Mexico, from La Reforma to the Porfiriato (1855–1876)

Coming on the heels of the devastating defeat in the MEXICAN-AMERICAN WAR, in 1855 the Revolution of Ayutla ousted the aging dictator JOSÉ ANTONIO LÓPEZ DE SANTA ANA for the last time, ushering in a period in Mexican history known as La Reforma, or the period of Liberal Reforms. Indelibly associated with the figure of BENITO JUÁREZ, the period saw a host of economic and political reforms inspired by Enlightenment notions of private property, secularism, free trade, and individual rights of citizenship.

These reforms in turn sparked widespread resistance on the part of the church, Indian communities, army officers, and other conservative elements. The result was a major civil war from 1858–61 (the War of the Reform). This massive civil war, ending just as the AMERICAN CIVIL WAR was beginning, led to the period of French intervention.

After the expulsion of the French came the period of the Restored Republic, which ended with the coming to power of the dictator PORFIRIO DÍAZ, the Porfiriato. The tumult and confusion of the period 1855–76 has been attributed to the depths of the differences separating various protagonists' visions of Mexico's past and future, compounded by the turmoil wrought by foreign invasion and occupation.

THE LIBERAL REFORMS (1855–1857)

In 1853 as discontent with the ruling conservative regime mounted, a group of prominent liberals plotted the overthrow of the dictator Santa Ana from exile in New Orleans. Their leaders included Melchor Ocampo, Santos Degollado, Guillermo Prieto, and Benito Juárez. Allying with dissident rebel chieftain Juan Alvarez, one of whose lieutenants Ignacio Comonfort had issued the Plan de Ayutla calling for the dictator's ouster, the exiles returned to Mexico, fomented a rebellion, and forced Santa Ana's resignation in August 1855.

One of the first acts of the new government bore the name of the new minister of justice: the Ley Juárez (Juárez Law). The law abolished the special privileges, or *fueros*, enjoyed by members of the military and the church, which since the early colonial period had

exempted soldiers and clerics from prosecution in civil and criminal courts. In a stroke, the law overturned more than 300 years of jealously guarded tradition among two of society's most powerful groups.

The Ley Juárez was quickly followed in June 1856 by the Ley Lerdo, brainchild of the new secretary of treasury Miguel Lerdo de Tejada, an even stronger anticlerical measure that essentially required the church to divest itself of most of its real property via public auction.

The Catholic Church was far and away the country's single largest landholding entity. The law also abolished the collectively owned land of Indian communities, compelling their sale at public auction. The law was intended to weaken the church, turn Indians in communities into individual citizens, advance its framers' vision of a more secular and modern state and society, and create an important new government revenue stream.

This frontal assault on the church's power and Indians' collective rights in land was followed by what is widely considered to represent the height of 19th-century Mexican liberalism: the 1857 Constitution. Incorporating the Juárez, Lerdo, and other reform laws, the Constitution created a unicameral legislature as a stronger check on the power of the executive. It also created Mexico's first bill of rights, which included freedom of the press, speech, assembly, and education. The new charter did not specify freedom of religion, but nor did it privilege the Catholic Church, creating de facto state toleration of non-Catholic sects. The church, the military, Indian communities, and other conservative elements bridled at this assault on centuries of tradition, a resistance that soon erupted into open civil war.

THE WAR OF THE REFORM (1858–1861)

Spearheaded by conservative general Félix Zuloaga and his Plan de Tacubaya, conservative elements rose in revolt. Zuloaga and his allies marched on Mexico City, dissolved Congress, arrested the chief justice of the Supreme Court, Juárez, and forced the resignation of President Comonfort. Juárez, the most charismatic and visionary of the liberal leaders and second in line to the presidency, escaped and established a provisional government in Querétaro, then in Veracruz, rallying liberals around him. For the next two years, a horrific civil war wracked the country.

By this time, liberalism had become a homegrown ideology embraced by Mexicans from diverse walks of life; lines of alliance and conflict were complex, shaped by ideology, personal allegiances, and many other factors. Atrocities mounted on both sides. The war devastated

the economy, destroying crops and livestock and bringing commerce to a standstill.

In July 1859 the liberal government in Veracruz enacted the Veracruz decrees, deepening earlier reforms by nationalizing church investment capital as well as its lands. Soon after the U.S. government bestowed diplomatic recognition on the liberal government in Veracruz. By 1860 the liberals had gained the upper hand, and on New Year's Day 1861, a liberal army, 25,000 strong, marched into Mexico City unopposed.

THE FRENCH INTERVENTION (1862–1867)

Endless troubles bedeviled the restored liberal regime under Juárez, elected president in March 1861. Most nettlesome, the economy was in ruins and the government bankrupt. A confluence of events overseas soon compounded the difficulties. The U.S. Civil War, begun in April 1861, meant that the United States was no longer able to enforce the MONROE DOCTRINE prohibiting European powers from intervening militarily in Latin America.

In France, the conservative, pro-Catholic regime of NAPOLEON III, influenced by large numbers of Mexican conservatives exiled in Paris, determined to seize the opportunity to fulfill a longtime national vision and make Mexico part of the expanding French overseas empire. Using the pretext of the Juárez government's failure to compensate its nationals for properties destroyed in the late war, in December 1861 Napoleon III dispatched some 2,000 troops with orders to occupy Veracruz, reinforced by 4,500 more early the next year.

On their march toward Mexico City on May 5, 1862, the invading French army met unexpectedly fierce resistance in the city of Puebla. The famous battle, later memorialized in the national holiday Cinco de Mayo (fifth of May), forced the French to retreat. It also catapulted into prominence General Porfirio Díaz, who played a key role in the fight. The battle of Puebla delayed the French invasion for nearly a year. With the arrival of some 30,000 reinforcements and after a two-month siege, the French finally took Puebla in May 1863 and occupied Mexico City in June. Napoleon III selected an obscure Austrian archduke to serve as the new emperor of Mexico—Ferdinand Maximilian Joseph, or Maximilian, who entered Mexico City with his royal entourage in June 1864. Weak, indecisive, and well-meaning, Maximilian floundered while armed resistance to the French occupation mounted. Soon after the end of the U.S. Civil War in April 1865, the United States demanded French withdrawal.

Meanwhile, the Mexican venture proved more costly than Napoleon had anticipated. Opting to cut his losses, in January 1866 Napoleon ordered his troops home. The hapless Maximilian, deluded into believing that the Mexican people embraced his reign, opted to stay. Forces under Juárez captured, tried, and, on June 19 in Querétaro, executed him before a firing squad.

THE RESTORED REPUBLIC (1867–1876)

The restored Juárez government soon embarked on an ambitious program to implement the provisions of the 1857 constitution. Slashing the size of the army, enacting measures to revivify the moribund mining economy, and encouraging foreign investment, it also intensified its efforts to secularize education and privatize church and Indian lands. Elected to a fourth term in 1872, Juárez died of a heart attack in July. His successor Miguel Lerdo de Tejada, elected in October, announced his intention to seek reelection in 1876. Rising in revolt on the principle of “no reelection,” Porfirio Díaz took the National Palace in the fall of 1876, dominating Mexican political life for the next 35 years.

Mexico, independence of

Mexico followed a path to independence that both resembled and differed from the path taken by other Latin American nations in the Age of Revolution. As in South America, the Napoleonic invasion of Iberia in 1807–08 generated a crisis of authority in New Spain, prompting the formation of a *cabildo abierto* (open city council) in Mexico City. Of the various plots and conspiracies hatched against the Spanish colonial government in the Basin of Mexico and beyond, one in particular would have major repercussions for the process of independence.

On September 16, 1810, the Creole priest MIGUEL HIDALGO issued his famous Grito de Dolores (Cry of Dolores), denouncing the bad government of the Spanish and demanding an end to the Spanish colonial rule of Mexico. The Hidalgo rebellion rapidly snowballed, reaching its height in late October 1810, when as many as 100,000 of the priest's impoverished mestizo and Indian followers stood on the outskirts of Mexico City, posing the threat of an all-out race and class war in the heart of Spain's overseas empire.

The Hidalgo rebellion thus played much the same role in New Spain as the HAITIAN REVOLUTION two decades earlier across the Caribbean. It could be seen as a cautionary tale for Creole elites who wished to achieve independence, but not at the cost of subverting the colony's rigid race-class hierarchy and thus risking their own privileges and power. After the Spanish defeated Hidalgo's insurgency, autonomist Creoles bided their time, most refusing to support the simmering rebellion waged in the regions surrounding the basin of Mexico by another parish priest, José María Morelos. The Morelos rebellion fizzled, despite the 1813 Congress of Chilpancingo (in the province of Guerrero) in which delegates formally declared independence.

In 1815 Spanish fortunes improved with their capture and execution of Morelos and, back in Europe, with the defeat of NAPOLEON I and restoration of King FERDINAND VII to the throne. For the next five years, until 1820, the independence movement in New Spain remained relatively quiescent, though the Spanish proved unable to snuff out the numerous guerrilla bands led by Vicente Guerrero, Guadalupe Victoria (both future presidents), and others.

In 1820 it was once again events in Spain that triggered a movement toward independence in the colony: the Riego Revolt against King Ferdinand, in which Colonel Rafael Riego led an uprising of army officers demanding that the king adhere to the provisions of the liberal 1812 Constitution, in effect establishing a constitutional monarchy. The king had little choice but to yield to Riego's demands. Back in New Spain, the conservative Creole elite felt threatened at this latest turn of events. One such conservative Creole, Colonel AGUSTÍN DE ITURBIDE abandoned his royalist allegiances and struck out for independence.

Iturbide sought an alliance with his erstwhile foe, the rebel leader Vicente Guerrero, and after a series of conferences the two agreed on a plan to make New Spain independent: the Plan de Iguala. It boasted 23 articles and three guarantees: that the new nation would

be ruled under a constitutional monarchy; that Roman Catholicism would be the state religion; and that equality would reign between Creoles (Spaniards born in New Spain) and *peninsulares* (Spaniards born in Spain). Under Iturbide's command, the so-called Army of the Three Guarantees (Ejército Trigarante) attracted allies from throughout the colony, and in September 1821 marched triumphantly into Mexico City, effectively making Mexico independent after almost exactly 300 years of colonial rule.

As elsewhere in Latin America, the devastation wrought during the independence period was immense. Mines were flooded, crops destroyed, livestock slaughtered, and commerce crippled. As many as half a million people died in the violence. The range and depth of the problems facing the new nation were immense. While the actual date of Mexican independence was thus September 28, 1821, Mexicans celebrate independence on September 15–16, in commemoration of Hidalgo's Grito de Dolores of 1810—a national memory that reveres the courage and sacrifice of the renegade parish priest and his followers while ignoring the legacy of the turncoat conservative-cum-emperor.

Mexico, New Spain revolts in

Indian revolts, rebellions, and insurrections played a key role in the colonial history of the Americas, shaping Indian-Spanish relations in lasting ways and helping to structure the principal features of colonial society. In New Spain, patterns of violent collective action by Indian communities varied widely in time and space. In Central and Southern Mexico, the core of the viceroyalty, colonial-era revolts were local, small-scale, and of relatively brief duration, at least until MIGUEL HIDALGO Y COSTILLA's Revolt of 1810, in the waning days of 300 years of colonial rule. In peripheral zones, outside the core areas of Indian settlement, north and south,

several large-scale rebellions erupted during the colonial period. These patterns were partly an expression of demographics, geography, and the Spanish Crown's geopolitical strategy of rule: those areas of densest Indian settlement yielded more labor, more wealth, and thus, were more worth controlling and defending. Areas with fewer people had less labor, less wealth, were costlier to control, and were thus less worth defending.

Because their power was far from absolute, the Spanish in effect gave up large parts of the Americas as unconquerable, launching occasional forays into those areas, but for the most part leaving their generally seminomadic inhabitants alone. It was on the boundary between these zones of Spaniards' unequivocal domination and generalized absence that the largest and most violent Indian rebellions erupted. Each of these collective outbursts can be traced to a unique confluence of long-term causes and short-term triggers; each followed a distinctive trajectory and each produced a different outcome. All can also be seen to have had certain features in common.

On the northern periphery, in 1680 a major rebellion broke out among the sedentary Pueblo Indians of the Upper Río Grande Valley, the result of decades of extreme exploitation, oppression, and violence at the hands of Spanish *encomenderos*, combined with epidemic diseases, drought, widespread hunger, and an intensification of religious persecution by Franciscan missionary friars. After 1692 when the Spanish managed to retake the area, the Pueblo Revolt (or Popé's Rebellion) led to a major restructuring of Spanish colonial rule throughout the region, resulting in decreased exactions in tribute and labor, greater religious autonomy, and an overall easing of the most oppressive features of colonial rule. In 1740 in the highland valleys of the Sonora desert, the Yaqui and Mayo Indians rose in rebellion against the Jesuit missionaries and the small number of Spanish miners and hacienda owners. The revolt, which lasted some six months and extended across large parts of the north, was rooted in intensified labor demands by secular Spaniards, grievances against specific Jesuit friars, and an erosion of the autonomy of individual communities, and was triggered by floods and famine. In the wake of the uprising, the mission and mining system on the northern frontier was considerably weakened, while the Yaqui exercised greater political, economic, and cultural autonomy for the rest of the colonial period and after.

On the southern periphery, the Tzeltal (Maya) Revolt in Chiapas in 1712 was similarly rooted in decades of excessive labor demands compounded by extreme political and religious persecution. This revolt was triggered

by the vision of a 13-year-old Tzeltal girl named María López, of the Virgin yearning for her own kingdom. Dissident Maya leaders and thousands of their Tzeltal, Tzotzil, and Chol-speaking followers embraced her vision; the revolt spread throughout large parts of Chiapas before being suppressed by the Spanish military. Subsequent decades saw a lessening of exactions and greater religious autonomy among Tzeltals and other Mayan-speaking peoples throughout the region. The Maya Insurrection of 1761 in Yucatán, led by Jacinto Canek, had similar long-term causes and was triggered by Canek's argument with a priest that escalated into a major, regionwide rebellion. Its aftermath saw a diminution of Spanish labor and tribute demands and a relaxation of friars' religious intolerance, along with a legacy of struggle that inspired later generations of rebels (most notably, the Caste War of Yucatán from 1848). All of the foregoing were major regional events that offered direct and sustained challenges to Spanish authority and power, and whose repercussions endured for decades.

In central and southern Mexico, episodes of violent collective action by Indian communities followed a different pattern. Large-scale regional rebellions were impossible here; the Spanish were simply too strong. Instead, Indian communities devised and pursued a host of strategies intended to more effectively endure the weight of colonial rule. From the mid-1500s on, Indians became adept at using the judicial system against specific infringements of their collective rights in land and labor, initiating litigation and pursuing legal cases through the courts that could and often did last for decades. Many Indian communities became renowned for their savvy and skill in using the courts.

Another way Indians in central and southern Mexico defended the rights of their communities was through violent collective action. Such violent outbursts did not assume the character of sustained frontal challenges to the overall structure of Spanish domination and Indian subordination. Instead they were localized, spontaneous, without identifiable leaders, of relatively brief duration, and focused on specific sets of grievances against individual agents of state and ecclesiastical authority. Targets most often included specific authorities such as priests, municipal officials, hacienda overseers, land surveyors, census takers, tax collectors, and government buildings like jails and administrative offices. Women often played key roles in these unplanned outbursts. Weapons were makeshift, consisting of diggings sticks, hoes, clubs, slings, rocks, and powdered chili peppers used to temporarily blind and disable the targets of the community's wrath. Few such revolts lasted more than

a day or two. Deaths were usually few. The authorities generally responded to such spontaneous outbursts with “a calculated blend of punishment and mercy,” and the outcome commonly led to redress of the community’s specific grievances.

The Mexican historian Agustín Cue Cánovas has identified more than 100 conspiracies and rebellions during the 300 years of Spanish colonial rule in New Spain, while U.S. historian William B. Taylor has unearthed evidence for more than 140 episodes of communities in revolt against Spanish rule. Scholars are just beginning to unravel the complexity of these episodes of rural and urban unrest and the variety of ways in which violent collective action by Indian communities shaped the overall structure of colonial society and of Spanish-Indian relations in the heartland of Spain’s American empire.

MICHAEL J. SCHROEDER

Midhat Pasha

(1822–1884) Ottoman reformer

Midhat Pasha entered the Ottoman government service as a young man and rose quickly within the ranks. He worked in Syria and then in Istanbul before being appointed governor (*vali*) over Bulgaria in 1857. Midhat quickly restored order to the rebellious province and instituted a wide-ranging series of modernization projects. While he supported modernization of the empire, Midhat opposed local nationalist sentiments and repressed Bulgarian nationalism. His anti-pan-Slavic stance incurred the enmity of Russia and owing to Russian pressure he was withdrawn from Bulgaria and brought back to Istanbul.

Midhat served as provincial governor over Baghdad from 1869–72. As governor of Baghdad, he in effect ruled all of Iraq. He extended Ottoman influence into the Arabia Peninsula and, as in Bulgaria, worked

to modernize the territory. He modernized Baghdad with the construction of new roads and a bridge across the Tigris River, a bank, and textile factory. He also improved shipping lanes for the Shatt al-Arab leading into the Persian Gulf and enlarged irrigation projects to increase productivity and income. Midhat also efficiently applied Ottoman Land Law to regularize and register land titles and the collection of taxes.

Midhat served as Grand Vizier from 1876–77 and was accorded the title of pasha. However, Midhat’s efficiency, financial acuity, and honesty threatened many increasingly corrupt officials who frequently intrigued against him. On the other hand, the pro-reform Young Ottomans called Midhat “the ideal statesman.”

Midhat supported the programs of the Young Ottomans who wanted the implementation of a constitutional monarchy over the Ottoman Empire. Midhat and the Young Ottomans sought to halt the further erosion of Ottoman financial independence to European creditors and to prevent national uprisings in the Balkans.

In 1876, the Young Ottomans and Midhat were instrumental in ousting Sultan Abd al-Aziz, who was subsequently assassinated, and placing Murad V on the throne. Murad V only served a few months before mental illness forced his removal. His brother ABDUL HAMID II became the new sultan after promising to implement the constitution written by Midhat and to support reforms. The first Ottoman parliament opened in 1877, but Abdul Hamid II used the impending war with Russia as the excuse to suspend the constitution and parliament within a year. Midhat was ousted from office on charges of complicity with the assassination of Abd al-Aziz. To escape further persecution, Midhat then toured Europe and observed the House of Commons in session in London. He was called back to serve as governor of Syria, but within months the sultan reconsidered and brought him back to be tried with others for the killing of Abd al-Aziz. In a highly biased trial, Midhat was sentenced to death, but following pressure from the British his sentence was commuted to banishment. He was exiled to Taif, Arabia, where an agent of the sultan probably was responsible for his death by strangulation in 1884.

JANICE J. TERRY

Mississippi River and New Orleans

North America's most important river, contested by four nations and many native tribes, has played an essential role in U.S. history. Flowing 2,301 miles from northern Minnesota's Lake Itasca to the Gulf of Mexico below New Orleans, the Mississippi was a key AMERICAN CIVIL WAR arena. Until 1865, Cairo, Illinois, at the confluence of the Ohio and Mississippi Rivers, was the boundary between freedom and slavery. Reshaped over hundreds of years by settlers, engineers, and business interests, the Father of Waters has been and remains an important commercial artery and an ecological battlefield.

The Mississippi even has its own bard—Mark Twain (penname of Samuel L. Clemens) who grew up on the river's banks, plied its waters, and wrote two

books in which the Mississippi is the central character. His 1883 *Life on the Mississippi* is a nonfictional account; 1884's *Huckleberry Finn* uses a fictional journey down the mighty north-south river to explore slavery and freedom in pre-Civil War America.

By 1750 France was the major player in the Mississippi basin, obtaining furs from local Indian tribes and establishing military fortifications and trading posts along the upper Mississippi. New Orleans, founded in 1718, became the major port and capital of France's sprawling Louisiana colony.

The SEVEN YEARS'/FRENCH AND INDIAN WARS demolished France's imperial dreams for the Mississippi and the New World generally. In 1755 thousands of French colonists known as ACADIANS were deported by British victors from Nova Scotia to Louisiana delta lands. Later known as Cajuns, they found a living fishing, trapping,

In 1815 two weeks after a treaty ended the War of 1812, Andrew Jackson, assisted by French pirate and slave trader Jean Lafitte, won a major victory over British forces at New Orleans, permanently securing this port for the United States.

and farming along the lower Mississippi. A deal with Spain before the war's end in 1763 allowed France to maintain its fur trade. Spain, at least nominally, held all lands west of the Mississippi and the vital port of New Orleans from 1762 to 1800.

Access to the Mississippi was an issue that aggravated relations between Britain and its North American colonies. The treaty ending the AMERICAN REVOLUTION promised river rights to the new United States, yet French and British fur traders and their Indian allies continued to dominate the region. In 1802 President THOMAS JEFFERSON learned that Spain had secretly sold Louisiana back to French emperor NAPOLEON I. A worried Jefferson asked to buy New Orleans. Napoleon instead agreed to sell his entire holding for about 18 dollars per square mile. The LOUISIANA PURCHASE doubled the size of the United States.

The LEWIS AND CLARK EXPEDITION and concurrent explorations along the Mississippi by U.S. Army lieutenant Zebulon Pike in 1805 began to reveal just what the United States had acquired. The Mississippi remained a wild frontier. Soon after killing ALEXANDER HAMILTON in an 1804 duel, former vice president Aaron Burr rode a keelboat down to New Orleans, which he hoped would become the seat of his own American empire. Burr was warmly welcomed by New Orleans's French population but his plans were undone by a co-conspirator. In 1815, two weeks after a treaty ended the WAR OF 1812, ANDREW JACKSON, assisted by French pirate and slave trader Jean Lafitte, won a major victory over British forces at New Orleans, permanently securing this port for the United States.

By this time, the Mississippi had become a busy waterway for travel and commerce of every kind. Although navigable for its entire length, the river was treacherous, especially in seasons of drought and flood. Many different kinds of vessels were tried on the river—canoes, rafts, pirogues, pole boats, and keelboats, to name a few. In 1811 the steamboat *New Orleans*, engineered by Robert Fulton, took four months to travel from Pittsburgh to New Orleans. Within a decade, boats could reliably sail upstream.

The U.S. Army Corps of Engineers, established in 1802, played (and continues to play) a major role on the Mississippi and its watershed. In 1824 Congress authorized the Corps to manage and improve the river's navigability and safety. Locks and dams were installed; later, levees to prevent flooding were constructed almost continuously from New Orleans to Dubuque, Iowa. Other projects that began in the 19th century but did not reach their zenith until the 20th

included dredging, channelization, and construction of auxiliary canals.

Before railroads in the 1850s began to cut into Mississippi shipping, lead ore, lumber, and agricultural products, mostly heading to St. Louis or New Orleans for processing or transshipment, kept "river rats" busy until winter ice buildups curtailed travel. Galena, Illinois, became an important metropolis, supplying 90 percent of the nation's lead ore. Logging in Minnesota and Wisconsin, spurred by an almost insatiable need for lumber, especially on the treeless Great Plains, filled the Mississippi with huge logs heading to sawmills. Logging increased erosion and soil loss; logs snagged underwater became a major threat to river shipping.

The Mississippi's north-south trade suffered a huge setback when war broke out in 1861. It was apparent to Union leaders that controlling the Mississippi could cripple the Confederacy, making cotton shipments to Europe almost impossible. The "River War" of 1862 made heroes of officers ULYSSES S. GRANT and David G. Farragut. Using ironclad gunboats adapted for river conditions, Union naval units occupied New Orleans in April. In June Union forces captured Memphis. Besieged at Vicksburg that summer, Confederates, although lacking sufficient weaponry, held off the attack and maintained control of about 200 miles on the Mississippi.

Today's Mississippi is still crowded with boats and barges, but its commercial importance continued to decline after the Civil War. New Orleans's importance was eclipsed by New York's Harbor. St. Louis lost out to Chicago, the nation's railroad hub. River tourism increased on paddlewheel excursion boats appealing to gamblers and a growing leisure class. By 1882 Mark Twain, nostalgically traveling his river from New Orleans to St. Paul, found the formerly bustling river eerily quiet. The nation's traditional watery heart, now mostly driven and flown over, makes headlines only when the Mississippi experiences devastating floods.

Mitre, Bartolomé

(1821–1906) *Argentine statesman*

Bartolomé Mitre was one of the Argentine statesmen who dominated his country's political scene following the overthrow of JUAN MANUEL ORTIZ DE ROSAS in 1852. The son of Ambrosio Mitre and Josefa Martinez, he grew up in Buenos Aires where the political life was dominated by Rosas. Disliking the dictatorship that Rosas had established, when Mitre was 26 he began his 15-year exile, leaving Argentina for Uruguay where he took part in the defense of Montevideo against the Argentine dictator. He then went to Bolivia and Peru, returning to Uruguay, where in 1852 he led their forces in the Battle of Caseros, which led to the overthrow and flight of Rosas.

In 1853 Buenos Aires province refused to accept the new Argentine constitution which massively diminished its role in the nation's politics, and Mitre was called upon to lead the breakaway province. Eight years later he was governor and led the Unitarists at the Battle of Pavon on September 17, 1861, when the Federalists, who wanted regional autonomy, were decisively defeated. Although few realized it at the time, it was the end of the Federalist cause.

Mitre, who became president on April 12, 1862, moved the capital back to Buenos Aires and spent the next two years ensuring that the Federalists were politically marginalized. He extended postal and telegraph lines throughout the country with stamps being issued for the whole of Argentina rather than separate regional issues as had previously been the case. Mitre also ended most local taxes, consolidated provincial and regional debt, and established a nationwide system of courts. Immediately, the power of the Federalists had been diminished.

In December 1864 war with Paraguay broke out when the Paraguayan president, Francisco Antonio López, still believing that the Federalists would prevent Argentina playing an important role in the impending conflict, attacked the Brazilian Matto Grosso region and then marched into Argentina and captured the city of Corrientes. However, López had miscalculated, and Mitre took charge of the Argentine forces and became a passionate advocate of continued Argentine involvement, allying his country with Brazil and the new government of Uruguay. This resulted in the war becoming known as the War of the TRIPLE ALLIANCE. One of Mitre's sons, Jorge, was killed in that war.

The war dominated Argentine affairs, and Mitre used it to achieve greater national unity. It also seems

certain that the war was particularly beneficial to Mitre's supporters, some of whom amassed fortunes in war contracts. Mitre's political party became known as the Purveyors' Party, as the prices for beef, leather, horses to serve as cavalry mounts, fodder, and military supplies soared. The main Federalist leader, Urquiza, was also placated by massive contracts for supplying the Argentine and the Brazilian military.

In 1868, when his term as president came to an end, Paraguay's defeat was inevitable, even if the final victory was still two years away. The defeat of the Paraguayan forces at the Battles of Tuyuti in May 1866 and Curupayty in September, as well as the subsequent capture of the Paraguayan fort of Humaita, failed to gain Mitre much popularity in Buenos Aires. In January 1868 Mitre stepped down as commander in chief of the Allied forces, and the post went to the Brazilian marquis (later duke) of Caxias. In the 1868 presidential elections, the Argentine population was clearly weary of the conflict and refused to support Mitre's handpicked successor-designate in the presidential elections.

However, Mitre was elected to the senate and in 1874 ran again for the presidency. On losing, Mitre tried to lead a rebellion, which quickly petered out. In 1891 he again contested the presidency, but withdrew before the final election. In his old age, Mitre was regularly seen around Buenos Aires, and when he died on January 19, 1906, he was acclaimed as one of the great men in Argentine politics. The newspaper *La Nacion* ran a full-page obituary on the day after he died and another on the following day. He was buried in Recoleta Cemetery, Buenos Aires. He was featured on a 1935 postage stamp and again in 2006 to commemorate the 100th anniversary of his death.

As well as being a politician, Mitre was also a great scholar. He translated Dante's *Divine Comedy* into Spanish and was the author of many books. He wrote poetry and detailed biographies of both independence heroes Manuel Belgrano and San Martín. An avid reader and book collector, a contemporary painting of his bedroom by Pierre Calmettes shows many books open around the room. Mitre's library of 20,000 books has been augmented since his death by an additional 50,000 volumes, making it one of the most important in Argentina. Known as the America Library, the vast majority of the books are concerned with the Americas, or printed in the Americas. It is open to the public and contains many rare works in Spanish and English, as well as a map collection, rows of bound periodicals, and a coin collection. In addi-

tion, there is a historical archive of 48,000 documents covering 19th-century Argentine history.

The library is housed in Mitre's old house, now the Mitre Museum, where the room in which Mitre met Urquiza and Derqui on the ground floor has been recreated. On the upper floor, Mitre's bedroom, bathroom, and adjoining study have all been faithfully preserved with a photograph of the former president's wife above the bed, flanked by those of his sons Jorge and Adolfo. Entry to the museum is two pesos—the two peso note having Mitre on one side, and his residence—the museum—on the other. One of Mitre's sons, Emilio became an engineer and politician, another son, Bartolomé Mitre y Vedia, was a well-known writer.

JUSTIN CORFIELD

Monroe Doctrine

In 1823 in response to the long-anticipated successes of the Spanish-American independence movements, U.S. president James Monroe announced a hemispheric policy that later came to be known as the Monroe Doctrine. Penned principally by secretary of state and future president JOHN QUINCY ADAMS, the doctrine forbade subsequent European colonization in the Western Hemisphere. “The American continents,” Monroe proclaimed, “are henceforth not to be considered as subjects for future colonization by any European powers.”

The doctrine further implied that the United States would oppose strategic or political alliances between European powers and Latin American nations: “We could not view any interposition for the purpose of oppressing [the newly independent nations], or controlling in any other manner their destiny, by any European power in any other light than as a manifestation of an unfriendly disposition toward the United States.” An expression of an emergent muscular foreign policy following the victorious WAR OF 1812 with Great Britain, the doctrine applied to all European powers but

was aimed specifically at Britain, which had designs on Cuba, and at France, one of Spain's most important allies in the early 1820s.

The doctrine had important precedent in the thinking of U.S. policy makers. In 1808 THOMAS JEFFERSON, pondering the probable emergence of new nations in the wake of Spain's collapse, wrote that “We consider [the new Latin American nations'] interests and ours as the same, and that the object of both must be to exclude all European influence from this hemisphere.” The United States provided substantial material aid to the Latin American revolutionaries, despite a formal proclamation of neutrality in 1815.

The year before Monroe announced his hemispheric doctrine, the United States extended diplomatic recognition to the newly independent Latin American nation-states of La Plata (later Argentina), Chile, Colombia, and Mexico, and the not-yet-independent nation of Peru.

The first open defiance of the doctrine came in the early and mid 1860s. With the United States embroiled in its own CIVIL WAR, France under NAPOLEON III launched an invasion and occupation of Mexico. After the defeat of the Confederacy in April 1865, the administration of President Andrew Johnson demanded French withdrawal, and Napoleon soon complied. The Caribbean presented a more nettlesome situation, with every island a European colony (save Hispaniola, divided between Haiti and the Dominican Republic). In the 1880s and 1890s, as U.S. aspirations for hemispheric domination grew, policymakers sought not only to keep European powers out but to establish a positive U.S. right to intervene if warranted. This came in 1904, with President Theodore Roosevelt's corollary to the Monroe Doctrine.

While the 1823 Monroe Doctrine did not explicitly proclaim U.S. domination of the hemisphere or include any U.S. right to intervene militarily in Latin American affairs, many Latin Americans denounced the doctrine as a fundamental violation of the principle of national sovereignty. A vast polemical literature from south of the U.S. border decries the Monroe Doctrine as a signal expression of Yankee imperialism.

MICHAEL J. SCHROEDER

Mormonism

The Church of Jesus Christ of Latter-day Saints was established in 1830, shortly after *The Book of Mormon: Another Testament of Jesus Christ* was published. The church was “restored” by the prophet Joseph Smith. At 14, Joseph, born in Vermont but living in Palmyra, New York, claimed to have had a vision, in which God informed him of his mission to restore the true religion.

At 17, Joseph reported that an angel named Moroni directed him to a hidden manuscript preserved on golden plates and written in an unknown language. Smith’s translation narrates the story of how Middle Eastern exiles, associated with the so-called Ten Lost Tribes of Israel, came to America in 600 B.C.E., how the resurrected Jesus later had preached to these now-native American tribes, and how one tribe of Christian converts, the Nephites, were reduced by wars to only Mormon and his son, Moroni.

Before their deaths, they buried this narration in 384 C.E., to be recovered in a “latter day” when their spiritual descendants would restore the true faith. Smith’s community, identifying itself as the restoration of this ancient faith (authentic Christianity), was forced by harassment to leave New York and move first to Kirtland, Ohio (1832), and then to Independence, Missouri (1838).

They eventually settled in Illinois on the Mississippi and built the city of Nauvoo, which would become

in the early 1840s the largest city in the state. Smith, who began taking many other wives in addition to his first wife Emma Hale, advanced the general practice of polygamy as an ordinance of the church.

Despite his enormous popularity and prosperity, such that he was able to mount a viable candidacy for the U.S. presidency, Smith’s practice of polygamy led disillusioned ex-members to establish a newspaper designed to expose him as a fraud and suppress his political ambitions. Eventually, a riot led to the burning of the newspaper office, and Joseph and his brother, Hyrum, were arrested. While detained in a Carthage jail, a lynch mob murdered both men.

After Smith’s death, the church split. The largest group, following their new leader Brigham Young, migrated in 1847 to Salt Lake City, Utah. This group withdrew support for polygamy in 1890. The second group, now known as the Community of Christ (Reorganized Church of Jesus Christ of Latter Day Saints), followed Smith’s wife Emma back to its current home in Independence, Missouri. They rejected polygamy immediately and have attempted to maintain a theology closer to mainstream Christian thought.

The Book of Mormon, read by literary critics as an early American romance based on Bible stories, is for the Utah church merely the first of many revelations, which early on included Smith’s *Doctrine and Covenants* and *The Pearl of Great Price*. The doctrines of progressive revelation (in which leaders are divinely inspired with teachings for a developing community)

Mormon pioneers on the trail in 1847: Following the death of Joseph Smith, many in the Mormon Church headed west to Salt Lake City, Utah. The second group, the Community of Christ, followed Smith’s wife Emma back to Independence, Missouri.

and progressive spirituality (in which believers are destined to become divine beings) form the framework of Mormon theology.

However, the most contentious point with critics is the secrecy of Mormon Temple practices. Clearly, church membership has not been hindered by such clandestine behavior. In 1947, the community reached the million mark and today it has risen to over 12 million. By the beginning of the 21st century, this aggressive missionary church could boast 200 million members worldwide.

RICK M. ROGERS

Mughal dynasty (decline and fall)

Descended from both Genghis Khan and Tamerlane, the Mughal dynasty originated in Central Asia. It became the strongest dynasty to rule India, lasting from 1526 to 1858. The Mughal dynasty reached its height under Akbar, who encouraged reconciliation among his subjects by encouraging intermarriage between Hindus and Muslims and appointed competent administrators. His empire stretched from the Himalayas to the Hindu Kush and included present-day India, Bangladesh, Afghanistan, and Pakistan. The Mughal Empire passed its zenith after Akbar.

Shah Jahan, although famous for the construction of the Taj Mahal, was an unsuccessful military leader. He launched three failed campaigns against the ruler of southern Afghanistan, was defeated in his attempt to regain the ancient Mughal patrimony in Central Asia, was repulsed four times in his efforts to extend rule from northern to southern Deccan, and lost an effort to oust the Portuguese from its coast. The cumulative effect of these campaigns was the imposition of higher taxes on the peasantry, whose loyalty to the Mughals began to diminish. This became more evident under Aurangzeb. The fortunes of both the empire and the dynasty decreased in the last half of Aurangzeb's reign. Overwhelmingly ambitious, he spent the last 28 years of his

reign campaigning in the south to conquer and unite the subcontinent from the south tip to the northern Himalayas and Hindu Kush. Although initially successful, many areas quickly revolted.

Aurangzeb's wars took a toll on the empire's resources, which became strained. This led to peasant resistance and flight, thereby increasing the burden on the remaining peasants. Aurangzeb's strict Islam and intolerance toward other religions also roused opposition. He destroyed Hindu temples and schools, dismissed Hindu officials from government, and reimposed the tax on non-Muslims. These policies led to the rise of the greatest military opponents of the Mughals—the Marathas and the Sikhs. Under the leadership of Shivaji, the Marathas in the northwest Deccan carried out resistance and by 1750 controlled large sections of central and northern India. The Sikhs, originally a peaceful sect that attempted to synthesize Hindu and Muslim beliefs, became militarized by persecution and by 1750 controlled much of the Punjab in northeast India. The Hindu Rajputs in northcentral India, initially won over by Akbar's policies, became hostile and began to attack the Mughals. Even within the Delhi area, Hindu peasants called the Jats became radicalized and also revolted.

After Aurangzeb's death in 1707, most of the 10 Mughal emperors who followed him between 1707 and 1857 were little more than figureheads for one of the contending parties for power in India. Court feuds and civil wars also led to disintegration as Muslim dynasties arose in south Deccan, the eastern province of Oudh, and northeast Bengal between 1704 and 1720. One Mughal emperor, Muhammad Shah, attempted to repair some of the damage by placating the Hindus but with little success, partly due to his own indolence and foreign invasions. Mughal power never recovered from the invasion of the Persian ruler Nadir Shah, who sacked Delhi in 1739, carried away the fabled peacock throne, symbol of the dynasty, and plundered northern India. Even more devastating was the invasion of Ahmed Khan, ruler of eastern Persia, Afghanistan, Uzbekistan, and portions of northern India. He sacked Delhi, defeating the Marathas and Rajputs, but his empire disintegrated after his death in 1772.

Mughal power also suffered with the rise of European merchants, especially the British and French who replaced the earlier Portuguese and Dutch. In 1691 the BRITISH EAST INDIA COMPANY received a charter from the Mughal government not only to trade but to collect taxes in what is now Calcutta. In time, it became progressively more involved in politics; by 1765, the company controlled all Bengal, the richest province of

India. By 1800 Britain had ousted the French from India. By 1818 the company either directly or indirectly ruled most of India. By the 19th century, Mughal emperors had become mere pensioners of the company. The last Mughal emperor was deposed and exiled to Burma after the INDIAN MUTINY in 1857.

There were many causes for the decline and fall of the Mughal dynasty. First, the lack of tolerance shown to the non-Islamic majority by later Mughal emperors; second, the imperial overreach by emperors in terms of military expeditions which strained resources after 1680; third, the diversity of India's ethnic and religious groups as well as strong traditions of regionalism which served to weaken the center; and fourth, the superior technological and financial expertise which the West, including England, enjoyed after 1500 gave it an advantage dealing with Islamic emperors who had fallen behind. Finally, and perhaps most important, the Mughal dynasty remained a minority in India, distinct in religion, culture, and language from the majority of subjects. Given the circumstances, its fall was perhaps inevitable.

NORMAN C. ROTHMAN

Muhammad Ali

(1769–1848) *Egyptian ruler*

An Ottoman janissary of Albanian origin, Muhammad Ali became the founder of modern Egypt. Following the Napoleonic invasion and short-lived British occupation of Egypt, Muhammad Ali and a number of other janissary forces were sent to reassert Ottoman control in 1802. Muhammad Ali had outmaneuvered rival janissaries for leadership by 1806.

Muhammad Ali then cleverly aligned himself with the weaker of the perennially warring Mamluk factions that had previously governed Egypt to defeat the stron-

ger. He eliminated the remaining Mamluks by inviting them to a celebration at the heavily fortified citadel overlooking Cairo in 1811. Once the Mamluks were securely inside the high walls of the fort, the janissaries massacred them, leaving Muhammad Ali the sole ruler. Pledging allegiance to the Ottoman sultan, he was appointed pasha of Egypt and began an ambitious program to increase the strength of his armed forces and to build a new navy. The army was conscripted from the Egyptian fellaheen, or peasantry, and ultimately reached over 100,000 men.

To finance military expenditures, Muhammad Ali increased taxes and established government monopolies over the economy. Monopolies controlled the sale of oil, coffee, and Egyptian products including tobacco, grains, sugar, and cotton. He also moved the Egyptian economy toward the production of cash crops, especially tobacco and the highly desirable Egyptian long-grain cotton. Through government support, Muhammad Ali underwrote the creation of small industries in textile manufacturing, food processing, and some armaments. This began a process of industrial modernization that was largely halted by the British occupation of Egypt at the end of the 19th century. The irrigation systems were expanded and water and road transport systems were developed throughout the area. Medical care improved, although cholera and malaria remained problems. A new administrative elite was created. The top officials were predominantly of Turkish origins; like Muhammad Ali, they spoke Turkish rather than Arabic.

Although he was illiterate, Muhammad Ali valued education and established a military training school and sent students at government expense to European universities. Muhammad Ali made one graduate Rifa'a Rafi al-Tahtawi director of a new School of Languages; the school was responsible for the translation of many European, especially French, political and philosophic works. The Bulaq Press published hundreds of books in Arabic, including many translations from European works. These influenced a new generation of Arab and Islamic reformers in the late 19th century. An official gazette was also issued.

As leader of Egypt, Muhammad Ali was involved in four major wars. At the behest of the Ottoman sultan, he sent his sons Abbas and Ibrahim to crush the puritanical Islamic reformist movement, the WAHHABIS, who threatened Ottoman control over the holy cities of Mecca and Medina in the Hijaz from 1811–81. The Wahhabis were defeated in their stronghold in the Nejd (in northern modern-day Saudi Arabia). After making a pilgrimage to Mecca, Muhammad Ali withdrew his troops in 1824,

thereby allowing the Wahhabis to regroup and emerge as an even stronger force at the end of the century.

In 1820 Muhammad Ali launched military campaigns into the Sudan. He wanted new recruits and slaves for his army and hoped to obtain gold to help finance his army and navy. Although his troops were militarily successful, most of the army recruits and slaves died of diseases and the gold resources failed to materialize.

In 1822 the ongoing GREEK WAR OF INDEPENDENCE threatened Ottoman control in the Balkans, and the sultan again called on Muhammad Ali to use his new navy and army to defeat the Greeks and their allies. Muhammad Ali took the island of Crete in 1824 and met with initial success. But in 1827 his new fleet was destroyed at the Battle of Navarino Bay. Muhammad Ali was ready to negotiate, and he lost Crete to the British in 1840.

He then turned his attention toward Palestine and Syria, where he hoped to enhance his prestige as well as stop the flow of draft dodgers from Egypt who sought to escape the much-hated state conscription. He also hoped to obtain wood to rebuild his navy. Syria had suffered under a long period of Ottoman misrule and initially offered little opposition to Muhammad Ali's troops, who under Ibrahim's command took Acre in 1832. Ibrahim advanced to Konya, deep inside the Anatolian Peninsula, and might have advanced to Istanbul, but he was stopped by Muhammad Ali. Although he wanted further territory, Muhammad Ali recognized that the European powers, who were engaged in a long-term diplomatic rivalry over the so-called EASTERN QUESTION, or what to do about the weakened Ottoman Empire, would not allow it to collapse. When Russia offered to support the sultan in the war against Muhammad Ali, Great Britain, which opposed Russian advances in the Black Sea, stepped in to force negotiations. Under the Kutahya Convention of 1833, Muhammad Ali retained control over Greater Syria in exchange for a small yearly tribute to the sultan. He thereby controlled key trade routes and the Muslim holy cities in Arabia.

Ibrahim was made governor of Syria, but efficient tax collection and conscription led to local dissent and rebellions. Wishing to reassert his authority, Sultan Mahmud II was confident that his newly reformed army would be able to defeat Muhammad Ali. Ottoman forces attacked in 1838, but at the Battle of Nazib in northern Syria, Ibrahim routed the Ottoman army in 1839. Fearing Muhammad Ali's mounting power and the collapse of the Ottoman Empire, Great Britain intervened. Britain rallied the support of Russia, Prussia, and Austria and offered Muhammad Ali control

over Egypt for life if he immediately agreed to a settlement. When Muhammad Ali refused, a four-power blockade was put in place, and British marines took Acre in 1840. Recognizing defeat, Muhammad Ali withdrew from Syria.

In 1841 the sultan granted Muhammad Ali and his heirs the hereditary right to rule Egypt as khedives; however, the Egyptian army was limited to 18,000, a huge decrease from its size during the zenith of Muhammad Ali's power. In 1848 Ibrahim, the presumed heir, died, before his father. Thus when the ailing Muhammad Ali died shortly after Ibrahim, his grandson Abbas succeeded to the throne. The conservative Abbas halted many of Muhammad Ali's development projects, but they were resumed after Said, Muhammad Ali's son and Abbas's uncle, and later Ismail, another of Muhammad Ali's grandsons, became khedives. The dynasty established in Egypt by Muhammad Ali survived until it was overthrown in a military-led revolution in 1952.

JANICE J. TERRY

Muhammad al-Mahdi

(1848–1885) *religious leader*

Muhammad Ahmad Abdullah was born on the island of Lebab on the Nile River. He had a traditional Islamic education and as a child committed the Qur'an to memory. Known for his fervent religious belief, as a young man he secluded himself in a cave to meditate. Following in the pattern of the prophet Muhammad, Muhammad Abdullah began to receive revelations that he shared through teaching and preaching. In 1881 he declared himself the Mahdi or "rightly guided one"; according to Islamic tradition, the Mahdi was to appear to foreshadow the end of an age. The Mahdi was sent to establish the faith and custom of the prophet. The Mahdist movement in the Sudan was a combination of

nationalist and religious belief and was seen by many as the beginning of Sudanese nationalism.

The Mahdi established his state in a power vacuum when the Ottoman Empire, the ostensible governing authority, and Egypt, in the midst of the URABI REVOLT, were weak and torn by revolts and local problems. In addition to his undoubted religious appeal and charisma, the Mahdi's refusal to pay Ottoman or Egyptian taxes attracted further support among the Sudanese. The taxes levied by the Mahdi were generally lower than those of the Ottomans. He garnered tribal support and crushed internal uprisings. In 1882 the Mahdi took el Obeid, the capital of western Sudan. He struck money in the name of the new Mahdist government, pacified most of the country, and ousted the remaining Turkish garrisons. He established a theocratic state based on religious law. The Mahdist movement was another of the 19th-century Islamic revival movements such as the Sanusiya in Libya and the WAHHABIS in Arabia.

Alarmed by the rising new power in the south, the British who had occupied Egypt in 1882, sent a military expedition led by William Hicks to defeat the Mahdi. Without proper supply routes or knowledge of the local terrain, Hicks, with a force of Egyptian soldiers, moved deep into Sudanese territory where his expedition was cut to pieces by the Mahdi's army in 1883. Cut off from Egypt and outside supplies, foreign missionaries and adventurers in the Sudan were taken prisoner by the Mahdi; some remained under virtual house arrest for years.

As the Mahdi moved closer to the capital of Khartoum, CHARLES "CHINESE" GORDON, so named for his role in defeating the Boxer Rebellion, was sent to evacuate the remaining British forces. A Christian zealot, Gordon believed it was his mission to stop slavery in the Sudan and to secure the territory. Ignoring orders to withdraw, he was trapped in Khartoum as the Mahdi's army lay siege to the city. The siege lasted from 1884 until late January 1885. A British relief expedition was sent to rescue Gordon, but before it arrived the Mahdi's forces, known as dervishes in the West, took the city. Against the Mahdi's orders, Gordon was killed and beheaded. His head was then presented to the Mahdi as a sign of the victory. The British relief forces arrived on the outskirts of Khartoum two days too late and, recognizing their untenable position, promptly retreated back to Egypt. Gordon became a martyr to the cause of British imperialism. Although the British prime minister WILLIAM GLADSTONE favored withdrawal from the Sudan, the

British public, including Queen VICTORIA, were outraged and demanded that Gordon's death be avenged and the Mahdi destroyed.

The Mahdi died shortly after the taking of Khartoum in 1885. He was succeeded by Abdallahi, as the khalifa, or companion. Abdallahi struck money with an Omdurman mint mark and legislated proclamations and decisions on points of law. He defeated the Abyssinians (in present-day Ethiopia) in 1889, but shortly thereafter the Mahdist state faced internal uprisings, a plague of locusts (a recurring ecological problem in much of Africa), and a resulting famine.

Meanwhile, the British remained determined to defeat the Mahdist state. The British military hero Herbert Kitchener was appointed commander in chief of Egyptian forces to take the Sudan. Avoiding the mistakes of previous expeditions, Kitchener extended the railway system deep into southern Egypt to ensure efficient movement of supplies and men. In 1898, Kitchener met the Mahdist army at the BATTLE OF OMDURMAN, where with superior armaments his army easily defeated the larger but poorly armed dervishes. Kitchener then moved to eradicate any traces of the Mahdist state, even destroying the Mahdi's tomb. However, the movement remained a latent force in the Sudan, and the Mahdi's heirs emerged as political leaders when the Sudan became independent in the second half of the 20th century.

JANICE J. TERRY

music

The period from 1750 until 1900 covered the European musical periods of the classicists and romantics. Most European countries had official orchestras, with smaller bands of musicians performing in stately homes, town halls, and other places, and folk music traditions existing throughout Europe, where performers would play at fairs, festivals, and other occasions. However, there was a stronger innovative musical tradition in Germany,

where many rulers and states had their own courts and competed with rivals as cultural centers.

GERMANY AND AUSTRIA

In Austria and the German lands, there were a number of important patrons of music, one of the foremost in the mid-18th century being the Habsburg rulers of Austria, although the war over Silesia—the War of Austrian Succession and the SEVEN YEARS' WAR—were extremely costly, causing Empress MARIA THERESA to economize on her court music. In this period Johann Georg Reutter continued to write church music and opera, and Gottlieb Muffat wrote for the harpsichord and the organ.

The elector Palatine also maintained considerable musical talent in his court at Mannheim, recruiting musicians such as the Bohemians Johann Stamitz, Franz Xaver Richter, and Christian Cannabich, as well as a number of Italians. By contrast the Prussian court at Berlin tended to favor more academic music, with Carl Heinrich Graun being the *Kapellmeister* (director of music) for Frederick the Great. In charge of the Berlin opera, he also wrote *The Death of Jesus*, a Passion cantata. He was later joined by Carl Philipp Emanuel Bach, the son of Johann Sebastian Bach. Mention should also be made of musicians in Hamburg such as Georg Philip Telemann, director of the Leipzig Opera in 1702, and the Hamburg Opera from 1732 to 1738.

The great age of classicism in Europe started in the 1770s with renewed confidence and increasing wealth at many central European courts. This period saw the Austrian cities of Vienna and Salzburg emerging as centers for this new musical style, with G. C. Wagenseil, a composer of many symphonies, quartets, and piano concertos, and also J. B. Vanhal. Another musician during this period was Leopold Mozart, father of Wolfgang Amadeus Mozart, and an important composer in his own right.

Franz Josef Haydn managed to get a position in the choir at St. Stephen's Cathedral, Vienna, and then joined the household of the famous Esterhazy family, as their *Kapellmeister* from 1766.

It was not long before the Italian Antonio Salieri emerged as an important musician at the Habsburg court, with his youthful prodigy Wolfgang Amadeus Mozart quickly rising to prominence. Mozart traveled to Italy when he was young, and there he heard many other musicians, remaining in contact with many of them throughout his life. As a result he had a wide knowledge of contemporary European

compositions and was able to compose new music, including 21 operas.

His work included *Don Giovanni* and *The Magic Flute*, as well as 27 concertos, piano trios, and serenades. He worked at the Austrian court in Vienna under Emperor Joseph II, dying from renal failure. A cousin of Mozart's wife was Carl von Weber. Also a youthful prodigy, he wrote a number of concertos and then the operas *Sylvana* and *Abu Hassan*.

THE ENLIGHTENMENT

The forces of the ENLIGHTENMENT, which came to influence events around the French Revolution, led to the romantic era, which saw a decline in the prestige and wealth of the Austrian court and the rise in importance of France. Franz Josef Haydn died in 1809 on exactly the same day that NAPOLEON I entered Vienna after defeating Austria. In spite of this decline, there were still a number of Austrian musicians who helped Vienna retain its prominent position, albeit briefly. Italian Luigi Boccherini composed several hundred compositions for string quartets. Franz Schubert was a prolific composer, writing 145 songs in 1815 alone, including nine in one single day. These included some of his best-known works, although critics feel his finest music dates from the 1820s. Another important German composer of this period was Robert Schumann, who produced a choral work titled *Paradise and the Peri* and was director of the Dusseldorf Orchestra from 1849 until 1853.

By this time new composers had emerged, notably Ludwig van Beethoven, who developed from a classicist from the 1780s into the leading romantic composer of the 19th century. He rose to international prominence with his symphonies, and his music was seen as breaking from the classical tradition and being unpredictable, clearly influenced by Haydn and Mozart. Beethoven used a much greater range of tempos, rhythms, harmonies, and key changes than most of his contemporaries.

Beethoven initially admired Napoleon I and dedicated his Third Symphony, to him, before renaming it the *Eroica* Symphony when he became disillusioned after Bonaparte crowned himself emperor. Beethoven later went on to compose his Fifth Symphony, known as The Emperor Symphony, and the Ninth Symphony, The Choral Symphony. His other work included the opera *Fidelio*, originally entitled *Leonora*. He is also well known for his popular piano pieces Moonlight Sonata and Für Elise. Some of Beethoven's contemporaries included Johann Ladislaus Dussek, Johann Nepomuk Hummel, and the pianist Ferdinand Ries.

THE ROMANTIC PERIOD

The romantic period also saw cultural influence from other parts of the world, with music in the Americas becoming influenced by Indian musical traditions alongside a growing appreciation of the indigenous cultural traditions throughout the Americas. This gradually led to some changes in music in the newly independent United States and also in Spain, with some of the rhythms gradually spreading around Europe. In Bohemia, Antonin Dvořák composed *From the New World*, which shows influences of African-American musical traditions.

The emerging power—political and financial—of France saw Paris become a center of music from the last decade of the 18th century into the early 19th century. The Belgian-born composer François-Joseph Gossec worked in the French capital throughout the Revolution and enduring changes of government, with Nicholas D'Alayrac composing many comic operas in the early French Republic. Later French composers include Hector Berlioz, who composed many symphonies, including the *Symphonie Fantastique*, and *Romeo and Juliet*; and also Gioacchino Antonio Rossini from Italy who composed *Le Comte Ory* and *William Tell* in France. Jacques Offenbach moved to Paris from Germany and became famous with his *Orpheus in the Underworld* and *La Belle Hélène*. Other French composers include Charles Gounod, composer of *Faust* and *Romeo and Juliet*; Léo Delibes, composer of ballets including *Coppelia* and *Sylvia*; and Jules Massenet, who produced music for the ballet *Le Cid*.

With the rise of German nationalism and the increasing connections between France and western Germany, many new composers became important, including Giacomo Meyerbeer, Camille Saint-Saëns, Georges Bizet, Emmanuel Chabrier, César Franck, and Gabriel Fauré. Felix Mendelssohn composed many pieces of music for strings and piano, including the oratorio *Elijah*. Later the increasing political unity of Germany coincided with the popularity of Johannes Brahms and Richard Wagner. Wagner became an opera conductor at Dresden and produced *The Flying Dutchman* and *Tannhäuser* before spending years perfecting *The Ring of the Nibelungs*, *Siegfried*, and *Tristan and Isolde*. His music came to epitomize German national identity during the late 19th century, building on Teutonic legends and influenced by Greek tragedies and the philosophies of Friedrich Nietzsche and Arthur Schopenhauer. Austrian composer Johann Strauss composed over 400 waltzes, including *An der Schönen Blauen Donau*, better known in English as the *Blue*

Danube, and Richard Strauss, not related to Johann, composed German operatic concertos.

BRITAIN AND THE REST OF EUROPE

In Britain, the most famous composer of the period was Sir Arthur Sullivan, who wrote the music for operas for which W. S. Gilbert wrote the words. Their operas included *Trial by Jury*, *H.M.S. Pinafore*, *The Pirates of Penzance*, *Patience*, *Iolantha*, *The Mikado*, *Ruddigore*, *The Yeoman of the Guard*, and *The Gondoliers*.

In eastern Europe, much of the new musical traditions came from Poland, even though Poland as an independent nation had ceased to exist. Frédéric Chopin, who had a French father and Polish mother, embodied both western and eastern European concepts. Most of his music was composed for solo piano, and with the increase in the number of pianos throughout the world, it was not long before his music was being played all over the globe. In Hungary Franz Liszt became popular with his oratorio *Christus*; Gustav Mahler, best known for his symphonies, directed the Budapest Opera in 1888–1891; and Franz Lehár conducted military bands in Vienna and wrote *The Merry Widow*. In Italy Niccolò Paganini was an important violinist and composer from Genoa, and Vincenzo Bellini composed a number of pieces of music and had an important influence on Giuseppe Verdi, whose operas included *Rigoletto*, *Il Trovatore*, and *Aida*, composed for the opening of the Suez Canal. Other important Italian musicians were Gaetano Donizetti, whose operas included *Lucrezia Borgia*, *Lucia di Lamermoor*, and *La Favorita*; and Giacomo Puccini, who composed *La Bohème* and later *Madama Butterfly*. In Spain the major composers included Isaac Albeniz, Emmanuel Chabrier, composer of *Espana*, and Enrique Granados y Campina, who became a prominent pianist. Norwegian composers included Edvard Grieg, who wrote, among other pieces, music for Ibsen's *Peer Gynt*, and Rikard Nordraak.

In Russia prominent composers of this period include folk musician Mikhail Glinka; Alexander Dargomizsky; Alexander Borodin; Modest Petrovich Mussorgsky from Ukraine, who composed much work including *Boris Gudonov*; Nikolai Rimsky-Korsakov, composer of *The Golden Cockerel*; Alexander Nikolayevich Scriabin, who wrote mazurkas and piano concertos; and most notably Piotr Illyich Tchaikovsky. Tchaikovsky's great works include *Swan Lake*, *Eugene Onegin*, *Sleeping Beauty*, the *Nutcracker*, the *Pathétique* Symphony, and the *1812 Overture*. Mention should also be made of Sergei Rachmaninov, whose First Symphony was performed in 1897, and Jean Sibelius, whose work *En Saga* was played for the first time in 1892.

THE REST OF THE WORLD

Outside Europe and the Americas, music in Africa involved heavy use of percussion, especially drums, with lutes and zithers also being common in northern and Saharan Africa. Drums and dance played an important part in religious ritual in much of sub-Saharan Africa.

In the Arab and Islamic worlds, chanting of the Qu'ran remained the most esteemed musical form. Even in present-day Islamic societies, such as Malaysia, national competitions in Qu'ranic chanting are held for both men and women. Some local and instrumental improvisational performances were considered the Arab equivalent to classical music in the West. The oud (a short-necked lute), tambourine, *qanun*, tabla (a small, hand-held drum), and various flutes were the main instruments. Numerous authors from Morocco, Egypt, Syria, and Turkey wrote about musical theory and the lawfulness of singing and musical performances from the 17th to 19th centuries. There was also a lively tradition of folk music and dance.

In India musicians used a very wide range of musical instruments such as the two-stringed lute, the sitar, the tabla, the *sarangi*, and the *tambura*, with much of the music being associated with ritual religious festivals. *Ghazals*—classical Urdu love songs—were popular throughout the year. Chinese music tended to rely on percussion, with drums and cymbals heavily used in theatrical performances, but use of the flute and stringed instruments were also common. Mention should also be made of gamelan bands (musical ensemble bands), which remain common in Java and Bali in modern-day Indonesia. They trace their origins back to medieval times, and during the 18th century most villages in Java and Bali had at least one gamelan—the orchestra being imbued with special spiritual significance. Japanese court musicians were formed into orchestras playing for members of the imperial family and to accompany plays.

JUSTIN CORFIELD

Muslim rebellions in China

The three Muslim rebellions against the QING (CH'ING) DYNASTY in China in the 19th century were caused by economic, ethnic, and religious problems. The Xinjiang (Sinkiang) Rebellion also had diplomatic implications.

The first was the rebellion in Yunnan, known in the West as the Panthay Rebellion, from a corruption of the Burmese word for “Muslim.” Between 20–30 percent of the population of Yunnan, located in southwestern China, is Muslim, descended from Central Asian Muslim troops sent by Kubilai Khan to garrison the region in the 13th century. They were discriminated against by the majority non-Muslims and the Han and Manchu officials because of their distinctive lifestyles. Disputes over mining rights led to the rebellion in 1855 under Du Wenxiu (Tu Wen-hsiu), who proclaimed himself Sultan Sulieman of a Muslim kingdom with capital at Dali (Tali). After enjoying initial successes, a new governor appointed by the Qing was able to eliminate the rebels in 1873. Du sought British help in vain and committed suicide.

The second Muslim rebellion occurred in Shaanxi (Shensi) and Gansu (Kansu) Provinces in northwestern China between 1862 and 1873. It is also called the Tungan Rebellion, after the approximately 14 million Chinese Muslims in these provinces who were of mixed Central Asian and Chinese descent; although largely assimilated in language and customs, they nevertheless suffered from discrimination. The rebellion broke out in 1862 as a result of the incursion of Taiping rebels into Shaanxi, igniting local grievances. The situation was very confused because the Muslims were divided into the warring Old and New Sects and was further complicated by incursion of another rebel group, the Nian (Nien), into Shaanxi in 1866, who joined forces with the Muslims. The Qing court appointed ZHO ZONGTANG (Tso Tsung-T'ang), a great general-statesman who had helped defeat the TAIPING REBELLION, governor-general of Shaanxi-Gansu, in charge of suppressing the Tungan rebels. Zuo could not take up this task until

he had suppressed the NIAN REBELLION in 1868, after which he spent six years of hard campaigning before pacifying these two provinces.

Xinjiang, in the far northwestern part of China, was its historic gateway to the West along the ancient Silk Road. After several campaigns it was conquered in 1759 by Emperor QIANLONG (Ch'ien-lung), who expelled the previously influential religious leaders called *khojas* to Khokand beyond China's border. After 1759 Xinjiang was governed by a military governor from Ili, who delegated local chieftains called *begs* to control the Muslims called Uighurs. It was garrisoned by Manchu banner troops concentrated on the north and south of the Tianshan Mountains. In 1864 as the Uighurs rebelled, Yakub Beg (1820–77), a Khokandian adventurer, invaded Xinjiang. Preoccupied with rebellions elsewhere, the Qing government was unable to respond; thus Yakub Beg gained control of parts of northern Xinjiang (Kashgaria) and proclaimed himself ruler. Russia took advantage of China's disarray to occupy Ili.

Xinjiang became part of the Great Game between Great Britain and Russia for control of Central Asia. After suppressing the Muslim rebellion in Shanxi and Gansu, the Qing court appointed Zuo Zongtang imperial commissioner to suppress the Xinjiang Rebellion. An experienced and careful commander, he was able to crush the rebels in 1877. Yakub Beg committed suicide, and Xinjiang was pacified. Russia was compelled to restore the Ili to China in the Treaty of St. Petersburg in 1881. On Zuo's recommendation Xinjiang received the status of province and was fully integrated into the Qing Empire.

The three Muslim rebellions were indicative of the decline of the Qing dynasty. Their suppression, along with the defeat of other rebellions, would give a new lease on life to the dynasty.

JIU-HWA LO UPSHUR

mutiny on the *Bounty* (1790)

In 1790 the crew of the Her Majesty's Armed Vessel (HMAV) *Bounty* and the Polynesians accompanying

them arrived to populate Pitcairn Island. They found traces of earlier Polynesian settlements, but no indigenous people were resident at the time of their arrival.

Over 2,000 accounts of the mutiny and the subsequent settlement of Pitcairn have been told, often contradictory and must be regarded as part myth, part fiction. Also, five motion pictures have captured the tale of the *Bounty*. Vessels from the Royal Navy discovered Pitcairn Island in 1762, but the rough sea prevented any landings. It rose to fame from the events that unfolded on the *Bounty* in 1789.

The trader *Bethia* was armed and renamed HMAV *Bounty* and under command of Captain William Bligh sailed for the South Seas on December 23, 1787, with orders to collect seeds of the breadfruit tree to help feed African slaves in transit to the Americas.

After some difficulties, the *Bounty* arrived in Tahiti on October 30, 1788, and stayed for five months while the seeds were collected. The *Bounty* left Tahiti but had only been at sea for three weeks when some of the crew mutinied under the leadership of Fletcher Christian. The Royal Navy in those days was known for its harsh discipline. Also, the pleasant lifestyle on Tahiti and the fact that several of the crew had engaged in intimate relations with local women might have inspired the subordination. The events and roles in the mutiny remain disputed. The Hollywood version shows the captain of the *Bounty*, William Bligh, as a inhuman tyrant, while recent research suggests that Christian may have been suffering from a mental condition that led to irrational behavior. The captain and 18 loyal crewmembers were cast adrift in open boats and later picked up at sea.

The *Bounty* returned to Tahiti to pick up supplies, livestock, and to take some of the native Polynesians back with them. Sixteen mutineers had decided to stay in Tahiti, but Christian rightfully thought it would be too risky—the Royal Navy captured those that stayed behind. Christian and the others continued to search for an isolated island to settle on. On January 15, 1790, the *Bounty* happened upon Pitcairn. Their cargo was brought ashore, and on January 23 the *Bounty* was set on fire so it would not be spotted and reveal the presence of the mutineers on the island.

The soil was fertile and the climate warm. A settlement was established at what is now known as Adamstown, and a kind of apartheid developed. The male Tahitians did not receive any land, were treated like slaves, and had to share the women that were left after the mutineers chose their spouses. The Tahitian men rebelled, and several mutineers were killed, Christian

among them. But the rebels fell out over the women, and the mutineers killed them.

Peace was eventually maintained, but having learned how to distil spirits from local produce, drunkenness plagued the community, until John Adams, the last remaining mutineer, had a religious experience. He started holding mass and showed leadership, bringing about some order.

The community developed a unique mix of Victorian and Tahitian culture, but the outside world would reach them sooner or later. Ships had been sighted, some even having come ashore without contact being established. An American whaling vessel, the *Topaz*, reported the presence of the community in 1808, but it was not until 1814 that British naval vessels visited Pitcairn. They took pity on Adams, given his place in the community and his piety. He had requested a resettlement of the islanders, since population growth made their resources meager. Adams died in 1829, and in 1831 the entire community was moved to Tahiti. There they experienced disease and discovered that their culture was too European to thrive in Tahiti. That same year, they went back to Pitcairn.

Adams and his successors had no formal powers, but increasing interaction with the outside world exposed the need for legitimate governance. A constitution was drawn up in 1838, making the islands a British colony, giving universal suffrage for the election of a chief magistrate to anyone over the age of 18 and who intended to stay on the island for more than five years.

A new emigration followed in 1856 because of overpopulation (193 people) on Pitcairn, this time to the Norfolk Island that was uninhabited. But again some chose to return to Pitcairn, first in 1858, then in 1864. Meanwhile, visitors to Pitcairn had vandalized

the houses, and the gardens were overgrown. Selling handicrafts to passing vessels and salvaging provided some extra income, but they could no longer trade any surplus crops for needed supplies. Missionaries and sailors that the islanders had rescued offered some gifts, and Queen VICTORIA even sent them an organ.

Religion had played a prominent part in the life of the inhabitants on Pitcairn. However, a visit by American Seventh-day Adventists caught them in a time of social crisis and with lack of unifying leadership, and the Anglican Church was replaced. The conversion spurred social and political reform. Education was improved, a newspaper was founded, and a judiciary and parliament introduced. But the ill fortune that haunted the islanders since returning from Norfolk would not relent. The parliament was removed, and the chief magistrate was reintroduced in 1904. In the 20th century, communications improved, with about one ship a week arriving at Pitcairn. The population peaked at 233 in 1937 but had dropped to 40 by the turn of the millennium. Most of those who left emigrated to New Zealand.

FRODE LINDGJERDET

Naoroji, Dadabhai

(1825–1917) *Indian nationalist*

Dadabhai Naoroji, known as the Grand Old Man of India, was a leading Indian nationalist and critic of the British economic exploitation of India. He was born into a Parsi (Zoroastrian) family in Bombay. The Parsi had fled Persia in the seventh century to avoid forcible conversion to Islam and established a colony in Bombay where they prospered through trade with the British and Portuguese.

This background was helpful to Naoroji, as he spent much of his adult life in Great Britain and established the first Indian business firm in that country. He was also the first Indian (in fact, the first Asian) to be elected to the British parliament. When taking his seat he was allowed to swear on a book of Avesta (Zoroastrian scripture) instead of the Bible.

Naoroji was educated in mathematics and natural science at Elphinstone College and taught there before moving to Great Britain in 1855. In Britain he worked as a businessman and was involved in politics and also became a professor of Gujarati at University College, London. Naoroji continued to travel between Britain and India and remained active in Indian politics, serving as the prime minister of Baroda state (an Indian princely state) and as a member of the legislative council of Bombay. Naoroji founded the Indian National Association, which later merged with the Indian National Congress (INC) and served three times as president of the INC.

Naoroji was a tenacious critic of British economic policy in India. He developed the drain theory, which charged that Britain was draining money and resources from India to Britain. To amass evidence for this theory, he examined import and export figures for India for 37 years and demonstrated that there was an annual discrepancy of about \$135 million in favor of Britain. Although economic exploitation of colonies was a common practice at the time (indeed opportunity for such exploitation was a principal reason why countries acquired colonies), Naoroji continued to write and speak against it, appealing to the British self-image as a nation that engaged in “fair play.”

Naoroji died in 1917, but left a legacy of influence that touched such great Indian figures as Mahatma Gandhi.

SARAH BOSLAUGH

Napoleon I (Napoleon Bonaparte)

(1769–1821) *French emperor and military leader*

Napoleon Bonaparte is regarded as one of the greatest military commanders in history, changing the map of Europe and developing new laws, civil codes, and educational systems that continue to the present day. He is recognized as one of the most famous men in history, being the subject of countless biographies, with one writer suggesting that only Jesus and Adolf Hitler have had more biographical studies written about them.

Napoleone Buonaparte, as his name was known in Italian, was born on August 15, 1769, at Ajaccio, Corsica, shortly after the island was ceded to France by Genoa. He was the fourth child, and the second surviving one, of Carlo Buonaparte, a lawyer, and his wife, Letizia (née Ramolino). The Buonapartes were descended from Tuscan nobility who had moved to Corsica in the 16th century, with Carlo Buonaparte marrying his wife when she was 14. In an interesting twist, Carlo Buonaparte disliked the idea of French rule over Corsica and joined the nationalist resistance movement of Pasquale Paoli. When Paoli fled after his defeat at the Battle of Ponte Novo on May 8, 1769, ending Corsica's brief experience of independence, the Buonapartes made an accommodation with the French, and Carlo became the assessor for the judicial district of Ajaccio in 1771. Seven years later, he managed to get his eldest two sons, Joseph and Napoleon, into the Collège d'Autun. Napoleon was nine years old.

EDUCATION AND EARLY CAREER

Although Napoleon Bonaparte was a Corsican by birth and ancestry, in later life he never felt a huge affinity for the island; indeed he only visited it once after his rise to power. After the Collège d'Autun, Bonaparte spent five years at the Brienne Military College and then a year at the military academy in Paris. While he was at the military academy his father died, on February 24, 1785, leaving the family in difficult financial straits. Bonaparte graduated in September ranked 42nd in a class of 58, having assumed the position as head of the family, although he was not the oldest son. Bonaparte had become interested in mathematics and science.

His first military posting was as a second lieutenant in the artillery, being sent to Valence. There he became extremely interested in military strategy, writing his first book, *Lettres sur la Corse*, which expressed some of his early feelings for the island of his birth. He returned to Corsica soon afterward and in June 1788 rejoined his

regiment. By this time he had also become fascinated by many of the ideas of the ENLIGHTENMENT, especially those of Rousseau and VOLTAIRE.

With the calling of the National Assembly in Paris in 1789, Pasquale Paoli had been allowed to return to Corsica, and Bonaparte wanted to go and join him. The Corsican nationalist, however, was upset that Bonaparte's father had deserted his cause, and Bonaparte returned to France, where, in April 1791, he was appointed first lieutenant of the 4th Regiment of Artillery at Valence. He also became active in politics, joining the Jacobin Club.

However, his emotional attachment was still with Corsica, and he returned there but had a falling out with Paoli, returning to metropolitan France, where he had been briefly listed as a deserter. In April 1792 war with Austria broke out, and Bonaparte's skills were needed by the artillery. Although he was promoted to captain, Bonaparte went back to Corsica yet again. There he sided with the Corsican Jacobins who were trying to prevent Paoli from getting Corsica to break away and become independent. Condemned by Paoli, the entire Buonaparte family fled to the French mainland, adopting the spelling "Bonaparte."

Bonaparte went to Nice, where the Jacobins had gradually come to dominate the republican movement. The monarchy had been abolished, and Bonaparte went to Marseille with his soldiers from the National Convention. To get to Marseille, he took them to Toulon, where he was appointed commander of the National Convention's artillery with the support of Antoine Saliceti, who was also from Corsica and a longtime family friend. In September Bonaparte was promoted to major and in October became adjutant general. He was involved in fighting at Toulon in December and forced the British troops there to evacuate the city. On December 22, 1793, at age 24, Bonaparte became a brigadier-general, one of the youngest generals in modern history, a feat subsequently bettered only by Francisco Franco.

AFTER THE FRENCH REVOLUTION

When Maximilien Robespierre fell from power in Paris in July 1794, Bonaparte was arrested on a charge of conspiracy and treason. As a Jacobin, Bonaparte had been seen as a follower of Robespierre, and even though he managed to get his freedom, he was not restored to his command but, instead, in March 1795, he was sent to La Vendée, where he was placed in command of the artillery of the Army of the West. Bonaparte was unhappy at the demotion and sought military preferment and even considered, albeit briefly, leaving France

altogether and serving under the sultan of the Ottoman Empire. However, Bonaparte decided to stay, and with a new constitution being introduced, royalists hoped that they would be able to seize power in Paris. The National Convention was worried but felt that they could trust Bonaparte. He was placed second in command of the troops in Paris and used them to shoot hundreds of royalists who were trying to storm the National Convention. This move earned him the gratitude of the politicians, and he was hailed as the savior of the French republic. He was immediately appointed commander of the army of the interior and an adviser to the Directory, as the new government was called.

It was during this period that Napoleon met Josephine Tascher de la Pagerie, the widow of General Alexandre de Beauharnais, who had been executed during the Reign of Terror. She was from Martinique in the Caribbean, and Bonaparte fell in love with her. Bonaparte was then involved in cracking down on a protocommunist conspiracy launched by François Babeuf and sought to get command of the Army of Italy, the French army that was about to invade the Italian Peninsula. Filippo Buonarroti, an Italian who had known Bonaparte in Corsica, was appointed commander in chief of the Army of Italy in March 1796. It was a great disappointment for Bonaparte, who married Josephine on March 9 and two days later had to leave home to lead the army on March 11.

RISE TO MILITARY PROMINENCE

When Bonaparte took command of his soldiers in Nice, he found that there were only 30,000 soldiers instead of the 43,000 he had been promised. Their morale was low, as they had been badly fed and not paid properly. He managed to turn them around and inspire them in battle. At Lodi he was first given the nickname *le petit caporal* (the little corporal). In early 1797 Bonaparte led his men to victory over the Austrians, forcing them to evacuate Lombardy. He then crushed the troops of the Papal States but decided against following up the order from Paris to dethrone the pope. As it was, Pius VI, who had condemned the execution of LOUIS XVI, was to die in French captivity in the following year.

Bonaparte invaded Austria and forced the Austrians to sign the Treaty of Campo Formio. This gave France control of the Low Countries (modern-day Belgium and the Netherlands) and also northern Italy and the Rhineland. Bonaparte then captured the city of Venice and forcing the abdication of the doge, Lodovico Manin, on May 12, 1797, ending its independence, and reorganized the map of Europe to create the pro-French

Cisalpine Republic in northern Italy. Bonaparte had taken 160,000 prisoners and had captured 2,000 cannons and 170 standards.

In March 1798 Bonaparte suggested putting together a military expedition to seize Egypt, then a part of the Ottoman Empire. The Directory were worried about the cost of this expedition but happy that it would take Napoleon a long way from France. On his way to Egypt, the French captured Malta on June 9, 1798, but were unable to find the great treasure they had expected to find. On July 1, the French reached Alexandria, after eluding the British navy.

In the Battle of the Pyramids, fought some four miles from the pyramids, a French force of 25,000 held off 100,000 Egyptians. By the end of the battle, the French had lost 300 men, and the Egyptians had lost 6,000. However, although the French were successful on land, the British under Admiral Horatio Nelson attacked the French at sea and destroyed the French navy. Napoleon then moved into Palestine and Syria, where the French captured Gaza, Jaffa, and Haifa. They killed large numbers of people in these attacks, but the French army itself was badly weakened.

RISE TO POWER

Bonaparte had his eye on developments at home, and on August 29, 1799, he suddenly left the Middle East for France. In October he returned to Paris, where people were beginning to be dissatisfied with the Directory. Emmanuel-Joseph Sieyès, one of the members of the Directory, asked whether Bonaparte would support a coup d'état. On November 9 (18 Brumaire of the revolutionary calendar), Bonaparte led his soldiers into the Legislative Assembly and ejected the members, and Bonaparte, Sieyès, and Roger Ducos were declared the three provisional consuls. Sieyès hoped to run the new government but Bonaparte who had drafted a new constitution managed to make himself the First Consul, and then the First Consul for life. There was no mention in the new constitution of "liberty, equality, and fraternity."

The Consulate was a period when Bonaparte tried to introduce many long-lasting reforms, a number of which continue to the present day. In 1801 he negotiated the Concordat with the Roman Catholic Church, leading to a reconciliation between the church and the state. He also introduced the Napoleonic Code, whereby legal experts reformulated the entire legal system, codifying criminal and civil laws. There was also a meritocratic system by which Bonaparte himself

appointed ministers, members of the Council of State, generals, and civil servants. It profoundly changed the nature of France forever.

CONQUEST OF EUROPE

While this was taking place, Bonaparte returned to Italy, which had been taken back by the Austrians while he had been preoccupied in Egypt. He entered Italy leading his men across the Alps, through the Great St. Bernard Pass. He met the Austrians at the Battle of Marengo and in one of his finest battles victory was eventually his. The Treaty of Lunéville of February 1801 not only confirmed the Treaty of Campo Formio but also extended French control. France was extended to cover the frontiers chosen by Julius Caesar in his creation of Gaul: the Pyrenees, the Alps, and the River Rhine. The Treaty of Amiens in March 1802 resulted in peace between the British and the French. The British withdrew some soldiers, but there was a disagreement over Malta, with Britain, in support of French royalists, declaring war on France in 1803. The French had used the period to sell the French possessions in North America to the United States. The LOUISIANA PURCHASE resulted in the United States's doubling in size after paying less than 3 cents per acre.

In January 1804 Bonaparte discovered that the royalists were plotting his assassination. He sent his soldiers several miles over the French border into the German state of Baden, where the duc d'Enghien from the house of Bourbon was seized and brought back to France. He was quickly tried and then shot. By this time Napoleon seemed to have decided to confirm himself in power by becoming an emperor, and the Empire was proclaimed on May 28, 1804. On December 2 at Notre-Dame de Paris, the imperial regalia was blessed by the pope, and Napoleon then crowned himself and Josephine. On May 26, 1805, in Milan Cathedral, he was crowned king of Italy. There were no major changes in the way France was run, except that succession was not hereditary, and some princely titles were handed out to members of his family, with an imperial nobility created in 1808.

Napoleon was involved in fighting the British from 1803 until 1805, hoping to be able to land troops on the British mainland. Initially the French moved many troops to Boulogne but they did not have control of the sea, which had prevented their previous planned attack in 1798. The French managed to persuade the Spanish to declare war on the British, with the hope that the Franco-Spanish fleet might be a match for the British.

However, on October 21, 1805, at the Battle of Trafalgar, the British under Admiral Horatio Nelson defeated the Franco-Spanish fleet, ending any real chance of an invasion of the British Isles. Nelson himself was killed in the battle despite the Royal Navy's victory.

With his failure at sea, the French decided to attack Austria again, and on November 13, 1805, Napoleon led his men into Vienna, the Austrian capital. On December 2 he defeated the combined Austrian and Russian forces at the Battle of Austerlitz, one of his greatest victories. The Treaty of Pressburg saw the Austrians give up all claims to influence in Italy and also cede Venetia and Dalmatia (Croatia) to the French, as well as giving land in Germany to France's ally Bavaria. In July 1806 Napoleon established the Confederation of the Rhine, placing western Germany under French protection and control.

Napoleon then turned his attention to the Prussians, and he defeated them at the Battles of Jena and Auerstädt. He then defeated the Russians at Eylau, and took the city of Warsaw, where he met and fell in love with Countess Marie Walewska, a Polish woman who hoped that she might persuade Napoleon to re-create Poland. Soon after this the Russian czar ALEXANDER I met with Napoleon at Tilsit in northern Prussia, and this summit led to the re-creation of the Grand Duchy of Warsaw. Napoleon was developing his concept of the continental system that would strangle the British economy by forbidding Britain to export goods to any European country, and this in turn would result in mass unemployment, making Britain collapse from within.

While most countries agreed to this, Portugal, Britain's oldest ally, refused to cooperate, so Napoleon decided to invade Portugal. He sent General Junot against the Portuguese, with Charles IV of Spain allowing French troops to go through his country. The French quickly captured Lisbon, and the Portuguese monarchy fled to Brazil. However, many Spanish were unhappy about the presence of French soldiers, and, Charles IV abdicated in favor of his son, who became FERDINAND VII. Napoleon saw this move as a perfect opportunity to remove the Spanish Bourbon family, and both Charles and Ferdinand, under pressure, abdicated. Napoleon put his brother Joseph Bonaparte on the throne of Spain. Although Spanish revolutionaries welcomed this, it was very unpopular in most of Spain and guerrilla war broke out.

With the British aiding the Portuguese and now the Spanish royalists united under the command of Arthur Wellesley—later the first duke of Wellington—the French started losing what became known as the Penin

sular War. Although Napoleon met with Czar Alexander I at the Congress of Erfurt from September to October 1808, the czar would give no firm commitment. However, it removed the prospect of war with Russia. Napoleon sent huge forces into Spain and was about to win the war when Austria attacked Bavaria. Napoleon had to send his armies against Austria, defeating them and forcing them to sign the Treaty of Schönbrunn on October 14, 1809.

FIRST EXILE

Napoleon was upset that Josephine had been unable to give him an heir, and he divorced her to marry Marie-Louise, the daughter of Austrian emperor Francis I. Their son was born on March 20, 1811, and was given the title the king of Rome. Napoleon was now at his most powerful. He controlled the French Empire, which included the Illyrian provinces, the Papal States, Tuscany, the Netherlands, and parts of Germany. It was surrounded by the Kingdom of Westphalia, ruled by his youngest brother, Jérôme Bonaparte; the Kingdom of Spain, ruled by older brother, Joseph Bonaparte; the Kingdom of Italy (ruled by Eugène de Beauharnais, Josephine's son, as the viceroy); the Kingdom of Naples (ruled by Napoleon's brother-in-law, Marshal Joachim Murat); and the Principality of Lucca and Piombino (ruled by another brother-in-law, Félix Bacciocchi). With the Swiss Confederation linked to France by alliance, there were also two other French allies, the Confederation of the Rhine and the Grand Duchy of Warsaw. With Napoleon's marriage to Marie-Louise, Austria was also an ally.

However, the fighting on the Iberian Peninsula continued, and in spring 1812, Napoleon moved his army to Poland to threaten Czar Alexander I of Russia. The Russians retreated, and Napoleon, intent on engaging them in battle, invaded Russia with 650,000 men. As the Russians retreated, the French were drawn further and further into Russia, with the French fighting an indecisive two-day battle at Borodino on September 7. A week later Napoleon entered Moscow, which had been abandoned by the Russians. However, a fire broke out later the same day destroying much of the city, and Napoleon had to withdraw. Harassed by Russian soldiers, Cossacks, and others, by the time Napoleon's troops left Russia, there were scarcely 10,000 men left.

The Prussians and the Austrians suspected that the French army had been broken in Russia, and after a false report that Napoleon had died in Russia in October, morale declined. When Napoleon returned to Paris, he found France in a bad state, economically and

A portrait of Napoleon I at Fontainebleau in 1814. The emperor had “extended the boundaries of glory” for France.

militarily. He was still able to defeat the Russians and the Prussians, respectively, at the Battles of Lützen and Bautzen. Austria offered to allow the French to return to their original borders, but with the dissolution of the Grand Duchy of Warsaw and the Confederation of the Rhine. The Prussians offered to return to the frontiers of 1805.

Napoleon hesitated, and Austria declared war. At the Battle of Leipzig on October 16–19, 1813, known also as the Battle of Nations, the French forces were badly mauled. With the French facing defeat in Spain, Napoleon ordered his troops to return to France, and he faced his opponents who declared that their war was not against the French people but specifically against Napoleon himself. While Napoleon wanted to continue fighting, he was forced to accept the Treaty of Fontainebleau, whereby he abdicated and moved to the island of Elba with 400 guards and an annual income of 2 million francs. Napoleon bid

farewell to his old guard at Fontainebleau and went to Elba. Louis XVIII, brother of the executed Louis XVI, then became the king of France.

RETURN TO FRANCE

Although Napoleon was initially quite happy to reform the government of Elba, he soon became bored, and some of the French were upset at the Bourbon Restoration, with Louis XVIII effectively put into power by foreign countries. With Napoleon worried about being sent into a more remote exile and without his allowance, which was supposed to have been paid by the French government, Napoleon decided to risk everything on returning to France and trying to regain power.

On March 1, 1815, he landed at Cannes with some guards and rapidly gained more and more support, reaching Paris on March 20. Louis XVIII announced that he would not hold the French command to their oaths of loyalty, in a great gesture to prevent a civil war, and Napoleon was back in power. Some of the men who had pressured Napoleon to abdicate at Fontainebleau and who had taken up appointments under Louis XVIII returned to support Napoleon, who magnanimously appointed Marshals Ney and Soult to senior command positions.

The British and the Prussians were angered by Napoleon's return to Paris and immediately massed armies in the Netherlands (modern-day Belgium). Louis XVIII had ended conscription, and Napoleon was eager not to reintroduce the draft, so he mustered as many soldiers as he could and then marched them into the Netherlands, where he defeated the Prussians at the Battle of Ligny on June 16, 1815. At the same time the French under Ney drove back the British at Quatre Bras. Napoleon then made a crucial mistake in detaching a third of his army to cut off the Prussians, whom he thought had fled eastward. In fact they soon found that they were following the Prussians of Field Marshal Gebhard von Blücher.

When Napoleon and his soldiers met the British at Waterloo, Napoleon was ill but launched a series of attacks against the British lines before having to retire as his condition worsened. When he recovered, he found that the French cavalry had launched a number of futile charges against the British. He salvaged much of the situation by advancing the artillery. With the British forces driven back, and some of their allies having fled in disorder, Napoleon launched an all-out attack. However, at that moment the Prussians arrived on the battlefield, and the French were defeated, with Napoleon fleeing back to France. He abdicated on June 22, 1815, and tried to make for the United States

but eventually surrendered to the British, who decided to send him into exile on the remote South Atlantic island of St. Helena.

EXILE ON ST. HELENA

Napoleon spent the last six years of his life on St. Helena, where he wrote his memoirs and amused himself with his small number of followers who went with him into exile. He was well looked after but soon became ill. It has been suggested that he was poisoned by arsenic given off by his wallpaper and, alternatively, even more bizarrely, that he had developed female characteristics. It also seems that he might have succumbed to cancer. He died on May 5, 1821, on St. Helena and was buried there, although his body was repatriated to France in 1840 and lies in the Hôtel des Invalides in Paris.

Many people have marveled at Napoleon's military genius. He was a good tactician, but his strengths lay in campaigning strategies in which he often went into a war outnumbered by his opponents but was often able to match them on the battlefield. He also relied heavily on the artillery, most likely from his original background. His ability to risk much on single battles served him well until Borodino, with him making mistakes at both Leipzig and at Waterloo. At the latter battle he asked an aide how he would be remembered, and the man replied that Napoleon had "extended the boundaries of glory."

JUSTIN CORFIELD

Napoleon III (Louis-Napoleon Bonaparte)

(1808–1873) *emperor of the French*

Louis-Napoleon was born on April 20, 1808, at the apogee of the empire of his uncle, NAPOLEON I. Louis-Napoleon was the son of Napoleon's brother Louis, whom Napoleon had made the king of Holland, and

Hortense de Beauharnais, the daughter of Josephine de Beauharnais.

In April 1814 Napoleon I was forced to abdicate his throne, bringing to an end the Napoleonic adventure, except for the Hundred Days in 1815, when Napoleon suddenly won back his imperial crown only to lose it again permanently at the Battle of Waterloo on June 18, 1815. With the fall of the Napoleonic empire and the RESTORATION OF THE BOURBON DYNASTY in the person of King Louis XVIII, Louis-Napoleon found refuge with his mother in Switzerland and Germany. From an early age, Louis-Napoleon sought to emulate the martial glory of his uncle, and he joined the Swiss army, where he rose to the rank of captain.

Louis-Napoleon was also animated with the revolutionary spirit that Napoleon and the French had brought across Europe. Following in his uncle's footsteps, Louis-Napoleon would become involved in the revolutionary ferment that swept Italy, once Austrian power had been reestablished following the defeat of Napoleon. In 1830 revolutions swept over Europe, in spite of the efforts of the Great Powers to end political liberalism after the defeat of Napoleon and his subsequent death in 1821. Louis-Napoleon became involved in the revolutionary ferment in Italy. In France, the last of the Bourbons, Charles X, was forced to abdicate in favor of Louis-Philippe, the "Citizen King."

Louis-Napoleon's personal ambitions were given an unexpected boost with the death of Napoleon's only son, Napoleon II, in the cholera epidemic of 1832. With the death of Napoleon II, Louis-Napoleon became the standard-bearer of the Napoleonic cause, and his political ambition gradually emerged to take the place of his illustrious uncle. He thus became a direct threat to the rule of Louis-Philippe in France. As a political conspirator for most of his adult life, Louis-Napoleon must have realized that France was still content under the reign of the "Citizen King." Thus he lived the life of an English gentleman, biding his time for another chance at imperial glory.

He had only two years to wait. In 1848, when liberal revolutions swept over Europe again, Louis-Philippe fell from power. The new provisional authorities gave Louis-Napoleon permission to settle in France. Presenting himself as a reformist candidate, Louis-Napoleon was elected to sit in the new assembly. However, it was soon evident he was not content with only that.

Louis-Napoleon set about imprisoning his opponents and waging a coup d'état. Given the bloodiness of the Paris revolution of 1848, most Frenchman received

Louis-Napoleon as their new emperor with a measure of relief, as an earlier generation had his uncle after the chaos of the FRENCH REVOLUTION. Napoleon III, as he was now named, and his empress Eugénie attempted to bring to life again the glamour of the First Empire of his uncle, with the imperial eagles prominent in Paris again for the first time since Napoleon I's final defeat at Waterloo in 1815.

FOREIGN ADVENTURES

Like Napoleon I, his nephew could not resist being drawn into foreign adventures. In 1854 Napoleon III entered the CRIMEAN WAR to defend Turkey from Russian aggression. The idea of France and England being allies after the long Napoleonic Wars was a surprise for many on both sides. Together they helped bring about the Russian surrender at the Treaty of Paris in 1856.

Remembering his earlier attempts to liberate Italy, in 1859 Napoleon III invaded Italy, where, allied with the Kingdom of Piedmont under Victor Emmanuel II, he was determined to break the hold of Austria on northern Europe, as his uncle had done in 1796–97. On June 24, 1859, the Austrians were defeated decisively at the Battle of Solferino, leading the way to the unification of Italy under Victor Emmanuel. Henri Dunant, a Swiss, was so appalled by the suffering of the wounded on the battlefield that he took the initial steps that would lead to the foundation of today's Red Cross and Red Crescent associations. However, the growing might of France alarmed the British and created a war scare that led to many volunteer regiments who feared Napoleon III would invade England.

If Louis-Napoleon desired to imitate his imperial uncle in all things, he also did so by reaching beyond his ability. As Napoleon I was permanently weakened by his invasion of Spain in 1808, so too was Napoleon III by his adventure in Mexico. From 1857 to 1860 Mexico was embroiled in a civil war, which endangered the investments of foreign countries there. On October 31, 1861, England, France, and Spain occupied Mexican fortresses to guarantee repayment of Mexican debts. The new Mexican president, BENITO JUÁREZ, was compelled to agree.

MEXICAN INTERESTS

However, when England and Spain withdrew in April 1862, Napoleon III, taking advantage of the AMERICAN CIVIL WAR, attempted to establish a Mexican empire ruled by the Austrian archduke Maximilian. Juárez was able to unite Mexico against the French occupiers, and the Mexicans never viewed Maximilian as more than

Napoleon's puppet. After four years of guerrilla war, Napoleon III was forced to evacuate Mexico in 1866 when the United States, with its civil war won, deployed a large army under General Phillip Sheridan on the border with Mexico. Maximilian, who did not leave with the French, was shot by a Mexican firing squad.

Napoleon III was now confronted by the growth of Prussia, under the leadership of its chancellor OTTO VON BISMARCK. Bismarck was determined to unite Germany under Prussia's king, Wilhelm I. In 1866, in a mere six weeks, Prussia defeated Austria, the only other real claimant to power in Germany. Napoleon III felt that a united Germany under Prussia represented a clear threat to France.

The two countries finally clashed over Bismarck's attempt to put a relative of the Prussian king on the throne of Spain. On July 19, 1870, Napoleon's France declared war on Prussia and the North German states supporting it. In the war that followed Napoleon proved no match for the Prussian troops. He himself and Marshal MacMahon were surrounded at the fortress city of Sedan and forced to surrender to the Prussian army on September 1, 1870. Napoleon III was forced to undergo the humiliation of imprisonment at the hands of the Prussians, after which he was permitted to leave for exile in England in 1871. He would die there on January 9, 1873. Any hopes of a Bonapartist resurgence ended when his son, Louis Eugène, the prince imperial, was killed in a minor skirmish by Zulus as he accompanied British troops during the Zulu War of 1879.

JOHN F. MURPHY, JR.

Napoleonic conquest of Egypt

NAPOLEON I's 1798 expedition to Egypt aimed to increase French imperial holdings and to prevent British

overland communications with Asia. The Directory agreed to the mission because the conquest of Egypt would be a victory for France, while Napoleon's possible defeat would prevent him from further meddling in French politics.

Consequently, a large armed force led by Napoleon set sail for Egypt in the spring of 1798 and took Malta on the way. The English navy under Nelson gave chase but failed to capture the French fleet. The French landed in Egypt in July; in spite of the summer heat, Napoleon had his troops immediately march toward Cairo, where they defeated the local Mamluk forces at the Battle of the Pyramids.

Styling himself as a "friend of Islam and Egypt," Napoleon entered Cairo to establish French control. He established a local *diwan*, or council, with a few elite Egyptian members to act in a purely advisory capacity. Napoleon had also brought along a number of SAVANTS, or French scholars, to provide assistance to the occupation and to collect as much information as possible on all aspects of Egypt.

However, rather than have it cruise in the open sea, Napoleon had instructed the French navy to lay anchor outside Alexandria, where it was soundly defeated by the English at Battle of Aboukir Bay. This left Napoleon's troops at a distinct disadvantage in terms of reinforcements and supplies. They also faced a major insurrection in Cairo in the fall.

The insurrection took the French by surprise and threatened their occupation of the city; however, within days the French had successfully crushed the rebellion.

Seemingly undaunted by these setbacks, Napoleon continued his plans for the conquest of Greater Syria in 1799. He easily took the Sinai Peninsula, Gaza, and Jaffa, but stalled in northern Palestine at Acre. The city was staunchly defended by Jazzar Pasha and the French troops were ill with malaria and other diseases brought on by the summer heat and lack of clean water and other provisions.

With the loss of military momentum and hearing of troubles back in Paris, Napoleon abandoned his troops, most of whom died on the battlefield or on the retreat back to Egypt. Escaping capture by the British navy, Napoleon returned to France as a military hero and following a coup d'état became first consul of the French government.

General Kléber replaced Napoleon as commander in chief and under the Convention of El-Arish with the English in 1800, the French agreed to evacuate Egypt as soon as possible. But Kléber was assassinated in the

summer of 1800 by an Egyptian nationalist, Sulayman al-Halaby, who was then executed for the crime. General Menou, who had married an Egyptian woman, then took command, but he was highly unpopular with French troops. Menou then entered into protracted negotiations with the English regarding the terms of the French withdrawal. Negotiations dragged on as the two sides argued over possession of the many antiquities that the savants had taken from Egypt. Ultimately almost of these artifacts, including the famous Rosetta Stone, were taken by the British and placed in the British Museum in London, where they remain today. The French troops and the savants returned to France by 1801.

In 1801 the English temporarily occupied Egypt. At the time, they saw Egypt only as a way station for their more important holdings in the Indian subcontinent. Under the Treaty of Amiens in 1802 the British withdrew from Egypt. The Ottoman sultan promptly sent a new contingent of Janissary troops to reestablish his sovereignty over Egypt, but for a short period the Mamluks continued to remain an important political force as well.

Napoleon's Egyptian expedition had long-lasting effects in Europe. Largely owing to the popular publications by the savants, European society became acquainted with ancient Egyptian history and a new field, Egyptology, or the study of ancient Egypt, developed. Europeans added Egypt to their itineraries for the Grand Tour, and a new tourist industry, including package tours, developed in Egypt.

The expedition also increased the awareness of European governments regarding the geostrategic importance of Egypt and the region, thereby contributing to western imperial designs for control of the area. Although Napoleon's expedition influenced a very small number of urban Egyptians, the modernization of Egypt began several decades later under the rule of MUHAMMAD ALI.

JANICE J. TERRY

Native American policies in the United States and Canada

Since the foundation of the first permanent English settlement in North America in Jamestown in 1607, the relationship between Euro-American politics and the continent's indigenous inhabitants has comprised a major chapter in British-American, French-American, U.S., and Canadian history. Imperial, colonial, national, state, and provincial government policies toward Native peoples varied widely and went through a number of distinct phases.

In the broadest terms, the process was one in which aggressively expansionist states—spurred by massive European immigration, settlers' land hunger, efforts to enhance states' fiscal capacities, and racist expansionist ideologies—successfully implemented a range of strategies intended to appropriate the lands of Native peoples. In the mid-1700s indigenous peoples exercised effective dominion over most of North America, particularly the interior and the West. By 1900 they had been defeated and marginalized, their lands seized in a long series of wars, treaties, laws, and court rulings, and their communities relegated to reservations comprising less than 1 percent of the continent's landmass, most on lands inadequate for subsistence and often on lands unfamiliar to them.

COLONIAL PERIOD

During the colonial period, many Indian peoples in eastern North America were able to maintain a significant degree of economic, political, and cultural autonomy by playing off different European powers against each other (this despite the ravages of epidemic diseases, which severely weakened Native peoples before sustained interactions with white people had even begun). Emblematic here was the diplomatic strategy pursued by the Five Nations of the Iroquois Confederacy (Mohawk, Seneca, Cayuga, Onondaga, and Oneida), the dominant political power throughout upstate New York and much of the Great Lakes region, which shrewdly avoided strong alliances with any European power or colonial government.

With the French defeat at the hands of the British in the SEVEN YEARS' WAR, Indian peoples in areas conquered by Britain lost an important counterweight to British power. French fur traders and Jesuit missionaries, more interested in trade and saving souls than in acquiring land, on the whole were far more tolerant of Indians than the English. After 1763 the balance of power strongly favored the British, diminishing the

diplomatic and political leverage of Native peoples in the Northeast. Further west, a series of attacks launched by a Native alliance under the leadership of the Ottawa chieftain Pontiac in 1763 exposed Britain's weaknesses west of the Allegheny and Ohio River valleys and in the Great Lakes region. The unsettled conditions prompted the British government to issue the Proclamation of 1763, forbidding further settler expansion beyond the Appalachian Mountains. Settlers largely ignored the proclamation, setting the stage for further conflict on the western frontier.

THE AMERICAN REVOLUTION

A similar dynamic unfolded in the aftermath of the AMERICAN REVOLUTION. The war split the Iroquois Confederacy, with the Mohawk, Seneca, and Cayuga allying with the British. The victorious Americans retaliated, compelling large numbers of Iroquois to abandon their lands and migrate west or north to Canada. In the South, the Cherokee and others took advantage of the fighting between the British and Americans to launch a series of attacks on frontier towns and settlements, prompting harsh retaliation after the war.

Overall, the Revolution severely weakened the position of Native peoples vis-à-vis the new American republic, while also opening Appalachia and the Ohio, Cumberland, and Tennessee River valleys to white settlement and, south of the Ohio, to the expansion of African slavery. In the early republic, under the intellectual leadership of THOMAS JEFFERSON in particular, U.S. policy toward the Indian problem gelled into an either-or proposition: either Indians east of the Mississippi River could assimilate into white society and become civilized, or they could migrate west of the Mississippi. Either way, the U.S. government would assume dominion of their lands.

As events unfolded, even eastern tribes' adoption of all the hallmarks of civilization did not prevent the land seizures and forced migrations. In the Old Northwest, the Treaty of Greenville of 1795 with the Shawnee, following the armed conflicts between the U.S. Army and Shawnee in 1790–91, ceded most of present-day Ohio and parts of Indiana in exchange for the promise of a permanent boundary between Indian territory and the zone of white settlement, a pledge not enforced in subsequent years. After 1815 with the 1812 U.S. defeat of the coalition of tribes cobbled together by the Shawnee chieftain Tecumseh and defeat of the British in the WAR OF 1812, the U.S. government was in a position to enforce the Jeffersonian assimilate-or-migrate policy.

A series of Supreme Court rulings, beginning with *Johnson v. McIntosh* (1823), provided constitutional backing for the policy, based mainly on the Indian commerce clause of the Constitution. The rulings further defined Indian tribes as sovereign political entities subject only to the authority of the federal government and not state governments, largely resolving a key issue in the constitutional principle of federalism. In 1824 the Indian Office was established under the administration of the War Department; in 1849 it became the Bureau of Indian Affairs under the authority of the Interior Department.

