most famous being around TIANANMEN SQUARE—with the building of the new Chinese Parliament, the Great Hall of the People, on the west side of the square, and the Museum of the People on the east side, with Mao's Mausoleum later built at the southern end. Other major projects included the building of the Beijing subway and the construction of the nuclear fallout tunnel system under Beijing. Communist revolutionary art was famous for its telling of the heroic efforts of Mao Zedong (Mao Tse-tung) and other Communist leaders, as well as important revolutionary actions.

From the late 1980s, Beijing, as with other cities in China, saw a massive building boom, with office buildings, apartment blocks, and hotels being constructed at a

frenetic rate. For Shanghai, Pudong, which had been the location of many market gardens, was transformed with skyscrapers dwarfing those on the Bund, which they face across the river. The Oriental Pearl Tower, located there, is now the tallest building in Asia and the third-tallest in the world. Many of the designs in the skyscrapers throughout China can trace their roots to the massive urban development of Hong Kong from the 1960s. The Bank of China Tower in Hong Kong, designed by I. M. Pei, built in 1989, is important. Mention should also be made of the new Hong Kong Airport, and airports throughout China, as well as tourist sites such as the Tianjin History Museum. Many new buildings are being constructed for the Beijing Olympics. In Taiwan, the Chiang Kai-shek Memorial in Taipei and the National Palace Museum are two of the outstanding architectural sites on the island.

During the KOREAN WAR (1950–53), much of the Korean Peninsula was devastated, and after the war both Pyongyang and Seoul needed extensive reconstruction. In Pyongyang, massive edifices were built such as the Kumsusan Memorial Palace, formerly the residence of the North Korean leader KIM IL SUNG, now his resting place. The Mansudae Grand Monument, the Monument to the Juche Idea, the Great People's Study House (the library), and the unfinished Ryugyong Hotel (now the tallest unoccupied building in the world) are all important architectural projects. Artists in North Korea not only produce communist propaganda art but also have been involved in working on Western animated films such as *The Lion King* (1994).

In Japan, the rebuilding after the war was quickly dwarfed by the property boom of the 1970s and the 1980s, which saw massive buildings constructed in all of Japan's major cities. Architects in Japan have long been involved in designing buildings to withstand earthquakes, and this was shown to have been important during the Kobe earthquake of 1995.

In Southeast Asia, Vietnam has seen the construction of the HO CHI MINH Mausoleum in Hanoi, and the functional modernist Presidential Palace in Saigon (the scene of the final surrender of the South Vietnamese government). The Cu Chi Tunnels outside Saigon are also great architectural feats from the Vietnam War, which saw the destruction of much of the country, including large sections of the Imperial Palace at Hue. In Thailand, the tourist boom and the wealth that flowed into the country from the 1960s saw the construction of massive hotel complexes and condominiums in Bangkok and some other cities, leading to major traffic problems and pollution. Artwork in Thailand has

tended to remain rather traditional, and much appeals to the tourist market, with paintings by elephants now becoming popular.

In Malaysia, the incredible wealth in the country from the 1980s led to the construction of the Petronas Towers (1996), the Masjid Wilayah Persekutuan (Federal Territory Mosque) in Kuala Lumpur (1998–2000), and the massive national expressway through western Malaysia. The Kuala Lumpur airport was also, for a short period, the largest airport in the world. In Singapore, the 1950s saw the start of the construction of many apartment blocks throughout the island by the Singapore Housing and Development Board. During the 1970s “Garden Cities” were created, and during the 1980s many skyscrapers were built, the two most well-known ones being possibly the UOB Building and the OCBC Building, both headquarters for banks. In Brunei, the Istana Nurul Iman in Bandar Seri Begawan, the official residence of the sultan, is larger than the Vatican—and is the largest residential palace in the world—designed by Filipino architect Leandro V. Locsin, and boasts 1,788 rooms. The Omar Ali Saifuddin Mosque, also in Brunei, was built in 1958 by a Malay architectural firm from Kuala Lumpur and dominates the central part of Bandar Seri Begawan.

In Indonesia, the Monas Tower in Jakarta—built from 1961 until 1975 in Italian marble—and many civic buildings throughout the country demonstrate the increasing prosperity of the country, with Jakarta International Airport being designed in the traditional Javanese style (with heavy use of carved wooden features). The tourist boom has also seen a large number of hotels and guest houses of varying designs in Bali and in other places. The Imax Cinemas at Keong Mas in Jakarta once had the largest Imax screen in the world, taking its name the Golden Snail Theatre from its shape. The Komodo Natural History Museum—in the shape of its residents, Komodo dragons—is also worth mentioning. In Manila, the capital of the Philippines, the “Metro Manila” phase of the 1970s saw First Lady Imelda Marcos being responsible for the construction of massive buildings, with critics claiming that she was suffering from an “edifice complex.” There has even been a recent upsurge in building in Myanmar (formerly Burma), where Naypyidaw became the country’s capital on November 6, 2005.

THE REST OF THE WORLD

Artistic endeavor in India has followed the traditional Hindu myths, with Rama, Sita, and other characters from the *Ramayana* remaining popular, but also artwork which portrays India as a regional power. The massive wealth of India has seen the emergence of large areas of apartments

and lavish homes, with the billionaire Mukesh Ambani’s 173-meter tower in Mumbai (formerly Bombay) being perhaps the most extravagant. In Pakistan the major architectural projects in the country centered on the moving of the country’s capital from Karachi to Rawalpindi and then to Islamabad, the project designed by the Greek architect and urban planner Constantinos A. Doxiadis.

In Australia, the most famous building built during this period was the Sydney Opera House, designed by Jørn Utzon and opened in 1973. The Eureka Tower in Melbourne, opened in 2006, is now the tallest residential building in the world. On the art scene, aboriginal art has become extremely popular both within Australia and also overseas.

The incredible wealth in the Middle East from oil led to Kuwait, Saudi Arabia, the United Arab Emirates, and Bahrain affording some of the best architects in the world and building iconic structures such as the Kuwait Towers and the Burj Al Aran Hotel in Dubai. In Baghdad, Iraq, the massive swords across the main road celebrating Saddam Hussein’s achievements outlived him, as did the shah’s monumental arch in Tehran, Iran.

Throughout Africa, many European and indigenous architects have worked on the numerous civic buildings that were constructed by the newly emerging nations. The Cairo Tower in Egypt, built by GAMAL ABDEL NASSER in 1956–61, remains an important site in central Cairo. The construction of numerous civic buildings and presidential palaces throughout the continent is also worth mentioning, as is the Sun City complex in South Africa.

In the United States, countless skyscrapers have been built, the most famous being the twin towers of the World Trade Center in New York, designed by Minoru Yamasaki, completed in 1972, and destroyed on September 11, 2001. Other important landmarks include Chicago’s Sears Tower—at one point the world’s tallest building—completed in 1974, and Seattle’s Space Needle, built in 1962 for the Seattle World’s Fair. Mention should also be made of the Glass Cathedral of Oral Roberts and the strange deconstructionist cityscape of the Massachusetts Institute of Technology’s Stata Center. For art, in the United States many artists have turned to episodes in U.S. history, with countless scenes of the Native Americans, the American Revolutionary War (especially around the anniversary in 1976), and the American Civil War. Commemorations of more recent conflicts, such as the U.S.M.C. War Memorial, the Vietnam Veterans Memorial, and the Korean War Veterans Memorial in Washington, D.C., have risen as well.

In Latin America, the massive enlargement of the cities of Mexico, Brazil, Argentina, and Chile has seen architects designing apartments and also civic amenities.

The moving of the Brazilian capital to Brasília in 1960, with plans designed by the architect Oscar Niemeyer, the landscape architect Burle Max, and the urban planner Lucio Costahas, is one example. From the 1980s there has also been the construction of large parliament buildings, such as the Chilean parliament in Valparaíso and the Paraguayan parliament in Asunción. In terms of art, many painters return to traditional themes, but there have also been many new painting techniques, exemplified by the later works of Diego Rivera (1886–1957) and the surrealist style of David Siqueiros (1896–1974), both from Mexico, which have influenced many artists throughout Latin America.

JUSTIN CORFIELD

Asian Development Bank

The Asian Development Bank (ADB), a nongovernmental organization headquartered in Manila, the Philippines, was founded to provide aid, funding, and various forms of financial and technical support to countries in Asia and the Pacific. The ADB started operations in 1966 and initially represented a group of 31 states. As of 2006 it had grown to have 66 members. This included 47 states from inside the zone and 19 countries elsewhere.

The bank's stated goal is to improve the lives of the peoples of the region by helping them develop economically and socially. This is a major task given the depths of poverty encountered in some regions. Many area peoples live on less than \$2.00 per day. The bank has a specific commitment to helping less-developed and poorer Asian countries to advance economically. This help can take several forms and affect regional, subregional, and local projects and programs.

The goals of the ADB are varied and include developments to foster economic growth and projects to reduce

poverty. The organization also attempts to assist in the improvement of conditions that affect women and children as well as to implement strategies that encourage human resource development and to promote environmentally friendly strategies for growth.

The total lending volume is around \$6 billion in the early 2000s, with technical assistance programs totaling \$180 million a year. These financial programs can involve both public and private investments. In terms of economic development, the bank evaluates requests for help and then determines where its assistance is most appropriate. It favors proposals that offer a combination of social and economic development. It hopes that at least 50 percent of the projects will produce social or environmental benefits. Its other priorities are geared to economic growth and development. The bank also attempts to match its lending with governmental contributions.

The ADB's work encompasses many different activities and embraces many diverse areas. For example, the bank's efforts affect agriculture and resources, finance, transport and communications, economic and social infrastructure, industrial investment, and mineral extraction projects. The ADB receives numerous proposals from its members for particular projects, which it assesses to determine their relative merits. It analyses the viability, value for money, economic and social impact, technical realities, provisions for accounting oversight, and contract and bidding implementation as well as openness and overall development priorities. After a thorough review and analysis—which can include review by outside agencies and consultants—worthy projects receive the bank's approval, and a schedule for completion is determined that also details performance guidelines and expectations.

The ADB is directed by a board of governors with one representative drawn from each member country. This board then elects a 12-member board of directors, with eight of the 12 coming from Asian-Pacific countries. The governors also elect a bank president, who acts as chairperson for the board of directors and whose term is five years, with the possibility of reelection. Traditionally the president has been a Japanese. This choice reflects Japan's heavy investment in the bank of approximately 13 percent of its shares, a figure matched only by U.S. investment. Countries that withdraw from the organization have their investment reimbursed.

In 2006 there were projects and feasibility studies in areas such as road development in Afghanistan, infra-

structure and transport strategies for India, telecommunications investment in Cambodia, road improvements in the Solomon Islands, water management programs in China, and regional efforts in energy-related areas.

In recent years the bank has developed anticorruption initiatives. As in related institutions such as the WORLD BANK, corruption can work against the developmental interests of poor countries. In theory, all projects must undergo regular and intensive ADB audits, yet issues still remain as to the misuse or misappropriation of funds and the wasteful use of project money. There are also concerns that there have been projects approved that do not help the poor as they should.

THEODORE W. EVERSOLE

Asian Pacific Economic Cooperation (APEC)

APEC is an organization that aims to promote free trade and economic cooperation throughout the Asia-Pacific region. It was created in 1989 because of the growing interdependence of Asia-Pacific economies and the establishment of regional economic blocs such as the EUROPEAN UNION and the NORTH AMERICAN FREE TRADE AGREEMENT. APEC intends to improve living standards and education levels through sustainable economic growth and to promote a sense of community and an appreciation of common values among Asia-Pacific countries. APEC's membership includes 21 states, called "member economies." Of these, 12 are founding members—Australia, Brunei, Canada, Indonesia, Japan, South Korea, Malaysia, New Zealand, the Philippines, Singapore, Thailand, and the United States—while Chile, China, Hong Kong, Mexico, Papua New Guinea, Peru, Russia, Taiwan, and Vietnam joined at a later phase. APEC has no treaty obligations of its participants. Decisions made within APEC are reached by consensus, and commitments are undertaken on a voluntary basis. APEC's membership accounts for approx-

imately 40 percent of the world's population, approximately 56 percent of world GDP, and about 48 percent of world trade.

The first APEC Leaders' Meeting occurred in 1993 and was organized by BILL CLINTON in Blake Island, Washington. At its 1994 summit meeting in Bogor, Indonesia, APEC set an ambitious schedule to achieve free trade and raise the level of investments throughout the Asia-Pacific region by 2010 for members with developed economies and by 2020 for members with developing ones. The Osaka Action Agenda was adopted a year later and was designed to implement APEC's goals of liberalizing trade and investment, facilitating business activities, and promoting economic and technical cooperation. The procedure that all APEC's decisions had to be taken by consensus and preferably passed unanimously limited the effectiveness of APEC. In addition, although decisions can be taken in the absence of unanimity, they are not legally binding on member governments. In 1997 at the annual summit in Vancouver, Canada, police forces violently clashed with demonstrators objecting to the presence of Indonesian president SUHARTO.

APEC is organized into numerous committees, special task commissions, working groups, and a business advisory council. The committees meet twice per year. The working groups are led by experts and consider specific issues, including energy, tourism, fishing, transportation, and telecommunications. Every year one of the member economies hosts an economic leaders' meeting, selected ministerial meetings, senior officials meetings, the APEC Business Advisory Council and the APEC Study Centres Consortium, and also fills the executive director position at the APEC secretariat. The deputy executive director changes every year, as the position is given to a senior diplomat of the country who will be the APEC chair the following year. The APEC secretariat, established in 1993 and based in Singapore, provides coordination as well as technical and advisory support for all the organization's initiatives.

LUCA PRONO

Assad, Hafez al-

(1930–2000) *Syrian leader*

Hafez al-Assad was born in Qardaha in northern Syria to peasant parents. The Assad family was from the Alawite Muslim minority (a breakaway sect from Twelver Shi'ism), traditionally the poorest and least powerful group in Syria. Assad became a member of the Ba'ath socialist party, as a teenager in 1946. Like many young Alawites, Assad received a free education in the Syrian military academy.

While at the academy, Hafez al-Assad became life-long friends with Mustafa Tlass, who would become the Syrian defense minister in the Assad regime. Assad was trained in the Soviet Union, and although he supported pan-Arabism, he opposed the 1958 union with Egypt to create the UNITED ARAB REPUBLIC (UAR) because of GAMAL ABDEL NASSER's dominance of it.

Syria dropped out of the UAR in 1961 with the support of the BA'ATH PARTY. As the fortunes of the Ba'ath Party rose, Assad was made head of the Syrian air force in 1964. The Ba'ath Party came to power in a bloodless coup in 1966. In a series of complex inter-party rivalries Assad supported the military wing, versus Salah Jadid, who advocated a more radical socialist program. In the so-called corrective revolution of 1970, Assad defeated Jadid and seized power. In the 1971 referendum Assad was overwhelmingly elected president, a position he held until his death. Assad consolidated power by appointing close friends and fellow Alawites, who then owed their advancement directly to him to key positions within the military, intelligence services, and government offices.

The Assad regime, a one-party state with a cult of personality surrounding Assad, proved to be remarkably stable. The infrastructure, including transportation and communication systems, was improved, and the government invested heavily in education, health care, and a huge dam on the Euphrates backed by Lake Assad to increase agricultural productivity and provide electricity for the country. The regime also spent heavily on the military, the backbone of its support. The status of women was also improved. Syria experienced economic growth in the 1970s, but stagnation set in during the 1980s. Assad was closely allied with the Soviet Union and, after the collapse of the Soviet bloc, suffered a loss of military supplies as well as international support.

Although Assad continued publicly to advocate pan-Arabism, he increasingly adopted a Syrian nationalist stance in regional politics. During the LEBANESE CIVIL WAR Syria was asked by various Lebanese factions

and Arab nations to intervene militarily in 1976. However, after the civil war ended, Syrians troops remained in Lebanon, and Damascus continued to exercise considerable influence over Lebanese politics. In the face of mounting international pressure Syrian troops ultimately withdrew from Lebanon in 2005.

The Assad regime was secular and proclaimed that Syria was a "democratic, popular, socialist state." The Muslim Brotherhood, dominated by Sunni Muslims, opposed Assad's secular state and in the early 1980s mounted a bombing campaign of bus stations, military installations, and other targets with the aim of bringing down the regime. Following a massive uprising in Hama, a brotherhood stronghold north of Damascus, Assad ordered Syrian troops to bombard the city and crush the rebellion in 1982. The brotherhood was defeated, but thousands were killed and much of the old city was destroyed.

Assad strongly supported the Palestinian cause for self-determination, although he frequently clashed with the PALESTINE LIBERATION ORGANIZATION under YASIR ARAFAT, whom Assad disliked. In negotiations with the United States and Israel, Assad was remarkably consistent. He demanded the full return of the Golan Heights, Syrian territory lost to Israel in the 1967 ARAB-ISRAELI WAR and not fully regained in the 1973 war, in exchange for a peace settlement. Owing in part to his long rivalry with SADDAM HUSSEIN in Iraq and support for the revolutionary regime in Iran, Assad supported the coalition invasion of Iraq in the FIRST GULF WAR in 1991 but opposed the U.S. invasion in 2003.

Assad suffered a near-fatal heart attack in 1983, and, while he was still ill, his brother Rifaat attempted a coup. After Assad rallied loyal troops, the coup failed, and Rifaat was sent into exile and by 1988 removed from all official positions.

Assad's son Basil was initially groomed for succession, but after he died in an automobile accident in 1994, another son, Bashar, an ophthalmologist by training, was picked to follow his father as president. Hafez al-Assad was a pragmatic, authoritarian, and consistent political leader. After Hafez al-Assad's death in 2000 Bashar was elected president. He followed his father's general policies but loosened political controls and attempted to liberalize the system. He encouraged technological developments, particularly the Internet and computer technology. Bashar had to balance the desires of old Ba'ath hard-liners, however, who were loath to give up the privileges and power enjoyed under his father with political liberalization.

Owing in part to increased oil revenues, the Syrian economy grew in the 1990s. Like his father, Bashar demanded the return of the Golan Heights, and Israeli-Syrian negotiations failed to resolve the impasse. By 2006 Bashar faced mounting opposition from Israel and the United States for his support of HIZBOLLAH, the Islamist Lebanese movement that continued to confront Israel along its northern border. The Assad regime seemed threatened by possible military attack from both Israel and the United States. In September 2007 Israel conducted an airraid on a possible Syrian nuclear cache.

See also ISLAMIST MOVEMENTS.

JANICE J. TERRY

Association of Southeast Asian Nations (ASEAN)

The Association of Southeast Asian Nations (ASEAN)—with Indonesia, Malaysia, the Philippines, Singapore, and Thailand as original members—was established on August 8, 1967. As outlined in the Bangkok declaration of ASEAN, it was formed to strive for the peace and prosperity of the region. An important regional organization, ASEAN, whose member countries have a population of more than 500 million, strove for regional cooperation to benefit its member countries. It encompassed the rest of the countries of Southeast Asia over time with the admission of Brunei (1984), Vietnam (1995), Laos and Myanmar (1997), and Cambodia (1999). The Meeting of the ASEAN Heads of State and Government is the top decision-making body of the ASEAN. Every year, ASEAN Summit and ASEAN Ministerial meetings are held. The term of the secretary-general is five years, and he advises on and implements various ASEAN programs. The cooperation of member countries is through specialized bodies pertaining to education, energy, police, meteorology, and other areas.

Against the changing backdrop of the geopolitical situation, the ASEAN countries saw the necessity of regional cooperation on matters of common interest. The ASEAN was established during the VIETNAM WAR, and the member countries were bound together by fear of North Vietnam and China. The victory of communists in Indochina in the early 1970s and diminishing

American involvement made the ASEAN states fearful of communism. The Kuala Lumpur declaration of November 22, 1971, called for the creation of a Zone of Peace, Freedom, and Neutrality (ZOPFAN) in Southeast Asia aimed at neutralization of the region. The triumph of communism in the three Indochinese states of Laos, Cambodia, and Vietnam in 1975 spurred the ASEAN into action. Fearful of a militant and expanding communism, the ASEAN countries signed the Treaty of Amity and Cooperation at the First ASEAN Summit held at Bali, Indonesia, on February 24, 1976.

It called for renunciation of the use of force, cooperation among the nations in Southeast Asia, and non-interference in one another's internal affairs. After the disintegration of the Soviet Union and the end of the COLD WAR, ASEAN moved in a new direction to meet with the challenges of globalization. The three Indochinese states became members.

From the early 1990s ASEAN looked for increasing economic cooperation among member countries. At the Fourth ASEAN Summit held in Singapore in January 1992 an agreement was signed for the creation of an ASEAN Free Trade Area (AFTA) within 15 years. The 1995 Bangkok Summit passed a resolution on the Agenda for Greater Economic Integration. The time frame of AFTA was reduced to 10 years. The ASEAN Vision 2020, adopted in 1997, envisaged an ASEAN Economic Region. There would be closer economic integration along with reduction of poverty and removal of economic disparities. The Framework Agreement for the Integration of Priority Sectors and its Protocols of 1999 called for the creation of a single market and production base.

In 1994 the ASEAN Regional Forum (ARF) was established with non-ASEAN countries like the United States, Russia, China, India, and others to discuss security issues and take steps in confidence building. There was an agenda for an enhanced role of the ARF in matters of security dialogue and cooperation. Meetings on this topic were held in the Cambodian capital and in Potsdam, Germany, in 2004 and 2005 respectively. The December 2005 ASEAN Summit, held in Kuala Lumpur, noted with satisfaction progress toward a Free Trade Area, with such countries as Australia, China, Japan, New Zealand, India, and the Republic of Korea. ASEAN cooperates with the East Asian nations of China, Japan, and the Republic of Korea, which were accorded the special status of ASEAN Plus Three. They expected to have a free-trade agreement by the year 2010. India enjoys a special standing with ASEAN. An ASEAN-India Partnership for Peace and Progress was signed at the Third ASEAN-India Summit in November 2004.

The ASEAN and its member countries have taken steps, through treaties, conventions, and communiqués, to prevent different types of organized crime with regional and international dimensions, such as TERRORISM, terrorist financing, money laundering, human trafficking, and drug smuggling. On February 24, 1976, the ASEAN countries declared that they would cooperate with one another and with international organizations to check illegal trafficking of drugs. The ASEAN Vision 2020 resolved to tackle the problems of drug trafficking, trafficking of women, and other transnational crimes. Through organizations like the ARF, Ministerial Meetings, the ASEAN Chiefs of Police (ASEANAPOL), the ASEAN Centre for Combating Transnational Crime (ACTC), the Senior Officials Meeting on Transnational Crime (SOMTC), and the ASEAN Ministerial Meeting on Transnational Crime (AMMTC), steps were taken to prevent various forms of crimes affecting Southeast Asia in particular and the world in general. The Vientiane Action Program of November 2004 contained measures to tackle the problem of terrorism.

Aswān Dam

The Aswān Dam was the cornerstone of GAMAL ABDEL NASSER's program for Egyptian economic development. Nasser described the project as "more magnificent and seventeen times greater than the Pyramids." The dam was to improve the living standard for Egyptians by increasing agricultural output and providing electricity for Egyptian villages and power for industrialization. The dam increased reclaimed agricultural land by one-third and provided 10,000 million kilowatt hours of electricity. Nasser Lake, one of the world's largest artificial lakes at about 300 miles long, was created as a result of the dam.

The dam was over 120 feet high and a mile wide and was one of the most extensive projects in the world at the time. However, the dam also had some unforeseen ecological impacts. Because it was no longer flushed by annual floodwater, Egyptian agricultural land increased

in salinity. The decrease of Nile floodwater into the Mediterranean resulted in a decrease of plankton, organic carbons, and fish. Advocates of smaller, more cost-effective projects argued that the massive amounts of money expended in construction of the dam might have been better spent in more APPROPRIATE TECHNOLOGY projects.

The dam provided Egyptians with a sense of pride, however, and from Nasser's viewpoint was a project around which Egyptians could be rallied for other political and economic programs. Originally money and technology to build the dam was to come from the WORLD BANK and Western nations, particularly the United States. But after Nasser adopted a policy of neutralism in the COLD WAR, recognized the PEOPLE'S REPUBLIC OF CHINA, and signed an arms deal with Czechoslovakia, John Foster Dulles, the U.S. secretary of state in the Eisenhower administration, concluded that Nasser was not a reliable ally.

Consequently Dulles withdrew U.S. aid for the project and publicly criticized Egypt's economic stability. Dulles hoped that the failure to secure economic aid for the dam would result in Nasser's overthrow. On the contrary Nasser retaliated by nationalizing the Suez Canal, announcing that the income from the canal would be used to build the dam. The nationalization infuriated Great Britain and France and helped to precipitate the 1956 ARAB-ISRAELI WAR.

Ultimately the Soviet Union provided the money and technicians to build the dam. The dam was completed in the early 1970s after Nasser's death. But Soviet influence over Egypt was short-lived for President Anwar el-Sadat, Nasser's successor, ousted the Soviets shortly after the dam's completion and turned instead toward the West and the United States.

JANICE J. TERRY

Aung San Suu Kyi

(1945–) *Nobel laureate and pro-democracy activist*

Aung San Suu Kyi was born to diplomat Daw Khin Kyi and Burmese (Myanmar) national hero Bogyoke Aung San on June 19, 1945. She was educated in Yangon, New Delhi, Oxford, and London. In 1969 she worked

in the United Nations Secretariat in New York and afterward in Bhutan. She was married to British academic Michael Aris in 1972, and the couple had two sons. In March 1988, Suu Kyi returned to Myanmar to take care of her ailing mother, and she became a pro-democracy political activist.

Suu Kyi was destined to take the leadership in a country under the military dominance since 1962 of General NE WIN, who was also the leader of the Burma Socialist Programme Party (BSPP). Her status as daughter of Aung San and her sound knowledge about her country's culture contributed to her immense popularity.

Ne Win resigned on July 23, 1988, but the military retained power and brutally crushed a popular uprising. The military junta then created the State Law and Order Restoration Council (SLORC) and changed its name to the State Peace and Development Council (SPDC) in 1997. Suu Kyi and her associates established the National League for Democracy (NLD), which called for non-violent protests and appealed to the United Nations to intervene on their behalf. Her status as a national leader made her position formidable. She adhered to her non-violent ideals in spite of the brutality, intimidation, and slander directed against her by the SLORC.

Suu Kyi criticized the violation of human rights by the military junta, calling for free and fair elections. Her meetings throughout the country attracted many people and caused the junta to put her under house arrest and to reject her candidature for the forthcoming elections. Despite this, her party won the May 1990 elections with 82 percent of the legislative seats. The international pressure forced the junta to release Suu Kyi in July 1995, but she was barred from leaving Yangon. In the same year her NLD delegates were expelled from the national convention, which was preparing a draft constitution. The convention itself was suspended in March 1996. In September 2000, Suu Kyi and 92 NLD members were put under house arrest again. There was another secret meeting between Suu Kyi and the junta in 2002 that resulted in the release of NLD prisoners due to increasing criticism of the regime from many lands over the world. She was released from house arrest on May 6, 2002, and was permitted to travel in Myanmar. But she was jailed again in 2003 and remained in jail in 2008. Her international standing remained high. The European Parliament awarded her the Sakharov prize for freedom of thought in July 1990. In October 1991 the Nobel Committee awarded her the Nobel Peace Prize, calling her "an outstanding example of the power of the powerless." She donated the \$1.3 million prize money to set up a trust for the

health and education for her people. She was also given the Nehru Peace Award in 1995 by the government of India. Suu Kyi remained the undisputed leader of Myanmar for her ceaseless efforts to restore democracy and against the abuse of human rights.

PATIT PABAN MISHRA

Awami League

The Awami League, a political party founded by lawyer and politician H. S. Suhrawardy in 1956, was at the forefront of the political developments that led to the creation of BANGLADESH (formerly East Pakistan) in 1971. When the British left India in 1947, they had left behind two sovereign nations: India and Pakistan. In the years that followed independence, questions of national identity arose between East and West Pakistan and were taken up by the Awami League on the behalf of East Pakistan. The Awami League advocated that Bengali, spoken in East Pakistan, be given the status of national language alongside Urdu, which was spoken in West Pakistan and had been declared the national language in 1947. The league also promoted greater representation of Bengalis in central government, since Bengalis in central civilian services in West Pakistan did not possess a strong base of power within the region, and higher posts in military and government in East Pakistan were often held by West Pakistanis.

During the military rule of General AYUB KHAN (1958–69), there had been economic growth in both wings of the country, but the disparity between the wealth of West Pakistan and the poverty of East Pakistan had also been on the rise. Furthermore a war with India in 1965 had left East Pakistan undefended, because the constitution of the country provided for troops to be stationed only in West Pakistan. Under the leadership of SHEIKH MUJIBUR RAHMAN, the Awami League formulated a six-point demand as a means of

addressing the disadvantages faced by Bengalis in economic and national affairs. The six-point demand was to become a cornerstone of the nationalist movement for Bangladesh.

Mujibur Rahman's six-point demand wanted a parliamentary form of government in the country with representation based on population. The federal government was to be in charge of defense and foreign affairs only, and there were to be either two different currencies or one currency, in the event of which federal banks were to prevent the flight of capital from one region to the other. Fiscal policy was to be the responsibility of the federating units, and each unit was to have separate foreign exchange accounts. Lastly, in the interests of national security, both East and West Pakistan were to have a militia and a paramilitary force. The popularity of the Awami League as the representative of the Bengalis was attested by the results of the 1970 national elections, in which the Awami League captured 160 out of 162 seats in East Pakistan, and 38 percent of the national vote. Meanwhile, the majority of seats in West Pakistan, and 20 percent of the national vote, went to the PAKISTAN PEOPLE'S PARTY led by ZULFIQAR ALI BHUTTO. When the time came for the two parties to form a government, tensions between the two wings of the country came to a head.

The Awami League wanted the six points to be part of the new constitution, but met with resistance from Bhutto. General Yahya Khan, the president at the time, encouraged meetings between the two parties. The People's Party under Bhutto began a campaign to discredit the Awami League by attacking the six-point demand and delaying the meeting of the National Assembly as a means of pressurizing the Awami League into a compromise. The delays in the meeting of the National Assembly, and Bhutto's campaign against Mujibur Rahman, were seen as evidence of bad faith by East Pakistanis, and led to widespread public demonstrations and riots. By accepting Bhutto's postponement of the meeting, Yahya had implicitly accepted Bhutto's political authority. When Yahya called an all-party conference without consulting the Awami League, the Awami League called a strike and refused to attend the meeting.

In the months between the election and the all-party conference, the Awami League had assumed authority and exercised powers of government in East Pakistan. When the league refused to attend the conference, and successive negotiations between Yahya and Mujibur Rahman failed, General Yahya accused the Awami League of treason and announced military intervention in East Pakistan, along with the arrest of all prominent

persons within the league. During the consequent civil war between East and West Pakistan, the Awami League formed the government-in-exile of the Republic of Bangladesh across the border in India. Repeated Indian insurgency into Pakistani soil and Indian support of the Bangladeshi freedom fighters led to a declaration of war on India by Pakistan. On December 17, 1971, a cease-fire was declared, and Pakistani troops surrendered. Mujibur Rahman was released by the new government of Pakistan under Bhutto and went on to become the first prime minister of Bangladesh.

The Awami League emphasized nationalism, democracy, socialism, and secularism. Reconstruction efforts in a war-torn country, however, proved to be challenging to the new government. In the face of criticism and opposition, Mujibur Rahman declared Bangladesh a one-party state and gave himself the powers of president. Rahman was assassinated by a military officer in 1975, and martial law was imposed by Ziaur Rahman, the chief of army staff. In the 1980s the Awami League was revitalized by Mujibur Rahman's daughter, SHEIKH HASINA WAJID, who won the elections of 1986 and stayed in power until her term ended in 1990. The Awami League today remains a powerful and vocal opposition party in Bangladesh into the 21st century, and consistently opposes the role of the military in government.

TAYMIYA R. ZAMAN

Ayub Khan, Muhammad

(1907–1974) *Pakistani leader*

Muhammad Ayub Khan, a military leader and the second president of Pakistan, was born on May 14, 1907, in the village of Rehana. His father, Mir Dad Khan, served in the British Indian Army. After finishing his military training at the Royal Military Academy Sandhurst in England, Ayub joined the army as an officer. He fought against the Japanese in Burma in World War II. After the partition of India in 1947, he became

the general commanding officer in East Pakistan. He was an able administrator and noncontroversial in politics, attributes that were instrumental in making him the first Pakistani commander in chief on January 17, 1951. In the COLD WAR period, Ayub supported Pakistan's joining U.S.-sponsored military alliances, and Pakistan received massive military and economic assistance from the United States. When President Iskander Mirza (1899–1969) imposed martial law on October 7, 1958, Ayub became the chief martial law administrator. Eleven days afterward, he deposed Iskander and proclaimed himself president.

The presidency of Ayub was eventful in the history of Pakistan. There were reforms in the agricultural and industrial sectors with land reforms and job creation. There was construction of new dams and power stations. The Indus Water Treaty with India in 1960 settled disputes over the waters of six rivers of the Punjab. The Family Laws Ordinance of 1961 tried to empower women in matters relating to polygamy, marriage, and divorce. Islamabad became the new capital in 1962; Ayub lifted martial law in the same year.

Ayub promulgated a new constitution in 1962, introducing democracy with indirect elections. But his policy alienated the Bengalis of eastern Pakistan, who felt marginalized and whose leader, SHEIKH MUJIBUR RAHMAN, was imprisoned and prosecuted.

Ayub's capital received a severe jolt from the Indo-Pakistani War of 1965. There were border skirmishes beginning in March in the Rann of Kutch region, but they did not escalate because of British mediation. In August, Ayub began Operation Gibraltar by sending infiltrators to Kashmir, a bone of contention between Pakistan and India in the original conflict. India regained the territory occupied by Pakistan in the north and proceeded toward Lahore. Fearful of a widening

conflict, the United Nations Security Council arranged for a cease-fire on September 22, and Soviet premier Alexei Kosygin invited Ayub and the Indian premier LAL BAHADUR SHASTRI to Tashkent to negotiate. The signing of the TASHKENT AGREEMENT on January 10, 1965, saw both the armies going back to the positions they had held before the conflict. The Cease-Fire Line (CFL) would become the de facto border. India and Pakistan agreed to resolve their disputes by peaceful means and not to interfere in each other's internal affairs.

There was adverse reaction to the Tashkent Agreement in Pakistan. The opposition parties blamed him for sacrificing Pakistan's interests, and the foreign minister ZULFIQAR ALI BHUTTO (1928–79) resigned, forming an opposition PAKISTAN PEOPLE'S PARTY in 1967. There were strikes and demonstrations throughout Pakistan. The army was called in in many cities. By the end of 1968, Ayub had lost the support of the majority of the population and a Democratic Action Committee was formed in January 1979 to restore democracy in Pakistan. The only course left for Ayub was resignation.

Martial law was proclaimed once again on March 25, 1969, and General Agha Mohammad Yahya Khan (1917–80) was named the chief martial law administrator. Six days afterward he became the president. Ayub died on April 19, 1974.

PATIT PABAN MISHRA

B

Ba'ath Party

The Ba'ath (“Renaissance” in Arabic) was a pan-Arab political party founded by Michel Aflaq and Salah al-Din Bitar. From Syria, Aflaq (1910–89) came from a Greek Orthodox family; he studied at the Sorbonne and became a teacher in a well-known secondary school in Damascus. Bitar (1912–80), from a prominent Damascene Sunni Muslim family, also studied in France and taught at the same school as Aflaq. In 1940 they led a small group known as the Movement of Arab Renaissance, or Ba'ath, that professed a pan-Arab, anti-imperialism program. Aflaq was the preeminent ideologue of the party, which published a series of papers dealing with Arab nationalism, Arab union, and Arab socialism, as opposed to a strictly Marxist ideology. The party's motto was “Unity, Freedom, Socialism.”

In 1947 the group merged with another nationalist party to form the Arab Ba'ath Party. The new party attracted members including nationalistic youth; disaffected minorities, especially the Alawites in Syria; and young army officers. In 1953 the party unified with Akram Hourani's Arab Socialist Party to become the Arab Socialist Ba'ath Party. A popular nationalist, Hourani had a far wider following than Aflaq, and his participation in the party enlarged its support and membership.

The party was organized into cells on the grassroots level, giving it considerable flexibility. Groups of cells (two to seven) were formed into party divisions that merged into party sections representing entire towns or rural districts and, at the highest level, party branches.

At periodic party congresses all the party branches met. The national command was the executive that exercised considerable power from the top down.

In 1958 the Ba'ath strongly supported the creation of the UNITED ARAB REPUBLIC but became disenchanted with having to take a secondary role to that of Nasser and Egypt. The Ba'ath supported Syria's withdrawal from the union in 1961, and a military coup in 1963 brought the Ba'ath into power. Bitar and Aflaq both supported the so-called civilian wing of the party versus the military wing, but they were outmaneuvered in 1966. Although he retained the title of secretary-general of the party, Aflaq held no real power and went into exile. He ultimately moved to Baghdad in 1974, where he enjoyed considerable respect but no real power. In 1989 Aflaq died, whereupon the Iraqi regime announced that he had converted to Islam prior to his death. After considerable infighting among Ba'athist officers in Syria, HAFEZ AL-ASSAD seized power in 1970 and proceeded to establish a regime that lasted into the 21st century. Bitar split from the party owing to disagreements with the Assad regime; he went into exile in Paris, where he was assassinated—possibly by Syrian intelligence—in 1980.

The Ba'ath established branches in Jordan, Lebanon, North and South Yemen, and other Arab states. Al-Saiqa was the Palestinian branch of the Ba'ath under control of Syria. Although these separate branches played some limited political roles in their respective countries, Syria and Iraq remained the centers of the party's power.

In Iraq the Ba'ath Party came to power in 1963 under Abd al-Salem Arif, but internal disputes again led to its

loss of power. Under General Ahmad Hassan al-Bakr, who led a military coup in 1968, the Ba'ath returned to power. Although most Iraqi Ba'athists were not professional soldiers, they attracted considerable support from the military. Bakr's main protégé, SADDAM HUSSEIN, a committed Ba'athist, ousted his mentor from power in 1979. Assad in Syria and Hussein in Iraq became bitter rivals, but both claimed to represent the real Ba'ath Party. Although both leaders professed their commitment to pan-Arabism, they adopted increasingly nationalistic policies to retain power. The Ba'ath Party in Iraq was dismantled after the U.S. invasion in 2003 but remained in power under Bashar al-Assad in Syria.

JANICE J. TERRY

baby boom, U.S.

The term *baby boom* refers to the dramatic increase in the population of certain industrialized nations in the years following the end of World War II. In the United States, the population grew from 141 million to 179 million—an increase of 27 percent between 1947 and 1960—at a time when immigration to the United States was limited by restrictive laws. By contrast, the population of the United States grew just 13 percent between 1960 and 1970. This increased birthrate generally affected all social classes and reversed a population decline that had been going on for 150 years. In Canada, the birthrate increased from 24.3 per thousand in 1945 to 28.9 in 1947, and did not return to lower rates until 1963.

The boom in the United States can be explained by demographic and ideological factors. Although the age of marriage for both men and women dropped between 1930 and 1950, Great Depression uncertainties and massive social dislocations caused by war put a damper on reproduction. Both of these concerns had lifted by the late 1940s. By 1960, 97 percent of Americans over 18 had been married at least once; this was perhaps a product of postwar affluence but possibly also a response to a fear of nonmarital sexuality that had

been produced by wartime. The so-called nuclear family became a symbol of U.S. freedom.

Ideological factors also contributed to the boom. Partly to ease the reentry of men returning from the war, women who had been engaged in war work were encouraged to leave the workplace and to concentrate on making a home for their families. This was accompanied by a preference for more than one child and a concurrent belief that childlessness demonstrated socially dysfunctional behavior. Women who married in the 1940s and 1950s generally had most of their children before they were 30 and allowed child-rearing to become their career.

The G.I. Bill and SUBURBANIZATION in the late 1940s and the 1950s helped establish the nuclear family ideal. The boom influenced the form of suburbanization by making the construction of schools and playgrounds necessary and caused an expansion in college and university construction. The baby boomers were the first generation to consider television their birthright, and several of the television programs of the 1950s depicted idealized versions of their family life. The idea that the nuclear family of the 1950s, as seen on television, represented “traditional family values” persisted into the 21st century.

As baby boomers entered adolescence, many of them became associated with the CIVIL RIGHTS MOVEMENT, other STUDENT MOVEMENTS of the 1960s, and the so-called hippie counterculture. Members of the baby boom invented the slogan “Don't trust anyone over thirty.” By the 1990s baby boomers were the “establishment” in the United States. Born in 1946, BILL CLINTON, who served as president from 1992 to 2000, was America's first baby-boomer president.

DAVID MILLER PARKER

Baghdad Pact/CENTO

The Baghdad Pact, also known as the Middle East Treaty Organization (METO) and the Central Treaty Organization (CENTO), was a mutual defense treaty that aimed to encircle the southwestern flank of the Soviet Union. The United States viewed the treaty, similar to

NATO, as a means to prevent possible Soviet expansion into the vital oil-producing region of the Middle East during the COLD WAR. It also enabled the United States to establish a military presence in member nations.

CENTO began with a series of treaties of mutual cooperation between the United States, Pakistan, and Turkey in 1954 and a military assistance agreement with Iraq in the same year. In 1955 Turkey and Iraq signed a mutual defense treaty creating the foundation for the Baghdad Pact. In the same year Britain, Iran, and Pakistan joined the Baghdad Pact, which guaranteed economic and military assistance to any country in the pact that was threatened by communism. In 1958 a coup in Iraq ousted the pro-Western government, and the following year Iraq withdrew from the treaty, prompting the change of its name to the Central Treaty Organization. The effectiveness of CENTO was lessened during the INDO-PAKISTANI WARS of 1965 and 1971; neither party to the treaty rushed to assist Pakistan even though India was at the time an ally of the Soviet Union. Following the overthrow of the pro-Western Pahlavi dynasty and the establishment of the Islamic Republic of Iran in 1979, Iran also withdrew from CENTO. Along with the failure of CENTO members to assist Pakistan, the withdrawal of Iran and Iraq from the treaty led to the treaty's demise.

RAMZI ABOU ZEINEDDINE

Balkans (1991–present)

Since 1991 the region of the Balkans has been a place of dynamic change. The region (excluding Greece) has been divided into two subregions: the Western Balkans, consisting of Albania and the entities that emerged from the breakup of Yugoslavia—Bosnia-Herzegovina, Croatia, Macedonia, Serbia, Slovenia, and Montenegro, and Bulgaria and Romania. The division of the Balkans into two subregions reflects the distinct dynamics in the two sets of states. For instance, the Western Balkans were subjected post-1991 to the dynamics of building nation-states, while Bulgaria and Romania embarked

on the path of postcommunist consolidation of democracy, marked by free elections, market liberalization, and the strengthening of civil society. However, the underlying feature characterizing the developments in all Balkan countries was the uncertainty of their transition process. This may be the main reason why Slovenia, which emerged from the dissolution of Yugoslavia, not only managed to distance itself from the Balkans with its domestic and foreign policy objectives but also ultimately “left” the region altogether.

Ambiguity dominated the Balkan states for the better part of the 1990s. This pattern changed as a result of the Kosovo crisis of 1999 for two reasons. First, and perhaps tragically, by that time the nation-state-building projects in the western Balkans had reached a plateau of stability, which allowed the countries from that subregion to focus on their democratization. The uneven transition processes in Bulgaria and Romania had led to the establishment of the first reformist governments in those countries. Second, in the aftermath of the Kosovo crisis the two dominant international institutions in Europe—the EUROPEAN UNION (EU) and the NORTH ATLANTIC TREATY ORGANIZATION (NATO)—altered their perceptions of the Balkans. After 1999 they recognized the candidate status of Bulgaria and Romania and outlined the prospect of membership for the countries of the Western Balkans. Such twin alteration of the intraregional and extraregional trends in the Balkans informed the 21st-century processes in the region.

BULGARIA

Despite their being lumped together, the postcommunist development trajectories of Bulgaria and Romania were characterized by quite different dynamics. The transition in Bulgaria, which began on November 10, 1989, with the removal of Todor Zhivkov as head of state, was in effect an internal coup within the Bulgarian Communist Party. These developments set up the background for a rather unpredictable transformation process, one that was initiated from “above” and did not reflect a significant social anxiety with the communist status quo. The pattern of power up to 1997 was marked by governments that came, tried their policies, and were ousted by either the corrective of popular unrest or a change of allegiance of coalition partners. After 1997, however, governments followed the road of democratization and market reforms fairly consistently and pursued the objectives of EU and NATO integration. As a result, on March 29, 2004, Bulgaria became a member of NATO and joined the EU on January 1, 2007.

Personnel with the NATO-led Stabilization Force (SFOR) in Bosnia collect weapons seized during Operation Harvest. The steel plant melts the weapons and renders them as harmless metal.

ROMANIA

In Romania, the transition process began with a series of violent protests across the country in December 1989, which culminated with the execution of the communist dictator Nicolae Ceaușescu on Christmas night, 1989. During the winter of 1989–90 a new political formation emerged, which called itself the National Salvation Front (NSF). It established itself as the vanguard of the revolution and ruled in Romania until 1996. During this period the government was afflicted by internal dissent as a result of the authoritarian tendencies of the NSF leader Ion Iliescu and domestic unrest caused by both the interethnic tensions with the substantial Hungarian minority located in Transylvania and the social disorder caused by the miners' uprising during 1991. Another set of problems was associated with the NSF's wavering foreign policy. After the elections in 1996, however, consecutive governments did away with the uncertainty characterizing the country's initial transition process. Thus, like Bulgaria, Romania joined NATO on March 29, 2004, and joined the EU on January 1, 2007.

ALBANIA

The post-1991 period in the subregion of the western Balkans was in many respects even more heterogeneous than the one in Bulgaria and Romania. Although all countries in the subregion experienced violent upheavals of one sort or another, they dealt with their effects differently. Albania was the only country from the western Balkans that did not emerge from the dissolution of former Yugoslavia. Yet internal conflict beleaguered its postcommunist development. The period up to the 1992 elections was generally characterized by chaos, which led to an exacerbation of the division between the north and the south of the country, rapid growth of organized crime, and the beginning of large-scale emigration fueled by the economic deterioration. Subsequent governments failed to address these problems, which led to a severe crisis in the country during 1997. It was spurred by the collapse of several financial pyramid schemes, which wiped out the savings of the majority of the Albanian population. During the unrest, military depots were raided and scores of weapons were looted. Order was restored only after the international

community dispatched a military force to the country during Operation Alba. Albania did not fully recover from this crisis, and in 2006 continued to be the poorest country in Europe.

REPUBLIC OF MACEDONIA

The transition of the other countries from the western Balkans was marked by the wars of Yugoslav dissolution. Unlike the other republics of former Yugoslavia, however, Macedonia succeeded to gain its independence peacefully after a referendum on September 8, 1991. The country's transition, however, was hampered by the embargo on former Yugoslavia imposed by the international community. At the same time the country faced an embargo from Greece, which refused to recognize the country by its constitutional name and continued to refer to it as the Former Yugoslav Republic of Macedonia. Concurrently the existence of the Macedonian nation and language was challenged by Bulgaria. Furthermore the ecumenical independence of the Macedonian Orthodox Church continued to be challenged by the Serbian Orthodox Church. None of these challenges threatened the existence of the Macedonian state as much as the tension caused by the conflict with the substantial Albanian minority in the country. In the wake of the Kosovo conflict the nearly 25 percent of Albanians living in Macedonia demanded greater recognition of their cultural and political rights. This led to violence during 2001. The conflict was settled under pressure from the international community with the signing of the Ohrid Peace Accords in August 2001. As a result of the implementation of these accords the EU recognized Macedonia as a candidate country in December 2005. It became a member of NATO's Partnership for Peace program in 1995.

CROATIA

The beginning of the democratic transition in Croatia is usually dated to the electoral victory of the Croatian Democratic Union (HDZ) in the first multiparty elections in April 1990. The vote for the HDZ, led by Franjo Tudjman, was also a vote for independence from Yugoslavia. The subsequent Homeland War lasted until 1995 and witnessed the territorial consolidation of the country and the exodus of the Serbian minority, as well as the military involvement of Croatia in the war in Bosnia-Herzegovina. The authoritarian rule of President Tudjman, which lasted until his death in 1999, was characterized by nepotism, criminal privatization, and subversion of constitutional practices. It was only after the parliamentary and presidential elections in

2000 that Croatia began affiliating itself with European institutions. On May 25, 2000, it became a member of NATO's Partnership for Peace program. In terms of its relations with the EU, Croatia was the most advanced country from the subregion of the western Balkans. On November 13, 2005, it began its accession negotiations, which were the final stage in gaining membership to the Brussels-based bloc.

BOSNIA-HERZEGOVINA

The development of Bosnia-Herzegovina after 1991 was marked by war, which ravaged the country until 1995. During this time, over 250,000 people lost their lives and many more were either internally displaced or fled the country altogether. After the signing of the General Framework Agreement for Peace (Dayton Accords) in 1995, Bosnia-Herzegovina became a virtual protectorate of the international community with a rotating presidency between the representatives of the three dominant ethnic groups—Bosniaks, Croats, and Serbs. However, decision-making in the country was overseen by a High Representative of the International Community, who could intervene in the domestic affairs of the state and remove elected officials. Bosnia-Herzegovina gradually overcame the division between the three ethnic communities and progressed with the consolidation of its statehood.

SERBIA AND MONTENEGRO

Until the Kosovo crisis of 1999, the political process in Serbia and Montenegro was driven by the extreme nationalism propagated by Slobodan Milošević, which fuelled the breakup of Yugoslavia. As a result Serbia and Montenegro were involved in several wars and subjected to international sanctions. Milošević's ouster during the elections of 2000 and his subsequent arrest and transfer to the International Criminal Court for the former Yugoslavia in 2001 seemed to suggest that the country was distancing itself from the policies of the 1990s. However the murder of the reformist Serbian prime minister Zoran Djindjic on March 12, 2003, reflected the continuing legacy of the wars.

Montenegro held a referendum on its independence in May 2006 where its citizens voted to become an independent nation. Montenegro declared its independence on June 3, 2006, followed by Serbia's declaration of independence on June 5, 2006. A further complication was the status of Kosovo, which after the 1999 conflict remained a protectorate of the UN, although still formally a province of Serbia. In 2006 representatives of the international community, the Serbs, and the Kosovar

Albanians conducted talks however, on the status of the province. The talk yielded little progress, as the Kosovo citizens favored independence, which was formally declared in February 2008, despite Serbia's objectives.

EMILIAN KAVALSKI

Baltic States (1991–present)

In 1985, MIKHAIL GORBACHEV, the newly elected general secretary of the Communist Party of the Soviet Union, introduced two concepts to his country and its satellite states that would fundamentally change the course of human history: *glasnost* and *perestroika*. Glasnost, which literally means “openness,” allowed the citizens of the Soviet Union and its satellite states greater freedom of expression. Perestroika was about restructuring the Soviet economy, shifting from rigid, centralized state planning to a more flexible approach to combat chronic shortages of consumer goods. These two reforms, coupled with struggles between moderate and hard-line Communists within the Politburo, the economic strain of the war in AFGHANISTAN, the renewal of the arms race with the West, and the revolutions that swept through the satellite states in 1989, furthered the calls for secession from the Soviet Union by the three Baltic states: Estonia, Latvia, and Lithuania.

The desire for independence from the Soviet Union had deep roots, stretching back to their annexation in 1940 per the terms of the Nazi-Soviet Non-Aggression Pact. The Nazi-Soviet Non-Aggression Pact, signed in August 1939 by Joseph Stalin and Adolf Hitler, provided for the three Baltic states and the eastern third of Poland to fall under a Soviet sphere of influence in exchange for the Soviet Union's neutrality upon the German invasion of western Poland. Following the annexations, tens of thousands of Balts were deported from their homelands by Soviet authorities and shipped eastward, a process repeated in the late 1940s. The aim of the wide-sweeping deportations

was to remove those most likely to resist Soviet occupation and communism.

From the early 1950s until the mid-1980s, protests against Soviet control were limited and brutally crushed by government forces. However the freedom promised by Gorbachev's reforms led, by 1987, to popular demonstrations in major cities such as Tallinn (Estonia), Riga (Latvia), and Vilnius (Lithuania) against Soviet rule. In 1988, these spurred the establishment of popular nationalist organizations in Estonia (April), Lithuania (June), and Latvia (October).

The first official cracks in the forced relationship between the Baltic states and the Soviet Union began to appear in late 1988 when the Estonian Supreme Soviet declared Estonia's sovereignty. This proclamation was quickly followed by similar declarations by its counterparts in Lithuania and Latvia in May 1989. On August 23, 1989, the Balts demanded independence from Soviet control by forming a continuous human chain of more than 2 million people, 370 miles long, that linked their capital cities. When the Soviet Union responded with force to demonstrations in Vilnius and Riga in January 1991, the response of Baltic citizens was swift and decisive. Between February and March of 1991 all three states held referenda regarding independence. In contrast, referenda held by the Soviets testing the willingness to continue the union were predominantly boycotted by the Baltic population. In August 1991, all three Baltic states officially declared their independence, received external recognition of such, and were admitted by the UNITED NATIONS as independent nations. On September 6, 1991, in the aftermath of the failed hard-line coup attempt to replace Gorbachev in August, the Soviet Union recognized the three Baltic states.

Having successfully won their independence, each of the Baltic states then had multiple issues to address: politically, the formation of new governments, the foundation of political parties, and the drafting of constitutions; economically, restoring private property, releasing state control of industrial development and collectivization of farms, transitioning to an independent currency, and securing a solid and independent economic base; and socially, restructuring the school system and curriculum, restoring traditional institutions, including churches, and dealing with issues of citizenship and ethnicity. The Baltic states were more difficult given that they were literally controlled by Moscow. They lacked independent institutions from which they could begin to build.

The Estonians officially adopted their new constitution by referendum on June 28, 1992. This was soon

followed by elections for their parliament, the Riigikogu, in September, which brought a center-right coalition into power, led by the Fatherland Party (Isamaa). Elections for Lithuania's parliament, the Seimas, occurred in October 1992 and resulted in a majority victory for the Lithuanian Democrat Labor Party. The same month a new Lithuanian constitution, establishing a democratic republic, was adopted by popular referendum and endorsed by the newly elected parliament. Latvians held the first national elections for their parliament, the Saeima, in June of 1993, leading to the victory of the centrist party, Latvia's Way (Latvijas Cels), at the polls.

The question of citizenship for non-Balts continued to be a major point of contention. In 1989 Lithuania had the smallest percentage of Russians among its population at 9.4 percent; therefore it chose a more inclusive approach to citizenship. However Latvia's Russian minority was 34 percent of its overall population and Estonia's Russian population made up approximately 30 percent. In November 1991 Estonia was the first Baltic state to establish specific divisions between citizens, as native Estonians and predominantly Russian immigrants who would have to undergo a process of naturalization before they were granted citizenship. Initially, Latvia passed a strict citizenship bill in 1994, establishing a quota of 2,000 maximum naturalizations per year. This quota provision was eliminated.

Following freedom from Soviet rule, economic productivity fell dramatically across Estonia, Latvia, and Lithuania. The new governments struggled to transition from state-controlled, command economies to market capitalism. Industrial production in Estonia fell by more than 50 percent in 1992, whereas in Latvia it fell by 33 percent, and in Lithuania by about 40 percent. The vast majority of workers maintained employment, indicating that worker productivity fell sharply as well.

Given the backward nature of factories, transportation systems, and communication networks due to the impoverished Soviet system as a whole, the Baltic nations grappled with reforming their economies and developing markets in the West. They were also at a disadvantage in terms of learning basic capitalist business techniques such as marketing, packaging, and design. The Balts needed to retool not only their machinery but their economic mentality as well. Another psychological barrier to embracing capitalism was the long-lasting legacy of bitterness toward those who profited and operated on the black market under the communist system. Often those who privatized larger businesses first were the Soviet managers of these plants and factories, continuing their pattern of economic exploita-

tion. Privatization on the smaller scale occurred with less corruption.

Within the agricultural sector, the transition from collectivized farms to privatization was extremely difficult. Two additional negative elements were the lack of an adequate supply of farm machinery and the problems generated by a firm commitment to returning lands to those from whom they were taken during the process of collectivization. In addition, during 1992 a severe drought wreaked havoc on both food production and the stability of the livestock population. Disaster was averted only through the infusion of large amounts of Western aid. But the prices of native agricultural products rose sharply, resulting in stronger competition with food imports from the West. This led farmers to lobby their governments to institute protective tariffs for native-grown products, a tactic that would then harm the drive to increase exports of Baltic products to Western markets, which was connected to their desire to be integrated into Western economic entities.

Estonia was the first of the three Baltic States to reestablish an independent currency, the *kroon*, in June of 1992, and it led the charge for economic reform. Latvia soon followed with limited circulation of the *lat* in March of 1993, and Lithuania unveiled the *litas* in June of 1993. Although an important symbolic step on the path to complete autonomy, the emergence of independent currencies also emphasized some of the weaknesses within the economic structure. Another source of instability was the lack of hard currency held by the respective governments. This weakness was remedied in part by the restoration of gold reserves by Western nations; these reserves had been sent west in 1940 as the Soviet occupation had begun. By 1993 Estonia and Lithuania gained membership in the Council of Europe; Latvia soon followed suit in 1995. By late 1995 all three had applied to join the EUROPEAN UNION; by March 2004 all three had officially joined.

Another important means of securing full independence from the Soviet Union was the development of national militaries and the withdrawal of Soviet troops from Baltic soil. These national militaries began as all-volunteer forces and were hampered by a lack of well-trained Balts, given that few Balts had wanted to become officers in the Soviet military. In addition, during the transition period, government funds for training and equipping soldiers and for securing weaponry were scarce. Russian forces withdrew from Lithuania in August 1993; in August 1994 they withdrew from both Latvia and Estonia. All three Baltic states joined NATO in 2004.

Banda, Hastings

(1896?–1997) *Malawian president*

Dr. Hastings Banda was a physician and prime minister, founding president, and former dictator of the African country of Malawi. After leading the country's independence movement against the British, Banda became prime minister in 1963. An authoritarian ruler, Banda became president in 1966 and president for life in 1971. In 1994 Banda authorized democratic elections. He was defeated. Banda died in a South African hospital in 1997; he was rumored to have been 101 years old.

The name "Malawi" was given to the country formerly named Nyasaland by Dr. Banda. Having read a French map that called the dominating lake of the country "Lake Maravi," Banda decided he liked the sound and appearance of the name and chose a similar name.

Because of tribal migrations, several tribes make Malawi their home. The Tumbuka from the Congo and the Chewa from Zambia moved into Malawi during the 14th through the 16th centuries and remain there today. The Bantu peoples flourished in Malawi during the 18th century and the Yao moved into southern Malawi in the 19th century. It is thought that the Yao used firearms taken from Arabian traders to capture weaker tribes for the growing slave trade. Although slave trading had existed in Africa for centuries, the international transatlantic slave trade drastically increased the practice.

The first Europeans in Malawi were Portuguese explorers, but the most famous explorer was the Brit-

ish Dr. David Livingstone in 1846. Dr. Livingstone would return to Malawi twice more to help establish trade routes and mission sites before his death in 1873. Livingstone's Malawian legacy was the increased trade and missionary presence in Malawi, which eventually became a trade center. During the late 19th century, Malawi became a British protectorate. During the next few decades, the British government officials in Malawi battled slave traders, oversaw the growth of European settlers, constructed a postal system, and built a railway line.

Local Malawian peoples were dissatisfied under the British colonial system and in 1915, the Reverend John Chilembwe led a violent uprising against European settlers living on formerly Malawian farmlands. By 1944 the growing elite consisting of Europeans, Americans, and Africans organized the Nyasaland African Congress in order to protect their new holdings. Britain joined the Central African Federation, a white-dominated organization, in 1953.

When he was young, Hastings Banda left Malawi for Rhodesia and South Africa. The son of peasants, Banda went to work in the South African gold mines and by 1925 had enough money to head to America for college. He studied on a scholarship at the Wilberforce Institute in Ohio and then went to the University of Chicago. After graduation, Banda went to Meharry Medical College in Nashville, Tennessee. Although he graduated in 1937, Banda was required to earn a second medical degree in order to practice medicine in the British Empire. In 1941 he graduated from the School of Medicine of the Royal College of Physicians and Surgeons of the University of Edinburgh.

After World War II, Banda established his medical practice in Scotland and London. His office soon became a meeting place for exiled African leaders. However, in 1953 Dr. Banda chose to return to Africa, establishing a medical practice in Ghana. By 1958, Banda had returned to Malawi to campaign against the Central African Federation. In 1959 he spent time in prison for his political activities but was released in April 1960. In 1963, Banda and his Malawi Congress Party won the elections in a landslide victory. Dr. Hastings Banda became the prime minister on February 1, 1963.

The British still controlled all of Malawi's financial, security, and judicial systems. In May 1963 a new constitution took effect, winning Malawi its independence from Britain. In 1966 Malawi became a republic with Banda as its president. Banda became increasingly autocratic, making himself president for life in 1971. Opponents were jailed, sent into exile, or killed. The foreign

press was barred from entering the country. In addition to gaining almost total control of Malawi's economics, Banda also made economic trade ties with South Africa. During apartheid in South Africa, Malawi was the country's only African public trade partner.

Following rioting and the suspension of Western aid in 1992, Banda had no choice but to abandon the idea of one-party rule and even his life presidency in 1993. Open democratic elections were held in 1994, and Bakili Muluzi easily defeated Banda. Calculations report Banda accumulated over \$320 million in personal assets during his rule. Another calculation reports that during his rule, over 250,000 people went missing or were murdered in connection with the government.

MELISSA BENNE

Bandung Conference (Asian-African Conference)

The Bandung Conference, or Asian-African Conference, attended by 29 primarily newly independent nations, was held in 1955. The Indonesian leader AHMED SUKARNO hosted the conference of so-called Third World nations, most of which had become independent after World War II and were generally poor, agricultural, and economically underdeveloped. They represented over half the world's population.

India's leader JAWAHARLAL NEHRU played a key role in the conference that adopted his principles of opposing imperialism and focusing on the development of local economies rather than reliance on either the Western world led by the United States or the Soviet bloc dominated by the Soviet Union. Participants of the conference also raised issues of race, religion, and world peace. Most were, however, authoritarian in their political orientations.

The Chinese prime minister, ZHOU ENLAI (CHOU EN-LAI), was another key spokesperson at the conference. Aware of the different political and economic approaches of the participants, Zhou wisely did not

push an aggressive communist program and succeeded in establishing ties with other Asian and African leaders. Other leaders at the conference included KWAME NKRUMAH, prime minister of the Gold Coast (Ghana); HO CHI MINH, the North Vietnamese prime minister; and President GAMAL ABDEL NASSER of Egypt. The nations of North Africa also attended and condemned French imperialism. Nasser spoke about the role of Pan-Arabism and Pan-Africanism as well as the cause of Palestinian self-determination. Nasser, Nehru, and President Tito of Yugoslavia subsequently became personal friends and exchanged state visits with one another.

Many of the participants of the Bandung Conference became leaders of the Nonaligned Movement in the early 1960s. The Nonaligned Movement sought to steer a middle or neutral course between the United States and the Soviet Union in the COLD WAR. Neither superpower endorsed the Nonaligned Movement, although the United States tended to be more hostile to the neutralism of nations seeking to maximize their own benefits rather than adopting policies that mirrored that of either superpower. Many leaders of African and Asian nations attended a conference in both Bandung and Jakarta marking the 50th anniversary of the conference in 2005.

JANICE J. TERRY

Bangladesh, People's Republic of

Bangladesh—officially known as the People's Republic of Bangladesh—is a country of 55,598 square miles in South Asia. Bangladesh translates as the “Country of Bengal.” Geographically Bangladesh shares a small border with Myanmar in the southeast, and the rest is surrounded by India except for the Bay of Bengal to the south. Bangladesh, whose capital is Dhaka, had an estimated 2005 population of over 141,800,000. Officially the government is a parliamentary republic that declared independence from Pakistan on March 26, 1971. (The total population of Bangladesh recently ranked eighth in the world but the land area 94th. Hence the

population density ranks near the top of all countries in the world. Its climate is marked by frequent monsoons and cyclones.)

The partition of India in 1947 resulted in the division of Bengal according to religion. The western section of Bengal went to India and the eastern to Pakistan as a province that would become East Pakistan. During the 1960s, East Pakistan began to push for autonomy. A 1970 cyclone, according to many experts, may have acted as a tipping point in the push for an independent East Pakistan. Many charged that the central government responded poorly to the disaster. Unrest spread when the AWAMI LEAGUE and SHEIKH MUJIBUR RAHMAN won a majority in parliamentary elections but were not permitted to take office. These events led to the Bengali Liberation War that lasted for nine months. Support from Indian armed forces in December of 1971 led to independence and the establishment of Bangladesh.

Politically Bangladesh has two major parties—the Bangladesh Nationalist Party (BNP) and the Bangladesh Awami League. The BNP gains support from a number of radical Islamic parties including Jamaat-e-Islami Bangladesh and Islami Oikya Jot. The rivalry between the BNP and the Awami League has often led to protests and violence. Students are quite active in politics and reflect the historical legacy of liberation politics. In February of 2005 two Islamic parties—Jagrata Muslim Janata Bangladesh (JMJB) and Jama'atul Mujahideen Bangladesh (JMB)—were banned after a series of terrorist attacks and bombings.

Bangladesh is located on the Ganges Delta. Most of Bangladesh is no more than 10 meters above sea level. Therefore some scientists suggest that a rise of the water only one meter above sea level would flood approximately 10 percent of the land in the country. The country is underdeveloped and overpopulated, with recent per capita income of only approximately \$440. WORLD BANK reports, however, have praised Bangladesh for progress in literacy, gains in education, and the reduction of population growth. Between 1990 and 1996 the economy grew at an annual rate of 5 percent. Its economic development is stymied by cyclones and floods, inefficient state enterprises, lack of power as well as corruption, and a rapidly growing population.

MATTHEW H. WAHLERT

Bay of Pigs

In April 1961 putting into effect a plan initially formulated by the Central Intelligence Agency (CIA) under the Dwight D. Eisenhower administration, U.S. President JOHN F. KENNEDY authorized the Bay of Pigs invasion to topple Cuban revolutionary FIDEL CASTRO. The plan was for a U.S.-trained and equipped force of Cuban exiles to invade Playa Girón in the Bahía de Cochinos (Bay of Pigs) on the south coast and spark a popular uprising against Castro, which would overthrow his regime and end Cuba's Communist experiment. Ill-conceived from its inception, and plagued by mishaps and missteps, the invasion failed, becoming a major foreign policy embarrassment for Kennedy and solidifying popular support for Castro within Cuba. A few months later, Cuban revolutionary leader CHE GUEVARA thanked a Kennedy aide for the invasion, which Guevara claimed “enabled [us] to consolidate” the revolution and “transformed [us] from an aggrieved little country to an equal.” The Bay of Pigs fiasco also had major repercussions for the COLD WAR, helping to precipitate the CUBAN MISSILE CRISIS, convincing the Kremlin that Kennedy was weak and indecisive, and steeling Kennedy's resolve to stand up to the perceived menace of global communism.

Operational planning for the invasion began in March 1960, headed by Vice President RICHARD NIXON. This was in the wake of the successful CIA-sponsored incursions into Iran (1953) and Guatemala (1954), which resulted in the installation of governments friendly to the United States. The CIA secretly recruited a Cuban exile force of some 1,000 men, called Brigade 2506, which underwent training in south Florida and Guatemala. The original landing site near Trinidad, Cuba, was later changed to the Bay of Pigs. Operations began on April 15 with a failed effort to destroy the Cuban Revolutionary Air Force.

Two days later, four privately chartered ships transported 1,511 Cuban exiles to the Bay of Pigs, accompanied by CIA-owned landing crafts carrying supplies. Fighting was fierce and lasted for four days (April 17–21). Casualties are estimated at 2,000 to 5,000

Cubans and 200–300 invading exiles. Kennedy refused to send in air support or the marines, fearing the consequences of clear evidence of direct U.S. involvement. The Cuban Revolutionary Armed Forces soon killed or captured most of the invading force. Soon afterward, 1,209 captive exiles were put on trial. Around 20 were executed or otherwise killed, the remainder being released within two years in exchange for \$53 million in medicine and food.

The botched invasion was a major blow to the Kennedy administration and gave a major boost to Castro at home and abroad. Kennedy's vacillating leadership during the Bay of Pigs prompted Soviet Premier NIKITA KHRUSHCHEV to challenge the U.S. administration more directly by placing nuclear-armed missiles in Cuba, leading to the Cuban missile crisis of October 1962. Until his assassination in November 1963, Kennedy endeavored to demonstrate his strength in confronting the Soviet Union and its allies in Europe, Asia, and Latin America, a foreign policy stance attributable in large part to the Bay of Pigs debacle.

MICHAEL J. SCHROEDER

Beat movement

Every generation has its own avant-garde movement, and the Beats were the avant-garde of the 1950s in the United States, providing an acerbic critique of what they believed was a bland, conformist, and frivolous society. The writers associated with the movement had a disproportionate influence for their numbers. They worked outside traditional creative forms and behavior, placing immense value on personal freedom and spontaneity and viewing themselves as poets in a philistine nation. They used their immediate raw experience—sometimes drug fueled—as the basis for their writing, and used patterns of plain American speech but also adopted the rhythms of progressive jazz and bebop.

The movement began in 1945, when Jack Kerouac and Allen Ginsberg, students at Columbia Universi-

ty, met William S. Burroughs in New York City. The movement got its name from an article that John Clellon Brown, a novelist of the movement, wrote for the *New York Times* in 1952. In the article Brown talked of a "new vision" invented from the everyday surroundings of the writers that sustained their "perfect craving to believe" in the U.S. promise of freedom in the tense COLD WAR years.