INDIAN REMOVAL AND DISPLACEMENT

With the election of ANDREW JACKSON to the presidency in 1828, the U.S. government embarked on an aggressive policy of Indian removal. In 1830 Congress passed the Removal Act, which required Indian tribes east of the Mississippi to relinquish their ancestral lands and either become citizens of the states in which they resided or migrate west. In the Northwest, the Sac and Fox under Black Hawk resisted and were defeated in the Black Hawk War of 1832. In the Southeast, the Five Civilized Tribes (Cherokee, Creek, Seminole, Chickasaw, and Choctaw) responded to white encroachment in a variety of ways, including armed resistance, the adoption of farming and Christianity, and the appropriation of nationalist discourses and practices. In the 1820s a Cherokee nationalist movement under the leadership of John Ross and others, building on Sequoyah's 1809–21 invention of an 85-character Cherokee syllabary, published the newspaper *Cherokee Phoenix*, the year after formally establishing a new nation-state in the Cherokee constitution of 1827, modeled on the U.S. Constitution.

Under President Jackson, however, the pressures for Indian removal proved too great. From 1830 to 1838 in the infamous Trail of Tears, upward of 30,000 members of the Five Civilized Tribes were forcibly removed and resettled in Oklahoma's Indian Territory, a policy supported by the Supreme Court's rulings in *Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832). By 1840 virtually all the lands east of the Mississippi River had been opened to white settlement, south of the Ohio River accompanied by African slavery.

WESTERN EXPANSION

From the 1840s to the 1870s with the U.S. victory in the MEXICAN-AMERICAN WAR, the Homestead Act of 1862, the victory of the Union in the CIVIL WAR, the

Indian Wars in the West from the 1860s to the 1880s, and the building of the railroads during the same period, the process of land dispossession was carried all the way to the Pacific. In New Mexico Territory, the Taos Rebellion of 1847 was quickly suppressed and its leaders executed. In California, the gold rush from 1849 led to the enslavement and virtual genocide of California's linguistically diverse and politically disunited Native peoples.

The early 1850s saw the coalescence of a new reservation policy favoring concentration, in which the federal government negotiated individual treaties with reputed representatives of specific tribes. Such treaties most commonly forcibly imposed an exchange of Indian land for cash. Treaties also required tribal members to concentrate on reservations that comprised a small fraction of their former holdings. With the outbreak of the Civil War, many Plains Indians seized the opportunity to try to regain their lost lands, as in the Great Sioux Uprising of 1862 and its aftermath across Dakota Territory to Montana and beyond. Similarly, from 1860 to 1864 the Navajo War in New Mexico Territory ended with the defeat of the Navajo and the Navajo Long Walk, or forced migration, out of their ancestral homeland 300 miles east to Bosque Redondo reservation in northwestern New Mexico.

In the postwar years, Plains Indians' resistance to white encroachment intensified. Their lifeways dramatically transformed by their adoption of the horse from the 1700s, and firearms in the 1800s, the Dakota, Cheyenne, Apache, and many other Plains and western tribes presented the federal government with a formidable adversary. A pivotal moment in the mounting conflict came in the aftermath of the systematic violation of the Treaty of Fort Laramie of 1868, which guaranteed in perpetuity Sioux dominion over the Black Hills of present-day South Dakota.

The Black Hills gold rush from 1874 prompted swarms of white prospectors to enter the region, violating the treaty and stiffening Indian resistance, and culminating in the annihilation of George A. Custer's 7th Cavalry in the Battle of Little Bighorn in southern Montana in summer 1876 by a coalition of tribes led by Sitting Bull and Crazy Horse. The defeat shocked the nation and steeled the federal government's determination to resolve the Indian problem once and for all. After a complex series of aggressive U.S. military campaigns, which included the systematic slaughter of the region's vast buffalo herds, by 1890 all organized armed resistance had been crushed.

THE DAWES ACT

The effort to eliminate Indians' collective land-ownership was codified in the Dawes Act (General Allotment Act) of 1887, which required remaining Indian reservation lands to be broken up into individual parcels to male heads of households. Efforts to implement the law by the Bureau of Indian Affairs became riddled with corruption and malfeasance and its enforcement was only partial.

It is estimated that from its passage in 1887 until its repeal in 1934, the Dawes Act resulted in the privatization of 90 million acres, shrinking reservation lands from 138 million to 48 million acres. The ostensible goal of the Dawes Act was to facilitate the civilization of Indian peoples by their gradual assimilation into white society. This goal was also pursued by the government's establishment of Indian boarding schools in various parts of the country, in which Native children were forcibly subjected to assimilation, most famously at the Carlisle Indian School in Carlisle, Pennsylvania, founded in 1879. By 1900 the Native American population in the United States had shrunk to 237,196 (according to the U.S. Census Bureau), from a conservatively estimated 3 to 5 million people four centuries earlier, a demographic decline of around 95 percent.

CANADA

A similar set of processes unfolded in what remained of British North America after 1815, which after 1867 became the quasi-independent Dominion of Canada. Through a series of wars, treaties, laws, and court rulings, First Nations peoples (as Native peoples are officially known in contemporary Canada) were systematically stripped of their ancestral lands in ways very similar to those implemented by Canada's southern neighbor, though with less episodic violence overall. In the words of one eminent scholar, compared to their southern neighbors, First Nations peoples in Canada were shot less but starved more often.

In 1885 the Métis leader LOUIS RIEL launched a major rebellion in Manitoba with the aim of ensuring the ancestral rights of the Métis peoples centered on Winnipeg and the Red River Valley. The rebellion was crushed by the Canadian government, and its leader executed. With the formation of the Royal Canadian Mounted Police, most First Nations peoples in the Canadian West recognized the futility of armed resistance and reluctantly consented to treaties relinquishing their land rights in exchange for reservations (often small and in marginal zones), cash, the promise of future annuity payments, hunting and

fishing rights, and similar mechanisms mostly adopted from U.S. treaties.

MICHAEL J. SCHROEDER

Netherlands East Indies

The Netherlands East Indies was a political unit controlled by the Dutch, covering what is now Indonesia. Consisting of a vast archipelago of over 2,000 islands, it had been taken over piecemeal by the Dutch over several centuries. The center of their rule was on the island of Java and their capital was Batavia (now Jakarta), located on the north coast of Java. Their main reason for initially taking the islands had been to control the trade with the Spice Islands, and the Dutch therefore exerted great control over the eastern islands in the archipelago, the Moluccas, especially the island of Ambon. Gradually the Dutch established military bases throughout the islands and in the early 17th century began to cultivate plantations.

On the island of Java, they first took over Batavia and the area around it in 1619, adding the Preanger districts to the south of Batavia in 1677. Two years later they annexed Cheribon and then Semarang, taking Bantam, the westernmost part of Java in 1684. The Dutch then took control of the northern coast in 1741 and the island of Madura two years later. Some areas in south-central Java remained in the control of the sul-

tans of Yogyakarta and Surakarta (Solo). Outside Java the Dutch had reached agreements to trade and establish bases on many islands but did not have control of northern Sumatra, which was under the control of the sultans of Aceh (or Atjeh) and the island of Bali. By the 1770s they had control over much of the coastal regions of Borneo and the Celebes (now Sulawesi).

On an administrative level, the Dutch ruled through the Dutch East India Company, which, outside Java, made no attempt to control the people, working through native rulers—with the exception of the islands of Ambon, Ternate, and Banda in the Moluccas. However, from 1770 the company was faced with bankruptcy. Its employees had made huge fortunes but the main company itself was in a disastrous financial position. When war broke out with England in 1781—the AMERICAN REVOLUTION—the Netherlands government had to intervene financially to prevent the company going bankrupt. However, the debt burden increased and in 1783 the company ceased paying dividends to shareholders.

In 1790 the Dutch government appointed a committee to overhaul the company—the government itself was the chief creditor. While a rescue package was being arranged, war with France broke out in 1792 and three years later the Netherlands was invaded. The National Assembly, under French revolutionary control, then proclaimed the Batavian Republic and enacted a new constitution by which the state took over the Dutch East India Company, and the company was formally dissolved in 1798.

The Batavian Republic was eager to get funds from its colonies and decided to institute a different administrative structure for the East Indies. By the nature of the various treaties with the different sultans and rulers, it was necessary to totally overhaul the entire system, and in 1803 a report was submitted to the new republican government. Most of its recommendations were actually academic because in 1795 when William V had fled the Netherlands ahead of the French, he had taken refuge in England and ordered all his colonial governors to welcome British troops and merchant ships.

Thus the British had taken control of Malacca—also ruled by the Dutch at the time; and the bases at Padang (which had been sacked by the French in 1793 and was unable to resist), Ambon, Banda and even Ternate in 1799. The latter was particularly important for the trade in sandalwood. In 1802, by the Treaty of Amiens, all these places were to be restored to the Dutch; however, with war breaking out so soon afterwards, the British decided to keep them all and prepare to invade Java.

Java and in particular Batavia had been going through a period of semi-independence at the time. With the British controlling most of the seas, little control was exerted from the new Batavian Republic or from France. The governing authorities in Java were even able to conclude commercial treaties with Denmark and the United States. However, this whole situation changed in 1806 when the Batavian Republic was swept away and Louis Bonaparte, brother of NAPOLEON I, became king of the Netherlands. On January 28, 1807, he appointed Herman Willem Daendels, a Dutch Jacobin, to be the new governor-general of the Netherlands East Indies.

DETERMINED CHANGE

Daendels arrived in the Netherlands East Indies determined to change the whole administrative structure. He was anxious to regularize and standardize commercial arrangements, codify the laws, operate through a more formal judiciary, and reduce the influence of Chinese businessmen. At the same time he had to overcome the appalling sanitary conditions of Batavia. He did this by demolishing sections of the old city, Kota, and moving the old cemetery, which was close to the water table, to a new site outside the city walls. The large square in front of the governor's residence in Batavia was also his creation.

Daendels also had the task of fortifying the city to prevent an imminent British attack. He moved much of the army out of Batavia, where it was in range of British ships, to a garrison base at Meester Cornelis, just south of the city. There work began on massive fortifications. Although many of the decisions made by Daendels were needed, his reforms did create much resentment among the businessmen in Batavia who complained regularly to the Netherlands. By this time Napoleon had decided to annex the Netherlands, incorporating it into France. Daendels was recalled and replaced by Jan Willem Janssens, who was far more conciliatory in his approach, and also less decisive.

BRITISH ATTACK

Unfortunately for Janssens, soon after he arrived, the British attacked. Lord Minto, the governor-general of India, had wanted to capture Java. A BRITISH EAST INDIA COMPANY agent, THOMAS RAFFLES, had long urged him to do so. Finally in 1811 Minto led a massive expeditionary force, with 9,000 soldiers, to Malacca, and then they sailed for Batavia, landing at Ancol, just east of the city. As well as soldiers, Minto had brought with him teams of agronomists, botanists, and scien-

tists. Minto's massive and well-armed force frightened Janssens, who immediately retreated to Meester Cornelis, leaving Batavia as an open city. The British took it, marveling at its wealth. They then surrounded Meester Cornelis, which had been reinforced by some French soldiers, and after a short battle stormed it. Janssens then fled south with the British in pursuit. Facing them north of Yogyakarta, the British again easily defeated the Franco-Dutch forces, and Janssens surrendered. The British also stormed the sultan's palace at Yogyakarta, where they looted.

With the British in control of Java, they dispatched ships to seize outlying Dutch bases: Palembang, Macassar, and Kupang (or Koepang) in West Timor. The British East India Company then split their new possessions into four: Java, Malacca, West Sumatra, and the Moluccas. Raffles was appointed lieutenant-governor and took up residence in Batavia, but preferred the summer residence in Bogor, set in the middle of the botanical gardens.

Raffles pushed through many of the reforms that Daendels had tried to introduce. These actions were generally quite popular. However, Raffles was under pressure to increase the revenue base of his administration. Most of his moves were free of trouble, but in May 1813, the sale of land at Probolinggo, in eastern Java, resulted in massive protests as Chinese businessmen had increased their control in the region. Local farmers marched on the British, who were visiting the Chinese community leader at the time and demanded that the British officers acknowledge the local titles to the land and disregard Chinese attempts to evict them. The Chinese had hired local bodyguards, but these fled, and two highlanders, trying to calm the demonstrators, were both "barbarously murdered," as described on their gravestone.

CONVENTION OF LONDON

Raffles was finally making inroads into the land problem when the Convention of London, at the end of the Napoleonic Wars, returned to the Dutch all lands held by them after 1803. This was delayed by Napoleon's return from Elba, but after his defeat at Waterloo, instructions arrived at Batavia to this effect. The British in Java were angered by this arrangement, as they had actually increased the size of the colony during their rule. However, they relented, holding onto Malacca, and Raffles went on to found a British base on Singapore.

The Dutch, returning to the Netherlands East Indies, were told to be as liberal as they could, to reestablish

their rule without opposition from the locals. In 1830 they succeeded in gaining control of the rest of Java and set about building a new administrative structure. At the heart of this was a school to train Dutch civil servants who would form the administrative class in the Netherlands East Indies. To this end in 1834 they established a school in Surakarta (Solo). After nine years this project was abandoned and a new school was established at the Royal Academy at Delft, Netherlands. There a two-year (later three-year) course was introduced to ensure civil servants had a good understanding of the culture and history of the East Indies.

The island of Java and its satellite island, Madura, were to form the economic and administrative core of the colony. They were the most densely populated islands in the region—in fact one of the most densely populated parts of the entire world—and were divided into West Java, Central Java, and East Java, with the cities of Yogyakarta and Surakarta having a degree of autonomy. The rich farming lands provided vast quantities of rice and were also good in the raising of livestock, and the seas around Java were rich in fish.

To the west of Java was the island of Sumatra. The British eventually gave up their base at Bencoolen (modern-day Bengkulu) in exchange for holding onto Malacca, but the Dutch were never able to develop high-intensity agriculture on the scale that was the case in Java. With the rubber boom in the late 19th century, extensive rubber plantations were established in Sumatra. The island of Bangka, and to a lesser extent, the neighboring island of Billiton, off the east coast of Sumatra, was found to have extensive deposits of tin, and Dutch mining companies established large ventures, leaving much of the island covered by a moonscape. The north of Sumatra, under the control of the sultans of Aceh, only finally became a part of the Netherlands East Indies after the Acehese War, which lasted from 1873 until 1904.

To the east of Java, the island of Bali was occupied by the Hindu princes who had ruled Java before the arrival of Islam. They managed to maintain their independence, but when the Dutch took the island of Lombok in 1894, it was obvious that the Dutch were going to move on Bali, which they invaded in 1906. Prior to that there had been constant problems over Dutch merchant vessels running aground on the islands and being looted by the locals. During the Dutch invasion, the Balinese nobility charged the Dutch lines and were massacred.

In Borneo, the Celebes, and the rest of the Sunda islands, the Dutch controlled trade with Dutch

administrators, merchants, and businessmen living in towns, but not exerting much control over events in the countryside and the hinterland. This was also the case in Dutch New Guinea. In contrast to this, in the Moluccas, the Dutch exerted a much greater control over the population. The Dutch built schools and hospitals and many people joined the Dutch Reformed Church. Many Moluccans, especially Ambonese (or *Amboinese* as they were known at the time), served in the Dutch colonial forces and made up a large section of the Dutch colonial police used throughout the archipelago.

The society in the Netherlands East Indies was stratified with the Dutch ruling class generally living in particular parts of cities, close to churches, and maintaining their own social life and clubs, and being buried in Christian cemeteries apart from most of the rest of the population (who were mainly Muslim). There were other Europeans, including a sizeable British trading community in Batavia and also some Britons running plantations in Sumatra. The Chinese formed the merchant class of the archipelago and although they never numbered more than 3–5 percent of the population, they dominated business in almost every town in the Netherlands East Indies. Of the locals, the rulers enjoyed the prosperity that Dutch rule brought, and gradually a small middle class emerged, aiding the Dutch in their colonial rule and also producing the nationalists who worked against the Dutch in the 1930s. For the rest of the peasantry, life hardly changed.

JUSTIN CORFIELD

Newman, John Henry

(1801–1890) *theologian and church leader, cardinal*

John Henry Newman's life can be divided neatly into two almost equal parts: as an Anglican from 1801 to 1845 and as a Roman Catholic from 1845 to 1890. Newman was born in London on February

21, 1801, to a conventional Anglican family, neither too high church nor too low church. Although it was a religious household, there was little to suggest the extraordinary career Newman would have in his later years.

In 1816 Newman entered Trinity College, Oxford. Thus began what would become almost three decades of educational, pastoral, and intellectual work in that celebrated university. In 1822 Newman won a fellowship to Oriel, at that time Oxford's most prestigious college. Becoming vicar of the University Church of St. Mary the Virgin in 1828, he began to attract a large following who came to listen to his sermons. Preached in a soft, melodious voice, Newman's sermons appealed to Oxford students and High Street shopkeepers, to intellectuals and common folk. These would be collected in later years in the multivolume *Plain and Parochial Sermons*.

In Oriel's senior common room, Newman came into contact with some of the men who would become the most important leaders of the Oxford Tractarian Movement, which was launched in 1833. The immediate catalyst for this religious movement (more commonly known as the Oxford Movement) was the coming to power of a new parliament in 1831. With the threat of government interference in ecclesiastical affairs, coupled with a poorly educated clergy and lukewarm congregations, some Oxford intellectuals began to speak out in pulpit and on the printed page. The movement's chief weapon was the published tract, hence the name for its proponents, Tractarians.

Meanwhile, Newman was touring Europe. Falling ill at sea in the summer of 1833, he penned the verses for which he is famous: *Lead, Kindly Light*. He hastened back to Oxford in time to hear John Keble preach a sermon *On the National Apostasy*, which for Newman was to signal the beginning of the Oxford Movement, a movement forever associated with the name of Newman. In all, 90 *Tracts for the Times* were published from 1833 to 1841, of which he wrote 29. It was his *Tract 90* that provoked a storm of controversy and ended the series.

Newman's association with such high church Anglicans as Keble and Edward Pusey was to shape his theological orientation. In his own words, it checked his drifting toward the liberalism of the day. Newman was against liberalism in religion, not in politics. Liberalism was, to him, "the anti-dogmatic principle," the principle that "there is no positive truth in religion, but one creed is as good as another, and all are to be tolerated since all are matters of opinion." Newman's first book, *The*

Arians of the Fourth Century (1833), is notable for his insistence on the necessity of dogma.

Indeed, it was his study of early church history that provoked his own intellectual and spiritual crisis. What began as a study of the early church fathers, with a view toward justifying the Anglican *via media* (middle way) between Catholicism and Protestantism, was turning into, first, unease over the Anglican position, and then a positive doubt. In the spring of 1839 the Oxford Movement was at its height, but Newman himself was on the verge of a change of heart. He penned the tract *The State of Religious Parties*, which would be (in his own words) "the last words which I ever spoke as an Anglican to Anglicans." This article ended with the rhetorical question: "Would you rather have your sons and daughters members of the Church of England or of the Church of Rome?" But from then on, until 1843, he "wished to benefit the Church of England, without prejudice to the Church of Rome."

The year 1841 saw the publication of *Tract 90*, which argued that the Anglican 39 Articles could be interpreted in a Roman Catholic sense. The storm of indignation from many quarters that this tract produced eventually led to Newman's resignation as head of the Oxford Movement. Preferring silence and withdrawal, Newman retired to the village of Littlemore, just outside Oxford, where he continued his reading and study.

By 1843 he made a formal retraction of his verbal polemics against the Roman Catholic Church and resigned the vicarship of St. Mary's. For two more years, he quietly lived as an Anglican layman. He was received into the Roman Catholic Church in October 1845 by Dominic Barberi, an Italian passionist. He left Oxford for good the following year; it would be many years before he would see the old university again.

In 1846 Newman was in Rome to study, before his ordination to the Catholic priesthood the following year. Returning to England, he would spend most of the remainder of his life in the house of the Oratorians in Birmingham. If Newman was a controversialist and outspoken theological adversary in his Anglican period, he was no less so as a Catholic priest. In 1850, for example, England was in a no popery period, which was a reaction to the restoration of the English Catholic hierarchy by Rome. Awarded a papal doctorate of divinity for his *Lectures on Certain Difficulties Felt by Anglicans in Submitting to the Catholic Church*, he was henceforth to be called Dr. Newman until the time he was made cardinal.

Such writings, however, were not Newman's lifework, although posterity remembers him chiefly for his writings. He preferred to live, until his death in 1890, the simple and obscure life of an Oratorian priest, engaged in liturgical, educational, and charitable activities. Nonetheless, he was an exceedingly effective writer, though only an occasional one. Except for a few monumental, indeed astonishingly erudite, theological works that were far ahead of their time, such as *An Essay on the Development of Christian Doctrine* (1845), *An Essay in Aid of a Grammar of Assent* (1870), and *The Idea of a University* (published only in 1873), much of Newman's literary output as a Catholic consisted of responses to those who either maligned or misunderstood him or Catholic teaching. Thus, his *Letter to Pusey* (1866) was a defense of Catholic devotion to Mary, the *Letter to the Duke of Norfolk* (1875) was a carefully nuanced theology of papal infallibility (defined by the VATICAN I COUNCIL in 1870), and most famously, his autobiographical *Apologia Pro Vita Sua* (1864) was a response to writer Charles Kingsley's gratuitous and published attack on the Catholic clergy and Newman in particular. These works had the cumulative effect of establishing Newman as a first-rate intellectual and a modern-day Catholic apologist.

With such accomplishments, one would not have imagined Newman undergoing years of suspicion and setbacks from his Catholic superiors. In an article entitled "On Consulting the Faithful in Matters of Doctrine," Newman had articulated his vision of a church in which laypeople actively participate even in doctrinal matters, since they have the spirit of truth in them. Such ideas (which the Second Vatican Council adopted in its teaching on the *sensus fidelium*, the "spiritual sense of the lay faithful") were deemed dangerous and heretical. From 1859 onward, Newman was held in suspicion by prelates in Birmingham, London, and Rome. It was only in 1879, when he received the cardinal's red hat, that he felt that the cloud was lifted from him forever.

Cardinal John Henry Newman died on August 11, 1890, and was buried in Rednal, eight miles out of Birmingham. One paper wrote: "No peer, or prince, or priest, or merchant who ever walked the crowded streets of Birmingham is so missed or mourned as the Roman Cardinal." Cardinal Henry Manning, preaching at the London Oratory, declared that "the history of our land will hereafter record the name of John Henry Newman among the greatest of our people, as a Confessor for the Faith."

Newman's enduring contributions are difficult to measure. In his Anglican period, he awakened the

church to a clearer grasp of Christian doctrine and a more energetic practice of the faith. As a Catholic, he published timely apologetics and seminal theological treatises remarkable for their scholarship, balance, and farsightedness. Throughout his long life he sought to live virtuously, honestly, and charitably. A man of deep prayer and unassuming humility, he once wrote in his private journal: "Those who make *comfort* the great subject of their preaching seem to mistake the end of their ministry. *Holiness* is the great end. Comfort is a cordial, but no one drinks cordial from morning till night." The cause for his heroic sanctity is presently being pursued with the Vatican's Congregation for the Causes of Saints.

newspapers, North American

Emerging almost simultaneously with the appearance in Europe of new forms of printed communication, Britain's North American colonies propelled newspapers to new heights of political clout, popular appeal, and financial success in the 18th and 19th centuries. New technologies, including the telegraph and steam printing press, and an evolving connection between growing urban publics and their newspapers made this medium the communication choice of its era.

COLONIAL BEGINNINGS

Early colonial newspapers tended to be small and mainly devoted to commercial information. Papers like the *Boston Gazette*, founded in 1719, published commodity and stock prices, ship arrivals, and notices for goods available in town. Printers needed to be literate; a printer who had opinions also had the means to express them. As early as 1721 James Franklin, elder brother of BENJAMIN FRANKLIN, opposed smallpox vaccinations in his *New England Courant*. The ability of a news sheet to include controversial topics or political views tended to

wax and wane, depending on the forbearance of British and local officials.

As relations between the American colonies and Britain deteriorated after the SEVEN YEARS'/FRENCH AND INDIAN WAR, newspapers' political engagement increased significantly. Publishers spearheaded opposition to Britain's 1765 Stamp Act, which threatened both their expression and their profits. This act imposed a tax on every printed page. Printers counterattacked, using their presses to circulate anti-Stamp Act articles while often refusing to pay the tax. Newspapers not only helped kill the Stamp Act but forged colonial linkages that would eventually help bring on the AMERICAN REVOLUTION. The oldest surviving paper from this era, the *Hartford Courant*, was founded in 1764. In 1791 the U.S. Bill of Rights would enshrine freedom of the press.

U.S. PRESS CHALLENGES

Establishing press freedom soon proved much easier than actually dealing with a free press. It was one thing for colonial newspapers to ridicule the hated British, but U.S. politicians soon found themselves targets of both fair and unfair abuse. As political parties emerged, newspapers became a favored way to broadcast their achievements and belittle their foes' programs in highly partisan fashion. One such party mouthpiece was the *New-York Evening Post*, founded by Federalist ALEXANDER HAMILTON.

A major challenge to press freedom emerged in 1798 when a Federalist Congress approved and President John ADAMS signed the ALIEN AND SEDITION ACTS. A key target of these repressive laws was the *Philadelphia Aurora*, published by Benjamin Franklin Bache, grandson of Benjamin Franklin. Bache was a ferociously Republican journalist who spared no Federalist from his printed assaults. Bache died of yellow fever before his sedition trial; his wife defiantly continued to publish. When THOMAS JEFFERSON became president in 1801, he made sure the Sedition Acts died.

THE PENNY PRESS REVOLUTION

In the early 19th century, neither the partisan press nor a growing number of newspapers dedicated to business issues were widely circulated by modern standards. These papers were expensive, about six cents an issue, and many were available only by long-term subscription. It was the wealth or importance of readers rather than their number that concerned the owners of such newspapers. Even so, by 1825, the United States was believed to circulate more newspapers than any other

country. Visiting in 1831, French observer ALEXIS DE TOCQUEVILLE saw this outpouring of printed speech as a means of uniting and stabilizing American society.

Newspaper circulation soared dramatically when, in 1833, Benjamin Day, using the slogan "It Shines for All," launched his *New-York Sun*, priced at just a penny. In 1835 James Gordon Bennett began publishing the *New-York Herald*. Although its price was raised to two cents the next year, the *Herald* circulated 20,000 copies a day. This new penny press focused on crime, human interest, and scandal, although political issues of special concern to working-class readers were not ignored. In 1841 Horace Greeley, an abolitionist and promoter of westward expansion, founded the influential *New-York Tribune*, another penny paper.

The penny press was made possible by the growing populations of American cities and the rise of steam-powered presses. The old hand press, not much changed from the days of Gutenberg, turned out about 125 copies per hour; by 1851, Day's *Sun* was printing 18,000. Another important leap was the introduction, in 1844, of the first telegraph connections. No longer stuck printing stories days or weeks old, received by mail or messenger, newspapers became considerably more timely and enterprising. Transatlantic telegraph connections in the 1860s extended this real-time benefit to foreign news.

NEW PROFESSIONALISM AND "YELLOW" JOURNALISM

As newspapers became wealthier, many owners committed their publications to new kinds of journalism, and new kinds of clout for themselves. In 1851, backed by two friends who were bankers, Henry J. Raymond, a veteran of Greeley's *Tribune*, founded the *New York Times*.

The *Times* caused a stir in 1871 with pioneering investigative journalism that brought down the corrupt political organization of New York City boss William Marcy Tweed. In 1855 Joseph Medill, a Canadian immigrant who helped create the U.S. Republican Party, took over the *Chicago Tribune*. After the disastrous CHICAGO FIRE of 1871, he served a term as mayor.

Although some newspapers sent staffers to gather news from Washington, D.C., and state capitals as early as the 1820s, not until the CIVIL WAR did the necessity of having reporters cover live events become generally recognized. Bennett had sent just one observer to the MEXICAN WAR; he sent 63 to Civil War battlefields, where they competed with reporters from the *Tribune*, *Times*, and others. In the late 19th century

fierce competition between publishers Joseph Pulitzer and William Randolph Hearst reshaped journalism in many American cities. Pulitzer founded the *St. Louis Post-Dispatch* in 1865 and moved to New York in 1883 to spectacularly resuscitate the ailing *New York World*. Pulitzer used a combination of sensational stories, important local issues, and populist politics to attract urban readers. His effort to raise donations from *World* readers to install the STATUE OF LIBERTY succeeded after other fundraising efforts had failed. Hearst trained at Pulitzer's *World* after he was expelled from college. In 1887 Hearst returned to California to revive his father's *San Francisco Examiner*. His rivalry with Pulitzer truly began in 1895 when Hearst bought the *New York Morning Journal*, cutting its price to one cent and luring away many *World* staffers, including the artist who drew an early comic called "The Yellow Kid." The battle between the two publishers for circulation and stature, often at the expense of journalistic accuracy, became known as yellow journalism.

As the United States and Spain tangled over the status of Cuba in the 1890s, Hearst sent celebrity writer Richard Harding Davis and renowned artist Frederic Remington to Cuba to collect news. Although Pulitzer and Hearst were soon enmeshed in their own war over which newspaper was telling the truth about Cuba, both the *World* and Hearst's *Journal* used huge headlines and scare stories to help foment and cheer on the 1898 SPANISH-AMERICAN WAR.

By the end of the century, U.S. newspapers were riding high. Across the nation, advertising revenues rose with circulation, staffs increased in numbers, skill, and specialization, and larger cities supported an array of daily and weekly newspapers. New techniques, including woodcuts and etchings, were making both news content and advertising copy more colorful and easier to read. By 1897 a new kind of rotary press made it possible for many papers to include actual photographs on their pages. Outside the mainstream, smaller presses used similar techniques of writing and presentation to bring news to non-English-speaking immigrants and African Americans. Although the first African-American journal appeared in 1827, and FREDERICK DOUGLASS began publishing his *North Star* in 1847, black-owned newspapers like the *Philadelphia Tribune* of 1884 and *Baltimore Afro-American* of 1892 provided their readers the full newspaper experience.

CANADIAN NEWSPAPERS

With a smaller population and continuing colonial rule by Britain until 1867, Canada's journalism fol-

lowed a trajectory similar to that of U.S. newspapers, but at a somewhat more gradual pace. In Canada, as in the United States, political figures played major roles in publishing and used their newspapers to shape the political discourse. In 1752 the *Halifax Gazette*, Canada's first newspaper, was established with the help of a Boston printer who brought the first press to what was still a wilderness outpost. France had strongly discouraged newspapers in its New France colony; not until Britain triumphed in the French and Indian War did French-language publications begin to emerge. The first was the *Quebec Gazette*, founded in 1764 with the assistance of Philadelphia printers. In 1778 Fleury Mesplet founded the *Montreal Gazette* as a French-language journal. After a period as a bilingual paper it became English only in 1822.

Mesplet, who had received some encouragement from American patriots, was jailed, along with his editor, by outraged local authorities soon after the *Gazette* appeared. In 1766 British authorities closed down the *Halifax Gazette* and removed its editor for allowing publication of an article attacking the Stamp Act. In 1835 publisher Joseph Howe was charged with seditious libel for writing in his *Novascotian* that local magistrates were pocketing fines with tacit approval from the province's lieutenant governor. Although he was not allowed to claim truth as his defense, Howe was acquitted by a jury in just 10 minutes.

Between 1813 and 1857, the number of Canadian newspapers, mainly weeklies, rose tenfold. Politics was a major impetus as old Tory elites faced challenges from new reform parties in both French- and English-speaking areas. William Lyon Mackenzie's *Colonial Advocate* was one of the most outspoken of these new papers.

When Tory sympathizers smashed his presses in 1828, Mackenzie used the incident to build support and was elected to a reform Upper Canada assembly soon thereafter. George Brown, who had published an antislavery paper in New York, launched the *Toronto Globe* in 1844. Brown, a proponent of Canadian western expansion, used his paper to push this and other reform causes, becoming an initiator of CANADIAN CONFEDERATION in the 1860s. Brown died in 1880 after he was shot in his office by a disgruntled former *Globe* employee.

Like their U.S. counterparts, Canadian papers expanded their size, circulation, advertising, and news-gathering techniques in the late 19th century, although they were slower to adopt such innovations as huge headlines. They did experiment earlier than many U.S.

papers with rotary presses and half-tone photographs, the first of these, a photo of the new Montreal Customs House, appeared in 1871. As Canadians expanded west, so did their newspapers. By 1900 Canada had 121 dailies, up from 23 in 1857.

MARSHA E. ACKERMANN

Nian Rebellion in China (1853–1868)

The word *nian* means “a band” and referred to the outlaw secret society bands or gangs along the lower Yellow and Huai River valleys in borderlands between Shandong (Shantung), Henan (Honan), Jiangsu (Kiangsu), and Anhui Provinces. This area had long harbored bandits and salt smugglers.

Although they existed since the 18th century, floods in the early 1850s and the famine that followed abetted their growth. In 1853 a man named Zhang Luoxing (Chang Lo-hsing) became leader of the Nian and titled himself the Great Han Heavenly mandated King. He organized his followers after the Manchu banner system and initiated them with pseudo-religious rites. At the peak of his power in the late 1850s the Nian controlled approximately 100,000 square miles of territory.

However, the Nian never developed a centralized government capable of administering cities or organizing a coordinated military action, resorting mainly to guerrilla warfare and fast but uncoordinated cavalry raids, seldom holding on to towns and cities, but retreating to their earthen-walled strongholds. They scorched the earth to deprive government forces of supplies.

The Nian also sporadically cooperated with the Taiping rebels in the Yangzi (Yangtze) River valley. Early QING (Ch'ing) efforts to defeat the Nian met with failure, in part because of the hostility of many peasants toward the government. Even the capture of Nian leader Zhang in 1863 did not end the rebellion

because in 1864 some followers of the defeated TAIPING REBELLION joined their cause.

In 1865 the court appointed ZENG GUOFAN (TSENG KUO-FAN), the statesman-general who led the defeat of the Taiping Rebellion, to suppress the Nian. He approached the task by reforming the local government and winning over the population in contested areas. But the aging Zeng had disbanded most of the Hunan army that he had organized and led after the defeat of the Taiping Rebellion and pleaded to be allowed to retire. The task was given to one of his lieutenants in 1867. He was LI HONGZHANG (Li Hung-chang), the organizer and commander of the modern armed and well-disciplined Huai, or Anhui, Army. With the assistance of Zuo Zongtang (Tso Tsung-t'ang), another statesman-general who had contributed to defeating the Taiping Rebellion, Li ended the Nian Rebellion in 1868.

The suppression of the Nian and other rebellions in the 1860s and 1870s was the triumph of warfare and civil government by capable leaders who rallied to the Qing dynasty. It was a genuine pacification in the traditional manner by scholars-generals-administrators committed to Confucian moral principles, who stressed political and economic reforms in combination with hard fighting. They had to recruit the armies that they commanded because the Qing regular army had deteriorated to ineffectiveness.

JIU-HWA LO UPSHUR

Nightingale, Florence

(1820–1910) *health care pioneer*

Florence Nightingale came from a wealthy English family and received a classical education in languages, history, and mathematics from her father. Much to her parents' dismay, she rejected several marriage proposals and was determined to become a nurse, a profession that was held in low esteem by the upper classes in the 19th century.

With an annual income from her father, she traveled to Egypt and elsewhere. In Germany she studied new

Through Florence Nightingale's efforts in the Crimean War great advances were made in healthcare and nursing.

health care practices. Returning to England, Nightingale became superintendent at a Harley Street hospital for women in 1853. After she learned about the deplorable

lack of health care for the soldiers in the CRIMEAN WAR, Nightingale traveled to Scutari (in present-day Turkey), where, in spite of considerable prejudice against women working in the field, she and her assistants worked tirelessly to improve sanitary conditions and hygiene. As a result, mortality rates dropped from over 40 percent to around 2 percent.

Because she carried an oil lamp while caring for the wounded at night, Nightingale became known as the lady with the lamp. After the war, Nightingale used her considerable skills in the mathematical field of statistics to improve health care in general; she funded a training school for nursing in London as well and wrote a detailed report providing recommendations on health care in the army.

Nightingale was bedridden, perhaps with a psychosomatic illness, for the last years of her life and died in 1910. She received numerous awards for her work in the field of health care. Clara Barton and others followed her example by volunteering as nurses during the U.S. CIVIL WAR. Nightingale was perhaps the most famous woman, after the queen, in Victorian England.

JANICE J. TERRY

O'Higgins, Bernardo

(1778–1842) *Chilean military and political leader*

A military leader who led Chilean forces against the Spanish, Bernardo O'Higgins won independence from Spain and became the supreme dictator of Chile from 1817 until 1823.

Bernardo O'Higgins was born on August 20, 1778, in Chillán, Chile, the son of Ambrosio (Ambrose) O'Higgins and Isabel Riquelme. Ambrose was originally from County Sligo, Ireland, and moved to Spain to join the Spanish army, later settling in Paraguay, where his brother William (or Guillermo) O'Higgins had bought some land. Ambrose then became marquis of Osorno, governor of Chile. As a Spanish official, he was not allowed to marry locally and as a result started living with a well-connected lady from Chillán. Some time after Bernardo was born, his father moved to Peru, where he was appointed viceroy, and the boy stayed with his mother, using her surname until his father's death.

To complete his education, Bernardo O'Higgins was sent to school in Lima, Peru, and at 16 went to Spain. The following year he went to England, living in Richmond-upon-Thames, just outside London. In England, O'Higgins became interested in nationalist politics. There he met the Venezuelan independence activist Francisco de Miranda, who was agitating against Spanish rule, and became hugely influenced by liberal ideas. He joined a secret Masonic lodge that Miranda had established in London—the mem-

bers dedicated their lives to the independence of Latin America. With his father being viceroy of Peru, O'Higgins could get introductions to important people easily, and for Miranda he was a very important recruit for the cause. O'Higgins left England in 1799 and went to Spain where he met some Spanish who were also against Spanish rule.

In 1801 Ambrosio died, and Bernardo O'Higgins was left a large estate near Chillán. He retired there and took up the life of a gentleman farmer. He bought a house in Chillán and in 1806 was elected to the local town council.

However, there were sudden huge changes to sweep through Latin America. In 1808 Napoleon Bonaparte invaded Spain and appointed his brother Joseph as king. This left the Spanish colonies without a central authority, and the administration in each city formed juntas—military leaders—who they could constitutionally appoint in times of emergency. Chile started to make its first moves toward independence, and on September 18, 1810, a junta announced that it had replaced the Spanish-appointed governor-general. In 1811 Chile's first Congress met with O'Higgins as a member. Two years later Chile had a constitution and seemed to be on the road to independence.

However, the Spanish decided to try to reestablish royal control over Chile. In 1814 the viceroy of Peru sent soldiers into Chile and within several months O'Higgins rose from being a colonel in the militia to general-in-chief of the defense forces. He was then appointed governor of the province of Concepción. However,

when the Chilean forces were defeated at the hands of the royalists, O'Higgins was replaced as commander. In October 1814 the Chileans were badly mauled at the Battle of Rancagua and the royalists occupied most of Chile.

Several thousand Chilean nationalists, or patriots, as they became known, including O'Higgins, were forced to flee across the Andes into western Argentina, where they drew up plans for a subsequent invasion of Chile. Over the next three years, the Chileans and Argentines were drilled and trained at Mendoza, and José de San Martín prepared them to cross the Andes. With Argentina independent from July 9, 1816, the soldiers of San Martín and O'Higgins were reinvigorated, and on January 24, 1817, the two took the 3,000 infantry, 700 cavalry, and 21 cannons through the passes at Gran Cordillera. They were met on February 12–13 at the Battle of Chacabuco. On the first day of the battle, O'Higgins led his men in an early morning move where they prevented the Spanish from withdrawing. San Martín then attacked and routed them. On February 15 O'Higgins took the Chilean patriots back into Santiago, and O'Higgins was elected as interim supreme dictator. Chile's independence was proclaimed on February 12, 1818.

During his six years as supreme dictator, O'Higgins overhauled the administration. With Chile at peace, he set about establishing a navy with the flagship called *O'Higgins* and founding the Chilean Military Academy, as well as instituting the new Chilean flag. He also mounted a major military expedition into Peru, where royalists were still threatening Chilean independence. However, although he was a good military commander, O'Higgins was not a good politician. An admirer of democracy, he wanted to abolish the titles of the nobles and introduce liberal reforms.

O'Higgins alienated the Roman Catholic Church and the aristocracy, followed by the business community. A constitutionalist, he had no political base, and once there was no threat of attack from the Royalists, it was not long before O'Higgins was eased from office. His government was implicated in the assassination of four political figures, José Miguel Carrera, his two brothers in Argentina, and a friend Manuel Rodríguez. O'Higgins resigned under pressure on January 28, 1823, unable to fulfill his ambitions for independence for all of Latin America.

O'Higgins went into exile in Peru in 1823, spending half of his time at a farm he bought and the other half of his time in Lima. He never married but did have a son, Pedro Demetrio O'Higgins, who remained with

him for all of his life. He died on October 23, 1842, in Peru. In his will he left money for the establishment of an agricultural college in Concepción, a lighthouse in Valparaíso, and the Santiago Observatory. In 1869 his remains were brought back to Chile and put in a mausoleum facing the Palacio de la Moneda, the government palace. The main street in Chile's capital, Santiago, is Avenida Bernardo O'Higgins, in which there is a large statue of him.

JUSTIN CORFIELD

Olmsted, Frederick Law

(1822–1903) *U.S. architect and urban planner*

Gentleman farmer, antislavery journalist, gold mine supervisor, and U.S. CIVIL WAR official, Frederick Law Olmsted is today best known for his design and implementation of New York City's Central Park. He and the partners and sons who carried on his work were ultimately responsible for thousands of important urban and suburban projects that reshaped and beautified North America, from the U.S. Capitol grounds to Niagara Falls to Montreal's Mount Royal. His multifaceted career epitomizes what a man of means, intellect, and enthusiasm could achieve in 19th-century America.

Olmsted was, as one biographer put it, the "eager and undisciplined" son of a successful Hartford, Connecticut, merchant. He entered Yale University, but never graduated. Fond of the outdoors, he apprenticed as a surveyor and endured a year aboard a square-rigger involved in the China tea trade, before taking up scientific farming in then-rural Staten Island, New York.

As the slavery issue began to boil over in the late 1840s, Olmsted, although no abolitionist, raised money for Free-Soil causes and became an early supporter of the new Republican Party. Hired by the *New-York Daily Times* (now the *New York Times*), the young correspondent undertook a series of trips through the slave-owning South to write influential articles revealing slavery's economic and social impact.

Olmsted's involvement with Central Park was almost accidental. On the recommendation of a well-

placed friend, Olmsted was named superintendent of the proposed 800-acre park in 1857. Months later, Olmsted teamed up with Calvert Vaux, a protégé of Andrew Jackson Downing, America's first professional landscape designer, to win the park design competition with a proposal titled "Greensward." Central Park was the first of many Olmsted projects that would meld natural features and human artifice to create a peaceful yet energizing "balanced irregularity" that seemed to appeal to people of every class and condition. It was an immediate success, despite serious cost overruns.

In 1859 Olmsted married Mary Perkins, widow of his beloved brother John, adopting his two nephews and a niece. (They would have four children together.) As the Civil War erupted, Olmsted, as first general secretary of the U.S. Sanitary Commission, used his considerable organizational talents to save lives by improving medical care for Union soldiers and others endangered by the war. Eager to repay his father's many loans and captivated by northern California's natural beauty, Olmsted in 1864 accepted the post of manager at Mariposa Estate, a productive but troubled gold mining operation. While in California, Olmsted helped to promote "Yo Semite" and its huge sequoias as a future national park.

By 1868 Olmsted had resumed his landscape and planning career with Vaux and others. Major projects of these post-war years would include a park system for Buffalo, park designs for Chicago before and after the 1871 CHICAGO FIRE, and the site plan for Chicago's 1893 World Columbian Exposition. Olmsted designed a campus for Stanford University in California and pursued projects at other major universities including Cornell and Yale.

Olmsted suffered from bouts of depression and endured dementia in his final years. His central role in shaping and improving so many cities faded from public recollection. Not until the 1980s, as New York City began to refurbish its dangerously neglected Central Park, would Olmsted's "People's Park" and the genius of its creator reemerge to astonish a grateful public.

MARSHA E. ACKERMANN

Omani empire

The Omani empire in East Africa, which dominated the East African coast between Somalia and northern Mozambique, entered a new phase after 1800. It faced new challenges as Britain, the United States, France, and Germany abolished the slave trade in the 1800s. Yet, in the 19th century, the Omani empire was centered at Zanzibar, and was known as Zanzibar because it was the center of a vast rich empire, based on trade in spices and slaves.

The suzerains of the empire had been traders for many centuries and used Zanzibar as their main port, originally for slaves and ivory. However, in 1812 it was discovered that cloves grew very well in the south of Zanzibar and the neighboring island of Pemba. The demand for cloves and other spices was high.

Sultan Seyyid Said of Oman saw the possibilities in this trade and began to invest in clove plantations starting in 1820. In order to maximize production of cloves, he used slaves from much of east and central Africa. Ultimately most of Africa between the East African coast and the Congo River basin, or an area of over 1 million square miles, was affected by the slave trade which persisted to the 1890s. In order to gain cheap labor, the Omani Arabs, beginning with Seyyid Said, encouraged African tribes to turn on each other so as to provide slaves through prisoners of war. By the 1820s 8,000 slaves a year were brought to Zanzibar and Pemba. This was opportune as the market for slaves was drying up because of pressure from Europe. (By 1873 before the British forced the end of the slave trade by sending a naval squadron, the number of slaves brought to Zanzibar/Pemba to work the plantations had reached 30,000 per annum.) Slavery was not abolished until the British made Zanzibar a protectorate in 1890.

The sultan repeatedly promised to end slavery and the slave trade, but never kept his promise. He also used slave labor to transport ivory. He buttressed his position by getting rid of his only rivals, the Mazrui family of Mombassa, Kenya, in 1837. Moreover, he signed huge commercial treaties with America, Britain, and France. He maintained his position by playing America, Britain, and France against each other. He enforced his authority through wholesale purchases of European and American arms, a navy of 15 ships, and a force of 6,500 soldiers.

Sultan Seyyid Said moved his headquarters from Muscat, Oman, to Zanzibar between 1832 and 1841. In the latter year Zanzibar became the capital of the Omani empire both in Africa and Arabia. The profits

from investments in cloves made the sultan and his entourage very rich. Cloves had become so dominant that many other crops in Zanzibar were cleared away to grow them. The sultan decreed in the 1840s that three clove trees should be planted for every coconut palm. Any landowner failing to do so would have his property confiscated.

By 1841 the sultan appointed his elder son to rule in Oman while he concentrated on Zanzibar. By 1850 Zanzibar/Pemba accounted for 80 percent of world's clove production. In 1856 the sultan died of dysentery. On his death, his younger son was proclaimed sultan as the new ruler of Zanzibar and the East African coast while the older brother ruled Oman. The Omani empire had ended, but the Omani dynasty continued until 1890, when Britain took over Zanzibar as a protectorate. The heritage of the Omani empire of East Africa in the first half of the 19th century was a depopulated East and East-Central Africa. The advent of independence in 1964 saw the overthrow of the oligarchy that had grown rich during the heyday of the clove trade.

NORMAN C. ROTHMAN

Omdurman, Battle of

At the Battle of Omdurman the British, led by Horatio Herbert Kitchener, the sirdar or commander in chief of the Egyptian army, decisively defeated the Mahdist forces led by the Khalifa 'Abdullahi. Kitchener's force

of about 25,000 mostly Egyptian soldiers with British officers met the Mahdist forces, also known as dervishes in Europe, of some 50,000 men, on the battlefield of Karari outside the Mahdist capital of Omdurman. To facilitate the movement of troops and supplies Kitchener had had the railway from Cairo to southern Egypt extended to the northern Sudan. He also had armored gunboats. Armed with machine guns, Kitchener's forces easily killed over 10,000 attacking Mahdist forces, many of whom were armed with spears. At least another 20,000 Mahdist soldiers were wounded and many of those subsequently died from lack of medical care.

Kitchener's gunboats also fired on Omdurman, destroying the imposing tomb of the Mahdi whose remains were scattered by the victors. The Khalifa managed to escape but was ultimately killed in battle some months later by British forces led by F. (Francis) Reginald Wingate who had been director of military intelligence and Kitchener's subordinate.

Kitchener was appointed governor general over the Sudan, and Khartoum, a city on the other bank of the Nile River from Omdurman, became the new Sudanese capital. However, Kitchener only held the position for a short time before he was dispatched to assist in the British military efforts during the Boer War in South Africa. Wingate succeeded him as the new governor-general in 1899 and went on to consolidate British control over the Sudan under the Anglo-Egyptian Condominium, the rather cumbersome arrangement the British devised to legitimize their rule over the country.

JANICE J. TERRY

Pacific exploration/annexation

From the time that the Spanish navigator Vasco Núñez de Balboa stood and gazed in silence at the vastness of the Pacific Ocean in 1513, explorers from around the globe have been fascinated with its mysteries and sheer size. The discovery of the Pacific Ocean opened up new areas of exploration and eventually led to the settlement of the New World, which forever changed life on the planet as it existed in Balboa's time. Exploration of the Pacific also provided cartographers with the information needed to chart the entire globe more completely than had ever been done before. In the beginning, the Spanish, Dutch, and Portuguese had led the way in exploring the world. However, as exploration of the Pacific became both more urgent and profitable, Britain and France also financed expeditions. Each new voyage added to existing maritime knowledge of tides, currents, and wind patterns and helped to discover new navigational guides that made exploration safer and more productive for ships and their crews.

Seven years after Balboa discovered the Pacific Ocean, Ferdinand Magellan (Fernão de Magalhães) of Portugal became the first navigator to circumnavigate the globe and cross Balboa's ocean, which he named the Pacific to honor its serenity. The path that Magellan traveled, which bears his name, is now known as the Strait of Magellan. Thus, Magellan became the first known explorer in the history of the world to travel the waters of the South Pacific. Scientists of his time believed that in order for the balance of the Northern Hemisphere to

be maintained, an undiscovered continent, which they had named Terra Australis Incognita, would have to be located in the furthest areas of the Southern Hemisphere. Over the next 250 years, countless explorers attempted to find this mysterious southern continent.

By the 18th century, the question became how soon new lands could be claimed by nations looking for colonies with rich resources. This new emphasis on exploration and annexation arose out of the massive changes that were taking place in Europe. After Sir Isaac Newton introduced the notion that science was better suited than philosophy to explain the world, educated Europeans became hungry for any knowledge that broadened their understanding of the world in which they lived. As a result, the ENLIGHTENMENT brought about new social and political orders that were accompanied by a desire to learn more about non-Western societies. At the same time, the INDUSTRIAL REVOLUTION was creating increasing demands for raw materials and new products that could be exploited for trade. Recent discoveries in the field of navigation, such as the chronometer and the *English Nautical Almanac*, provided navigators with more exact methods of computing longitude and latitude in open water, making voyages of discovery safer and more productive. In the 18th century all of these changes came together to fuel the desire to explore the Pacific Ocean.

ENGLAND AND THE PACIFIC

In August 1766 aboard the H.M.S. *Dolphin*, Captain Samuel Wallis sailed from Plymouth, England, with

orders to find the Great Southern Continent and claim it for Britain. He was accompanied by Captain Philip Carteret in the H.M.S. *Swallow*. On June 28, 1767, after navigating the Strait of Magellan, the *Dolphin* discovered the island of Tahiti, where they were met by hundreds of Tahitians in canoes. After establishing friendly relations with the curious Tahitians, Wallis docked in Matavi Bay. However, the natives decided they were under attack and began pelting the ship with stones. Wallis responded with gunfire, destroying at least 50 canoes. Afterwards, the Tahitians brought out young girls to entice the sailors back to the beach. Satisfied that the danger was past, trading began in earnest, with the English trading nails for young girls, chicken, fruit, and hogs. Wallis was forced to confine his men to the ship to keep them away from the girls. In May 1768 officials in London learned of Wallis's discovery of this new tropical paradise.

CAPTAIN COOK

Of all British explorers who traveled the Pacific in the 18th century, CAPTAIN JAMES COOK was the best known and most respected. In 1768 King George III chose Cook to lead a geographical and scientific expedition in which the Royal Society planned to observe an upcoming phenomenon that involved the planet Venus passing between the Earth and the Sun. Scientists predicted that observations of this phenomenon would provide the information needed to calculate the exact distance from the Earth to the Sun. Since Tahiti was believed to be an ideal spot for observing the event, Cook traveled there.

He was also charged with exploring the coast of New Zealand and continuing the search for the Great Southern Continent. Consequently, Cook became the first navigator to explore the area of the Pacific Ocean that lies between New Zealand and South America. He made three separate voyages to the Pacific between 1768 and 1779, and his accomplishments include disproving the existence of the mythical southern continent, discovering the HAWAIIAN ISLANDS, claiming parts of Australia for Britain, charting the 300-mile area from Oregon to beyond the Bering Strait, and providing the first comprehensive map of the Pacific.

On his first journey to the Pacific as captain of the *Endeavour*, Cook worked for half pay because he was not as experienced as other navigators who had sought the assignment. Cook's entourage was made up of 119 individuals, including 11 passengers. The most amazing thing about Cook's journey was that he did not lose a single individual to scurvy, which was considered the plague of long oceangoing voyages. Avoiding the mistakes of earlier navigators, Cook stocked the *Endea-*

avour with a variety of foods that included portable soups, sauerkraut, onions, evaporated milk, vinegar, lemon juice, and all sorts of vegetables and fruits.

Initially, Cook followed the path established by previous navigators, traveling along the Strait of le Maire to sail between Tierra del Fuego and Staten Island. From there, Cook sailed westward. By the time, the *Endeavour* reached Tahiti, Cook and his passengers had traveled some 5,000 miles. On June 3, 1769, with the assistance of three telescopes, the scientists were able to observe Venus as it crossed between the Earth and the Sun.

Cook remained in Tahiti for three months and then sailed south into unknown territory, eventually hoisting the flag over the Society Islands. Over a six-month period, Cook and his crew navigated the coast of New Zealand, charting a 2,400-mile area while being besieged by hostile aborigines and severe storms. On April 28, 1770, the *Endeavour* anchored at Botany Bay in Australia, allowing Cook to chart and name the area's various islands and bays. When they reached the 80,000-square-mile area known as the Great Barrier Reef, which reached from the tropic of Capricorn to the coast of New Guinea, the *Endeavour* struck a reef. After repairing the ship, Cook set out for the East Indies. Thirty-eight members of the crew were lost to malaria and dysentery over the coming months. Nevertheless, by the time Cook returned to England, he had added a considerable amount of land to the British Empire.

On July 13, 1772, Cook again set sail with orders to circumnavigate Antarctica and settle the question of whether or not another continent existed. The *Resolution* and the *Adventure* set out together, and Cook's plan was to continue sailing southward after traversing the area between Madeira and the Cape of Good Hope. This was the first voyage to circumnavigate the Earth from west to east. Cook also became the first navigator to cross the Antarctic Circle, discovering thousands of islands along the way. His journey included extensive explorations of Easter Island, the New Hebrides, New Caledonia, Norfolk Island, the Marquesas, and the Isle of Pine. The *Resolution* arrived at Spithead on July 30, 1775. In honor of his explorations, Captain Cook was named Commander Cook.

After Captain Cook's exploration of the southernmost continent laid to rest the question of whether or not an unidentified continent still existed, Cook shifted his focus north and renewed his attempts to find the elusive Northwest Passage, which could decrease travel time between Britain and the East Indies. On July 12, 1776, the *Resolution* again set sail with instruc-

tions to travel from west to east, reversing the routes of earlier expeditions. After spending time in Tahiti, Tasmania, and New Zealand, the *Resolution* turned north in December 1777, leading to the discovery of the Channel and Sandwich Islands, which were part of the kingdom of Hawaii. By April 26, 1778, Cook had reached the northernmost point of North America, which he named Cape Prince of Wales. When the ship traveled through the Bering Strait, Cook met solid walls of ice. With winter coming on, he decided to turn around and head back toward the Hawaiian Islands. This was to be the last lap of his final voyage. In Kealahou Bay, on February 14, 1779, a dispute with locals ended in Cook's being murdered. However, his influence did not end with his death. Other navigators chose to explore the waters of the Pacific and complete Cook's unfinished work.

It was another English explorer who ultimately succeeded in finding the Northwest Passage. This was accomplished during a search for members of a lost expedition led by Sir John Franklin who had been trying to force his way through the Arctic from Baffin Bay to the Beaufort Sea to discover the passage. Exploring the relevant area from 1850 to 1854, Robert John McClure became the first person to traverse the Northwest Passage, although he traveled part of the way by sledge. McClure's ship was ice-bound for three years around Banks Islands, but he and his crew were rescued at the point of starvation by a party led by Sir Edward Belcher. It was not until 1906 that Norwegian Roald Amundsen in the ship *Gjoa* succeeded in traversing the Northwest Passage entirely by ship.

FRANCE AND THE PACIFIC

By the late 18th century, France had developed a strong interest in the Pacific Islands, which it believed to be filled with uncivilized but noble savages. The government was convinced that these islands would open up new avenues of trade and provide philosophers and scientists with new subjects for study. Most important, France wanted new colonies to make up for those that had been lost in North America and India. As a result, in November 1766, three months after Captain Wallis sailed from Plymouth, England, Chevalier Louis-Antoine de Bougainville set sail on the *Boudeuse*, charged with discovering and claiming for France the southern continent that was believed to exist in the uncharted areas of the South Pacific. Two scientists and a crew of 200 accompanied Bougainville.

In April 1768, two years after Wallis's discovery of Tahiti, Bougainville and his crew rediscovered and

claimed the island, which Bougainville named Nouvelle Cythère, or New Cythera, after the Greek mythological Utopia. The Tahitians again offered their young girls in trade, with the result that the French left numerous cases of venereal disease behind when they left the island. When they returned to France, they were accompanied by the Tahitian Shurutura. Bougainville's books about his voyage became an instant best seller in France.

When LA PÉROUSE set sail in August 1828 to explore the Pacific Ocean, he was determined to seek his own path. Instead of traveling east as Cook had done, he mimicked the actions of previous navigators and traveled west. In June of the following year La Pérouse arrived at the point in Alaska where Cook had turned back in 1776. The Frenchman explored the area between Alaska and Monterey, California, and then headed for Macao in the South China Sea, where he charted the East Asian coast of the Pacific. By the summer of 1789 La Pérouse had begun his journey up the Pacific coast of Asia. Between 1837 and 1840 French naturalist Jules Dumont d'Urville explored the Southwest Pacific, claiming Antarctica for France. D'urville's careful charting of the atolls and reefs in the Pacific was immensely valuable for future navigators.

NORTH AMERICA AND THE PACIFIC

During the last half of the 18th century, European settlers began colonizing Australia, New Zealand, and the major Pacific islands. The United States and Canada entered the fray in 1780, establishing trading routes that netted silk, spices, and other products from distant lands. First with whaling ships and later with steamships, explorers traveled the entire Pacific Ocean. One of the most notable of those explorers was Alexander MacKenzie, a Scot who emigrated to Montreal, where he became a fur trader. After discovering the MacKenzie River in 1788, this explorer became the first North American to traverse the continent and helped to establish Britain's claim to the Canadian West.

Increased knowledge of the Pacific also led to a period of inland exploration in the United States and Canada during the early 19th century. As areas became more settled, there was a push to explore western boundaries and to find more direct routes to areas outside North America. In the early 19th century, France owned most of the land beyond the Mississippi River. In 1803 THOMAS JEFFERSON purchased the Louisiana Territory for around \$15,000,000, annexing all land north of Texas and westward toward the Rocky Mountains. The newly purchased area included what is now Arkansas, Missouri, Iowa, Nebraska, South

Dakota, North Dakota, most of Oklahoma, Kansas, Wyoming, Montana, most of Minnesota, and part of Colorado. The following year, Jefferson acted on his dream and financed the LEWIS AND CLARK EXPEDITION. On November 7, 1805, the expedition reached the Pacific Ocean, completing the charting of the United States from east to west.

ELIZABETH PURDY

Paine, Thomas

(1737–1809) *revolutionary journalist and activist*

Thomas Paine, the English pamphleteer who helped spark the AMERICAN REVOLUTION and later played a central role in the FRENCH REVOLUTION, remains a controversial figure, hailed by many as an “Apostle of Freedom” but disparaged by others as a drunken atheist and radical troublemaker.

Paine was born in Thetford, an English country town, where his Quaker father, Joseph Pain [sic] was a corset maker. Tom was well read, but his formal education ended at age 13, and his early efforts as teacher, tobacconist, tax collector, and even husband mostly ended in failure. In 1772 Paine met BENJAMIN FRANKLIN, then Pennsylvania's colonial representative in London. Armed with letters of introduction, Paine set sail for Philadelphia in October 1774. Although a novice writer, Paine was hired by *Pennsylvania Magazine*, where his essays boosted the monthly's circulation.

As tensions between Britain and rebellious colonials escalated, Paine began formulating his own long-held ideas of freedom and tyranny, inspired by such ENLIGHTENMENT figures as John Locke and Jean-Jacques Rousseau. Paine's pamphlet *Common Sense*, published in January 1776, was a huge best seller. Written in simple,

Born in England, Thomas Paine was a central figure in both the American and French revolutions.

forceful language and modestly priced, his passionate attack on hereditary monarchy and support of human freedom was read by perhaps a fifth of all Americans and inspired the Second Continental Congress's DECLARATION OF INDEPENDENCE that July.

As hostilities commenced, Paine wrote *The American Crisis*, a series of articles intended to bolster patriot resolve. GEORGE WASHINGTON used Paine's opening salvo, “These are the times that try men's souls,” to inspire his poorly equipped troops on the eve of a Christmas Day, 1776, victory. By 1781 Paine was employing his pen to promote French-American alliance and secretly publicizing Washington and other leading Americans to earn desperately needed funds. In 1785 Congress granted Paine \$3,000, and New York officials deeded him a New Rochelle farm.

Always restless, Paine traveled widely in the late 1780s, trying unsuccessfully to finance construction of his patented design for a new kind of iron bridge. He also found time to pick political fights with both sworn enemies and allies in the United States, Britain, and

France. In an outburst of political activism, beginning with his February 1791 publication of *Rights of Man*, a human rights manifesto, Paine became a principal defender of France's ongoing revolution. This would result in his 1792 election to the French National Convention, where he arrived in September, steps ahead of an arrest warrant issued by Parliament for "diverse wicked and seditious writings." Found guilty in absentia, Paine would never again visit his native land.

Although he never spoke fluent French, Paine was acclaimed a national hero by adoring crowds and soon was helping devise a constitution for the new French republic. Meanwhile, as the Terror deepened and thousands fell victim to revenge killings, Paine audaciously opposed plans to execute KING LOUIS XVI of France. In December 1793 he was imprisoned in Luxembourg, a palace-turned-jail, where he would remain under constant threat of execution for 315 days. His health broken by incarceration, Paine nonetheless wrote *The Age of Reason*, his greatest attack on official religion.

Paine returned finally to his adopted homeland in 1802, after long-time admirer THOMAS JEFFERSON became president. In his final years, Paine regularly attacked Federalists as opponents of liberty and endured accusations of atheism that alienated him from many old friends. At his death in New York, he was almost as poor as he had been on arriving in America 35 years before. Even after death, this citizen of the world remained notorious. In 1819 an English admirer removed Paine's bones from his New Rochelle grave. To this day, no one knows where Tom Paine rests.

MARSHA E. ACKERMANN

papal infallibility and Catholic Church doctrine

The dogma of papal infallibility was proclaimed at the VATICAN I COUNCIL in 1870. The council fathers taught that when the pope speaks *ex cathedra*, that is, as pastor and teacher in an absolute final and irrevocable way concerning faith and morals, he receives the divine assistance that was promised to Peter, the leader of the Twelve Apostles and his successors, and, therefore, speaks infallibly. Such proclamations are "irreform-

able" of their own nature and not dependent upon the church's consent. As a dogma, papal infallibility is held to be divinely revealed and binding on all Catholics.

This theology was controversial at the time and has not been accepted by non-Catholic churches to this day. Opposition to such a definition was strong in Germany, Austria, and Switzerland throughout the 19th century whenever it was proposed for discussion, even among the Catholic bishops. Most of them, however, accepted the teaching and saw it as necessary for the unity of the church. Upon its overwhelming approval in a vote at council on July 18, 1870, the vast majority of opposition among the council fathers ceased and they supported the dogma. Laity in those German-speaking states who could not accept the decision eventually broke away from Rome to form the Old Catholic Church, securing their own apostolic line of authority through orthodox bishops.

The Catholic Church teaches that support for papal infallibility may be found both in Scripture and in tradition. Primarily the church looks to Christ's promise to Peter in Matthew 16:18: "Upon this Rock I will build my Church, and the gates of hell shall not prevail against it." Peter's successors, therefore, lay hold of the same promise. It is not Peter's faith of which Jesus speaks, but his official position, and, therefore, those who accept the same office are heirs of the promise. In other words, Peter's authority to defy the gates of hell amounts to the doctrinal and ecclesiastical infallibility that the First Vatican Council recognized.

Tradition also indicates that early church fathers such as Clement and Irenaeus were in support of the primacy of Rome. St. Augustine once declared that Rome had replied on the matter "and now the case is closed." Similar sentiments are reflected in decisions made by the council fathers at Ephesus, Chalcedon, Constantinople 3 and 4, and later at Florence in 1445. Certain objections that Popes Liberius, Honorius, and Vigilius had made errors in their doctrinal statements have never been proven to the satisfaction of many scholars.

The Second Vatican Council further addressed the dogma in *Lumen Gentium* saying: "Although the individual bishops do not enjoy the prerogative of infallibility, they can nevertheless proclaim Christ's doctrine infallibly." They are required, however, to maintain unity with Peter's successor. That authority is manifest when they gather together in council. Traditionally, an infallible pronouncement only occurs in matters of faith and morals and usually when it is clearly understood that the majority of Catholics already agree with the papal position. Such "infallible" pronouncements are not easily or

frequently made and only after much prayer, reflection, consultation, and the believed prompting of the Holy Spirit. The most recent infallible statement was made by Pope Pius XII on November 1, 1950, declaring Mary's assumption into heaven.

WILLIAM J. TURNER

Paraguayan War (War of the Triple Alliance)

One of only a handful of major wars fought among the newly independent nation-states of 19th-century Latin America, the five-year war between landlocked Paraguay and an Argentine-Brazilian-Uruguayan alliance resulted in devastation for Paraguay while transforming the states of the three allies, especially Brazil, in important ways. The roots of the conflict lay in the territorial ambitions of Brazil and Argentina combined with the recklessness and hubris of Paraguay's CAUDILLO dictator Francisco Solano López. In September 1864 Brazil sent troops into Uruguay to support the *colorados* (reds) in their fight against the *blancos* (whites), Uruguay's two main political parties. Uruguay had been created in 1828, largely through British mediation, as a kind of buffer state between Argentina and Brazil. In response to the Brazilian incursion, Uruguay's *blancos* solicited the assistance of Paraguay's Solano López. The Paraguayan caudillo responded by starting a two-front war, sending troops north into Brazil and southwest into Argentina's northern interior provinces. Cementing an alliance in early 1865, Brazil and Argentina struck back and were joined by Uruguay in May 1865 after a *colorado* political takeover.

The war, which took place mainly on Paraguayan soil, proved exceptionally destructive. Despite overwhelming odds, the Paraguayan troops fought with great skill and tenacity, inflicting high casualties on the invading forces. The allied armies, first commanded by Argentine president BARTOLOMÉ MITRE, then by the seasoned Brazilian military strongman Marshal Caxias (Luiz Alves de Lima), took Paraguay's capital city of Asunción in December 1868. Still, Solano López

fought on, until his own death in battle on March 1, 1870. The belligerents finally signed a peace treaty in June 1870.

The treaty forced Paraguay to relinquish roughly 40 percent of its national territory (about 140,000 square kilometers, most divided between Argentina and Brazil). It also created a provisional government, inaugurating a prolonged period of political instability in the ravaged and defeated country. For many years, historians estimated Paraguay's wartime deaths at between half a million and 1 million. More recent scholarship shows a decline from around 407,000 in 1864 to 231,000 in 1872, a death rate of around 43 percent, with only about 28,000 males of military age surviving the conflict. The war destroyed Paraguay's isolated protosocialist autocracy forged under the dictatorship of José Rodríguez de Francia, leaving the country not only decimated and impoverished but riven by factional strife. It also destroyed the country's landowning class, opened the Upper Río de la Plata basin to commerce, and facilitated capitalist expansion into the interior.

The war had other important long-term effects for the allied nations, especially Brazil. Two in particular stand out. First, the war brought the issue of slavery to the fore, with many thousands of black Brazilian troops securing their freedom in compensation for military service. In combination with broader antislavery trends in the Atlantic world and the cessation of further slave imports in 1850, the war intensified abolitionist sentiment across the country. The combination of pressures compelled Brazilian emperor PEDRO II to support the Law of the Free Womb in 1871, ensuring slavery's eventual disappearance. Second, the war substantially enlarged the Brazilian army while catapulting into positions of political authority and power a new generation of military officers, more modern in outlook and disenchanted with the country's increasingly archaic political system. Scholars consider Brazil's final abolition of slavery in 1888 and the fall of its empire in 1889 directly traceable to the social and political changes set in motion by its victory in the Paraguayan War. For Argentina, the war added substantially to the national territory while accelerating the centralization and consolidation of the Buenos Aires-based national state. Smaller in scale but similar in effect were the war's consequences for Uruguay.

MICHAEL J. SCHROEDER

Paris Commune

The Paris Commune was the name given to an uprising that lasted from March 18, 1871, to May 28, 1871. The Commune symbolized for anarchists, socialists, and communists an early 19th-century example of a heroic workers' revolution. For forces of the Right, the Commune represented rebellion against property, individuals, order, and the state.

The Commune arose following France's defeat, while under the leadership of NAPOLEON III, in its war with Prussia in 1870–71. The Prussian armies occupied northern France, then surrounded and laid siege to Paris. Led by Louis-Adolphe Thiers, who would later become president of the Third Republic, the French negotiated a peace agreement with the Prussians, and an armistice was signed on February 28, 1871. Following this cease-fire the French national government moved from Bordeaux to Versailles outside of Paris.

Parisians, angered by the defeat, became increasingly defiant and refused to accept Prussian victory. For Thiers and the national government, their position was impossible without control of Paris. The government needed order and a return to normalcy to build national confidence. They also required money to pay Prussia indemnities so that Prussian troops would withdraw from French soil.

It was in this context that the Commune of Paris was proclaimed on March 18. The Parisian National Guard, or citizen's militia, which controlled cannons within the city, gave their support to the Communards. Government troops under the command of General Claude Lecomte arrived on March 18 to seize these cannons and suppress any rebellion. Lecomte's troops refused to fight and he and his officers were taken prisoner. In turn, 600 barricades were erected throughout the city to resist further attack.

The Commune set up offices at the Hôtel de Ville, adopted revolutionary red banners, and called for municipal elections. These elections led to the creation of a Commune government on March 28. The

Commune leadership numbered 80 to 90 and were young and inexperienced. In addition, the Commune lacked direction and a dominant leader. Its makeup was varied and included old radicals tied to the revolution of 1789, Blanquists (followers of the radical Louis Blanqui), anarchists, and those representing the socialist labor movement. The policies that were enacted were more moderate than radical and included free education, an end to conscription, working-hour restrictions, and unemployment and debt relief.

The threat posed by the Commune led the national government on April 2 to end the rebellion. The suburb of Courbevoie was taken and the National Guard's counterattack on Versailles was handily defeated. The Commune was isolated, and it lacked cohesive leadership; further, the local neighborhoods did not have a citywide plan of defense. On May 21 a gate in the western part of the city was breached, and the government forces began their reconquest of Paris. What followed is known as the *la semaine sanglante* (the bloody week) as the national army moved from west to east crushing all resistance. At 4:00 on the 28th the last barricade at the rue Ramponeau in Belleville fell to the forces of Marshal Patrice MacMahon, who proclaimed the Commune rebellion over.

The suppression of the Commune was bloody and without mercy. Both sides committed atrocities, which led to additional retaliation. Prisoners who survived were often shot. The week of May 21 saw more killed than in the entire FRANCO-PRUSSIAN WAR or in any previous French massacre.

Official estimates are 19,000 Communard deaths against national losses of approximately 1,000. Some have suggested that the death toll in the fighting was far higher and closer to 30,000 killed. Another 50,000 were arrested or executed, with 7,000 prisoners exiled to New Caledonia in the Pacific. Paris remained under martial law for the next five years.

The immediate consequences of the Commune were fear of substantial social reform and a limitation of democratic rights in French society. It created a suspicion among classes that has lasted to the present. For the Left, the Commune became an inspiration for revolutionary change, even though the social agenda of the Commune was hardly revolutionary, and the uprising itself ultimately killed workers and failed to liberate them. Twentieth-century communist propagandists saw the Commune as a useful event for exploitation.

THEODORE W. EVERSELE

Pedro I

(1798–1834) *Brazilian ruler*

Pedro I, or Dom Pedro, was the son of King João VI of Portugal. His family fled to the Portuguese colony of Brazil when NAPOLEON I threatened to invade Portugal in 1808. The arrival of the Braganza (Bragança) family, the royal family of Portugal, in the only major Portuguese colony in South America, created a national identity for Brazilians. João VI ruled both Brazil and Portugal from South America until 1821 and did not want to return to Portugal. He liked Brazil and was afraid another European country would try to seize it if he left to return to Europe.

As a father of a future monarch, King João VI was negligent. An unattractive man, he ignored his handsome and high-spirited son. Pedro spent much of his early years in the company of servants in the royal household without parental or other responsible supervision. He received no training for the life that was to be his destiny.

In 1821 King João left his son as regent of Brazil and returned to Portugal. José Bonifácio de Andrada e Silva, who had studied in Paris at the time of the FRENCH REVOLUTION, became Pedro I's main adviser. However, the handsome, vivacious, and dishonest Pedro had not been raised to listen to wise advice. Pedro backed the party of Brazilians who advised King João to return to Portugal.

When João VI arrived back in Portugal, the Portuguese government began a plan that restricted the sovereign powers of Brazil, returning it to colony status. Pedro I was to be little more than governor of Rio and the southern provinces of Brazil. Although he was irritated by these maneuvers, Pedro hesitated to assert his authority in defiance of the Portuguese assembly, the Cortes, because he did not want to give up his claim to the throne of Portugal.

High-handed orders from the Portuguese government in Lisbon irritated the Brazilians as well as their future ruler, Pedro I. On January 9, 1822, Pedro I refused an order to return to Portugal, saying: “*Fico!*” (“I shall stay”). Today, January 9th is a holiday in Brazil called Dia Do Fico (I Shall Stay Day). Finally Pedro and the Brazilian party threw Portuguese officials out of Rio de Janeiro and other provinces. However, not all Brazilian provinces supported the move toward independence. Pedro made a tour of the provinces to gain support and hired a British admiral to help drive the Portuguese forces out of Brazil. Pedro managed to persuade most Brazilians they would be better off as an independent country.

Pedro was popular with members of Brazil's aristocratic upper class who resented Portuguese-born government officials and were glad to see them leave. In September 1822 Pedro declared Brazil's independence from Portugal and soon after was crowned Emperor Pedro I of Brazil. He convened the first constituent assembly of Brazilians.

Meanwhile, José Bonifácio urged Pedro to develop a constitutional monarchy in Brazil. Others in Brazil wanted a traditional monarchy. The new emperor did not wish to lessen his own royal authority. He told the Brazilian assembly he would consider no documents he deemed unworthy. Pedro also appointed many Portuguese-, not Brazilian-, born ministers. Pedro I sent his advisers, including Bonifácio, into exile. The aristocratic party wanted Pedro to separate completely from his royal family in Portugal, and the Portuguese party within Brazil's commercial classes wanted him to maintain his family ties.

In 1824 a new constitution gave Pedro I almost absolute authority. The assembly could be overruled, and Pedro I even decided which papal decrees would be publicized in Brazil. Instability followed in Brazil. A revolt in Recife in the state of Pernambuco created the Confederation of the Equator. Pedro's forces soon put down this revolt. Portugal recognized Brazilian independence, but Brazil had to repay a loan Portugal took from England.

This greatly increased the national debt the Brazilians had to repay. Also, during this year the people in the area that was to become the country of Uruguay with the help of Argentina threw off Brazilian rule and became an independent country. Pedro I, against the Brazilian constitution, claimed the throne of Portugal when João VI died in 1826. The Brazilians saw in this action an attempt once again to make Brazil a colony of Portugal. When Pedro's wife, Maria Leopoldina, died,

rumors circulated that Pedro had mistreated her so that he could marry one of his mistresses.

Meanwhile in Portugal, Pedro's brother Miguel had tried to take control from his father. The people of Portugal called for Pedro to return home. Pedro renounced the crown of Portugal, giving it to his daughter, Maria II.

Having failed to maintain the loyalty of the people of Brazil, Pedro I abdicated in 1831 and returned to Portugal, leaving his five-year-old son as regent of Brazil. He sailed for Portugal with all the loot he could carry. It was said there was not one silver spoon for PEDRO II to use in the entire palace. Pedro I suffered from tuberculosis, and after fighting his brother Miguel for the right of his daughter to the throne of Portugal he died in 1834.

To some, Emperor Pedro I is regarded as a hero and founder of the nation of Brazil. But others see him merely as a reactionary leader who failed to show initiative in leadership.

NANCY PIPPEN ECKERMAN

Pedro II

(1825–1891) *Brazilian ruler*

Emperor Pedro II, or Dom Pedro II, as he was commonly known, was related to most of the royal families of Europe. His father was PEDRO I and his mother was Maria Leopoldina of Austria. Ironically, despite his royal pedigree, Pedro II is called the Citizen Emperor of Brazil. On April 7, 1831, five-year-old Pedro II was left by his father with his two younger sisters in Brazil. Pedro I was forced to leave Brazil due the corruption of his government and his desire to remain an heir to the crown of Portuguese throne. He fought his brother Miguel in Portugal to secure the Portuguese

crown for his daughter, Maria II, who was Pedro II's older sister.

The flight of Pedro I from Brazil left Pedro II with neither father nor mother to guide him. Three regents were to rule for Pedro II until he came of age; he was crowned emperor in 1841. Pedro was calm, serious, and intelligent. He was interested in the study of languages, religion, and science. He studied life in other countries, especially the United States, and began to industrialize Brazil. He created railroads between major cities and had a transatlantic cable placed in Brazil. He encouraged Brazilians to grow coffee. Charles Goodyear's vulcanization of rubber created another important new export for Brazil. The motto of his reign was "Union and Industry."

Politically, Pedro ruled with care. He alternated the parties in power and listened to advice while maintaining the power of the monarchy. However, Pedro II was caught between the conservative upper class of Brazil and the Brazilian liberals to whom he was more closely allied. Conservatives did not like Pedro's attempts to do away with slavery in Brazil. Like some slave owners in the United States, Brazil's elite families could not envision life without slavery. The slave trade was banned in 1850, and gradual emancipation was granted in 1871. In 1888 Pedro II's daughter signed the act eliminating slavery in Brazil. To replace this manpower, Pedro II encouraged Italians, Poles, and Germans to settle in Brazil. The liberals, on the other hand, found that having an emperor as their champion, no matter how liberal his actions, was a contradiction to liberalism.

Pedro II wanted to make education part of every Brazilian's life. He suggested that instead of erecting a statue of him commemorating his victory in the PARAGUAYAN WAR, more primary schools should be built. He also refused to allow repairs to the royal palace while there were not enough schools for the children of Brazil. He even said that if he had not been destined to be an emperor, he would have chosen to be a teacher. He traveled to the United States and visited the Philadelphia Exhibition of 1876 and used one of Alexander Graham Bell's first telephones. He was so impressed that he became the first investor in Bell's company.

Although Pedro II had earned the affection of many of his people, several groups of Brazilians were unwilling to remain under his control. The military that Brazil built up during the Paraguayan War produced officers and soldiers who were not willing to go back to their life in the lower classes of Brazilian society. They

A progressive leader who helped modernize Brazil, Pedro II was exiled by forces allied against his reforms.

sought new positions in the power structure of Brazil. The church was upset because Pedro II supported the Masons against several church ordinances. The urban middle class also joined with the military against Pedro II, whom they saw as a tool of the rural landowners. In addition the coffee growers, whom Pedro had always encouraged, joined other dissatisfied groups against the monarch. Despite his popularity among the lower classes, the military forced Pedro II to leave Brazil in 1889.

Pedro II left Brazil without bitterness, hoping that Brazil would have a prosperous future. He died in Europe and was buried there. Eventually, his remains and those of his wife were returned to Brazil.

NANCY PIPPEN ECKERMAN

Perry, Matthew

(1794–1858) U.S. naval commander

Commodore Matthew Perry of the U.S. Navy was responsible for the opening to Japan. During the late 18th and 19th centuries, European and American commercial interests were directed to the Pacific as Asian countries offered large trading markets. Perry's actions ended Japan's policy of isolationism and exposed the inability of the TOKUGAWA military regime (*bakufu*) to defend Japan against foreign encroachments.

The United States was determined to open up Japan to American trade. In 1853 Matthew Perry arrived in Japan with four warships of the U.S. Navy. His orders were to persuade Japan to establish trading relations with the United States. Perry told the Japanese that he would return to Japan in 1854 to receive their answer. He invited officials to board his warships where they were shown American products as well as the powerful weapons his naval vessels were armed with. The ultimatum from Perry created a debate among Japanese officials; some favored fighting the Americans while others favored compliance.

When Perry returned to Japan the following year with eight warships, the Japanese signed an agreement that complied and opened the ports of Hakodate and Shimoda to American trade, promised to treat sailors well, and allowed an American consul to take up residence in Shimoda.

The U.S. government followed up by sending TOWNSEND HARRIS to negotiate trade treaties with the Japanese in August 1856. Harris demanded that Japan establish a fixed low tariff for U.S. imports and that U.S. citizens be granted extraterritorial rights in Japan. These demands created another debate in Japanese political circles between members of the emperor's court and the *bakufu*, which favored compliance because the French and British fleets had just defeated the Chinese in the Arrow War and were rumored to be traveling to Japan to force the Japanese to accede to their demands. Thus they wished to placate the Western powers. A treaty was signed in 1858 that allowed Americans to trade at three more ports, with an additional two ports to be opened within a

stipulated time. These privileges were soon extended to England, France, the Netherlands, and Russia in similar agreements.

The government was severely criticized for allowing Japan to be humiliated by the Western powers. Critics advocated a stronger leadership loyal to the emperor and committed to repel Western encroachments. A slogan, “Honor the emperor, expel the barbarian,” became a popular rallying cry.

Two feudal lords of Choshu and Satsuma especially denounced the Tokugawa Shogunate as too weak to handle the problems afflicting Japan and led the movement to change Japan. In 1868 these two regional lords, who had undertaken to modernize their armies, led a successful uprising that captured Edo, seat of the shogun. It ended the Tokugawa Shogunate and resulted in the MEIJI RESTORATION.

BRIAN DE RUITER

Pius IX

(1792–1878) pope

Pope Pius IX was born Giovanni Maria Mastai-Ferretti at Sinigaglia on May 13, 1792, and died in Rome on February 7, 1878. As a young man, he desired to be a member of the papal noble guard, but was refused admission because he suffered from epilepsy. He instead studied for the priesthood and was ordained a priest in 1819 and archbishop of Spoleto in 1827. He was moved to the diocese of Imola and made a cardinal in 1840.

Mastai-Ferretti was elected pope on June 16, 1846. He had many domestic challenges in Italy that occupied his early papacy. King VICTOR EMMANUEL II defeated the papal army in 1860 and 10 years later seized Rome and made it the capital city of a united Italy. Problems with most of the nations of Europe compelled Pius IX to use diplomacy to fight against the expulsion of

Catholic clergy and a general feeling of anti-Catholicism throughout the continent. His lifelong devotion to the Blessed Virgin Mary compelled him to circulate letters to the world’s bishops in regard to the subject of her immaculate conception.

On December 8, 1854, he promulgated the Marian dogma of the Immaculate Conception of the Blessed Virgin. He convoked the VATICAN I COUNCIL, which declared the dogma of PAPAL INFALLIBILITY that establishes that the pope, when speaking on matters of faith and morals, is infallible in his teachings. At 32 years, his pontificate is the longest in history. He was beatified on September 3, 2000, by Pope John Paul II.

JAMES RUSSELL

Poland, partitions of

The three partitions of the Polish-Lithuanian Commonwealth, which took place in 1772, 1793, and 1795 resulted in the end of independent Poland and the incorporation of its lands into Prussia, Russia, and Habsburg Austria.

In the early 18th century, the Polish-Lithuanian Commonwealth was undermined by various European powers, especially through the Polish parliament, the Sejm, where a single member could exercise the right of veto and block any measures being introduced by the body. This had allowed the commonwealth to remain neutral during the SEVEN YEARS' WAR (1756–63), although it sympathized with France and Austria, allowing Russian soldiers to cross its territory to fight the Prussians after Russia entered the war as an ally of the French and Austrians.

At the end of the war, FREDERICK THE GREAT OF PRUSSIA wrecked the Polish economy and sought to undermine the country. In 1768 the Russians were involved in fighting the Ottoman Empire and won such easy victories over the Ottomans that the Austrians were nervous that the victorious Russians might attack them. Frederick II decided to refocus the Russian attentions on Poland.

On February 6, 1772, representatives of the Prussian and Russian governments, meeting at St. Petersburg, the Russian capital, decided to annex large parts of Poland, with the agreement of partition signed 13 days later in Vienna, and the Austrian government also gaining part of the country. The annexation took place on August 5, 1772. Some parts of Poland resisted with Tyniec holding out until March 1773 and Kraków falling on April 28—the garrison of the latter being exiled to Siberia.

Essentially the result of the partition was that the Austrians took over areas around Kraków and Sandomir (but not Kraków itself), as well as Galicia. The Prussians took the area around Danzig (Gdańsk) and areas of western Prussia, along with control of some 80 percent of the total pre-partition foreign trade; with the Russians annexing the parts of Livonia they had not already seized, as well as Vitebsk, Polotsk, and Mstislavl, in modern-day Belarus. The Polish sejm

was forced to accept the partition, which it did on September 30, 1773.

The Poles had hoped to get the support of Britain and/or France, but their plans came to nothing. The new Polish government, having lost large amounts of territory and most of its foreign revenue base, signed the Polish-Prussian Pact of 1790. This effectively allowed the next partition to take place and when the new Polish Constitution of 1791 enfranchised much of the middle class, the Russians were angry and regarded the action as aggressive, coming so soon after the French Revolution. On January 23, 1793, the Second Partition took place with Prussia and Russia seizing more land—the former taking Danzig.

The Poles under Tadeusz Kościuszko led an uprising that lasted from March until October 1794. This forced the Russians and the Prussians into a closer military alliance, and they decided, along with Austria, that it was easier to annex the remainder of Poland. This was achieved on October 24, 1795, when the Third Partition took place, ending Poland's independence.

NAPOLEON I tried to restore Poland during the Napoleonic Wars, forming the Duchy of Warsaw, but as he started losing, the entity was dismembered and the lands of the three partitions were returned to Austria, Prussia, and Russia, respectively, formed into the Republic of Kraków, the Grand Duchy of Posen, and the Kingdom of Poland. Poland did not regain its independence until after World War I.

JUSTIN CORFIELD

Polish revolutions

The central European nation of Poland spent much of its history between the 17th and 20th centuries struggling for the right to exist as an independent nation. Yet, throughout this period, the rebellious spirit of the Polish people was never completely eradicated. In a series of agreements negotiated in the late 18th century, the neighboring nations of Russia, Prussia, and Austria partitioned Poland, with each country adding parts of

the country to its own territory. It was not until 1918, at the end of World War I, that Poland established its own independence, only to be invaded by Germany and the Soviet Union during World War II.

After the war, Poland became a Soviet satellite, although it was more tolerantly governed than was common. The Solidarity movement of the 1980s paved the basis for a turn toward democracy in the 1990s when the Soviet bloc was dissolved.

In 1807 France created the Duchy of Warsaw out of land it had taken from Prussia and enlarged the territory in 1809 by taking land from Austria. However, French expansion into Polish territories was halted in 1815 by the defeat of the French in the Napoleonic Wars. As part of the war spoils set out in the Treaty of Venice, Russia was granted control of the Kingdom of Poland. Initially, Czar Nicholas I allowed Poland to exist in a semiautonomous state. However, in 1830, he made the decision to call up the Polish army to assist in his efforts to halt the move toward democratization in Belgium and France. His actions gave rise to a new wave of Polish nationalism, and a newly awakened sense of rebellion led to the first Polish revolution. The revolution was in large part a response to the French and Belgian revolutions and to the emergence of democratic socialism in Poland.

Hostilities began on the night of November 29, 1830, when a group of civilians attacked Belweder Palace. Their aim was to kill the first viceroy of Poland, the Grand Duke Constantine Pavlovich Romanov. Constantine was the grandson of CATHERINE THE GREAT of Russia. Ironically, Constantine had organized the Polish army and was a strong supporter of the Poles. He considered himself more Polish than Russian and had married a Pole, Johanna Grudzinska, in May 1820. In the confusion that accompanied the attack, Constantine managed to escape. Because he was hesitant to attack those whom he considered his own people, he refused to order his troops to counterattack.

Simultaneously with the attack on the palace, cadets from Warsaw Military College overwhelmed Russian forces along the Austrian and Prussian borders. The cadets captured a number of generals, executing those who refused to join the revolutionary movement. The revolution gained strength as it spread to Lithuania, where the revolt was spearheaded by Emilia Plater. Plater, who died a heroine, was representative of the many women who took up arms to fight for Polish independence. Convinced that victory was within their grasp, the revolutionary government expelled Russian garri-

sons, deposed the ROMANOV DYNASTY, and established its own government.

Ultimately, Russian forces, which initially outnumbered the Polish forces 10 to one, overwhelmed the Poles and Liths who were weakened by indecisive military leaders, and recaptured Warsaw in September 1831. Without mercy, Russia apprehended more than 25,000 prisoners and exiled them to Siberia. The leader of Polish romanticism, poet Adam Mickiewicz, was one of those sent into exile. Although he was not exiled, the composer Frédéric Chopin left Poland at this time but continued to express his despair over the Polish situation in his musical compositions.

After the war, the czar began the Russification of Poland with the intention of eradicating any remaining tendencies toward Polish nationalism. He was unsuccessful, however, and only caused Polish rebels to go underground as they waited for a new opportunity to rid themselves of the Russian invaders. A subsequent uprising in 1846 in the Free City of Kraków and in those cities along the Austrian border was halted by the quick and brutal action of Austria and her allies.

When Alexander II ascended to power in Russia in 1855, he exhibited more tolerance toward Poland and reinstated the semiautonomous state that had existed before the first revolution. While the majority of the Polish people were delighted to regain some of the ground that had been lost, revolutionary groups stepped up their efforts to incite rebellion. When the government attempted to draft the rebels into the army, insurrections broke out in January 1863 and again spread into Lithuania and into what was known as White Russia.

This conspiracy that developed into the second Polish revolution originated at the School of Fine Arts and the Medical Surgical Academy in Warsaw in 1861. Most revolutionaries split along ideological lines into the radical Reds who seized control of the revolution through the Central National Committee and the more moderate Whites. Members of the Whites, generally the landowning and bourgeoisie classes, saw alliances with Britain and France as more likely avenues toward eventual independence than taking up arms against the powerful Russian government and military. Splinter groups also surfaced. When the revolt began, Poland was operating without an organized army and was forced to depend on guerrilla fighters to engage Russian forces.

By the mid-19th century, the Kingdom of Poland had become home to large numbers of Ukrainian peasants who did not share the Polish desire for

independence. This lack of unity within Poland provided Russia with excellent opportunities to undercut Polish efforts toward independence. Among the Polish population, participation was widespread. Out of a population of some 4 million people, an estimated 200,000 individuals took up arms at some point in the second Polish revolution.

When Russian forces prevailed in May 1864, the czar was determined to wipe out all elements of Polish nationalism. Once the Russian administration was entrenched in Poland, all Polish children were required to learn Russian. The Roman Catholic Church, which was seen as instrumental in keeping Polish nationalism alive, came under close scrutiny. In order to exert its right to control Poland, the czar also confiscated a good deal of land and curtailed Polish autonomy. Even though the Poles had been defeated, the desire for independence had been roused in many young people, particularly university students. It was those individuals who kept Polish nationalism alive during the following decades.

ELIZABETH PURDY

political parties in Canada

As the British Empire regrouped after the shock of losing 13 of its North American colonies in the AMERICAN REVOLUTION, Canadian politics began to evolve from rudimentary local and regional councils almost entirely dominated by royal governors-general and their lieutenants to genuinely competitive political parties that contested specifically Canadian problems and issues.

At the outset, Canadian politicians identified themselves as Tories or Whigs, in emulation of Britain's parliamentary division of the late 18th and 19th centuries. Canada's Colonial Office and its royal governors worked closely with members of local or provincial rul-

ing elites who had the most to gain by toeing the imperial line. Religious leaders (including Roman Catholics in French Canada and Church of England clerics in Ontario) and wealthy merchants were often part of this Tory oligarchy.

After Britain's WAR OF 1812 with the United States, during which Canada survived American invasion, new voices of political reform began to emerge in opposition to this decidedly nonrepresentative system of power. French-Canadian Louis-Joseph Papineau, a lawyer and French nationalist, in 1815 was elected speaker of the Lower Canada assembly, in defiance of the Chateau Clique's previous stranglehold on that body. This was an early indication that British governors were losing their ability to shape and manage local legislatures. In Upper Canada, businessman turned journalist William Lyon Mackenzie put forth a strong reform agenda and collaborated with Papineau. Despite having his presses smashed by Tory opponents, by 1828 Mackenzie, an admirer of the U.S. political system and its incoming president, ANDREW JACKSON, won a seat and joined a new reform majority in Upper Canada's assembly.

The reformers were poorly organized and faced powerful opposition. The so-called Family Compact—Tory leaders in Upper Canada supported by the British governor and Colonial Office—blocked reform proposals targeting patronage and tax policies, and, by 1831, had regained control. Even though Britain's Whigs managed in 1832 to implement major electoral reforms at home, Canadian reformers still despaired of change without radical action. For Canada, the 1830s were a period of political confusion and rising conflict, culminating in the Rebellion of 1837.

It was a year of desperation, caused largely by crop failures and a serious economic depression afflicting both Canada and the United States. In Québec, Papineau seemed to incite his supporters to boycott British trade and adopt some American political practices. Mackenzie encouraged farmers to rally in Toronto to overthrow the existing Ontario government. British-led troops put down both schemes with minimal bloodshed but almost 100 arrests and several executions; both Papineau and Mackenzie fled temporarily to the United States.

Militarily the uprisings were a fiasco, but they caused Britain to look much more seriously at Canadian unrest and its potential threat to Britain's colonial system. In 1838 John Lambton, earl of Durham, was sent by London's Whig government to restore order and recommend new political arrangements that would ultimately establish Canadian self-government. Lord Durham's groundbreaking *Report on*

the Affairs of British North America did not instantly solve Canada's political malaise but helped Canadian politicians plan strategies for local self-rule. Most immediately, the Durham Report paved the way for a single legislative assembly for what was now called the Province of Canada, in which both Upper and Lower Canada were equally represented. This move strengthened the importance of the two most populous regions of Canada, but also raised new concerns about French versus English political power: issues that have continued to roil Canadian politics.

New sectional and ideological parties began to appear in the 1840s and '50s, as Canadians extended their autonomy. In Québec, a new Parti Rouge espoused French cultural supremacy while attacking its own Catholic clergy. Canadians in the growing western region, feeling underrepresented by traditional politics back east, in the 1850s formed the Clear Grit Party that focused on agrarian interests, free trade, and more democratic voting rights. It took a young politician from Kingston, Ontario, JOHN A. MACDONALD, to revitalize Upper Canada's hidebound Tory tradition by accepting moderate reform and reaching out across the English-French cultural, religious, and political divide. Soon Macdonald's new Liberal-Conservative party was winning elections with its French partner, Parti Bleu.

With the coming of CANADIAN CONFEDERATION, the Liberal-Conservatives governed Canada from 1867 to 1896, except for 1874–78 when the Reform, or Liberal Party, headed by Alexander Mackenzie won control of Parliament. A Scottish-born stone mason not related to William Lyon Mackenzie, Alexander Mackenzie benefited from a Pacific railway bribery scandal that forced Macdonald's resignation. During their tenure, the Liberals created the Canadian Supreme Court and instituted the secret ballot, among other electoral reforms. Winning support almost exclusively in Ontario, the Liberal party lost badly in the 1878 general election. Not until Wilfrid Laurier became his party's leader and, in 1896, Canada's first French-Canadian prime minister, would the Liberal party truly become a competitive Canadian political institution.

MARSHA E. ACKERMANN

political parties in the United States

From the nation's earliest days U.S. leaders struggled over how to deal effectively with political disagreements. Many Americans feared that faction—what today would be called special interests—would distort the new republic, setting citizens against one another and encouraging attacks by hostile foreign powers.

In April 1789 GEORGE WASHINGTON, elected unanimously, became America's first president. Within months, sharply opposed political coalitions were arguing inside Washington's own cabinet. Treasury Secretary ALEXANDER HAMILTON had founded the Federalist Party, reclaiming the name given supporters of the CONSTITUTION. In 1792 Secretary of State THOMAS JEFFERSON organized the Democratic-Republican Party, completing what came to be called the first party system.

Federalists and Republicans (as Jefferson's party soon called itself) had very different views of America's future. Would it be an agricultural nation or a commercial and industrial power? Should individual states exercise power or the federal government prevail? Was France or Britain America's trusted ally? Partisan newspapers criticized even Washington; his successor, John Adams, the first and only Federalist president, faced harsher attacks for his Alien and Sedition Acts.

Jefferson won the vicious 1800 election, outpolling fellow Republican Aaron Burr and three Federalists, including Adams.

One result of this political shakeup was the Twelfth Amendment, ratified in 1804 to fix a constitutional defect. Instead of making the electoral runner-up vice president, whether or not he shared the president's views or even his political party, candidates would now run as a slate. This change elevated the importance of party over individual ambition.

Hamilton's death in an 1804 duel with Vice President Burr cost the Federalist Party its most dynamic leader, accelerating its decline despite continuing strength in New England. Federalist opposition to the WAR OF 1812 was decried as treason by political foes. The last Federalist ran (and lost) in 1816.

FADING PARTISANSHIP

During Republican James Monroe's two terms, partisanship briefly seemed to fade. In fact, the Republican Party was splitting internally between national Republicans and states-rights Republicans. Monroe's Era of Good Feeling evaporated in 1824, when four

candidates, all nominally Republican, vied for the presidency. ANDREW JACKSON of Tennessee, a states-rights Republican, won a plurality of the popular vote but lost the election when national Republican rival Henry Clay transferred his votes to John Quincy Adams, son of the second president. Jackson supporters never forgave this “corrupt bargain.” When Jackson won easily in 1828, he became the first president not from Massachusetts or Virginia. His victory initiated the second party system.

Jacksonians in 1844 renamed themselves the Democratic Party and benefited from the growth of universal white male suffrage. Among Jackson’s innovations was patronage—awarding jobs and favors to supporters to cement their party loyalty. Democrats also pioneered national political conventions.

Clay’s national Republicans in 1834 reinvented themselves as Whigs, named for the British political party that had backed the AMERICAN REVOLUTION. Whigs favored national improvements, the BANK OF THE UNITED STATES, proindustrial policies, and middle-class values.

Clay never achieved his presidential dream. Only two Whigs were elected president, despite campaign strategies (borrowed by rivals) that significantly increased voter turnout. The 1840 William Henry Harrison campaign included marches, bonfires, and copious helpings of hard cider. Whigs even encouraged women (who could not vote) to attend campaign events. War of 1812 hero Harrison, the first Whig president, became ill at his inauguration and died shortly thereafter.

DISSIDENT THIRD PARTIES

Although the U.S. political system has historically generated success for only two major parties, in the 1830s, dissident third parties began to tackle major issues, including growing opposition to slavery and southern political power and increasing immigration. In 1844 James G. Birney, a slaveholder turned abolitionist, was the Liberty Party’s presidential nominee. In 1848 amid sharp regional divisions caused by the MEXICAN-AMERICAN WAR, former president Martin Van Buren campaigned for the Free-Soil Party.

As politics in the 1850s fractured along sectional lines, the new American, or “Know-Nothing,” Party, founded in 1849 in New York, became a major factor in the Whigs’ demise as a functional political organization. Nativist, secretive, and anti-Catholic, Know-Nothings were strong in New England and the Mid-Atlantic, even attracting some slave-state voters. Former president Millard Fillmore in 1856 won

22 percent of the vote for the Know-Nothings. Third-party success explains more about the political chaos of the 1850s than it does about campaign skill. Amid a series of failed compromises, growing distrust between North and South splintered any political party hoping to appeal to both sections. Whigs fielded their last presidential candidate in 1852. Northern Whigs joined Free Soilers and antislavery Democrats and Know-Nothings to create a new Republican Party (not to be confused with the party by then known as Democrats). Former Whig ABRAHAM LINCOLN became the nation’s first Republican president in a four-way race.

Democrats remained strong in the North during the CIVIL WAR. Those nicknamed Copperheads were especially critical of Republican leadership. To aid his 1864 reelection, Lincoln chose a Democratic running mate—Senator Andrew Johnson, a Tennessean who had refused to secede. Nor did Republicans always support their president.

The radical wing of the party complained that Lincoln was too slow to end slavery. Other Republicans preferred to focus on postwar reunification and their northern war party’s future.

The RECONSTRUCTION began shakily after Lincoln’s assassination as now-President Johnson struggled with radical Republicans for political domination. Although Republicans would win six of eight presidential elections between 1865 and 1900, their commitment to Reconstruction and reform wavered. Boss politics held sway in many American cities. ULYSSES S. GRANT’s administration was riddled by corruption, undercutting his ability to protect African-American voting rights.