The movement made headlines in 1956 when Lawrence Ferlinghetti, a poet and the proprietor of San Francisco's City Lights Bookstore, published Ginsberg's *Howl and Other Poems*, which was promptly seized by a customs agent and became the basis for an obscenity trial. *Howl* would sell 100,000 copies in the next 10 years. The same year, Kerouac's *On the Road*, written in 1951 on teletype paper as a single 120-foot-long paragraph, became a best seller. Burroughs published *Naked Lunch* in 1960. It had been impounded when published in serial form, but was declared not obscene a year later.

The Beat writers were not taken seriously by many outside observers. Critics in the print media—and there were many—called the group "beatniks," a term created by San Francisco columnist Herb Caen, suggesting an unsavory connection to the Soviet Union's shocking 1957 launch of *Sputnik*. Mainstream media portrayed them as hipsters and slackers: the men wearing goatees and sunglasses and carrying a book of poetry, the women with long straight hair and heavy eye makeup.

Although the principal figures of the movement had scattered by the early 1960s, Beat remained a fully realized subculture in urban areas like Greenwich Village and the Venice District of Los Angeles. In San Francisco, the Beat movement had left its haunts in North Beach and relocated to a multiracial working-class neighborhood farther west, called Haight-Ashbury, leading commentators to believe that the Beat ethos was responsible for the "hippie" movement of the late 1960s. The Beat movement did inform the politics of the New Left to a degree, and it can be credited with creating the atmosphere of freedom of expression in which the protest movements of the 1960s developed.

DAVID MILLER PARKER

Berlin blockade/airlift

The Berlin blockade was a diplomatic crisis and military operation during the COLD WAR precipitated by the Soviet Union's blockade of the city of Berlin from June 18, 1948, to May 12, 1949, and the subsequent relief effort launched by the United States, the United Kingdom, and France to provide provisions for the western half of the city. The Berlin blockade was one of the first major diplomatic crises of the cold war. The Western Allies' ability to provide for the city proved to be a major diplomatic victory and ensured the creation of a pro-Western West German state. However, it also ensured the division of Germany and Berlin for the next four decades.

The diplomatic struggle over Berlin in 1948–49 had its origins in the final months of World War II and the agreements made among the Allied powers over the division of postwar Germany. Germany's capital, Berlin, although deep within the proposed Soviet zone, would also be divided into four sectors of occupation. Although each power would be given sole control of its respective zone, an Allied Control Council based in Berlin would be assembled to coordinate and plan policy for all of Germany. These plans were made under the assumption that the occupation of Germany would be temporary and that Germany would be reunified relatively soon after the war's end. Critically, the agreements were also made under the assumption of continued inter-Allied cooperation.

Within days of Nazi Germany's defeat, the Soviets undertook efforts to ensure the dominance of sympathetic German communists in their zone, especially in Berlin, which the Soviets claimed was an integral part of their zone. Their overall aim was the reunification of a pro-communist German state, a goal that placed it at odds with the Western Allies. In 1946 the Soviet Union sponsored the forced merger of the German Communist Party and the Social Democrats (SPD) of its zone into the Socialist Unity Party (SED). Censorship of the press was instituted and members of noncommunist parties were frequently arrested in the Soviet zone. In Berlin agitators working for the SED frequently disrupted the meetings of the democratically elected city council. In 1946 the election of the Social Democrat Ernst Reuter to the office of lord mayor of Berlin was vetoed by the Soviets. However, the Soviets were unable to gain control of Berlin outside their zone or the rest of Germany.

Over the course of the next three years, hopes of inter-Allied cooperation quickly faded as it became

increasingly apparent that neither the Soviets nor the Western Allies would come to an agreement on either a postwar settlement or reunifying Germany. In 1947 the British and the United States united their two zones to create the Bizone, or Bizonia. Although it was created as an economic union, the Bizone would eventually form the nucleus of what was to become West Germany. In the spring of 1948—the three Western Allies—along with Belgium, the Netherlands, and Luxembourg— assembled at the London Conference to plan for the future of the three west German zones.

In 1948 with reunification unlikely, the British and the Americans made moves to sponsor the creation of a Western-oriented German state in their zones. Together with the French they created the deutsche mark to replace the inflated reichsmark. This currency reform took effect in the three western zones and the three western sectors of Berlin. The Soviets argued that this violated postwar agreements made at the Potsdam Conference and their rights to all of Berlin. They subsequently ordered a blockade of all rail, road, and barge traffic into and out of the three western sectors of Berlin.

The Soviets' aim was to halt the creation of a West German state and force the Western Allies out of Berlin. It became apparent to the Allied powers that any compromise or appearance of backing down before Soviet intimidation would be diplomatically disastrous. Although several U.S. generals argued that Berlin was not strategically important enough to risk a confrontation and pressed for withdrawal, President Harry S. Truman and Secretary of State George C. Marshall felt that Berlin was critical to maintaining a strong front against the spread of communism. The Western Allies affirmed their support for their respective sectors in Berlin.

However, there were few actions that they could take. With only 15,000 Allied troops in West Berlin, a fight was not possible. General Clay advocated using an armed convoy to break the blockade. But both the U.S. State Department and the Pentagon saw this as both too risky and unworkable. The option of an airlift became increasingly attractive, as it would demonstrate Allied determination to remain in Berlin and provide it with much-needed provisions and supplies. Also, whereas the rights for land access to Berlin were left undefined, the Western Allies and the Soviets had concluded an agreement guaranteeing access by air. Thus the likelihood of war resulting from an airlift was much smaller than if the Allies were to force the blockade.

Between June 1948 and May 1949 almost all the provisions for the western zones of Berlin were shipped

The "Last Vittles" flight left Rhein Main Air Base on September 30, 1949, as sister planes of the airlift flew overhead in formation, marking the end of a dramatic chapter in air history, the Berlin airlift.

in by air, using aircraft such as the C-47 Dakota and C-54 Skymaster. The operation was given the code name "Vittles" and was commanded by General William H. Tunner. Tunner, who had experience transporting goods over the Himalayas during World War II, organized an extremely complex operation. During the summer months the airlift was able to provide only between 3,000 and 4,000 tons of goods a day. By the onset of winter, Vittles was providing between 5,000 and 6,000 tons a day.

The Allies were also blessed by a winter marked by frequently clear skies. During the spring of 1949 an aircraft landed at one of the three airports in the western zone once every two minutes. The citizens of Berlin greatly appreciated the Allied efforts and many West Berliners aided in distributing supplies throughout the city. Children called the planes *Rosinenbombers* ("Raisin Bombers"), and the name became a popular appellation for the aircraft throughout the city. Ernst Reuter, unofficially mayor of the western sectors and spokesman for the western half of the city, made great efforts to improve morale and win world sympathy for the city. What supplies the airlift could not provide were often

found on the black market in the east and through legal East-West trade.

By the spring of 1949 it had become apparent that the western sectors could be sustained with the necessary provisions, so long as the Soviet military did not interfere. However, it had come at a cost: 31 Americans, 40 Britons, and 5 Germans lost their lives to air-related accidents during the course of the airlift.

On May 12, the Soviets, aware they would neither force the Western Allies to back down on the issue of currency reform nor end their support for a West German state, ended the blockade. Fearful that the Soviets might try to renew the blockade, the Allies continued airlifting provisions into September of 1949. The blockade was a disastrous diplomatic defeat for the Soviet Union. In the short-term it had failed to accomplish its two primary goals: to prevent the creation of a pro-Western German state and to expel the Allies from Berlin. The French, who had initially opposed the creation of a western Germany, joined their zone to the Bizone in 1949. That same year, both the Federal Republic of Germany and the German Democratic Republic were proclaimed.

The chief long-term effect was the prolonged division of Germany. The Western Allies had confronted the Soviets and had maintained their commitments without having to resort to armed action. The blockade also proved damaging to world opinion of the Soviet Union. Berlin, long perceived as a bastion of German-Prussian militarism, had been transformed into a symbol of freedom. The allied presence in Berlin would be the source of almost constant difficulty for the East German state, as it provided an enclave of Western liberalism and economic prosperity that was a constant source of enticement for the citizens of the communist state. West Berlin would be a popular destination for East German emigrants over the course of the next decade, their massive flight from the east stopped only by the erection of the Berlin Wall in 1961.

NICHOLAS J. SCHLOSSER

Betancourt, Rómulo

(1908–1981) *Venezuelan president*

One of the leading figures of 20th-century Venezuelan history, Rómulo Betancourt is generally credited with playing a pivotal role in helping to establish viable and sustainable democratic institutions in Venezuela that endured from his second presidency (1959–64) to the 2000s. A moderate social reformer and forerunner of latter-day Venezuelan president HUGO CHÁVEZ in his advocacy of populist social democracy focusing on the needs of the poor, Betancourt founded the political party Democratic Action (Acción Democrática, AD) in 1941, which would play a major role in subsequent Venezuelan political life. Threading a difficult line between the far Left, the far Right, and the omnipresent specter of

U.S. intromission in this oil-rich country, Betancourt contributed in enduring ways to the institutionalization of Venezuelan democracy.

Born in the town of Guatire in the state of Miranda to a family of modest means, he starting working at 14 years of age to put himself through high school, college, and law school. In 1928 he participated in student protests against the dictatorship of Juan Vicente Gómez, events marking him as a leading member of the “Generation of 28” dedicated to democratization and social reform. After being jailed by the Gómez regime he went into exile and became active in various leftist political groups, including the Communist Party of Costa Rica.

At age 23 he penned the Plan of Barranquilla, a Marxist-inspired document outlining his vision of his homeland's political future. After Gómez's death in 1936, he returned clandestinely to Venezuela and became engaged in political activity against the military regime. In 1940 he went into exile in Chile, where he published *Venezuelan Problems (Problemas Venezolanos)*. A year later he returned to Venezuela and founded AD, gathering around him a team committed to reform that formed the nucleus of the party and skillfully using the press and other media to disseminate his ideas.

On October 19, 1945, a coalition of AD reformers and disgruntled army officers overthrew the military regime and installed Betancourt as president of a provisional government. During his first presidency (1945–48), Betancourt's government instituted a wide range of political, economic, and social reforms, including universal suffrage; mechanisms for free and fair elections; an accord with foreign oil companies that guaranteed a reasonable profit, decent wages, and ensured labor peace; agrarian reform; expansion of public education and public health facilities; and related initiatives. Declining to run for a second successive term, in 1948 he transferred power to his successor, the novelist and activist Rómulo Gallegos. Later that year, in December, the military in collusion with conservative elements overthrew the Gallegos government, ruling Venezuela for the next 10 years under General Marcos Pérez Jiménez.

In 1958 a resurgent coalition of reformers and army officers overthrew the Jiménez regime, installing a democratic AD-dominated government, with Betancourt again as president, which broadened and deepened the reforms of the 1940s. Since 1958 Venezuela has been ruled by a succession of democratically elected governments. Surviving an assassination attempt

by Dominican dictator RAFAEL TRUJILLO in 1960, and promulgating the Betancourt Doctrine that denied diplomatic recognition to regimes coming to power by military force, Betancourt died on September 28, 1981, in Doctor's Hospital in New York City.

MICHAEL J. SCHROEDER

Bharatiya Janata Party (BJP)

The Bharatiya Janata Party (BJP) is a nationalist party of India. It grew out of a Hindu nationalist organization, the Rashtriya Swayamsevak Sangh (RSS, National Volunteer Organization), which was founded in 1925 by K. B. Hedgewar as a reaction to Muslim fundamentalism. That organization was dedicated to propagating orthodox Hindu religious practices and building Hindu unity.

In 1947 upon independence the Indian subcontinent was divided into two separate states, India and Pakistan. Although most Muslims remained in Pakistan and most Hindus stayed in India, some Muslims lived in India while some Hindus continued living in Pakistan. This situation, along with a territorial dispute over the Kashmir region, created tensions between the two nations.

In 1951 Bharatiya Jana Sangh (BJS)—a political wing of RSS that grew during the 1950s and 1960s—was established. In 1971 East Pakistan seceded and created a new nation, Bangladesh. The BJS supported the movement for the creation of Bangladesh.

In 1977 the BJS joined the Janata Party, a coalition of opposition parties that defeated INDIRA GANDHI and the Congress Party in parliamentary elections and formed a government that lasted through the end of 1979, when Gandhi returned to the government.

In 1980 BJS was renamed and the Bharatiya Janata Party (BJP) was born. The principles of the BJP are inspired by Hindu nationalism and the main objectives are to build up India as a strong, unified, and prosperous nation.

In 1984 the BJP separated from the RSS; it became the main opposition to the Congress Party. In the 1991 elections the BJP became an effective opposition party

winning so many seats that the Congress Party had to govern with a coalition. In 1996 the BJP emerged as the largest party in Parliament.

When parliamentary elections were held in 1998, again the BJP and some opposition parties won the largest number of seats and formed a government. This government lasted only one year but during that time the administration fulfilled an electoral promise and carried out the country's first nuclear tests, making India a nuclear power. As a consequence, Pakistan also conducted nuclear tests, making both countries nuclear.

The BJP administration faced a new conflict with Pakistan whose soldiers had occupied ground on the Indian side of the line of control demarcated by the United Nations in Kashmir. However, peace was restored in 2001.

Under the BJP government, India's economy became decentralized and market-oriented with privatizations of government corporations, increasing foreign investment, and the liberalization of trade under World Trade Organization rules. There was improvement in infrastructure and production and the middle class grew. However, there was little improvement for the rural and poor classes.

In February 2002 a series of violent incidents in Gujarat State discredited the BJP government. Many activists and members of the BJP were accused of leading the violence against the Muslim minority in that state. In the 2004 elections the Congress Party coalition won the elections and the BJP became the opposition party.

VERÓNICA M. ZILIOOTTO

Bhumibol Adulyadej (Rama IX)

(1927–) *Thai king*

Bhumibol Adulyadej, Rama IX of the Chakri dynasty, is the reigning king of Thailand and the longest-ruling monarch in the world. His bespectacled visage is

a familiar sight in Thailand, where photographs of the king and his queen consort, Sirikit, adorn the walls of many homes.

Political developments ended absolute monarchy in Thailand in 1932, and Bhumibol's uncle King Pradjadhipok abdicated three years later, elevating 10-year-old Ananda Mahidol to the throne. On June 9, 1946, the 21-one-year-old King Ananda was found in the royal chamber dead of a gunshot wound. Three palace aides were eventually executed for their involvement. Bhumibol Adulyadej, still a minor, ascended to the throne the next day but returned to Switzerland to continue his education. In 1950 Bhumibol returned temporarily for his wedding and official coronation. He married his fiancée, the 17-year-old M. R. Sirikit Kityakara, whom he had met in Paris while her father was the Thai ambassador to France. The royal couple returned to take up permanent residence in Thailand in 1951.

Between 1951 and 1957, King Bhumibol and the royal household found themselves subject to a "royal containment" policy. The government, headed by the antiroyalist prime minister Phibun and dominated by the military, vigorously circumscribed the influence of the monarch, restricting him primarily to a symbolic role in traditional and religious ceremonies.

The situation changed in 1957 when a rival military faction, led by Field Marshal Sarit Thanarat, worked with a royalist faction to topple the Phibun government. Sarit and his coconspirators apparently had sought an audience with the king to inform him of their plans. In turn, King Bhumibol designated Sarit the military protector of Bangkok during the period of upheaval. This marked the beginning of a partnership between Sarit and the king.

Field Marshal Sarit and the king enjoyed a cordial working relationship. Sarit, who appreciated the value of promoting King Bhumibol both as a rallying point in Thai political life and as an antidote to communist influence, astutely included the monarch as a junior partner in governance. Consequently, King Bhumibol's role in Thailand became increasingly visible and influential. He and Queen Sirikit toured the country, visited foreign nations, and in general became prominent symbols of Thailand. His popularity in the country remains unquestioned.

Even though the king is generally above politics, he has used his stature to intervene in political crises. In 1992 a political crisis brewed when demonstrators protested the appointment as prime minister a leader of the military coup that had ousted a democratically

elected government the previous year. The king intervened, mediating a peaceful resolution to the crisis.

King Bhumibol's popularity in the country is also the result of his and the royal family's efforts to improve the livelihood of ordinary Thai citizens. The king and other members of his family have been closely involved with agricultural, environmental, and social welfare projects that have endeared them to the populace.

SOO CHUN LU

Bhutto, Benazir

(1953–2007) *Pakistani leader*

Benazir Bhutto was the first female to lead a modern Muslim country; she was prime minister of Pakistan from December 1988 to August 1990 and again from October 1993 to November 1996. Bhutto's father was ZULFIKAR BHUTTO, who founded the PAKISTAN PEOPLE'S PARTY (PPP).

Benazir Bhutto was born on June 21, 1953, in Karachi, Pakistan. She attended Harvard's Radcliffe College starting in 1969 and graduated, cum laude, in 1973. She then attended Lady Margaret Hall at Oxford University, where she studied politics, philosophy, and economics until 1977. She was elected president of the Oxford Union and became the first Asian woman to lead their debating society. She returned to Pakistan in 1977.

Shortly after her return to Pakistan, a military coup led by General Zia overthrew her father's government, imprisoned him, and hanged him two years later. Over the next seven years, until her exile in 1984, she was imprisoned several times because of her opposition to Zia. In January 1984 she went into exile in London. From there she worked to build the PPP's strength and in January 1986, after martial law was lifted, she returned. Because Pakistan is a Muslim country, she decided that she needed to be married and arranged a marriage to Asif Ali Zardari in December 1987.

With Zia's death in August 1988, elections were held and Bhutto ran for prime minister. The PPP was unable to win a majority of the seats in parliament, but did put together a coalition government with Bhutto as the prime minister. Bhutto and the PPP worked to improve the conditions of the poor of Pakistan as well as to improve social justice in the country. She also believed in a free economy and private control of business. She worked to improve human rights in Pakistan.

Throughout Bhutto's term, the opposition tried to get her removed from office. Their attempts had been unsuccessful until 1990 when violence broke out in several cities in Pakistan. This violence, along with support from the military, gave the Pakistani president the excuse he needed to dismiss the government. Thus on August 6, 1990, Bhutto was removed from office and charged with corruption, nepotism, and misuse of her office. In elections in October the PPP lost all but a few of the seats it held in parliament.

Bhutto spent the next several years improving her reputation. The government that replaced her coalition proved unable to deal with the problems of Pakistan and new elections were held in 1993. The PPP, while holding a large number of seats, did not have a majority. When a PPP candidate was elected president, it appeared that the government would be stable. However, corruption and criminal activity by politicians continued to be a problem. She was dismissed as prime minister in 1996 and went into exile. Bhutto vowed she would triumph in new elections scheduled for February 1997, but she lost to Nawaz Sharif, whom she had replaced in 1993. In January 1998 corruption charges against Bhutto and her husband widened. Bhutto denied the charges and said they were politically motivated, but during her five years in office, Pakistan's treasury was drained, and she was unable to deliver the programs she had promised. In spite of the charges, Bhutto maintained her position as leader of Pakistan's major opposition party, the PPP.

In 1999, Bhutto fled Pakistan to avoid corruption charges, and she was convicted in absentia by a Pakistani court. In October of that year, Sharif lost power when General PERVEZ MUSHARRAF took over the country in a military coup. Bhutto returned to Pakistan in 2007 after President Musharrarf granted her and others amnesty from corruption charges. She was assassinated shortly after.

Zulfikar Bhutto was one of the prominent leaders of Pakistani politics and founder of the Pakistan People's Party (PPP).

Mosque and Military. Washington, DC: Carnegie Endowment for International Peace, 2005.

DALLACE W. UNGER, JR.

Bhutto, Zulfikar

(1928–1979) *Pakistani leader*

Zulfikar Bhutto, one of the prominent leaders of Pakistani politics and founder of the PAKISTAN PEOPLE'S PARTY (PPP) was born on January 5, 1928, in Larkna, Sind. He was the son of Sir Shah Nawaz Bhutto, a wealthy landowner. Bhutto was close to President MUHAMMAD AYUB KHAN (1907–74) and held the important portfolio of foreign affairs. He was an excellent orator and represented Pakistan in various world capitals and the UNITED NATIONS with conviction. He left the company

of Ayub after the INDO-PAKISTANI WAR of 1965 and formed the PPP on November 2, 1967, in Lahore.

The PPP catered to the needs of diverse constituencies in Pakistan, attracting people from various walks of life. In the political turmoil of the last days of Ayub, Bhutto and his PPP tried to oust Ayub. General Agha Muhammad YAHYA KHAN, the successor of Ayub, ordered the elections based on adult franchise on December 7, 1970. With the slogan “Food, Shelter and Clothing,” the PPP emerged victorious in west Pakistan, whereas the AWAMI LEAGUE of SHEIKH MUJIBUR RAHMAN gained an absolute majority in the whole of Pakistan. The PPP prevailed upon Yahya Khan in not allowing Mujibur to form a government.

Bhutto called the National Assembly to prepare the third constitution for Pakistan. It became operative on August 12, 1973. The parliamentary system was adopted and the prime minister became the most powerful official. He was also the commander in chief of the armed forces.

Comparative stability entered the politics of Pakistan. Pakistan also recognized the independence of Bangladesh in the first amendment of the constitution. Bhutto carried out reforms in industry, agriculture, and the civil services, and ordered the nationalization of banks along with rice, flour, and cotton mills.

Bhutto had a fair amount of success in international relations. He tried his best to revive the image of Pakistan after its humiliation due to the secession of East Pakistan. He cemented the country’s relations with other Islamic countries. Under him both India and Pakistan recognized the Line of Control (LOC) that had been established after their war of 1971 and agreed to refrain from the use of force against each other. Pakistan gained back the territory lost in the war. The accords prevented any major conflagration between the two until 1999.

Bhutto announced in January 1977 that elections were to be held for the National Assembly two months later. The PPP emerged victorious with 155 seats and the combined opposition; the Pakistan National Alliance (PNA) secured only 36 seats. The PNA then launched a mass movement against Bhutto, claiming that the elections were rigged. Bhutto was arrested and released a month later.

In September, he was arrested on charges of authorizing the murder of an opponent three years previously. He was found guilty of murder and he was hanged on April 4, 1979. The PPP again came to power in 1988 with BENAZIR BHUTTO the daughter of Zulfikar Bhutto, becoming prime minister.

PATIT PABAN MISHRA

Biafran War (1967–1970)

The Biafran War, also known as the Nigerian Civil War, was a political conflict waged from July 6, 1967, to January 13, 1970. It was a war rooted in ethnic conflicts between three main tribes in the country: the Igbo in the southeast, the Yoruba in the west, and the Hausa/Fulani in the north.

The war came about as a result of events that followed the independence of Nigeria in 1963. In 1964 elections were held, which were afterward condemned by non-northern Nigerians as fraudulent. In January 1966 a coup d’état was staged by mostly Igbo officers that put Major General Johnson Aguiyi-Ironsi in power at the head of a government that gave more favor to Igbo-related officers. A counter-coup was then staged by Lieutenant Colonel Murtala Mohammed that placed Lieutenant Colonel Yakubu Gowon (a northerner) in power on July 29, 1966. Because Igbos became suspect for the problems caused by the first coup, social unrest started that led to massacres of Igbo people, continuing into September of the same year. Around 30,000 Igbo civilians were killed, and over 1 million Igbos began to relocate to the southeast to escape persecution. At the same time Hausas and other non-Igbos were killed in Igbo lands, causing a counter-exodus to escape retaliation.

Oil had been discovered in Nigeria in 1958, and the country’s oil industry was based in the Igbo-dominated southeast. Lieutenant Colonel Chukwuemeka Odumegwu-Ojukwu, military governor of the eastern region, became the leader for the Igbo side. Based on Igbo appeals for secession from the federal government, he declared the independence of the Republic of Biafra on May 30, 1966. Unwilling to lose the oil industry, the FMG advanced into Biafra on July 6, 1967, to force Biafra back into the fold of Nigeria. The Biafran forces

repulsed the advance, then launched a counterinvasion into FMG territories, seizing key strategic locations. At the end of 1967 however, the FMG regained these territories, and the Biafran forces were again looking for breakthroughs into Nigeria.

For most of 1968 the forces were stalemated. The Biafran military enjoyed much support from foreign countries. French doctors and other volunteer groups airlifted supplies and medical assistance into Biafra. The Swedish eccentric Carl Gustav von Rosen fought as a mercenary on the Biafran side.

When Biafra was declared, the country was formally recognized by only Tanzania, Zambia, Gabon, South Africa, and Ivory Coast. Other African countries refused to recognize Biafra because they were opposed to South Africa.

FMG forces later took the town of Owerri, the capital of the Igbo heartland, and thought that victory was close. But Biafran forces reclaimed it later on, and the stalemate held again. By April 1969 the Biafran forces were heavily reduced, but they continued fighting. Ojukwu's appeals for UNITED NATIONS intervention in October were unsuccessful. The final push of FMG forces started in December of 1969. On January 6, 1970, Owerri again fell to the FMG. On January 10 Ojukwu admitted defeat and fled Nigeria for the Ivory Coast. He left the country to the commander of the Biafran Army, Philip Effiong, who led a delegation to Lagos and formally surrendered on January 15, 1970, thus ending the existence of Biafra.

The Biafran War ended with 100,000 military casualties, while between 500,000 and 3 million Biafran civilians became casualties from starvation during the war. After the war, ethnic tensions continued to be a problem in Nigerian politics.

biblical inerrancy

The doctrine of biblical inerrancy asserts that the original texts or teachings of the Bible contain no errors. The word *infallibility* sometimes appears as a synonym for inerrancy, but strictly speaking, the term infallibility has a slightly different sense, namely, that the claims of a religious authority cannot fail.

A good case can be made that all major branches of the Christian faith historically embraced biblical inerrancy or its equivalent, yet also that the definition of biblical inerrancy took on additional connotations and significance for Protestant evangelicals in the late 19th century. Roman Catholics generally prefer to discuss religious authority in terms of the infallibility of the Church, which entails the teachings of its councils, leaders (especially the pope), and official documents, including the Bible. Eastern Orthodoxy looks particularly to the religious authority of the seven ecumenical Church councils.

For some Protestants, biblical inerrancy provides a litmus test for determining who is an evangelical. Thus biblical inerrancy became the theological basis for founding both the National Association of Evangelicals (1942) and the Evangelical Theological Society (1949). While the most widely accepted evangelical confession of the 20th century, the *Lausanne Covenant* (1974), states that the Bible is "without error in all that it affirms," the phrase implicitly allows some ambiguity since there are serious debates over what in fact the Bible actually affirms. Hence, while many evangelicals would agree with the doctrine of biblical inerrancy, the meaning and implications of that belief have often been contested.

The *Chicago Statement on Biblical Inerrancy* (1978) was an attempt by certain evangelical theologians to articulate clearly and delimit the meaning of biblical inerrancy. Nevertheless, there are at least four rather different senses in which the doctrine of biblical inerrancy has been understood by those who embrace it. For some, biblical inerrancy means that every propositional statement in the Bible—including statements bearing upon science or history—must be accepted as a divinely sanctioned literal truth.

For others, the Bible is still in some important sense true when referring to nonreligious domains, but such references should not be pressed too literally, especially when they are merely describing human experiences of the physical world. A third approach turns the focus upon the reliability of the Bible's *religious* teachings. The fourth way of understanding biblical inerrancy emphasizes the Bible's overall purpose of bringing people into

fellowship with God, rather than asking whether this or that proposition is true.

The doctrine of biblical inerrancy is frequently defended by one or more of the following arguments: an appeal to the nature of God (God cannot lie and the Bible is his divine word), the teachings of Jesus (Christ) of Nazareth about the trustworthiness of Scripture, the Bible's own self-authenticating claims, the threat to religious authority if the Bible is errant, or the analysis of test cases to show that apparent errors in the biblical text are instead true and that supposed contradictions are actually in harmony with each other.

TIMOTHY PAUL ERDEL

Black Power movement

Influential from 1960 to 1976, the Black Power movement was a conscious endeavor to liberate the blacks from white political, social, and cultural institutional clutches. As a radical political philosophy, the Black Power movement advocated ethnic integrity, self-sufficiency, and self-assertion with an aim to maximize black opportunities. During a march to Mississippi, Stokely Carmichael is believed to have articulated the blueprint of the movement.

Although MARTIN LUTHER KING, JR., with his philosophy of nonviolence and brotherhood, succeeded in the pursuit of equality, blacks felt that they had been alienated and discriminated against in many social institutions. It was this disappointment with King's approach to the African-American condition that persuaded Huey Newton, MALCOLM X, and Stokely Carmichael to look for an alternative model. Accordingly, they insisted on the need to advance black freedom through force.

In its initial stages, the Congress of Racial Equality (CORE) was the only organization that supported the Black Power movement. The National Association for the Advancement of Colored People (NAACP) denounced Black Power, though it reportedly generated support later. Interestingly, the impact of the Black Power movement in America surfaced in the United Kingdom. Organizations such as the Racial Adjustment Action Society and the Universal Coloured People's Association fervently propagated the ideologies of the

A recruiting poster for the Black Panthers, one of the best-known and militant Black Power organizations.

Black Power movement. Carmichael visited London in 1967 and was deported for inciting racial hatred.

In 1966 Black Power reached new prominence in the form of the Black Panther movement. Founded in Oakland, California, in 1966 by Huey Newton and Bobby Seale, the Black Panthers fashioned their views after FRANTZ FANON, Mao Zedong, and Malcolm X. With their "rhetoric of the gun," the Black Panthers, like the Black Power movement, strove to advance the rights of blacks through violence and force.

But the most intense and successful manifestation of the Black Power movement is the Black Arts movement. Drawing inspiration from the ideological specifics of the Black Power movement, the Black Arts movement ardently rejected white literary standards and sought to define a new black aesthetic. Prominent members of the Black Arts

movement, among others, include Amiri Baraka (LeRoi Jones), Harold Cruse, Sonia Sanchez, Haki Madhubuti, Ed Bullins, Dudley Randall, Ed Spriggs, Nikki Giovanni, Conrad Rivers, and Mari Evans. Two prominent contributions of the Black Arts movement are the growth of theater groups and black poetry performance. Baraka, a prominent Black Arts practitioner, established Black Arts Repertory Theatre and School in Harlem. Another prominent playwright of this era was Ed Bullins. Unlike Ellison, Ed Bullins—true to the spirit of the Black Arts and Black Power movements—denied the whites in his plays. Poets such as Haki Madhubuti, Sonia Sanchez, and Angela Jackson experimented with verse forms with the intention of differentiating from white literary culture and thus asserting cultural autonomy. Though the radical political agenda of the Black Arts movement was severely criticized by the later artists, the movement's thrust toward cultural autonomy brought black creativity to new heights.

Eventually, the Black Power movement was increasingly met with violence from white counterparts. Strict government measures such as Cointelpro and IRS probes later disrupted the activities of the Black Power movement. Finally, though the Black Power movement failed to enact concrete political changes, it marked a crucial phase in the evolution of African-American politics on the eve of the civil rights era.

SATHYARAJ VENKATESAN

Bolivian revolution (1952–1964)

Beginning in 1952 Bolivia underwent a social and economic revolution, spearheaded by the Revolutionary Nationalist Movement (Movimiento Nacionalista Revolucionario, MNR), a political party founded in 1941 and led by the economist VICTOR PAZ ESTENSSORO and the lawyer and former president's son Hernán Siles Zuazo. The roots of the revolution can be traced to Bolivia's

humiliating defeat by Paraguay in the Chaco War (1932–35); decades of military dictatorship and politically exclusionary rule by the landowning and military elite; the country's long history of class and racial inequality and extreme poverty among its mostly indigenous population; and the emergence of new leftist political forces from the early 1940s, particularly its labor unions, peasant leagues, and Marxist-oriented political parties.

Coming to power through both electoral victory and popular mobilizations, after 1952 the MNR instituted a range of far-reaching social and economic reforms. By the late 1950s the revolutionary process stalled in consequence of mounting conservative opposition, growing factionalism and corruption within the MNR, and U.S. support to conservative elements. In 1964 the MNR was overthrown in a military coup. The Bolivian revolution left an enduring legacy, with much of the popular unrest and indigenous political organizing of the 1990s and 2000s finding important antecedents in the revolutionary period half a century before.

Coming to power on April 16, 1952, after a wave of strikes and street protests, the MNR under Paz Estenssoro launched an ambitious program of land, labor, and social reform. Establishing universal suffrage in July, the regime expanded the electorate from around 200,000 to over one million voters. It also slashed the size and power of the military.

In October it nationalized the country's largest tin mines and established the state-run Mining Corporation of Bolivia (Corporación Minera de Bolivia, COMIBOL). The act fulfilled a longtime goal of the Union Federation of Bolivian Tin Workers (Federación Sindical de Trabajadores Mineros de Bolivia, FSTMB), founded in 1944 and led by Juan Lechín, the country's largest labor union with some 60,000 members. Following the MNR's assumption of power, in 1952 Bolivian trade unions formed the Bolivian Workers' Center (Central Obrera Boliviana, COB), with the FSTMB as its largest affiliate. The COB exercised a major political influence throughout the period of MNR rule.

In August 1953 the MNR initiated a sweeping program of agrarian reform in an attempt to eliminate forced labor and address the country's extremely unequal landowning patterns. Before 1953, 6 percent of landowners controlled upwards of 90 percent of the nation's arable land, and 60 percent of landowners controlled 0.2 percent.

While not all of the provisions of the 1953 Agrarian Reform Law were implemented, in later years land ownership became significantly less unequal. Peasant leagues, forming armed militias, exerted considerable influence

on the revolutionary government, partly through their representation in the new Ministry of Peasant Affairs.

By the end of Paz Estenssoro's first term (1952–56), the revolutionary process had slowed in consequence of mounting opposition from conservative elements, growing polarization within the multiclass ruling coalition, economic decline in the tin and farming industries, and skyrocketing inflation due to increased government spending. Under the presidency of Siles Zuazo (1956–60), the United States stepped up its efforts to moderate the regime through increased flows of economic assistance, heightening the country's political polarization. By Paz Estenssoro's second term (1960–64), the MNR's more radical elements faced mounting internal and external opposition. In 1964 a resurgent military overthrew the regime, followed by a series of military dictatorships that ruled until 1982.

Bosch, Juan

(1909–2001) *Dominican president*

Poet, scholar, educator, activist, politician, and the first democratically elected president of the Dominican Republic after the long dictatorship of Rafael Trujillo, Juan Emilio Bosch y Gaviño is most remembered for championing the rights and dignity of ordinary Dominicans through his writings and his progressive liberal-democratic politics. His tenure as president was brief, lasting only seven months—from February to September 1963—when he was overthrown by a coalition of conservative forces. He nonetheless continued to play a major role in Dominican politics, running for president and losing repeatedly to U.S.-supported candidates (1978, 1982, 1986, 1990, 1994), becoming the standard-bearer of the country's populist left and pushing the national political discourse toward the promotion of liberal democracy, civil rights, and the political enfranchisement of the poor and working class.

Born on June 30, 1909, in the Dominican town of La Vega to a Puerto Rican mother and Catalanian father, at age 28 Bosch went into exile in Cuba to escape the repression of the Trujillo regime. Two years later, in 1939 in Havana, he cofounded the Dominican

Revolutionary Party (Partido Revolucionario Dominicano, PRD), which would later play a major role in Dominican politics. Devoting much of his time to poetry and writing, in 1933 he published his first collection of stories, *Camino Real*; from 1935 to 1963 he published no fewer than 13 novels, anthologies, and works of nonfiction (from *Indios* [1935] and *La mañosa* [1936] to *David, biografía de un rey* [1963]). After Trujillo's assassination on May 30, 1961, he returned to the Dominican Republic, and, after a tempestuous interlude characterized by widespread popular mobilization and abiding U.S. concern relating to the COLD WAR and the radicalization of the CUBAN REVOLUTION, Bosch was elected president in the national elections of December 20, 1962, with 64 percent of the vote.

Assuming the presidency on February 27, 1963, he embarked on an ambitious program of economic, political, and social reform. His administration promulgated a new liberal constitution in April that secularized the government; guaranteed civil rights for all citizens; imposed civilian control on the military; and inaugurated a far-reaching program of agrarian reform. The reforms alienated the most powerful sectors of Dominican society, including the Catholic Church, the military, industrialists, and large landowners. In the context of the intensifying cold war, the stage was set for a U.S.-supported conservative coup, which came on September 25, 1963.

Going into exile in Puerto Rico, he returned to the Dominican Republic in September 1965 after the U.S. military intervention of April that ended an emerging civil war between pro-PRD and anti-PRD factions. He ran again for president in 1966, but was defeated by the U.S.-supported Joaquín Balaguer. While he never regained the presidency, he became renowned for his left-populist rhetoric, the acuity of his social criticism, and his determination to improve the lot of ordinary Dominicans. In 1973 he founded a new political party, the Dominican Liberation Party (Partido de la Liberación Dominicana, PLD), which since the mid-1990s has drifted to the center-right. The author of at least 36 publications translated into many languages, and popularly revered as a national hero, he died on November 1, 2001, in Santo Domingo.

Bourguiba, Habib

(1903–2000) *Tunisian leader*

Habib Bourguiba, known as the Supreme Warrior, was born in Monastir, Tunisia, in 1903 and died in April 2000 while under house arrest in his hometown. Bourguiba attended Sadiqi College in Tunis, where he graduated in 1924. He then went to France to study law and political science at the University of Paris. Upon graduation in 1927 Bourguiba returned to Tunisia; a year later he was writing for multiple political newspapers on issues involving Tunisian nationalism. Bourguiba was a member of the Executive Committee of the Destour Party, but his disagreements with the party's political approach led to his resignation. He formed the breakaway Neo-Destour Party in 1934.

The French colonial authorities reacted to Bourguiba's growing power by exiling him for two years. This would prove to be the first of many times Bourguiba would be imprisoned and released by the French during the struggle for Tunisian independence.

In April 1938 pro-nationalist demonstrations broke out in Tunisia and the French authorities opened fire on the crowds. Shortly thereafter, Bourguiba was imprisoned by the French on charges of sedition. In 1945 as the war ended, Bourguiba embarked on a series of tours through Arab nations, the United States, and parts of Europe to publicize the Tunisian cause. When Bourguiba returned to Tunisia, he reorganized and resumed control of the Neo-Destour Party. In January 1952 armed resistance broke out in parts of Tunisia and Bourguiba was again arrested and imprisoned in France. Beleaguered by the ongoing war in Algeria, the French released Bourguiba in 1955 and granted independence to Tunisia in 1956. Bourguiba became Tunisia's first president. He promptly embarked on a program of reform and development. Tunisia's constitution called for a secular state. Women were granted equality, and ambitious educational and health care programs were instituted; however, early attempts to collectivize agriculture failed and economic difficulties beset the nation.

Bourguiba was sympathetic to independence movements in developing countries, but his calls for negotiations with Israel in the mid-1960s led to riots in Jordan and Lebanon. In 1975 Bourguiba was named

president for life. He was seen by many as a passionate orator with a charismatic personality but he also had a reputation as a shrewd politician who outmaneuvered his political opponents.

The economy continued to decline during the 1980s as Islamist political groups gained support. As his health failed, Bourguiba seemed increasingly unable to deal with the mounting political, economic, and social problems of the nation. In November 1987 a bloodless coup led by Zine el Abidine Ben Ali took over the government and ousted Bourguiba. Ben Ali proclaimed that Bourguiba, at the age of 84, was too old and senile to serve as president. Bourguiba lived under house arrest for 13 years until his death in 2000. Although Ben Ali promised a return to democracy and held elections, he too became increasingly authoritarian and continued to rule Tunisia into the 21st century.

BRIAN M. EICHSTADT

Bracero Program (1942–1964)

The Bracero Program, begun in August 1942 at the height of World War II in response to war-induced labor shortages in the United States, was a joint U.S.-Mexican agreement to bring temporary Mexican male laborers to work in the U.S. agricultural, railroad, and related industries. While the program was conceived as a temporary wartime expedient, commercial fruit, vegetable, and cotton growers in the U.S. Southwest found the program so profitable that they persuaded the U.S. Congress and Mexican governments to extend it for nearly two decades after the end of the war. In the 22 years during which the program was operational, an estimated 5 million Mexican men worked as *braceros* (a term roughly synonymous with “*jornaleros*,” or “day laborers”). Repeatedly condemned by human rights activists as abusive and exploitive, the Bracero Program had a major impact on the economic, social, and cultural history of both Mexico and the United States.

The program provided millions of poor Mexicans with legal entrée into the United States, familiarizing them with the land, its people, its wage structure, and its employment opportunities. For some it provided

Mexican workers at the border await legal employment in the United States, February 3, 1954.

an opportunity to reconnect with kin on the U.S. side of the border. After completing the terms of their contracts, many braceros opted to stay in the United States illegally or to return to Mexico and cross the border clandestinely at a later time. The program also made major contributions to the development of commercial agriculture in the U.S. Southwest.

While the terms of the original agreement mandated a minimum wage of 30 cents per hour, humane working conditions, and free round-trip transportation between Mexico and sites of employment, in practice the U.S. companies hiring bracero laborers frequently failed to adhere to these requirements. Unauthorized and sometimes exorbitant deductions for food, housing, medical attention, and other necessities were common, as were abusive practices such as substandard food and housing, poor sanitary conditions, physical intimidation, and violence. The program was briefly halted in 1948 in response to a decision by Texas cotton growers to pay braceros \$2.50 per hundred weight, while non-braceros earned \$3.00.

The Mexican government responded by suspending the program, an impasse resolved with a U.S. government apology and a new agreement in 1951 under U.S. Public Law 78 (sometimes called the “second” Bracero Program), which continued until 1964 (with successive “temporary” extensions in 1954, 1956, 1958, and 1961). Through the 1950s, an estimated 300,000 Mexicans worked as braceros annually. In order to combat illegal immigration and the tendency of many braceros

to remain in the United States without authorization, in 1954 the U.S. government launched “Operation Wetback,” a program intended to repatriate unauthorized Mexicans, which also resulted in the deportation of some U.S. citizens. By the mid-1950s such repatriations reached a high of 3.8 million.

The Bracero Program is the subject of an expansive literature. The most rigorous early scholarly investigation was by the Mexican-American scholar and activist Dr. Ernesto Galarza, whose book *Merchants of Labor* (1964) is considered a classic in the field. Testifying repeatedly before the U.S. Congress and other government bodies, Galarza and others finally persuaded lawmakers to end the program. The program’s termination coincided with the rise of the National Farmworkers Association (later United Farmworkers of America, UFW), led by labor organizer Cesar Chavez. In many ways, the ending of the Bracero Program—and the glut of cheap migrant labor it provided—made possible the rise of the UFW.

MICHAEL J. SCHROEDER

Brazil, military dictatorship in (1964–1985)

Following a recurring pattern in Brazilian history (1889, 1930, 1937, 1945), in 1964 a group of military officers overthrew the civilian government of João Goulart (1961–64), installing a military dictatorship that ruled for the next 21 years. The roots of the crisis prompting the coup have been traced to a confluence of events from the mid-1950s. These included a dramatic upsurge in leftist political movements, parties, and unions among urban and rural dwellers, encouraged by civilian leaders and intensifying after the 1959 CUBAN REVOLUTION, combined with a growing economic crisis marked by high inflation (nearly 90 percent in 1964) and foreign debt (\$3 billion), huge budget deficits (\$1.1 billion in 1964); declining foreign investment, and eroding middle-class support.

With U.S. backing, on March 31, 1964, a group of officers headed by General Humberto Castello Branco seized power. Castello Branco ruled as president until 1967, his principal goal economic stabilization. Reforms

introduced by his planning minister, the neo-orthodox technocrat Roberto Campos, partly achieved this aim. The regime also reformed the nation's banking system and reduced unions' bargaining power. From 1968 to 1974 years of the so-called Brazilian miracle, foreign investment soared, industry boomed, and the economy grew at an average annual rate of 11 percent, though inflation still averaged around 23 percent. Relatively moderate, Castello Branco and his successor, General Artur Costa e Silva (1967–69), tolerated a degree of organized dissent, though when opposition leaders launched a series of protests and strikes in 1967–68, Costa e Silva cracked down, arresting and jailing hundreds. In September 1969 he suffered a stroke and was replaced by hard-liner General Emilio Garrastazu Médici (1969–74).

By 1969 there emerged in the country's major cities more than a dozen guerrilla groups, composed of perhaps 500 members altogether and akin to the MONTONEROS in Argentina, that for the next four years waged a losing battle against the dictatorship. Robbing banks and kidnapping foreign diplomats, the guerrillas found inspiration in the writings of Carlos Marighela, especially his *Mini-manual of the Urban Guerrilla*. The years of Brazil's Dirty War (1969–73) were marked by mass jailings, institutionalized torture, and upwards of 333 disappearances, far fewer than in neighboring Argentina and Uruguay. By 1973 the urban guerrilla groups had been eradicated. In 1974 the more moderate General Ernesto Geisel (1974–79) assumed the presidency.

Inclined toward a return to civilian rule, in October he allowed opposition parties to run in congressional elections, resulting in their landslide victory, thus stalling further democratization. In the economic sphere, the steep OPEC oil price hikes in 1973 and 1979 returned Brazil to high deficits, ballooning debt, and climbing inflation, which reached 110 percent in 1980. The abundance of cheap petrodollars on world markets delayed the day of economic reckoning, but in 1981 a global recession and credit squeeze compelled Brazil to default on its commercial bank loans, decisively ending the economic boom.

The fifth and last of the general-presidents was João Figueiredo (1979–85), who, facing mounting popular opposition and a ravaged economy, pledged a return to civilian rule. Local, state, and federal congressional elections in 1982 were followed by presidential elections in 1985, won by Tancredo Neves, governor of the state of Minas Gerais. Since 1985 Brazil has been governed by a succession of democratically elected governments.

MICHAEL J. SCHROEDER

Brezhnev, Leonid Ilyich

(1906–1982) *Soviet politician*

On October 15, 1964, Leonid Brezhnev became first secretary (later renamed general secretary) of the Communist Party of the Soviet Union (CPSU), a position he held until his death on November 10, 1982. For the last five years of his life, as well as from 1960 to 1964, he was also president of the Soviet Union. As a result, during the 18 years that Brezhnev was the undisputed leader of the Soviet Union the country went through a period of economic stagnation and, although at his death it remained a superpower, its military power was being sapped by its long occupation of AFGHANISTAN. The Soviet Union was also unable to exert as much influence in Eastern Europe as it had 20 years earlier.

Leonid Ilyich Brezhnev was born in 1906 in the village of Kamenskoye in the Ukraine. It was an iron and steel center and both his grandfather and his father had worked in the iron and steel plant. After completing his education at a local school, Brezhnev also went to work in the local factories. When he was 17 he joined the Young Communist League, became interested in farm collectivization, and went to study in Kursk. He then left the Ukraine to work as a land-use specialist in Byelorussia and the Urals.

When he was 25, Brezhnev returned to his hometown and studied metallurgy, graduating from the local institute in 1935. Four years later he was elected secretary of the Communist Party Committee for the Dnepropetrovsk region, at that time one of the largest industrial centers in the Soviet Union. In 1941 at the outbreak of World War II in the USSR, Brezhnev joined the army as a political officer, holding the rank of brigade commissar. In 1944 he was promoted to major general and marched with the 4th Ukrainian Army Group in the June 1945 Red Square Victory Parade.

At the conclusion of the war he was put in charge of the Carpathian military district. He then became leader of the Communist Party in Moldavia, the smallest of the constituent republics of the Soviet Union, and then became a member of the party's central committee and a candidate member of the presidium, losing all these positions in the shakeup that followed the death of Joseph Stalin in 1954.

Brezhnev spent the next two years in Kazakhstan, where he became involved in developing new lands for agriculture. According to official Soviet government publications, Brezhnev greatly enjoyed his time there. It was during his time in Kazakhstan that Brezhnev became an ally of NIKITA KHRUSHCHEV and in 1957 succeeded Kliment Voroshilov as chairman of the presidium of the Supreme Soviet of the Soviet Union, and thus the chief of state—or president of the Soviet Union—from May 7, 1960, until he resigned on July 15, 1964, to take a more active part in Communist Party affairs.

On October 14, 1964, Brezhnev took part in the ousting of Khrushchev as first secretary of the CPSU and took his place, with a strong ally in Alexei Kosygin, the chairman of the council of ministers during most of Brezhnev's time in power. Brezhnev and Kosygin pledged themselves to reinvigorating the economy of the Soviet Union and ensuring that it remained one of the superpowers. In contrast to Khrushchev, who made personal decisions on most issues, Brezhnev operated a more collective form of leadership and gradually tended to concentrate on larger foreign and defense matters.

Nikolai V. Podgorny's retirement as chairman of the presidium of the Supreme Soviet (in essence head of state) meant that Brezhnev was able to assume that position as well, making it the first time the general secretary of the Communist Party was also head of state; Yuri Andropov, Konstantin Chernenko, and MIKHAIL GORBACHEV were later to combine both roles. On an organizational level, Brezhnev was keen to reduce membership of the CPSU, which had expanded under Khrushchev. He always felt that the larger the party the more unwieldy it could become.

Like many people at the time, Brezhnev was fascinated by the achievements of Yuri Gagarin, and he poured much government energy and resources into space research. However, he was quickly diverted by political machinations. With the PRAGUE SPRING of 1968 threatening Soviet control of the country, Brezhnev reacted quickly. When he could not persuade Czechoslovak Communist Party leaders to change their positions, he ordered Warsaw Pact troops into Czechoslovakia. This was later justified by the "Brezhnev Doctrine," with the Soviet Union stating publicly that it could intervene in countries within its sphere of influence. But Brezhnev was careful to be seen as acting multilaterally and soldiers from other Warsaw Pact countries were also involved. It was a move decried in the West but Brezhnev saw the political storm in western Europe as a price he had to pay for what he genuinely did regard as a threat to Soviet hegemony in eastern Europe.

Soviet leader Leonid Brezhnev (right) meets with U.S. president Gerald Ford in the mid-1970s.

Soon afterward, Brezhnev entered with U.S. president RICHARD NIXON into a period of détente. Nixon visited the Soviet Union in 1972 and the two signed the Strategic Arms Limitation Treaty (SALT 1) on May 26, 1972, at a summit meeting in Moscow. In 1973, Brezhnev traveled to the United States.

In November 1976, JIMMY CARTER was elected U.S. president and there was a greater focus on human rights. There was much Western press coverage of dissidents such as Anatoly Sharansky and Andrey Sakharov, as well as the use of Soviet mental asylums for holding critics of the government. However, the presence of more Western tourists in the Soviet Union also tended to lessen tensions and to open up the country considerably. They naturally visited Moscow and Leningrad (St. Petersburg), and began to travel to Kazakhstan and other parts of Central Asia, admittedly on tours organized by the Soviet travel bureau Intourist.

After his health declined in late 1979, Brezhnev was seen in public less often, although he did visit Yugoslavia for the death of MARSHAL TITO in May 1980. Pictures of a seemingly robust Brezhnev meeting with Jimmy Carter reassured many of the Soviet leader's health. By this time the Soviet Union was embroiled in a major conflict in Afghanistan. The Soviet government clearly did not expect the major storm of protests from the West, although the West's reactions to the Vietnamese invasion of Cambodia in December 1978 should have prepared it for this. Brezhnev saw it as the Soviet Union aiding a neighboring government that was about to succumb to Muslim fundamentalists. Brezhnev's actions in Afghanistan became one of the most criticized aspects of Soviet foreign policy.

The next big test for Brezhnev was over the founding of the independent trade union, Solidarity, which was established in POLAND in September 1980. When by the following year Solidarity boasted a membership of 10 million, Brezhnev was keen on the Polish authorities' acting quickly. On December 13, 1981, the Polish government imposed martial law and declared the Solidarity trade union illegal. Its leader, Lech Wałęsa, was arrested and his release only days after Brezhnev's death clearly indicated Brezhnev's role in the crackdown.

When Brezhnev died on November 10, 1982, in Moscow, he was buried in Red Square. Apparently the team that had embalmed Lenin and had looked after Lenin's body for decades expected to be asked to embalm Brezhnev, but this was not the case. For many years Brezhnev had been a familiar figure on the international stage. He had also received more public honors than most Soviet leaders, including the Lenin Peace Prize in 1973, the title of marshal of the Soviet Union in 1976, the Order of Victory (the highest military honor) in 1978, and the Lenin Prize for Literature (for his memoirs) in 1979. In hindsight, however, the Brezhnev era was regarded as one of economic stagnation. Although published economic figures showed that the economy was improving, and that economic growth had accelerated, the truth was that the Soviet infrastructure was wearing out, and its military was unable to keep up with new technology being designed in the United States. The Brezhnev years represented a decline in initiative, and the economy was largely maintained through the country's massive natural resources.

Brezhnev's successor as general secretary of the CPSU was Yuri Andropov, who, although he had been head of the feared KGB, was determined to overcome the malaise that had taken place during the 1970s. He had been the man who had actually carried out Brezhnev's policies of putting dissidents in mental asylums and forced internal exile. In a surprise move, Andropov immediately launched a crackdown on official corruption. Andropov also tried to repair relations with China, but died after only 15 months as general secretary. He was replaced by one of Brezhnev's staunchest supporters, Konstantin Chernenko. On Chernenko's death after 13 months as general secretary Mikhail Gorbachev became general secretary of the CPSU.

JUSTIN CORFIELD

Brown v. Board of Education

The unanimous May 17, 1954, U.S. Supreme Court decision known informally as *Brown* sent shock waves through a deeply segregated nation and strengthened the growing African-American CIVIL RIGHTS MOVEMENT. Intended to end the racial segregation of public schools, the *Brown* decision made important inroads, but educational equality for minorities remained elusive.

By 1948 the National Association for the Advancement of Colored People (NAACP) Legal Defense and Educational Fund, headed by lawyer THURGOOD MARSHALL, was focusing on dramatically unequal public schools. Eventually they would bring to the nation's highest court a group of five lawsuits initiated by African-American parents from South Carolina; Virginia; Washington, DC; Delaware; and Topeka, Kansas.

The *Brown* case was named for Oliver Brown, the pastor father of Linda, a seven-year-old third-grader. She daily navigated a Topeka rail yard and busy roads to attend an all-black school although a white school was nearby. Compared to other school systems in the *Brown* case, Topeka provided relatively equal facilities to its tiny black population; community activists emphasized that racial separation made black children there feel inferior.

The combined cases reached the Supreme Court in 1952, but its ruling was postponed in anticipation of a rehearing. By then the Court had a newly appointed chief justice, Earl Warren, a former Republican governor of California. *Brown* would become the first of many cases that made the Warren Court a byword for judicial activism on behalf of America's disenfranchised.

Warren read the 11-page decision aloud. It invoked the Constitution's Fourteenth Amendment in support of equal protection for minorities. It marshaled sociological and psychological evidence showing that racial separation, especially of children, rendered them "inherently unequal." And *Brown* invalidated *Plessy v. Ferguson*, the 1896 ruling that had affirmed the doctrine of "separate but equal." In 1955 with a decision dubbed *Brown II*, the Court urged federal judges to undo school segregation "with all deliberate speed."

By then a forceful white backlash had emerged. Although some southern and border states began to

educate black and white children together, many districts defied the Court's suggestions. In 1956 a "Southern Manifesto," initiated by South Carolina Senator Strom Thurmond, accused the Court of abusing its power and vowed to reverse *Brown*. It was signed by 19 of 22 southern senators and 77 of 105 representatives.

In cities like Charlotte and New Orleans efforts to enroll black children in white schools were met with hostility and outright violence. In Little Rock, Arkansas, in 1957 an attempt by nine carefully chosen black students to attend Central High School was met with spitting, kicking, and death threats, encouraged by Governor Orval Faubus. Reluctantly President Dwight D. Eisenhower ordered army and national guard troops into Little Rock to restore order. By 1964 only 1.2 percent of black children in 11 southern states were attending school with white children. Many whites left public schools for nominally "private" academies.

The situation "up north" was hardly better. There, segregation occurred not by law (*de jure*), but by long-standing patterns of racial housing discrimination (*de facto*). In the 1970s a Boston judicial plan to bus black students to predominantly white schools triggered violent protests not unlike those in Little Rock, as white families fled to suburban schools.

Meanwhile African-American parents, most at first delighted by *Brown*, questioned the aims of racial integration and doubted its realization. They argued that adequate school budgets and resources were more important than seating their children next to whites in the classroom.

In 1967 the NAACP's Thurgood Marshall became the first African-American justice appointed to the Supreme Court, but the racial equality he had worked to achieve remained only partially implemented when *Brown's* 50th anniversary was celebrated in 2004.

Board of Education: A Civil Rights Milestone and its Troubled Legacy*. New York: Oxford University Press, 2001.

MARSHA E. ACKERMANN

Bush, George H. W.

(1924–) U.S. president

George Herbert Walker Bush (b. June 12, 1924) was president of the United States from 1989 to 1993 after

serving as RONALD REAGAN's vice president for the previous eight years. He was born in Massachusetts, the son of Prescott Bush, a banker and future senator whose indirect financial ties to the Nazi Party remain controversial. He followed in his father's footsteps by entering military service on his 18th birthday, in the midst of World War II, and became the country's youngest naval aviator; by the time he was discharged at the end of the war three years later, he had received three Air Medals, the Distinguished Flying Cross, and the Presidential Unit Citation. He entered Yale University, where he majored in economics, joined the Skull and Bones society as his father had, and captained the baseball team in the first College World Series.

In 1964, the year after Prescott finished his second and final year as senator from Connecticut, Bush ran for the Senate in Texas, winning the Republican nomination but losing the election. He was elected to the House of Representatives in 1966, where he served until again losing the senatorial election in 1970. In the 1970s, he served as the United States ambassador to the UNITED NATIONS and the director of the Central Intelligence Agency, an appointment that confirmed for many people the suspicions that he had been involved with the agency since his days at Yale. In fact, CIA documents have admitted that Bush's business partner in Zapata Petroleum, the oil business he started, was a covert agent. The extent of Bush's other ties with the agency have not been established.

In 1980 Bush was Ronald Reagan's principal opponent in the Republican primaries and the one who coined the derisive term "voodoo economics" to refer to Reagan's fiscal policy. When Reagan won the Republican nomination, he made Bush his running mate; the two won decisively in both 1980 and 1984. In 1988 Bush became one of the few vice presidents to succeed his president.

Over the course of the Reagan presidency, the COLD WAR had all but ended, and during Bush's term, the Berlin Wall was taken down, Germany reunified, the Soviet Union dissolved, and many Eastern European countries behind the Iron Curtain began holding elections or overthrew their communist governments. In 1990 when Iraq invaded Kuwait, Bush led the United Nations coalition in operations Desert Shield and Desert Storm, liberating Kuwait but stopping short of invading Iraq; it was, Bush said, not a war for oil but a war against aggression. Significantly, it was also a televised war, the first major American military action conducted under the watch of cable news. Americans whose parents had been the first to see footage of war on the evening news were now the first to see their war broadcast live.

George H. W. Bush and King Fahd (seated, right) meet in the Royal Pavilion in Saudi Arabia to discuss the situation in Iraq in 1990.

In the 1992 election Bush lost to Governor BILL CLINTON, an election notable for the involvement of Texas billionaire and third-party candidate Ross Perot, who won nearly a fifth of the popular vote despite frequent decisions not to run. Key to Bush's loss were the recession, the perception that he was out of touch with the common man (particularly when compared with the genial Clinton), and the desire for change to reflect a new state of affairs in the wake of the cold war.

BILL KTE'PI

Bush, George W.

(1946–) U.S. president

George Walker Bush was the 43rd president of the United States, elected in 2000 and serving from 2001 to 2008. His presidency began and remained in controversy, from the issues surrounding the 2000 election to the aftermath of the September 11, 2001, terrorist attacks and the subsequent wars in Afghanistan and Iraq.

The oldest son of President GEORGE H. W. BUSH, Bush was raised in Texas where his father had moved to start his Zapata Oil corporation, and like other men in his family, attended Yale University where he earned a degree in history and was a member of the Skull and Bones society. While his father and grandfather had served in the navy during wartime, he served in the Air National Guard during the VIETNAM WAR. Bush has described this period of his life as irresponsible and informed by bad choices, characterized by excessive drinking. After a failed congressional bid, he spent most of the 1980s working in the oil industry before purchasing a share of the Texas Rangers baseball team, of which he served as general manager from 1989 to 1994.

He ran for governor of Texas in 1994, the same year his younger brother Jeb ran for governor of Florida; Jeb lost, but was elected in 1998, the same year George won his reelection by a landslide. As governor of Texas, Bush was a noted conservative. State executions rose to higher levels than any other state in modern American history, and the line between church and state was worn thin when Bush declared June 10, 2000, to be “Jesus Day,” a state holiday in memory of Jesus and encouraging reaching out to those in need. At the time, Bush was running for president; in an early debate preceding the Republican primaries, he named Jesus (identifying him only by the religious title “Christ”) as the political philosopher he most identified with. He won the Republican nomination, picking Dick Cheney—his father's secretary of defense—as his running mate.

Voting irregularities in Florida, where Jeb was still governor, made it difficult to determine whether Bush or Clinton's vice president, Al Gore, had won the state, and the electoral vote in the rest of the country was close enough that the Florida votes would be the tiebreakers. Less than one-tenth of 1 percent separated the two candidates, requiring a series of recounts both by hand and machine, and precipitating a national controversy over reports of vote tampering, problematic ballot designs and the handling of overseas ballots, and the coincidence of a Bush governing the state. The U.S. Supreme Court finally ruled that with no time remaining to require a thorough and uniform recount, the state's then-official count—in favor of Bush—would be upheld. Gore conceded the election rather than fight the matter further.

More than any other president in recent memory, even in light of RONALD REAGAN'S COLD WAR rhetoric and its resemblance to “fire and brimstone” sermons, Bush has worn his faith on his sleeve, making frequent reference to God and Christian matters in his speeches. After the terrorist attacks of September 11, 2001, Bush

Black smoke billows from Ground Zero at the World Trade Center in New York City on September 11, 2001. Merely months into his presidency, the events of September 11 proved pivotal for the rest of George W. Bush's two terms.

declared a “war on terrorism,” and shortly identified an “axis of evil” (Iran, Iraq, and North Korea) as those states most guilty of sponsoring terrorist activity. Both terms of his presidency have been defined by this initiative. While foreign policy led to war with AFGHANISTAN and a protracted war in Iraq, domestic policy was affected by the USA Patriot Act and the creation of the Department of Homeland Security. The Office of Strategic Influence was created in secret to develop psychological means of furthering the war on TERRORISM, changing its name once the public discovered its existence.

Bush and his administration have come under constant criticism. He has positioned himself as his father's successor, staffing his cabinet with several men associated with the elder Bush and repeatedly referring to an Iraqi assassination attempt (“they tried to kill my dad”) as part of his justification for the war in Iraq. His approval rating has dipped as low as 28 percent, among the lowest presidential approval ratings in history, and several

prominent movements have called for his impeachment, usually in response to the controversy surrounding the National Security Agency's warrant-less surveillance. His slow response to the failure of the levees in New Orleans when Hurricane Katrina struck in 2005 has also come under fire, particularly given his support of the clearly ineffective Federal Emergency Management Agency (FEMA).

Canada after 1950

Since the mid-20th century Canada has been a constitutional monarchy and a parliamentary democracy with a federal system of parliamentary government. Canada's constitution governs the legal framework of the country and consists of written text and unwritten traditions and conventions.

Until November 1981 Canada's government retained strong ties to the British parliament; the Canadian constitution could only be amended by an act of Great Britain's parliament. Throughout the 1960s and 1970s negotiations between the provinces and the federal government that were designed to patriate the constitution and provide an amending procedure were unsuccessful. These negotiations between the federal government and the English-speaking provinces finally bore fruit in 1981, giving Canada full amendment powers over its own constitution.

Prior to this, Queen Elizabeth II of England had been the chief of state, and despite the patriation of the constitution, ties between Canada and the COMMONWEALTH OF NATIONS remain close. On September 27, 2005, Michaëlle Jean was appointed by the queen, on the advice of the prime minister, as governor-general of Canada for a five-year term.

In February 2006 Stephen Harper became prime minister. This position belongs to the leader of the political party that can obtain the confidence of a majority in the House of Commons, whose members are elected by the citizens by simple plurality in one electoral

district. General elections are called by the governor-general when the prime minister so advises, and must occur every five years or less.

Ever since its founding, Canada has had two official languages, English and French, which are the mother tongues of 56 percent and 28 percent of the population, respectively. On July 7, 1969, the Official Languages Act was proclaimed, and French was made commensurate to English throughout the federal government. This started a process that led to Canada's redefining itself as a "bilingual" nation. French is mostly spoken in Quebec province, parts of New Brunswick, eastern and northern Ontario, Saskatchewan, the south of Nova Scotia, and the southern Manitoba province. Several aboriginal languages also have official status in the Northwest Territories. Inuktitut is the majority language in NUNAVUT and has official status there.

Since the mid-20th century religion patterns have not changed much. They changed with the arrival of new immigrants, as they did during the country's early days. Seventy-seven percent of Canadians identify themselves as Christians, and of that Catholics make up the largest group (43 percent). The largest Protestant denomination is the United Church of Canada; about 17 percent of Canadians have no religious affiliation; and the remaining 6 or 7 percent practice religions other than Christianity.

Canada's entertainment industry grew alongside the United States's leading film and music industry, having had a quick development during the 1950s and 1960s, but the most rapid development after the 1990s. For

decades the Canadian film market was dominated by the American film industry, but then Canadians developed a vigorous film industry that produced a variety of well-known films, actors, and directors.

Canada's film industry is in full expansion as a site for Hollywood productions. The series *The X-Files* was famously shot in Vancouver, as was *Stargate*, the 2003 version of *Battlestar Galactica*, and *The Outer Limits*. The American series *Queer as Folk* was filmed in Toronto. After the 1980s Canada—and Vancouver in particular—became known as Hollywood North.

Canadian literature shows a mixture of French and Anglo-Saxon trends. After the mid-20th century there were many advances in literature, mainly since the 1980s. But before those years Canada's literature also had some important authors. Whether written in English or French, Canadian literature reflects three main parts of the Canadian experience: nature and the relation with the sea, frontier life, and Canada's position in the world.

DIEGO I. MURGUÍA

Caribbean Basin Initiative

Launched by U.S. president RONALD REAGAN in 1983, the Caribbean Basin Initiative (CBI) built on the legacy of the ALLIANCE FOR PROGRESS (1961–69) to foster free trade, open markets, economic growth, and export diversification throughout the circum-Caribbean, including Central America.

Formally called the Caribbean Basin Economic Recovery Act (CBERA), and going into effect on January 1, 1984, the program was made permanent in the Caribbean Basin Economic Recovery Expansion Act (CBI II) in 1990 and was expanded substantially in 2000 under President BILL CLINTON in the Caribbean Basin Trade Partnership Act (CBTPA). The CBTPA, set to expire in 2008, includes 24 countries in a regional trading bloc akin to that created by the NORTH AMERICAN FREE TRADE AGREEMENT (NAFTA). Measured in

terms of the dollar values of goods exchanged, the initiative has proven successful. In 2004 the total value of CBI exports to the United States more than tripled from 1984, reaching \$27.8 billion, while U.S. exports to CBI countries reached \$24.5 billion, 1.6 percent of total U.S. exports, making the CBI region the eighth largest recipient of U.S. exports.

The CBI was launched during a period of escalating tensions between the United States and the Soviet Union, when the U.S. foreign policy establishment was deeply concerned with the growth of leftist and revolutionary movements in Central America and the Caribbean. By 1983 the Sandinista revolution in Nicaragua was entering its fourth year; the leftist FDR-FMLN political and guerrilla movements in El Salvador posed a serious challenge to that country's U.S.-supported government; and the Guatemalan military's U.S.-supported war against several guerrilla groups and genocidal campaign against the country's indigenous peoples had already peaked.

The October 1983 U.S. invasion of GRENADA to oust that country's anti-imperialist, Marxist-oriented government further underscored the geopolitical concerns of U.S. foreign policymakers. The CBI, which excluded Nicaragua until the Sandinista electoral defeat in 1990, was thus similar to Kennedy's ALLIANCE FOR PROGRESS in its goal of weakening Soviet and Cuban influence, preventing leftist movements and governments from expanding their power, and tightening the economic integration between the United States and the nation-states of its historic "backyard."

Scholarly interpretations of the CBI's economic and social impact vary widely. All observers agree that the CBI has expanded trade and promoted economic growth, but disagree over whether that growth has fostered sustainable economic development, diminished inequalities, alleviated poverty, or enhanced the social well-being of the majority. Critics charge that the CBI's export-led model of growth has done little to improve living standards and has perpetuated structural inequalities within CBI member countries and between them and the United States.

The CBI's supporters argue that economic growth remains the sine qua non of poverty alleviation and improved social conditions. While it is difficult to disaggregate the effects of CBI-induced economic changes from other factors, the evidence indicates that poverty rates, socioeconomic differentiation, and indices of social well-being in most CBI countries have seen marginal improvements at best since 1984. All observers agree that the CBI and related U.S. laws

will continue to have a major impact on the region's economies and inhabitants.

MICHAEL J. SCHROEDER

Carter, Jimmy

(1924–) U.S. president

James Earl Carter, Jr., was the president of the United States from 1977 to 1981, succeeding GERALD FORD. Though he only served a single term, his was a significant presidency in both foreign and domestic affairs, and he presided over a tumultuous time in American history.

Like his predecessor, he was a gifted student and athlete and a navy officer. He resigned from the navy in 1953 immediately following the death of his father and worked on his family's Georgia peanut farm for the rest of the decade, becoming active in local politics. In 1962 he was elected to the State Senate, and he ran for governor only four years later, losing, but winning the 1970 election. During the election, he seemed to pay lip service to segregationists, but he condemned segregation immediately upon attaining office. He was the first southern governor to condemn segregation, and he underscored his point by appointing blacks to many state offices. A reform-minded pragmatist, he worked at streamlining state government, condensing programs and agencies while increasing school funding, especially in the poorer parts of the state.

But nothing in his governorship brought him to national attention, and when he ran for president in 1976, he was almost a complete unknown. He made his reorganization of state government the centerpiece of his national campaign, and his soft-spoken charisma, southernness, and traditional moral character (Carter had taught Sunday school for years, and his sister Ruth was a well-known evangelist) were well received in the aftermath of Nixon's corruption and Ford's irrelevance. Though his opposition to segregation distanced him from the Dixiecrats, he was conservative for a Democrat and had criticized 1972 Democratic candidate George McGovern for being too liberal. Sentiment was against Ford sufficiently for Carter to win the election,

albeit by a slim (2 percent) margin. He was the first southerner elected president since 1848.

As president, Carter inherited a difficult economic situation. Stagflation and the 1973 oil crisis had discouraged growth for too long, after the lengthy healthy period to which Americans had become accustomed after World War II. The 1979 energy crisis followed the IRANIAN REVOLUTION, when the (previously American-supported) shah of Iran fled his country and allowed the AYATOLLAH KHOMEINI to seize power. Inflation reached double digits, and although many of Carter's fixes were probably effective, the results were not seen until after he had lost the 1980 election.

Where Carter excelled was in diplomacy. In September 1978 he brought Israeli prime minister Menachem Begin and Egyptian president Anwar el-Sadat to Camp David, to continue and finalize peace negotiations that had been ongoing for months in the wake of the Yom Kippur War and the other Middle Eastern conflicts of the decade. The Camp David accords remain one of the most important developments in modern Middle Eastern relations, setting a precedent for Arab-Israeli diplomacy while segregating powerful Egypt from its Arab allies.

Carter's foreign policy was driven by his respect for human rights, which may have influenced his decision to deny the shah's request for help during the Iranian Revolution. Though the shah's reign had begun with American support immediately after World War II, and his governance remained more liberal and Western-friendly than any other in the region, his social policies were still a far cry from what even conservative Westerners would support, and by the late '70s, this gap was more pronounced than it had been 30 years earlier. Carter did eventually grant the exiled shah entry to the United States for cancer treatment in October 1979. In response, Iranian militants seized the American embassy in Tehran and held 53 hostages for more than a year. There is widespread speculation that the final negotiations were delayed by parties seeking RONALD REAGAN's election; the hostages were released on the day of his inauguration.

The combination of the failing economy and the hostage crisis led to Carter's loss to Reagan in the 1980 election. For years he was considered something of a joke, emblematic of a weak Democratic Party unable to contend with the 12-year Reagan-Bush era. He remained active in humanitarian work, especially in the areas of human rights and public health, and was only the third U.S. president to be awarded the Nobel Peace Prize. Since the 1990s he has taken on a role as occasional diplomat, visiting countries such as North Korea and Venezuela, and was the first president to visit Cuba

since the 1959 revolution. He has also been active with the charity Habitat for Humanity.

BILL KTE'PI

Castro, Fidel

(1926–) *Cuban revolutionary leader*

Head of the Cuban Communist Party and leader of the CUBAN REVOLUTION, Fidel Castro is one of the major world figures of the second half of the 20th century. One of the longest-lived heads of state in modern times, and one of the most controversial, Castro was born out of wedlock on August 13, 1926, a few kilometers south of the Bay of Nipe in then-Oriente province (present-day Holguín) in eastern Cuba. His father, Angel Castro y Argiz, was a Galician immigrant and owner of a large sugar estate; his mother, Lina Ruz González, was a servant in Angel's house and, after Fidel's 17th birthday, Angel's second wife. As an adult, Fidel grew estranged from his parents, maintaining close relations mainly with his younger brother Raúl, who also became one of the revolution's premier leaders.

Graduating from the Jesuit high school Belén in Havana in 1945, Castro entered the University of Havana the same year. In 1947 he joined the moderately reformist and anti-imperialist Orthodox Party (Partido Ortodoxo), led by Eduardo Chibás. In 1948 he traveled to Bogotá, Colombia, for a student conference being held alongside the ninth meeting of the Pan-American Union. There he witnessed and participated in the extraordinary events of the Bogotazo, in which liberal leader JORGE GAITÁN was assassinated and Bogotá erupted in massive street violence. The events are considered to have had a major impact on his thinking on the role of violence and popular insurrection in sparking social change.

Returning to Cuba, he married Mirta Díaz Balart, daughter of a wealthy Cuban family. He earned his law

Fidel Castro in his early days in power. He was the undisputed leader of Cuba from 1959 until 2008.

degree in 1950 and joined a small firm in Havana whose work focused mainly on the poor. Intensely interested in politics, he became a parliamentary candidate in 1952, only to see the elections cancelled following the coup by General Fulgencio Batista.

Determined to challenge the regime, he and his brother Raúl plotted and carried out an assault on the Moncada barracks in eastern Cuba on July 26, 1953. The assault proved a military defeat but a political victory, with his four-hour "History will absolve me" speech at his October 1953 trial propelling him into national prominence. Imprisoned for less than 20 months of a 15-year sentence (released in May 1955 in a general amnesty), he went into exile in Mexico and began organizing his 26 July Movement, composed of Cuban exiles and other Latin Americans, including ERNESTO "CHE" GUEVARA.

Forming the nucleus of a guerrilla army, he and his followers returned clandestinely to eastern Cuba on December 2, 1956, where for the next two years they waged a guerrilla war against the Batista regime. Seizing power on January 1, 1959, he was still vague about his ideology, which by his public statements could be

characterized as broadly nationalist and focused on issues of social justice. From 1959 to 1961 the revolution radicalized and became integral to the COLD WAR. In December 1961 he announced, “I am a Marxist-Leninist.” Since 1959 he was the undisputed leader of the Cuban revolution and government—revered by some, despised by others (especially the Miami-based Cuban exile community)—and renowned for his volcanic energy, hours-long speeches, and hands-on leadership style. In early 2007 his death appeared imminent, but he remained in power until his resignation in February 2008.

MICHAEL J. SCHROEDER

Central Asia after 1991

The former Soviet Republics of Central Asia consist of the present-day states of Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. All five of the so-called stans received their independence during the fall of the Soviet Union in 1991. Often the five former Soviet republics are considered collectively because they share many of the same challenges and problems.

One challenge commonly faced by the states of Central Asia is the rise of radical Islam. The geographic center of the movement is the Fergana Valley. The valley is shared by Tajikistan, Uzbekistan, and Kyrgyzstan, and has hosted a centuries-long tradition of independent Islamic thinking. Namangan, a key city in the valley, is also the home of a key founding member of the radical terrorist group the Islamic Movement of Uzbekistan (IMU): Juma Namangani.

Another typical problem in the region is one of effective governance. Recent WORLD BANK ratings attest to the regional governance dilemma. Quantitative scores for variables such as voice and accountability, political stability, government effectiveness, regulatory quality, rule of law, and control of corruption rank near the bottom third for each state.

Another significant problem in Central Asia is the environment. Cities in the region face water shortages and contaminated water, pollution, and radioactive and toxic waste issues. Radon and uranium levels are nota-

bly high in the region. Many have suggested that the chronic environmental problems have been inherited from the Soviet regime. During the 1930s Joseph Stalin attempted to increase Soviet cotton production by constructing new canals in order to irrigate Central Asian lands. Water from the Aral continues to be diverted to the existing irrigation systems. As a result, a contemporary ecological problem is the constant shrinking of the Aral Sea. In addition, land surrounding the Aral Sea faces desertification, which jeopardizes homes and businesses near the water. Airborne pollutants have resulted in high levels of tuberculosis, viral hepatitis, and cardiovascular and liver diseases.

Although each of the former Soviet Central Asian republics face similar challenges, each state also offers a different narrative, and generalizations do not tell the entire story. Indeed, each of the five former Soviet republics has embarked on different paths since independence.

KAZAKHSTAN

The formal name for Kazakhstan and the successor to the Kazakh Soviet Socialist Republic is the Republic of Kazakhstan. The capital is Astana. Kazakhstan is 1,049,155 square miles (about twice the size of Alaska). Figures from 2004 show a population of 15,143,704. Approximately 47 percent of all Kazakhs are Muslim. The predominant languages are Kazak and Russian. Kazakhstan neighbors Russia to the west and north, China to the east, and Kyrgyzstan, Uzbekistan, and Turkmenistan to the south. President Nursultan Nazarbayev has served as the chief of state since before the December 16, 1991, day of independence.

A sense of identity in Kazakhstan developed during the Soviet era. Ethnic Kazakh Dinmukhamed Kunaev served as the first secretary of the Kazakh Communist Party from 1956 to December 1986. MIKHAIL GORBACHEV replaced Kunaev with a Slav named Gennady Kolbin. The violence and rioting that followed forced Gorbachev to turn to another Kazakh in order to placate Kazakh opinion. During the August 1991 putsch against Gorbachev, Nazarbayev supported Gorbachev. Shortly afterward Nazarbayev banned all political activity in the government as well as in the courts and police. As the Soviet Union disintegrated, the Kazakh president was one of the last to push for independence from the Soviet Union.

Economically, Kazakhstan enjoys a prosperous grain agribusiness in the north and raises stock in the south. Many extractive minerals can be found in the northeast: coal, iron ore, lead, zinc, copper, chromite, nickel, molybdenum, and tin. In addition, Kazakhstan

enjoys large deposits of oil and gas. The rich natural resources have, in addition, made Kazakhstan an attractive destination for foreign direct investment. In fact, from 1991 to 2002, direct foreign investment in Kazakhstan was over \$13 billion. Kazakhstan boasts 4 billion tons of provable and recoverable oil reserves and 2 trillion cubic meters of natural gas. Estimates suggest that Kazakhstan may be able to produce about 3 million barrels of oil a day by the year 2015.

Kazakhstan's constitution dates to 1993. The system is a presidential-parliamentary model similar to that in Russia. The executive was to be popularly elected. In March 1994 the Constitutional Court found that the method previously used to elect representatives to the lower house of parliament was illegal. A change was made so that the lower house, the Majlis, would be elected and the upper house, the Senate, would be appointed. The president controlled seven appointments to the Senate, and indirect elections of a joint session of all representative bodies of all local government units filled the other 32. By December 1995 new parliamentary elections were held. Nazarbayev constructed his own political party, Otan, in 1999. That same year, 44 of 67 members in the lower house of parliament joined the Otan Party. The process for filling seats in the lower house was again changed. This time, 10 of the 67 possible seats were reserved for proportional representation for parties meeting a 7 percent threshold.

Under pressure from Nazarbayev during October 1998, the parliament moved elections scheduled for December 2000 to January 1999. Ultimately Nazarbayev won the elections and received more than 79 percent of the vote. However, many questions existed about the fairness of the 1999 elections. Former prime minister Akezhan Kazhegeldin, a significant opponent of the regime, was not allowed to run. Nazarbayev was re-elected in 2005 by more than 90 percent of the vote. Outsiders again criticized the election as unfair.

Overall, Kazakhstan operates in the tradition of strong presidential governments in the region, with a great deal of control in the hands of Nazarbayev and his family.

KYRGYZSTAN

The formal name of the independent successor to the Kirgiz Soviet Socialist Republic is the Republic of Kyrgyzstan. The capital is Bishkek. Kyrgyzstan is 76,640 square miles in total area (a bit smaller than Nebraska). Figures from 2004 indicate a population of 5,081,429. Approximately 75 percent of the Kyrgyzstan population is Muslim. The prominent languages are Kyrgyz

and Russian. Kyrgyzstan is bordered by Kazakhstan in the north, Uzbekistan to the west, Tajikistan to the west and southwest, and China to the east. Until the Soviet years, many in Kyrgyzstan were primarily nomadic. Life under the Soviet Union led to more modern life and movement to cities. Like many republics in the former Soviet Union, the late 1980s and early 1990s brought questions of identity to Kyrgyzstan.

Gorbachev's program of perestroika led to ethnic riots in 1990. In an area bordering Uzbekistan, riots led to the deaths of some 200 civilians. The leader of the Kyrgyz Communist Party, Absamat Masaliev, called for the Supreme Soviet to elect him as president. The movement called Democratic Kyrgyzstan emerged in opposition to Masaliev, and Askar Akayev was chosen as president.

Early in its history, Kyrgyzstan was seen by many as the most progressive of all Central Asian governments. In fact, the United States symbolically opened its first Central Asian embassy in Bishkek on February 1, 1992. By 1993 Kyrgyzstan was receiving the highest per-capita aid from the United States of any of the Central Asian states. In 1988 Kyrgyzstan was the first of the new Central Asian states to be invited to join the World Trade Organization. Bishkek has had fairly warm relations with Russia, which include the presence of Russian troops in Kyrgyzstan. The Central Asian state also offered bases to U.S. forces and allowed military flights into the Manas International Airport in the aftermath of the September 11, 2001, terrorist attacks.

Since independence, Kyrgyzstan has distributed free land to approximately 700,000 citizens. Much of the industry is devoted to extractive ventures. Mining of antimony and mercury ores are a source of revenue, and lead, zinc, and coal are all mined as well. Most of the economy, however, still relies on agriculture.

Akayev led Kyrgyzstan on a path of political liberalization. Eventually, opposition to market reforms from the legislature led to Akayev's calling for a referendum for February 1994. In that referendum, 96 percent of respondents favored Akayev and his economic program. He responded by dissolving a leftover from the Soviet era, the 350-seat Supreme Soviet. In its place Akayev created a bicameral legislature called the Assembly of the People of Kyrgyzstan. Elections were set for February 5, 1995. In those elections, more than 1,000 candidates ran for the 105 seats in the assembly. Approximately 80 percent of the candidates ran as independents and, ultimately, created an assembly very receptive to Akayev's policies.

Civic education students listen to a visiting local religious leader, or mullah, in Kyrgyzstan.

After the 1995 elections, Akayev began to increase his own power through a number of constitutional amendments. A policy of privatization resulted in about 61 percent of all state-owned enterprises being privatized by May 1997. At that time Akayev became convinced that state assets were being sold too quickly, and a one-year ban on privatization resulted. In April 1998 the legislature approved further privatization. Many within the political opposition, however, claim that members of the legislature personally profited from the privatization process. As the parliamentary elections of February–March 2000 grew nearer, the Kyrgyz government made a concerted effort to minimize the turnout of opposition parties. In fact, the Organization on Security and Cooperation in Europe criticized the elections as being unfair. Scheduled presidential elections in October 2000 created another challenge for Akayev. Akayev's most significant opposition was widely believed to be Feliks Kulov, a former vice president. Kulov, however, was arrested, acquitted, and rearrested on what many felt were fabricated charges, and eventually he pulled out of the race. Akayev was reelected with 74.47 percent of the vote.

After the election Feliks Kulov called for cooperation with Akayev's government. In spite of this, Kulov was arrested once again in 2001. In November that year, the opposition parties formed a "People's Congress" and, in what was mainly a symbolic move, elected Kulov chair. Opposition continued to grow when, in January 2002, a parliament deputy from southern Kyrgyzstan, Azimbek Beknazarov, was arrested. Clash-

es between protesters and government authorities in March resulted in the deaths of six individuals. In April Kyrgyz authorities launched an investigation into the deaths. In May, as the commission released its report, protests calling for the resignation of Akayev spread throughout Kyrgyzstan. Akayev ordered the release of Beknazarov and even replaced the prime minister. Participation exceeded 86 percent. The referendum found that 75.5 percent supported the notion that Akayev serve until the completion of his term—in 2005. But 12 opposition parties refused to participate in the referendum. The most significant change in the constitution was the movement from a bicameral to unicameral legislature, to be effective at the end of the legislative term.

On March 24, 2005, Akayev bowed to widespread protests and the will of the people and resigned. The "Tulip Revolution" was seen by many as the result of Akayev's inability to address growing levels of crime and corruption as well as questions concerning his reelection. In the political shakeup that ensued, Kurmanbek Bakiev became president, and Omurbek Tekebaev became speaker of the Jogorku Kenesh, the parliament of Kyrgyzstan. Bakiev and Tekebaev engaged in a power struggle of their own.

TAJIKISTAN

The formal name for Tajikistan is the Republic of Tajikistan, which is the independent successor state to the former Tadzhik Soviet Socialist Republic. Tajikistan's 2004 figures placed the population at 7,011,556. The predominant language is Tajik. Tajikistan is neighbored by China to the east, Afghanistan to the south, Uzbekistan to the west and north, and Kyrgyzstan to the north. Approximately 85 percent of Tajiks are Muslim. A large number of Tajikistan's Muslims are Sunni from the Hanafi School. Mountain Tajiks boast a number of Shi'ite communities. During the Soviet period, very few mosques were allowed. In addition, 80 percent of the population is Tajik, with the next-largest group being Uzbek at about 15 percent. The capital city of Tajikistan is Dushanbe.

During the Soviet period, Tajikistan was typically ruled by leaders sent by Moscow. As late as 1990 Tajiks were a minority in the Tajik Communist Party. The programs of perestroika and glasnost introduced by Gorbachev changed the dynamics of Tajik politics. In August 1990 the Tajik Supreme Soviet claimed sovereignty. The Tajik Communist Party leader and chair of the Supreme Soviet, Kakhar Makhkamov, resigned in August 1991 because of his support for

the hard-liner coup against Gorbachev. Makhkamov was replaced by Kadriiddin Aslonov. Upon his appointment, Aslonov immediately resigned from the Politburo of the Tajik Communist Party and used a decree to ban the Communist Party of the Soviet Union from Tajik territory. The Tajik Supreme Soviet responded by ousting Aslonov as chair and electing Rakhmon Nabiyev. Nabiyev resigned as the chair of the Supreme Soviet on October 6. Elections set by the Supreme Soviet on November 24 initially featured 10 candidates—ultimately 7 would vie for the position. Rakhmon Nabiyev won of the November 1991 election with 56.9 percent of the vote.

By the spring of 1992 opposition to Nabiyev came in the form of the Islamic-led Union of Popular Forces. The union pushed for multiparty elections, greater freedom of religion, and the removal of Nabiyev. The Tajik parliament gave Nabiyev the use of decree in order to strengthen the hand of the executive. Political protests continued, and Nabiyev resorted to the use of a state of emergency. In May opposition forces seized the capital and created a revolutionary council. Nabiyev lifted the state of emergency and promised to form a government of reconciliation. Eight seats in the new government were reserved for a coalition of democrats and moderate Islamists and the Islamic Revival Party.

The compromise government only brought a brief period of peace. Nabiyev now not only faced criticism from Islamic opponents but also found himself under attack from ex-communists who insisted that he had ceded too much to the opposition. The central government quickly lost control of the countryside. Former communists began to seize local governments in the north, and the Islamists seized local governments in the south and the east. Nabiyev requested international peacekeepers from the Commonwealth of Independent States, while opposition forces declared an open rebellion. Nabiyev was captured as he attempted to flee Dushanbe and was forced to resign. A new Islamic-democratic coalition government, led by Akbarsho Iskandarov, claimed control. The end result, at least for a time, was that the most developed regions of Tajikistan—the north—fell under the power of ex-communists aligned with Nabiyev. Forces loyal to Nabiyev took over Dushanbe on December 10 and installed Emomali Rakhmonov as acting president. The Islamic forces fled to the mountainous regions of Tajikistan and to areas over the border in Afghanistan. The Tajik civil war was in full swing.

As the war continued, the Tajik government received a great deal of financial and military sup-

port from Russia. By the fall of 1993 there were some 20,000 Russian troops in Tajikistan. Russian finances were providing an estimated 50 percent of the Tajik budget as well. The nearby government of Uzbekistan also provided a significant amount of support. In the summer of 1994 talks between the rebels and the Tajik government, held in Islamabad, led to a cessation of hostilities. In November 1994 presidential elections were held between Rakhmonov and former prime minister Abdumalik Abdulajanov. The new constitution was approved, and Rakhmonov won reelection with 60 percent of the vote.

By early 1996 President Rakhmonov faced accusations of corruption. Russia informed Rakhmonov that they would not intervene again to save the regime. Rakhmonov began negotiations with the rebels and dismissed several high-ranking government officials. Under a great deal of pressure from the Russians, Rakhmonov traveled to Moscow in December 1996 to meet with the Islamic Renaissance Party, the largest party within the United Tajik Opposition (UTO). A peace agreement was reached, and a Reconciliation Council was formed. Once Rakhmonov returned to Dushanbe, however, he was unable to convince political allies to sign off on the agreement. Again, after tremendous pressure from Russia, Rakhmonov returned to Moscow in the spring of 1997 to negotiate with the UTO. Rakhmonov agreed to allow opposition troops into the Tajik armed forces. Meetings followed in Tehran in April 1997 and in Moscow in June 1997. The two political parties that supported the government—the People's Party and the Political and Economic Renewal Party—combined to form the National Unity Movement. Tajik politics were set to be a contest between two different parties: one in support of President Rakhmonov and one opposition party. The movement to a two-party system, it was hoped, would have the effect of limiting the violence inherent heretofore in Tajik politics.

The late 1990s were characterized by a number of political assassinations. In 1998 opposition politician Otakhon Latifi was killed, and a former prosecutor general, Tolib Boboyev, was killed in early 1999. The 1997 agreement called for parliamentary elections by 1998, but the ban on Islamic political parties retarded rapid reconciliation. The Tajik people, by 1999, faced three crucial amendments: the establishment of Islamic political parties, the creation of an upper chamber of parliament, and a single seven-year presidential term. All three amendments were approved on September 26. Presidential elections were scheduled for November 6,

1999, and lower-house parliamentary elections for February 27, 2000.

Three potential presidential candidates were not allowed on the ballot based on the claim that they had not achieved the required number of signatures. The Islamic Renaissance Party—a key member of the UTO—called for a boycott of the presidential elections. The end result was that Rakhmonov only faced nominal resistance and was reelected with 96 percent of the vote. Parliamentary elections were just as complicated. In fact, the Supreme Court used various legal machinations to suppress opposition. The only parties to meet the 5 percent parliamentary threshold were the People's Democratic Party, the Communist Party, and the Islamic Renaissance Party. Elections for the newly created upper house, the Majlisi Milliy, were held on March 23, 2000. In the Tajik system of governance, the Majlisi Milliy theoretically serves as a stabilizing factor in domestic politics.

As in other states in the region, one of the primary concerns of the Tajik government is the specter of radical Islam. The Islamic Movement of Uzbekistan (IMU), which was headquartered in AFGHANISTAN, launched incursions into Kyrgyzstan via Tajikistan in 1999 and 2000. The Hizb ut-Tahrir later became a concern as well. Hizb ut-Tahrir called for an Islamic state in Central Asia. In 2002 President Rakhmonov stepped up attacks and surveillance of Islamic groups. Another significant modern problem facing Tajikistan is the transit of illegal drugs and associated problems.

As a result of the 1992 to 1997 Tajik civil war, Tajikistan's relations with Russia have been close. Even after the civil war ended, Russian troops remained in order to protect the Tajik border with Afghanistan. During the reign of the TALIBAN in Afghanistan, Tajikistan offered sanctuary to a Tajik commander and his troops. Ultimately, Tajikistan feared the potential spread of radical Islam from Afghanistan. After the terrorist attacks of September 11, 2001, on the United States, Tajikistan was among the first to offer cooperation with the United States—despite the relatively warm relationship between Tajikistan and Russia. Tajikistan permitted the use of the Dushanbe Airport and allowed the basing of a small contingent of U.S. troops within its sovereign borders.

Tajikistan boasts a presidential-parliamentary government. The president is popularly elected within a multiparty system and fills both the ceremonial role of head of state and the policy-creating role of a chief executive officer. The prime minister is appointed by the president and is confirmed by the lower chamber

of parliament. The prime minister and the cabinet control the day-to-day operations of the government. President Rakhmonov and many of his political allies are former members of the Tajik Communist Party. The power-sharing arrangement of 1997 guaranteed 30 percent of government and local posts to opposition parties. Key to this arrangement is the reality that all geographic areas are represented. The power-sharing agreement was renewed in 1999 and then again, indefinitely, in 2002.

Most of the Tajik economy is agricultural, and cotton is the most dominant agricultural product. Industrially, Tajikistan is mostly involved in the light manufacturing segments of cotton and silk processing. But Tajikistan is rich in nonferrous metals. Mining of coal, iron, lead, zinc, antimony, mercury, gold, tin, and tungsten are the most common extractive industries. Some deposits of oil and natural gas have also been discovered. Over three-quarters of Tajiks live at or near the poverty line. Politically, the uneasy peace that lasted since the end of the Tajik civil war offered some optimism for the future of that state.

TURKMENISTAN

The formal name for Turkmenistan is the Republic of Turkmenistan, which is the successor to the Turkmen Soviet Socialist Republic. Figures from 2004 indicated a population in Turkmenistan of 7,011,556. Muslims account for 85 percent of the population in Turkmenistan, which is 186,400 square miles in area. The capital city is Ashgabat, and Turkmenistan is bordered by Kazakhstan to the north, Uzbekistan to the north and east, and Iran and Afghanistan to the south. The Caspian Sea lies to the west. The Turkmen landmass is dominated by the Kara Kum Desert, also referred to as the Black Sand Desert. The Kara Kum Canal is the largest irrigation and shipping canal in the world. Approximately three-fourths of all citizens of Turkmenistan are Turkmen, with the next-largest ethnic groups being Uzbek, at about 9 percent, and Russian, at 6.7 percent. Since independence, a significant problem has been the flight of Russians.

Although loyal to the Soviet Union, the Turkmen Supreme Soviet declared sovereignty in August 1990. Saparmurat Niyazov, first secretary of the Turkmen Communist Party, was elected to the office of president in October 1990. After the coup attempt on Gorbachev, in 1991, Niyazov declared Turkmen independence and scheduled a referendum for October 26. In the referendum 94 percent favored independence. The next day Niyazov made independence

official and seized all assets of the Soviet Communist Party. The Turkmen Communist Party was renamed the Turkmen Democratic Party and elected Niyazov as chair.

Niyazov served as president until late December 2006. Turkmen foreign policy is based upon a number of bilateral agreements and does not allow multilateral agreements. In terms of domestic policy, Niyazov engaged in a strategy to enhance the Turkmen culture. He adopted the name the Great Turkmenbashi and claimed a “monopoly on wisdom.” Attempts to isolate Turkmenistan included the banning of opera, the closing of concert halls and the circus, ending the Academy of Sciences, and institution of Turkmen-only language laws. In addition, Turkmenistan had no recognized opposition parties. A referendum held in January 1994 on whether Niyazov’s term should be extended to 2002 resulted in a reported 1,959,408 for, 212 against, and 13 spoiled ballots. In November 2002, however, Niyazov survived an assassination attempt. In 2003 Niyazov constructed penal colonies in the Karakum desert in an effort to, according to Niyazov, make society healthier by cleansing society. Niyazov died in late December 2006 and was succeeded by Deputy Prime Minister Gurbungali Berdymukhamedov.

Initial elections were held in December 1994. During the legislative elections, no opposition party was able to meet the standards required for registration. Hence the vast majority of the 1994 victors were all members of the Democratic Party of Turkmenistan—and ran unopposed. In December 1999 parliamentary elections were held once again. This time 102 candidates competed for 50 seats. Again—other than a few scattered independents—the candidates were almost exclusively members of the Democratic Party of Turkmenistan.

In 2002 the former chair of the Turkmen Central Bank, Hudaiberdi Orazov, joined the anti-Niyazov forces. Orazov was fired as deputy prime minister in 2000. Characterizing himself as a reformer, Orazov lost some credibility when he was charged with embezzling money from the Turkmen government. Orazov later admitted partially to the charges and even returned \$100,000 in funds. All three major political opponents ended up living in Moscow. Niyazov followed with a purge of the National Security Committee in March 2002. Defense Minister Kurbandurdy Begendjev was also fired, as were a number of other high-ranking officials on the National Security Committee. A month later, in May 2002, the former head of the National Security Committee and 21 of his subordinates were accused of a number of crimes that included murder, hiring prosti-

tutes, accepting bribes, and corruption. Also charged with corruption was ex-defense minister Begendjev. The trials proceeded very rapidly and led to long prison sentences. Purges also led to the dismissals of the chair of the National Bank, the head of the country’s main television outlet, the chair of the Council for Television and Radio Broadcasting, and the rector of the Institute of Culture.

Perhaps one of the most mysterious developments in Turkmenistan’s politics was the attempted assassination of Niyazov on November 25, 2002. A number of conflicting accounts emerged, but what they all shared was that an armed attempt was made on Niyazov and that his car escaped untouched. Some political opponents accused Niyazov of masterminding the attack himself in some sort of effort to enhance his political position both domestically and internationally. Niyazov used the attack as an excuse to crack down on the opposition again. The assassination attempt was followed by the arrests of hundreds—including a number of foreign citizens. Niyazov raided the Uzbek embassy and accused them of harboring assassination conspirators, and then expelled the Uzbek ambassador. Somewhat ironically, regime opponent and former foreign minister Boris Shikhmuradov was arrested several days before the assassination attempt while attempting to secretly enter Turkmenistan from Uzbekistan. Shikhmuradov was sentenced to life in prison. In early 2003 Niyazov was pursuing law enforcement and security officials because of the assassination attempt.

Turkmenistan utilized the Soviet-era government system until December 1994. At that point Turkmenistan created a new system in which the president is the head of state and head of government. The legislative arm of Turkmenistan is the Majlis and consists of 50 members elected for a five-year term. Niyazov dominated the legislative branch.

The Turkmen system also includes constitutional and supreme courts. The constitution of Turkmenistan also calls for a body called the Khalk Maslakhaty (People’s Supreme Council). The People’s Supreme Council is the country’s supreme consultation body. Theoretically, the People’s Supreme Council is to meet annually, but it met for the first time in three years in August 2002. The council includes cabinet members, local executive bodies, judges, and members of some nongovernmental organizations. At the 2003 annual meeting the Khalk Maslakhaty took over many of the functions previously entrusted to the Majlis.

Economically, Niyazov spoke in favor of private property. In December 1996 Niyazov began a program

of leasing that allowed farmers to receive land from state farms free of rent for a period of 15 years. Cotton is a leading agricultural product, but grain is also produced. Industry in Turkmenistan is limited mainly to extractive ventures and, specifically, oil and gas. Turkmenistan has the third-largest natural gas reserves in the world, and its Caspian Sea oil deposits are topped only by those in Kazakhstan. Foreign investment, in large part due to the nature of Niyazov's regime, has been very slow. Major markets for Turkmen gas now include western Europe, Russia, Ukraine, and Iran.

The growth of Turkmenistan has been slow and painful. Energy sales provided needed funds, but these funds were almost all spent by Niyazov in efforts to enhance his own cult of personality. Ultimately, Turkmenistan's future was clouded by the possibilities of political instability, made even more cogent with the death of Niyazov on December 21, 2006. In February 2007 Gurbungali Berdymukhamedov was elected president.

UZBEKISTAN

Officially the Republic of Uzbekistan, Uzbekistan is the former Uzbek Soviet Socialist Republic and is the most populated of all the Central Asian states. Uzbekistan celebrated its independence on September 1, 1991. Tashkent is the capital city of Uzbekistan. Figures from 2004 showed an Uzbek population of 26,410,416. Approximately 88 percent of all Uzbeks are Muslim. In terms of area, Uzbekistan is 186,400 square miles, which makes it about the size of California. Uzbekistan is bordered by Kazakhstan on the west and south, Kyrgyzstan and Tajikistan to the east, Afghanistan to the south, and Turkmenistan to the south and west. Principal languages are both Uzbek and Russian. Uzbeks make up about 80 percent of the total population and are followed by Russians (5.5 percent) and Tajik (5 percent). Geographically, Uzbekistan boasts parts of the Amu Dar'ya River Valley and the Kysyl-Kum Desert. In eastern Uzbekistan the landscape includes the Tien Shan Mountain Range and the politically significant Fergana Valley. Uzbekistan also borders the environmentally troubled Aral Sea. Since 1936 Uzbekistan has also included the Kara-Kalpakia Autonomous Republic. Approximately 1.2 million people live in the Kara-Kalpakia Region.

Uzbekistan's Soviet era was most notable for its impact on regional agriculture. During the 1950s the Soviets completed large irrigation projects that transformed present-day Uzbekistan into a large cotton producer. During the Soviet era, the Communist Party

controlled the politics of Uzbekistan. However, with Gorbachev's perestroika came a nascent nationalist movement. In June 1990 the Uzbek Supreme Soviet passed a resolution of sovereignty. After the failed coup of 1991 against Gorbachev, the leader of the Uzbek Communist Party, Islam Karimov, remained silent until it was clear the putsch would be defeated. Then Karimov condemned the coup and quickly acted to ban the Communist Party in the police and the armed forces. In August of that same year, Uzbekistan declared independence. By September, Karimov had changed the Uzbek Communist Party to the People's Democratic Party.

Upon independence Karimov began to utilize a strategy of nationalism. Under Karimov's direction, the Uzbek Supreme Soviet called for elections for December 29, 1991. Although opposition political parties were allowed, they were not permitted to act freely. In fact, Birlik, a popular opposition party, was not permitted to field a candidate for the December elections. Uzbek authorities banned the Islamic Renaissance Movement, which called for the formation of an Islamic state. Only the Erk Democratic Party provided an opposition candidate to Karimov. In the December elections, Karimov won 86 percent of the vote and the Erk candidate 12.4 percent. Soon after the election, the Erk Democratic Party was banned, and leadership in the party fled to Turkey.

December 1994 brought parliamentary elections to Uzbekistan. The recently amended constitution called for 250 deputies—in place of the 500 formerly seated. Political opposition was not permitted. The two main political parties were the ruling People's Democratic Party, which won 205 seats, and the government-created National Progress Party, which won six seats. Presidential elections scheduled for 1996 were postponed until 2000 with a 1995 referendum. Karimov won another five-year term in January 2000 with 91.9 percent of the popular vote. The only other option for voters was Karimov's hand-selected opposition, Abdulhafiz Dzhahalov. Dzhahalov headed the People's Democratic Party—the party Karimov ran until 1996. Another referendum followed in January 2002 and delayed the scheduled 2005 elections until 2007.

A critical issue facing Uzbekistan is militant Islam. In his first few years in office, Karimov encouraged Islam. However, a 1997 attack on four policemen in the city of Namangan placed the Karimov regime on notice that radical Islam might be a potential problem. The Islamic threat became even more pronounced following a February 1999 assassination attempt on Karimov. On the way to a cabinet meeting, Karimov's

motorcade was attacked. Although the president was uninjured, 16 were killed and 80 others wounded. The government immediately placed blame on Islamic extremism. Observers of the Uzbek government claimed that the Islamic threat was one that was exaggerated by Karimov in order to rationalize further crackdowns on Islam.

After the September 11, 2001, terrorist attacks on the United States, Islam Karimov was one of the first to offer his country's support. Uzbekistan ultimately offered use of its airspace and modern air bases and allowed the United States limited basing privileges. For its part, the United States served Uzbek interests with its attack on the Taliban in Afghanistan.

Islamic militants launched a number of suicide bombings in Tashkent from March 28, 2004, to April 1, 2004. Security officials claim that the attackers were trained in Pakistan and had links to AL-QAEDA. In addition, wider attacks were most certainly planned, as law enforcement seized 50 suicide belts from one Uzbek woman. Government figures claim that the attacks resulted in the death of 47, including 10 policemen and 33 militants. Initially the government blamed the Hizb ut-Tahrir. Soon after, a theory emerged that the attacks were the result of a resurgent IMU. Law enforcement officials finally settled on the arrest of members of Jamoat, which translates into "community." Jamoat is believed to be the remnants of IMU cadres. In July 2004 further attacks commenced against the Israeli and U.S. embassies and the Uzbek General Prosecutor's Office.

The relationship between Uzbekistan and the United States certainly was strained in May 2005. During that month Uzbekistan is said to have massacred demonstrators in the Fergana town of Andijhan. Karimov claimed that the uprising was a result of the United States's and nongovernmental organizations' attempts to replicate the successful revolutions in Georgia, Ukraine, and Kyrgyzstan. By July 2005 Karimov served notice that the United States should cease operations at the Uzbek air base at Karshi-Khanabad within 180 days.

The government of Uzbekistan is a presidential-parliamentary system, but the president has been dominant since independence. Karimov ruled initially through the Uzbek Communist Party and then changed its name to the People's Democratic Party. Karimov resigned party leadership in 1996 in order to show a semblance of pluralism. However, all five political parties represented in the Oliy Majlis—the parliament—are from parties created by Karimov. In addition, of the 250 seats in the Oliy Majlis, the largest bloc is reserved for local government representatives.

Uzbekistan is heavily reliant on agriculture and, in particular, on the growth of cotton. The majority of its cotton ends up being exported. Uzbek cotton also accounts for two-thirds of all Central Asian cotton, and Uzbekistan is the second-largest exporter of cotton in the world. Most of the food consumed by Uzbeks is produced in the many small farms throughout the country. All Uzbek agriculture is heavily dependent upon the irrigation system, a remnant from the Soviet era.

Uzbekistan also boasts large reserves of coal, natural gas, and petroleum. Russia is a large consumer of Uzbek gas. Mining of gold is also a source of income for Uzbekistan. In 2001 gold exports made up 9.6 percent of the Uzbek GDP. Copper, zinc, and lead ores are mined, and uranium is also produced in Uzbekistan. The partnership between Uzbekistan and the United States in the war on terror brought economic relief to Uzbekistan. In November 2001 the United States offered Karimov a \$100 million grant in order to make Uzbek currency fully convertible. James Wolfensohn of the WORLD BANK visited Tashkent in April 2002 and offered \$350 million to fund infrastructure projects over two years and \$40 million to aid in improving water supplies. Yet the economy of Uzbekistan, like those of others in Central Asia, is troubled and operates at levels considerably lower than it did during the Soviet era.

MATTHEW H. WAHLERT

Chávez, Hugo

(1954–) *Venezuelan president and revolutionary*

Hugo Rafael Chávez Frías, president of Venezuela from February 1999 to the present writing in 2008, ranks as one of the most influential and controversial

figures in post-COLD WAR Latin America. Distinguished by his left-populist policies, strident anti-imperialism and anti-neoliberalism, promotion of Latin American integration—often bombastic and polarizing rhetoric—and volcanic energy, and the driving force behind Venezuela’s so-called Bolivarian revolution, Chávez elicits strong emotions among both supporters and detractors. A key debate among scholars is whether his “democratic socialism” will lead to a populist dictatorship characteristic of Latin America in the 20th century, or whether his government can pursue a populist social revolution while maintaining the democratic political structures that have endured since the days of RÓMULO BETANCOURT in the late 1950s.

Born on July 28, 1954, in the city of Sabaneta (pop. 20,000), capital of the southwestern plains state of Barinas, and of Spanish, Indian, and African ancestry, he was the second son of school teachers, receiving a good education. At age 17 he entered the Venezuelan Academy of Military Sciences, where he graduated four years later as a sub-lieutenant. He attended Simón Bolívar University in Caracas, sharpening his political views on pan-American nationalism (“Bolivarianism”), socialism, and anti-imperialism. For the next 17 years he served in the military, rising from counterinsurgency paratrooper and platoon commander to lieutenant colonel and instructor at the Venezuelan Military Academy. On July 24, 1983, on the bicentennial of the birth of Simón Bolívar, Chávez and his comrades secretly founded the Bolivarian Revolutionary Army (Ejército Revolucionario Bolivariano, or ERB-200) with the goal of launching a Bolivarian revolution in Venezuela.

On February 4, 1992, in the midst of widespread popular disaffection for the government of President Carlos Andrés Pérez and his free-market reforms (manifest most dramatically in the massive street protests and riots known as El Caracazo, in February 1989), the ERB launched a failed coup attempt. Appearing on national television, Chávez became an overnight celebrity for his vigorous denunciations of the government’s corruption and cronyism before he and other coup leaders were jailed. Two years later he was released in an amnesty by the government of President Rafael Caldera. Reorganizing the ERB as the Fifth Republic Movement (Movimiento Quinto República, or MQR) and campaigning on his Bolivarian platform, in December 1998 he won the presidency with 56 percent of the popular vote.

Once in office, Chávez embarked on a wide-ranging program of social, economic, and political

reforms. In 1999, after seeing many of his initiatives blocked by the National Assembly, he oversaw the writing and promulgation of a new constitution, which granted the executive greater powers and renamed the country the Bolivarian Republic of Venezuela (República Bolivariana de Venezuela). Re-elected in July 2000 to a six-year term, he deepened the reforms of his first months in office.

In spring 2002 an opposition movement coalesced demanding his ouster, and between April 11 and April 13, he was briefly removed from office before massive street protests led to his reinstatement. In August 2004 he triumphed decisively in a national referendum intended to recall him, and in December 2006 won a second six-year presidential term with 63 percent of the vote. In a December 2007 referendum, voters rejected Chávez’s proposed changes to Venezuela’s constitution, hurting the momentum of his socialist program.

MICHAEL J. SCHROEDER

Chiang Ching-kuo

(1910–1988) *Chinese political leader and reformer*

Chiang Ching-kuo was Chiang Kai-shek’s eldest son. In 1925 he set out to study in the Soviet Union with other young Chinese men and women during a period when the Chinese Nationalist Party (KMT) was allied with the Soviet Union and a United Front with the Chinese Communist Party (CCP). Chiang Ching-kuo’s fortunes changed dramatically in 1927 when his father ended the United Front and purged the CCP from the KMT.

In retaliation, Soviet leader Joseph Stalin refused to allow Ching-kuo to return to China, although other students were allowed to repatriate. Thus he remained in the Soviet Union, where he worked in various factories and mines and married a Russian woman. Early in 1937 he was suddenly summoned to Moscow and was told by top Soviet officials that he could return to China. The reason was Japan’s

imminent attack on China and the Soviet realization that if China fell, the Soviet Union would be Japan's next victim.

Chiang Kai-shek immediately began to train his son in government, initially at the county level in regions just behind the battlefield during World War II and then progressively promoting him to bigger tasks both on the mainland and, after the Nationalists lost the civil war to the CCP in 1949, on Taiwan. In 1965 he was appointed minister of defense; later he was appointed vice-premier, and he became premier in 1972, from which post he initiated many important projects that promoted Taiwan's rapid economic growth while ensuring an equitable distribution of income. Chiang Kai-shek died in 1975 during his fifth term as president of the Republic of China. Vice President Yen Chia-kan served out the remaining years of Chiang Kai-shek's term and retired. Chiang Ching-kuo was elected president by the National Assembly in 1978 and was reelected for a second six-year term in 1984.

Chiang Ching-kuo's stay in the Soviet Union made him an opponent of the communist system. His many years as a laborer also gave him a populist outlook. He was an approachable and popular leader. More important, he began political reforms during his second term. He saw the political turmoil against the autocratic regimes of the Philippines and South Korea and understood that the prosperous and educated people of Taiwan yearned for democracy. Thus he initiated overall political reforms that ended martial law and censorship, legalized opposition political parties, and implemented free elections. Finally, with his health failing, he promised that none of his family would succeed him as political leader.

After Chiang Ching-kuo's death, political reforms continued on Taiwan that made it into a democracy, in notable contrast to the communist government of the PEOPLE'S REPUBLIC OF CHINA. Although Taiwan's economic miracle began under Chiang Kai-shek, the credit for its continuation and peaceful political reforms belongs to Chiang Ching-kuo.

"Chicago Boys" (Chilean economists, 1973–1980s)

A group of some 25 like-minded Chilean economists trained mainly at the School of Economy at the Pontifical Catholic University (Pontificia Universidad Católica de Chile) in Santiago, and, steeped in the free-market theories of U.S. economist and Nobel laureate Milton Friedman and the Chicago School of Economics, the "Chicago Boys" played a pivotal role in transforming Chile's economy during the dictatorship of General AUGUSTO PINOCHET. Chicago School economists were influential throughout much of Latin America in the 1980s and 1990s, a period witnessing the growing influence of neoliberalism as espoused by the INTERNATIONAL MONETARY FUND (IMF) and other U.S.-dominated transnational financial institutions. The Chicago Boys, like the IMF, decried the fiscal excesses of populist and socialist governments and promoted open markets, privatization of state-owned industries, reduced government expenditures, deregulation, limiting the rights and bargaining power of labor unions, and increased foreign investment as ways to promote economic growth and national development. These years saw similar developments in the United States and Europe, personified in U.S. president RONALD REAGAN and British prime minister MARGARET THATCHER.

Among the most influential of the Chicago Boys were Jorge Cauas, minister of finance (MF), 1975–77; Sergio de Castro (MF), 1977–82; Pablo Baraona, minister of economy (ME), 1976–79; Roberto Kelly, ME, 1978–79; José Piñera, minister of labor and pensions, 1978–80, and minister of mining, 1980–81; Álvaro Bardón, ME, 1982–83; Hernán Büchi, MF, 1985–89; Juan Carlos Méndez, Budget Director (BD), 1975–81; Emilio Sanfuentes, adviser to Central Bank; Juan Villaluz, BD, 1974–75; and Sergio de la Cuadra, MF, 1982–83. Following their policy prescriptions, the Chilean government under Pinochet privatized social security, pensions, banks, and most state industries; slashed public subsidies and services; and cut taxes, especially for upper-income brackets. Their reforms generated a severe economic contraction and sharply curtailed inflation in the mid-1970s, followed by robust growth in the late 1970s, a deep recession (following a broader global economic downturn) in the early 1980s, and renewed growth in the mid- and late 1980s. The average growth rate from 1973 to 1990 was 3.5 percent, nominally higher than in most Latin American countries. By 1990 the economy was growing rapidly, though economic

inequality had increased, along with economic hardship among the bottom income brackets, with 44 percent of families living below the poverty line.

These and related results of the Chicago Boys' radical laissez-faire economic restructurings have sparked wide-ranging debates among scholars, while Chileans have continued to grapple with the effects of the free-market reforms. Neoliberalism's defenders looked to Chile's privatization of social security as a model for other countries, for example, while its critics pointed to the system's gaps and insufficient coverage for roughly half of the country's labor force. In early 2005 all of the candidates in Chile's presidential campaign agreed that "the country's much vaunted and much copied privatized pension system needs immediate repair."

MICHAEL J. SCHROEDER

China, human rights and dissidents in

In 1949 the Chinese Communist Party (CCP) established the PEOPLE'S REPUBLIC OF CHINA (PRC), a totalitarian regime. Although the CCP denied human rights, as understood in the West, to all its citizens, it had a particularly hostile relationship with the intellectuals, whom it distrusted. The repression was especially severe during Mao Zedong's (Mao Tse-tung's) rule.

Mao died in 1976 and bequeathed a bankrupt nation to his successor, DENG XIAOPING (Teng Hsiao-p'ing). Deng sought to pull China out of its economic disaster by reforms called the "Four Modernizations"—of agriculture, industry, science, and defense. He also somewhat relaxed intellectual controls in 1978 by allowing a Democracy Wall in the capital city Beijing (Peking), where citizens could air their grievances. Deng was surprised by the extent and bitterness of the complaints and stunned by an article posted by a young man named Wei Jingsheng entitled "The Fifth Modernization: Democracy." Wei (born 1950) was the son of committed communist parents and had lived a privileged life in Beijing.

His travels during the Cultural Revolution exposed him to the horrors and inequities of a regime that condemned millions to death by man-made famines and that denied justice to ordinary people. His article argued that the Four Modernizations were not enough without a fifth—democracy. For this he was arrested, convicted of "counterrevolution" in a show trial, and sentenced to 15 years of hard labor. He became China's most famous political prisoner. Wei was released in 1993, one-and-a-half years short of serving his full term—not because the regime had come to accept international standards of human rights but because it wanted to host the 2000 Olympics in Beijing. He was rearrested and sentenced to another long jail term in 1994 for speaking out for human rights, but was released in 1997 and exiled to the United States.

Countless other Chinese were tortured, imprisoned, and killed for seeking religious freedom or for other perceived offenses against the Communist Party. One was Harry Wu (born 1937), who began to suffer severe persecution as a college student. After becoming a U.S. citizen, Wu worked to expose the Chinese government practice of imprisoning political dissenters in brutal labor camps and selling their products and the organs of the prisoners to the United States and other nations.

Two world-famous victims were intellectual leaders Fang Lizhi (Fang Li-tzu, born 1936) and Liu Binyan (Liu Ping-yen, born 1925). Fang was China's leading astrophysicist and vice president of the prestigious Chinese University of Science and Technology. For supporting students' demands for genuine elections, for advocating democracy and intellectual freedom, and for demanding that Wei Jingsheng be released, he was dismissed from his positions in 1987 and expelled from the CCP. When President GEORGE H. W. BUSH invited Fang and his wife to a state dinner that he hosted during a visit to China in 1989, the Chinese leaders sent police to prevent them from attending.

Liu Binyan was a famous literary figure and also an investigative reporter for the newspaper the *People's Daily*. For exposing the massive abuses of power by the CCP, he was dismissed from the party. Their fame protected Fang and Liu from arrest, but both were exiled—to Great Britain and the United States, respectively. Among the four, Wei, Fang, and Liu began as committed communists and later became determined opponents of communism. Wei and Wu suffered long and harsh imprisonment. Millions of other Chinese, named and unnamed, continued to suffer the denial of their human rights.

JIU-HWA LO UPSHUR

China, People's Republic of

On October 1, 1949, the chairman of the Chinese Communist Party (CCP), Mao Zedong (Mao Tse-tung), proclaimed the establishment of the People's Republic of China (PRC) upon victory over the Kuomintang in a civil war. Beijing (Peking) became the capital of the new government. Since then, the CCP has ruled China as a one-party state, although several minor political parties were allowed to exist.

The PRC aligned itself with the Soviet Union in foreign policy, signing a treaty of alliance and mutual aid in 1950 under which China received loans and technical help from the Soviet Union. The Beijing-Moscow axis began to crack toward the end of the 1950s because of multiple reasons; by the mid-1960s border conflicts had broken out between them. To counterbalance the Soviet threat, China began a rapprochement with the United States that culminated in a visit by President RICHARD NIXON to China in 1972 and the establishment of full diplomatic relations between China and the United States in 1979. The PRC also joined the UNITED NATIONS in 1971 as a permanent member of the Security Council, replacing the Republic of China (ROC), or Taiwan. Since the 1970s the PRC has replaced the ROC in most international organizations.

Upon its establishment, the CCP immediately undertook violent land reform, killing millions of landlords and redistributing land to the cultivators. However, the peasants were forced to give up their newly acquired land in 1953 to join collective farms under the First Five-Year Plan, copied from that of the Soviet Union. Collective farming continued in varied formats until Mao's death in 1976. Due to China's failing economy

and the severe distress of the farming population, Mao's successor, DENG XIAOPING (Teng Hsiao-p'ing), dismantled the collective farms and allowed individual farmers to work private plots, although the state continued to own the land. Productivity and the standard of living among farmers increased dramatically as a result. With the adoption of private enterprise in most industries, however, the standard of living of Chinese farmers lagged far behind that of people in the rapidly expanding urban sector, especially in the advanced coastal provinces.

China underwent catastrophic political and economic turmoil under Mao's radical leadership, most notably during the GREAT LEAP FORWARD and the GREAT PROLETARIAN CULTURAL REVOLUTION. Deng Xiaoping was, by contrast to Mao, pragmatic in dealing with the economy, but he brooked no political opposition, as the bloody repression of student protesters in the TIANANMEN SQUARE MASSACRE in 1989 demonstrated. After Deng ousted several putative successors who failed to conform to his ideas, the succession among CCP leaders was peaceful. In 2002 HU JINTAO became chairman of the CCP and president of China. In 2005 China had an estimated population of 1.3 billion people; the largest military in the world, comprising 2.25 million soldiers; and the third-largest and fastest-growing economy in the world.

JIU-HWA LO UPSHUR

Chinese-Vietnamese conflict

For over 2,000 years China directly or indirectly ruled Vietnam until 1885. The close relationship between the two peoples led to the sinicizing of Vietnamese society. After the end of World War II and the establishment of the PEOPLE'S REPUBLIC OF CHINA in 1949, the example

Chinese vice premier Deng Xiaoping (right) at the White House in 1979, the same year China attacked Vietnam.

of the Chinese revolution persuaded many Vietnamese that they could liberate their country with similar political goals. During the subsequent wars against the French and the Americans, Communist North Vietnam received material as well as political support from China. Some among the Chinese leadership felt that the Vietnamese had been insufficiently grateful for the aid they had received. Assistance from China and other Communist-bloc countries contributed to Communist North Vietnam's victory over South Vietnam in 1975. Unified Vietnam became the dominant power in Indochina. In 1979 Vietnamese troops entered Cambodia to oust the Khmer Rouge regime in that country.

China viewed this as an example of Vietnamese expansionism. China also resented Vietnam's ill treatment of ethnic Chinese residents in the country, and Vietnam's closeness to the Soviet Union, China's rival for leadership in the Communist bloc.

Thus the Chinese army (the People's Liberation Army, or PLA) attacked Vietnam in February 1979. Caught by surprise, the Vietnamese army lost ground, and the PLA successfully achieved the first part of its plan, which was to capture the provincial towns of Cao Bang and Lao Cai and then advance on Lang

Son. About 250,000 Chinese troops were deployed, together with militia, the air force, and a naval detachment, to the Spratly Islands in the South China Sea in the event of Soviet intervention to aid Vietnam. All of the fighting took place in the forested mountainous region that marks the border. Eventually the battle-hardened Vietnamese regrouped against the advance of the PLA. The Soviet Union declined to respond to Vietnamese requests for aid. After a limited advance China declared that it had punished Vietnam and withdrew. It threatened to return, however, should Vietnam's actions warrant further punishment. This showed that Communist nations harbored historic resentments against one another: Vietnam's territorial ambition in Southeast Asia, and China's attitude toward small states in areas of its historic influence. The conflict put Vietnam firmly in the Soviet camp until the end of the COLD WAR. The fighting continued at a low level along the border.

JOHN WALSH

Civil Rights movement, U.S.

When Harry Truman assumed the presidency after the death of Franklin Roosevelt in 1944, he had more important concerns than civil rights. His first priority was finishing the wars in Europe and the Far East. He also confronted the decision over whether or not to use the atomic bomb. The end of World War II saw the onset of the COLD WAR. Still, in 1945 and 1946, civil rights was not totally forgotten.

In 1945 the Fair Employment Practices Committee (FEPC)—established by Roosevelt through executive order under pressure from A. Philip Randolph's threatened March on Washington—was involved in trying to end discrimination in a Washington, D.C., transportation company. Truman was unable to convince Congress to finance the FEPC. He did, however, establish a committee in 1946 to examine violence against African Americans. The committee, stacked with liberals Truman expected would develop a strong to shocking civil rights statement, issued "To Secure These Rights" in October 1947. The report called for the extension of

full citizenship rights to all Americans, regardless of race, color, creed, or national origin.

In his State of the Union speeches of 1947 and 1948, Truman called for adoption of the committee's recommendations. For Truman, it was a matter of justice in a world divided between free and communist states.

On July 26, 1948, Truman issued Executive Order 9981, ending segregation in the armed forces, and Executive Order 9980, mandating fair employment in the civil service. After resisting the presidential order for two years, the military began implementing desegregation, but discrimination in the officer corps remained strong, and few blacks served as officers. In the KOREAN WAR, many more blacks served in integrated units than had served in World War II. A further executive order in 1951 established the Committee on Government Contract Compliance (CGCC), which was to require that all potential suppliers of goods to the Department of Defense have an equal employment policy. The CGCC lacked enforcement powers.

For many, a major turning point in how African Americans were viewed by the country at large came with the ending of segregation in Major League Baseball in 1947. When he took the field on April 15 for the Brooklyn Dodgers that year, Jackie Robinson became the first African American to play professional Major League Baseball in the modern era. While Robinson endured abuse from fans, other teams, and even his own teammates, he went on to win the first-ever Rookie of the Year award, and over the course of his career, was named to the All-Star team six times.

The American scene, however, was changing slowly. Murders and lynchings of African Americans still occurred in the 1950s, and commonly the murders went unpunished. Emmett Till, a teenager from Chicago, was visiting Money, Mississippi, in 1955. Till purportedly whistled at a white woman. For that offense, he was murdered brutally. His mother had an open-casket funeral so the mourners could see the beating the boy had endured before his two white abductors threw him into the Tallahatchie River on August 28. Till's murderers were quickly arrested and acquitted. This blatant disregard for justice fired northern sentiment for reform.

Before 1955 the Civil Rights movement had focused on the courts. Although the approach had won the landmark victory in *BROWN V. BOARD OF EDUCATION* in 1954, the Supreme Court had failed to provide any implementation target or tools. Local National Association for the Advancement of Colored People (NAACP)

chapters in the South attempted to register voters and protest discrimination, but their efforts were usually uncoordinated and unsuccessful in the face of intimidation and harassment by local authorities.

Rosa Parks further fired the impulse for change. On December 1, 1955, in Montgomery, Alabama, she was arrested for failure to yield her bus seat to white passengers. Her trial and conviction for violating the local segregated transit ordinance catalyzed the local black community. Fifty African-American leaders formed the Montgomery Improvement Association, which led the 381-day Montgomery Bus Boycott that resulted in the repeal of the ordinance. The success in Montgomery was followed by a successful boycott in Tallahassee, Florida, but its greater importance is that it brought national prominence to the minister brought in to lead it, MARTIN LUTHER KING, JR.

The successful boycott encouraged civil rights leaders to shift from the old civil rights tactic of litigation to a greater emphasis on direct action. Direct action required mass mobilization, led by local churches and community organizations, and nonviolent resistance as well as civil disobedience. The Montgomery Bus Boycott was an early success. Sit-ins, freedom rides, and other local action followed during the decade between 1955 and 1965.

After Montgomery, the Montgomery Improvement Association—veteran leaders of the Baton Rouge and Tallahassee boycotts—and other black activists created the Southern Christian Leadership Conference (SCLC) in 1957. The SCLC eschewed the chapter structure of the NAACP, instead providing ad hoc training to those who fought segregation at the local level.

In 1957, in the South Carolina Sea Islands, Septima Clark, Bernice Robinson, and Esau Jenkins began the first Citizenship Schools to give blacks the literacy they needed to pass voting tests. The number of eligible voters on St. John Island tripled. The SCLC took over the program and spread it to Alabama, Georgia, and Tennessee.

That same year, the Little Rock, Arkansas, school board decided to integrate in accordance with *Brown*. The NAACP had put pressure on Little Rock because the civil rights organization thought a test case would have better success there than in the Deep South. Arkansas had desegregated a couple of small towns, including Fayetteville and Hoxie, and it had a progressive reputation. It also had a governor with a progressive reputation. Orval Faubus, however, caved in to the conservative wing of the state Democratic Party and called the Arkansas National Guard to prevent deseg-

A group of African Americans march on Washington, D.C., in 1963 in protest against discrimination, for equal rights, and for an end to segregation. Martin Luther King, Jr., influenced such marches with his policy of nonviolent protest.

regation of the high school. President Eisenhower was committed to preventing the usurpation of a federal power, so Faubus's resistance in Little Rock led to a federal-state confrontation resulting in the nationalization of the National Guard. Eventually, after Faubus backed off and then shut down the schools, integration was pushed through.

The sit-in movement began in Greensboro, North Carolina, in 1960 and spread to Nashville, Tennessee; Atlanta, Georgia; and elsewhere in the South—as well as to the North and West. The initial spark was the decision of local college students to eat where they shopped. Complying with local law, counter personnel refused to serve them. The demonstrators suffered arrest and physical abuse, but they refused to post bail so that the local jails would feel the financial burden. When released from jail, civil rights activists returned to the lunch counters again and again until finally the counters desegregated. Sit-ins spread from lunch counters to beaches, libraries, and everywhere that blacks were denied access on account of race.

Some sit-in veterans created the Student Nonviolent Coordinating Committee (SNCC) in 1960. SNCC began freedom rides in 1961, which were bus trips through the Deep South to force desegregation of bus terminals as required by federal law. The riders faced a bus bombing in Anniston, Alabama; an attack by Klansmen in Birmingham; and a mob assault in Montgomery. There were injuries—some serious—but the riders persisted. In Jackson, Mississippi, they were jailed in squalor—and occasionally beaten. Other riders had to do forced labor in 100-degree heat. Some ended up in Parchman Penitentiary.

In 1962 the movement shifted to Mississippi, where the SNCC representative, Robert Moses, united all the state civil rights organizations into the Council of Federated Organizations (COFO) for the purpose of door-to-door voter education and student recruitment. While the COFO effort was underway, James Meredith won the legal right to attend the University of Mississippi. Three times he tried to enter, and three times Governor Ross R. Barnett refused him. The Fifth Circuit Court of

Appeals found Barnett and his lieutenant governor in contempt, and U.S. marshals escorted Meredith onto the campus. White riots ensued. Two people died, 28 marshals were shot, and 160 others were injured. The Mississippi highway patrol withdrew from the campus, so President JOHN F. KENNEDY sent the army to control the campus and allow Meredith to attend classes.

In 1961 and 1962 King went to Albany, Georgia, to assist in the Albany Movement, which aimed at ending segregation in all phases of the city. The police in Albany reacted not with violence but with mass arrests, including King in December 1961. City leaders came to an agreement with local prominent African Americans: If King left Albany, the city would—among other things—desegregate the buses and set up a biracial committee. King left, and the city did not fulfill its promises, forcing King's return. He was arrested again in July 1962, and in August agreed to leave the city and stop the protests. He blamed the failure of the Albany Movement on its broad scope rather than a specific aspect of segregation and discrimination.

With Albany dogging him, King needed a victory. He went to Birmingham in 1963 with the Albany lessons in mind. Rather than total desegregation, the SCLC sought a more limited desegregation of downtown businesses. The local commissioner of public safety was Eugene "Bull" Connor. The SCLC used sit-ins, kneel-ins, marches, and other nonviolent techniques. The city obtained an injunction, the SCLC refused to quit, and King and others were arrested on April 12, 1963. King wrote his "Letter from a Birmingham Jail" on April 16, but the campaign was faltering until organizers, desperate for bodies, decided to put high school students on the streets. On May 2, over 1,000 students demonstrated, and over 600 ended up in jail. The next day another 1,000 students appeared, and Connor ordered dogs and fire hoses to be turned on them. Television covered it all. Kennedy forced the SCLC and local businesses to reach a settlement. On May 10 they agreed: Downtown public accommodations were to be desegregated and a committee established to end discrimination in hiring. Also, the prisoners were released, and black-white communications channels were established. Four months later, Klansmen bombed the Sixteenth Street Baptist Church, killing four girls.

The summer of 1963 saw George Wallace's attempt to prevent desegregation of the University of Alabama and Kennedy's sending sufficient force to enroll two students. The evening that the University of Alabama desegregated, on June 11, Kennedy made a major civil rights address on television and radio. The next day

Medgar Evers, who had fought to desegregate the University of Mississippi law school, was murdered. On June 19, Kennedy submitted his long-awaited Civil Rights Bill.

In August A. Philip Randolph and Bayard Rustin led the March on Washington—from the Washington Monument to the Lincoln Memorial—despite Kennedy's efforts to get them to call the march off. All the major civil rights and progressive labor organizations were involved, as were other liberal leaders. The demands were "meaningful civil rights laws, a massive federal works program, full and fair employment, decent housing, the right to vote, and adequate integrated education." Most important was the new civil rights law, which was stalled in Congress. More than 200,000 gathered in front of the Lincoln Memorial to hear King's "I Have a Dream" speech and other speeches criticizing the administration's failure to enact civil rights laws and to protect southern civil rights workers. After the march, Kennedy had King and other leaders over to the White House for a chat.

POLITICAL WEIGHT

The Civil Rights Bill was going nowhere until Kennedy died on November 22, 1963, and LYNDON B. JOHNSON put all his political weight (and Kennedy's martyrdom) behind its passage.

In 1964 COFO continued its dangerous work in Mississippi. "Freedom Summer" involved locals and northern students in voter registration and voter education (Freedom Schools), and the organization of the Mississippi Freedom Democratic Party (MFDP). Three civil rights workers were murdered in Neshoba County on June 21, 1964. An FBI investigation found not only the three bodies but also others of blacks who had disappeared over the years without attracting more than local attention. During the six weeks between the disappearance of the three and the discovery of their bodies, Johnson used the case to bring pressure for enactment of the Civil Rights Act, which passed on July 2. The Civil Rights Act of 1964 barred discrimination in public accommodations, employment, and education.

At Selma, Alabama, the SCLC intervened in 1965 after locals struggled to get voters registered through a SNCC campaign. Hosea Williams of the SCLC and John Lewis of the SNCC attempted to lead a march to Montgomery, but they were stopped at the Edmund Pettus Bridge by state and local officers, who attacked with clubs, tear gas, and whips. National coverage matched that of the Birmingham children's campaign.

Local reaction included a murder by whites. Johnson used the violence to push enactment of the Voting Rights Act of 1965. Signed into law on August 6, the act outlawed poll taxes and literacy tests and other devices to bar voting by blacks.

It provided for federal supervision of voter registration in states and districts with a pattern of discrimination. Within months, a quarter of a million new black voters were created, mostly by federal examiners who replaced local registrars. Voter registration in the South more than doubled in four years. Mississippi's black turnout in 1965 was 74 percent. Black turnout in 1969 was 92 percent in Tennessee, almost 78 percent in Arkansas, and 73 percent in Texas.

Blacks began voting out those who had plagued them during their struggles against segregation. And they began voting in blacks they hoped were more sympathetic to their needs. In 1989 there were 7,200 elected black officials in the United States, more than 4,800 of them in the South. In 1965 about 100 were in elective office in all of the United States. Blacks were sheriffs, mayors, and county, state, and national officials.

RADICALIZATION

Voting rights failed to provide jobs. As the nation turned from civil rights to the war in Vietnam, and as King and other civil rights leaders split with the Johnson administration over foreign policy and the failure of economic justice at home, the Civil Rights movement faded. Blacks radicalized—SNCC threw out its white members, and the Black Panthers stressed not only BLACK POWER but black self-help. Blacks rioted in American cities between 1965 and 1968. When King went to Memphis, Tennessee, in 1968 to support a sanitation workers' strike, he was murdered.

By 1967 22 percent of black students in southern and border states were in integrated schools. Still, the National Advisory Commission on Civil Disorders of 1968 reported that the United States was continuing to move toward a two-society status, separate and unequal. Housing segregation was addressed in the Civil Rights Act of 1968. RICHARD NIXON's administration slowed integration by leaving it to the courts rather than his administration.

After the Supreme Court ruled in *Miliken v. Bradley* (1974) that cities could not expect to use suburbs to desegregate, white flight began resegregating America's major cities. The absence of federal assistance and persistent residential segregation contributed to resegregation. By the late 1990s, a third of black students were in schools that were 90 percent nonwhite.

During World War II, many African Americans migrated north, following jobs in war industries, but most of the jobs they were able to get were menial and paid very little. This created greater racial problems in these northern cities; blacks were forced by de facto segregation into slums that were plagued by high unemployment and crime. Additionally, the slum areas were patrolled by predominantly white police forces who many felt threatened rather than protected the neighborhood. The area schools tended to be all black and terribly underfunded. Frustrated by these conditions, urban African Americans rose in protest.

The first riot was in Harlem in the summer of 1964. A white policeman shot a black youth, and a mob demanded the suspension of the officer. When that did not happen, the mob rampaged through the neighborhood and destroyed Jewish-owned stores and much else that was not black-owned. Brooklyn's black Bedford-Stuyvesant neighborhood and Philadelphia, Pennsylvania, had riots for similar reasons that year.

After passage of the Voting Rights Act of 1965, expectations were that there would be celebration. Instead there was violence. California was among the states that refused to implement the fair housing element of the 1964 Civil Rights Act. The Civil Rights Act of 1968 required fair housing. MALCOLM X was killed in 1965. The black ghetto riots were the most prolonged period of civil disturbance in the United States since the Civil War. Tens of thousands of National Guardsmen were required to reestablish order.

Blacks began taking out their frustrations on police by murdering racist and brutal "honkies" and "pigs." In 1966 nearly all major U.S. cities endured riots by blacks taking an independent "black power" stance, no longer following the white-black integrated approach of the NAACP and SCLC. Black power was the slogan of Stokely Carmichael, leader of the SNCC. Its approach was similar to that of the Black Panthers, formed in Oakland in 1966 and nationally prominent by 1968.

Racial stereotyping and simple personal racism remains. Interracial tension and social problems remain, which are especially pronounced in the inner cities. Sometimes the cities erupt, as in New Jersey in the late 1990s where racial profiling led to public controversy. And riots do still occur. Note the 1992 riots in Los Angeles after the Rodney King verdict.

JOHN H. BARNHILL

Clinton, Bill (1946–) and Hillary Rodham (1947–)

U.S. politicians

Bill (William Jefferson) Clinton was the 42nd president of the United States, in office from 1993 until 2001. Hillary Clinton was the First Lady during that time, and was a Democratic Party candidate in the 2008 presidential elections.

William Jefferson Clinton was born on August 19, 1946, as William Jefferson Blythe III, in Hope, Arkansas. His father, William Jefferson Blythe, Jr., was a traveling salesman who died in a car accident some three months before his son was born. After his death, his widow, Virginia Dell, married Roger Clinton, who was a partner in an automobile dealership, and when he was 14, Bill adopted his stepfather’s surname. It was meeting JOHN F. KENNEDY and listening to MARTIN LUTHER KING, JR.’s “I Have a Dream” speech in 1963 that convinced him that he should enter politics.

Bill Clinton went to the Edmund A. Walsh School of Foreign Service at Georgetown University, receiving a bachelor of science in foreign service in 1968. He then was awarded a Rhodes Scholarship to study at Oxford University in England. On his return to the United States, Clinton went to Yale Law School, where he met Hillary Rodham. They were married on October 11, 1975, and their only child, Chelsea, was born on February 27, 1980.