In 1877 deals made after the closest election in U.S. history (prior to 2000) put Republican Rutherford B. Hayes in office with a tacit promise to leave the former Confederacy alone. With white-dominated southerners voting solidly Democratic and Congress narrowly split, the nation experienced a politics of dead center.

Amid GILDED AGE inertia, new third parties emerged. In its first presidential campaign in 1872, the Prohibition Party attracted many female TEMPERANCE advocates to its crusade against alcoholic beverages. The Greenback-Labor Party, founded in 1878, focused on farmer debt relief and worker rights. Populists in 1892 carried four western states and parts of two others. In 1896 Democratic presidential nominee William Jennings Bryan appropriated much of the populist agenda but lost to William McKinley.

MARSHA E. ACKERMANN

prazeros

The *prazeros* arose from Portuguese expansion in the late 15th century. Operating from the mercantile principle that wealth equals power, the Portuguese concentrated on a search for precious metals, especially gold and silver. After Vasco da Gama sailed from Portugal

to India in 1498, Portugal sought to gain control of the gold trade in East Africa. Before this time the Swahili city-states located between what is now Somalia and Mozambique had acted as intermediaries for the output of the gold mines of the Shona empire of Monomotapa, which is located in what is now eastern Zimbabwe and western Mozambique.

Portugal seized the Swahili city-states between 1506 and 1512 and, although the northern city-states slipped out of their control between 1648 and 1729, maintained control of the southern city-states, especially Sofala. By the mid-17th century Portugal, a relatively small country of perhaps 1 million, decided to maintain some degree of control through the *prazero* system in its African territories. Concentrated in Mozambique, the hinterland of Sofala and the site of some of the goldfields, the *prazero* system was to last until approximately 1940 and, in part, reflected the lack of firm Portuguese control in its overseas African colonies.

The *prazeros* were Portuguese landholders in East Africa. This system enabled the Portuguese to continue to export large amounts of precious metals from Africa, allowing the relatively small Portugal to maintain its empire on an equal footing with larger nations.

The *prazeros*, holders of leases from the Portuguese Crown, were similar to the holders of the *latifundia* in Latin America but held a larger number. In practice, they were basically independent from 1650 to 1900. Nominally required to defend Portuguese interests, they also derived rights from the loosely organized Shona states of Monomotapa and its successors. By 1700 they were functioning as local African leaders. They had taken African wives, although they continued to emphasize their Portuguese roots by sending their wives and children to Portuguese schools. By 1800 the *prazeros* were more or less African-Portuguese and were actively engaged in the local slave trade. At the height of slave trading in Mozambique, the *prazeros* dominated trade and were involved in the export of perhaps 15,000 slaves per year.

The beginning of the end of the *prazeros* as a privileged class arose from two factors between 1850 and 1890, the ABOLITION OF SLAVERY and the scramble for Africa, which endangered Portugal's position in Africa. The latter directly affected the economic base when Great Britain, in order to forestall the German attempt to connect German Southwest Africa (now Namibia) and German East Africa (now Tanzania), occupied the major goldfields of the Shona states.

The final end of *prazero* power came between 1880 and 1914 when Portugal sought to reassert control in its attempt to preempt British and German ambitions. Europeans were anxious to use African labor, materials, and markets for their increasing factory production. When the Portuguese embarked upon the reassertion of their authority in the Zambezi Valley, they utilized three chartered companies, particularly the British-controlled Zambesia Company, which controlled labor and markets and expanded Portuguese control indirectly by, along with the other companies, establishing military posts and building roads, ports, and the transterritorial railroad. Labor was mobilized to work on the newly developed plantations, especially in cotton and sugar, which were exported through the port of Beira. In the process most holdings of the *prazero* class were absorbed by the companies. By 1940 the *prazeros* had virtually disappeared as a dominant class.

NORMAN C. ROTHMAN

public education in North America

Public education has undergone a process of significant change because of religion, politics, economics, and immigration. The limited educational system in America led the first settlers, beginning in the New England colonies to push for an educational system similar to that of England. The northern, middle, and southern colonies thought about education differently. An organized and cohesive educational system was needed from the colonial period through the INDUSTRIAL REVOLUTION, in order to better the country as a whole.

THE COLONIES

In the northern colonies of New Hampshire, Connecticut, Rhode Island, and Massachusetts, the first colonial textbooks and required reading in schools started with Benjamin Harris's *New England Primer* of 1690, published in Boston. The first primer became required reading in both school and church and was used into the 19th century. It was a combination of the hornbook (paddle-shaped boards with paper attached used to teach children capital and lowercase letters, syllables, the benedictions, and prayers) and catechism. The idea behind the primer was that it provided a combination of religion and learning so that students would gain salvation as well as knowledge.

The first public schools began in Massachusetts and eventually arose in most of the other northern colonies. Education in the north was predominately sponsored and supported by Puritans who fostered the teaching of their beliefs. Dorchester, Massachusetts, established the first public school, Boston Latin School, funded by state taxes. By 1750 mandates were set in place for children who did not attend public schools to learn a trade under an apprenticeship.

The Massachusetts Bay Colony also required towns to set up schools, depending on their size; one elementary school in towns of 50 families or more and one grammar school in towns of 100 families or more. The other northern colonies followed with similar laws, except Rhode Island. The first state board of

education was established in Massachusetts in 1837. In Boston the integration of African Americans into public schools occurred in 1885.

Horace Mann was the first secretary of state for Massachusetts's first board of education. During his tenure he made vast developments for education—schools to train teachers, free public libraries, state aid for schools, public education supported through taxation, education mandates for every child, and secular education not supported through taxation. Efforts to establish state boards of education throughout the colonies began to spread.

The middle colonies—Pennsylvania, Delaware, New Jersey, and New York—approached education more slowly than the north. By 1750 a child was required to be able to read and write by age 12, enforceable with a £5 fine. The Quakers founded the Friends Public School in Philadelphia, now the William Penn Charter School, to assist in educating children. Those who were interested could attend an academy to seek further education. In 1753 BENJAMIN FRANKLIN chartered a nonsecular academy in Philadelphia, which eventually became the University of Pennsylvania. Academy attendance varied depending on the school; while some schools only attracted local students, others had students from many areas.

In 1834 a state-funded public system for education was set into place. Around 1840 state public education began to develop, stretching from Connecticut to Illinois, but the southern states were a bit behind. Several factors contributed to the slow development of public education in the South. First, the south was less populous than the North. For about 100 years in Virginia, free schools had already been established, but public education did not become common in the south until after the CIVIL WAR. Puritan New England emphasized educating students about religion in the classroom, while in the south members of the Anglican Church saw education and religion as separate.

The southern elite also took in private tutors from Europe or sent their children to England to seek an education; private tutors and education in the home were commonplace throughout the colonies. Public education also posed a threat to whites; the potential existed for slaves to become literate and gain enough knowledge to organize and revolt. It was punishable by law to teach a slave to read or write. When African Americans were educated, it was usually with the help of Anglicans, Quakers, or other religious groups. In the early part of the 18th century, French immigrant

and minister Elias Neau opened the first school for blacks. In 1782 Quakers also founded the Philadelphia African School, which was a free school. In the early part of the 18th century, other religious groups sought to educate African Americans as well as other poor Americans.

IMPACT OF THE INDUSTRIAL REVOLUTION

Education in North America continued to evolve during the Industrial Revolution, which lasted from the late 18th through the early 20th century. Children often worked as cheap labor under precarious conditions. There was nothing to regulate these conditions where children were viewed as miniature adults, capable of providing for themselves and their families. During this period, there was a rise in the growth of the middle class. From this middle class emerged reformers who pioneered the idea that childhood constituted a separate stage of development from adulthood and needed to be treated as such. Part of this treatment included education and leisure time.

During the early part of the Industrial Revolution, compulsory education was designed for work, whether in the factories or on the land, and geared toward factory work and labor. The compulsory education of early schools eventually had students who were several years apart in grade and age in one room. Students would be taught the same lessons but the instruction was differentiated and modified based upon the students's learning needs, ability, and learning style.

In early colonial America, students wanting a university education had to travel to England to attend Cambridge or Oxford, which could be unsafe and expensive. It became imperative to establish a university system of education, much like the universities the first settlers had attended before arriving in the colonies. With several colleges founded during the early colonial period—Harvard in 1636, College of William and Mary in 1693, and Yale University in 1701—the trend toward post-secondary education continued from the mid-18th century to the 1900s. Columbia University was first chartered as King's College in 1754, and Dartmouth was founded in 1769. By the end of the 18th century, there were more than 350 colleges in North America.

SEPARATION OF CHURCH AND STATE

During the 1830s there was an influx of immigrants to North America, and by the middle of the 19th century over half of the urban populations were immigrants.

Many foreigners were attracted to New York and New Orleans with new industrialization and economic opportunity.

Many issues began to arise in both the North and South around Catholic education, which led Governor William H. Seward and Bishop John Hughes of the New York diocese to become involved. At the time, the principles of Protestantism dominated North American society. Consequently, little progress was made in enabling Catholics to attend Protestant schools, ultimately leading to private Catholic education.

The private Catholic school system developed because schools only received state funding if they incorporated Protestant teachings into their curricula. Catholics refused to have their children attend Protestant schools because they used the King James translation of the Bible, a Protestant translation undertaken during the 17th century. If

Catholics were to attend public schools they would have to follow Protestantism within the school, and Catholics were afraid of losing support from the Catholic Church if they did so. Catholics eventually gained permission to open their own schools, which were not funded through state aid or taxation.

SPREAD OF STATE-FUNDED EDUCATION

With the influx of poor immigrants to the colonies, kindergarten was started to instill the basic social needs of children between the ages of three and seven. In 1890 junior high schools began opening with the purpose of preparing students for high school by distinguishing their needs and determining what they would pursue when they went to high school. Many educational developments were impeded during the mid-18th century up through the early 20th century because of cultural,

In British North America, educational institutions first developed in the northern colonies, where the first colonial textbooks were used in schools, starting with Benjamin Harris's New England Primer of 1690, published in Boston.

religious, and economic differences in American society. The need for public education could not be ignored if North America wanted to have unity and prosperity, both in its economic and social conditions.

NICOLE J. DECARLO

Qajar dynasty

After ruling much of what is now Iran since 1501, the Safavid Empire was largely destroyed and occupied by invading Afghan tribes, who captured the imperial capital of Isfahan in 1722. Two years later, subsequent invasions by the Ottoman Empire and the Russians effectively ended centralized Safavid rule and ushered in a period of tribal conquest throughout the region. The Afshars under Nadir Khan conducted a series of brilliant military campaigns that drove the Ottomans and the Afghans out of Iran and led to the recapture of the cities of Mashhad, Isfahan, and Shiraz and the capture of the city of Herat in western Afghanistan between 1726 and 1729. In 1736 Nadir deposed the last Safavid shah, Abbas III, and declared himself shah, ruling until his assassination in 1747 by members of his own court.

The Zand tribe, under its leader, Karim Zand Khan, replaced the Afshar tribal polity in 1750 and ruled much of Iran from their capital city of Shiraz. During Karim's lengthy reign, which lasted until his death in 1779, Iran enjoyed over a quarter century of relative peace and prosperity. However, a dynastic civil war severely weakened Zand power following Karim's death and led to the dynasty's overthrow by the Turcoman tribal leader Agha Muhammad Khan and the establishment of the Qajar dynasty with Tehran as its capital in 1786.

Under Karim, Agha Muhammad had been imprisoned in Shiraz by the Zand tribe, though many sources suggest that he was relatively well treated and even con-

sulted by Karim on issues of governance. After Karim's death, he escaped from Shiraz and went to Mazandaran, where he fought other tribes for supremacy until 1786 when Qajar forces captured much of northern Iran. Over the next several years, Agha Muhammad solidified and expanded his territorial holdings, occupying the old Safavid capital of Isfahan in 1787 and leading campaigns to subjugate Azerbaijan in 1791.

In 1795 Qajar forces entered Georgia, which had once been a client state of the Safavids, after its ruler, Heraclius, refused to begin paying tribute to them, and sacked the city of Tiflis. The next year Agha Muhammad was crowned the ruler of much of Iran. He spent the remainder of his reign in the field with his army, campaigning to assert Qajar authority over the province of Khurasan and fending off attacks from the Russian Empire. While in Georgia, Agha Muhammad was murdered on June 17, 1797, by two slaves who had been sentenced to death for some minor infraction. Under him, the central government in Tehran was tenuous and the importance of tribal affiliations, both within the Qajar tribe and Iran's other tribal groups, remained an important aspect of political life. The bureaucracy that would coalesce later in the Qajar period was not yet formed, and Agha Muhammad relied on a rather decentralized government apparatus to rule his fledgling state.

Upon the death of the first Qajar monarch, Agha Muhammad's nephew, Fath Ali Shah, the governor of the province of Fars, assumed the throne. Under its new ruler, who had been trained in the art of politics while in

Ahmad Shah Qajar of Iran. Shah Ahmad did not address his country's problems and was marginalized.

his previous post, the Qajar dynasty began to shift from a tribal polity into a more centralized state. Fath Ali, unlike his uncle, was a great patron of scholarship and art, and it was under him that the administrative structures of government were refined. Iran's other tribes were kept in check because many of their leaders were required to reside in Tehran, and the Qajars frequently attempted to sow rumors among them in order to prevent alliances from forming that might endanger their control of the country. The Qajar administration was run by a new class of bureaucrats, the *mirzas*, and the support, or at least acquiescence, of Iran's Shi'i clergy, the *ulema*, was sought by the shah. The state benefited from periods of relative peace, though Fath Ali's military expeditions against both the Ottomans and the Russians in the Caucasus led to a series of wars.

During the Napoleonic Wars, which pitted various European powers against the French Empire under NAPOLEON I, the Qajars were treated as pawns. In

1801 they signed a treaty of cooperation with Great Britain, in which the British promised to supply the Qajars with military assistance against possible attacks on British India from French forces or Afghan tribes that might come through Iran. However, in 1804, having failed to receive any British aid in their war against Russia, since those two nations were now working jointly against the French, the Qajars aligned themselves with Napoleon.

In 1807 the Qajars and France signed the Treaty of Finkelstein, in which the French agreed to assist Iran in regaining Georgia if in turn the Qajars assisted the French against the British. The French sent officers to train the Qajar army and prepare for an invasion of India, but two years later, the French and Russians signed the Treaty of Tilsit, and Iran was again left without a reliable ally. Finally, Fath Ali and Great Britain entered into another agreement, which included British promises to aid Iran during wartime, particularly during the continuing conflict with Russia. British military officers were sent to Iran in order to assist in the modernization of the Qajar army, which was overseen by the heir to the throne, Abbas Mirza.

To finance his war with Russia over the control of Georgia, Fath Ali increased the level of taxation and began the Qajar practice of appointing some government posts, including vacant provincial governorships, to the highest bidder. The state also granted tax-free landholdings to those who joined the army. Qajar princes were often named to important governorships, and many of them rivaled the shah in power and influence, which led to internal struggles within the dynasty. Despite earlier efforts to centralize the government, the Qajar polity still lacked a cohesive national army or bureaucracy.

The war with Russia ended in 1813 with the signing of the Treaty of Gulistan, which granted control over much of the disputed land to the Russians. When reports of Russian suppression of Muslims in the Caucasus reached Iran in 1825, the *ulema* pressured Fath Ali to declare war on Russia. The next year the shah acquiesced to their demands but was soon defeated because the British refused to aid the Iranians, despite the renewal of their treaty in 1814, since the Qajars had started the conflict. In 1828 Fath Ali signed the Treaty of Turkmanchai, ending the war and agreeing to cede additional territories to Russia and pay an indemnity for starting the war, which included trade concessions to the Russians.

Abbas Mirza, the crown prince, led an invasion of Afghanistan shortly after the end of the war with

Russia, driving toward the city of Herat, but died in 1833 before the conquest could be completed. A year later Fath Ali also died, and the Qajar throne passed to Muhammad Mirza, who was challenged by two other Qajar tribal leaders, Husayn Ali Mirza and Ali Mirza Zill al-Sultan. With the aid of Russian and British troops, who escorted him from Tabriz to Tehran, Muhammad Mirza took power. The reliance on foreigners to prop up the ruling dynasty became steadily more apparent during his reign, which lasted until his death in 1848. The new shah ruled in name only after four years, due to ill health, and the Qajars came under Russian influence.

NEW PROPHETIC REVELATIONS

On September 4, 1848, with the death of his father, Nasir al-Din Shah became the new Qajar monarch. During his reign, the government bureaucracy was built up and centralized further. The influence of the ulema over the government remained during Nasir al-Din's reign, and the government actively suppressed the nascent Baha'i, a religious movement founded in Shiraz in 1844 as an offshoot of Shi'ism under the leadership of a messianic preacher, Sayyid Ali Muhammad, who radically reinterpreted several Shi'i tenets. Sayyid Ali declared that he was the *bab*, an individual capable of delivering new prophetic revelations. After a joint conference of Sunni and Shi'i ulema met in Ottoman-held Baghdad and declared the new religion to be deviant and Sayyid Ali an apostate, the Baha'i leader was arrested and executed in 1850.

Under the leadership of Amir Kabir, who served as the shah's first prime minister from 1848 to 1851, the Qajar tax system was reformed and the growth of indigenous industries, including armaments factories, was encouraged. Iranians were sent to Russia and countries in western Europe to receive technological training and to observe the workings of foreign governments. Despite his positive impact on the state or perhaps because of it, Amir Kabir was deposed by the shah in 1851 and exiled to the city of Kashan, where he was murdered the next year.

In 1870 the shah named Mirza Husayn Khan as prime minister, and the new premier began a series of reforms, which included the further centralization of the state's power, the curbing of the authority of provincial governors, and the formation of a cabinet and a consultative assembly. In 1872 the prime minister granted a trade concession to Baron Julius de Reuter, a Briton, that granted him a 75 percent share of all Iran's mines, except those with precious minerals, and

the exclusive right to oversee the construction of railroads in Iran. The next year, when the concession was made public, the shah was pressured by the ulema, who opposed many of its provisions, to remove the prime minister from office, which Nasir al-Din reluctantly did. Mirza Husayn, however, was not exiled but returned to the inner circle of the shah's advisers, where he remained until his dismissal in 1880. His reforms and attempt to modernize Iran by emulating western Europe were opposed by the ulema and many in the Qajar government who resented the attempt to limit their authority. Thus many of the reforms ended after his dismissal from office and subsequent retirement from politics.

The conflict between the state and the ulema came to a head again in 1890, after the shah granted a trade concession to a British company that allowed them to monopolize the tobacco trade in Iran. The clergy condemned the shah's decision and called for the public to oppose the concession. Protests and riots broke out across Iran, and in December of that year Grand Ayatollah Mirza Hasan Shirazi, the world's senior Shi'i cleric, issued a juridical opinion (*fatwa*) that declared the use of tobacco illegal because of the trade concession; his ruling was obeyed by the majority of Iran's population, including the wives of the shah and Iran's non-Shi'i population. In early 1892, under intense public pressure, the shah rescinded the concession. Nasir al-Din was assassinated four years later while meeting with petitioners at the royal court.

LAVISH LIFESTYLE

The monarchy's woes continued under the new shah Muzaffar ad-Din, who faced widespread opposition among the ulema, the merchant class, and the general public in late 1905 when he put in place new, restrictive economic laws and granted trade concessions to European powers in order to finance his family's lavish lifestyle. A constitutionalist movement, which opposed the concessions, led to the formation of a representative assembly, the Majlis, in 1906. The shah died the next year, and his successor, MUHAMMAD ALI SHAH, cancelled the agreement in June 1908 and ordered an attack on the Majlis building and implemented martial law.

Muhammad Ali used the army to put down popular revolts that erupted following the closing of the Majlis, and constitutionalist forces fled to Tabriz, where they withstood a siege by the shah's army for months. By the summer of 1909 a coalition of constitutionalist and other anti-Qajar forces captured Isfahan and marched

on Tehran, forcing Muhammad Ali to abdicate on July 16. The deposed shah went into exile in Russia and two years later attempted to reclaim the throne by invading Iran, but was again defeated.

The outbreak of the World War I in 1914 and the violation of Iran's declared neutrality by both the Central Powers and the Triple Entente led to the country becoming a battleground as Ottoman and German invasions were matched by British counterattacks. The war was also marked by the signing of new agreements between Great Britain and the Qajars guaranteeing British influence over the country.

Reeling from the aftershocks of the war, Iran was beset with invasions by Russian Bolshevik forces in 1920, the continued presence of British troops, and sectarian revolts by the country's Kurdish and Azeri minority communities.

The inability of Shah Ahmad to address the country's mounting external and internal problems led to his being marginalized by Reza Khan, a commander of the Persian Cossack Brigade, who formally put an end to the Qajar state and established the Pahlavi dynasty in 1926 after quelling revolts and successfully implementing a new authoritarian political order in Iran.

CHRISTOPHER ANZALONE

Qianlong (Ch'ien-lung)

(1711–1799) *Chinese ruler*

Emperor Qianlong was the fourth ruler of the QING (Ch'ing) DYNASTY. He abdicated after 60 years on the throne so that his reign would not be longer than that of his revered grandfather Emperor Kangxi (K'ang-hsi). The Qing dynasty reached its zenith under him, as he was a brilliant and hardworking ruler, but many

problems developed during his later years that forebode dynastic decline.

Born in 1711, the fourth son of Emperor Yongzheng (Yung-cheng), he was named Hongli (Hung-li) and was rigorously educated in the Confucian classics, history, literature, rituals, administrative techniques, and military skills. His school day lasted from dawn to midafternoon, with only five holidays per year. He was taught that a good ruler must have "the ability and desire to discover, select, and use ministers of high talent . . . and to exhaust their talent in the service of the state." Age 24, when he ascended the throne, he inherited a prosperous empire at peace, a full treasury, and able counselors who had served his father.

Qianlong traveled widely on six tours of inspection to the south, four to the east, and five to the west. He had a splendid military record and led several campaigns personally. In the 1750s his army finally and conclusively ended independent nomad power in Central Asia, and he annexed all lands in what is now China, plus present-day Mongolia, the Ili Valley of Kazakhstan, and parts of Siberia. This was a feat comparable with the achievement of the most successful previous dynasties. The distance his armies traveled exceeded the distance of Napoleon's failed march to Moscow in his Russian campaign. The Qing dynasty moreover continued to control these extensive territories for over a century by maintaining large garrisons and administrators throughout the pacified territories. His other campaigns, though less momentous, included the subjugation of Burma, Annam (Vietnam), and the Gurkhas in Nepal, bringing into or retaining these areas in the Qing tributary system. Dozens of states in addition, ranging from Korea, Siam, and Central Asian khanates such as Bokhara, Khokand, and Badakshan, also paid tribute.

The domestic achievements of the Qianlong reign were equally striking. He was a great patron of all the arts and learning, which he demonstrated in many ways. In addition to the regular exams for recruiting civil servants he held special examinations to recognize men of great learning and invited famous scholars to join the government. He was also an avid collector of paintings, calligraphy, and fine works of many genres of art. Thousands of pieces of art in the national museums of both Taipei and Beijing were collected by Qianlong. His lavish patronage of art and crafts stimulated high-quality workmanship throughout the empire. Qianlong was also a calligrapher, painter, and poet and spent his spare time in literary pursuits. He boasted of composing a grand total of 43,000 poems in his lifetime.

More important, Qianlong sponsored great literary projects, including the compilation of the *Complete Library of the Four Treasuries* that contained 36,000 volumes arranged into four categories as follows: classics, history, philosophy, and belles lettres. Its catalog listed 10,230 works. Seven complete sets of the Four Treasuries were printed and deposited in libraries in different parts of the empire. Qianlong also had an ulterior motive in sponsoring this project—to exercise censorship over works that he considered derogatory to the Manchus, which he then destroyed. As many as 528 titles met that fate. The social and political stability that he inherited and prolonged produced a significant population increase, to approximately 300 million by his reign's end. New crops introduced from the Americas, promotion of irrigation, and the opening up of virgin lands increased food-producing capacity, feeding the increase in population. He also reduced land taxes and maintained granaries that relieved famine.

For all his splendid achievements, historians have not judged Emperor Qianlong kindly, in part because his reign was the watershed between the successful era of the early Qing and the precipitous decline that set in during the 19th century. The very success of his reign brought problems, the most difficult being the unprecedented expansion of Chinese agriculture and population.

Pressure for land led to internal colonization by Han Chinese of land held by minority ethnic peoples that would lead to tribal rebellions and peasant unrest. Large-scale commercial expansion and export-oriented enterprises begun during the early Qing initially resulted in very favorable balance of trade for China. However, by the late 18th century, Great Britain, China's major trading partner, had found an item that would redress its unfavorable balance of trade: opium. Initially a legally imported medicinal item, opium later became popular as a recreational drug. While addiction to opium was at its infancy during his reign, it would later explode to cause a national and international crisis.

Qianlong's judgment became seriously flawed as he got older. Around 1775 he met a young, handsome guardsman named Heshan (Ho-shen) whom he rapidly promoted to the highest offices of the empire; he even married his youngest daughter to Heshan's son.

Heshan was openly and massively corrupt and promoted cronies who colluded with him to extort money. Although Qianlong retired in 1795, he nevertheless continued to exercise power behind the scenes. Thus it was not until Qianlong's death in 1799 that his son and successor Emperor JIAQING (Chia-ch'ing) could

arrest and execute Heshan and confiscate his ill-gotten wealth, estimated at \$1.5 billion.

Qianlong's long reign began brilliantly and proceeded on a steady and successful course. The personal decline that set in during his old age would become the beginning of dynastic decline. In 1793 Great Britain's first ambassador, Lord Macartney, arrived in China, coinciding with the emperor's birthday celebrations. Macartney's account noted the emperor's remarkably fit physical condition for a man of his age, but assessed the outwardly magnificent Qing Empire as decaying from within. His words proved prophetic.

Qing (Ch'ing) dynasty in decline

The Qing dynasty (1644–1911) was the last of 24 dynasties in Chinese history and one of the most successful. The transition from its predecessor the Ming dynasty, was one of the least disruptive in Chinese history. In the territory it controlled the Qing was the second largest in Chinese history, after the Mongol Yuan dynasty. The Qing is also called the Manchu dynasty, after the ethnic origin of the ruling house. The Manchus were frontier people from northeastern China; they were originally nomadic but as frontier vassals of the Ming had learned agriculture and Chinese ways before 1644. Although the Manchus maintained a privileged status for their people, they nevertheless gained the support of their majority Han Chinese subjects by upholding Chinese institutions and assimilating to Chinese culture. China enjoyed a century and half of prosperity under three capable and long reigning early Qing emperors, Kangxi (K'ang-hsi), Yongzheng (Yung-cheng), and QIANLONG (CH' IEN-LUNG).

Qing dynastic fortune began to decline toward the end of the Qianlong reign partly due to the emperor's failing ability as he aged, allowing corruption to

flourish. There were, however, longer-term reasons beyond Qianlong's or anyone's control that led to the turn of dynastic fortunes. One was the demographic disaster. Over a century of peace led to an unprecedented explosion in population, which tripled in two centuries from approximately 150 million in 1650 to about 450 million in 1850 while arable land rose from 5.27 million *qing* (*ch'ing*) in 1661 to 7.9 million in 1812 (1 *qing*=15.13 acres). Thus food production did not keep up with population increase despite the introduction of new crops—maize, sweet potatoes, and peanuts—and improved farming techniques. The result was the decreasing size of farms and the migration of poor farmers to cities, where there were no factories to absorb them. This domestic crisis was made worse by the opium problem. Other causes of dynastic decline included the corruption and loss of martial spirit of the once powerful Manchu banner army. Mounting domestic problems that overwhelmed the later Manchu rulers fueled a revival of anti-Manchu sentiments that had never died out, especially in southern China.

From before the common era trade between China and the West had been primarily overland, across Eurasia via the Silk Road. Portuguese traders who first arrived on the coast by sea in the 16th century supplanted the overland trade, and China accumulated a surplus due to European demand for Chinese silks, tea, and porcelain. Westerners eventually found a profitable item to sell to the Chinese: opium. By the 18th century Great Britain had gained primacy as China's trading partner and primary seller of opium, which the BRITISH EAST INDIA COMPANY produced in Bengal, India. Increasing Chinese addiction to opium, and the government's inability to prohibit its import created an unfavorable balance of trade for China, in addition to moral and public health crises. The incompatible Chinese and Western views of the world order, diplomatic relations, and international law resulted in wars between China and Great Britain and France, called Opium Wars by China, in the mid-19th century. Defeats led to the signing of dictated treaties that opened up China on Western terms and the imposition of extraterritorial rights for Westerners in China, plus territorial losses and indemnities.

Belatedly, the Qing government responded with limited adoption of Western-style reforms beginning in

the 1860s. Loyalists and reformers saved the dynasty by defeating serious rebellions (the TAIPING REBELLION, the NIAN REBELLION, and the MUSLIM REBELLIONS being the most threatening) and inaugurating modernizing schemes such as the TONGZHI RESTORATION/SELF-STRENGTHENING MOVEMENT. But the reforms were inadequate due to the lack of central leadership and massive corruption under the dowager empress CIXI (Tz'u-hsi) who held the reins of power between 1862 and 1908. Her reactionary policies aborted the dynasty's last chance for survival through the HUNDRED DAYS OF REFORMS in 1898, and her xenophobia resulted in the disastrous BOXER REBELLION in 1900. A revolution led by Western-educated Dr. Sun Yat-sen in 1911 ended the dynastic era in Chinese history.

Although the decline of the Qing dynasty preceded negative Western influences, its inability to adjust and respond effectively accelerated its decline and fall. Additionally the nature of the Western impact changed the traditional pattern of the dynastic cycle because, unlike previous invading groups who had prevailed over China, the Westerners enjoyed technological superiority backed by a highly advanced civilization. The clash of traditional Chinese with modern Western civilizations would result in a radical and difficult transformation of China that would persist into the 21st century.

R

Raffles, Thomas

(1781–1826) *British colonial administrator*

Sir Thomas Stamford Raffles, the son of an English sea captain, joined the BRITISH EAST INDIA COMPANY as a clerk in 1795 and was sent to Asia in 1805. When the Netherlands became part of NAPOLEON I's empire, Dutch overseas possessions became a prize in the Anglo-French struggle. In 1811 a British naval expedition of over 100 ships set sail to conquer Java and other Dutch possessions in the East Indies. Upon its conquest, Commander Lord Minto appointed his secretary, the 30-year-old Raffles, as lieutenant-governor of Java. Raffles immediately began thorough reforms based on liberal principles, overturning the oppressive Dutch plantation system that forced the people to cultivate and deliver export crops—primarily sugar, coffee, tea, indigo, and cotton—that greatly profited the Dutch East India Company. Raffles implemented a free market system and completely reformed the internal administration of the islands. He was also interested in the local culture and history, wrote a history of Java that became a classic, and ordered the first survey of the magnificent Buddhist monument at Borobodur.

Raffles had hoped that Java would become a permanent British colony. However, at the Congress of Vienna in 1815, the Netherlands was awarded its former possessions in the East Indies, and most of Raffles's reforms were rescinded by the returning Dutch administration. Raffles returned to Britain in 1816 due to ill-health, was knighted, and came

back to Asia as lieutenant-governor of Bencoolen in western Sumatra in 1818. To offset the loss of Java, Raffles negotiated the purchase of Singapore, a sparsely inhabited island at the tip of the Malay Peninsula from the Sultan of Johore in 1819, assuring the British government that its location made it “the most important station in the East,” adding that as a result of this acquisition, the Dutch “are no longer the exclusive sovereigns of the eastern seas.” It had a population of 1,000 inhabitants.

Singapore was strategically located at the tip of mainland Southeast Asia and had a superb deep-sea harbor. Modern cosmopolitan Singapore is the result of policies begun by Raffles: city planning, free trade, orderly government, and imposition of law and order. The city became a magnet for Asian and European shipping and immigrants of many nationalities, mainly Chinese, but also Indians and Malays. Raffles granted the right of Muslim legal practices to the Malays but instituted English laws modified to suit local circumstances for other peoples. He also abolished slave trade and slave status for anyone who had come to Singapore after the establishment of British rule in 1819, much before the abolition of slavery in the British Empire and other nations.

The Netherlands had opposed the establishment of British Singapore but was forced to accede in the Anglo-Dutch Treaty of London in 1824, in return for Britain's total retreat from Sumatra. In 1867 Singapore, Penang, and Malacca (also British possessions) were joined to form a crown colony called the Strait Settlements. British

involvement in the petty and unstable Malay states to the north resulted in the formation of the Federated Malay States in 1895 when four states came under the supervision of a British resident general. In 1914 the remaining five Malay states also came under indirect British rule when they formed into a union called the Unfederated Malay States. These steps established British rule throughout Malaya.

Raffles returned to Britain in 1824 due to ill health, founded the Royal Zoological Society, and died in 1826. Modern Singapore would not have come into being save for Raffles's vision.

railroads in North America

The impact of railroads on the economic, political, social, and cultural history of North America was immense. These iron horses propelled by steam locomotives along ribbons of steel were integral to the 19th-century transportation revolution and the INDUSTRIAL REVOLUTION, binding together geographically disparate regions of the United States, Canada, and northern Mexico.

Railroads provided fast, cheap transportation for people and goods; facilitated the growth of markets, industries, migration, and organized labor; promoted westward expansion in the United States and Canada; integrated the regional mining and ranching economies of northern Mexico with U.S. markets; and, by the late 19th century, provided an important organizational model for emergent corporations. They were also key to the emergence of the populist movement and the era of progressive reforms and were not displaced as the principal means of mechanical conveyance until the automobile became an object of mass consumption in the 1920s.

In the United States, the transportation revolution began in the 1790s–1820s with a frenzy of road and

An illustration published in 1875 of crews laying track on the Great Plains. Soldiers and Native Americans rest in the foreground.

turnpike construction, continued in the 1820s–1840s with a frenzy of canal building, and reached a culmination in the 1840s–1890s with a rush of railroad building. Railroads engendered a revolution in transport arguably not supplanted until the construction of the interstate highway system in the mid-1950s. Like the interstate highways, the railroads were built only through the active intervention of state and federal governments via massive public subsidies, tax breaks, land grants, and other major incentives to ensure their timely construction.

The first working railroad in the United States was a 13-mile stretch completed in 1830 by the Baltimore & Ohio Company. In 1836 total railroad mileage in the United States stood at around 1,000; in 1840 3,000; in 1860 30,000. In 1864 Congress mandated a standard track gauge (width) for the projected transcontinental railroad, though the standard gauge of 4 feet, 8½ inches did not become the U.S. standard until 1886. By 1900 nearly 200,000 miles of railroad track crisscrossed the length and breadth of the country. Densest in the industrial and agricultural heartland of the Northeast and Midwest, sparsest in the West, railroads linked all the country's major cities and tens of thousands of towns

and communities. Emblematic here was the emergence of Chicago as a major rail hub in the nation's midsection integrating rail and water transport. Towns along railways prospered; those bypassed floundered. The transcontinental railroad, linking the east and west coasts and built mainly by immigrant Irish and Chinese laborers under exceedingly hazardous conditions, was completed in 1869. Two decades later, another six major lines crossed the continent east to west, with termini in Vancouver, Seattle, Portland, San Francisco, and Los Angeles.

A parallel development unfolded in Canada, where a canal boom from the 1820s and 1830s was followed by a railroad boom from the 1850s. Here, too, public subsidies, activist government, and abundant immigrant labor made railroad construction possible. The transcontinental Canadian Pacific Railway, linking the eastern provinces to the Pacific port city of Vancouver, British Columbia, was completed in November 1885, with dozens of spur lines linking major cities and towns and crisscrossing the southern border with the United States in both the urban and agricultural East and prairie West.

The same happened in northern Mexico, where from the 1880s the burgeoning ranching and mining economies prompted a spate of railroad construction during the period of the Porfiriato. By the early 1900s a dense network of railroads linked northern Mexico's ranching and mining districts with the U.S. Southwest and industrial centers of the East, South, and Midwest. Like railroads elsewhere in Latin America, funneling into port cities from Peru to Argentina, northern Mexico's were geared mainly to export production.

This was in contrast to the United States and Canada, where railways, in addition to funneling goods to seaports for export, played a key role in integrating internal markets and facilitating migration to the interior. From the mid-1840s telegraph lines followed the rail lines, generating a revolution not only in transport, but in communications. Another revolution occurred in timekeeping: today's standard time zones, first implemented on November 18, 1883, by rail companies in the United States and Canada, resulted directly from the need to synchronize rail schedules.

Among the largest concentrations of private capital in the world in the late 19th century, U.S. railroad companies also pioneered important new forms of business organization. Most notable here was their pursuit of horizontal and vertical integration, in which a single company integrated "horizontally" by controlling firms

engaged in the same industry (in this case, other railroad companies), and "vertically" by controlling the subsidiary industries involved in the primary industry (in this case, coalfields, iron and steel factories, and even cotton fields and textile mills for passenger car seats and draperies).

By the 1870s railroad monopolies and corruption had become the object of much popular wrath, most tangibly expressed in the Great Railroad Strike of 1877, and later, in the Populist Movement of the 1890s. Many Progressive Era reforms from the 1890s, especially anti-monopoly and antitrust legislation, found a primary target in the nation's giant railroad monopolies. For these and many other reasons, one would be hardpressed to exaggerate the centrality of railroads in the economic, political, social, and cultural history of North America.

MICHAEL J. SCHROEDER

Rama V (1853–1910) *Thai king*

Rama V, commonly known as Chulalongkorn, was one of the greatest Thai monarchs, noted for his foreign policy and modernization. The fifth king of the Chakri dynasty was born to King Mongkut and Queen Debsirinda in 1853. Mongkut was an enlightened ruler who employed Anna Leonowens to be an English governess for his children; the story is told in the book *Anna and the King of Siam*, later adapted to the musical *The King and I*. Chulalongkorn also studied in a Buddhist monastery for two years and succeeded to the throne on October 1, 1868.

His reign began under the regency of Prime Minister Chao Praya Srisuriyawongse, as he was too young to rule. He visited Penang, Singapore, Java, Burma, Calcutta, and India during this period and got firsthand knowledge of Western colonial administrations. He also visited Europe twice, in 1897 and 1907.

Mongkut and Chulalongkorn kept up with the times. It was because of the endeavors of the father-and-son duo that Thailand preserved its independence

and became a modern state. His 42 years of liberal rule saw reforms with far-reaching consequences for Thailand.

The administrative structure of Thailand was changed in 1882 with the introduction of a cabinet system with ministers responsible to the king. The archaic feudal administration was changed with the division of the kingdom into provinces and districts.

The king's administrative reforms touched almost every aspect of the state. In 1884 state schools were established and were open to girls and boys. The newly established government printing press published the textbooks. State scholars were sent abroad and later modern universities were established in Thailand. The traditional lunar calendar was replaced by a Western one with Sunday as a holiday in 1899.

Chulalongkorn was instrumental in developing a modern army. The first railroad opened in 1896 from Bangkok to Ayudhya and, in 1905, the first foreign loan from Britain to meet expenses for its building was received. A benevolent monarch, he traveled throughout the kingdom to see the condition of his subjects. Thailand became a viable, stable, and modern state because of the reforms of Chulalongkorn.

PRUDENT POLICIES

Thailand survived without becoming a colony of either Britain or France, unlike its neighbors, thanks to prudent policies of the king, although Mongkut and Chulalongkorn both signed unequal treaties of friendship and commerce with the Western powers that allowed them extraterritoriality rights.

Aware of the limitations of his military, Chulalongkorn made land concessions to France and Britain that kept Thailand as a buffer state between the two. In 1893 Thailand gave up its claim on the territories of the left bank of the Mekong River, covering most of the area of modern Laos to France. In 1904 the Anglo-French treaty designated the respective spheres of influence of Britain and France. In exchange for 25 kilometers of neutral zone along the Mekong's west bank, Thailand gave Champassak and Sayaboury provinces to France in 1904 and 1907. By the Anglo-Thai Convention of 1909 Thailand gave up its rights over the four southern states of the Malay Peninsula: Kedah, Perlis, Kelantan, and Trengganu, while Britain recognized Thai control over the Muslim-dominated Pattani Province. The convention thus fixed the present existing boundary between Malaysia and Thailand, which has become one of the factors for the rise of Islamic terrorism in Thailand.

When Chulalongkorn died on October 23, 1910, in Bangkok, he left a modern Thai state to his successor, Rama VI. To commemorate the reign of Chulalongkorn, October 23 is observed as a national holiday.

PATIT PABAN MISHRA

Reconstruction in the United States

The era of Reconstruction was from 1865 to 1877 when Americans tried to reunite a nation shattered by CIVIL WAR. It generated bitterness and controversy. The people who lived through Reconstruction viewed it from sharply different perspectives. Many white southerners saw it as a devastating experience, a time when vindictive northerners humiliated the South and delayed reunification. Northerners argued that forcible federal intervention was the only way to stop the old southern aristocracy from returning and subjugating their former slaves and to keep die-hard Confederates from restoring southern society to the way it had been before the war.

Many considered Reconstruction significant for other reasons. They saw it as a small but important first step to putting former slaves on the path to claiming their civil rights and accumulating economic power.

Reconstruction did not bring African Americans enough legal protection or material resources to assure them anything resembling equality, and when it ended in 1877 the federal government abandoned the freed slaves to a system of economic serfdom and legal subordination. The African Americans who continued to live in what came to be called the New South could only produce token resistance to the new southern system for the remainder of the 19th century.

THE PROBLEMS OF PEACE

Emancipation had stripped many white southerners of their slaves, and they had no capital and almost no

personal property for rebuilding their lives and fortunes. Towns were gutted, plantations burned, fields grown to weeds, and bridges and railroads destroyed. Many white southerners faced starvation and homelessness. More than 258,000 Confederate soldiers died in the war and thousands more came home wounded or sick. The Legend of the Lost Cause, romanticizing the South as its citizens remembered it in the days before the War, became a unifying point of hope for southerners.

Southern blacks faced the same stringent conditions as their white neighbors. Nearly 200,000 of them had fought for the Union, and 38,000 had died. These African Americans envisioned a life free from the injustices and humiliations of slavery with the same rights and protections as white people enjoyed. African Americans disagreed among themselves on how to achieve freedom. Some demanded that economic resources like land be redistributed, and others just wanted legal equality, confident that if they had the same opportunities that white people had they would earn places in American society.

White southerners had a different view of freedom. To them, freedom meant the ability to control their own destinies without the North or the federal government interfering. In the aftermath of the Civil War, they tried to restore southern society to the way it had been in the antebellum period.

Leaders of both parties believed that readmitting the South to the Union would reunite the Democrats and weaken the Republicans. Republicans disagreed among themselves about the proper approach to Reconstruction. Conservative Republicans insisted that the South accept the abolition of slavery but did not suggest any other conditions for readmission of the states that had seceded. Radical Republicans, following the lead of Thaddeus Stevens of Pennsylvania and Senator Charles Sumner of Massachusetts, demanded that Confederate civil and military leaders be punished, that many southern whites be disenfranchised, that black legal rights be protected, and that the property of wealthy white southerners be confiscated and distributed among the freedmen. Moderate Republicans rejected the vengeance of the Radicals, but desired some concessions from the South, including African-American rights.

TEN PERCENT PLAN

Sympathizing with the moderate and conservative Republicans, President ABRAHAM LINCOLN pursued a lenient plan for Reconstruction that he announced in

December 1863. He wanted to quickly readmit southern states into the Union in good standing and with a minimum of retaliation. He proposed what he called a 10 percent plan: whenever 10 percent of the number of voters in 1860 took the oath in any state, those loyal voters could set up a state government.

Using this formula, Louisiana, Arkansas, and Tennessee reestablished loyal governments in 1864. President Lincoln also wanted to extend suffrage to African Americans who were educated, owned property, and had served in the Union army. He created the Bureau of Refugees, Freedmen and Abandoned Lands and insisted that the new freedmen would have equal rights. African Americans in the Freedmen's Bureau were sent to farming plantations in the Sea Islands of South Carolina that the army had seized, but they never became owners of the land that they worked.

History and Reconstruction would undoubtedly have taken a more positive turn if southerner John Wilkes Booth had not assassinated President Lincoln on April 14, 1865. The assassination extended and deepened the bitterness of the Civil War on both sides. Lincoln's successor, Andrew Johnson, did not fit the compromising or conciliatory pattern. A tactless and intemperate man, Johnson, a Democrat from Tennessee, resented the freed slaves and refused to support any plans that gave them civil or voting rights. Soon after he took office, he revealed his Reconstruction plan, or as he called it, his Restoration plan, which he implemented in 1865 during the congressional recess. As Lincoln had done, he offered amnesty to southerners who would take the oath of allegiance. He appointed a provisional governor for each state and instructed the governor to invite qualified voters to elect delegates to a constitutional convention. To be readmitted to Congress, a state had to revoke its ordinance of secession, abolish slavery, ratify the Thirteenth Amendment, and repudiate the Confederate and state war debts. As a final restoration step, each state had to elect a state government and send representatives to Congress. By the end of 1865, all of the seceded states had formed new governments and were prepared to rejoin the Union when Congress recognized them.

Many northerners were disturbed at these Reconstruction results. They were dismayed that southerners were reluctant to free the slaves and astonished that states claiming to be loyal to the United States would elect leaders of the recent Confederacy. The Democratic Party, proclaiming itself the party of white men, supported Johnson. In response to recalcitrance, the Radical Republicans blocked the readmission of the

rebellious states to the Congress in fall 1865. Congress also renewed the Freedman's Bureau, but Johnson vetoed it.

Reconstruction under President Andrew Johnson's plan, sometimes called presidential Reconstruction, progressed only until Congress reconvened in December 1865. After it reconvened, Congress refused to seat representatives of the "restored" states and created a new Joint Committee on Reconstruction to work out a new Reconstruction policy. This began the era of congressional, or Radical, Reconstruction.

RADICAL RECONSTRUCTION

Constitutional amendments, far-reaching legislation, and restrictive Black Codes were enacted during the next years of Reconstruction. In 1865 and 1866 the governments of white ex-Confederates quickly instituted Black Codes that limited freedmen to second-class civil rights and no voting rights. Southern plantation owners wanted to dominate their African-American labor force and prevent them from attaining equal rights. The Mississippi and South Carolina Black Codes said in part that if African-American workers ran away from their tasks they forfeited their wages for the year and fugitives were to be arrested and carried back to their employers. Codes in other southern states prohibited African Americans from owning or leasing farms or taking any jobs other than plantation or domestic workers.

Three new constitutional amendments were adopted as a result of the Civil War. The Thirteenth Amendment abolishing slavery was ratified in 1865. Proposed by the Joint Committee on Reconstruction in April 1866, the Fourteenth Amendment granted federal civil rights to every person born in the United States as well as to naturalized citizens, providing the first constitutional definition of American citizenship. It guaranteed repayment of the American war debts and repudiation of the Confederate debts. The Fifteenth Amendment stipulated that the right to be vote could not be based on race, color, or previous condition of servitude.

Congress passed the Civil Rights Act of 1866 to create and protect black civil rights in the South. This led to a decisive break with President Andrew Johnson, who vetoed the bill. Congress overrode it.

The 1866 congressional elections were fought over the Reconstruction question. The southern states had not yet been readmitted to the Union and were not allowed to vote, so the Republicans gained solidly in Congress. President Johnson actively campaigned for

conservative candidates, but the voters overwhelming returned a Republican majority to Congress. Radical Republicans under Thaddeus Stevens and Charles Sumner gained full control of Congress and formed a plan of their own and implemented it, even over President Johnson's veto.

Early in 1867 the radical Republicans passed three Reconstruction bills, overriding President Johnson's vetoes. Under the radical Reconstruction plan, after ratifying the Fourteenth Amendment, Tennessee was readmitted to the Union, but Radical Republicans rejected the Lincoln-Johnson governments of ten other Confederate states and combined them into five military districts: Virginia; the Carolinas; Georgia, Alabama, and Florida; Arkansas and Mississippi; and Texas and Louisiana.

MARTIAL LAW

Under direct control of the U.S. Army, these military men and their soldiers reconstituted southern state governments with little or no fighting. A state of martial law existed where the military closely supervised local government, supervised the elections, and protected the officeholders from violence. Blacks were enrolled as voters as well as white males who had not participated in the rebellion. These Republican governments met the congressional conditions for readmission to the Union, including ratifying constitutional amendments.

Republicans won every state except Virginia in the 1867 elections. They were organized into clubs called Union Leagues, and the Republican coalition in each state was made up of freedmen, African Americans who came from the North, recently arrived white Northerners, and local white Republican sympathizers called scalawags. In most elections, the Republicans won the state government, the state was readmitted, the congressional delegation seated, and most soldiers were removed. The old political elite of the Democratic Party, mostly former Confederates, were left out of power. Republicans took control of all southern state governorships and state legislatures, leading to the election of numerous African Americans to state and national office, as well as to the installation of African Americans into other positions of power.

By 1868 seven of the 10 former Confederate states had fulfilled the requirements and had been readmitted to the Union. Conservative whites delayed the return of Virginia and Texas until 1869 and Mississippi until 1870. To check President Johnson, the Radical Republicans passed two laws in 1867, the Tenure of Office Act

forbidding the president to remove civil officials, including his own cabinet, without Senate consent, and the Command of the Army Act, which stopped the president from issuing military orders except through the commanding General of the Army.

IMPEACHING PRESIDENT JOHNSON

The Radical Republicans wanted to impeach President Johnson, and in 1868 they found a reason to do so when President Johnson dismissed Secretary of War Edwin Stanton over congressional objections. On March 5, 1868, senators formed a court of impeachment to hear the charges against the president, and they introduced a resolution containing 11 articles of impeachment. The Senate tried the case through April and May of 1868.

William M. Evarts served as President Johnson's counsel, basing his defense on a clause in the Tenure of Office Act that stated that the current secretaries would hold their posts throughout the term of the president who appointed them. President Lincoln had appointed Stanton so the president's counsel claimed that the applicability of the act had already run its course.

The Senate held three votes. On all three occasions, 35 of the senators voted "guilty" and 19 "not guilty." Seven Republicans joined the Democrats and Independents to vote for acquittal. The vote was one short of the constitutional two-thirds majority to convict the president.

In 1868 voters were tired of the political turmoil of the Johnson administration and they turned to popular Civil War hero general ULYSSES S. GRANT. Grant had his choice of either the Democratic or Republican nomination. He accepted the Republican nomination because he believed that Republican Reconstruction policies were more popular in the North. Grant's victory over Democratic candidate Horatio Seymour of New York proved to be a narrow one. Without the 500,000 new African-American voters in the South, Grant would have lost the popular vote.

By 1870 all southern states had been readmitted to the United States, with Georgia the last on July 15, 1870. When President Ulysses S. Grant signed the Amnesty Act of 1872, all but 500 sympathizers were pardoned.

The white southerners who lost power re-formed themselves into conservative parties that battled the Republicans throughout the South. The party names varied somewhat, and by the late 1870s they called themselves simply Democrats.

Despite his lack of political experience and scandals in his administration, President Grant won a substantial

victory in 1872. One scandal after another marked his second administration.

END OF RECONSTRUCTION

In some states, where African Americans were the majority or the populations of the two races were almost equal, whites used intimidation and violence to keep African Americans from voting. Started in 1866 and led by former Confederate general Nathan Bedford Forrest, the Ku Klux Klan gradually absorbed some of the smaller organizations and expanded to create terror in black communities across the South. In 1870 and 1871 the Republican Congress passed two Enforcement Acts, also known as the Ku Klux Klan Acts. These acts empowered the federal government to supersede the state courts and prosecute violations of the law, the first time the federal government had ever claimed the power to prosecute crimes by individuals under federal law.

By 1870 the Democratic-Conservative leadership ended its opposition to Reconstruction as well as to black suffrage. The Democrats in the North concurred. They wanted to fight the Republicans on economic grounds rather than race. But not all Democrats agreed. A group of hard-core Democrats wanted to resist Reconstruction to the bitter end. Finally a group of Democrats called Redeemers wrested control of the party in state after state by forming coalitions with conservative Republicans, emphasizing the need for economic modernization.

President Grant accepted responsibility for the panic of 1873, and state after state fell to the Redeemers. In the 1874 elections, the Republican Party lost 96 seats around the country, and President Grant decided not to run for reelection. Most Democrats and Northern Republicans agreed that the Civil War goals had been achieved and further federal military interference would be an undemocratic violation of historic republican values. In 1875 Rutherford B. Hayes won a hotly contested Ohio gubernatorial election, indicating that his policy toward the South would become Republican policy. It became Republican policy the next year when he won the 1876 Republican nomination for president.

After Rutherford B. Hayes won the disputed presidential election of 1876, the South agreed to accept his victory if he withdrew the last federal troops from its territory. He did so in a political move called the Compromise of 1877, and the South was redeemed. The end of Reconstruction marked the reduction of many civil, political, and economic rights and opportunities for African Americans. African Americans would legally and

socially remain second-class citizens until change began with the Civil Rights Act of 1964.

After the end of Reconstruction, the South reestablished a segregated society, and the U.S. Supreme Court overturned much of the civil rights legislation. The Court suggested in the 1873 Slaughterhouse Cases, then held in the 1883 Civil Rights Cases, that the Fourteenth Amendment only gave Congress the power to outlaw public, rather than private, discrimination. In 1896 the Court announced in *Plessy v. Ferguson* that state-mandated segregation was legal as long as the law provided “separate but equal” facilities.

DELIA GILLIS

revolutions of 1848

The revolutions of 1848 were transitory events that erupted throughout Europe and collapsed as quickly as they arose. For a brief moment they promised much in the way of democratic and social reform, but without direction and steady leadership delivered little. The forces opposing revolutionary change and radical reform were far more formidable and better organized, so that repression was easy to achieve.

The backdrop for these revolts revealed a range of causes tied to industrialization and changing economic conditions. Rising prices tied to poor harvests, depressed industrial conditions, increased unemployment, radical and moderate political ideas, and nationalism all combined to create a climate that challenged the old regimes that were characterised by aristocratic and monarchical dominance. Society was changing, and the hotbeds for these revolutions were Europe’s cities, which had witnessed sweeping changes. The still most populous section of Europe’s population, the peasantry, was largely

witness to, but not participant in, the revolutions of 1848. It was in the cities that the bourgeoisie and the emerging working classes most wanted liberal political and economic reform such as an expanded franchise and workers’ rights.

As with many such events, the “Spring Time of the Peoples” began in France and spread to the German Confederation, Prussia, the Habsburg Empire, Italy, and Poland. In the initial February French revolt the middle class and working class combined interests and demanded constitutional change. However, disagreements soon emerged, and the ending of a system of national workshops for the unemployed led the Parisian workers to raise a more radical agenda of class conflict and resistance. By June the provisional government, supported by the military, had brutally suppressed the workers. There soon followed a presidential election in December, which saw NAPOLEON III take charge of this SECOND REPUBLIC. In 1852 Napoleon, by exploiting French nationalism, seized total power and replaced the Second Republic with the Second Empire.

In Prussia a constitutional monarchy was proposed for Frederick William III, and in the rest of the German Confederation the revolutionaries drew up the liberal Frankfurt constitution proposing a greater Germany and a liberal constitutional monarchy. Through Prussian resistance, the Frankfurt assembly broke down into factionalism, and by 1851 the old order was re-established throughout the German areas.

In the Habsburg Empire revolts broke out in Vienna, Budapest, Venice, and Milan. Emperor Ferdinand dismissed the unpopular prince CLEMENS VON METTERNICH who had overseen Austrian affairs since 1815. Metternich then sought exile in London. With its many nationalities, revolution could mean the end of the empire. Hungary, led by Louis Kossuth, proved initially more successful in gaining independence from Vienna; however, the central government eventually crushed all ethnic revolts, including revolts in northern Italy, and put in place martial law, although some economic reforms did last.

In Italy the revolutionary flames spread throughout the politically fragmented Italian Peninsula. The Piedmontese unsuccessfully arose against the Austrians, and additional revolts challenged the established regimes throughout Italy.

These included revolts against King Ferdinand II of Sicily and insurrections in Bologna and Rome, where the prime minister of the Papal States was assassinated. Rebel leaders like GIUSEPPE MAZZINI and GIUSEPPE GARIBALDI proclaimed a Rome of the People. French

intervention ended the Rome uprising, and in April 1849 the pope returned to power. Mazzini fled to England and Garibaldi to the United States.

The revolutionary spirit spread to Poland, where the people of the Grand Duchy of Poznan rose against an occupying Prussian army. However, internal divisions split the leadership, and the revolt failed by May 1848. Russia and Britain remained free of the 1848 unrest. The oppressive Russian state, with its nonindustrial feudal base, was far removed from the conditions of the rest of Europe, and Britain, a more advanced industrial state, had secured a degree of reform in 1832, and with a freer political atmosphere there was less support for more radical change.

The revolutions of 1848 dramatically failed, and Europe remained autocratic, with national elites in power, although the monarchies after 1848 were sometimes described as constitutional. The pressing economic, political, and social problems remained: rapid industrialization, a rising urban population, a dissatisfied bourgeoisie denied political influence, and idealistic university students desiring change.

In Germany and Italy, a drive for national unification, built upon the romantic nationalist forces unleashed by the 1848 revolts, emerged. Within 20 years of the 1848 revolt, national unification occurred in Italy in the form of the *Risorgimento*, and in Prussia, OTTO VON BISMARCK created a German empire by 1871. The European working classes, inspired by many socialist voices, most important KARL MARX, moved toward a class-based politics.

THEODORE W. EVERSOLE

Rhodes, Cecil

(1853–1902) *British businessman and imperialist*

Cecil John Rhodes was born the son of a vicar of the Church of England (Anglican) in Bishop's Stortford in Hertfordshire in 1853. Rhodes coincidentally was born

in the year that the eighth Kaffir War, between the British and Africans of the Xhosa tribe, came to a conclusion. These wars were a prolonged battle by the African people against the intrusion of Europeans, finally ending with the annexation of the Xhosa territories by the Cape Colony, as well as the incorporation of the Xhosa people.

After the deposition of the Xhosa paramount, Sandile, in 1851, this territory was reserved, apart from the British military outposts, for occupation by Africans. Resentments in British Kaffraria, however, resulted in the eighth and most costly of the wars. Once again the Xhosa resistance was immensely strengthened by the participation of Khoisan tribesmen, who rebelled at their settlement of Kat River. By 1853 the Xhosa had been defeated, and the territory to the north of British Kaffraria was annexed to the Cape Colony and opened to white settlement.

Rhodes was afflicted with poor health most of his life but seemed to compensate with a mighty will. The army or navy were obviously out of the question because of his diminished physical capabilities. Like many young Victorian men, he went out to the colonies to seek his fortune, as many Americans of his generation went to the Wild West. Rhodes went to join his oldest brother, Herbert, in Natal, in eastern South Africa.

Natal Province had been settled centuries earlier by the Zulu people, as part of the great Bantu migrations, which had been caused by the growing desertification of the sub-Saharan region of Africa. Cattle herders, the Bantu sought the grasslands of southern Africa for their home. They fought bitter wars with the Boers, descendants of Dutch settlers who arrived in what became Cape Town in the 17th century.

In Natal, Herbert and Cecil Rhodes attempted cotton farming, but like the British who settled in the high country of Kenya in East Africa some 50 years later with the expectation of establishing vast coffee plantations, met with mixed success. With their plans for cotton farming proving a failure, the two Rhodes brothers decided to seek out the diamond fields. The next 15 years saw a tremendous increase in South African diamonds. More stones were recovered in this period than had been mined in the previous 2,000 years in India. Coincidentally, this outpouring of wealth came at a time when Brazilian deposits were starting to be depleted. The rise in wealth around the world, particularly in the United States, ensured that diamond prices stayed steady, something they had not done when Brazil overproduced diamonds for the demand in the 1730s.

A cartoon of Cecil Rhodes, who was instrumental in the British 19th-century colonization of Rhodesia (Zimbabwe)

By 1869 diamonds were found far from any stream or river, first in yellow earth and below in hard rock called blueground, later called kimberlite after the mining town of Kimberley. In the 1870s and 1880s Kimberley, encompassing the mines that produced 95 percent of the world's diamonds, was home to great wealth and fierce rivalries, most notably that between Rhodes and Barney Barnato, English immigrants who consolidated early 31-foot-square prospects into ever larger holdings and mining companies

While Cecil and Herbert Rhodes became involved in the growing diamond industry around Kimberley, Cecil made continual trips back and forth to England. He managed to be awarded a degree from Oxford in his younger years and went on to become perhaps the best-known spokesman for imperialism in his time. Although very much a believer in free enterprise, he realized the need for the imperial factor. Essentially, he needed the imperial government to protect his holdings and interests in the diamond fields.

Although intent on building his private empire within the British Empire, Rhodes also became convinced that Ireland, England's oldest colony, ought to have home rule, a degree of autonomy from the home government of London. In this he followed the policies of WILLIAM GLADSTONE, the head of the Liberal Party.

Rhodes's views on the native Africans were equally complex. His treatment of the indigenous people was often contradictory. On one hand, in his speech he was often derogatory of Africans and essentially created the apartheid system that separated his African workers from white society and the rest of the world. On the other hand, Rhodes appears to have had significant interest in both the languages and cultures of the native people, an interest and respect that was surprisingly liberal for the time.

Back in South Africa, Rhodes singlemindedly pursued his consolidation of his hold on the Kimberley diamond bonanza. Upon his return, Rhodes formed DeBeers Consolidated Mines Limited in March 1888. Rhodes controlled the company with some of the diamond barons he had formerly considered rivals. These served as life governors of the company. By March 1890 DeBeers made a substantial profit on diamond sales, with estimates reaching as high as £50 of profit on every £100 pounds sold. By 1891 DeBeers had created a monopoly on the production of diamonds in Kimberley and, because of this, controlled virtually every other commercial venture and activity in the entire South African region.

Not content with his effective monopoly on South African diamond production, Cecil Rhodes continued to look for new opportunities for wealth and power. In 1890, mainly due to his economic position in the Cape Colony, Rhodes became the colony's premier. Of the many projects he envisioned, the one that was his most publicized was the creation of a railway to run from Cape Colony through the entire African continent, ending in Cairo. His premiership of Cape Colony allowed him to pursue goals such as this on a much grander scale. As premier, he lobbied for the annexation of Bechuanaland, a goal that was rebuffed due to a general lack of will in the Colonial Office.

Prevented from this goal by political means, Rhodes instead created a new company in an effort to claim lands in the African interior. The British South Africa Company gained a royal charter in 1889. Following this, the company managed to gain access to the lands of the Matabele and the Mashona, as well as other indigenous people. In his drive for empire,

Rhodes created what is today Zimbabwe when the British South Africa troops under Major Patrick Forbes raised the flag of the company over Bulawayo in November 1893, having defeated the Ndebele people. The region was first called Rhodesia in 1891.

With Rhodes's backing, Jameson, the administrator of the conquered Mashonaland, invaded the Transvaal. Rhodes cautioned Jameson to delay, but Jameson, disregarding the request, sent as many as 600 men on horseback into the Transvaal. This force was defeated at Krugersdorp on January 1, 1896, and the next day, surrendered. Jameson was handed over to the British by the Boers; he was tried in London, convicted, and served several months in prison. The others in the raiding party were held for a time by the Boers, and were eventually released, thanks to a large payment.

The diplomatic repercussions from the raid were significant. Rhodes was forced to resign his premiership of the Cape Colony. Undaunted, in 1896, Rhodes rode alone and unarmed into the Matopo Hills. There he spoke with the Matabele chiefs who had rebelled. This effort forestalled another war, at least for a few years. Within three years, the Second Boer, or Second South African, War began in 1899, as a direct result of the tensions that had been growing from Jameson's ill-fated expedition. Rhodes helped to coordinate the defense of Kimberley when it was besieged by Boer forces. However, Rhodes would not live to see the end of the war, for he died of heart disease and was buried in April 1902 in the Matopo Hills. His estate initiated the Rhodes scholarships that educate aspiring scholars from all over the English-speaking world at Oxford University.

NORMAN C. ROTHMAN

Riel, Louis

(1844–1885) *fighter for Métis rights in Canada*

Louis Riel, a man of mixed Native American (Ojibway) and French descent (Métis), sought to preserve Native

land rights against an expanding Canadian government. The Canadian government wanted to assert its authority over the territory acquired from the Hudson's Bay Company in 1869. This agenda conflicted with the aspirations of the Métis, as they attempted to assert their right to self-government through the Council of Assiniboia, established in 1835 by the Hudson's Bay Company and a Métis provincial government that assumed power in 1869. The legacy of Riel is a difficult one to ascertain as he has been depicted by historians as both a traitor of and a martyr for Native rights.

Riel was born in 1844 into a family that was well respected and possessed a history of protesting injustices committed against Natives. Jean-Louis Riel, Louis Riel's father, led a protest against charges imposed on Pierre-Guillaume Sawyer, a man of mixed descent, for the illegal trading of furs. Even though Sawyer was found guilty by a jury, he escaped punishment for this crime, partially due to Riel's protests.

Louis Riel studied at the Collège de Montréal a curriculum similar to that used in 17th-century France. He ended his pursuit of the priesthood in 1864, in part because he fell in love with Marie Guernon, whom he married on June 12, 1866.

Riel continued his father's policies in fighting against infringements on Métis rights by protesting against surveys conducted on local land. In 1869 Riel followed up his protests against the Canadian government by confronting surveyors sent to André Nault's farmland. The Council of Assiniboia questioned the wisdom of Riel and the Métis, but Riel professed his loyalty to the council.

Riel and the Métis followed up with armed force, taking Upper Fort Garry, a fort controlled by the Hudson's Bay Company. Riel and others created a list of rights that demanded that an elected body of Métis people be able to formulate and enact local laws, possess the right to veto, and the right to approve all laws passed by the Canadian government. This list proposed that the Métis be entitled to elect representatives to the Canadian parliament.

On December 7, 1869, Riel and a band of Métis took possession of a store owned by Dr. John Christian Schultz and imprisoned Schultz and 48 other individuals in Fort Garry. Riel dissolved the Council of Assiniboia and formed a provisional government, assumed the presidency, and attempted to open talks with the Canadian government regarding the entrance of the Red River settlement. Riel was able to use the authority of the provisional government to keep the English and the French mixed bloods together in order to maintain unity and order in the Red River region.

Riel continued to follow a policy of aggression as he executed Thomas Scott, a prisoner involved in the Orange Order, on March 4, 1870. It is difficult to assess the impact that Scott's execution had on the Canadian government, but it acceded to many of the Métis's demands. The talks between the Métis representative and the Canadian government resulted in 1870 in the passage of the Manitoba Act, which provided 1,400,000 acres for the Métis and guaranteed bilingualism in the province. The government refused to give amnesty to Riel and the others involved in the execution of Scott. Riel left for the United States when Colonel Garnet Wolseley approached Fort Garry to take possession of the fort.

JOHN A. MACDONALD, the prime minister of Canada, intended to keep the Métis calm until he could send enough settlers out to the Red River area to assimilate them. The Métis only received 500,000 acres of the land they were promised. More settlers from eastern Canada started to settle in these regions, leading to further land surveys. The Métis in the Qu'Appelle settlement attempted to seek redress from the government by issuing demands for representation in the Canadian parliament and reforming the land laws. These demands were followed by a bill of rights, but the Métis requests were turned down by the Canadian government. Concerned for the future of Métis settlements, the Métis asked Riel to return to Canada to represent their interests, which he did in 1884.

Riel acted on his decision to use armed conflict and demanded the surrender of Fort Carleton in March 1885, but Superintendent L. N. F. Crozier refused. This led Gabriel Dumont, an ally of Riel, to confront a small detachment of mounted police moving toward Fort Carleton. This action forced Crozier to confront the Métis at Duck Lake. A short battle ensued in which the numerically superior Métis forced the mounted police to withdraw from the area. MacDonald was eager to put down this resistance, which led to further armed conflict in the area. A brief battle ensued at Batoche, as 800 Canadian soldiers overwhelmed 200 Métis, leading to the capture of Riel.

Riel was formally charged with treason on July 6, 1885, despite the fact that he possessed American citizenship. His execution on November 16, 1885, had a tremendous impact on the unity of Canada and the Quebecois's perception of him. The French-Canadian and the Métis depicted Riel as a martyr who fought against the attempts of Anglo-Saxons to control the country.

BRIAN DE RUITER

Rivadavia, Bernardino

(1780–1845) *Argentinian president*

One of the major figures who led Argentina to independence, Bernardino Rivadavia became the country's first president with his belief in a nation focused on the capital, Buenos Aires. He was also the creator of many of the major institutions of the country.

Born in Buenos Aires, Rivadavia grew up under the last years of Spanish rule. NAPOLEON I's occupation of Spain in 1808 led to many of Spain's colonies establishing their own governments as the ties between them and Madrid were severed. This essentially resulted in the start of the breakup of the Viceroyalty of the River Plate, an area encompassing what is now Argentina, Bolivia, Paraguay, and Uruguay. Taking advantage of this and eager for a new market for British goods that could not be sold in Europe owing to Napoleon's control of the continent, in 1806 some British soldiers attacked and captured Buenos Aires. Rivadavia was among the inhabitants of the city who fought the British, eventually driving them out. He also became active in the political debates that started to raise the question of Argentine independence for the first time on May 25, 1810. Rivadavia became secretary of the triumvirate that ruled the new country, and he had the task of organizing the militia and overhauling the Spanish legal system. He also used his position to end the slave trade and press censorship.

Although many people in Argentina did want independence—it was formally proclaimed in 1816—it was the nature of this new country that was to cause recurring problems throughout Rivadavia's political career.

Some political figures saw it as a loose confederation of states, with Buenos Aires as the capital, but with each state having the right to raise its own taxes and maintain its own militia. Others such as Rivadavia envisioned a unified country centered on Buenos Aires, with a central government that would erode the power of regional juntas and CAUDILLOS.

Rivadavia had first risen to prominence opposing the British, but as secretary of the triumvirate he was eager to agree to allow British goods to be imported to Buenos Aires. He felt this would encourage British acceptance of Argentine independence and bring greater wealth to Buenos Aires. In 1812 the triumvirate was overthrown, and Rivadavia went into exile in Europe, where he entertained the idea of some unitarists to establish a constitutional monarchy based in Buenos Aires. He also met many intellectuals and became greatly influenced by Jeremy Bentham.

Unable to find a member of the Spanish royal family eager to rule as a constitutional monarch, Rivadavia returned to Buenos Aires and became a member of the government of Martín Rodríguez in 1821. Just before this several caudillos had been successful in wresting much power from Buenos Aires, but they soon became involved in territorial disputes. This allowed the Buenos Aires government to exert its power. It was not strong enough, militarily, to bring renegade provinces into line, but it did control the River Plate and the Paraná River and thus could institute an economic blockade should the need arise. This took place, and Rivadavia, who dominated the political scene throughout the 1820s, in 1826 was elected president of the United Provinces, the official title of what was to become Argentina.

The reforms introduced by Rivadavia drew much from his experiences during his six years spent in Europe. He extended the franchise to all males from the age of 20 and reorganized the court system to guarantee individual and property rights, as well as freedom of the press. On the cultural scene, in 1821 he founded the University of Buenos Aires, provided generous funding for the national library, and established several museums. He also abolished religious courts, clerical immunity from taxation, and the compulsory tithe, massively weakening the power of the church and thus earning himself the enmity of the Roman Catholic hierarchy.

The 1820s also coincided with an "opening up" of the hinterland around Buenos Aires. Rivadavia had sought to encourage migration to Argentina from Europe, but this was not successful, and a few wealthy families

from Buenos Aires were able to establish considerable ranches destroying Rivadavia's plan for the formation of thousands of family farms. With the central government unable to keep up with the expansion of landholding, Rivadavia introduced the Roman system of *emphyteusis*, by which land taken over by farmers would be held by the government, with the farmers paying annual taxes for its exclusive use. With rent put at 8 percent for pastureland and 4 percent for cropland, the hope of the Rivadavia government was that this would move the tax base from Buenos Aires to the countryside.

This scheme was incredibly successful at changing the control of the land, but, as it did not place a cap on the land that could be alienated, and as people could take over land without paying any money, and only a small rent, speculators started registering massive claims. This focused land in the hands of a small number of the elite. Some 122 people and partnerships took control of 5.5 million acres, with 10 of them having more than 130,000 acres each. With a weak administration unable effectively to monitor the land, few paid much in the way of taxes, which was never to exceed 3 percent of total government revenue.

In Buenos Aires, the economic life of the city was also dominated by a small number of merchant groupings. Many Britons took control of the import-export businesses as Rivadavia, eager for British investment, opened up the economy to foreign capital. This was to lead to Rivadavia's most controversial move: He negotiated a massive loan from Britain's Barings Bank. Although this was used to establish the Banco Nacional (national bank) in Buenos Aires, speculators made fortunes from the heavy discounting of the loan. In return for going into debt to the tune of 1 million pounds, Baring Brothers furnished less than half of it in cash, the rest going to middlemen and speculators who underwrote the loan. It was a massive political scandal in Argentina, and payments continued until 1904.

However, Rivadavia's concerns were not only financial. In 1822 Brazil had declared its independence and was eager to exert its control over the eastern bank of the River Plate. This area was largely controlled by Argentine ranchers, and the two countries headed to war, with Brazil blockading Buenos Aires and forcing the government to default on the Barings loan. At this juncture, several provinces decided to form an alliance to oppose Rivadavia's newly enacted centralist constitution. In 1827, after being president for only 17 months, Rivadavia was forced to resign and left for exile in Europe. The constitution was nullified by his successor, but the war with Brazil did lead to a compromise:

the formation of the Eastern Republic of Uruguay as an independent country.

In 1834 Rivadavia returned to Buenos Aires to face charges brought against him and was sentenced to be exiled. He went to Brazil and then to Spain, where he died on September 2, 1845, in the port of Cádiz. In 1857 his body was brought back to Buenos Aires. In 1880 his birthday, May 20, was declared a national holiday, although it is no longer observed.

Rivadavia has long been honored by the Argentine government as one of the founders of the country, and in 1864 he was the first person to be featured on an Argentine postage stamp, and stamps commemorating him were produced regularly until 1951.

JUSTIN CORFIELD

Romanov dynasty

Probably the most famous Romanovs besides Peter and CATHERINE THE GREAT were Nicholas II, his wife Alexandra, and their five children, whom the Bolsheviks murdered in 1917. The legend of the survival of Anastasia, the youngest daughter of Nicholas and Alexandra, lingered into the 21st century, strengthened by the fact that her remains and those of her brother Alexei were still missing from the mass grave that covered her sisters, parents, servants, and pet spaniel, Jimmy.

The Romanov dynasty began in turmoil, which matched its end. Evil days followed each other in dreary succession in the Grand Duchy of Moscow after the death of Ivan the Terrible in 1584. Many arguments raged over the succession and ushered in a Time of Troubles and ultimately the accession of the Romanovs, who would rule Russia from 1613 to 1917.

The House of Romanov ruled Muscovy and the Russian Empire for five generations from 1613 to 1762, then combined with the House of Oldenburg, known as Holstein-Gottorp-Romanov, to rule Russia from 1762 to 1917. The Romanovs descended from two dozen Russian noble (boyar) families, with Andrei

Kobyla, attested as a boyar in the service of Semyon I of Moscow, as a common ancestor. A giant increase in the family fortunes occurred when a Romanov daughter, Anastasia Zakharyina, married Ivan IV of Muscovy in February 1547. When her husband became czar, she became the very first czarina. Her untimely and mysterious death prompted her husband to start a reign of terror against the boyars, whom he suspected of poisoning her. He became known as Ivan the Terrible.

The fortunes of the Romanov family rose and fell during the years of the Godunov dynasty, a branch of the Romanov line, until finally the Godunov dynasty collapsed in 1606 and the Russian Assembly of the Land offered 17-year-old Mikhail Romanov the crown of Russia. After receiving the offer, Mikhail burst into tears of fear and despair, but his mother finally persuaded him to accept the throne and blessed him with the holy image of Our Lady of Saint Fyodor. Never feeling secure on his throne, Mikhail asked the advice of the Assembly of the Land on important issues. This strategy proved successful, and the Russian population accepted the early Romanovs as relatives of Ivan the Terrible.

At first, the Romanovs did little to strengthen the Russian state. In the 1650s a reforming patriarch of the Orthodox Church nearly started a revolution when he ordered that the ritual and liturgy be revised to bring them closer to the original Greek text of the Bible. This order exasperated hundreds of uneducated people who believed the Slavonic texts were sacred. For many years after that, Old Believers (Russian Orthodox) resisted the government religious policy despite executions and exile.

Besides Old Believers, the Cossacks also revolted against the czar. *Cossack* comes from a Turkish word meaning “free men” and is used to designate a group of people who lived in wheat-growing communities around the Danube River. The Don Cossacks were the largest group and led colonizing expeditions to Siberia. As the czars extended their rule over Russia in the 16th and 17th centuries, they tried to integrate the Cossacks into Russia. Cossack men became eligible for military service, and the czars used them in wars against the Tartars in Crimea and the Caucasus.

The Cossacks jealously guarded their freedom and often rebelled against the czars. Revolts occurred in 1648 and 1662, but the 1670 to 1671 revolt gained the most notoriety. A Don Cossack named Stenka Razin, who became a hero of the common people, led this revolt. Eventually he was executed, but the Cossack rebellions helped Russia by leading the expansion into Siberia.

Throughout most of the 17th century, Russia often could not defend its frontiers against invading Swedes, Poles, and Turks. It did not have access to either the Baltic or Black Seas, although English merchants had contacted Moscow in the 1550s through the White Sea, and German merchants were active in Moscow. Russia absorbed some Western technology, especially military technology, but cultural changes in the rest of Europe left it relatively untouched. The Renaissance, reformation, and scientific revolution brought ferment to the West but scarcely touched the peoples east of Poland.

PETER THE GREAT

In 1689 Peter the Great, one of the most remarkable Romanov rulers, assumed the throne at the age of 17. For the next 36 years, until 1725, he transformed Russia from a feudal country into a power in Europe. He strengthened the Russian throne, expanded Russia's borders, and Westernized Russia. He reformed the military, political, and social institutions of his country, borrowing ideas and techniques from France, England, the Dutch Republic, Brandenburg, and Sweden. His methods were often more casual, informal, brutal, and ruthless than those of his Western counterparts, but they worked in Russia. During his reign Russia became an empire, with Peter as its first emperor. The Russian Church became strictly subordinated to the state under a civilian official. Peter compelled the ancient hereditary nobility to serve the state, creating a "service nobility," and he tightened the bondage of the serfs so that more than a century would pass before they would gain their freedom.

In 1707 Peter moved his government to a new city that he had built on conquered territory at the eastern end of the Gulf of Finland. He named his new city in honor of his patron saint, Saint Peter, and Saint Petersburg symbolized his work in Russia. Unlike Moscow, it did not have roots in Russia's past, since it had been built by forced labor on Neva River marshlands.

Peter the Great's influence proved paradoxical for Russia. On one hand he linked Russia with Europe and the rest of the world, and from his time forward Russia was crucial in the European balance of power. On the other hand Peter's Westernizing policy stimulated a strong nationalistic and orthodox reaction in people, leaving the Russian psyche teetering between deep suspicions of everything foreign and ardent admiration of Western technology and power. Peter's methods are as important as his accomplishments because they created a tradition of dynamic autocracy. His

reign exemplified what a ruthless and determined czar could accomplish.

CATHERINE THE GREAT

Catherine the Great ruled Russia from 1762 to 1796 and came to the throne with specific goals in mind. She sought to minimize Russian connections to Europe, but she also wanted to continue Westernizing Russia in the manner of Peter the Great. She wanted to bring the ENLIGHTENMENT to Russia and read authors like Voltaire, Diderot, and Montesquieu, incorporating their theories into her ruling methods. She encouraged the publication of numerous books and periodicals and embraced the arts.

During her reign Catherine the Great worked to increase education in Russia by creating elementary and secondary schools and universities. In 1763 she established a medical commission to improve medical conditions in Russia and led the way by being the first person in Russia to be vaccinated. She helped Russian expansion through two Russo-Turkish wars, one from 1768 to 1774, and the other from 1787 to 1792. She added Ukraine to Russia after a 1781 to 1786 war and gained portions of Poland through partition. She also gained the Crimea and most of the northern shore of the Black Sea for Russia. Catherine improved the lives of the nobility while decreasing the status and rights of the peasants and serfs.

The centuries after Catherine the Great saw several Romanov czars named Nicholas and Alexander ruling Russia. During the reign of Alexander I, Napoleon invaded Russia in 1812. The Russian winter and supply line problems forced Napoleon's armies to depart along the same route they had used to enter Russia.

Nicholas I came to the throne in November 1825, with an agenda of Russian Orthodoxy, autocracy, and nationalism. He and others working with him published a *Complete Collection of Laws of the Russian Empire*, meant to make rulings more uniform throughout Russia. One of the departments he created he put in charge of monitoring subversive groups. This was a precursor to the modern FSB (Federal Security Service). During the reigns of Nicholas I and Alexander II some of the most important Russian writers, artists, and composers enhanced the arts. Fyodor Dostoyevsky wrote *Crime and Punishment* and other works. Alexander Pushkin produced his great novels; Tolstoi wrote *War and Peace* and *Anna Karenina*. The composer Tchaikovsky wrote his scores for ballets and the *1812 Overture*. The CRIMEAN WAR, a military conflict between Russia and a coalition of Great Britain, France, the Kingdom of

Sardinia, and the Ottoman Empire, fought from 1853 to 1856 at the end of the reign of Nicholas I, made it obvious that Russia needed reform.

ALEXANDER II

The next czar, Alexander II, the son of Nicholas I, helped Russia reform. Alexander ruled from 1855 to 1881 and became known as the czar liberator because he freed the serfs. Alexander II realized that forcing labor from the serfs was not an economical way for Russia to operate, and many nobles were also beginning to think that serfdom should be ended. Just before the AMERICAN CIVIL WAR began, Alexander II freed the serfs with the Emancipation Act of February 18, 1861. The Emancipation Act freed 52 million serfs, or about 45 percent of Russia's population, but it did not solve Russia's problem of peasant unrest. Only serfs who had been farmers were given land, excluding house serfs. Serfs had to continue working for estate owners for two years after being freed and had to pay over a 49-year period for the land that they had been given.

Alexander II also instituted other reforms. He changed the military and shortened the required time of service for peasants from 25 to six years. He created the legal profession, opening trials and instituting equal treatment under the law. Beginning in 1864 he instructed the Ministry of Education to create a national system of primary schools. As people, especially university students, became better educated they became more critical of the government. University students and the populace at large began to demand changes. On March 13, 1881, an agitator threw a hand-made bomb at Alexander's carriage. He got out of the carriage to see what had happened, and a second bomb exploded. The czar and his assassin, Ignacy Hryniewiecki, were killed.

Alexander III succeeded his father, and, fearful of his father's murderers, he tightened the autocratic rule in Russia, reversing many of the reforms that the more liberal Alexander II had pushed through. He renewed the policy of Russian Orthodoxy, autocracy, and nationalism. Marxism began to grow during his reign, with Bolshevik and Menshevik groups forming, and leaders like Lenin, Plekhanov, and Pavel Martov emerging as revolutionaries.

Alexander's son Nicholas II began ruling Russia in 1894, after Alexander unexpectedly died of kidney disease at age 49. Industrialism had finally reached Russia, and a working middle class was emerging. Nicholas II did not want to allow workers to unite and form unions, as they were doing all over the world. After the czar created state-approved unions, he refused to meet a striking

Russia's czar Alexander II was killed by an assassin's bomb on March 13, 1881.

group from one of these and ordered his soldiers to fire upon it. The resulting massacre of hundreds of people, which came to be known as Bloody Sunday, set off a revolt in 1905 that motivated Nicholas II to endorse the October Manifest, which gave people civil liberties and created the Duma.

Russia went to war in 1914 to defend the Serbs when Austria declared war on Serbia, but the Russian armies had inadequate weapons and suffered from poor leadership. Nicholas II himself went to the lines to lead his armies, but the problems increased and many soldiers deserted.

These soldiers were instrumental in the February Revolution in 1917, which ended the Romanov dynasty. Nicholas II and his family were put under house arrest and taken to Yekaterinburg. Bolsheviks killed the last Romanov czar, Nicholas II, and his family

in the cellar of Ipatiev House in Yekaterinburg, Russia, on July 17, 1918. In a historical irony, the Ipatiev House had the same name as the Ipatiev Monastery in Kostroma where the Russian Assembly of the Land had offered Mikhail Romanov the Russian crown in 1613.

In June 1991 the bodies of Nicholas II, his wife Alexandra, and three of their five children were exhumed from their 70-year-old graves, and the exhumers discovered that two of the family were missing. The other two graves were found in 2007. After the bodies were exhumed, they languished for years in laboratories while Russians fought over whether they should be buried in Yekaterinburg or Saint Petersburg. Finally, a Russian commission chose Saint Petersburg, and the last Romanovs were buried with their ancestors.

The Romanov family still exists in the 21st century, with Grand Duchess Maria Vladimirovna of Russia having the strongest claim to the Russian throne. Despite the collapse of the Soviet Union and zealous campaigns by her supporters to recognize her as the constitutional monarch, it is not likely that she will gain the throne because there is little popular support for the resurrection of a Russian monarchy.

BRIAN DE RUITER

Rosas, Juan Manuel Ortiz de

(1793–1877) *Argentinian dictator*

Juan Manuel Ortiz de Rosas dominated the Argentine political scene from 1829 until 1852 as governor of Buenos Aires and then supreme chief of the confederation. Although professing federalism, Rosas was a centrist and a dictator, and his model of rule was to be followed by many of the Latin American dictators of the 20th century.

Born in Buenos Aires, Rosas's paternal grandfather, a career soldier, had emigrated from Burgos, Spain, in 1742. His mother's family was extremely wealthy, and Rosas's parents controlled one of the largest cattle ranches in Argentina. Rosas only spent a year in school—apparently his teacher told him that he would spend his life in farm management and need not be troubled by books. As a teenager, Rosas was an ammunition boy during the British invasion of 1806, and when his father died, instead of taking over the family property (he was the eldest son), he gave it to his mother to divide among the rest of the family. Rosas was determined to make his own fortune, which he did in a meat-salting plant in Quilmes, now a suburb of Buenos Aires.

In 1820 his business partner Colonel Manuel Dorrego, governor of Buenos Aires, put Rosas in charge of the provincial militia. By this time he had a loyal band of supporters gathering around him, and soon after the resignation of BERNARDINO RIVADAVIA, Dorrego became president. He was overthrown in 1828, and Rosas worked to bring down the new governor of Buenos Aires, Juan Lavalle.

At this time, Rosas was head of the Federalist Party, which sought to build up the power of the provinces against that of Buenos Aires. He managed to get the former legislature to reconvene, and on December 5, 1829, Rosas was elected governor, deposing Lavalle. In 1832 Rosas stepped down when his three-year term ended, but returned in 1835 with the promise that he would have dictatorial powers. At that time Argentina was in a perilous state, with strong regional warlords, or CAUDILLOS, seeking to wrest power from the government in Buenos Aires. Although he still professed federalist beliefs, Rosas gradually centralized power in Buenos Aires.

During the 17 years that Rosas was dictator of Argentina, he used police and spies to destroy his political opponents. His *mazorca*, the political police, arrested and tortured with impunity. His wife, Encarnación, also used the *mazorca* against her enemies, and a century later journalist Fleur Cowles, in her dual biography, *Bloody Precedent*, was to draw startling parallels between the ruthlessness of Juan and Encarnación Rosas and that of Juan and Evita Perón. Much is made of Rosas ordering his portrait to be displayed in public places and in churches.

Putting aside his treatment of political opponents, Rosas managed initially to achieve economic stability and massively increase the prosperity of Buenos Aires. The period coincided with an increase in the cattle industry, with tanning and salting works, and also a rise in migration from Europe to Argentina. Although

many French migrated to the city, their government was unable to gain for them the privileges afforded to the British, and they became liable for national service and high local taxes. This resulted in many French businesses moving their headquarters to Montevideo in neighboring Uruguay, and in 1838, a French fleet blockaded Buenos Aires.

As trade in Buenos Aires dried up, Rosas responded by tripling the amount of paper money in circulation; massive inflation resulted. It also led to regional caudillos to try to achieve regional autonomy. The British eventually persuaded the French to stop the blockade, and Rosas paid a token indemnity. Rosas was also forced to end the blockade he had been imposing on Paraguay, allowing that nation to start trading with Britain and other countries. In 1841 Rosas was able to destroy and then kill his main political opponent (and predecessor), Lavalle, who had been leading a small rebellion in the north.

In 1845 Rosas started his own blockade of the River Paraná in order to bring some of the provinces into line. The British and French sent in their navies to reopen trade but soon had to balance the small amount of commerce with these provinces, with far greater money to be made from Buenos Aires. After two years the blockade was abandoned, leaving Rosas triumphant. However, he had made many enemies. Paraguay was much angered by the seemingly cavalier fashion in which Rosas had been able to close the river, and it started to industrialize and then build its own arms industry. Brazil had been unable to send goods by ship to the Mato Grosso region of the country, and Uruguay became the place for many exiles from Buenos Aires.

When the blockade of the Paraná River started again in 1848, the governor of Entre Ríos, Justo José de Urquiza, who was actually placed in charge of a large part of the army by Rosas, launched a rebellion against Rosas. In May 1851 Urquiza opposed the reelection of Rosas as governor of Buenos Aires, forcing him to adopt the title supreme chief of the confederation. Urquiza then led his forces against those of Rosas and defeated them at the battle of Caseros on February 3, 1852. As Urquiza was about to enter Buenos Aires, Rosas fled onto a British naval vessel, leaving hundreds of his supporters to be massacred by Urquiza's men.

Rosas settled in England and took up farming near Southampton, Hampshire. He died on March 14, 1877, and was buried in Southampton. Despite his long dominance of Argentine politics, or possibly because of it, it was not until 1935 that he was featured on an Argentine postage stamp in a series that included all the famous

figures of 19th-century Argentina; the series also included Urquiza. A grandson, who shared the same name as the dictator, became governor of Buenos Aires province in 1910. In 1990 the family moved the body of Rosas from England back to Buenos Aires, and it was interred in the family mausoleum at Recoleta.

JUSTIN CORFIELD

Roy, Ram Mohan

(1774–1833) *Indian reformer and scholar*

Raja Ram Mohan Roy exemplified the new English-educated class of Indians who emerged in the late 18th century. He came from a distinguished Brahman family in Bengal—the headquarters of the BRITISH EAST INDIA COMPANY. Feeling somewhat alienated from his orthodox family, he eventually became an employee of the British East India Company.

After a few years, Roy left the company to pursue humanism and religious reform. Influenced by contemporary European liberalism, he challenged traditional Hindu beliefs. In 1803 he produced a tract that denounced religious superstition and segregation. By 1815 he had begun translation of ancient Sanskrit texts such as the Sutras and various Upanishads (philosophic writings) into modern Hindi and Bengali.

He was also the progenitor of many modern secular movements in India. He actively campaigned against suttee (the burning of widows). He also argued for reform of Hindu law, upholding the rights of women, freedom of the press, more just land laws, Indian participation in the government of India, and establishment of an English-style education system in India. He opposed the founding of Sanskrit College, which he viewed as too traditional.

Roy backed his writings and views with action. In 1815 he founded a publishing house that translated the New Testament into Bengali. In 1820 he published a work on the “Precepts of Jesus, the Guide to Peace and Happiness,” the beginning of a pantheistic approach that would combine Christianity and Hin-

duism, eventually adopting a Unitarian antitraditional position. In 1823 Roy founded two newspapers. In 1827 he founded the Anglo-Hindu School and a college in 1826. However, the act for which he is best remembered is establishing the Brahmo Samaj in Calcutta in 1829. This society rejected idol worship and the multiple deities of traditional Hinduism. The emphasis was on a more nationalist monotheist interpretation of Hinduism.

Roy was famous for his learning and general erudition. He spoke several languages and was a scholar in both Sanskrit and Arabic. He was much admired by Western intellectuals for his breadth of knowledge and intellectual curiosity. He became one of the first Hindus to visit Europe in an official capacity. He came to England in 1831 as the ambassador of the Mughal emperor. In 1832 he visited Paris and then returned to England, where he died the following year.

His most enduring legacy, apart from the educational institutions he founded and his writings, were satellites of the Brahmo Samaj, which spread throughout India and then via Indian communities throughout the world. A believer in the Western method of living for India as the path for the future, Roy is considered by many Indian scholars as the founder of modern India.

NORMAN C. ROTHMAN

Russian conquest of Central Asia

During the 19th century as European colonization continued to expand, czarist Russia launched a concentrated campaign to extend its own empire by annexing lands in central western Asia. In Central Asia, the Russians were particularly interested in the Uzbek oasis states of Kokand, Bukhara, and Khiva, all part of present-day Uzbekistan.

Although Bukhara and Khiva suffered devastating losses to their independence and cultures during the Russian conquest, Kokand ultimately paid the heaviest price when the Russians attempted to eradicate its existence.

While Russia was most interested in expanding its empire in order to compete with Western powers, the czar viewed Central Asia as a land of untapped resources with undeveloped potential as a major trading center. The invasion of the Muslim states of Central Asia also allowed the czar to add millions of new subjects to his already large citizenry. Until the mid-19th century, Central Asia had succeeded in repelling Russian advances.

However, as Russia's military grew stronger and more sophisticated, Central Asia was powerless to defend itself from encroachment. For some 50 years after the annexation, the invaders unsuccessfully attempted to Russify the Muslims of Central Asia. Despite this failure, the Russians succeeded in transforming Central Asian culture in a number of ways that included new economic and education systems and major overhauls of the communication and transportation sectors.

Czar Peter I launched an unsuccessful campaign to annex Bukhara and Khiva in the early 18th century in an effort to establish a trading route between Russia and India. When he sent armed troops to Khiva in 1717, the Khivans annihilated the entire expedition. Succeeding czars determined that they were more likely to make inroads in Central Asia by practicing diplomacy and promoting trade relations. However, little progress was made. As a result, another unsuccessful military attack on Khiva was launched in 1839–40.

At the same time that Khiva was attempting to stave off Russian attack, Bukhara established a relatively amicable relationship with the monarch. In 1847 the Russians erected a fort at the mouth of the Sir Darya, paving the way for eventual annexation of the surrounding area. The Russians spent the years between 1853 and 1864 plotting their strategy for annexing Central Asia, where the raw cotton that Russian textile factories so badly needed was readily available. The need for Asian cotton grew even more urgent when the American supply of cotton was halted by the outbreak of the AMERICAN CIVIL WAR in 1861.

By the time the Russians became a real presence in Central Asia, Bukhara and Khiva already had well-established cultures that dated back to the eighth century, and both were actively involved in trade. Both Muslim states were home to diverse ethnic groups and were relatively politically and socially stable. Neither Bukhara nor

Khiva had been exposed to Western thought and culture; therefore, neither khanate had developed the sense of nationalism that might have been used to unite the people against Russian invasion. After the annexation, the Russians allowed both Bukhara and Khiva a good deal of political autonomy. As a result, less modernizing and Russification occurred in these khanates than in other areas of Central Asia.

Bukhara was wealthier and more industrialized than Khiva, with a population that was predominately Muslim. The khanate was ruled by the emir, a hereditary monarch, although day-to-day affairs came under the province of a chief minister, a treasurer, and a tax collector. Each province of Bukhara was ruled by its own emir. Outside of Bukhara, the emir was viewed as the most powerful ruler in the area, and he was notorious for furthering his own interests at the expense of others.

When Czar Alexander II ordered his forces to attack Bukhara in 1868, the khanate was in the midst of internal strife. Tribal conflicts had accelerated, and the peasant class was ready to revolt in response to the levying of excessive taxes. The Muslim clergy, who strongly resented the Russian presence in Bukhara called for a jihad (holy war). Although Emir Muzaffar al-Din repeatedly attempted to negotiate terms with the Russians that were favorable to Bukhara, he was unsuccessful. The emir ultimately negotiated a treaty that essentially established Bukhara as a Russian protectorate while allowing him to continue ruling the khanate. The merchant class reaped the greatest benefits from the Russian presence in Bukhara because trade with the outside world opened up new avenues for amassing wealth. As this new cultural elite rose to power, the gulf between the peasants and the rest of the population expanded. Today, as one of the main cities of Uzbekistan, Bukhara is a major trading center and a popular tourist destination.

The population of Khiva was more ethnically diverse than Bukhara, with the Uzbeks making up 65 percent and the Turkomans 27 percent. Other minorities included the seminomadic Karakalpaks and the Kazakhs. The Khan of Khiva possessed powers similar to those of the emir of Bukhara, but in Khiva the government was highly centralized. Early in 1839 Czar Nicholas I announced his decision to attack Khiva, although his forces were disguised as a scientific expedition to the Aral Sea. By the end of the year, the expedition could no longer be disguised, and the attack took place.

It was not until 1869, however, that the Russians managed to surround Khiva on three sides and begin

the invasion. Russian forces encountered almost no resistance as they invaded Khiva on May 29, 1873. Three months later, the Khan signed a peace treaty. Because Khiva, unlike Bukhara, had been conquered by invasion, the Khan's power to rule was much more restricted than that of the emir of Bukhara. The rich history of Khiva and the preservation of much of the original khanate have made the modern-day city a magnet for tourists from around the world.

The invasion of Kokand was accomplished in 1866, and the government acted as a Russian ally against neighboring Bukhara. At this point, Kokand was allowed to run its own affairs in much the same way that Bukhara was operating. However, in 1875, civil unrest within Kokand surfaced in response to increased taxes, political repression, and a rising sense of nationalism. When tensions exploded into outright revolt in Ozgan in July 1875, all avenues of authority disintegrated. Khudayar Khan escaped to neighboring Tashkent and demanded Russian protection. His son, Nasrid-din Bek, ascended to the seat of power and quickly established relations with Russia. Nevertheless, on August 29, the Russians military arrived, putting an end to the possibility of Kokand's independence. On February 19, 1876, the Russians abolished the khanate of Kokand, replacing it with the region of Ferghana, which was placed under the authority of a military governor. Before the Russians arrived in Kokand, the khanate had been a significant trade and administrative center for the Ferghana Valley region. After the annexation, Ferghana was established as the center of Russian Turkestan and became the major cotton-producing area of the Russian Empire. In the 21st century, Kokand has regained its status as a trading center, specializing in the manufacture of fertilizers, chemicals, machinery, and cotton and food products.

ELIZABETH PURDY

Russo-Ottoman Wars

During the 18th and 19th centuries, the Ottomans and Russians fought a series of wars over territory around the Black Sea and the Balkans. As the Ottoman Empire slowly declined, the Russians extended their control over former Ottoman territories around the Black Sea. Russia sought access to warm water ports and entry into the Mediterranean through the Ottoman controlled Dardanelles. Russian imperial ambitions in the Balkans also brought them into conflict with the Ottomans and Austria.

In 1696, while much of the Ottoman army was fighting against the Holy League led by Austria in the Balkans, Russia under Peter the Great took the port of Azov on the Azov Sea. Russia and the Ottomans signed a separate treaty in 1700 that reaffirmed the terms of the earlier Treaty of Karlowitz of 1699, whereby the Ottomans lost territory in the Balkans and Poland moved into the Ukraine. Russia and Austria joined together to attack the Ottomans in the mid-18th century, but under the Treaty of Belgrade in 1739 the Ottomans regained Belgrade, which they had lost in 1718. However, the Russians slowly realized their ambitions for access to Azov and then the Black Sea. Under the Treaty of Belgrade, Russia gained some land along the Azov, but they were forbidden to fortify the area.

Following their defeat in the Russo-Turkish War of 1768–1774, the Ottomans under Sultan Mustafa III signed the Treaty of Kuchuk Kainarji (in present-day Bulgaria), with Russia led by CATHERINE II. Under this treaty the Russians gained ports along the Crimean and territory in the Caucasus. The Ottomans were also forced to grant independence to the Crimean Khanate that Russia formally annexed in 1783. Russia also gained the right to serve as the so-called protector of Orthodox Christians in the Ottoman empire, thereby increasing its involvement in the domestic affairs of the Ottoman state.

JANICE J. TERRY

Russo-Turkish War and Near Eastern Crisis

The Balkans had been effectively under the rule of the Ottoman Turks since 1389, when the medieval Serbian kingdom was crushed at the Battle of Kosovo. However, beginning in the 17th century with the Turkish defeat at Vienna in 1683, the Turks were in almost a constant retreat. Wars with Russia that had ended in 1774 with the Treaty of Kuchuk-Kainardji and in 1792 at Jassy had established Russia as a diplomatic presence in the Balkans and determined to make its presence felt. Moreover, German Chancellor OTTO VON BISMARCK had inaugurated the LEAGUE OF THREE EMPERORS with Russia and Austria in 1872–73, as a way of making palatable the sudden rise to prominence in Central Europe of a united Germany after the FRANCO-PRUSSIAN WAR of 1870–71. The League of Three Emperors was a de facto diplomatic understanding, or demarche, that the future of the Balkans could be settled by Austria and Russia. Bismarck felt that Germany had no real interests in the Balkans, which, in his famous phrase, were “not worth the bones of a Pomeranian [part of Germany] grenadier.”

It turned out that the League of Three Emperors could not have come at a better time for Czar Alexander II of Russia. Freed from a concern over Austria and Germany as a source of danger, Alexander was able to modernize both his army and navy. Coincidentally, Alexander’s modernization of the Russian juggernaut came at the perfect time. In its years of decline since 1683, Turkish rule had veered from incompetent to brutal and back again, with a few efforts at enlightened reform that never lasted.

In June 1875 the Slavic Christians in Bosnia and Herzegovina revolted against Turkey, and the Ottoman Turks retaliated in force. In spite of these reprisals, the rebellion against Ottoman Sultan ABDUL HAMID II spread in April 1876 to Bulgaria. Soon the entire Balkans had risen up against Abdul Hamid II, whom many of Ottoman subjects called Abdul the Damned. In 1876 Prince Milosh Obrenovich, although a vassal of Turkey, also declared war on the Ottomans. Like

Alexander II of Russia, he had recently modernized his armed forces. With the Serbs, the Montenegrins rose up against the Turks, turning the original Bosnia-Herzegovina revolt into an all out Balkan rebellion against Abdul Hamid II.

At the same time, the doctrine of Pan-Slavism animated the Russian people to come to the aid of the South Slavs in the Balkans. Pan-Slavism had its origin in the outburst of nationalism against NAPOLEON I of France and held that mystical, ancient bonds united all Slavs.

Because Russia was the most powerful Slavic state, it meant that it had an obligation to help the “little Slavic brothers” in the Balkans. Since this philosophy also provided a rationale for Russian expansion into the Balkans, it received the encouragement of the czarist government. Fyodor Dostoyevsky, author of *Crime and Punishment*, was also a great propagandist for Pan-Slavism. On April 12, 1877, Alexander II declared war on the Ottoman Empire.

In one of the great defensive battles of the 19th century, the Turkish general Osman Pasha managed to hold the Russians and their new Romanian allies for five months at Plevna (Pleven), but eventually the superior Russian force compelled him to surrender. As a mark of his heroism, he was treated with great courtesy by the Russian commanders.

Once the siege of Plevna was won, the Russians and their allies kept up the impetus of their drive to the south. It appeared that they were determined to go all the way to Constantinople, the capital of the Ottoman Empire, and end the Ottoman power once and for all. However, although the British public had been aroused by the Turkish atrocities in the Balkans, the British prime minister did not want to see the Russian Bear swimming in the Dardanelles, the gateway to the Mediterranean, which had been a British lake since the victory of Lord Horatio Nelson at Trafalgar in 1805. For the same reason, the British had intervened in the CRIMEAN WAR from 1854–56 on the side of the Ottoman Empire, to keep the Russians from conquering the empire and gaining access to the Mediterranean. In February 1878 the British Mediterranean fleet was put on a war footing and sailed to a position off Constantinople, a potent reminder that the Russians had advanced as far as the British were going to allow them to. QUEEN VICTORIA herself announced that “she would rather abdicate than allow the Russians to enter Istanbul [Constantinople].”

Alexander II was conscious that if a peace were not made with the Turks, the British, and also Austria, might intervene on the side of his enemy. Therefore, in March 1878, Turkey and Russia concluded the Treaty of San Stefano. The Russians sought to take full advantage of the Turks in their defeated state.

The treaty immediately aroused the envy and concern of Austria, which had its own plans for expansion into the Balkans, ultimately to the disadvantage of the Serbians. Bismarck began to realize that his League of Three Emperors was in a deep crisis as a result of the San Stefano treaty. Consequently, he invited the great powers of Europe to the CONGRESS OF BERLIN from June to July in 1878. Great Britain was reassured by the fact that the territorial integrity of the Ottomans in Europe was maintained, and the great harbor at Constantinople would not become a Russian naval base. Austria was allowed to occupy Bosnia and Herzegovina, which it would later annex to its empire in 1908, causing great hatred among the Serbs, who also desired the territory.

Russia lost most of its conquests won in the war, although the Congress of Berlin did regain for Russia much of the territory given up at the Peace of Paris, which had brought the Crimean War to an end in 1856. However, because much of Bulgaria had had to be relinquished to the Ottomans, and Great Britain and Austria had coerced Russia into doing so, the Pan-Slavs considered the Treaty of Berlin as having robbed Russia of what it justly gained by right of conquest in the war. The Treaty of Berlin, although it attempted to avert a European war, only tragically succeeded in sewing the seeds for World War I 26 years later. In June 1914, precisely 26 years after the opening of the Congress of Berlin, the Serb terrorist Gavrilo Princip would kill the heir to the Austrian throne, Archduke Franz Ferdinand, in the streets of Sarajevo in Bosnia.

JOHN F. MURPHY, JR.

Salafiyya movement (Africa)

In its most popular form, the Salafiyya movement of Africa was a modern Muslim reform movement established by JAMAL AL-AFGHANI and Muhammad ‘Abduh at the turn of the 20th century. The term *Salafiyya* (also spelled Salafiyah) is derived from the Arabic root *salaf*, which means “predecessors,” and is often used to refer to the first three generations of Muslims (where a generation is equivalent to a century). The presumption is that the individual Salafis who make up the Salafiyya derive their understanding of Islam directly from the religion’s primary sources, such as the Qu’ran (Koran) and Sunnah (normative example of the Prophet Muhammad), instead of being bound to the traditions, customs, and ideas that were developed by later Muslims. As such, there have been numerous Muslim movements, both premodern and modern, that some historians have designated as *Salafi*.

One such premodern movement was established in Nigeria by USUMAN DAN FODIO, the revolutionary founder of the Sokoto Caliphate. Having been inspired by the WAHHABI (or *Wahhabiyah*) MOVEMENT, which was established by the 18th-century Arabian reformist Muhammad ibn ‘Abd al-Wahhab, Dan Fodio sought reform, unity, and a purification of Islam from its African syncretistic elements. Whether historians are actually justified in designating Dan Fodio as Salafi is debatable, especially given the latter’s connections to certain classical institutions, such as the legal school (*madhab*) system and Islamic mysticism (Sufism).

Either way, it is the modern Salafiyya movement that has come to define Salafism. This movement, which arose during a period of Western colonialism, is characterized by a desire to both reform Islamic thought and end the intellectual, political, moral, and cultural stagnation of the Muslim world. It strongly opposed the blind imitation of archaic religious decrees and advocated a revival of *ijtihad* (unmediated interpretation). It also explicitly emphasized the role of reason and science and asserted that Islam was indeed compatible with both. Perhaps what most separates this modern Salafiyya movement from that of its predecessors is precisely its modernist character, as is evident in the writings of both Afghani and ‘Abduh.

Afghani was probably of Persian Shi’i origin and had spent a considerable amount of time in Afghanistan during his youth. (Afghani himself claimed that he was an Afghan). After a brief stint in Istanbul, Afghani made his way to Egypt, where he taught at al-Azhar University and established a following. It was there that he would meet his young Egyptian disciple, ‘Abduh, who once described his master as “the perfect philosopher.” Following a period of fiery speeches against the British colonizers of Egypt, al-Afghani was expelled from Egypt in 1879. In 1884 Afghani was joined by ‘Abduh in Paris, where they published the pan-Islamic Arabic newspaper *al-Urwa al-Wuthqa* (The strongest link). Afghani would eventually pass away in Istanbul, where he had been confined during the last years of his life. On the other hand, ‘Abduh, who was arguably the most significant figure of the

modern Salafiyya movement, would return to Cairo to head al-Azhar and write his famous *Risalat al-Tawhid* (The message of unity). In their time, both Afghani and ‘Abduh were controversial to some (because of their heterodox teachings) and inspirational to others (because of their reform-mindedness).

And though Afghani and ‘Abduh would become the icons of the modern Salafiyya movement, there were others who would also play a major role. Most prominent among them was ‘Abduh’s famous student Muhammad Rashid Rida. Rida was especially instrumental in propagating Salafi ideas by way of his periodical *Al-Manar*, which was initially a joint effort with ‘Abduh before the latter’s death. It is notable, however, that the movement under Rida came to acquire a reputation of being more conservative, and his ideas have been considered a link between the reformism of Afghani and ‘Abduh and the activism of the famous Egyptian neorevivalist organization, the Muslim Brotherhood, which was established by Hasan al-Banna.

The ideas of the modern Salafiyya movement spread throughout North Africa and the Muslim world. In Algeria the reformist ‘Abd al-Hamid Ibn Badis took a stance against Muslim mystical (Sufi) orders, focused much of his efforts on education reform in order to safeguard national identity (in light of the assimilationist policy of the French), and established the Association of Algerian Ulema (Scholars). In Morocco Wahhabi and modern Salafi ideals would be adopted by the reformist scholars Abu Shu‘ayb al-Dukkali and Muhammad ibn al-‘Arabi al-‘Alawi, both of whose ideas would influence Moroccan nationalist movements and their leaders, such as ‘Allal al-Fasi. In Tunisia modern Salafi thought would be adopted by ‘Abd al-‘Aziz al-Tha’alibi, founder of the Destour Party, as well as by prominent scholars of al-Zaytuna University, including Bashir Safar, Muhammad al-Tahir ibn ‘Ashur, and his son Muhammad al-Fadil ibn ‘Ashur.

In light of contemporary Muslim scholarly discourse, it would appear that many of the ideas put forth by the modern Salafiyya movement are as relevant (and contentious) now as they were over a century ago.

MUHAMMAD HASSAN KHALIL

Salvation Army

In 1878 in London, England, William Booth and his wife, Catherine, became the founders of a Wesleyan- and Holiness-oriented organization, which they called the Salvation Army. William, a discontented Methodist minister and then an evangelist, envisioned “a cathedral of the open air.” The couple had eight children, and all of them became major figures in this new organization, which developed a military structure and esprit de corps to serve better the spread of the Christian message and a welfare program based on the Gospels. William gave himself the title of “General,” which his wife and children were enjoined to use even at home. Catherine became known as the “Army Mother.” Converts and members were known as “Salvationists.” Within a decade, and particularly after the 1890 publication of William’s book, *In Darkest England and the Way Out*, this new movement was well established not only in the British Isles but also throughout Europe, Canada, and Australia. Already, by 1880, the Salvation Army had “opened fire” on the United States, and one of the older children, Ballington, soon became the “Commander” of operations there.

The doctrine of sanctification, by which God’s grace and believers’s practical exercise of faith give rise to a host of virtues and a deep sense of love for humanity, is preminent in the ideology of the Salvation Army, functioning as a guiding force in members’ lives. While many other evangelical doctrines, including faith in the sacrificial atonement of Christ’s death, are of enormous importance for Salvationists, all mainstream Protestant sacraments and rituals were jettisoned as confusing and divisive, in order to streamline the Army’s evangelistic goals. In addition to the Booths’s evangelistic fervor for lost souls, demanding of all Salvationists, both Officers and Soldiers, that they sign the Army’s Articles of War on unbelief and poverty, the Salvation Army has always advocated humane treatment of animals and supported women’s rights. With respect to the latter, William and Catherine insisted that all three of their married daughters hyphenate their last names, long before the practice became more common.

Evangeline Cory Booth posing with poor children. The Salvation Army has been a proponent of poverty relief and women's rights.

However, it is the charitable nature of the Salvation Army that is so widely known and appreciated. The American organization has created day-care centers, summer camps, residences for senior citizens, programs for the homeless, rehabilitation centers for alcoholics and drug addicts, and relief collections, for which the red kettles and the ringing bells have become ubiquitous during the Christmas season.

The most vibrant mark on the American consciousness was made by the seventh of the Booth's children, Evangeline. With a strong will and a penchant for flamboyance, this remarkable administrator served as the U.S. commander from 1904 to 1934, bringing relief to many during World War I and the Great Depression. Of special note were her campaigns on behalf of unwed mothers and neglected children, acknowledged by the government and the public alike. Due to her work, today there are well over 1,000 Corps (local churches) in America,

many of which conduct evangelical services distinguished by exuberant brass band hymn singing. Before retiring in the United States, now boasting the largest organization and membership in the world, Evangeline returned to London in 1934 and for five years assumed duties as the fourth general of the Salvation Army.

RICK M. ROGERS

Santa Ana, José Antonio López de (1794–1876) Mexican president and caudillo

Dominating Mexican political life for most of the first three decades of the independent Mexican republic, Antonio López de Santa Ana is often regarded as a classic CAUDILLO—a shrewd political opportunist, beholden to neither principle nor ideology, who used his personal charisma, the fierce loyalty of his followers, dispensation of patronage, personal control of the means of organized violence, and glorification of his person to enhance his own political power at the expense of his adversaries and competitors. Generally unscrupulous and invariably self-serving, from 1833 to 1855 he occupied the country's highest political office at least 11 times (depending on how one counts and the criteria one uses). His extensive network of loyal clients and allies, combined with his keen political acumen made him one of the nation's most important political players throughout the early republican period, sometimes dubbed the “Age of Santa Ana.”

Born in Jalapa, Veracruz, on February 21, 1794, Santa Ana joined the Spanish military at age 16, when he became an officer cadet in his home state's Fixed Infantry Regiment. After a stint in the north, he returned to Veracruz in 1815 as a sublieutenant conducting counterinsurgency operations against the various bands then harassing the Spanish forces. It was in Veracruz, among the criminals and vagabonds who filled the ranks of his regiment, that Santa Ana

began to hone his vaunted interpersonal skills. For five years, between 1815 and 1820, in the steamy jungles and rocky sierras of his home state, he conducted search-and-destroy operations against insurgent bands, gaining a large personal following and earning a reputation as an effective and charismatic military leader. With the formation of AGUSTÍN DE ITURBIDE'S "Army of the Three Guarantees" in 1821 Santa Ana abandoned his royalist allegiance and joined the independence movement. It was the first of several such about-faces that characterized his subsequent political and military career.

In 1823 two years after allying with Iturbide, he put himself at the head of the revolt that ousted the vainglorious emperor, his *Plan de Casa Mata* and successful uprising making him the darling of the liberals, who ruled Mexico for the next 13 years. The period of liberal dominance generated an accumulation of grievances on the part of the military, the Church, and other conservative elements. Sensing the impending backlash, Santa Ana was elected president as a liberal in 1833, retired to his Veracruz estate, and put himself at the head of the conservative revolt that followed.

From 1833 until his fall from power in the mid-1850s, his politics can be generally described as conservative and centralist, though mainly they were pro-Santa Ana. He accumulated fantastic wealth, and as head of state devised many elaborate rituals, ceremonies, and titles to honor his heroism and grandeur. His final fall from power came in the aftermath of Mexico's humiliating defeat in the MEXICAN-AMERICAN WAR of 1846–48, despite subsequent attempts to resurrect himself and his brief return to power in 1853–55. Convicted of treason after the liberal "Revolution of Ayutla" that ousted him in 1855, he was sentenced to permanent exile, though was allowed to return to his homeland in 1874. He died a broken man two years later. Despite the central role played by Santa Ana in the political tumult of the new Mexican nation-state, scholars widely agree that he was more a symptom than a cause of the period's chronic political instability.

Santeria

Santeria (Santería), or "the way of the saints," is a syncretic religious practice that combines elements of Catholic and Yoruba faith; the practice originated in Cuba. It is often called La Regla Lucumi or La Regla de Ocha. *Santéria* was a derogatory term used by the Spanish to describe their slaves's inappropriate reverence of the saints. Priests of Santeria are called *santeros*; priestesses are called *santeras*.

A syncretic religion is one that combines and reconciles different belief systems—or significant elements thereof—into a new whole, quite often as the result of a mingling of two cultures. In the West, syncretic belief systems are more common in folk practice than at the institutional level, often originating among a conquered or enslaved people. In the Caribbean, syncretic religions are sometimes called Creole religions. Like Santeria, most Creole religions combine elements of Yoruba belief with the Catholicism of the European masters: VODOO in Haiti and Louisiana; Umbanda and Candomble in Brazil; Obeah in the West Indies; Kumina in Jamaica; and Palo Mayombe, Kimbisa, and Santeria in Cuba.

The Yoruba are a large ethnic group in West Africa, the land from which many slaves bound for the Caribbean came. In Cuba, the Spanish built *cabildos* (social houses organized according to ethnic group) for their slaves. In areas where the Yoruba ethnic groups predominated—and possibly in some where they did not but were an influential minority—the practices of Santeria began to coalesce in the *cabildos*, where slaves were allowed to gather on holidays and engaged in traditional practices. They had been forcibly baptized and were ostensibly Christians, but the days in the *cabildos* were intended to be an occasional outlet for their African culture; they provided a way to burn off steam, so to speak.

In Santeria, the gods of the Yoruba—the Orisha—are associated with, and revered as, Catholic saints. God becomes—or is the "true identity of"—Oloдумare or Olorun (specific correlations between Christian and Yoruba elements vary by tradition), and the other deities are redescribed accordingly. Ellegua, a trickster and psychopomp (a manifestation of death) and the god of travel and the crossroads, became Saint Anthony or Saint Michael. Chango, the god of thunder and ancestor of the Yoruba people, became Saint Barbara. Oshun, the goddess of love and beauty, was associated with Our Lady of Charity, the patron saint of Cuba—and Ogun, the god of war, with Saint Peter.

There was no real transformation here, as such; these joint Yoruba-Catholic entities were treated not as new deities or supernatural beings but as newly recognized manifestations. Much as different apparitions of the Virgin Mary—Our Lady of Fatima, Our Lady of Prompt Succor—are revered as aspects of Mary rather than as independent entities, the Orisha were now venerated as aspects of the saints. Traditional Yoruba prayer could continue—and continue to develop. The Spanish, for their part, would hear only prayers to their own saints.

Traditionally a purely oral faith, Santeria has no official written records and no holy scriptures other than the Christian Bible. Like many Creole religions, its rituals are secretive, open only to the properly initiated. Ritual music and dancing are used in prayer, as they were in the days of the *cabildos*. Dancing may be used to induce a trance state for the purpose of ritual possession, similar to being “ridden by the loa” in Voodoo. The veneration of ancestors is the focus of family rituals. In some cases, a santero sacrifices a chicken, the blood of which is given in offering to the Orisha, the meat being consumed separately. These sacrifices have been the subject of lawsuits in the United States, and discussions of the specific protections of freedom of religion.

BILL KTE'PI

Sanusiya

The Sanusiya was a religious reformist movement founded by Muhammad ibn 'Ali al-Sanusi. Born in Algeria, al-Sanusi studied in Cairo and Mecca. He was heavily influenced by the teachings of the noted Sufi Ahmad ibn Idris. Al-Sanusi established his first lodge, or Sufi collective, outside Mecca in 1827. After ibn Idris's death, he moved to Cyrenaica in present day Libya and established *zawiyas* (collectives) along the desert trade routes into the Sahara.

The Sanusiya stressed the role of the prophet Muhammad and encouraged members to practice a pious way of life with a stress on Islamic education. It discouraged excessive rituals involving singing or dancing. The orders were highly centralized and individual *zawiyas* were governed by several key officials. With their stress on the importance of work, the Sanusiya *zawiyas* flourished economically and attracted more followers. From Cyrenaica, new orders were established in the oases of Jaghbub and Kufra that became the center of the movement in 1895. Although its base was primarily from among the desert *bedu*, it also attracted urban followers. The Sanusiya also spread into Chad in the southern Sahara and, by the turn of the century, into Niger where the movement was repressed by the French.

Although the Sanusiya cooperated with the Ottoman governors in the northern Libyan coast, they opposed French expansion into Algeria and became fierce opponents to Italian imperial designs over Libya. Thus like many Islamic revival movements it gradually became a nationalist force against imperial domination.

JANICE J. TERRY

Sarmiento, Domingo Faustino

(1811–1888) *Argentine president and statesman*

Most famous for his classic polemical study of CAUDILLO politics and life in the Argentine interior, *Facundo*, or *Civilization and Barbarism*, and for his educational reforms during his term as president of Argentina, Domingo F. Sarmiento ranks among the most influential statesmen and intellectuals of 19th-century Latin America. His diverse literary contributions and political activities have also been interpreted as emblematic of the larger search for national identity in Latin America during the first century of independence, as the literati and politicians of the freshly minted nation-states from Mexico to Argentina struggled to create a viable sense of national belonging from the disparate ethnic and racial strands of their homelands.

Born on February 15, 1811, in the rustic capital city of the interior province of San Juan in the shadow of the Andean foothills, Faustino Valentín Sarmiento Albarracín, one of 15 siblings, was the only son of his soldier-laborer father and homemaker mother to survive to adulthood. Precocious as a youth, he learned to read at age four, continuing his studies at San Juan's Escuela de la Patria (School of the Homeland), and later with his priest uncle, under whose tutelage he acquired his lifelong appreciation for the transformative power of education. Conscripted into a provincial militia in the late 1820s, he was briefly imprisoned for refusing to serve, an experience that sharpened his rapidly evolving political views.

Sarmiento became convinced that only under the strong leadership of Buenos Aires could Argentina transcend its historic legacy of backwardness and primitivism, represented by its interior provinces, and become a modern nation. Embracing this Unitarist (pro-Buenos Aires, centralist) perspective, he fought against the army led by Federalist caudillo Juan Facundo Quiroga. Captured and arrested by Facundo's forces, he fled to Chile in 1830, where he spent most of the next 15 years working in a variety of jobs. Reading voraciously and writing prolifically, it was in exile in Chile that he wrote *Facundo* and other important works, many directed against the Argentine dictator JUAN MANUEL DE ROSAS. From 1845–47 he traveled widely in Europe and the United States, establishing a lasting friendship with U.S. educational reformer Horace Mann and his wife, Mary; the latter's translation of *Facundo* introduced the Argentine author to an English-speaking audience.

With the overthrow of Rosas in 1852, Sarmiento returned to Argentina and launched his political career, becoming senator in the National Assembly; governor of San Juan Province, and minister to the United States. Upon his return from Washington, he was elected president of the republic—the first in a string of four non-*porteños* (persons not from Buenos Aires) to hold the nation's highest office.

During his administration—which coincided with the last two years of the PARAGUAYAN WAR—federal government expenditures on education in the interior provinces quadrupled, much of it going toward the construction of new schools. Between 1869 and 1914 the nation's illiteracy rate dropped from more than two-thirds to around one-third, thanks largely to the legacy of educational reform bequeathed by Sarmiento, while its secondary school and university system came to rank among the finest in Latin America. Overall, however,

many Argentines considered Sarmiento's presidency a disappointment, in part because of his administration's failure to reform the nation's highly unequal patterns of landownership. Remembered mainly for his literary contributions, especially the impassioned dualism expressed in his major work—*civilization* as represented by the cities, especially Buenos Aires, lifeline to Europe and national progress, and *barbarism* as embodied by the backwardness and primitivism of the GAUCHO, the Indian, and the interior provinces—Sarmiento has been both lauded for his cosmopolitanism and criticized for his racism and disdain for rural life. Few would disagree that he left an indelible legacy on the literary, cultural, and political life of his homeland or that his larger oeuvre can be taken as representative of the broader struggle to create authentic national identities in Latin America during the first century of independence.

MICHAEL J. SCHROEDER

Satsuma Rebellion (1877)

The origin of the Satsuma Rebellion in Japan lay in the voyage to Japan of U.S. Commodore MATTHEW C. PERRY to Japan in July 1853. Perry carried with him instructions from President Millard Fillmore for the government of Japan to move away from isolationism. If the government did not do so voluntarily, according to the president's instructions, Perry was given the freedom to turn his guns on the Japanese. Several years earlier, Commodore James Biddle had been given a similar mission, but because he lacked the authority to use force, he had been compelled to turn away by Japanese officials. Fillmore was determined that Perry's mission would not have a similar outcome. On July 10, Perry sailed into Edo (Tokyo) Bay, with the warships *Susquehanna*, *Mississippi*, *Saratoga*, and *Plymouth*. For four days, the American warships carried out firing exercises in Edo Bay. On July 14 an emissary

came from the Japanese emperor Komei, promising to take a message from Perry to the emperor. With his mission accomplished, Perry promised to return in spring 1854.

Perry's mission to Japan provoked an immediate crisis for the Tokugawa shogun, Iesada. The appearance of a foreign naval squadron underscored his inability to protect Japan. The sole rationale of the shogunate (military regime) was its ability to use force to preserve domestic peace and prevent foreign invasion. Having seen what the British had done to China when they inflicted a humiliating defeat in the Opium War in 1839–42, a group of military leaders were infuriated by the "loss of face" that Tokugawa Iesada had caused the Japanese to suffer.

When Perry returned to Uruga Harbor on February 15, 1854, he was met by five officials of the imperial court. After six weeks of cordial ceremonies, the Japanese signed the Treaty of Kanagawa on March 31, 1854.

Opposition began to grow again toward the Tokugawa Shogunate in the west of the country. Two clans began to assert themselves against the Shogunate: the Satsuma Clan in southern Kyushu, and the Choshu in western Honshu. Ironically, because they were "outsiders" in the Tokugawa social and political order, meaning that they were not originally supporters of the founder of the Tokugawa Shogunate, they tended to have kept the samurai warrior virtues that the Tokugawa supporters had gradually lost. In response to the declining figure of the shogun, the rebellious lords began to champion the emperor, although he had largely been powerless since the first shogunate in the 12th century. The Satsuma and Choshu clans had strong resources to back them. Politically, the Choshu and Satsuma samurai became known as the Imperial Loyalists, feeling that the Emperor Komei was the legitimate leader of Japan.

Both the Choshu and Satsuma clans vied for leadership in what became open opposition to the shogunate. In December 1862 the Choshu samurai forced the shogun to agree to expel all foreigners by July 1863, something which the Choshu leaders knew the Tokugawa were now powerless to do. Thus, they achieved their goal of making the Tokugawa appear even more politically irrelevant than before. In September 1863 a Satsuma force marching on Kyoto forced the Choshu samurai to abandon the court. However, the political cause of both clans, to restore the emperor, remained the same. The decisive event, the Shimonoseki Affair, took place in 1864. The Shimonoseki Strait was an important maritime trade route controlled by the Choshu samurai, who attempted to block it to foreign trade. Its

position between Honshu and Kyushu made its opening imperative to foreign commerce.

To the nationalistic samurai of Choshu and Satsuma, the Tokugawa capitulation at Shimonoseki proved the final insult. On March 7, 1866, Choshu and Satsuma drew up a secret alliance to restore the emperor. In 1867 Emperor Komei died, to be succeeded by Mutsuhito, who took the reign name of Meiji. Emperor Meiji was determined to rule Japan, and he welcomed the secret support of Choshu and Satsuma against the new shogun, Tokugawa Yoshinobu. Civil war erupted in 1867, and the Choshu and Satsuma clans openly rose up for the emperor. Yoshinobu surrendered his powers to Meiji, who became restored to a powerful imperial throne in December 1867. In January 1868 Yoshinobu decided to attempt a final stand at Fushimi, where his forces were crushed. He surrendered to the imperial forces, and formally opened Edo to the imperial troops.

As when Western monarchies modernized, Japan's modernization was done at the expense of the feudal classes. In August 1871 the new imperial government suddenly abolished all the domains of the feudal daimyo and established governmental prefectures in their place. In 1873 the imperial government announced the formation of a new peasant conscript army to support the emperor, and this was rapidly followed by the permanent eclipse of the samurai class. Always proud of their status in society, they were now no longer to carry the *daisho*, the great sword and the small sword, in public.

The humbling of the samurai class distressed the new government, which not only had owed its creation to the samurai of Choshu and Satsuma but was composed itself of members of the warrior class. In 1873 a possible invasion of Korea was announced as a way to help the samurai regain their sense of military honor and at the same time diffuse what was beginning to become a threat to the new imperial regime.

Throughout this period, Saigo Takamori, a Satsuma samurai, had loyally supported the MEIJI RESTORATION and had worked closely with Kido and Okubo in the modernization of Japan. When the new national army was created, Saigo had been made a field marshal in recognition of his services to the emperor. Yet Saigo saw also in the decline of the samurai the ending of the class system of the ancient Japan to which he had dedicated his life. In the summer of 1873 Emperor Meiji called off plans for the invasion. Saigo Takamori resigned from the government and returned to the Satsuma lands. Others felt as he did, especially when the wearing of the swords of the samurai was officially abolished by law

in 1876. Rebellions broke out in Satsuma, Hizen, and Tosa. Whether intentionally or not, Saigo was forging the nucleus for a rebellion.

The flashpoint for what became known as the Satsuma Rebellion came when imperial troops seized the military supplies from the arsenal at Kagoshima, to prevent them falling into the hands of any rebels. To the Meiji government, this was an example of its policy of *fukoku-kyohei* (rich country, strong army) in a country in which all were now servants of the emperor. To Takamori and his supporters, it was a call to revolt to defend traditional values. Although late to join active opposition to the emperor, Saigo nevertheless found himself in command of some 25,000 samurai.

His original strategy was to march directly on the imperial capital at Edo. There is some reason to think he may have been able to capitalize on the discontent of the peasant class as well if he had done so. To the peasants, the conscription of their sons was just another form of taxation, to be paid in blood rather than kind. However, Saigo deviated from his plans by besieging Kumamoto Castle, being held by a garrison of imperial conscripts. The attack on the castle began on February 21, 1877. Finally, the Meiji government, showing a lack of military preparedness, was able to send a relief force to Kumamoto Castle on April 14. Faced with this new threat, Saigo was forced to abandon the siege. There followed months of a long pursuit in Kyushu, where government forces were compelled to fight on Saigo's own terms.

Saigo, with only a few hundred followers, was confronted by an imperial force of some 30,000 men. However, in true samurai spirit, he refused to surrender to the government soldiers. On September 24, 1877, he led a final charge down Shiroyama into the guns of the imperial conscripts. He was mortally wounded. His closest follower, Beppu Shinsuke, picked up the dying Takamori and carried him further down the hill to a place suitable for ritual suicide. Shinsuke then charged into the guns of the imperial troops. The Satsuma Rebellion was over, but the legend of Saigo Takamori had just begun.

JOHN F. MURPHY, JR.

savants/Rosetta Stone

On his 1798 expedition to conquer Egypt, Napoleon also took along 167 savants, or French intellectuals. Some had been eager to join the expedition, but others had to be persuaded to join. A few of the savants traveled on the same ship with Napoleon, who insisted that at dinner they participate in debates on topics he personally selected. In Egypt, the savants were involved in governmental procedure that directly benefited the French occupying forces and the indigenous population; they worked on surveys and historical research, and they published a variety of printed material. The latter had particular merit, for this was the first publishing to be done in Egypt with a modern printing press, which Napoleon had brought along.

The savants also traveled all over Egypt from the pyramids to Luxor to study and record the flora, fauna, local customs, and geography of the country. Dominique Vivant Denon was particularly enthusiastic about recording and measuring the ancient monuments. These studies laid the foundation for the field of Egyptology. Along with many other artifacts, many of them stolen and cut out of monuments, the savants also acquired the Rosetta Stone, which, with the same inscription in three languages, became the key for deciphering the ancient Egyptian hieroglyphics.

After their return to France in 1801, the savants began to publish numerous memoirs, diaries, and scholarly accounts of their journey and findings. The multi-volume *Description de l'Égypte* contained a complete history of Egypt to modern times, a full census of cities, tribes, cultural habits, geography, music, astronomy, and technical reports. French technicians had also studied the feasibility of building the SUEZ CANAL. Although based on an incorrect survey, they had concluded it would be possible. These findings gave further impetus for the future construction of a canal to join

the Mediterranean with the Red Sea. These publications created a passion for all things Egyptian among Europeans. Egypt was added to the Grand Tour itinerary, and a major tourist industry evolved in Egypt. The expedition and the publications by the savants also drew the attention of European governments to the potential importance of Egypt and other parts of the region in terms of imperial holdings.

JANICE J. TERRY

Second and Third Republics of France

The regimes of the Second Republic and Third Republic solidified the republican tradition in France. Modern France has emerged as the product of the competing ideologies of the FRENCH REVOLUTION and the Counterrevolution, of how much of the changes made by the French Revolution to keep and how much of the Old Regime to restore. The enduring success of the Second and Third Republics resulted in the victory of the French Revolutionary tradition over that of the Counterrevolution and established the groundwork for the construction of a common French culture. Following the “experiment” of the Second Republic, the Third Republic, while not popular, proved to be a durable, long-lasting regime that provided the stability France desperately needed while establishing a republican form of government.

The French Revolution resulted in the overthrow of the monarchy and its replacement by the First Republic, which ended following NAPOLEON I's coronation. Following Napoleon's demise in 1814, the French monarchy returned, only to be overthrown in the Revolution of 1830. Louis-Philippe, a member of a cadet branch of the royal family, became king of the French until he was overthrown in the REVOLUTION OF 1848, amidst which the Second Republic began.

While initially plagued by the instability and chaos surrounding the Revolution of 1848, the Second Republic solidified itself by November. A democratic

republic was proclaimed with direct universal suffrage and a separation of powers. A single permanent assembly of 750 members serving three-year terms voted on legislation introduced by a council of state, whose members were elected by the assembly for six-year terms. The executive branch consisted of a president who served one four-year term without the possibility of standing for reelection, and his self-appointed ministers. Governmental revision was extremely difficult, requiring three-quarters of the majority of a special assembly to approve the measure three times in succession.

NAPOLEON III, nephew of Napoleon I, won the presidential election by taking advantage of the nostalgia surrounding his uncle's regime and its remembered stability and order. The government was plagued by struggles between conservatives, liberal republicans, and socialists. In 1850 a liberal victory at the polls encouraged conservatives to pass the Falloux Law, which returned the church to its previous role as popular educator, thereby reversing one of the primary ideologies of the French Revolution. Napoleon III struggled with his parliament and continued to maneuver his loyal supporters to positions of authority.

The Second Republic ended in 1852 when Louis-Napoleon organized a coup. The French Second Empire lasted until 1871, when France was defeated in the FRANCO-PRUSSIAN WAR. After Napoleon III's capture, General Louis-Jules Trochu and politician Leon Gambetta overthrew the Second Empire and proclaimed a government of national defense, which later became the Third Republic. Following war with Prussia, France was plagued by an insurrection known as the PARIS COMMUNE that established a radical leftist regime that held control for two months until its suppression in May 1871.

During the early Third Republic, there was strong favor for a constitutional monarchy. Yet the two competing contenders for the throne, Henri, comte de Chambord, head of the elder branch of the royal family, and Louis-Philippe, comte de Paris, head of the family's younger branch, could not come to terms. Although a compromise between the two factions was reached allowing Henri to ascend to the throne with Louis-Philippe as his heir, Henri refused to acknowledge the tricolor, the flag of the French Revolution. Since a constitutional monarchy did not come to fruition, a “temporary” republic was proclaimed.

In 1875 a series of parliamentary acts laid the foundations for the organization of the Third Republic. A bicameral legislature was created, along with a ministry

under the direction of a prime minister responsible to both parliament and the president. The issue of monarchy versus republic continued throughout the 1870s. By 1877, however, public opinion swayed in favor of a republic.

President Patrice MacMahon attempted to salvage the monarchist cause by dismissing prime minister Jules Simon, a republican. MacMahon appointed monarchist duc de Broglie to the position and dissolved parliament. In the general election held in October 1877, the republicans made a triumphant return, thereby eliminating the possibility of a restored monarchy. MacMahon resigned in 1879 and in 1885, the French crown jewels were broken up and sold.

There were no strong, clear political parties during the Third Republic but, rather, coalitions of similar-minded politicians and factions. Consequently, ministries during the Third Republic changed often as various radicals, socialists, republicans, and monarchists battled for control. The Third Republic weathered many scandals during its existence while remaining intact. One of the most infamous scandals was the DREYFUS AFFAIR, which involved the imprisonment of an innocent French officer on espionage charges. The case unleashed the growing anti-Semitism within France and divided the nation. A preoccupation among many French politicians was revenge against Germany for the humiliating defeat of 1871. France became involved in colonial activities to compensate for its losing the economic race with Germany.

The Third Republic was active in building a common French culture for the process of citizenship education. The government promoted national holidays and a common French language to eliminate diverse dialects spoken in the countryside. In 1905 the Third Republic introduced several anti-clerical laws meant to separate church and state. Such efforts outlawed religious control of education. Increased industrialization led to the construction of railroads and the ability to travel more easily throughout the country. A rise in education furthered literacy, which paralleled the development of popular presses and widely circulated newspapers.

The Third Republic's greatest success occurred when it rallied the French nation to defeat the invading German army after a long standoff during World War I. The Third Republic collapsed following the invasion of Nazi Germany, which occupied much of France for the duration of World War II. The remainder of France was governed by a Nazi collaborative regime based at Vichy.

ERIC MARTONE

Seven Years'/French and Indian War (1754–1763)

The Seven Years' War—its name in Europe—was known as the French and Indian War in North America. Officially, hostilities began in 1756 with a declaration of war between Britain and France and ended with the Treaty of Paris in 1763. Actual fighting, however, began in 1754 in North America. That unofficial beginning is one distinctive aspect of this war for empire, which was the fourth struggle in 65 years between Britain and France over control of North America. The Seven Years'/French and Indian War was unlike these earlier wars, and not only because it began in North America. In the 1750s, in fact, neither London nor Paris wanted a war in North America or anywhere else for that matter.

Although both imperial powers desired to expand their influence from their current colonial boundaries into the Ohio and Mississippi River valleys, neither wanted to risk war to do so. British colonists had other ideas. More heavily populated than New France, British North America by the 1750s was beginning to experience overpopulation and land shortages along the Atlantic seaboard. Settlers agitated to expand beyond the Appalachian Mountains in order to squat on Western land, no matter the consequences with the French or their very powerful Algonkin allies. Additionally, moneyed interests in the British colonies, such as the Virginia-based Ohio Company, were also promoting frontier settlement.

By 1753 clashes seemed inevitable, as the French sought to increase their influence into the Ohio River valley by extending fur trading posts, while British colonists “on the spot” in the same area tried to acquire

British general James Wolfe, lying mortally wounded on a field surrounded by soldiers and an American Indian during the siege of Québec in 1759. The Seven Years' War raged across North America, Europe, India, and large tracts of the Atlantic and Indian Oceans.

land of their own. In 1754 the first confrontation of British colonists with French and Algonkin forces resulted in Virginia militia leader and Ohio Company investor GEORGE WASHINGTON's forced surrender to the French, as he and his men marched back to Williamsburg in defeat.

In the summer of 1755 British and New England troops retaliated by capturing Fort Beauséjour in Acadia (now Nova Scotia), deporting almost 10,000 French colonials, most to Louisiana. Just a month later, a British regular force under Major General Edward Braddock was devastated by French Canadian and Algonkin fighters near present-day Pittsburgh, beginning two years of reverses for the British at the hands of a small but highly competent force of French regulars, Canadian militia well-versed in winter and forest

warfare, and powerful Algonkin tribes who were the real arbiters of power in the region. At one point, the French and Indian coalition pushed the English frontier back 150 miles, most significantly in Pennsylvania and Virginia.

In Europe, the fighting revolved around FREDERICK THE GREAT OF PRUSSIA's attempt to prevent dismemberment of Prussia by Austria, France, and Russia. With fewer than 6 million people but Europe's best army and his own strategic and tactical brilliance, Frederick was able to maintain his independence with financial and limited military assistance from Britain and Hanover. With France occupied against the British elsewhere, and the Austrians and Russians suspicious of each other, Prussia was able to win significant victories in 1757 and retain Silesia in 1763.

The turning point for the British came in 1757 when William Pitt became prime minister. Personally and politically committed to victory whatever the cost, Pitt convinced Parliament to use Britain's advantages, primarily its financial and naval power, to overcome France. This strategy entailed sending small numbers of regulars to the Continent to bolster Britain's Germanic allies, while using British money to subsidize these allies to carry the brunt of the fighting against the French in Europe. This gave the British navy the operational flexibility to ensure its supremacy in the Atlantic and Indian Oceans, which in turn allowed Great Britain to defeat the French in the Caribbean with relatively small forces, as well as successfully deploy small regular forces and subsidized Indian allies on the subcontinent.

The British soon occupied the French colonies of Guadeloupe and Martinique, as well as French slave stations in Africa. More important for the future of the British Empire, Robert Clive of the BRITISH EAST INDIA COMPANY used British and Sepoy troops to seize Bengal from its local Muslim ruler, Suraja Dowla, thereby preempting the French East India Company's presence on the subcontinent. While Clive's actions, like those on the North American frontier, were not welcomed by a British government, which wanted to avoid additional engagements, the Royal Navy was dispatched to ensure Clive's survival and avoid the British being forced out of India by French countermoves. By 1763 the French presence in India, as in North America and the Caribbean, was at the mercy of British naval power.

British naval superiority also meant that Great Britain could send regular forces to the North American frontier and cut the French off from reinforcement and re-supply. British financial power meant that London could not only cover the cost of Britain's war in Europe, India, and the Caribbean, but also subsidize and reimburse its American colonies for the cost of providing supplies locally and raising militias—such as British Army Major Robert Roger's Rangers—that were well versed in forest and frontier warfare. Additionally, Pitt made sure that younger, more aggressive officers, such as Lieutenant General Jeffrey Amherst and Major General James Wolfe, were sent to command in the New World.

The result was a string of victories in North America and elsewhere that caused France to cede almost its entire North American empire to the British and Spanish in 1763. Although it had been allied with France, Spain was given the western bank of the Mississippi River in compensation for its loss of Cuba to Great Britain. While Martinique, Guadeloupe, and its

African slave stations were restored, in North America France retained only the city of New Orleans and two fishing islands off Newfoundland.

In addition, France was forbidden to erect fortifications or pursue political ambitions in India. After 1763 a British Raj would eventually replace the MUGHAL EMPIRE, and India would become a mainstay of the British imperial and economic system in the 1800s.

This war clearly demonstrated what the British Empire could achieve when it emphasized its advantages of naval superiority, Continental allies, and financial clout. The war, however, also doubled the British national debt, greatly extended the empire, and demonstrated real fissures between the mother country and its American colonies. Attempts to deal with these problems would lead in a dozen years to the AMERICAN REVOLUTION that would prove to be one of the British Empire's most significant defeats.

HAL M. FRIEDMAN

Shaka Zulu

(1781?–1828) *Zulu leader and warrior*

A significant amount of myth surrounds the life of the Zulu leader Shaka Zulu, as he is recognized as one of the more popular leaders in African history and is widely known for his conquests in southern Africa. It is difficult to assess when Shaka Zulu was born, but scholars believe he was born sometime between 1781 and 1787. It is also difficult to characterize his upbringing, due to the lack of sources, and therefore historians have difficulty ascertaining whether Shaka was mistreated by his father, Sensangakona, or whether his mother, Nandi, and Sensangakona had a stable relationship, but it can be ascertained that Shaka was conceived out of wedlock.

What is known by historians is that Shaka, as a young warrior, was under the guidance of Dingiswayo, a chief of the Mthethwa, who was instrumental to Shaka's rise to power. Dingiswayo assisted Shaka in ousting his brothers for control of the Zulu in 1812.

After Shaka came to power, he created a number of alliances with neighboring tribes in order to check the growing power of the Ndwandwe. Aside from these alliances, Shaka also adopted a number of military reforms in order to strengthen the martial power of the Zulus. It is open to debate whether Shaka himself devised these military changes, whether other Africans assisted in these designs, or whether he was influenced by the success of European models. It is known that the changes he initiated helped him to defeat the Ndwandwe. Some of the reforms that he adopted included the exchange of the assegai for a short spear used to stab opponents, ordering his soldiers to fight without sandals in order to increase mobility, and using the “Buffalo Horns” formation, which primarily consisted of the right and left flanks surrounding the bulk of the opponent’s army, while the center was used as the main thrust against the enemy.

Shaka was eager to learn about European culture, and he was fascinated by Christianity. He was also interested in learning how to read and write. He had an intermediary named Jakot who traveled between the Zulu and the Europeans to provide Shaka with information regarding the foreigners. From the news that he received, Shaka was able to make comparisons on various aspects of European and Zulu societies. The information he acquired regarding the power of Britain troubled Shaka, as he became concerned that the British might initiate a war against him and the Zulu. This concern may have prompted Shaka to send a diplomatic mission to King George in 1828, which proved relatively fruitless.

European perceptions of Shaka Zulu are complex and difficult to ascertain. This is particularly true when examining the writings of James Saunders King, who wrote articles for the *South African Commercial Advertiser* concerning the characteristics of Shaka Zulu. The article that was published by King on July 11, 1826, noted the hospitality that the Zulu leader extended towards others, but another article published the following week noted Shaka’s tyrannical nature.

Shaka fought a number of wars to gain supremacy in southern Africa, battling the Ndwandwe tribe a number of times. Shaka was forced to contend with the Ndwandwe, under the leadership of Zwide, in a number of battles, including the Battle of Gqokli Hill in 1818, where Shaka defeated a numerically superior Ndwandwe force, and another engagement on the Mhlatuze River. After the latter battle, the Zulu were able to demolish Zwide’s kraal, forcing Zwide to flee from Shaka’s grasp, but Zwide did not long survive the

destruction of his army, and he was later killed. Despite the fact that Shaka defeated the Ndwandwe tribe, he was forced to confront them again in 1826 when Zwide’s son, Sikhunyane, rose to power and became a threat to Shaka. Shaka quickly dealt with this threat, attacking the Ndwandwe encampment that was situated in the vicinity of the Intombi River and slaughtering a significant number of Ndwandwe warriors. Following this victory, Shaka took possession of 60,000 Ndwandwe cattle and killed the Ndwandwe women and children in the vicinity, ending the Ndwandwe threat to his rule.

Following Shaka’s victory over the Ndwandwe, an event occurred that contributed to the downfall of the Zulu leader: His mother died. Nandi’s death in 1827 greatly affected Shaka Zulu, as illustrated by the terms of mourning that he initiated following her death. He stipulated that milk was not to be extracted from cows for drinking, nor were the Zulu permitted to grow crops, threatening the Zulu with starvation. He also stipulated that women who were discovered to be with child within one year of Nandi’s death were to be executed along with their husbands.

Nandi’s death resulted in the deaths of many of the Zulu, as Shaka executed people for not following his terms of mourning or for not attending to him at the time of his mother’s death. Even after he ended the terms for the period of mourning, the continuation of this erratic behavior continued in 1828. His unpredictability is illustrated by the fact that he killed 300 women, some of whom were the wives of the leaders of Zulu regiments, while his warriors were absent.

Shaka’s bizarre behavior led conspirators to plot his assassination. It is not exactly known when Shaka died, but the best estimates claim September 1828. The assassination was a result of a plot between his half brothers Dingane and Mhlangana and a man named Mbopa, who was Shaka’s head domestic servant. The three men were encouraged to act by Mkabayi, the sister of Senzangakona, who asserted the belief that Shaka was implicated in the death of his mother.

It is impossible to know for certain whether Mkabayi believed this or if she wanted Shaka dead for ulterior motives. After Shaka was killed, a civil war ensued, as Dingane was forced to contend with pro-Shaka forces and his half brother Mpande, who was able to acquire the assistance of the Boers and the British settlers in southern Africa, in order to consolidate his grasp on the Zulu. Dingane failed to subdue all of his opponents, and Mpande was successful in overthrowing

his half brother and becoming the leader of the Zulu in 1840.

BRIAN DE RUITER

Siamese-Burmese War

Conflict between Siam and Burma was common in the 18th century the Burmese fought a series of civil wars against the Mons, who created their own state in 1740. The Mons' success at achieving independence failed to ease tensions between them and the Burmese, and the Mons sacked Ava, the Burmese capital, in 1752 and captured the Burmese royal family, ending the Toun-goo dynasty's control. The Burmese continued to fight the Mons after Alaungpaya assumed the role of leader of the Burmese forces and pushed the Mons into lower Burma. This fighting witnessed the subjugation of the city of Syriam in 1756, followed by the conquest of the Mon city of Pegu the following year.

This conflict with the Mons was followed by war with Siam in 1759, as Alaungpaya used the excuse of a revolt in Tavoy to justify this war. Alaungpaya accused the Siamese officials in the nearby areas of Tenasserim and Mergui of inciting this rebellion, prompting Alaungpaya to invade Siam in order to maintain the honor and prestige of Burma. Alaungpaya did not live long enough to become deeply involved in this conflict, as he died in 1760 during the siege of Ayudhya (Ayutthaya), the Siamese capital. Despite the fact that Alaungpaya failed to make any cultural contributions to Burma during his reign, his effective military policies enabled his successors to inherit a strong, united state for further conflict against Siam.

Naungdawgyi succeeded Alaungpaya, but his reign was cut short because of a revolt in the army partially incited by his orders to execute two of his generals. Hsinbyushin, the son of Alaungpaya, came to power in 1763 and continued the conflict against Siam in 1765. This renewed war witnessed the siege of Ayudhya, which began in 1766 and ended when the city capitulated on April 7, 1767. This victory changed the

geopolitics of the region, as Burma was able to capture thousands of Siamese and kill a significant portion of the Siamese nobility and royal family, leaving Siam without a ruler.

Following this massacre of the royal family, a number of candidates attempted to claim the throne of Siam. Some of the rivals for the throne included government officials such as the governors of Phitsanulok and Nakhon Si Thammarat; a member of the royal family who eluded the Burmese and was living in the northeastern section of Siam; Buddhist monks residing in the vicinity of Uttaradit; and a man named Sin, who was the ex-governor of Tak. Sin was able to subdue his opponents and crown himself king of Siam because he had a strong following. He was also able to halt the Burmese advance into western Siam, also maintaining the cohesion for Siam.

The victory of Burma in the Siamese-Burmese War prompted the Siam government to construct Thonburi, the new capital of Siam, which was situated on the Chao-phraya River. This relocation allowed the Siam government to consolidate itself and extend its influence into neighboring regions. During the 1770s the Siam government was able to launch a number of expeditions in order to assert its influence over Cambodia and Laos. The Siam government was also able to assert its influence over Chiang Mai when it captured the city in 1773.

The Burmese government had more to contend with besides Siam, as Burma and China became entangled in a war in 1766. This conflict was followed by more fighting after the Burmese government deposed the ruler of Manipur, replacing him with its own candidate. The Burmese government was eager to seek more territory in Southeast Asia and engaged in another conflict against Siam, but it failed to make substantial gains. The Siamese-Burmese War altered the dynamics of Southeastern Asia, as Burma was able to extend its influence into parts of Siam, forcing Siam to move into Cambodia and Laos.

Sikh Wars

The first Anglo-Sikh War was the result of British imperial expansion to annex the Punjab and remove the Sikh threat to British hegemony on the Indian subcontinent. During the 18th and 19th centuries, RANJIT SINGH made use of war and diplomacy to unite the Sikh tribes into a powerful nation. He built up a powerful army under European influence and European-style cavalry.

After learning of the impressive performance of the British infantry in the Anglo-Maratha War, Singh built up his army and constructed factories to manufacture guns. European advisers were important to the development of the Sikh army because they helped to improve the munitions factories and trained Sikh troops. Before he died in 1839, he had built up his army of 150,000 men.

Singh's death changed the dynamics of the politics in the Punjab because his son Kharrack Singh proved to be an ineffective leader and was murdered in 1840. The British, aware of this political instability, mobilized their army on the border separating the British Empire from the Sikh nation, provoking the Sikhs to attack in December 1845. The British defeated the Sikhs in this war with the help of the defections of two army commanders, Lal Singh and Tej Singh. The British victory over the Sikh army resulted in Britain's annexation of part of the Punjab. The Sikh army was reduced, and Britain was able to appoint advisers in the Punjab to influence the administration.

The concessions that the British wrestled from the Sikhs in the First Anglo-Sikh War were not enough to satisfy Governor-General Dalhousie. Determined to annex the entire Punjab, Dalhousie used the death of two Britons in the Sikh mutiny at Multan in 1848 as an excuse to expand British territory. The Sikhs, however, tried to create an anti-British front by calling on the aid of the Afghans. Britain, however, was able to suppress the Sikh resistance at Gujrat, and the Treaty of Lahore was signed in 1849 as a result. It forced the Maharaja Dhalip Singh to retire and become a pensioner of the British government.

The fall of the Sikh nation was crucial for the British government. It eliminated the Sikh threat to British control over the Indian subcontinent. Thereafter, Punjabis were recruited in large numbers to serve in the Indian army. The INDIAN MUTINY of 1857 failed badly because of the significant number of Sikh troops from the Punjab who adhered loyally to Britain's cause.

BRIAN DE RUITER

Singh, Ranjit

(1780–1839) *Sikh leader*

Ranjit (also spelled Runjit) Singh founded a Sikh state in the Punjab (an area in northwestern India, now divided between India and Pakistan) and ruled from 1801 to 1839. In the 18th century most Sikhs lived in the Punjab, an ethnically diverse area whose population also included Muslims, Hindus, Jains, and Pash-tuns (Afghans). The Sikhs of the Punjab during Singh's era were grouped into 12 *misl*s, or tribes. Singh became chief of the Sukerchakias tribe upon the death of his father in 1792. He furthered his own power by twice marrying women from other Sikh tribes.

Singh began uniting the Punjab under his rule in 1799, when he seized Lahore, capital of the region. In 1802 Singh captured Amritsar, a city sacred to the Sikhs as well as a major commercial center, and subdued a number of smaller Sikh and Pashtun principalities in the Punjab. He signed the Treaty of Amritsar with the British in 1809, gaining recognition as ruler of the Punjab and fixing the Sutlej River as the eastern boundary of his territories.

Singh continued to expand his empire to the north and west, and by 1819 had captured Peshawar and expelled the Pashtuns from the Vale of Kashmir. By 1820 he had consolidated his rule over the entire Punjab, from the Sutlej to the Indus Rivers, with more than a quarter of a million square miles of land, including some of the most strategically significant and richest territory in India. This area is sometimes called "The Land of the Five Rivers" because of the five major rivers within it: the Indus, Jhecum, Chenab, Ravi, and Sutlej. Ranjit Singh's rule in the Punjab was a time of peace and prosperity. He encouraged trade by ensuring safe passage for caravans and imposing lenient duties. Religiously tolerant, his army had members of different faith

communities, including Sikhs, Muslims, and Hindus, as did his commanders and administrative appointees. New styles of architecture and painting were also developed during his reign, and many literary and historical works were produced.

Singh died of natural causes in Lahore in 1839. His state did not long survive him. In March 1846 the Sikhs were forced to sign a treaty that gave Great Britain much of their land and to accept British rule.

SARAH BOSLAUGH

Sino-French War and the Treaty of Tianjin (Tientsin)

This war and treaty between China and France concerned Annam (or Vietnam), an area that was ruled by China until circa 900 C.E., and a closely linked vassal state since. The government of Annam, modeled on China's, controlled internal affairs; its kings received investiture by the Chinese emperor and on occasions received Chinese assistance to suppress local rebellions. Between 1644 and 1881 Annam sent 50 missions to Beijing (Peking) to render tribute to the Qing (Ch'ing) dynasty.

France first became interested in Annam in the 17th century. However, French Jesuit missionaries converted few Annamese to Catholicism, nor was the French East India Company successful in establishing trade in the region. France renewed its interest in Annam in the 1860s under NAPOLEON III who was anxious to win glory abroad. In the 1870s, Germany encouraged French imperialism in Annam and elsewhere as a distraction from its loss of Alsace-Lorraine to Germany. Beset by domestic rebellions and

Russian advances in the northwest, the Qing government was unable to protect the government of Annam due to civil war. Thus, the Treaty of Saigon in 1874 allowed French ships freely to navigate the Red River, to guide Annam's foreign affairs, and granted France other rights that made Annam a de facto French protectorate. China refused to recognize the validity of the treaty because Annam was a vassal state but did not pursue the matter. In 1880 France expanded its power by stationing troops in Hanoi and Haiphong, the main city and port in northern Annam.

China and France held inconclusive talks over Annam between 1880 and 1884. Chinese negotiator LI HONGZHANG (Li Hung-chang) and PRINCE GONG (K'ung) were anxious to temporize because they realized China's military weakness, but were loudly opposed by a group of scholar-officials who were ignorant of reality and called for war with France. The regent and dowager empress CIXI (Tz'u-hsi), vacillated between the two camps. In 1884 Li and French naval officer F. E. Fournier reached an agreement (Li-Fournier Agreement) that was vague on some crucial points and thus infuriated extremists in both nations; the French parliament rejected its terms and Chinese hardliners demanded Li's impeachment. Prince Gong was dismissed. War broke out in July 1884. The French navy destroyed most of China's naval vessels at the Fuzhou Shipyard and then blockaded the Yangzi (Yangtze) River and key ports. Panic stricken, and after many reversals of positions, Cixi sued for peace, despite a Chinese land victory at the Battle of Langson.

Li was again ordered to negotiate with France. In the Treaty of Tianjin (Tientsin) in 1885 China lost Annam as a vassal state. France would later add Laos and Cambodia, also Chinese vassal states to Annam, to form French Indochina. Similarly, Great Britain would secure a treaty with China in 1886 that made another vassal state, Burma into a British possession. The Sino-French War of 1884–85 signaled the inadequacy of the Self-Strengthening Movement and the disastrous consequences of the dowager empress Cixi's rule. Her pathetic ignorance would lead China to further disasters.

JIU-HWA LO UPSHUR

Sino-Japanese War and the Treaty of Shimonoseki

The Sino-Japanese War of 1894–95 was fought primarily over Korea. Korea was Qing (Ch'ing) China's closest tributary state, evidenced by the three tribute missions the Li dynasty in Korea sent to China annually. Korea was vital to China because it acted as the bulwark of Manchuria, which was the shield for China's capital Beijing (Peking). Thus, the previous Ming dynasty had sent an army of over 200,000 men to defend it against Japanese invaders in 1592.

After 1868 leaders of MEIJI Japan looked to foreign expansion to show its power to the world. Thus they were no longer content with the 1870 treaty with China that was based on equality. In 1876 Japan had signed a treaty with Korea opening it to trade. This treaty had declared Korea an independent country in violation of its vassal relationship with China. Preoccupied with other problems, the Qing government let pass the offending clause. It, however, encouraged the Korean government to sign treaties with Western countries to check Japanese aggressions. Japan was also interested in establishing sole control over the Ryukyu (Liu Qiu or Liu Ch'iu in Chinese) islands, which were tributary to both China and the lord of Satsuma of Japan, and annexed them in 1879 while China was preoccupied with Russia.

Politics in Korea became very chaotic. Two parties emerged, one pro-China, the other pro-Japan; their disputes led to an insurrection in 1882 causing both China and Japan to send troops. Chinese forces under Yuan Shikai (Yuan Shih-k'ai) arrived first and restored order. Yuan remained in Korea as China's resident-general until 1894 and put down another mutiny in 1884. In 1885 China and Japan negotiated the Tianjin (Tientsin) Convention that made Korea their joint protectorate, an unwise arrangement for China because it would be the fuse for a future war. In 1894 there was another revolt in Korea, called the Tongchak (Eastern Learning) Insurrection. Japan asked China for a joint expedition to put it down. China agreed and sent 1,500 soldiers. Japan, however, sent a first installment of 8,000 soldiers with large reinforcements arriving later. The revolt was put down easily, and China requested a diplomatic settle-

ment, which Japan stalled. In July China sent troop reinforcements but its troop-ships were sunk by the waiting Japanese navy. Declaration of war followed in August.

Japan had all the advantages in the brief war fought between August 1894 and March 1895. The inadequate Chinese navy was decisively defeated, and the remnants surrendered their bases in Port Arthur, Dairen, and Weihaiwei, where the Chinese commanding officer committed suicide. On land a large Japanese force routed the small and isolated Chinese contingent in Korea, then invaded Manchuria. The desperate Qing court sued for peace. Japan answered that it would only negotiate with LI HONGZHANG (LI HUNG-CHANG), a senior statesman and governor-general of Chihli Province.

The proceedings took place at Shimonoseki, with Prince Ito Hirobumi, Japan's chief negotiator, dictating the terms of the Treaty of Shimonoseki. China recognized the independence of Korea and ceded Taiwan (Formosa), Penghu (Pescadore) Island, and the Liaodong (Liaotung) Peninsula (the southern tip of Manchuria). It also agreed to pay 200 million gold taels (1 tael equals 1 1/3 ounces) indemnity, open more ports to Japanese trade, grant extraterritorial rights to Japanese nationals (which Europeans and Americans already enjoyed in China), and to negotiate a commercial treaty with Japan. Li suffered a non-fatal bullet wound by a would-be Japanese assassin in Shimonoseki. At home he was severely criticized and impeached by furious Chinese for not obtaining better terms for China. The people of Taiwan attempted to resist Japanese occupation but were put down by Japanese troops at the end of 1895.

The publications of the terms of the treaty shocked Western imperial powers. Thus Germany, France, and Russia banded together to form the Far Eastern Triple Alliance, or Dreibund, that sent identical notes to Japan, demanding that it return the Liaodong Peninsula to China in exchange for a larger indemnity that Japan felt compelled to accept. The commercial treaty of 1896 granted Japan the right to set up factories and other enterprises in China whose products would not be subject to Chinese taxes. Under the most-favored-nation clauses included in all treaties between China and Western nations, all of them automatically received the same rights, with disastrous consequences for China's economy and industrial development.

There were many causes of China's catastrophic defeat. Most blame belonged to dowager empress CIXI (Tz'u-hsi), who had ruled China since 1862. She was ignorant, greedy, and corrupt and gave vast powers to her favorite eunuchs. She sold offices and misappropriated funds for the navy to finance her rebuilding of a

summer palace, with the result that Chinese battleships lacked guns and ammunition. Under her capricious rule, the central government had practically broken down. As a result emperor GUANGXU (Kuang-hsu) was a figurehead with no power, the Zongli (Tsunqli) Yamen, or Foreign Office, had no power to formulate or execute foreign policy, the Navy Yamen did not control the entire navy, the Ministry of War had no troops to deploy, and the Ministry of Finance had no funds. Cixi additionally promoted and dismissed officials at will, listened to the advice of her favorites, and vacillated while the country floundered. These factors explained China's humiliating fiasco in the Sino-Japanese War. China's decisive defeat showed the world its weakness and opened it to further losses of sovereignty in the coming years.

slave revolts in the Americas

As an expansive literature attests, African-descended slaves in the Americas resisted their enslavement in myriad ways, including malingering, pilferage, temporary absence, sabotage, arson, and maroonage, as well as in music, dance, religion, and other cultural expressions. In addition to these day-to-day and less directly confrontational forms of resistance and protest, slaves also launched large-scale and often carefully planned uprisings, revolts, and rebellions that directly challenged their subordinate status within the master-slave relationship. During the period covered in this volume, African-descended slaves in the Americas launched scores of violent revolts and uprisings. Some lasted only a few hours, others decades; most were crushed, some reached negotiated settlements, and a handful succeeded. All influenced the slave system in important ways.

Such large-scale collective actions were far less common in North America than in the circum-Caribbean and Brazil—the destinations of approximately 80 percent of

the more than 10 million African slaves forcibly transported to the New World during the era of the transatlantic slave trade. The reasons for the relative infrequency of slave revolts in mainland North America compared to the Caribbean Basin and Brazil have been traced to a number of factors. North America was characterized by a lower white-slave ratio, smaller production units, a smaller proportion of Africa-born versus American-born slaves, more armed white men, less accessible frontier zones and fewer expanses of open or unclaimed land, more rigorous surveillance and control mechanisms, and greater danger of violent retribution. Despite these inauspicious circumstances, more than a dozen significant slave rebellions erupted in mainland North America from the early 1700s to the final abolition of U.S. slavery in 1865. These include the New York Revolt; the Stono Rebellion, Gabriel Prosser's Rebellion, the Chatham Manor Rebellion, the Louisiana Territory Slave Rebellion (or Deslandes Rebellion), the George Boxley Rebellion, the Fort Blount Revolt, the Denmark Vesey Uprising, Nat Turner's Rebellion (conventionally considered the bloodiest in U.S. history, with at least 55 whites killed), the Black Seminole Slave Rebellion, the *Amistad* Revolt, and John Brown's raid on Harpers Ferry, Virginia.

The aftermath of each of these revolts was marked by violent retribution and the imposition of tighter controls on slave populations by individual slave owners and local, state, and federal governments. Especially after the onset of the HAITIAN REVOLUTION, slaveholders across the Americas intensified their surveillance and control of slave populations.

Slave uprisings in the circum-Caribbean and Brazil were more frequent, longer, involved greater numbers of slaves, and posed a more abiding threat to the institution of chattel slavery. Among the most prominent of such revolts and uprisings were the First Maroon War in Jamaica; the Suriname slave wars, which lasted for most of the 18th century; Tacky's War (Jamaica); Kofi's Revolt (Dutch Guyana); the Jamaican Uprising of 1773; the watershed Saint-Domingue Uprising, or Haitian Revolution; another Jamaica Maroon Rebellion; Tula's Revolt (Curaçao); the Santa Lucia Revolt; the Guadeloupe Revolt; Bussa's Uprising (Barbados); the Demerera Revolts (British Guiana); the Antigua Revolt; the Great Jamaican Slave Revolt, or Christmas Uprising (Jamaica); the Bahia Revolts (Brazil); numerous revolts in the British Virgin Islands; and the La Escalera Conspiracy in Cuba. In particular, the second Demerera Revolt in British Guiana and Christmas Uprising in Jamaica underscored the contradiction between free labor ideology and the institution of chattel slavery, prompting

lawmakers in London to accelerate the process of slave emancipation throughout the British Empire, including Upper and Lower Canada, which came in 1833.

For scholars of African slavery in the Americas, an important debate was launched with the thesis proposed by the historian Eugene Genovese in his book, *From Rebellion to Revolution*. To Genovese, the Haitian Revolution represented a watershed moment in New World slavery and slave resistance. Earlier revolts and uprisings were more “restorationist,” ideologically circumscribed, and did not aspire to challenge the totality of the slave system. In contrast, the post-Haiti slave revolts were more “revolutionary,” modern, infused with republican and ENLIGHTENMENT notions of rights and citizenship, and geared more toward overturning the slave system as a whole. Scholars have debated Genovese’s thesis in a host of specific instances, resulting in broad consensus that the “restorationist” versus “revolutionary” dichotomy unduly simplifies a more variegated and multilayered process—much as the “resistance” versus “accommodation” dichotomy unduly simplifies a more complex reality—and a body of scholarship that has greatly enriched understanding of the slave experience in the Americas, the role of slaves in hastening their own emancipation, and the role of African slavery in the making of the modern world.

MICHAEL J. SCHROEDER

slave trade in Africa

Of the nations that participated in the slave trade, Britain had by 1750 the largest trade. The sugar islands of the Caribbean absorbed the bulk of Britain’s slave trade. Between 1753 and 1807 imports into Barbados totaled 104,800 slaves, though this number reveals nothing

about the fluctuation in trade during these years. Between 1753 and 1766 imports into Barbados totaled 46,900 slaves, an average of 3,350 per year, and rose to 51,900 over the longer span of 1767 and 1807, though the annual average for these years fell to 2,300.

These numbers reveal that after having peaked around 1770, the trade declined, a dwindling that had nothing to do with supply and demand. Slaves were as plentiful as ever, and the demand was intense. Caribbean planters were forever wringing their hands over the problem of getting more and cheaper slaves. After 1770 planters came to meet the demand for labor by reproduction more than by trade. By the first decade of the 19th century the slave population in Barbados sustained itself by reproduction, obviating the need for planters to buy slaves. Biology had, at least in Barbados, made commerce in humans superfluous.

The pattern is less clear in Jamaica, where imports reached their nadir of 362 slaves per year between 1784 and 1788. Thereafter, imports recovered, rising to 1,020 per year in 1802 and 1803. This increase implies that the slave trade may well have continued in Jamaica well into the 19th century had Britain not ended it in 1807. The Leeward Islands show a similar pattern, with imports at 251,100 slaves, an average of roughly 3,440 a year, between 1734 and 1807, more than double the average of 1,600 between 1707 and 1733. The SEVEN YEARS’ WAR won Britain the Caribbean islands of Dominica, Saint Lucia, Saint Vincent, and Tobago.

Flush with victory, Britain poured slaves into these islands, more than 2,000 per year between 1763 and 1769, to convert them to sugar production. Stasis in Dominica allowed Britain to reduce imports to fewer than 300 per year between 1780 and 1807, though imports remained high in the other three islands. In total, Britain imported into these islands 70,100 slaves between 1763 and 1807. In the island of Grenada, trade peaked about 1780, perhaps a decade after its peak in Barbados. Imports into Grenada halved from 1,600 per year between 1753 and 1778 to 750 per year between 1785 and 1807, implying, as in Barbados, that natural increase more than the slave trade filled the demand for labor. In all, Britain imported to its colonies more than 1.8 million slaves between 1750 and 1807.

ABOLITION BEGINS

In British North America and the United States, natural increase met the demand of tobacco and rice planters as early as 1700. The expansion of cotton after 1790 and the acquisition of Louisiana in 1803 spiked the trade to 70,000 slaves between 1791 and 1807, an average of

4,375 per year. The U.S. CONSTITUTION ended the slave trade in 1808, though merchants defied the law until the CIVIL WAR. Historian Philip D. Curtin estimates the illicit trade at 54,000 slaves between 1808 and 1861, an average of roughly 1,020 per year, and one-quarter of the total of the legal trade. Only the Civil War ended the slave trade and slavery in the United States.

The end of the slave trade in Britain and the United States coincided with the abolition of the trade in Denmark and the Netherlands. Denmark imported 11,160 slaves into the Danish West Indies (now the U.S. Virgin Islands) between 1755 and 1799, an average of roughly 250 per year. The volume of Danish trade rose from an average of 536 slaves per year between 1751 and 1775 to 1,216 per year between 1776 and 1800 and to 5,250 per year between 1801 and its abolition in 1803. Denmark thus ended the slave trade at its zenith. In contrast, the trade in the Netherlands ended after a 40-year decline. Trade peaked at 118,200 slaves between 1751 and 1775, falling to 34,200 between 1776 and 1800 and to 1,300 between 1801 and its abolition in 1814. A remnant of its former vigor, Elmina, the fortress in Ghana, remained a possession of the Netherlands until 1872.

As in the Netherlands, the trade withered before dying in France. At its apogee, the French trade, at 60,340 slaves imported into the colony of Saint-Domingue in 1788 and 1789, constituted half Europe's slave trade. These years were the largest in a remarkable spurt in which France imported 338,200 slaves into Saint-Domingue between 1779 and 1791. The numbers might have been higher still had not a slave revolt in 1791 disrupted trade. Thereafter, French trade hobbled into the 19th century, with 48,900 imports into Martinique between 1788 and 1831 and another 9,100 between 1852 and 1861.

Guadeloupe showed a similar decrease in imports, from 36,500 between 1779 and 1818 to 27,000 between 1819 and 1831 and to 5,900 between 1852 and 1861. France imported 118,000 slaves into Louisiana between 1785 and its sale to the United States in 1803 and 14,100 slaves into French Guiana between 1814 and 1830. All the while France vacillated, allowing Britain in 1831 to enforce a ban on the slave trade but in 1852 concocting the fiction that Africans aboard French ships were exempt from this prohibition because they were workers rather than slaves.

THE END OF THE SLAVE TRADE

The end of the slave trade in Britain, the United States, Denmark, the Netherlands, and France brought the Ibe-

rian nations of Portugal and Spain to the fore. From Jamaica, the Spanish imported into their colonies 206,200 slaves between 1701 and 1807 and another 200,000 from British, French, Dutch, and Danish carriers. The rise of sugar cultivation on the island of Cuba around 1760 stoked Spain's demand for slaves. Between 1774 and 1807 planters in Cuba imported 119,000 slaves. The slave trade in Cuba remained robust into the 19th century, averaging more than 10,000 per year in all but a few years between 1817 and 1865. Imports into Cuba between 1801 and 1865 exceeded 600,000.

Puerto Rico was likewise a sugar island, though its demand for slaves was little more than one-tenth that of Cuba. Between 1774 and 1807 Puerto Rico imported 14,800 slaves. The Spanish imported even fewer slaves into Santo Domingo, perhaps 6,000 between 1774 and 1807. The Portuguese trade rose steadily until the mid-19th century, increasing from 472,900 slaves imported into Brazil and the colonies of other nations between 1751 and 1775 to 1.2 million between 1826 and 1850 dropped.

Portuguese trade slumped to 154,200 slaves between 1851 and 1867. In total, Portugal bought and sold 3.4 million slaves between 1750 and 1867. The prime movers of the slave trade, Portugal and Spain, began and ended it.

By the 19th century the slave trade had fallen out of favor. The planters in the United States and Barbados, with a self-sustaining slave population, did not need to import slaves. The ENLIGHTENMENT of the 18th century branded slavery, and by implication the slave trade, as wasteful. In their place, Scottish economist ADAM SMITH and his disciples advocated wage labor. The Society of Friends (Quakers) and other religious reformers declared slavery and the slave trade contrary to the tenets of Christianity.

In 1783 a delegation of Quakers petitioned the nascent United States and Britain to end the slave trade. John Wesley, the founder of Methodism, likewise opposed the slave trade. Opponents of the slave trade coalesced in 1787 into the London Abolition Committee in England. In 1788 and 1789 likeminded organizations formed in France and the United States. In 1788 Parliament began to regulate the slave trade, and in 1792 the House of Commons passed a bill to outlaw it. The measure died in the House of Lords, but the bill's revival and enactment in 1807 ended the British slave trade. In 1833 Britain outlawed the slave trade in its colonies.

Two years earlier Britain had begun to patrol the Atlantic for slave ships in an effort to force other nations

to end their trade. Denmark in 1803, the Netherlands in 1814, and France in 1848 ended the slave trade. Britain pressured Cuba to abandon the slave trade in 1867, and Brazil followed in 1888, ending four centuries of commerce in humans.

CHRISTOPHER CUMO

Smith, Adam

(1723–1790) *economic thinker*

Adam Smith was the founder of the laissez-faire school of economics and traditional economic liberal theory. A graduate of Oxford University in 1746, he continued his studies in his home of Kilcaldy, Scotland. In 1751 he became a professor of logic at the University of Glasgow and in 1752 the head of the department of moral philosophy. By 1760 his emphasis was on jurisprudence and political economy. By then he had become a charter member of the Scottish ENLIGHTENMENT. Influenced by Scottish writers such as David Hume, he believed that natural laws regulate human activities. Therefore, all forms of human endeavor could be understood by analyzing universal laws. If human institutions respected the laws of nature, all would go well. People would be guided to the goal by the application of reason.

In 1763 and 1765 Smith came into contact with the physiocrats of France, who rebelled against economic absolutism in the form of mercantilism, which put economic institutions at the disposal of the state and indi-

Adam Smith believed economics should be governed by the forces of nature and reason.

cated that wealth equals power. One physiocrat, François Quesnay, compared the circulation of money to the circulation of blood. Mercantilist controls, to him, acted like a tourniquet on the circulation of money, which cut off a natural life-giving flow. Jacques Turgot, another physiocrat, said that natural human behavior guided by national self-interest in search of a profit would result in the best service and the most goods for society.

After traveling in France, Smith published his great work, *Inquiry into the Nature and Cause of the Wealth of Nations*. The work, known by its shortened title, the *Wealth of Nations*, became the dominant theory of

economic liberals in the 19th century and economic conservatives in the 20th century. Under this theory, the state was basically a “passive” policeman who intervened only when the marketplace collapsed.

Smith maintained that increased production depended on a national division of labor and specialization. Trade, therefore, was to be encouraged, as it increased specialization to meet its demands, which in turn led to greater production. This growing value of trade also depended on personal liberty; each person should be free to pursue his or her individual self-interest. When buyer and seller met in the marketplace, they would be guided by an “invisible hand,” which basically was the law of supply and demand, where the results of buyers and sellers would be optimized. In general Adam Smith deplored all forces that interfered with this enlightened self-interest. Therefore, he opposed all economic controls in the form of the state government, guilds, or unions as harmful to the exchange of goods and services or trade. To him mercantilism, whether it favored gold and silver bullion for its own sake, surplus exports over imports—which weakened your neighbor’s economic status—or state control of an essential item to use as a weapon, was wrong. Ideally trade should be for everyone’s benefit. This would be the natural result of free trade unencumbered by protective tariffs. Therefore in such a natural and free market, the prosperity of each nation would be dependent on all nature. He also departed from traditional mercantile economic theory, which regarded colonies as an economic asset; he saw them as liabilities.

This work, upon its publication in 1776, was an instant success. After being lionized for the next two years, Smith retired to live in Edinburgh. He died there in 1790. He requested at his death that all manuscripts on which he had worked be destroyed, except for his *Theory of Moral Sentiments*, which posited that moral sympathy derives from human sympathy. *The Wealth of Nations* remains his major work.

NORMAN C. ROTHMAN

Social Darwinism and Herbert Spencer (1820–1903)

The term *Social Darwinism* emerged in the mid-19th century and came to be associated most closely with the philosopher/sociologist Herbert Spencer. Spencer was born in Derby in the English industrial heartland. He was a descendent of a family of religious nonconformists with strong individualist traits and utilitarian views based on those of social reformer Jeremy Bentham.

Spencer’s childhood ill health led him to be home-schooled by his father until age 13, when he moved to Bath for further education by his uncle, a clergyman who was a social reformer with radical views for the time. His education was geared to math and science and less to Latin and Greek. Spencer did not progress to university but in 1837 joined the London and Birmingham Railway as an engineer. He was not seen as a cultivated gentleman in terms of the existing society. He became interested in radical issues in the 1840s and started writing for the *Non-Conformist*. He came to view government as a threat to freedom and the individual. Although he returned to the railroad for temporary employment, he secured an editorial job with the London *Economist* in 1848, which secured a steady income.

Spencer lived at a time when CHARLES DARWIN’S *On the Origin of Species* introduced evolutionary theory as an explanation for the development of plants and animals. Such evolutionary thoughts had previously influenced Spencer’s speculations on society itself, and he had earlier in *Social Statics* come to believe that competition in human society also led to social advancement. Spencer’s application of Darwinism to his own ethical and social thought came to be known as Social Darwinism. What emerged from this conviction in a simplified form was a notion of the *survival of the fittest*, a phrase Darwin never used.

Darwin’s struggle in nature could be transferred to society, and the strongest or fittest would and should dominate the poor and weak because they were more adaptable. The weak should ultimately disappear, for they could only reproduce those unfit for the competition of life.

Spencer’s theory in its most basic form led some to believe that natural selection, when applied to societies and government, meant that there was a natural dominance in the world that allowed certain races (principally European Protestants), individuals, and nations to dominate because they were superior in the natural

order. In political and economic terms, competition and self-interest advanced the social order. Competition could cure social ills without the need for government social programs or intervention. In society, a liberal economic laissez-faire approach was best.

Some have also come to see 19th-century Social Darwinism as the intellectual rationale behind European colonialism, imperialism, and capitalism itself. This might be labelled the “might makes right” school of thought. A nation is strong because it is the fittest in the struggle for survival and has made the necessary adaptations to become superior.

Spencer’s works gained popularity outside of Britain and had a great influence in the United States. Often Spencer’s ideas were simplified to the point of absurdity, and much like Darwin, he was summarized and not read. He influenced Andrew Carnegie, the industrialist, and helped shape his philanthropic efforts. The most prominent American convert was William Graham Sumner, and then during the 1890s, historians such as John Fiske, who influenced Senator Henry Cabot Lodge and naval planner Alfred Thayer Mahan. The consequence of this influence was for some a justification of American imperialism.

The publication of Darwin’s *Descent of Man* saw concepts of natural selection applied to humans, and this gave further impetus to Spencer’s ideas. Other thinkers, primarily biologists such as Sir Francis Galton, entered the fray. Heredity, according to Galton, meant that biology was more important than environment in shaping human destiny.

Nevertheless, Herbert Spencer’s rational utilitarianism did have appeal and influence, and works such as his *Principles of Sociology* had significant impact on his era. He did define a system of moral rights, and he divorced himself from many, if not most, aspects of popularized Social Darwinism. To achieve the greatest happiness and to develop their talents Spencer’s humankind needed maximum individual freedom without the heavy hand of government interference, and this did not mean that the fittest were necessarily the best.

THEODORE W. EVERSOLE

socialism

Socialism was a term first used in the early 19th century in western Europe. Its exponents were primarily French and British.

The INDUSTRIAL REVOLUTION changed Europe by making the aristocracy largely irrelevant, raising the capitalist bourgeoisie into wealth and power and moving the old peasant class into industrial labor. Unlike the agrarian society it overturned, where wealth depended on a finite quantity—land, in the industrial capitalist system wealth was limitless, at least in theory, and untied to the old feudal order.

The Industrial Revolution also overturned the old sense of noblesse oblige. Capitalists were comfortably, guiltlessly, rich and powerful, full of pride, and without a sense of obligation to the poor or their own competition. These were the people who took power from the aristocrats and created the early capitalist democracies, political systems in the image of their economic and political interests. Freed from the nobility, they had guarantees of property rights and the ability to pursue more property. These 19th century “liberals” agreed that only the economically independent and secure could be politically free. THOMAS JEFFERSON exemplified this concept, using it as justification for his desired nation of small farmers. He also agreed that liberty was not the product of Christian thought but of natural law; without theological justification, there was no basis for censure. Some 19th-century liberals even praised greed as the motivator for economic growth and prosperity. Unlike feudalists, capitalists defined dependency as self-destructive; for their own well being, the poor had to work, and if they did not do it voluntarily, the system would force them. In Britain poor laws, which seem to be based on this philosophy, could be quite harsh.

CAPITALIST PROBLEMS

The French philosopher Jean-Jacques Rousseau contended that democracy could not survive with a wide disparity between the rich and poor. Other critics of the system worried about more basic problems with rule by “benign” capitalists. They pointed out that the system—in England, Germany, and other early industrializing countries—had

taken the old feudal protections that had ameliorated the lot of peasants limited in space and wealth. As near property without rights of mobility or much else, peasants did have reasonable protection against starvation and homelessness. Capitalism's exploited factory workers lacked even the basics, being "free." They could be fired and hired at will from jobs whose pay was set by a going rate pegged to competition with hordes of other displaced peasants desperate for a wage. The new workers faced factory employment that included 12-hour shifts seven days a week in inhumane conditions. This applied to women and children, often preferred because they worked for much less than men. Early capitalism produced lowered standards of living and declines in educational levels in many areas.

The new industries also lacked compunctions about polluting the environment or maiming or killing the workers. Factory town food was commonly inferior and often scarce. Even some of the well off began feeling twinges of guilt, spurred in part by the works of Charles Dickens.

Of more concern to the middle classes was the business cycle. Under the feudal system, aside from the occasional plague, war, drought, or famine, life was mostly predictable. Capitalism from the beginning featured booms and busts out of human control. Life would sail along for a period, with growth, prosperity, increases in jobs and wages. Then, inexplicably, the system would collapse: Profits and wages would fall, millions would be either out of work or poor, and even some of the rich might fall a class or two toward poverty. Capitalists thought to stabilize the system by regulating maximum wages and prohibiting unions. They also regulated imports and combined into trusts to thwart competition. The crashes persisted.

THE BASICS OF SOCIALIST THOUGHT

Although critical of liberalism, socialism shared the idea of progress and the end of aristocracy. Socialists repudiated liberalism as a facade for greed. Rather than looking back to a better yesterday, the proto-socialists analyzed industrialism and defined principles for making it tolerable (given that it was here to stay.) They shared the outrage at capitalism's abuses expressed by 19th-century liberals such as Honoré de Balzac, Thomas Carlyle, and BENJAMIN DISRAELI. They were distinct from these conservatives and the anarchists seeking to revert to an agrarian idyll in that they were optimistic and positive about industrialization.

Some began to suggest that the system was inherently flawed. What was needed was a system that

controlled greed and lifted the masses from poverty—socialism. Socialism, broadly defined, dated back at least to early Christianity, with Christians sharing among themselves from the beginning and with the rise of monasticism, which entailed community ownership of everything. Socialism as a political force dated to the Industrial Revolution.

Socialism is often a derogatory term for anything an opponent dislikes. Disregarding the animus, socialism includes a democratically controlled economy operated for the good of all members. Rather than unchecked competition that characterizes capitalism, it relies on cooperation, and it involves government planning to stabilize the economy and reduce or eliminate the business cycle. Socialists may share property in common and prohibit private ownership of land and industry, but they may also simply advocate publicly financed social programs and heavy state regulation of industry and property.

Socialists generally agreed that wealth was the product of working men and women and that capitalists had wrongfully taken it. To alleviate poverty and misery, they sought to bring about a system characterized by cooperation, democracy, equality, and prosperity for all.

OTHER PHILOSOPHIES

Other groups shared the socialist ideals—anarchists and communists. Anarchists rejected even the socialist democratic government. They viewed government as inherently tyrannical and wanted maximally decentralized government incapable of tyrannizing the people. They were ineffective because peaceful anarchists lacked the power to change much and violent anarchists generally provoked more hostility against themselves than against the government they wanted to end. Communists could occupy the extreme wing of socialism—with community ownership of everything, perhaps in the manner of the early and monastic Christians. They could also be MARXISTS. Marxists see socialism as an interim arrangement that reorganizes society into the form that withers away until a modified anarchism appears—a society without money or market forces, with worker ownership of property, with production for the producers only, and with no state. This communism has never developed.

EARLY SOCIALISM

In the 19th century capitalism was new, and socialism seemed a reasonable system to replace it. The early socialists knew that economic systems were not inevitable or eternal; feudalism died within their memories. Capitalism could wither away as well.

The early socialists included Henri de Saint-Simon, François Marie-Charles Fourier, and Louis Blanc of France and Robert Owen of Wales. Not politically astute, they were ENLIGHTENMENT idealists who thought that people of good will could voluntarily bring about a better society. Fourier and Saint-Simon's ideas remained theoretical, but Owen, the wealthy industrialist, founded several communities, particularly in the United States, but failed to make a go of any of them.

These social critics thought to reform poverty and inequality by redistribution of wealth and the creation of a society of small, utopian communities without private property. The early critics made no distinction between socialism and communism. A perception developed in Europe that socialism was more amenable to religion while communism was atheistic. In Britain, communism sounded too much like communion, and thus was viewed as being too Catholic.

Pierre-Joseph Proudhon was actually an anarchist. His slogan "property is theft" reflected the common socialist hostility to capitalism. He was not extreme, however, allowing for individual ownership of one's home and domestic goods. He opposed property that took its wealth from the labor of others. Property of this sort included factories, mines, railroads, and the like. Karl Marx was generally in accord with Proudhon, whom he met in Paris in the 1840s. Marx's opponent, the anarchist Mikhail Bakunin, was also influenced by Proudhon. Proudhon was more influential in socialist circles than Marx and Engels, even when they published *The Communist Manifesto*.

The utopian socialists came later to be known by scientific socialists under terms such as proto-socialists, Fruhsozialismus, pre-Marxian socialists, and the like. After experimentation with the small utopian communities, some socialists shifted to direct political action. Marx and Engels regarded themselves as scientific socialists, setting themselves apart from the utopian socialists.

The United States was a hotbed of experimentation, home to dissenters and creators of new religious groups, as well as immigrants dissatisfied with what they had left behind. It was large, and there was room for just about anyone to adopt whatever ideology seemed reasonable. Utopias flourished during the 19th century, but mostly the blooms proved short-lived when expectations were set too high. Many fell to internecine jealousies, preferential treatment of some over others, unnatural restrictions on competition and personal relationships, and other misreadings of what proved too often to be less than perfect human nature.

Examples include the Amana Society, the Shakers, Separatists of Zoar, the Oneida and Wallingford Perfectionists, the Aurora and Bethel Communes, and the Icarians. Descendant utopias, as the hippie communes and remnants of some 19th-century utopian communities, remain to the present day.

MARX, ENGELS, AND COMMUNISM

Marx and Engels enunciated a theory of history as exploitation. History occurred in stages, each better than its predecessor, each with its appropriate economic system, with change triggered by class conflict that each economic system bred within itself. The 19th-century world was in a capitalist stage, but inevitably capitalism would give way to another economic system with another dominant class. As feudalism had brought about the rise of capitalists who overthrew feudalism in favor of capitalism, so capitalism was creating a working class that would overthrow capitalism in favor of a worker-run economy, the extreme form of socialism known as communism.

Marx and Engels had trouble being taken seriously. The entire socialist intellectual movement, composed of middle- and capitalist class idealists and intellectuals, lacked the numbers to generate a serious socialist movement. That came from the working people, enamored of simplified versions of the socialist ideas. Probably the majority of the 19th-century labor movements were socialist in aims, using unionism as a means to an end. Even 20th-century labor unions—even in the United States—had elements of socialism in their platforms, but they gained only small victories. They had little success in nationalizing mines, railroads, and other industries.

Capitalists reinforced the labor-socialist tie by attempting to suppress all labor movements, rather than drawing distinctions between the milder forms of labor organizing and the socialist movement. Socialists and communists welcomed the capitalist accusations that they were revolutionaries. This oppression would encourage the poor, insecure, workers, downtrodden by the capitalist business cycle, to join forces and press for radical change. Numbers alone would make them a force the capitalist rulers would have to confront and suppress, probably by abandoning all pretense of democracy. The masses would rise and overthrow the capitalist system. At least that was the Marxist dream.

The revolutions never happened. Despite the odds, labor movements fought the uphill battle against capitalists, governments, militaries, and police—some died, but the others won the shorter working day, higher wages, and better working conditions. The average

worker had a stake in the system rather than a desire to overthrow it. It did not help that capitalism became more adept at producing cheap and abundant-if-inferior goods and brought about a higher standard of living. Most workers in the second half of the 19th century were living better than their parents. Revolutions did break out in 1848, but they were not socialist. The International Working Men's Association (the First International) came into being only in 1864. Strongly Marxist, it was dominant in European socialism.

Marx's International Workingmen's Association had its first meeting at Geneva in 1866. This was the first major international socialist meeting. It reflected the general socialist tendency to disagree on strategy. Marx and Engels and British and exiled continental labor leaders created the International Workingmen's Association in 1864. It was a committee, and about as effective as committees normally are—it included British reformists, continentals of more radical persuasion, and anarchists of several types. Marx relocated headquarters to New York to strip away the anarchists. The IWA dissolved in 1876. By century's end, Marxist socialism was the leading ideology of working-class parties in all but the Britain and the United States.

Socialism rose from a small intellectual movement to a large mass working-class political movement coincident with the industrialization of Europe, particularly between 1870 and 1890, which created the great proletariat. The centenary of the FRENCH REVOLUTION in 1889 was the occasion for socialists and social democrats to meet in Paris and form the Second International. The Second International was a confederation of centralized national parties. The approach was popularized by Engels, August Bebel of the German Social Democratic Party, and Karl Kautsky.

Socialism had a shining moment from March 18 to May 28, 1871, when the PARIS COMMUNE arose in the aftermath of France's loss to Prussia and the collapse of the Second Empire. The city's citizens elected a radical government composed of old Jacobins from 1789 and Proudhonites. Communes arose in Toulouse, Marseille, Saint-Etienne, and Lyon but were suppressed quickly. The Versailles government sent the army against Paris and repressed the Commune. The Commune accomplished little but became a symbol remarked on by Marx; it was evidence to many socialists that the working class was ready for the revolution.

AMERICAN SOCIALISM

The U.S. Socialist Labor Party of America came into being in 1877. Already small, it fragmented in the

1890s. In 1901 the Socialist Labor Party's moderate faction and the Social Democratic Party and Eugene V. Debs put together the Socialist Party of America.

American socialism differed from European and British socialisms because Americans' experiences were not those of the old countries. The American labor movement struggled in the 19th century, even later when industrialism was rampant and highly exploitive, because American workers were slow to acknowledge that they were no longer free agents, self-employed craftsmen and entrepreneurs in the making. Socialism's emphasis on cooperation rather than rugged individualism seemed un-American. Socialism's American beginnings were imported, primarily from Germany. It remained strongly influenced by immigrants—Milwaukee's gas and water socialist Victor Berger, the leadership of the anarchist Industrial Workers of the World, and many of the national party leaders. Where socialism had native roots, it tended to arise from populist farmers whose socialism tracked more closely with their Christianity than with any imported European ideas. When Oklahoma voted for socialists before World War I, it did so because of agricultural conditions in Oklahoma, not out of commitment to the Second International.

EUROPEAN SOCIALISM

Eduard Bernstein and the social democrats Vladimir dominated the Second International in 1889 in Paris. Vladimir Lenin and Germany's Rosa Luxemburg led the radicals. Karl Kautsky led a smaller faction. The anarchists were left out and split from the socialist movement. In 1884 British middle-class intellectuals formed the Fabian Society, which laid the basis for the Labour Party in 1906. Jean Jaurès founded the Section Française de l'Internationale Ouvrière in 1905. Under Jaurès and later Léon Blum the SFIO kept Marxist theory while in practice becoming reformist.

In Germany, Ferdinand Lassalle advocated voluntary worker cooperatives rather than Marx's revolution. Marx was scornful, but Lassalle's cooperatives were the beginnings of today's credit unions, mutual insurance companies, food cooperatives, and similar institutions. They have never altered capitalism but have found a niche within it.

The German Social Democratic Party, founded on the ideas of Marx and Lassalle, was for decades the world's leading socialist organization. By 1891 it had a million and a half members and was beginning to enjoy reasonable electoral success. Although Karl Kautsky kept the German Social Democratic Workers' Party Marxist in doctrine, in practice the party became

reformist rather than revolutionary. Success meant that, despite rhetoric of revolution, the party found itself absorbed into the conventional political process.

In Great Britain, the Marxist critique failed to take hold. Rather the approach was “Gas and Water Socialism,” under the Fabian Society. It began on January 4, 1884, when members of the Fellowship of the New Life took a political approach to the Fellowship’s goal of the transformation of society by setting an example of simple, clean living.

The Fellowship faded, and the Fabians drew members such as Sidney and Beatrice Potter Webb, H. G. Wells, and George Bernard Shaw. These were elite reformers who felt that socialism could transform society by slow penetration of its principles into the fabric of capitalist society. They had no interest—and perhaps no true awareness—of class politics, including labor unions and labor parties. The driving force was the Webbs, who wrote the bulk of the studies of Britain’s industrial system and alternative policies for capital and land.

The Fabian Society was named for Roman general Quintus Fabius Maximus, “Cunctator” or “Delayer,” who fought through harassment and attrition rather than head on confrontations. Fabians were against free trade but supported nationalist foreign policy in SOUTH AFRICA. They were significant in the establishment of the Labour Party in 1900. They advocated government ownership of utilities and land and other resources, but they insisted that all changes come through law rather than revolution.

SOCIALISM AND NATIONALISM

In the late 19th century the various socialist groups became increasingly nationalistic. Universal male suffrage became common in the western world during the first decades of the 20th century. Socialism became increasingly tied to labor unions and labor parties, which increasingly mobilized the working class vote.

As socialists got access to power, they became more pragmatic, recognizing that they still needed the middle and wealthy classes to achieve their aims. Those classes still owned the bureaucratic apparatus of the state. And the welfare state made the workers’ lives better, delaying the revolution.

The involvement of socialists with government split the parties into moderates and radicals in the 20th century. Eduard Bernstein represented the moderates who thought that the reforms could come through the democratic political process. This was the basic social democracy. Communists in countries without a

parliamentary democracy argued for revolution; Vladimir Lenin argued this path. In 1903 the Russian social democrats split into Bolsheviks and Mensheviks.

By the early 20th century, Germany’s Social Democratic Party had abandoned the revolutionary goal completely and backed Kaiser Wilhelm, in the process destroying its credibility with foreign socialist movements. The other socialist parties backed their governments one by one, destroying the international working-class movement in a wave of nationalism. The American Socialist Party was the exception in refusing to back the war, but it was a weak organization nationally and internationally, never able to win more than 6 percent of the vote.

Marx and other socialists ignored or discounted working-class differences of nationality, religion, ethnicity, and gender. These were factors that the capitalists exploited to divide and weaken the workers. For socialists, the real division was between a unified, homogeneous working class and a unified capitalist class. As reality intruded during the 19th-century era of socialism, intrusion of nationalism and other differences forced the socialists to adjust their doctrine to keep it relevant to workers who were also male and female members of ethnic, national, and religious communities.

Socialism won out over anarchism and other ideas within the working-class movement because it was better organized and had a more realistic political strategy. It fit nicely with the alienated workers of the large factories and plants of 19th-century capitalism, workers more prone to alienation and more susceptible to pitches about solidarity than were the workers of the small crafts industries of early industrialism. Socialism also deemphasized millenarianism, stressing instead a better tomorrow in the here and now with tangible bread and butter results. Until the Russian Revolution, no one had any way of measuring the validity or effectiveness of the socialist promises of economic equality and fairness for all.

Social democrats had better success than socialists did. They were more gradualist, advocating high taxes to promote relative equality, government regulation, nationalization as necessary, and social welfare. Scandinavia was most successful with this approach, but other European countries adapted some elements. Late in the 20th century and early in the 21st, governments began dismantling at least parts of these social democracies.

South Africa, Boers and Bantu in

The first encounters between Europeans and the Bantu- (Xhosa, Zulu, among others) and Khoisan-speaking peoples of southern Africa occurred during the European race to discover sea trade routes to Asia in the 15th century. The first Dutch settlers, called Boers (Dutch for “farmer”), developed a colonial society that expanded into African-occupied territories that themselves were experiencing great social and political change. With the introduction of British rule during the FRENCH REVOLUTION, intra-European hostility worsened in both Africa and the world. The political and cultural landscape became a powderkeg as the British colonial government, various groups of settlers, missionaries, and Africans on the Cape interacted. The discovery of gold and diamonds in the middle of the 19th century intensified the conflict between the British and the Boers (also called *Afrikaners*, the Dutch word for “African”) into war and resulted in greater European control and influence over the lives of African peoples.

In 1488 Bartolomeu Dias of Portugal was the first European to reach South Africa, in a journey around the southern tip of Africa in search of a sea trade route to Asia. While Dias only traveled as far as Algoa Bay (location of present-day Port Elizabeth), another Portuguese explorer, Vasco da Gama sailed around the Cape to India in 1497. The Cape itself did not become a site of permanent settlement until 1652, when Jan van Riebeeck established a station at the Cape of Good Hope for the Dutch East India Company (VOC). The Cape became a colony of European settlement in 1657 when the VOC settled employees on company-plotted farms. The population grew as company servants retired to the colony. In 1688 a large group of French Huguenots arrived in the colony, fleeing Louis XIV's revocation of the Edict of Nantes. In 1658 the first ships of

African slaves arrived at Table Bay; other slaves would soon be delivered from Dutch colonies in Asia.

The Dutch East India Company and, after 1795, the British, struggled to maintain stability as colonial farmers pushed the boundaries of settlement into the interior. While officially off-limits to the slave trade, Africans in and near the Cape Colony experienced an increasingly troublesome relationship with European settlers. During the late 17th century the desire for arable land sparked violent conflict between white farmers and pastoral Khoikhoi peoples, as well as amongst the Khoikhoi themselves. By the late 18th century Cape Khoikhoi had been all but destroyed by dispossession and disease. Between the 1770s and the 1830s African societies were experiencing a period of rapid change and conflict called the Mfecane (the Zulu word used to describe turmoil). While the Mfecane is an incredibly controversial topic among scholars—it refers to a period of warfare and migration caused by the expansion and consolidation of the Zulu kingdom under SHAKA ZULU. Refugees often fled southward into Xhosaland as pressure was mounting from European settlers in the south, who began moving into Xhosa territory during the 18th century. The hunger for land by Africans and a growing population of European settlers only intensified, as did the conflict between and amongst them.

In 1795 the Revolutionary French government invaded the Dutch Republic and established a new regime on a French model and under French control. This new government seized the Cape Colony from the Dutch East India Company. The British, at war with France, perceived French control of the strategic colony at the Cape of Good Hope as a threat and forcibly took it in September 1795. As a result of the Treaty of Amiens, the colony was returned to the Dutch, only to be seized again when hostilities between the French and British resumed. After the defeat of NAPOLEON I, the Cape remained a British colony.

The Cape itself was ecologically inhospitable and lacked, as far as the British knew, many natural resources. The British cared mostly for its place on the sea route to India. Despite few immediate changes to the colony in the wake of British rule, the pace of Anglicization quickened during the 1820s, as did the spread of English-style schools and the introduction of more strictly English models of political, economic, and judicial organization. Starting in 1820 many settlers were imported from Britain. While Dutch-speaking Trekboers had been emigrating from the colony since the 1770s, thousands of Afrikaner Voortrekkers (“pioneers”) left the British colony during the 1830s and 1840s during

a migration known as the Great Trek. It later became a key mythological moment of Afrikaner nationalism.

British occupation also introduced extensive missionary activity to the Cape, starting with the arrival of the Nonconformist London Missionary Society (LMS) in 1795. The role of missionary societies in educating and protecting Africans and in advocating for the abolishment of slavery further intensified already existing hostilities between the British colonial government and the Afrikaners, most of whom resented British presence. In 1833 the British Parliament abolished slavery, enraging many slave-owning settlers while not radically improving conditions for former slaves in the colony. As early as 1809 the British colonial government employed legal ordinances to control the movement and employment of Africans who worked for white settlers in colony. On the frontier, land hunger and conflict between European settlers and Africans generally worsened.

By the 1770s white settlers had moved beyond the colonial boundary into an area west of the Great Fish River called the Zuurveld. The British sought to create a colonial boundary that would separate blacks and whites. In 1811 under the governorship of Sir John Craddock, Colonel John Graham (for whom Grahamstown was named) led a British, Afrikaner, and Khoikhoi force to expel Ndlambe's Xhosa from the Zuurveld. The Xhosa responded by raiding settler farms and stealing cattle. The colonial governor Lord Charles Somerset created a "spoor" system, by which farmers could seek reprisals for their stolen property. The Xhosa chief Ngqika allied with the British against his uncle Ndlambe. In 1819 a prophet named Makhanda Nxele led a massive Xhosa force toward colonial troops at Grahamstown, only to be eventually driven back over the Fish River. With the Xhosa defeat, Somerset abandoned even his Xhosa ally and created a buffer zone between white and Bantu settlements on Ngqika's former land. In 1840 the British forced Ngqika's son Maqoma off of his lands along the Kat River.

The frontier wars continued. During the Sixth Frontier War, the British commander Sir Harry Smith and the colonial governor Benjamin D'Urban invited the Xhosa chief Hintsa to peace talks, only to have him shot dead and his ears cut off. During the Seventh Frontier War (also known as the War of the Axe), the plunder of colonial troops starved the Xhosa into surrender. D'Urban annexed the land between the Fish and Kei Rivers as the Queen Adelaide Province but was forced to rescind his claim by the metropolitan government. In 1850 Sir Harry Smith, now the colonial gover-

nor, provoked the Eighth Frontier War and established a separate British colony named British Kaffraria.

In 1855 the outbreak of lung sickness decimated the Xhosa's livestock. A messianic movement started when a girl named Nongqawuse believed that her ancestors had appeared to her. They told her that the whites would be swept into the sea if the Xhosa destroyed their cattle and crops. The Great Cattle Killing that followed resulted in mass starvation, conflict, suicide, and migration. The colonial governor Sir George Grey used this massive disruption to further expand "civilization" to the area west of the Kei River, where a group of German legionnaires and other immigrants were settled by the colonial government.