Hillary Diane Rodham was born on October 26, 1947, at Edgewater Hospital, Chicago, Illinois. She attended Maine South High School and grew up in a conservative Republican family. At the age of 16 she campaigned for Republican presidential candidate Barry Goldwater. Hillary Rodham then went to Wellesley College, where she developed liberal inclinations and graduated in 1969. In 1971 she worked for Senator Walter Mondale’s subcommittee on migrant workers and in 1972 started working for Senator George McGovern’s 1972 presidential election campaign.

The Clintons returned to Arkansas after completing their studies at Yale, and Bill became a law professor at the University of Arkansas. In the following year, 1974, he ran for the House of Representatives but was defeated. In 1976

Despite his popularity, Bill Clinton’s second term in the White House was beset by scandal (with wife, Hillary, at right).

Clinton was elected attorney general of Arkansas without opposition. Two years later he was elected governor of Arkansas and, at the age of 32, was the youngest governor in the country. He spent his first term as governor working on improving schools and roads, but became unpopular over the motor vehicle tax and the escape of Cuban prisoners. In 1980 Republican Frank D. White defeated Clinton. However, in 1982 Clinton was reelected as governor and remained in office until 1992. He used these 10 years to transform Arkansas by dramatically improving the education system and introducing welfare reforms.

By 1988 Clinton was being suggested as a possible presidential candidate, given his high profile in American liberal circles. He decided not to run, although he did speak at the Democratic National Convention, gaining a much wider national profile. Following the defeat of the Democratic candidate Michael Dukakis in the 1988 elections, some Democratic Party organizers felt that Clinton should run in 1992. In that election it was thought that the incumbent GEORGE H. W. BUSH would win easily because of his recent victory in the GULF WAR. Clinton managed a major victory in the New York primaries, and even defeated California governor Jerry Brown in his home state. The result was that Clinton easily won the Democratic Party primaries.

In 1994 the Democratic Party lost control of Congress at the midterm elections, the first time in 40 years they lost control of both houses. It was the start of a bitter battle between Clinton and his new adversary Newt Gingrich. Despite losing control of Congress to the Republican Party in the middle of his first term, in 1996 Clinton easily won the presidential election,

becoming the first Democrat since Franklin D. Roosevelt to be reelected.

Clinton's second term in office was preoccupied, on the foreign policy front, by his attempts to resolve the Arab-Israeli conflict. In July 2000 Clinton brought both Israeli Prime Minister Ehud Barak and Palestinian Authority chairman YASIR ARAFAT to Camp David, but the negotiations failed. On the economic front, Clinton managed to balance the federal budget for the first time since 1969. His second term in office was overshadowed by the controversy over Clinton's affair with White House intern Monica Lewinsky. Hillary Clinton stood by her husband throughout the crisis. The Republican-controlled House of Representatives voted to impeach Clinton for lying under oath in his denial of the affair, but the Senate voted to acquit Clinton, and he remained in office until the end of his term, which he ended with a popularity approval rating of 65 percent. The result of the Monica Lewinsky affair was that Bill Clinton had to abandon his plans for reforms of the health-care system, which had been heavily supported by his wife.

Throughout his presidency, Bill Clinton did much to improve the life of African Americans, who became some of his most loyal supporters. Certainly Clinton saw as one of his major successes the implementation of majority rule in South Africa, with the election of the NELSON MANDELA government after a peaceful transition of power. Clinton's secretary of state, Madeleine Albright, was also able to engage with North Korea and reduce tensions in Northeast Asia.

After completing his second term as president, Bill Clinton opened his office in the Harlem district of New York, showing his affinity for African Americans, and helped Hillary Clinton when she campaigned for a Senate seat for New York State. Since then, Bill Clinton has been active in campaigning for measures to prevent climate change, speaking at the United Nations Climate Change Conference in Montreal, Canada, on December 9, 2005, in which he was critical of the Bush administration. Through the William J. Clinton Foundation, he has also raised money for HIV/AIDS research through the Clinton Foundation HIV/AIDS Initiative (CHAI).

Hillary Clinton was elected to the U.S. Senate on November 7, 2000, winning 55 percent of the vote to 43 percent for her Republican opponent, Rick Lazio. During her time as First Lady, many Americans openly hated Hillary Clinton, with large numbers of Internet hate sites being established. However, her election victory proved that she was popular in her own right. She not only won in the traditionally Democratic Party base of New York City by a large majority, but she also car-

ried suburban Westchester County and even did well in Buffalo, Rochester, and Syracuse, with Lazio winning in his home-base area of Long Island.

In the Senate, initially Hillary Clinton took a low profile. After the September 11, 2001, attacks on the World Trade Center and the Pentagon, Hillary Clinton was active in gaining funding for rebuilding projects. Hillary Clinton urged for the United States to take strong military action against AFGHANISTAN, also highlighting the ill-treatment of women in that country by the TALIBAN. She voted in favor of the Iraq War Resolution, but subsequently came to disagree with the prosecution of the war in Iraq.

On domestic issues, Hillary Clinton followed the same liberal traditions that had characterized her husband's presidency. On January 20, 2007, Hillary Clinton announced that she was forming a presidential exploratory committee to run as a candidate in the 2008 presidential elections and later officially pursued her electoral bid.

JUSTIN CORFIELD

cold war

The cold war was the decade-long conflict between the United States and the Soviet Union, especially characterized by its constant tensions, arms escalation, and lack of direct warfare. First coined by author George Orwell to describe a state of permanent and unresolvable war, *cold war* was applied to the U.S.-Soviet conflict in 1947 by Bernard Baruch, the U.S. representative to the UN Atomic Energy Commission and influential adviser to both Franklin Roosevelt and Woodrow Wilson.

Both sides often phrased the conflict as one between capitalism and communism, not simply between two states. Picking its endpoints requires some arbitrary choices, but it essentially lasted from shortly after World War II to the 1991 DISSOLUTION OF THE SOVIET UNION.

Long before even the Bolshevik Revolution of 1917, there were significant differences between Russia and the West—Russia was a latecomer to capitalism, abolishing serfdom only in 1861—and the transition was an awkward one that created enough ill will to make a radical revolution appealing. Before the 20th century, Russia’s imperial designs threatened those of Great Britain—a maritime rival—and Spain, which encouraged settlement in California out of fear that Russian colonists would settle the west coast traveling south from Alaska. In both cases the Western nations may have been exaggerating or misperceiving the extent of Russia’s expansionist interests—just as was likely the case with Western perceptions of the Soviet Union during the cold war.

In the 20th century, the old European empires had lost their power, and the most powerful countries were the ideologically opposed Soviet Union and the United States, with its close ally the United Kingdom. These were the two world leaders that developing nations would be shaped by and recovering nations would have to ally themselves with. Given the size and power of the countries—with perhaps as an additional factor the youth of their governments, relative to those of old Europe—some historians consider the conflict inevitable.

World War II had broken the faith that the Soviet Union had in the rest of the world’s willingness to leave communist states alone, and so Stalin sought to spread communism to neighboring countries in eastern Europe—Yugoslavia, Bulgaria, Romania, Hungary, and Poland—but remained uninvolved with communist interests in Finland, Greece, and Czechoslovakia, at least directly. Winston Churchill was the first to refer to this band of communist countries as the “Iron Curtain,” referring not only to the fortified borders between the capitalist and communist nations of Europe but to the Soviet Union’s protective layer of communist states shielding it from capitalist Europe.

Meanwhile, communism grew in popularity in China, France, India, Italy, Japan, and Vietnam. Very quickly the West began to perceive communist victories as Soviet victories, and communist nations as Soviet satellites, officially or otherwise. The United Kingdom could no longer afford to govern overseas and in the 1947 partition of India had granted independence to that holding, which led to the formation of the states of India and Pakistan. The United States began increasing its overseas influence as that of the British waned.

For the first few decades after World War II, the dominant focus of U.S. foreign policy was that of “con-

tainment”; the U.S. took pains to limit communist and Soviet influence to the states where it was already present and to prevent its “leaking out” to others. Many believed that, so contained, communist governments would wither and die—in contrast, the domino theory proclaimed that if one capitalist government fell, its neighbors would be next, a proposition that motivated U.S. involvement in the VIETNAM WAR, which was proclaimed a war not just over Vietnam but over all of Southeast Asia, which notably included former British and French holdings.

When civil war broke out in China, the Soviet Union aided the Communists, and the United States armed and funded the Nationalists. The new PEOPLE’S REPUBLIC OF CHINA, formed on October 1, 1949, became a valuable Soviet ally, while the Nationalists took control of the island of Taiwan, from where they retained their seat in the UNITED NATIONS. The Soviets boycotted the United Nations Security Council as a result, and so were unable to veto Truman’s request for UN aid in prosecuting an attack on the Soviet-supported North Korean forces invading U.S.-supported South Korea. The KOREAN WAR that followed lasted three years, ending in a stalemate; into the 21st century no peace treaty had been formed between the two Koreas.

As the lines between the two sides became more clearly drawn, 12 nations formed the NORTH ATLANTIC TREATY ORGANIZATION (NATO)—Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom, and the United States. In response to this and the rearmament of West Germany, Stalin’s successor, NIKITA KHRUSHCHEV, formed a similar alliance of eastern European states called the WARSAW PACT: Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and the Soviet Union.

EISENHOWER TO REAGAN

From President Eisenhower in the 1950s to President RONALD REAGAN in the 1980s the guiding light of military spending was deterrence theory, ensuring that retaliation would be swift and extraordinary. The specter of nuclear warfare dominated U.S. consciousness in these decades. In the 1950s fallout shelters were built in many towns and private homes, and educational film shorts shown in schools included the famous “Duck and Cover,” in which a talking turtle advises children to seek shelter in the event of nuclear war. Many schools and town governments held duck-and-cover drills, which likely served no real purpose except to heighten fears.

Eisenhower openly worried about the inertia of the military-industrial complex as well as escalating military spending. Perhaps seeking to avoid future military conflicts, he was the first to use the CIA to overthrow governments in developing or less powerful nations that were unfriendly to U.S. policy, replacing them with nominally democratic ones. Asia, the Middle East, and Latin America became more important to the cold war than Europe. In Latin America, the United States had been involved in national politics since the 19th century, but the cold war gave a new lift to foreign policy. As the increasingly powerful lower classes in many Latin American countries gave rise to a strong left wing and socialist concerns, the United States targeted revolutions and instigated coups against left-leaning governments.

FIDEL CASTRO led the communist revolution in Cuba, only miles from the U.S. coast. The United States responded by dispatching a group of CIA-trained Cuban expatriates to land at Cuba's BAY OF PIGS and attempt to oust Castro from power. The invasion was a significant failure and provided the Soviets with a further excuse to install nuclear missiles in Cuba—balancing out those the United States had installed in Turkey and western Europe. Only when President Kennedy promised not to invade Cuba and to remove missiles from Turkey—close to the USSR—did the Soviets back down. It is still considered the moment when the two nations came closest to direct warfare.

BERLIN WALL

In 1961 the Berlin Wall was built and quickly became the most vivid symbol of the cold war: The 28 miles of wall, barbed wire, and minefields separated Soviet-controlled East Berlin from U.S.-supported West Berlin. Passage across the border was heavily restricted. Families were divided, and some East Berliners were no longer able to commute to work. About 200 people died trying to cross into West Berlin; some 5,000 more succeeded. It would be nearly 30 years before the wall came down.

By the end of the 1960s the prevalence of deterrence theory had led to a state of “mutually assured destruction” (MAD), in which an attack by either side would result in the destruction of both sides. Theoretically such assurance prevents that first strike, which was the logic behind limiting antiballistic missiles. Talks and, later, agreements on strategic nuclear arms (SALT I and SALT II) began in 1969. President Reagan's SDI program in the early 1980s would be a significant step away from the MAD model toward the goal of a winnable nuclear war.

The word *détente*—“warming”—is often used to describe the improvements in Soviet-U.S. relations from

the late 1960s to the early 1980s, a time when military parity between the two had all but been achieved. Both nations' economies suffered—the United States from the expense of the Vietnam War, and the Soviets from that of catching up to the United States in the nuclear arms race. In order to encourage Soviet reforms, U.S. president GERALD FORD signed into law the Jackson-Vanik Amendment in 1975, which tied U.S.-Soviet trade relations to the conditions of Soviet human rights.

The Soviets had lost their alliance with China because they had failed to strongly support China during border disputes with India and the invasion of Tibet. The prospect of facing a Chinese-U.S. alliance—however unlikely it may have seemed to Americans—discouraged the Soviets as much as MAD did, and contributed to their willingness to participate in summits such as those that resulted in the Outer Space Treaty, banning the presence of nuclear weapons in space.

As they recovered from World War II, western Europe and Japan became more relevant again to the international scene, as did Communist China. Especially from the 1970s on, the U.S.-Soviet domination of international affairs eroded. The United States began to come under more frequent and serious criticism for the choices it had made in its opposition to communism, especially for its support of dictatorial or oppressive right-wing governments.

Meanwhile, throughout the 1960s and 1970s, more and more developing nations adopted the policy of nonalignment. The Middle Eastern nations, their influence bolstered by oil and the increasing consumption thereof, became a particular factor, and the ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC), which increased oil prices in 1973 by 400 percent, was a leading player in the West's economic troubles. As more countries joined the United Nations, the Western majority was broken. In 1979 the secular democratic regime of the shah in Iran—supported by the United States and restored in 1953 with the CIA's help—fell to an alliance of liberal and religious rebels, who installed the religious leader the AYATOLLAH KHOMEINI as the new head of state. Outraged at the involvement of the United States in Iranian affairs, a group of Iranian students held 66 Americans hostage for 14 months, until 20 minutes after President Reagan's inauguration.

Détente ended as the 1980s began, with the IRAN HOSTAGE CRISIS and the 1979 Soviet invasion of AFGHANISTAN. Hard-line right-wingers had been elected in both the United Kingdom (MARGARET THATCHER) and the United States (Reagan in 1981), and many neoconservatives characterized the *détente* of the previous decade as

too permissive, and too soft on communism. Just as the United States had come under criticism for its support of certain governments, the Soviets lost a good deal of international respect not only over Afghanistan but also when they shot down a Korean commercial airliner (Korean Air Flight 007, in 1983) that passed into Soviet airspace. The first years of the 1980s saw an escalation in the arms race for the first time since the SALT talks began. The Strategic Defense Initiative, proposed by the Reagan administration in 1983, was a space- and ground-based antimissile defense system that would have completely abandoned the MAD model. Significant work went into it, seeking a winnable nuclear war, unthinkable in previous decades.

MIKHAIL GORBACHEV

In 1985 the Soviet Politburo elected reformist MIKHAIL GORBACHEV, the leader of a generation who had grown up not under Stalin but under the more reform-minded Khrushchev. Gorbachev was savvy, sharp, and politically aware in a way many Soviet politicians were not. The keystones of his reforms were glasnost and perestroika, policies almost encapsulated by catchphrases widely repeated both in the Soviet Union and in Western newspapers.

Glasnost, a policy instituted in 1985, simply meant “openness,” but referred not just to freedom of speech and the press but to making the mechanics of government visible and open to question by the public. Perestroika, which began in 1987, meant “restructuring.” Perestroika consisted of major economic reforms, significant shifts away from pure communism, allowing private ownership of businesses and much wider foreign trade.

Two years after the start of perestroika, eastern European communism began to collapse under protests and uprisings, culminating in reformist revolutions in Bulgaria, Czechoslovakia, German Democratic Republic (East Germany), Hungary, Poland, and Romania. Several Soviet states sought independence from the Soviet Union, and Estonia, Latvia, and Lithuania declared independence. The period culminated in the fall of the Berlin Wall on November 9, 1989.

After years of public pressure, East Germany finally agreed to lift the restrictions on border traffic for those with proper visas. East Germany had little choice but to abandon the wall. They did nothing to stop the Mauer-sprechte (“wall chippers”) who arrived with sledgehammers to demolish the wall and claim souvenirs from it, and began the rehabilitation of the roads that the wall’s construction had destroyed. By the end of the year free travel was allowed throughout the city, without need

of visas or paperwork. A year later East and West Germany reunified.

In 1991 radical communists in the Soviet Union seized power for three days in August, while Gorbachev was on vacation. BORIS YELTSIN, the president of Russia, denounced the coup loudly and visibly—standing on a tank and addressing the public with a megaphone. The majority of the military quickly sided with him and the other opponents of the coup, which ended with little violence. But it was clear that the Soviet Union would not last—it was soon dissolved, becoming 15 independent states.

With the dissolution of the Soviet Union the cold war was technically over, effective immediately, but a “cold war mentality” continued. The United States continued to involve itself in international affairs in similar ways, sometimes being accused of acting like a world policeman—a role the United Kingdom had enjoyed before the world wars. The apparatus of espionage found new subjects, with the ECHELON system of signals intelligence—monitoring telephone and electronic communication—eventually repurposed for the war on terror following the 9/11 attacks in 2001. Contrary to every expectation, the cold war ended without direct warfare and without the use of nuclear weapons.

BILL KTE’PI

Colombia, La Violencia in (1946–1966)

Known simply as “The Violence” (La Violencia), the period of widespread political violence and civil war that wracked Colombia from the mid-1940s to the mid-1960s (conventionally dated from 1946 to 1966, but also from 1948 to 1958, and 1948 to early 1970s) was rooted in conservative efforts to quell liberal challenges to continuing conservative political dominance, and liberal

resistance to the Conservative campaign of persecution and terror. Upwards of 200,000 people were killed from 1948 to 1958, the bloodiest years of The Violence, and perhaps 300,000 people from 1946 to 1966.

The longer-term origins of La Violencia can be traced to Colombia's long history of internecine political conflict, especially its "War of the Thousand Days" (1899–1902) between Liberals and Conservatives, the longest and bloodiest of Latin America's 19th-century civil wars, in which some 100,000 people were killed, of a population of around 4 million. In the shorter term, La Violencia originated in rising Liberal-populist challenges to oligarchic liberal-conservative rule spearheaded by liberal dissident JORGE ELIÉCER GAITÁN from the 1930s, and especially from 1946. In that year's presidential election, the Liberal Party split between the left-leaning populist reformer Gaitán and official candidate Alberto Lleras Camargo, permitting a plurality victory by conservative Mariano Ospina Pérez.

In the context of rising popular support for a more open political system, democratic reforms, and more equitable sharing of the nation's resources, the regime of Ospina Pérez stepped up the persecution of liberals and other moderate elements. Violence exploded after April 9, 1948, when Gaitán, widely considered the leading contender for the 1950 presidential elections, was assassinated in Bogotá. The city exploded in violence against property, with days of pillaging, burning, and political protesting across the length and breadth of the city, in what has come to be known as The Bogotazo (loosely, "the Bogotá Smash"). Liberal insurrections soon spread across much of the country, including provincial capitals and rural areas. Conservative elements responded by launching counterinsurgency actions, which by mid-1948 had crushed most overt resistance. Most Liberals withdrew from the government and refused to participate in the 1950 elections, which brought to power the ultraconservative Laureano Gómez (1950–53). Tensions ran high, as many Liberals continued organizing and mobilizing.

With the support of most large landowners, the army and police, the church, conservative peasants, and the United States, the Gómez regime unleashed a reign of terror in city and countryside. The spiraling violence reached into almost every city, town, village, community, and family, with political partisanship at fever pitch and often accompanied by gruesome tortures and murders. Especially hard hit were Andean coffee-growing regions dominated by smallholding peasants—especially Boyacá, Antioquia, the Satanders, Valle del Cauca, and Cauca. Hit squads and assassins (*pájaros*, or "birds")

were paid handsomely for eliminating targeted enemies, protected by the authorities and dense networks of supporters. In response, guerrilla resistance armies emerged in many areas, often led by lower-class partisans.

In 1953 the Gómez regime was ousted in a coup led by General Gustavo Rojas Pinilla, who launched a pacification campaign based on amnesty and public works projects. By 1955 the pacification effort had largely failed, and the violence and atrocities continued. In 1958 a national plebiscite brought to power the National Front, a Liberal-Conservative power-sharing arrangement that stemmed much of the violence, which continued to simmer in many areas, often in the form of rural banditry. By 1966, with the regime of Liberal Carlos Lleras Restrepo (1966–70), most violence had dissipated. Still, with the emergence of several left-wing guerrilla groups and right-wing paramilitary organizations, and in the context of the ballooning marijuana and cocaine trade and skyrocketing U.S. military aid in the "war on drugs," Colombia remained one of Latin America's most violent countries into the 21st century.

MICHAEL J. SCHROEDER

Comecon

The Council for Mutual Economic Assistance (Comecon) was established in January 1949 by the Soviet Union. It was an organization designed to economically unite all the communist states in the eastern bloc of Europe. The founding member nations were the Soviet Union, Poland, Hungary, Romania, Czechoslovakia, and Bulgaria. Albania joined in February 1949, the German Democratic Republic in 1950, Yugoslavia in 1956, and Mongolia in 1962.

Several other communist states—such as China, North Korea, and North Vietnam—were official Comecon observers. Other countries gained membership or observer status in the Comecon. Council sessions were held regularly, and the leaders of member states usually met at least once each year. Economic policies for all member states were debated and determined at the

council sessions. These policies were then implemented through Comecon directives. After the collapse of the Soviet Union in 1991, the Comecon was formally dissolved in June of that year.

The initial charter of the organization stated three main goals to provide broader economic cooperation: “exchanging economic experience,” rendering “technical assistance,” and providing “mutual aid” to all member countries. The original goal of the Comecon was to establish stronger ties and greater cooperation between the command economies of the Soviet Union and the Eastern-bloc states. The Comecon provided Stalin with yet another way to strengthen his control over the eastern European allies by linking their economic vitality, production, and trade directly to the Soviet Union.

The early years of the organization provided only modest results, such as bilateral trade agreements and sharing of technology between member states. Soviet leader NIKITA KHRUSHCHEV attempted to strengthen the organization by proposing that all member states join a centrally planned socialist commonwealth to be run from Moscow. Smaller member states with less-developed economies and those relying more heavily on agriculture disagreed with this plan for a centralized commonwealth. However, upon his ouster from power in 1964, his attempted centralization of the Comecon and most of his other policies were abandoned.

LEONID BREZHNEV and the Soviet leadership in the 1960s and 1970s recognized the need for economic acceleration and further industrial and technological development in the Soviet Union and Comecon member countries. The economic and technological gaps between countries in western Europe and those in the Comecon were becoming more evident. Therefore, the Comecon adopted a new plan in 1971 called the *Comprehensive Programme for the Further Extension and Improvement of Cooperation and the Development of Socialist Economic Integration*. The basic goal of this program was to emphasize long-term planning and investments in industrial development of all member states.

The Comecon dissolved in 1991. Throughout its four decades of existence, the organization encountered many problems. The dependence of all member states on the economy of the Soviet Union created an unstable and impractical system. The planned economies of the member states did not rely on normal market forces and prices; therefore, the mechanism created a false and inflated economic situation. When the countries traded and dealt with other states outside of the Comecon, the

weakness of their economies became evident. The Comecon never completely fulfilled its objectives because of the difficulties presented when attempting to integrate multiple states' economies.

ELIZABETH C. CHARLES

Commonwealth of Nations

The Commonwealth of Nations, formerly the British Commonwealth, is a loose cultural and political alliance of former British Empire territories. The idea of the commonwealth continually evolved after its origins in the mid- to late 19th century. The term referred to the settler colonies: Australia, New Zealand, Canada, Ireland, Newfoundland, and South Africa. But in the 1920s the settler colonies and Britain began to meet in Imperial Conferences, which provided the structure for the later Commonwealth of Nations. The commonwealth shifted from a community of British-populated independent nations to a proposed economic bloc, and finally to a multicultural community of nations.

The concept of commonwealth described the unique constitutional relationship between Great Britain and the settler colonies; Parliament and the Foreign Office presided over foreign affairs that involved the colonies, but the colonial parliaments controlled their own internal affairs. In the 1926 Imperial Conference, the Balfour Declaration acknowledged that Britain and the settler dominions were “equal in status” to Britain. After the Statute of Westminster in 1931—which gave the dominions of Canada, Newfoundland, South Africa, and Ireland legislative independence—the commonwealth officially became a political organization consisting of the United Kingdom along with its former colonies.

The British tried to make the commonwealth work as a large trading bloc, with trade preferences between the former colonies as well as the formal colonies. Britain's imports and exports to and from the colonies never amounted to more than a third of Britain's trade. Also, such countries as Australia, New Zealand, and

Canada became more dependent upon the United States for trade, especially after World War II.

The sudden decolonization of the British colonies in the 1940s, 1950s, and 1960s created the foundations for the current commonwealth. India's decision to stay in the commonwealth in 1949 provided a precedence for later nonsettler colonies to join the commonwealth after independence. In order to keep its political sovereignty while still allowing for cultural ties, India accepted the king of England as the symbolic head of the commonwealth. In 1949, when India accepted the king as the symbolic head of the commonwealth, the British Commonwealth of Nations changed its name to the Commonwealth of Nations, so as not to imply that its peoples were all of British ethnicity.

As a number of newly independent countries applied to join the commonwealth after they gained independence, the composition of the commonwealth shifted from a meeting of predominantly white countries to a multicultural organization. At the Heads of Governments Conferences in Singapore in 1971 and in Ottawa in 1973, the general consensus was that the commonwealth should be a loose political association of the former British Empire. The Commonwealth of Nations continued to uphold these principals into the 21st century.

As of 2006 Queen Elizabeth II, the queen of England, held the title head of commonwealth. The commonwealth heads of government decide who will be the next commonwealth secretary-general, the official who leads the Commonwealth Secretariat, the decision-making body of the Commonwealth of Nations. Every five years the heads of government elect a new secretary-general at the Commonwealth Secretariat meeting.

Members as of 2006 included Antigua and Barbuda, Australia, the Bahamas, Bangladesh, Barbados, Belize, Botswana, Brunei Darussalam, Cameroon, Canada, Cyprus, Dominica, Fiji, Gambia, Ghana, Grenada, Guyana, India, Jamaica, Kenya, Kiribati, Lesotho, Malawi, Malaysia, Maldives, Malta, Mauritius, Mozambique, Namibia, Nauru, New Zealand, Nigeria, Pakistan, Papua New Guinea, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Samoa, Seychelles, Sierra Leone, Singapore, Solomon Islands, South Africa, Sri Lanka, Swaziland, Tanzania, Tonga, Trinidad and Tobago, Tuvalu, Uganda, United Kingdom, Trinidad and Tobago, Zambia, and Zimbabwe.

BRETT BENNETT

contra war (Nicaragua, 1980s)

Within a year of the July 1979 triumph of the NICARAGUAN REVOLUTION, there emerged a counterrevolutionary (*contra*) movement against the Sandinista regime. From around 1982 the war expanded to include large parts of the country, especially in rural zones of the north and east, due in large part to U.S. funding, training, equipment, and organizing under the presidency of RONALD REAGAN. Combining an internal civil war with an external war of aggression, the contra war was waged by several counterrevolutionary armies that were responsible for the deaths of thousands of Nicaraguans and millions of dollars of property damage.

By the mid-1980s the war compelled the Sandinista regime to devote around half of the national budget to national defense and to institute universal military conscription. By the late 1980s the latter measure proved widely unpopular among Nicaraguans, as did the economic and human cost of the conflict and the shortages of basic goods caused by the war and the May 1985 U.S. trade embargo. Most observers agree that the contra war was a critical factor in causing the electoral defeat of the Sandinistas in February 1990, effectively ending the Sandinista revolution. It was also central to the IRAN-CONTRA AFFAIR in the United States, which rocked the second Reagan administration (1984–88).

With the electoral defeat of the Sandinistas and an internationally supervised demobilization process, by the early 1990s the war effectively ended, though armed groups continued to destabilize many rural areas well into the 1990s. It is estimated that the war uprooted some 600,000 people (around 15 percent of the national population) and caused the deaths of 30,000 to 50,000 civilians and combatants.

Small-scale armed resistance to the Sandinista regime by autonomously organized militias began within a month of the FSLN's takeover, principally in the region north of Jinotega. These earliest contras, calling themselves *milpistas* (combatants of the MILPAS, or Militias Populares Anti-Sandinistas, successor

organizations to the pro-Sandinista Militias Populares Anti-Somocistas, and a play on an indigenous word for “cornfield”), launched their first armed assault against the Sandinistas in November 1979 in the mountains near Quilalí. The MILPAS were generally kinship-based, composed of fewer than 100 members each and rooted in rural dwellers’ long tradition of antipathy to state authority.

During this early period (1979–81), contra organizing also emerged in the borderland zones of Honduras and Costa Rica among exiled Somocistas and National Guardsmen. Like the MILPAS, these paramilitary groups were small in scale and organized principally around personal relationships. By late 1980 some of these exile groups began to receive covert funding from the U.S. Central Intelligence Agency (CIA) and Argentine military.

In April 1981 elements of the MILPAS and ex-Guardia—dominated exile groups in Honduras formed the Nicaraguan Democratic Force (Fuerza Democrática Nicaragüense, or FDN), under the command of ex-Guardia colonel Enrique Bermúdez, composed of some 500 troops. Portraying the Sandinistas as clients of the Cubans and Soviets, in November 1981 Reagan signed a secret order (National Security Decision Directive 17) granting \$19 million to the CIA to recruit and train contra forces. On December 1, 1981, he issued a presidential finding calling for U.S. support in conducting paramilitary operations against the Sandinista regime. Around this time a second contra army was formed in the north, the Revolutionary Armed Forces (FARN), under the political direction of the Nicaraguan Democratic Union (UDN), and led by exiled businessman José Francisco Cardenal.

Henceforth the contra war rapidly gained steam. In April 1982 a second front was opened in the south with the formation of the Democratic Revolutionary Alliance (ARDE) and its military wing, the Sandino Revolutionary Front (FRS), based in Costa Rica and commanded by former Sandinista Edén Pastora. Another largely autonomous armed rebel group formed in the Atlantic Coast region in late 1981, led by Brooklyn Rivera, among disaffected elements of the mass indigenous organization MISURASATA—an organization composed primarily of Miskitu Amerindians and represented in the FSLN’s newly created Council of State.

In the United States, congressional opposition to the Reagan administration’s funding of the contra forces mounted. In December 1982 the House passed an amendment sponsored by Edward Boland (D., Mass.) banning the use of federal funds to overthrow the Nica-

raguan government. The Reagan administration found legal ways to circumvent the ban. By 1983 the contra forces had grown to some 13,000 to 15,000 troops, and by 1985 to some 20,000. By this time the contras had committed hundreds of atrocities against Nicaraguan civilians, as documented by the human rights organization Americas Watch and others. In May 1984 Congress passed a second Boland amendment, requiring an end to all military aid to the contras by October 1. For the next two years, the Reagan administration illegally funneled covert aid to Iran in exchange for Iranian arms shipments to the contras.

By the late 1980s contra armies were active across much of the northern and central parts of the country. In 1988 and 1989 a series of peace accords (notably the Sapoá Accord of 1988) created a framework for contra demobilization. With the Sandinista defeat in the February 1990 elections, the administration of President Violeta Chamorro negotiated with the leaders of the Nicaraguan Resistance (Resistencia Nicaragüense, or RN, successor to the FDN), culminating in the Disarmament Protocol of May 30, 1990. Agencies of the United Nations and Organization of American States supervised the disarmament process, which by mid-1990 had processed some 23,000 contras, from an estimated fighting force of 170,000, many of whom demobilized informally. Through the early 1990s armed groups continued to destabilize large parts of the interior, consisting of both ex-contras (*recontras*) and former members of the Sandinista Army (*recompas*)—groups that sometimes merged to form groups of *revueltos* (a play on words meaning both “rebels” and “scrambled eggs”). By 1992, with the contra war officially ended, as many as 23,000 armed insurgents continued to operate in rural areas, posing severe challenges to governance in the second-poorest nation in the Western Hemisphere.

counterculture in the United States and Europe

Counterculture is a sociological term that describes the radical values and models of a group of people clashing with those of the majority, or cultural mainstream. The term entered common usage during the 1960s and 1970s when movements of youth rebellion against conservative social standards swept the United States and western Europe. The countercultural movement represented a reaction against the conformist values embodied by 1950s society, the repressive principles of the COLD WAR, and the U.S. intervention in Vietnam. Young people throughout the world advocated peace and fairer race relations. They challenged conventional gender and sexual role—ideas spawned by the revival of FEMINISM—and pushed legal boundaries to the limit by the recreational use of drugs such as marijuana and LSD. The political and social aspects of counterculture are inseparable from the unconventional postures and appearances of its members.

The 1960s counterculture originated on U.S. college campuses and later arrived in European universities. The University of California at Berkeley was a particularly important center, and its 1964 FREE SPEECH MOVEMENT became one of the first occasions of tension between youth and the authorities. To scholars of counterculture, the free speech movement was the point of departure for the protest movements of the 1960s and 1970s. The movement demanded that campus administrators suspend the ban on university political activities and recognize the students' right to free speech and academic freedom. On October 1, 1964, former student Jack Weinberg refused to leave the table where he was campaigning for the civil rights association Congress for Racial Equality (CORE). His arrest by the police led to a spontaneous demonstration by fellow students, who blocked the police car containing Weinberg for 36 hours. The following month the university decided to bring charges against those who organized the sit-in. This led to imposing demonstrations and the arrest in early December of 800 students in front of Sproul Hall, the university's administrative center. After more protest parades the University of California started reconsidering its rules on political activities on campus, permitting tables and discussions on the steps of Sproul Hall at certain times of the day.

The decade continued in the United States with the outbreak of more tensions, often along generational lines, concerning the VIETNAM WAR, sexual behavior, the

role of women in society, African-American civil rights, and drug experimentation. Vietnam became a specific target of criticism, which was also heightened by the imposition of a compulsory military draft. A veritable revolution took place in sexual mores with the spread of contraception and the legalization of abortion in 1973 with the Supreme Court ruling on *Roe v. Wade*. The Summer of Love drew thousands of people from around the world to San Francisco in 1967, particularly to the Haight-Ashbury district.

The end of the 1960s also witnessed the organization of gays and lesbians in groups to acquire visibility and to have their identities recognized. Drug taking stopped being a social phenomena linked to urban ghettos and became part of middle-class life. Feminist thinkers asked for comprehensive social change, pointing out that economic structures are at the base of women's subordination. The United States shifted from the family-oriented society of the 1950s to one that had individual rights at its core. It was in the 1960s that women started to challenge the cultural expectation that they would take primary responsibility for child rearing. Most feminists demanded the alleviation of the social burdens of motherhood through paternal involvement in parenting, quality child care, flexible work arrangements, and a system of social and financial welfare that did not leave them to rely completely on their husbands.

At the beginning of the 1960s few Americans were aware of the struggle of African Americans for civil rights. The Supreme Court ruling *BROWN V. BOARD OF EDUCATION* outlawing segregation in public schools dates back to 1954, but progress in the implementation of integration had been slow. The 1960s witnessed renewed activism of young African Americans, who refused to leave lunch counters when they were denied service or to travel on segregated buses. In 1962 the admission of African American James Meredith to the state university in Mississippi caused a sensation and an outburst of violence from white supremacists. MARTIN LUTHER KING, JR., became the leader of the CIVIL RIGHTS MOVEMENT, and in August 1963 he managed to draw together hundreds of thousands of African Americans and white Americans in his March on Washington to call attention to the fact that a century after emancipation many African Americans were still unable to exercise basic citizens' rights. The Civil Rights Act of 1964 and the Voting Rights Act of 1965 were important achievements of the Civil Rights movement. The acts outlawed segregation in public facilities and authorized federal examiners to register black voters, thus ending disenfranchisement.

The counterculture soon arrived in European capitals, with devastating effects for the established power. As in the United States, the young people taking part in the countercultural movements were well educated, often at the university level. As riots became widespread throughout European streets, this provoked heated debates within the left. Who were the true proletarians? The students or the policemen who had to battle with them in the streets? Left-wing groups independent from the communist and socialist parties were formed in Italy, France, and Germany. These groups—such as Potere Operaio and Lotta Continua in Italy—did not have parliamentary representation, but still became the avant-garde of the movement because of their capacity to attract young people.

CULTURAL FORMS

During the 1960s and 1970s new cultural forms emerged in all artistic fields from cinema to music, from fashion to media. The music of the Beatles came to embody the need for change and the experimentation of younger generations. The Old Hollywood of dated melodramas controlled by studio moguls was replaced by the New Hollywood. Young directors such as Dennis Hopper, Peter Bogdanovich, Mike Nichols, Arthur Penn, Francis Ford Coppola, and Martin Scorsese reflected in their movies the rise of the counterculture and expressed the longing for freedom shared by thousands of young Americans. In Europe the French and British New Waves and the New German Cinema rejected the classic norms of filmmaking, experimenting with photography and editing. They also focused their films on the ordinary lives of the working classes and on those outside of the social mainstream. Underground newspapers spread throughout the United States and Europe, constituting a network of resistance to the establishment.

One of the most visible icons of the counterculture movements was the figure of the hippie, who often expressed the distaste for social conventions by renouncing consumerism and living in communes guided by forms of spiritualism outside the Christian tradition. The figure of the hippie encapsulates a major contradiction in the countercultural movement. The communal thrust of the movement is countered by an equally strong emphasis on individual choices, which tends to prevent any form of cooperation.

The more fascinating and controversial aspects of the counterculture should not overshadow the contributions of the movement outside the arts. The counterculture influence reached less spectacular and more

stable fields such as economics, business, and law. Many of today's nongovernmental organizations, for example, have their roots in the 1960s search for a fairer and more environmentally minded development. In general, as the counterculture evolved in the 1970s and its icons began to lead more moderate lives, the movement started to be absorbed to a certain degree within the mainstream. As such it left its mark on various fields like philosophy, morality, music, art, lifestyle, and fashion. Yet, especially in the European context, there were those who refused to be absorbed, and pushed their refusal to dangerous extremes. The late 1970s and the 1980s were characterized by the rise of terrorist groups such as the Red Brigades in Italy, Action Directe in France, and the Red Army in Germany.

The most apparent features of the 1960s and 1970s counterculture were unconventional appearance, music, drugs, communitarian experiments, and sexual liberation—mostly practiced by white, middle-class young Americans and Europeans. To some the counterculture represented the longing of young people for free speech, equality, and a more inclusive and less exploitative world. Others denounced the counterculture as hedonistic, meaninglessly rebellious, unpatriotic, and destructive of the Western world's moral order.

LUCA PRONO

Cuban migration to the United States

Movements of people from Cuba to the United States comprise a longstanding feature of both countries' histories. The panic of 1857 prompted numerous Cuban cigar manufacturers to move their operations to Key West, Tampa, and elsewhere along the Florida coast. During and after the Ten Years' War (1868–78), several thousand Cubans formed exile communities along the

U.S. eastern seaboard—especially in Key West, Tampa, Ocala, and Jacksonville, Florida, and further north in New York City. The 1850 U.S. census shows 969 persons of Cuban birth living in the United States, with most (275) in Louisiana and 23 in Florida.

By 1860 there were 2,056, with 55 in Florida. That number more than tripled by 1870, reaching 6,515, with about half (3,014) in New York and less than a fifth (1,147) in Florida. By 1880 the figure rose slightly to 7,004, with Florida (2,625) surpassing New York (2,253), followed by Louisiana (652) and Pennsylvania (359, with 309 in Philadelphia). In 1900, in the aftermath of the Cuban War of Independence and the U.S. military intervention and occupation of the island, 11,243 Cuban-born persons were listed, including 6,645 in Florida (3,378 in Tampa, 3,015 in Key West) and 2,251 in New York. In 1910 the number rose to 15,725, remaining stagnant to 1920 (15,822). All of the above figures likely undercounted the actual number.

A much larger movement of Cubans to the United States began with the CUBAN REVOLUTION, which came to power in January 1959. From 1960 to 1962 an estimated 195,000 Cubans immigrated to the United States, mostly professionals and members of the middle class, with most settling in Miami, Florida; Union City, New Jersey; and New York City. The exodus continued in several waves through the 1960s and into the 1970s, becoming integral to COLD WAR politics, welcomed by the U.S. government and materially harming the Cuban economy, even as the exoduses proved politically useful to the Castro regime.

The 1966 Cuban Adjustment Act (CAA) allowed undocumented Cuban immigrants to stay in the country and gain permanent residence after one year, rights not extended to any other immigrant group. In 1980 some 125,000 Cubans, the so-called Marielitos, emigrated to the United States in the Mariel boatlift. In the summer of 1994 at Castro's invitation, an estimated 33,000 Cubans made the journey. The exodus prompted the U.S. government to negotiate an agreement with Cuba, in September 1994, in which the United States agreed to admit a minimum of 20,000 Cubans annually, and emigrants intercepted at sea would no longer be permitted to enter the United States. In 1995 the 1966 CAA was revised to incorporate the so-called wet-foot, dry-foot policy, which stipulated that undocumented Cuban immigrants who reached U.S. soil ("dry feet") would be permitted to apply for permanent residence status in one year, while those intercepted at sea ("wet feet") would be sent back to Cuba or to a third country.

The 2000 U.S. census enumerated 1,241,685 persons of Cuban ancestry in the United States, comprising 3.5 percent of U.S. Hispanics and 0.4 percent of the U.S. population of 281.4 million. Most lived in Miami-Dade County, Florida, with 525,841 Cuban-born, the single largest national group among large influxes of Haitians, Dominicans, Central Americans, and others from the 1980s especially. As a result of these demographic changes, the politics and culture of south Florida have undergone profound shifts, with relatively affluent, politically conservative, and vehemently anti-Castro Cuban Americans increasingly shaping the region's economy, politics, and culture.

MICHAEL J. SCHROEDER

Cuban missile crisis (October 1962)

In what many experts consider the closest the world has yet come to nuclear war, for 13 days in October 1962 the United States and the Soviet Union faced off over the Soviet placement of nuclear missiles in Cuba. In the end, the Soviet Union backed down, agreed to remove the missiles in exchange for the removal of U.S. nuclear missiles in Turkey, and the crisis passed. The Cuban missile crisis left an enduring mark on U.S.-Soviet relations, heightened U.S. resolve in other COLD WAR conflicts, and appeared to demonstrate the viability of the doctrine of nuclear deterrence through mutually assured destruction.

The long-term roots of the crisis lie in the atmosphere of mutual hostility and distrust engendered by the cold war. In the shorter term, Soviet Premier NIKITA KHRUSHCHEV hoped to use the provocation to force the United States to remove the 15 Jupiter nuclear missiles in Turkey, which were within striking distance of Moscow. In addition, the botched April 1961 BAY OF PIGS invasion of Cuba heightened revolutionary leader FIDEL CASTRO's fears of a follow-up U.S. effort to topple his regime. The Bay of Pigs events also persuaded Khrushchev that U.S. president JOHN F. KENNEDY

An aerial view showing the medium-range ballistic missile field launch site at San Cristóbal, Cuba, on October 25, 1962. The presence of these weapons led the United States and the Soviet Union to the brink of war.

was weak and indecisive and would back down when confronted with the reality of Soviet missiles in Cuba. Declassified documents and a series of conferences among participants from the United States, Cuba, and the former Soviet Union have confirmed that the events of October 1962 brought the world closer to the brink of nuclear holocaust than officials at the time realized.

Scholars have meticulously reconstructed the chronology of events marking the crisis. Through the summer of 1962 the Soviets built a variety of military installations on Cuba, as confirmed by aerial reconnaissance, though U.S. intelligence analysts did not believe they included nuclear weapons. On October 14, 1962, a U-2 spy plane photographed military bases around San Cristóbal, Cuba, demonstrating the existence of nuclear installations. Khrushchev, with Castro's approval, had deployed launchers for at least

40 medium-range and intermediate-range nuclear missiles, capable of reaching all of the continental United States except the Pacific Northwest. For the next two days, U.S. analysts poured over the photographs. Kennedy and his national security team were briefed on their findings on the morning of October 16, the beginning of the "thirteen days." His team devised two plans: an invasion of the island, and a naval blockade—the latter, by international law, an act of war. Kennedy opted for the blockade, announced in a televised address to the nation on October 22. The next six days were the height of the crisis. On October 28, one day before the U.S. deadline for launching an invasion of Cuba, Khrushchev agreed to remove the launchers in exchange for the U.S. removal of its missiles from Turkey. Many scholars argue that the outcome of the crisis prompted a more muscular U.S.

response to perceived Communist aggression around the world, and contributed to deepened U.S. intervention in Vietnam.

MICHAEL J. SCHROEDER

Cuban revolution (1959–)

On January 1, 1959, a broad-based insurrectionary movement—with FIDEL CASTRO at its helm—overthrew the dictatorship of Fulgencio Batista and inaugurated the Cuban revolution, a process of social transformation that continues to the present writing. Its ideology was at first broadly nationalist and democratic, but by 1961 the revolution was proclaimed unambiguously socialist and Marxist-Leninist. One of only a handful of social revolutions in 20th-century Latin America, the Cuban revolution had a major impact not only within Cuba but around the world.

In Latin America, the revolution encouraged the formation of leftist and neo-Marxist ideologies and movements of national liberation, sparking a florescence of guerrilla groups in the 1960s and after that hoped to duplicate the successes of the Cuban revolutionaries. The Sandinista revolution in Nicaragua (1979–90), for instance, found much of its inspiration in the events in Cuba, as did other national liberation and guerrilla movements from Mexico to Argentina. By bringing a Marxist-Leninist regime to the historic “backyard” of the United States, the Cuban revolution was also a major event in the COLD WAR. Its effects were felt in Angola, Mozambique, Vietnam, and scores of other nation-states around the world, particularly in the two decades following Batista’s ouster.

The revolution found its long-term origins in the structural dependency of Cuba on the United States since the thwarting of Cuban independence in 1898 and the U.S.-imposed Platt Amendment of 1901, which prompted denunciations of “Yankee imperialism” across the island; and in the poverty, economic inequalities, and political disfranchisement of the Cuban people under a series of dictatorial regimes. Most narratives of the revolution begin with the

rise of the Jesuit- and university-educated lawyer Fidel Castro and his band of revolutionaries. On July 26, 1953, Castro—at the head of a group of 134 men—attacked the Moncada barracks in Oriente province in eastern Cuba. The assault was quickly defeated but catapulted Castro into national prominence. At his trial in October 1953, he delivered a brilliant speech, later turned into a pamphlet and becoming one of the defining texts of the revolution, whose title repeated its closing words: “History will absolve me.” Sentenced to 15 years in prison, Castro became something of a folk hero for his eloquent denunciations of the Batista dictatorship and the island’s social injustices.

Released on May 15, 1955, in a general amnesty, Castro traveled to Mexico to form a guerrilla army of Cuban exiles. In February 1956 he announced the formation of his 26 July Movement, and on November 25, with 81 other men, departed Tuxpan, Mexico, aboard the yacht *Granma*, headed for eastern Cuba, which they reached on December 2.

The guerrilla war in the Sierra Maestra in 1957–58 is the topic of an expansive literature. Led by Castro, his brother Raúl, and the Argentine ERNESTO “CHE” GUEVARA, the rebels gradually earned the trust of the peasants and workers who comprised the region’s majority. It also established contacts with politically disaffected labor leaders, workers, students, intellectuals, and other activists in Cuba’s major cities, especially Havana, whose protest movements soon dovetailed with Castro’s. After a complex series of events that found the Batista regime increasingly beleaguered, Castro’s forces entered Havana in triumph on January 1, 1959.

On seizing power, the revolutionaries embarked on a program of social transformation that focused on nationalization of major industries and broad-ranging reforms in land ownership, housing, rents, food, and related spheres. Since a large proportion of Cuban land and industries were U.S.-owned, the stage was set for confrontation with the United States. Hostile rhetoric intensified on both sides as the administration of Dwight D. Eisenhower, under pressure from business interests and anticommunists, interpreted events in Cuba through the prism of the cold war. In February 1960 the Castro regime signed a trade agreement with the Soviet Union in which the Soviets agreed to sell Cuba oil at a discount and buy Cuban sugar at a high price. In June Standard Oil, Texaco, and Shell refused to refine Soviet oil, prompting the Castro regime to nationalize their refineries. In retaliation the Eisenhower administration cancelled its commitment to buy its annual sugar quota of 700,000 tons, which the

Soviets quickly assumed. What had begun as a national liberation movement quickly escalated into a cold war battleground, with the Castro regime, in effect, trading U.S. economic dependency for Soviet dependency. On December 2, 1961, following the failed BAY OF PIGS invasion and U.S. trade embargo of April, Castro proclaimed: "I am a Marxist-Leninist and will remain a Marxist-Leninist until the day I die."

Early efforts to diversify the economy largely failed, plagued by bureaucratic micromanagement and overplanning, and over-reliance on the concept of the socialist "New Man," in which economic incentives were to be displaced by revolutionary fervor. From 1964 the regime opted to increase the economy's reliance on sugar, culminating in the disastrous policy goal of producing 10 million tons of sugar by 1970. The effort failed and had negative economic effects for years. Efforts to improve the living standards of ordinary Cubans met with greater success. Government programs in housing, health care, education, and related spheres are generally considered the biggest successes of the revolution. By the 1970s hunger, malnutrition, homelessness, and illiteracy had been all but eliminated, while the Cuban health-care system ranked among the most developed in the world. On the negative side of the ledger, political oppression increased markedly, with all organized opposition to the regime banned, thousands of dissidents jailed, and freedom of speech severely curtailed. Beginning in 1960 and continuing in several waves thereafter, the regime's intolerance of political dissent and socialist economic policies prompted tens of thousands of middle-class and professional Cubans to migrate to the United States, where large exile communities formed, centered in Miami.

Internationally, Cuba became a beacon of hope for revolutionaries across Latin America. To the chagrin of his more cautious Soviet patrons, Castro announced his intention to export revolution to Latin America. The plan's most ardent proponent was former minister of industries Che Guevara, whose "foco" theory of revolution, which held that a small group of dedicated revolutionaries could win peasant support and spark a social revolution, was put to the test in Bolivia in 1967. The expected mass uprising did not materialize, and Guevara was captured and killed by the Bolivian army.

Castro remained the head of the Cuban Communist Party through the 1970s and 1980s, as the bureaucracy expanded and the revolution grew increasingly institutionalized. With the fall of the Soviet Union in 1991 and the end of its approximately \$4 billion in annual subsidies, combined with the continuing U.S. trade embargo,

the revolution entered a "Special Period" that saw a decline in living standards and in all major industries. In the early 2000s, Cuba was one of only a handful of countries worldwide explicitly espousing communist ideology. In early 2007, with over 1 million Cubans and Cuban Americans in Miami and elsewhere anticipating the regime's demise, Castro appeared on the brink of death, with speculation rife on whether the revolution could survive without him. He resigned the presidency in favor of his brother, Raoul, in February 2008.

MICHAEL J. SCHROEDER

Cyprus, independence of

On June 4, 1878, Britain concluded a treaty with the Ottoman sultan Abdul Hamid II, officially known as a Convention of Defensive Alliance. In this treaty Abdul Hamid agreed to the loan of Cyprus to Britain, while retaining Ottoman sovereignty over the island and the right to collect a tax known as the tribute.

Britain won de facto control of the island and the right to make laws and international agreements in the name of Cyprus. Within weeks of the signing of this treaty, the Union Jack flag was hoisted over Nicosia, and shortly afterward a contingent of Indian army troops arrived from Malta to safeguard British colonial rule, which lasted 82 years. For Britain, Cyprus became a vital staging area for its Middle East interests. The island was formally taken over by the British in 1914, when the Ottoman Empire aligned itself with Germany and the other Central Powers during World War I. Under the Treaty of Lausanne of 1923, Turkey and Greece agreed that Cyprus would remain under British sovereignty, and in 1925 Cyprus was declared a crown colony.

Both the Greeks and the Turks of Cyprus considered British control a welcome relief from Turkish taxation; many Greek Cypriots also felt that the departure of the Ottoman administration brought the island closer to the Greek dream of *enosis*, or union, with Greece. Thus, in effect, began the efforts of the Greek Cypriots to link the island's destiny with that of Greece. The British govern-

ment continued to state formally that no change in the status of the island was contemplated. Such an attitude further embittered the Greek Cypriots, although it was of some comfort to the Turkish Cypriots.

On April 1, 1955, a secret organization calling itself the National Organization of Cypriot Fighters—known by its Greek initials as EOKA (Ethniki Organosis Kypriou Agoniston)—declared a struggle until death to free the island from British rule and to link it with the Greek mainland. The war for the future of Cyprus began as colonial empires were crumbling around the globe. The British felt there was no question of a union with Greece or of full independence for Cyprus.

Considering its commitments in the Middle East and its still important role on the southeastern flank of the NORTH ATLANTIC TREATY ORGANIZATION (NATO), Britain regarded Cyprus as a crucial military base on the traditional crossroads of big-power competition for influence in the eastern Mediterranean. Turkish Cypriot reactions were predictable. The Turks felt that, if successful, the Greek struggle for *enosis* against British colonial rule meant that the Turkish-speaking minority on the island would lose the protection of the British.

Fear of a Greek victory prompted the creation of a Turkish Cypriot counter organization known as VULCAN; the Turkish Cypriot minority also cooperated with the British police and military in tracking down suspected EOKA fighters. To the slogan of *enosis*, Turkish Cypriots answered with their own solution, that of *takism*, or partition, of Cyprus. Georgios Grivas, who had previously served as a colonel in the Greek army, led the EOKA. Grivas arrived on the island from Greece in 1954 and set out to prepare what amounted to an well-organized uprising.

In Nicosia, early in 1955, rumors of landings of saboteurs, of infiltration by agents dispatched from Greece, and of organized resistance began sweeping the narrow streets, and soon Cyprus became an armed camp. An estimated 28,000 British troops were deployed throughout the island, manning roadblocks, searching passers-by, pursuing elusive terrorist suspects, and uncovering arms caches and hideouts in some of the most improbable places. Cyprus had become a dangerous weak spot in the NATO alliance. What needed to be done was to work out a system of ethnic power-sharing that would satisfy Greece and Turkey, as both nations worked to protect their Cypriot ethnic compatriots as well as their own interests. Talks between the two countries continued throughout January 1959.

On February 5, Greek prime minister Constantine Karamanlis and Adnan Menderes of Turkey met

in Zurich, where they prepared, after negotiations and consultation with the leaders of the two Cypriot communities, an outline for a solution to the Cyprus situation. With that document in hand, they traveled to London, where they were joined by Archbishop Mikhalis Khristodoulou MAKARIOS III and Dr. Fazil Kuchuk, the political leader of the Turkish Cypriot community.

The new Cypriot constitution, based on the Zurich-London agreements, was issued in April 1960 and paved the way for the proclamation of the independent Republic of Cyprus. The president of the republic was a Greek Cypriot while the vice president was a Turkish Cypriot, both being elected by their representative communities. Both had veto powers over foreign affairs, defense, fiscal matters, and security.

THREE TREATIES

On the same day the constitution was finalized it was accompanied by three treaties: the Treaty of Guarantee, the Treaty of Alliance, and the Treaty of Establishment. The Treaty of Guarantee was signed by Turkey, Britain, Greece, and Cyprus. It stated that the four countries agreed not to undertake activity aimed at promoting, directly or indirectly, a union of Cyprus with any other state, or a partition of the island.

The Treaty of Alliance involved Cyprus, Greece, and Turkey. It established a tripartite headquarter on the island and permitted the two latter states to deploy, respectively, 950 and 650 persons in Cyprus to protect the island.

The Treaty of Establishment was signed between Britain and Cyprus and granted Britain sovereignty over a territory on the island's southern coast for two military bases, Akrotiri and Dhekelia. The constitutional agreement was reached at the price of some 500 killed during the EOKA struggle with the British, but it also allowed Britain's colonial disengagement from Cyprus. The flag under which the two communities of Cyprus were to unite was displayed to the public on August 16, 1960. The Union Jack was replaced with a white flag bearing an orange map of Cyprus with small green branches underneath.

Cyprus, Turkish invasion of

On July 19, 1974, Turkish warships and landing craft moved toward the northern coast of Cyprus. The invasion—or intervention, to the Turks—was Turkey's answer to the military coup of 15 July that toppled Archbishop Mikhalis Khristodoulou MAKARIOS III, president of Cyprus, at the behest of the military junta in power in Athens, Greece. Turkish officials justified the military action by citing the terms of Article IV of the Treaty of Guarantee, noting the impossibility of joint action with Greece and the reluctance of Britain to use military force to restore the state of affairs established by the constitution of 1960.

The Turkish military offensive began on July 20, and although the Greek National Guard tried to defend the beachfront of northern Cyprus, it was defeated by the far stronger Turkish armed forces. The Greek National Guard was poorly armed, while the Turks used new equipment and weapons recently purchased from the United States. Britain evacuated an estimated 12,000 British and other foreign nationals, as well as a number of Cypriots, to the Akrotiri military base and from there to England. By July 22, the United Nations succeeded in obtaining a cease-fire. At this stage of the operation, named Attila II, the Turks controlled only a strip of the northern coastline about 10 miles long, including Kyrenia and a few villages.

Under pressure of the events in Cyprus, the Athens junta finally collapsed after more than seven years in power. Former Prime Minister Constantine Karamanlis returned from exile in Paris to form a new cabinet. At the same time, Nicos Sampson renounced his seven-day-old presidency of Cyprus, leaving the shattered country to Glafcos Clerides, who had previously been the president of the House of Representatives. During the early days of the post-invasion period, the Greek National Guard attacked Turkish Cypriots, thereby worsening inter-communal relations.

A conference of the guarantor powers (Greece, Turkey, and Britain), as well as Cyprus, was organized in Geneva on July 25 and resulted in a declaration calling for an exchange of prisoners and protection by the UN

forces of the Turkish Cypriot enclaves. As scheduled, the second part of the conference convened on August 9 with Clerides and a large team of advisers and experts representing Cyprus. Meanwhile, the small area of Cyprus held by the Turkish army was further occupied by some 30,000 troops with accompanying tanks, and artillery. On August 13 the Turkish foreign minister Turan Güneş shocked international opinion by refusing a request for a 36-to-48-hour delay made by Clerides in order to consider proposals to resolve the crisis. At dawn on the following day, armor-backed Turkish columns fanned out east and west of Nicosia.

By this action Turkey was in violation of the many Security Council resolutions calling for a cease-fire and troop withdrawal, as well as agreements that were signed in Geneva. After three more days of fighting, Turkey called a cease-fire, but not before 37 percent of Cyprus had come under Turkish military occupation. Approximately 10,000 Turkish Cypriot refugees from enclaves in the south were flown to northern Cyprus from British bases by way of Turkey.

Some 140,000 to 160,000 Greek Cypriots, making up roughly one-third of the island's population, were expelled from their homes and land. Acts of ethnic cleansing by the Turkish military were documented, and many POWs are still unaccounted for. The events of 1974 dramatically altered the internal balance of power between the two Cypriot communities and coupled their prevailing political and institutional separation with a stark physical and geographical separation. Until the present day, the island remains divided between the Greek-speaking south, now a member of the EU, and the self-styled Turkish Republic of Northern Cyprus, which is recognized only by Turkey.

BRIAN M. EICHSTADT

Dalai Lama, 14th (Tenzin Gyatso)

(1935–) *Tibetan Buddhist leader*

The Dalai Lama has been both the temporal and the spiritual leader of Tibet since the 16th century. Tibetans are followers of Vajrayana (Vehicle of the Thunderbolt), or Tantric Buddhism, and believe that the Dalai Lama is the reincarnation of the Bodhisattva Avalokiteshvara (Chenrezig in Tibetan, and Guanyin or Kuan-yin in Chinese). In 1578 Altan Khan, a Mongol ruler (Mongols also follow Vajrayana Buddhism), conferred the title Dalai Lama (meaning ocean of wisdom) on an eminent Tibetan lama, and since he was viewed as the third reincarnation of Avalokiteshvara, he became known as the Third Dalai Lama. He resided at the Potala Monastery in Lhasa. The Fifth Dalai Lama, called the Great Fifth, conferred the title Panchen Lama or Panchen Rimpoche (meaning the Great Gem of Learning) on his teacher, declaring that he was the reincarnation of Amitabha Buddha, or the Buddha of Light. The Panchen Lama presided at Tashilhunpo Monastery in Shigatse. Called Living Buddhas, they headed the Tibetan theocracy. When one died a committee of senior lamas would be appointed to find his reincarnation, directed by omens and signs.

In 1933 the 13th Dalai Lama died and a search began for his reincarnation. They found him in a two-year-old farmer's son named Tenzin Gyatso in 1939 and enthroned him as the 14th Dalai Lama in Lhasa. In addition to his traditional education, he was taught Western subjects by an Austrian adventurer and Nazi

Heinrich Harrar, who had escaped internment by Great Britain in India.

In 1950 the government of the newly founded PEOPLE'S REPUBLIC OF CHINA announced its intention of taking control of Tibet, which had enjoyed autonomy, with minimal interference from China, for over half a century. Tibetan efforts to enlist aid from India, Great Britain, the United States, and the UNITED NATIONS failed because no nation recognized Tibet as an independent state. As the Chinese army advanced, the Dalai and his court fled to India in December 1950, carrying with them the contents of the treasury. The authorities in Lhasa bowed to the inevitable, traveled to Beijing (Peking) in 1951, and signed a Seventeen Point Agreement that granted Tibet large measures of autonomy. With that the Dalai returned to Lhasa. In 1954 the Dalai and Panchen Lama traveled to Beijing to attend the meeting of China's National Assembly representing Tibet. In Beijing he met with Chairman Mao Zedong (Mao Tse-tung) and Premier ZHOU ENLAI (Chou En-lai), and found many of their government's policies commendable.

Relations between the Dalai Lama's court and the Chinese government began to deteriorate when China pushed for changes and reforms and expanded its control. Tibetan resentment of Chinese repression led to violence that culminated in an armed uprising in Lhasa in 1959. Fearing detention by the Chinese, the Dalai, his family, and his entourage left Lhasa in disguise on March 17, 1959, and crossed into India on March 30. They were given a cordial welcome by the Indian government, including a visit by Prime Minister JAWAHARLAL

The spiritual leader of the Tibetan people, the Dalai Lama continues to tour the world to speak on behalf of his people.

NEHRU, and were granted political asylum, along with about 13,000 other Tibetan refugees. They were allowed to set up a government in exile in Dharamsala, located in the foothills of the Himalaya Mountains.

Since 1959 the Dalai Lama has visited many countries worldwide speaking on behalf of his people and their plight. He has been a most effective spokesman for the Tibetan cause because of his charisma, fluency in English, and peaceful approach to conflict resolution. His numerous writings on Tibetan Buddhism and culture and his personal philosophy are known worldwide. In the process he has demystified the once-mysterious Tibet and the theocracy headed by a Living Buddha. He received the Nobel Peace Prize in 1989. Since 1988 he has also become more flexible on the future of Tibet, abandoning demands for independence in favor of autonomy within China.

JIU-HWA LO UPSHUR

Darfur

In 1989 a civil war began in the African nation of Sudan after an officer in the Sudanese army, Omar al-Bashir, seized power through a coup d'état. The roots of this war are complex, including struggle over limited resources following a serious drought and famine in the mid-1980s, conflicting conceptions of the use of land, ethnic tensions between southern and northern peoples, and religious tensions between Muslims and non-Muslims. In addition, in a more recent development, the cultivation of oil fields in southern Sudan led the government to engage in widespread destruction of long-standing villages to profit from the production and sale of oil. Throughout the entire process the government used food and resources as weapons, often pitting different ethnic groups against each other and withholding humanitarian aid to force the population to abide by its policies. In the 17 years after the civil war began, fighting displaced more than 4 million Sudanese and killed at minimum 2 million, many of them targets of ethnic cleansing and starvation by their own government.

After 2003, government brutality focused on the western region of Sudan, known as Darfur. The tensions in this region were directly linked to the ongoing struggle between pastoral and sedentary communities over land use. In 1989 this region was divided into three states: North Darfur, with its capital at Al-Fasher; South Darfur, with its capital at Nyala; and West Darfur, with its capital at Al-Jeneina.

In February 2003, in response to insurrection, the government sent in its troops, bolstered by Arab paramilitary groups known as *janjawiid* (roughly “armed men on horseback”), predominantly drawn from this region. In retaliation for the continued insurgency and the defiance of the civilian population, these two forces implemented a scorched-earth policy, eliminating both people and communities in a wide swath of destruction. They burned villages, destroyed crops, and stole livestock. Satellite imagery indicates that almost 50 percent of villages were completely destroyed in the western and southern regions of Darfur. Government forces and the *janjawiid* bombarded communities with

aerial assaults, confiscated property, and poisoned local water supplies in order to displace millions of people. In addition to all these acts of destruction, government troops and the janjawiid murdered civilians, abducted thousands of villagers, and participated in hundreds of rapes of women and girls.

Conservative estimates place the death toll in the collective region of Darfur at 200,000; other estimates range to 400,000. The majority of the deaths were due to starvation and disease, exacerbated by the government's refusal to allow humanitarian aid, safe passage, and distribution. In early 2006 violence persisted in the region as government troops and the janjawiid destroyed non-Arab villages and drove refugees into camps along the neighboring border with Chad.

The Sudanese government was directly connected to this process. The Sudanese government refused to allow humanitarian aid to flow freely into the region, to disband the janjawiid, to investigate consistently mass violence against civilians, to allow observers from the UNITED NATIONS or nongovernmental agencies to document the crisis, or to permit United Nations peacekeepers on its soil.

LAURA J. HILTON

Day, Dorothy

(1897–1980) U.S. religious activist

Dorothy Day was a peace and social justice activist, journalist, and writer who cofounded the Catholic Worker Movement, with the aim of enabling the needy to support themselves with dignity.

Day developed a concern for the poor at an early age. Her family endured the 1906 San Francisco earthquake. When her family lived in Chicago, she often

wandered into the poor tenement districts to observe the life there. At the age of 16, Day won a scholarship to the University of Illinois at Urbana, where she studied journalism. At various times throughout her life she protested against conscription, championed women's and African-American rights, and called for an end to war. Day was jailed numerous times for her participation in nonviolent demonstrations.

Day aborted her first child to please her lover, who deserted her. She was married briefly to an older man before entering a common-law marriage with a scientist. The birth of her daughter Tamar prompted a spiritual awakening that led her to the Catholic Church. She became a devout Catholic, attending daily Mass and immersing herself in Scripture.

Day's particular concern was to find an equitable way of life by which people could "feed, clothe, and shelter themselves as God intended them to do." She felt the solution was a return to the land and worker ownership of the means of production. In 1932 she met Peter Maurin, a poor French Catholic immigrant. Together they formed the Catholic Worker Movement.

The *Catholic Worker* was a journal Day and Maurin used to spread the news of the movement. They also formed Catholic Worker houses of hospitality and farms, where people would live together and share their resources with one another. These venues pitted the gospel against the realities of human weakness, often with disappointing results.

Viewed in her time as a revolutionary, Day's radicalism as she applied it to the gospel now inspires many to view her as a saint. Pope JOHN PAUL II approved the opening of her cause for canonization in 2000.

LUCY SCHOLANDS

Democratic Progressive Party and Chen Shui-pièn (Chen Shui-bian)

After its defeat in the civil war the Republic of China (ROC), led by the Nationalist Party (or Kuomintang, KMT), fled to Taiwan, an island province, while the Chinese Communist Party ruled the mainland, called

the PEOPLE'S REPUBLIC OF CHINA (PRC). Fearing invasion by the PRC and to ensure stability on Taiwan, the Nationalist government under Chiang Kai-shek prohibited the formation of opposition parties and imposed martial law in 1949; non-KMT candidates could nevertheless compete as independents or non-partisans in local elections. Although most citizens accepted the restrictions as a necessary price for living a relatively free and increasingly prosperous life, some criticized the mainlander-dominated KMT for monopolizing national power.

Chiang Kai-shek died in 1975. His eldest son, CHIANG CHING-KUO, was elected president in 1978 and reelected in 1984. Ching-kuo left important legacies. One was political reforms that included ending martial law in 1987, granting full freedoms, and allowing the formation of competing political parties. He also declared that no member of the Chiang family would succeed him and promoted highly educated younger people, including native-born Taiwanese, to power. One was his vice president, Taiwan-born Lee Teng-hui. Unlike the chaotic political changes during the same period in the Philippines and South Korea, Taiwan's transition to democracy was peaceful.

In 1986 a previously "illegal" political party became legal. It was called the Democratic Progressive Party (DPP) and gained about 20 percent of the popular votes in legislative elections that year. After Chiang's death in 1989, Lee Teng-hui accelerated the pace of political reforms and won two terms as president. Fractures within the KMT caused by Lee's policies resulted in the victory of DPP candidate Chen Shui-bian (born 1950) a lawyer, in the 2000 presidential elections with 39 percent of the popular vote (compared with 60 percent combined votes for the KMT and its splinter People First Party candidates). Chen won a second term in 2004 with a very slim majority, but the KMT and its allies won a comfortable majority in the legislature.

Taiwan's stable democratic transition with a competitive party system was remarkable. However, it was accompanied by a new kind of corruption, locally called "black and gold politics," that is, crime and money influencing the political process, a situation unknown under authoritarian rule. Chen Shui-bian was popular among some Taiwanese for promoting a local identity and a thinly veiled goal of separating from China. Since the PRC regarded Taiwan as a renegade province and has not disavowed force to compel it to rejoin the motherland, Chen and the DPP's policies have heightened tensions across the Taiwan Strait.

And after China became Taiwan's second-largest trading partner in 2000, Chen's political stance and corrupt rule resulted in a downturn in Taiwan's economy. Despite the end of the United States-ROC Mutual Defense Treaty in 1979, the United States continued to sell arms to Taiwan and remained interested in maintaining the people of Taiwan's right to self-determination. Thus the unsettled relations between the two Chinas constituted the most important source of friction between the PRC and the United States.