Many Voortrekkers had traveled northward into Natal, Transorangia, and the Transvaal with the intention of establishing new states independent from the British. The victory of Andries Pretorius at the Battle of Blood River (Ncome) over the Zulus became a national holiday for Afrikaner nationalists. A possibly fake treaty with the Zulu king Dingaan resulted in the creation of the Afrikaner republic of Natal, its capital at Pietermaritzburg and Pretorius as its president. British colonial administrators worried about destabilization and access to Port Natal (Durban). In 1843 Britain annexed Natal, and most of the Afrikaners abandoned it. In the 1850s two new Afrikaner republics were established: the South African Republic, or Transvaal, and the Orange Free State (results of the Sand River and Bloemfontein Conventions respectively). The British recognized Afrikaner independence north of the Orange and Vaal Rivers. However, the discovery of South Africa's mineral wealth—huge deposits of diamonds and gold—forever changed the political, social, and economic landscape and would renew hostilities between the British and the Afrikaners.

By 1872 the British granted its South African colonies self-government. In a short period of time, the Cape transformed from a relatively poor outpost of empire to a wealthy nexus of gold and diamond mines. Infrastructure rapidly expanded as immigrants with dreams of wealth poured into places like Kimberley. The government at home aimed to consolidate British power on the Cape by creating a federated state with Dominion status. In the Transvaal, efforts to resist British annexation were led by Paul Kruger. Afrikaner forces defeated British colonial forces led by Sir George Colley at Mujuba Hill in February 1881, and the British government led by WILLIAM GLADSTONE made peace with the Afrikaners in 1881, ending the First Anglo-Boer War (the British name) or the First War of Freedom (the Afrikaner name).

In 1886 huge gold reserves were discovered at Witwatersrand in the Transvaal. Kruger recognized the stabilizing importance that such wealth gave his republic, but an increasing population of foreigners, or Uitlanders, seemed to threaten Boer sovereignty. The Uitlanders, conversely, complained about the way they were treated in the Transvaal. In 1895 the colonial governor and mineral baron CECIL RHODES schemed, with the approval of the British colonial secretary Joseph Chamberlain, to overthrow the Transvaal government. The resulting Jameson Raid failed to incite a widespread Uitlander uprising and came to symbolize the British lust for power in South Africa.

Kruger was overwhelmingly reelected as president in 1898. In response, Chamberlain sent Sir Alfred Milner to the Cape as High Commissioner. Milner sought to use Uitlander disenfranchisement to create support for British intervention. Ultimately, the British desired not only gold but also control of a consolidated South Africa. After some negotiations, Kruger, assuming war was inevitable, declared war on the British. The brutally fought Anglo-Boer War, or South African War, was a turning point not only in Anglo-Boer relations but also in the way Europeans treated Africans in South Africa.

CHARLES V. REED

Spain in Africa

Although the coast of Spain is only some 8.7 miles from that of North Africa, and it is possible to go by ferry in less than an hour, Spain has had few colonies on the African continent. Part of this is because until 1492, the Spanish government was more concerned with the Reconquista, the reconquest of Muslim Spain, than with colonial expansion, and as a result Portugal took the lead in voyages around the western coast of Africa. Indeed,

by the time of the capture of Granada in 1492, when the last part of Moorish Spain was taken, and the subsequent departure of Christopher Columbus, the Portuguese had already seized control of the Moroccan port of Ceuta, the Azores, Madeira, the Cape Verde Islands and also the island of São Tomé, and claimed the Canary Islands.

This Portuguese expansion into Africa, and the successful voyage of Christopher Columbus, meant that the Spanish and Portuguese kings came to an agreement over the division of the world. In 1494 Pope Alexander VI issued his *Inter Caetera*, which drew a line of demarcation from the North Pole to the South Pole set at 100 leagues west of the Cape Verde Islands. Lands to the west were awarded to Spain and those to the east to Portugal. However, King João II of Portugal felt that this did not give his ships enough room around the west coast of Africa, and Portuguese and Spanish ambassadors met at Tordesillas in northern Spain and on June 7, 1494, signed the Treaty of Tordesillas, which moved the line to 370 leagues west of the Cape Verde Islands. This was given papal sanction on January 24, 1506, and not only totally excluded Spain from Africa, but also had the result of giving Brazil to Portugal.

However, the Spanish had held two ports on the north coast of Africa. One, Ceuta, had been captured in 1309 by King James (Jaime) II of Aragon, making it the first European colonial possession in Africa (or for that matter anywhere else in the world). Its geographical position and disposition made it an important port in antiquity, with both Hercules and Odysseus from Greek mythology said to have visited it. It had been a Roman and then Byzantine city, but in 931 was captured by the Muslim rulers of Spain, and in 1083 by the Almoravid Arab rulers of Morocco. After the Spanish had taken it in 1309, they were unable to hold it, and the Arabs took it back. In 1415 the Portuguese took the city, and thus at the time of the Treaty of Tordesillas it was Portuguese.

The port of Melilla, on the Mediterranean coast of Morocco, had been an important port of the Phoenicians and then the Romans and, after centuries of obscurity, was captured by Abd ar-Rahman III of Córdoba. In 1496 a Spanish raiding party had landed and stormed the fortress that dominated the town. Led by the duke of Medina Sidonia, they then built their own fortress on a peninsula on the east of the town, which was transferred to the Spanish Crown in 1556. The township (population 70,000, of whom 10,000 are soldiers) has been Spanish ever since. In 1921 the Riff rebels came close to taking Melilla. Fifteen years later General Francisco Franco

launched the Spanish civil war. Morocco has regularly made diplomatic overtures to regain the town, but Spain has maintained its hold, and administratively, Melilla is a part of the Spanish mainland province of Málaga.

In addition, the Spanish also held the Canary Islands, geographically also a part of Africa. The Portuguese had claimed possession as early as 1345 in a letter from King Afonso IV of Portugal to Pope Clement VI. However, by the Treaty of Alcáçovas, Portugal recognized Spanish sovereignty over the Canaries, which the Spanish completely conquered and occupied by 1496. These islands proved to be important in all four voyages of Christopher Columbus, and many subsequent missions across the Atlantic, including that of Hernán Cortés. Francis Drake attacked the Canary Islands in 1585; so, too, did Admiral Blake in 1657—his ships were the first to attack the forts in Las Palmas. In 1797 the local forces at Santa Cruz de Tenerife defeated the British admiral Horatio Nelson, the only defeat in his career—and one which cost him his right arm. The Canary Islands were a single Spanish province until 1927; they are now two provinces of Spain, Las Palmas and Santa Cruz de Tenerife, and are a popular holiday destination for Britons and many northern Europeans.

Thus, with the exception of Melilla (and the Canary Islands), from the time of the Treaty of Tordesillas, Spain did not involve itself in African affairs. However, in 1579 the situation changed, allowing Spain to establish a foothold in Africa. On August 4, 1579, a Portuguese expeditionary force led by their king, Sebastião of Aviz, was destroyed at the Battle of the Three Kings at Alcácer-Quivir in northern Morocco. Sebastião had been trying to put his candidate on the throne of Morocco, and the battle saw Sebastian and his Moroccan ally face the Sharif of Morocco (hence three “kings”). As Sebastião II was only 24 and had no children, his uncle, King Philip II of Spain, succeeded to the Portuguese throne (as Philip [Filipe] I of Portugal). Philip promised to maintain the separate Portuguese governmental institutions and bureaucracy and did so. However, he did regain Spanish control over Ceuta; Portugal recognized the Canary Islands as Spanish territory. Melilla, Ceuta, and the Canary Islands remain part of Spain to this day, as do the islands of Penon de Vélez de la Gomera and Alhucemas, which were taken by the Spanish during the 16th and 17th centuries.

Ceuta returned to Spanish rule in 1580, and the Spanish government set about fortifying it and establishing a permanent garrison. As a peninsula jutting into the Mediterranean, the port is partly enclosed by a peninsula, with the Fortress of Hacho located on the furthest

part of that peninsula, making it very hard to attack by land. Indeed, to do so an army would have to fight its way through the town, which occupies the thinnest part in the middle of the peninsula. The port has long been associated with the Spanish Foreign Legion, which was established in 1920 to ensure the Spanish Protectorate of Morocco remained in Spanish hands. As with Melilla, the town’s economy is helped by tax advantages offered by the Spanish government, which also has a large number of soldiers based there; the modern Kingdom of Morocco has made several diplomatic overtures for the return of Ceuta, but to no avail.

Most of Spain’s interests in Africa have centered on Morocco, but apart from Ceuta, Melilla, and two small islands, there was no plan to take over the country until the 1890s. Finally in 1904 France and Spain concluded a secret agreement for partitioning Morocco into two zones, and the British and Italians agreed to this in return for France dropping its claims to Egypt and Libya. In the Treaty of Fez in 1912, the Spanish were given the mountainous regions around Melilla and Ceuta (which became French Morocco), as well as some territory along the Atlantic coast (loosely known as Spanish West Africa). While the French reached an accommodation with the sultan of Morocco, the Spanish faced many problems, partly caused by the nature of the territory they held.

Spanish Morocco had no major cities except Tetuan, which became the administrative center. Most trade from there went through either Tangier, which was an international city, or through Ceuta or Melilla, both Spanish possessions. It did help Spain maintain her hold on her two ports, but the region was underdeveloped and communications were very bad.

Spanish West Africa was essentially divided into a large administrative unit known as the Spanish Sahara. Sometimes known as Río de Oro, it was almost entirely desert with very little agriculture and was administered, from the Canary Islands. There was also a southern enclave called Cape Juby, where a British engineer had established a commercial factory that he later sold to the sultan of Morocco.

The only other Spanish possession in Africa was what is now Equatorial Guinea. This consisted of an island, Fernando Póo, and the adjoining mainland, known to the Spanish as Río Muni. The island of Fernando Póo had been discovered by a Portuguese sailor Fernão do Poo in 1472 and then acquired by Spain under a treaty in 1778. From 1827 until 1843 it was leased to the United Kingdom, which used it as a naval base to try to stop the slave trade, whereupon it was returned to Spain. The

mainland, Río Muni, was officially known as Spanish Guinea, and this was proclaimed as a Spanish protectorate on January 9, 1885. On July 30, 1959, Spanish Guinea was divided back into Fernando Póo and Río Muni (which included Elobey and Corisco), and these became two overseas provinces of Spain. On October 12, 1968, the two were again merged to form the Republic of Equatorial Guinea, and five years later Fernando Póo was renamed Macias Nguema Biyoga after the president of the country. It is now known as Bioko.

JUSTIN CORFIELD

Spanish-American War

In 1898, in a war marking the emergence of the United States as a major imperial power, the United States wrested from Spain its remaining colonies in the Caribbean and Pacific: Cuba, Puerto Rico, Guam, and the Philippines. The short-term trigger of the war was the events in Cuba, with the Cuban revolutionaries on the verge of defeating the Spaniards and achieving outright independence. The sensationalist "yellow journalism" of the Hearst newspapers, which popularized the perception that the Spaniards were inhuman brutes committing atrocities against the childlike Cubans, had played a key role in laying the groundwork for U.S. intervention in Cuba.

The explosion aboard the U.S. battleship *Maine* in Havana Harbor on February 15, 1898, which killed more than 260 people, provided the *casus belli* that the United States had sought. On April 25 the U.S. Congress, at President William McKinley's request, declared war on Spain. Historians generally agree that the longer-term causes of the war were rooted in the previous eight decades of U.S. interest in acquiring Cuba; the late 19th-century process of European empire-building in Asia and Africa, which heightened U.S. policy-

makers' desire to compete with European powers for markets and territory; and the desire of political leaders to distract the nation's attention from pressing domestic issues, including a severe economic depression and an upsurge in labor and popular unrest. More recent scholarship also emphasizes the desire of a new generation of political leaders, epitomized by McKinley's assistant secretary of the navy Theodore Roosevelt, to prove their "manliness" by going to war, as their predecessors had done in the U.S. CIVIL WAR.

Called the "splendid little war" by U.S. Secretary of State John Hay, the war with Spain began in April and was concluded in August. Altogether, some 5,660 U.S. military personnel died in the war—460 in battle or of wounds suffered in battle, and 5,200 from disease. Casualties among Spaniards, Cubans (in their war of independence), and Filipinos were much higher. At the same time as U.S. forces were invading Cuba, another contingent occupied Puerto Rico; the U.S. military ruled Puerto Rico until the Foraker Act of 1900, which ended military rule and set up a colonial administration. Puerto Rico became a U.S. territory in 1917 with the Jones Act, a law that also made Puerto Ricans U.S. citizens.

THE PHILIPPINES

In the Pacific, the U.S. quickly defeated Spanish forces in the Philippines, though "pacifying" the colony proved far more difficult. On May 1, 1898, the fleet of U.S. Commodore George Dewey entered Manila Bay and destroyed the Spanish fleet anchored there; U.S. forces occupied the capital city of Manila in July. Soon afterward, a nationalist resistance movement against the U.S. occupation erupted under the leadership of Emilio Aguinaldo. The war against Aguinaldo's forces lasted nearly four years, involved some 200,000 U.S. troops, and resulted in the deaths of more than 50,000 Filipinos. In March 1901 U.S. forces captured Aguinaldo, severely weakening the resistance movement, and by 1906, U.S. forces had triumphed.

The Spanish-American War formally ended in December 1898 with the Treaty of Paris, which granted the United States formal control of Cuba, Puerto Rico, Guam, and the Philippines, in exchange for \$20 million. In the United States, debates swirled about the terms of the treaty and the fate of the conquered territories. Some favored annexation, others independence, and still others various forms of formal and informal colonization. After much debate, the U.S. Senate ratified the Treaty of Paris on February 6, 1899. The precise nature of U.S. rule that emerged in later

An illustration for McClure's magazine of troops on the march in 1898: The Spanish-American War marked the emergence of the United States as a major power, able to compete with European nations.

years changed over time and varied from territory to territory, as evidenced by the formal independence of Cuba in 1902 (with the United States retaining control of Guantánamo and limiting the Cuban government's right to conduct an independent foreign policy, by the terms of the 1901 Platt Amendment), the formal independence of the Philippines in 1946, and the contemporary commonwealth status of Puerto Rico and Guam.

MICHAEL J. SCHROEDER

Spanish Bourbons

The Spanish Bourbons are the ruling dynasty, or family of rulers, of Spain. The dynasty was established by Philip V, grandson of Louis XIV of France, in 1700 following the death of the childless Charles II of Spain. The Spanish Bourbon (Borbón) dynasty has been overthrown and restored several times, ruling from 1700 to 1808, 1813 to 1868, 1875 to 1931, and from 1975 to the present.

Philip, duc d'Anjou, was the second son of the dauphin, son of Louis XIV of France and heir to the French throne. Charles II, king of Spain and a member of the Habsburg dynasty, had no children. He adopted Philip, great-grandson of Philip IV of Spain, as his heir. When Charles II died in 1700, the right of Philip to the Spanish throne was disputed by the major European powers out of fear that Bourbon rulers on the thrones of both France and Spain would upset the existing balance of

power. Known as the War of the Spanish Succession, Philip's right was upheld following the war's conclusion with the Treaty of Utrecht in 1713. As part of a compromise, the Spanish Bourbons could not inherit the throne of France.

After having two sons with his first wife, Philip V married Elizabeth Farnese of Parma, an Italian duchy, in 1714. Philip V and Elizabeth had two sons that became instrumental in the Spanish Bourbons' attempts to expand their dynastic control into the Italian Peninsula. Philip V occupied Sardinia in 1717, thereby incurring the wrath of a European coalition of Britain, France, Austria, and the Netherlands. In 1720 Philip V abandoned his claim to Sardinia and Sicily but secured the right of Charles, his eldest son with Elizabeth, to the throne of Parma following the current duke's death.

In 1731 Charles became duke of Parma. Philip V abdicated in 1724 in favor of Louis I, his eldest son from his first marriage. The early death of Louis I that year prompted Philip V to re-assume the throne. During the War of the Polish Succession, Philip V formed the Family Compact, an agreement with his uncle and king of France, Louis XV. Philip V's son Charles, now duke of Parma, invaded Naples. During peace negotiations in 1738, Charles ceded Parma to Austria in exchange for Naples and Sicily. During the War of the Austrian Succession, Austria ceded Parma to the second son of Philip V and Elizabeth.

Ferdinand VI, second son of Philip V and his first wife, succeeded his father as king of Spain in 1746. He worked to keep Spain out of the SEVEN YEARS' WAR. Following his death, his half brother Charles, king of Naples and Sicily, inherited the Spanish throne as Charles III. He abdicated the thrones of Naples and Sicily to his third son, Ferdinand, who furthered an Italian branch of the Bourbon dynasty that ruled until the unification of Italy in 1861. Charles III revived the Family Compact with his French relations in 1761 and joined in the Seven Years' War against Britain the following year. He also opposed Britain during the AMERICAN REVOLUTION in 1779.

Charles IV succeeded his father as king in 1788. Royal Spain declared war on the French Revolutionary government in 1793, but made peace in 1795. In 1808 NAPOLEON I, emperor of the French, invaded Spain, leading to an uprising that forced Charles IV's abdication in favor of his son Ferdinand VII. Shortly thereafter, Napoleon grew frustrated with Ferdinand VII's treachery and forced him to return the Spanish throne to his father Charles IV. Napoleon I then forced Charles IV from the throne and replaced him with his own brother, Joseph Bonaparte. The move prompted massive resistance,

known as the Peninsular War, one of the major conflicts of the Napoleonic Wars.

Following Napoleon I's exile in 1814, Ferdinand VII returned to the Spanish throne. Following an uprising in 1820, he was forced to grant a constitution. France, now under control of the restored Bourbon dynasty, invaded Spain in 1823 and revoked the constitution. Although Ferdinand VII married many times, he had difficulty conceiving an heir. In 1833 he, influenced by his wife, abolished the Salic law, which stipulated that the throne could only be inherited through the male line, in order for his daughter Isabella to inherit the throne rather than his brother Don Carlos.

Isabella II became queen in 1833 following her father's death. Only three years old at the time, her mother, Maria Cristina, served as regent. Isabella II's right to the throne was challenged by Don Carlos, whose conservative supporters became known as Carlists. To rally the liberals to Isabella II's favor, Maria Cristina granted a constitution in 1834. A failed attempt to seize the throne by force resulted in the departure of Don Carlos from Spain in 1839. Don Carlos and his descendants perpetuated their claims to the Spanish throne until 1936.

In 1846 Isabella II married her cousin, Francisco de Asís de Borbón. In 1868 a revolution forced Isabel II's abdication in favor of her son, Alfonso XII, in 1870. However, the government elected Amadeo I of the House of Savoy as king of Spain. Shortly thereafter, a republic governed Spain before a Bourbon restoration under Alfonso XII in 1875. He granted a more liberal constitution in 1876 and suppressed a Carlist uprising. When Alfonso XII died in 1885, his heir was still unborn. Alfonso XIII was born in 1886, technically already king for several months. His mother ruled as regent until 1902.

Alfonso XIII married Eugenia of Battenberg, granddaughter of QUEEN VICTORIA of Great Britain, in 1906. He kept Spain neutral during World War I but supported Miguel Primo de Rivera's military coup in 1923. Republican turmoil prompted Alfonso XIII's departure from Spain in 1931. He never formally abdicated, but he lived in exile until his death in 1941. The Second Spanish Republic was overthrown in the Spanish civil war, which resulted in the dictatorship of Francisco Franco. In 1969 Franco named Juan Carlos de Borbón, Alfonso XIII's grandson, as his successor. When Franco died in 1975, the Bourbon dynasty was restored under Juan Carlos I, who oversaw Spain's return to democracy and the constitution of 1978 recognizing the monarchy.

ERIC MARTONE

Statue of Liberty

Since its 1886 installation in New York Harbor, where it was then the tallest structure, this 305-foot, 225-ton copper-clad statue of a stern-faced woman whose torch “Enlightens the World,” has become one of the world’s best-known symbols, as well as one of its more contentious.

The idea of recognizing French-American friendship as the U.S. centennial neared was conceived in 1865 by French jurist Edouard-René Lefebvre de Laboulaye, a longtime admirer of American freedom and foe of NAPOLEON III’s Second Empire. Dining with Laboulaye, Alsatian sculptor Frédéric-Auguste Bartholdi, already known for his monumental works, suggested a statue of heroic size to be situated in New York City.

The United States would be 110 years old before Bartholdi’s immense figure, supported by an iron skeleton designed by French engineer Gustav Eiffel, arose on Bedloe’s Island in New York’s harbor. Although French people, rich and poor, enthusiastically raised money for the statue’s fabrication and transport, President Grover Cleveland vetoed federal funding for an appropriate pedestal, and voluntary American matching contributions lagged. Not until Hungarian-born newspaper magnate Joseph Pulitzer used his *New York World* to admonish New York and the nation were sufficient funds procured for the project to go forward.

Poet Emma Lazarus was also raising funds when she wrote “The New Colossus” in 1883. By the time a plaque engraved with her sonnet was affixed to Liberty’s pedestal in 1903, Lazarus’s interpretation of Bartholdi’s huge figure as “Mother of Exiles” who lifts her “lamp beside the golden door” to welcome “huddled masses yearning to breathe free” had redefined the statue as a maternal symbol of America’s enduring promise to the world’s “wretched refuse.”

The monumental Statue of Liberty, created by sculptor Frédéric-Auguste Bartholdi, under construction

Of course, it was not so simple. The gala unveiling on October 28, 1886, occurred just five months after Haymarket, a Chicago labor protest that turned violent and led to the execution of seven immigrants presumed to be violent anarchists.

As President Cleveland spoke, WOMEN’S SUFFRAGE advocates protested the nearly all-male ceremony for the world’s largest female figure. That year, anarchist and birth control proponent Emma Goldman admired the Statue of Liberty as a symbol of freedom as she arrived in New York from Lithuania. In 1919 she would view the “Mother of Exiles” a final time as she was deported to the Soviet Union during a Red Scare.

In recent years the Statue of Liberty has continued to be a major tourist destination, despite security and structural issues that have limited trips to what is now Liberty Island and exploration of the monument itself. For Liberty’s 1986 centennial, a huge fund-raising drive, headed by major corporations, collected some \$230 million to refurbish the statue and nearby Ellis Island, where, after 1892, newly arriving immigrants were processed in Liberty’s shadow.

Meanwhile, the statue’s rich symbolism continues to inspire humor and protest: advocacy of open immigration and celebration of the republican ideals of liberty that infused both the AMERICAN REVOLUTION and the FRENCH REVOLUTION. In 1989 a 30-foot-high styrofoam figure modeled on the Statue of Liberty was

created by Tiananmen Square pro-democracy protesters. It stood for five days before it was crushed by a Chinese government tank.

MARSHA E. ACKERMANN

St. Petersburg, Treaty of (1881)

The rapidly expanding Russian Empire in Central Asia had reached the northwestern borders of the QING (Ch'ing) Empire of China by the mid-19th century. Xinjiang (Sinkiang), as northwestern China is called, was mainly inhabited by Turkic speaking Muslims, who chafed under Manchu banner troops stationed in the region. A Muslim revolt broke out in Xinjiang in 1864, led by an adventurer from Khokand named Yakub Beg, who proclaimed himself ruler of Kashgaria and part of northern Xinjiang.

This revolt gave Russia the opportunity to intervene. Fearful of Russian ambitions and anxious to protect its interests in India, Great Britain also became involved. This struggle for mastery of Central Asia and northwestern China was called the "Great Game." Both powers saw Yakub Beg as a useful tool. First the governor-general of Russian Turkestan, General K. P. von Kaufman, sent troops that occupied the Ili Valley, Ili city, and the main Chinese fort in Xinjiang and signed a treaty with Yakub Beg that granted Russia many privileges in the region. Not to be outdone, Britain also recognized Yakub Beg's power in Xinjiang and gave him assistance.

The Chinese government could do nothing in Xinjiang until it had suppressed the other rebellions in the country. In 1875 it appointed ZHO ZONGTANG (Tso Tsung-t'ang), the great general-statesman who had played a major role in putting down the other revolts, commander of a force against the Xinjiang rebels. By 1877 Yakub Beg had been soundly defeated and driven to suicide; the rebellion soon collapsed.

Ili, however, remained under Russian occupation. The Qing court appointed a Manchu nobleman Chonghou (Chung-hou) special ambassador to Russia

to negotiate its restoration to China. Inexperienced and unprepared, Chonghou signed the Treaty of Livadia without authorization that ceded 70 percent of the Ili region, including strategic mountain passes, to Russia, agreed to pay Russia a huge indemnity, and other concessions. The Qing government refused to accept this disastrous treaty and sentenced Chonghou to death (due to strong protests by Western government the sentence was left pending the outcome of the renewed negotiations). China then appointed Zeng Jize (Tseng Chi-tse, known as Marquis Zeng in the West), son of the great statesman ZENG GUOFAN (Tseng Kuo-fan) and then minister to Britain and France, special ambassador to Russia to renegotiate the treaty.

An able and well-prepared diplomat, Zeng secured the secret assistance of Great Britain before embarking on the difficult negotiations with the Russians, which culminated in the Treaty of St. Petersburg in 1881. By its terms, almost all the Ili Valley, including the strategic passes, were returned to China, and the number of Russian consulates in the region was reduced, but China did pay an indemnity to Russia.

The Treaty of St. Petersburg reversed the disastrous Treaty of Livadia. The reconquest of Xinjiang and the treaty of St. Petersburg were rare instances of Chinese victory during the late Qing dynasty and were principally due to two men, Zho Zongtang and Zeng Jize. Xinjiang was made into a province in 1884.

JIU-HWA LO UPSHUR

Sucre, Antonio José de

(1795-1830) *South American freedom fighter*

Antonio José de Sucre fought against Spain and alongside SIMÓN BOLÍVAR for the independence of South America. More of a soldier than an administrator, he also served as the first president of Bolivia.

Sucre was born on February 3, 1795, to Don Vicente de Sucre Urbaneja, a colonel in the colonial army, and

Doña Maria Manuela de Alcalá in Cumaná (present-day Sucre), on the northeast coast of Venezuela, then part of the Spanish Viceroyalty of Nueva Granada. He was the seventh child of prosperous Creole parents and the eighth generation of his family to be born in the New World. Among his ancestors were Spanish nobles, Christianized Jews from Flanders, a few Indians, and some African slaves. Sucre received a basic education and then studied mathematics and engineering with a tutor.

As a family of high office and long residence, the Sucre family were natural leaders within the province of New Andalusia. When the revolutionary movement took shape in Caracas and Cumaná in April 1810, the slight but tall Sucre enlisted as a cadet in the company of hussars that his father commanded. The republican government gave him the rank of second sublieutenant for the militia. Sucre served with the hussars until mid-1811, when he was assigned to a corps of engineers that was constructing defenses at the Fort of Margarita. Promoted to the rank of lieutenant in 1812, he was instructed to join the expeditionary force that his father was organizing for the purpose of suppressing the royalist reactionaries in Barcelona. However, the revolution failed, and the new royalist government sought to punish those who were involved with the revolutionary government. Sucre managed to flee to Trinidad, but his father wound up in a dungeon.

When Bolívar launched a second attempt at a revolution in 1813, Sucre joined him. Sucre, now promoted to major, took Cumaná on August 2, 1813. In the attack on Barcelona, Sucre headed the Zapadores battalion, which he founded to provide engineering services. Sucre next served as adjutant to General Santiago Mariño when he routed the army of José Tomás Boves on March 31, 1814, at Boca Chica. Unfortunately for Sucre, the republicans lost the next few battles. At the end of 1815 Sucre fled Venezuela for exile in Haiti. Too short of funds to stay on the island, he moved to Trinidad to get financial aid from relatives.

In 1816 Sucre returned to the South American fight. After participating in the capture of Yaguarapao and the siege of Cumaná with the Colombian battalion, he became the governor of the province of Cumaná. In 1817 Sucre was named to head the Baja Orinoco battalion and subsequently became major general of the Lower Orinoco. Modest, loyal to Bolívar, and absolutely dedicated to independence, Sucre gained a stellar reputation as a soldier and administrator. In 1820 Bolívar named Sucre to be chief of the general staff and assistant minister of war. He helped Venezuela gain independence later that same year.

Bolívar and Sucre then turned their attentions to Colombia. In August 1821 Sucre marched 1,200 men to Babahoyo. With the Spanish loyalist forces unaware of his presence, Sucre surprised and decisively defeated them at Yaguachi.

In the 1822 Battle of Pinchincha, Sucre concluded the Quito (present-day Ecuador) campaign and obtained liberation for Colombia. Sucre became the political and military governor of the southern department of Gran Colombia. He began working with Bolívar to prepare for the attack on Peru, the center of Spanish control in the Americas. Accompanying Bolívar to Peru, Sucre distinguished himself at the August 1824 Battle of Junín. Bolívar was absent, and Sucre was the chief commander when the Battle of Ayacucho was fought in December 1824. The generous terms that he granted to the loyalist forces were typical of Sucre's magnanimous style. With considerable reluctance, Sucre accepted the presidency of the newly created state of Bolivia. He was never happy in the post. Despite the conciliatory spirit of his rule, an attempt was made on his life. In 1828 he resigned and returned to Quito. A few months later, he led the forces that repelled a Peruvian invasion. He was elected president of the constitutional convention that met in 1830 in an effort to prevent Bolívar's large republic of Colombia from disintegrating. Sucre's efforts to prevent Venezuela from seceding and becoming a separate state failed.

On June 4, 1830, when he was riding back from the congress to his home in Quito, Sucre was ambushed by Apolimar Morillo, José Erazo, Juan Gregorio Sarría, and three accomplices in La Jacoba, a wild mountainous region.

The attack may have been arranged by a rival, José María Obando, who commanded the troops at Cauca. Sucre was shot through the heart. His body remained face down in the mud for 24 hours before he was buried at the side of the road. Upon learning of Sucre's assassination, Bolívar famously stated that Abel had been killed.

Sudan, condominium in

After the British defeated the Mahdist forces at the BATTLE OF OMDURMAN in 1898 they debated how to govern the Sudan. Prior to 1895 the British government had maintained that the Sudan was *res nullius*, or ungoverned territory. With control over Egypt and the vital SUEZ CANAL, British politicians believed that it was also necessary to control all of the Nile River upon which Egypt was dependent for its very survival. The weak Ottoman Empire that ostensibly ruled the Sudan as well as Egypt was powerless to prevent British expansion into the Sudan. Other European powers, including France, Britain's major imperial rival, were pressured into accepting British domination over the Nile Valley.

After some debate the British decided that annexation of the Sudan was impracticable, and Lord Cromer, who ruled Egypt as consul general, devised a hybrid form of dual government. The so-called Anglo-Egyptian Condominium of 1899 provided that Ottoman rights were recognized but not implemented and, through the right of conquest, Egypt would govern and pay for the administration of the Sudan by the British. Herbert Kitchener was appointed the first governor-general, and the territory was divided into six provinces administered by British officers. These officers governed territory far larger than Britain itself. The khedive in Egypt had no power over the Sudan, but the Egyptian treasury was held accountable for many of the expenses for governing the Sudan.

The governor general in the Sudan reported through Cromer in Egypt; a fiscal conservative, Cromer attempted to keep the expenditures in the Sudan as low as possible, a practice that caused considerable dismay among British officers in the Sudan. After Kitchener was recalled to lead troops in the Boer War, Reginald Wingate, the Sirdar, or commander in chief of the Egyptian forces in the Sudan, was appointed the new governor-general; Wingate remained in the position until the middle of World War I, when he became high commissioner in Egypt.

The largest country in Africa, the Sudan was a complex conglomerate of peoples, religions, and languages. The north, with the capital city of Khartoum, was mainly Muslim and Arabic-speaking and was tied culturally and historically to the Arab world.

As the center of government, the north tended to receive more monies for development and education than the more remote and harder to reach southern provinces. The peoples in the southern provinces were ethnically and linguistically tied to other groups in central Africa and practiced traditional African religions or were converted to Christianity.

The deep social and religious differences between the north and the south often broke out into civil wars that continued to plague Sudan into the contemporary era. The political and economic linkage between Egypt and the Sudan that the British had devised also became a major stumbling block in diplomatic negotiations between Britain and Egypt. Given the major financial contributions to the Sudan by Egypt, Egyptian nationalists, not surprisingly, contended that Egyptian and Sudanese independence were intertwined and that Egypt should have a role in deciding how the Sudan was to be governed. On the other hand, Britain steadfastly refused to link the two issues. Under the British administration, a separate Sudanese nationalist movement evolved, but Britain did not grant the Sudanese independence until 1956.

JANICE J. TERRY

Suez Canal

Ferdinand de Lesseps, a Frenchman with support from NAPOLEON III and Empress Eugénie, was the major force behind the construction of the Suez Canal; he also subsequently pushed for the construction of the Panama Canal. The Suez Canal created a direct link between the Mediterranean Sea and the Red Sea and was a much shorter and direct trade route from Europe to Asia than the long and often dangerous route around Africa and the Cape of Good Hope. In 1855 de Lesseps persuaded his friend Said, the khedive of Egypt, to grant him a broad concession to build the canal. At the time the British opposed construction of the canal because many thought it would not be financially profitable, and others wanted to limit French imperial ambitions.

Undeterred, de Lesseps launched a major campaign to raise money to finance the canal through the sale of stock. Preference shares went to Said for granting the concession; founder shares were held by the organizers or given to influential personages, and public shares were sold in Europe and the United States, where, largely owing to the CIVIL WAR, they went mostly unsold.

One of the largest engineering feats of the age, the Suez Canal created a direct link between the Mediterranean and the Red Seas.

Said took most of the unsubscribed shares, and digging for the canal began in 1859. Said also agreed to provide forced labor through the *corvée* of Egyptian peasants, or *fellaheen*, to build the canal. The forced labor was supplemented by paid foreign labor and machinery that cost twice as much as manual labor. At the time the Egyptian economy was booming, as, with the lack

of cotton from the United States, the price of cotton, Egypt's main export, was high. The 100-mile canal was finished in 1869 and opened with great pomp and circumstance. During its first years, the canal operated at a loss, but revenues gradually increased. In 1874 KHEDIVE ISMAIL, facing bankruptcy, sold his ordinary shares of the canal to the British for the bargain price of 4 million pounds. However, Ismail ultimately was forced to turn over control of the Egyptian economy to the international *Caisse de la Dette* run by Europeans. The canal became the major trade route for the transport of goods and personnel between England and the British Empire in Asia. The desire to protect British interests in the canal was a major motivating factor behind the British occupation of Egypt in 1882. Although the Suez Canal was on Egyptian territory and had been built largely with Egyptian labor, it remained under foreign control until the Egyptian leader Gamal Abdul Nasser nationalized it in 1956.

JANICE J. TERRY

Taiping Rebellion

Among the many rebellions that enveloped China in the mid-19th century, the Taiping Rebellion (1850–64) caused most devastation and posed the greatest danger to the QING (Ch'ing) DYNASTY. The rebellions had many causes, the most serious being the population explosion, the result of prolonged peace and the introduction of new and better yielding crops. By the early 19th century, the available land could no longer sustain the burgeoning population, and there were no industries to absorb the surplus labor force. Natural disasters in the 1840s along the Yellow and Yangzi (Yangtse) River valleys further devastated the economy. Politically, the Qing dynasty was in decline, evident in the pervasive corruption among the bureaucracy. Defeat by Great Britain in the First ANGLO-CHINESE OPIUM WAR further discredited the dynasty and brought to the fore latent anti-Manchu sentiments among the majority Han Chinese.

The Taiping Rebellion was led by HONG XIUQUAN (Hung Hsisu-chuan), whose ambition to pass the state examinations and thus join the elite bureaucracy had been quashed by repeated failures. While in Canton waiting for the exams, he had met Protestant Christian missionaries who gave him religious tracts. He later equated their messages with visions he experienced while in a delirium during an illness after failing the exams for the fourth time. He claimed to be the second son of God and younger brother of Jesus and further stated that God had entrusted him with a mission to rid

the world of demons and establish a heavenly kingdom on Earth. Hong studied briefly with an American missionary, gaining some knowledge of the Old Testament, but was not baptized. In 1844 he founded the Society of God Worshippers and began preaching his version of Christianity among poor people in Guangxi (Kwangsi) province in southern China.

An unsuccessful attempt by the Qing government to suppress the movement in 1850 ignited the rebellion. Hong then proclaimed himself the Heavenly King and his movement the Taiping Tianguo (Taiping t'ien-kuo), or Heavenly Kingdom of Great Peace. His foremost lieutenant Yang Xiuqing (Yang Hsiu-ch'ing), who claimed to be the third son of God and the Holy Spirit, became the Eastern King, while other supporters were given ranks as lesser kings and nobles. The Taiping army enjoyed tremendous success as it marched northward, culminating in the capture of Nanjing (Nanking) in 1853; it was renamed Tianjin, or the Heavenly capital, but the movement failed to gain headway north of the Yangzi Valley.

Early Taiping success is attributable to the appeal of its messianic message, the prevalence of anti-Manchu sentiments in southern China, strict military discipline among its troops, and promise of social and economic reforms. The reforms, on paper, included nationalization of land and its distribution to men and women, a new calendar, equality between the sexes, revamping of the examination system to allow more candidates to succeed, and various modernization measures. However, most of the promised reforms

were unrealized because the Taiping leaders showed a lack of ability to govern and evidenced a great interest in giving themselves perks and privileges. Moreover, the leaders began quarreling among themselves. Both Hong and Yang claimed to receive messages from God, and their rivalry degenerated into a bloody conflict in which Yang was defeated and killed. Hong thereafter trusted no one except his mediocre relatives and retired to a life of hedonism among his women. Western nations that were initially interested in the Taiping government because of its Christian trappings were quickly disillusioned by its bogus Christianity and its theocratic and universal claims. Finding the Qing government easier to deal with, they then proclaimed their neutrality in the conflict.

The Qing government also found in ZENG GUOFAN (TSENG KUO-FAN) a committed Confucian scholar-official of great ability and integrity. Zeng organized a militia among men of his home province (Hunan). They first cleared Hong's men from Hunan and then expanded the anti-Taiping forces with the aid of Zeng's able colleagues and lieutenants, including Westerners and their modern arms. They reformed the administration in areas that they reconquered and ultimately gave the people a better alternative to the failed Taiping model. Nanjing was captured in July 1864; Hong died; and the rebellion ended.

Some historians claim the Taiping movement as revolutionary but others dispute this claim on the basis that the Taiping leaders showed no real revolutionary spirit or wish to introduce fundamental changes to society. While the Taiping ideology showed some revolutionary elements, in practice the regime did not change social relations or better the lot of peasants. Rather, the Taiping leaders regarded their success as a way to attain elite status.

The rebellion ultimately failed due to inconsistencies in the policies of the movement, strategic mistakes, internal dissension, and refusal to cooperate with other rebel movements for not following their brand of Christianity. Conversely, the anti-Taiping forces led by Zeng Guofan demonstrated integrity and ability, and their commitment to Confucian ideology was more in tune with the temper of the time. The rebellion devastated a huge area in southern China and caused upward of 20 million in lost lives. It also resulted in a shifting in the internal balance of power in China from the central government in Beijing (Peking), whose banner army had not been able to handle the rebellion, to Han Chinese loyalists who defeated the rebellion by raising local forces. The defeat of the Taiping and

other mid-19th century rebellions and the domestic reforms and modernizing measures called the TONGZHI (T'ung-chih) RESTORATION gave the Qing dynasty a new lease of life.

Talleyrand, Charles-Maurice de

(1754–1838) *French diplomat*

Charles-Maurice de Talleyrand-Périgord was one of the best-known diplomats in European history, having served the throne of France from the time of Louis XVI (the nation's last absolute monarch) to Louis-Philippe (the last king), a time that encompassed the French Revolution and Napoleon. An aristocrat denied his inheritance because he was physically unfit for the military service traditionally taken by his family, he first sought a career in the church. Though he was ordained a priest and was later named bishop of Autun, he was not a pious man, and, in fact, was likely an atheist. His interest in the church was in its institutions and social merits, not any supernatural matters.

During the FRENCH REVOLUTION, he helped to secularize the church and its properties in France and was excommunicated by Pope Pius VI. He personally proposed the Civil Constitution of the Clergy, which dissolved monastic orders in France, made the offices of bishop and priest elected ones, and denied any authority of the pope over French clergymen. The constitution stood from 1791 to 1795.

Talleyrand helped France avoid war with Britain during the Revolution, while cultivating friendships with NAPOLEON I and Lucien Bonaparte. Talleyrand participated in the coup that brought Napoleon to power and was made his foreign minister—though the two rarely agreed about foreign policy. He rose to power quickly, becoming grand chamberlain of the

Charles-Maurice de Talleyrand served two French monarchs, skillfully negotiating during times of revolution and imperial rivalries.

empire and prince of Benevento. Once so positioned, he felt freer to distance himself from Napoleon's policies when he disagreed with them, and he resigned his ministry in 1807 over a disagreement with Bonaparte. In 1812 Napoleon made Talleyrand his representative in meetings with the Russian czar ALEXANDER I—and Talleyrand responded by becoming a Russian secret agent, selling Napoleon's secrets and reporting to Alexander in the future. Talleyrand was instrumental in restoring the Bourbons to power to succeed Napoleon and was an important negotiator in the Treaty of Paris, which helped to repair French-European relations after Napoleon's abdication.

For most of his remaining life, Talleyrand stayed out of the limelight, offering comment more than action, and probably brokering and breaking deals behind the scenes. He remained a womanizer and gourmand throughout his life and was a good friend of Alexander Hamilton despite the latter's reputation for decadence. His home in Paris is now the American embassy.

BILL KTE'PI

Tanzimat, Ottoman Empire and

The Tanzimat, meaning “reorganization,” was a series of reforms within the Ottoman Empire during the 19th century. Sultan Mahmud II initiated a number of sweeping reforms in order to strengthen the empire by centralizing administrative control and breaking the power of local provincial governors and the janissaries. He also supported reforms to Westernize the education system and established military and engineering schools. Although Mahmud II wanted mandatory elementary education, the Ottoman government lacked the financial wherewithal and personnel to make it a reality.

Like MUHAMMAD ALI in Egypt during the same era, Mahmud II sent students to Europe; he also hired French and Prussian army officers to train his new military. Mustafa Reshid, who served in many official positions, including grand vizier, helped to implement these reforms. Key reformers during the Tanzimat era included Mehmed Emin Ali Pasha and Kecehizade Mehmed Fuad Pasha, both of whom were mentored by Mustafa Reshid. Ali Pasha was the son of a shopkeeper and worked his way up in government service to the position of grand vizier. Fuad Pasha came from a wealthy family; fluent in French, he negotiated with a number of foreign powers. He often served as foreign minister when Ali Pasha was vizier, and when Fuad Pasha was vizier, Ali Pasha often served as foreign minister.

The reforms were supported and enlarged upon by Sultans Abd al-Majid and Abd al-Aziz. As part of the price for their support of the empire in its struggles against Russia, the European powers pushed the Sultan to institute sweeping reforms that often favored minorities within the empire, particularly Christians, as well as European financial interests.

The Hatti-Sherif Gulhane, the Imperial Rescript of the Rose Chamber, in 1839 declared the security of life and honor of Ottoman citizens, provided for tax reforms and the end of tax farming and abuses. It also mandated orderly army recruitment, fair trials with the creation of a council of justice, and equality of religious practices. The rescript ended the extra tax levied on religious minorities and their exemption from military

service. The Hatti Humayun, or Imperial Rescript, of 1856, was forced upon the Ottoman government following the CRIMEAN WAR. It expanded on the earlier reforms and stressed that all Ottoman subjects regardless of religion were to be treated equally. Some elected local assemblies, with advisory functions, were created. Proposed new laws were debated by the Tanzimat Council and approved by the Council of Ministers.

The Ottoman Land Law of 1858 aimed to increase agricultural production but had some unforeseen social and economic results. The law forced the registration of land, but many fellaheen (peasants) were traditionally reluctant to register anything from land to births for fear of government taxation and conscription of their sons into the Ottoman military. The educated, urban class, who had the disposable income to bribe their way out of heavy taxation and to pay for their sons to avoid the military, took advantage of the weakness of the peasantry to gain title to vast tracts of land, thereby creating a new landed gentry of often absentee land owners. Many peasants lost their traditional land holdings and were forced to become tenant farmers. This resulted in the further impoverishment of the peasantry in many parts of the empire, particularly in greater Syria.

A civil law code (Mecelle) was put in place in 1869 and expanded in 1876. The new code, modeled on European legal systems, was largely formulated by Ahmed Cevdet Pasha. Under the new legal system, religious law was separated from civil law. A Judicial Council that included both Muslims and Christians dealt with appeals to new civil laws. The old *millet* courts continued to deal with matters involving religious law. The creation of a new secular legal system to the detriment of the old shari'a (Islamic law) was opposed by many conservative and religious elements, such as the WAHABI MOVEMENT in the Arabian Peninsula, who refused to adopt civil laws and maintained the shari'a.

International investment, largely from Europe, increased in many parts of the Ottoman Empire. The 1838 British-Ottoman commercial convention granted the British highly favorable trading terms, and British commerce with the empire flourished. However, the influx of European goods hurt many local manufacturers, especially in the textile industry. As Ottoman expenditures on the army, which grew in numbers, and new government offices created under the Tanzimat increased, so too did the Ottoman indebtedness to European banks and investors. Foreign ownership and investments in new communication lines and railways also mounted. The capitulations, favorable legal and commercial status, including exemption from taxes,

granted by the Ottomans to foreign residents in the empire, gave foreign merchants competitive advantages against local entrepreneurs. Foreign consuls frequently exercised extensive authority in local areas, even getting legal cases against their citizens dropped. Some Ottoman citizens were able, by legal and illegal means, to secure foreign citizenship and thereby enjoy the extra privileges granted foreign nationals.

Although ports and cities, such as Izmir, Alexandria, and Beirut, grew in size, the majority of the population remained rural and continued to maintain their traditional lifestyles. In urban areas, especially in coastal cities where there were growing European populations, Ottoman elites adopted Western fashions in dress and emulated Western life styles in everything from the architecture of their homes and household furnishings to food, literature, and music.

The number of schools following Western educational models increased. Educational and social opportunities for women in urban areas improved. By the 1850s a teachers' training school for women had been established, and many secular schools replaced traditional religious ones. Missionary schools such as Roberts College (present-day Bogazici University) in Istanbul, Syrian Protestant College (present-day American University of Beirut) and the French Jesuit Université de St-Joseph in Beirut educated a new generation of liberal, Western-looking elites. Many of their graduates became leaders of the cultural reforms and nationalist movements in the late 19th and early 20th centuries. A new elite emerged, including the young Ottomans, who supported political reforms and the creation of a constitutional monarchy and a parliament along Western lines.

However, no matter how committed Ottoman sultans and officials were to implementing these sweeping reforms, the Ottoman government simply could not provide enough qualified administrators or judges to implement the reforms. The effects of the reforms were most evident in urban and coastal areas. The vast rural hinterland remained largely untouched by the process of Westernization and secularization. As the economic and social gaps between the urban, Westernized elites and local middle class and the traditional, highly religious peasantry grew, societal tensions and conflict escalated.

JANICE J. TERRY

Texas War of Independence and the Alamo

Texans have long taken pride in their state's unique history as the only state in the Union to have fought for and achieved independence as a republic. For nearly 10 years, from April 1836 to December 1845, the Republic of Texas (or Lone Star Republic) existed as a sovereign nation-state—not recognized by Mexico for its illegal secession from the Estados Unidos Mexicanos (United Mexican States), and not annexed by the United States, despite the desire for annexation among many of its Anglo-American citizens. During this decade, the sectional divisions between North and South prevented Senate agreement on admission to the Union of another slave state.

The long-term roots of the Texas War of Independence lay in the rapid expansion westward of the southern cotton and slave plantation system, especially after the widespread adoption of Eli Whitney's cotton gin after 1793 and the LOUISIANA PURCHASE of 1803. Cotton monoculture was extremely destructive of soils, prompting slaveholding cotton growers to seek new lands to the west. In the 1810s and 1820s many were drawn to Alabama, Mississippi, and further west to the fertile valleys of East Texas. In late 1820 Moses Austin, a leading lead mining and manufacturing entrepreneur, received permission from the Spanish government to settle 300 Anglo-American families in present-day San Antonio. He died soon after.

Within the year, his son, Stephen F. Austin, secured permission for the settlement from the newly independent Mexican government. The colony's population grew rapidly. In 1830 the roughly 10,000 Anglo-American settlers in East Texas outnumbered Mexicans by around two to one.

On September 15, 1829, the Mexican government abolished slavery throughout the republic, including the territory of Texas, but the Anglo-American colonists ignored the law. They also ignored Mexican laws mandating adherence to Roman Catholicism,

Battle of the Alamo: The Mexican army overwhelmed and killed all the defenders of the Texan fort.

and an 1830 law banning further Anglo colonization of the territory.

Tensions mounted through the early 1830s. Following a series of armed clashes in 1832, the Texas settlers held conventions in 1832 and 1833 demanding reforms from the Mexican government. The pivotal moment came with the passage of the Siete Leyes (Seven Laws) in December 1835, amending the 1824 Mexican constitution, effectively curtailing the political autonomy of states and territories, including Texas. The Anglo-Texans rebelled, and on March 2, 1836, Texas declared independence from Mexico, naming David Burnet provisional president and Sam Houston supreme military commander. Mexican president JOSÉ ANTONIO LÓPEZ DE SANTA ANA took to the field with some 6,000 troops. Crossing the Río Grande, he determined to take the San Antonio de Valero Mission in San Antonio de Béxar, also known as the Alamo, garrisoned by some 180 men under William B. Travis. After a two week siege, on March 6 the Mexican army overwhelmed and killed all the defenders, most famously Travis, Jim Bowie, and Davy Crockett. “Remember the Alamo!” became the rallying cry for the Texas army.

An even more consequential military episode took place several weeks later at the small town of Goliad, where several hundred troops under Texas colonel James W. Fannin surrendered to Mexican general José Urrea. To these were added prisoners from other engagements. All were ordered shot by Santa Anna. The infamous “Goliad Massacre” of March 27, 1836, in which an estimated 342 Texan prisoners were executed by firing squads, inflamed the passions of the

Texans. A few weeks later, in the decisive engagement of the war, on the afternoon of April 21, 1836, General Houston, at the command of some 900 men, launched a surprise attack on the Mexican army encamped on the banks of the San Jacinto River. The battle was over in less than 20 minutes. Houston later reported 630 Mexicans killed and 730 taken prisoner, with fewer than 40 Texan casualties. The next day, Santa Ana was found hiding in the brush, taken prisoner, compelled to sign two treaties effectively granting Texan independence, and sent back to Mexico City.

The Mexican government later refused to recognize Texan independence. Texas twice applied for annexation to the United States (in 1836 and 1844) but was prevented by a coalition of northern senators fearing the addition of another slave state to the Union. Texas joined the Union as the 28th state on December 29, 1845, its foundational mythologies becoming an integral part of the expanding nation's stock of shared stories—especially events at the Alamo—mythologies that glorified Anglo Texans' heroism, decried the treachery of the Mexicans, and elided the contradictions of a struggle for freedom waged by men holding slaves in perpetual bondage. The state's strong sense of nationalism endures to this day.

MICHAEL J. SCHROEDER

Tilak, B. G.

(1856–1920) *Indian nationalist leader*

Lokmanya Bal Gangadhar Tilak was a prominent militant nationalist leader of the Indian freedom movement against British rule. He was born in Ratnagiri to a family of Brahmans in 1856. His father was an officer in the educational department. Tilak passed the bachelor of arts examination from Deccan College in 1879 and received a bachelor of law from Elphinston College, Bombay (now Mumbai).

He was one of the founders of the New English School, Pune, and taught there in 1880. The success of the school encouraged him and his colleagues to set up the Deccan Educational Society in October 1884, and the following year the society opened Fergusson College.

Tilak also led influential newspapers—*Kesari* and *Mahratta*, in Marathi and English respectively—in 1881.

Tilak was a radical in politics, but he was not a socialist. He opposed the Age of Consent Act of 1891, saying that the British were interfering in the social life of Hindus.

Tilak was strongly resistant to British rule, advocating an agenda of social conservatism and a return to a golden Hindu past. He became the extremist leader of Indian politics against moderates like G. K. GOKHALE. In the 1890s he championed the cause of peasants and criticized the plague prevention policies of the British government. Tilak was sentenced to prison for 18 months on charges of sedition.

Tilak was interested in the Indian National Congress (INC) right from its inception in 1885, and he was elected its joint secretary in 1895. He was elected to the Bombay Legislative Council in the same year. When Viceroy Lord Curzon partitioned the province of Bengal in 1905, Tilak joined those who opposed it and plunged into a *swadeshi* (indigenous) movement to advocate a boycott on British goods. The agitation galvanized the masses in a boycott of foreign goods. Tilak and his supporters dominated the INC session of 1906, which endorsed the idea of *swaraj*, or self-government. The result was a split between moderates and the extreme nationalists at the Surat session of the INC in 1907, with Gokhale emerging as a leader of the moderates. In June 1908 Tilak was arrested in a bombing case and charged with sedition. Tilak defended himself brilliantly but was sentenced to six years of imprisonment.

After his release Tilak formed the Indian Home Rule League in 1916, which collaborated closely with the Home Rule League of Annie Besant. Both leagues demanded Home Rule or self-government for India after the end of World War I. Because the moderates and extremists of the Congress had realized that a split among them was not serving Indian freedom, Tilak and his supporters returned to Congress again in 1916.

Tilak was among those who signed the famous Lucknow Pact, which endorsed a Hindu-Muslim rapprochement. He then went to England in 1918 to open a branch of the Home Rule League, garnering the support of many Labour party leaders. He caught pneumonia and died on August 1, 1920, in Bombay. His courage, patriotism, and devotion guided latter-day freedom fighters. Mohandas Gandhi honored him as the “maker of modern India.”

PATIT PABAN MISHRA

Tocqueville, Alexis de

(1805–1859) *French politician and philosopher*

Youngest son of an aristocratic Norman family, Alexis de Tocqueville became famous on two continents as an important supporter, interpreter, and critic of democracy. His books on the United States remain enduring analyses of the young republic. Born at the dawn of the Napoleonic era, Tocqueville would serve France during a period of great political upheaval as deputy and minister of foreign affairs. Ousted in the 1852 coup that launched the Second Empire, Tocqueville wrote an essential study of the origins, promise, and failures of the FRENCH REVOLUTION.

Tocqueville was just 25 when he and lifelong colleague Gustave de Beaumont engineered an official trip to the United States in 1831. Their stated purpose was to investigate America's new systems of prison reform, which they did, visiting New York's Auburn and Sing Sing penitentiaries, among others. The two young lawyers planned also to ask a much larger question: Could American democracy be a political and social prototype for a still struggling France?

Beaumont was a distant relative of the Marquis de Lafayette, French hero of the AMERICAN REVOLUTION, and Tocqueville had read the frontier stories of James Fenimore Cooper. Neither was yet fully fluent in English. During eight months in the United States, however, they connected with important Americans, including former President JOHN QUINCY ADAMS; saw slavery and racial discrimination firsthand; lamented the decline of the Native Americans; and toured formerly French Québec, lost to Britain in the SEVEN YEARS'/FRENCH AND INDIAN WAR.

In *Democracy in America*, appearing in two parts in 1835 and 1840, Tocqueville saw America as both a stunning success and a cautionary example of the dan-

gers inherent in a society where all assert equality. He described a restless nation, consumed by commercial values, and warned against tyranny of the majority. Yet he was impressed by American women's relative freedom, the boldness of newspapers, and Americans' propensity for forming voluntary associations.

In the Chamber of Deputies from 1839 to 1852, Tocqueville would work to end international slavery but also supported France's colonization of ALGERIA, even as he denounced misgovernance there, calling French policies "monstrous." In the tumultuous wake of Europe's REVOLUTIONS OF 1848, Tocqueville hoped to become minister of education but instead held the foreign affairs position for a hectic five months.

Essentially an exile in his own country after the ascension of NAPOLEON III, Tocqueville, by then ailing from tuberculosis, took up a topic that had long fascinated him: the Revolution during which his maternal grandfather was executed and his father arrested. The result, in 1856, was the publication of *L'Ancien Régime et la Révolution*, a penetrating sociopolitical portrait of pre-1789 France. Like *Democracy in America*, the book was a financial and critical success.

Alexis de Tocqueville—dutiful aristocrat, public servant, supporter and skeptic of liberal democracy—died at age 54 and was buried in his ancestral village. Renowned at his death, Tocqueville gained new currency in the 1930s, as his writings helped people understand systems as diverse as Nazism and modern American society.

In recent years, admirers have retraced his American trip. In France, a Tocqueville Commission oversees his intellectual legacy, and the U.S. boasts a host of Tocqueville societies, many affiliated with private charitable initiatives.

MARSHA E. ACKERMANN

Tokugawa Shogunate, late

The late Tokugawa Shogunate (1853–67) witnessed the end of the Edo period in Japan, when the country emerged from a period of self-imposed isolation and

modernized from a feudal military society as a result of the MEIJI RESTORATION. The expedition of Commodore MATTHEW PERRY and other dealings with Western governments helped to expose the rift in Tokugawa society and the *bakuban* system between the *fudai daimyo* (feudal lords originally Tokugawa allies), who for nearly two centuries had been favored by the shoguns, and the *tozama* (later Tokugawa supporters), who had been largely excluded from the shogun's favor. It was the Choshu and Satsuma clans of the *tozama daimyo* that began a reaction in favor of the emperor and against the shogun Iesada. Two clans began to assert themselves against the shogunate: the Satsuma clan in southern Kyushu, and the Choshu in western Honshu. Their slogan "Revere the Emperor, Expel the Barbarians," became the battle cry of the movement to overthrow the Tokugawa *bakufu* (military government).

Politically, the Choshu and Satsuma samurai became known as the Imperial Loyalists. In 1857 the emperor Komei got a secret message to the Satsuma and Choshu clans asking for their support against the shogun. In a possible response to that message, in 1859, a Japanese scholar named Yoshida Shoin became involved in a plot to assassinate a representative of the shogun Iemochi. Because of this, he and an accomplice, Kusakabe, were taken by shogun authorities to Edo (now Tokyo), where they were beheaded for treason against the shogun in 1859.

Although the Choshu and Satsuma samurai competed for leadership of the Loyalist Cause, eventually they realized that by making common cause they stood a greater chance for success. In April 1863 Emperor Komei issued his "Order to expel barbarians," and the Choshu samurai forced the shogun to agree to expel all foreigners by July 1863, something which the Choshu leaders knew the Tokugawa were now powerless to do. Thus, they achieved their goal of making the Tokugawa appear even more politically irrelevant than before. At the same time, the Choshu and Satsuma clans, because of their wealth, were able to buy modern firearms from British traders, whose gun-running became a powerful force in what was to come.

Sakamoto Ryoma, a samurai from Tosa, was instrumental in brokering an alliance between the two competing clans in 1866. By this time, the Tokugawa Shogunate had been shown powerless a second—and fatal—time. In 1864 foreign ships had been able to blast a passage through the Shimonoseki Strait to open it to commerce, showing again that the shogun was a paper tiger. Even when Shogun Iemochi created his Shinsengumi, a special samurai corps, in 1863 to keep

his rule even by terror, little was accomplished. By 1866 the Choshu and Satsuma samurai were ripe for rebellion. A shogunal army was sent to restore order among the Choshu in the summer of 1866, but no other clans offered any assistance, and the Tokugawa army was forced to retreat.

In 1867 the two clans came out in open rebellion for the new Emperor Meiji, whose given name was Mutsuhito. In December 1867 the 15th, and last, Tokugawa shogun, Yoshinobu, was forced to surrender to the emperor. The Meiji Restoration of imperial power had taken place. In January 1868 Yoshinobu decided to attempt a final stand at Fushimi, where his forces were crushed. He surrendered to the imperial forces and formally opened Edo to the imperial troops. Emperor Meiji entered the city, and, thus, in January 1868 the Meiji Restoration of imperial power had taken place.

JOHN F. MURPHY, JR.

Tongzhi (T'ung-chih) Restoration/ Self-Strengthening Movement

The Treaty of Beijing (Peking; see AIGUN) of 1860 that ended the Second ANGLO-CHINESE OPIUM WAR and the suppression of the TAIPING and other rebellions in the 1860s gave the QING (Ch'ing) DYNASTY a reprieve. The adjustments and reforms in the post-1860 decades would give the dynasty a new lease on life. The dynastic revival began during the reign of Emperor Tongzhi (1862–74), hence the name Tongzhi Restoration. However, the era extended into the early part of his successor GUANGXU's reign; the expanded period of restoration is called the Self-Strengthening Movement.

Two groups of leaders emerged during this era beginning with the succession of the child Tongzhi. The first group was led by the child-emperor's uncle, PRINCE GONG (Kung), and the Manchu officials who assisted him in conducting foreign affairs. They saw to the implementation of the Treaties of Beijing with Britain, France, and Russia and established new institutions to deal with the Western world. They were the Zongli Yamen (Tsunqli Yamen, forerunner of the Ministry of Foreign Affairs); the Superintendencies of Trade for the Northern and Southern Ports that supervised trade with the Western nations; the Tongwenguan (T'ung-wen kuan), a school to train students in Western languages and also to teach new subjects; and the Maritime Customs Service to collect customs as mandated by the treaties. Young men were also sent to study in the United States in the 1870s. Prince Gong also had works on international law translated into Chinese and sent retiring U.S. minister to China ANSON BURLINGAME and Chinese diplomats as roving ambassadors to Western nations to renegotiate treaties for China.

The second group of leaders was Han Chinese who worked with Prince Gong. They were governors of provinces and leaders of local armies that defeated various rebels and began a process of modernization in areas they governed. The foremost among them was ZENG GUOFAN (Tseng Kuo-fan), who formed a militia to defend his native Hunan Province from the Taiping rebels. His able lieutenants, most notably LI HONGZHANG (Li Hung-chang) and ZHO ZONGTANG (Tso Tsung-t'ang), also formed militias in Anhui and Zhejiang (Chekiang) Provinces.

Together these men defeated the Taiping Rebellion in 1864, the NIAN REBELLION in 1868, followed by the MUSLIM REBELLIONS. Zeng, Li, Zho and their colleagues were scholars-administrators-generals whose military victories were accompanied by genuine reforms based on traditional Confucian principles that led to economic recovery.

They, as well as Prince Gong, were also keenly aware of Western military and technological superiority and were quick to employ Western military experts such as CHARLES GORDON of Britain to train Chinese soldiers in Western techniques of fighting and the use of modern Western firearms. They additionally established new arsenals, shipyards, and factories to manufacture arms. As provincial governors, these men also strove to modernize China's economy by opening mines and building industries.

However, as China's defeat by France in 1885, and the much more catastrophic defeat by Japan in

1895 showed, the Self-Strengthening Movement failed effectively to modernize China and ensure its survival from imperialist encroachments. Many factors explain this failure. Foremost was the lack of leadership in the central government. Prince Gong was increasingly sidelined and finally dismissed by the ambitious and power-hungry mother of Tongzhi, the dowager empress CIXI (Tz'u-hsi), whose extravagance and ignorance of the world plunged China into repeated disasters. For example, she siphoned funds intended for building a modern navy to build and furnish a summer palace for herself, with the result that the inadequately equipped fleet was destroyed by Japan in the SINO-JAPANESE WAR. Her corrupt minions pocketed the already inadequate funds needed for reforms and modernization. She also crushed the reform movement initiated by her nephew Emperor Guangxu in 1898, and finally her xenophobia led to the catastrophe of the Boxer Rebellion in 1900.

That she was able to abort all reform and self-strengthening initiatives and eliminate their leaders also showed the strength of conservatism among Chinese officials who clung to their visions of the past and rejected the modern world and reactionary Manchus who feared the loss of power. These men gave her support. Many other factors contributed to the long term failure of the attempt at dynastic revival. One was the huge size and diversity of China and the strength of its culture and traditions. Because China had in past eras been defeated by neighboring peoples, but had eventually absorbed and overpowered them, many failed to realize that the Western incursion was fundamentally different in nature and could not be dealt in the same way. Also, those "Restoration" movements in the past that had succeeded had invariably been led by a powerful national leader aided by dedicated lieutenants. Both Tongzhi and Guangxu came to the throne as very young boys (the latter was chosen and adopted by Cixi precisely because he was only three years old), necessitating long regencies. Thus, Cixi ruled China from 1862 until she died in 1908. By the time of her death, the Self-Strengthening Movement collapsed, and the European great powers and Japan were on the verge of carving up China.

JIU-HWA LO UP SHUR

Toussaint Louverture

(1744–1803) *Haitian rebel leader*

Symbol of slaves' struggles for freedom and dignity in the age of revolution, the onetime house slave Toussaint Louverture assumed leadership of the HAITIAN REVOLUTION soon after its outbreak in August 1791. For more than a decade Toussaint led the island's ex-slave insurgent forces—first as an independent rebel chieftain; then, after the French abolition of slavery on the island in 1793, on the side of the French against the British and Spanish; then, as a renegade French officer after the decision of NAPOLEON I to retake the island and reestablish slavery. In June 1802 at the height of the French invasion, Toussaint was betrayed by his own men, turned over to Napoleon's army, transported in chains to Brest, and then to Fort-de-Joux prison in the Jura Mountains in France. Within the year he died of privation and ill-treatment, though by this time his name had become legendary in his native Saint-Domingue (Haiti) and throughout much of the Atlantic world.

Toussaint's father was the son of a minor African chieftain, captured in war, sold into slavery, and transported to the French colony of Saint-Domingue, the most productive sugar-producing region in the world. At the time, more than 90 percent of the approximately 30,000 African slaves imported annually into Saint-Domingue toiled in the sugarcane fields and died within their first seven years. Thanks to luck and the benevolence of a kind master, Toussaint's father was among a tiny stratum of slaves who enjoyed certain freedoms and privileges. He converted to Catholicism, married, and was charged with cultivating a plot of land to provision the plantation near the northern port city of Cap-François. His eldest child, Toussaint Bréda as he was known, learned to read and write French and Latin, thanks to the tutelage of his godfather and neighbor, the house slave Pierre Baptiste. Reading Caesar's *Commentaries*, the writings of the Abbé Raynal, and

other works gave Toussaint a grounding in the nature of history and the politics of empire. He also became an herbalist and healer. Of unusual aptitude and intelligence, he assumed key responsibilities on his master's estate, including coachman and stock steward, and earned a reputation in the community as a man of recititude and learning.

In September 1791, a month after the outbreak of the slave uprising that would engulf the island for more than a decade, "Old Toussaint" as he was known, age 45, abandoned his master's estate and joined the rebel ranks. Soon he became one of their top leaders. On April 29, 1793, the French abolished slavery throughout Saint-Domingue, hoping to quell the slave uprising and more effectively prosecute the war against the British and Spanish. Toussaint, who had changed his surname to Louverture ("the opening"), brought his 4,000-strong army to the French side. In 1796 he was named brigadier-general, in command of all French forces on Saint-Domingue. Under Toussaint's leadership, in April 1798, the British were finally driven from the island, after a five-year campaign and at the cost of some 25,000 British lives. Before departing, the British had encouraged Toussaint to rebel against the French and declare independence; he refused. In February 1799 a mulatto army led by André Rigaud rebelled against Toussaint; by August 1800 Toussaint had crushed Rigaud's rebellion.

Meanwhile Toussaint sought to restore some semblance of order to the island's economy. He revived its sugar plantations, compelled former slaves back to work as wage-earners, and promulgated a series of laws regarding labor, land ownership, and taxes. He also established diplomatic relations with the United States. Anticipating Napoleon's invasion, he purchased some 30,000 guns from the United States and distributed them among his forces. On January 26, 1801, he marched into Spanish Santo Domingo, unifying the island's eastern and western regions. He also promulgated a new constitution, permanently abolishing slavery and making Saint-Domingue effectively independent. On June 7, 1802, he was betrayed and turned over to the invading French. In the decades following his death in France, Toussaint's remarkable life became the subject of songs, stories, poems, novels, plays, and oral traditions that paid homage to the honor, courage, and martyrdom of the liberator of Haiti.

MICHAEL J. SCHROEDER

transcendentalism

In its 1836–46 heyday, the New England–based religious, intellectual, and social movement known as transcendentalism fostered a truly American literature and inspired important social reforms, including ABOLITION OF SLAVERY and new roles for women. Although it was never a mass movement, its adherents' attempts to harmonize human freedom with religious belief, social responsibility, and the natural order continue to resonate in today's American culture. Transcendentalism was deeply influenced by the romantic movement that swept Europe in the wake of the AMERICAN REVOLUTION and the FRENCH

REVOLUTION. Young Americans—children of the early 19th century—found themselves drawn to new ideas about how to interact with nature and find personal authenticity and wholeness. In so doing, they challenged old-line religious beliefs, questioned the growing INDUSTRIAL REVOLUTION, and energized emerging notions of American democracy. Well educated (many were Harvard graduates) and more urban than most Americans of their time, most who called themselves transcendentalists were clergy, writers, and teachers living in and near Boston.

RALPH WALDO EMERSON

In the beginning what became known as transcendentalism was mainly a revolt against many of the teachings and assumptions of the New England religious establishment. As Massachusetts, established as a Puritan “City on a Hill” in the early 17th century, evolved toward Unitarianism in the early 19th century, some church leaders and members came to see their modern creed as excessively rationalistic and inadequate to modern challenges. Bostonian Ralph Waldo Emerson was destined to follow in his Unitarian minister father's respectable footsteps. When his 20-year-old wife died of tuberculosis in 1831, the young Harvard graduate was plunged into doubt, finding his own preaching of religious certitude of little comfort. Resigning his ministry at Boston's Second Unitarian Church, Emerson went to Europe, learning French, German, and Italian and meeting such key romantic advocates as essayist Thomas Carlyle and poets Samuel Taylor Coleridge and William Wordsworth.

By the 1830s the former minister was traveling the American lyceum circuit, preaching lay sermons to men and women seeking moral and intellectual improvement. In his famous 1841 lecture, “Self-Reliance,” Emerson urged people to think, and rethink, for themselves, saying “A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines . . . To be great is to be misunderstood.” Revered and attacked, admired, imitated, and sometimes mocked as a disembodied “transparent eyeball,” Emerson was the intellectual and personal center of the coterie of like-minded thinkers and doers who were the transcendentalists. He is generally considered to be America's first public intellectual and first philosopher of the evolving republic.

OTHER IMPORTANT TRANSCENDENTALISTS

Emerson's circle was marked by deep intellectual and personal friendships that could at times become

competitive or even petty. Transcendentalism tried to unleash human potential rather than codify it, and transcendentalists tended toward independence rather than orthodoxy. In the process, adherents made important contributions to the slavery and labor questions of their day and rethought education and women's rights.

HENRY DAVID THOREAU

The person most closely associated with Emerson, Thoreau is best known for his two-year experiment in natural living at Walden Pond and his formulation of "civil disobedience," the idea that free people of conscience can, and indeed must, refuse to go along with unjust government actions. A Harvard graduate like his mentor, Thoreau worked to develop practical skills and showed a real talent for making do with available resources. In important ways, he embodied the self-reliant man of Emerson's orations. Thoreau wrote his essay, "Resistance to Civil Government," after he was arrested at Walden in 1846 by Concord's sheriff for refusing (for a sixth time) to pay a poll tax because he felt it aided Massachusetts's participation in the MEXICAN-AMERICAN WAR, a war that many believed was being fought to preserve and expand slavery. "Unjust laws exist: shall we be content to obey them . . . ?" Thoreau asked. "The authority of government . . . can have no pure right over my person and property but what I concede to it." He served a night in jail; the essay became an inspiration for later activists.

MARGARET FULLER

Cofounder with Emerson of the influential but short-lived quarterly *The Dial*, Fuller was later an assistant editor and foreign correspondent for the *New-York Tribune* and one of America's earliest exponents of women's rights. In her essays and an influential 1845 book, *Woman in the Nineteenth Century*, Fuller argued that the kinds of self-realization and personal fulfillment advocated by transcendental thinking must also be available to women. "As men become aware that all men have not had their fair chance," she wrote in the July 1843 *Dial*, "they are inclined to say that no women have had a fair chance." Fuller died in a shipwreck near New York as she returned from Italy with her husband and young son, who both also drowned.

THEODORE PARKER

Parker, a controversial minister, was forced out of the Unitarian Church. Although he had doubts about the intellectual equality of black people, he became an enthusiastic transcendentalist and a leader of the

antislavery movement. A foe of the Mexican War like Thoreau, Parker led opposition in the Boston area to federal efforts to enforce the new Fugitive Slave Act of 1850, going so far as to hide an escaped slave in his home. Even more controversially, he helped finance arms purchases that helped antislavery zealot John Brown and others fight slaveholding settlers in the disputed Kansas-Nebraska Territory and enabled Brown to launch his failed raid on a U.S. armory at Harpers Ferry, Virginia, in 1859.

ORESTES A. BROWNSON

Born in Vermont, Brownson was a lifelong religious seeker who ultimately became a Roman Catholic. During his years as an important transcendentalist, Brownson focused on inequitable treatment of workers, both free and enslaved. A socialist and editor of his own Boston-based journal, Brownson saw the gap between the wealthy and laboring classes growing disastrously in violation of God's law and the supposed equality promised by American democracy. "What in one word is this American system?" he asked in 1840. "Is it not the abolition of all artificial distinctions, all social advantages founded on birth or any other accident, and leaving every man to stand on his own feet . . . ?"

BRONSON ALCOTT

Best known today as the often-absent father of *Little Women* author Louisa May Alcott, the self-educated Alcott pioneered new educational methods, some of which have continued to influence American schooling. Children, he believed, should not be forced to learn a rigid curriculum but taught ways to open their minds to a world of knowledge. The child, he wrote, "is the Book. The operations of his mind are the true system." Although his ideas were controversial, partly because he disdained corporal punishment, Alcott was eventually appointed superintendent of Concord's public schools. Less successful was Fruitlands, the agricultural community Alcott and a British friend founded in a rural Massachusetts town in 1843. It lasted just six months, done in by rules that included cold-water showers, strict vegetarianism, sexual abstinence, and opposition to animal exploitation so strict that colonists could not use horses or oxen to clear land for farming.

GEORGE RIPLEY AND THE BROOK FARM EXPERIMENT

Brook Farm, an experiment in communal living on a transcendental plane, proved more durable than

Alcott's Fruitlands but collapsed in 1847 after six years of financial struggle, infighting, a disastrous fire, and a smallpox outbreak. Located on a 200-acre West Roxbury, Massachusetts, dairy farm, the "colony" was the brainchild of Unitarian minister George Ripley, his wife, Sophia, and other committed transcendentalists.

In the wake of 1837's socially destructive U.S. financial panic, ideas of economic self-sufficiency, the ennoblement of manual labor, and the in-gathering of likeminded intellectuals seemed especially appealing. Brook Farm's founders were also influenced by the social thought of Frenchman Charles Fourier, whose American adherents would eventually gain control of this experiment in group living.

Although Emerson was unenthusiastic about Ripley's proposed "city of God," planning proceeded apace in 1840–41. During a very cold and wet spring, the Ripleys and a dozen supporters—most lacking any agricultural experience whatsoever—took up residence at the farm. In 1842 a school of college-preparatory caliber was established at Brook Farm, attracting some of the cream of New England society as students and teachers. The settlement quickly became a magnet for tourists, transcendentalists, and Fourierists, but its poor soil and inadequate financing, as well as a series of disasters, led to its demise. As the community failed, George Ripley auctioned off his personal library in a vain effort to save the foundering utopian enterprise.

LITERARY RENAISSANCE

Emerson immersed himself in the ideas, poetry, and literature of early 19th-century Europe, but he and other transcendentalists were also convinced that their countrymen and -women must and could create a uniquely American voice in all the arts, especially fiction and poetry. Eventually, writers who were not always best sellers in their own time would be canonized by 20th-century critics and are still considered among the most important the United States ever produced.

NATHANIEL HAWTHORNE

An early settler and major investor in Brook Farm, Hawthorne was the descendant of Puritan elders, among them participants in the Salem witch trials. In 1852, 10 years after he spent more than six months milking cows and spreading manure, he satirized Brook Farm in his novel *The Blithedale Romance*. More important were novels such as *The Scarlet Letter* and short stories, including "Young Goodman Brown," in

which Hawthorne examined darker aspects of theology and human behavior.

HERMAN MELVILLE

A strong admirer and interpreter of Hawthorne's work, Melville, a New Yorker, first gained notice as the writer of popular seafaring stories based on his own experiences. His later stories and novels, including "Bartleby the Scrivener," *Benito Cereno*, and *Moby-Dick* (dedicated to Hawthorne) were much bleaker, exploring issues of slavery, race, and madness before and after the CIVIL WAR. His sales languished during his lifetime but were revived by positive critical attention in the 1920s and later.

WALT WHITMAN

Born on a failing Long Island farm, Whitman was an itinerant teacher, printer, and editor whose poetry collection, *Leaves of Grass*, later much expanded, burst on the scene in 1855. "I greet you at the beginning of a great career," Emerson wrote to the previously unknown poet days after its publication. Emerson viewed Whitman as the ideal poet he had proposed in an 1844 essay. An active opponent of slavery, Whitman used his poetry to mourn the violence of war as he nursed injured Union soldiers.

His poem "When Lilacs Last in the Dooryard Bloomed" lamented ABRAHAM LINCOLN's assassination. Whitman's poetry celebrated ordinary men and women. That, and his radical use of free verse—characterized by some as "barbaric yawp"—became key aspects of his truly "American" poetics.

ENDURING SIGNIFICANCE

Always controversial in its own time, transcendentalism gained new respect and importance in the 20th century, as educators, literary critics, and social activists found in its teachings and experiments new energy and new lessons for the United States and other societies. In Thoreau, such social critics as Mohandas K. Gandhi, Martin Luther King, Jr., and American anti-Vietnam war protestors found inspiration and justification for their opposition to colonialism, racism, and arrogant political power. Educational programs that seem to borrow from the child-centered focus of Alcott and others have met both praise and scorn in America and Europe. Emersonian concepts of self-reliance and personal fulfillment, sometimes credited with improving American public life, have also been blamed for encouraging a "culture of narcissism." Transcendentalism continues to transcend its own historical place and time.

MARSHA E. ACKERMANN

Triple Alliance and Triple Entente (1882)

Between 1882 and 1914 western Europe divided between the Triple Entente and the Triple Alliance. The division allowed the preservation of an uneasy peace despite periodic disruptions, particularly in the Balkans.

The map of Europe experienced major alterations in 1871 with the creation of the German Empire and the kingdom of Italy. Under OTTO VON BISMARCK Germany's main foreign policy goal was to keep France from becoming strong enough to take revenge for the FRANCO-PRUSSIAN WAR (1870–71) defeat and to fulfill its desire to retake Alsace and Lorraine. Germany allied with Austria-Hungary and Russia in the Three Emperors' League. Russia and Austria-Hungary, however, were at odds with one another over the Balkans and the Russian-backed Pan-Slavic movement, which threatened to break up the multinational Austria-Hungary by unifying Slavs. Pan-Slavism became a greater menace after the Treaty of San Stefano (1878) created a Bulgarian state. The CONGRESS OF BERLIN in 1878 broke the Three Emperors' League. In 1879 Bismarck and Austria-Hungary formed the secret Dual Alliance.

Germany and Austria-Hungary shared extensive common borders. Many regions of Austria were German-speaking, and both wanted to expand; Austria particularly had territorial ambitions in the Balkans. However, Austria was a fading empire, while Germany was young and ambitious. Germany soon dominated the alliance.

Italy joined the Dual Alliance to form the Triple Alliance in 1882. Italy was an off-and-on enemy of Austria because it coveted the same lands, but France occupied Tunisia in 1881 and blocked Italy's ambitions for an African empire. The Triple Alliance eased differences between Italy and Austria and gave Italy promises of aid against French aggression. Italy's

promise of aid against French attack helped Germany, whose agreement with Austria had no mutual assistance provision.

The treaty was secret and temporary. The signatories renewed it in 1887 and 1903. In 1903 Italy canceled its promise to assist Germany against a French attack. In 1902 France secretly gave Italy free rein in Tripoli (present-day Libya in North Africa), thereby ending Italy's anger at France. Italy was free to resume its rivalry with Austria in the Adriatic.

In 1882 Serbia joined a treaty with Austria-Hungary. Romania joined in 1883. The result was a powerful bloc in central Europe. Such a powerful combination called for a counterweight, and the powers on the periphery—France, Russia, and Britain—responded accordingly.

The Triple Alliance collapsed in 1914 at the onset of World War I when Italy argued that Serbia committed no aggression and declined to join her partners in war. The remaining alliance powers held together against the Triple Entente.

When Germany refused to renew its treaty with Russia, Russia turned to France, which wanted an ally against a united and hostile central Europe. The two signed an understanding in 1891, a military agreement in 1893, and the Franco-Russian Dual Alliance of 1894, made public in 1895.

Germany under Wilhelm II was aggressively seeking colonies and building a powerful navy. In response, the traditionally standoffish Britain sought allies. France was a traditional enemy and current rival in Africa. Anti-German Théophile Delcasse became French foreign minister in 1898. In 1901 Francophile Edward VII became king of Great Britain. In 1904 France and Britain signed the Entente Cordiale, an agreement of friendship but not military aid. After Russia lost the Russo-Japanese War, English rivalries with Russia in Asia cooled. Russia joined the Triple Entente in 1907. Europe, therefore, was divided and ready for an event that would spark a major confrontation.

JOHN H. BARNHILL

Tunisia under French rule

In 1881 a French expeditionary force attacked Tunisia from Algeria and along the coast. The French forced the local ruling bey, Muhammad al-Sadiq, to sign the Treaty of Bardo that agreed to a French occupation of Tunisia. France was interested in controlling Tunisia in order to guard the eastern border with Algeria (already under French control) and to stop Italian expansion into North Africa.

During the CONGRESS OF BERLIN in 1878, the British and Germans had agreed to French control over Tunisia. Meanwhile, the British expanded their imperial control over Egypt, in 1881–82.

The resident-minister Paul Cambon legalized the French position with the Convention of Marsa in 1883, whereby Tunisia became a French protectorate. Although the position of the bey was retained, the French appointed a resident-general who became the real ruler of Tunisia. The French legal system was introduced, and the monetary system was based on the French franc. A customs union with France was established, and the French exercised a monopoly over tobacco plantations.

Tunisia was divided into military and political zones with civil controllers. The government allowed immigrants from France and Italy settle in Tunisia, but unlike the situation in Algeria, where French *colons* often received free land, in Tunisia European settlers had to buy the land. Italian immigrants outnumbered French settlers until the 1930s. Under the French, areas of cultivation, particularly vineyards for the production of wine, a substance forbidden to the majority Muslim Tunisian population, were expanded. The French

also supported the growth of industry and the mining of phosphates while modernizing and expanding the ports and railway systems. Education was based on the French model, with French as the primary language and Arabic as the second language. Vocational schools were established on the elementary level, but state schools took only a small percentage of children. The vast differences in education and social opportunities afforded European settlers and the indigenous Tunisian population contributed to urban elite Tunisians trying to reestablish their identity. Some advocated assimilating Western technology and political approaches and cooperating with the French regime. Others favored reviving Islamic traditions and customs.

Shaikh Abd al-'Aziz al-Tha'alibi founded a newspaper in 1895 in which these ideas were discussed. Al-Tha'alibi became one of the foremost leaders of the first generation of Tunisian nationalists. Tunisian nationalism flourished as Tunisians resisted French rule. A young Tunisian educated elite also emerged from Sadiqiyya College, which had been established during KHAYR AL-DIN's administration in the mid-19th century; many Sadiqiyya graduates became the leaders of the Tunisia nationalist movement in the 20th century.

JANICE J. TERRY

ultramontanism

Ultramontanism literally means “over the mountains,” and it implies that there are two views of how the Catholic Church should be governed. One view sees leadership as a centralized and unified papacy (in Rome, over the Alps from the rest of Europe) and the other looks for local control and a national church (the church of France or Germany or any other country). Ultramontanism is the former view; Gallicanism is the latter.

For centuries, theologians had speculated on the position and authority of the Roman papacy, and often the pope was seen as the center and coordinator of the whole church. The urgency of these thoughts became apparent as the Protestant reformation began and challenged church unity.

The first phase of ultramontanism is often called Romanism. It was promulgated by the forces of the Counter-Reformation and later championed by Robert Bellarmine. The bishops of the Council of Trent swallowed their objections to the claims of the papacy if only to stem the tide of Protestant defections among their flocks. Ironically, Trent reformed the Catholic Church by depositing even greater powers in the pope.

Momentum returned to the Catholic Church as a result of Romanist ultramontanism. All countries adopted it at least externally, even the actively independent regions of France and Germany. The Jesuit order served Romanism well, with its worldwide efforts to propagate the Catholic faith now held together by a focus on the

pope. Some of its characteristics include a strong hierarchy; a restriction of access to foundational texts like the Bible, the liturgy, and even theological texts; a folk piety that celebrated feasts, the “Sacred Heart,” and Marian devotions; and an expansionistic faith opposed to toleration of sects and supportive of conversions.

As time went on, the Romanists lost ground to the Gallicanism, as promoted by the likes of Louis XIV of France. At this time the word *ultramontanism* came into parlance, as national church identities revived and the enthusiasm of the Protestants waned. All this changed with the FRENCH REVOLUTION, when the monarchy and its Gallican agents were deposed.

Again, the need for a strong papacy was felt, giving birth to the next phase called neo-ultramontanism. Many Catholics believed that the French Revolution’s anticlericalism and godless ideology were a direct result of the Protestant reformation as intensified later by the ENLIGHTENMENT. This phase witnessed at times flirtation with liberal ideals of democracy among the laity, but with the REVOLUTIONS OF 1848, ultramontanism became soundly autocratic in its support of the papacy.

Pope PIUS IX led the Catholic Church into the first VATICAN I COUNCIL and rejected not only Gallicanism but all forms of liberal Catholicism. Among the ultramontanist positions it adopted were an emphasis on the juridical role of the pope over his supernatural role, more emotional devotions toward such things as the Blessed Sacrament and the Virgin Mary, a focus on Marian apparitions and pilgrimages, and attention on the centralized and authoritative church under the pope.

Between Vatican I and Vatican II, ultramontanism was effectively synonymous with orthodox Catholicism. Today the victory is so complete that the term has largely fallen out of usage.

MARK F. WHITTERS

Urabi revolt in Egypt

The Urabi revolt was a nationalist-led movement that led to the British occupation of Egypt in 1882. When ISMAIL was forced to step down as khedive, Tewfik, a weak pro-British ruler, replaced him in 1879. Under the Caisse de la Dette, government revenues went to repay the enormous debts Ismail's overly ambitious building schemes had incurred. This resulted in economic hardships, particularly in the agricultural sector where most Egyptians worked as peasant, or fellaheen, farmers. Cutbacks in military expenditures led to public discontent in the army that fueled nationalist sentiments. Secret nationalist societies were also formed.

In 1880 army officers led by Ahmed Urabi drew up a petition listing their grievances, particularly failures to pay their salaries in a timely fashion. The officers also forestalled their possible arrest on the orders of Tewfik by storming the war ministry. In 1881 Urabi accompanied with a large group of demonstrators gathered outside Abdin Palace in Cairo, where Urabi presented the demands to Tewfik. Flanked by the English financial controller, Tewfik met with Urabi and agreed to the demands that included the writing of a new constitution. A negotiated settlement was reached through the intermediary efforts of Wilfrid Scawen Blunt, an English aristocrat and traveler. A new constitution and parliament were duly formed. To Tewfik's displeasure, the parliament demanded control over Egypt's finances, and Urabi was made defense minister.

In London, British officials felt it was time to formalize British control in Egypt. Riots in Alexandria caused widespread panic among the Europeans living in the city and resulted in a number of deaths in 1882. The British used the riots as an excuse to move ships into Alexandria's harbor. They then demanded that

Urabi, who was in actual control of the government, to halt all military preparations. When Urabi predictably refused, the British bombarded the city and landed troops. The British defeated the Egyptian army in a surprise attack at the Battle of Tel-el-Kebir and within a day had occupied Cairo. Urabi surrendered and was subsequently tried for treason. Blunt, who opposed the British occupation, arranged for Urabi's defense by English counsel, but the verdict was a foregone conclusion.

Fearing that Urabi might become a martyr to the nationalist cause if he were executed, the British arranged for his exile to Ceylon. Urabi was permitted to return in 1901 to Egypt, where he lived in virtual anonymity until his death in 1911. After some debate, the British government decided to retain its control over the Egypt, and the British were to remain a major political and military power in Egypt until a military-led revolution in 1952.

JANICE J. TERRY

Uruguay, creation of

Uruguay is a buffer state sandwiched between the two giants of South America—Argentina and Brazil. During the colonial period, Spain and Portugal fought over control of the area, and their former respective colonies, Argentina and Brazil, later took over the quarrel.

The first Spaniard in what is now Uruguay was Juan Díaz de Solís, when he explored the Río de la Plata. His death at the hands of Indians set the stage for a two-century-long struggle after the western shore of Buenos Aires across the estuary was settled in 1580; Uruguay did not receive permanent settlements. For a time some Jesuits attempted religious missions and faced opposition from the Charruas, the fierce tribe who occupied the area that became Uruguay. The native population was not subdued and was instead essentially eliminated

Plaza de Constitución in the capital of Montevideo, Uruguay, at the turn of the century. Located between Argentina and Brazil, Uruguay has been a buffer state between its more powerful neighbors.

by 1800. There were no permanent settlements by the Spaniards in the 17th century.

Into this vacuum came the Portuguese. Having been under Spanish rule between 1580 and 1640, and not formally independent until 1667, the Portuguese wanted to make up for lost time, especially in their largest colony of Brazil. In 1688 the Portuguese began a colony called appropriately Colonia in what is now northern Uruguay. They based their claim on the Treaty of Tordesillas and the papal bull of 1494, which gave Portugal claim to Brazil. The Portuguese argued that the territory was an extension of Brazil, specifically its province Rio Grande do Sol (the area around São Paulo) that resembled what is present-day Uruguay in terms of climate and topography.

The Spanish countered when they established Montevideo, the capital of Uruguay, on the eastern

shore of Uruguay. Colonia was taken and retaken several times in the ensuing century as Spain and Portugal struggled over the territory between the Río de la Plata and the Uruguay River, which came to be called the Banda Oriental del Uruguay, on the eastern shore of Uruguay.

When the War of Independence began in 1810, a native of Uruguay, Artigas, took control of the independence movement of the Spanish provinces of the Plata region, such as Buenos Aires and Cordova (the heart of modern-day Argentina). With his power, he was able to propose a federal system of all of the Plata provinces, which included the autonomy of the Banda Oriental.

In 1816 the Portuguese, still in possession of Brazil, invaded the country on the pretext of trying to restore order. The people of the Banda, or Uruguay as the province came to be called, had become independent

and resisted the Portuguese for four years until they were finally overcome.

By 1825 the Portuguese had withdrawn from Brazil, and Uruguay again assumed its independence and, with Argentine aid, obtained it after a war with Brazil formally ended by the Treaty of Montevideo in 1828. This became reality in 1830 when a republic was established. Uruguay was aided by the turmoil existing in Brazil during the minority of Don Pedro before 1841. In addition, Brazil was struggling to overcome the secession attempt of Rio Grande do Sol.

After 1830 Argentina, under JUAN MANUEL DE ROSAS, dictator of Buenos Aires, was the threat to Uruguay as it sought to unite all the Plata provinces under its leadership. The country kept its integrity through the military and naval successes of Garibaldi at San Antonio and Cerro were successful in safeguarding the independence of Uruguay, ironically with some Brazilian aid in the 1840s. From 1843 to 1851 allies of Rosas blockaded Montevideo, but by 1851 the siege had ended. By that date, Argentina and Brazil accepted the independent existence of Uruguay as long as the other party did not control it. Uruguay was the result of the balance of power between the two giants.

NORMAN C. ROTHMAN

Usman Dan Fodio

(1754–1817) *West African reformer*

Usman Dan Fodio, also known by the Hausa honorific *shehu* (sheikh), was a West African scholar and religious reformer of the Fulani ethnic group who led a successful early 19th-century Islamic jihad in Hausaland, modern-day northern Nigeria. The jihad led to the establishment of the Sokoto Caliphate, the most significant 19th-century independent African state, with regard to both size and impact on the local region's history.

Usman Dan Fodio was born in 1754 at Maratta within the Hausa state of Gobir but spent his formative years in the town of Degel. His father was a learned member of the Qadiriyya Sufi order and provided Usman and his brother Abdulahi with the highest Islamic education available to them. In the traditional Islamic manner, he traveled throughout Hausaland and as far away as the Saharan city of Agadez, studying under various teachers. At around age 20, he became an itinerant preacher and teacher while still completing his studies. In Degel, he quickly gained a following of devoted disciples, which encouraged him to travel to other Hausa states, where he met with further success in attracting students. Emboldened, he and his followers began calling on the nominal Muslim rulers in Hausaland to accept and practice orthodox Islam and remove non-Islamic customs and rituals from their courts. Dan Fodio went further and called into question the local rulers' taxation and enslavement of his Fulani brethren, as well as the arbitrary confiscation of peasant property. The *shehu's* growing following and the social and political arguments he raised put him at odds with much of the ruling class in Hausaland. Thus, he was forced to flee Degel when the sultan of Gobir sent forces against him.

In 1804 the *shehu* and his followers regrouped. He was named *amir al-mumineen*, or commander of the faithful, and announced a call for a jihad campaign against Gobir. Years prior to this call, the *shehu* had had a series of visions in which he believed that the prophet Muhammad and Abd al-Qadir al-Jilani, founder of the Qadiriyya order, instructed him to pick up the "Sword of Truth" in order for his followers to defend themselves from increasingly hostile rulers. Filled with conviction and fervor, an army of inferiorly armed Fulani scholars, clansmen, and Hausa peasants set forth to destroy the larger, better-equipped army of the sultan of Gobir. The *shehu* never led an army nor fought in a battle; his role was purely spiritual and consultative. He left the military campaigning to his generals, including his brother Abdullahi and son Muhammadu Bello.

The *shehu's* forces won a series of decisive battles and within four years had gained control of almost all of Hausaland and much of neighboring Bornu. From this amalgamation of lands was created the Sokoto Caliphate. In 1812 the *shehu* split rule of the Sokoto Caliphate between Abdullahi and Muhammadu Bello, and he withdrew into a scholarly and spiritual life. He continued teaching and writing but remained distant from the political dealings within the caliphate.

A key element throughout Dan Fodio's reform movement was his writings. He authored more than 100 works in both his native Fulfulde and Arabic; some of his works were later translated into Hausa but were not originally written in that language. Most works were prose, but a substantial portion were in verse. One of his early works clarified that anyone who subscribed to the religion and carried out their religious duties was a Muslim and deserved all rights and freedoms to be afforded to the brethren, including slaves who were Muslim. This was not the traditional practice in Hausaland at the time, which allowed for lower-class Muslims to be enslaved.

Some of his most important works were written during the jihad, which established the ground rules for warfare and defined those who were to be considered Muslim (nontargets of jihad) and those who were non-Muslims (targets of jihad). This was important, since all of the leaders the jihad was directed against were at least nominally Muslim. However, Dan Fodio made clear that if rulers allowed non-Muslim practices in their lands or deviated from strict orthodoxy, they were legitimate targets of his campaign. In this regard, he drew from a controversial discussion some three centuries earlier between Askia Muhammad Touré, ruler of the Songhai Empire, and the scholar Muhammad ibn Abd al-Karim al-Maghili, when the former was expanding the holdings his empire into some areas having nominal Muslim rul-

ers, including Hausaland. After the jihad was completed and the Sokoto Caliphate established, the *shehu's* works showed moderation and more tolerance of non-Islamic practices occurring within state boundaries.

Usman Dan Fodio died in the capital city of Sokoto in April 1817, leaving a legacy of 37 children and hundreds of grandchildren who continued to be important players in the political, social, and religious landscape of Sokoto for generations. This included his daughter Asma'u, a prolific writer and important chronicler of the jihad and the development of Sokoto. Usman Dan Fodio's ideas for Islamic reformation in West Africa remained influential well into the late 19th century, manifesting themselves in the continued spread of Islam and sporadic calls to jihad.

BRENT D. SINGLETON

Vatican I Council (1869–1870)

Pope PIUS IX began laying the groundwork for the first Vatican Council in late 1864. He intended to consult various bishops throughout the world concerning whether the church should convene an ecumenical council and what its agenda should be. The responses were favorable enough that Pius IX announced on June 26, 1867, his intention to summon the Council. On June 29, 1868, a proclamation, or bull, was written announcing December 8, 1869, as the day the Council would solemnly begin.

Throughout Europe and America, critics asserted that the pope's hidden agenda was to promote papal infallibility.

On the eve of the Council, however, official papers showed the following agenda: errors resulting from Rationalism; the Church of Christ; Christian marriage; church discipline concerning bishops, dioceses, seminaries, catechism, rituals, Christian morals, customs of the church year, and current developments in society such as dueling, spiritualism and secret societies; decrees on religious orders; and concerns involving the Eastern Churches.

In addition, many Catholic bishops throughout the world demanded that a dogma concerning the Assumption of the Blessed Virgin Mary be addressed, that St. Joseph be proclaimed Patron of the Universal Church, and that the infallibility of the pope be clearly defined. A document concerning infallibility was not found in any of the drafts of preparation.

The preliminary gathering for Vatican I began as close to 500 bishops met in the Sistine Chapel on December 2, 1869. Approximately 74 percent of the eligible 1,050 worldwide prelates played some role in the nine-month proceedings. All told, the Council Fathers sat at 89 general congregations and four public sessions.

The first debate of the council was on the errors resulting from rationalism. This philosophy places human reason as the supreme criterion of truth. It flows from the teachings of Gottfried Leibniz and Christian Wolff and can be characterized by spiritualism, dogmatism, and determinism. The church wished to address the weaknesses of these philosophies and offer a Catholic response to them.

The next topics to be discussed concerned bishops, dioceses without a bishop, morality among clerics, and a catechism. These items were sidelined throughout the proceedings by the growing desire among many of the bishops for a statement on papal infallibility. Meanwhile, pressures were being felt by the bishops that impeded the progress of the council, so the pope made some procedural changes that expedited decision making. One important result was the "constitution," *De Fide Catholica*, promulgated on April 24, 1870.

Finally, on May 9, participants received a draft of *De Romano Pontifice*, a document that spelled out the dogma of papal infallibility. Debate about this issue continued through June and into July. On July 4 the debate ended, and a vote was called for July 13. By this time many bishops had left Rome on hearing the news

A photo of the Vatican taken during the Vatican I Council. The Council was created by Pope Pius IX as a way to discuss issues within the Catholic Church. While initially controversial, the meetings were eventually accepted by most of the world's Catholic population.

about an imminent war between France and Germany. The remaining fathers voted 75 percent affirmative, another 10 percent affirmative with conditions, and 15 percent negative. On July 18 the pope personally presided over the Council and a last vote was taken. The results of the vote were 433 to 2 in favor of the document, and it was immediately promulgated.

On September 8 troops from Piedmont entered the Papal States, and by September 20 they had reached Rome. Pius IX would from that day forward be a self-imposed prisoner in the Vatican.

Unfortunately, the council did not address a large number of drafts and proposals due to the political situation that brought Vatican I to a premature end. However, two constitutions were promulgated, and these are of great importance to the Catholic Church.

De Fide Catholica fortified Rome's defense against the errors of atheism, materialism, and rationalism. It affirmed that God exists as a personal and all-knowing God, creating everything from nothing and leading everything to its end. This God can be known by reason, is revealed in Scripture and in tradition, and can be made known to the world by miraculous occurrences. Faith and knowledge support each other and are entrusted to the church to defend and interpret.

De Romano Pontifice teaches that the primacy of the pope brings unity and strength to the entire church.

This primacy is one of true pastoral jurisdiction to which all clergy and faithful are bound in obedience. This primacy strengthens and defends local bishops in their ministry. No secular power can interfere with these duties.

Nonetheless, critics of the council emerged in the form of minor reactions and schisms. In Germany, the "Old Catholics" sect arose, and in Switzerland the "Christian Catholics" formed. After the war between France and Germany, the German government used the infallibility doctrine as a reason to encourage *Kulturkampf* ("Culture Struggle," or Secularization). Austria annulled its concordat with the Holy See. Other than these few occurrences, the decisions of Vatican I did not result in objections throughout the world.

On December 8, 1870, Pius IX finally declared St. Joseph as Patron of the Universal Church. Subsequent popes would challenge many of the moral and religious problems that were not addressed by Vatican I, including masonry, human freedom, Christian marriage, forbidden books, and the codification of canon law.

WILLIAM J. TURNER

Victor Emmanuel II

(1830–1878) *king of Italy*

Victor Emmanuel II was born on March 14, 1830, in Turin, the eldest son of Charles Albert, king of Piedmont-Sardinia, and Maria Theresa of Habsburg-Lorraine. During the first Italian War of Independence (1848–49), Victor Emmanuel fought alongside his father, seeing action at Pastrengo, Santa Lucia, Goto, and Custoza where, on July 24–25, 1848, the Sardinian forces were driven from Lombardy.

On March 23, 1849, Charles Albert was forced to abdicate the throne after being defeated at the Battle of Novara on March 23—he went into exile in Portugal and died four months later—and Victor Emmanuel became king. He managed to negotiate a peace agreement with the Austrians on August 9, 1849, but the Piedmont Chamber of Deputies refused to ratify it. Victor Emmanuel responded by sacking the prime minister, Claudio Gabriele de Launay, and replacing him with Massimo D’Azeglio. New elections were held, and the new chamber ratified the treaty.

In 1852 Victor Emmanuel appointed Count CAMILLO DI CAVOUR as prime minister, and together they were to be involved in the Italian Risorgimento—the reunification of Italy—along with MAZZINI and GARIBALDI. To achieve this, Cavour persuaded the king that there should be an alliance with the British and the French, and the opportunity arose with the outbreak of the CRIMEAN WAR. Piedmont sent over a small contingent.