JIU-HWA LO UPSHUR

Democratic Republic of the Congo (Zaire)

This country, located in central Africa, is bounded by the Republic of the Congo to the west; Tanzania, Burundi, Rwanda, and Uganda on the east; Zambia and Angola on the south; and Sudan and the Central African Republic on the north. The capital city is Kinshasa, which changed its name from Leopoldville in 1964.

The topography varies from tropical rain forests to mountainous terraces, plateau, savannas, dense grasslands, and mountains. Its region is dominated by the Congo River system, so it has a main role in economic development, transportation, and freshwater supply. This country has equatorial location; as a consequence the climate is hot and humid with large amounts of precipitation in the central river basin and eastern highlands, but it presents periodic droughts in the south.

The majority of the population is Christian, predominantly Roman Catholic but Protestants also. There are other indigenous beliefs. Although French is the official language of the country, 700 local languages and dialects are spoken because DRC has over 200 ethnic groups, mainly of Bantu origin. The population was estimated at 58 million in 2004 and has grown quickly.

The DRC has a vast potential of natural resources and mineral wealth such as cobalt, diamonds, gold, copper, coal, uranium, crude oil, and tin. Most of these are export commodities. The agricultural production basis of the DRC is diversified; the wooden resources

A village scene depicts life in the Democratic Republic of the Congo, a country that has had a troubled, unstable history.

are quite large, and it holds an enormous hydroelectric potential. The programs and policies of structural adjustment set by the INTERNATIONAL MONETARY FUND (IMF) have a ruling presence in the country. In the 1980s, the IMF played a leading role in the economic policies adopted by the DRC. In exchange, the country's external debt was reconsidered and the IMF awarded a considerable loan.

In 1989 the DRC was forced to establish a new economic reform due to economic instability. On the whole, the adjustments have improved the macroeconomic conditions in some countries, but the population's living standards have worsened.

Relative peace in the country in 2002 let President Joseph Kabila, son of the first DRC president, begin implementing an economic plan, helped by the IMF and WORLD BANK; exports increased, improving the situation. But a country with immense economic resources continues to be dependent on external donors. In 1959, as an answer to the increasing demands for complete independence by the main nationalistic parties, the DRC's government announced the forthcoming elections with the aim of establishing an autonomous government. In 1960 the Belgian Congo proclaimed its independence and was renamed Republic of Congo. In 1966 the country became Democratic Republic of the Congo.

The post-independence period was distinguished by instability. Ethnic disputes and military revolts had provoked violent disorders, all of which intensified when the prime minister of the mineral-rich province of Katanga proclaimed his independence from the country and asked Belgium for military help.

A UNITED NATIONS peacekeeping force was called to restore order. However, Col. Joseph Désiré Mobutu, chief of staff of the army, took over the government and declared himself president. In 1971 he renamed the country the Republic of Zaire. During the COLD WAR, Mobutu continued to enforce his one-party system of government, but at the end of this period the regime suffered from external and internal pressures, and he acceded to implement a multiparty system with elections and a constitution. In fact, Mobutu continued ruling until 1997.

Between 1994 and 1996 Zaire was involved in the RWANDA conflict, hosting large numbers of refugees in its border territory. This situation caused trouble when the presence of Hutu refugees, among them several responsible for the Rwanda genocide, provoked the Tutsis to revolt. This rebellion, supported by the United States, Rwanda, Uganda, Burundi, and Angola, spread over the Zaire territory, weakening Mobutu's regime, which was supported by France. This first war in Congo ended when rebel leader Laurent-Désiré Kabila, declared himself president and changed the name of the nation back to Democratic Republic of the Congo.

But relations between Kabila and his foreign backers deteriorated, and in 1998 Kabila's government was subsequently challenged. Troops from Zimbabwe, Angola, Namibia, Chad, and Sudan intervened to support him. The series of wars in this nation was determined not only by ethnic factors but also by natural resources. The control of diamonds and other important minerals has contributed to encourage both wars as well as the maintenance of the authoritarian governments. In 1999 a cease-fire was finally signed, but Kabila was assassinated in 2001. He was succeeded by his son Joseph, who signed a peace agreement with Rwanda the next year and established a transitional government.

With the United Nations presence, a new constitution was formally adopted in 2006, and on July 30 the first free multiparty elections were held. In November 2006 Joseph Kabila won the presidency in the country's first democratic elections since 1960.

Deng Xiaoping (Teng Hsiao-p'ing)

(1904–1997) *leader of the Chinese Communist Party*

Deng Xiaoping was born on August 22, 1904. As leader of the Chinese Communist Party (CCP), Deng was not officially the leader of China but acted as such during the late 1970s until his death. Deng's legacy was the creation of a Chinese form of socialism with limited economic liberalization. Many Communist hard-liners, however, argued that Deng represented a threat and the potential of a return to capitalism. The divided opinion within the CCP with regard to Deng would be a pattern throughout his career. It was under Deng's "second generation" of leadership that China became one of the fastest-growing world economies.

Deng left China in 1920 to work and study in France. He quickly gravitated to many of his seniors on the trip—including ZHOU ENLAI (Chou En-lai). Deng's studies focused on the study of Marxism; in 1922 he joined the Communist Party of Chinese Youth in Europe. By 1924 Deng became a member of the Chinese Communist Party. He returned to China in 1929, led the failed uprising in the Guangxi (Kwangsi) province, then fled to Jiangxi (Kiangsi) Province.

Deng participated in the Long March (1934–35) and guerrilla campaigns against Japan in World War II as well as in the civil war against the Kuomintang. He became mayor and political commissar of the city of Chongqing (Chungking). Mao Zedong (Mao Tse-tung) promoted him to several prominent posts. Mao's 1957 Anti-Rightist Campaign offered Deng the opportunity to work closely with another Communist leader, Liu Shaoqi (Liu Shao-chi). As a result of Mao's GREAT LEAP FORWARD and the economic disaster that followed, Deng and Shaoqi took over control of the CCP and government and implemented a number of less radical and pragmatic policies. The Cultural Revolution, begun by Mao in 1966, dealt a major blow to Deng's career, and he was disgraced.

By 1974, Chinese premier Zhou Enlai was able to bring Deng back to power, taking over as first deputy premier in charge of running the day-to-day affairs. However, the radical GANG OF FOUR, committed to the ideals of the Cultural Revolution, viewed Deng as a significant threat and were able to purge him once again from his positions. Deng's next opportunity came with Mao's death in 1976, and he quickly emerged as Mao's successor.

After 1978 Deng implemented policies that improved relations with the West, traveling to Washington in 1979 to meet President JIMMY CARTER. Rela-

tions with Japan improved as well. In 1984 China signed an agreement with Great Britain for the return of Hong Kong to China in 1997. China promised not to interfere with Hong Kong's capitalist system for 50 years.

Deng implemented the Four Modernizations Program in agriculture, industry, science and technology, and the military. The goal of the modernization program was to create a more modern Chinese economy. Under him China encouraged direct foreign investment and created special economic zones.

The TIANANMEN SQUARE MASSACRE is the most controversial of all Deng's policy decisions. Mass student demonstrations in favor of democratic reforms were met with a violent military crackdown ordered by Deng and his senior associates that resulted in thousands of deaths in Beijing and dozens of other cities in China. It was followed by widespread repression, which stained his career.

MATTHEW H. WAHLERT

disarmament, nuclear

During and after the COLD WAR, the United States and the Soviet Union conducted a series of talks and signed several treaties dealing with arms control and nuclear disarmament. Arms control entails the limitation of nuclear weapons or delivery systems, while nuclear disarmament indicates the actual reduction of nuclear weapons. Beginning with the Intermediate-range Nuclear Forces Treaty (INF) in 1987, the powers would begin the process of nuclear disarmament.

After dropping atomic bombs on Hiroshima and Nagasaki in 1945 to end World War II, the United States had a monopoly on nuclear weapons. In June 1946, at the first meeting of the United Nations Atomic Energy Commission, the United States presented the Baruch Plan, offering to turn over its stockpile of atomic weapons to a UNITED NATIONS international agency if all other countries would pledge not to produce them and agree to a system of inspection. At that time the Soviet Union was in the process of developing its own nuclear weapons and

rejected the plan, arguing that the United Nations was dominated by the United States and western Europe.

The Soviet Union became a nuclear power in 1949 and by the mid-1950s had proposed a gradual reduction in conventional military forces, to be followed by an eventual destruction of nuclear stockpiles. In 1959 Soviet premier NIKITA KHRUSHCHEV, in a speech to the General Assembly of the United Nations, called for total nuclear disarmament within four years. The United States refused to accept these recommendations without on-site inspections to verify disarmament agreements. The Soviet Union refused to allow nuclear inspectors on its territory, and there would be little progress on the issue of disarmament between the two powers in the 1950s.

After the United States and the Soviets came to the brink of war in the CUBAN MISSILE CRISIS, the focus of the two superpowers moved away from nuclear disarmament toward preventing the testing, deployment, and proliferation of these weapons. In August 1963 the United States, the Soviet Union, and Great Britain—which had become a nuclear power in 1952—signed the Limited Test Ban Treaty, which banned nuclear tests in the atmosphere, outer space, and underwater. In July 1968 the United States, the Soviet Union, and Great Britain signed the Nuclear Non-Proliferation Treaty. Under the terms of the treaty the nuclear powers pledged never to furnish nuclear weapons or nuclear technology to non-nuclear powers. The treaty also created an international inspection team under the United Nations International Atomic Energy Administration to verify compliance with the terms of the treaty.

After his election in 1968, President RICHARD NIXON sought an easing of diplomatic tensions with the Soviet Union, a process known as *détente*. The Soviet Union also was looking to ease tensions with the West. Both sides came to the conclusion that the cold war was costing too much and sought to achieve their foreign policy goals through negotiations and peaceful coexistence rather than confrontation.

In January 1969 the Soviet Union proposed negotiations for the limitation of nuclear delivery vehicles and defensive systems. President Nixon endorsed the talks, and in so doing altered U.S. policy away from nuclear superiority. This change in policy was the result of the Soviet arms buildup in the 1960s, which had led to strategic parity between the two superpowers.

SALT I

Negotiations between the United States and the Soviet Union, known as the Strategic Arms Limitation Talks (SALT I), began in November 1969. These talks culmi-

nated in the signing of the SALT I Treaty in May 1972. This treaty placed limits on specific nuclear weapons. The SALT I Treaty was to be valid for five years, and the two sides began negotiations for a new agreement to take effect after the expiration of this treaty. The two sides agreed on a ceiling of 2,400 total delivery vehicles, with each side equipping no more than 1,320 missiles with multiple independently targetable reentry vehicles (MIRVs). After 1974 talks slowed because of disagreements over which types of weapons should count under the 2,400 ceiling. The two sides failed to come to an agreement.

From 1977 to 1979 the United States and the Soviets began new negotiations, known as the SALT II talks. These talks culminated in the SALT II Treaty signed by President JIMMY CARTER and Soviet president LEONID BREZHNEV on June 22, 1979. This treaty implemented the principle of equal aggregate limits, placing numerical limits on each side's nuclear arsenal. The treaty allowed 2,400 total strategic vehicles (reduced to 2,250 in 1981) and limited MIRV ballistic and MIRV intercontinental ballistic missiles. With the principle of equal aggregate limits in place, both superpowers sought to end unrestricted competition for strategic superiority.

The Soviet invasion of AFGHANISTAN in 1979, and U.S. domestic political opposition, influenced the U.S. Senate to refuse to ratify the treaty. Despite this fact, both sides agreed to adhere to the terms of the treaty as long as the other complied as well. By 1986, however, both sides were producing weapons programs that led the other to charge it with rejecting the provisions of the treaty.

STRATEGIC ARMS REDUCTION TALKS TREATY

In 1981 President RONALD REAGAN focused on alleged Soviet military superiority and began the largest peacetime buildup in U.S. history. Despite this arms buildup, Reagan agreed to abide by the limits in the SALT II Treaty. In 1982 Reagan called for the resumption of strategic arms reduction talks, later termed START.

Shortly after MIKHAIL GORBACHEV became Soviet general secretary in March 1985, he announced a postponement of the planned deployment of intermediate-range missiles in Europe until November and expressed a willingness to reenter talks with the United States. By July he suspended all Soviet nuclear tests. In November Gorbachev and Reagan met at the Geneva Summit, breaking the period of deteriorating relations since the Soviet invasion of Afghanistan in 1979. The leaders also announced the beginning of new talks.

Gorbachev and Reagan met again at the Reykjavík Summit in October 1986. In these meetings the two sides came to some broad understandings on reductions in long-range nuclear weapons, the elimination of strategic missiles, removal of medium-range missiles from Europe, a reduction in weapons testing, and on-site verification. The summit was abruptly terminated when the Soviets insisted that the agreement was contingent on ending further research into the Strategic Defense Initiative (SDI) and Reagan refused this condition.

Gorbachev and Reagan signed the Intermediate-range Nuclear Forces Treaty (INF) at the Washington Summit in December 1987 after the Soviet Union separated its opposition to SDI from the larger question of nuclear missiles in Europe. In this agreement both sides promised to destroy all ground-launched intermediate-range nuclear missiles in Europe with a range of 300 to 3,400 miles (approximately 2,300 missiles) and begin a system of on-site inspections. The INF Treaty was ratified by the U.S. Senate and the Supreme Soviet and went into effect after the Moscow Summit in May 1988.

In July 1991 Reagan's successor, President GEORGE H. W. BUSH, and Mikhail Gorbachev signed the Strategic Arms Reduction Talks Treaty (START). START restricted ballistic warheads and launchers, cut land-based ICBMS, and provided for on-site verification. This treaty reduced U.S. and Soviet strategic nuclear forces by about 30 percent. In September 1991 President Bush proposed that both sides dismantle all of their ground-launched tactical nuclear weapons (TNWs). Gorbachev agreed, and all such weapons were scheduled to be destroyed.

After the collapse of the Soviet Union in December 1991, the four former Soviet republics possessing nuclear weapons—Russia, Ukraine, Belarus, and Kazakhstan—signed the Lisbon Protocol to START I, thereby agreeing to recognize Russia as the heir to the Soviet nuclear arsenal. The three non-Russian republics agreed to sign the Non-Proliferation Treaty as nonnuclear states and transfer all their nuclear warheads to Russia within seven years.

President Bush continued to campaign for further cuts in strategic nuclear weapons, proposing dramatic cuts in the number of warheads in existing ground- and sea-launched weapons systems. Bush also unilaterally and effectively canceled the U.S. nuclear modernization program. Bush and Russian president BORIS YELTSIN signed START II in January 1993, which provided for a 25 percent reduction in each

country's strategic forces to 3,000–3,500 warheads over 10 years. The two sides further agreed to the total elimination of MIRV intercontinental ballistic missiles.

In a landmark symbolic gesture in 1994, Presidents BILL CLINTON and Yeltsin announced that their long-range missiles would no longer be targeted at each other's territory. In May 2002 Presidents GEORGE W. BUSH and VLADIMIR PUTIN signed the Strategic Offensive Reduction Treaty, reducing the number of nuclear warheads to a range of 1,700 to 2,200 within 10 years. Although there remain some escape clauses and conditions, many view this agreement as the culmination of the arms control and disarmament process begun by Nixon and Brezhnev in the early 1970s.

MICHAEL A. RIDGE, JR.

drug wars, international

The fight against drugs dates back as far as 1880, when the United States and China signed an agreement prohibiting opium's being shipped from one country to the other. However, it was specifically under RICHARD NIXON's administration in the early 1970s that the domestic war on drugs sparked renewed interest in international enforcement of curtailing the supply of illicit drugs. Actions were especially successful in Turkey, but not in Mexico—a center of the drug trade that would only strengthen over the years.

Something other than interdiction efforts had to be done to upset the supply of drugs. This is when the kingpin strategy was adopted and began making the war on drugs much more international in scope, as U.S. DEA agents went after organizations, cartels, and drug lords who controlled major quantities of drugs on an international scope or gave military aid to governments that did so.

United States coast guardsmen form a chain to offload 77 bales of cocaine from the CGC Tornado.

During and after RONALD REAGAN's term, attention turned again to the war on drugs. The Reagan administration pressured Colombian officials to cooperate in the international drug war by extraditing accused cocaine traffickers. Yet many officials who cooperated in such efforts were killed. A prime example of the risk of cooperation was seen in the Medellín cartel's attack on November 6, 1985, on the Colombian Supreme Court, in which they killed over 200 people and destroyed extradition requests.

The 1988 UNITED NATIONS Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances argued that continued illicit drug trafficking undermined legitimate economies, threatened stability, and mandated international cooperation in seizing drug-related assets. Shortly thereafter, in 1989, the Joint Task Force 6 (JTF-6, also known as JTF-North) was formed.

By 1995 this force would be 700 soldiers strong, with 125 specifically stationed, ready for combat, on the U.S.-Mexican border; they killed the first suspected drug trafficker, Esequiel Hernandez, there in 1997. In 1991 the Posse Comitatus Act amendments allowed the military to train civilian police in counter-drug practices.

A decade later the U.S. Coast Guard was given machine guns and sniper rifles to assist in efforts to interdict drug traffickers. Shortly thereafter, efforts shifted beyond policing the U.S. borders for traffickers to sending assistance to policing efforts far from the borders. In July 2000 Congress earmarked \$1.3 billion for Plan Colombia military aid—adding 60 combat helicopters, bringing the number of U.S. troops in Colombia to 500, and training the Colombian military to eradicate coca and fight the FARC (the Revolutionary Armed Forces of Colombia), the country's largest rebel group.

Efforts in the international war on drugs were not limited to Colombia. U.S. forces worked with the Peruvian air force as part of the Air Bridge Denial (ABD) program. The program was implemented to shoot down aircraft, such as that belonging to the infamous Pablo Escobar (leader of the Medellín cartel). ABD was stopped shortly after the April 2001 shooting down of a civilian aircraft carrying a U.S. missionary and a child. It resumed again in Colombia in August 2003 and had forced down 24 drug-trafficking aircraft by 2004, according to U.S. congressman Mark Souder (R-IN).

While Mexico and Colombia have arguably been the center of attention in the international war on drugs, other frontline battles against heroin and opium production have occurred, including the countries of the historical and current leaders in the production of opium and its derivatives—morphine and heroin—in the Golden Triangle (Burma, Laos, and Thailand) and the Golden Crescent (Afghanistan, Iran, and Pakistan). In recent years, the White House Drug Control Policy Office has been working with China to prevent drug trafficking through China to the United States.

Many continue to argue that international drug wars to reduce supply are less successful and much more bloody than drug wars focused on reducing demand. Some argue that reducing demand is the only way to stop supply in the \$400 billion (estimated) global narcotics business.

Instability. Santa Monica, CA: RAND Corporation, 2001; Simmons, Geoff. *Colombia: A Brutal History*. London: SAQI Press, 2004.

ASHLEY THIRKILL-MACKELPRANG

Dutch New Guinea/West Irian

On the western side of Papua New Guinea (PNG) is situated West Irian, a province of Indonesia. A colony of the Netherlands after August 1828, it was known earlier as Dutch New Guinea or West New Guinea. In 1961 it was renamed Irian Barat (West Irian), and in 1973 it was renamed Irian Jaya. The whole of western New Guinea was named Papua in 2002. In February 2003 the western portion of Papua was separated and renamed West Irian Jaya. The Indonesia constitutional court in 2004 did not allow the division of Papua into three regions, but accepted the creation of the West Irian Jaya province, carved from Papua's western region.

The Netherlands controlled Dutch New Guinea even after the Hague Agreement of December 1949, which transferred sovereignty to the Indonesian federal government. The Indonesian leader AHMED SUKARNO (1901–70) did not want any remnant of Dutch colonialism. The Indonesian army occupied New Guinea in 1961. An agreement was signed on August 15, 1962, by which power was transferred to the United Nations Temporary Executive Authority (UNTEA) for six years from 1963. Indonesia had administrative power over the territory from May 1, 1963. West Irian was incorporated with Indonesia as its 27th province in November 1969. This Act of Free Choice was not accepted by various groups and raised controversy. In the U.S. Congress a bill was brought in 2006 that questioned the validity of the Act of Free Choice. The independence leaders also had not accepted the merger of West Irian with Indonesia in the act.

Opposition to Indonesian rule and the desire for independence as a free nation were held by a sizable portion of the population. In December 1963 the Organisasi Papua Merdeka (OPM, or Free Papua Movement) was established. It launched a guerrilla campaign against the Indonesian government in 1970 and set up an independent government the next year. Its military wing, known as the Liberation Army of OPM, indulged in terrorist activities. Kelly Kwalik, the commander, was responsible for the kidnapping of Indonesians and foreigners. He had also targeted the multinationals operat-

ing in the region. Moses Werror was the chairperson of the Revolutionary Council of OPM, based in Madang, Papua New Guinea. The Satgas Papua is another pro-independence organization. Theys Hijo Eluay's (1937–2001) Lembaga Musyawarah Adat Papua (Papuan Customary Council Assembly) believed in nonviolent methods. Eluay was murdered in 2001. The Indonesian armed forces along with its paramilitary group, Barisan Merah Putih, was active in suppressing the secessionist movement.

The clashes between the army and the rebels continued from 2003 to 2004. The Papua governor, J. P. Salossa, wanted serious implementation of autonomy status. The Indonesian president, Susilo Bambang Yudhoyono, had invited Governor Salossa and Papua provincial council speaker Jhon Ibo to Jakarta on August 10, 2006, for talks.

PATIT PABAN MISHRA

Duvalier dictatorship (Haiti, 1957–1986)

One of the Western Hemisphere's most repressive and brutal dictatorships, the successive regimes of François "Papa Doc" Duvalier (1907–71) and his son Jean-Claude "Baby Doc" Duvalier (1951–), ruled Haiti with an iron fist from 1957 to 1986, when Baby Doc was overthrown following widespread civil strife and massive street protests.

With the support of the nation's security forces, its leading elite families, and a substantial proportion of its urban and rural poor, the elder Duvalier was elected president in 1957. A physician educated at the Haitian National University Medical School, and a reputed practitioner of voodoo (Vodun), Papa Doc created a cult of personality around his person, which he projected as the embodiment of the Haitian nation. After violently suppressing all organized opposition to his rule, in 1964 he proclaimed himself "president for

life,” as he remained until his death in 1971, when his son assumed his political mantle.

Violent political oppression and grinding economic poverty for the country’s majority characterized the nearly three decades of Duvalier rule. Running the country as their personal fiefdom, the Duvaliers terrorized their political and personal foes through their infamous secret police, the Tontons Macoutes (“Bogeymen”), a state security apparatus responsible for mass imprisonment.

The roots of the Duvalier dictatorship stretch deep into Haitian history, from its independence in 1804, through a succession of dictatorial regimes, to the U.S. military intervention of 1915–34, which laid the groundwork for the modern Haitian state. This included its armed forces, the *gendarmérie*—later the Garde d’Haïti, or Garde—which centralized the state’s violence-making capacities within a single institution, based in Port-au-Prince. It was from within the structures of this U.S.-created security apparatus that the two Duvaliers based their power after 1957.

Under Duvalier rule (Duvalierism), Haiti became a pariah state internationally, with the United States suspending diplomatic relations in May 1963, even as many U.S. and other foreign firms continued to do business in the country. From the 1960s to 1980s, Haiti emerged as a key assembly point for many U.S. manufacturers. In 1966, 13 U.S. corporations owned assembly plants

in Haiti; in 1981 the number had risen to 154. Meanwhile, the vast majority of Haitians remained mired in poverty. In 1986, the year of Baby Doc’s ouster, the poorest 60 percent of the country’s population earned an annual per capita income of \$60, according to the WORLD BANK.

Malnutrition, infant mortality, and other social indices marked Haiti as the Western Hemisphere’s poorest country. At the top of the social hierarchy a handful of economically and politically powerful families—most prominently the Brandt, Mevs, Accra, Bigio, and Behrmann families—controlled many of the island’s key industries, including sugar, textiles, construction materials, cooking oil, and others.

This combination of extreme poverty and severe political oppression largely explain the meteoric rise to power of the anti-Duvalier radical populist preacher JEAN-BERTRAND ARISTIDE following Baby Doc’s overthrow in 1986.

MICHAEL J. SCHROEDER

E

Eastern bloc, collapse of the

The end of the COLD WAR was the collapse of the binary international power structure instigated by the military and political rivalry of the United States and the Soviet Union in the wake of World War II. It was also a consequence of the reforms initiated by the first secretary of the Soviet Communist Party in the years 1985–91, MIKHAIL GORBACHEV; the result was the collapse of the Soviet Union and the demise of communist systems in the countries of eastern Europe.

EAST GERMANY

One of the symbolic moments announcing the end of the cold war was the fall of the Berlin Wall in November 1990. The Berlin Wall was built in August 1961 in order to prevent refugee migration from the communist German Democratic Republic (GDR) to the Western Federal Republic of Germany (FRG). During the era of the leadership of Erich Honecker, the first secretary of the Socialist Unity Party of Germany from 1971, the GDR remained an orthodox socialist and highly repressive state. The GDR leadership maintained its dictatorial and conservative character. In fact, a diplomatic discord developed between reform-oriented Gorbachev and Honecker in the late 1980s. In the summer of 1989 Hungary decided to open its boundaries with Austria. A number of GDR residents moved to West Germany through Hungary and Austria.

In connection with Gorbachev's visit at the 40th anniversary of the establishment of GDR, pro-reformist

and pro-democratic demonstrations were organized in Leipzig and Berlin, which subsequently spread through the whole GDR. The protesters demanded government guarantees that human rights and civic rights would be respected, as well as that democratic restructuring be initiated. On November 9, 1989, the vehement civic protests and the confusion of the party leadership resulted in an unanticipated decision to annul the requirement for exit visas of East German residents who were crossing the border between the GDR and FRG. On November 10, five crossing points in the Berlin Wall were opened and approximately 40,000 East Berliners crossed into West Berlin. The atmosphere of festivity and celebration prevailed among the crowds, and people on both sides of the Berlin Wall started to make openings in the wall and bring parts of it down. On December 22 the Brandenburg Gate officially opened. The image of East and West Berliners jointly destroying the Berlin Wall became a powerful symbol of the collapse of the cold war and of the termination of the division of Europe.

Honecker resigned from his post as the first secretary of the party and as the chairman of the Council of State of the GDR on October 18, 1989, and was temporarily replaced by another Communist politician, Egon Krenz. Honecker later fled to Moscow and was extradited in 1992, but avoided trial for health reasons. In March 1990 the first postcommunist democratic elections took place, and the Christian Democratic Union of Germany achieved victory. The collapse of the Berlin Wall also paved the path for the reunification of Germany. On October 3, 1990, the GDR ceased to exist, and its territory

Prior to its eventual dismantling, the Berlin Wall became a site for graffiti, much of it in favor of the destruction of the wall.

became absorbed by the state of Germany. In 1990 the Socialist Unity Party of Germany transformed itself into the Party of Democratic Socialism.

POLAND

In Poland, an indication of increased political relaxation took place between 1986 and 1987 with a general amnesty of political prisoners. A series of strikes in 1988 pressured the communist authorities to re-legalize the independent trade union Solidarity, which had been made illegal after martial law was instituted in Poland in 1981.

At that time the first secretary of the Polish Communist Party and the head of state was General Wojciech Jaruzelski. In spring 1989 the reform-oriented factions of the Polish Communist Party decided to enter talks with the dissident groups associated with the SOLIDARITY MOVEMENT. The negotiations were chaired both by Lech Wałęsa, leader of the Solidarity movement and a winner of the Nobel Peace Prize, and by Czesław Kiszczak, a chief of the Polish secret services and the minister of internal affairs beginning in 1981. The negotiators agreed that Solidarity would be re-legalized and that partially free parliamentary elections would be organized.

The parliamentary elections on June 4, 1989, brought an overwhelming majority of representatives from Solidarity, which had transformed into the Solidarity Citizens' Committee. It received 161 of 460 total seats in the Sejm and 99 of 100 total seats in the Senate. A coalition government was formed with a Catholic dissident, Tadeusz Mazowiecki, as prime minister. Jaruzelski served as the president of Poland from 1989 to 1990, when Wałęsa was elected to that post in presidential elections. In 1991 free parliamentary elections were organized, and a coalition government of anti-communist groups emerged. The party Social Democracy of the Republic of Poland was formed in 1990 with no official ideological ties, but with evident personal ones, to its communist predecessor.

zelski served as the president of Poland from 1989 to 1990, when Wałęsa was elected to that post in presidential elections. In 1991 free parliamentary elections were organized, and a coalition government of anti-communist groups emerged. The party Social Democracy of the Republic of Poland was formed in 1990 with no official ideological ties, but with evident personal ones, to its communist predecessor.

HUNGARY

In Hungary, the deteriorating economic situation, due to increasing foreign debt, spurred public debates on the possibility of introducing radical reform policies. They facilitated the creation of the opposition movement, the Hungarian Democratic Forum, on September 27, 1987. The leader was József Antall, a historian who was known for his engagement in the Hungarian revolt in 1956. In May 1988 the first secretary of the party, János Kádár, was removed from his post and replaced by Károly Grósz. Grósz was inclined to introduce moderate economic reforms within the systemic socialist framework, but was opposed to the idea of organizing a roundtable discussion between the party and the anticommunists. At the congress in October 1989, the power within the Hungarian Socialist Workers' Party was seized by soft-liners such as Gyula Horn and Imre Pozsgay. In March 1989, the Hungarian Democratic Forum held a national meeting at which it demanded democratic reforms and agreed to enter negotiations with the party representatives at the elite level.

On March 22, 1989, the National Roundtable Talks were organized, and their results were a series of reformatory events: The power monopoly of the party was abandoned, the constitution was amended, and multiparty democracy was reconstituted in 1989. In October 1989 the Hungarian Socialist Workers' Party renounced its Marxist-Leninist legacy and endorsed a social-democratic political direction, changing its name to the Hungarian Socialist Party. In April 1990 democratic parliamentary elections took place. The result was the victory of the Hungarian Democratic Forum, and its leader, József Antall, became prime minister of the coalition government.

CZECHOSLOVAKIA

In Czechoslovakia in January 1989, students organized a peaceful rally to commemorate the anniversary of the suicide of Jan Palach, a student who committed self-immolation as an act of demonstration against the WARSAW PACT invasion of the country in 1968 dur-

ing the PRAGUE SPRING. The student demonstrations were brutally broken down by the riot police. Another student demonstration was organized by the Socialist Youth Union on November 17, 1989, in Prague and Bratislava. More than 30,000 participating students commemorated the anniversary of the murder of another Czech student figure, Jan Opletal, who was killed in 1939 by pro-Nazi forces. On November 19, different opposition and human rights groups created Civic Forum. Its spokesman became VÁCLAV HAVEL.

Together with its Slovak counterpart, the Public Against Violence, Civic Forum demanded the resignation of the first secretary of the Czechoslovak Communist Party, Miloš Jakeš, holding him responsible for the maltreatment of the demonstrating students. On November 24 Jakeš resigned from his post. On the same day Alexander Dubček, the architect of the Prague Spring events, made a public speech. On November 28 Prime Minister Ladislav Adamec declared abandonment of the power monopoly of the Czechoslovak Communist Party.

On December 17 there was an official spectacle of cutting through the wire border between Czechoslovakia and Austria. The first postcommunist democratic parliamentary elections took place in June 1990. Two anticommunist blocs, the Civic Forum and the Public against Violence, emerged victorious, with over 50 percent of the votes. The Czechoslovak transformation was called the Velvet Revolution, because in spite of the deeply orthodox and dictatorial character of the Czechoslovak communist regime, the collapse of the system and the initiation of democratic change were accomplished without violence.

BULGARIA

In Bulgaria the late 1980s witnessed the emergence of discriminatory nationalistic policies authored by the president of Bulgaria and the first secretary of the Bulgarian Communist Party, Todor Zhivkov. These were directed against Bulgaria's large Turkish minority. The result was a massive emigration of the Bulgarian Turks and a rapidly deteriorating economic situation in the country. This increased opposition against Zhivkov among reform-oriented members of the party. During the Central Committee meeting on November 10, 1989, the foreign minister, Patur Mladenov, condemned Zhivkov's hard-line economic policies and authoritarianism and managed to secure Zhivkov's removal from his leadership position. Mladenov consequently took over Zhivkov's secretarial and presidential posts. Famously, he publicly pledged a turn toward political

democratization, far-reaching economic reforms, and amnesty for political prisoners.

In January 1990 pro-democracy demonstrations involving 40,000 people took place in Sofia. As a consequence the Bulgarian National Assembly made a number of path-paving decisions: The power monopoly of the Bulgarian Communist Party was revoked, the Bulgarian secret police was dismantled, and Zhivkov was charged with fraud and corruption. In April 1990 the Bulgarian National Assembly elected Mladenov as president and subsequently dissolved itself.

The Bulgarian Communist Party renounced its ideological attachment to Leninism and transformed itself into the Bulgarian Socialist Party, with Alexander Lilov as its chairman. In June 1990 postcommunist democratic elections were organized and the Bulgarian Socialist Party achieved a narrow victory. Later Mladenov was forced to resign from his presidential post after it was made public that he had considered the possibility of using force against the pro-democratic demonstrators in Sofia earlier that year.

On August 1, 1990, he was replaced by Zhelyu Mitev Zhelev, a former oppositionist, professor of philosophy, and founder of the dissident Club for the Support of Glasnost and Restructuring. He was reelected in 1992 and remained in the presidential post until 1997. Zhelev represented the Union of Democratic Forces, a party that consisted of various anticommunist groups formed in December 1989.

In November 1990 a series of general strikes was organized, which instigated a sense of political and economic crisis in the country and which brought about the complete discrediting of the Bulgarian Socialist Party. In 1991 a new democratic constitution was adopted, and in 1992 the Union of Democratic Forces took over power in the national elections and embarked on a series of radical economic and political reforms.

ROMANIA

In Romania the Communist dictatorship of President Nicolae Ceaușescu was particularly oppressive. Although in other East European countries popular demonstrations and negotiations took place throughout 1989, it seemed that Ceaușescu's position would remain unchallenged. On December 17 street protests were organized in the city of Timișoara against the decision by the Romanian Secret Police (Securitate) to deport local bishop László Tokés. The protests against Tokés's eviction were transformed into anticommunist and anti-Ceaușescu demonstrations. Hundreds of demonstrators who gathered on the streets of Timișoara were attacked

by military forces. Nearly 100 of them were killed, and many more were injured.

Beginning on December 20 the antiregime demonstrations and a wave of strikes took place in Romania's other large cities. Ceaușescu condemned the protests in Timișoara and ordered the organization of a pro-regime gathering in the center of Bucharest on December 21. Mass mobilization and civic unrest continued throughout the country, and the regime made extensive use of violence to put down the revolutionary occurrences. On December 22 the National Salvation Front was formed in a national TV studio. It was led by Communist politician Ion Iliescu, and its other members were Silviu Brucan, a former diplomat and an opponent of Ceaușescu; and Mircea Dinescu, a dissident poet. Subsequently, the National Salvation Front restored peace and formed a temporary government with Iliescu as a provisional president, following Ceaușescu's execution on December 25, 1989.

Later the National Salvation Front was transformed into a political party and achieved the majority of votes in the democratic elections in May 1990. The important difference between the postcommunist elections in Romania and in other East European countries was that in Romania, the victorious National Salvation Front comprised former socialist officials. In 1992 it was divided into two leftist Romanian parties: the Democratic Party and the Social Democratic Party.

MAGDALENA ZOLKOS

East Timor

The Democratic Republic of Timor-Leste, or East Timor, was a Portuguese colony until 1975. On the eve of the Portuguese departure in August 1975, a civil war broke out, leading to the deaths of 1,500 to 2,000 people. There was a unilateral declaration of indepen-

dence on November 28, 1975, by the East Timorese people. With U.S. assistance, Indonesia invaded East Timor in December. Afterward, Indonesia incorporated East Timor as its 27th province in July 1976. The UNITED NATIONS (UN) did not recognize this. A guerrilla war against Indonesian occupation followed amid reports of brutality by the army. The ensuing civil war was marked by brutality, loss of life, and human rights abuses. From 1982 onward, the UN secretary-general endeavored to bring a peaceful solution to the conflict. In 1998 Indonesia was prepared to grant autonomy to East Timor, but its proposal was rejected by the East Timorese. It was decided to hold a plebiscite in East Timor, resulting in a declaration of independence on August 30, 1999.

The army, along with pro-Indonesian militia, unleashed a reign of terror in East Timor. There was a pacification campaign during which more than 1,300 people were killed and 300,000 more were forcibly sent into West Timor as refugees. The ethnic conflict and genocide by Indonesian troops devastated East Timor. Violence was brought to an end by an international peacekeeping force. The Timorese tragedy had taken the lives of 21–26 percent of the population. East Timor was placed under the transitional administration of the United Nations Transitional Administration in East Timor (UNTAET) on October 25, 1999. There were about 8,000 peacekeepers and civilian police helping the administration. The National Consultative Council (NCC), consisting of 11 East Timorese and four UNTAET members, worked as a political body in the transitional phase. An 88-member Constituent Assembly was elected in August 2001 to frame a new constitution. East Timor became a fully independent nation on May 20, 2002, with international recognition.

Nation-building was difficult for the East Timorese. The reconstruction of their damaged infrastructure and the creation of viable administrative machinery became priorities for the new regime. The United Nations Mission of Support in East Timor (UNMISET), which had replaced the UNTAET, gave necessary support to the new government, which was headed by Xanana Gusmão.

PATIT PABAN MISHRA

Ebadi, Shirin

(1947–) *Iranian human rights activist*

Shirin Ebadi is a democracy and human rights activist and a lawyer. She was born in northwestern Iran to a Shi'i Muslim family in 1947 and studied law at Tehran University. In 1975 she became the first woman judge in Iran and was appointed president of the Tehran City Court. Following the Islamic revolution in 1979, all female judges, including Ebadi, were removed from the bench and given clerical duties.

Ebadi quit in protest and wrote books and articles on human rights, particularly on the rights of children and women, for Iranian journals. After many years of struggle, in 1992, Ebadi won her lawyer's license and opened her own practice. She is known for taking cases at the national level, defending liberal and dissident figures. In 2000 she was arrested and imprisoned for "disturbing public opinion" and was given a suspended jail sentence and barred from practicing law (the restriction was later removed). She campaigns for strengthening the legal rights of women and children, advocating a progressive version of Islam.

Her legal defense in controversial cases, pro-reform stance, and outspoken opinions have caused the conservative clerics in Iran to oppose her openly. In 2003 Ebadi was the first Muslim woman and Iranian recipient of the Nobel Peace Prize for her efforts to promote democracy and human rights both domestically and abroad. She teaches law at Tehran University, writes books and articles, and runs her own private legal practice. Her books include *The Rights of the Child* (1993), *Tradition and Modernity* (1995), *The Rights of Women* (2002), and *Iran Awakening: A Memoir of Revolution and Hope* (2006).

RANDA A. KAYYALI

Economic Commission for Latin America (ECLA)

One of the world's most influential schools of economic thought was founded by the United Nations Economic and Social Council Resolution 106(VI) on February 25, 1948, as the Economic Commission for Latin America (ECLA; in Spanish, Comisión Económica para América Latina, or CEPAL), headquartered in Santiago, Chile. Under the intellectual leadership of Argentine economist Raúl Prebisch, Brazilian economist Celso Furtado, and others, the ECLA offered an analysis of Latin American poverty and underdevelopment radically at odds with the dominant and neoclassical "modernization" theory espoused by most economists in the industrial world. Building on the work of world-systems analysis, the ECLA pioneered an approach to understanding the causes of Latin American poverty commonly called the "dependency school" (*dependencia*) in which the creation of poverty and economic backwardness, manifested in "underdevelopment," was interpreted as an active historical process, caused by specific and historically derived international economic and political structures, as conveyed in the phrase, "the development of underdevelopment." This approach was then appropriated by scholars working in other contexts, especially Asia and Africa, as epitomized in the title of Guyanese historian Walter Rodney's landmark book *How Europe Underdeveloped Africa* (1972). Since the 1950s, the theoretical models and policy prescriptions of the ECLA have proven highly influential, sparking heated and ongoing debates among scholars.

From its foundation the ECLA rejected the paradigm proposed in the neoclassical, Keynesian, modernization school, which posited "stages of growth" resulting from the transformation of "traditional" economies into "modern" economies, a perspective epitomized in U.S. economist Walter W. Rostow's book *The Stages of Economic Growth* (1960). Instead, the model formulated by the ECLA posited a global economy divided into "center" and "periphery," with the fruits of production actively siphoned or drained from "peripheral" economies based on primary export products (including Latin America) to the "center" (the advanced industrial economies of Europe and the United States). Based on this model, in the 1960s ECLA policy prescriptions centered on the promotion of domestic industries through "import substitution industrialization" (ISI), diversification of production, land reform, more equitable distribution of income and productive resources, debt relief, and increased state intervention to

achieve these aims. Key analytic concepts of these years included “dynamic insufficiency,” “dependency,” and “structural heterogeneity.” In the 1970s attention shifted to “styles” or “modalities” of economic growth and national development. The economic crisis of the 1980s generated another shift toward issues of debt adjustment and stabilization, while the 1990s saw heightened emphasis on issues of globalization and “neoliberalism,” in opposition to the “neoliberalism” promoted by the INTERNATIONAL MONETARY FUND and related international financial bodies. In 1984 the UNITED NATIONS (UN) broadened the mandate of the ECLA to include the Caribbean, and it became the Economic Commission for Latin America and the Caribbean (ECLAC); its Spanish acronym, CEPAL, remained the same. It is one of five UN regional commissions and remained highly influential into the 21st century.

MICHAEL J. SCHROEDER

ecumenical movement

In 1517 Martin Luther nailed Ninety-five Theses to the door of a church in Wittenberg, a university town in the German province of Saxony, to start a debate over indulgences and related questions about Christian salvation. His action is often understood to be the beginning of the Protestant Reformation. In 1529 Protestant representatives to the imperial Diet in Germany presented the Augsburg Confession, which enshrined the Protestant position at that time and is still accepted by all the Lutheran churches. The rejection of that confession by the Roman Catholics with the support of the emperor, Charles V, has since been understood by many historians as the definitive division between the Protestant and Roman Catholic Churches, resulting in a plurality of churches in Western Christendom no longer in communion with one another.

Central to the Augsburg Confession was the doctrine of “justification by faith alone,” which together with “grace alone” and “scripture alone,” summarized the

Protestant concerns. In addition, the Reformers insisted on changes in worship (especially the Mass) and the sacraments, changes unacceptable to the Roman Catholics and viewed by them as heretical. What began as a movement for the reformation of the Western (Latin) Church ended up with doctrinal division and ecclesiastical separation.

The Lutheran churches were not the only churches that came from the Reformation. Shortly after the Lutheran movement began, a similar movement, resulting in the formation of the Reformed churches, arose in Switzerland under the leadership of Ulrich Zwingli in Zurich. From there churches were established in many countries of Europe, with the predominant theological influence coming from John Calvin in Geneva. In addition, groups of radical reformers (termed Anabaptists by their opponents) were formed and were persecuted by Reformed, Lutheran, and Roman Catholic Churches alike. Each of these groups developed distinct theological positions. From them, especially from the Church of England in England and its American colonies, came many new churches including the Baptists, Methodists, and Pentecostals.

In the 20th century the ecumenical movement was born. The 1910 World Christian Missionary Conference in Edinburgh is often considered its beginning. The conviction of missionaries that church division was harmful for their outreach gave rise to a worldwide (ecumenical) movement to overcome those divisions. By 1948 many of the churches affected by that movement formed the World Council of Churches, an interchurch body representing a large percentage of Protestant churches. They were, in addition, joined by many Orthodox churches—churches that had become separate from the Roman Catholic Church long before the Protestant Reformation but that are much closer in theology and practice to Catholicism than to Protestantism.

At first opposed to ecumenical endeavors, the Roman Catholic Church during the Second Vatican Council in 1962–65 accepted the ecumenical movement as a fruit of “the grace of the Holy Spirit.” Afterward, it entered into more active cooperation with other churches and also began a series of dialogues over doctrinal differences with Orthodox and many Protestant churches, even though it did not join the World Council of Churches. Many Evangelical churches also did not join the World Council of Churches but have formed their own world alliance and national associations for cooperation.

As a result of the ecumenical movement, the climate has changed among a large number of Christian

churches from hostility to friendliness and growing cooperation. In addition, dialogues among theologians representing their churches have produced a number of accords on previous doctrinal differences. The Faith and Order section of the World Council of Churches has sponsored multilateral dialogues. The wide-ranging 1982 statement on *Baptism, Eucharist and Ministry*, focusing on disputed areas of worship and sacraments, is often cited as the most successful result of those endeavors. In addition, various churches or church bodies have entered into bilateral dialogues with one another.

The bilateral dialogues have produced some notable doctrinal accords. Many Protestant churches have joined together or established communion with one another as a consequence of these accords. Some of the more significant have been concluded by the Roman Catholic Church with Oriental Orthodox and Assyrian churches. Commissions of Eastern Orthodox theologians have come to agreements with their Oriental Orthodox counterparts. Doctrinal differences that antedate the Reformation by a millennium are now discussed if not reconciled. The Roman Catholic Church has, in addition, conducted a series of dialogues with the Anglican Communion that have produced a body of agreed statements on many of the disputed points between the two church bodies.

Not all of the important dialogues have been official dialogues between church bodies. Informal study groups like the Groupe des Dombes have made independent contributions. Perhaps the most significant result produced by such groups has been the series of statements by Evangelicals and Catholics Together, a committee of prominent Evangelicals and Roman Catholics in the United States. The first statement, *The Christian Mission In the Third Millennium* in 1994, was widely influential in fostering rapprochement between two Christian groups that are sometimes considered to be the farthest apart from one another.

Symbolically, one of the most notable results of the bilateral accords has been the *Joint Declaration on the Doctrine of Justification* (JDDJ), signed by official representatives of the Roman Catholic Church and the Lutheran World Federation. The JDDJ was prepared for by 35 years of dialogue between Lutheran and Roman Catholic theologians on the international level and the national level, most notably in the United States and Germany. In 1983 the United States dialogue produced an agreement, *The Doctrine of Justification*. This was followed by *The Condemnations of the Reformation Era: Do They Still Divide?*, a significant 1986 statement

produced by a German study group. Then the international commission in 1993 produced *Church and Justification: Understanding the Church in the Light of the Doctrine of Justification*. On the basis of these and other works, the JDDJ was produced and agreed to.

The JDDJ is noteworthy as being the only agreement officially accepted by the highest authority in the Roman Catholic Church and a Protestant church body. It is even more noteworthy as being an accord on the doctrine of justification, the point of disagreement that began the Reformation. While the JDDJ acknowledges that it did not resolve all questions about justification, it did resolve enough of the most fundamental ones that, in the view of the two parties, the doctrine of justification no longer had to be church dividing. Although other points of disagreement remain, the JDDJ in effect marked an official recognition by the two church bodies that they do not have incompatible views of what it is to be a Christian.

The JDDJ was signed in 1999, just in time for the beginning of the new millennium. It was signed in the city of Augsburg, the city where the Augsburg Confession was presented to the emperor. It was signed on Reformation Sunday, the day that commemorates the posting of the Ninety-five Theses. The JDDJ did not put to an end the disunity caused by the Reformation. It was, however, in the minds of those who signed it, an indication that the crucial step towards ending that disunity had been taken.

STEPHEN B. CLARK

Egyptian revolution (1952)

In 1952 a group of Free Officers led by GAMAL ABDEL NASSER overthrew the corrupt monarchy of King Farouk in a bloodless coup. After World War II and the loss to Israel in the 1948 Arab-Israeli War, Egypt gradually slid into political chaos. The king was known internationally for his profligacy, and the Wafd Party—the largest Egyptian party, led by Mustafa Nahhas—had been discredited by charges of corruption and cooperation with the British during the war. Other political parties, some supporting the monarchy; the small Egyptian Communist Party on the left; and the far larger

Muslim Brotherhood on the right vied for power and sometimes engaged in terrorism and assassinations of rivals to gain power. Attacks against the British forces still stationed along the Suez Canal also escalated. The British reinforced their troops, and after fighting broke out between British soldiers and Egyptian police forces, a massive riot erupted in Cairo in January 1952. During "Black Saturday," angry Egyptian mobs stormed European sectors, burning European-owned buildings and businesses in a demonstration of nationalist discontent and opposition to imperial control and the British refusal to leave Egypt.

On July 22, 1952, the Free Officers, who had secretly been plotting to overthrow the government for some time, took key government buildings, and on July 26 they deposed King Farouk. Farouk was permitted to go into exile, and his young son Ahmad Fu'ad II was made the new king. The young officers, most of whom were in their 30s, chose the elder and more well-known Brigadier General Muhammad Naguib as their figurehead leader, although it was known within the group that Nasser was the real political force. They formed an executive branch, the Revolutionary Command Council (RCC), including Anwar el-Sadat, Abd al-Hakim Amr, and Zakariyya Muhi al-Din. In January 1953 political parties were abolished in favor of one party, the Liberation Rally, and in June the monarchy was abolished in favor of a republic with Naguib as president.

The new government was anti-imperialist, anti-corruption, and eager to develop the Egyptian economy and to secure full and complete Egyptian independence. Naguib and Nasser soon argued over the course Egyptian politics was to take, and, after an assassination attempt against Nasser failed, allegedly by the Muslim Brotherhood, Naguib was forced to resign. Under a new constitution, Nasser was elected president in 1956, a post he would hold until his death in 1970.

In 1954 the new regime negotiated an agreement with the British for the full withdrawal of British troops and an end to the 1936 treaty between the two nations. Under the agreement the old conventions regarding control of the Suez Canal by private shareholders were maintained; this issue led to a major war in 1956 after Nasser nationalized the canal.

Economic development was the cornerstone of the new regime's program. Under a sweeping land reform program, land ownership was limited to 200 *feddans*, and major estates, many formerly owned by the royal family, were redistributed to the peasants. Plans for the construction of one of the largest development projects of its type at the time, the ASWĀN DAM, were

announced. Although the financing and construction of the dam became a major point of conflict between Egypt and the United States, it was duly built with Soviet assistance.

With the formation of the UNITED ARAB REPUBLIC with Syria in 1958, the pan-Arab policies of Nasser seemed ascendant in the Arab world; however, the union collapsed in 1961. Egypt also became bogged down in the Yemeni civil war. In 1962 pro-Nasser forces in Yemen overthrew the weak Imam Muhammad al-Badr and established a republic. Pro-monarchy forces assisted by arms and money from Saudi Arabia supported the monarchy while Egypt assisted the republican forces with arms, money, and troops. The war dragged on, draining Egyptian resources, and Nasser referred to the conflict as his "Vietnam." Following the disastrous Arab defeat in the 1967 ARAB-ISRAELI WAR, Saudi Arabia and Egypt agreed to withdraw their support from both sides and, although it adopted a far more moderate and pro-Saudi stance, the Yemeni republic survived.

In the 1960s Egypt turned increasingly toward the Soviet Union and state-directed socialism. In 1961 large businesses, industry, and banks were nationalized. Cooperatives for the peasants were established. With the creation of a new class of technocrats and officers, the power of the old feudal and bourgeoisie elites was gradually eliminated.

In 1962 a new political party, the Arab Socialist Union (ASU), with a worker-peasant membership, was created. Under the 1962 National Charter the authoritarian state held political power exercising control from the top. The charter outlined an ambitious program of education, health care, and other social services; it also addressed the issue of birth control and family planning, as well as mandated equality of rights for women in the workplace. Many conservative forces in Egypt opposed the social changes, especially as they pertained to the family and the status of women, and consequently the social programs fell far short of their original intentions.

Under Nasser, Egypt became the dominant force in the Arab world and attempted to steer a neutral course in the COLD WAR. The Egyptian revolution failed to meet many of its domestic goals, and the state-run economy was often inefficient. Egypt's neutrality in the 1950s alienated many Western powers and conservative Arab regimes, especially Saudi Arabia. Following Nasser's sudden death in 1970, Anwar el-Sadat became the Egyptian president. Sadat, who showed far more political acumen than he had previously been credited with, gradually turned away from the Soviet bloc.

Sadat forged alliances with the United States and gradually dismantled most of the revolution's economic and social programs.

JANICE J. TERRY

El Salvador, revolution and civil war in (1970s–1990s)

In the 1980s the small Central American country of El Salvador made world headlines as a key site of struggle in the COLD WAR, and in consequence of its leftist revolutionary movements and civil war (conventionally dated 1980–92) that left some 70,000 dead and the economy and society ravaged. The long-term roots of the crisis have been traced to the country's history of extreme poverty, economic inequality, and political oppression of its majority by its landholding and power-holding minority. Important antecedents include the 1932 Matanza (Massacre), in which the military and paramilitaries killed upwards of 30,000 people, ushering in an era of military dictatorship that continued to the 1980s. The 1969 Soccer War with Honduras is also cited as an important antecedent. By the mid-1970s numerous leftist revolutionary groups were offering a sustained challenge to military rule, groups that in April 1980 came together to form the revolutionary guerrilla organization Farabundo Martí Liberation Front (Frente Farabundo Martí para la Liberación Nacional, or FMLN).

Open civil war erupted soon after July 1979, when the leftist SANDINISTAS overthrew the Somoza dictatorship in Nicaragua. Fearing a similar outcome in El Salvador, the U.S. government increased its military aid to the Salvadoran regime, which launched an all-out assault against revolutionary and reformist organizations. From 1979 to 1981, approximately 30,000 people were killed by the military and associated right-wing paramilitaries and death squads. On March 24, 1980, a right-wing death squad assassinated the arch-

bishop of El Salvador, Óscar Romero, after his numerous public denunciations of the military regime and its many human rights violations. In December 1980 centrist José Napoleon Duarte assumed the presidency, the first civilian to occupy that post since 1931. Interpreted by many as a civilian facade installed to obscure a military dictatorship, his administration failed to staunch the violence. Especially after RONALD REAGAN became U.S. president in January 1981, U.S. military and economic assistance to the Salvadoran regime skyrocketed. Framing the issue as a cold war battle, and despite much evidence to the contrary, the Reagan administration claimed that the FMLN and its political wing, the FDR (Frente Democrático Revolucionario), were clients of Cuba and the Soviet Union. It also alleged Sandinista complicity in funneling arms to Salvadoran revolutionaries, thus legitimating U.S. support for anti-Sandinista forces in the CONTRA WAR.

In 1982 the extreme right-wing party, the Nationalist Republican Alliance (Alianza Republicana Nacionalista, ARENA), won the presidency in an election marred by violence and fraud. The rest of the 1980s saw continuing civil war waged under a series of ostensibly civilian governments dominated by the military. In 1991, following United Nations-sponsored talks, the government recognized the FMLN as a legal political party. In January 1992 the warring parties signed the UN-sponsored Chapultepec peace accords, and in 1993 the government declared amnesty for past violations of human rights. The civil war and its aftermath left an enduring legacy throughout the country and region.

MICHAEL J. SCHROEDER

environmental disasters (anthropogenic)

Several major environmental disasters, those that are man-made rather than naturally occurring, have taken place after the World War II due to the emphasis on heavy industrial development. In developed countries in the late 1960s, environmental movements led the public to be more concerned about the pollution of air, water,

and soil, and the danger of chemical agriculture. Several governments developed more policies for the preservation of the environment. The issues of environmental concerns became internationalized at the Stockholm conference in 1972, the UNITED NATIONS National Conference on the Human Environment. Environmental, nongovernmental organizations started to play an important role in the deliberations. During the period 1971–75, 31 important national environmental laws were passed in the OECD countries. In 1983 the World Commission on Environment and Development (WCED), also known as the Brundtland Commission, was created to seek sustainable development.

In December 1984 the world's worst industrial disaster occurred in Bhopal, a city located in the northwest of Madhya Pradesh in central India. The leakage of a highly toxic gas (methyl isocyanate) from a Union Carbide pesticides plant killed more than 3,800 persons and affected more than 200,000 with permanent or partial disabilities. It is estimated that more than 20,000 people have died from exposure to the gas. Union Carbide was manufacturing pesticides, which were in demand because of the GREEN REVOLUTION in India.

This environmental disaster raised the public's concern about chemical safety. Similar concerns are related to severe accidents in nuclear power plants such as the Chernobyl nuclear power plant accident in the Soviet Union on April 26, 1986. The accident occurred at the block number 4 of the Chernobyl Nuclear Power Plant. This nuclear power complex is located 100 kilometers northwest of Kiev, close to the border of Belarus. The initial explosion caused the reactor to melt down for 10 days. The result has been the discharge of radionuclides, which contaminated large areas in the Northern Hemisphere.

This release of radioactive material has damaged the immune system of people in the area and has contaminated the local ecosystem. While natural processes, some as simple as rainfall, have helped restore the local environment, problems are still widespread. More than 750,000 hectares of agricultural land and 700,000 hectares of forest have been abandoned. In 2000, 4.5 million people were living in areas still considered radioactive. Two opposing explanations, poor reactor design and human error, have been advanced for the Chernobyl accident.

The Chernobyl accident occurred during the glasnost/perestroika era of the Soviet Union. So, while the government performed its own investigations of the tragedy, additional citizens advisory boards, some without any government involvement, were set up.

Chernobyl was not the first civilian nuclear power plant disaster. Accidents in nuclear power plant installations occurred in Windscale (in Great Britain) in 1957 and in the United States, such as in the Three Mile Island Unit 2, which was damaged during an accident in 1979. Since Chernobyl, other accidents, like those at Tokaimura (1999) and Mihama (2004)—both in Japan—have occurred.

These accidents have brought the nuclear industry under greater scrutiny from the general public. Many feel that not only should the overall safety of such plants be improved, but also the preparedness and response to such disasters need to be more fully developed. The Bhopal and Chernobyl cases are disasters of similar magnitudes in terms of damage to people and the environment. The concerns go beyond safety to local populations. Today, such questions as environmental impact and sustainability have become at least as important as concerns over health and human welfare.

NATHALIE CAVASIN

environmental problems

From the 1950s, with the massive rise in the human population, the expansion of cities and towns, and the increasing use of natural resources, some scientists such as Rachel Carson have written about impending problems. However, most people only became aware of major environmental problems from the 1980s, with the environment becoming a major political issue from the 1990s.

After World War II, the increasing use of pesticides in industrialized countries, especially the United States, led to Rachel Carson writing her book *Silent Spring* (1963), which highlighted the side effects of D.D.T. on the local environment. It led to the reduction in the amount of pesticides used, and this was followed by the

banning of D.D.T. in the United States in 1972. Other environmental campaigns saw protests against the killing of seals in Canada, and also against whaling mainly undertaken by the Japanese and the Norwegians. The International Whaling Commission introduced a moratorium on whaling in 1986, although Japan has continued to conduct whaling under the guise of science. International environmental organizations such as Friends of the Earth and Greenpeace have been prominent in leading protests around the world, the latter becoming famous for taking part in direct action.

Developing environmental problems around the world have been added to by many natural occurrences such as hurricanes in the Caribbean, in the United States and elsewhere, floods in Florence and Venice in 1966, the eruption of volcanoes such as Mount St. Helens in 1980, and the Indian Ocean tsunami of December 26, 2004. In some cases there were a combination of other man-made environmental disasters that have involved feeding sheep and cattle with substandard “food.” The destruction of forests either for timber or to clear land for cash crops continues, as does the contamination of rivers and the countryside by waste from mines. Even natural disasters such as Hurricane Katrina leading to flooding in New Orleans in August 2005 has subsequently led to an ENVIRONMENTAL DISASTER by creating a toxic stew of sewage, household chemicals, gasoline, and industrial waste that will take years to clean up.

In addition there have been a large number of man-made environmental problems. The one which has resulted in the largest number of deaths in the short-term was undoubtedly the Bhopal poison gas explosion in India on December 3, 1984. The biggest disaster on an international scale was the Chernobyl nuclear power station accident in the Soviet Union in 1986. Others have included the venting of oil into the Persian Gulf by SADDAM HUSSEIN in 1991, and also a large number of oil spills around the world created by damage to oil tankers and the like, the largest being that of the *Exxon Valdez* in Prince William Sound, Alaska, in March 1989. In the 2000s, the major environmental issue became that of global warming, especially after the screening of former U.S. vice president and Nobel laureate Al Gore’s film *An Inconvenient Truth*.

ASSAULT ON FORESTS

The assault on the world’s forests are as old as humankind. Early people were quick to learn the many uses of wood: fuel for cooking, warmth, and the smelting of metals; materials for durable shelter; and a sign of fertile lands for the growing of crops. Wood was abundant in most places where early humans chose to settle. It was

More and more carbon dioxide is being expelled into the atmosphere, creating a thick blanket of heat around the globe.

relatively easy to obtain and work with, and there was always more. Archaeologists are finding widespread evidence of wood-burning and log construction that began much earlier than anyone expected.

Clearing of the land was rarely mentioned in the chronicles of the Western or Eastern world in the early modern period, but it seems obvious that as the population grew, the forests shrank. In central and northern Europe an estimated 70 percent of the land was covered by forest in 900 C.E.; by 1900 it had shrunk to only 25 percent.

During this long period of growth and expansion, people learned how to fashion wood into sailing ships, opening up new sources of timber to exploit and new lands to settle. Clearing land in the tropics and subtropics helped the slave trade by creating vast plantations for the cultivation of sugar, coffee, tobacco, tea, rubber, rice, and indigo.

The birth of the industrial age accelerated the onslaught. Trees could suddenly be turned into pulp for paper, wood for mass-produced furniture, plywood for lightweight construction, and countless other useful

products. Rubber trees produced the raw materials for automobile tires and other items for a growing consumer marketplace. By the mid-20th century, the development of chainsaws and heavy machinery had made the clear-cutting of entire forests easier than ever before. Today, the clear-cutting of forests is driven by a need for both wood and cropland, as the swelling global population demands more and more food.

Our evolutionary ancestors faced widespread shifts in the climate as glacial periods, referred to as “ice ages,” came and went every 100,000 years or so. The impact of those early ice ages on human development are difficult to judge; it is likely that some proto-human species adapted and others did not.

Some scientists now believe that it was climate change that spurred the migration of humans out of Africa. The fossil record, incomplete as it is, shows that *Homo sapiens* had emerged between 150,000 and 120,000 years ago in southern and eastern Africa, yet it took another 100,000 years or more for them to move into Europe, Asia, and beyond. Ice core samples and excavation of ancient seabeds indicate that the climate in that part of Africa underwent significant changes between 70,000 and 80,000 years ago, with annual precipitation rates fluctuating wildly for a long period of time, putting a strain on the food chain and forcing humans to look for new habitats. There is some evidence that there was a major volcanic eruption at Mount Toba in modern Indonesia around 73,000 years ago, which could have caused most of the planet to suffer the effects of a “volcanic winter,” lasting up to seven years. Some believe this could have caused the mass extinction of proto-human groups outside Africa, reducing the competition when humans from Africa began moving into their territories.

CLIMATE CHANGE

In climatological terms, we are just coming out of the latest glacial period, known as the Little Ice Age. This period extended from between the 13th and 16th centuries to around 1850. In the Northern Hemisphere the period was marked by bitterly cold temperatures, heavy snowfalls, and the rapid advance of glaciers.

Unseasonable cold spells and precipitation lead to periodic crop failures and famines. Most notable was the Great Famine, which struck large parts of Europe in 1315. Heavy rains began in the spring of that year and continued throughout the summer, rotting the crops in their fields and making it impossible to cure the hay used to feed livestock. This cycle of rainy summer seasons would continue for the next seven years.

Food scarcity hit Europe at the worst possible time: at the end of a long period known as the Medieval Warm Period, where good weather and good harvests had led to population growth that had already begun to push food supplies to the brink. Few seem to have died from outright starvation, but an estimated 15–25 percent of the population died from respiratory diseases such as bronchitis and pneumonia, the natural result of immune deficiency.

The Great Famine had far-reaching effects on society. Crime increased along with food prices, with property crimes and murders becoming more common in the cities. There were stories of children being abandoned by parents unable to find food for them, and even rumors of cannibalism. This was during the height of the Catholic Church’s hegemony in Europe, and people naturally turned to the church in times of fear. When prayer failed, the church’s power was diminished. It was the beginning of a long drift towards the Protestant Reformation of the 16th–17th centuries.

The Little Ice Age was releasing its grip in the early part of the 1800s when a massive volcanic eruption on Mount Tambora in present-day Indonesia ejected a huge amount of volcanic ash into the atmosphere. This ash cloud encircled the Northern Hemisphere over the next year or more, creating climatological havoc throughout Europe, the United States, and Canada. In May 1816 a killing frost destroyed newly planted crops. In June, New England and Quebec saw two major snowstorms, and ice was seen on rivers and lakes as far south as Pennsylvania. The crop failures that year led to food riots across Europe. Many historians believe that the summer of 1816 spurred the process of westward expansion in America, with many farmers leaving New England for western New York State and the Upper Midwest.

At the beginning of the 21st century, signs of another great climate shift seem to be everywhere. Glaciers are receding at an unprecedented rate. Polar ice caps are shrinking. Sea levels are on the rise. Severe weather events, including droughts, heat waves, and hurricanes, are growing in length and intensity. Controversy continues among academics and policy makers over the exact cause of the warm-up: Is it being caused by humans, or is it simply the latest in an long series of climate changes?

There is some support for the idea that this is an inevitable rise in temperatures growing out of the end of the Little Ice Age in the mid-19th century, but the majority of scientists now believe that humans are playing a significant role in global warming. World population has reached 6 billion, all of whom consume and burn

biomass to survive. Whether from industrial smokestacks, millions of car exhaust systems, or open fires used to cook food across the developing world, more and more CO₂ is being expelled into the atmosphere, creating a thick blanket of heat around the globe.

The threat to both the environment and human life cannot be underestimated. Up to a third of the world's species may go extinct by the beginning of the next century. While northern climates may see an initial surge in crop yields, high temperatures and persistent droughts in the southern climates will reduce yields and increase the threat of widespread famines. Water scarcity will become severe. The latest projections indicate that by 2030, hundreds of millions of people in Latin America and Africa will face severe water shortages. By 2050 billions of Asians will also be running far short of their freshwater needs, with the Himalayan glaciers all but gone as early as 2035. By 2080 100 million people living on islands and coastlines will be forced to flee their homes. The struggle for an increasingly small share of food, water, and other natural materials could spark "resource wars" among nations. The possibility of reversing this trend is not clear, but many scientists believe we have reached the "tipping point," making a full reversal unlikely.

HEATHER K. MICHON

Equal Rights Amendment

The Equal Rights Amendment (ERA), first proposed in the U.S. Congress in 1923, guarantees the equality of rights for all people in the United States. The amendment has been pushed by women's groups since 1920. Following the Great Depression and World War II, the rise of a second, more sweeping women's rights movement led to reconsideration of an amendment to secure women the rights to equal wages and equal consideration under the law. The 1970s and 1980s saw the congressional approval of the amendment but the failure of enough states to ratify it into the Constitution. The failure of the ERA in 1982 was a step backward politically.

Protesters against the Equal Rights Amendment were spurred on by the rise of the feminist movement.

The historical landmark for increased rights for women was the 1848 Seneca Falls Convention, a clarification call by concerned females to the rest of the country for increased rights. The unity of the convention was quickly disturbed by the Civil War and the subsequent passage of the Fourteenth Amendment, which was meant to give rights and liberties to freed slaves. However, women's groups argued over how loosely the amendment could be interpreted and whether such equality was given to black women if the Constitution did not include rights for white women.

Legal interpretations of woman's rights in the United States became more sophisticated in the early 20th century, as the Supreme Court saw fit to deal with issues of labor. In *Lochner v. New York* (1905), the Supreme Court ruled that the number of hours worked by women was not related to the maintenance of public health. In *Muller v. Oregon* (1908), however, the Supreme Court ruled in favor of a 10-hour work day passed by the Oregon state legislature and aimed toward regulating industry in favor of employees.

The first protests for suffrage began in front of the White House in January 1917, led by future members of the National Women's Party (NWP), including equal rights advocate Alice Paul. Agitation by women dedicated to the cause of ERA women's suffrage, along with rights to fair wages, was successful, as the Nineteenth Amendment was ratified in 1920. Even with this success, a major rift developed between activists like Paul who sought quicker strides for women, and experienced professionals like Carrie Chapman Catt and Florence Kelly. Catt and Kelly feared the NWP's agenda was too sweeping and harmful to progress already being

made for women in the areas of judicial review and minimum-wage legislation.

The 1920s–1930s saw several phases in the battle between the NWP and other women’s groups—including vacillation on whether an equal rights amendment would be effective, whether protective legislation for women should be incorporated with an amendment, and whether courts should be more active in providing equality for women. The NWP remained active not only in working for an amendment for equal rights but in creating a better work environment for women in the United States and expanding equal rights throughout the globe. However, the NWP was not successful in fulfilling many of its goals because of strong-arm tactics by more conservative groups in the United States, more conservative governments globally, and the devastation of the Great Depression.

The idea of an equal rights amendment was not lost with the diminishing influence of the NWP. In every session of Congress between 1923 and the passage of the ERA in 1982, an amendment was introduced dealing with equal rights based on gender. The Republican Party included a fairly progressive plank in their 1940 platform. The U.S. Senate passed the Equal Rights Amendment three times—in 1949, 1953, and 1959—but each passage was marred by an irreconcilable rider exempting existing sex-specific legislation from the amendment. The period between the Great Depression and the rise of FEMINISM was one of slow progress toward public acceptance of the ERA.

The rise of a feminist movement in the 1960s was broad and rapidly well organized. The movement encompassed all aspects of female life in the United States. The expression of sexuality by women was made a topic of discussion after Betty Friedan’s *Feminist Mystique* was published in 1963.

The creation of a marketable birth control pill in 1960 made a woman’s control over her own body an important aspect of public health. The establishment of the National Organization for Women in 1966 and its rapid acceptance among other lobbying groups gave the feminist movement a political organization that would be unrivaled within a few years.

The Equal Rights Amendment was passed several times in the 1970s by the House of Representatives, but was not passed through to the ratification process. In August 1970 the House passed the ERA 352-15, and in the fall of 1971, on the back of Representative Martha Griffiths (D-MI), the House passed the ERA 354-23; it was moved further by congressional approval in 1972. It was not until 1982, however,

that the legislative approval of the ERA was followed up by the ratification process.

The amendment failed when only 13 of the state legislatures ratified. One cause of trepidation by the public toward the amendment was the activism of antifeminists such as Phyllis Schlafly, who saw the amendment as an unnecessary exercise and a waste of energy for women. However, the amendment’s process and the rise of feminism and antifeminism have opened a dialogue for women’s issues and legal interpretations of equal rights in already existing amendments.

NICHOLAS KATERS

Eritrea

Eritrea is an African country lying along the southwestern coast of the Red Sea and to the northeast of Ethiopia. Its capital and largest city is Asmara. Eritrea gained its independence from Ethiopia in 1993. The country’s diverse population speaks many languages and reflects many cultures. About half the inhabitants are Christian and about half are Muslims. In spite of this diversity, Eritrea has had little internal conflict in part because most factions were united in a struggle for independence from Ethiopia.

The Eritrean region was one of the first areas in Africa to produce crops and domesticate animals. Early people also engaged in extensive trade from Eritrea’s Dead Sea ports. In the fourth century, Eritrea was a relatively independent part of the Askum Empire. In the 16th century the area became part of the Ottoman Empire, and in 1890 it became a colony of Italy. Italian rule lasted until World War II, when Britain conquered the territory in 1941. In 1952 the UNITED NATIONS (UN) approved a federation of Eritrea and Ethiopia in an attempt to settle the dispute between Ethiopian claims of rights to the land and Eritrea’s desire for independence.

Ethiopia’s emperor, Haile Selassie, quickly acted to end the federation and to annex Eritrea as a province.

Eritrea began a war for independence from its long-lasting domination by other countries. The Eritrean Liberation Front (ELF) was formed in 1958 and initiated armed resistance in 1961.

The next three decades were filled with bitter warfare before Eritrea finally gained its independence in 1993. In the 1970s, due in part to the internal conflicts within the ELF, a new and more tightly organized group—the Eritrean People's Liberation Front (ELPF)—emerged. This group became dominant in the struggle against Ethiopian rule. The Soviet Union and Cuba came to the aid of Ethiopia's new regime after Haile Selassie was deposed in 1974, but the alliance was unable to dominate the rural districts of Eritrea. By 1980 the ELPF was increasing its control over more areas of the province, and in 1990–91 it gained possession of two major cities, including the capital. At that point the ELPF was recognized as the provisional government by many other countries. Ethiopia and Eritrea agreed to hold a referendum on independence in 1993, which resulted in almost unanimous approval for the initiative. In May of 1993 the United Nations admitted Eritrea to membership and granted a four-year transitional period for the formation of a constitution.

The ELPF dominated the early years of independence, and Isaias Afwerki—former general secretary of the ELPF—was elected the first president of the National Assembly. The constitution, formally approved in 1997 but not yet implemented, outlines a government directed by the National Assembly—whose members are elected for five-year terms—a president, and a supreme court. The president holds great power, since he appoints the members of the Supreme Court and the administrators of each of Eritrea's six regions. The only legal political party is the People's Front for Democracy and Justice (formerly the ELPF). The National Assembly elections scheduled for 2001 were postponed indefinitely.

Eritrea's independence and democratic government have been threatened by a number of factors, including the government itself and the economic and physical damages of the long war for independence. During the 1970s–1980s, nature dealt Eritrea devastating blows in the form of droughts and famine. In addition, the government pursued policies that led to engagement in several wars. Eritrea fought the Sudanese on a number of occasions. Eritrean forces invaded the Red Sea island of Hanish al Kabir, a possession of Yemen, in 1995 and claimed ownership. Arbitration settled the dispute in Yemen's favor in 1998. Conflict that led to thousands of deaths broke out again between Ethiopia and Eritrea in 1998 over disputed territory. In 2000 the

two countries agreed to a cease-fire, but a formal agreement on the borders between them was not approved. A UN peacekeeping force located in Eritrea continued to patrol a 25-mile-wide Temporary Security Zone along the countries' borders.

With less than 5 percent of its land arable, Eritrea continues to face severe economic and ecological concerns arising from deforestation, soil erosion, overgrazing, and its decayed infrastructure.

JEAN SHEPHERD HAMM

Ethiopia, Federal Democratic Republic of

The Federal Democratic Republic of Ethiopia is situated in the east of Africa in the region known as the Horn of Africa. Its capital is Addis Ababa. This country is bound to the west and northwest by Sudan, to the south by Kenya, to the east and southeast by Somalia, and to the east by Djibouti and Eritrea. Ethiopia is 1,221,900 square kilometers in size. Its topography consists of rugged mountains and isolated valleys. It has four main geographic regions from west to east: the Ethiopian Plateau, the Great Rift Valley, the Somali Plateau, and the Ogaden Plateau.

The diversity of Ethiopia's terrain determines regional variations in climate. This country has three climatic zones: a very cool area, where temperatures range from near freezing to 16°C; a temperate zone; and a hot area, with both tropical and arid conditions, where temperatures range from 27°C to 50°C. The semiarid part of the region receives fewer than 500 millimeters of precipitation annually and is highly susceptible to drought. The most important current environmental issues are deforestation, overgrazing, soil erosion, desertification, and water-intensive farming and poor management that contribute to water shortages in some areas. Another problem that the country faces is the constant loss of biodiversity and the threat to the ecosystem and the environment.

Ethiopia's population is mainly rural and has a high annual growth rate. In 2004 the UNITED NATIONS

Three Ethiopian gunners from Addis Ababa preparing to fire a 75mm recoilless rifle. Modern Ethiopia has a long history of conflict with neighboring countries in the Nile River basin.

estimated Ethiopia's population at more than 70 million. There are more than 70 distinct ethnic groups in Ethiopia. The principal groups include the Oromo, who account for 40 percent of the population; the Amhara, 25 percent; and the Tigre, 12 percent. Smaller groups are the Gurage, 3.3 percent; the Ometo, 2.7 percent; the Sidamo, 2.4 percent; and other ethnic minorities. More than half of Ethiopians, 53 percent of the population, are Christians (Orthodox), and around 31 percent are Muslims; there are also other indigenous tribal beliefs.

Ethiopia is one of Africa's oldest countries. Although Ethiopia was considered a strategically important territory by superpowers during the colonial period, Ethiopia's monarchy maintained its freedom. There were exceptions during the Italian invasion in 1895–96 and the occupation during World War II. During the COLD

WAR era in 1974, a military junta deposed Emperor Haile Selassie and established a socialist state, which maintained a relationship with the Soviet Union. After long period of violence, massive refugee problems, famine, and economic collapse, the regime fell in 1991 to a coalition of rebel forces, the Ethiopian People's Revolutionary Democratic Front (EPRDF). In 1994 a new constitution was approved, and Ethiopia's first multiparty elections were held in 1995. At the international level Ethiopia engaged in several disputes.

ETHIOPIA-ERITREA CONFLICT

In 1889 Ethiopia granted the control of its colony to Italy, but between 1941 and 1952 this country was put under British administration. An agreement was signed, and both countries formed a federation. However, 10

years later Haile Selassie abolished it and imposed imperial rule throughout ERITREA, which became a province, causing a series of guerrilla attacks. In 1991 a provisional government was established in Eritrea, and it became an independent nation in 1993. But the border between Ethiopia and Eritrea was never precisely demarcated. So in 1998 Eritrean forces occupied the disputed Ethiopian town of Badme, and a new war began, lasting until 2000, when both countries signed a treaty. Despite an international commission that delimited the border, the relationship between them remains hostile.

ETHIOPIA-SOMALIA CONFLICT

Ethiopia has always sought access to the sea and looked to Somalia for the reunification of its territory. Somalia used to claim the Ogaden region, inhabited for the most part by Somali ethnic groups. During the conflict with Eritrea, Ethiopia controlled almost the whole region, with a consequent breaking off of diplomatic relations. In 1988, after 11 years of constant confrontation, Ethiopia removed the troops from the border with Somalia, reestablished diplomatic relations, and signed a peace treaty. But the central section of Ethiopia's border with Somalia was never fully demarcated and is only provisional. Also, Ethiopia and Somalia have always had aspirations to control the territory of Djibouti.

THE NILE BASIN DISPUTE

The Nile River runs through nine states: Egypt, Burundi, Tanzania, Uganda, Sudan, Kenya, Rwanda, Ethiopia, and Congo. This river serves as a constant source of water for these countries. It has a vital role in agriculture and it also plays a major role in transportation. The river is born in Ethiopia's territory, and Ethiopia controls 85 percent of its water, but Egypt is the country that makes the most profit from its water flow. This country, with its military superiority and economic and political stability, puts pressure on upstream countries. During recent years these countries have not been able to divert the water flow because of the constant tensions. Though the conflict is still between the main actors—Sudan, Egypt, and Ethiopia—it is probable that all the countries in the Nile basin will be affected while the population continues growing and water needs increase.

Ethiopia's economy is based on agriculture, and 90 percent of the products obtained are exported. The principal crops are cereals, pulses, oilseed, cotton, sugarcane, beans, and potatoes, but the most important is coffee. This sector suffers from frequent drought and poor cultivation practices. As a consequence the coun-

try has to rely on massive food imports. Ethiopia does not have many mineral resources. It has small reserves of gold, platinum, copper, potash, and natural gas. For these resources Ethiopia depends on imports too. The leading manufactures in Ethiopia include cement, construction materials, food processing, and textiles. It has extensive hydropower potential. The transportation network is poor.

During the 1990s Ethiopia abandoned its exclusive bilateral policy with the Soviet Union and began to acquire more freedom. It became a decentralized, market-oriented economy with privatization and the cooperation of international financing organs. Agreements were also made to form regional organizations. But participation in the world economy remained marginal, and dependence on international financing organisms increased Ethiopia's external debt. In fact, in 2001 Ethiopia qualified for debt relief from the Highly Indebted Poor Countries (HIPC) initiative, and in 2005 the INTERNATIONAL MONETARY FUND voted to forgive Ethiopia's debt.

Ethiopia is among the poorest countries in the world according to the Human Development Index established by the UNITED NATIONS. About 50 percent of the population is below the poverty line. Food shortage in Ethiopia has reached alarming levels. The climate conditions, the lack of means to develop agriculture, displacements, refugees, and AIDS are factors that contribute to worsening the situation. Therefore foreign aid is constantly needed to prevent diseases and famine, particularly in times of drought.

VERÓNICA M. ZILIOOTTO

European Economic Community/ Common Market

The European Economic Community (EEC), also known as the Common Market, was established by the Treaty of Rome among France, Italy, West Germany, Belgium, Luxembourg, and the Netherlands. It was the

core of what would become the European Community in 1967 and the EUROPEAN UNION after the ratification of the Maastricht Treaty (1992). The EEC aimed to create a single economy among its members. Its acts were devised to achieve free labor and capital mobility; the abolition of trusts; and the implementation of common policies on labor, welfare, agriculture, transport, and foreign trade.

The idea of a united European market has its roots in the aftermath of World War II. After Europe had been divided and ravaged by two brutal world wars, politicians such as German chancellor Konrad Adenauer, Italian prime minister Alcide De Gasperi, and French foreign minister Robert Schuman agreed on the necessity of securing a lasting peace among previous enemies. They believed that European nations should cooperate as equals and should not humiliate one another. In 1950 Schuman proposed the creation of a European Coal and Steel Community (ECSC), which was established the following year with the Treaty of Paris. France, Italy, West Germany, Belgium, Luxembourg, and the Netherlands consented to have their production of coal and steel monitored by a High Authority. This was a practical and a symbolic act at the same time: Steel and coal, the raw materials of war, became the tools for reconciliation and common growth.

These first years of cooperation proved fruitful, and ECSC members started to plan an expansion of their mutual aid. Negotiations between the six countries making up the ECSC led to the Treaty of Rome (1957), which created the European Economic Community, a common market for a wide range of services and goods. The process of integration continued during the 1960s, with the lifting of trade barriers between the six nations and the establishment of common policies on agriculture and trade. Denmark, Ireland, and the United Kingdom joined the EEC.

As the EEC grew, its leaders realized that European economies needed to be brought in line with one another. This persuasion, reached during the 1970s, was the starting point of the tortuous path that would finally lead to monetary union in 2002 with the circulation of the euro. To stabilize the fluctuations of European currencies caused by the breakdown of the Bretton Woods system, the European Monetary System (EMS) was created in 1979. The EMS helped to make exchange rates more stable and promoted tighter policies of economic solidarity and mutual aid between EEC members. It also encouraged them to monitor their economies.

The monitoring of the members' economies became vital during the 1980s, when membership in the EEC

rose to 12, with the entries of Greece in 1981 and Spain and Portugal in 1986. The first Integrated Mediterranean Programme (IMP) was launched with the aim of making structural economic reforms and thus reducing the gap among the economies of the 12 member states. With the enlargement of its membership the EEC also started to play a more relevant role on the international stage, signing treaties and conventions with African, Caribbean, and Pacific countries.

The worldwide economic recession of the early 1980s seemed to endanger the process of market integration. However, the commission, led by the French socialist Jacques Delors, gave new impetus to European incorporation. It was under Delors's leadership that the Single European Act, the first major revision of the Treaty of Rome, was signed, setting a precise schedule for the removal of all remaining barriers between member states by 1993. The Delors Commission also worked to create a single currency for the European Common Market. The single currency option was chosen with the creation of a Central European Bank aiming to unify monetary policies and create a common currency. The choice was made explicit in the Treaty of Maastricht (1992), which set up a timetable for the adoption of a single currency. With the Maastricht Treaty, the European Economic Community was simply renamed the European Community, and the process of European integration was completed with the creation of the EU. Austria, Finland, and Sweden joined the union in 1995. Ten more countries (Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia) joined in 2004, making the EU the world's largest trading power. Bulgaria and Romania joined in 2007.

In some countries the introduction of the euro was marked by controversies and heated debates. Yet economists have shown that the European Common Market has much to benefit from the euro. Frankel and Rose suggest that being part of a single currency tends to triple the country's trade with other members of the single-currency zone, leading to increases in the country's per capita income.

European Union

The European Union (EU), founded with the signing of the Maastricht Treaty in 1992, represents a large project of economic and political integration between an ever-growing group of European countries. The EU quickly became the world's major trading power and enjoyed fast economic growth. Free internal trade and common customs duties, which member countries enjoyed since the beginning of the union, led to significant trade development among the different members. The EU, by 2006, included 25 member states. Bulgaria and Romania became members in January 2007. Croatia and Turkey were negotiating their membership, which was prevented by concerns over human rights violations in both countries. Of the 25 members, 12 adopted a single currency—the euro—for financial transaction in 1999. The euro entered circulation in January 2002.

As the union expanded, however, it increasingly found resistance and obstacles on its way. A powerful movement of Euro-skeptics emerged throughout the EU in the late 1990s, pointing to a supposed lack of democracy in the EU institutions and to the danger of losing national sovereignty to a centralized body. Some politicians in those countries with more developed economies looked upon the enlargement of the union with suspicion, fearing a wave of uncontrollable migration. These concerns led to several serious defeats: Referenda in Denmark and Sweden showed that the majority of citizens were against adopting the euro; French and Dutch voters rejected the European Constitution in 2005.

Although the Maastricht Treaty was signed in 1992, the idea of a united Europe dates back to the aftermath of World War II. After two world wars had divided European countries and massacred their people, statesmen such as German chancellor Konrad Adenauer, Italian prime minister Alcide De Gasperi, and French foreign minister Robert Schuman agreed on the necessity of building a lasting peace between previous enemies. The cooperation between these countries led to the Treaty of Rome in 1957, which established the European Economic Community (EEC) and the first European Commission, led by the German Christian Democrat Walter Hallstein. Customs duties among member states were entirely removed from 1968, and common policies for trade and agriculture were also devised. The fall of the Berlin Wall in 1989 and the disintegration of the Soviet Union in 1991 progressively shifted eastern European countries toward the EU.

The most important EU institutions include the Council of the European Union, the European Com-

mission, the European Court of Justice, the European Central Bank, and the European Parliament. The origins of the European Parliament, which convenes in Strasbourg, date back to the 1950s. It has been elected since 1979 directly by the European people. Elections are held every five years. The European Central Bank manages the union's single currency, and the EU has a common policy on agriculture, fisheries, and foreign affairs and security.

Although the policies devised by the EU range across a wide variety of areas, not all have binding power for the union's members. The EU status, therefore, varies accordingly to the matters discussed. The union has the character of a federation for monetary affairs; agricultural, trade, and environmental policy; and economic and social policy, while each member state retains wider independence for home and foreign affairs. Policy making in the EU results in an interplay of supranationalism and intergovernmentalism.

Following the Maastricht Treaty, the areas of intervention of the EU can be divided into three pillars: European Communities, Common Foreign and Security Policy, and Police and Judicial Cooperation in Criminal Matters. Supranational concerns are strongest in the first pillar, while the Council of Europe and thus intergovernmental opinions count the most in the second and third pillars.

The Council of the EU, together with the European Parliament, form the legislative branch of the union, while the European Commission represents its executive powers. The council is formed by ministers of all the member states. The presidency of the council rotates between the members, and the council is made up of nine subcommissions, which meet in Brussels. The European Commission, whose president is chosen by the Council of Europe and is then confirmed by the European Parliament, has 25 members, one for each member state. Yet, unlike the Council, the commission is completely independent from member states. Commissioners, therefore, are not supposed to take suggestions from the government of the country that appointed them. Their only goal should be to propose legislation to favor the development of the whole union.

The major setback for the EU was the rejection of the constitution by two of its founding members, France and the Netherlands. Signed in 2004, the constitution—whose elaboration was particularly difficult and thorny—aimed to make human rights uniform throughout the union as well as to make decision-making more effective in an organization that now

includes as many as 25 members, each with priorities and agendas of their own.

The main challenge that the EU will have to face in years to come is, paradoxically, a direct result of its success and its capacity to attract new nations. With more member countries, the EU is threatened by increasing regional interests that endanger the deployment of shared policies.

F

Falklands War (1982)

The Falklands War was a short war between Argentina and the United Kingdom over the Falkland Islands (Islas Malvinas), occurring between March and June of 1982. The Falklands consist of two large—and many small— islands in the South Atlantic Ocean east of Argentina, rich in subaquatic offshore oil reserves. Disputes over the sovereignty of the islands have occurred since the 18th century, as the islands are actually located within the Argentinean continental platform. However, in spite of many Argentinean claims, in 1833 British troops and inhabitants took possession of the islands.

At the beginning of the 1980s Argentina's military government had become less powerful. Argentina faced a devastating economic crisis and large-scale civil unrest, with many people clamoring for the return of democracy. As a way of recovering some power and maintaining the military dictatorship, the Argentine government—headed in 1982 by General Leopoldo Fortunato Galtieri—decided to play off long-standing feelings of nationalism by launching what it thought would be a quick and easy war to reclaim the Falkland Islands. Most of Argentina's military experts likely misjudged the political climate in Britain and did not anticipate that the British would move their fleet halfway across the globe to reclaim their rights over the islands.

After days of tension, the war finally began on April 2, 1982, when General Galtieri ordered the invasion of the Falkland Islands, triggering the Falklands War. During the first weeks Argentina's troops moved quickly,

invading the islands, defeating the improvised British troops, and gaining domain of the islands. Britain quickly organized a naval task force, consisting of the HMS *Conqueror* submarine, helicopters, Royal Air Force bombers and fighters, destroyers, and a large number of naval fighting boats. In comparison to Argentina's task force technologically, in quantity, and in the areas of military professionalism and experience, British troops by far were better prepared than the Argentinean troops.

Although there was a huge difference in military power between the two forces, the war lasted four months and resulted in 255 killed and 746 wounded on the British side and 655 killed, 1,100 wounded, and 11,313 prisoners on the Argentinean side. One of the war crimes most sadly remembered by the Argentineans was the sinking of the *General Belgrano* light cruiser. The cruiser was located in the "total exclusion zone" of 200 nautical miles (370 kilometers) that had been established by the British before commencing operations in order to keep neutral shipping out of the way during the war. In spite of that, on May 2 the British HMS *Conqueror* submarine fired torpedoes, hit the boat, and sank it, taking the lives of 321 Argentinean soldiers. In response to that, the Argentine air force launched an air attack and sank the destroyer HMS *Sheffield*. As a result, 22 British sailors were killed and 24 were injured.

Given the difference in military force between the sides, the war quickly turned in Britain's (United Kingdom's, or U.K.'s) favor. In addition to their military advantage, the U.K. government received strong international support from the United States, France, and Chile, among other countries.

Legally the United States had military treaty obligations to both parties in the war, bound to the U.K. as a member of NATO and to Argentina by the 1947 Inter-American Treaty of Reciprocal Assistance (the Rio Pact). However, the 1949 North Atlantic Treaty only obliged the signatories to support if the attack occurred in Europe or North America above the tropic of Cancer. The Rio Pact obliged the United States to intervene if an adherent was attacked; the U.K. never attacked Argentina, only Argentine forces on British territory.

French President François Mitterrand gave full support to the U.K. in the Falklands War. France provided the U.K. with aircraft, identical to the ones it had supplied to Argentina, for British pilots to train against and also provided intelligence to help sabotage the Exocet missiles it had sold to the Argentine air force. In Latin America, Argentina's neighbor country Chile also gave its support to the U.K. by providing important logistical support during the war and strategic help by threatening an invasion on the west border of Argentina.

Argentina's only support was military assistance from Peru and Venezuela. This came in the form of critical aircraft supplies like long-range air fuel tanks. Cuba and Bolivia also offered ground troops, but their offers were seen as political propaganda and not accepted. Only after the war was over did the Brazilian air force send some reinforcements.

The British eventually prevailed, and the islands remained under British control. On June 14, 1982, after the final battle in Port Stanley, the commander of the Argentine garrison in Stanley, Mario Menendez, surrendered to Major General Moore of the Royal Marines. From the British point of view, the Falklands War was one of many small military conflicts in which the U.K. has been engaged. For Argentina, the war remains the country's main military conflict and is very much present in the people's memory. As of 2006, Argentina still showed no sign of relinquishing its claim to the Falkland Islands.

DIEGO I. MURGUÍA

Falun Gong

Falun Gong is a system of meditation exercises, termed *qigong*, introduced by Li Hongzhi in 1992. Falun Gong, translated as Practice of the Wheel of Law, grew quickly after its public introduction and is also known as Falun Dafa. In 1999 the Chinese government suppressed Falun Gong in response to hugely growing numbers and large peaceful demonstrations by Falun Gong practitioners.

In 1992 Li Hongzhi introduced Falun Gong at the Fifth Middle School in China. A system of *qigong*, Falun Gong is a cultivation practice associated with Buddhism. The foundation of Falun Gong is dharma, the doctrine and discipline of Buddhism. The Falun Gong core principles are truthfulness, compassion, and forbearance. *Qigong* systems teach breathing techniques and meditation.

In Falun Gong, practitioners are required to enforce strict meditation and must abide by truth, compassion, and endurance in all of their actions. Falun Gong, using evidence they believe does not fit into modern anthropology, teaches that humankind has endured several cycles of civilization. Its teachings emphasize not belief but rational understanding. To pray or hope for things is considered futile action. Lust, homosexuality, and other practices considered of low morals in Falun Gong are believed to hinder the cultivation process.

According to its beliefs there are five important sets of exercises that include meditation: four standing exercises and one sitting exercise that strengthen the mind and the body. It also believes that karma is the cause of disease and that only by letting go of earthly attachments can one prevent and cure disease. Additionally, in Falun Gong the Wheel of Law (the Falun) must be installed in the abdomen through meditation. Once installed, this Falun turns continuously.

By the late 1990s, Falun Gong, spread by the Internet, had gained followers all over the world. Controversy over its beliefs led to protests by believers in 1998, during which some practitioners were arrested. According to Falun Gong reports, the police beat some of the protesters. On July 20, 1999, the Chinese government began attempts to suppress the movement, concerned about its growth. Books and Web sites related to Falun Gong were suppressed, and the movement was declared illegal in China. However, the movement continues to claim followers in more than 80 countries, where governmental reactions range from acceptance to suspicion. One estimate projects their membership to be around 70 million people.

MELISSA BENNE

Fanon, Frantz

(1925–1961) *Third World spokesperson*

Frantz Fanon, born of the descendants of African slaves, was raised on the French Caribbean island of Martinique; he was French-educated and became a practicing psychiatrist as well as an influential writer and spokesperson for Third World revolutions during the 1950s–1960s. Fanon influenced an entire generation of revolutionary activists in Africa and in the CIVIL RIGHTS MOVEMENT in the United States. Influenced by Aimé Césaire and the ideas of Negritude, Fanon championed the cause of black liberation movements and, in his books and essays, explored the interrelationship of racism and colonialism.

Fanon worked with the French resistance against the Nazis in World War II and went to Algeria as doctor at a hospital at Blida in the early 1950s. After the ALGERIAN REVOLUTION broke out in 1954, Fanon quit to join the Algerian National Liberation Front (FLN) and became a leading spokesperson for the cause of Algerian independence from the French. His books, *Black Skin, White Masks* (1952) and *Wretched of the Earth*, published posthumously in 1961, became “handbooks of black revolution.” Fanon argued that violence was an integral part of the struggles for Third World independence because imperial colonial powers would never willingly cede their control over people of color. Fanon died of leukemia in Washington, D.C., in 1961 and was returned to be buried on Algerian soil.

JANICE J. TERRY

feminism, worldwide

The phenomenon of feminism worldwide in the latter part of the 20th century reflects the diversity of social

and cultural theories, political movements, and moral and religious philosophies shaped by the experiences of women. There is no universally accepted form of feminism that represents all of its advocates, but its representatives share a similar vision. Feminist theory continues to question basic assumptions about gender and sexuality, including the understanding of what it means to be a woman. Feminist scholars and activists seek clarity about feminine consciousness, the identity of women, their values, and their ambitions. They address the issue of oppression by men as an issue of power, dominion, and hierarchy. Feminists believe this oppression exists in relation to the identity of women and the challenges they have to face in local and global contexts.

By the mid-20th century the feminist movement had brought about positive transformation and advances for women. Historically, feminism began as a women's movement that originated at the Seneca Falls Convention (1848) held in New York State. This first wave of feminism formally ended in 1920 with the passing of the Nineteenth Amendment to the U.S. Constitution, which secured the right to vote for women. Ironically, the values of the early feminist movement have been so ingrained in Western culture that society generally accepts them, even though individuals who agree with those values may not accept being labeled “feminist.”

FEMINISM, SECOND WAVE

In the late 1960s, after 40 years consumed by economic depression, world war, and COLD WAR fears, women again revisited issues of gender equality, launching a movement that came to be called Second Wave Feminism. Looking beyond the right to vote, many women in the industrialized world, joined by some women from developing nations, asserted new rights and demanded liberation from stereotypical female roles.

A precursor of the post-suffrage women's movement appeared in 1949, when French philosopher Simone de Beauvoir (1908–86) published *The Second Sex*, a major analysis of women's lives and roles. Extremely controversial—the book was forbidden to Roman Catholics—de Beauvoir's insights had little immediate effect on Western women, many of whom had embraced child rearing and homemaking in the prosperous years following World War II.

By the 1960s a growing racial CIVIL RIGHTS MOVEMENT and rising opposition to Soviet and U.S. cold war policies were sparking protests in Europe and the Americas. In this climate journalist Betty Friedan's 1963 analysis, *The Feminine Mystique*, was a huge best seller. Pointing to educated, middle-class women's

Betty Friedan, author of *The Feminine Mystique*, a book that helped spark the Second Wave women's movement.

dissatisfaction with their “perfect” lives, Friedan (1921–2006) not only posed a “problem that has no name” but also helped found the National Organization for Women (NOW) in 1966 to deal with it. Canada’s National Action Committee on the Status of Women (NAC) followed in 1971.

The movement quickly took on a life of its own, as women in many nations found new ways to understand and advance their social, economic, and political rights. Asserting that “the personal is political,” movement women discussed issues long considered private, such as motherhood, divorce, abortion, rape, lesbian relationships, prostitution, and the sexual double standard. In 1976 de Beauvoir keynoted a huge International Women’s Day rally in Brussels that criticized the timidity of UNITED NATIONS efforts for women. The same year 100,000 Italian women held the first “Take Back the Night” march to spotlight male violence against women.

FIRST WOMEN

Around the world, female political leaders began to emerge in far greater numbers than ever before. Legisla-

tive bodies in Scandinavia and other western European nations saw near-parity in their sex ratios. In 1984 Geraldine Ferraro (1935–) became the first woman chosen for vice president by a major U.S. party (the ticket lost) and in 2007 Nancy Pelosi (1940–) of California became the United States’ first female Speaker of the House of Representatives. Nations including Britain, India, and Pakistan have been governed by women, although critics say that the feminist movement had little to do with their success.

As was true during the original suffrage movement, not all women (or men) were comfortable with Second Wave Feminism’s new issues and styles of protest. Competing efforts to define the contours of women’s equality versus women’s differences from men continue to create controversy, as does the relevance of feminism in the lives of poor women, women of color, and women living in traditional societies—especially in Africa and the Islamic world.

As an example, in the United States Alice Paul’s Equal Rights Amendment of 1923 was reclaimed by new feminist leaders and became the centerpiece of a broad spectrum of women’s rights initiatives. In 1972 this measure, promising “equal rights under the law” for women, easily cleared Congress and was sent to the states for ratification. Religious conservatives, led by mother and lawyer Phyllis Schlafly (1924–), were able to raise enough opposition to halt the ERA three states short of passage. Schlafly and her supporters feared that traditional wives and mothers would be devalued and could lose legal protections. Claims by some opponents that the ERA would require that public toilets be available to both sexes helped reduce a spirited political controversy to farce.

Other feminist proposals proved more successful. Title IX, a 1972 federal program to afford equal opportunities to high school and college women—although still controversial—greatly expanded women’s college enrollments and participation in competitive sports. Legislation and market forces combined to narrow the “pay gap” between men and women. Modern contraception—the “pill”—was approved for sale in the United States in 1960; birth control pioneer Margaret Sanger (1870–1966) helped finance its development. In 1965 a Supreme Court decision in *Griswold v. Connecticut* struck down a law that had prohibited contraceptive use even by married couples. By 1973 the U.S. Supreme Court’s narrow decision in *ROE V. WADE* legalized abortion in the first three months of pregnancy.

Continuing bitter controversy over *Roe* highlights some general problems that, depending on one’s view,

have either hampered the modern women's movement or kept it within reasonable bounds. In the United States, Canada, and elsewhere, anti-abortion protests have tended to increase restrictions and have sometimes made safe, legal abortion unavailable, especially to the poor and rural. Nations emerging from communism, including Russia, where abortion was freely allowed after 1955, have tended to tighten formerly liberal abortion and contraception alternatives.

The same middle-class women whom Friedan urged to shed the bondage of woman's "separate sphere" have struggled with demanding full-time jobs paired with full-time home responsibilities, although European nations have traditionally offered generous maternity and child-care benefits. Help-wanted ads no longer separate male and female opportunities. However, women who have surged into law, medicine, science, the military, and other nontraditional jobs have experienced pay gaps, sexual harassment, and the so-called glass ceiling, which is said to limit women's ultimate success. By the early 21st century, especially among the Second Wave's second and third generations, a "mommy track"—giving up an unfulfilling job for motherhood—has emerged as at least a temporary alternative. Critics point out that the mommy track offers little help or economic advancement to working-class mothers.

THIRD-WAVE FEMINISM

Recently Third-Wave feminists have been identified, although the Second-Wave feminists assert that the work of the Second Wave is by no means complete. Women who were born in the 1960s–1970s felt that their personal experience set them apart from older leaders of the feminist movement. Third-Wave feminists of this period, having inherited a feminist tradition from the First and Second waves, strove to form their own distinct identity as feminists, naming and seeking to correct perceived inadequacies and contradictions of their predecessors.

Hazel Carby, a representative of the Third Wave of feminism, identified a problem with the Second Wave. She believed that the Second Wave overlooked the experiences of black women by emphasizing the experiences of patriarchy and oppression endured by white women. She concluded that theories of patriarchal oppression studied in the 1970s and early 1980s overlooked the negative influences that slavery, colonialism, and imperialism had on women, and sought to raise awareness about these issues through her writings.

Many, but not all, figures within feminism worldwide have been women. Feminists argue that men

should not be leaders within feminist organizations because they have been conditioned to seek leadership aggressively. Similarly, those critical of accepting men in the movement believe that women have been socialized to defer to men, which may hinder their asserting their own leadership when working alongside men. Even so, some feminists believe men should be accepted within the movement because the virtue of equality should serve to promote inclusion and acceptance.

The feminist movement has been influenced by and has shaped the study of culture. Since the late 1970s feminist cultural studies have expanded the study of women and established gender as an important criteria of analysis within broader cultural studies. Feminist cultural studies serve to answer questions about the influences of present cultural systems and their oppression of women and what can be done to combat patriarchy and oppression. Feminist cultural scholars, by observing the everyday lives of women, learn about their daily experience, how they cope with it, and how they are challenged by systems of inequality and oppression.

Essentially all cultural objects, writings, and practices constitute the subject of cultural studies, and thus the subjects of feminist cultural studies are likewise as diverse. Areas that are studied within feminist cultural studies include advertising, art, being a housewife, class, colonialism, materialism, movies, pornography, postcolonialism, shopping, soap operas, and youth subcultures.

In the 1980s cultural feminists used the mass media in their analysis of culture. Feminist cultural scholars believe that an analysis of mass media gives insight into the dynamics of society and politics. Feminists who study the influence of mass media on culture seek answers to the questions of how women may relate to and be affected by the mass media and how oppressive patriarchal ideologies may be throughout all forms of mass media. Studies argue that women who engage in watching television dramas and reading romance novels actively judge implicit patriarchal messages found within them.

After the late 1980s, the feminist movement was influenced by post-structuralism. Post-structuralist feminists seek to understand and value feminine subjectivity and the implications of the power of written discourse for women. Some writings argue that the term and meaning of *woman* itself results from male-dominated discourse. Through uncritical use of the word, it loses its value in trying to shape and transform feminist thinking. These writings have caused feminists to insist that feminist cultural studies have lost track of the real material lives of women.

The feminist movement has had an effect on written and spoken language in the latter part of the 20th century. English-speaking feminists have advocated using nonsexist language, for example, Ms. instead of Mrs. or Miss and *herstory* for *history*. Many feminists advocate using gender-inclusive language, such as *humanity* in place of *mankind* or *he or she* or just *she* instead of *he* when the gender of a subject is unknown. Many non-English languages do not have gendered pronouns and thus do not require gender-inclusive language. The increasing popularity, however, of using English in the world gives feminists reason to promote gender inclusivity in language.

The influence of feminism in the late-20th century created distinctive ways of developing ethics. Feminist ethics attempt to investigate and rethink traditional Western ethics that do not take into account the moral experiences of women, in order to form a critique of traditional ethical theories formed by a male-dominated culture. The aim of the different forms of feminist ethics possesses a liberating aspect, based on moral theory founded in nonsexist methodology.

Late 20th-century feminist thought has also influenced the movement toward equality in Islamic countries. Grounded in Islamic thought, Islamic feminists seek full equality of men and women in both the public and personal sphere. Among the issues addressed are the female dress code in Muslim society, sexuality, and the legal discrimination against women.

A variety of women-centered approaches to feminist ethics have been developed, including feminine, lesbian, maternal, political, and theological. These approaches seek to provide guidelines for undermining the systematic subordination of women. The different forms of feminism that exist worldwide in the late-20th and early-21st centuries are manifold. They include African-American, Amazon, anarcha-feminism, black, cultural, ecofeminism, egalitarian, equity, existentialist, French, gender, gynocentric, individualist, lesbian and lesbian separatism, liberal, male pro-feminism, material, non-Western, postcolonial, postmodern, pro-sex, psychoanalytic, queer theory, radical, segregationist, Socialist, spiritual, standpoint, theological, third-world, transfeminism, transnational, and womanist.

MARSHA ACKERMANN AND CHRISTOPHER M. COOK

Fonseca Amador, Carlos

(1936–1976) *Nicaraguan revolutionary*

The intellectual guiding light of the Sandinista National Liberation Front (Frente Sandinista de Liberación Nacional, or FSLN) from its founding in 1961–62 until his death in battle in 1976, Carlos Fonseca Amador ranks among the most influential figures in modern Nicaraguan history, and one of the era's most prominent Latin American revolutionaries. As an adult who was tall, slender, severely nearsighted, and self-abnegating, he was born out of wedlock as Carlos Alberto Fonseca on June 23, 1936, in the provincial city of Matagalpa, Nicaragua, to seamstress and laundress Augustina Fonseca Ubeda. His biological father, Fausto Amador Alemán, was one of the region's wealthiest and most prominent coffee growers and businessmen. Growing up in the abject poverty characteristic of the city's working class, at age 14 Carlos entered Matagalpa's only public secondary school, the only one among five maternal siblings to go beyond primary school. A gifted student, he read voraciously, and at age 18 became active in the local branch of the banned Nicaraguan Communist Party (PSN). In the same year he copublished a cultural journal, *Segovia*, in which he developed many of the themes that would later play a major role in his political thought. Graduating from high school in 1955, he was honored for finishing all five years as first in his class.

Moving to Managua, he worked in the library of the prestigious Instituto Ramírez Goyena high school before settling in León and enrolling in the National University of Nicaragua (UNAN) as a law student, where he became involved in radical student politics. Arrested by the regime of Luis Somoza following the assassination of Somoza's father, Anastasio Somoza, in September 1956, Fonseca was jailed for seven weeks. In 1957 he embarked on a PSN-sponsored trip to Moscow as the Nicaraguan delegate to the Sixth World Congress of Students and Youth for Peace and Friendship. The

next year he published *Un Nicaragüense en Moscú* (A Nicaraguan in Moscow) and became one of UNAN's top student leaders.

With the triumph of the CUBAN REVOLUTION in January 1959, he traveled to Cuba, along with many other Nicaraguan dissidents. Upon his return, in April he was arrested and deported to Guatemala. From there he joined a newly formed guerrilla group training in Honduras. On June 24, 1959, he was severely wounded in a firefight with the Honduran military and Nicaraguan National Guard at El Chapparal. The event was a turning point. He broke with the PSN and, determined to forge an independent revolutionary movement modeled on FIDEL CASTRO's 26th of July Movement, he returned to Cuba and began a serious study of Nicaraguan rebel leader Augusto C. Sandino. In 1961–62 Fonseca and several comrades formed the FSLN, though the idea of using Sandino's name and image was Fonseca's. He interpreted Sandino as a kind of "path" that, through the FSLN vanguard, would combine Marxist theories of class struggle with Nicaragua's unique history and culture of popular resistance. Henceforth Fonseca was the group's undisputed leader.

Organizing relentlessly and writing prolifically, for the next 15 years Fonseca guided the group through many hardships and phases. He was killed in a National Guard ambush on November 7, 1976, in the mountains northeast of Matagalpa, nearly three years before FSLN overthrew Somoza.

MICHAEL J. SCHROEDER

Ford, Gerald

(1913–2006) U.S. president

Gerald Ford was the president of the United States from 1974 to 1977, following a vice presidency of about eight months. He is perhaps best known as the successor to disgraced president RICHARD NIXON, whom he pardoned, and as the American president during the fall of Saigon.

A college football player, graduate of Yale Law School, and navy officer during World War II, Ford became an active Republican after the war and was elected to the House of Representatives in 1948 on an internationalist platform that meshed well with the recent creation of the UNITED NATIONS. He served as a representative for 24 years, proposing no major legislation and focusing instead on negotiating between and supporting the legislation of others. As a member of the Warren Commission appointed to investigate the assassination of President JOHN F. KENNEDY, he altered the Commission's findings to misreport the location of one of Kennedy's wounds in order to support the single bullet theory—tampering that was not revealed until 1997.

In 1973, while Ford was House minority leader, Nixon's vice president Spiro Agnew resigned in the middle of the WATERGATE SCANDAL. The Speaker of the House and other congressional leaders made it clear to Nixon that they would accept only the mild, moderate Ford as Agnew's replacement. He was confirmed at the end of the year and became president when Nixon resigned on August 9, 1974. One month later, Ford pardoned Nixon preemptively for any crimes committed against the nation during his presidency. The pardon brought great criticism upon Ford: Some accused him of pardoning Nixon in exchange for the resignation that made him president, others thought it was simply terrible judgment. Many agreed that it discouraged the pursuit of charges against Nixon, hampering the Watergate investigation; Ford's supporters have pointed to a 1915 Supreme Court decision that established that for the accused to accept a pardon, he must

President Gerald Ford (left) and Secretary of State Henry Kissinger converse on the grounds of the White House in 1974.

accept his guilt. Thus, pardoning Nixon found the former president guilty in the process.

In September 1975 two assassination attempts were made on Ford, the first by Lynette “Squeaky” Fromme, a troubled young follower of Charles Manson. Secret Service agent Larry Buendorf managed to block the hammer of Fromme’s handgun with his thumb, preventing her from firing. Later in the month, 45-year-old bookkeeper Sara Jane Moore shot at Ford during his visit to San Francisco, but failed because of the intervention of bystander Billy Sipple, a former marine and Vietnam veteran who soon became a gay hero when he came out of the closet. Moore’s motivations are unclear, but she spoke of wanting to “create chaos.”

Ford was upfront about the odd start to his presidency and referred to himself as an “unelected” president. The vice presidency was filled by Nelson Rockefeller, the popular and well-connected New York governor whose presidential bids had repeatedly failed. Rockefeller’s replacement when Ford ran in the 1976 election was Bob Dole, who would later be known for his own run of failed presidential campaigns. After narrowly beating Governor RONALD REAGAN for the Republican nomination, Ford lost the election to JIMMY CARTER. In 1980 he rejected Reagan’s offer to make him his running mate when Reagan refused to consider a “co-presidency” in which Ford’s power would be increased beyond ordinary vice presidential duties.

As an ex-president, he spoke in favor of election reform and gay rights and condemned the war in Iraq. He died the day after Christmas, 2006, at the age of 93—the longest-lived American president.

BILL KTE’PI

Free Speech Movement

The Free Speech Movement (FSM) began in 1964 at the University of California, in Berkeley. It was the catalyst for student protest in the United States and in the world during the 1960s–1970s. The movement began

as a protest by students, teaching assistants, and faculty against the university’s ban on political activities and sought to establish the right to state political views on campus.

The size of the incoming freshman class at Berkeley grew by 37 percent between 1963–64. Humanities and social majors had risen from 36 to 50 percent in the previous decade. The new students were more socially conscious than their predecessors.

The president of the University of California system, Clark Kerr, anticipated the influx, but failed to anticipate that the old *in loco parentis* philosophy was impractical in the face of student restlessness and activism. The student left wing began emerging in the late 1950s as the anticommunist fervor of the McCarthy era eased. Some of its leaders were the children of liberal and radical professionals. The student party at Berkeley, SLATE, wanted to end nuclear testing, capital punishment, and the COLD WAR. In 1957 it began running slates of candidates in student elections, and it included civil rights as one of its issues.

Berkeley students in 1960 protested the San Francisco hearings of the House Un-American Activities Committee (HUAC), to radicals the most blatant symbol of the 1950s suppression of civil liberties. Police turned fire hoses on the protesters and arrested many of them. The HUAC produced a film, *Operation Abolition*, that attempted to portray the protesters as subversives, but the movie backfired—it was so poorly done that it supported the liberal case against the committee. It later became a cult classic on campuses.

Mario Savio, the son of a Roman Catholic machinist, entered this climate. Savio spent the 1964 summer teaching at a freedom school in McComb, Mississippi. After returning to Berkeley in September 1964, he learned that the traditional venue for protest, the Bancroft strip of Telegraph Avenue just outside Berkeley’s main gate, was off limits for the handing out of pamphlets, petitions, and recruitment because it had been the scene of demonstrations by students against local businesses that discriminated. The conservative regents pressed the administration into closing the campus and adjacent areas to recruiting and agitation.

The students reacted angrily. SLATE, anti-HUAC groups, civil rights activists, and ordinary students—even some conservative ones—protested the closure. On September 29, they set up tables on the Bancroft strip and refused an order to leave. On September 30, the university officials began taking names. When five protesters were ordered to appear before disciplinary hearings, 500, led by Mario Savio, marched on the

administration building. The marchers demanded that they be punished too. The administrators added the three leaders of the march to the five and suspended all eight.

The next day, students received handbills declaring that a fight for speech was under way. Student tables in front of Sproul Hall included representatives from the Congress of Racial Equality (CORE), the Student Non-Violent Coordinating Committee (SNCC), the Du Bois Club, the Students for a Democratic Society (SDS), and half a dozen others. When asked to identify himself, Jack Weinberg at the CORE table refused. When campus police attempted to arrest him, Weinberg went limp in the classic civil disobedience manner. For 32 hours the police car containing Weinberg and the police was unable to move. Finally Kerr and the student representatives compromised. Weinberg was released, the academic senate committee examined the question of suspensions, and the big issue of appropriate political behavior on campus was given to a faculty-student-administrator committee. That took care of the incident. It did nothing to stop the rebellion.

PRIOR RESTRAINT

The FSM wanted an absolute First Amendment freedom of political activity. When the senate committee announced a compromise, Savio denounced it as prior restraint. On November 9 Savio and his allies put up the tables even though the administration opposed them. The administration did nothing, leading many undergraduates to conclude that the administration was picking and choosing, taking on the FSM because it was weak. The undergraduates shifted support back to the FSM.

The faculty senate committee issued its findings on November 13. Six of the eight were to be reinstated, but Savio and Art Goldberg were to be on suspension for six weeks—retroactive to the incident more than six weeks in the past. The regents increased the penalties for Savio and Goldberg. FSM became stronger as the semester ended.

On December 2, in another protest of university action against the FSM, the graduate students went on strike. Four to five thousand heard Savio speak against the grinding of the machine and about the need to resist, and 1,000 to 1,500 students occupied the administration building. Under the authority of Governor Pat Brown, 600 state and county police cordoned off Sproul Hall, and the chancellor ordered the students to leave. Clearing the building of limp protesters took 12 hours. All 773 arrested for trespassing were out on bail the next day.

The strikers were well organized, and with the support of faculty sympathizers turned out thousands of flyers. Most teaching assistants and faculty cancelled

classes. Kerr cancelled Monday classes to allow for a meeting where all could hear about his faculty-approved “new era of freedom under law.” When the meeting ended, Savio attempted to speak, but two campus guards dragged him from the stage. To the FSM supporters, it was a blatant denial of free speech. The crowd demanded that Savio be allowed to speak; he announced a rally at Sproul Plaza.

OLD SYSTEM

The academic senate meeting on the following day was the largest in memory. Several thousand students outside heard the proceedings over loudspeakers. The senate’s academic freedom committee endorsed all FSM demands, leaving the administration only the power to prevent physical disruption. Conservatives attempted to establish limits, but the proposals passed 824 to 115. Shortly thereafter the FSM ended the strike. The next day SLATE won every student government office. On December 18 the regents refused to accept the faculty committee’s recommendations.

The University of California’s board of regents resisted the pressure initially, but it slowly retreated until, on January 2, 1965, the new acting chancellor, Martin Meyerson, ceded most of the FSM’s basic demands. The regents reinstated the rights of students to set up tables on campus, especially in Sproul Plaza, and to collect money through donations. They could also distribute literature and recruit members. Protests and marches for religious, social, and political causes were once again permitted.

The Berkeley Free Speech Movement was the prototype of the new campus liberalism. It altered the American campus for the foreseeable future. Traditional controls and curricula were gone, and students enjoyed the free exchange of ideas and freedom in general. The Berkeley FSM was but the first round in the generational clash of the 1960s–1970s. It brought to students the tactics of the CIVIL RIGHTS MOVEMENT, tools the students would use in protesting the war in Vietnam. Veterans of the 1960s protests would turn into leaders of the women’s rights movement, and both conservatism and liberalism would change. RONALD REAGAN would emerge from political obscurity on the issue of opposition to all that the FSM represented.

JOHN H. BARNHILL

FRELIMO

FRELIMO, founded in Dar es Salaam, Tanzania, on June 25, 1962, is the result of a merger among three regionally based nationalist organizations—the Mozambican African National Union, the National Democratic Union of Mozambique, and the National African Union of Independent Mozambique. Eduardo Mondlane, its first president, settled its headquarters in 1963 outside of Mozambique in Dar es Salaam. His group was founded on the ideals of liberation from Portugal's colonial power. He was assassinated in 1969 by Portuguese forces.

By 1964 FRELIMO controlled most of the northern regions of Mozambique. The war waged against the Portuguese, concurrent with the anticolonial wars in Angola and Guinea-Bissau, drew heavy economic losses for Portugal. The resulting depression in Portugal contributed to the end of fascism in the home country and aided the victory of FRELIMO over the colonial forces. Portugal and FRELIMO negotiated Mozambique's independence, but FRELIMO's victory in 1975 also delivered a completely bankrupt nation.

FRELIMO established a one-party state based on Marxist principles, with Samora Machel as the first president of the newly independent nation. Its Marxist and communist roots provided Mozambique with diplomatic and some military support from Cuba and the Soviet Union. The new FRELIMO government went on to fight a civil war with RENAMO—a South African- and Rhodesian-sponsored political faction. This conflict did not see a resolution until the Rome General Peace Accords were signed in 1992.

Mozambique, as inherited by FRELIMO, was rife with poverty and illiteracy. The Portuguese colonists had prohibited elementary education to the indigenous

population, and upon fleeing the Portuguese dug up roadways, destroyed electrical and plumbing infrastructure, killed livestock, smashed equipment, and left the national treasury empty. In March 1976 FRELIMO closed its borders to Rhodesia.

The price of this solidarity was \$600 million in lost Rhodesian revenue and punitive sanctions imposed by apartheid South Africa on independent Mozambique. Rhodesia, backed by South Africa, waged war against Mozambique and FRELIMO with increasingly harsh raids into Mozambique's central provinces. Yet despite the continuation of war, FRELIMO, with overwhelming popular support, was able to cultivate outstanding economic growth in Mozambique by 1979. Mass literacy campaigns quickly nullified centuries of deprivation, and FRELIMO's healthcare policies were soon lauded worldwide as an ideal for developing nations.

With Machel's death in 1986, Joaquim Chissano began to lead both FRELIMO and Mozambique. Despite his education in the communist bloc countries, Chissano was not a hard-line Marxist and called for democratic, multiparty elections in 1994 that put an end to single-party rule. Chissano stepped down, and Armando Emilio Guebuza took over as leader of FRELIMO and Mozambique in 2005.

RIAN WALL

Gaitán, Jorge Eliécer

(1903–1948) *Colombian politician and reformer*

Remembered mainly for the tragic manner of his death and the convulsions of violence sparked by his assassination on April 9, 1948—an event precipitating an explosion of popular outrage in Bogotá (the Bogotazo), and soon after, La Violencia (The Violence), which wracked Colombia through the 1950s and after—Jorge Eliécer Gaitán was born to a poor family on January 23, 1903. Entering school for the first time at age 11, and graduating from law school in 1924, Gaitán became a professor at the National University of Colombia and in 1926 earned his doctorate in jurisprudence at the Royal University of Rome.

Politically active from 1919 in the Colombian Liberal Party, in 1933 he broke with the Liberals to found the Revolutionary Leftist National Union (Unión Nacional Izquierdista Revolucionaria, or UNIR). His rise to prominence rested on his keen political skills, gifted oratory, populist message, and capacity to make that message resonate among ordinary people—especially workers and the poor. His discourse was filled with references to “the people,” a source of moral good, in contradistinction to “the oligarchy,” a force of evil, corruption, and oppression. Denouncing poverty, inequality, exploitation, and oppression, he advocated economic justice and reconfiguring the nation’s political life.

In 1935 he rejoined the Liberal Party, and in 1936 became mayor of Bogotá, an office he filled for eight months. In 1940 he was named minister of education,

and from 1943 to 1944 served as labor minister. In 1945 he was nominated as the Liberal Party’s candidate in the May 1946 presidential elections, but was defeated at the polls due to a Liberal split, coming in third after Conservative Mariano Ospina Pérez, who triumphed, and the runner-up, Liberal Gabriel Turbay. Named Liberal Party chief in 1947, he was widely considered the favorite for the 1950 presidential elections. His assassin, Juan Roa Sierra, was killed by rioters moments after Gaitán’s death, leading to much speculation about who was behind the assassination. Gaitán’s daughter, Gloria Gaitán, 11 years old at the time of her father’s death, later implicated the U.S. Central Intelligence Agency and its Operation Pantomime. No definitive evidence has surfaced to prove the allegation, which is nonetheless consistent with the broader U.S. COLD WAR effort in the postwar years to stem populist leftist movements in Latin America and elsewhere. The assassination took place during the Ninth Pan-American Conference in Bogotá, and its Latin American Youth Conference, attended by Gaitán supporter FIDEL CASTRO of Cuba, among others.

MICHAEL J. SCHROEDER

Gandhi, Indira

(1917–1984) *Indian prime minister*

Indira Priyadarshini Gandhi (November 19, 1917–October 31, 1984) was the third (1966–77) and sixth (1980–84) prime minister of India and the first woman to hold that office. Her legacy is very complex.

Gandhi was the daughter of the first prime minister of India, JAWAHARLAL NEHRU (1889–1964). She was a member of the Indian National Congress, a nationalist organization established during British rule in 1885. In the 1930s Gandhi began the Vanara Sena, a movement that consisted of young people who participated in marches and protests to support the independence movement and also distributed nationalist propaganda and illegal materials.

While attending Oxford University, Gandhi met a young Parsee activist and Congress Party member, Feroze Gandhi (1912–60). The two eventually returned to India and were married in 1942. They had two sons, Rajiv (1944–91) and Sanjay (1946–80). Shortly after their marriage she and Feroze joined Mohandas Gandhi's (1869–1948) nonviolent action against the British, which landed them in jail. Shortly after independence Gandhi moved to Delhi to aid her father, and Feroze accepted a position in Allahabad as a writer for a Congress Party newspaper.

During India's first election, Gandhi worked as campaign manager for both her father and her husband. Nehru won the election and became the first prime minister of India; Feroze won a seat in Parliament. Friction between Nehru and Feroze Gandhi caused the couple's official separation. Feroze Gandhi suffered a heart attack in 1957 and after a brief reconciliation with Indira and their two sons, died in 1960.

Gandhi's political career took off. She was elected president of the Congress Party in 1960 and subsequently became Nehru's chief of staff and major political adviser. After her father's death in 1964, India's second prime minister, LAL BAHADUR SHASTRI, appointed her minister for information and broadcasting in his cabinet. In this position she became a very popular figure, as she traveled to many non-Hindi-speaking regions and calmed rising violence against the imposing of Hindi as India's national language. She also gained popularity when she refused to leave volatile border regions where she was vacationing when the Indo-Pakistani War of 1965 broke out. After Prime Minister Shastri died, Gandhi won the election and became the third prime minister. She immediately began successful programs to aid farmers in the production of staple foods.

Indira Gandhi was the third prime minister of India following independence and the first woman to hold the office.

In 1971 she met her first major crisis when East Pakistan declared independence. Events culminated in another Indo-Pakistani War in 1971. India's intervention led to the defeat of Pakistani forces and independence for Bangladesh. India detonated a nuclear device and joined the nuclear club in 1974 under her leadership.

The Congress Party, however, suffered schism. One reason was her shifting of power away from the individual states to the central government. She was accused of fraud and was found guilty. Her sentence was removal from office and prohibition from running in elections for six years, which she appealed, thus remaining in office until the appeal could be heard.

She then countered the advice of President Fakhruddin Ali Ahmed to declare a state of emergency that would give the prime minister and her government unchecked power. On June 26, 1975, the emergency proclamation was ratified by Parliament. Elections were postponed. The emergency government she led

had unlimited power of detention and censorship and persecuted many members of opposing parties. However, the economy flourished, and violence decreased. The emergency ended in 1977, possibly because she believed in her popularity. She called for elections, was beaten handily by the JANATA PARTY, and stepped down. Her measures in imposing and leading the government during the emergency split the Congress with an offshoot wing called Congress-I supporting her.

The Janata government immediately sought to prosecute the former prime minister for her illegal acts. It reviewed, and the president called for, new elections in 1980, in which the Congress-I won a landslide victory.

Gandhi's final term as prime minister had to deal with challenges from the Sikh Akal Takht extremist movement, which sought autonomy for Punjab, a state with a Sikh majority. Gandhi countered by ordering the Indian army to raid the Golden Temple in Amritsar, a site holy to Sikhism. The raid resulted in an uproar among the Sikh minority. Two of Gandhi's Sikh bodyguards assassinated her on October 31, 1984.

CALEB SIMMONS

Gandhi, Rajiv, and Sonia S.

(1944–1991 and 1946–) *Indian politicians*

Rajiv Ratna Gandhi was the seventh prime minister of India, following in the footsteps of both his grandfather, JAWAHARLAL NEHRU (1889–1964) and his mother, INDIRA GANDHI (1917–84).

After finishing high school in India, Rajiv, like most children of prominent Indian families, went to England for further education. He attended Imperial

College London and Cambridge University. At Cambridge Rajiv met Sonia Maino, an Italian student, and despite opposition from her family she moved to India and the two were married in 1968. Rajiv and Sonia had two children, Rahul and Priyanka. Rajiv initially showed no interest in politics. He worked as an airline pilot for Indian Airlines. However, after the death of his brother, Sanjay (1946–80), Rajiv was persuaded to enter politics by his mother. He was criticized for his lack of experience and viewed as merely a successor of a Nehru-Gandhi dynasty. In 1981, Rajiv won the Parliament seat vacated by his brother and became a top adviser to Indira. He became the leader of the Congress Party's youth movement, the Youth Congress, and won popularity as a young progressive leader.

After Indira Gandhi's assassination in 1984, President Zail Singh dissolved Parliament, and new elections were held. Rajiv was named president of the Congress Party, which won a landslide, and Rajiv assumed the role of prime minister of India. Immediately after taking office Rajiv began changing foreign policy to strengthen relations with the United States and distance India from the Soviet Union. He also began to reform governmental quotas, tariffs, taxes, and educational spending policies, extending the opportunity to receive an education to lower-class citizens.

Rajiv also promoted human rights and peace within India and abroad. His policies reconciled disaffected Sikhs in Punjab. He also sent an arbitration and peacekeeping corps to Sri Lanka to mediate between the government and rebels called the Liberation Tigers of Tamil Eelam (LTTE). After a treaty was signed, conflict broke out between the Indian forces and the rebels over disarmament. Many Indian soldiers were killed, forcing Rajiv to withdraw his forces.

Rajiv's image was further tarnished by a scandal involving foreign defense contracts that paid high-ranking Indian officials. He lost the following election. Rajiv, however, remained the president of the Congress Party and the leader of the opposition.

On May 21, 1991, he was assassinated by a suicide bomber from Sri Lanka opposed to his interventions in her country, while he was campaigning for reelection. His death once again united the Congress Party, which regained a majority in Parliament. Sonia, his widow, was urged to enter politics and assume the seat vacated by her husband. She refused and remained outside of the political arena until shortly before the 1998 elections. She then announced her candidacy for a seat in Parliament, and later she also won the presidency of

the Congress Party, now in opposition. The Bharatiya Janata Party (BJP) governed India to 2004. In the 2004 elections the Congress Party once again won a majority. She was unanimously elected as the new prime minister of India but declined due to the controversy surrounding her foreign birth. She in turn appointed former economist MANMOHAN SINGH, the former finance minister, as the first Sikh prime minister of India.

CALEB SIMMONS

Gang of Four and Jiang Qing

The epithet "Gang of Four" was Mao Zedong's (Mao Tse-tung) name for his wife, Jiang Qing, and her three lieutenants, Yao Wenyuan (Yao Wen-yuan), Zhang Chunqiao (Chang Ch'un-ch'iao), and Wang Hongwen (Wang Hung-wen) in 1976; the four rose to power during the GREAT PROLETARIAN CULTURAL REVOLUTION (1966–76). Jiang had hoped to succeed her husband as leader of the Chinese Communist Party when he died, with the assistance of her three confederates. Instead, they fell from power within a month of his death, were tried for high crimes in 1980, and were convicted.

Jiang Qing (1913–91) was an actress in Shanghai before she went to Yan'an (Yenan). She became Mao's secretary, then his wife, over the objection of his colleagues, who reputedly made him promise to keep her out of politics for at least 20 years. Largely sidelined from running the party since 1960 as a result of the failed GREAT LEAP FORWARD, Mao promoted her to great prominence in 1966 to help him recapture power. Together they unleashed the Cultural Revolution and empowered the youthful Red Guards to inflict a reign of terror that eliminated Mao's enemies. Jiang Qing took control of the media and banned all entertainment except for the eight "model operas" that she authorized.

However, before his death in September 1976, Mao appointed Hua Guofeng (Hua Kuo-feng), minister of public security and acting premier, to be his successor. Jiang then planned to mount a coup and assassinate the senior party leaders with the aid of her lieutenants and the militia, which was loyal to them. But they were preempted by Hua, who had the support of the senior party and military leaders. Hua invited the Gang of Four to attend an emergency meeting of the Politburo (the supreme council of the Communist Party) at its headquarters at midnight on October 5. Zhang, Wang, and Yao fell into the trap and were arrested as they arrived for the meeting; Jiang was captured while still in bed. None of their supporters rose to their aid. This event was called the Smashing of the Gang of Four.

Nevertheless it took four years before the Gang of Four was brought to trial for crimes they had committed against the state and people because of the difficulty of assessing Mao's role in what transpired during the Cultural Revolution. In November 1980 a special court charged them with framing and persecuting party and government leaders, torturing and killing more than 34,750 people, and plotting an armed uprising in Shanghai after Mao's death. Although the others admitted guilt, Jiang remained defiant, claiming that she had acted as Mao's dog, doing his bidding. The trial lasted two months and resulted in death sentences for Jiang and Zhang, with a two-year suspended execution. Wang was sentenced to life and Yao received 20 years. Some sources say that Jiang committed suicide in jail in 1991. Wang died in 1992, Zhang died in 2005, and Yao died in 2006.

JIU-HWA LO UPSHUR

Gaulle, Charles de

(1890–1970) *French president*

Charles de Gaulle represented French strength and resilience throughout his career, first as an officer during World War I and the interwar period, then as leader of the Free French government abroad during World War II, and finally as the president of the republic during an era characterized by prosperity and foreign policy

challenges. His determination to defend France's independence and freedom of action earned him both plaudits and criticism. His social and cultural conservatism frustrated French youths of the late 1960s, although his supporters appreciated his respect for tradition.

De Gaulle received a solid, humanist education at Catholic-run schools. His father, Henri, was a teacher of history and letters. Having decided not to continue in his father's footsteps, De Gaulle entered the military academy of Saint-Cyr in 1908. He joined the infantry because it would be exposed to direct fire in wartime. He served as a student officer under Colonel Philippe Pétain. Following graduation from Saint-Cyr in 1912, de Gaulle chose to join Pétain's 33rd Infantry Regiment from Arras. Lieutenant de Gaulle received several wounds during World War I, though he returned to combat as soon as he recovered from them. He became a colonel before he received a third, nearly fatal wound during the battle of Verdun in 1916. Left for dead, he became a prisoner of war under German supervision. He attempted escape five times without success.

After armistice he briefly returned to France before being posted to Poland. He helped to organize an army to fight against the Soviet Red Army. He spent the years after his 1921 marriage to Yvonne Vendroux in France. In 1931 he joined the general secretariat of National Defense in Paris, where he became involved in politics for the first time.

He also commenced writing and theorizing about warfare during the interwar period. He published several articles that attracted attention due to his unorthodox claims; de Gaulle recommended that commanders adapt to the particular features of their situation. In a series of lectures at the Ecole Supérieure de Guerre, under Pétain, he considered possible reforms of the military. De Gaulle advocated the creation of a corps that combined firepower and mobility in the interest of rapid, daring offensives.

After France declared war against Germany in September 1939, de Gaulle became commander of the 5th Army. After the French troops had been pushed back and many evacuated from Dunkirk, de Gaulle left for London with his aide-de-camp, Geoffroy de Courcel. He expected that the French government would continue the war from abroad. In response to Pétain's announcement of armistice with Germany, General de Gaulle made his first appeal for continued resistance. Relatively few in France heard the initial message; the next day, however, the press promulgated de Gaulle's call to arms. In succeeding days, de Gaulle repeated his rejection of the armistice and of Pétain's government.

De Gaulle organized the Free French Forces and, with the help of French jurist René Cassin, ensured that they would retain their national identity and enjoy a special status when fighting among British soldiers. The Free French soldiers would assist the Allies during the campaigns in North Africa, Italy, and France.

De Gaulle established a series of committees designed to give structure to the Free French. The French National Committee, created in September 1941, began as the focal point for the government in exile. Soon after de Gaulle settled in Algiers he organized the French Committee for National Liberation, on June 3, 1943. He helped to coordinate the resistance within France by deputizing Jean Moulin to lead the National Council for the Resistance.

De Gaulle disagreed with the new Constituent Assembly, chosen through elections held in October 1945, about the form of the new French state, so he resigned on January 20, 1946. On April 14, 1947, de Gaulle launched the Rassemblement du Peuple Français (RPF), which he intended as a "gathering" of loyal Frenchmen who opposed the weak executive and sweeping social legislation planned by the government of the Fourth Republic. In practice, the RPF served as a political party akin to the others. The RPF enjoyed local electoral success but had little effect on national politics given their small numbers in the National Assembly. The RPF staged a resurgence in 1958 when de Gaulle returned to the fore after years in the political "desert."

Between 1955 and 1958 de Gaulle relaxed at his estate at Colombey-les-Deux-Eglises. He remained attuned to current events, especially to the crisis of the Fourth Republic as it confronted the independence movement in Algeria that began with a November 1, 1954, insurrection. Some influential people called for de Gaulle to take control as a means of preventing civil war. On May 19, 1958, de Gaulle expressed his willingness to lead the republic, though he had no intention of staging a coup.

On May 29 then-president René Coty called upon de Gaulle to form a government. The National Assembly accepted his presidency on June 1; he received the power to rule by decree for a six-month period and to introduce constitutional reforms. The constitution approved on September 29, 1958, brought the Fifth Republic into existence and provided for a strong executive and an influential parliament. De Gaulle received a large plurality in presidential elections and assumed the powers given to the president under the new constitution on January 8, 1959.

As president of France, de Gaulle intended to resolve the Algerian crisis, to direct France's relations with her

European neighbors, and to ensure her independence relative to the United States. He traveled to Algeria on numerous occasions, finally concluding that France had to give the colony its independence. Negotiations proved difficult, given multiple factions in Algeria and the failed putsch staged by French generals in April 1961. After almost a year of talks the Évian Accords were signed on March 22, 1962, and then accepted by the French and the Algerians through referenda.

De Gaulle made important contributions to the formation of a united Europe, though he never accepted the need for France to surrender any sovereignty in the process of building the European Union. He adhered to the requirements instituted by the Treaty of Rome, signed just prior to his arrival in office, by initiating financial reforms and by reducing customs duties and tariffs imposed on trade with other European countries. He pursued cordial relations with Germany; German chancellor Konrad Adenauer and de Gaulle signed the Elysée Treaty on January 22, 1965.

De Gaulle also directed his attention to ensuring French national independence during the COLD WAR. Although always opposed to communism and a sup-

porter of capitalism, as made evident by his immediate encouragement of American president JOHN F. KENNEDY during the Berlin crisis (1961) and the CUBAN MISSILE CRISIS (1962), he nonetheless believed it important for France to retain a “free hand” in the world. In his quest to preserve France’s international stature de Gaulle continued the nuclear program started after World War II; France exploded its first atomic bomb in the Sahara in February 1960. De Gaulle gradually pulled France out of the NATO military command, though the country remained part of the alliance even after 1966.

De Gaulle further demonstrated his determination to maintain an autonomous foreign policy by his decision to recognize the PEOPLE’S REPUBLIC OF CHINA in 1964. He criticized the U.S. war in Vietnam during a 1966 speech in Cambodia.

He justified his encouragement of Québécois independence activists as being in line with his lifelong opposition to imperialism and his belief in the right to national self-determination. On the other hand, he developed amicable relations with the Soviet Union and its Eastern European satellite states.

Despite hesitations and almost no campaigning, de Gaulle won reelection to the presidency over François Mitterrand in 1965. Yet trouble was on the horizon. Although his tenure was generally a time of economic prosperity and modernization, many citizens chafed at the lack of social and cultural modernization. The events of May 1968, when students and labor union members engaged in protests and strikes, posed a problem for de Gaulle. Much to the public’s consternation he disappeared from France by helicopter on May 29. After returning from an evening in Baden Baden, where he consulted with a French general, he gave a radio address in which he stressed the need to remain intransigent about the necessity of public order.

The legislative campaigns that followed de Gaulle’s dissolution of the assembly did little to eliminate the social fissures that had been revealed and exacerbated by the events of May 1968. The president became more cut off from the citizenry, while the new assembly refused necessary reforms. Ignoring his advisers, de Gaulle put planned reforms of the Senate to referendum in 1969. French voters responded negatively. He immediately announced his resignation and returned to his estate.

In the year prior to his death he wrote his *Mémoires d’espoir* (only the first volume of which was completed) and received visitors at his estate. De Gaulle was buried in the local church according to his instructions.

gay liberation movements

The birthplace of the modern gay liberation movement in the United States is usually considered to be the Stonewall Inn, where riots took place in June 1969 in New York City. The Stonewall Riots and the social movement they engendered were influential in many countries. Stonewall did not occur in a vacuum, and there were social movements advocating gay liberation in the United States and elsewhere long before 1969.