Then Victor Emmanuel reached an agreement with the French emperor NAPOLEON III at Plombières in 1858, where Piedmont and France would take part in an attack on Austria and the former would get the Kingdom of Lombardy-Venetia and the French would be given Nice and Savoy. However, the fighting began badly for the French, with France getting Nice and Savoy, but Piedmont only gaining Lombardy. Cavour resigned, but Victor Emmanuel was able to get Naples and Sicily, in plebiscites, to vote to join Sardinia-Piedmont, and on February 18, 1861, the Kingdom of Italy was established.

In 1866 Venice was added to Italy, and in 1871 the Papal States were annexed, with Rome as the capital.

The taking of Rome was only possible with the French being involved in the FRANCO-PRUSSIAN WAR. It also led to Victor Emmanuel being excommunicated. This was reversed in 1878, just before Victor Emmanuel’s death on January 9, 1878. He was succeeded by his son, Umberto, who reigned until 1900.

JUSTIN CORFIELD

Victoria

(1819–1901) *queen of Great Britain, empress of India*

Queen Victoria was born May 24, 1819, acceded to the throne on June 20, 1837 (succeeding William IV), and died January 22, 1901 (succeeded by Edward VII). The woman who wore the crown of the United Kingdom through six decades of great political, economic, and social change in Britain and elsewhere might never have been born at all were it not for a dynastic crisis in 1817. That year, Princess Charlotte, the daughter of the Prince of Wales and second in line to inherit the throne, died due to complications from giving birth, during which her baby also died. Despite the fact that George III and his queen had 15 children, 12 of whom were still alive in 1817, Charlotte had been their only surviving legitimate grandchild.

There were many illegitimate children, such as Prince William’s 10 Fitz Clarences, but these were excluded from the succession. Charlotte’s death thus created a major problem for the Hanoverian line. The king was an incapacitated old man, and his children were mostly unmarried and all in their 40s and 50s, not the prime time to start a family. Nevertheless, the solution was for the unmarried sons of George III to leave their mistresses behind, marry women of appropriate status, and serve their country by producing as many living heirs as possible. As an incentive, Parliament agreed to alleviate some of the debts of the princes if they would settle into family life.

Prince Edward Augustus, the duke of Kent and Strathearn, the father of Queen Victoria, had both financial problems and a mistress. His long, stable, and loving relationship with the French gentlewoman Julie de St. Laurent was practically a common-law marriage, but this counted for nothing in the royal succession. Legislation such as the Settlement Act of 1701 and the

Royal Marriages Act of 1772 placed major restrictions on the choice of marriage partners for members of the royal family, and as a French Catholic without suitable pedigree, Julie was an inappropriate choice on many counts. So Edward, like virtually all of his brothers, went looking for a German Protestant princess to take as his wife. He found Victoria of Saxe-Coburg-Saalfeld, a widow and the sister of Prince Leopold, the widower of Princess Charlotte. The couple was married in 1818, and Victoria was born in May 1819. Within a matter of months, other hastily arranged royal matches also produced children, but since none from the more senior dynastic lines survived infancy, Victoria was soon considered to be the most likely grandchild of George III to inherit the throne.

The old king died early in 1820, followed within a week by the duke of Kent. Victoria was thus fatherless from infancy. Her mother, the duchess of Kent, sought to keep her isolated from the courts of both George IV and William IV, partly because she wished to shield her daughter from the corruption of courtly life and partly due to chilly personal relations between the duchess and most of the royal family. Later in life, Victoria would remember George, William, and the other sons of George III as her “wicked uncles.”

The young princess also faced problems closer to home. Her mother was loving but domineering, and she was guided by Sir John Conroy, a former equerry of the duke who became comptroller of the household. There were rumors that Conroy was the duchess’s lover, but in any case, he certainly carried a great deal of influence over her. The two sought increasingly higher pensions from the government (which they would manage on the young princess’s behalf) and also tried to ensure that they would have complete control of the regency if Victoria came to the throne before she turned 18.

The two people to whom Victoria looked for guidance and compassion were her German governess, Baroness Lehzen, and her maternal uncle, Prince LEOPOLD. In 1830 Leopold was chosen to become king of the newly independent Belgium, and he continued to provide his niece with advice and support throughout his life.

ERA OF GREAT CHANGES

In the summer of 1837 William IV died, secure in the knowledge that Victoria had passed her 18th birthday, and would no longer be subject to the domination of her mother and Conroy. Victoria came to the throne in an era of great changes. A number of European countries had experienced political revolutions in 1830; the

British political landscape had been altered by the 1832 Reform Bill and other initiatives of the Whig government, paving the way for popular demands for even further change, in the form of the Chartist movement. The INDUSTRIAL REVOLUTION was changing the British economy and the condition of its cities and people. Practical, steam-driven railways were barely a decade old, but the network of rails rapidly spread across the country. Some people worried that a young “girl” (in the parlance of the time) could not effectively rule a modern, industrial, and imperial state.

As it was, in the early years of her reign Victoria relied heavily on the guidance of her first prime minister, the Whig Lord Melbourne. This posed great risks to the supposed impartiality of the sovereign in the operation of the British constitution. Many conservatives saw the Bedchamber Crisis of 1839, when the queen refused to accept the changes to her household personnel proposed by the Tory leader Robert Peel, as proof of her Whig sympathies. At the time, the queen disliked Peel intensely, but she would grow to respect his abilities later. For the moment, however, her lack of cooperation led Peel to refuse to form a government and kept Melbourne and the Whigs in power for two more years.

ROMANTIC MATCH

In 1840 Victoria married her first cousin, Albert of Saxe-Coburg and Gotha. Some had suggested that her husband should be chosen for diplomatic reasons, but the queen opted for a romantic match. Although the personalities of the queen and her new husband differed in many respects, their partnership was very effective in both political and domestic affairs.

Albert was somewhat shy and intellectual and never tired of paperwork; Victoria was more outgoing and temperamental and did not mind ceremonies and state functions as Albert did. Together they oversaw the management of the royal family and household, as well as making the monarchy more active and visible in society at large. The Victoria Cross was created during the CRIMEAN WAR to recognize the courage and sacrifice of British soldiers fighting in her name. The Great Exhibition of 1851, which showcased machinery and products from around the world, but above all the ascendancy of Britain’s industrial might, was heavily influenced by Albert’s energy and enthusiasm.

The couple had nine children: Victoria, born in 1840; Albert Edward, the future Edward VII, 1841; Alice, 1842; Alfred, 1844; Helena, 1846; Louise, 1848; Arthur, 1850; Leopold, 1853; and Beatrice, 1857. Although Albert invested so much energy and time in

trying to raise Albert Edward (known as Bertie) to be a good king someday, the prince was a constant source of disappointment to both of his parents.

Even so, the Prince of Wales and his siblings were often sent to distant parts of the empire as emissaries of their mother, which helped to reinforce the sentimental attachment of settler colonies in Canada, Australia, and South Africa to the home country.

Albert's death in 1861 had an enormous influence on Victoria for the rest of her life. Out of devotion to him, she insisted that the routines that were followed while he was alive continue, including making up his rooms and putting out hot water for shaving and washing. She largely retreated from public appearances for decades, except for the unveiling of monuments to Albert around the country. Her continued use of public funds without performing a public role led to popular criticism of the queen and the monarchy as an institution, especially in the 1870s.

Many scholars argue that lacking Albert's counsel, her behavior in politics also changed; whereas during their marriage the royal couple had generally sought to remain above party and to work dutifully with the government of the day, in widowhood Victoria began to show a marked preference for the Conservative Party (especially BENJAMIN DISRAELI) and more antipathy to the Liberals (especially WILLIAM GLADSTONE). She could not singlehandedly decide who would form the government, as some of her predecessors had, but she could make day-to-day administration more or less difficult depending on her prejudices.

Victoria also grew close to two of her male servants: first the Scottish highlander John Brown, with whom many contemporaries and some historians assumed she had an affair, and later the Indian Abdul Karim. Regardless of the precise nature of her relationships with these men, there is no doubt that she was very attached to each of them in turn and found a measure of comfort for her loneliness in their company. At the same time, some people believed that she was being manipulated by such confidants, and her image as Mrs. Brown added fuel to the criticism of the monarchy in the 1870s.

Her popularity was salvaged to a large extent through her increasing association with imperialism and British prestige abroad. Disraeli arranged for her to assume the title of empress of India in 1876, and she became the centerpiece of the great pageants that marked her two jubilees. The Golden Jubilee of 1887 emphasized the respect and goodwill for Britain and the queen from countless foreign dignitaries, although it was also immediately preceded by the Colonial and

Queen Victoria, one of Great Britain's most influential monarchs, and Prince Albert with their many children

Indian Exhibition in 1886. The 1897 Diamond Jubilee placed more emphasis on the empire, with multicultural soldiers and statesmen from India, the settler Dominions and other colonies surrounding the queen in a colorful and triumphant display. By this time she had also become the "Grandmother of Europe," through her children and grandchildren marrying into the royal families of Germany, Russia, Sweden, Denmark, Greece, Spain, and Romania. By her death at the beginning of the 20th century, Britain was a preeminent global power in political, economic, and military terms, as nearly all of her obituaries declared.

These accomplishments were not the queen's own doing, nor did they only begin to develop after she took the throne. But the great length of her life and reign provided a reassuring veneer of stability and timelessness to an age that saw great and unpredictable changes in every field of human activity, from technology to women's rights. The queen herself was not always an advocate of such transformations, but in

the popular imagination her name and image became inextricably linked with the period and all that happened within it.

The life and times of Queen Victoria continue to fascinate historians and nonhistorians alike. The queen herself is still one of the most talked- and written-about women in history. According to her biographer Walter Arnstein, “only the Virgin Mary, Joan of Arc, and Jane Austen ranked ahead of the queen” in the holdings of the Library of Congress. She was a complex personality, and the firsthand documentary record is vast, encompassing her own diaries, letters, and published works, as well as official papers and the memoirs of many of the people who lived and worked with her over eight decades. With the passage of time and new sources being uncovered, the discussion of Victoria has continually been fed with new opinions and reevaluations. Her biographers are both numerous and diverse: They include a jaded intellectual (Lytton Strachey), a Catholic aristocrat (Elizabeth Longford), and a feminist and communist historian (Dorothy Thompson). Regardless of perspective, most biographers have found both commendable and faulty elements in the queen’s character, and it appears likely that the interest in Queen Victoria will continue for a long time to come.

CHRISTOPHER TAIT

Vienna, Congress of

The Congress of Vienna was held in the Austrian capital, where ambassadors from the major powers in Europe discussed what should happen to the continent at the end of the Napoleonic Wars. The conference was chaired by the Austrian statesman PRINCE CLEMENS VON METTERNICH and took place from October 1, 1814, to June 9, 1815. Strictly speaking, however, it was not a conference in the modern sense of the word, as the ambassadors never met in one place for these discussions, preferring to deal with other countries bilaterally, and then eventually come to a consensus. The peace terms with France had already been decided in

the Treaty of Paris signed on May 30, 1814. The discussions began with the initial defeat of Napoleon in 1814, and his subsequent exile to the island of Elba. However, he returned to France in March 1815 but was defeated at Waterloo on June 18—the congress having broken up nine days earlier.

Metternich, the Austrian foreign minister, presided, and much of the success of the congress was because of his diplomatic skills and his grasp of the situation. The United Kingdom was represented by Viscount Castlereagh, the foreign minister, and then by the duke of Wellington, although Wellington had to leave to take charge of the British forces in the southern Netherlands (modern-day Belgium), leading them at Waterloo. Prince Karl August von Hardenberg, chancellor of Prussia, represented the Prussians, with Count Nesselrode, the Russian foreign minister officially representing his country, although Czar ALEXANDER I intervened regularly in proceedings. The French were represented by CHARLES-MAURICE DE TALLEYRAND, the foreign minister of King Louis XVIII. The Spanish, the Portuguese, and the Swedes were also represented, as were the German states of Bavaria, Hanover, and Württemberg.

The victors in the Napoleonic Wars gained considerable territory, with the Russians being given the Duchy of Warsaw (Poland) and allowed to hold Finland, which they had annexed from Sweden in 1809. The German states were massively simplified, with smaller states merged and 39 states created under the presidency of the Austrian emperor. Prussia was given land from the Duchy of Warsaw and also Saxony, Rhineland/Westphalia, and the port of Danzig. Austria regained the Tirol and Salzburg, the Illyrian coast (modern-day Croatia and Slovenia), and also Lombardy-Venetia. The British gains were around the world, with the United Kingdom retaining Cape Colony, South Africa, and also Tobago and Ceylon. However, it had to give up the Netherlands East Indies and Martinique. The House of Orange in the Netherlands was given control of modern-day Belgium and also the Grand Duchy of Luxembourg. Many other changes were made in Italy and Germany.

There was opposition to the Congress of Vienna from the Poles, who saw their brief independence under the French being extinguished. Poland was not to appear as an independent country again until the end of World War I in 1918. The Congress also ignored the concept of nationalism, and the emerging national identity. However, it was the first concerted effort to sort out major European problems through discussion, with subsequent congresses being held to work out

solutions to new or emerging problems. The result was what became known as the congress system, by which the major powers controlled many events in Europe up until 1830, and in many cases up to 1848.

Metternich emerged as the greatest statesmen in Europe at the time; in recent times, Henry Kissinger studied the congress system prior to his entry into U.S. politics, with him drawing parallels and differences between what was possible in the discussions such as the Congress of Vienna and what could be envisaged during the 1960s and 1970s. In many ways, the congress system envisaged international discussions that would occur in the 20th century under the aegis of the League of Nations and later the United Nations.

JUSTIN CORFIELD

Voltaire (François-Marie Arouet)

(1694–1778) *French philosopher*

François-Marie Arouet, better known to the world as Voltaire, was born in Paris on November 21, 1694. With his penetrating observations of society and his incisive wit, Voltaire would become one of the stars of the French ENLIGHTENMENT, generally considered to be the beginning of the age of modern thought. Along with others like Denis Diderot, Voltaire changed the face of intellectual life forever.

Although he spent his life poking fun at what he considered the absurdities of organized religion, Voltaire received his education at the Collège Louis Le Grand, an educational institution founded by the Jesuits, the Society of Jesus. While named after Louis Le Grand, Louis XIV, in honor of his visiting there and offering royal patronage, the college was established by the Jesuits in 1563. Even though it was named a college during Voltaire's time, it is actually a *lycée*, roughly equivalent to an American high school. Victor Hugo, another of France's great men of letters, was educated at Louis Le Grand.

Born into the French middle class, or bourgeoisie, Voltaire's knack for satire gained him aristocratic enemies early in his life. In 1717 he was imprisoned in the infamous Bastille in Paris for writing about the regency government of Philippe II, duc d'Orléans,

who served as regent for the young Louis XV after the death of Louis XIV in 1715. Life in the Bastille, which was by then no longer the forbidding prison of the Middle Ages, did not dampen Voltaire's creativity. While incarcerated there, he wrote the play *Oedipe*, and adopted the pen name Voltaire. *Oedipe* would become his first success, and set him on his career as a writer.

Ten years later, in 1726, Voltaire ran afoul of another French aristocrat, known to history as the chevalier de Rohan. By now, his fame had gained him a certain immunity from imprisonment. Those sent to the Bastille were often never tried, merely sentenced by the king or regent with a secret document. This time, Voltaire was given the choice of either the Bastille or exile. Wisely, he chose England, then the most intellectually free of European countries. After the Glorious Revolution of 1688 had ended the despotic rule of King James II, writers like John Locke in his *Two Treatises of Government* laid out a plan for representative government that would affect the rest of Voltaire's career. His *Letters on the English* were published in Rouen, France, in 1731. Nowhere else is there a better statement of his political philosophy

Best known for his works in political satire and theory, Voltaire was one of the first major historians of the modern era.

than in his Letter VIII: On the Parliament, where he writes, “The English are the only people upon earth who have been able to prescribe limits to the power of kings by resisting them; and who, by a series of struggles, have at last established that wise Government where the Prince is all-powerful to do good, and, at the same time, is restrained from committing evil; where the nobles are great without insolence, though there are no vassals; and where the people share in the Government without confusion.”

Such views hardly endeared him to the court of King Louis XV, who was intent on carrying on the tradition of absolute monarchy that had been perfected by King Louis XIV, the Sun King. The closest approximation to the British parliament was the French Estates General, an assembly of the bourgeoisie, clergy, and nobility. Its last meeting had been in 1614, after the assassination of King Henry IV in 1610. It did not meet again until 1789, and its convocation then by an unwilling Louis XVI would begin the FRENCH REVOLUTION.

By 1734 Louis XV had heard enough of Voltaire’s views on government. At about that time, Voltaire began his liaison with Madame de Châtelet, whose husband was well aware of the affair. Voltaire apparently felt it prudent to take up residence at the Châtelet’s chateau at Cirey. However, from then on, Voltaire’s life became both more confusing and more intriguing.

Voltaire remained an astute critic of French government and society, especially the official Roman Catholic Church. While he is often portrayed as being an atheist, in one passage he declared his personal belief in Jesus Christ as his God. His satire on St. Joan of Arc, *La Pucelle*, showed as much humor as scandal to the organized church.

The political satire of Voltaire remains a treasure to readers and writers alike. Voltaire’s best-known satire, *Candide*, was published in 1759, at the height of the SEVEN YEARS’ WAR and most likely was influenced by the carnage of the worst conflict that Europe would witness between the Thirty Years’ War and the Napoleonic Wars. Although he lampoons the search for “the best of all possible worlds,” he nevertheless still reveals his faith in the indomitable spirit of mankind, a creed that never left him.

While Voltaire is best known for his works in political satire and political theory, he also has claim to be one of the first serious historians of the modern era. His biographies of Louis XIV of France and the warrior-king Charles XII of Sweden still stand as models of the historian’s art today. Both combine an

appreciation for the times that the two monarchs lived in and an understanding of the personal impact that individuals could have on their eras.

In 1755 Voltaire settled in Switzerland and purchased his own chateau at Ferney. The great and the humble came to visit him. However, his ideals of tolerance and just government gained him another bout with the authorities.

Although he had moved from France, Voltaire remained French in his heart until his death. Fittingly, he died in Paris on May 30, 1778, only a little more than a decade before the old French monarchy, whose absolutist policies he so despised, collapsed of its own weight in the French Revolution of 1789.

JOHN F. MURPHY, JR.

voodoo (Vodun), Haitian

The origins of Haitian voodoo can be attributed to West African roots. Anthropologists have studied African voodoo rituals and applied this study to Haitian voodoo. The Ewe tribe in western Africa practices this religion to invoke spirits for protection. One ceremony is meant to show that voodoo rituals offer protection against hot knives burning the body and broken glass cutting into flesh. The participants in these ceremonies believe their medicine and participation in these rites will appease the gods and offer them protection.

Voodoo, like many other religions in the world, has a hierarchical system of gods and spirits (*loas*). One of the more powerful gods in this religion is *bon dieu*, the maker of the planet and heavens. The *loas* have their own characteristics and personalities and are able to perform both good and malicious deeds. The development of various *loas* did not just occur in Africa, as some *loas* were created in Haiti as well. Voodoo is not restricted to simply religious ceremonies; it also includes various social elements such as dancing. During voodoo rituals, people summon spirits to embody them, merging the identities of the person with the spirit, which allows that individual to possess the powers of the spirit.

A hypnotic trance is induced during a voodoo dance. Voodoo was introduced to Haiti as a result of the trade that brought in thousands of slaves. Secret voodoo ceremonies were conducted in a temple with the presence of a priest (houngan) or priestess (mambo).

Voodoo was introduced to Haiti as a result of the slave trade that brought in thousands of enslaved Africans. Haitian voodoo is difficult to research because many of the slaves were unable to keep written records of their culture and history. In fact, there was a great need for secrecy because plans for resistance were made and sworn upon at these religious festivals. These secret voodoo ceremonies were usually conducted during the later hours of the evening in a temple (*hounfor*) with the presence of priest (*houngan*) or priestess (*mambo*). The reason these ceremonies were conducted in secrecy is because slaves practicing voodoo in colonial Haitian society were assaulted, jailed, and/or executed. Haitian voodoo is a blending of African and Christian cultures; the majority of Catholics in Haiti embrace voodoo, while the majority of voodoo followers profess to be Catholics.

Voodoo has a history of suppression and was a means of survival for the slaves. The use of African religion was a means to cope with the horrid condi-

tions of the Middle Passage, the journey from Africa to the Americas. The demographic composition of Haiti prior to the HAITIAN REVOLUTION was that of a society comprised mostly of African slave labor, with white colonists numbering in the minority.

Voodoo societies were major contributors in creating the infrastructure needed for the slaves to form an uprising against the French colonial administration and to succeed in becoming an independent state. Voodoo has been suppressed by many leaders of the Haitian Revolution after 1791, as both TOUSSAINT LOUVERTURE and Jean-Jacques Dessalines, independent Haiti's first ruler, prohibited voodoo gatherings and dancing. Henry Christophe sought to get the new country of Haiti recognized by various nations by supporting Christianity and stifling the practice of voodoo.

The attempts by these three Haitian leaders to suppress voodoo were unsuccessful, as the practice of this religion played a significant role in the development of Haitian society. In fact, president and later dictator

of Haiti Papa Doc (François) Duvalier, used voodoo in his 20th-century government, assigning a number of government posts to voodoo priests. Voodoo priests invoked a certain degree of fear within the Haitian populace since some believe that voodoo priests use sorcery to transform people into zombies. The belief in the zombie was instrumental to maintaining social order in Haiti, as there is a belief that if a person who committed evil deeds dies, his or her spirit is trapped in limbo. This belief becomes an incentive for the population to observe the rules of society. Voodoo has not only played a major role in the religious lives of the Haitian people and the maintenance of the social order, but has also penetrated into the realm of art, which is recognized, for example, in the artwork of the voodoo priest Hector Hyppolite. In an executive order by then-president Jean-Bertrand Aristide in April 2003, voodoo was sanctioned as an officially recognized religion in Haiti.

This blending of voodoo beliefs with art has gained some degree of recognition from people who enjoy the beauty of the pictures and the messages these artworks convey.

Voodoo has acquired a negative image, partly due to the belief that it represents uncivilized African superstition, and partly due to American depiction of voodoo in popular culture as a religion of superstitions and spiritual possessions. This depiction is intensified by the fact that voodoo involves the use of an assortment of props such as chicken feathers, skulls, and snakes. It is this perception of voodoo that emerges in American popular culture as various movies emphasize the exotic nature of voodoo. Voodoo still possesses a sizable following, as approximately 40 million people practice this religion.

BRIAN DE RUITER

Wahhabi movement

Muhammad Ibn Abd al-Wahhab (d. 1792), a cleric from the Arabian Peninsula (present-day Saudi Arabia), founded the Wahhabi movement after concluding that innovation and interpretation had corrupted Sunni Islam. He used the works of the early Muslim thinker Ibn Taymiyya to justify his interpretation and advocated an Islamic reformation. Wahhabis claimed the way of *Salaf as-Salih*, or the rightly guided Muslims who sought to restore Islam to its true state. While some consider Abd al-Wahhab a great Islamic reformer, others refer to him as the father of modern Islamic terrorism.

After being expelled from his home village in the Najd, Abd al-Wahhab moved to Dir'iyah and formed an alliance with the chieftain Muhammad Ibn Saud in 1795. The alliance of Wahhabism and the Saud dynasty proved a potent religious and military force that would survive several major military defeats over two centuries. Ibn Saud used Wahhabism to justify his conquests of Arabia, arguing that many Muslims had become unbelievers and that orthodox, or right-guided, Muslims had the right or even the duty to conduct violent jihad (holy war) against the unbelievers. By 1795 the Wahhabis, in alliance with the Saud family, controlled most of the northern and eastern parts of the Arabian Peninsula. By 1804 they had taken the Hijaz and the holy cities of Mecca and Medina. The Ottoman Empire, accused of corrupt Islamic practices by the Wahhabis, opposed the movement and enlist-

ed the support of MUHAMMAD ALI in Egypt to crush both the Saud family and the Wahhabis and to reassert Ottoman hegemony over Arabia. From 1811–20 Muhammad Ali's able son Ibrahim was able to defeat the Wahhabis and drive them back into the remote northern part of the Arabian Desert.

Wahhabism recognized the Qu'ran and the Hadith (teachings of the Prophet Muhammad) as the basic texts. Unlike other Muslims, Wahhabis did not adhere solely to one specific Islamic school of jurisprudence, but rather based their beliefs on direct interpretations of the words of the Prophet. Wahhabis believed that other Muslims, such as the Sufis and the Shi'i, followed non-Islamic practices. They sought to restore Islam to its true state. Wahhabi interpretations of the Hadith were austere and puritanical. The most severe Wahhabi practices were manifested in the Arabian Peninsula,

In 1924 the Wahhabi Saud dynasty reconquered the two Muslim holy cities of Mecca and Medina, giving them control of the hajj, the annual pilgrimage. Control over the hajj gave Wahhabis ample opportunity to preach to Muslim pilgrims, while subsequent revenues from vast petroleum reserves gave the Saudi dynasty the resources to fund Wahhabi-based religious schools, newspapers, and outreach organizations.

Most Muslims outside Arabia rejected Wahhabi Islam, and traditional Sunnis, while accepting the Hanbali scholar Ibn Taymiyya, rejected Abd al-Wahhab's interpretation of his work.

JULIE EADEH

Waitangi Treaty

New Zealand became an official colony of Britain on February 6, 1840, with the signing of the Waitangi Treaty. The treaty gave the British government, headed by Queen VICTORIA, political sovereignty in New Zealand. In the treaty, the Maori gave sovereignty to the government of Britain but were allowed to continue their own cultural practices and traditions. Though many provisions were made for the protection of the Maori, especially in regard to land boundaries and ownership, throughout the 19th century the Maori seceded many of their rights and homelands to the colonial New Zealand government, mostly during the MAORI WARS.

In 1939 the British Colonial Office gave Captain William Hobson the authority to officially annex the islands now known as New Zealand as a part of the British Empire. Britain wanted to annex New Zealand through the signing of the Waitangi Treaty for a few reasons. Europeans had been in New Zealand since that late 18th century, but emigration and trade from British subjects in the islands increased substantially during the 1830s. In the 1830s British politics and culture were under a heavy moral influence to protect native cultures affected by British imperialism, such as the Maori. This moral sentiment in Parliament and in the popular newspapers helped to prompt the Colonial Office to try to annex the colony in order to help protect the Maori from British exploitation.

The missionary Henry Williams copied the Waitangi Treaty, which was eventually signed by 529 chiefs on eight different copies in Maori and in English. There were differences, however, between the English and the Maori text that later created problems between the settlers and the Maori after the signing of the treaty. Many of the terms that the English incorporated into the treaty, such as *sovereignty*, were foreign concepts to the Maori. The Maori and the English copies also differed, most importantly in the concept of *chieftainship*, the native Maori conception of political organization, with the British concept of sovereignty. Though numerous Maori chiefs did not sign the Wait-

angi Treaty, it became official New Zealand law on February 6, 1840.

The treaty was broken down into a preamble and three parts. The controversy focused predominantly on the preamble and the second article. The English preamble suggested that the main focus of the Waitangi Treaty was to establish a British government to create a British colony. This differed from the Maori version that stated that the Queen Victoria wanted the treaty to protect and allow the Maori to retain land indefinitely. In the second article, the Maori “individuals” as well as “the Chiefs and Tribes of New Zealand” were allowed possession of land. But the Maori version stated that the “unqualified exercise of . . . chieftainship” governed land claims. This later helped the colonial government in New Zealand force individual land ownership upon the Maori, which allowed the British settlers to purchase land that was formerly held in common.

Many Anglo–New Zealanders consider the Waitangi Treaty as the origin of the modern nation-state of New Zealand. There has been continued debate about the original intention as well as the effects of the treaty upon the Maori. In the 20th century, there has been a conscious attempt to redress the wrongs of the 19th century. The Waitangi Act, signed on October 10, 1975, established the Waitangi Tribunal, which eventually paid reparations to the Maori.

BRETT BENNETT

War of 1812

The War of 1812 began in June with a U.S. declaration of war against Great Britain. At the time, U.S. grievances seemed clear to a majority of the American public and to members of Congress from the South and West who voted in favor of the declaration. They were convinced that Great Britain was supporting American Indian attacks against U.S. settlers in the Old Northwest, such as Shawnee chief Tecumseh's clashes with settlers in the Ohio River valley, in violation of agreements dating back to the treaty that ended the AMERICAN REVOLUTION.

Although this has since been demonstrated to be false, it was widely believed at the time. In addition, British naval outrages against U.S. ships on the high seas in the context of the Napoleonic Wars had inflamed the American public. While New England and the Northeast were largely opposed to the war, mainly because of their important economic connections to the British Empire, President JAMES MADISON derived significant support from the other regions for his idea to capture Canada, making it a diplomatic bargaining chip against real and perceived British aggression.

The first half of the war was disastrous for the United States because the young nation was not at all militarily, administratively, or fiscally prepared for any war, least of all for a war against the world's greatest power at that time. The U.S. Navy's active ships numbered a few dozen at best. The army numbered a few thousand, and, in the early going, most of these soldiers were inadequately trained militia led by politically appointed officers or aging Revolutionary War veterans. The nation had an insufficient weaponry manufacturing base, no real means to resist a British naval blockade, nor the fiscal and administrative machinery to raise, train, or pay for military forces. The United States experienced defeat at Detroit and was repeatedly repulsed in its attempts to take Canada. The only good news for the United States in the first half of the war was victories by navy warships, but this did not prevent the British from blockading the U.S. Navy into its ports by 1813.

Bright spots for the United States in 1813 included Master Commandant Oliver Hazard Perry's victory at the Battle of Put-In Bay against a British naval squadron. Coupled with Master Commandant Thomas Macdonough's victory at the Battle of Lake Champlain in 1814, the United States was able to retake control of the Great Lakes region. In addition, by 1814 the Americans saw to it that a new army was formed, trained, equipped, and officered. Removing ineffective appointees from the higher ranks, the army commissioned newer, younger, and more aggressive officers such as ANDREW JACKSON, Winfield Scott, and Edmund Gaines. By 1814 these officers had trained an army made up of soldiers who were in uniform for the duration instead of short-term enlistees. These men were well enough trained in line-of-battle tactics to overcome crack British troops, fresh from helping defeat Napoleon, at the bloody Battle of Lundy's Lane in Niagara Falls, Ontario.

In addition, Major General Jackson was able to win some of the most strategic U.S. victories. Driven by his hatred of American Indians, Jackson molded regular and militia forces into units that broke the back of Ameri-

can Indian military power in the Old Southwest at battles such as Horseshoe Bend. These wartime defeats, especially of the Creek Nation, would pave the way for postwar U.S. conquest and occupation of the region and eventual Indian removal in the postwar period.

After enduring humiliating British raids on Baltimore and Washington, D.C., in which the British burned public buildings and forced President Madison to flee what is now the White House, the United States belatedly achieved one final victory at the Battle of New Orleans. This clash occurred in January 1815, three weeks after a peace treaty, principally negotiated for the United States by JOHN QUINCY ADAMS, had been signed at Ghent, Belgium. Ultimately, the war ended as it had begun: with a miscommunication. In 1812 the British had agreed to U.S. diplomatic demands but the treaty did not get to Washington, D.C., before Congress declared war.

The war's odd beginning and end have puzzled diplomatic historians for decades. The United States had been unprepared for war, representatives of the New England states were, by 1814, meeting in Hartford, Connecticut, to consider secession, and the United States was losing so badly at the beginning of the war that many people feared the country might lose some of its original territory to the British Empire. Almost from the day war was declared, in fact, the Madison administration had negotiators in Europe trying to bring an end to a conflict that the United States had started. But as the United States came out of the war with its territory intact, America's public, press, and politicians somehow turned a stalemate into a spectacular U.S. victory. The United States even derived its national anthem, Francis Scott Key's "Star-Spangled Banner," penned during the British attack on Baltimore, from a war it nearly lost.

HAL M. FRIEDMAN

War of the Pacific (1877–1883)

Sparked by conflicts over control of the rich nitrate fields in the Atacama Desert along South America's Pacific coast, the War of the Pacific proved a national

humiliation for the allies Peru and Bolivia and a national triumph for Chile. With its decisive victory, Chile wrested from Bolivia Antofagasta, its only access to the sea, thus rendering the country landlocked and shearing off Peru's southernmost province of Tarapacá. The strip of land conquered by Chile was loaded not with one but two vital natural resources, nitrates and copper, that later proved crucial in the development of the Chilean national economy. The war caused lasting resentment against Chile by its two defeated neighbors that endures to this day. It also sparked a popular uprising in the Peruvian highlands that exposed the weak sense of national belonging among Peru's highland Indian, black, and Chinese populations, and that for a time threatened to fragment Peru into warring regions. Some scholars maintain that the ideology espoused by the highland rebels was itself explicitly nationalist, spearhead of a nationalist project directly at odds with the elitist nationalist discourse emanating from the capital, Lima. This was just as the Peruvian national state and the Lima-based commercial elite were experiencing a deep fiscal crisis in consequence of the depletion of Peru's guano reserves following the age of guano.

The war's short-term trigger was Bolivia's 1878 imposition of higher taxes on Chilean nitrate operations in the Bolivian province of Antofagasta, contrary to an earlier agreement between the two countries. Chile balked, tensions escalated, and soon Peru was drawn into the conflict in consequence of its secret mutual defense treaty with Bolivia. Hostilities commenced in April 1879 with a series of sea battles that raged along the Pacific coast. In the 1870s both nations had recently built formidable modern navies, though Chile's proved far superior, destroying Peru's in six months. The decisive encounter was the Battle of Angamos of October 8, 1879, in which the Chileans captured the Peruvian battleship *Huascar* and killed its able commander, Miguel Grau. With its control of the sea secure, and with Bolivia knocked out of the picture, Chile launched a land invasion of Peru. Following its January 1881 victories in the Battles of San Juan and Miraflores, the Chilean army occupied Lima and ousted the dictatorship backed by the Peruvian CAUDILLO Nicolás de Piérola, installing a government headed by Francisco García Calderón.

For nearly three years following Chile's capture of Lima, the Peruvian General Andrés Cáceres led an armed resistance to Chilean occupation in the central and southern Peruvian highlands, backed by an insurgent army of Indian, black, and Chinese workers and peasants, the *montoneras*.

Soon the army nominally headed by Cáceres fractured, as the *montoneras* and other groups pressed their own agendas that had less to do with ousting the Chilean occupiers than with overturning longstanding relations of power and privilege in the highlands, especially with regard to the region's highly unequal patterns of landownership and labor relations. Drawing on social memories of highland resistance during the Great Civil War a century earlier, the rebels kept up their resistance even after the war's formal end in the Treaty of Ancón of October 1883. Scholarly debates continue regarding the nature of this resistance movement, particularly its social composition, geographic extent, and the motivations of its participants in various regions, as expressed in both their written texts and collective actions. The *montonera* movement highlights a broader pattern in Latin American history, in which fights among dominant groups lead to sustained challenges to existing social relations by those from below.

MICHAEL J. SCHROEDER

Washington, George

(1732–1799) *general and first U.S. president*

George Washington, a fourth-generation Virginia planter, played a central role in every phase of America's separation from Britain and creation of the United States. Acclaimed during his own lifetime as Father of his Country, Washington was indeed the AMERICAN REVOLUTION's "indispensable man."

One of seven children of Virginia landholder Augustine Washington, George's formal education ended when he began training as a surveyor at age 16. Over six feet tall and heir to Mount Vernon, George, a stockholder in Virginia's Ohio Company, was picked by the Virginia House of Burgesses in 1754 to help command troops sent west to assert the private land company's claims to territory controlled by the French and their Indian allies.

In what would prove to be opening maneuvers in the SEVEN YEARS'/FRENCH AND INDIAN WAR, Washington and his troops killed a French commander and a Seneca chieftain, erecting Fort Necessity to consolidate British/Virginian regional claims. The French soon coun-

George Washington at his home in Mt. Vernon, Virginia, with his wife, Martha (left), and two children. Although his presidency was avowedly nonpartisan, his opinion of the French Revolution revealed him as a Federalist and sparked abuse from the Republican press.

tered, killing one-third of his men, but Washington and his remaining troops were allowed to evacuate.

Working closely with British generals as war broke out in earnest, Washington would learn important lessons about British ways of warfare. The massacre of General Edward Braddock and two-thirds of his troops at Fort Duquesne in 1755 showed Washington the futility of fighting a European-style war amid harsh frontier terrain. Like many others, he seethed at British arrogance and condescension toward colonial troops.

Elected in 1758 to the House of Burgesses, Washington consolidated his position as a leading Virginian by marrying Martha Dandridge Custis, the colony's wealthiest widow, becoming stepfather to her son and daughter. He would spend the years prior to 1775 as both country squire and active farmer, expanding and diversifying his plantations, acquiring more than 300 slaves. A tough taskmaster who pursued runaways, Washington nevertheless tried to keep slave families intact, endorsed the

gradual elimination of slavery, and arranged for his own slaves's emancipation in his will.

Chosen in 1775 to organize and lead a Continental army, Washington made serious errors and struggled to fill and train his ranks. Yet his skill at avoiding or escaping disastrous encounters, combined with bravery, self-discipline, and quiet confidence, enabled Washington to eventually cooperate with state militias and keep his often sick and hungry army together.

As it became clear that the American-French victory at Yorktown in 1781 would be the war's last major encounter, Washington made what may have been his greatest contribution to the republican ideals of the American Revolution: He retired to Mount Vernon. Washington was hailed as a new Cincinnatus, the victorious fifth-century B.C.E. Roman general who returned to his farm rather than accept money or power from a grateful populace.

Washington's retirement would not last long. His military service had convinced him of the need for a

government strong enough to field an effective army. As a member of the landed gentry, he also saw in the 1786 Shays's Rebellion by poor western Massachusetts farmers and veterans the seeds of collapse of the new nation. Persuaded to chair the Constitutional Convention in Philadelphia in 1787, he brought order and legitimacy to the closed-door proceedings while playing only a minor role in its debates.

Once enough states had ratified the U.S. CONSTITUTION, Washington was unanimously chosen as the United States's first president, taking office in New York City on April 30, 1789. Focusing on fiscal stability and political credibility, Washington selected trusted colleagues, including ALEXANDER HAMILTON, his former military aide, and fellow Virginian THOMAS JEFFERSON, former ambassador to France, for what became known as the cabinet. As Americans debated what to call their new leader, Washington discouraged "regal" titles in favor of "Mr. President." By 1790 Americans were celebrating their president's February 22 birthday.

Governing did not always prove so rewarding for the aging leader. As Hamilton and Jefferson clashed over a series of vital issues, factions, soon to become political parties, vied for Washington's backing. His second term was especially difficult. Although Washington's presidency was avowedly nonpartisan, his opinion of the FRENCH REVOLUTION, as it declined into anarchy, revealed him as a Federalist and sparked abuse from the Republican press. The 1794 Whiskey Rebellion saw Commander in Chief Washington marching into Pennsylvania at the head of 13,000 federal troops sent to pacify opponents of Hamilton's hated whiskey tax. A controversial treaty, negotiated by and named for Washington's close colleague, John Jay, provoked outrage when it seemed to put the fledgling United States in Britain's pocket.

Washington had a final precedent to set. With Hamilton's help he crafted a farewell address to announce that he would not seek a third term. In it, Washington urged Americans to come together as a nation and warned against foreign alliances based on other than sound national interests. Washington's second voluntary withdrawal from power set an example that only one U.S. president, Franklin D. Roosevelt, has ever breached. In his final retirement, Washington closely monitored construction of the new federal district that would bear his name, renovated Mount Vernon, and added to his vast land holdings. He died of a throat infection at age 67 after insisting on riding out to do chores in a freezing December rain. An outpouring of tributes ensued,

none better remembered than Congressman Henry Lee's "First in war, first in peace and first in the hearts of his countrymen."

MARSHA E. ACKERMANN

Watch Tower Society

Charles Taze Russell founded the Watch Tower Bible and Tract Society in 1884. This society brought together many Bible study groups that he had established throughout Pennsylvania over more than a decade. Russell rejected many traditional and mainstream Christian doctrines. However, his most radical teaching had to do with eschatology (doctrines about the Second Coming of Christ, the Battle of Armageddon, and the establishment of the Kingdom of God).

Russell claimed that the Bible contained a secret code revealing the dates (1874 and 1914) for what he famously phrased "the end of the world as we know it." Given the obvious lack of visible evidence, Russell came to believe that Christ had returned in only a spiritual sense in 1874 and that the final conflict between the forces of God and those of Satan was merely set in motion in 1914. At the conclusion of these protracted events, sometime in the very near future, insisted Russell and his society, God would unleash a mass genocide on all unbelievers and reward the faithful with eternal life.

After Russell's death and several schisms, the primary group, now calling themselves Jehovah's Witnesses, under the leadership of Joseph Rutherford, became focused on missionary activity, organizing what was rapidly becoming a world community. Successive leaders developed a publishing empire primarily to produce translations of the Bible and literature supportive of their controversial theology. Jehovah's Witnesses are often recognized today for their unconventional beliefs and anticultural behaviors, some of which have led to important legal cases and resulted in Supreme Court decisions that have substantially enhanced America's religious freedoms.

Jehovah's Witnesses forbid their members to engage in the celebration of Christian and civic holi-

days (except for the Memorial of Christ's Death), which they believe originated in pagan rituals. They accept baptism and the Lord's Supper as sacraments, but the latter is reserved for the "Anointed Class" (144,000 elite believers), while the "Great Crowd," or current general membership, may observe this once-a-year Passover-style meal. But it is their unwillingness to join the armed forces, to salute the flag, recite the Pledge of Allegiance, run for public office, vote in public elections, or accept blood transfusions, vaccinations, and organ transplants that have led to their legal problems and occasional persecutions, the most vicious of which were conducted by the Nazis in the 1940s, when thousands of Witnesses died in concentration camps.

Holding a strict monotheism, they deny the existence of the Trinity, believing Jehovah to be the Supreme Being. Christ is viewed as God's first created spiritual being and is legitimately called God's Son even though he is not divine. Christ was incarnated in Jesus as a sinless man and invisibly resurrected and enthroned by God as a king over heaven and Earth. The Holy Ghost is simply a biblical term describing God's method of work in the world and not a separate entity. Jehovah's Witnesses also deny the immortality of the soul and the existence of hell as a place of punishment. For them the death of unbelievers is merely the annihilation of human consciousness.

RICK M. ROGERS

Wesley, John (1703–1791) and Charles (1707–1788)

religious reformers

The story of the Methodists cannot be told without John and Charles Wesley. Sermon and hymn, poetry and prose have permanently marked the story of Methodism. Methodism was indelibly formed, not only by the preached and published sermons of John, but also by the poetry and hymnody of Charles. John Wesley was the 15th child and second surviving son of Samuel and Susanna Wesley. John was born at the Epworth Rec-

tory on June 17, 1703; he died on March 2, 1791, and was buried at the City Road Chapel in London.

When John was six years old, he and Charles were rescued from the burning rectory. This made a stronger impression on John than it did on Charles, as he came to see himself as a child of Providence, a "brand plucked from the burning."

Charles Wesley was the youngest of three surviving sons and the 18th child born of Samuel and Susanna Wesley. Charles was born in the Epworth Rectory, about 23 miles northwest of Lincoln, England, on December 18, 1707. He died in London, on March 29, 1788, three years prior to John's death.

In 1713 John entered Charterhouse School in London, and in 1720 he entered Christ Church College, Oxford, where he earned his M.A. in 1727. As early as 1725, John was ordained deacon and later in 1728 he was ordained a priest. After graduation, John returned home to help his father as a curate for two years before returning to Oxford to carry out his assignments as an elected fellow of Lincoln College.

In 1716 Charles was sent to Westminster School, where his older brother Samuel, an usher at the school, provided a home and board for him. In 1721 he was elected King's Scholar and began to receive free board and tuition. In June 1726 Charles entered Christ Church, Oxford, where he completed his degree in 1729 and became a college tutor.

Earlier in life, Charles Wesley had objected to becoming "a saint all at once," but later at Oxford he became restless over the absence of assurance in salvation and, thus, started the Holy Club in 1729. Initially, the Holy Club began with the intent of following the prescribed method of study set by the university, but soon became more uniquely defined. The original four men who made up the Holy Club (William Morgan, John Clayton, John and Charles Wesley) were jeered with names like Bible Moths, Bible Bigots, Supererogation Men, Sacramentarians, and Methodists. Finally, the name Methodist stuck because of their methodical study of Scripture, fervent daily prayers, ministering to those in need, and weekly attendance in the Eucharist.

Upon John's return to Oxford in 1729 he would join the Holy Club started by Charles. During those early formative years, the young and impressionable John struggled with two questions: "How do I become a Christian? How do I remain a Christian?" Later in life, Wesley would reflect in his journal that he was struggling over the nature of justification and sanctification and that the struggle was in effect plucking the cart before the horse. In other words, he was

Charles and John Wesley (above) started the Methodist Church through study and questioning of their faith.

struggling to understand salvation and was confusing the two.

A few years later, in 1735, after much anguish over the decision to enter Holy Orders, Charles yielded and was ordained a deacon by Reverend Dr. John Potter, Bishop of Oxford. On the following Sunday, he was ordained a priest by Reverend Dr. Edmund Gibson, bishop of London. Still searching for that assurance of faith, Charles decided to accompany his brother John to the new colony of Georgia to serve as secretary to General Oglethorpe. This Georgia interlude has been referred to as the second rise of Methodism. After a short six-month stay in Frederica, Georgia, Charles would return to England in 1736 still seeking rest for his soul. In 1737 Charles found considerable help in his spiritual formation; through the influence of the Moravians, and most notably, Count Nicholas Ludwig von Zinzendorf, Peter Bohler and Mr. Bray, he was finally able to stop trusting in his own self-righteousness.

On John's return to England in 1738—often referred to as the third rise of Methodism—John was painfully aware of his failure as a missionary in Georgia and was sorely depressed over the state of his own soul. As providence would have it, John would find similar help and

counsel from Peter Bohler as his brother Charles. Three days after Charles's assurance of salvation, John would have his own assurance of faith. John went reluctantly to a society in Aldersgate Street, where he heard Martin Luther's preface to Romans. Wesley would later say, "I felt my heart strangely warmed. I felt I did trust in Christ, Christ alone for salvation, and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death."

After years of ministry with his brother John, as an itinerant and field preacher, Charles was married to Sarah Gwynne on April 8, 1749, with his brother officiating at the wedding. Sarah was 23 and Charles was 40 when they married. Unlike John's marriage to Mary Vazeille that would end up in separation and without children, Charles's marriage was happy. Eight children were born to the couple; only three of the youngest survived infancy: Charles, Sarah, and Samuel. While every member of this family was musical, the two sons were considered musical prodigies.

Charles Wesley, the poet of Methodism, was undoubtedly one of the greatest poets the church has ever known. The *Poetical Works of John and Charles Wesley* fills 13 volumes of approximately 9,000 poems that would eventually be set to music for the hymns that not only shaped Methodism but continue to be sung today. Some of the more well-known songs include "Jesus, Lover of My Soul," "Oh for a Thousand Tongues to Sing," "Hark, the Herald Angels Sing," "And Can It Be That I Should Gain," "Lo, He Comes with Clouds Descending," "Love Divine, All Loves Excelling," and "Christ the Lord Is Risen Today."

Increasingly, John Wesley found that he was no longer welcome in his own Church of England; he established the Methodist Society in England. As the Methodists in close-knit groups of fellowship and mutual accountability would "watch over one another in love," in prayer, singing of hymns, Scripture reading, exhortation, encouragement, and confession, they were able to zealously "give out" God's love in "works of mercy" and "works of piety." Both brothers have left a rich legacy of "faith filled with the energy of love," not only in their poetry and hymns, preaching and leadership, but by their own lives of faith.

White Lotus Rebellion

The White Lotus Society was one of several secret societies that emerged from time to time during the history of imperial China. They required members, mostly from lower social classes, to adhere to rituals associated with Buddhism and Daoism (Taoism), food taboos, and penance. Such groups attracted the attention of the government, which often took steps to suppress them. The White Lotus Society had roots in the Song (Sung) dynasty and survived the Song government's efforts to suppress it. It emerged as one of the rebel movements during the late Mongol Yuan dynasty and helped to topple it.

The QING (CH'ING) DYNASTY was ruled by a frontier people, the Manchu, a fact that upset many of the majority Han Chinese. Because early Manchu rulers had been successful and China had been prosperous through the second half of the 18th century, potential opponents of the dynasty had lain low and not been able to garner significant support. Like its predecessors, the Qing government was ambivalent toward popular religious organizations such as the White Lotus, condemning religious festivals and rituals as wasteful, disruptive, and potentially harmful to morality.

The White Lotus Rebellion (1796–1804) began in the southeastern border area of Sichuan (Szechuan) Province in 1796. Sichuan had undergone dramatic population growth during the 18th century, due to large-scale immigration from neighboring provinces, to about 20 million by 1800; government efforts to slow the pace of immigration into Sichuan had been ineffective. The large influx of people strained government resources and caused tension between the immigrants and the existing local population.

In 1781 the government arrested a White Lotus leader named Liu Song (Liu Sung) and banished him to the frontier. His harassed followers then revolted and the unrest spread quickly from Sichuan to neighboring provinces in central and northern China. This rebellion indicated the turning point of Qing dynastic fortunes; the army sent to suppress it proved too rotten to perform its task. The rebels were able to garner popular support due in part to their millenarian religious appeal and also to their racial-nationalistic stand against Manchu rule.

Finally, local gentry and officials in the affected regions organized militias to undertake the task of putting down the rebellion, which cost the government 100 million silver taels. Although put down in 1804, the White Lotus Rebellion was the forerunner of more dev-

astating revolts of the 19th century that contributed to the downfall of the dynasty.

women's suffrage, rights, and roles

Against the background of the ENLIGHTENMENT and AMERICAN, FRENCH, and INDUSTRIAL REVOLUTIONS, Western women's lives changed dramatically, although not until the 20th century would most gain the right to vote. By 1900 Western societies had become accustomed to women's participation in public affairs, even if governments, and many individual men and women, still questioned its appropriateness. The profound changes reshaping European and North American women's lives were not examples of unfettered progress toward equality but, rather, a series of challenges to, and compromises with, ancient traditions of female inferiority and dependency.

Although there had long been women of distinction and even importance—queens, priestesses, scholars, and saints—the first influential proponent for all women was Englishwoman Mary Wollstonecraft. A former governess who supported the French Revolution and collaborated with THOMAS PAINE, she published *A Vindication of the Rights of Woman* in 1792. Women, said Wollstonecraft, were equal to men in their ability to reason. Therefore, women must be treated as reasonable and equal members of the human race.

FEMALE EDUCATION

At a time when the “female” brain was perceived as feebler and less focused, Wollstonecraft proposed free public school systems to equally educate boys and girls together in intellectual, physical, and vocational pursuits. The reality of the times was otherwise. In the 18th century and later, many women educated themselves by sneaking books from male family members or secretly listening in on brothers' lessons. Some were lucky to be encouraged by fathers or brothers, or had access to rigorous schools led by female teachers, like Emma Willard of New York, who had themselves achieved a decent education. TRANSCENDENTALIST Margaret Fuller of Massachusetts was

educated in Greek and Latin by her lawyer father and later learned German and Italian. In 1839, she organized a series of meetings, mainly for women, to discuss intellectual and political issues. Hers was an Americanized version of the European salon that flourished, especially in France, in the late 18th century. Unlike those salons, organized by well-educated women but dominated by men, Fuller's gatherings were a form of female adult education.

Proponents of female education were not necessarily feminists. Catharine Beecher championed improved teacher training for women and helped develop home economics as a science, not because she approved of female equality, but because she believed that women needed to do their traditional work more efficiently. In Britain Isabella Beeton likewise advised women on cooking and home management.

Ohio's new Oberlin College opened its doors to a few women in 1833. But women only colleges seemed to offer a more acceptable solution. Founded in Massachusetts in 1837 by Mary Lyon, a chemist, Mount Holyoke Female Seminary was the first. In Britain, Frances Mary Buss founded a college preparatory school for girls in 1850, and in 1871 Britain's Shirreff sisters, Maria and Emily, themselves self-taught, created the National Union for Promoting the Higher Education of Women. Some all-male institutions added adjunct female colleges as did Harvard University in 1879, establishing Radcliffe College.

Coeducation for children older than 10 was extremely controversial, for both pedagogic and moral reasons, but grew as public education expanded. This did not mean that female students were warmly welcomed by their male classmates and professors, or afforded equal accommodations. Despite some concessions to female students, neither Oxford nor Cambridge Universities offered women full academic privileges until well into the 20th century. Likewise, Paris's Sorbonne let women audit courses long before granting them degrees.

ECONOMIC RIGHTS AND WORK OPTIONS

In the preindustrial economy, distinctions between men's and women's work were far less clear than they became in the 19th century. Women's work (except in the upper classes) had always included cleaning, food preparation, and child care, but men and women, boys and girls, often labored side-by-side on their farms, or made products like brooms and shoes at home for sale to local distributors. As the growing MARKET REVOLUTION displaced local commerce, and manufacturing migrated from home work to factories, female labor was redefined. Woman's sphere

would be the home exclusively; women would no longer produce for their family but consume goods made by the new economy. Too delicate and refined for the public fray, the true woman, as "angel of the house," would make home a refuge for her husband and children.

This vision, often called the cult of domesticity, excluded millions of poor and enslaved women in Europe and North America. Unmarried women, deserted women, women whose husbands struggled to support their family all found most kinds of paying work closed to them. There were some new opportunities: In New England, growing textile factories, desperate for labor, encouraged farm parents to send their young daughters to work. Carefully supervised and poorly paid, "mill girls" were expected to leave their jobs for marriage. Most did; many also enjoyed new self-sufficiency. Paid work for respectable lower-class women was primarily domestic service. "Angels of the house" exploited large staffs of female servants.

Middle-class women or poor but educated women could become governesses or schoolteachers, but almost had to quit when they married. Some women chose spinsterhood over married dependency. Many pushed the boundaries of female opportunity by taking up work related to women's lives and needs. Born in England, Elizabeth Blackwell taught school in Cincinnati before overcoming fierce opposition to become a physician. Blackwell argued that women and children were better served by female doctors who could alleviate their pains without compromising their modesty. Her contemporary, Briton FLORENCE NIGHTINGALE, professionalized nursing during and after the CRIMEAN WAR, giving new respectability to women's traditional caregiver role. Dorothea Dix, who made her name in prison and mental-health reform, and nurse Clara Barton played similar roles in America's CIVIL WAR.

More controversially, others entered, or tried to enter, male domains. An estimated 400 women disguised themselves as men to fight in the Civil War. In 1872 the U.S. Supreme Court denied Myra Bradwell a license to practice law in Illinois, saying "The natural and proper timidity and delicacy which belongs to the female sex evidently unfits it for many of the occupations of civil life." Victoria Woodhull, an activist U.S. journalist and stockbroker, attempted a run for president on a third-party ticket in 1872. Later, married to an Englishman, she backed Britain's woman suffrage movement.

A traditionally male undertaking in which women excelled was writing for pay. New England writer Nathaniel Hawthorne famously blamed the popularity of novels by "scribbling women" for his relative difficulty

A Currier & Ives print titled *The age of brass: Or the triumphs of woman's rights*, published in 1869 and featuring women lining up at a ballot box, with a man holding a baby at the end of the line

in reaching a mass audience. For activists including Clara Zetkin and Louise Otto Peters of Germany, writing was a way to earn money while gaining political support. Both France's George Sand and England's George Eliot were authors who adopted male names to protest the female condition and achieve stronger sales of their works.

MARRIAGE AND CHILD-REARING

Unmarried women were objects of pity and scorn who often lived with their parents, but married women were more dependent on men for their very lives. The ancient tradition of *couverture* defined married women as legally incompetent minors. It was not abolished in Britain until 1870. A husband was the undisputed head of the household, controlling absolutely his property, his children, his servants, his wife, and whatever resources she might have brought into the marriage. Extreme cruelty was considered bad form, but moderate beatings were sanctioned by law and religion.

Nevertheless, after 1750 there were indications of new and more equal kinds of relationships between men and women. In Europe and America, so-called companionate marriages that allowed for romantic love began to replace or augment unions arranged by parents. In the United States, the "republican" mother responsible for future generations of free citizens was accorded some respect. Experiments in "free love" and multiple marriage scandalized but provided alternatives for adventurous women and men. The lives of women's rights advocates would have been even more difficult without such husbands as Henry Blackwell, whose wife, Lucy Stone, kept her own name, and English philosopher John Stuart Mill, who actively promoted female equality alongside his wife, Harriet Taylor Mill.

Even with the best of husbands, married life was difficult. Wives endured many pregnancies; infant and maternal deaths were common. Despite servants, the care and feeding of large households severely limited

middle-class women's ability to gain education or take on a job or career. Birth control methods were rudimentary and generally considered sinful.

Lacking property rights, married women were at the mercy of an economic system over which they had no control. To satisfy creditors, a husband could sell his wife's belongings, down to her clothes and cookware. A husband was not required to consider his wife's wishes when disciplining, educating, or apprenticing their children. If a wife ran off, or obtained a rare divorce, she might never again see her children. In 1848 New York's Married Woman's Property Act gave wives some control of their own resources. This initiative, however, as often protected the property interests of a father or brother as those of the wife.

POLITICAL RIGHTS

The political ferment that brought about the American Revolution and continued in America and Europe until about 1850 inspired new hopes of freedom among women and other oppressed groups. Enthusiasm aroused by such stirring calls for freedom as America's 1776 DECLARATION OF INDEPENDENCE would harden into an often angry struggle for women's political recognition later in the 19th century.

Abigail Adams, wife of president JOHN ADAMS, was not the only woman to ask her nation to "remember the ladies." Between 1776 and 1807 a few women actually voted in New Jersey, where the state's new constitution had failed to specify that only males were entitled to the franchise. From 1809 to 1849 when the word *male* was inserted, Québec's female property owners voted in municipal and provincial elections. But in France, both Revolutionary-era rulers and NAPOLEON I's regime curbed women's search for freedom with stricter laws.

The cause that galvanized America's organized woman suffrage movement was the battle to end slavery. Many middle-class women, horrified by the plight of slave mothers and children, found common cause in abolition and began comparing their own restricted freedoms to slavery's chains. Sisters Sarah and Angelina Grimké, who grew up attended by slaves on a South Carolina plantation, came north to aid the abolitionist cause. By 1836 they were writing and speaking against slavery, first only to women but soon to mixed audiences, outraging many Protestant clergymen.

In 1840 Quaker antislavery leader Lucretia Coffin Mott and other American abolitionists, including the newly married Elizabeth Cady Stanton, sailed to London for a World Anti-Slavery Convention. Mott, an official delegate, was forbidden to speak on account of her sex. In July 1848 Mott and Stanton reconnected to organize a two-day woman's rights meeting at Seneca Falls. Some 300 attended, including about 40 men, one of whom was FREDERICK DOUGLASS, abolitionist leader and former slave.

Meanwhile, in many European nations, a reform tide that peaked in 1848 was propelling women's rights advocates in a similar direction. Pauline Roland and other French women associated with the socialist-leaning Saint Simonian and Fourierist movements called for marital reform and universal suffrage laws that included women. Then came a backlash: in 1851 a new Prussian law not only forbade women to join political parties but prohibited them from attending meetings where politics were discussed. A series of British voting reform acts excluded women. Led by Emmeline Pankhurst, Britain's suffrage movement intensified after 1880. Despite press mockery, the U.S. women's rights movement grew briskly, especially after Susan B. Anthony, a teacher and temperance crusader, joined forces with Stanton.

After the Civil War, however, the two suffrage leaders precipitated a bitter split in the movement when they protested a constitutional amendment that allowed male former slaves, but no women of any race, to vote. Not until 1890 did the two suffrage organizations reunite. By 1900, four western states (beginning with Wyoming in 1869) allowed women to vote in all or most elections, and piecemeal suffrage was being doled out in Sweden, Britain, and parts of the British Empire.

MARSHA E. ACKERMANN

Young Ottomans and constitutionalism

The Young Ottomans, also known as the New Ottomans, were 19th-century reformers. The members, some of whom were in the royal family, sought to continue the TANZIMAT reforms. They wanted to liberalize the Ottoman Empire in order to ensure its survival. They applied the concept of Osmanlilik, Ottoman nationality, to a sweeping program of constitutional change. Osmanlilik meant the attachment to freedom and fatherland with the equality of all citizens. The Young Ottomans supported civil secular rule with a separation of religious participation in government; they also stressed the importance of human rights for all the diverse religious and ethnic peoples of the empire.

The Young Ottoman program was outlined in Mustafa Fazil Pasha's letter to Sultan Abdul Aziz in which a statement of loyalty to the empire was coupled with demands for reforms. Other Young Ottomans included Ali Suavi, a teacher from a merchant family, who was in charge of the first Young Ottoman publication, and Sadik Rifat Pasha, who urged reforms of the authoritarian Ottoman regime. Using journalism to disseminate Young Ottoman ideals, Sadik wrote on the need for constitutionalism and urged the Ottomans to work hard to regenerate their society. Sadik Rifat Pasha had been educated in the Palace School and worked in the Ottoman civil service. He traveled through much of Europe and while in Austria wrote public letters urging reforms.

Another Young Ottoman, Ibrahim Sinasi, studied in France and was a friend of Samuel de Sacy, the son of the noted Orientalist Sylvestre de Sacy. He also knew the poet Alphonse de Lamartine. Sinasi served on the education committee in Istanbul and published poems, pamphlets, and journal articles. Ziya Pasha, an experienced administrator, focused on the necessity of bureaucratic reforms. Namik Kemal, whose father was the court astronomer, was the most famous Young Ottoman. Kemal's poems, especially "On Liberty," and other publications are still studied in present-day Turkey. The Young Ottomans were influenced by western European approaches to government and society. They attempted to use language acceptable to a Muslim society in order to fuse Muslim traditional government with essentially Western approaches to parliamentary systems. They translated European works into Ottoman Turkish; in intellectual salons in Istanbul and elsewhere, they engaged in lively debates about French philosophy and political theory.

A leading Young Ottoman supporter, MIDHAT PASHA, framed a constitution whereby the sultan would become a constitutional monarch. This constitution awaited the signature of ABDUL HAMID II when he became sultan in 1876. Although Abdul Hamid was not committed to parliamentary government he was forced to implement the constitution as a provision of becoming sultan. The constitution provided for a bicameral legislature, along the European model, with a statement regarding the rights of man. The first Ottoman parliament opened in 1877; it consisted of 25 officially nominated senators and 120 deputies elected

with official pressure and general indifference among most of the population. The first parliament was composed of a wide mixture of representatives. It met for two sessions over the course of five months. Sultan Abdul Hamid II used the excuse of war with Russia to dissolve the parliament in 1878. The short-lived constitution remained suspended for the next 30 years. Abdul Hamid's suspension of the constitution marked the end of the Young Ottomans. Future reformers were censored and repressed under Abdul Hamid's rule.

JANICE J. TERRY

Zeng Guofan (Tseng Kuo-fan)

(1811–1872) *Chinese statesman, general, and scholar*

Zeng Guofan was a leading statesman of the TONGZHI (T'ung-chih) RESTORATION. His leadership and policies resulted in defeating the TAIPING REBELLION, the most destructive in 19th-century China.

Son of a farming family from Hunan Province, Zeng Guofan was raised under a stern Confucian tradition of hard work and study, filial piety, and frugality. He joined the government after attaining the highest, *jinshi* (*chin-shih*) degree in 1838 and gained widespread experience in civil administration. In 1852 he obtained leave to bury his mother and mourn her death, which was subsequently canceled. Instead he was ordered to raise a militia to defend his home province from invasion by the Taiping rebels. This was necessary because the regular QING (Ch'ing) army had proven completely inadequate. Because the Taiping Rebellion preached a pseudo-Christian theology and initially fought with crusading zeal, Zeng countered it with instilling his militia with a mission—to defend China's Confucian heritage and traditional cultural values. To ensure the men's esprit de corps he chose his officers carefully from Confucian scholars and his soldiers from sturdy farmers in his home area; their initial goal was defending their home districts. These units were called the Hunan, or Xiang, (Hsiang, another name for Hunan) Army because they all came from Hunan Province. They were known for their discipline and loyalty, despite initial setbacks, growing to 120,000 strong. Later a navy or “water force” of armed

junks was formed to operate on the rivers and lakes of the Yangzi (Yangtze) River region.

As the Hunan army proved itself in clearing the homeland of rebels, the court begged Zeng to proceed to neighboring Hubei (Hupei) Province. In time, Zeng's forces spread operations to Jiangsu (Kiangsu) Zhejiang (Chekiang), and Anhui Provinces also. In 1864 Nanjing (Nanking), the Taiping capital, fell, ending the rebellion.

The main credit for defeating the formidable Taiping Rebellion belonged to Zeng. He combined many admirable qualities—able administrator, careful general, and good judge of men, picking first-rate assistants. His personal integrity, humility, and lifelong commitment to study made him the exemplary Confucian. He commanded few resources for the monumental task because he had no authority to collect land taxes in the provinces where he operated, but managed to complete his mission spending only 21.3 million taels of silver (each tael equals 1¹/₃ ounces). Zeng dissolved most of the Hunan Army after 1864, spent some time unsuccessfully dealing with the NIAN REBELLION, then served as governor-general of Zhili (Chihli) Province.

Some 20th-century Chinese faulted Zeng with propping up the Qing dynasty, which they argued was not worth saving. But from the perspective of the time, his ideals represented the true will of the nation. The Taiping movement dominated regions in southern China but never had support in the north. Had it survived, China would at best have been partitioned. Thus in preserving the Qing dynasty Zeng helped maintain a unified China. Zeng was also important for advocating

and implementing reforms and adopting Western learning and technologies.

JIU-HWA LO UPSHUR

Zho Zongtang (Tso Tsung-t'ang)

(1812–1885) *Chinese military leader and statesman*

Zho Zongtang was from a scholarly family of moderate means in Hunan Province. He obtained the *juren* (*chu-jen*) degree, the second highest in the examination system, then studied geography, agriculture and military strategy and experimented in farming, specializing in sericulture. Between 1852 until his death he devoted himself to military affairs, winning high distinction in serving China.

In 1860 Zho joined the staff of ZENG GUOFAN (Tseng Kuo-fan), China's leader in fighting the TAIPING REBELLION, raising and training 5,000 volunteers of his native Hunan braves to serve in Jiangxi (Kiangsi) and Anhui Provinces, engaging in more than 20 battles. He was appointed governor-general of Zhejiang (Chekiang) and Fujian (Fukien) Provinces, expelling the Taiping rebels from both and implementing programs that restored prosperity. They included opening schools, printing offices, and promoting sericulture and cotton culture. After the suppression of the Taiping Rebellion, Zho was appointed governor-general of Shaanxi (Shensi) and Gansu (Kansu) Provinces in northwestern China. He collaborated with his colleagues Zeng Kuofan and LI HONGZHANG (Li Hung-chang) in first putting down the NIAN REBELLION, then undertaking the suppression of the MUSLIM REBELLIONS, first pacifying Shaanxi in 1869, followed by bringing peace to Gansu in 1874. He then made important reforms in those provinces that included the prohibition of opium poppy culture, promoting cotton growing and manufacture of cotton and woolen cloths, utilizing the spare time of his soldiers in agriculture and reforestation.

Zho next obtained court support for raising loans for the reconquest of Xinjiang (Sinkiang) or Chinese

Turkestan, much of which had been under the control of Yakub Beg, a Muslim who curried favor with Russia, Great Britain, and the OTTOMAN EMPIRE by promising them influence should he succeed in establishing an independent state. A careful campaigner who had sure knowledge of geography and logistics, Zho defeated the Xinjiang Muslims in 1877. Yakub committed suicide. The combination of the collapse of the Xinjiang Muslim rebellion thanks to Zho's generalship and the negotiation skills of Chinese diplomat Zeng Jize (Chitse) (son of Zeng Guofan), Russia agreed to withdraw its troops from the Ili Valley in Xinjiang in the TREATY OF ST. PETERSBURG in 1881. Xinjiang became a province of China in 1884. Zho was appointed governor-general of Jiangnan (Kiangnan) and Jiangxi (Kiangsi) in 1882, was put in charge of military affairs when war loomed with France in 1884, but he was suffering from ill health and died shortly after.

Zho was a great military leader of the TONGZHI (T'UNG-CHIH) RESTORATION AND SELF-STRENGTHENING MOVEMENT who struggled successfully to defeat China's domestic rebellions and protect its territorial integrity against Western imperialism. Both he and his wife, Zhou Yituan (Chou I-tuan), were accomplished in literature, she leaving published collections of verses, and he of official and literary works.

JIU-HWA LO UPSHUR

Zionism and Theodor Herzl

(1860–1904) *father of Jewish nationalism*

Theodor Herzl is considered the father of modern Zionism, or Jewish nationalism. Born in Budapest, Hungary, then part of the Austro-Hungarian Empire, Herzl attended university in Vienna. As a young journalist, he covered the DREYFUS AFFAIR in Paris. This noted case of anti-Semitism in liberal France, coupled with the periodic violent pogroms against Jews in eastern Europe and Russia, convinced Herzl that anti-Semitism was an inherent evil in Western civilization. He concluded that the only solution to the so-called Jewish

question was the establishment of a Jewish state that would be as much Jewish as France was French or Italy was Italian. He expanded on the need for a Jewish state in his books *Der Judenstaat* (Jewish State, 1896) and *Altneuland* (Old New Land, 1902).

The first Zionist Congress met in Basel, Switzerland, in 1897, and Herzl was elected president of World Zionist Organization (WZO). Within the WZO there was considerable debate over the question of where the Jewish state should be. Herzl was initially in favor of accepting offers by the British for territory in Argentina and present-day Uganda for a Jewish state. Other Zionists were convinced that for religious, historic, and cultural reasons only the territory of ancient Israel was a realistic location upon which to establish a modern Jewish state, and the establishment of a modern state of Israel in Palestine became the official Zionist policy.

Zionists dreamt of the renaissance of Jewish life through their physical labor on the land. With financial support from the Rothschild family, the WZO bought land in Palestine, often from absentee landowners. Some early Zionists were socialists who established communes, or *kibbutzim*, or cooperatives, *moshavim*. Ber Borochov sought to fuse Marxism and Zionism and was one of the founders of the Zionist left.

Zionists encouraged Jews throughout the world to make *aliyah*, or to move to Palestine. The Zionist state was to grant automatic citizenship to all Jews who sought to live there. The first Zionist settlement in Palestine, Patah Tikva, was established north of Jaffa in 1878; although it was soon abandoned because of malarial marshes. Once the marshes were drained, settlers returned in 1878. Other Zionist settlements were created during the 1880s. From 1881 to 1903 the first wave of Jewish settlers to Palestine was mostly from Russia. By the outbreak of World War I in 1914 there were about 59 Jewish colonies with some 12,000 people in Palestine.

Zionists also debated what language should be adopted by the Jewish state. Some favored Yiddish, which was spoken by many Jews in eastern Europe where Zionism was most prevalent. Others successfully argued that Hebrew, the language of ancient Israel, should be the language of the state. Like Latin, Hebrew had been used for religious rites or for reading

of sacred texts, but it had not been in common use for hundreds of years. It therefore needed to be modernized for contemporary usage; for his work in revitalizing Hebrew, Eliezer Ben Yehuda (Eierzer Perlmann) was considered the father of modern Hebrew. Like Ben Yehuda, many Zionists adopted Hebrew names rather than those commonly used in Europe.

Initially the Zionist movement had little support from Jews in Western nations such as France or the United States, where anti-Semitism, while by no means nonexistent, was not as virulent as in eastern Europe. Similarly, Orthodox Jews, who formed the small percentage of the Jewish population in Palestine at the time, opposed the creation of a modern Jewish state for religious reasons; they argued that they should not interfere in the divine plan by entering the political field. Zionists also met with mounting opposition from the indigenous Palestinian Arab population. The struggle of two separate nationalisms—Zionism and Palestinian Arabism—for control over the same territory laid the foundation for the unresolved Israeli-Palestinian conflict.

To fulfill the dream of a Jewish state, Herzl and others recognized the need for outside support. He approached Germany, Italy, the pope, and Great Britain to secure their approval, but met with little success. Herzl even traveled to meet with the Ottoman sultan in Istanbul. Although it is not clear that Herzl ever met face to face with the sultan, it is known that the sultan responded to Zionist requests, saying that “he was not in the business of selling his right arm,” but that Jews were welcome to live in Palestine like other minorities within the Ottoman Empire. Herzl died in 1904, and Chaim Weizmann was selected as the new president of the WZO. Following in Herzl’s footsteps, Weizmann worked tirelessly to secure outside support for the Zionist cause.

ABOUT THE EDITORS

Marsha E. Ackermann received a Ph.D. in American culture from the University of Michigan. She is the author of the award-winning book *Cool Comfort: America's Romance with Air-Conditioning* and has taught U.S. history and related topics at the University of Michigan, Michigan State University, and Eastern Michigan University.

Michael J. Schroeder received a Ph.D. in history from the University of Michigan and currently teaches at Eastern Michigan University. Author of the textbook *The New Immigrants: Mexican Americans*, he has published numerous articles on Latin American history.

Janice J. Terry received a Ph.D. from the School of Oriental and African Studies, University of London, and is professor emeritus of Middle East history at Eastern Michigan University. Her latest book is *U.S. Foreign Policy in the Middle East: The Role of Lobbies and Special Interest Groups*. She is also a coauthor of the world history textbooks *The 20th Century: A Brief Global History* and *World History*.

Jiu-Hwa Lo Upshur received a Ph.D. from the University of Michigan and is professor emeritus of Chinese history at Eastern Michigan University. She is a coauthor of the world history textbooks *The 20th Century: A Brief Global History* and *World History*.

Mark F. Whitters received a Ph.D. in religion and history from The Catholic University of America and currently teaches at Eastern Michigan University. His publications include *The Epistle of Second Baruch: A Study in Form and Message*.

FOREWORD

The seven-volume *Encyclopedia of World History* is a comprehensive reference to the most important events, themes, and personalities in world history. The encyclopedia covers the entire range of human history in chronological order—from the prehistoric eras and early civilizations to our contemporary age—using six time periods that will be familiar to students and teachers of world history. This reference work provides a resource for students—and the general public—with content that is closely aligned to the *National Standards for World History* and the College Board’s Advanced Placement World History course, both of which have been widely adopted by states and school districts.

This encyclopedia is one of the first to offer a balanced presentation of human history for a truly global perspective of the past. Each of the six chronological volumes begins with an in-depth essay that covers five themes common to all periods of world history. They discuss such important issues as technological progress, agriculture and food production, warfare, trade and cultural interactions, and social and class relationships. These major themes allow the reader to follow the development of the world’s major regions and civilizations and make comparisons across time and place.

The encyclopedia was edited by a team of five accomplished historians chosen because they are specialists in different areas and eras of world history, as well as having taught world history in the classroom. They and many other experts are responsible for writing the approximately 2,000 signed entries based on the latest scholarship. Additionally, each article is cross-referenced with relevant other ones in that volume. A chronology is included to provide students with a chronological reference to major events in the given era. In each volume an array of full-color maps provides geographic context, while numerous illustrations provide visual contexts to the material. Each article also concludes with a bibliography of several readily available pertinent reference works in English. Historical documents included in the seventh volume provide the reader with primary sources, a feature that is especially important for students. Each volume also includes its own index, while the seventh volume contains a master index for the set.

CHRONOLOGY

1900 Boxer Rebellion

The Boxers, who are Chinese nationalists, stage a revolt that pushes the imperial government to demand the removal of all foreigners from China. The foreigners refuse and have troops sent in to impose their will.

1900 The Boer War

The Boer War is fought between Great Britain, the Boers of Transvaal (South Africa), and the nearby Orange Free State.

1901 Australia Is Created

By an act of the British parliament, the Commonwealth of Australia, a federation of six self-governing colonies, comes into being.

1901 McKinley Is Assassinated

While attending the Pan-American Exposition, U.S. president William McKinley is shot and killed by an anarchist.

1901 Trans-Siberian Railroad Is Completed

The Russians complete the Trans-Siberian Railroad from Moscow to Port Arthur. The railroad opens large-scale access to Siberia.

1902 Anglo-Japanese Treaty

On January 30 Japan and Great Britain sign a treaty of military alliance. The treaty provisions state that if either country is attacked by another country, the cosignatory will maintain a state of benevolent neutrality.

1902 South African Peace Agreement

On May 31 the Boers and the British sign the Peace of Vereeniging, ending the Boer War.

1903 King and Queen of Serbia Are Murdered

Alexander I Obrenovich and his wife, Draga Mashin, are assassinated in the Royal Palace in Belgrade by dissident Serbian Army officers.

1903 Russian Socialist Party Splits

At a meeting in London, the Russian Socialist Democratic Labor Party splits between the Bolsheviks and Mensheviks.

1903 Turks Massacre Bulgarians

Thousands of Bulgarian men, women, and children are killed by Ottoman Turkish troops. At the time of the attack, the Turks are in the process of suppressing a rebellion in Macedonia.

1903 British Conquer Northern Nigeria

The British capture the mud-walled city of Kano in northern Nigeria on February 3. Once Kano falls, the leaders of the various tribes of northern Nigeria agree to indirect British control.

1903 Ford's First Model A

Henry Ford begins selling the Model A automobile for \$850.

1903 Panama Independent from Colombia

A revolution led by Philippe Jean Bunau-Varilla, an organizer of the Panama Canal Company, declares Panama independent from Colombia. U.S. naval forces prevent the Colombians from suppressing the revolt.

1903 First Messages Are Sent over Pacific Cable

U.S. president Theodore Roosevelt sends the first message across the Pacific Cable. The message connects San Francisco and Manila.

1903 "Wright Flyer" Flies

On December 17 the first flight in a heavier-than-air vehicle occurs in Kitty Hawk, North Carolina.

1904–05 Russo-Japanese War

The Japanese defeat the Russian fleet and land forces in this war, which is the first modern victory of an Asian power over a European power.

1904 Entente Cordiale Is Signed

France and Great Britain reach an agreement that resolves all the major differences between them. This becomes the basis of the alliance among France, Russia, and Great Britain during World War I.

1904 British Forces Reach Tibet

Great Britain forces the Tibetans to agree to a series of commercial agreements for the purpose of opening up Tibet to British trade.

1904 Germans Put Down Revolt in Southwest Africa

On January 11 a revolt by native Africans is initiated against the German colonization of South-West Africa. The Germans ruthlessly put down the revolt.

1904 Treaty between Bolivia and Chile

From 1879 to 1884, the War of the Pacific has taken place between Chile and Bolivia. The war ends in a truce. In 1904, a full treaty is signed.

1905 Revolt in Russia

On January 22 the first Russian Revolution breaks out and is put down.

1905 Sun Yat-sen Founds the United League

Sun Yat-sen, the leader of the Chinese Revolution, issues the San-min Chu, or the Three Principles of the People: nationalism, democracy, and livelihood. He advocates overthrow of the Manchu dynasty and the establishment of a republic.

1905 First Moroccan Crisis

A crisis develops between France and Germany over who should have rights in Morocco. War is feared, but it is avoided.

1905 Theory of Relativity Is Published

Albert Einstein, who at the time is a German physicist living in Switzerland, publishes the theory of relativity.

1905 Russo-Japanese Treaty of Portsmouth

U.S. president Theodore Roosevelt acts as the mediator in peace talks between the Russians and the Japanese to conclude the Russo-Japanese War, which Japan had won.

1906 Reform in Russia

On May 6 Czar Nicholas II announces the implementation of the Fundamental Laws.

1906 Dreyfus Affair Ends

The Dreyfus affair in France ends when the French court of appeals exonerates Alfred Dreyfus. The affair contributes to the decision to separate church and state in France.

1906 All-India Muslim League

The Muslims of India found the All-India Muslim League. The league's goal is to lobby for constitutional reform and protect Muslim rights.

1906 France Gains Control of Morocco

After a long conference in Algeçiras to determine the future of Morocco, it is agreed that the French would have special responsibility for restoring order along the Algerian-Moroccan border.

1906 San Francisco Earthquake

The most disastrous earthquake in America's history hits San Francisco on April 18.

1906 U.S. Troops Occupy Cuba

After a revolt breaks out in Cuba, the Cuban leader, Tomas Estrada Palama, asks the United States to intervene.

1907 Peace Conference at the Hague

At the behest of President Theodore Roosevelt, leaders of all major nations meet at The Hague (Netherlands). The major issue for discussion is the attempt to reach an arms limitation agreement.

1907 New Zealand Becomes a Dominion

New Zealand is granted dominion status in the British Empire and Commonwealth, uniting two self-governing colonies.

1907 Passive Resistance in the Transvaal

The autonomous government of Transvaal announces a policy that requires registration and fingerprinting of all Asians. In response 10,000 Indian residents passively protest.

1907 French Warships Bombard Casablanca

In response to the killing of nine European workers in Casablanca, French warships bombard the city on August 2.

1907 Gentlemen's Agreement

Under the Gentlemen's Agreement, the Japanese agree to withhold passports from laborers intending to migrate to the United States. In return, the United States agrees formally not to limit Japanese immigration.

1908 Union of South Africa Is Founded

On May 31 the Union of South Africa is established, a federation of four self-governing colonies in the British Empire and Commonwealth.

1908 Austria Annexes Bosnia and Herzegovina

Austria unilaterally announces the annexation of Bosnia and Herzegovina, two former Ottoman provinces.

1908 Young Turks Revolt

The Turkish sultan Abdul-Hamid II is forced to accede to the demands of the Young Turks, a group of army officers who demand that constitutional rule be restored in Turkey.

1908 King Carlos and Crown Prince Are Assassinated

Assassins kill King Carlos of Portugal, as well as his son and heir, Prince Luis Filipe.

1908 Bulgaria Declares Independence

The Bulgarian Principality declares its complete independence from the Ottoman Empire.

1908 Congo Free State Becomes Belgian Congo

The Congo Free State, which had been the private property of Belgian king Leopold II, becomes an official Belgian colony.

1908 First True Skyscraper Is Built

In 1908 the Singer Building, in Lower Manhattan, is completed. It is the first true skyscraper, reaching 47 stories.

1909 Sultan Abdul Hamid Is Deposed

The Ottoman sultan Abdul Hamid II is ousted by a unanimous vote of the Turkish parliament.

1909 Revolution in Persia

Revolution breaks out in Persia when the shah, Muhammad Ali, seeks to destroy the constitutional monarchy that he himself had created.

1910 Revolution in Portugal

After the assassination of a prominent republican leader, a revolt breaks out against the monarchy.

1910 Japan Annexes Korea

On August 22 Japan officially annexes Korea. It renames the country Cho-sen, and continues the occupation until the end of World War II.

1911 Tripolitan War

Italy declares war on the Ottoman Empire in September in order to acquire its possession, Libya, in North Africa.

1911 Revolution in China

On October 10 a revolution breaks out against the Manchu government, the central government collapses, and Sun Yat-sen becomes president of the Chinese Republic.

1912 First Balkan War

Serbia, Greece, and Bulgaria declare war against Turkey and quickly overrun all Turkish holdings in Europe.

1912 Sun Yat-sen Resigns as President of China

In an effort to unify the country, Sun Yat-sen resigns to allow Yuan Shikai to become president of China.

1912 Italy Annexes Libya

The Italian-Turkish War is brought to an end by the Treaty of Ouchy, which gives Libya to Italy, though the Libyans continue to rebel against Italian domination.

1912 U.S. Marines Intervene in Nicaragua

On August 14 American marines land in Nicaragua to protect American interests from a popular local revolt.

1913 Senators Elected Directly in the United States

The Seventeenth Amendment is ratified, providing for the direct election of senators.

1914 Archduke Franz Ferdinand Is Assassinated

Archduke Franz Ferdinand, heir to the Austro-Hungarian Empire, and his wife are assassinated in Sarajevo in Bosnia.

1914 Austria-Hungary Declares War on Serbia

In the aftermath of the assassination of Archduke Franz Ferdinand, Austria declares war on Serbia, thus beginning World War I.

1914 Germany Declares War

When the Russians come to the defense of the Serbs, the Germans declare war to defend their Austrian allies.

1914 Germany Invades Belgium

When Germany invades Belgium, a neutral country, to attack France, an ally of Russia, it provokes Great Britain to declare war on Germany.

1914 Japan Declares War on Germany

On August 15, Japan, an ally of Great Britain and Austria-Hungary, issues Germany an ultimatum demanding that the German fleet be withdrawn from the Far East. When they do not receive an answer, Japan declares war against Germany.

1914 Panama Canal Opens

After 10 years of work, and at a cost of \$366 million, the Panama Canal is completed.

1914 Battle of Mons

The Battle of Mons is a series of battles that take place around the River Marne. It lasts seven days, with the result that the British and French break the German advance.

1914 First Battle of Ypres

The battle lasts almost four weeks against the German army, and as a result the Allied lines hold.

1915 Second Battle of Ypres

The Allies' major counteroffensive is stopped by the German use of chlorine gas.

1915 *Lusitania* Sinks

Some 128 American citizens are among the 1,200 passengers of the *Lusitania*, torpedoed by a German submarine.

1915 Battle of the Somme

The British launch a major attack against the Germans, using gas for the first time. On the first day of the battle, the British lose 50,000 soldiers. The battle lasts from July 1 until November 8, and the Allies succeed in recapturing a total of 125 square miles of land.

1916 Battle of Verdun

The battle between French and German forces begins in February and lasts until June. The French lose an estimated 350,000 troops in the battle.

1916 U.S. Troops Intervene in Dominican Republic

After continued armed revolts, U.S. officials declare martial law in the Dominican Republic.

1916 Easter Uprising in Ireland

An uprising in Dublin begins when Irish nationalists seize post offices and other installations.

1917 Allenby Takes Jerusalem

British general Allenby attacks the Ottomans in Palestine. The high point in the British assault is the capture of Jerusalem in December.

1917 Russian Revolution

The February Revolution begins as a series of riots protesting food shortages and the Russian suffering in World War I. Czar Nicholas II is forced to abdicate.

1917 Bolshevik Revolution

On November 6, the Bolsheviks, led by the Military Revolutionary Committee, capture most of the government offices and storm the Winter Palace, overthrowing the provisional government.

1917 United States Enters World War I

On April 6 the United States declares war against the

- Central Powers (Germany, Austria, Hungary, Turkey, and Bulgaria). The vote is 90 to 6 in the Senate and 373 to 50 in the House.
- 1918 Treaty of Brest-Litovsk**
A treaty is signed between the Central Powers and the Soviet government of Russia.
- 1918 Battle of the Marne**
The Battle of the Marne is a massive attempt by Germany to break through on the western front before American forces could arrive in large numbers.
- 1918 Battle of Argonne Forest**
On September 26, Allied troops begin the offensive. The German high command warns that it could no longer ensure victory, and as the German army begins mutinying, it sues for peace.
- 1918 Poland Declares Independence**
Poland declares its independence as a nation on October 6, 1918.
- 1918 United States and Allies Intervene in Russia**
The United States takes a limited role in the international force that intervenes in the Russian Civil War.
- 1918 Czechoslovakia Declares Independence**
The Prague National Council declares Czechoslovakia independent from Austria-Hungary on October 28, 1918.
- 1918 Armistice Is Signed in Europe**
On November 11, an armistice is signed, bringing World War I in Europe to a conclusion.
- 1919 Versailles Peace Conference**
On June 29, 1919, the Treaty of Versailles is signed, officially ending World War I.
- 1919 Amritsar Massacre in India**
On April 13 British general Reginald Dyer orders his troops to open fire on demonstrators at Amritsar in the Punjab of India; 379 people are killed, and nearly 1,200 are wounded.
- 1919 Anglo-Afghan War**
Afghan ruler Amanullah Khan proclaims a religious war against the British and calls on the Muslim subjects of India to rise up. He leads a failed small-scale invasion of India. As a result Britain recognizes Afghan independence.
- 1920 Ireland Is Granted Home Rule**
The British parliament passes the Government Act. The act calls for the creation of separate parliaments in Northern and Southern Ireland.
- 1920 Gandhi Leads Indian Independence**
Mohandas Gandhi begins a nationwide speaking campaign to enlist support for the nonviolent, noncooperation movement against Great Britain.
- 1920 Palestine Becomes British Mandate**
Under terms agreed to at the Paris Peace Conference, the British government is given the mandate for Palestine, TransJordan, and Iraq.
- 1920 Syria and Lebanon Become French Mandate**
The Syrian National Congress declares its complete independence. The League of Nations wartime Anglo-French agreements officially confirm the land of the French mandate, and French forces take Damascus by force.
- 1920 Prohibition Begins in the United States**
The Senate and House override the veto of President Woodrow Wilson and enact into law a bill outlawing the production, sale, and transportation of all forms of liquor.
- 1920 Participation by the United States in League of Nations Is Rejected**
On November 19 the U.S. Senate votes 53 to 38 against supporting the League of Nations.
- 1920 Women's Suffrage in the United States**
With the ratification of the Nineteenth Amendment to the Constitution, women gain the right to vote.
- 1921 Modern Turkey Is Founded**
On January 20 Turk nationalists led by Mustafa Kemal (Ataturk) adopt a set of fundamental laws that becomes the foundation of the modern state of Turkey. These laws provide for the sovereignty of the people, a parliament elected by male suffrage, and a president with extensive powers.
- 1921 Reza Khan Becomes Ruler of Persia**
Reza Khan arrives in Tehran on February 22, commanding an army of 4,000 troops. His forces topple

the government, and he becomes the new leader of Persia, later named Iran.

1921 Faisal Becomes King of Iraq

In June 1921, Emir Faisal, formerly the king of Syria, arrives in Iraq with British support. Faisal is soon proclaimed king of Iraq. He remains on the Iraqi throne until 1933.

1921 Washington Naval Conference

The United States, Great Britain, Japan, France, and Italy meet and agree to a treaty limiting the size of their respective navies.

1922 Irish Free State Is Established

An agreement is reached that provides for an independent Ireland, having the status of dominion within the British Empire.

1922 Mussolini Seizes Power in Italy

As a result of large-scale demonstrations by his supporters King Victor Emmanuel III appoints Fascist leader Benito Mussolini prime minister and gives him dictatorial powers in an effort to restore order.

1922 British Give Egypt Limited Independence

The British government unilaterally terminates its protectorate of Egypt but retains British troops in the country.

1923 France Occupies the Ruhr

France announces on January 9 that the Germans are in default on their coal deliveries under the terms of the Treaty of Versailles. On January 11, the French occupy the Ruhr district of Germany in order to force the German government into compliance.

1923 Munich Beer Hall Putsch

Adolf Hitler, together with General Erich Ludendorff, attempt to overthrow the German government of the Weimar Republic. The putsch is suppressed by the government.

1923 TransJordan Is Established as a Separate Country

Britain separates TransJordan from the mandate of Palestine and installs Emir Abdullah as the titular ruler.

1924 Mongolian People's Government Is Established

With the support of the Soviet Union, the Mongolian

Peoples Revolutionary Government is established. It becomes the first Soviet satellite state.

1924 Lenin Dies

The death of Vladimir Lenin, leader of the Bolshevik Revolution and the Soviet Union, starts a power struggle between Joseph Stalin and Leon Trotsky.

1924 Ibn Saud Takes Mecca

Abdul Aziz Ibn Saud undertakes a campaign to unify Saudi Arabia. In October Ibn Saud captures Mecca, thereby coming close to achieving his goal.

1926 Trotsky Is Ousted

Joseph Stalin wins his battle for control of the Soviet Union by ousting Leon Trotsky from the Communist Party in 1926. Trotsky is assassinated while in exile in Mexico.

1927 Chiang Kai-shek Breaks with Communists

Chiang, leader of the Chinese Nationalists after the death of Sun Yat-sen, initially continues to cooperate with the Russian and Chinese Communists. In 1927, ending the alliance, Chiang sets up a separate government and turns against them.

1927 Lindbergh Crosses the Atlantic

On May 27 Charles Lindbergh arrives in Paris after completing the first solo nonstop flight between New York and Paris.

1928 First Five-Year Plan

The Soviet Union launches an ambitious five-year plan for economic growth under the Marxist model.

1928 Warlord Era Ends

The Chinese Nationalists, led by Chiang Kai-shek, capture Peking (Beijing), ending the Warlord era.

1928 Kellogg-Brand Pact

The Kellogg-Brand Pact, started as a bilateral French-American accord, is expanded to include 62 nations. Its goal is to outlaw war.

1929 Stalin Enforces Collectivization

Joseph Stalin begins a policy of forced collectivization of farms. Small farmers are forced off their land and onto collectives.

1929 Settlement of Tacna Arica Question

Chile and Peru settle a longstanding border dispute.

- Under terms of the agreement, Chile is awarded Arica, and Peru is awarded Tacna.
- 1929 Stock Market Crash**
Between October 29, on what becomes known as “Black Tuesday,” and November 13, the U.S. stock market loses a total of 40 percent of its value. The stock market crash is the first major event of the Great Depression.
- 1930 Nazis Win 107 Seats in Parliament**
The Nazi Party wins 107 seats in the election for the German Reichstag, later home of the German parliament.
- 1930 London Naval Accord**
Great Britain, the United States, and Japan sign a naval pact limiting the number of capital (major) ships.
- 1930 Chiang Kai-shek Attacks Communists**
Chiang Kai-shek begins the first of five military campaigns against the rebelling Chinese Communists.
- 1930 Peruvian President Is Ousted**
A rebellion breaks out in southern Peru in August. As a result, Peruvian president Augusto Leguía is forced to resign.
- 1930 Revolt in Brazil**
After Conservative Julio Prestes is elected president, a revolt breaks out in the southern provinces.
- 1931 Japan Attacks Manchuria**
In violation of all its treaty obligations, Japan begins the occupation of Manchuria, a region in northeastern China, on September 18. This is the first step toward World War II in Asia.
- 1932 Coup d’État Ends Absolute Monarchy in Siam**
The army stages a coup d’état in Siam (named Thailand) that ends the absolute powers of the monarchy.
- 1932 Japan Attacks Shanghai**
The Japanese continue their assault on China by attacking Shanghai but are forced to withdraw due to Chinese resistance and international mediation.
- 1932 War between Peru and Colombia Breaks Out**
Peruvians seize the Amazon border town of Leticia. This action sparks a two-year war that ends when the League of Nations restores the area to Colombian control in 1933.
- 1933 Hitler Becomes Chancellor of Germany**
Adolf Hitler becomes the chancellor (prime minister) of Germany after his Nazi Party forms a coalition with a centrist party. It is his first step toward dictatorial powers.
- 1933 Dachau Concentration Camp Is Established**
The Nazis round up all potential adversaries, arresting tens of thousands of opponents and Jews. There is no place to put them in jail, so the first of many concentration camps is opened.
- 1933 New Deal Begins**
The inauguration of Franklin Roosevelt as president brings with it the New Deal, which sees the creation of a multitude of government agencies and activities to combat the Great Depression in the United States.
- 1933 Prohibition Is Repealed**
One of the first acts of the Roosevelt administration is the repeal of Prohibition.
- 1933 Western Hemisphere Agreement**
The nations of the Western Hemisphere enter into an agreement in which they renounce aggression.
- 1934 King of Yugoslavia Is Assassinated**
King Alexander of Yugoslavia arrives in France for a state visit on October 9. While traveling in a motorcade with French foreign minister Louis Barthou, both are killed by a Croatian assassin.
- 1934 Unrest in Austria, Dollfuss Is Assassinated**
The Nazi Party of Austria, abetted by the German Nazi Party, attempts to stage a coup in Austria. They take over the chancellery in Vienna and kill Austrian chancellor Engelbert Dollfuss, but the coup fails.
- 1934 Stalin Begins Purges**
Sergei Kirov, a close associate of Joseph Stalin, is assassinated. This prompts Stalin to institute a great purge throughout the Soviet Union.
- 1934 Mao Sets off on Long March**
Continued victories by the Kuomintang Army under Chiang Kai-shek compell the Chinese Communist forces under Mao Zedong (Mao Tse-tung) to flee in what becomes known as the Long March.

1935 Germany Rejects Versailles Treaty

Adolf Hitler announces on March 16 that he is abrogating those portions of the Versailles Treaty that limit the size and weapons of the German armed forces.

1935 Government of India Act

The British parliament passes the Government of India Act. Under its terms, Burma and Aden are separated from India, and India and Burma are given greater measures of self-government.

1935 Commonwealth of Philippines Is Declared

The Filipinos approve a new constitution, passed by the U.S. Congress, under which they are granted independence as a commonwealth.

1935 WPA Is Created

The largest U.S. employment agency is created under President Franklin Roosevelt with the enactment of the Works Progress Administration.

1936 Italy Invades Ethiopia

The League of Nations censures Italy for aggression in Ethiopia but fails to take measures to prevent the country's conquest by Italy.

1936 Spanish Civil War Breaks Out

The Spanish army, led by General Francisco Franco, begins a revolt against the democratic government of the Spanish Republic.

1936 Oil Found in Saudi Arabia

Standard Oil of California discovers oil under the Saudi desert.

1936 Treaty between Egypt and Great Britain

A treaty is signed in August between Egypt and Great Britain. Under the terms, Great Britain is to withdraw all but 10,000 of its troops.

1936 Arab Revolt in Palestine

An Arab High Committee is formed to unite Palestinian opposition to a Jewish state in Palestine and the British mandate.

1937 Sino-Japanese War Resumes

On July 7, Japanese troops clash in maneuvers with Chinese troops at the Marco Polo Bridge, 10 miles west of Peking (Beijing). Three weeks later, the Japanese invade in large numbers, beginning an all-out

war between the two countries that becomes part of World War II.

1937 Partition of Palestine

The Peel Commission in the United Kingdom recommends the partition of Palestine into a small Jewish state, a much larger Arab state united with TransJordan, and a small continuing British presence in Jerusalem.

1937 Somoza Family Gains Control over Nicaragua

The legitimate government of Juan Sacasa is overthrown by the national guard, led by General Anastasio Somoza.

1937 Italian-German Axis Is Announced

On November 11 Italy joins an Anti-Communist Pact already in force between Japan and Germany.

1938 Germany Seizes Austria in the Anschluss

On March 12 German troops invade and annex Austria to Germany.

1938 Munich Agreement

In a desperate attempt to avoid war, the leaders of Great Britain and France meet with Hitler and Mussolini in Munich at the end of September. During the meeting, they accede to Hitler's demands to annex the Sudetenland, a part of Czechoslovakia, to Germany.

1939 German Forces Enter Prague

In March 1939, the remaining parts of Czechoslovakia are conquered by Germany.

1939 Madrid Surrenders

The Spanish civil war comes to an end in March with the surrender of Madrid and Valencia.

1939 Pact of Steel

Italy and Germany enter into the Pact of Steel. The alliance pledges that each nation will support the other in case of war.

1939 The White Paper

The White Paper states that since the Balfour Declaration called only for the establishment of a Jewish homeland in Palestine, and since there were over 450,000 Jews in Palestine, Britain has met its responsibilities and that independence should be granted in 10 years.

- 1939 Soviet-German Non-Aggression Pact**
Nazi Germany and the Soviet Union sign a Non-Aggression Pact.
- 1939 Germany Invades Poland**
World War II begins when Germany invades Poland on September 1. On September 3, Great Britain and France declare war against Germany.
- 1940 Germany Invades Norway**
German forces invade Norway and Denmark.
- 1940 German Armies Invade the Netherlands, Belgium, and Luxembourg**
In a flanking move that makes the French Maginot Line irrelevant, the Germans attack the Low Countries. The Netherlands surrenders in four days, after massive German attacks on Rotterdam.
- 1940 Dunkirk Is Evacuated**
The British successfully extricate 200,000 British and 100,000 French troops from the beaches of Dunkirk as German forces advance on France.
- 1940 Paris Falls, France Surrenders**
On June 13, Paris is evacuated by French forces in the face of advancing German troops. France surrenders 10 days later.
- 1940 Battle of Britain**
Germany attempts to subdue Great Britain, attacking major British cities and military installations by air, but fails.
- 1940 Italy Invades Greece**
The Italians invade Greece, expecting a quick victory.
- 1940 British Attack Italian Forces in Egypt**
British troops launch a surprise attack on Italian troops that occupy parts of western Egypt, routing the Italians.
- 1941 German Forces Invade Greece and Yugoslavia**
Germany invades Yugoslavia after a coup in Belgrade that overthrows the pro-German government and replaces it with one committed to neutrality.
- 1941 German Forces Invade the Soviet Union**
Breaking the Soviet-German Non-Aggression Pact, German forces invade the Soviet Union. Germany advances on a 2,000-mile-long front.
- 1941 Japan Attacks Pearl Harbor**
On December 7 the Japanese launch a surprise attack on the American naval base at Pearl Harbor in Hawaii.
- 1942 Singapore Surrenders**
The British fortress at Singapore surrenders to the Japanese.
- 1942 Philippines Surrender**
On December 22, 100,000 Japanese troops land on the island of Luzon. Japanese forces converge on the capital of Manila, forcing the U.S. and Filipino defenders to retreat to the island of Corregidor. On May 6, American forces surrender.
- 1942 Battle of Midway**
The entire U.S. naval carrier force intercepts and sinks four Japanese carriers. This victory is the turning point for the United States in the Pacific war.
- 1942 German Troops Reach Stalingrad**
German troops reach the Russian city of Stalingrad, on the Volga, and besiege it.
- 1942 British Victory at El Alamein**
German forces, under the command of Erwin Rommel, meet the British forces under General Bernard Montgomery at El Alamein. Montgomery has a two-to-one advantage in tanks and is victorious.
- 1942 Operation Torch**
The invasion of North Africa in Operation Torch is designed to encircle German troops there. American troops land in French North Africa with limited opposition.
- 1942 Japanese Americans Are Interned**
On February 20, President Roosevelt issues a presidential order to intern Japanese-American residents of the West Coast.
- 1943 Casablanca Conference**
A conference is held in Casablanca, in French Morocco, January 14–24, between U.S. president Franklin Roosevelt and British prime minister Winston Churchill and their respective staffs.
- 1943 German Troops Surrender at Stalingrad**
The starving and surrounded German troops at Stalingrad surrender to Soviet forces.