Although gay and lesbian communities thrived in certain cities early in the 20th century in the United States, the fact that same-sex behavior was both illegal and widely considered immoral made it difficult for gay people to organize. The Society for Human Rights, founded by Henry Gerber in Chicago in 1924, was shut down by the police a few months into its existence. Several longer-lasting organizations were founded after World War II, including the Mattachine Society in Los Angeles in 1951 (for men); ONE, Inc., in Los Angeles in 1952 (for men and women); and The Daughters of Bilitis in 1955 in San Francisco (for women). These organizations were more conservative than the post-Stonewall gay liberation organizations, and often stressed how similar homosexuals were to heterosexuals and advocated “blending in” to the dominant culture.

The Stonewall Riots took place in Greenwich Village on the weekend of June 27–29, 1969. Not coincidentally, Judy Garland, an icon of the gay community, died on June 27, 1969. Although eyewitness accounts of the actual events of the Stonewall Riots differ, all agree that the precipitating event was a police raid in the early morning of June 28 on the Stonewall Inn, a bar on Christopher Street frequented by members of the gay community. Patrons of gay bars were used to police raids; normally the patrons would peacefully allow themselves to be arrested, but on June 28 they decided to fight back. The situation quickly turned into

a brawl outside the bar. Passersby joined in the action, people began throwing stones and bottles, and eventually the outnumbered police had to take refuge in the bar. A riot-control unit was summoned, and the crowd was dispersed, but on the evening of June 28 another large crowd gathered outside the Stonewall, and there were more confrontations with the police into the early morning of June 29. A change of spirit was noted in the gay community, as gay people realized that they did not need to accept second-class status and that they had sufficient strength in numbers to resist harassment from the police or anyone else.

The first modern gay liberation organization, the Gay Liberation Front (GLF), was formed a month after Stonewall. It was modeled more on other radical social organizations of the 1960s such as the Black Panthers. The GLF's agenda was radical: They believed a societal transformation was necessary to ensure the rights of gay and lesbian people, and they also opposed racism, sexism, and militarism. Many other gay liberation groups were formed in the following years. The success of these organizations in winning full civil rights for gay people was uneven and varied within the United States.

The word *homosexual* first appeared in a German pamphlet published in 1869, and Germany was the home of many pioneer theorists of gay liberation as well as the first gay liberation movement of the modern era. Leaders included Adolf Brand (1874–1995), publisher of the first homosexual literary journal, *Der Eigene*; Magnus Hirschfeld (1868–1935), the most prominent leader of the early German gay liberation movement; and Kurt Hiller (1885–1972). Although same-sex activities were technically illegal in both Germany and Austria, in fact the laws were frequently ignored, and a thriving homosexual subculture existed in major cities. This period of freedom came to a halt with the rise of National Socialism. More than 100,000 homosexuals were arrested during the Nazi years, many serving time in prison or concentration camps. Gay and lesbian activism revived in the 1970s in Germany and Austria, and in 2006 both countries recognized same-sex civil unions.

The Netherlands was also a leader in gay liberation: The country legalized same-sex behavior among adults in the 19th century. In the 1970s many gay and lesbian groups formed, and most forms of discrimination against gay people were abolished. In 2001 the Netherlands became the first country to recognize same-sex marriage, including the right to adopt children.

Many western European countries had gay liberation movements similar to those in the United

States in the 1960s and 1970s, as did countries with a predominantly European culture such as Canada, Australia, and New Zealand. In many ways, gay men and lesbians in these countries had more rights than they did in the United States. Most European countries have decriminalized homosexual behavior and have outlawed discrimination against homosexuals. Belgium and Spain became the second and third countries to recognize same-sex marriage, in 2003 and 2005, respectively, and many other countries recognize same-sex civil unions, including Portugal, France, Norway, Sweden, Iceland, Finland, Hungary, Croatia, and Denmark.

The idea of gay liberation and antigay prejudice became more prominent with the onset of AIDS. Originally, AIDS was referred to as gay-related immune deficiency (GRID) until it became evident that the disease was not limited to the homosexual community. For many, AIDS was seen as divine retribution against the homosexual lifestyle; others saw the disease as a justification for antigay discrimination.

It is difficult to generalize about gay liberation in non-Western countries. In some countries the history of rights for gay people is similar to that of western Europe. In general, greater prosperity may be associated with greater personal freedom, but this is not always the case. For instance, Singapore, which has one of the highest standards of living in the world, outlaws homosexual behavior between men. Japan, an equally industrialized country, has a history of tolerance of homosexual behavior; gay organizations within that country have been oriented more toward entertainment and culture than political reform. In Turkey, a country that in 2006 hoped to become a member of the European Union, same-sex behavior is not technically illegal but gay people are often harassed by the police. This combination makes the formation of a gay liberation movement difficult, but two Turkish gay liberation organizations were founded in the 1990s: Lambda Istanbul (for men and women) and Sappho (for women).

General Agreement on Tariffs and Trade

The General Agreement on Tariffs and Trade (GATT) was an international agreement, originally between 23 nation-states, resulting from meetings held in Geneva, Switzerland, in 1947. Its goal was to promote global trade through a reduction in tariff barriers and other obstacles to the free flow of goods and services. Born at the dawn of the COLD WAR (1947–91) and shaped most by the commercial and security concerns of the United States and western Europe, GATT was the principal international agreement governing commercial and tariff policies until its subsumption by the World Trade Organization (WTO) in 1995.

GATT was originally conceived as the International Trade Organization (ITO), which would complement the INTERNATIONAL MONETARY FUND (IMF) and WORLD BANK, both founded at the 1944 Bretton Woods Conference. Because the U.S. Senate refused to ratify the ITO charter, President Harry S. Truman issued an executive order making the United States a signatory to GATT. Although GATT had no enforcement mechanism to ensure compliance by signatory states, it survived principally through its members' voluntary adherence to its provisions, and fears of trade retaliation if they did not.

Neither an international body nor a formal treaty, GATT was renegotiated many times, in a series of "rounds" named after the cities or countries in which the meetings took place, or after a country's leader—for example, the Geneva Round (1955–56); the Kennedy Round, held in Geneva and named after U.S. President JOHN F. KENNEDY (1964–67); the Tokyo Round (1973–79); and the Uruguay Round (1986–93). Among the most important aspects of the resulting agreements concerned the principle of "most favored nation status," or nondiscrimination, in which no signatory could discriminate against another without discriminating against all. Typically, the supplier(s) of a particular commodity negotiated with the consumer(s) of that commodity regarding tariffs, regulatory quotas, and related issues. Once an agreement was reached, it became part of GATT, shared by all member nations. As a result, average world tariffs on industrial commodities declined to 13 percent by the mid-1960s.

Critics charged that GATT systematically favored the world's most advanced industrial countries and locked the producers of primary export products into a permanent subordinate status within the global economic system. Pointing to the historical example of the United States, in which tariffs were routinely used to promote domestic industries, opponents of GATT accused it of perpetuating global economic inequalities and undermining the principle of national sovereignty. GATT's defenders countered that tariffs and quotas constituted unfair trading practices, and that free trade agreements in general increased the world's wealth by increasing trade and encouraging individual countries to leverage their comparative economic advantages.

GATT's successor, the WTO, a permanent body of the UNITED NATIONS, which in 2007 had 145 members, does have enforcement mechanisms. Critics denounce the WTO as a tool of wealthy multinational corporations. Its defenders regard it as essential in ensuring the free flow of goods, services, and ideas. Debates regarding the efficacy and ethics of GATT and the WTO will likely remain heated.

MICHAEL J. SCHROEDER

Germany (post–World War II)

At the Yalta Conference in February 1945, the leaders Winston Churchill of Great Britain, Franklin Roosevelt of the United States, and Joseph Stalin of the Soviet Union agreed that Germany would be divided into four zones of occupation following its military defeat. The three countries and the French would each control one zone. In addition the capital city of Berlin, which lay within the Soviet zone, would also be divided into four sectors, one for each ally. The political leaders did not anticipate that these occupation zones would lead to a formal division of Germany into two separate nations. But in the context of growing tensions between Western and Eastern Allies, which laid the basis for the COLD WAR, Germany became the primary battleground in a new kind of war, one of ideology rather than direct con-

flict. The division, formally made in 1949, lasted until reunification on October 3, 1990. The three western zones fused together as the Federal Republic of Germany, a nation reconstituted as a parliamentary democracy; the Soviet zone became the German Democratic Republic, with a communist-dominated government.

Initially, the Allies endeavored to administer their zones by developing interzonal policies, through the auspices of the Allied Control Council. As part of their reparations the Soviets began to strip their zone of foodstuffs, livestock, transportation networks, and even entire factories. A major breaking point occurred in early 1948 as the three Western Allies—joined by Belgium, the Netherlands, and Luxembourg—called for the western zones of occupation to be eligible for MARSHALL PLAN aid from the United States. This paved the way for a proposal to fuse the three western zones together economically and to introduce a common currency, the deutschmark, in May 1948. The former Allies were now clearly on opposite sides of a new war, and former enemies, the Germans, had become the respective allies of the two hostile superpowers.

LEGACY OF THE THIRD REICH

Each of these new German nations had to grapple with the legacy of the Third Reich as they wrote new constitutions, revised legal codes, rebuilt their devastated economies, and struggled to find a new identity. A first step in the process was for occupation authorities to allow the revival or creation of political parties. Occupation authorities first encouraged politics to resume at the local and regional levels, while the question of national unity remained uncertain. By 1947 each of the regions, or *Länder*, in the western zones of occupation was led by a minister president, who was chosen by directly elected parliamentary assemblies. A similar process emerged in the Soviet zone, but with much less freedom of choice.

It was apparent that the four occupation zones would not be unified as one political entity. The Western powers began to take steps toward encouraging the fusing of their zones, politically as well as economically. They authorized the West Germans to hold a constitutional assembly, draft a constitution, and secure its ratification by the state parliaments. This assembly convened in September 1948 and worked for nine months, compromising over issues such as the balance between state and federal powers. West Germany ratified its constitution in May 1949, held its first nationwide elections in August 1949, and narrowly chose Konrad Adenauer as its first chancellor.

In the Soviet zone, the process of encouraging German-style socialism was abandoned in the Soviet drive to secure compliance from its satellite states by 1947. In its stead, political parties on the Left called a People's Congress into session at the end of 1947. By October 1948 this congress of about 2,000 delegates had written and approved a constitution for what would become East Germany. On October 7, 1949, the Congress voted unanimously to form the German Democratic Republic.

Economic rebuilding in West Germany received an enormous boost from the United States through Marshall Plan aid. This led to the German Economic Miracle; by the mid-1950s the West German economy was robust. The volume of foreign trade tripled between 1954 and 1964, while unemployment dropped from between 8 and 9 percent in 1952 to less than 1 percent by 1961. In 1957 Germany joined with five other western European nations (France, Belgium, the Netherlands, Luxembourg, and Italy) in the EUROPEAN ECONOMIC COMMUNITY (EEC). The EEC created a common market, which allowed for the free movement of goods and people, facilitated stronger economic growth in a collective sense, and eliminated taxes and tariffs among its members. Amid considerable internal controversy and over strong French protest, West Germany also rearmed itself and joined NATO in 1955.

East Germany's economy was closely tied to that of the Soviet Union, as it instituted centralized economic planning, reduced private ownership of property, and seized and either collectivized or redistributed farmlands. In 1950 it joined COMECON, and in 1955, the WARSAW PACT. Relations between the East Germans and the Soviets were strained during the first decade of West German existence, exacerbated by the Soviets' stripping of the eastern zone in the immediate aftermath of the war; the brutal treatment of German civilians, particularly women, at the hands of the Soviet military; and the economic hardships created by the transition to state-centralized economic planning. It also led to a serious drain of workers; by 1952 more than 700,000 East Germans had fled to the West.

Tensions between West and East Germany increased again in the late 1950s, sparked by the steady stream of young, productive, educated workers from East Germany to West Germany. In the summer of 1961, by which time more than 3 million East Germans had fled to the west since 1949, NIKITA KHRUSHCHEV, premier of the Soviet Union, spoke out against the infiltration of Western saboteurs and imperialists into the East and the necessity of "protecting" the people of East Germany from Western propaganda. This war of words culminated on August

13, 1961, when the citizens of the divided city of Berlin awoke to the sounds of construction. East German soldiers began to build a wall, one that eventually stretched for more than 100 miles, completely encircling the city of West Berlin, with minimal access through military checkpoints. The wall cut across streets and through subway and train stations, and separated families, religious congregations, and friends, dividing them for 28 years and 4 months, until it fell on November 9, 1989.

The 1960s in West Germany were marked by generational conflict and the resurgence of the political left. Student movements in the 1960s in West Germany grew in response to a host of causes: nuclear disarmament, outdated curriculum and inadequate resources at universities, and Bonn's support for U.S. involvement in Vietnam. In 1966 the West German economy, which had boomed for more than 15 years, suffered a depression, leading to increased unemployment and stagnation in industrial production. In addition, the political dominance of the Christian Democratic Union (CDU) and the Christian Social Union (CSU) came to end, as the parties were forced to build a coalition with the Social Democratic Party (SPD) to formulate policy in November 1966. This marked the first incursion of the SPD into the postwar West German cabinet. The power of the SPD continued to rise, culminating with its electoral victory in 1969, which gave it the majority of seats within the parliament and propelled Willy Brandt into the position of chancellor, which he held until May 1974.

Within East Germany, the economy stabilized. The government, under the control of Walter Ulbricht, ensured higher production of consumer goods, built limited flexibility into centralized economic planning, and achieved an average annual increase in industrial production of 7 percent by 1967. Greater choices among clothing, food, and leisure activities also grew. But by the late 1960s, the climate turned harsher; under a new constitution, basic freedoms, such as the rights to emigrate, were stripped away. Ulbricht resigned in 1971.

During the late 1960s the development of *Ostpolitik*, a thawing of relations between East and West, mediated the strict foreign policy of the Hallstein doctrine, established in 1955. This doctrine stated that the Federal Republic of Germany was the sole authoritative government of the German people and as such demanded that diplomatic recognition never be extended to East Germany. Among the practical implications of this policy was the fact that West Germany did not extend diplomatic relations to any of the Soviet satellite states in eastern Europe. Given the economic downturn and the need for expansion of export markets, the new coalition government first extended trade relations, and

then diplomatic relations, with states in eastern Europe. Negotiations culminated in December 1972, when the governments of West and East Germany signed the Basic Treaty, which guaranteed respect for the borders, officially recognized each other's independence, and promised to renounce the use of force.

REUNIFICATION

Since October 3, 1990, Germany has been a unified country again. Germany was first unified and subsequently became a nation-state in 1871. The date October 3, 1990, marks the day West Germany (Bundesrepublik Deutschland, or BRD) integrated East Germany (Deutsche Demokratische Republik, or DDR) under one political system: the democracy (Rechtsstaat) of the Federal Republic of Germany. Five new states were added to the existing 11, and the population grew by about 18 million, making Germany, with over 80 million inhabitants, the most populous country of the EUROPEAN UNION. In 2000 Berlin again became the capital of Germany.

By 1989 the two states had established themselves firmly as separate players on the world stage, with West Germany never having given up on the possibility of reunification. In January of that year, however, Erich Honecker—the GDR head of state and general secretary of the communist SED Party—confidently declared

that the Berlin Wall would still stand in 50 or 100 years. Nonetheless, reform movements had begun to ripple through a few communist countries, beginning with the SOLIDARITY MOVEMENT in POLAND in the 1980s, and in September 1989 Hungary opened its borders to Austria, allowing thousands of East Germans to escape via Hungary and Austria to West Germany.

The festivities for the 40th anniversary of East Germany, on October 7, 1989, were accompanied by demonstrations demanding democracy and freedom of expression. Moreover, the vast majority of East Germans could monitor the wealth of West Germany via radio and television, and the contrast was too stark to be tolerated any longer. Even the “big brother,” the Soviet Union, talked of reforms, and in 1989 its leader, MIKHAIL GORBACHEV, famously admonished the East German government to engage in change. By mid-October Honecker, who had been in power since 1971, was forced to resign and Egon Krenz took over. October continued to be marked by numerous sizable demonstrations. On November 7 the East German government resigned while the demonstrations continued. On the evening of November 9 the East German leadership suddenly opened the borders to West Germany and to West Berlin, permitting thousands of East Germans to visit the West for the first time in their lives.

The modern skyline of Frankfurt, Germany. After reunification, the German government strongly supported moves toward greater European integration and common action, but the German population was less certain.

The remaining months brought rapid change for East Germans and their country. On November 10 East German soldiers began to take down the wall, and Hans Modrow became the new head of state. In December the Brandenburg Gate opened up to two-way traffic. Early 1990 saw more demonstrations. In February Helmut Kohl, chancellor of West Germany, met with Gorbachev, who granted Germany the right to unify and to do so at its own pace. In East Germany free elections were held in March for the first time, and in April, Lothar de Maizière became head of state; his coalition decided to unify East and West Germany according to Article 23 of West Germany's constitution. Negotiations began between East Berlin and Bonn and between the Allied forces, who still had soldiers in both Germanies. In June another symbol of the divided states, the border crossing at Checkpoint Charlie, was demolished. In July the West German mark was designated as the common currency for both Germanies. In late August East German leaders decided that East Germany would join West Germany on October 3, 1990, and on September 12, 1990, the four Allied powers, the foreign minister of West Germany, Hans-Dietrich Genscher, and de Maizière signed the reunification contract in Moscow. Germany regained its sovereignty on October 1, and the four Allied powers suspended their rights. On October 3, 1990, Germany, after 45 years of separation, was once again one country. The date became an official holiday in Germany.

1991 TO THE PRESENT

Following political reunification with the former German Democratic Republic on October 3, 1990, the Federal Republic of Germany grappled with how to merge its economic structures, legal codes, educational institutions, and most important, population into one unified nation; arguably the larger process is not yet complete. In addition, the stunningly quick reunification, not even one year after the fall of the Berlin Wall, brought with it unintended and unforeseen consequences. Germany struggled with an economic downturn, the pressure of larger political integration with the European Union, spikes in both anti-Semitism and xenophobia, and the growth of splinter political parties on the far Right and far Left, while still facing the fundamental question of whether or not the Germans truly stand as one people.

One of the first steps after signing the official treaty to reunify the Federal Republic of Germany and the German Democratic Republic under article 23 of the Basic Law was to make provisions for including the former East German lands in the parliamentary system. In the first post-unification election, in Decem-

ber 1990, Helmut Kohl's Christian Democratic Union (CDU) won the most seats in four of the five former eastern states; the only state where the CDU polled the second-largest number of votes was in Brandenburg, where the Social Democratic Party (SPD) won more votes. The CDU continued to hold control of the government until the national elections of 1998 brought the SPD, under the leadership of Gerhard Schröder, into power. However, its inability to garner a clear majority of votes ushered in the so-called Red-Green coalition, building an alliance between the SPD and the Green Party. The CDU regained control over the government in the elections of May 2005, resulting in the election of Germany's first female chancellor, Angela Merkel, who is also the first chancellor of reunified Germany to have come from the former eastern lands.

In June 1991 the capital of Germany was transferred to Berlin. By 1994 a plan for moving the institutions of government had been drafted, and the process was complete by 1999. This vote had important implications, economic as well as symbolic. Undertaking this massive transfer of labor, offices, and institutions from Bonn to Berlin was extremely expensive; some estimates of costs ranged as high as \$70 billion. This was fiercely debated given the shaky economic ground of Germany in the early 1990s. However, moving the capital to its historic place had another set of meanings. Placing the seat of government within former eastern lands indicated the state's commitment to full integration of the two portions of Germany and shifted the orientation of the government further to the east.

As a unified state, Germany is the most populous in western and central Europe at more than 80 million inhabitants. It is the third-largest state in terms of land and also one of the most industrialized and prosperous nations in Europe. But despite these advantages in population and industrial capability, the economic recession of 1992 had devastating effects on the newly unified German nation. The integration process proved to be ruinous for the eastern region; as demand for their products dropped off precipitously, hundreds of factories closed and millions of workers lost their jobs. Despite some optimistic projections, deindustrialization was the immediate effect, not economic growth. Between 1990 and 1991 the Gross National Product (GNP) of the East declined by 33.4 percent. Industrial production fell by 67 percent in 1990–92, while the prices of goods increased by 12 percent. A total of 3 million jobs were lost, amounting to close to 50 percent of its total workforce. The agricultural sector was particularly hard hit, losing 800,000 jobs from a total

of about 1 million. Older workers were at a serious disadvantage, lacking the education and skills necessary in the transition economy. Of the workers aged 52 to 63 who were employed before the fall of the wall, 90 percent were unemployed following unification.

Economic development in the East would rebound slowly. Any waste was slashed at those entities that did manage to stay afloat. A complicating factor was that the “natural” market for their goods and services was floundering. Another difficulty encountered in the process was dealing with the claims (more than 1.5 million) of those who had lost property under the establishment of the communist state in 1949. When the Treuhand concluded its operations in 1994, it was running a deficit of 300 billion marks, a debt that had to be assumed by the unified German government.

When the economic recession of 1992 hit, its impact was even more severe in the East. By 1993 more than 10 percent of the German workforce was unemployed, the highest level in the West in more than three decades, and an unheard-of phenomenon in the east, where chronic unemployment underneath communism did not exist. Although unemployment reached its nadir in late 1994, it continued at rates higher than before unification. As of 1997 eastern unemployment stood at 18.3 percent, whereas in the West it was 9.7 percent. By the end of 2005 unemployment rates overall stood at just over 11 percent. The German government, under the leadership of Helmut Kohl, remedied this drain on economic resources in part through an increase in taxes. This tension between “Wessis” and “Ossis” persists, with many in the East feeling as if their entire former way of life has been discredited and devalued, and many in the West blaming the East for difficult economic times. A common expression is that a wall remains in the heads of many, still separating West and East.

One of the most visible, public reactions against the economic downturn and the dislocations caused by reunification was the backlash against foreigners. With the fall of communism across eastern Europe, the collapse of the Soviet Union, and the regional conflict in the Balkans, the number of people seeking asylum in Germany jumped dramatically in the 1990s, at precisely the same time that the country was struggling to provide jobs, housing, and basic welfare to its own citizens. One aspect of the fallout from this development was an increase in the membership of right-wing political parties that emphasize “Germany for the Germans.” Although the public reaction against “foreigners” was even more negative in the former eastern lands than in the West, across Germany violence reached a height in

1992, with more than 2,600 violent acts taken against immigrants, their neighborhoods, and their businesses. This led to stricter asylum legislation in 1993 as well as widespread public demonstrations against the acts and the attitudes that lay behind them. A more recent development was a strong immigration stream of Jews, particularly from the former Soviet Union, which led to some spikes in anti-Semitism.

One of the largest groups suffering dislocations following unification was working women. In West Germany, women were not encouraged to hold full-time jobs and develop careers; in East Germany women were an integral part of the workforce. In 1989 at the time of the fall of the wall, only 51 percent of women were working in West Germany while 91 percent were employed in the East. After unification, as unemployment skyrocketed in the East, women were disproportionately represented among those who lost their jobs. Marriage and birth rates in the former eastern lands dropped drastically in the years immediately following unification, and divorce rates surged.

Germany’s position within Europe also shifted after unification, with important debates about the country’s role within larger institutions—such as NATO and the emerging European Union—garnering public attention both in Germany and in the larger international arena. Although the German government strongly supported moves toward greater integration and common action, the German population was less certain. For example, when the European Union was trying to launch its common currency, the euro, in 1998, six out of 10 Germans did not want to give up the deutschmark in exchange for the euro. In 2005 an attempt to adopt a political constitution for the European Union was defeated in both Germany and France. Although economic unification clearly had its benefits for the German economy, its people remained wary. However, the German public still strongly supported the military alliance, NATO, as a means of providing for security and coordinated international efforts to combat crime and terrorism.

ANKE FINGER AND LAURA J. HILTON

Ghana

Ghana celebrated its independence from Britain on March 7, 1957. Ghana, formerly the Gold Coast, merged with a part of British Togoland, a former part of German West Africa ceded to Britain after World War I. Ghana was the first nation in Africa south of the Sahara to overthrow a colonial power; its independence was a momentous event for the people in the new nation and for people in the African diaspora everywhere.

Ghana was deliberately named to highlight its historical political situation as the sixth African nation to receive independence from a major colonial power. Ghana's leaders sought to link their nation to one of the great West African kingdoms of the past. This name represented both a political victory and a symbolic hope for black people everywhere. Held up as a symbol of black intelligence, self-determination, and power, Ghana's independence led to many idealistic expectations.

Its new leader, KWAME NKRUMAH, had spent time in prison in the struggle for independence, and he led a nation with many contradictory expectations. Fueled by the positive outcome of his many years fighting for independence and imbued with a Pan-Africanist ideology, a nationalist outlook, and mounting racial pride, Nkrumah liked neither the capitalism of the West nor the communism of the East. He articulated a nationalist ideology that celebrated and encouraged traditional African culture and dress. In addition, he embraced the Pan-Africanism he had been exposed to as a student in the United States and London. He supported the development of racial identity and linked himself to the ideals of Marcus Garvey and W. E. B. Du Bois.

What became known as "Nkrumahism" started out as a hybrid economic and social philosophy that com-

bined the best practices from both systems. Nkrumah's "African Socialism" became the model for organizing society in Tanzania under JULIUS NYERERE and in Kenya under JOMO KENYATTA. Nkrumah's articulations of self-determination also influenced the doctrine of Pan-Arabism championed by Egyptian president GAMAL ABDEL NASSER. Nkrumah demanded free education on all levels and the development of rural health care as well as the construction of bridges, roads, railroads, and waterways to build up Ghana's economy. Ghana's independence had major consequences for global politics and the lessening of European hegemony. In the decades following Ghana's independence, many linked the dissolution of the British Empire, the end of Portuguese colonial power in Africa, and the destruction of the apartheid system in South Africa to Ghanaian independence.

Nkrumah instituted many customary practices to help maintain order and restore stability. While utilizing the British model of government at the superstructure level, Nkrumah sought to empower local chiefs and elders by restoring respect for and interest in traditional structures of society. Elders, healers, and local officials were all enlisted in his effort to make Ghana a stable nation. Although many blame Nkrumah for destroying the country with his socialist politics and making it ripe for coups, his vision led to Ghana's independence and also defined the ethos of the new nation.

Many of Nkrumah's policies failed. There was a great deal of dissatisfaction with his government in the years leading to his ouster in 1966. Sixteen years of instability followed his exile.

In 1981 Flight Lieutenant Jerry Rawlings seized power in a counter coup. He suspended the constitution and banned political parties. In 1992 a new constitution was approved, free elections were held, and Rawlings was elected to two four-year terms. Under the terms of the 1992 constitution, executive power was vested in the president, who was named head of state and commander in chief of the armed forces. Rawlings was reelected president in 1996. Legislative power was vested in a single parliamentary chamber consisting of between 160 and 200 members chosen through direct adult suffrage for renewable four-year terms.

Given that Rawlings could not be elected to a third term, John Kufuor, a rather unknown politician, was elected president in 2000. An effective leader, he was reelected in 2004. The politics of modern Ghana followed two trajectories: a doctrine of laissez-faire capitalism and the socialist-inspired revolutionary practices of Nkrumah. Kufuor expanded and refined a third political tradition, introduced by Rawlings: He

continued policies of universal rural development while simultaneously opening up the private sector to external development and foreign investment.

Much of the current economic and social optimism in Ghana is tied to an enlightened ruling class with close ties to the United States and Great Britain, and a successful diaspora of almost 2 million people who send almost half a billion dollars to Ghana every year. With a multi-language, multiethnic, and diverse population, Ghana is a pluralistic society. Ghana has also been successful in attracting foreign investments from India, China, Lebanon, and other nations.

Ghana also has a highly educated population of about 20 million people. It operates a 12-year preuniversity educational system and has five public universities, private universities, eight polytechnics, and 22 technical institutions as well as many educational exchange programs around the globe. Ghana has substantial economic potential. As a stable nation with a credible government, a working infrastructure, and a highly trained population, Ghana's future seems bright. Although cacao is Ghana's best-known crop, other major exports include bauxite, diamonds, gold, foodstuffs, handicrafts, and timber. As a popular tourist destination, Ghana is well known internationally.

ALPHINE W. JEFFERSON

globalization

First investigated by Canadian scholar Marshall McLuhan in 1964 and then further explored since the 1970s, globalization is the process through which world populations become increasingly interconnected and interdependent, both culturally and economically. The process is often perceived by its critics as creating a sense of standardization throughout the globe and reinforcing economic inequalities between developed and underdeveloped countries. Advanced capitalism, enhanced by technological developments such as the Internet and electronic business transactions, is seen as stretching

social, political, and economic activities across the borders of communities, nations, and continents. Global connections and the circulation of goods, ideas, capital, and people have deepened the impact of distant events on everyday life. Thus globalization entails two related phenomena: the development of a global economy and the rise of a global culture. The major transnational financial, political, and commercial institutions that are instrumental to globalization are the G8, the INTERNATIONAL MONETARY FUND, the World Economic Forum, the WORLD BANK, and the World Trade Organization.

Samuel Huntington coined the expression *Davos Culture* in his book *The Clash of Civilizations* (1996) to define such universal civilization. The phrase *Davos Culture* takes its name from Davos, the Swiss town that had hosted a preponderance of World Economic Forum meetings since 1971. The members of Davos Culture share the same visions of democracy and individualism, obviously favoring capitalism and the free market. The appeal of Davos Culture reaches across the political spectrum, often leading liberals and conservatives to share the same table. It has been noted that the 2005 meeting at Davos included not only a large contingent of the GEORGE W. BUSH administration and the Republican Party but also a considerable representation of the Democratic Party, led by former president BILL CLINTON and former vice president Al Gore.

The rise of a new global economy involves a discrepancy between a huge decentralization of production processes, often to developing countries where manpower is cheaper and unions are weaker, and a simultaneous centralization of command and control processes in rich economies. Corporations, whose level of accountability to the general public has increasingly been questioned, are perceived to have replaced governments in economic and social control. Corporations involved in this massive exposure of exploitative labor practices have included Gap, Wal-Mart, Guess, Nike, Mattel, and Disney. Antiglobal organizations are also investigating the links between transnational corporations and totalitarian regimes in developing countries.

Parallel to economic globalization is the phenomenon of cultural globalization. Its supporters claim that the rise of a global culture entails multiculturalism and a hybridization of national cultures. The creation of a global culture will also build a more peaceful world, based on shared cultural values. Critics of cultural globalization point out its darker side, claiming that cultural globalism destroys all local traditions and regional distinctions, creating a homogenized world culture. Local cultures are replaced by a uniform and single culture,

dictated by the same powerful corporations that control the global economy. In addition, globalization through economic commoditization—the spreading of Western values and lifestyles through the selling of Western goods throughout the world—is not such a simple and straightforward process.

In regard to economic globalization, cultural globalization has given rise to movements for resistance. Anti-global theorists stress how corporations have hijacked culture and education through their aggressive marketing practices. The antiglobalization movement was thrown from the fringes to the center of political debates thanks to the protests in Seattle against the World Trade Organization in November 1999. Since then, major financial and commercial summits of the G8, the International Monetary Fund, the World Economic Forum, and the World Bank were disrupted by mass demonstrations in the streets of Washington, D.C.; Genoa; and Prague. After January 2001 annual counter-meetings were held at the World Social Forum in Pôrto Alegre, Brazil, under the slogan “Another World Is Possible.” Alternative media and communication networks such as Indymedia have been established to turn the Internet, one of the tools that makes globalization feasible, into a powerful anti-global weapon. In reaction to power centralization typical of the corporate world, antiglobal activists argue for fragmentation and radical power dispersal.

LUCA PRONO

Gorbachev, Mikhail

(1931–) *Soviet president*

Mikhail Sergeevich Gorbachev was general secretary of the Communist Party, then president of the Soviet Union from 1985 to 1991. He was a reformer who attempted to fix the economic problems of the system and wanted democracy to grow within the country. He presided over the dismemberment and collapse of his nation.

Gorbachev and Ronald Reagan sign the INF Treaty limiting the use and production of ground-based ballistic missiles.

Gorbachev was born on March 2, 1931, in a small village in the Stavropol region in south Russia. Both his grandfathers were arrested as kulaks during a collectivization drive of 1928–33. His father joined the Communist Party and was a veteran of the Great Patriotic War (1941–45). Gorbachev himself was an eager student, joined the Communist Youth League, and gained acceptance to the law faculty at Moscow State University in 1950. He completed his studies in 1955. During his time in Moscow he met his future wife, Raisa Maksimovna Titorenko, who would play a crucial supporting role in his reforms throughout their lives. While in Moscow, Gorbachev gained a reputation as something of a liberal, publicly approving of the reformist efforts of the current leader, NIKITA KHRUSHCHEV. He also became close friends with a Czech student, Zdenek Mlynar, who would be active in Czechoslovak politics during the reformist PRAGUE SPRING of 1968.

After graduation, Gorbachev returned to Stavropol, where he practiced law for a few years. He was elected first secretary of the Stavropol city Komsomol committee in 1956. From there he began a quick ascent. In 1962 he moved to the Communist Party administration. He became first secretary of the Stavropol city party organization in 1966. In 1970 he rose to first secretary of the Stavropol region. After eight years he moved to Moscow, where he became the Central Committee secretary for agriculture. Within two years he was a full member of the Politburo, the ruling council of the Soviet state. Finally, in March 1985, he was chosen as general secretary of the Communist Party.

Even before Gorbachev became general secretary, he was thinking about ways to reform the system. His ini-

tatives followed a path laid out by the previous general secretary, Yuri Andropov. These were fairly conservative, calling for higher levels of productivity of labor. In 1986 Gorbachev announced a set of more radical proposals that he called *perestroika*, or restructuring. Perestroika called for decentralization and self-accounting for industries. He continued to innovate, even allowing cooperatives in order to gain control of illegal economic activities. None of his reforms challenged the basic nature of the Soviet Union's planned economic system.

DEMOCRATIZATION

Political reforms became an integral part of perestroika. Because Gorbachev's economic reforms were criticized and often ignored by entrenched party officials, he sought to remove them and bring new initiative through democratization. Multicandidate elections within the Communist Party were announced in 1987. Those elections were held in 1988, with thousands of contests throughout the country. When the Congress of People's Deputies met afterward, it represented a newly reformed Communist Party that pushed Gorbachev to implement additional changes.

Perhaps the most traumatic moment of Gorbachev's reign occurred when the Chernobyl nuclear station exploded in April 1986. A mix of unsafe construction, insufficient maintenance, and human error led to the worst radiation leak in history. In its wake, Gorbachev launched the policy of *glasnost*, or openness, in earnest. At first it involved a few magazines and journals, such as *Ogonek* and *Moscow News*, but it quickly spread to almost all other media. These outlets began to publish stories that openly revealed the problems that faced the Soviet Union—including poverty, corruption, and divorce. In addition, there was a broad reexamination of Soviet history, leading to harsh criticism of Joseph Stalin and even Vladimir Lenin. Literary works and authors that had been banned reappeared, such as Mikhail Bulgakov's *Master and Margarita* and Boris Pasternak's *Doctor Zhivago*. Glasnost brought an ambivalent response from the Soviet public. Many were happy to see the truth of the past revealed but many, perhaps a majority, felt that these revelations unnecessarily blackened the reputation of the Soviet Union.

The pent-up hostility of the nations inside the Soviet Union was also released by Gorbachev's economic, political, and cultural reforms. Beginning in Uzbekistan in 1986 national groups began to resist decisions made in Moscow. Arguments between Armenians and Azerbaijanis over a small piece of territory led to violent clashes in 1988 and demonstrated the increasing weak-

ness of central authority. Estonia, Latvia, and Lithuania announced their sovereignty starting in 1988. A movement even began among the Russians, led by BORIS YELTSIN, to limit the power of the Soviet government over their territory. The increasing pressure from these national groups weakened Gorbachev's ability to hold the Soviet Union together.

MEETING WITH REAGAN

Foreign affairs were the area where Gorbachev had the most success. Gorbachev pursued a policy of reducing international tension from the beginning of his rule. After 1985 Gorbachev quickly moved toward negotiations that would eventually lead to the end of the COLD WAR. He met with U.S. president RONALD REAGAN repeatedly throughout the 1980s. These meetings culminated in the first arms control treaty in a decade, the Intermediate Nuclear Forces (INF) Treaty, which removed both U.S. and Soviet nuclear-tipped missiles from Europe. The good relations continued with President GEORGE H. W. BUSH, although Gorbachev was never able to gain the large restructuring loans that he had hoped for from the Western powers.

The Soviet allies in eastern Europe benefited from Gorbachev's approach to foreign policy. The centripetal forces unleashed by perestroika did not stop at the Soviet border. Gorbachev, however, felt that it was unwise to attempt to keep eastern Europe forcibly under Soviet control. Conservative regimes in the Soviet bloc were unable to respond to perestroika and glasnost. When they appealed to Gorbachev for military help, he refused. Once his policy of nonintervention became clear, these regimes unraveled very quickly. All of the communist states collapsed in 1989. Gorbachev received the Nobel Peace Prize in 1990 for his leading role in the reduction of international tensions and the generally peaceful transition to democracy.

With the end of Soviet dominance over eastern Europe, Gorbachev faced increasing internal resistance to his reforms. He tried to strengthen his political position by convincing the Congress of People's Deputies to create a new position—president of the Soviet Union—and elect him to it in March 1990. He also proposed the most radical transformation of the Soviet economy so far. Called "the 500 Days," it was supposed to move the planned economy quickly to a market-based one. He abandoned it before it truly started. Within a few months Gorbachev moved in the opposite direction. He brought in new advisers who held a conservative vision for the future of the Soviet Union. This conservative swing reached its peak in January 1991, when Soviet

troops moved into Lithuania in an attempt to prevent its declaration of independence.

In spring 1991 Gorbachev proposed a new arrangement that would greatly decentralize power but keep the Soviet Union together. He called a nationwide referendum to vote on this new structure. It was approved by almost 75 percent of those who voted in March. However, Gorbachev's archrival Boris Yeltsin used the referendum to create a position of president of the Russian Federation, from which he was able to undermine Gorbachev and his plans to hold the Soviet Union together. The new, weaker union was scheduled to go into effect on August 20, 1991.

The weakness in this agreement led a group of conservatives to attempt to restore the centralized power of the Soviet state. A coup attempt was launched on August 19 by men that Gorbachev had appointed earlier. Gorbachev was placed under house arrest and the plotters declared martial law. The coup attempt was quickly defeated. Resistance from Yeltsin, now president of the Russian Federation, and thousands of Muscovites who gathered outside the Russian parliament convinced the army to remain uninvolved in the political struggle. The coup plotters gave in a few days later. When Gorbachev returned from house arrest, his power was fatally weakened.

Yeltsin took the initiative after the failed coup. Yeltsin banned the Communist Party in Russia and undermined Gorbachev's last attempts to hold the state together. After months of futile negotiation, Gorbachev resigned as president on December 25, and the Soviet Union was officially disbanded on December 31, 1991.

Gorbachev remains active in Russian political life, though he is intensely disliked by most Russians. He ran for president of Russia in 1996 but received less than 1 percent of the vote. In 2006 he was the head of the Gorbachev Foundation in Moscow and traveled the world giving speeches. He is also the author of numerous books and a commentator on Russian and world politics.

KARL LOEWENSTEIN

Graham, Billy (William Franklin Graham)

(1918–) *evangelical leader*

William Franklin (Billy) Graham is one of the best-known and respected religious leaders of the 20th century. His influence has been immense in his roles as evangelist, as a shaper of modern evangelicalism, and as a link between evangelicalism and prominent political leaders, particularly Republican presidents.

Graham was raised and educated in a Southern, fundamentalist milieu, but by the 1940s had graduated from Wheaton College in Illinois and had become a world-roaming evangelist with Youth for Christ. A 1949 Los Angeles crusade brought him to the attention of William Randolph Hearst, who helped boost his career among a national audience. This crusade set the pattern for Graham's evangelistic appeal: In a context of COLD WAR anxieties, Graham urged personal and national repentance to avoid divine judgment. Throughout his career Graham's preaching would remain simple and direct, stressing that the answers to all essential questions are to be found in God through Jesus Christ.

In other respects, however, Graham departed significantly from the conservatism of many of his constituents. He refused to allow his audiences to be segregated by race, as was common in the South when he began his ministry. Beginning with his 1957 crusade in New York City, he agreed to cooperate with mainline churches. Fundamentalists who insisted that no fellowship could be maintained with theological liberals considered this a fatal compromise. Far from accommodating any kind of liberalism, however, both of these positions followed from Graham's principled biblicism. Indeed, along with several other figures, Graham was critical in shaping a post-fundamentalist stance for conservative Protestantism in the 1950s.

Through the National Association of Evangelicals and *Christianity Today*, Graham and others helped evangelicals shed what many saw as the angry self-righteousness of fundamentalism, as well as emerge from the cultural ghetto that kept them separated from "the world" and at the same time prevented their engaging it.

Graham's belief that modern men and women were desperate for the Bible's message led him to work with non-evangelicals who supported his crusades. It also made him welcome the attention of U.S. presidents who were eager to profit from associating with him. These were mostly symbiotic relationships: Politicians sought the approval of Graham's constituency, and evangelicals in turn moved closer to the cultural mainstream. Graham would later express some regret that he had allowed himself to be used, especially by RICHARD NIXON, who aggressively cultivated religious conservatives. At the time it had seemed an appropriate way to bring biblical truths to the ears of the powerful. In the 1980s, Graham would again shock his more conservative supporters by questioning the morality of the nuclear arms buildup.

JOHN HAAS

Great Leap Forward in China (1958–1961)

THE PEOPLE'S REPUBLIC OF CHINA (PRC) followed the Soviet Union's model of planned economy on the socialist model. The success of the First Five-Year Plan (1953–57), undertaken with Soviet financial and technical aid, prompted the government to announce a more ambitious Second Five-Year Plan for 1958–62 that called for a 75 percent increase in industrial and agricultural production. This was not enough for party leader Mao Zedong (Mao Tse-tung), who proclaimed a "Great Leap Forward" in February 1958 with the goal of passing Great Britain in industrial production by 1972. It mandated an average 18 percent increase in steel, electricity, and coal production for that year. This was only the beginning of a series of escalating and totally unattainable goals for production.

Mao called on the Chinese people to "walk on two legs," that is, to use modern and sophisticated plants built with Soviet aid to make steel, along with primitive "backyard" furnaces manned by millions of untrained workers. By late 1958, 600,000 backyard furnaces had been built throughout China that smelted pots, pans, and farm implements, with wood from forests as fuel, and that produced millions of tons of unusable metal in order

to fulfill their quotas and avoid punishment. To mobilize all the available labor force and to complete the socialist transformation of the people, more than 500 million peasants, or more than 98 percent of the rural population, were organized into 26,000 People's Communes that controlled all aspects of their lives.

In addition, some city people were organized military fashion into urban communes. Afraid of failure to realize Mao's fantastic expectations, local Communist bosses competed with one another to announce overachievement of quotas and goals, which allowed the government to announce at the end of 1958 that industrial production for that year had exceeded that of 1957 by 65 percent.

In launching the Great Leap Forward Mao was also motivated by his disapproval of Soviet leader NIKITA KHRUSHCHEV, whom Mao castigated as "revisionist" for giving incentives to improve productivity in Soviet agriculture. He boasted that he had found a shortcut, through the People's Communes, to reach the ultimate Marxist utopia ahead of the Soviet Union and thus the right to lead the world communist movement.

The Soviet Union, however, firmly rejected Mao's claims when Khrushchev declared that "society cannot leap from capitalism to communism." The debate over the validity of the Great Leap Forward widened the split in the international communist movement and contributed to worsening relations between China and the Soviet Union.

In reality the Great Leap Forward brought unprecedented disaster to the Chinese people. By 1959 it was no longer possible for the government to deny that the economy had been crippled. The people were exhausted and demoralized, and famine stalked the land. Economists estimated that the economy had declined by \$66 billion, and demographers concluded that more than 30 million people had died of starvation in the Mao-made famine, the worst in world history.

At the Lushan Conference of communist leaders Mao had to admit his folly, stepped down from chairmanship of the PRC, and let others who had not lost touch with reality—called pragmatists—run the country to bring it back from ruin.

JIU-HWA LO UPSHUR

Great Proletarian Cultural Revolution in China (1966–1976)

The Great Proletarian Cultural Revolution (shortened to Cultural Revolution) that disrupted and ruined life, destroyed innumerable cultural artifacts, and caused the deaths of countless people between 1966 and 1976 was a power struggle within the leadership of the Chinese Communist Party (CCP).

The background for this event was the catastrophic economic losses suffered in the GREAT LEAP FORWARD that the chairman of the CCP and the People's Republic of China (PRC), Mao Zedong (Mao Tse-tung), instigated between 1958 and 1960. It led to a successful challenge to Mao's power by pragmatic senior leaders in the party and compelled Mao to give up his state chairmanship to his second in command, Liu Shaoqi (Liu Shao-ch'i), and actual running of the CCP to Party Secretary DENG XIAOPING (Teng Hsiao-p'ing). These men—called pragmatists—dismantled the communes, scrapped the backyard furnaces, and restored private plots to peasants. Their measures led to a gradual economic recovery but left Mao seething impotently.

To recover power, Mao turned to his wife, Jiang Qing, who had been out of the limelight and held little power until now. She went to Shanghai and formed an alliance with local Communist leaders Zhang Chunqiao (Chang Chun-ch'iao), Yao Wenyuan (Yao Wenyuan), and a young factory activist named Wang Hongwen (Wang Hung-wen)—they would later be labeled the GANG OF FOUR. Mao next called on young people, mostly students in secondary schools and universities, to form Red Guard units. Using Mao's sayings, collected in a little Red Book, as their "Bible," they became his vanguard in denouncing and harassing party bureaucrats, intellectuals, and anyone in power who might oppose Mao. They also destroyed anything they considered "old" and therefore bad, including countless cultural treasures. Jiang took charge of the media. She banned most forms of cultural expression, including Western classical music (Beethoven was denounced as a counterrevolutionary), Chinese operas, movies, and so on, and replaced them with so-called revolutionary operas. Schools were closed, and intellectuals were sent to forced labor camps and for "reeducation."

The Red Guards attacked Liu Shaoqi as a revisionist; he was dismissed and humiliated, and later died in prison. Deng Xiaoping was also purged, as were countless others. Among top leaders Premier ZHOU ENLAI (Chou En-lai) was only one of a few who retained his post. At the height of their power between August and November 1966, Mao eight times reviewed the Red Guards at Tiananmen Square in Beijing (Peking) and lauded them for their revolutionary zeal. While most senior CCP leaders were ousted and imprisoned, the star of Minister of Defense LIN BIAO (Lin Piao) rose. When the Red Guards became totally uncontrollable and began battling among themselves Mao called on Lin to use the army to put them down. Most Red Guards were then "sent down" to the countryside for "reeducation." Lin was elevated to vice chairman of the Central Committee of the CCP in 1968 and was designated Mao's "closest comrade-in-arms and successor" in the revised CCP constitution.

A power struggle next developed between Mao and Lin, each plotting to eliminate the other. In September 1971 Lin, his powerful wife Ye Qun (Yeh Chun), and their son, an air force officer, plotted to assassinate Mao and seize power in a coup d'état. Upon the plan's discovery they fled toward the Soviet Union in an air force jet piloted by the younger Lin, which crashed in Outer Mongolia, killing them all. Several of Lin's confederates were arrested but the news of the attempted coup and Lin's death was kept a secret until 1973. With Lin dead Jiang Qing and her allies became even more powerful, and Jiang pressured the ailing Mao to confirm her as his successor. Zhou Enlai and other senior party leaders opposed her and rehabilitated the disgraced Deng Xiaoping, whom Zhou groomed as successor.

When Zhou died in January 1976, Deng's position became insecure and he disappeared from public view, seeking refuge in southern China, where a local military commander protected him. Finally, just before he died Mao chose a dark horse to succeed him with the words "with you in charge I am at ease" scribbled on a sheet of paper. He was former minister of public security, Hua Guofeng (Hua Kuo-feng). Mao died on September 9, 1976. A power struggle ensued among Jiang and her allies, and Hua Guofeng and the resurfaced Deng Xiaoping and other CCP elders. On October 12 the Gang of Four were arrested in a dramatic showdown. These events ended the Maoist era, the succession struggle, and a decade of unprecedented turmoil called the Cultural Revolution.

JIU-HWA LO UPSHUR

Great Society (U.S.)

President LYNDON B. JOHNSON's Great Society was an aggressive agenda of domestic legislative reforms. Introduced at a speech given at the University of Michigan in May 1964, Johnson's list of programs seemed limitless, and would lead, he hoped, to better schools, better health, better cities, safer highways, a more beautiful nation, support for the arts, and more equality.

By the time Johnson became president, he had already had three decades of political experience. During his tenure in Congress, he had experienced New Deal legislation and the mobilization of resources against enemies in World War II. Once he became president, Johnson decided to use all of the powers given to him to extend and even surpass the New Deal's progressive record. With his landslide victory in the 1964 election, he had a powerful mandate and a large Democratic majority in Congress. These factors gave Johnson what he needed to carry out his plan. He was particularly interested in equality of opportunity, improved urban conditions, an improved educational system, ending poverty, and implementing racial justice.

The Housing and Urban Development Act was put into effect in 1965. It offered reduced interest rates to builders of housing for the poor and elderly. In addition, it allocated funds for urban beautification programs, health programs, recreation centers, and improvements to inner-city housing and provided a rent-supplement program for the poor. To streamline and control programs, the law made it mandatory that all applications for federal aid to cities be approved by city or regional planning agencies. To administer the new programs, Congress created a new cabinet secretary and agency, the Department of Housing and Urban Development. In 1964 Congress granted nearly \$400 million for mass-transit planning. In 1966 Congress allocated even more

funds for that purpose, and created a new agency, the Department of Transportation, to administer them.

The Model Cities Act of 1966 granted \$1.2 billion for slum clearance and removal. The goal of the act was to revitalize inner-city life in many respects, including housing, schools, job training, recreation, and health care. The law gave funds to new model communities.

Another of Johnson's goals was to improve the quality of education. Johnson, a former teacher, envisioned the Great Society as one in which all children could enrich their minds. To achieve this, the Elementary and Secondary Education Act was passed in 1965 and allocated over \$1 billion for programs to aid children who were seen as educationally deprived. The bulk of that money went to schools in poor districts. However, the bill also targeted bilingual education for Hispanic children and the education of disabled children.

In addition to the Elementary and Secondary Education Act, the Higher Education Act was also passed in 1965. This act created a federal scholarship and loan program for college students and provided library grants to colleges and universities to increase their resources. These two acts had an enormous impact on the state of education in the United States, but also increased government expenditures substantially. In 1965 alone, government spending on education was over \$4 billion.

The Great Society drastically improved the state of healthcare. Johnson's Medicare bill was enacted by Congress in 1965 and provided health insurance for all Americans over the age of 65. Medicare was initially provided with a fund of \$6.5 billion, with long-range funding to come from increased social security payroll deductions. To increase the number of health professionals, Congress passed funding for nursing and medical schools and provided scholarships for students to enter those fields. Medicare's companion program, Medicaid, administered through state welfare systems, provided healthcare for poor Americans.

Preserving the environment and national splendor was another of Johnson's Great Society goals. Johnson sought to combat the effects of industrialization, which included shrinking wilderness areas, vanishing species of wildlife, a degradation of the landscape, and pollution. During Johnson's presidency, Congress passed nearly 300 pieces of legislation relating to beautification, pollution, and conservation—amounting to expenditures of \$12 billion. Another aspect of Johnson's Great Society was the "war on poverty." One of the largest pieces of legislation passed to wage the war on poverty was the Economic Opportunity Act, passed in August 1964. The act had 10 major parts. Head Start offered basic skills

training to preschoolers. The Upward Bound program helped gifted students from poor families attend college. Another section of the act expanded the 1962 Manpower Development and Training Act, which focused on job training. Job Corps was created to teach important and marketable skills to inner-city youth, and the Volunteers in Service to America (VISTA) was a domestic parallel to President JOHN F. KENNEDY's Peace Corps. The Legal Services Program provided lawyers to defend the rights of low-income citizens. Other parts of the Economic Opportunity Act funded public works programs in poor and rural areas and provided loans for small farmers and small businesses. To administer the war on poverty, the act created the Office of Economic Opportunity.

Another section of the Economic Opportunity Act was the Community Action Program. It allocated \$300 million for local antipoverty programs. This initiative reflected the belief held by some that social-policy formation had too many experts and bureaucrats and lacked grassroots input. By 1966 more than 1,000 Community Action Programs were in place, including in many African-American and Mexican-American inner-city neighborhoods. They led to increased community activism. The programs encouraged political organization and community development, and when used as intended, their funds went to education, medical services, and legal services.

COURT DECISIONS

The Supreme Court had its part in the Great Society as well. The Court's decisions improved individual rights, equal protection under the law, and electoral processes. To help give all citizens an equal voice at the polls, *Baker v. Carr* (1962) made states do all that was practical to maintain population balance in the drawing of congressional and state legislature lines. *Gideon v. Wainwright* (1963) ensured that poor people would have legal counsel provided to them by the court if they could not afford to pay. The 1966 case of *Miranda v. Arizona* mandated that people be informed of their legal rights when placed under arrest.

Civil rights was another integral part of the Great Society. However, it was also one of the hardest to achieve. Before the Civil Rights Act of 1964 was passed, opponents of the bill filibustered for 75 days. However, on June 11, the bill passed the Senate by a vote of 73 to 27. The bill targeted racism in American life. It made it easier for the attorney general to take part in all civil rights cases and allowed him or her to prosecute segregated school districts and election officials who denied voting rights to black Americans. Other sections for-

bade discrimination in public facilities, hiring, and federally funded programs.

The Voting Rights Act of 1965 authorized federal officials to register voters and oversee elections. It outlawed long-standing measures used primarily in southern states to keep African Americans from voting. By mid-1966 a half-million African Americans were registered to vote in the South; by 1968 nearly 400 African Americans held elected office in that region. A final civil rights measure, the Open Housing Act, was passed in 1968 and outlawed racial discrimination in the sale or rental of housing. Also under the heading of civil rights was the Immigration Act of 1965, which abolished discriminatory national-origins policies.

Although some of Johnson's Great Society measures were received with mixed feelings, they helped overall to improve the quality of life for millions of Americans. The impact of his legislation is still felt today. However, even with all of the success of President Johnson's Great Society, his presidency was marred by the stigma of Vietnam, the cost of which curtailed spending on some of his Great Society programs. His noble and idealistic crusade was cut short by a bitter and unpopular war.

JAMES E. SEELYE, JR.

Greek Junta

The Greek Junta is the name given to the April 21, 1967, military coup that after seven years ended Greek parliamentary democracy. The suggested reason for this military action was the prevention of an impending communist takeover. However, there remains little or no evidence to confirm that this threat was real.

The immediate background to the event was a series of social, economic, and political developments in the period from 1963 to 1967 that affected Greek stability. Particularly unsettling was the election of George Papandreou's Center Union government in February 1964. Papandreou attempted a number of social and

economic reforms and promoted his more radical son, Andreas Papandreou, to the economics ministry, which caused splits in his own party. A leftist conspiracy of military personnel known as ASPIDA, which implicated Andreas and threatened the monarchy and the existing military structure, was also uncovered during this time. Papandreou resigned in July 1965. Greece then entered a period of continual uncertainty with a series of unsatisfactory governments that failed to establish a solid governing base. The king eventually proposed new elections for May 1967.

The Right, especially within the military, had become suspicious of these political maneuvers and the accompanying instability. Many of the officers came from the lower social classes and felt that their rise and prestige had been undermined by the country's corrupt political elite. In addition to social tension, CYPRUS, under Archbishop MAKARIOS's leadership, was demanding concessions from the island's Turkish minority, who threatened to bring about outright war with Turkey. A Turkish invasion was prevented in 1964 by the United States and peace was maintained to a degree by UNITED NATIONS peacekeeping forces. Additionally, Greece's King Constantine II was coping with youth and inexperience, having been king only since March 1964.

The threat of George Papandreou's return to power motivated the king to plan his own revolt, which was also scheduled for April 21, 1967. However, this coup was circumvented by a group of young officers. Their action changed the course of postwar Greek history and took the entire political establishment by surprise. Led by Colonels Georgios Papadopoulos and Nicholas Makarezos and Brigadier Stylianos Pattakos and backed by a vague revolutionary council, the army struck on the morning of April 21. Their plan, code-named Prometheus, proved effective.

Communications were seized, as were other key civic and military installations, and martial law was declared, which appeared to be endorsed by the king and his advisers. Constantine attempted a counter coup in December 1967; it was ill-conceived and failed even before it started. Following this fiasco, Constantine's final recourse was to flee into exile with his family.

The junta's political philosophy was ill-defined but generally paternalistic and authoritarian, with populist overtones designed to appeal to the peasantry and workers. They promoted Greek nationalism and proclaimed themselves to be defenders of Greek values, civilization, and Christianity. In essence, the junta wanted to discipline Greek society and, in 1968, produced a new authoritarian constitution to allow them

to do so. They made frequent use of propaganda and the secret police (*Asphaleia*) and military police (ESA) to silence critics and opponents. Human rights abuses were numerous. Such violations gave the colonels a bad international reputation within Europe and left them with few friends.

Colonel Georgios Papadopoulos soon rose to command the regime, a position he held until November 1973. The regime managed to maintain its membership in NATO while suffering only minor criticisms, although U.S. military aid was curtailed from 1967 to 1973. Greece's strategic position in the Mediterranean in the face of COLD WAR realities meant that the United States needed Greek ports to be open to the Sixth Fleet.

The junta eventually failed because of its inability to govern effectively or respond to external crises. By relying on crude suppression, the colonels destroyed any chance for popular support. Campaigns against the regime, such as Andreas Papandreou's Panhellenic Liberation Movement, were maintained from abroad. But the most important cause was the rise of an active university student opposition. A weakened leadership threatened the regime's ability to rule. This, in turn, led Dimitrios Ioannidis—a previous secret police head—to seize junta leadership from Papadopoulos.

Ioannidis then searched for a populist/nationalist cause to restore the government. A confrontation with Turkey over oil deposits in the Aegean seemed the ideal circumstance. The junta attempted in July 1974 to overthrow Makarios in Cyprus. Turkey responded by invading the Turkish side of the island. Ioannidis thought he had the military challenge he needed, but dissent and dissatisfaction in the heart of the military establishment left him isolated.

The only resolution to the junta's failure was a return to legitimacy, which was now backed by the military itself. Former prime minister Konstantinos Karamanlis returned from exile in Paris and restored democratic government. He reintroduced political parties, created a new constitution modeled on that of France, and purged junta supporters from the military and civil service. He also sought a referendum on the future of the monarchy, which produced a 70 percent majority against the restoration of the king. The new constitution of 1975 increased the powers of the executive in the form of a president. The junta leaders were tried and given death sentences, which were later commuted. The junta's civilian supporters avoided major criminal trials. Some military and police officers were convicted of more serious crimes. The demise of the

junta came without much bloodshed and with a general spirit of leniency.

THEODORE W. EVERSOLE

Green Revolution

The term *Green Revolution* refers to the incredible transformation of agriculture in developing nations between the 1940s and 1960s. Programs of agricultural research and the development of infrastructure led to significant increases in agricultural production. The Green Revolution has had significant social and ecological impact on the world, and because of this has been equally praised and criticized.

For English wheat yield to increase from one-half metric ton per hectare to two metric tons took 1,000 years; the increase from two to six metric tons took only 40 years. The change took place due to improvements in breeding, agronomy, and the use of pesticides and fertilizers. The result was that by the second half of the 20th century most industrial countries were agriculturally self-sufficient.

Developing countries were less fortunate. Colonial powers invested little in the food production systems of their colonies and did nothing to slow population growth, so by independence in the 1950s–1960s, the new nations were approaching a crisis. By the mid-1960s hunger and malnutrition were widespread. Asia was particularly dependent on food aid from developed countries. India suffered back-to-back droughts in the mid-1960s, exacerbating the problem. The Rockefeller and Ford foundations led in the establishment of the international agricultural research system to adapt the latest science and technology to the Third World. Efforts focused on rice and wheat, two of the principal sources of food in the developing world. U.S. Agency for International Development administrator William S. Gaud coined the term “Green Revolution” in 1968.

The Green Revolution created higher crop yields, but also may have contributed to widespread environmental damage.

The Green Revolution spread rapidly. By 1970 approximately 20 percent of the Third World’s wheat area and 30 percent of the rice land in developing countries were planted in high-yield varieties. By 1990 the share was 70 percent for both.

The Green Revolution led to markedly improved yields of cereal grains during the 1960s–1970s due to the development of new seeds through genetics. The beginnings came in Mexico during the 1940s when Dr. Norman E. Borlaug led a team that developed a strain of wheat that was resistant to disease and efficient in converting fertilizer and water into grain. Shorter and sturdier stalks were necessary to allow the plant to hold the larger grain yield. Borlaug developed dwarf varieties with the requisite characteristics. Initially, Mexico was importing half the wheat it needed. By 1956 it was self-sufficient, and by 1964 it was exporting half a million tons annually. Equal success in India and Pakistan kept millions of people from starving. As the technologies spread through the world, crop yields increased each year. But as production of rice and wheat and other genetically altered crops grew, output of other indigenous crops, including pulses, declined.

After wheat came corn, although with less success. Building on the efforts of China, Japan, and Taiwan, the International Rice Research Institute developed semi-dwarf rice plants. By 1992 a network of 18 research centers, primarily in developing countries, continued the effort to improve yields. Funding came from the Rockefeller Foundation and other private foundations, nation-

al governments, and international agencies including the WORLD BANK. At the same time the Green Revolution came under criticism because it requires fertilizer, irrigation, and other tools unavailable to impoverished farmers. Further, it may be ecologically harmful. Most important, its emphasis on monoculture leads to a loss of genetic diversity. Academic critics, such as the economist Arartya Sen, note that increasing food production does not necessarily lead to improved food security.

Most industrialized nations consume Green Revolution hybrids. The crops are created through crossbreeding or random mutagenesis to improve crop yield and increase durability to allow for longer shipment and storage times. Other alterations allow plumper tomatoes or straighter rows of corn. Uniformity eases mechanical harvest. Modified strains still depended heavily on the high use of fertilizers, which consume fossil fuels, instead of the traditional crop rotation, mixing of crops, and use of animal manure. And large-scale irrigation entailed the use of large volumes of natural monsoon and other water sources. It also required poor farmers to use simple irrigation techniques. Control of pests and weeds by pesticides and herbicides also improved the crops.

The Green Revolution allowed a record grain output of 131 million tons in 1978–79. India became one of the world's largest producers, and an exporter of food grain. No other nation matched India's success. The Green Revolution also allowed food production to match population growth.

Mechanization has reduced the need for low-skilled human labor. Farmers and agricultural workers have seen increases in income as production costs have dropped markedly. Mechanization encouraged collectivization—or corporatism—because the machines are too expensive for small landowners. After the initial exploitation, real improvement occurred for many poor farmers. Between 1970 and 1995, real per capita incomes in Asia almost doubled, with a decline in poverty from nearly 60 percent to less than 33 percent. As population increased 60 percent between 1975 and 1995, poverty decreased from 1.15 billion to 825 million people. India's rural poor before the mid-1960s ranged from 50 to 65 percent; by 1993 the number was about 33 percent.

Vandana Shiva and other critics of the Green Revolution object to the emphasis on genetically modified, high-yield crops at the expense of quality ones. The dependence on a few strains increases the risk of disaster should a new crop pest arise. The revolution also makes populations dependent on external sources of food. And the potential for future improvement through breeding of different strains is weakened.

Critics also note that the reduction in crop types leads to a less varied, less healthy diet, because the crops are produced for volume, not nutritional quality. Herbicides kill wild plants that are traditionally eaten as vegetables, further restricting the variety in many diets. Pesticides also kill the fish in rice paddies. Water buffalo exposed to the pesticide-rich land develop hoof-and-mouth disease.

Some villages that were previously self-sufficient are suddenly enduring famine that seems irreversible. Supporters note that the Green Revolution has created higher gross nutrition levels and increased the intake of calories. To promote variety, advocates encourage the planting of vegetable gardens. The newer varieties have improved nutrient content, for example, the “golden rice” with increased carotene, and there is more attention to developing altered versions of less common crops. High-yield sorghum, millet, maize, cassava, and beans are now available.

The Green Revolution changes social arrangements. Many hybrids are sterile. Others are sold with the restriction that farmers cannot save seed. Farmers have to buy seed each year, and the seed they buy is usually hybrid because traditional seeds produce much less. The Green Revolution also brought traditional subsistence farmers into the world of large-scale industrial agriculture. Many are forced off their farms and into urban poverty because their small holdings are not competitive with the large agribusinesses.

Dependence on chemical fertilizers also leads to ecological damage such as on the Pacific island of Nauru, which was mined extensively for its phosphates. Chemical runoff from fields pollutes streams and other water supplies. DDT and other chemicals used in the early Green Revolution have given way to safer varieties, but the impact remains.

Critics claim that the Green Revolution's methods destroy land quality because irrigation increases salinity, soil erosion increases, and the soil loses organic material and trace elements due to reliance on artificial means of stimulating growth. The soil weakens, and chemical dependency grows until the soil finally fails.

Supporters counter that new techniques will develop as resources become scarce or environmental damage becomes likely. They note that no-till farming has decreased erosion. And work continues on the development of alternative energy sources, disease- and pest-resistant crops, and closed nutrient cycles.

JOHN H. BARNHILL

Grenada, U.S. invasion of (1983)

On October 25–28, 1983, the United States—under President RONALD REAGAN—invaded the small Caribbean island-nation of Grenada, deposed its leftist government, and installed a government more in keeping with the Reagan administration's perception of U.S. geostrategic interests in the Western Hemisphere.

A clear violation of international law, the action garnered widespread domestic popular and bipartisan support, while being roundly condemned by much of the international community. The UNITED NATIONS General Assembly overwhelmingly condemned the invasion; in the Security Council the United States cast the sole dissenting vote on a resolution condemning it. The invasion boosted Reagan's popularity at home; intimidated leftist movements and parties throughout the circum-Caribbean; and resulted in a corrupt and elite-dominated post-invasion government characteristic of the region. Undertaken by some 7,000 U.S. troops, the invasion caused 118 deaths (19 U.S.; 69 Grenadan; 25 Cuban) and 533 were wounded, while U.S. forces detained 638 Cubans as prisoners of war. U.S. forces withdrew from the island in December.

The invasion's antecedents have been traced to the intensification of the COLD WAR under Reagan; the 1979 triumph of the leftist Sandinista revolution in Nicaragua; ongoing leftist revolutionary movements and civil wars in El Salvador, Guatemala, and elsewhere in the circum-Caribbean; and the March 13, 1979, coup d'état in Grenada by the leftist New Jewel Movement, led by the charismatic Marxist-influenced attorney Maurice Bishop.

Independent from Great Britain since 1974, Grenada was ruled from 1974 to 1979 by Prime Minister Sir Eric Gairy, widely considered despotic and notorious for his preoccupations with the occult, whose "Mongoose Squad" kept his opponents in check and himself in power. Most of the island's 110,000 inhabitants welcomed the New Jewel coup. From 1979 to 1983, the economy grew at an average of 9 percent (very high for the Caribbean during this period, which included a global recession in 1981–82); unemployment declined from 45 to 14 percent; literacy rates increased from 85 to 98 percent; and the nation's health, education, and welfare systems were reformed and expanded.

Bishop, as much a nationalist as socialist and influenced as much by Jamaican musician Bob Marley as by Marx, articulated a socialist, anti-imperialist vision at odds with express U.S. economic, strategic, and security interests in the region. The Bishop government did not hold elections as promised, imposed press censorship, jailed political opponents, and lent rhetorical support to the Soviet Union and Cuba. On October 19, 1983, New Jewel hard-liner Bernard Coard ousted Bishop, precipitating islandwide protests and a general strike. After crowds forced Bishop's release, Coard's forces killed several dozen protesters and executed Bishop and two cabinet members. The main U.S. rationale for its invasion was to protect the lives of more than 800 U.S. medical students at the St. George's School of Medicine, whom the Reagan administration claimed were in imminent danger and prevented from departing. The Grenada invasion comprises a minor but revealing episode in the late cold war in the Western Hemisphere.

MICHAEL J. SCHROEDER

Guatemala, civil war in (1960–1996)

From 1960 to 1996, the nation-state of Guatemala was convulsed by a civil war that caused the deaths of at least 200,000 people. The worst years of the violence were 1981–82, when the U.S.-backed government launched what has been accurately characterized by the Report of the Guatemalan Commission for Historical Clarification as "acts of genocide" against the country's majority indigenous population. The same report concluded that "[the] majority of human rights violations occurred with the knowledge or by order of the highest authorities of the State." An important component of the COLD WAR in the Western Hemisphere, the history of Guatemala from 1954 to 1996 was mostly shaped by the country's extreme inequalities in landowning, wealth, and power; U.S. military assistance and economic and political intervention expressly intended to combat the perceived threat of international communism; a dictatorial Guatemalan state dominated by the military and backed by the U.S. government, the country's traditional landholding oligarchy, and right-wing paramilitaries; and the struggles

of civil society—including labor unions, peasant leagues, indigenous and human rights groups, political parties, and guerrilla organizations—to create a more just and equitable society.

The short-term origins of the civil war have been traced to the U.S. Central Intelligence Agency–orchestrated coup of 1954, following a decade of far-reaching reforms, which overthrew the democratically elected government of Jacobo Arbenz and installed a military dictatorship headed by Colonel Carlos Castillo Armas. In 1960 a group of junior officers revolted and formed an even more hard-line military government. In the early 1960s several guerrilla organizations became active in rural districts, including the Guerrilla Army of the Poor (EGP); the Revolutionary Organization of Armed People (ORPA); and the Rebel Armed Forces (FAR). In 1982, the guerrilla organizations combined to form the Guatemalan National Revolutionary Unity (URNG). Beginning in 1966 the army launched a major counterinsurgency campaign in rural areas that eliminated most armed resistance to the regime. Guerrilla operations continued in urban areas through economic sabotage and targeted assassinations. Repression by the military, right-wing paramilitaries, and death squads such as the White Hand intensified—with tortures and murders of labor organizers, community activists, students, professionals, and other suspected leftists.

In March 1982 a military coup installed as president General Efraín Ríos Montt, a right-wing extremist, 1974 presidential candidate, and lay pastor in the evangelical Protestant “Church of the Word.” His presidency (1982–83) is linked to the worst human rights abuses in the 36-year civil war, with human rights organizations amply documenting the “acts of genocide” perpetrated by his government. In March 1994 a UNITED NATIONS–sponsored peace process resulted in an accord between the URNG and the government. In January 1996 Álvaro Arzu, candidate of the center-right National Advancement Party (PAN), was elected as president. The final peace accord was signed on December 29, 1996, formally ending the 36-year civil war, the major events of which are amply documented in the 1999 CEH Report and related reports.

Guevara, Ernesto “Che”

(1927–1967) *Latin American revolutionary*

An iconic Latin American revolutionary whose visage remains emblematic of leftist and Marxist struggles throughout the continent and world, Ernesto Guevara de la Serna joined FIDEL CASTRO’s 26 July Movement in late 1955. An exceptionally effective guerrilla leader, his charisma, intelligence, and revolutionary idealism soon made him one of the leading figures of the early years of the CUBAN REVOLUTION.

He was the primary impetus behind the notion of the socialist “New Man,” at the core of many Cuban government policies in the early 1960s, in which revolutionary fervor was seen as more fundamental than material incentives (such as wages and benefits) in propelling workers to produce. Convinced that Cuba’s successes could be duplicated in other countries through what he called the “foco” theory of revolution, in which a small band of revolutionaries could spark a mass insurrection and topple dictatorships, he journeyed to Bolivia in 1967 to test his theory. The anticipated popular uprising failed to materialize, and after a few months he was captured and executed by the Bolivian military. His writings on revolution and guerrilla warfare remain classics of the era.

Born on June 14, 1927, to a wealthy landowning family in Rosario, Argentina, Guevara was a frail and sickly boy, suffering asthma that plagued him throughout his life. Raised Roman Catholic, because of his asthma he was educated mainly at home by his mother, Celia de la Serna y Llosa, and his four siblings. His father, Ernesto Guevara Lynch, was a businessman and for a time ran a *mate* (tea) farm owned by his wife. Both were committed leftists. From his mother, to whom he remained emotionally close throughout his life, he acquired his lifelong passion for books, learning, and politics. In 1943 when Guevara was 16, his family moved to Córdoba. After completing his high school studies he began studying engineering. In 1947 he and his family moved to Buenos Aires, where he entered the university to study engineering before switching to medicine. In 1951 he and a friend embarked on a yearlong motorcycle journey through South America, where he saw firsthand the continent’s poverty and social injustices (as portrayed in his journals and dramatized in the 2004 film *The Motorcycle Diaries*). Graduating from

medical school in 1953, he journeyed through Bolivia and Peru to Guatemala, where he witnessed the social revolution under President Jacobo Arbenz.

After Arbenz's overthrow in a U.S.-orchestrated coup in 1954, which steeled Guevara's anti-imperialism, Guevara journeyed to Mexico and established contact with Cuban exile Fidel Castro. Convinced that Castro was the visionary revolutionary he had long sought, he joined Castro's 26 July Movement and soon became one of its leaders. The group embarked for Cuba in November 1956, and for the next two years Guevara played a central role in the guerrilla war against Cuban dictator Fulgencio Batista, earning a reputation as a skilled and sometimes ruthless commander. After Batista's ouster in January 1959, Guevara was appointed to the National Institute of Agrarian Reform, and later became president of the National Bank, minister of industries, and ambassador to the United Nations. During this period he developed his ideas regarding the socialist New Man and his foco theory of revolution. After failing in several attempts to launch socialist revolutions in other countries (including Panama, the Dominican Republic, and Congo), in late 1966 he traveled to Bolivia in the hope of sparking a mass insurrection. On October 8, 1967, he and his bedraggled forces were captured by the Bolivian military, and the next day he was executed. He is widely considered one of the most important revolutionary figures of the 20th century.

MICHAEL J. SCHROEDER

Gulf War, First (1991)

The First Gulf War was fought by a coalition of forces from 34 countries against Iraq in 1991 in response to the 1990 Iraqi invasion of Kuwait. The war began because of several crises stemming from the IRAN-IRAQ WAR of 1980–88. The Iran-Iraq War ended on August 8, 1988. Iraq was left with huge debts, largely to other Arab nations that had helped to finance the war, and extensive material damage; however, the Iraqi military had benefited from the war by becoming the strongest military force in the Gulf region.

Immediately following the cessation of the Iran-Iraq War, the Kuwaiti government made the disastrous decision to increase its oil production in violation of OPEC

(ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES) agreements. The Kuwaitis increased oil extraction from the Rumaila oil wells, which lay on disputed territory with neighboring Iraq. Iraqi revenues were 90 percent dependent on oil, and the Kuwaiti increase in oil production helped to lower oil prices and slowly began to strangle Iraq economically.

Kuwait's leaders, the Al-Sabah family, ignored Iraq's protestations. Until the early 20th century Kuwait had been a semi-independent emirate administered from Baghdad under the Ottoman Empire. During the 19th century British influence in the Gulf and in Kuwait in particular increased, and after World War I Britain was responsible for drawing the borders between the two nations. Although Iraq ultimately established diplomatic relations with Kuwait, many Iraqis continued to view it as part of Iraq.

STRATEGIC ACCESS

Iraq also owed \$14 billion from the Iran-Iraq War to Kuwait; Iraq had expected that Kuwait would cancel the debt since Iraq had fought and suffered during the long war with Iran while the oil-rich nations in the region had helped to finance the struggle. However, Kuwait not only refused to cancel the debt, it demanded its immediate repayment. During the Iran-Iraq War many of Iraq's limited port facilities in the Shatt al-Arab were destroyed, leaving Iraq almost landlocked. Kuwait had greater strategic access to the Persian Gulf, which Iraq viewed as essential were hostilities to erupt again with Iran.

From 1988 to 1990, SADDAM HUSSEIN increased his threats against Kuwait, asking for cancellation of Iraq's debts. He also sought help from King Hussein of Jordan to mediate the problems. In July 1990 Saddam met with U.S. ambassador April Glaspie and stated his grievances regarding Kuwait; Glaspie gave him a controversial response that he took to mean that the United States would not become involved in the dispute if he took stronger steps to rectify the problem. On August 2, 1990, Iraq invaded Kuwait.

The Iraqi military quickly overran and occupied all of Kuwait, and the ruling family fled the country. Hussein justified the invasion based on Kuwait's slant-drilling into Iraqi oil fields across the border, as well as his complaints over debt cancellation. He also appealed to Arab nationalism, claiming that Kuwait was part of Iraq, calling it the 19th province of Iraq. Immediately after the invasion the United Nations (UN) passed Resolution 660 condemning the invasion and demanding an immediate withdrawal. UN Resolution 661 then imposed economic sanctions on Iraq.

Saudi Arabia was alarmed by the invasion and the mounting power of the Iraqi military, which was within

striking distance of the vast Saudi Hama oil wells. In Operation Desert Shield, begun on August 7, 1990, the U.S. military beefed up its forces in Arabia to defend its Saudi ally from a possible Iraqi attack. In addition, the UN placed a January 15, 1991, deadline for Iraq to withdraw from Kuwait.

The United States and the UN assembled a coalition force of 34 countries to implement this resolution by force should Iraq fail to comply. On January 12, 1991, the U.S. Congress narrowly approved the use of U.S. military force in an operation against Iraq.

When Iraq failed to comply with the January 15 deadline, coalition forces initiated Operation Desert Storm on January 17, 1991, with a massive month-long air campaign against Baghdad and much of Iraq. The air attacks, over 1,000 in number, disabled military and communication installations and severely weakened the Iraqi military and infrastructure. Coalition forces launched a ground attack, Operation Desert Sabre, on February 24, 1991; they quickly overwhelmed the thinly stretched Iraqi forces, and after only 100 hours President GEORGE H. W. BUSH declared a cease-fire. Iraqi troops hastily retreated back across the border, setting Kuwaiti oil fields on fire as they withdrew. This caused massive environmental damage that persisted into the 21st century. Iraqi troops also dumped approximately 1 million tons of crude oil into the Persian Gulf.

The quick victory was a surprise, and the war ended sooner than predicted. Kuwait City was recaptured, and on February 27, 1991, Kuwait was officially liberated and the Iraq-Kuwait border was restored. However, Saddam Hussein was not captured, and he remained in power. Allied forces did not pursue him and did not try to occupy Iraq, although they did advance to within 150 miles of the capital of Baghdad. President Bush justified this decision by noting that the goal of the coalition had been to liberate Kuwait.

However, the U.S. administration hoped that continued economic sanctions against Iraq, as well as assistance for resistance groups within Iraq (such as Shi'i and Kurdish factions), would lead the Iraqi people to revolt against Hussein and oust him from power. But Hussein ruthlessly repressed any uprisings. Although the sanctions caused the deaths of an estimated 500,000 Iraqis, mostly women and children, they had little effect on Hussein's regime, which actually extended its political control over a nation badly crippled by years of war. Thus the First Gulf War was a military success, succeeding in liberating Kuwait, but it did not change the Iraqi regime. Consequently the United States, Great Britain, and a small number of other

nations moved to oust Hussein and occupy Iraq in the SECOND GULF WAR, beginning in 2003.

KATIE BELLIEL

Gulf War, Second (Iraq War)

The invasion of Iraq officially began on March 20, 2003, under the name "Operation Iraqi Freedom." The stated justification for the invasion was that SADDAM HUSSEIN, ruler of Iraq, had weapons of mass destruction (WMDs) and supported terrorism, and that the Iraqi people were suffering under his tyranny and needed to be freed. The United States contended that Iraq was in violation of both United Nations (UN) Security Council Resolution 1441 and the terms of the 1991 cease-fire agreement, which ended hostilities after Desert Storm. Both of these documents prohibited Iraq from possessing or researching WMDs. Saddam's links to terror were indirect and centered mostly on monetary rewards provided to the families of Palestinian suicide bombers and to the families of the "victims of Israeli aggression." Allegations that Saddam was linked in some way to the September 11, 2001, terrorist attacks were never supported by evidence.

A "Coalition of the Willing" was created by the United States in the time after September 11, 2001 and the invasion of Iraq in 2003 though 98 percent of the Coalition troops were British and American. The Coalition forces assembled for the attack on Iraq numbered just under 300,000. The Iraqi army numbered 390,000 soldiers, plus 44,000 Fedayeen and potentially 650,000 reserves. The 2003 invasion was not preceded by an extended bombing campaign, as was the 1991 attack. The strategy for the 2003 invasion depended on speed and precision strikes to destroy Iraqi command rapidly enough to ensure that the defenses would quickly collapse.

A primary strategic goal of the Coalition was to limit damage to Iraq's oil production capability; key sites related to the oil industry were to be secured as quickly as possible. The course of the invasion was designed to prevent both the destruction of oil sites and to limit the Iraqi army's ability to concentrate their defenses. The U.S. Army moved west through the Iraqi desert and then headed north toward Baghdad while the marines

moved directly toward Baghdad along the main Iraqi Highway One. British forces concentrated on securing southeastern Iraq, particularly the Basra area. Major actions took place at Nasiriyah and Karbala where the Iraqis defended important crossroads and bridges over the Euphrates River. In the third week of the invasion, U.S. forces entered Baghdad. Raids called “Thunder Runs” were launched on April 5 and 7 to test Iraqi defenses in the capital and to capture the key objectives of the Baghdad Airport and Saddam’s palace complex. The city of Baghdad was formally occupied on April 9. Saddam was declared deposed and went into hiding, and many Iraqis rejoiced by defacing his monuments. The initial invasion had lasted a mere 21 days. Looting followed the fall of the regime, with store goods,

museum items, and military arms and equipment being targeted, as did outbreaks of violence between tribes and cities based on old grudges.

Coalition troops began searching for Saddam, Iraqi politicians and leaders of the BA’ATH PARTY, military leaders, and Saddam’s family members. On July 22, 2003, Saddam’s sons Uday and Qusay, along with a grandson, were killed during a standoff at their fortified safe house in Mosul. Saddam was captured on December 13, 2003, near his hometown of Tikrit. In all, 300 top leaders from Saddam’s regime were killed or captured along with a large number of lower-level troops and government officials.

After the fall of Baghdad and Saddam’s regime, the Coalition Provisional Authority (CPA) was formed

Two U.S. Marines speak with a local Iraqi woman during a security patrol in Saqlawiyah, Iraq. The marines were assigned to Weapons Platoon, Fox Company, 2nd Battalion, 7th Marine Regiment.

to run Iraq until power could be turned over to the Iraqis. The CPA was led by Paul Bremer. The CPA officially controlled Iraq from April 21, 2003, until June 28, 2004. The CPA opposed holding elections in Iraq shortly after the fall of Saddam and wanted to hand power over to an appointed interim Iraqi government, which would be chosen by the Coalition. A second group formed in early 2003 was the Iraq Survey Group (ISG). The ISG was charged with finding the WMDs that Iraq was alleged to possess. They could not find any WMDs or programs to build them even though Iraq was known to have had nuclear, biological, ballistic missile, and chemical weapons programs prior to the 1991 Gulf War.

The media explored a new format to cover the war by “embedding” journalists inside military units. The war also saw for the first time soldiers instantly reporting their activities by means of digital cameras, cell phones, and the Internet. Uncensored soldiers’ stories, photos, Web blogs, and movies became available shortly after events took place. Arabic news networks such as AL JAZEERA provided the Islamic viewpoint and was available worldwide through satellite TV and on the Internet.

On May 1, 2003, major combat operations were declared over by U.S. president GEORGE W. BUSH. Peace was short-lived, as a disjointed insurgency took hold in Iraq with many factions fighting for control. They included religious radicals, Fedayeen, Ba’athists, foreign Arabs, and other Muslim jihadis—and Iraqis opposed to the occupation. The insurgency was a chaotic decentralized movement with as many as 40 separate groups fighting for control. The picture was further clouded as each group was splintered into large numbers of semiautonomous cells. Insurgent attacks increased around Iraq, but especially in the “Sunni Triangle,” home to most of the Sunni population. Insurgents used guerrilla-style tactics, employing suicide bombs, mortars, rockets, ambushes, snipers, car bombs, sabotage of the infrastructure, and improvised explosive devices (IEDs).

In late 2004 the focus of insurgent attacks switched from Coalition forces to the newly elected Iraqi government and its collaborators, including the Shi’i population. Many of the attacks were carried out by foreign fighters. At the end of March 2004 insurgents in the town of Fallujah ambushed and killed four private military contractors from the Blackwater USA Corporation. Pictures of their burned bodies hanging from a bridge were distributed around the world, causing outrage among Americans. Blackwater was one of many private companies that provided specialized services and expertise needed by the U.S. military. The employ-

ees or contractors of these companies are typically men with special-forces or police backgrounds. They are paid much more money than they would make in the official armed forces. This has led many to label them “mercenaries.” It is believed that there were more than 100,000 private contractors in Iraq around 2007.

Two fierce battles were fought after attacks were launched by the U.S. Marines to gain control of Fallujah after the Blackwater incident. The first battle in April 2004 was not successful and ended with the Marines withdrawing. The second battle, fought in November and December 2004, resulted in the death of more than 5,000 insurgents and the complete takeover of Fallujah. The battles for Fallujah are considered to be the heaviest urban fighting the U.S. Marines have done since the battle for Hue fought in Vietnam during 1968.

On June 28, 2004, the CPA transferred sovereignty of Iraq to the Iraqi Interim Government, which was charged with holding national elections. The elected Iraqi government would then draft a new constitution. The Interim Government was also to try Saddam Hussein for his many crimes. At the end of his first trial, Saddam was sentenced to death for crimes against humanity and was executed by hanging on December 26, 2006.

The Iraqi constitution was ratified on October 15, 2005, and a general election was held on December 15 to choose the new national assembly. In a first for Iraq, the constitution stipulated that 25 percent of the assembly seats must be held by women. An escalation in sectarian violence followed, as the Sunni minority feared their power slipping into the hands of the Shi’i majority. Sunni bombers destroyed a very important Shi’i mosque and ignited a cycle of revenge violence in which both sides used bombs, ambushes, and death squads against both politicians and civilians. Violence between the Shi’i and Sunni escalated to the point that the United Nations (UN) has labeled it an “almost civil war situation.” Many feared that this sectarian violence could spread to other countries in the Middle East, especially if Iraq was splintered into independent Sunni, Shi’i, and Kurdish states.

Many of the opposition insurgents and suicide bombers were in fact foreign Sunni Arabs who came to Iraq to fight against the United States and against the Shi’i. One of the most notable foreign insurgent leaders was Abu Musab al-Zarqawi. Born in Jordan, he moved around the Middle East and Central Asia working as a terrorist and jihadi before taking leadership of AL-QAEDA in Iraq after the 2003 invasion. He was killed on June 7, 2006, when his safe house located north of

Baqubah was hit by smart bombs dropped by U.S. aircraft. Al-Qaeda has continued its violent campaign in Iraq.

The war continued as 2007 saw a rising death toll. The number of Iraqis killed in the war is not known. Some estimates are as high as 900,000 Iraqi dead from all causes related to the war. In addition, an estimated 2 million Iraqis are said to have fled to Syria or Jordan. The number of Coalition forces killed is much clearer: more than 4,052 Americans and 309 other forces by

April 2008. Private contractors killed and wounded are not included in this figure and have not been published.

COLLIN BOYD

H

Hamas

Hamas—an acronym of *Harakat al-Muqawama al-Islamiyya* in Arabic, literally “Islamic Resistance Movement”—was both a part of a regionwide radical Islamic movement that developed in 1980s and an expression of the Palestinian struggle against Israeli domination and occupation. Hamas was established shortly after the outbreak of the first INTIFADA in the Gaza Strip in 1987.

Its political program and ideology were drafted in lofty Arabic rhetoric and religious symbolism. Hamas believed that “the land of Palestine is an Islamic *Waqf* consecrated for future Moslem generations until Judgment Day.” Hamas regarded nationalism (*wataniyya*) as an implication of religious faith and struggle against the enemy as a religious duty. Hamas declared itself to be a “humanistic movement, which cares for human rights and is guided by Islamic tolerance when dealing with the followers of other religions.” According to its charter, “Under the wing of Islam it is possible for the followers of the three religions—Islam, Christianity and Judaism—to co-exist in peace and quiet.” Both its charter and many of its official statements are harsh and uncompromising.

Hamas is divided into two main spheres of operation: social programs such as building schools, hospitals, clinics, and religious institutions; and militant operations. The Hamas underground militant operations included a number of suicide bombings that killed a few hundred Israeli soldiers and civilians, especially

in February and March 1996, and after the outbreak of the AL-AQSA INTIFADA in September 2000. During this second intifada, when Palestinian towns and refugee camps were besieged by the Israeli army, Hamas organized clinics and schools that served Palestinians; it also summarily executed Palestinian collaborators with Israel. Many Hamas leaders and activists, including its founder, Sheikh Yassin, and his successor, Dr. Abdel Aziz al-Rantissi, were assassinated by Israel during the so-called targeted killing operations. Its leader, Khaled Meshaal, lives in exile in Syria.

The social programs and political and religious stance of Hamas contributed to its considerable popularity among the Palestinians. Hamas participated in the January/May 2005 Palestinian municipal elections and achieved control of some places such as Beit Lahya in northern Gaza, Qalqiliya in the West Bank, and Rafah. On January 25, 2006, Hamas won the parliamentary elections, taking 74 of 132 seats in the Palestinian parliament. After the elections Hamas faced considerable diplomatic and financial pressure to adjust its ideology to Western and Israeli demands. In June 2007 Hamas attacked their Fatah rivals, resulting in Hamas taking control of the Gaza Strip, while the West Bank remained under control of the Palestinian National Authority.

ANDREJ KREUTZ

Havel, Václav

(1936–) *Czech writer and president*

Václav Havel is a Czech dramatist, journalist, essayist, and former president of Czechoslovakia (1989–92) and of the Czech Republic (1993–2003). Havel was born in Prague in 1936 to a prosperous family. As a member of a former bourgeois family in a communist regime, Havel was denied privileges, including education. In order to finish high school he had to enroll in night school while supporting himself as a lab assistant. Afterward he was not permitted to enroll in a university. He trained for a short time at a technical institution and later completed his theater degree as a part-time student at the Academy of Arts. After his mandatory military service Havel worked first at the ABC Theater and then at the Theater on the Ballustrade, well known for experimental theater. Here, in the 1960s, Havel gained acclaim as a leader in the theater of the absurd in Czechoslovakia. Many of Havel's plays were highly critical of the totalitarian state's oppression of individual liberties.

During the PRAGUE SPRING, a 1968 reform movement led by Alexander Dubček, Havel played an important role. His outspoken support for human rights during the period earned him the antagonism of the communist government. When WARSAW PACT forces invaded Czechoslovakia in August 1968, Havel was prohibited from involvement in public affairs, and his plays were banned from performance or publication. In spite of this Havel continued to write, and his plays and books were published to acclaim in other countries.

Continuing his work for human rights, Havel was arrested and imprisoned a number of times. He was placed under house arrest from 1977 to 1979. Havel tirelessly took up his protest work again. In 1989 he participated in a commemoration of the 1969 death of Czech student Jan Palach and was again imprisoned for several months.

In the same year the Civic Forum, which Havel had helped establish, began a series of protests that overthrew the communist government in what has become known as the Velvet Revolution. In December a heavily Communist parliament chose Havel as the new interim president of Czechoslovakia. After national elections the new Federal Assembly reelected him in June 1990.

In 1993–98 Havel was elected president of the Czech Republic. During his 13 years as leader of postcommunist Czechoslovakia, Havel brought his country back into the mainstream of European politics. Havel negotiated the withdrawal of Soviet troops and forged friendships with the United States and European nations. The Czech Republic became a member of the Council of Europe, NATO, and the EUROPEAN UNION.

JEAN SHEPHERD HAMM

Hizbollah

Hizbollah (Party of God) is a political, military, and social Islamic Shi'i organization established in Lebanon in 1982. After the Israeli invasion of Lebanon that year, Shi'i Muslims—with the assistance of the Iranian Revolutionary Guard—formed Hizbollah to combat the Israeli occupation.

In the mid-1980s the Hizbollah guerrillas, known as the Islamic Resistance, executed a series of operations against Israeli and U.S. targets to force the United States and Israel to withdraw all military presence from Lebanon. After the end of the LEBANESE CIVIL WAR (1975–90), the group focused its attacks on the Israeli Defense Forces (IDF) and the South Lebanon Army (SLA). The IDF and the SLA occupied an 850-square-kilometer stretch in south Lebanon known as the "security zone." Hizbollah's main aim was to liberate this area. In 1996, the UNITED NATIONS (UN) sponsored the "April Accord," legitimizing Hizbollah as a resistance movement.

After the withdrawal of the IDF from southern Lebanon in May 2000, Hizbollah continued fighting the IDF around the disputed, Israeli-occupied Shaaba Farms area. Although the UN regarded Shaaba Farms as Syrian territory, Hizbollah considered the area part of Lebanon. Hizbollah also sought the release of Lebanese and Arab prisoners in Israel and followed a strategy of snatching IDF soldiers in Shaba Farms to exchange for prisoners.

In addition to its military wing, Hizbollah maintains a civilian arm, which runs hospitals, schools, orphanages, and one television station—Al-Manar. Hizbollah

held 14 seats in the 128-member Lebanese Parliament in 2005. Hizbollah remains active in Shi'i-dominated areas in Lebanon—mainly the Bekaa Valley, the southern suburbs of Beirut, and southern Lebanon—and fought tenaciously against the Israeli attack on it and the invasion of Lebanon in the summer of 2006.

RAMZI ABOU ZEINEDDINE

Ho Chi Minh

(1890–1969) *Vietnamese communist leader*

Ho Chi Minh's original name was Nguyen Ai Quoc. He fought against French rule over his country and afterward struggled against the United States in the VIETNAM WAR. Combining his ideology of communism with love of his country, Ho left an indelible mark in history.

He was born in the village of Kim Lien in Annam on May 19, 1890, and received education from his father, Nguyen Sinh Huy, as well as in the local school. He attended the National Academy school in Hue and then worked as a teacher in south Annam. After taking a course in navigation, Ho traveled to the West to find means for liberating Vietnam from French rule. He was appalled at the oppressive rule of the colonial masters and had a burning desire to free his country.

Ho went to Marseilles in 1911 and after three years traveled to London, where he worked in the kitchen of the Carlton Hotel. He was a member of the Overseas Workers Association. Ho was in the United States for some time and then went to Paris and drifted toward socialism and Marxism and became one of the founding members of the French Communist Party after its split with the Socialist Party in 1920. He called for Vietnamese independence, convinced that the road to it was through the doctrine of Marxism-Leninism.

Ho edited a journal, *Le Pariah* (The outcast), where he published articles on anticolonialism under the alias Nguyen Ai Quoc. He used many names before he took up the name of Ho Chi Minh in 1940. In 1922 he attended the fourth congress of the Comintern in Moscow, joined its Southeast Asia bureau, and took a leading part in the work of Krestintern (Peasant International). Playing a prominent role in the fifth congress as well, Ho advocated anticolonial revolution in Asia.

He was not happy with the French Communist Party, which only made halfhearted attempts to oppose colonialism. Ho began to contact the Vietnamese exiles in Guangzhou (Canton) in southern China.

After traveling to Brussels, Paris, and Bangkok, Ho went to Hong Kong and set up the Indochinese Communist Party (ICP) on February 3, 1930. Its agenda was to end French rule in Laos, Cambodia, and Vietnam; nationalize the economy; and institute land reforms. In neighboring Laos and Cambodia, communist parties such as the Pathet Lao and the Khmer Rouge were set up. Until its formal disbanding in February 1951, the ICP under Ho took the lead in Vietnam's struggle against French rule, where it organized party cells, trade unions, and peasants.

Ho was in Moscow when World War II in Europe broke out on September 1, 1939. The war provided an opportunity to free Vietnam after the German victory over France that allowed Japan, Germany's ally, to occupy Vietnam. In January 1941 Ho returned to Vietnam after 30 years in exile. He established the Vietnam Doc Lap Dong Minh Hoi (League for the Independence of Vietnam), or Vietminh. In the northern portion of Vietnam, liberated zones were set up near the Chinese border.

Ho was arrested by the Chinese government and returned in 1944 to Vietnam after spending two years in jail. In August 1945 Ho called for a revolution, and the Vietminh took control of Hanoi on August 17. When Japan surrendered on September 2, 1945, Ho immediately declared independence and formed the DEMOCRATIC REPUBLIC OF VIETNAM (DRV, or North Vietnam). He remained president of North Vietnam until his death in 1969.

A communist state, North Vietnam would be embroiled in COLD WAR politics, war with France, and the struggle for unification of both the Vietnams after the French defeat. Ho relentlessly followed his objective to establish a unified communist Vietnam. After the breakdown of an agreement Ho had signed in Paris, the First Indochina War began. The Vietminh resorted to guerrilla warfare and by 1950 were in complete control of the northern portion of Vietnam. The United States, following a containment strategy in the cold war, gave military help to the French. The French-sponsored South Vietnam had been established in July 1949, which the United States recognized in 1950. The Soviet Union and China recognized the DRV.

The collapse of French forces at the Battle of Dien Bien Phu on May 7, 1954, ended French colonial rule

in Indochina, and Vietnam was divided in two at the 17th parallel. Ho's dream of a unified Vietnam had not been realized, and he would fight against the United States in the Vietnam War. Although much of his country was devastated, Ho never wavered from the path toward his goal. Both Vietnams were unified in 1975, six years after Ho Chi Minh's death.

PATIT PABAN MISHRA

Hong Kong

The First Anglo-Chinese, or Opium, War ended in 1842 in total British victory and the cession by China of Hong Kong (several islands totaling 32 square miles on the tip of the Pearl River estuary) to Great Britain in the Treaty of Nanjing (Nanking). Hong Kong prospered and soon needed more room. Britain acquired the adjoining Kowloon Peninsula (opposite Victoria, the principal island of the colony) from China under the Treaty of Beijing (Peking) in 1860, and in 1898 it leased for 99 years additional land beyond Kowloon, called the New Territory. Britain would rule these 442 square miles of land (except for four years when it was under Japanese occupation between 1941 and 1945) until 1997.

Hong Kong was a free port and a hub of international trade in eastern Asia, and it provided refuge for Chinese revolutionaries led by Dr. Sun Yat-sen, father of the Chinese Republic, and those fleeing the civil wars of the early republic. After the establishment of the PEOPLE'S REPUBLIC OF CHINA (PRC) in 1949 and during the chaos of the Cultural Revolution (1966–76), millions of refugees found opportunities there and a haven from Communist-ruled China.

Because the continuation of a British colony on the China coast offended Chinese nationalism, China demanded Hong Kong's return. Negotiations between British prime minister MARGARET THATCHER and Chinese paramount leader DENG XIAOPING (Teng Hsiao-p'ing) culminated in an agreement in 1984 that would restore all the ceded and leased territories to China on

June 30, 1997. The agreement stipulated that Hong Kong would be ruled for 50 years as a Special Administrative Region (SAR) under a Basic Law that allowed it to maintain its own legislature, executive, and judiciary, currency, customs and police forces, flag, and passport. China would be responsible for its defense and foreign policy. Two other significant features of this agreement were:

(1) Hong Kong would retain its capitalist and free-enterprise system and economic and financial structures;

(2) The "One Country, Two Systems" arrangement would calm Hong Kong citizens' fears of communism and perhaps lure the Republic of China on Taiwan to become part of the PRC.

Britain made many reforms before 1997 that furthered the legal protection and self-governing rights of Hong Kong's citizens. Nevertheless, several hundreds of thousands of them emigrated to Western countries before 1997. China appointed a prominent local businessman, Tung Chee-hwa, first chief executive of Hong Kong. Tung navigated a difficult path between the aspirations of Hong Kong's residents for self-government and China's demand for a final say in all major decisions affecting the SAR.

China always prevailed. For example, in 1999 the Chinese National People's Congress overruled the Hong Kong Court of Final Appeals on the right of abode for children with one Hong Kong parent. Tung resigned in 2005, two years before his second term ended, and was replaced by Donald Tsang, a respected high-ranking civil servant who had risen to prominence under British rule. The PRC remained leery of demands for human rights and democracy by Hong Kong's citizens.

After the opening of China in 1979, a strong economic bond developed between Hong Kong and China. They became each other's foremost partners in investment and trade, initially limited to adjoining Guangdong (Kwangtung) province, and after 1992 spreading to other centers in China. While China needed Hong Kong's managerial skills and capital, Hong Kong benefited from China's deep, cheap labor pool. The SAR arrangement also applied to the former small Portuguese colony of Macao, but found no acceptance from the people or government of TAIWAN. In 2005 Hong Kong had an estimated population of 6.8 million people who enjoyed one of the highest standards of living in Asia.

JIU-HWA LO UPSHUR

Horn of Africa

Because of its strategic location near the Red Sea and the Arabian Peninsula, the Horn of Africa—currently composed of ETHIOPIA, Somalia, ERITREA, and Djibouti—witnessed some of the most intense and violent geopolitical maneuvering during the COLD WAR. Both the United States and the Soviet Union poured vast sums of money and weapons toward their allies in the region. The effects of the cold war in the region were often grave: The meddling of the superpowers disrupted the decolonization and modernization processes, intensified local rivalries, heightened resulting violence, and contributed to the deaths of many Africans.

Although the Horn of Africa had long had global strategic value because of its location near the Strait of Bab al-Mandab, where the Red Sea narrows before opening into the Indian Ocean, its significance grew tremendously after World War II. This was because of two factors: The growing importance of the Middle East and its vast petroleum resources, and the increasing intensity of the zero-sum competition between the United States and the Soviet Union for influence around the world.

The United States first established a presence in the Horn during World War II. In 1943 the United States constructed a radio communications station—called Radio Marina—near the town of Asmara in Eritrea, then under British control. The Horn and Radio Marina took on increasing importance as the contours of the oil-based postwar world and cold war rivalries took shape. The United States worried that losing influence in the Horn would destabilize the governments of allies in the region, interrupt shipping lanes, and possibly staunch the supply of Middle East oil to the West.

The strategic significance of Radio Marina changed the course of both Eritrean and Ethiopian history. During the middle decades of the 20th century, Ethiopia was ruled by Emperor Haile Selassie, an autocrat who had first gained power in 1917. In the name of mod-

ernizing Ethiopia, Selassie had dismantled the aristocracy and used the revenues gained from taxing coffee exports to centralize power. With aid from the United States Selassie continued to modernize Ethiopia and tighten his grip on power, which he would not yield until he was deposed in a coup in 1973.

During the early postwar years the United States viewed the mostly Christian Ethiopia as the most stable and influential state in the entire Horn. Before World War II, however, the small, mostly Muslim sliver of land along the Red Sea known as Eritrea had not been part of the Ethiopian state. Unlike Ethiopia it had been colonized by Italy in the early 20th century and was controlled by the British during World War II. Despite this, after the war Eritrea found an unfavorable environment for independence. Two studies by the U.S.-dominated UNITED NATIONS (UN) found that Eritrea lacked national consciousness as well as the basis for a stable economy. In 1953 the UN established a federation in which Eritrea and Ethiopia were conjoined. In May 1953, five months after the Ethiopia-Eritrea federation was established, Ethiopia and the United States signed a 25-year arms-for-bases accord. In 1962 Selassie dissolved the federal system and absorbed Eritrea into Ethiopia. The result was a 30-year war between Eritrean nationalists and Addis Ababa, which ended with an Eritrean victory in 1991 and the establishment of an independent Eritrea in 1993.

The 1953 deal became the foundation of a 25-year relationship between Washington and Selassie. Between 1953 and 1974 the United States gave more aid to Ethiopia than to any other country in sub-Saharan Africa. In 1958 the United States helped fund a modern air force; in 1960 it agreed to train and equip an army of 40,000; in 1966 it provided Ethiopia with a squadron of F-5 fighters. U.S. support strengthened Selassie's hand against the numerous opposition groups that criticized his increasingly autocratic and corrupt administration. It also helped Selassie meet his nation's top geopolitical interest, maintaining access to the Red Sea.

In the 1970s the cold war landscape in the Horn changed dramatically. Several factors came together to end Selassie's rule: a devastating famine mostly mishandled by the government, severe economic problems caused by the oil crisis, and Selassie's own senility. The United States was trying to improve relations with Arab nations in the Middle East, many of whom opposed Christian-led Ethiopia. In 1973 a group of junior and noncommissioned army officers overthrew Selassie. Swayed by the radical thinking of the intelligentsia, this group, known as the Dergue (which

means “committee”), pursued a Marxist agenda. After a transitory phase, in 1977 Mengistu Haile-Mariam, a hard-line radical, emerged as the leader of the new Ethiopia. Haile-Mariam nationalized many businesses and implemented a sweeping land reform program to undermine the power of the old ruling class, mercilessly repressed his political opponents, and cultivated closer ties with the Soviet Union.

In 1975, taking advantage of the instability and immaturity of the regime in Addis Ababa, the Somali government launched a military offensive against Ethiopia. A mostly pastoral society, Somalia had not fared well in a modern world organized by agricultural and industrial nation-states. In 1960, after the newly independent British Somaliland merged with Italian Somaliland to become the Somali Republic, many within the new nation hoped to reunite with Somalis across the border in Ethiopia. In 1969 a coup organized by Major General Mohamed Siad Barre replaced the parliamentary system with a Soviet-style democratic republic run by a Supreme Revolutionary Council. Fueled by a massive arms build-up funded by the Soviet Union, Siad Barre maintained the long-standing hope of bringing together all Somalis under one government. Siad Barre’s government spearheaded the mid-1970s war with Ethiopia, which ended when Somalia withdrew in 1978.

A reshuffling of cold war alliances accompanied internal political changes during the 1970s. In response to the radicalism of Mengistu Haile-Mariam, newly elected U.S. president JIMMY CARTER suspended U.S. aid to Ethiopia, hoping that the situation would soon change, but, offered Somalia “defensive” weapons and incorporated the country into the U.S. security network. U.S. assistance to Somalia in the 1980s totaled \$37 million. Similar political gymnastics occurred in Moscow. Although an ally of the Siad Barre government in Somalia, Moscow labeled its attack on Ethiopia aggression and began to support the new regime in Addis Ababa.

During the early 1990s, as the cold war ended, the Horn of Africa underwent yet another round of sweeping political changes. In Ethiopia severe economic problems and sustained rebellions in various parts of the country brought about the collapse of the Dergue. In May 1991, after a final push by the Tigray Peoples Liberation Front (TPLF), Ethiopia came into the hands of the Ethiopian People’s Revolutionary Democratic Front. Meanwhile, in Eritrea, the Eritrean Peoples Liberation Front (EPLF) seized control. Two years later they formalized independence with a referendum. The late 1980s found Somalia in a state of instability as numerous factions competed

for state control without any clear victor. After Siad Barre was toppled in 1991, Mogadishu fell into a state of civil war.

During the second half of the 20th century the people living in the Horn of Africa witnessed repeated changes in the political configuration ruling Ethiopia, Eritrea, and Somalia. The intense rivalry between the United States and the Soviet Union shaped these changes in profound ways. Such external influence sharpened divisions within the Horn and intensified the conflicts. International rivalries also combined with local dynamics—such as the long-standing imperial relationship of Ethiopia with its neighbors, the legacy of previous European colonialism in the area, and the personal and ideological agendas of local leaders such as Haile Salassie, Haile-Mariam, and Siad Barre—to shape the fate of this important region.

Hu Jintao (Hu Chin-t’ao)

(1942–) *Chinese politician*

Elected president of the PEOPLE’S REPUBLIC OF CHINA on March 15, 2003, Hu Jintao was born in December 1942 in Shanghai. He is the first Chinese leader whose career began after the communist victory of 1949.

Hu became active in the Communist Youth League while in high school and graduated with a degree in hydraulic engineering. He worked for a hydropower station in Gansu and then, from 1969 to 1974, worked as an engineer for Sinohydro Engineering Bureau. In 1974 Hu transferred to the construction department at Gansu. Within a year he earned a promotion to vice senior chief and met up with Song Ping, who would become his mentor. With Song’s help he took over as deputy director of Gansu’s Ministry of Construction in 1980. In 1981 Hu embarked on training at the Central Party School in Beijing. His political career advanced rapidly when DENG XIAOPING named him to the Politburo Standing Committee in 1992.

Hu Jintao pictured during a defense meeting held in Washington, D.C., when he was vice president of the People's Republic of China.

Hu's meteoric career rise continued with his appointment as governor of Guizhou (Kweichow) province in 1985. In 1988 he took over as party chief of the Tibet Autonomous Region at a time of great political turmoil. Hu ordered and led a political crackdown in Tibet in early 1989. During the 14th National Congress of the Communist Party of China (CPC), his name emerged as a potential future leader. In his 50s, he became the youngest member of the seven-person Politburo Standing Committee. In 1993 he became secretariat of the CPC Central Committee, and vice president of China in 1998.

Hu ascended to the office of party general secretary at the 16th National Congress of the Chinese Communist Party in 2002, at a time of immense change for China. Economically, politically, and socially, China faced difficult issues, including the 2008 Olympic Games in Beijing and the uncertainty of a rapidly globalizing economy.

MATTHEW H. WAHLERT

Hu Yaobang (Hu Yao-pang)

(1915–1989) *Chinese politician*

Hu Yaobang was born to a peasant family in Hunan Province and joined the Chinese Communist forces at age 14. He became a party member in 1933. He became a protégé of DENG XIAOPING after serving under him in the Chinese Red Army, although they had many differences of opinion on political and philosophical issues. After the formation of the PEOPLE'S REPUBLIC OF CHINA in 1949, Hu held many positions within the national government.

Hu became head of the Communist Party's Propaganda Department, then became general secretary in 1980 and chair in 1981. Hu attempted to create a more flexible, less dogmatic government that would seek practical and flexible solutions to particular problems rather than relying on rigid applications of Maoist ideology. He was also a strong champion of reform and democratization within the party and oversaw the rehabilitation of thousands of people, from party leaders to ordinary Chinese citizens, who had been unjustly exiled or imprisoned.

Hu was forced to resign in 1987 and compelled to sign a statement of "self-criticism," accepting responsibility for his failure to crack down on a series of student protests the previous year. He retained his seat on the Politburo, however, until he died of a heart attack two years later.

His death on April 15, 1989, sparked the Tiananmen Square Democracy Movement, which began with public protests and a hunger strike by thousands of students in Tiananmen Square in central Beijing. The protesters were brutally suppressed by the Chinese government, culminating in what is now termed the TIANANMEN SQUARE MASSACRE on June 4, 1989.

SARAH BOSLAUGH

Huk Rebellion

The Huk Rebellion was a leftist, rurally based armed rebellion in the Philippines, first against Japan and later against the newly independent, U.S.-supported Filipino government. Its main objective was independence and a more equitable society. The movement blossomed during World War II, dissipated in the mid-1950s, then returned during the late 1960s.

The Hukbalahap, or Huks, originated during World War II to liberate the Philippines from Japanese control. Hukbalahap is a contraction of the Tagalog phrase “Hukbo ng Bayan Laban sa Hapon,” which means “People’s Anti-Japanese Army.” (Japan had taken control of the archipelago nation by defeating U.S.-Filipino forces in 1941.)

The Huks found a base of support among the peasants of central Luzon, where approximately 80 percent of local farmers lived under oppressive debt. Led by the socialist Luis Taruc, they advanced an agenda of nationalism and agrarian reform. Taruc had worked as a peasant organizer in the Pampanga region during the 1930s. Throughout the war the Huks trained local farmers in political theory and fighting strategy.

By the end of the conflict the Huks could claim roughly 15,000 armed soldiers and many supporters. Obtaining their weapons mostly from retreating Filipino soldiers, old battlefields, and downed planes, they used their power to block Japanese food and military supplies and to interrupt the collection of taxes. Besides earning widespread popular support, the Huks developed communication networks and fighting tools that would serve them well in later years.

After U.S.-led forces recaptured Luzon from the Japanese in February 1945, the Huks looked forward to independence as promised by the Tydings-McDuffie Act of 1934. They formed a political party and won a number of elections in 1947, but were denied their rightful seats in parliament. In response they once again returned to the mountains and took up arms. In November 1948 the Huks renamed themselves “Hukbong Mapagpalaya ng Bayan,” or People’s Liberation Army.

The Huks came close to toppling the government in 1950. However, under the leadership of Ramon

Magsaysay, the Filipino government was able to turn the tide on the Huks. Magsaysay pursued a two-pronged approach, combining vigorous military action with successful efforts to reform the army. When Taruc surrendered in 1954, the movement ended. Magsaysay’s campaign became the model for U.S. efforts in Vietnam.

Rural discontent once again pushed the Huks to take up arms against the government in the late 1960s. In August 1969 however, President FERDINAND MARCOS, with the aid of the U.S. government, launched a military campaign that crushed them.

THOMAS ROBERTSON

Hundred Flowers Campaign in China (1956–1957)

Between 1949, when it came to power, and 1957, the Chinese Communist Party (CCP) completed land reform and eliminated domestic opposition. As a result of the First Five-Year Plan, it had collectivized agriculture and advanced industries. Chairman Mao Zedong (Mao Tse-tung) believed that most intellectuals supported his goals, but feared that there was resistance among the 100,000 or so “higher intellectuals” who had been Western trained. To arouse their enthusiasm Mao and Premier ZHOU ENLAI (Chou En-lai) decided in 1956 to embark on a campaign to “Let a hundred flowers bloom, let a hundred schools contend.” This term was borrowed from the Hundred Schools of Thought era of the late Zhou (Chou) dynasty, circa 500 B.C.E., when many philosophies developed. Its goal was to gain the intellectuals’ cooperation by permitting some debate and to allow them to question the competence of party cadres to direct science and technology. Cadres, too, were encouraged to criticize the system under which they worked.

The critics were encouraged by some liberalization in the Soviet Union after NIKITA KHRUSHCHEV began de-Stalinization in 1956. Some were inspired by the May Fourth Movement and Intellectual Revolution in

China in 1919. Many, however, were inspired by Marxist-Leninist ideals and thought it their duty to point out where the party had deviated. Most sought to express their criticism within the limits of the system, such as the writer-journalist and CCP member Liu Binyan (Liu Pin-yen), whose newspaper articles described the divergence between bureaucratic mismanagement and communist ideals. By 1957 university students, too, had become involved, led by those in National Beijing (Peking) University, whose predecessors had led the May Fourth Movement. They put up posters protesting the politicization of academic life on a Democracy Wall.

The leaders of the CCP were, however, unprepared for the extent and bitterness of the criticism by writers, scientists, and social scientists. In July 1957 Mao reversed himself, stating that intellectual freedom was only permissible if it strengthened socialism. He denounced those who had spoken out in the Hundred Flowers campaign as “rightists,” “counter-revolutionaries,” and “poisonous weeds.” Many senior CCP leaders had never endorsed the campaign and supported the crackdown. By the end of the year the anti-rightist campaign was in full swing, and more than 300,000 intellectuals had been condemned and sent to jail or labor camps, humiliated by public denunciations, and forced to make confessions. Their careers were ended. Countless bright students and young cadres never got a chance for a career as a result of their participation. Some were executed. The swing of the pendulum to severe repression was sharp and unrelenting. It reflected the insecurity of the CCP leaders and their fear of freedom.

JIU-HWA LO UPSHUR

Hungarian revolt (1956)

In 1956, Hungary was a nation of 9 million. Allied to Germany during World War II, it was occupied by Soviet troops in 1944–45. Hungarian Communists

began the process that by the late 1940s would give them control over the government. By that time, Hungary's government had undergone changes that ensured that the leadership strictly followed directives from the Soviet Union. The first Communist leader, from 1949 to the early 1950s, was the hard-liner Laszlo Rajk. He, in turn, was replaced on Moscow's orders by an equally harsh leader, Mátyás Rákosi.

While the imposition of Communist rule in Hungary was particularly repressive, it was applied with force throughout Eastern Europe into the early 1950s. At that time, a series of events took place that indicated restrictions from the Soviet Union and internal restrictions might be loosening. The first event was the death of Stalin in 1953. A slight thaw and liberalization followed in both the Soviet Union and the satellite states. There were changes in the internal policies in the East European states. Hard-liners died mysteriously, and in countries where rebellions against the Soviets had been put down, there seemed to be a certain degree of liberalization.

Closer to home, there seemed to be a change in Hungary's direction. Rákosi was pushed aside and a moderate, Imre Nagy, was brought in to take his place. Nagy left this position in 1955 and his predecessor, Rákosi, returned. In July 1956 NIKITA KHRUSHCHEV suggested to Rákosi that he should visit Moscow. Nagy was back in, but left the government after a very short while. This is when the troubles began.

On October 23, 1956, students demanded that Nagy return to the government. The students were fired on by the police, and on the following day martial law was declared. Soviet troops in Hungary put down the increasing number of riots and demonstrations. The violence escalated until October 28, when Nagy returned to the government, a cease-fire was signed, and the Soviet troops withdrew from Budapest.

In the next week Nagy and the newly formed government began making changes that alarmed not only hard-line Hungarian Communists but the leadership in Moscow as well. Political prisoners were released and the one-party system was ended.

Most serious, however, was the statement made that Hungary would begin withdrawing from the WAR-SAW PACT. Khrushchev ordered the Soviet army to commence Operation Whirlwind, a strong military response to the rebellion. Whirlwind commenced on November 4 and lasted until November 12. It was a Soviet-only operation, as the 120,000-man Hungarian army was not trusted politically. Most of the fighting took place in the streets of Budapest.

There was a political movement as well. János Kádár arrived in Budapest on November 7. He was a long-time Communist operative with a history of being in and out of power. When the revolt began, Kádár left Budapest and went to the Soviets, formally asking them to intervene in ending the disorder. Coming from a member of the Hungarian government, this request reinforced the impression of the legitimacy of the Soviet intervention.

In the end, the Soviet army saw 700 men killed and approximately 1,500 wounded. Three thousand Hungarians died, most in Budapest. Many thousands of Hungarians left the country, first to Austria, where refugee camps were set up, and then later to the United States, Canada, France, and Britain.

POLITICAL ORDER

As the Soviet Army put an end to the rebellion, Kádár, assisted by the Soviet ambassador Yuri Andropov, restored political order. Nagy was taken by the Soviets and executed in 1958. Kádár's rule was, at first, characterized by harshness and reprisals against anyone who participated.

In the following years, however, Kádár liberalized the regime, instituting what Khrushchev and others contemptuously referred to as "Goulash Communism." Kádár did not look for loyalty so much as conformity. Hungary, in relation with other members of the Warsaw Pact in the 1960s–1980s, was very liberal. By 1989 it had the most advanced economy in eastern Europe. Authors did not have to submit their works to a censor prior to publication, but those who crossed the unstat- ed line could still find themselves in trouble.

The United States government, which many considered to have instigated the rebellion through Radio Free Europe broadcasts, had decided that the potential for a nuclear war outweighed the benefits of assisting the Hungarians. From 1956 on, American diplomatic talk of rolling back communism was replaced with the phrase "containment."

Although Khrushchev succeeded in reestablishing the Communist government, his indecisiveness and actions prior to the rebellion damaged his credibility. It took the prodding of many within the Soviet government to make him act, and the fact that he had had to fly to Yugoslavia to get Tito's approval before intervening led many to question his leadership. In 1957 an attempt was made to replace him, which failed. His continued problems in foreign policy, however, finally led to his ouster in 1964.

By 1989 there were significant changes. In April the Hungarian government tore down the barbed wire

fences on its frontier with Austria. In June that same year, 200,000 Hungarians attended the reburial of Imre Nagy from a common grave to a place of honor.

ROBERT STACY

Hussein, Saddam

(1937–2006) *Iraqi leader*

Saddam Hussein was born in Al Awja near Tikrit, Iraq, to a poor family. He was raised mostly by an uncle and attended school in Baghdad. As a young man he joined the BA'ATH PARTY. After Hussein was involved in an abortive attempt to assassinate Abdul Karim Qassem, the leader of the 1958 IRAQ REVOLUTION, he fled to Egypt, where he studied law. When the Ba'ath seized power in 1963, he returned to Iraq but was soon imprisoned for another attempt to overthrow the regime. He escaped from prison in 1966 and was elected assistant general secretary of the Ba'ath.

Under the patronage of Ahmed Hassan al-Bakr, to whom he was related by blood, Hussein rose in power following the 1968 Ba'athist-led coup. In 1975 Hussein and Mohammad Reza Shah Pahlavi signed the Algiers Accord, which led to the Iran-Iraq Treaty of International Boundaries and Good Neighborliness, whereby the eastern portion of the Shatt al Arab was ceded to Iran. The agreements were a victory for Iran, and Hussein subsequently argued that Iraq had only signed under duress.

In 1979 Hussein ousted the ailing al-Bakr and assumed leadership of the Ba'ath Party and the nation. He emulated the Stalinist approach to government, establishing a totalitarian state based on a cult of personality. He ruthlessly purged possible dissidents within the Ba'ath Party, closely controlled the media and communications systems, and had the populace—especially the youth—indoctrinated in loyalty to himself. Although not a professional soldier, Hussein often appeared in military uniform, and he carried favor with the army. His regime was a secular one, and he closely monitored

A mural of former Iraqi leader and supreme military commander Saddam Hussein painted on a wall in rural Iraq.

Shi'i clerics and Islamist movements. He appointed relatives and close associates from Tikrit to key government positions and demanded absolute loyalty. However, his regime also improved education, healthcare services, and the status of women.

Hussein initiated the IRAN-IRAQ WAR (1980–88) ostensibly to recover the Shatt al Arab but also to contain the Shi'i-led IRANIAN REVOLUTION. The resulting war of attrition led to massive human, military, and economic losses for both sides. Neighboring Arab nations in the Gulf and Saudi Arabia, fearing the export of the Iranian revolution, assisted Iraq with loans and aid. From the Iraqi perspective the Arab regimes were paying for the war with money, and Iraq was paying with the blood of its soldiers. After the war Hussein downplayed his former secularism and adopted a more Islamic approach. He also launched major offensives, including the use of poison gas, against Kurdish forces in northern Iraq.

With the collapse of the Soviet Union, a major ally, Iraq became more isolated and found it increasingly difficult to obtain loans or assistance to rebuild its war-torn economy. Hussein also recognized the mounting hostility of his former Arab allies and resented the refusal of Kuwait to forgive wartime loans. He also accused Kuwait of illegally slant-drilling for petroleum into Iraq. In August 1990, he ordered the invasion of Kuwait.

Kuwait quickly fell to the Iraqi forces and was incorporated into Iraq. The international community, including the Arab world, condemned the invasion and after a month of massive aerial bombardment in the so-called FIRST GULF WAR, coalition forces, led by the United States, moved into Kuwait. The Iraqi army crumbled and hastily retreated. The coalition established no-fly zones that essentially created an autonomous Kurdish region in the north. However, Hussein crushed uprisings, especially among the large and disaffected Shi'i population in southern Iraq. Iraq managed to rebuild much of its infrastructure, and water and electricity services were restored to major cities.

In spite of a decade of international sanctions that resulted in the deaths of tens of thousands of mostly civilian Iraqis, Hussein clung to power. International diplomacy and arms inspections resulted in the demilitarization and destruction of most of the Iraqi military arsenal, but although severely weakened, the military remained intact. Hussein's sons Uday and Qusay became increasingly powerful during the 1990s, and their erratic behavior and violence terrorized those around them.

Saddam Hussein's regime was overthrown in the 2003 U.S.-led invasion of Iraq (the SECOND GULF WAR). As U.S. forces entered Baghdad many leaders of the regime, including Hussein and his sons, went into hiding. His sons were found and killed, and U.S. forces ultimately captured Hussein, who was then put on trial for crimes committed during his rule. During the protracted trial, Hussein adopted a belligerent tone, maintaining that he was still the legitimate ruler of Iraq, but he was found guilty and executed. A new Iraqi regime was established, and the Ba'ath Party was banned from holding positions in government or schools. The Iraqi army was also disbanded, but the nation continued to face tremendous economic and social problems as sectarian fighting broke out and massive opposition to foreign occupying forces erupted throughout much of the country.

India

India became an independent nation on August 15, 1947, with the end of British colonial rule. With a population of 1,095,351,995 (July 2006 estimate), India is the second most populous nation after China. It is the seventh-largest nation in land area in the world, covering 3,287,590 square kilometers. It borders Bangladesh, Bhutan, Myanmar, China, Nepal, and Pakistan. It presents considerable ethnic, linguistic, and religious diversity. India has 18 officially recognized languages and about 1,600 dialects. Hindus form 83.5 percent of the total population. After Indonesia, India has the second-largest number of Muslims, who constitute 13 percent of the population.

The partition of the British Empire into India and Pakistan created problems for both countries, a legacy that continues. India faced problems including the merger of princely states, an influx of refugees from Pakistan, communal riots, the division of assets, and war with Pakistan. The 562 independent princely states were given the choice to merge with either India or Pakistan. Vallabhbhai Patel (1875–1950), the home minister, was the architect of the merger of these states. Hyderabad and Junagarh were annexed when their rulers did not select the option of merging with India. War broke out over the state of Jammu and Kashmir, whose ruler, Maharaja Hari Singh (1895–1961), had signed the Instrument of Accession with the governor-general of India, Lord LOUIS MOUNTBATTEN (1900–79) on October 26, 1947. Despite opposition, Prime Minister

JAWAHARLAL NEHRU (1889–1964) took the matter to the UNITED NATIONS, which called for a cease-fire on August 13, 1948. It called for a plebiscite to determine the desire of the people of the state. The hostilities were over by December 31, 1948, and the demarcation line became the Line of Control (LOC) between the two countries. India also was getting ready to prepare a constitution, and B. R. Ambedkar (1891–1956) was appointed chairperson of the Drafting Committee on August 29, 1947. On November 26, 1949, the Constituent Assembly adopted the constitution. India became a sovereign democratic republic on January 26, 1950, when the constitution came into effect. Rajendra Prasad (1884–1963) became the first president of India, which adopted a parliamentary form of government.

In 1952 the first general elections were held, and the Indian National Congress (INC), under Nehru, formed the government. Nehru left an indelible mark on modern Indian history with his belief in a parliamentary form of democracy, a socialist pattern of society, secularism, equality before the law, and nonalignment. He believed that India could play a meaningful role at the time of COLD WAR. Imbued with a high dose of idealism, India pursued a dynamic policy in international politics. Acting as intermediary, India contributed to a lessening of tensions by hosting conferences like the Asian Relations Conference in 1947 and the Conference on Indonesia in 1949. The BANDUNG CONFERENCE (1955) was the high-water mark in Indian diplomacy. India became the chair of the peacekeeping machinery, the International Control Commission, after the end of

Indians bathe in the Ganges River, a sacred rite. India's history is mixed with religion, as in the partition into Pakistan and Bangladesh, and the continuing border conflicts that occur today.

the First Indochina War (1946–54). Nehru also played a pivotal role in establishing the Non-Aligned Movement in 1961. India had maintained friendly relations with China and signed a friendship treaty in 1954. But there were boundary disputes with China, which resulted in the Sino-Indian War of October 1962. India's humiliating defeat was a great shock to Nehru, and Indian foreign policy lost its momentum.

A planning commission was set up in 1950 headed by Nehru. Large sectors of the economy were modernized. The new policies aimed for an increase in agricultural productivity and industrialization within the framework of a socialist pattern of society. The government engaged itself in manufacturing, railways, aviation, electricity, communication, and infrastructural activities. The Indian Institutes of Technology, in tune with the scientific temperament of Nehru, research and educational institutions were established. Attempts also were made to change the social sector through legislation in parliament.

LAL BAHADUR SHASTRI (1904–66) became the next premier. The debacle for India in the Sino-Indian War of 1962 and the death of Nehru prompted Pakistan to wage another war. The Indian army crossed the border, bringing Lahore under Indian artillery fire. A cease-fire was called by the United Nations on September 22, 1965. The TASHKENT AGREEMENT was signed on January 10, 1966, and the cease-fire line (CFL) became the de facto border between the countries.

With the initiation of INDIRA GANDHI as prime minister, another important era began in contemporary Indian history. Daughter of Nehru, she was prime minister of India twice, between 1966 and 1977 and again from 1980 to 1984. She unleashed a program of *Garibi Hatao* (abolish poverty), supported the Indochinese people in the VIETNAM WAR, and moved closer to the Soviet Union with the signing of a 20-year treaty in August 1971. The liberation war in East Pakistan had started, and India was facing problems arising out of the exodus of 10 million refugees to provinces in eastern India. War became inevitable. On

December 3, the air force of Pakistan began preemptive air strikes on eight Indian airfields. The Pakistan army surrendered on December 16 in Dhaka. The Shimla Accords prevented outbreaks of any major conflict between the two countries until 1999.

Scientific development went forward at a tremendous speed with the launch of a satellite into space. In May 1974 India successfully carried out an underground nuclear explosion at Pokhran. The program of the GREEN REVOLUTION, which utilized new types of seeds, resulted in greater agricultural productivity and self-sufficiency in food production. There were demonstrations and strikes in protest against inflation and the poor standard of living. Indira Gandhi also was found guilty of violating election laws and she imposed a state of national emergency on June 26, 1975. Fundamental rights were suspended, censorship was imposed on the press, and opposition leaders were put behind bars. When Gandhi called for elections two years afterward, the Congress Party was badly trounced, and the combined opposition, the JANATA PARTY, came into power.

Morarji Desai (1896–1995), the first non-Congress prime minister of India, headed a coalition that lasted for two years. The mutual bickering among coalition partners and unsolved economic problems witnessed the return of Gandhi to power with a large majority in January 1980. The rise of militancy in the Punjab was crushed by the Indian security forces, but Gandhi paid with the loss of her life at the hands of her Sikh bodyguards on October 31, 1984. The violence that erupted against the Sikhs created another dark chapter in Indian history. RAJIV GANDHI (1944–91), the son of Indira Gandhi, was the next prime minister, and he took the country toward economic reforms and expansion of the telecommunication sector and information technology (IT).

India became involved in the ethnic conflict in Sri Lanka. The Indo–Sri Lankan Peace Accords were signed in 1987, and the Indian Peace Keeping Force (IPKF) was dispatched to Sri Lanka. Rajiv Gandhi was charged with corruption and the Congress lost the elections of November 1989. He was assassinated by a Sri Lankan suicide bomber in 1991.

The history of India since the last decade of the 20th century has been marked by the menace of terrorism, major economic reforms, tackling poverty, tremendous growth in IT, reservation to backward classes, and becoming a nuclear nation. The Janata Party ministry of Vishwanath Pratap Singh (1931–) lasted less than a year, but reactions to the affirmative

action by his government of reserving jobs and seats in educational institutions for lower classes divided India along caste lines. Politicians like Singh and others jettisoned merit-based awards for the quota system. Even after more than five decades of reservation, the various governments retained this system. The government of MANMOHAN SINGH (1932–) reserved seats for lower classes in some of the premier institutions of the country.

India shifted from its decade-old centralized planning model to a market-driven economy and joined the mainstream of globalization on an international level at the time of the Congress ministry of P. V. Narasimha Rao (1921–2004). Indian workers were sought after in IT fields globally. The educational infrastructure had developed so as to produce one of the world's largest concentrations of technical personnel.

There had been communal violence between Hindus and Muslims following the demolition of the Babri mosque in 1992 over the question of the birthplace of the Hindu god Ram in Ayodhya. Violence again erupted in 2002 after a train fire in Godhra, Gujarat, resulting in the massacre of Hindus and Muslims alike. Relations with Pakistan deteriorated over Kashmir, which has remained one of the major sources of conflict between the two countries. The conflict assumed dangerous proportions with the specter of a nuclear conflict after the Kargil War of 1999. Prime Minister Shri Vajpayee and the Pakistan premier Nawaz Sharif (1949–) signed the Lahore Declaration in February 1999 to solve the Kashmir problem. But the fourth war between the two countries began on May 8 and lasted for 73 days.

In spite of the odds, India maintained a democratic system. The country maintains steady economic growth and a reduction in the poverty level. India also is striving for a permanent seat on the UN Security Council.

Indochina War (First and Second)

The French colonization of Indochina—consisting of Vietnam, Laos, and Cambodia—was completed when Laos became a French protectorate in 1893. World War II opened new avenues for anticolonial movements in Southeast Asia. In the wake of the Japanese occupation of Indochina, the Vietnamese Communist leader HO CHI MINH (1890–1969) set up the Vietnam Doc Lap Dong Minh Hoi (League for the Independence of Vietnam), or Vietminh. He gave the call in August 1945 to liberate Vietnam. The Democratic Republic of Vietnam (DRV), or North Vietnam, was established on September 2, 1945, after the formal Japanese surrender on the same day. Laos and Cambodia did likewise. But the French were in no mood to give up Indochina. The Vietminh was ordered by the French to lay down arms, but they attacked the French troops in Hanoi on December 19, 1946. Thus the First Indochina War began. The Khmer Issarak, the Free Khmers of Son Ngoc Thanh (1907–76), were aligned with the Vietminh. In Laos, the Pathet Lao under Souphanouvong (1901–95) also fought against the French. The three communist factions formally formed the Viet-Khmer-Lao alliance on March 11, 1951.

In the COLD WAR period, the United States followed a containment strategy and helped France by giving it military aid. It amounted to 85 percent of the French Indochinese budget, and it provided up to 40 percent of the military budget of France during the First Indochina War by 1952. In March 1949 the southern part of Vietnam became an associate state within the French Union, along with Laos and Cambodia. By 1950 South Vietnam had been recognized by the United States and Great Britain.

The establishment of the PEOPLE'S REPUBLIC OF CHINA in 1949 was very favorable to the DRV. China recognized the government of Hanoi and supplied military matériel according to an agreement of April 1, 1950. The Soviet Union and its East European allies also recognized the DRV. The actual combatants in the First Indochina War were the Vietminh, the Pathet Lao, and the Khmer Issarak fighting against the French. The Vietminh resorted to guerrilla warfare. By 1950 the Vietminh had established complete control over the northern free zone, and the communists had strengthened their position in Laos and Cambodia.

The commander in chief of the Vietminh, VO NGUYEN GIAP (1911–), was an expert on modern guerrilla warfare and led the army of Vietnam from its inception. His strategy of dispersing French troops and capturing

weak outposts had paid off well. By 1952 half of the villages of the Red River Delta were under his control. The war was becoming unpopular in France, with a heavy loss of men from the French Expeditionary Corps and matériel. General Henri Navarre (1898–1983), the commander of the French forces, had captured the town of Dien Bien Phu, 16 kilometers from the Lao border, in November 1953. Navarre established a fortified camp and was convinced of a North Vietnamese attack so as to open the road to Laos. Giap did not make any assault and instead surrounded the camp with about 50,000 soldiers of the Vietnamese People's Army. The siege of Dien Bien Phu began on March 13, 1954, and 11,000 French troops were entrapped. The Vietminh artillery cut off the supply by air to the French troops.

FRENCH SURRENDER

On May 7 Dien Bien Phu fell, and the next day the Geneva Conference on Indochina began. The Geneva Conference divided Vietnam temporarily along the 17th parallel into two states, North and South Vietnam. Elections would be held two years afterward to decide unification of the two Vietnams. On November 7, 1953, Cambodia became independent, two days later; Norodom Sihanouk (1922–) returned to form a government. The conference recognized the Pathet Lao as a political party with control over the Phong Saly and Sam Neua Provinces.

Although there is no disagreement over the Second Indochina War ending in 1975, there is controversy about the year of its beginning. The years 1954, 1957, 1959, and 1960 have been named as the starting point. Most authorities agree on 1959, when the central committee of the Lao Dong Party in January called for armed struggle in South Vietnam to achieve the goal of unification. Gradually the whole of Indochina would be involved in war because the Geneva Conference of 1954 did not resolve the Vietnamese problem, and all the signatories violated its provisions. The United States provided military and economic assistance to NGO DINH DIEM (1901–63), the president of South Vietnam. Diem refused to hold the elections called for in the Geneva Conference to decide about unification.

Compared to the weakness of Diem's regime, Hanoi under Ho was politically stable and increased support to the communist factions in Laos, Cambodia, and South Vietnam. In September 1960 Le Duan (1908–86), the secretary of the Lao Dong Party, called for the overthrow of Diem's government to achieve the goal of unification. Le Duan had earlier led the independence struggle against France in the south. The Ho Chi Minh

Trail passing through Laos and Cambodia was the main supply route for North Vietnam to send convoys carrying supplies to the Vietcong in South Vietnam.

The U.S. commitment to South Vietnam strengthened during President JOHN F. KENNEDY's administration (1961–63), when the dispatch of American Green Beret “special advisers” to South Vietnam began. In August 1964 the USS *Maddox* was attacked by North Vietnamese patrol boats, creating the Gulf of Tonkin incident. Although the veracity of the incident was questioned afterward, the U.S. Congress gave full authority to President LYNDON B. JOHNSON to retaliate. The VIETNAM WAR escalated, with the survival of South Vietnam a primary consideration for Johnson, who had reaffirmed the policy of Kennedy.

The United States aimed at eliminating the Vietcong by bombing, chemical warfare, and counterinsurgency operations. Combat troops were sent in 1965, and their number reached 500,000 three years later. During the Tet (Vietnamese New Year) Offensive of January 1968, the communists attacked major cities of South Vietnam. Meanwhile, domestic dissent in the United States regarding the Vietnam War was gathering momentum.

The coup by General Lon Nol (1913–85) in Cambodia on March 18, 1970, added a new dimension to the Second Indochina War. On April 21 the United Indochinese Front was established. The summit conference three days afterward in southern China was attended by Pham Van Dong representing North Vietnam, Norodom Sihanouk as head of the National United Front of Cambodia, Souphanouvong from the Pathet Lao, and Nguyen Huu Tho as a representative of the provisional government of South Vietnam. The delegates called for unity in fighting against the United States.

The objectives of the 1971 U.S. attack on Laos were to cut the trail and prevent North Vietnam from attacking northern areas of South Vietnam. With 9,000 U.S. and 20,000 South Vietnamese troops, the campaign lasted for 45 days and resulted in a disastrous defeat of South Vietnam. The objective of cutting off the trail could not be achieved. The failure of South Vietnamese ground troops in spite of air support showed that it was not ready to take over a ground combat role from the United States.

The lessening of tension in the international arena had its impact on the Paris Peace Talks, which had started on January 23, 1969. The Sino-U.S. rapprochement, growing domestic opposition to the war, increasing success of communists in battlefields, the mounting cost of the war, and the loss of life of U.S. soldiers compelled the United States to disengage from

Vietnam. The Paris Peace Agreements on Vietnam were signed on January 27, 1973. It was only a matter of time before the communists would score the final victory. On April 30, 1975, communist forces entered the South Vietnamese capital of Saigon. The two Vietnams were reunited officially in January 1976. On December 2, 1975, the Lao People's Democratic Republic (LPDR) was formed. The government of Lon Nol in Cambodia was ousted by the Khmer Rouge on April 17, 1975. By 1975 the whole of Indochina was communist, and the Second Indochina War was over.