1943 Quebec Conference

British and American leaders meet in Quebec to coordinate war plans. At the meetings Winston Churchill and Franklin Roosevelt discuss the upcoming landing in Italy, as well as a future summit with Joseph Stalin.

1943 Teheran Conference

A three-way conference is held in Tehran between Winston Churchill, Franklin Roosevelt, and Joseph Stalin.

1944 U.S. Troops Land at Anzio

American forces land at Anzio, just south of Naples in Italy, in an attempt to outflank the Germans.

1944 Rome Is Liberated

On June 4, American forces, under the command of General Mark Clark, enter Rome, ending effective Italian resistance.

1944 D-Day

On June 6, 45 Allied divisions, with almost 3 million men led by U.S. general Dwight Eisenhower, begin landing on the beaches of Normandy in France.

1944 Paris Is Liberated

Allied forces, led by the French Second Armored Division, liberate Paris from the Nazis on August 25.

1944 Battle of the Bulge

German forces make a surprise attack against U.S. forces in Belgium—it is the last major German counteroffensive of World War II.

1945 Auschwitz Is Liberated

Soviet forces liberate the largest German concentration/death camp, Auschwitz, where Germany had killed 2,500,000 people, the great majority of whom were Jews.

1945 Yalta Conference

President Franklin Roosevelt, Prime Minister Winston Churchill, and Marshal Joseph Stalin meet at Yalta in the southern Soviet Union. The agenda concerns the Soviet Union declaring war against Japan and the postwar world.

1945 Fire-Bombing of Dresden

The Allied air forces bomb the city of Dresden in repeated waves. The resulting fire storm consumes 11 square miles of the German city.

1945 San Francisco Conference

On April 25 the Allied Big Four (United States, Great Britain, China, and the Soviet Union) representatives meet in San Francisco to create the United Nations.

1945 Germany Surrenders Unconditionally

On May 8 German forces officially surrender.

1945 Atomic Bomb Is Dropped on Hiroshima

On August 6 the U.S. Air Force drops an atomic bomb on the Japanese city of Hiroshima, followed by one at Nagasaki.

1945 Japan Surrenders

On September 2 the Japanese formally surrender unconditionally aboard the battleship USS *Missouri* in Tokyo Harbor.

1946 Perón Becomes Dictator of Argentina

Colonel Juan Perón is popularly elected president of Argentina.

1946 Chinese Civil War Resumes

Upon the surrender of Japan, which concludes World War II, war once again breaks out between the Communists and the Nationalists in China.

1946 Republican Government Is Organized in Italy

The Italian people vote in a referendum to abolish the monarchy and establish a republic.

1946 Republic of the Philippines Is Inaugurated

On the July 4 the independent Republic of the Philippines is officially declared.

1946 Greeks Vote for Return of Monarchy

In a special referendum, 70 percent of Greeks vote in favor of returning King George II to power.

1946 Verdicts at Nuremberg War Crime Trials

Nine of Nazi Germany's top leaders are hanged at the end of their trials for crimes against humanity and other charges.

1947 Truman Doctrine

President Harry Truman enunciates a policy under which the United States would oppose communist advances anywhere in Europe.

1947 Revolt against France in Indochina

A nationalist rebellion breaks out in Madagascar.

White settlers are assaulted, plantations burned, and French garrisons attacked. It takes the French more than a year to put down the revolt.

1947 India/Pakistan Gain Independence

On August 15 the two new states achieve independence, creating millions of refugees.

1947 Unrest in Palestine

On November 29 the UN General Assembly meets to vote to partition Palestine into a Jewish state and an Arab state.

1948 Communists Take over Czechoslovakia

In a bloodless coup, the Communists seize control of Czechoslovakia.

1948 Civil War in Costa Rica

After incumbent president Teodora Picado attempts to annul the election won by Otilio Ulate, a civil war breaks out.

1948 Organization of American States (OAS)

The Pan American Conference, held in Bogotá, Colombia, establishes the OAS as the United Nations' regional grouping for countries in North and South America.

1948 United Nations Votes to Create Two States

On May 14 the British Mandate ends, and the Jews of Palestine declare themselves independent. Neighboring Arab states respond by declaring war, which Israel wins, thereby extending its territory.

1948 South Africa Enacts Apartheid Laws

The government outlaws marriages between whites and nonwhites. It also passes the Group Areas Bill that divides the country into entirely separate ethnic zones.

1948 Major Nationalist Defeat in Manchuria

On October 30, Nationalist troops are defeated in Manchuria after the Communists capture the city of Mukden in their first major victory in the Chinese Civil War.

1949 Soviet Union Detonates A-Bomb

America's monopoly on atomic weapons ends when President Truman announces on September 23 that the Soviet Union has successfully detonated an atomic bomb.

1949 Communist Victory in China

The Nationalist army and government fall in China. The People's Republic of China is established.

MAJOR THEMES

1900 to 1950

FOOD PRODUCTION

In the early 20th century, agricultural outputs soared, even though the number of people engaged in farming declined precipitously in industrialized nations. Famines became less common but still took the lives of millions. Processed and convenience foods gained in popularity, while urban elites became more adventurous in their eating habits, adopting cuisines from an array of nations. In poorer countries, most agriculture was still based on traditional methods. Food variety and supply remained scant, and meat was a luxury for most, reserved for holidays and feasts.

Producing Food. North America enjoyed several “golden” seasons of farming between 1910 and 1914. On the Great Plains of both Canada and the United States, bountiful wheat harvests were exported to many parts of the world and briefly attracted more farmers. With agriculture disrupted in Europe by World War I, North American farmers received government incentives to increase production and enjoyed record prices. At war’s end, the good times ended for many small farmers. In 1900, 41 percent of the U.S. population was engaged in agriculture; by 1945, just 16 percent made their living on the land.

Farming was soon in decisive decline across the industrialized world. Yet farm productivity grew dramatically, thanks to new machinery, chemicals, and education. The 19th-century promise of farm machinery was fulfilled as more versatile internal combustion engines, manufactured by Henry Ford among others, replaced bulky steam-powered farm implements. As the number of farms and farmers decreased, both the size of farms and the number of tractors, combines, and other specialized machinery soared. In 1900, American farmers owned 21.6 million work animals, mainly horses and mules. In Canada there were 22 human farmhands for each tractor or combine. By 1950, the numbers of both animal and human workers were comparatively tiny.

In industrial nations, agricultural productivity was also fostered by crop specialization related to potential markets, as well as climate and soils. Plant geneticists developed improved seed stocks and varieties. Research into grains including wheat, corn, and rice helped poorer countries and would lead to a “green revolution” later in the century. African-American agricultural chemist and botanist George Washington Carver (1864–1943) introduced soil-enriching crops like sweet potatoes, peanuts, and soybeans in southern U.S. states, and engineered useful products made from these crops, as

well as new foods. New or improved chemical fertilizers and pesticides increased yields and diminished crop damage. The downside of these scientific interventions included increased costs, overreliance on potentially dangerous chemicals, and monoculture—growing only one variety of corn, for example, year after year. These problems would become more pronounced after 1950. Meanwhile, fewer farmers grew and raised more food.

Harsh natural conditions, aggravated by politics and war, brought about two major famines in the Soviet Union, as well as one in China in the 1920s and 30s. About 9 million people died in 1921–22 following massive crop failures caused by a complex combination of civil war and political and social revolution, atop the extraordinary devastation wrought by World War I, and exacerbated by drought. In Soviet Ukraine, an estimated 7 million people died between 1932 and 1934 as a result of a drought, made into a disaster by Joseph Stalin’s massive program to impose collective farming on the once-independent Ukraine and sell its farm products to finance industrialization. In China’s Henan (Honan) province in 1940, some 2 million people died from a combination of drought and Japanese invasion.

In North America, an agricultural disaster coincided with the Great Depression. Beginning in 1930, decades of poor land management in the continent’s midsection created the dust bowl. Years of severe drought worsened the situation. For six years, hot winds in the agricultural heartland periodically deposited once-fertile soil as far away as Boston. Tenant farmers and sharecroppers were the worst affected. Many of these “Okies” (so called because some were from hard-hit Oklahoma) trekked to California’s fertile Central Valley, where they were unwelcome or exploited. Depression-era programs also provided aid to the agricultural sector. Hydropower projects brought electricity and irrigation to the Tennessee Valley and the Northwest’s Columbia River region. A federal Rural Electrification program extended the electric grid to widely scattered farms that had been bypassed by urban America’s electrification earlier in the century. President Franklin D. Roosevelt’s Agricultural Adjustment Act of 1933 set a precedent for stabilizing farm prices by paying some farmers not to grow as much as they could.

Consuming Food. In 1906, the U.S. Congress passed and President Theodore Roosevelt signed a sweeping law to protect consumers from shady food and drug purveyors. Many years in the making, the Pure Food and Drug Act was given its final push by Upton Sinclair’s muckraking exposé, *The Jungle*, a novel set in the meatpacking plants of Chicago, where animals, workers, and the food itself were all abused. It was a key victory for the new consumer movement and also revealed the extent to which Americans, and urbanites in many other developed countries, now depended on foods grown on large farms and processed in factories rather than food grown locally and prepared in home kitchens. New appliances, especially home refrigerators and freezers, that began to replace regular ice delivery made food preparation easier and more varied in every season. Supermarkets and chain groceries, emerging first in California, were soon able to offer more kinds of food at generally lower prices. Gerber Foods, founded in 1928, was an early processor of baby foods and formulas.

Food like Spam, reconstituted eggs, Jell-O, Cotelene, and Crisco were more uniform, longer lasting, easier to use, and more colorfully packaged versions of typical American foods or food ingredients. World Fairs, such as St. Louis, Missouri’s, 1904 Louisiana Purchase Exposition, where ice-cream cones and cotton candy were introduced, promoted new food products to international audiences. Rationing programs imposed during both world wars tested the ingenuity of home cooks and also spurred the adoption of manufactured oils and egg and meat substitutes. During World War II, K-rations—complete canned battlefield meals issued to troops—were another example of convenience and indestructibility. They were also the butt of many jokes.

At the same time, the globalizing tendencies of the early 20th century also produced new openness and exchange among culinary cultures. Imperialism and immigration were central forces driving the adoption and adaptation of specialized foods and methods of preparation. Immigrants to the United States and Canada from Europe helped introduce such foods as hamburgers (from Germany) and pizza (from Italy) that would soon be Americanized beyond recognition in their homelands. Some Texans and other southwesterners enlivened their diet with peppers and beans from Mexico, creating what came to be called Tex-Mex cuisine. Chinese railroad workers and other laborers also

had started restaurants in the American West in the mid-1800s. By the 1900s, this cuisine, dominated by Cantonese specialties tailored to Western tastes, was becoming familiar yet was still “exotic” in many parts of the United States.

In British India, urban classes adopted some typically British habits including tea time and the hearty English breakfast. It was a two-way exchange: British who had resided in India—and many who had not—adopted curries, chutneys, and mulligatawny soup. Likewise, Indonesian foods, including rice dishes and satays, soon became popular in Holland, which had colonized the huge Asian island chain. Wealthy and urban elites in French Africa, the Middle East, and Southeast Asia emulated French cuisine, styles, and table manners.

SCIENTIFIC AND TECHNOLOGICAL DEVELOPMENTS

In the early 20th century, engineers and scientists became national heroes. The earlier Industrial Revolution had focused on manufacturing infrastructure; now, consumers were the main beneficiaries of innovations in transport, power delivery, communications, and health. Advances in science and technology tended to widen the developmental gap between the industrialized world of Europe, North America, and Japan and those regions that remained less “modern.” Large corporations and laboratories began to replace independent inventors and scientists in the creation of new products and systems.

Transport. Flight was an ancient human preoccupation, but success had remained elusive. In 1901, Brazilian-born inventor Alberto Santos-Dumont piloted a gas-powered balloon around Paris’s Eiffel Tower. Samuel P. Langley, head of the Smithsonian Institution, attempted a number of well-financed flights in his “aerodrome.” In December 1903, days after Langley’s latest crash, unpublicized Ohio brothers and bicycle fabricators Orville and Wilbur Wright managed a 12-second flight over an icy North Carolina beach. The Wrights obtained a patent for their invention in 1908. Meanwhile, Europeans, especially the French, were also making advances in powered flight.

Early airplanes—fragile, low-flying, and hard to maneuver—were novelties at first, although their potential in warfare was instantly obvious. By 1909 the Wright brothers were training Italian and U.S. aviators. Rudimentary aircraft were used in World War I for surveillance and aerial attacks. Commercial uses of aircraft followed. Germany’s first commercial aviation venture in 1909 used airships, or Zeppelins, rather than airplanes. Many European nations, their railroads badly damaged in the war, established airlines after 1918. Not until the 1920s did businessmen and aviators, including Charles Lindbergh, who was, in 1927, the first pilot to fly solo across the Atlantic, begin to create viable U.S. air fleets for crop-dusting, mail, passenger, and freight-hauling services.

Several inventors, including Germany’s Carl Benz and France’s Peugeot firm, successfully produced automobiles in the late 19th century. These costly vehicles were mainly indulgences for the wealthy. In 1903, American Henry Ford, who, like the Wright Brothers, was a tinkerer and bicycle mechanic, founded his Ford Motor Company. Pioneering such mass production techniques as the moving assembly line, and reducing expensive custom details, Ford was able to bring the price of an automobile within the budgets of middle-class consumers. Famously, one could buy any color of his wildly successful Model T, as long as it was black. Ford paid his workers well but supervised them rigorously; he was an early adopter of efficiency techniques, similar to those propounded in Frederick Winslow Taylor’s 1911 *Principles of Scientific Management*. Within a few years, automobiles and trucks had reshaped urban and rural landscapes, creating a boom for road building, petroleum, and rubber tires and threatening railroads and streetcars with bankruptcy.

The Panama Canal, a new example of a much older transportation technology, significantly enhanced trade across the globe. This enormous project turned a narrow isthmus between North and South America into a waterway that cut some 8,000 miles off the dangerous sea voyage from New York to San Francisco. President Theodore (Teddy) Roosevelt engineered a coup in 1903 that turned what had been Colombia’s northernmost province, Panama, into a U.S. client nation. Despite a storm of protest, construction went forward in a 10-mile zone deeded to the United States until 2000, when it came under Panamanian control. Completed in 1914 at a cost of \$350 million and 5,609 worker lives, the canal was made possible by sophisticated project management,

improved earth-moving equipment, and new methods for controlling Panama's endemic tropical diseases, especially yellow fever.

Power. Humans were aware of electricity long before they tried to harness it. This naturally occurring force was scientifically studied in the 1750s by Benjamin Franklin, inventor of the protective lightning rod. Although the telegraph, introduced in the 1840s, used electricity to transmit signals, electrification remained essentially a novelty until the late 19th century. In Europe, Finland in 1877 pioneered electrification for Helsinki street lighting and put its first power plant into operation in 1884. In 1881, water power generated by Niagara Falls was used to provide local street lighting. In 1882, famed inventor Thomas A. Edison opened his first electric power station in New York City. In the first quarter of the 20th century, urban cities in Africa and Asia also slowly acquired electric power systems.

For some time, electricity remained miraculous rather than commonplace. Cost and safety concerns, and arguments between advocates of direct current (like Edison) and those favoring alternating current (like Nikola Tesla and George Westinghouse) meant that gas or oil still fueled most indoor and outdoor lighting after World War I. Yet by 1900, electricity was a \$200 million industry in the United States alone. Two U.S. electric utilities—Westinghouse and Edison (soon to become General Electric)—dominated the market.

Although Edison had long cultivated an image of quirky independence, he was also a cagey businessman. Working with financial giants like J.P. Morgan, he helped pioneer an integrated energy supply and distribution system, providing a model for other new technologies. By the 1920s, a third of homes in more prosperous American cities were wired for electricity as customers eagerly purchased a plethora of new electric appliances. It required a federally financed electrification project during the Great Depression for rural dwellers to share in this advance. Disrupted by World War I, Europeans saw slower but steady growth in electrification. Beginning with the introduction of its first Five-Year Plan, the Soviet Union also promoted rapid growth of electrification.

Electrification also fostered the gradual growth of air conditioning, which began in 1902 as a technology designed to ensure consistent results for manufacturers of temperature- and humidity-sensitive products. By the late teens, the new motion picture industry (another Edison venture) was using air conditioning to make its "picture palaces" more appealing in summertime. In the 1930s, President Franklin D. Roosevelt, who disliked air conditioning, encouraged its installation in hot Washington, D.C., hoping to make federal workers more productive in the summers of the depression.

Communications. In 1900, the telegraph, with its worldwide cable connections, was still king, but it would soon lose its communications dominance. Scottish-born Canadian Alexander Graham Bell had won patent rights for his telephone in 1876 (prevailing over U.S. inventor Elisha Gray), but it took a long time for this new device, which many deemed a "useless toy," to catch on. Adopted first by businesses in major towns, the telephone gradually won favor. By 1905, Bell Telephone (by then known as American Telephone & Telegraph, and later simply AT&T) had strung five times as much wire as Western Union, the telegraph giant. It was 1915 before Bell customers could place transcontinental calls; transatlantic calling was launched in 1927. By 1920, a third of urban homes were equipped with this new device.

Many early European and Latin American phone installations used equipment made by Bell. Swede L. M. Ericsson began selling his own models in 1881. As telephones caught on, European phone systems were more likely to operate as government agencies. In Britain, private companies provided service starting in 1878, but by 1912 the national post office took charge. France developed a hybrid public-private system.

Italian Guglielmo Marconi introduced a wireless communication system, later called radio, in 1896, winning a patent for his invention in 1900 and a Nobel Prize in 1909. Although the installation of a Marconi radio communication device on the *Titanic* failed to save the doomed British ocean liner in 1912, his innovation soon caught on. By the 1920s, radio stations, beginning with Pittsburgh, Pennsylvania's, KDKA, were broadcasting music and other programming to the lucky few with radio receivers. KDKA broadcast results of the 1920 U.S. presidential election across the

eastern United States. By the 1930s, radio ownership had grown dramatically. Radio carried newly elected chancellor Adolf Hitler's speeches to German citizens; Americans tuned in for President Roosevelt's regular fireside chats.

Edison's "Kinetoscope," and his improved "Vitascope," introduced in 1896, were forebears of what became the 20th century's motion picture industry, as were image projection systems created by France's Lumière brothers. First shown in amusement parks, often featuring naughty "peepshows," these "movies" were an almost immediate novelty hit, but it took new modes of presentation—the nickelodeon and the movie house—to make films an enduring entertainment choice. "Talkies"—moving pictures with coordinated sound—were introduced in 1927. Frenchman Charles Pathé, a moving image pioneer who relocated to London in 1902, became the foremost producer of newsreels shown in movie theaters. These let audiences see actual newsmakers and recent events in the days before television.

The growing communications industry was a key beneficiary of versatile new materials that would eventually be known generically as "plastics." Most of these, including celluloid, rayon, bakelite, and nylon, were formulated to be cheaper, safer, more durable, or easier to use than traditional plant- and animal-based materials such as silk, ivory, and tortoiseshell. By 1900, most movies were projected on celluloid film, an ingenious but highly flammable medium that was eventually replaced with safer synthetic materials. Bakelite, developed in the United States in 1907 by Belgian chemist Leo Baekeland, is considered the first true plastic. It was used in Edison's phonograph records, Bell's telephone receivers, and cameras made by George Eastman's Kodak company.

Biology, Health, and Medicine. Nineteenth-century breakthroughs in understanding disease processes energized medical innovation in the 20th century. Ironically, Western imperialism brought new attention to the dangers of tropical diseases including malaria, yellow fever, and dengue fever. The Panama Canal project was but one example. New medications and mosquito eradication helped white colonials (and many indigenous people of afflicted countries) to improve child survival rates and overall adult health.

In 1901–02, Austrian physicians led by Karl Landsteiner discovered the four major human blood groups: A, B, AB, and O. This paved the way for lifesaving blood transfusions that significantly improved the survival rates in operations. Deficiency diseases including pellagra, beri-beri, and scurvy, occurring mainly among poor populations around the world, became more treatable when the properties of certain amino acids, later named "vitamins," were identified in 1915.

The first half of the 20th century introduced "miracle drugs" and "magic bullets" that indeed saved many lives and increased the human life span, although not without their own medical and social side effects. Syphilis, a disabling sexually transmitted disease, was controlled by arsenic-based compounds derived in 1909 by Prussian Paul Ehrlich and Japan's Sahachiro Hata. In 1921, Canadian scientists discovered and synthesized insulin, turning diabetes from a death sentence to a mostly manageable condition. A British team headed by Alexander Fleming in 1928 showed that a common mold could kill deadly bacteria, but this antibiotic, penicillin, did not become widely available until the 1940s. In the interim, sulfa drugs, first synthesized in 1908 by an Austrian chemist, became vital weapons against bacterial infections, especially in World War II.

Physical Sciences. Building on Wilhelm Roentgen's 1896 discovery of X-rays, Polish-born French scientist Marie Curie was the first woman to win Nobel Prizes for both physics (1903) and chemistry (1911) and also contributed to new knowledge in the health sciences. Her X-ray investigations, in partnership with physicists Henri Becquerel and Pierre Curie, her husband, led to the discovery of new elements, including radium and polonium, named by Curie for her native country, Poland. They also revealed properties of radiation, both healing and killing, that led to new cancer therapies, as well as atomic energy and the atom bomb. Both she and her chemist daughter Irène, who also won a Nobel with her husband, Frédéric Joliot-Curie (1935), died of ailments caused by radiation poisoning.

Physics was further revolutionized in 1905, when German Albert Einstein propounded his special theory of relativity, following up 10 years later with a general theory of relativity. Einstein's work fundamentally questioned the long-accepted physics of gravitation and other cosmic forces that were

developed in the 18th century by Sir Isaac Newton. Einstein's insights, and new discoveries by many other physicists, led to radically new knowledge of the power stored inside individual atoms. Einstein renounced his German citizenship when Hitler became chancellor in 1933, and he then emigrated to the United States. He was a key proponent of the United States's secret Manhattan Project, which in 1945 produced the first atomic bombs. Other important theoretical physicists who participated included Italian Enrico Fermi, Dane Niels Bohr, and American J. Robert Oppenheimer. The largest research and development project in world history, the Manhattan Project cost more than \$2 billion in 1940s dollars, employed 43,000 people, and became a model for doing science and technology in the second half of the 20th century and beyond.

SOCIAL AND CLASS RELATIONS

Important changes in social and class relationships, brought about by the Industrial Revolution that began in western Europe and North America during the 19th century, spread to other parts of the world during the first half of the 20th century. The changes were accelerated by global upheavals caused by World Wars I and II and revolutionary and nationalist movements, especially the Marxist revolutions in Russia and China. Many momentous changes were violent and cost millions of lives.

The Industrial Revolution, begun in England, had spread to western Europe and Japan by 1900. It caused domestic migrations as many people left farms and rural areas to work in factories in cities that sprang up in the industrialized nations. Millions also migrated across oceans, mainly from Europe to North America and Australasia, to seek better lives. Wide gaps separated the rich industrial nations and the agrarian ones, and within nations, they separated the wealthy industrial magnates, the middle-class professionals and white collar workers, and the lower class of factory workers and small farmers. Although the newly rich and powerful industrialists and entrepreneurs held great power in the United States, they shared power and influence with the hereditary aristocrats in many European countries.

By the early 20th century, significant improvements had taken place in the living standard of the urban working class in western Europe and the United States, especially among skilled workers. On the other hand, the lives of factory workers and miners in newly industrializing countries such as Russia, China, and India remained desperately poor. In Western countries, better nutrition and living conditions characterized the lives of many workers, whose children attended schools mandated by laws that forbade child labor and enforced compulsory education. Whereas many women had worked under harsh conditions in factories during the early stages of the Industrial Revolution, protective laws had improved their working environment in the advanced countries by 1900, and higher wages for male workers allowed their wives to stay at home to raise their children. The power of organized labor, legal in most Western nations, increased during the first half of the 20th century. The spread of the Industrial Revolution to eastern Europe and parts of Asia from 1900 to 1950 also contributed to the changing social and class patterns in those regions.

New Politics. In some countries, for example Great Britain and Australia, workers became strong politically by forming political parties that competed in local and national elections. Electoral success (the first Labour government was formed in Australia in 1904 and in Great Britain in 1924) by labor or socialist parties allowed workers to accelerate the pace of change through the passage of legislation such as the progressive income tax that aimed at income leveling. Such government actions had the effect of blurring class differences and lessening the advantages that the upper classes had enjoyed. In the Middle East and Africa, educated urban classes led the nationalist movements and struggled for greater political and economic power from the Western imperial rulers.

The most extreme reordering of social classes occurred in Russia after the Bolshevik Revolution. The Communist government of the Soviet Union brutally reorganized the social order, eliminated the nobility and much of the middle class, and later put the peasants who formed the majority of the population into collective farms. However, although the government of the Soviet Union officially favored the proletarian class, ordinary citizens had little say in the ordering of their lives because the Communist Party monopolized all power. Although less extreme, World

War I and the revolutions that followed in many countries dramatically changed class relations worldwide. In Europe, monarchies were overthrown in Germany and Austria-Hungary, which led to the downfall of the once powerful aristocracy in those countries. Outside of Europe, North America, Japan, and Australasia, China underwent continuing social and political revolutions that began with the overthrow of the Qing (Ch'ing) dynasty in 1911 and culminated in the establishment of a Communist government in 1949.

Race, Class, and Politics. Race was important in determining class in several parts of the world. For example, in Latin America, people of European origin enjoyed high status, followed by those of mixed-race descent, with indigenous people and the descendants of African slaves at the bottom. It was also an important factor in economic and class divisions in the United States. Similarly, class was determined by race in parts of Africa where Europeans had settled. Political and social revolutions that swept over several nations of Latin America threatened or overthrew the traditionally powerful classes and organizations. In Argentina, radicals advocating social reforms became politically active after 1912. In 1946 Juan Perón was catapulted to power on a populist ideology that combined left-wing, pro-working class rhetoric with right-wing, protofascist bureaucratic-authoritarian policies, winning electoral power on a platform ostensibly geared toward benefitting the *descamisados*, or shirtless ones. In Mexico, the vast social convulsion later dubbed the Mexican Revolution (1910–20) eroded the power of the Catholic Church, foreign corporations, and large landowners, and after 1917 offered a more inclusive and democratic polity to indigenous Mexicans. In Brazil, strongmen rulers also promulgated economic and social reforms to satisfy the demand of workers.

Social Engineering. The worldwide Great Depression that began in 1929 also accelerated social and political changes. In the United States it led to important social engineering in legislation called the New Deal. It led to growth of socialist parties in Europe, and contributed to the rise of Nazism in Germany. In all cases it led to a realignment of social classes, and in Germany and Nazi-conquered lands, it led to forced population displacements and the extermination of millions of Jews, gypsies, Slavs, and people with disabilities in the Holocaust.

Outside Europe, the political revolution under Kemal Atatürk that overthrew the discredited Ottoman Empire also led to a social revolution that secularized Turkish society, orienting it toward the West and granting legal equality to women. In these respects Turkey presented an alternative model of society to the traditional Islamic world. In Iran the new Pahlavi dynasty attempted similar reforms with far less success. In China the revolution that overthrew the dynasty in 1911 also ushered in a wide-ranging social revolution that encompassed the quest of women for equality and that of young people from the control of their parents. Chinese women won legal equality in new codes promulgated in the 1930s, and those from the middle class made rapid advances. For example, although there were no women's colleges in China in 1900, by 1937 a quarter of college students were women. As in the Soviet Union, the Chinese Communist Party carried out a violent and thorough social and economic revolution after it gained power in 1949. It eliminated landlords and rich peasants, first distributing their land to the poor peasants and later forcing them to join collective farms. In India the caste system determined the social status of Hindus. British rule had forced forward-looking Hindu intellectuals to reexamine their traditional social system beginning in the late 19th century; many leaders, as a result, advocated reforms. After World War I, Mohandas K. Gandhi emerged as India's leader in its struggle for political independence and social reform. Gandhi's nonviolent protest aimed at advancing not just India's nationalistic goals but also the causes of female emancipation and equality for the untouchables that constituted about 20 percent of Hindus. Partly as a result of his labors the constitution of newly independent India gave women equality and also abolished the discrimination suffered by untouchables. Gandhi would later be an inspiration for the Civil Rights movement in the United States and in the quest for equality by Africans in South Africa.

Women and Class. The 20th century also saw remarkable advances in the position of women worldwide. Whereas in 1900 only women in Australia and New Zealand had the right to vote and enjoy many of the same rights as men, by mid-century women had won equality in many nations on all continents. For example, English suffragists had been unsuccessful in lobbying for female

franchise, but with most men drafted to fight in World War I, women joined the workforce in large numbers, making important contributions to the war effort and advancing their economic independence. As a result, women in Great Britain, the United States, and many European nations won the right to vote soon after the war ended.

In Asia, by the early 1920s Indian women had also won the right to vote on the same terms as men. Turkish and Egyptian women led others in the Middle East and Africa to struggle for both political and social rights. Japanese women did not win voting or other equal rights with men until after World War II. It was then mandated by the U.S. occupation authorities and guaranteed in a new constitution. However Japanese women had been able to receive a higher education and enter the professions, especially in teaching and medicine, since the end of the 19th century. Among the Westernized urban middle class in many non-Western countries women made astonishing gains. For example, Sarojini Naidu was elected president of the Indian National Congress, India's foremost nationalist organization in the 1920s, and became India's first female provincial governor soon after.

The enormous devastation and dislocation caused by World War II was truly global. The forced migrations of hundreds of millions of refugees, the tremendous destruction and demand for manpower, and the outcome of the war changed the world. Among the changes effected were all levels of social and class relationships. Women went to work in larger numbers than during World War I, including performing combat and noncombat military duties, in skilled professions, and in industrial production. Former colonies demanded and won independence and in the process empowered previously voiceless peoples. In the United States the G.I. Bill gave opportunities to millions of young war veterans to attend college and enjoy better lives. High rates of taxation (up to 95 percent in Great Britain) to finance the war and war-caused inflation realigned social classes.

TRADE AND CULTURAL EXCHANGES

In the early 20th century European nations with vast empires in Africa and Asia dominated and controlled trade around the world. The United States also emerged as a major supplier of both agricultural commodities and manufactured goods. In Asia Japan emerged as an industrial and colonial power.

The open door policy in China enabled Western nations and investors to dominate the Chinese economy and vastly reduced the political independence of the nation. A plethora of new consumer goods, many from the United States, coupled with aggressive marketing, helped to create consumer societies in wealthy nations and among the wealthy in poor nations.

Improved transportation routes and modes of travel facilitated global trade. The Panama Canal, linking the Atlantic and Pacific Oceans, was begun in 1904 and opened in 1914. The Trans-Siberian Railway from St. Petersburg (Leningrad) on the Baltic coast to Vladivostok on the Russian Pacific coast was completed by 1917. The development of air travel opened up new and faster modes of transportation and enabled the wealthy to travel for business and pleasure over vast distances. The first flight from London to Delhi, India, occurred in 1926.

In 1927 Charles "Lucky" Lindbergh flew nonstop across the Atlantic from the United States to France. Henry Ford's assembly line and the introduction of interchangeable parts made the manufacture of relatively inexpensive automobiles such as the Model T affordable to the middle class in the United States. Easier and more affordable transportation systems fostered a growing tourist industry and made the world a much smaller place.

More accessible transportation systems also fostered increased movement of peoples in search of better jobs and lifestyles, especially from Europe to the Western Hemisphere. Between 1905 and 1914 over 10 million people, mostly from eastern and southern Europe, emigrated to the United States. Asians were mostly excluded by law from entry into both the United States and Australia.

The 1929 Great Depression ended world prosperity and lessened international trade. Many nations, such as the United States, attempted to solve their economic problems by introducing protectionist tariffs that worsened and lengthened the depression. Others abandoned the gold

standard to improve their international trading positions. Many nations were also caught in a web of debts incurred during World War I.

Nations and regions in eastern Europe, Africa, South and Central America, and Asia that produced primarily raw materials and agricultural goods were economically devastated when demand and prices for their goods dropped. As the depression deepened, many people became profoundly disillusioned with their governments, and some turned to totalitarian dictators and international aggression to solve the problem. Many nations, including the United States, only recovered full production and employment with the advent of World War II.

U.S. culture spread after World War I, especially through radio, popular music, and motion pictures, which became a major source of entertainment for people around the world. During the 1920s in New York, Paris, Cairo, and Singapore, men and women flocked to nightclubs to dance and drink cocktails. Urban women from Japan and elsewhere found new freedom, cut and permed their hair, and wore short dresses, giving up more modest traditional fashions and lifestyles.

Profound divisions between secular and traditional religious groups also emerged. For example, after the 1917 revolution in Mexico a secular constitution was implemented in this predominantly Catholic nation. Similarly, Mustafa Kemal Atatürk in Turkey and Reza Shah in Iran both attempted, with various degrees of success, to limit the power and influence of religious authorities in their mainly Muslim nations. Secularists in Asia also questioned ancient traditions and religion. A new cultural movement in China begun after World War I was inspired by Western-educated Chinese scholars. Many also rejected the moral teachings of Confucius. Sigmund Freud and others developed modern psychiatry. Freud used psychoanalysis to probe the unconscious; he also openly discussed sexuality, a previously taboo subject in much of the world. Earlier the German Friedrich Nietzsche, who died in 1900, and later Bertrand Russell in England questioned age-old beliefs regarding spirituality and the existence of God.

Religious leaders challenged not only the work of Freud but also Charles Darwin's theory of evolution, arguing that it countered the teachings of creation in the Bible. In the famous Scopes "monkey trial" in the United States, a teacher was found guilty of teaching evolution in 1925. In India the nationalist leader Mohandas K. Gandhi championed traditional Indian culture and Hinduism. However, Gandhi also preached and practiced tolerance for Indian Muslim communities, whereas other nationalist leaders sought support by rejecting tolerance for dissenters or minorities. In the West, Christian church leaders sought to establish more communication and cooperation among the various Christian sects, leading to the establishment of the World Council of Churches. The differences and hostilities between secularism and religion would be one of the major sources of tension in the 20th century.

Literature, Art, and Music. In literature the novels of Ernest Hemingway reflected a new wave of authors, many of whom became highly disillusioned about the human condition during the interwar years. Other writers sought to maintain traditions while accepting Western ways of life and technology. Léopold Senghor of Senegal, Aimé Césaire, and others wrote about *négritude* and the values of African traditions. Rabindranath Tagore wrote poetry in his native Bengali (a language of India), for which he received a Nobel Prize in 1913, while he also sought to return Indians to traditional ways through moral education.

Modern art in its many variations drew on several African and Asian modes of artistic expression. Impressionist artists, including Vincent van Gogh and Paul Gauguin, were heavily influenced by Japanese art and Polynesian life, respectively. Pablo Picasso, along with Georges Braque, was credited with founding cubism in 1907–08. Both were influenced by African art forms such as carved wooden masks. Many artists mixed traditional, indigenous motifs in their compositions. In Mexico, muralists Diego Rivera, David Alfaro Siqueiros, and José Clemente Orozco all used folk influences and Amerindian symbolism.

Music was similarly influenced by a wide variety of cultures. The South American tango became popular around the world. Western motifs influenced musicians and composers from other continents. For example, the Egyptian composer Sayyed Darweesh used a variety of traditional Arab and Western

forms in his operettas and classical pieces. His music remains popular throughout the Arab world. He also wrote about women's rights and class differences.

Jazz, a uniquely American musical art form, was a fusion of African and Western traditions largely created and popularized by African Americans. Many artists and writers worldwide, among them African-American musicians, often sought the social and artistic freedom of postwar western Europe, especially Paris, which became the cosmopolitan center of the arts, as Vienna had been before 1914. This movement ended with the Great Depression, when struggling artists could no longer afford the luxury of travel to distant locales.

Organized sports, especially football (or soccer, as it was known in the United States), baseball, and tennis, became popular in most nations around the world. The World Cup in soccer was begun in the 1930s, as were international tennis tournaments. The mass media of newspapers, movies, and radio made cultural and artistic endeavors more international and accessible and led to the opening up of new cultural forms. In contrast, rural poor countries in much of Africa, South America, and Asia remained highly traditional. Many of the cultural trends pioneered in the first part of the 20th century would continue and accelerate after World War II and into the 21st century.

WARFARE

Fueled by imperial rivalries, powerful new weapons, enlarged manufacturing capacity, and broader military conscription, the wars of the first half of the 20th century included the two largest armed conflicts in world history. The Great War of 1914–18, later renamed World War I, followed by World War II (1939–45), reshaped the global order, but neither proved to be the “war to end all wars.”

The years 1900 to 1914 were the high point of European and, to a lesser extent, American and Japanese colonial adventurism. Partitioning a war-weakened China into spheres of economic and political influence, the great powers also competed for control of many other resource- and labor-rich regions of Asia, Africa, and Oceania. At the same time, European powers used their industrial might to accelerate an arms race and developed intricate agreements and alliances to protect their interests at home and in their colonial holdings.

In the summer of 1914, a Serbian nationalist's assassination of Archduke Franz Ferdinand, heir to the Austro-Hungarian throne, set these alliances in motion and led directly to the Great War. The war pitted the Allied Powers—France, Russia, Britain, Japan, and other nations, eventually including the United States—against the Central Powers of Germany, Austria-Hungary, and the fading Ottoman Empire.

New Strategies. The Great War was a field laboratory for a range of new weapons and new strategies for deploying troops. For the first time, aircraft played a significant role. They were used by both sides for aerial reconnaissance and to drop explosives on enemy forces. Germany's successful use of torpedo-equipped U-boats, mainly to harass enemy shipping, was the first time that submarine technology, developed late in the 19th century, was taken seriously as an important tool of war. Breach-loading, quick-firing field guns made infantrymen more deadly; howitzers capable of firing five or more rounds of shells a minute were deemed responsible for 70 percent of the war's 9 million troop deaths. Radio, newly developed, revolutionized the ability of troops and commanders to communicate in real time. Near the end of the war, the British first used internal combustion-powered armored tanks to breach German positions. Tanks were better able to protect drivers and rolled easily over barbed wire and other obstacles—they became standard equipment in subsequent conflicts.

As both sides relied on massed infantry assaults and protected their men behind trenches dug into battlefields, stalemate became a frustrating and dangerous enemy, especially on the war's western front. The trenches indeed protected soldiers, but they also prevented them from effectively engaging the enemy in battle. To leave the trench was to face likely attack by a sniper in the opposing trench. The trenches filled with water and filth, causing illness and injury. Chemical and biological weapons, such as deadly and debilitating chlorine gas (its use has since been outlawed under international law), were a particular threat to troops trapped in trenches. The introduction of tanks late in the war would help to overcome this standoff.

As the war dragged on, inflicting huge casualties in such battles as Gallipoli in 1915 and Verdun and Somme in 1916, Central Power conquests in Russia, Serbia, and Romania, combined with internal unrest, led to Russia's withdrawal and its separate peace with Germany. As the Russian Revolution intensified, Romanov czar Nicholas II abdicated in March 1917. A month later, the United States, jolted by submarine attacks and outraged by a secret German plan to help Mexico regain territory lost to the United States, declared war on the Central Powers. Although it would be 1918 before significant numbers of U.S. troops began fighting with the Allies in Europe, the effect of fresh manpower helped bring about Kaiser Wilhelm II's abdication on November 9, followed by the armistice on November 11, 1918, that ended the war.

The Great War, ended by the controversial Treaty of Versailles with Germany and by other treaties with allies, solved few problems and almost certainly created new ones. Despite the creation of a League of Nations (which the United States declined to join) and a series of disarmament proposals and conferences, both rearmament and colonialism continued. Although Ireland would win its long-sought independence from Britain in 1921, other colonial struggles remained unsettled. In fact, Britain and France found new opportunities to dominate the Middle East in the remains of the former Ottoman Empire.

Russia, now under a Communist regime, fought off a postarmistice invasion by its alarmed former Allies and set about securing what would become a two-continent Soviet Union in Europe and Asia, while leader Joseph Stalin tightened his totalitarian rule. This almost guaranteed unrest in eastern Europe and new confrontations with Japan. Germany's new Weimar Republic struggled to recover from the lost war, and from the Versailles Treaty demands for billions in war reparations (although never collected in full). Austrian-born Adolf Hitler would brilliantly use post-Great War political and social conflict and German bitterness and resentment to obtain power as leader of the new National Socialist, or Nazi, Party.

Civil war in China in the 1920s and 1930s emboldened Japan to seize Manchuria in 1931 and launch a full-scale invasion of China in 1937. Japanese brutality toward their victims, for example, in the Rape of Nanjing (Nanking), equalled the horrors of Nazi atrocities. Meanwhile, Hitler began rebuilding German military power, in direct defiance of treaty provisions, meeting only token resistance from the former Allies. With his Fascist ally, Benito Mussolini of Italy, Hitler tested his new weapons by intervening in the Spanish civil war on the side of Fascist insurgents led by Francisco Franco. As a new war threatened in Europe, France responded by building its Maginot Line, a system of fortifications. Some 3,000 Americans defied official U.S. neutrality to fight against Franco in Spain. Otherwise, the predominant sentiment in France and Britain was appeasement of the aggressors.

Poland Attacked. World War II in Europe began on September 1, 1939, when German panzer divisions of massed tanks and mobile artillery invaded Poland days after a nonaggression pact between Hitler and Stalin gave Hitler a free hand in eastern Europe. By June 1940, Hitler's forces had occupied France, where they installed the Vichy government, which was subservient to Germany, and controlled most of Europe, while Britain fought virtually alone. That September, Germany, Italy, and Japan created a formal alliance known as the Axis. In June 1941, German forces invaded the Soviet Union, violating the 1939 pact.

From the outset, the fighting forces relied heavily on tanks, especially the reliable U.S. Sherman Tank, and air power. Battleships were central to earlier conflicts; in World War II aircraft carriers became the most significant fighting innovation because they enabled the simultaneous projection of both sea and air power. When Japanese planes bombed Pearl Harbor on December 7, 1941, bringing the United States into the war, the huge loss of life and warships at the Hawaiian air base was partially offset by the fortunate deployment elsewhere of America's aircraft carriers. Submarine warfare, especially in the Atlantic Ocean, expanded in importance for both the Allies and the Axis, inflicting huge damage on commercial shipping and enemy navies. Military aviators, including those from Britain's Royal Air Force, Germany's Luftwaffe, and the U.S. Army Air Force, depended on heavily armored bombers capable of flying long distances with heavy loads of bombs and on nimble fighter planes to repel enemy attackers. Radar technology, first made functional in the 1930s by

British and American scientists, helped the Allies detect submarines and obtain advance warning of air attacks, somewhat defusing the effectiveness of both these tools of war.

Total Global War. World War II was a global war and a total war with fronts in Europe, Asia, Africa, and the Pacific. As the Allies struggled in the early war years, the Soviet Union bore the brunt of Axis attacks in eastern Europe; Britain held out in the west, while the United States deployed most of its power against the Japanese in the Pacific. In 1942, the Allies began to have successes, especially at Midway Island in the Pacific, in North Africa, and in the USSR, where the Soviet Union, despite huge military and civilian casualties, turned back Hitler's siege of Stalingrad in January 1943. The Allies' "Operation Overlord" D-day invasion of Normandy beaches in June 1944 finally opened a second European front. It took almost a year of hard fighting before converging Soviet troops and British and American forces were able to force Hitler's suicide and Germany's surrender in May 1945.

This total war claimed an unprecedented number of civilian casualties and displaced persons. Millions were killed or wounded by military action. Millions more were victims of deliberate murder, overwork, or starvation. Stalin sent millions of Soviet citizens into forced labor camps. Hitler turned much of occupied eastern Europe into a Nazi forced labor camp and deliberately exterminated "undesirables," including 6 million Jews, in what became known as the Holocaust. Japan imposed brutal measures on occupied Asian territories, especially Korea and China. In the United States, 120,000 West Coast Japanese, most of them U.S. citizens, were forced to leave their homes and businesses for internment in rural detention camps for the duration of the war.

On both sides, the war mobilized millions of volunteers and conscripts and brought more women than ever before into the industrial economy. The United States instituted its very first peacetime draft in 1940. African Americans, as they had in every American war since the Revolution, fought in racially segregated units commanded by white officers. This changed in 1948 when U.S. president Harry Truman controversially ordered the U.S. armed forces to desegregate. Some 30,000 Japanese Americans served, but they were sent to Europe, not the Pacific theater. As had also been true in the Great War, political officials for both the Axis and the Allies created massive public relations campaigns designed to demonize their enemy, preserve home front morale, and encourage obedience to various rationing and work initiatives.

During the final two years of World War II, both sides would introduce controversial new kinds of weapons. Germany's blitz of London with manned bombers was succeeded in 1944–45 by even more terrifying unmanned medium-range rockets, the V1 and V2. Allied fire bombings of Dresden, Germany, and Tokyo incinerated large parts of both targets, killing thousands of civilians. But the most controversial weapon by far was the atomic bomb, or A-bomb, used twice on Japan by the United States in August 1945. An experimental weapon created during the war by America's top secret Manhattan Project, this bomb could be delivered by a small plane and destroy entire cities, as it did Hiroshima and Nagasaki. Conventional bombing had killed even more people; what made the A-bomb so terrible was the radiation it emitted, sickening survivors and causing their deaths or harming unborn children weeks or even years later. After the two A-bombs were dropped, Japan surrendered in September 1945, bringing World War II to its end.

Warfare continued, however, despite the creation of the United Nations, a new global peace-keeping body headquartered in New York City, and well-publicized Nuremberg War Crimes and Tokyo International Court Trials of surviving Axis leaders. In 1949, forces led by Mao Zedong, which had been nurtured during Japan's invasion of China while the Nationalist forces were ground down, finally won the Chinese Civil War, defeating China's U.S.-supported Nationalist government and installing a communist regime. Anticolonial wars threatened the remains of British, Dutch, and French colonial interests. Britain granted independence to India in 1947, but most African and Asian nations would only gain independence in the years following 1950.

Addams, Jane

(1860–1935) *U.S. social reformer and peace activist*

Born into a prosperous Illinois family, Jane Addams forged important new roles for women in education and social work. As founder of Chicago's Hull-House, she helped revolutionize social services for the poor and immigrants. Her work for peace as the United States marched into WORLD WAR I antagonized some Americans but made her the first U.S. woman to win a Nobel Peace Prize.

Addams, a sickly child, was just two when her mother died. Her father encouraged Jane's desire for a higher education. She became part of the first generation of U.S. women to have significant access to college and was one of many well-educated women who would make their era one that historians labeled "Progressive."

After great success at Rockford Seminary Addams found herself adrift, searching for some useful purpose for her education. Her father's sudden death in 1881 compounded her depression. She considered medical school but dropped out within weeks. Two trips to Europe and deepening religious convictions helped put Addams on a path toward achievement and acclaim. In 1887 she visited England's Toynbee Hall, where reformers were seeking to improve the lives of workers exploited by the Industrial Revolution. Back home a group of Smith College women had just founded the College Settlement Association to assist the millions pouring into U.S. factories and cities.

In 1889 Addams and college friend Ellen Starr opened their own settlement house in a former mansion at 335 Halsted Street. These small-town Protestant ladies soon found themselves purveying social services to families who were mostly Italian, Catholic, and poor. Initially emphasizing cultural uplift—art, music, and good manners—Hull-House under Addams's pragmatic supervision refocused on such pressing neighborhood needs as garbage collection and playgrounds.

By 1900, of more than 100 settlement houses in U.S. cities, Hull-House was the most famous, thanks to Addams's skills in writing, lecturing, public relations, and fundraising. Possibly the best-known U.S. woman, she was acclaimed a motherly saint before she was even 40. Unlike most white progressives, Addams worked with African-American reformers. Her fame peaked in 1910 when she published *Twenty Years at Hull-House*, her autobiography.

An 1896 visit with Russian author Leo Tolstoy, a theorist of simplicity and nonresistance, followed in 1898 by the Spanish-American War, helped turn Addams's attention to problems of aggression and war. Writing extensively on war, peace, and pacifism, she became active in U.S. anti-imperialism efforts. With war raging in Europe, Addams sailed to Holland for a women's peace conference in 1915, just weeks before German U-boats sank the *Lusitania*, and she later met with both sides in the vicious conflict.

When the United States entered World War I in 1917, Addams found herself vilified by some as an unpatriotic defeatist and ridiculed by others as a naive

female unable to understand the necessity of warfare. When the RUSSIAN REVOLUTION produced a communist regime, “red” and “Bolshevik” were added to the failings listed by Addams’s critics.

Addams spent much of the 1920s outside the United States. A long effort by her friends finally paid off when Addams shared the 1931 Nobel Peace Prize with Columbia University’s president. Her life’s work imbued with new relevance by the GREAT DEPRESSION, Addams died of cancer just days after her pioneering achievements were celebrated by admirers, including First Lady ELEANOR ROOSEVELT.

MARSHA E. ACKERMANN

Afrikaners, South Africa

The first half of the 20th century represented a consolidation of white-dominated rule in South Africa. Yet the century began with a conflict between the British colony and the Afrikaner, or Boer, republics. Afrikaners, who claimed their lineage from the original Dutch settlers of the Cape colony, had developed an increasingly distinct national identity in conflict with the British and the African peoples of South Africa. Despite British victory in the brutal South African War, the increasingly segregated and racialized system in a united South African state pinnacled with the birth of apartheid in 1948.

What the British called the Second Anglo-BOER WAR the Afrikaners called the Second War of Freedom. Historians have called it the South African War (1899–1902) to reflect that the war was not merely an imperial war between the British and the Boers, but a civil war that involved the entire population of South Africa. The British claimed that the war was about the rights of foreigners—Uitlanders—in the Boer republic called the Transvaal; Paul Kruger, the president of the Boer republic, understood the conflict to be about something more—British desire to control the Cape and the mineral wealth of Transvaal. After the early success of the Afrikaner war effort, the British drew on the resources of the empire to meet a significant challenge to their imperial dominance. The Boers, led by generals including JAN CHRISTIAAN SMUTS and Louis Botha,

turned increasingly to guerrilla tactics. In turn the British commander, HORATIO, Lord KITCHENER, responded by burning Boer farms and imprisoning enemy civilians, including Africans, at concentration camps, where thousands died of disease. Africans generally did not fight in the war, but they did provide logistical support and supplies. In Britain, opposition to the war on both financial and humanitarian grounds grew. Finally, the last holdouts surrendered in 1902. The Treaty of Vereeniging treated the Boers relatively mildly and even granted them political and cultural autonomy. The specter of African rebellion against growing repression in the white-dominated state quickly healed the wounds of the South African War. The Native Affairs Commission (1903–05), appointed by High Commissioner Sir Alfred Milner, suggested a policy of territorial segregation between whites and blacks, making Africans the true victims of the war.

In 1910, the British parliament created the self-governing UNION OF SOUTH AFRICA. It became a Commonwealth nation under the Statute of Westminster in 1931. The Cape government enfranchised adult blacks, but only whites could stand for election in the new Union parliament. The Afrikaner nationalist Louis Botha, on the ticket of the South Africa Party, was elected as the first prime minister of the Union of South Africa in May 1910. Blacks were denied political or economic power within the official structure of the state and society.

Some individuals within the Afrikaner political elite, like J. B. M. Hertzog, remained intensely hostile to the British. During both world wars, South Africans served the empire on the battlefields of Europe, though African troops were relegated to noncombat roles. Military alliance with Britain during both wars revived old debates about white South Africa’s relationship with its “mother country.” Afrikaner nationalists revolted in 1914 after Botha allied South Africa with Britain and even agreed to invade German South-West Africa (now Namibia). During WORLD WAR II, a coalition between Jan Smuts (Botha’s predecessor) and Hertzog, called the United Party, broke apart over the same issue. Groups like the African Brotherhood and the Purified National Party, a political party that developed after Hertzog allied with Smuts, built a mythology of Afrikaner nationalism centered on the Great Trek. The most radical Afrikaner nationalists went as far as to openly sympathize with the NAZI PARTY during World War II.

The beginnings of apartheid can be found in the increasing segregation of and discrimination against

black South Africans. The Natives' Land Act (1913) and the Natives' Trust and Land Act (1936) designated a small percentage of South Africa's total land area to (segregated) black reserves. The 1923 Natives (Urban Areas) Act limited blacks' access to white urban areas. While black South Africans were indispensable to whites as laborers, their overwhelming number in relation to the white population was perceived as a threat to the white-dominated state.

In 1912, a group of Western-educated Africans formed the South African Native National Congress (later known as the African National Congress, ANC). While African leaders like Pixley Seme and John Dube petitioned brilliantly against the color bar of the white-dominated society, their pleas were generally ignored by both the British and white South African governments. Some Africans sought to challenge their social and economic oppression through labor unions and even revolutionary groups like the Communist Party of South Africa. The period after 1945 witnessed revived rhetoric of human rights and self-determination in the birth of the United Nations (ironically, Jan Smuts was recruited to help draft the preamble of the United Nations Charter). In 1944, Nelson Mandela, Oliver Tambo, and Walter Sisulu founded a Youth League in the African National Congress. While they shared the ANC's goal of a democratic, racially egalitarian society, they advocated more militant tactics.

In the 1948 campaign the National Party, led by D. F. Malan, centered on their message of racial purity and white domination. In particular, their agenda was based on a systematic exclusion of and separation from Africans. With victory the National Party instituted what would become the bane of humanitarian society for the next four decades—apartheid.

CHARLES V. REED

Aga Khan

Aga Khan, the title ascribed to the imam of the Nizari Ismaili community, was first bestowed on Aga Hasan

Shah by Fateh Ali, the Shah of Persia, in 1818. The Ismaili branch of Islam is the second-largest Shi'i community after the Twelvers. The Ismailis and Twelvers both accept the same initial imams from the descendants of the prophet Muhammad. However, a dispute arose on the succession of the sixth imam, Jafar as-Sadiq. Although the Ismailis accepted the legitimacy of Jafar Sadiq's eldest son, Ismael, as the next rightful imam, the Twelvers accepted his younger son, Musa al-Kazim.

The first Aga Khan was appointed as the governor of the province of Kirman. He also aided the British during the first Anglo-Afghan War (1839–42) and in the conquest of Sind in India (1842–43). Ali Shah, who was also known as Aga Khan II, died in 1885.

Upon the death of Aga Khan II, his son, Sultan Muhammad (1877–1957), assumed the title of Aga Khan III. He played an active role in supporting the continuance of British colonial rule over the Indian subcontinent. Aga Khan III was also the founder of the ALL-INDIA MUSLIM LEAGUE, the lead political party that later demanded a separate homeland for Muslims be carved out of India. He was also the president of the Muslim League from 1909 to 1914. In the preindependence years of India, Aga Khan III made a number of high-profile visits abroad, including the imperial conference in London in 1930–31, the Geneva Disarmament Conference in 1932, and the League of Nations in 1932 and in 1934–37. In 1937, he was appointed the president of the General Assembly of the League of Nations for his pioneering leadership role.

In 1937, Aga Khan III was succeeded by his grandson, Prince Karim, who assumed the title of Aga Khan IV. He was very committed to the promotion of Islamic architecture and instituted a series of awards for architectural excellence and artistic innovation in architecture. Aga Khan IV also donated very generously to various developmental projects in a number of countries with a sizable Ismaili population.

Prince Sadruddin Aga Khan is the grandson of Aga Khan IV. He has an impressive educational record with degrees from Harvard University at the Centre of Middle Eastern Studies in 1957. Sadruddin Aga Khan worked strenuously for the ideals and programs of UNESCO, particularly for the promotion of cultural heritage sites worldwide as well as for the UN High Commission for Refugees. In 1965, he was appointed the UN High Commissioner for Refugees and continued in this prestigious position until 1977. He is the founder of the Bellerive Foundation, which is an

international corporate group that funds programs for the alpine environment. In 1978, the prince was made a special adviser and chargé de mission to the secretary-general of the United Nations to promote the cause of universal human rights.

MOHAMMED BADRUL ALAM

Aguinaldo y Famy, Emilio

(1869–1964) *president of the Philippines*

Emilio Aguinaldo was a revolutionary independence leader, general, statesman, and the first president of the Philippines according to many Filipinos. He played a major role in the Philippine revolution against Spain and in the Philippine-American War.

Aguinaldo's rise to notability happened early in his life. He was born into a wealthy Chinese-mestizo family that owned extensive lands and that provided benefits not readily available to many Filipinos. The young Aguinaldo overcame a near-death sickness in his youth and briefly attended Letran College in Manila, but left in order to help his family care for their extensive estate. In 1895, when only 17 years of age, he was elected to the position of *capitan municipal* (municipal captain), or town head, of Cavite El Viejo.

Around the same time, Aguinaldo began his revolutionary career and entered the secret Katipunan revolutionary society, an abbreviated Tagalog term for "The Highest and Most Respectable Society of the Sons of the People." The Katipunan advocated complete independence from Spain and thus aroused suspicions and opposition from the Spanish authorities. No longer able to evade notice by the ruling Spaniards, Aguinaldo and his fellow revolutionaries fought them, overcame early setbacks, and achieved considerable victories, most notably at the Battle of Binakayan on November 10, 1896, when they defeated Spanish regular troops. Although he won early successes and gained the leadership of his revolutionary group, Aguinaldo was forced by renewed military pressure from the Spanish to sign the Pact of Biacnabato and to accept banishment to Hong Kong in

return for financial and political concessions, social reforms, and promises of autonomy of government for the Philippines.

In 1898 Aguinaldo returned to the Philippines from exile to continue his revolutionary work and to assist the efforts of the United States to defeat the Spanish during the Spanish-American War. He believed that his participation and the victory over Spain would be rewarded with a declaration of independence for the Philippines; Aguinaldo instead found that the American forces refused to allow his military to occupy Manila. He refused to allow his troops to be replaced by American forces and withdrew to Malolos, where he and his followers declared independence on June 12, 1898. On January 23, 1899, Aguinaldo was inaugurated as the first president of the Philippines, although U.S. authorities did not recognize his government.

The Philippine-American War began on February 4, 1899, after a Filipino crossed over the San Juan Bridge and was shot by an American sentry. Aguinaldo led the resistance to American occupation and rejected the notions of gradual independence advocated by the occupiers and U.S. president William McKinley. Although Aguinaldo's guerrilla warfare tactics posed many difficulties for the U.S. military, they implemented a "carrot and stick" approach that mitigated popular support for the insurgents. The capture of Aguinaldo in Palanan, Isabela, on March 23, 1901, with the help of Filipino trackers broke the revolt, which foundered within the following year. In exchange for his life, Aguinaldo pledged loyalty to the United States and thus acknowledged its sovereignty over the Philippines.

Although no longer a revolutionary, Aguinaldo thereafter remained committed to independence and veterans' rights while staying retired from public life for many years. In 1935, when the Commonwealth of the Philippines was established, he ran for the presidency but lost to Manuel L. Quezon. During WORLD WAR II the Japanese occupiers forced him to support them and to make anti-American speeches and statements. He was later cleared of wrongdoing when Americans recaptured the Philippines and learned that the Japanese had threatened to kill his family if Aguinaldo did not comply. After the war he actively promoted nationalistic and democratic causes within his country. He died on February 6, 1964, in Quezon City.

SCOTT CATINO

Alessandri, Arturo

(1868–1950) *president of Chile*

Arturo Fortunato Alessandri Palma was president of Chile from 1920 to 1924, again in 1925, and then from 1932 to 1938. During that time he became known as the Lion of Tarapacá. Known initially for his strident support of the poor of Chile, he was later heavily criticized by many of his former supporters when he became far more conservative.

Arturo Alessandri was born on December 20, 1868, at Linares, south of the Chilean capital of Santiago, the son of Pedro Alessandri and Susana Palma. His father's family originally came to Chile from Italy. He was educated at the Sacred Heart School in Santiago, and then he worked at the National Library of Chile. He used his position there to study for a law degree and in 1893 was admitted to the bar.

Politically, Alessandri was connected with the Progressive Club, making him a liberal, and, in fact, he later joined the Liberal Party, becoming secretary of its executive committee in 1890. He was elected to the Chamber of Deputies in 1897 and had six terms in Congress and two terms in the Senate after successfully challenging a prominent local politician for the seat for Tarapacá. During this time he built a major political base by supporting the nitrate workers in northern Chile. He became minister of industry and public works in 1908, minister of finance in 1913, and was appointed minister of the interior in 1918.

In 1920 Alessandri was elected president of Chile, ending a right-wing domination of Chilean politics that had started in the 1830s. Alessandri faced many problems in office, and to raise more government revenue he introduced income tax for the first time in Chilean history. However, Chile was entering a period of economic hardships, and the new tax only partially made up for the shortfall in the economy. This came from the fall in the price of nitrate, which saw the Chilean peso fall from one for 27 cents (U.S.) to one for 9 cents. His reform moves were supported by the Liberal Alliance and the Democratic Party, but unemployment rose, and the pay for civil servants and the army fell into arrears.

Furthermore, Alessandri's attempts to spend more on public education, health, and welfare proved unpopular with some sectors of the country. During his time as president from 1920 to 1924, Alessandri had to change his government 16 times until he was finally able to secure a majority in Congress.

However, Congress moved against him, and with the Chilean peso plummeting in value and his inability to pay the army, Alessandri offered to resign. In the end a military junta staged a coup d'état on September 15, 1924. Alessandri fled to the U.S. embassy and then into exile in Europe. General Luis Altamirano Talavera headed a military junta to run the country, but when it failed to fulfill the social reform program it had promised, junior officers overthrew it and Carlos Ibáñez del Campo headed the new junta. He allowed Alessandri to return to Chile on March 20, 1925, the former president having been promised that the constitution would be rewritten to give the executive more powers. In 1925, when Alessandri returned from exile, a crowd of 100,000 came to greet him, and several people were trampled to death in the confusion.

However, on October 1, 1925, Alessandri was again forced to resign, and Luis Barros Borgoño succeeded him. In the elections that followed, Emiliano Figueroa Larraín became president, but he resigned in May 1927 to allow Ibáñez del Campo to return to power. Ibáñez borrowed U.S. \$300 million from the United States and tried to resuscitate the economy. Initially it worked, but Ibáñez was forced from power, and Anarguía Política became president. Elections were held in 1932, and Alessandri was once again elected president.

Alessandri's new administration was totally different from that of the early 1920s. He was a strict constitutionalist, and he had also become more conservative and depended on the support of the right wing. His economically conservative policies led to his refusing to give money to the poor, especially those hurt by the fall in the price of nitrate and copper. With the depression hurting in Chile, Alessandri tried to reorganize the nitrate industry, doubling the government's share of profits, raising it to 25 percent. Promoting building and civil engineering projects, Alessandri still wanted to improve the provision of education. The only way of raising the extra money was by using his finance minister, Gustavo Ross Santa María, to tighten up the collecting of taxes.

In early 1937 the Nacista movement began to gain support, and on September 5, 1938, it tried to stage a coup d'état to get Ibáñez del Campo back into power. Alessandri had already alienated most of his former

supporters, who then formed the Popular Front. He used the army to arrest Ibáñez del Campo. Alessandri's term as president ended in 1938, and Pedro Aguirre Cerda succeeded him. Alessandri went to Europe, endorsing Juan Antonio Ríos Morales in the 1942 elections, which he won. Returning to Chile, in 1944 Alessandri was elected to the Senate, becoming the speaker in the following year. In the 1946 elections he endorsed Gabriel González Videla, who won. By this time Alessandri had once again become more liberal in his views.

Alessandri towered over Chilean politics, but his speech was often rough and crude. When the U.S. journalist and writer John Gunther visited him, Alessandri's office was decorated with autographed photographs of politicians from all over the world, including Hindenburg, ADOLF HITLER, and Edward, prince of Wales (later the duke of Windsor). He died on August 24, 1950, in Santiago. Jorge Alessandri Rodríguez, who was president of Chile from 1958 until 1964, was Arturo Alessandri's older son. His younger son, Fernando Alessandri Rodríguez, was also active in politics.

JUSTIN CORFIELD

Algeria

Algeria remained part of the French Empire throughout the first half of the 20th century, but nationalist movements for independence became increasingly more vocal and determined. Several hundred thousand Algerians fought or worked for the French military during WORLD WAR I. After the war they expected reforms and changes in French policies of assimilation and favoritism toward the colons, but the colons blocked government reforms announced in 1919.

French government policies dating from the 19th century onward had gradually increased the ownership of the best land by the colons and had resulted in the impoverishment of Algerian peasants. By 1950 most Algerians owned small plots of less than 10 acres. To survive, peasants became sharecroppers or seasonal workers or fled to the cities where they were generally either day laborers or unemployed. The growing economic and social disparity between the colons and the

majority Muslim Algerian population contributed to civil unrest and nationalist discontent.

In the early 1920s, Algerian workers in Paris, led by Messali al-Hajj, established the Star of North Africa, a social action, leftist movement, which attracted considerable popular support. In the interwar years, two major approaches toward the relationship with France emerged among Algerians. The first group wanted assimilation and participation as full-fledged French citizens. The second advocated Algerian independence as a separate nation. Ferhat Abbas, a pharmacist by profession, represented the first when he said, "If I had discovered an Algerian nation, I would be a nationalist . . . I have not found it." Hadj Ben Ahmed Messali championed the second approach, asserting that "Islam is our religion, Algeria our country, Arabic our language." The French often jailed Messali for his uncompromising nationalist stances.

To minimize Algerian opposition, the French adopted a divide and rule tactic by favoring the Muslim Berber population that lived in the mountainous Kabyle region and encouraging it as a separate entity from the Muslim Arab population. These attempts failed as Berbers played key roles in the nationalist movement and were particularly attracted to Messali's approach.

The Algerian Muslim Congress drew up a list of grievances in 1936 but fell far short of advocating complete independence for Algeria. Many Muslim leaders still hoped that a form of assimilation could be devised whereby Muslims could become French citizens without abrogating Islamic law or tradition. In response to the problem, the Blum-Violette proposals in 1937 provided for the gradual extension of suffrage whereby some 20,000 Algerians would become citizens with more to follow over time. However, the colons adamantly opposed any reforms that widened Algerian participation and lessened their own political and economic power. The weakness and instability of French regimes in Paris prevented the implementation of reform programs that might have ameliorated the differences.

When the VICHY French regime came to power during WORLD WAR II, it instituted NAZI racist policies that imperiled both Muslim Algerians and Algerian Jews, who had been granted French citizenship in the late 19th century. These decrees were abolished when the Allied-supported French committee of national liberation took power in 1943.

Encouraged by Allied support, Abbas and his supporters issued the Manifesto of Algerian People in 1943. The manifesto paid respect to French culture but

A market in Biskra, Algeria, in the early 1900s: Algeria remained part of the French Empire throughout the first half of the 20th century, but nationalist movements for independence became increasingly more vocal and determined.

noted that assimilation had failed and that reforms were needed. Some French were willing to consider reforms, but others felt that the manifesto would lead to independence and flatly rejected it. Abbas then formed the Friends of the Manifesto and of Liberty and called for an autonomous republic in Algeria while counseling patience. His movement attracted mostly urban middle-class Algerians. The working class, far greater in numbers, supported Messali's calls for complete independence. The leader of the Free French, Charles de Gaulle, tried to conciliate the differences by proposing that more Algerians could become French citizens without giving up their Qur'anic rights, but this compromise failed to satisfy many Muslims and infuriated

the colons. In 1945 the French put Abbas under house arrest, and Messali was exiled.

In the spring of 1945 parades in Setif (southwest of Constantine) celebrating the end of World War II in Europe quickly turned into nationalist demonstrations. Violence spread to cities and other areas. In the rioting and French reprisals that quickly followed, hundreds of colons and thousands of Algerians (the figures vary widely ranging from 1,500 to 80,000) were killed.

The Algerian Statute of 1947 in which assimilation was stopped and two separate communities were recognized pleased no one. Under the new law, the French prime minister appointed a governor-general who was assisted by a council of six with the right to apply

French law. The Algerian Assembly was to have two houses, one European and one for “natives.” Europeans controlled both houses. Colons were against even this compromise, and Messali responded by demanding complete independence. By this time, the majority of Algerians had concluded that the French were never going to grant full equality and that independence was the only solution. By 1950 many Algerian nationalists had either been arrested by the French, were in exile, or had escaped into the mountains of the Kabyle. The conflict remained unresolved until full-scale war broke out in 1954.

JANICE J. TERRY

alliance system

Alliances are a common military or political action among states. Often resorted to for defensive purposes, they frequently result in the very war they hoped to avoid. When Sparta formed the Peloponnesian League and Athens led the Delian League in the aftermath of the Persian War, war followed, and it was long and costly. Likewise, the alliance system that emerged in the years before WORLD WAR I proved to be a major cause of one of the greatest conflagrations in human history.

The roots of the modern alliance system lie in the situation that arose following the victory of Prussia in its war with France in 1870–71. Since the 1860s the Prussian chancellor Otto von Bismarck had waged wars with Denmark and Austria, which led to territorial acquisitions. With the Franco-Prussian War came the unification of Germany, which then took two provinces, Alsace and Lorraine, from France. One of the major consequences of these events was a change in the balance of power as Germany replaced France as Europe’s greatest nation.

German diplomats assessed these new conditions. The first point to be noted was that France constituted a threat on Germany’s western border, eager as it was to retrieve the lost territories. Thus, in the 1880s, Bismarck sought to isolate France and prevent it from

obtaining another ally that could pose a danger to Germany in the east and thus produce the possibility of a two-front war against Germany in the future. With this in mind, Bismarck devised the Three Emperors’ League in 1873, which tied together the conservative empires of Germany, Russia, and Austria-Hungary. Even after signing the Dual Alliance with Austria-Hungary in 1879, he attempted to contain Russia in the Reinsurance Treaty of 1887.

Following Bismarck’s removal from office in 1890, Germany allowed the Reinsurance Treaty to lapse, as it appeared that Russia and Austria-Hungary were incompatible partners. Russian ambitions in the Balkans, fanned by Pan-Slavism, came into conflict with Austria-Hungary’s need to control these areas for the sake of its own national integrity. Thus, Russia was motivated to sign a treaty with France in 1894 to gain its assistance in the east. This created the possibility of a two-front war for Germany. It should also be noted that both France and Germany found themselves linked to eastern powers whose quarrel did not directly involve their national interests. In these circumstances, it was natural for Britain to be taken into consideration, despite the fact that Britain had a history of maintaining its distance from the continent and eschewing treaties. From the German point of view, there were two positive scenarios. The first would be for Britain to maintain neutrality; the second and best option would be for Britain to become a German partner. At the same time Russia and France hoped that Britain would become an ally and add British naval strength to their arsenal of weapons. The contest for British support was to become one of the most important issues around the turn of the century.

Germany made critical mistakes in dealing with Britain. In the first place, they seem to have believed that Germany needed to do nothing to woo Britain, for eventually Britain would be forced to side with Germany because of the former’s differences with France and Russia. There was a tradition of war with both, and Britain had important rivalries with France in Africa and Russia over India and Afghanistan. This turned out to be a serious miscalculation on Germany’s part since Britain, having been embarrassed by the unexpected difficulty of the BOER WAR, was anxious to achieve security. What truly alarmed Britain was the German decision to adopt a program to create a high seas fleet. Britain had always depended on its naval supremacy to be its most important defense and to secure its communications with the empire. The idea that Germany would challenge its predominance spurred Britain to embark

on its own naval building program, resulting in a naval race. More significantly, it prompted Britain, to the surprise of Germany, to reconsider its isolation and enter into conversations with France in 1904 and Russia in 1907. Both concluded in the resolution of their colonial differences and the inauguration of military contacts.

What had occurred was not an alliance between the three; rather, Britain had established friendly relations with the other two. Thus, this relationship became known as the Triple Entente. This outcome, of course, now forced Germany to plan not only for a two-front war but for a war in which Britain might intervene on the side of its opponents. Moreover, it now became clear that Italy, the third member of the Triple Alliance, could not be counted on to support Germany and Austria-Hungary. The result of all of this was the development of the SCHLIEFFEN PLAN, by which Germany hoped to score a decisive victory over Russia and France before Britain could intervene. This plan committed Germany to a timetable that was very hard to alter once a decision was made. Thus, it led to the violation of Belgian neutrality, which assured that Britain would come to Belgium's assistance.

The crisis in the Balkans caused by the assassination of Archduke Franz Ferdinand in 1914 led to a confrontation between Russia and Austria-Hungary over Serbia. Faithful to its treaty commitments, France supported Russia, while Germany backed Austria-Hungary. When German armies entered Belgium, Britain entered the war. The alliance system ensured that a chain reaction would take place as countries arrayed themselves against each other. In many ways it provoked the war it was intended to prevent.

MARC SCHWARZ

All-India Muslim League

The All-India Muslim League (AIML) was established on December 30, 1906, at the time of British colonial rule to protect the interests of Muslims. Later it became the main vehicle through which the demand for a separate homeland for the Muslims was put forth. The INDIAN NATIONAL CONGRESS (INC) was perceived by some Muslims as an essentially Hindu organization where

Muslim interests would not be safeguarded. Formed in the year 1885, the INC did not have any agenda of separate religious identity. Some of its annual sessions were presided over by eminent Muslims like Badruddin Tyabji (1844–1906) and Rahimtulla M. Sayani (1847–1902). Certain trends emerged in the late 19th century that convinced a sizable group of Muslims to chart out a separate course. The rise of communalism in the Muslim community began with a revivalist tendency, with Muslims looking to the history of Arabs as well as the Delhi sultanate and the Moghul rule of India with pride and glory. Although the conditions of the Muslims were not the same all over the British Empire, there was a general backwardness in commerce and education. The British policy of “divide and rule” encouraged certain sections of the Muslim population to remain away from mainstream politics.

The INC, although secular in outlook, was not able to contain the spread of communalism among Hindus and Muslims alike. The rise of Hindu militancy, the cow protection movement, the use of religious symbols, and so on alienated the Muslims. Syed Ahmed Khan's (1817–98) ideology and political activities provided a backdrop for the separatist tendency among the Muslims. He exhorted that the interests of Hindus and Muslims were divergent. Khan advocated loyalty to the British Empire. The viceroy Lord Curzon (1899–1905) partitioned the province of Bengal in October 1905, creating a Muslim majority province in the eastern wing. The INC's opposition and the consequent *swadeshi* (indigenous) movement convinced some Muslim elites that the congress was against the interests of the Muslim community. A pro-partition campaign was begun by the nawab of Dhaka, Khwaja Salimullah Khan (1871–1915), who had been promised a huge amount of interest-free loans by Curzon. He would be influential in the new state. The nawab began to form associations, safeguarding the interests of the Bengali Muslims. He was also thinking in terms of an all-India body. In his Shahbag residence he hosted 2,000 Muslims between December 27 and 30, 1906.

Sultan Muhammad Shah, the AGA KHAN III (1877–1957), who had led a delegation in October 1906 to Viceroy Lord Minto (1845–1914) for a separate electorate for the Muslims, was also with Salimullah Khan. Nawab Mohsin-ul-Mulk (1837–1907) of the Aligarh movement also was present in Dhaka. On December 30 the AIML was formed. The chairperson of the Dhaka conclave, Nawab Viqar-ul-Mulk (1841–1917), declared that the league would remain loyal to the British and

would work for the interests of the Muslims. The constitution of the league, the *Green Book*, was drafted by Maulana Muhammad Ali Jouhar (1878–1931). The headquarters of the league was set up in Aligarh (Lucknow from 1910), and Aga Khan was elected the first president. Thus, a separate all-India platform was created to voice the grievances of the Muslims and contain the growing influence of the Congress Party. The AIML had a membership of 400, and a branch was set up in London two years afterward by Syed Ameer Ali (1849–1928).

The league was dominated by landed aristocracy and civil servants of the United Provinces. In its initial years it passed pious resolutions. The leadership had remained loyal to the British Empire, and the Government of India Act of 1909 granted separate electorates to the Muslims. A sizable number of Muslim intellectuals advocated a course of agitation in light of the annulment of the partition of Bengal in 1911. Two years afterward the league demanded self-government in its constitution. There was also change in leadership of the league after the resignation of President Aga Khan in 1913. MOHAMMAD ALI JINNAH (1876–1948), the eminent lawyer from Bombay (now Mumbai), joined the league.

DRIVING OUT THE BRITISH

Hailed as the ambassador of “Hindu-Muslim unity,” Jinnah was an active member of the INC. He still believed in cooperation between the two communities to drive out the British. He became the president of the AIML in 1916 when it met in Lucknow. He was also president between 1920 and 1930 and again from 1937 to 1947. Jinnah was instrumental in the Lucknow Pact of 1916 between the congress and the league, which assigned 30 percent of provincial council seats to Muslims. But there was a gradual parting of the ways between the INC and the AIML. The appearance of MOHANDAS K. GANDHI (1869–1948) on the Indian scene further increased the distance, as Jinnah did not like Gandhi’s noncooperation movement.

The short-lived hope of rapprochement between the two parties occurred in the wake of the coming of the Simon Commission. The congress accepted the league’s demand for one-third representation in the central legislature. But the Hindu Mahasabha, established in 1915, rejected the demand at the All Parties Conference of 1928. The conference also asked MOTILAL NEHRU (1861–1931) to prepare a constitution for a free India. The Nehru Report spelled out a dominion status for India. The report was opposed by the radical

wing of the INC, which was led by Motilal’s son Jawaharlal Nehru (1889–1964). The league also rejected the Nehru Report as it did not concede to all the league’s demands. Jinnah called it a parting of the ways, and the relations between the league and the congress began to sour. The league demanded separate electorates and reservation of seats for the Muslims. From the 1920s on the league itself was not a mass-based party. In 1928 in the presidency of Bombay it had only 71 members. In Bengal and the Punjab, the two Muslim majority provinces, the unionists and the Praja Krushsk Party, respectively, were powerful. League membership also did not increase substantially. In 1922 it had a membership of 1,093, and after five years it increased only to 1,330. Even in the historic 1930 session, when the demand for a separate Muslim state was made by President Muhammad Iqbal (1877–1938), it lacked a quorum, with only 75 members present.

After coming back from London, Jinnah again took the mantle of leadership of the league. The British had agreed to give major power to elected provincial legislatures per the 1935 GOVERNMENT OF INDIA ACT. The INC was victorious in general constituencies but did not perform well in Muslim constituencies. Many Muslims had subscribed to the INC’s ideal of secularism. It seemed that the two-nation theory, exhorting that the Hindus and Muslims form two different nations, did not appeal to all the Muslims. The Muslims were considered a nation with a common language, history, and religion according to the two-nation theory.

In 1933 a group of Cambridge students led by Choudhary Rahmat Ali (1897–1951) had coined the term *Pakistan* (land of the pure), taking letters from Muslim majority areas: Punjab *P*, Afghania (North-West Frontier Province) *A*, Kashmir *K*, Indus-Sind *IS*, and Baluchistan *TAN*. The league did not achieve its dream of a separate homeland for the Muslims until 1947. It had been an elite organization without a mass base, and Jinnah took measures to popularize it. The membership fees were reduced, committees were formed at district and provincial levels, socioeconomic content was put in the party manifesto, and a vigorous anti-congress campaign was launched. The scenario changed completely for the league when in the famous Lahore session the Pakistan Resolution was adopted on March 23, 1940. Jinnah reiterated the two-nation theory highlighting the social, political, economic, and cultural differences of the two communities. The resolution envisaged an independent Muslim state consisting of Sindh, the Punjab, the North-West Frontier Province, and Bengal. The efforts of Jinnah after the debacle in the 1937 election

paid dividends as 100,000 joined the league in the same year.

There was no turning back for the league after the Pakistan Resolution. The league followed a policy of cooperation with the British government and did not support the Quit India movement of August 1942. The league was determined to have a separate Muslim state, whereas the congress was opposed to the idea of partition. Reconciliation was not possible, and talks between Gandhi and Jinnah for a united India in September 1944 failed. After the end of WORLD WAR II, Great Britain did not have the economic or political resources to hold the British Empire in India. It decided to leave India finally and ordered elections to central and provincial legislatures. The league won all 30 seats reserved for Muslims with 86 percent of the votes in the elections of December 1945 for the center. The congress captured all the general seats with 91 percent of the votes. In the provincial elections of February 1946, the league won 440 seats reserved for Muslims out of a total of 495 with 75 percent of the votes.

Flush with success, the Muslim members gathered in April for the Delhi convention and demanded a sovereign state and two constitution-making bodies. Jinnah addressed the gathering, saying that Pakistan should be established without delay. It would consist of the Muslim majority areas of Bengal and Assam in the east and the Punjab, the North-West Frontier Province, Sind, and Baluchistan in the west. The British government had dispatched a cabinet mission in March to transfer power. The league accepted the plan of the cabinet mission, but the league working committee in July withdrew its earlier acceptance and called for a Direct Action Day on August 16.

The league joined the interim government in October but decided not to attend the Constituent Assembly. In January 1947 the Muslim League launched a “direct action” against the non-Muslim League government of Khizr Hayat Tiwana (1900–75) of the Punjab. Partition was inevitable, and the new viceroy, Lord Louis Mountbatten (1900–79), began to talk with leaders from the league as well as the congress to work out a compromise formula. On June 3, 1947, it was announced that India and Pakistan would be granted independence. The Indian Independence Act was passed by the British parliament in July, and the deadline was set for midnight on August 14–15. The demand of the league for a separate state was realized when the Islamic Republic of Pakistan was born on August 14.

On August 15 Jinnah was sworn in as the first governor-general of Pakistan, and Liaquat Ali Khan

(1895–1951) became the prime minister. The new nation had 60 million Muslims in East Bengal, West Punjab, Sind, the North-West Frontier Province, and Baluchistan. After independence the league did not remain a major political force for long, and dissent resulted in many splinter groups. The Pakistan Muslim League had no connection with the original league. In India the Indian Union Muslim League was set up in March 1948 with a stronghold in the southern province of Kerala. The two-nation theory received a severe jolt when East Pakistan seceded after a liberation struggle against the oppressive regime of the west. A new state, Bangladesh, emerged in December 1971. In the early 21st century more Muslims resided in India (175 million) than in Pakistan (159 million).

PATIT PABAN MISHRA

Ambedkar, Bhim Rao

(1891–1956) *Indian lawyer and reformer*

Dr. Bhim Rao Ambedkar was the most important leader of the oppressed untouchable minority in the history of India. He acquired the honorific name Babasaheb. Fighting for his people, he angered MOHANDAS K. GANDHI, the revered leader of the Indian nationalist movement, as well as many Hindu traditionalists. When India became an independent country, he served in its cabinet and drafted its constitution. Near the end of his life, he became a Buddhist and encouraged other untouchables to do likewise; he had lost hope of justice for his people within Hinduism.

In Hinduism most people belonged to four hierarchical castes, but a large minority were excluded from the caste system and were regarded as beneath it. They did jobs that other Hindus rejected as ritually

unclean and were not allowed to pray in temples or to draw water from communal wells. Nearly all of them were desperately poor. In English these people often are called untouchables, or pariahs. Gandhi, wishing to improve their status, called them harijans, or children of God. To underscore their miserable condition, untouchables preferred to be called *dalits*, a name that means oppressed.

B. R. Ambedkar was born to an untouchable family as its 14th child. At the time of his birth his father was a soldier. Untouchables were divided into numerous hereditary subgroups, or *jatis*. Ambedkar belonged to the Mahar *jati*. Despite the disadvantages of poverty, family responsibilities, and untouchable status, he acquired an advanced education. In 1912 he earned a B.A. degree from Elphinstone College at Bombay University. The ruler of a princely state then financed his education in the United States and Britain. In 1916 Columbia University awarded him a Ph.D. in economics. He continued his studies at the London School of Economics. In 1921 it awarded him a second doctorate. He studied law at Gray's Inn and in 1923 was called to the bar in Britain. He also studied briefly at a German university.

In India he practiced law, taught, edited newspapers, and entered politics. Although he was elected to the Bombay legislature, his real political career was as the leader of the formerly passive untouchable community. Ambedkar's nonviolent protests mobilized tens of thousands of *dalits* for the right to draw water from wells and public tanks and to pray in temples. Although Gandhi saw himself as a friend of the untouchables, he got along poorly with Ambedkar. They quarreled at the Round Table Conferences on India's future held in London.

When Britain decided to grant India extensive political autonomy, its government grappled with the problem of the diversity within the Indian population. In 1932 Britain offered separate electorates to the untouchables, so that this oppressed minority would control the selection of its representatives. The INDIAN NATIONAL CONGRESS strongly opposed any separate electorates. Gandhi began a fast to put pressure on Ambedkar to reject the special electorates for his people. Reluctantly, he did so. The Indian National Congress offered Ambedkar concessions in what was known as the Poona Pact. The number of seats reserved for untouchable candidates was increased, but the entire electorate, not just untouchables, would vote on the candidates for these seats.

In 1936 Ambedkar organized the Independent Labour Party. In contrast with Gandhi and the Indian National Congress, Ambedkar and his party supported the British government in India during WORLD WAR II.

In 1942 he became a member of the viceroy's executive council. In the same year he organized a new political party, the Scheduled Castes' Federation.

When India became independent, Ambedkar joined the new government that the Indian National Congress dominated. From 1947 to 1951, he was a member of the cabinet. More important, he chaired the committee that drafted the national constitution and was its principal author.

In the final years of his life, Ambedkar turned to Buddhism, a religion with Indian roots that rejected the Hindu caste system and the concept of untouchability. He formally converted to Buddhism in October 1956. Hundreds of thousands of untouchables joined him in leaving Hinduism for Buddhism. A few weeks after his conversion ceremony, Ambedkar died.

Amin, Qasim

(1863–1908) *Egyptian author and reformer*

Qasim Amin was a noted Egyptian intellectual and advocate of reform in the later 19th and early 20th centuries. His father was a Turkish Ottoman official and landowner married to an Egyptian woman. Amin was educated in Cairo and at the School of Law and Administration. He was a follower of the earlier reformer Muhammad Abduh, who sought to resolve the conflict of Islamic practices and tradition with the adoption of Western scientific thought and development. As a highly respected lawyer, Amin was sent on a government educational mission to France, where he spent several years in the 1880s. Amin wrote a number of works on social issues, and in *Les Egyptiens* he focused on the national rights of Egyptians. He was best known for his works on the status of women.

He addressed the issues of polygamy, marriage laws, education for women, seclusion, and veiling in *The Liberation of Women*, published in 1899. Amin argued that sharia (Islamic law) and Islamic custom

did not mandate either the seclusion of women in the home or veiling. Both were commonly practiced among upper and middle classes of the era. Poor peasant families could not afford the luxury of secluding or veiling women who commonly worked alongside men in the fields. Amin emphasized that sharia granted legal rights to women and that the corruption or decline of morals by outside forces had been responsible for the decline of Islamic societies. He stressed the importance of women in building modern nations and in national struggles and advocated improved education for women. According to Amin, education for women should not be limited to matters of household management but should include subjects that would enable them to participate in life outside the home. Although by contemporary standards Amin's advocacy of gradual reform was not revolutionary, his book on the status of women aroused massive public debate about the role of women and Islam. Amin was severely criticized by conservative religious leaders and the palace.

Amin repudiated his critics in a second more radical—for the age—book, *The New Woman*, in 1900. In this second book he dropped a discussion of Islamic law and tradition to justify reforms and instead applied Western thought to augment his arguments. Amin stated that with education and reforms in status, women would ultimately have almost the same rights and status as men.

Amin supported the Egyptian nationalist movement, in which both men and women were full participants, in his memoirs, *Kalimat*. He also stressed the need for scientific knowledge in order for nations to advance. An early Egyptian nationalist, Amin was friendly with SA'D ZAGHLUL and Tal'at Harb, both of whom became leaders of the Egyptian nationalist movement.

JANICE J. TERRY

Amritsar massacre

The Amritsar massacre (April 13, 1919) helped many moderate Indian nationalists become fiercely anti-British. The Rowlatt Acts, enacted by the British government, had outraged politically minded Indians.

Extending wartime emergency legislation, the Rowlatt Acts gave the British viceroy in India the authority to silence the press, make arrests without a warrant, and imprison without trial. The Indian members of the viceroy's legislative assembly opposed this legislation, and several of them resigned (including MOHAMMAD ALI JINNAH, later the founder of Pakistan).

To protest the Rowlatt Acts, MOHANDAS K. GANDHI called for a national *hartal*, a day of prayer and fasting, that on April 6 closed most shops and businesses in the northwestern province of the Punjab. The British administration in the Punjab, headed by Sir Michael O'Dwyer, was notoriously stern, and the province had long seethed with unrest. In Lahore there were large anti-British demonstrations and a railroad strike. On April 10, on O'Dwyer's order, British officials in Amritsar arrested Dr. Saif-ud-Din Kitchlew, a Muslim lawyer, and Dr. Satyapal, a Hindu who had served as a medical officer in the British army. They were leaders of the Amritsar nationalist movement. In the angry reaction against these arrests, violence broke out resulting in destruction of property and looting in Amritsar. Five British civilians and 10 Indians were killed. A school superintendent, Marcella Sherwood, was trapped by a mob, badly beaten, and left for dead. This mistreatment of a British woman outraged officials.

The villain in the story of the Amritsar massacre was Reginald E. H. "Rex" Dyer. Dyer was a colonel who held the temporary rank of brigadier general while commanding an infantry brigade in the Punjab. Born in India, he was competent in several Indian languages, including Hindi and Punjabi. Before the Amritsar massacre, he had not had a reputation of being more racist than other British officers. In fact, early in 1919 he had resigned from the officers' club that served his brigade because he objected to the exclusion of Indians who held commissions as officers. He appears to have been lacking in self-confidence while at the same time being stubborn and rash. He did not always obey orders. Unfortunately, he was stationed near Amritsar.

Apparently, Dyer acted on his own initiative in moving his brigade to Amritsar on April 11. On the next day he reissued an earlier government order that banned any meetings or gatherings. He did not continue the previous policy of slowly extending British military and police control over one part of the city after another. He preferred to parade large forces through Amritsar as a demonstration of strength and then withdraw them.

Despite the proclamations against meetings, thousands of Indians flocked to the Jallianwala Bagh on April 13, most of them in support of the imprisoned Kitchlew and Satyapal. Some arrived after the police had closed a nearby fair held in honor of the Sikh new year. By late afternoon a huge throng was present, a rather quiet crowd and not an angry mob. Estimates vary, but there certainly were more than 10,000 people. The Bagh was a trap for them. Enclosed by the walls of surrounding buildings, it had only a few narrow openings for entrance or exit, some of them locked.

Dyer made no attempt to prevent the meeting at the Jallianwala Bagh or to disperse it peacefully. He decided to make an example of those who had violated the British prohibition of large gatherings. For this purpose he assembled a small force of 90 men that included no British soldiers. Instead he chose Baluchis, Gurkhas, and Pathans, “native” soldiers but ones who lacked sympathy for local Indians. He brought with him two armored cars equipped with machine guns. He later said that he did not use them because the entrances to the Bagh were too narrow. Even without the machine guns, the carnage was great. Without any warning Dyer’s soldiers fired on the crowd for 10 to 15 minutes. There was only one exit available for the thousands. In desperation many of those in the Bagh jumped into a deep well. After his troops had fired 1,650 rounds, Dyer ordered an end to the slaughter because he feared that his men would run out of ammunition and not be able to protect their withdrawal.

Nobody knows how many people were killed. An official estimate made by the British authorities says 379. An Indian investigation says 530. The wounded numbered over 1,000.

After the facts of the massacre became known, Dyer was dismissed. He returned to Britain, where a special commission of investigation censured him in 1920. Despite the official censure, some in Britain saw Dyer as a hero who took decisive action to prevent a rebellion that might have shaken British rule throughout the subcontinent. For many members of the upper and middle classes and military officers, Dyer was a victim of the government’s need to appease Indian nationalists. Dyer died of natural causes in 1927. An embittered Indian assassinated O’Dwyer in 1940.

DAVID M. FAHEY

analytic philosophy

Since its beginnings in ancient Greece, one of the motivations driving Western philosophy has been the conviction that concepts such as “knowledge,” “mind,” “justice,” and “beauty” are obscure and that it is the business of philosophers to achieve a clearer understanding of their meanings. Analytic philosophy seeks this elevated understanding through a clarification of “ordinary,” that is, nonphilosophical, language that is believed by most analytic philosophers to be vague and obscure, at least in regard to concepts of interest to philosophers.

In the early decades of the 20th century, the founders of the analytic tradition, Bertrand Russell and Ludwig Wittgenstein, sought to use newly developed techniques in symbolic logic to produce ideally simple “atomic statements,” the meanings of whose component terms were absolutely clear. These component terms would, they believed, directly match, or, to use Wittgenstein’s term, “picture,” “atomic facts,” thereby yielding absolutely certain truths about “reality.” Russell called this technique “logical atomism.” During the 1920s and 1930s, this methodology, especially as embodied in Wittgenstein’s book, *Tractatus Logico-Philosophicus*, inspired the short-lived analytic movement known as logical positivism.

In this view science represents the standard of what is to count as knowledge, and, positivists claimed, science itself ultimately rests on statements of the sort sought by Russell and Wittgenstein, namely, simple statements the truth or falsehood of which can be verified, in principle, by direct sensory experience. Utterances that cannot be analyzed and verified in this way, for example, those containing religious or ethical terms, were dismissed by logical positivists as meaningless, or at the very least as outside the boundaries of possible knowledge.

Though Russell never lost faith in some form of “logical analysis” as the proper approach to the solution of philosophical problems, over time most philosophers in the analytic tradition, including the logical positivists, came to doubt the feasibility of arriving at absolutely clear and simple statements whose truth could be conclusively verified by basic sensory experiences.

Wittgenstein also began to question his own “picture theory” of language. Later in his life he authored a radical critique not only of his and Russell’s earlier work, but of virtually all of previous philosophy and in the process inspired a second movement within the analytic tradition, one that came to be known as ordinary language philosophy. Through the presentation of extensive “reminders” about how concepts actually function in “ordinary” language, the later Wittgenstein sought to wean philosophers away from the perception that our ordinary concepts are obscure and in need of philosophical analysis and clarification. With regard to our familiar concepts, Wittgenstein claimed that “nothing is hidden.” A concept’s meaning, he said, is fully visible in the ways in which it is used in ordinary language. If we remind ourselves of how words such as *knowledge*, *mind*, and the rest are used in the push and pull of life, he argued, we can see all there is to see about what they mean. The outcome of this realization should then be that philosophers’ traditional problems are not solved, but dissolved, that is, shown not to have been genuine problems in the first place.

In spite of the widespread influence in the mid-20th century of this critique of the need for philosophical analysis, philosophers’ faith in the legitimacy and profound urgency of their ancient puzzles reasserted itself, and it has for the most part prevailed, at least for the foreseeable future. The vast majority of analytic philosophers are today fully engaged in attempts to “shed light” on concepts of traditional philosophical interest, though without resorting to the kind of rigorous, but discredited, logical analysis envisioned by Russell and Wittgenstein in the early decades of the 20th century.

MICHAEL H. REED

anarchist movements in Europe and America

Anarchism is a political belief that rejects organized government and asserts that each individual person should govern him- or herself. Anarchists believe that

all forms of rulership and government over a people are detrimental to society because they interfere with individual action and responsibility. The term is distinguished from the word *anarchy*, which means the actual absence of any form of organized government. The origin of anarchism can be traced to the Age of Enlightenment in the 18th century, when movements supporting intellectualism and reason became influential. Some of the effects of the ideas of this age were radical changes in government ideals and values. The ideas of Jean-Jacques Rousseau (1712–78), a Swiss-born philosopher, influenced the inciters of the French Revolution. Some of these groups applied the term *anarchist* to themselves as a positive label referring to people who were opposed to old and undesirable forms of government.

Anarchist ideas can be found in the writings of William Godwin (1756–1836), the father of *Frankenstein* author Mary Shelley. Godwin attributed the evils of mankind to societal corruption and theorized that it was better to reduce organized government. Godwin felt that humans’ possession of a rational mind would be spoiled should external controls interfere.

The person who is most often credited as the father of modern anarchism is Pierre-Joseph Proudhon (1809–65). He was the first to coin the words *anarchism* and *anarchist* to refer to his belief system. In 1840 he published his first significant work, *What is Property?* He was also opposed to both capitalism and communism, though his beliefs and writings put him under the socialist umbrella.

Proudhon, when he settled in Paris, found people who had already accepted his ideas. However, the movement soon evolved into several types of anarchism mainly due to views on economics. Most of the concepts of anarchist groups are based on the treatment of the industrial worker, as this was a primary concern at the time these groups were founded, and workers were the ones who most commonly formed anarchist groups.

The major types of anarchism that have evolved since then are:

Mutualism—Although this started as a set of economic ideas from French and English labor groups, it later became associated with Proudhon. It bases its ideas on Proudhon’s assertion that a product’s true price should be determined by the amount of labor spent to produce it without considering materials. Therefore, mutual reward is achieved when people are paid for their labor no matter what economic conditions will apply. However, private ownership of production facilities is maintained.

Collectivist Anarchism—This movement is mostly attributed to Russian anarchist Mikhail Bakunin (1814–76). For collectivist anarchists private ownership of the means of production is opposed, and ownership is collectivized. Workers should be paid according to the time spent on production work.

Anarchist Communism—Also called communist anarchism, this movement suggests that a worker is not necessarily entitled to the products that he or she worked to produce and that mere satisfaction of needs is the payment. Instead of a general government, self-governing communes can be organized that are ruled by actual democracy, based on constituent voting. Joseph Déjacque (1821–64) is considered the first figure of this subgroup, while the most influential is Peter Kropotkin (1842–1921). Like in communism, private ownership is opposed.

Anarcho-Syndicalism—This movement promotes the power of trade unions to override capitalism and seeks to abolish the wage system and private ownership. It borrows heavily from collectivist and communist modes of anarchism. Workers' groups are to have a heavy degree of solidarity and are able to self-govern without external controls. The most prominent anarcho-syndicalist was Rudolf Rocker (1873–1958).

Individualist Anarchism—This is the most common form of anarchism in the United States. Individualist anarchism is influenced mainly by the writings of Henry David Thoreau (1817–62), although his writings are mainly philosophical and do not recommend any kind of action. Other U.S. anarchists, such as Josiah Warren, Lysander Spooner, and Benjamin Tucker had more explanation on their courses of action. However, another kind of individualist anarchism, egoism, was presented by German philosopher Max Stirner (1806–56) in the mid-1800s.

Other anarchist forms were anarcho-capitalism, which enjoys a strong following in the United States, and anarchism without adjectives, a uniquely named form championed by the most prominent female anarchist in history, Voltairine de Cleyre (1866–1912). Russian writer Leo Tolstoy (1828–1910) promoted a religion-based form of anarchism, Christian anarchism, advocating that since God is the ultimate government there should be no human governments organized.

Anarchist ideals had gained a significant following by the 19th century but had lost mass appeal by the turn of the 20th century. In the RUSSIAN REVOLUTION AND CIVIL WAR of 1917, anarchists participated alongside communists but were turned against by the communist government. This led to the 1921

An act of terrorism by anarchists caused this Wall Street explosion in New York City in 1920.

Kronstadt Rebellion, and anarchists were either jailed or made to leave the country.

In the 1930s, anarchists were opposed to the Fascist government of Italy under BENITO MUSSOLINI. Anarchists were active also in France and Spain. In 1937, the Confederación Nacional del Trabajo was a generally anarchist labor union that participated in events leading to the SPANISH CIVIL WAR.

CHINO FERNANDEZ

Anglo-Japanese treaty

The Anglo-Japanese treaty was signed between Lord Lansdowne (1845–1927), the British foreign secretary, and Hayashi Tadasu (1850–1913), the minister of Japan, on January 30, 1902, in London to create an alliance scheduled to last five years. Its terms gave Japan an equal partnership with a great power of the Western

world. The purpose of this first military agreement was stabilization and peace in northeast Asia. On Japan's side it was to prevent Russian expansionism in northeast Asia, and on Great Britain's side it protected British interests and its commerce in China.

Japan felt vulnerable due to Russian influence in Manchuria and interest in Korea. The Anglo-Japanese treaty allowed Japan to become a more powerful player in world diplomacy and in negotiations with Russia. It allowed Japan to go to war against Russia in February 1904 and to ask for financial support from Great Britain. The Russo-Japanese War (1904–05) astounded the world because of the success of Japan. It ended the menace of Russia and helped Great Britain to play a greater role in Europe.

The revision of the Anglo-Japanese treaty was signed on August 12, 1905, between Lansdowne and Hayashi in Lansdowne's residence. The new terms included an extension of the area covered by the alliance to include India, British recognition of Japan's right to control Korea, and Japan's recognition of Great Britain's right to safeguard her possessions in India. It also provided that in the event of any unprovoked attack neither party would come to the assistance of its ally. The alliance would remain in force for the following 10 years. The new terms showed Japan had increased its status in international society after winning the war over Russia.

The third Anglo-Japanese alliance agreement was negotiated in 1911 after Japan's annexation of Korea. Important changes concerned the deletion of the articles related to Korea and India and the extension of the alliance for 10 more years. The second revision accommodated Japan's annexation of Korea but also, at Britain's request, excluded the United States from the region. The alliance enabled Japan to participate in WORLD WAR I as a British ally.

With World War I beginning in the summer of 1914 and with political changes in China, Anglo-Japanese relations entered a new era. The new situation in the Far East resulted in a closer relationship between the United States and China. With the outbreak of the RUSSIAN REVOLUTION AND CIVIL WAR in 1917, U.S. participation in the war, and later the publication of President WOODROW WILSON's Fourteen Points on how to end the war, the groundwork was set for new national relations.

These new circumstances brought changes in Anglo-Japanese relations after World War I. Great Britain no longer feared the Russian expansion in China and had developed a close relationship with the United States. The United States had also started

to view Japan as a competitor in East Asia. The problems of China were also affecting international politics. As a result, the United States decided to call a conference whose aim was to prevent expansion in China. At the WASHINGTON CONFERENCE (1921–22) Anglo-American cooperation in Asia allowed the United States to force Japan to accede to an end of the Anglo-Japanese alliance. The official termination of the alliance took place on August 17, 1923.

NATHALIE CAVASIN

anti-Communist encirclement campaigns in China (1930–1934)

In 1923 SUN YAT-SEN (d. 1925), leader of the Kuomintang (KMT), or Chinese Nationalist Party, then out of power, made an agreement with Adolf Joffe, Soviet representative in China. It became the basis of an entente between the KMT and the Russian Communist government whereby Russia sent advisers to help Sun and the KMT and allowed Chinese students to go to Russia to study. It also allowed members of the newly formed CHINESE COMMUNIST PARTY (CCP) to join the KMT. This entente ushered in what became known as the first united front.

In 1926 the KMT launched a campaign called the NORTHERN EXPEDITION, commanded by Sun's lieutenant CHIANG KAI-SHEK, to oust the warlords and unite China. Its spectacular success led to a power struggle between the Soviet-supported CCP and the anti-CCP faction of the KMT, led by Chiang. Chiang won the showdown, expelling the Soviet advisers, purging the CCP, and then defeating most of the remaining warlords. Between 1928 and 1937 the KMT ruled from China's new capital, Nanjing (Nanking), under an unstable coalition led by Chiang.

Remnant CCP members fled to the mountains in Jiangsu (Kiangsu) province, where they established the Chinese Soviet Republic with its capital at Ruijin (Juichin). Chiang's new government was too preoccupied with dissident KMT leaders to worry about the CCP between 1928 and 1930, which allowed the CCP to expand to parts of Hunan, Hubei (Hupei), Anhui (Anhwei), and Fujian (Fukien) provinces and increase its army to 120,000 men plus paramilitary units. Between 1930 and 1934 the Nationalist government launched five encirclement and extermination campaigns against the Communists (First Campaign, from fall 1930 to April 1931; Second Campaign, from February to May 1931; Third Campaign, from July to September 1931; Fourth Campaign, from January to April 1933; and Fifth Campaign, from October 1933 to October 1934). The first four campaigns failed because they were commanded by generals of varying ability and loyalty, because the government simultaneously had to deal with more serious revolts by dissident KMT generals, and because of Japan's attack on Manchuria and Shanghai (1931–32).

Meanwhile, Chiang consolidated his leadership and improved the central government's army with the help of German military advisers. He personally led the 700,000-strong army in the Fifth Campaign and adopted new strategies that were "70 percent political, 30 percent military." Militarily, he emphasized good training and improved morale for his officers and soldiers. As they advanced, his men constructed forts and blockhouses that blockaded the Communist-ruled areas. The political aspect of his strategies stressed economic reform, rural reconstruction, and neighborhood organization for security. These measures eliminated many of the abuses that had allowed the Communists to win the loyalty of the people of the contested region. The combination of military success and economic blockade effectively strangled the Communist-controlled land, reducing it to six counties by September 1934. On October 2 the central Chinese Soviet government headed by MAO ZEDONG (Mao Tse-tung) and its main army under ZHU DE (Chu Teh) decided to abandon Ruijin. They broke through the western sector of the blockade, where a general not loyal to Chiang had not completed building the blockhouses. Thus began the LONG MARCH.

JIU-HWA LO UPSHUR

appeasement era

In October 1925 British, French, Belgian, and Italian representatives met in Locarno, Switzerland, to settle postwar territory claims in eastern Europe and normalize diplomatic relations with Weimar Germany. Germany also sought to establish guarantees protecting its western borders as established by the Treaty of Versailles that ended WORLD WAR I.

Under the Locarno Pact, Germany, France, and Belgium agreed not to attack each other, while Great Britain and Italy signed as guarantors to the agreement. As such, all parties pledged assistance if Germany, France, or Belgium took any aggressive action against any of them. Additionally, Germany agreed with France, Belgium, Poland, and Czechoslovakia to handle any disputes diplomatically through the LEAGUE OF NATIONS, while France guaranteed mutual aid to Poland and Czechoslovakia in the event of a German attack.

Under the terms of the Treaty of Versailles, Germany was forced to disarm, lost all territorial gains, and had to pay reparations as part of the acceptance of guilt in starting the war. Germans resented the treaty, considering it far too harsh and demeaning. Many blamed the treaty for compromising Germany's economy, so much so that by 1923 the Weimar Republic could not make the required reparation payments. The situation worsened when the GREAT DEPRESSION hit in the 1930s, heightening the already-bleak socioeconomic pressures of the country. As a result, Germans faced a complete disintegration of their society, as a majority of citizens became disillusioned about the future of the country. Upon his ascension to the chancellorship in January 1933, ADOLF HITLER sought changes to the treaty that would allow for German *lebensraum* (living space). With that in mind, Hitler formally repudiated the Treaty of Versailles in March 1935, using it as both scapegoat and propaganda for the ills of the nation. He set about restructuring the economy and, more importantly, rearming the military in violation of the treaty. Industrial production and civic improvements were expanded, the results of which were both positive and negative: The unemployment rate fell with continued arms production and construction projects,

while inflation increased due to currency manipulation and deficit spending. The German military (Wehrmacht) reintroduced conscription, which helped to lower the unemployment rate further, and reorganized to include a new navy, the Kriegsmarine, and an air force, the Luftwaffe—both of which were severe violations of Versailles.

Hitler made the argument that rearmament was a necessity for Germany's continued security. At the time, European leaders felt such allowances simply corrected certain wrongs that bitter victors had set in the aftermath of a brutal world war; thus, Germany faced no repercussions other than formal protests. When France and the Soviet Union signed a treaty of alliance in 1936, Hitler's aims became even more significant. In response to the Franco-Soviet treaty, Hitler pressed for the stationing of German troops in the Rhineland. In accordance with the Treaty of Versailles, the entire Rhineland area was demilitarized to serve as a buffer between Germany and France, Belgium, and Luxembourg. By 1930 Allied forces had completely withdrawn under the terms of the treaty, which equally prohibited German forces from entering the area. Further, the Allies could reoccupy the territory if it was unilaterally determined that Germany had violated the treaty in any way.

France was not prepared militarily to dispute any claim over the territory without British aid. Great Britain could not provide such support. As a result, both countries had no choice but to allow Germany to retake the region. Thus, a policy of appeasement toward Germany was officially born under British prime minister Stanley Baldwin (1935–37), though it had already begun under his predecessor, Ramsey McDonald (1929–35). Guided by the growing pacifist movement, both Ramsey and Baldwin realized that national consensus did not favor military action. In spite of pressure from outspoken critics like WINSTON CHURCHILL, who recognized the dangers of German rearmament, both were determined to keep the country out of war.

Hitler's ambitions grew greater. Unwilling to assist the Republican government, Baldwin initiated a pact of nonintervention with 27 countries, including Germany and Italy. Despite being signatories, Hitler and Italy's BENITO MUSSOLINI, in violation of the agreement, sent weapons and troops to support General FRANCISCO FRANCO and his nationalist forces. By December both countries were fully involved in the Spanish conflict, having agreed two months earlier to an alliance, known as the Axis, to solidify their positions in Europe.

Using the war as a test for its armed forces and methods, particularly the Luftwaffe and blitzkrieg tactics, Germany demonstrated how far its remilitarization efforts had advanced. On April 26, 1937, the town of Guernica came to symbolize and foreshadow the German advancements. German and Italian forces in a joint operation began a bombing campaign against the town. The attack happened so swiftly that it appeared as one continuous assault, with no other intent than the complete decimation of the civilian population. However, several thousand refugees had come to the town in the wake of the war; by all estimates the number of dead stood near 1,700, consisting mainly of women, children, and elderly, with over two-thirds of the town in ruins.

ANSCHLUSS

As the Axis powers continued to lend support in Spain, Hitler forced his native Austria to unify politically (*Anschluss*) with Germany in March 1938. Despite the Treaty of Versailles's prohibition of union between Germany and Austria, again the Allies' response to the *Anschluss* went no further than formal diplomatic protests. A month earlier, on February 12, Austrian chancellor Kurt Schuschnigg had met with the führer in Berchtesgaden, Bavaria. Hitler had demanded the ban on the Austrian NAZI PARTY be lifted and that they be allowed to participate in the government, or Austria would face military retaliation from Germany. With little choice, Schuschnigg complied with the demands by appointing two Nazis to his cabinet, Arthur Seyss-Inquart and Edmund Glaise-Horstenau. He also announced a referendum to decide independence or union with Germany—a stall tactic aimed at preserving Austrian autonomy.

However, the gradual usurpation of authority by Schuschnigg's newly appointed ministers and pressure from Germany—in the form of an ultimatum from Hitler that threatened a full invasion—forced Schuschnigg to hand power over to Seyss-Inquart and the Austrian Nazi Party. When Hitler further threatened invasion, Miklas reluctantly acquiesced. On March 12 the German Wehrmacht 8th Army entered Vienna to enforce the Anschluss, facing no resistance from the Austrians. Many Austrians gave their support to the Anschluss with relief that they had avoided a potentially brutal conflict with Germany. Others fled the country in fear of the Nazi seizure of power.

Austria was only the beginning. When Neville Chamberlain became prime minister of Great Britain in May 1937 he adhered to the policy of appeasement that

his two predecessors had cultivated. He believed that the continued consent of changes to the Treaty of Versailles could prevent another war with Germany. To that end, Chamberlain, France's Édouard Daladier, and Italy's Benito Mussolini met with Hitler in Munich, Germany, in September 1938 to settle a dispute over the German-speaking Sudetenland, which both Czechoslovakia and Germany claimed. Hitler claimed that the Czech government was mistreating Sudeten Germans in Czechoslovakia, despite no evidence of such treatment and adamant denials from government officials; the same argument was made for German minorities living in Hungary and Poland. Exploiting ethnic tensions as a pretext to gain a foothold in eastern Europe, Germany demanded the incorporation of the region into Nazi Germany.

The Allies urged the Czech government to comply. In what is known as the MUNICH PACT, the parties agreed on September 29, 1938, without Czech representation, to the transfer of the Sudetenland to German control. Terms of the agreement included the allowance of German settlements in the region, with Germany exacting no further claims of Czech lands. Triumphant that the situation had been resolved and war resoundingly avoided, Chamberlain and Daladier returned to England and France, declaring that the peace had been preserved. Feeling abandoned by its allies, particularly France, Czechoslovakia had no choice but to capitulate to Hitler.

As German troops moved into the newly acquired territory, the Czech population fled to central Czechoslovakia. Six months later Germany violated the Munich agreement by invading Czechoslovakia itself. Despite an alliance with France and the Soviet Union, neither came to Czechoslovakia's aid. Hitler's main motivation for the invasion involved the seizure of Czech industrial facilities. However, Hitler's intentions to invade Poland following the breakdown of negotiations over territorial concessions deemed it necessary that he eliminate Czechoslovakia first. Accordingly, on March 15, 1939, German forces entered the Czech capital of Prague, proclaiming the regions of Bohemia and Moravia as German protectorates.

Chamberlain and the Allied nations now faced a major international impasse. They had granted concessions to Hitler, with no repercussions when Germany violated the agreements. If Hitler were to continue that course of action, the Allies would find themselves in a difficult position in regard to other international commitments. In particular, both Great Britain and France pledged aid to Poland were Germany to invade it. The scenario became a reality when Germany invaded Poland

on September 1, 1939. In a final attempt to avert war Great Britain and France lodged formal warnings and diplomatic protests against the invasion, to no avail. As a result, notwithstanding the Soviet-German agreement, both countries were forced to declare war on Germany.

Arab-Israeli War (1948)

After WORLD WAR II Great Britain was no longer able economically, politically, or militarily to control Palestine. The Labour government was elected to power in 1945, and the new foreign minister, Ernest Bevin, attempted to placate mounting Arab opposition to a Jewish state by enforcing limitations on Jewish immigration into Palestine. Even during World War II some Revisionist Zionist groups had begun attacking British officials and forces in attempts to force the British to vacate Palestine. The Irgun, led by Menachem Begin, and LEHI (Stern Gang) both attempted to kill Sir Harold MacMichael, the British high commissioner in Palestine, and in 1944 LEHI killed Lord Moyne, the British minister of state for the Middle East. In 1946 the Irgun bombed the King David Hotel, the British headquarters in Jerusalem, killing over 90 people. The British branded the Irgun a terrorist organization and arrested many of its members. The Irgun retaliated by kidnapping British soldiers; British arms depots were also raided.

Although the United States was reluctant to ease its own immigration quotas, it pressured Britain to allow increased Jewish immigration into Palestine. In the aftermath of the HOLOCAUST, the forced return or imprisonment on Cyprus of illegal Jewish immigrants fleeing Europe was an untenable moral and political position. From the Zionist perspective there was no such thing as an "illegal" Jewish immigrant into Pales-

tine, and numerous means of circumventing or evading British border controls were devised to allow the landing of new Jewish immigrants. Some Zionists, including CHAIM WEIZMANN, recognized the potential problem posed by the displacement of Palestinians, but he argued that the Jewish need was greater. DAVID BEN-GURION and others in Palestine continued to claim all of Palestine for the Jewish state.

Following the war, the United States issued several public statements favoring the creation of a Jewish state. In the face of its domestic weakness and reliance on U.S. economic assistance, the British government in 1947 announced that it was turning over the entire problem of Palestine to the newly formed United Nations. The UN then created the UN Special Committee on Palestine (UNSCOP), composed of 11 member states, to investigate the situation and to make recommendations as to what should be done regarding the mounting conflict between Zionist demands for a Jewish state and Palestinian demands for an independent Arab state in Palestine.

In 1947 UNSCOP traveled to Palestine, where it was well received by the Zionists and boycotted by the Arab Higher Command of Palestine under the mufti Hajj Amin al-Husseini, an implacable opponent of a Jewish state. From the Palestinian point of view, any Jewish state would result in a loss of territory that was considered part of the Palestinian national homeland. However, by boycotting the negotiations, the Palestinians lost an opportunity to present their side to the general Western public and politicians. UNSCOP submitted a minority and majority report; the minority recommended a binational state, and the majority recommended partition. The proposed partition plan allotted approximately 50 percent of the land for the Jewish state and 50 percent for an Arab state, with Jerusalem and a large area around the city to be under international control. The projected Jewish state included most of the north and coastal areas with the better agricultural land and sea access as well as the Negev desert in the south. Jaffa, totally surrounded by the proposed Jewish state, was to be an Arab port. Although the plan did not include all the territory the Zionists had claimed, Ben-Gurion and the majority Labor Party reluctantly accepted the UN partition scheme and launched an all-out effort to make an independent Jewish state a reality and to obtain recognition from the international community.

At the time there were 1.26 million Palestinian Arabs, or two-thirds of the total population, and 608,000 Jews, or one-third of the population, in Palestine, and Arabs

still owned over 80 percent of the total land within Palestine. Consequently, the Palestinians and other Arab states rejected the plan. At the pan-Arab conference in Bludan, Syria, in 1937, the Arabs had already unanimously rejected any partition of Palestine, so the rejection in 1947 came as no surprise to either side.

The United States lobbied several nations that were poised to abstain or vote against partition: Members of the UN narrowly voted in favor of the partition plan in November 1947. Violence immediately broke out in Palestine and elsewhere in the Arab world, and in waves of anti-Semitism Jewish quarters and businesses in Cairo, Baghdad, and elsewhere were attacked. The mufti called for a three-day strike in Palestine, during which violence between the two communities escalated.

The British withdrew from Palestine in May 1948, and war immediately broke out. By the time of the British withdrawal the HAGANAH effectively controlled the area allotted to the Jewish state by the partition plan. On May 14, 1948, Ben-Gurion proclaimed the establishment of the independent state of Israel amid widespread rejoicing among Jewish communities. Ben-Gurion became the first Israeli prime minister in a coalition government dominated by the Labor Party, and the Haganah became the Israeli Defense Force (IDF). The new state was immediately recognized by both the United States and the Soviet Union; however, the celebrations were tempered by the certainty of impending war with the surrounding Arab states and the Palestinians.

Israeli forces were well organized and trained with a unified chain of command and a plan for securing all the territory allotted to the new state. With the IDF, the Palmach, or shock troops, the police, and the Irgun and Stern Gang Israeli forces numbered about 60,000 in addition to 40,000 reservists. The Irgun and Stern Gang were not incorporated in the IDF but on some occasions coordinated efforts with it.

Arabs forces also numbered about 40,000 and included the Arab Liberation Army, volunteer forces led by Fawzi al-Kawakji, and the Jordanian Arab Legion, commanded by a British officer, Glubb Pasha. The legion was the best trained of the Arab forces. Abd al-Kader al-Husseini commanded Palestinians in Jerusalem; Iraqi and Syrian soldiers also fought in the war. The Arab League supported the Palestinian cause but refused to provide money to the mufti or to recognize the establishment of a Palestinian state in exile. The Palestinian population remained demoralized from their earlier defeat by the British in the Arab

Revolt of 1936–39 and had no real unified political or military leadership. Arab armies also suffered from inferior armaments and corrupt leadership, and they had not coordinated their efforts or devised an effective plan for military victory.

PALESTINIAN REFUGEES

By the time the war broke out massive numbers of Palestinians had already become refugees in neighboring Arab countries. Some upper- and middle-class Palestinians had left for jobs and businesses in other Arab countries during the mandate period, and the peasantry, by far the majority of the Palestinian population, was frightened by the mounting violence and impending war. The causes for the mass exodus remain highly controversial, with both sides blaming the other for the refugee problem. Some Palestinians undoubtedly left what was soon to become a war zone in the belief that they would return home after the war was over and the Arabs had been victorious. Attacks by Israeli forces, especially the Irgun, also terrorized the peasants and incited many to flee.

In the spring of 1948 the Irgun and LEHI attacked Deir Yasin, a peaceful village near Jerusalem, killing over 200 Palestinian civilians. The massacre at Deir Yasin spread terror among Palestinian peasants, who feared the same fate might befall their villages. Palestinians left Haifa and the northern area of Tiberias; those from northern Palestine fled into Syria and Lebanon, those in the central area went to the West Bank and across the Jordan River into Jordan, and those in the south crowded into the Gaza Strip along the Mediterranean Sea. By the end of April over 150,000 Palestinians had left, and by May the numbers reached 300,000.

The 1948 war is known as the war of independence in Israel and called al-Nakba, or disaster, by the Palestinians. Military engagements in the war fell into three parts. In the first part, lasting from May to June, Egyptian forces crossed into the Negev in the south on May 15, and the Iraqis subsequently marched through Jordan into Palestine and Israel and at one juncture were within 10 miles of the Mediterranean. According to an earlier secret agreement between the Zionists and King Abdullah of Jordan, Jordanian troops would not move into areas allotted to the Jewish state, in return for which Abdullah was to secure the West Bank. The agreement held during the war, but since there had been no agreement regarding Jerusalem, Jordanian and Israeli forces fought over the city, and the Jews were forced to surrender the Jewish quarter in

the old part of the walled city. The Syrians were halted in the north, and there was no Lebanese resistance.

The UN sent Count Folke Bernadotte of Sweden, a leading figure in the International Red Cross, to mediate; Bernadotte secured a truce in mid-June that lasted for four weeks, during which time the Israelis secured arms from Czechoslovakia and elsewhere. Great Britain suspended the supply of arms to Iraq, Transjordan, and Egypt. The truce ended in July, followed by 10 days of fierce fighting during which time the Israeli victory became apparent. Israeli forces took all of northern Palestine and restored communication between Jerusalem and Tel Aviv.

A second truce was negotiated in July, when al-Kawakji's forces had been decisively defeated and Israel held all Galilee; however, the eastern part of Jerusalem, including the Old City, remained under Jordanian control. In the negotiations Bernadotte had angered both sides, and there was fear among Israelis that his final report due in September would be favorable to the Arabs. His report supported the partition plan but with the right of Palestinian repatriation; he also recommended that the Negev go to the Arabs, that Galilee be Jewish, the creation of a UN boundary patrol, and that Haifa be a free port. Jerusalem was to remain under UN auspices. The Stern Gang assassinated Bernadotte in September, and the report was never implemented. The U.S. diplomat Ralph Bunche was appointed the new mediator.

In October the Israelis attacked the Egyptian forces in the Negev. A small group of Egyptian soldiers including a young officer, Gamal Abdul Nasser, held out for several months at Falluja but, lacking reinforcements or relief from Egypt, were ultimately forced to surrender. Nasser blamed the corrupt regime of King Faruk for the loss and would lead a successful revolution against the monarchy in 1952. In December Israel moved further into the Negev and northern Sinai but reluctantly withdrew from the Gaza Strip, which was administered by the Egyptian military.

The 1948 war resulted in the partition of Jerusalem, with west Jerusalem held by Israel and east Jerusalem by Jordan. Through military victories Israel had increased its territory by about one-third more than the original partition plan had called for. As far as Israel was concerned, the gains were nonnegotiable, and the land was immediately incorporated into the new state. The mufti attempted to establish a Palestinian state based in Gaza, but he was thwarted by King Abdullah. In December Abdullah announced the unification of the West Bank and east Jerusalem with Jordan; Abdullah's

claim as sovereign of Palestine was supported by hand-picked notables, and the Palestinians remained without a state of their own.

Peace negotiations were held at Rhodes in early 1949. Because the Arabs refused to recognize Israel, Bunche had to shuttle back and forth between the Arab and Israeli delegations, and the negotiations became known as the Proximity Talks. An armistice was reached with Egypt in February 1949, Lebanon in March, Jordan in April with clauses for the withdrawal of Iraqi forces from Jordanian territory, and Syria in July. No formal armistice was ever reached with Iraq.

SETTING THE STAGE

The losses in the 1948 war left the Arabs humiliated and unforgiving and set the stage for future political upheavals through much of the region. Attempts by the UN to secure a full peace failed; although full-scale fighting ceased, technically the Arabs and Israel remained at war.

Nor was the Palestinian refugee issue resolved. Fearing the creation of a possible fifth column within its new borders and a possible Arab majority in the new Jewish state, Israel refused to permit the return of most of the refugees and blamed the Arab governments for having created the problem in the first place. The Arabs blamed Israel. The Palestinians were determined to return to their homes in the future and refused resettlement elsewhere. Arab states were also ill equipped to deal with the influx of refugees; some Arab regimes also used the refugees as pawns in their own struggles with Israel. Only Syria volunteered to discuss granting citizenship to the refugees. Ben-Gurion refused to negotiate unless his preconceived terms were met, and the offer was dropped.

By 1949 there were about 800,000 Palestinian refugees, and the United Nations established an agency that became UNRWA (UN Relief and Works Administration) to provide minimal assistance of about 16 cents per day for them. As the conflict continued and as successive generations were born in the camps, the number of refugees grew. The issues of repatriation, reparations, or compensation for land and businesses lost remained unresolved into the 21st century.

The new Israeli government set about incorporating its territorial gains and assimilated over half a million new Jewish immigrants, many of whom came from Arab states, especially Iraq and Yemen. No peace settlement was reached between the Arabs and Israel, and the conflict continued to fester until full-scale war broke out again in 1956.

JANICE J. TERRY

Arab nationalism

Arab nationalism emerged in the 19th century as the ruling Ottoman Empire continued its long decline. Arabs, who constituted the single largest ethnic group in the empire, were particularly resistant to the program adopted by the ruling Committee of Union and Progress stressing Turkish history, language, and ethnicity after 1908. Arabs were particularly opposed to the teaching of the Turkish language as the first language in schools. Both Arab and Turkish nationalists such as the YOUNG TURKS grappled with the questions of what to do about the Ottoman Empire and whether separation along nationalist lines or decentralization was preferable. Prior to WORLD WAR I, when many still hoped that the Ottoman Empire might be reformed, a number of Arab intellectuals and activists formed clubs and published essays dealing with the problems of the empire and offering possible solutions to its problems.

In 1905 Negib Azoury (d. 1916), a French-educated Syrian Christian, published *Le Reveil de la Nation Arabe*. Azoury separated religion from government and openly demanded Arab independence from the Ottomans. He envisioned one Arab nation with the full equality of Muslims and Christians; however, Azoury did not include Egypt or North Africa in the projected Arab state. Amin al-Rihani and others emphasized Arabism over either Christianity or Islam.

A number of small nationalist clubs and political organizations were also established. Al-Qahtaniyya, formed in 1909, was made up of Arab officers in the Ottoman army who discussed the issues of ethnic and national identity. Many of the same officers joined Al-Ahd (the Pact), led by the Egyptian major Aziz Ali al-Misri. Misri was anti-Turkish and aimed for full Arab independence. In 1911 Al-Fatat (the Youth) had several

hundred Christian and Muslim members who called for the decentralization of the empire under some sort of dual monarchy along the lines of the Austro-Hungarian Empire. An Arab congress met in Paris in 1913 and recommended the decentralization of the Ottoman government and that Arabic be the official language in Arab provinces. All of these groups aimed for the creation of a secular, democratic state.

When the Ottomans joined the Central Powers in WORLD WAR II and declared jihad, or holy war, in the fight against the Allies, most Arab Muslims rejected the call, arguing that both sides of the European conflict were predominantly Christian and that it made no sense to fight on religious grounds. Sherif Husayn of the Hashemite family used the war as an opportunity to gain what he believed to be British support for an independent Arab state after the war in the SHERIF HUSAYN–MCMAHON CORRESPONDENCE. Sherif Husayn's son Faysal met with Arab nationalists in Syria to secure their backing for his father's efforts. Misri and other Arab nationalists supported the Hashemites and in the Damascus Protocol of July 1915 agreed to Anglo-Arab cooperation in the war. Consequently, the Arabs raised the standard of revolt in June 1916 and fought with the British against the Ottomans and Germany for the duration of the war. Misri and another Arab Ottoman officer of Iraqi origin, Jafar Pasha Al-Askari, were among the most notable soldiers to join the fight against the Ottomans. In 1916 Ottoman Turkish soldiers commanded by Ahmed Jemal Pasha publicly hanged several known Arab nationalists in downtown Beirut.

However, during the war the British made two other conflicting agreements, the SYKES-PICOT AGREEMENT and the BALFOUR DECLARATION, regarding the future of the Arab world. After the war the Arabs did not receive national independence. The Arab provinces of the old Ottoman Empire, including present-day Iraq, Syria, Lebanon, Jordan, Palestine, and Israel—none of which existed as independent states at the time—were divided up between the British and the French. Egypt, the Sudan, and North Africa also remained under French, British, or Italian control. When the Arabs failed to achieve self-determination, one Arab nationalist reputedly remarked, "Independence is never given, it is always taken."

In Syria representatives had gathered at the General Syrian Congress in 1919, and in the spring of 1920 they declared Syria's independence governed as a constitutional monarchy under Emir Faysal. To enforce their mandate over Lebanon and Syria, French forces attacked the fledgling Syrian army, defeating it at Maysalun Pass,

near Damascus. Faysal was forced into exile but was subsequently made king of Iraq by the British.

During the interwar years Arab nationalist parties from Morocco to Iraq adopted a wide variety of tactics including economic boycotts, strikes, demonstrations, and negotiations in the struggles against imperial control. When all of these failed some turned to more violent methods, joining armed paramilitary groups. There were also periodic and often spontaneous revolts and insurrections against the European occupiers from Egypt, to Iraq, to Syria. The Syrian revolt in 1925 was a major grassroots uprising against the French occupation. The revolt failed, and the French retained control of the Syrian mandate. Although the British granted facades of independence to Iraq, Transjordan (later Jordan), and Egypt, most of the other Arab territory remained under direct or indirect Western control until after WORLD WAR II.

Sati al Husri, a Syrian, was one of the foremost theoreticians of pan-Arabism. An Ottoman official prior to World War I, Husri supported Sherif Husayn and his son Faysal in the Arab revolt against the Ottoman Turks. In the 1940s Husri was responsible for the Iraqi educational curriculum that emphasized Arab history and culture. A prolific writer, Husri argued that the Arabs were a single people, including Egyptians and Maghrabis (North Africans), and that their common identity was based on a common language and history. His books included *In Defence of Arabism*. Husri and other Arab writers recognized the importance of Islam for Christian as well as for Muslim Arabs in their history and culture but foresaw the creation of one unified secular democratic Arab state. After World War II Husri became director general of cultural affairs of the League of Arab States, where he continued to champion pan-Arabism.

With the encouragement of the British, the first Arab conference was held in Alexandria, Cairo, in 1944; it resulted in the formation of the League of Arab States, ratified in 1945. The league was headquartered in Cairo, and Egypt often dominated the organization. Member states were usually represented by their foreign ministers at meetings. Abd al-Rahman Azzam, an Egyptian who had fought in the nationalist Libyan war from 1911 to 1912, became the first secretary-general of the league and remained in that position until 1952. Azzam was a tireless champion of the league and of a pan-Arabism that would be all inclusive. As Arab states became independent in the postwar era, all joined the league.

The league supported the Palestinian cause and, as part of the struggle against Israel after the Arab

losses in the 1948 war, implemented an Arab boycott of Israeli goods. The boycott was administered from Damascus, but individual Arab governments enforced it in a haphazard fashion; it had minimal impact. In 1950 league members signed a Joint Defence and Economic Cooperation Treaty as a cooperative effort to protect members against Israel. Pan-Arabism reached its apogee during the Nasserist era in the 1950s and 1960s, when there were numerous efforts to unify the separate Arab states.

JANICE J. TERRY

Armenians in the Ottoman Empire

After the Ottoman sultan Mehmet II captured Constantinople on May 26, 1453, a new policy regarding minorities was initiated. The Ottomans organized each non-Muslim religious minority, mainly Christians and Jews, into a separate national administration, called a *millet* (pl. *milletler*). The head of each *millet* was its highest religious authority residing in the Ottoman Empire. For Christians there were at first three *milletler*: one for the group of Byzantine (Greek) Orthodox, one for the Armenian Orthodox, and one for the Assyrian Church of the East. By the time of the fall of the Ottoman Empire there were no fewer than eight Christian *milletler*. The ideology behind this principle of organization was a liminal concept of “clean” versus “defiled.” Expressed in sociological terms, the “clean” Muslim Ottoman Turks did not wish to come into contact with “unclean” Christians. Furthermore, by substituting the Christian idea of “church” with the Islamic idea of an ethnic and religious nation in which the Armenian clergy were also civil and judicial administrators of the Armenian people, the Ottomans sought to destroy the spiritual power of the churches by forcing the bishops and other clergy to be embroiled in secular administration.

In the Ottoman system, the civil head of each Christian minority *millet* was a patriarch. The duty of the patriarch was to administer the internal civil as well as ecclesiastical affairs of his *millet*. The patriarch's chief responsibility was the collection of taxes on behalf of the Ottoman government, and the patriarch was the sole representative of his nation to the sultan. The patriarch also was responsible for education, hospitals, family law, and permission to travel within the Ottoman Empire.

The *millet* system offered some advantages for the minority groups themselves. It was illegal to convert Armenians to Islam, although this took place with significant frequency when it behooved the Ottoman government. Armenians were also nominally protected from intermarriage, and thus the homogeneity of each *millet* was largely preserved. For other minorities who were Muslim, principally the Kurds, their fate was worse: As Muslims they were not accorded a distinct national identity.

NATIONAL SELF-CONCEPT

For Armenians the church was the foundation of their national self-concept. Most Armenians were ignorant theologically. While many, especially in the rural areas of eastern Anatolia, were not formally religious, they were strongly pious. The major festivals of the church were celebrated even in the poorest homes. Even the simplest folk understood that the church was fundamental to their national survival, and Armenians supported their church as much as they could.

In the last three decades of the 19th century, like many other minorities in the Ottoman Empire, Armenians were faced with a precarious existence. Armenians in eastern Anatolia, who were forbidden to keep firearms, were at the mercy of marauding Kurds and Turks. Although some Armenians loyal to the Ottoman government rose to positions of power in the state, overall they were second-class citizens, faced with corruption both within and outside of their own community, unfairly taxed, and who, despite their industriousness and hard work, began immigrating to the United States, Canada, South America, and Australia in large numbers.

The Russo-Turkish War of 1877–78 marked the beginning of a new and bloody chapter for Armenians in the Ottoman Empire. The wars with Russia brought Armenians in Turkey into close quarters with their brethren in Russia, who enjoyed a much higher standard of living and greater autonomy. As a result the national revival of Armenians advanced much faster in Russian Caucasia than in Turkey. The Great Concert of

European powers produced the Treaty of Berlin (July 1878), which blocked Russia's attempt to force the sultan to improve the lives of Armenians. The situation of Armenians in Anatolia became worse in the 1880s, as Kurds and other Muslim minorities attacked Armenians without interference from the Turkish governors.

The result was that Armenians formed political organizations to force the Ottomans to deal with these and other problems. By the 1890s Armenian paramilitary organizations emerged with the intention of organizing a defense of Armenians and Armenian interests. The most important of these was the Armenian Revolutionary Federation, which sought greater autonomy for Armenians while ruling out political independence, and the Social Democratic Hnchag ("Clarion") Party, which sought complete independence for Armenia.

In 1894 the matter came to a head when Hnchag leaders sought to stir the international community to action through a planned act of rebellion. The response of the Ottoman government was very much disproportionate to the threat posed by the act: The Kurds and the Turkish military exterminated many villages that did not participate in the rebellion. In the course of 1894–96 in a planned and systematic fashion, Sultan Abdul Hamid I sought to solve the Armenian question through reduction of the number of Armenians through massacres. European powers did not intervene largely out of fear of Russia, and American president Grover Cleveland refused to intervene. The massacres essentially ended the Armenian revolutionary drive for independence and even led to a rejection of revolution from some of its most prominent Armenian supporters.

However, after 1904 renewed Armenian guerrilla activity in eastern Anatolia resulted in further punitive massacres similar to those in 1894–96. Further attacks followed in Adana and in Syria in 1908 with the participation of the YOUNG TURKS, who had seized power that same year. The tense situation between Armenian political organizations and the government of the Young Turks continued. The problem was compounded by the intervention of Western powers in Turkish governance and their open hostility to the Turkish regime. The start of WORLD WAR I, which pitted Turkey against many of its former enemies, particularly Russia, resulted in a cataclysm of death for Armenian civilians. The policy of brutally suppressing Armenian cries for safety from murder and pillage under the Ottomans continued. The government of the Ottoman Empire, led by the Young Turks, began a policy of massacre that was concentrated in 1915 but continued in the new Turkish Republic until 1922. Claiming that the Armenians and other

Christians were collaborating with the Russian army, the Turks set out to systematically eliminate, or at least to reduce to an insignificant number, the Armenians and other Christians from eastern Anatolia.

Along with this violence came the transfer of the wealth of these groups into Kurdish and Turkish hands. Although most of this activity was conducted at the hands of Kurds and prisoners released for the massacres, the Turkish army provided support, and the Turkish government was responsible for sanctioning and in some cases actively planning the removal of Armenians from eastern Anatolia. As many as 1.5 million Armenians, along with hundreds of thousands of Suryani and Assyrian Christians, were killed or died as a result of forced marches southward through the desert or in concentration camps.

The Turkish government in the early 21st century vehemently denied that the government of the Young Turks (who also were the founders of the modern Turkish Republic) engaged in a planned and systematic elimination of all Armenians from Anatolia. Instead, the Turkish Republic claimed that most of the casualties were Armenians who fought with the invading Russian army against the Ottomans, and that the number of these battle casualties for Armenians was 600,000. Currently, a reassessment of the Turkish participation in the slaughter of the Armenians is occurring among intellectuals and historians in Turkey, and even the government is promoting restoration and cultural expressions of the Armenians and other minorities as it lobbies to join the European Union.

ROBERT R. PHENIX, JR.

art and architecture (1900–1950)

With new styles and the availability of new construction material, there was a dramatic change in architecture during the first half of the 20th century. Although prefabrication had first been used in London's Crystal Palace in 1851, it did not become popular until the early 20th century, which saw the rise in functionalism.

However, some architects reacted sharply against this, the most well-known being perhaps British architect Edwin Lutyens, who returned to a simplified Georgian classicism with the Viceroy's House in Delhi, India, and other projects. In Britain Norman Shaw was one of the main domestic architects.

The first half of the 20th century saw a massive increase in travel around the world and the publication of heavily illustrated photographic works, art books, and millions of postcards. This led to much use of iconography, with particular cities being identified by specific buildings or structures. Examples of these include the Empire State Building (1931) in New York, the Harbour Bridge (1932) in Sydney, and the Golden Gate Bridge (1937) in San Francisco. Postcards also became important for artists whose designs, drawings, and photographs were reproduced and sold around the world, exposing creative people to influences of which previous generations had not known.

In terms of art styles, Fauvism from France of the 1890s continued to influence painters, and cubism began to revolutionize the manner in which art and sculpture was produced, the latter producing artists Pablo Picasso, Fernand Léger, and Georges Braque. Expressionism emerged in the 1910s, and Dadaism peaked from 1916 until 1920, introducing an antiwar polemic through the work of Marcel Duchamp, Francis Picabia, and others. From the 1920s surrealism became a cultural movement, reflecting itself in visual artwork. In Germany the Bauhaus movement flourished under Walter Gropius during the 1920s and also led to work by Vasily Kandinsky and Josef Albers; the Swiss architect Le Corbusier became famous during the 1940s for his introduction of modernism and functionalism; and Buckminster Fuller was celebrated for his geodesic domes. Other notables include Max Ernst, Joan Miró, and Salvador Dalí.

The two world wars and several other conflicts also had a dramatic influence on both art and architecture. War artists wanted to record specific events or sought to capture the spirit of an event. At the same time photography emerged as an art form with Robert Capra's depiction of the dying republican soldier during the Spanish civil war becoming famous—despite some doubts over whether it had been staged. The film and still photographs showing ADOLF HITLER looking at the Eiffel Tower and the soldier flying the Soviet red flag over the Reich Chancellery in Berlin are also famous for what they symbolized. The pile of captured German flags dumped at the foot of LENIN's mausoleum on June 24, 1945, signified the final destruction

of the German war machine in the same way that the haunting photographs and later paintings of the ruins of HIROSHIMA marked the first use of an atom bomb in war. In terms of architecture, the massive destruction of many European and Chinese cities during bombing raids and land bombardment also saw many pieces of artwork destroyed, although a remarkable number survived, having been moved to safekeeping in time of war. The Basque city of Guernica in northern Spain, bombed in 1937 in what is now seen as a prelude to the WORLD WAR II bombing raids, led to Picasso producing his famous painting *Guernica* later in 1937. In Britain painters such as C. R. W. Nevinson (1889–1946) recreated the horror of WORLD WAR I, as did Paul Nash (1889–1946), while artists in communist countries depicted heroic scenes from battles that became part of their respective countries' folklore.

The main way in which the world wars affected architecture was in terms of the war memorials and war cemeteries that were built. Then there were also the tombs to the unknown soldiers, at the Arc de Triomphe in Paris, Westminster Abbey in London, the Victor Emmanuel Monument in Rome, and in many other capital cities. Although war memorials had been built in previous centuries, the number and the diversity of them after the world wars is important. The building of the Cenotaph in London, the Shrine of Remembrance in Melbourne, the India Gate in New Delhi, the Liberty Memorial in Kansas City, and the National War Memorial in Canada are only the most obvious examples, with small memorials throughout Europe and indeed throughout the world. In Japan Yasakuni Shrine not only remembers Japan's war dead but also provokes foreign consternation over the reverence given to Japanese war criminals also remembered there.

It is also impossible not to mention military architecture, with pillboxes and fortifications constructed of such indestructible material that they will outlast ordinary buildings—both in places that were invaded and also as a preventive measure in places that feared attack. The MAGINOT LINE, along the French-German border, was perhaps the most famous defensive structure of the period, with the Pentagon in Washington D.C., opened in 1943, still the largest-capacity office building in the world.

With changes in political arrangements around the world, a number of totally new capitals were constructed, the most well known being Canberra, Australia. In Turkey the move from Constantinople (Istanbul) to Ankara in 1923 represented a major change in Turkish thinking and attitudes to the world. While Canberra

was built in what had been agricultural land, Ankara was constructed in what had been the city of Angora. In March 1918 Moscow became the capital of the Soviet Union, having been the capital of Russia until 1703. The period of great turmoil during the 1920s and 1930s also saw a number of countries establish new temporary capitals. Burgos in northern Spain became the nationalist capital during the SPANISH CIVIL WAR, with the inland city of Chungking (modern-day Chongqing) serving as the capital of Nationalist China during the SINO-JAPANESE WAR. In France the spa resort of VICHY became the capital of occupied France for three years. The growth of the urban environment saw a number of suburbs growing up. The British architect and civil planner Sir Ebenezer Howard designed Letchworth Garden City and in the 1920s moved on to found Welwyn Garden City.

Political forces of the far right and extreme left also supported designs that supported their views of the country in question. In NAZI Germany Adolf Hitler's architect, Albert Speer, designed impressive and grandiose structures that gave rise to the term *Albert Speer architecture*, describing a building or edifice that makes the onlooker seem small. In the Soviet Union grand architecture and "heroic" paintings were popular. The former impressed observers about the wealth of the country, with the latter highlighting important historical scenes. The building of Lenin's mausoleum in Red Square, Moscow, initially in wood and then in stone, incorporated some of the design of the grave of Cyrus the Great of Persia.

The changes in technology during the first half of the 20th century saw the construction of many railway stations around the world, but not on the scale of the edifices built during the late 19th century. The Moscow Metro was opened in 1935 and was part of the attempt to show the Soviet Union as a modern and efficient country. The British architect Charles Holden worked extensively on the London Underground. In addition, airports and factories were built, some with impressive art deco buildings, others being functional and having small sheds and huts to cater to the air passengers, or in the case of many factories, unimpressive work areas behind the façade.

The rise of art deco during the 1920s and 1930s featured not only in architecture but in art, furniture design, and interior decorating. In terms of architecture, the spire of the Chrysler Building in New York (1928–1930), the city hall of Buffalo, New York, and many other civic buildings follow this style. As well as in the United States, it was also popular in Italy, with the port

city of Asmara being the best surviving example of an art deco city; the most famous art deco building in Latin America is the Edificio Kavanagh (Kavanagh Building) in Buenos Aires, completed in 1936. The most well-known art deco architects included Albert Anis, who worked at Miami Beach; Ernest Cormier from Quebec, who designed the Supreme Court of Canada; Sir Banister Fletcher, author of the famous work on architecture; Bruce Goff, whose Boston Avenue Methodist Church in Tulsa is regarded as one of the best examples of art deco in the United States; Raymond Hood, who designed the Tribune Tower in Chicago; Joseph Sunlight; William van Alen, who worked on the Chrysler Building in New York; Wirt C. Rowland from Detroit; and Ralph Walker of Rhode Island. The writer Ayn Rand set her book *The Fountainhead* (1943), about an idealistic young architect, in the office of the New York architect Ely Jacques Kahn, with some seeing it as being modeled on Frank Lloyd Wright.

In sculpture art deco saw Lee Lawrie, Rene Paul Chambellan, C. Paul Jennewein, Joseph Kiselewski, and Paulanship; and expressionism, which had first flourished in Germany in the 1900s and early 1920s, led to artwork by Latvian-born American Mark Rothko, Jackson Pollock, and others.

The prosperity of the 1910s and 1920s led to the building of many hotels around the world and the enlarging of many others. The Waldorf-Astoria in New York, an art deco building, was designed in 1931. In Africa Treetops in Kenya and in Asia the Raffles Hotel in Singapore, the E&O Hotel in Penang, and the Strand in Rangoon were all either built during this period or had major refurbishment work. There were also many holiday resorts emerging from the late 19th century concept of life in the Tropics with a place to retreat to in the hot summer: Simla in India, Hua Hin in Thailand, the Cameron Highlands in Malaya, Dalat in Vietnam, and Maymyo (Pyin U Lwin) in Burma (Myanmar). This coincided with many civic buildings being constructed: town halls, schools, hospitals, and libraries. The Bund at Shanghai teemed with magnificent stone buildings showing stability and the feeling of commercial well-being. In time of war some of these structures were actually best able to weather bombing raids, with the Fullerton Building in Singapore being used as a shelter during Japanese bombing raids in early 1942.

The new construction techniques led to the building of skyscrapers. The first of these was the Flatiron Building in New York City, which was completed in 1902 and is 285 feet tall. However, in 1913 this was overtaken by the Woolworth Building (792 feet), which

in turn was overtaken in 1930 by 40 Wall Street and in 1931 by the Empire State Building, which was the first building in the world to have more than 100 floors.

JUSTIN CORFIELD

Atatürk, Mustafa Kemal

(1881–1938) *Turkish leader and reformer*

Mustafa Kemal Atatürk was one of the greatest reformers of the 20th century, and his legacy is present-day Turkey. He built a modern state from the ruins of the Ottoman Empire through massive and progressive domestic reforms. Viewed with godlike status by Turks, he is considered the savior of a country that under his guidance resisted occupation and colonization and embraced democracy and modernization.

He was born in Salonika (present-day Thessalonica, Greece). His father, Ali Reza, was a low-ranking Ottoman government employee who died when Mustafa was young. His mother, Zubeyde, raised him and his sister, Makbule. Zubeyde was a religious woman and hoped that her son would attend the local religious schools. However, with the help of his uncle he instead attended military school. The military schools, reflecting the Ottoman system, allowed students to rise not according to class status but by ability. Mustafa excelled in his studies. He took the name Kemal, which means perfection. He completed his studies at the War College in Harbiye, Istanbul, in 1905.

In Istanbul and elsewhere throughout his postings, Mustafa Kemal was deeply disturbed by the corruption in the Ottoman bureaucracy. He joined several underground organizations that had contacts with exiled Turks in Geneva and Paris. To keep him away from Istanbul, his superior officers, suspicious of Mustafa Kemal, posted him in faraway places such as Damascus

Mustafa Kemal Atatürk was one of the greatest reformers of the 20th century, and his legacy is present-day Turkey.

and Tripoli, but he was able to remain active in the secret societies, although events unfolding in the Balkans pushed other figures to the forefront.

The underground organizations united and formed the Committee of Union and Progress (CUP) and in 1908 started the YOUNG TURK revolution. The subsequent leaders of this movement, Enver Pasha, Talat Pasha, and Cemal Pasha, ruled as a triumvirate and were also suspicious of Mustafa Kemal and preferred to keep him away from the seat of government. Mustafa Kemal was critical of the CUP's lack of ideology and program. The CUP's only objective in the revolution was to reinstate the 1876 constitution, which had been abolished by the sultan. Mustafa Kemal was also wary of the expansionist and pan-Turkic postrevolution ideology the CUP embraced. Germany cleverly took advantage of the situation and entered into an alliance with the CUP. Mustafa Kemal, although he did not agree with the alliance, gladly learned modern military technology

from German military officers who had been sent to train the Ottoman armies.

ALLIED DEFEAT AT GALLIPOLI

The CUP-led Ottoman Empire fared badly in both the BALKAN WARS and WORLD WAR I. The only major victory was at Gallipoli, where Mustafa Kemal soundly defeated the British invasion. In 1915 the British army and navy valiantly fought to open the Dardanelles in a plan created by WINSTON CHURCHILL. It was essential for the Allies to take Istanbul in order to reopen the Bosphorus Strait. The Allied defeat in Gallipoli compromised that situation and possibly lengthened the war.

Mustafa Kemal was heralded as a hero among the Turks during a war that saw few victories and many defeats for the Ottomans. At the conclusion of the war, the remaining Ottoman territories were divided amongst the Allied powers. France was given control of southern Turkey (near the Syrian border), Italy was given the Mediterranean region, and Greece was given Thrace and the Aegean coast of Turkey. Istanbul was to be an internationally controlled city (mainly French and British). The Kurds and Armenians were also granted territory under the Treaty of Sèvres. The Turks would have only a small, mountainous territory in central Turkey.

Mustafa Kemal was outraged, as were most Turks. Of all the occupying armies, he viewed the Greek army as the most dangerous threat. Greek nationalism was at an all-time high, and many wanted to reclaim all of ancestral Greece (which extended well into Asia Minor). This fear was confirmed by the Greek invasion of Smyrna (present day Izmir) in 1919.

In May 1919 Mustafa Kemal secretly traveled to Samsun (on the Black Sea coast) and journeyed to Amasya, where he issued the first resistance proclamation. He then formed a national assembly, where he was elected chairman. Next he organized a resistance army to overthrow foreign occupation and conquest. Under his leadership the Turkish resistance easily drove out the British, French, and Italian troops, who were weary of fighting and did not want another war. The real conflict was with the Greek troops and culminated in horrible atrocities committed by both sides. In September 1922 the Turkish army drove the Greek army into the sea at Izmir as the international community silently observed.

In 1923 the Treaty of Lausanne was signed and replaced the Treaty of Sèvres. This treaty set the borders of modern-day Turkey. On October 29, 1923,

the Republic of Turkey was proclaimed, with Mustafa Kemal as president and Ismet İnönü as prime minister. Even though the government appeared democratic, Mustafa Kemal had almost absolute power. However, he differed from several rising dictators of the time in several respects. He had no plans or ideology pertaining to expansionism. His primary focus was the modernization and domestic reform of his country. He wanted to make Turkey self-sufficient and independent.

He believed that the only way to save his country was to modernize it, and by force if necessary. He moved the capital from Istanbul to Ankara, a centrally located city. He then abolished both the sultanate and the caliphate, and his fight against religion became one of his most contested reforms. He believed that Islam's role in government would prevent the country from modernizing. He was not antireligion but against religious interference in governmental affairs. He closed the religious schools and courts and put religion under state control. He wanted to lessen the religious and ethnic divisions that had been encouraged under the Ottoman system. He wanted the people of Turkey to identify themselves as Turks first. He established political parties and a national assembly based on the parliamentary system. He also implemented the Swiss legal code that allowed freedom of religion and civil divorce and banned polygamy.

Atatürk banned the fez for men and the veil for women and encouraged Western-style dress. He replaced the Muslim calendar with the European calendar and changed the working week to Monday through Friday, leaving Saturday and Sunday as the weekend. He hired expert linguists to transform the Turkish alphabet from Arabic to Latin script based on phonetic sounds and introduced the metric system. As surnames did not exist until this time, Mustafa Kemal insisted that each person and family select a surname. He chose Atatürk, which means "father of the Turks."

Some of his most profound reforms, however, were in regard to women. Atatürk argued that no society could be successful while half of the population was hidden away. He encouraged women to wear European clothing and to leave the harems. Turkey was one of the first countries to give women the right to vote and hold office in 1930. He also adopted several daughters. One of them, Sabiha Gökçen, became the first woman combat pilot in Turkey.

These reforms did not come easily and in many cases garnered little support. Many religious and ethnic groups such as the Sufi dervishes and Kurds staged rebellions and

were ruthlessly put down. Other minority groups suffered or were exiled as a result of the new government.

A heavy drinker, Atatürk died of cirrhosis of the liver in November 1938. As he had no children he left no heirs and instead bequeathed to his country the democracy that he created, which would survive him to the present day. Although Atatürk forbade many basic concepts of democracy such as free press, trade unions, and freedom of speech, he paved the way for the future addition and implementation of these ideals.

KATIE BELLIEL

Aung San

(1915–1947) *Burmese nationalist and freedom fighter*

Aung San was born on February 13, 1915, at Natmauk in central Burma (Myanmar). Aung was the president of the student union at Rangoon University in 1938. He joined the left-leaning Dobam Asiayon (“We Burmese” Association) and was its general secretary between 1938 and 1948. Aung was also a founding member of Bama-htwet-yat Ghine (Freedom Bloc). At the time of WORLD WAR II he was very active in the resistance movement against the British. He went to Amoy, China, and met with the Japanese to seek help forming an army to fight the British. An anti-British unit was formed by the “Thirty Comrades,” who received military training on Hainan Island in Japanese-occupied China. Aung became the commander of the Burma Independence Army (BIA), which was formed on December 26, 1941. Ne Win, the future authoritarian ruler of Burma (1962–88), was one of the comrades.

The army was stationed in Bangkok and entered Burma in January 1942 along with the invading Japanese army. The BIA, which had formed a provisional government, became unpopular because of an influx of criminals into the organization. It was replaced by the Burma Defense Army (BDA), with Aung as commander. The BDA, trained by the Japanese, was a conventional army. The name BDA was changed to Burma National Army (BNA). In the Japanese-sponsored government Aung was minister of war.

Aung became disillusioned with the Japanese and discussed with the other resistance leaders their next course of action. The Anti-Fascist Organization came into being in April 1944. Later renamed the Anti-Fascist People’s Freedom League (AFPFL), it was formed with Aung as its president. He openly turned against the Japanese in March 1945 and switched his loyalty to the British, renaming the forces the Patriotic Burmese Forces.

The British then founded a new government, and he became its deputy chairman in the executive council, holding important portfolios of defense and foreign affairs. In January 1947 he went to London and negotiated with the British Labour government about granting independence to Burma. The Aung San–Attlee Agreement of January 27, 1947, guaranteed independence within a year. There would be an elected constituent assembly, and until it finalized its work, the country would be governed under the provisions of the GOVERNMENT OF INDIA ACT of 1935. The British government also would sponsor Burma’s admission to the United Nations. On February 12 Aung signed the Panglong Agreement, which supported the cause of a united country with the leaders of other Burmese nationalist groups. Under his guidance the AFPFL won a landslide victory in April elections to the constituent assembly, securing 196 out of a total of 202 seats.

Aung was concerned about his country’s future and called a series of meetings in Rangoon (now renamed Yangon) in June 1947. He urged people in a public meeting to remain disciplined in a speech on July 13. He was assassinated six days later, along with six other councilors, during a meeting of the constituent assembly. Aung San’s political rival, U Saw, a former premier, was found guilty of the crime and executed in 1948. On January 4, 1948, Burma became independent from British rule. Aung had become a martyr and a national hero and continued to inspire his people with his dedication and sacrifice. He was criticized by some for his collaboration with the Japanese; others say it was a tactical move to gain independence for his country. He turned against the Japanese at the opportune moment. His wife became a diplomat and later served as ambassador to India.

PATIT PABAN MISHRA

Australia and New Zealand

During the 1880s there were many attempts to establish a “federation” by which the six British colonies of Australia—New South Wales, Queensland, South Australia, Tasmania, Victoria, and Western Australia—would be able to come together under a single government. In 1890 it was finally agreed to call a convention in the following year and draft a federal constitution. Because of the depression of the 1890s, the constitution was not drawn up until 1898, and agreement from all the states was reached with Western Australia holding a referendum to agree to joining the Commonwealth of Australia in 1900. New Zealand decided not to join with Australia. As a result, on July 14, 1900, the first governor-general of Australia, being the representative of the British sovereign, was appointed, and on January 1, 1901, the Commonwealth of Australia was proclaimed in Centennial Park in Sydney, New South Wales.

Part of the reason why the federation had taken so long to negotiate was the intense rivalry between the states, which had to agree to hand over powers for defense, foreign relations, and foreign trade and which also had to agree to dismantle tariffs and restrictions on the sale of goods within the commonwealth. There were disagreements over where the new capital was to be, and initially it was in Melbourne. The first opening of the federal parliament took place there on May 9, 1901, with Edmund Barton as the first prime minister. Fittingly, some of the Australian contingents to China, sent in the wake of the BOXER REBELLION, had returned to Sydney a few days before the first parliament was opened. They were rushed down by train to take part in the ceremony. At the time, Australian soldiers, as well as New Zealanders, were also involved in supporting the British in the BOER WAR. The early soldiers had left as part of state units—after federation Australian Commonwealth units were dispatched.

After federation it was obvious that Melbourne could not remain Australia’s capital, and in 1902 a Capital Sites Enquiry Board started inspecting prospective sites, which had to be within 100 miles of Sydney. Eventually a site was agreed on, and in 1913 Lady Denman, wife of the governor-general, announced “I name

the capital of Australia Canberra, with the accent on the *Can*”—*Canberra* being the Aboriginal name for the area. The region around it then became the Australian Capital Territory (ACT), designed with a conscious attempt not to make the mistakes that had taken place in the building of Washington, D.C. The ACT was 100 times larger than the District of Columbia, and all land in it was declared under leasehold to prevent property speculators’ taking it over. The U.S. architect Walter Burley Griffin drew up plans for the city after he won first place in a worldwide competition for the appointment. It was not until 1927 that a temporary parliament building was established there.

Over the same period, in New Zealand, which was also a self-governing “dominion,” Richard “King Dick” Seddon was prime minister of a liberal administration from 1893 until 1906. One of the major issues he faced was the need to encourage the expansion of agriculture by the establishment of more small farms. Both New Zealand and Australia during this period relied heavily on primary industries: farming and mining. Although the Australian economy was diversifying slightly, New Zealand’s main products were sheep/lamb/mutton, wool, and butter, most of which was exported to Britain. By 1913 New Zealand had become the largest exporter of dairy products in the world.

While the Liberals were in power in New Zealand, the trade union movement was growing in strength in both New Zealand and Australia. In 1889 a state Labour government was formed in Queensland, in northern Australia, and in 1891 the Australian Labour Party was formed. Seven years later, in 1898, the Trades and Labour Confederation decided to establish a New Zealand Labour Party, although it was not until 1935 that they were able to form a government. In Australia, in contrast, from 1904 to 1907 Chris Watson formed a minority administration and presided over the first national Labour Party government anywhere in the world, and in 1910 Labour achieved an absolute majority in the Australian parliament.

Australia and New Zealand were affected in the early 1910s by a small economic depression. This was followed by the outbreak of WORLD WAR I, and both countries were keen to support Britain, the “mother country” of many Australians and New Zealanders. Australian and New Zealand soldiers were immediately sent to Egypt, where, as the Australian and New Zealand Army Corps, they became known as Anzac. In 1915 they were deployed to Gallipoli in a failed attempt to capture the Turkish capital, Constantinople. In Australia and New Zealand this became an impor-

tant symbolic occasion for both countries, and many still visit Gallipoli each year on April 25.

After Gallipoli both Australian and New Zealand soldiers fought in France, with the Australian general Sir John Monash leading his men to victory in November 1918. During the war two attempts to introduce conscription in Australia failed; New Zealand maintained conscription throughout the conflict.

At the Versailles Peace Conference after the end of the war, Australia and New Zealand were represented by their respective prime ministers, William Morris “Billy” Hughes and William Ferguson Massey. Both were keen to ensure that the war had achieved something, and Australia was given charge of German New Guinea (which was merged with Papua to form Papua & New Guinea, later Papua New Guinea) and the Solomon Islands, and New Zealand was given Western Samoa.

The formation of the LEAGUE OF NATIONS after the war was treated differently by Australia and New Zealand. The former decided to play a more active role, but in New Zealand Massey felt that the organization was useless and that New Zealand should rely not on multilateral diplomacy but on the might of the Royal Navy. As a result, in the first 10 years of the League of Nations, New Zealand only sent three delegations to its annual conferences of the International Labour Organisation and did not ratify any of the league’s conventions until 1938. This was in spite of New Zealand’s election in 1936 to the League Council and a gradual move to support collective security.

THE DEPRESSION

During the 1930s in Australia and New Zealand the worldwide GREAT DEPRESSION saw widespread unemployment, which hit many families very hard. Others, fearing they might become unemployed, stopped spending money, further deflating the economy, and both countries were struggling to pay their war debts. Many of those badly hit were former soldiers who had fought in World War I and were now angry about a government that had “let them down.” Soup kitchens appeared, beggars were regularly seen in the streets, and children came to school malnourished. Some people turned to extreme political movements, and with the increase in strength of the trade union movement came the formation of pseudo-fascist organizations in Australia—the New Guard—and in New Zealand—the New Zealand Legion. In 1935 a Labour government came to power in New Zealand with Michael Savage as prime minister. When he died in 1940 he

was succeeded by Peter Fraser, who remained in office until 1949. In contrast, in Australia for most of the depression Joseph Lyons of the United Australia Party was prime minister, having defeated the Labour Party under James Scullin in 1932.

Pointing to the desire of both countries to connect with the wider world, Australian and New Zealand aviators began a series of remarkable pioneer flights. On September 10–11, 1928, the Australian aviator Charles Kingsford Smith made the first Australia–New Zealand flight. During that trip he met the teenage Jean Batten, who was to become a New Zealand flying legend. She moved to Sydney in the following year to train for a commercial pilot’s license. Kingsford Smith was to achieve numerous records for his flying across the Atlantic and Pacific Oceans and the Tasman Sea, as well as his October 1933 solo flight from England to Australia, and Jean Batten was to be the first woman to fly solo from England to Australia and back (1934–35), the first woman to fly the South Atlantic solo, and in 1936 the first person to fly from England to New Zealand.

In the arts Australian painters Hans Heysen, Arthur Streeton, William Dobell, and in the 1940s Sidney Nolan and Russell Drysdale were to gain international prominence, as were New Zealand artists Charles Goldie and Frances Hodgkins. Prominent artistic families the Lindsays and the Boyds flourished in Australia. Writers like Frank Clune and Ion Idriess wrote many books describing Australia and Australians—perhaps the most famous book by Idriess was about the quintessential Australian hero Harold Lasseter and the search for gold in central Australia. Other writers such as Miles Franklin, Ernestine Hill, Eleanor Dark, and Henry Handel Richardson dealt with Australia in fiction.

Poets such as Dame Mary Gilmore, Banjo Paterson, and Judith Wright are representative of that genre of Australian literature. New Zealand literature is widely known by way of Katherine Mansfield and crime fiction writer Ngaio Marsh. Australian actor Oscar Ashe and singer Nellie Melba achieved as much fame overseas as they did in Australia.

In the realms of medicine and science, respectively, Australian pathologist Howard Florey and atomic scientist Ernest Rutherford (from Nelson, New Zealand) were to make major contributions to the world. In Britain New Zealander Sir Arthur Porritt became surgeon to King George VI, and on the day of the coronation of Queen Elizabeth II in 1953 news was received of the scaling of Mount Everest by another New Zealander,

An Australian World War I recruitment poster calls for men to join the Allied cause. Though Australia and New Zealand became increasingly independent from Great Britain, both maintained strong cultural ties, especially in times of war.

Edmund Hillary, earlier that day, the first known ascent of the mountain.

In Australia and New Zealand the indigenous populations, the Aborigines and the Maoris, remained marginalized economically and socially. Gradually, the Maoris in New Zealand began, through their numbers and the fact that they all spoke a common language, to exert some political influence. Maori started to be taught in some schools and by the 21st century was widely taught throughout the country. By contrast, the Aboriginal people in Australia remained geographically on the fringes of cities and towns and were discriminated against in work and housing. Children were taken away from parents when they were young to be brought up in foster homes or children's homes, where they were alienated from their own culture. They became known as "The Stolen Generation." Although Maoris were always recognized as citizens of New Zealand, it

was not until 1967 that Aboriginal Australians had the right to vote.

In 1931 the British parliament enacted the Statute of Westminster, by which Britain relinquished powers over self-governing dominions. However, it was not adopted in Australia until 1942 and was finally adopted in New Zealand in 1947. In 1940 Australia established its own diplomatic posts in foreign countries: in Washington, D.C.; Tokyo; and Ottawa. New Zealand followed in the following year with a minister in Washington, D.C. Representation in commonwealth countries was still by a high commissioner and in other countries by an ambassador.

With the outbreak of WORLD WAR II in 1939, Australia and New Zealand both immediately declared their support for the United Kingdom, and soldiers from both countries were sent to the Mediterranean, serving in North Africa and in Greece. In December 1941, when

the Pacific War began, there was panic in both Australia and New Zealand over a possible Japanese invasion. Australian soldiers were immediately recalled from the Middle East, and some were sent into action in Malaya and Singapore, both of which quickly fell to the Japanese. On February 19, 1942, the Japanese bombed Darwin, causing significant physical damage and showing Australia's vulnerability to attack. Australian soldiers returning from North Africa were reinforced by large numbers of U.S. soldiers. Australian soldiers were then sent into action against the Japanese in New Guinea, where at Kokoda they managed to halt the Japanese advance and gradually drive them back. In contrast, in New Zealand soldiers were not recalled and continued to play an important part in the campaigns in the Western Desert and in Italy but a minimal role in the Pacific. U.S. soldiers also came to New Zealand, which at that point was largely defended by World War I veterans and teenagers who were hastily armed by the frightened government.

Australia and New Zealand, seeing their joint vulnerability, decided to conclude the Canberra Pact of 1944, which was to determine that after the war Australia and New Zealand would dominate the

South Pacific, and the United States would be excluded. As the Pacific War gradually saw the Japanese pushed back, New Zealand soldiers were recalled from Italy. Some were posted to the Pacific, but the war ended soon after. After the war both Australia and New Zealand became founding members of the United Nations, and both were led by governments that supported a multilateral approach to political problems.

JUSTIN CORFIELD

Balfour Declaration

The Balfour Declaration was a statement by the British government regarding Zionist aspirations for the creation of an independent Jewish state in Palestine. The statement took the form of a public letter from Lord Arthur James Balfour, the British foreign secretary, to Lord Rothschild, a prominent British Zionist and member of the renowned banking family. After many preliminary drafts the final statement, issued on November 2, 1917, read that His Majesty's government viewed "with favour the establishment in Palestine of a national home for the Jewish people." It went on to say that the British government would use its "best endeavours" to achieve that goal and that nothing should be done to prejudice "the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews" in other nations.

CHAIM WEIZMANN, a leading figure in the World Zionist Organization and a skillful diplomat, had been instrumental in securing British support for a Jewish state. Weizmann was a personal friend of Balfour's and had met with many key British officials to gain their sympathy for a Jewish state.

There were many motivations for the British to issue the Balfour Declaration in 1917. Some Christian Zionists supported a Jewish state for religious and moral reasons. But most government officials supported the declaration for political and wartime reasons. It was hoped that the declaration would encourage Russia to

stay in the war in spite of the revolutionary upheaval at the time. Some also thought the statement would prod the United States, where some key Zionists, especially LOUIS BRANDEIS of the Supreme Court, had important positions, to enter the war. However, the arguments that a Jewish state would support Britain in the Middle East and help to protect the vital Suez Canal were probably paramount in convincing many in the British cabinet to support the declaration.

Because most people in the West knew little or nothing about Palestine, many assumed that there were only a few non-Jews in Palestine and that their civil and religious (but not political) rights should be protected. However, in 1917, when the Balfour Declaration was issued, Palestinian Arabs, a mix of Muslims and Christians, made up over 80 percent of the population in Palestine. It was a predominantly agricultural society, and most people lived in settled villages. Palestinian Arabs and Arab nationalists, especially Sherif Husayn, immediately expressed their opposition to the Balfour Declaration. Sherif Husayn also argued that the statement contradicted the earlier SHERIF HUSAYN-McMAHON CORRESPONDENCE regarding the creation of an Arab state. But the Balfour Declaration did not mention the Palestinian Arab population by name, and they remained largely invisible to the Western world. Interestingly, some Jews also opposed the statement. Sir Edwin Montagu, a British Jew and secretary of state for India, opposed the creation of a Jewish state on the grounds that it would raise problems of dual nationality and might actually increase anti-Semitism.

The Balfour Declaration was a major step forward in the Zionist struggle to create a Jewish state in Palestine. At the Paris Peace Conference after the war, Weizmann used the Balfour Declaration to justify the creation of a Jewish state. However, neither Arab nor Jewish national aspirations would be realized after the war because the British and French implemented the SYKES-PICOT AGREEMENT, which essentially divided the Arab world between the two imperial powers. The division was formalized in the SAN REMO TREATY, and Britain made key decisions on how to rule its newly gained Arab territories, including Palestine, at the CAIRO CONFERENCE in 1921.

JANICE J. TERRY

Balkan Wars (1912–1913)

During 1912–13 the Balkan Peninsula witnessed two wars: the First Balkan War, which saw an alliance of Balkan states all but destroy the Ottoman presence in the region, and the Second Balkan War, fought between the former allies over the division of the spoils. The Balkan Wars were the result of the incomplete processes of nation-state formation in southeastern Europe at the beginning of the 20th century. Ever since the Congress of Berlin in 1878 warranted the continued existence of the Ottoman Empire in the region, the dominant foreign policy goal of the Balkan states had been expanding into European provinces. Their main motive was to recover territories that were perceived to be under foreign occupation. Thus, one of the dominant claims of the Balkan states at the time was that their fellow ethnic kin were still oppressed by the Ottoman sultan. Bulgaria, Greece, Serbia, and Montenegro justified their desire to extend into Ottoman-controlled Macedonia and Thrace through the principle of “liberation” of subjugated populations. For this purpose each country supported armed groups of its conationals that subverted and challenged the Ottoman regime. One of the aims of the YOUNG TURK revolutions of 1908 had been precisely to end these revolts, suppress rival national identities, and “Ottomanize” the population.

In this context the situation in the European provinces of the Ottoman Empire impressed on the Balkan governments the need to cooperate. External great powers such as Austria-Hungary, Russia, and Italy were also sizing up the opportunity to get their share of the crumbling Ottoman state, which was referred to at the time as the “sick man of Europe.”

The war that Italy launched against the Ottoman Empire in September 1911 hastened the resolve of Balkan governments to sit at the negotiating table. On March 13, 1912, Bulgaria and Serbia signed a treaty of alliance and friendship, which was accompanied by a secret annex anticipating war with Turkey and providing for the division of territorial acquisitions in case of a successful war. According to this annex the territory of Macedonia was to be divided into three zones: two zones that would belong, respectively, to Bulgaria and Serbia and a third one that was contested and would be subject to the arbitration of the Russian czar. At the same time Greece and Bulgaria were conducting separate negotiations, which culminated in the signing of a mutual defense treaty on May, 29, 1912, assuring support in case of war with Turkey. Bulgaria and Serbia had separate discussions with Montenegro, which concluded with verbal agreements that provided for mutual actions against the Ottoman state. By autumn the Balkan governments had managed to prevail over their mutual distrust and had formed a Balkan League premised on an extensive system of bilateral treaties.

The Balkan Wars began immediately afterward. On September 26, 1912, Montenegro opened hostilities invoking a long-standing frontier dispute as an excuse for declaring war. On October 2 Turkey hastily concluded a peace treaty with Italy, and on the next day it broke diplomatic relations with Bulgaria, Serbia, and Montenegro but tried to mend relations with Greece. On October 4, 1913, the Ottoman Empire declared war on the Balkan League. In turn Bulgaria, Greece, Serbia, and Montenegro declared war, accusing the Sublime Porte of not having implemented an article of the 1878 Treaty of Berlin, which insisted on the recognition of the minority rights of their conationals in Macedonia. This event began the First Balkan War.

With specific manifestos the governments of Athens, Belgrade, and Sofia informed their citizens that they were to fight for a common cause and against Ottoman tyranny. Military operations began on all frontiers of European Turkey. Within a month after the start of hostilities, the Balkan armies had won spectacular victories on all fronts. The Bulgarian troops had pushed the Ottoman army to the Çatalca

Turkish soldiers in the Balkans in 1912 line up for inspection. The two wars in the Balkans saw the effective end of the Ottoman Empire in the region. Following the war against the Turks, the other countries in the Balkans fought each other for territory.

line of defense, just 40 kilometers outside of Istanbul, and had besieged Adrianople (modern-day Edirne in Turkey). The Serbs had surged into Macedonia, reaching Monastir (Bitolj) on November 17, 1912, and together with Montenegrin forces had occupied the Sandzak of Novi Pazar and had besieged the town of Scutari (today Shkodra in Albania). The Greek troops advanced in Thessaly. They entered Thessalonica on October 28, only a few hours before the arrival of a Bulgarian detachment, and the town was occupied by both armies. In Epirus Greek detachments advanced all the way to Janina (present-day Ioannina in Greece) and on November 10 laid siege to the city.

By December 1912 the Ottoman rule in the Balkans was over. Save for the besieged Adrianople, Scutari, and Janina, the Ottoman troops had been driven out of the former European provinces beyond the Çatalca line covering Istanbul. Alarmed by the success of the Balkan armies, the great powers imposed an armistice on the belligerents on December 3, 1912. It was signed

by Bulgaria, Serbia, and Montenegro, who pledged that their troops would remain in their positions. Greece, however, did not join in, as it wanted to continue the siege of Janina and carry on with the blockade of the Aegean coastline. Yet despite the continuation of hostilities in Epirus, Greece, together with Bulgaria, Serbia, Montenegro, and Turkey, took part in the peace conference that opened in London on December 16, 1912. After two months of negotiations, toward the end of January 1913, a peace agreement seemed to be in sight. However, on January 23, 1913, a group of disgruntled Turkish officers overthrew the Ottoman government.

By January 30 fighting had resumed on the Çatalca line. On February 21 the Greek army captured Janina, and on March 13 the Bulgarian troops broke the Turkish defenses at Adrianople and occupied the city. On April 10, 1913, Montenegrin and Serb forces entered Scutari, but they had to withdraw eventually under the threat of war from Austria-Hungary. At this juncture the great powers again insisted on armistice and proposed

a peace treaty, which projected that all the territory west of a straight line stretching between Enos (Enez) on the Aegean Sea and Midia (Midye) on the Black Sea would be ceded to the Balkan states, that this territory was to be divided between the Balkan states under the supervision of the great powers, that an Albanian state would be established, and that the future of the Aegean islands was to be decided by international arbitration. By the end of May 1913 all parties taking part in the First Balkan War were compelled to agree to these conditions at the Treaty of London.

Yet at that time rifts started to appear among the Balkan allies over control of the “liberated” territories, with skirmishes between the Greek and Bulgarian troops occupying Thessalonica. Furthermore, the creation of an Albanian state confused the agreements made between Athens, Belgrade, and Sofia before the start of hostilities. Greece and Serbia insisted that the emergence of Albania deprived them of their anticipated gains on the Adriatic. Therefore, they asserted their right to retain the territories that their armies had already occupied in Macedonia at the expense of Bulgaria. Sofia insisted that the acquired territory should be divided in accordance with the principle of proportionality of the acquisitions to the military input. Athens and Belgrade insisted on a principle ensuring the balance of power among the members of the Balkan League.

Because of their shared interests, Greece and Serbia entered into secret negotiations and on May 19, 1913, reached an agreement for a military pact against Bulgaria. At the same time Romania, which had so far remained neutral, took the opportunity to obtain some concessions for itself. On the pretext of concern about the treatment of the Vlach population in Macedonia, Romania demanded that Bulgaria give up some of its territory in the contested Dobrudja region. Under pressure from Russia, Bulgaria agreed to cede the town of Silistra and the surrounding area to Romania. At the same time Bulgaria, urged by Austria-Hungary, refused to concede any territory in Macedonia to either Serbia or Greece.

In the beginning of June there were several military clashes between Bulgarian and Serbian troops. However, it was on June 16, 1913, by an oral command from the Bulgarian czar Ferdinand, that Bulgarian troops launched a full-scale attack on Greek and Serbian forces. Ferdinand was partly encouraged by promises by Austria-Hungary of assistance. However, a recent visit to Bulgarian-occupied Adrianople had also stirred in him a desire to revive the medieval Bulgarian Empire

and capture Constantinople. Thus, on June 16, 1913, the Second Balkan War began.

In the first few weeks the Bulgarian army had some limited success in holding to its positions, but by the end of the month the Serb, Montenegrin, and Greek armies were already on the offensive. On June 28, 1913, Romania also joined in the fray and declared war on Bulgaria. By July 6 Romanian troops had occupied the whole of northern Bulgaria, and a Romanian cavalry detachment arrived at the Bulgarian capital of Sofia. On June 30, 1913, Ottoman troops began attacks on Bulgarian positions, and on July 10 they recaptured Adrianople. By mid-July Bulgaria was suffering defeats on all fronts and had lost most of the territory it had gained during the First Balkan War.

The Second Balkan War ended in late August 1913. After a personal intercession by Emperor Franz Josef of Austria-Hungary, a peace conference was convened at Bucharest from July 17 to August 16, 1913. As a result of the Bucharest Peace Treaty, Serbia kept the territories of Macedonia, which its troops had obtained during 1912. Thus, it added Kosovo, Novi Pazar, and Vardar Macedonia to its territory.

Greece secured over half of Macedonia (Aegean Macedonia), the southern part of Epirus, and an extension into southern Thrace. Bulgaria received the smallest part of Macedonia (Pirin Macedonia) and a section of the Aegean coast, but it had to cede southern Dobrudja to Romania. As a result of its treaty with the Ottoman government, Bulgaria also gave up its claims to Adrianople. In the meantime an independent Albanian state was officially created by the Conference of Ambassadors in London on July 29, 1913.

This series of treaties concluded the Second Balkan War. It was bloodier than the first one, cost more lives, witnessed horrific crimes against civilians, and deepened the divisions between the Balkan states. All sides in the Balkan Wars acted in a way that indicated that their main aim was not simply the acquisition of more territory but also ensuring that this territory was free of rival ethnic groups. The atrocities committed during the Balkan Wars led to the establishment of an international commission of inquiry set up by the Carnegie Endowment for International Peace. It produced an extensive report detailing the crimes committed by all combatants against their enemies and against civilian populations.

Instead of resolving the problems between nationalities in the region, the Balkan Wars further exacerbated interethnic tensions. The psychological trauma of the wars and the displacement of populations increased

the suspicions and divisions between the Balkan states. The new boundaries that were established as a result of the Treaty of Bucharest in 1913 produced conditions for persistent resentment and created a feeling of unjust expropriation of territory and eradication of people. The suffering and the perceived injustice that all nations in the Balkans experienced molded the foreign policies of regional states. In this respect the Balkan Wars became a major source of the grievances that contributed to the beginning of WORLD WAR I.

EMILIAN KAVALSKI

Bao Dai

(1913–1997) *Vietnamese emperor*

Prince Nguyen Vinh, later known as Emperor Bao Dai, was the son of Annamese emperor Khai Dinh. Born in Hue on October 22, 1913, Bao Dai was educated in France. He became emperor of Vietnam on November 6, 1925. On his ascension to the throne he took the name Bao Dai, meaning “Keeper of Greatness.” After taking the throne he returned to France and resumed his education, and the regent Ton-Thai Han served until he came of age in 1932. Bao Dai married Jeanette Nguyen Huu Hao on March 24, 1934. As the empress Nam Phuong, she bore him two sons and three daughters.

Bao Dai was a reformer, seeking to modernize Vietnamese educational and judicial systems and to end archaic court practices such as the kowtow, and he put young reformers in his first cabinet of 1933. However, the French government continually undermined his initiatives and his authority.

In the mid-1930s, with France threatened by Germany, Bao Dai saw his opportunity to seek greater autonomy. When Germany conquered France the new French government at VICHY was compelled to surren-

der Indochina to Japanese control. Japan declared that it had freed Vietnam from foreign rule.

Under Japanese control Bao Dai established a nationalist government. Although he declared Vietnamese independence, in reality Vietnam switched from French to Japanese control. Under Japanese occupation a communist resistance formed led by Ho Chi Minh communist guerrillas called the Vietminh.

At the Potsdam Conference in 1945, the Allied leaders FRANKLIN ROOSEVELT, WINSTON CHURCHILL, and JOSEPH STALIN agreed that Vietnam would be divided between Chinese and British control after the war. A month after the Japanese surrender in August 1945, Ho Chi Minh announced the creation of the Democratic Republic of Vietnam. Vietnam became a battleground among the Vietminh, royalists, democrats, and supporters of the French.

Bao Dai stepped down to avert a civil war and in March 1946 went into exile in Hong Kong. However, France returned him as a constitutional monarch in an attempt to unify Vietnam. Bao Dai was hesitant, but French agreement to recognize the independent Vietnam led him to return. In 1948 Bao Dai agreed to lead a unified Vietnam under the French Union, received permission to return, and became head of state in 1949. But he soon left Vietnam for Europe, vowing never to return until his country was truly independent.

In 1954, when France lost the crucial battle at Dien Bien Phu against the Vietminh, it finally agreed to grant independence to Indochina. At Geneva in June 1954, representatives of the United States, the Soviet Union, China, Britain, and France met to decide how to end conflict in Vietnam. They agreed to divide Vietnam at the 17th parallel, with Ho Chi Minh ruling the north and Ngo Dinh Diem ruling the south as prime minister under Bao Dai. The Vietnamese could choose whether to live in the north or south. By July 1956 an election would be held to determine whether Vietnam would be unified.

With U.S. backing Ngo Dinh Diem held a plebiscite on whether to abolish the monarchy in October 1955. The United States opposed Bao Dai because he was out of touch, and supported Diem. American adviser Colonel Edward Lansdale suggested that ballots should be in two colors in hope that the Vietnamese would vote based on their beliefs that red meant good luck while green meant misfortune. Voters complained that they were harassed at the polls, with ballots for Diem counted and votes for Bao Dai tossed into the trash. Diem won 99 percent of the vote. Bao Dai lost the election and went into exile in France. In exile Bao Dai spoke

often on behalf of peace and unity for Vietnam, but he lived the life of a playboy. He died in a Paris military hospital on July 31, 1997.

JOHN H. BARNHILL

Batista, Fulgencio

(1901–1973) *Cuban soldier, politician, and dictator*

Fulgencio Batista was born in Banes, located in the Oriente province of Cuba, on January 16, 1901, to a poor farming family. He received little formal schooling, although he attended night school, and joined the army in 1931, where he studied stenography. He was promoted to sergeant in 1928. During 1931–33 he took part in a conspiracy to overthrow the dictatorship of Gerardo Machado, which was successful in August 1933. In September of that year he led a revolt against Machado's successor, Manuel de Céspedes. During this period he violently suppressed a number of attempts to defeat his control. During one attempt a number of those who surrendered to Batista and his men were executed. He was then promoted to colonel and commander in chief of the army by the provisional president, who Batista thanked by leading another revolt that overthrew him. Batista resigned from the army in 1944 and was elected president.

Batista was not allowed to succeed himself as president by Cuban law, so he left office in 1944. He traveled widely and lived in Florida for a time. He returned to Cuba and was elected to the senate in 1948. He staged another coup on March 10, 1952, and regained control of the government. He was elected president unopposed on November 1, 1954. In that election he was not expected to win and again used force to suppress his opponents.

During his presidency, Batista promoted education and public health care, encouraged independent economic development, and improved labor conditions. He also simplified administrative procedures. However, his regime was exceptionally corrupt, and

that, along with his brutal terror against political opponents, turned the people against him. There were several revolts, most notably the guerrilla campaign led by Fidel Castro in 1956, which was successful by late 1958. His regime was overthrown by Castro's forces, and he resigned the presidency on January 1, 1959, and fled the country with his family and many of his followers to the Dominican Republic. He later settled in Portugal, where he wrote *Cuba Betrayed* in 1962. He also wrote *I am With the People* (1939), *Repuesta* (1960), *Stones and Laws* (1961), *To Rule is to Foresee* (1962), and *The Growth and Decline of the Cuban Republic* (1964). Batista died in Spain on August 6, 1973.

JAMES E. SEELYE, JR.

Batlle, José

(1856–1929) *president of Uruguay*

José Batlle y Ordonez was the president of Uruguay from 1903 to 1907 and again from 1911 to 1915 and remains one of the great politicians in the history of Uruguay. He was a passionate believer in pan-Americanism and introduced many social reforms that made Uruguay one of the most liberal countries in the world.

José Batlle (pronounced "Bajé") was born on May 21, 1856, the son of Lorenzo Batlle y Grau, who was one of the major figures in the Uruguayan Colorado Party. Lorenzo was minister of war during the siege of Uruguay's capital, Montevideo. In 1868, when José, Jr., was 12, his father became president of Uruguay, a post he held until 1872. José spent four years studying at Montevideo University and then traveled around Europe, returning to Montevideo in 1881. He followed his father into the Colorado Party and on June 16, 1886, founded the newspaper *El Día*, which became the party's paper. In the following year José Batlle became political chief of the department of Minas, an area near Montevideo, and in 1890 he reorganized the Colorados. His wife, Matilde, was also from an

important Colorado family. Her father was Manuel Pacheco y Obes, who had fought in the defense of Montevideo with José's father.

From February 15 to March 1, 1899, José Batlle was acting president of Uruguay, and he made an unsuccessful bid for the presidency in 1900. Following his narrow victory in elections four years later, on March 1, 1903, he succeeded Juan Lindolfo Cuestas. Many people knew José Batlle as the son of a former president and a man of great intellect. However, when he was elected he had no public platform to implement. This was in spite of his being one of the most prominent journalists in Montevideo. When he was elected, Aparicio Saravia, the leader of the rival party, the Blancos, launched a rebellion that lasted for 18 months. When the Colorados defeated the Blancos at the Battle of Masoller on September 1, 1904, it marked the end of fighting as a way of sorting out political problems in the country. Saravia was mortally wounded in the fighting, and his forces were annihilated.

Batlle promoted discussion on social reform and gave Uruguay much of its heritage of democracy and the system of the welfare state, almost alone in Latin America. In 1905 he ended the payment of income tax by low-level civil servants, encouraging people to join the government service. In the following year by presidential decree, he established secondary schools in every city in Uruguay. His third major reform, in 1907, was to allow women to divorce their husbands if they were being cruelly treated, while men could only divorce on grounds of adultery. That bill spent two years in the Uruguayan congress before it was finally made law. Other social reforms included the removal from public oaths of references to God and other Christian beliefs and the removal of crucifixes from hospitals.

When his term of office ended on March 1, 1907, Batlle went to Switzerland, where he became an admirer of the plural presidency. He was also hugely influenced by the social reforms in Europe during this period, and when he returned to Uruguay he was determined to establish a complete welfare state. His first move was to shore up the financial side of his government, and in 1912 he established the Banco de Seguros, the state insurance bank, and took over the state mortgage bank.

In 1913 Batlle wanted to introduce a collegiate head of the executive branch of government on the Swiss model. This caused a massive split in the Colorados, which lasted until 1966 and was blocked by dissident Colorados and the Blancos until Batlle threatened in 1919 to run for a third term. This forced his enemies

to decide to back the project as a way of reducing any future power he would have. In 1914 Batlle instituted social security for people who were unemployed. He also legislated for employers in bakeries and textile factories to provide chairs for women employees. In the following year he finally pushed through a law that had taken four years of debates. This established the eight-hour workday. At the same time the government took over the telephone services and power generation facilities. The two were merged to form the Usinas Eléctricas y los Teléfonos del Estado (the State Telephone and Electrical Facilities). Many secondary schools were created around the country, and everybody was guaranteed a free high school education. The university was enlarged and also allowed to admit women.

Many of these reforms were paid for by the increasingly wealthy beef industry, which expanded dramatically. It was to provide much of the meat required by the British war effort during WORLD WAR I. José Batlle stood down as president on March 1, 1915, and went into retirement. He died on October 20, 1929.

JUSTIN CORFIELD

Ben-Gurion, David

(1886–1973) *prime minister of Israel*

Born as David Josef Gruen in Plonsk, Russia, David Ben-Gurion studied the “Lovers of Zion” movement at a school established by his father. At an early age he met and greatly admired Theodore Herzl, the founder of the International Zionist Movement, who died when Ben-Gurion was 18. It was from then on that he was determined to carry through with what Herzl had only dreamed of—the establishment of a Jewish state. Because of his determination and in fear of the widespread anti-Semitism that plagued eastern Europe, Ben-Gurion moved to Palestine in 1906. He initially worked as a laborer and remained active in the Poalei Tzion movement, which he joined at 17. In 1910 he was elected a member of the editorial board of the *Achdut*

(unity) newspaper and shortly thereafter adopted the Hebrew name David Ben-Gurion.

In hopes of changing the anti-Zionist Ottoman policies in Palestine he went to Constantinople, Turkey, in 1912 to study law and government. At the outbreak of WORLD WAR I Ben-Gurion returned to Palestine but was arrested as a known member of Poalei Tzion and was deported. He moved to New York City and began Hehaultz, the American wing of Labor ZIONISM, and in 1917 married Paula Munweis, with whom he had three children. Certain that the Ottoman authorities would never support Zionism, he strategically altered his plans and joined Ze'ev Jabotinsky's call to form Jewish battalions within the British Army to liberate Palestine from the Ottoman Empire.

Ben-Gurion and his family returned to Palestine in late 1918. Ben-Gurion formed the Histadrut, the Federation of Laborers in Israel, in 1920 and was elected secretary-general in 1921. He also established the HAGANAH, the paramilitary force of the Labor Zionist movement, which facilitated underground Jewish immigration and provided the backbone of the future Israel Defense Force (IDF). In 1930 Ben-Gurion formed the Israel's Workers Party, Mapai, which became the government during the first three decades of Israel's existence. He was elected chairman of the Zionism Executive and chairman of Histadrut, was regarded by the British as the official representative for the Jews in Palestine, and was instrumental in purchasing arms from Europe.

Ben-Gurion was elected the leader of the World Zionist Organization's Department of Defense in 1946. From this and his other positions he pressured the British to either grant the Jews a state in Palestine or to quit the mandate. In 1947 Britain chose the latter. On May 14, 1948, David Ben-Gurion announced Israel's declaration of independence and became leader of its provisional government. The surrounding Arab nations invaded Israel, and violence increased between the Arabs in Israel and the Jews. Ben-Gurion recognized the rationale of Arab objections to Zionism early on and was aware of the nature of the clash between two genuine claims to the same land; however, he and others believed that the establishment of a Jewish homeland was crucial for the survival of Judaism.

Equipped with a stronger military force, Israel defeated the Arabs, and Ben-Gurion became the prime minister on February 26, 1949, a post he held until 1963 except for a period of two years (1953–55). In 1970 he resigned from politics altogether and worked on his autobiography at Kibbutz Sde-Boker until his death in 1973.

JENNA LEVIN

Black Dragon and Japanese ultranationalist societies

Owing their origins to the yakuza, Japan's native organized crime group, Japanese ultranationalist societies gained strength in the ex-samurai class during the reign of Emperor Meiji. The purpose of one such society, organized in 1901, was the expansion of Japanese control past the Amur River, the border between northeastern China (Manchuria) and Russia. The river, named Amur in Russian, has a Chinese name that translates as the Black Dragon River, hence the name for the society. The Black Dragon Society and other new types of yakuza organizations considered themselves righteous gangsters who worked for the rights of the people, reverence for the imperial institution, and total Japanese domination of Asia.

By the beginning of the 20th century, the reign of Emperor Meiji had turned Japan into a world power with a growing economy and a population of around 45 million people. Commerce flourished in Japan. As the economy grew and the priorities of the population shifted toward consumerism, gangs grew in power as they organized laborers in businesses such as construction, gambling, building the new metal-wheeled rickshaw, and running street stalls. Gang bosses often opened legitimate businesses to act as covers for underground work. Often they paid off local police to keep their activities quiet.

As their power grew, the yakuza increased their presence in politics. Eventually, close ties to influential officials developed, and many gangs worked under government sanction that protected them from persecution. Since both sides were motivated by opportunism, ideology played only a small part at this time, and cooperation between the gangs and the government resulted. There was always a conservative slant to the

yakuza, but as the Japanese increased their international military presence and some Japanese sought greater democracy, the new yakuza became more conservative and ultranationalist.

First erupting on the southernmost Japanese island of Kyushu, ultranationalism became the defining force behind Japan's move to extreme conservatism. The island served as the home to a large number of discontented ex-samurai. Many of these samurai had already been taken advantage of by charismatic patriots and politicians who fought against the perceived disregard for tradition among the modern sector. The city of Fukuoka, located closest to mainland Asia, had developed into a center of xenophobic ultranationalism.

From this center of antigovernment ideology, Mitsuru Toyama emerged as a strong leader who effected lasting change in Japanese organized crime. During his 20s, Toyama's political activities sent him to jail for three years, and upon his release he joined his first nationalist society, called the Kyoshisha, the Pride and Patriotism Society. Toyama handed out money to his followers on the streets in the manner of those before him, earning him the moniker Emperor of the Slums. Next he began enlisting the disgruntled youth of Fukuoka and created a workforce of disciplined and dedicated fighters.

Toyama made a move in 1881 upon the founding of the Genyosha, the Dark Ocean Society. According to the tenets of its charter, the Dark Ocean Society vowed to revere the imperial institution, love and respect the nation, and defend the people's rights. Even with such vague intentions, Toyama exploited the passion of the ex-samurai for Japanese expansion and total rule. Toyama was able to successfully tap into this sentiment and create a strong political, paramilitary force. The work of the Dark Ocean Society, whose very name indicated expansion across the small divide of ocean between Japan and mainland Asia, was a campaign of strength. Using blackmail, assassination, and other forms of terror as a catalyst, the Dark Ocean Society was successful in exerting influence over government officials and ultimately played a critical role in pushing Japan into mainland Asia and war with the United States.

An offshoot of the Dark Ocean Society, the Black Dragon Society was known for their espionage, sabotage, and assassination methods in Japan, China (especially in Manchuria), Russia, and Korea. The ultimate objective of the Black Dragon Society was domination of Asia. The natural successor of the Dark Ocean Society, the Black Dragon Society took over Dark Ocean followers along with Dark Ocean policies and goals. Under the patronage and guidance of the Dark Ocean

Society's Toyama, the Black Dragons pushed Japan into a victorious war with Russia, committed political assassinations, and helped create the conditions for a Japanese invasion of Asia. For 30 years, the Black Dragon Society flourished. They discouraged Japanese involvement in capitalism, democracy, and anything associated with the West.

In the 1920s, even during the TAISHO democracy and the increase in Japan's liberalism, the Black Dragons grew. As a result the Japanese polity was overwhelmed by assassination, police repression, and an increasingly renegade military. Ultranationalist groups increased in power, even receiving money from the imperial family. The Black Dragon Society evolved into the paramilitary arm of a dominant political party.

Boer War

The Boer War, from 1899 to 1902, was a conflict between Great Britain and the Boers, or Dutch settlers, in South Africa. The Boers were mostly farmers who had settled as early as the 18th century in South Africa. The British wanted to unify their Cape Colony and Natal colonies and the Boer republics of the Orange Free State and the South African Republic. The discovery of gold in Transvaal in 1886 led more English settlers to South Africa. These new settlers, called *Uitlanders* by the Boers, raised Boer concerns over the possible loss of valuable farmland to the English, who were predominantly interested in the mineral resources of South Africa.

After British leaders attempted to incite an uprising among the English in Transvaal in the Jameson Raid of 1896, the rift between the British and the Boers widened. As a result, the Boer leader Paul Kruger won the 1898 election as president of the South African

Soldiers man their guns during the Boer War, which pitted the agrarian Dutch settlers of South Africa against the British.

Republic. To undercut possible British moves, the Boers demanded that the British withdraw all their troops; when the ultimatum was rejected, the Boers attacked the Cape Colony and Natal, laying siege to the cities of Kimberley, Mafeking, and Ladysmith. The defense of Mafeking was led by Robert Baden-Powell, the founder of the Boy Scouts. The future prime minister of Britain WINSTON CHURCHILL also participated in the war, as did the Indian nationalist leader MOHANDAS K. GANDHI, who served in the British medical corps.

After initial defeats, the British rallied their troops and in 1900 appointed HORATIO HERBERT KITCHENER, who had just successfully taken the Sudan, as the commander in chief. With superior firepower the British army successfully lifted the sieges, but the Boers then resorted to hit-and-run guerrilla warfare tactics, some of which they had learned from the Zulus in earlier confrontations. To defeat the Boers, Kitchener adopted techniques that were used against guerrilla fighters throughout the world in the 20th century. These included slash-and-burn attacks against civilian farms and cutting off supplies of food and arms to Boer fighters by placing the civilian population in concentration camps. Thousands of Boer women and children were rounded up and placed in armed camps, where many starved to death. Their farms were then burned to the ground, thereby depriving the Boer fighters of cover and food supplies. Many indigenous Africans were also placed in camps. Some were sent to camps in Bermuda, India,

and St. Helena. Almost 30,000 Boers, mostly women and children, and 14,000 Africans died in the camps. The destruction of much of the countryside also led to food shortages. In the spring of 1902 the Boers were forced to accept defeat. Under the Treaty of Vereeniging all of South Africa became part of the British Empire.

JANICE J. TERRY

Bonhoeffer, Dietrich

(1906–1945) *theologian and social activist*

Dietrich Bonhoeffer was a German pastor and brilliant theologian who was made famous by his role in the German resistance movement. He was executed in April 1945 for his involvement in plots to overthrow ADOLF HITLER.

Bonhoeffer and his twin sister, Sabine, were born on February 4, 1906, in Breslau, Germany (now Wrocław, Poland). His father, Karl Bonhoeffer, was a distinguished psychiatrist, and his mother, Paula, presided over the early education of her eight children with the aid of a governess, entering her children for state examinations at an early age.

In 1912 the Bonhoeffers moved to Berlin, where Dietrich's father took a post as a professor of psychiatry. By age 14 Dietrich Bonhoeffer had already decided to pursue theology. His family was not particularly religious, attending church only occasionally, but respected his decision even at a relatively young age.

In 1923 at age 17, Bonhoeffer entered the University of Tübingen. In 1924 he switched to the University of Berlin, a center for theology made famous by one of its founders, Friedrich Schleiermacher. The theology faculty was headed by Adolf von Harnack, an eminent theologian, and Reinhold Seeberg, a well-known systematic theology professor and author. Bonhoeffer stood out as a brilliant, studious, and somewhat independent thinker.

It was during this period that Bonhoeffer began to read and be influenced by the works of the Neo-Orthodox movement, a reaction to the liberal theology of Schleiermacher and von Harnack made famous by Karl Barth. Bonhoeffer began work on his doctoral thesis in mid-1926 under Seeberg, finishing in December 1927 at age 21 with a rarely awarded *summa cum laude*.

Assigned to work for a year as an assistant pastor in a Lutheran church in Barcelona, Spain, Bonhoeffer plunged into congregational life. Always interested in children, Bonhoeffer quickly organized a Sunday school program aimed at boys, who responded well to his leadership. In 1930–31 Bonhoeffer did postgraduate study in New York at the Union Theological Seminary. Returning to Berlin, he took up his pastoral duties but continued his association with the university. By this time he had published two books (*Sanctorum Communio* and *Act and Being*). In 1931 Bonhoeffer attended an ecumenical conference in Cambridge, England. This conference proved to be the start of his leadership role in the ecumenical movement as well as a wartime cover for many of his activities. During this period, Bonhoeffer's own faith grew more intensely personal rather than simply academic.

In 1933 Adolf Hitler came to power and quickly moved to control the churches. After spending several months in England in late 1933, where he was able to inform British Christians about the increasingly severe plight of Christians in Germany, Bonhoeffer returned to Berlin. During 1934 the regional churches that were still relatively free from government influence formed what was called the Confessing Church. This church body decided to form unofficial seminaries separate from the theological schools at the government-controlled universities. Bonhoeffer was asked to run a seminary consisting of 23 seminarians in the country town of Finkevalde. It was during this time that Bonhoeffer wrote his best-known work, *The Cost of Discipleship*, which was based on some of his evening lectures to the seminarians. In the context of Germany with its unquestioning obedience to the führer, Adolf Hitler, Bonhoeffer focused on what true obedience as a Christian meant. He would eventually prove such obedience with his own life.

In 1939, in part to avoid a call-up into the military, Bonhoeffer went to England for several months. During that time he met with church and ecumenical authorities trying to persuade them to support the Confessing Church on an official basis. In the United States Bonhoeffer was offered a position as pastor to the German refugees in New York. Accepting it would have meant he could never return to NAZI Germany, then on the verge of war. After much discussion and prayer he chose to return to Germany to share in the fate of his country.

Bonhoeffer's brother-in-law, Hans von Dohnanyi, was already deeply involved in the resistance movement, which at the time was trying to persuade influential generals to arrest Hitler. Hitler's early successes in the war precluded this strategy. In 1940 Bonhoeffer

began working for the Abwehr, the German intelligence service headed by Admiral Canaris ostensibly to gather information for the Germans from his international church contacts. This cover provided Bonhoeffer with the freedom to travel internationally as well as avoid a military call-up but at the same time drew him deeper into the circle of resistance, which included Admiral Canaris himself. In 1941 and 1942, well aware of the conspiracy to overthrow Hitler, which involved several German generals, Bonhoeffer traveled several times to Switzerland, Norway, and Sweden looking for ways to communicate via church channels to officials in England and elsewhere the necessity for a speedy recognition of the new government that would result from Hitler's overthrow.

In March 1943 Dohnanyi was involved in a failed plot to blow up Hitler during one of his inspection tours. The Gestapo investigations of the resistance were drawing their nets tighter around Canaris and his associates, and on April 5, 1943, Dohnanyi, Bonhoeffer, and several others were arrested on suspicion of conspiracy and put in prison in Berlin. Bonhoeffer had carefully prepared for this moment and was able to evade the charges against him successfully, although he was never released from prison. His case never came to trial, and in 1944 it increasingly looked like Bonhoeffer would be released. During his time in prison Bonhoeffer secretly worked on his book *Ethics*, which was published posthumously.

On July 20, 1944, there was another assassination attempt on Hitler by the conspirator von Stauffenberg. The resulting investigation uncovered incriminating evidence against Canaris and Dohnanyi and indirectly against Bonhoeffer. This judgment sealed the fate of all the conspirators. They were moved to a concentration camp, where they were hanged on the personal orders of Hitler on April 9, 1945.

BRUCE FRANSON

Bonus Army

During the summer of 1932, in the midst of the GREAT DEPRESSION, as many as 25,000 WORLD WAR I veterans calling themselves the Bonus Expeditionary Force

marched on Washington, D.C., to ask Congress for bonuses promised for wages they had lost while in service to their country. The bonuses, authorized in 1924, would not mature until 1945, but the former servicemen clamored for any small portion that would aid the survival of themselves and their starving families.

Many of the desperate vets inhabited abandoned downtown buildings or erected makeshift abodes of cardboard, wood, and tin in a shantytown located across Washington's Anacostia River. Peaceful demonstrations and parades past the capitol were organized by Walter Waters. President HERBERT HOOVER refused to meet with Waters or the other vets. The House of Representatives passed Texas representative Wright Patman's bill for accelerated payment, but the Senate defeated the measure by a vote of 62 to 18.

With Congress set to recess for the summer, some of the protesters accepted an offer of free transportation back to their homes; others had nowhere else to go. With the help of superintendent of police Pelham Glassford, many others defiantly remained in Washington. On July 28 Secretary of War Patrick J. Hurley ordered Glassford to remove the emaciated veterans, many of whom occupied condemned buildings. Feeling betrayed, veterans hurled rocks at the police, who opened fire, killing one and wounding another. That afternoon 600 federal troops led by General DOUGLAS MACARTHUR moved on the marchers in compliance with the president's order to evict.

MacArthur, perhaps convinced that these were communists, not veterans, exceeded his orders and attacked the desperate itinerants with tanks, gas grenades, and cavalry; MacArthur ordered the troops across the Anacostia River, where fire was set to the Bonus Marchers' makeshift village, killing three and injuring 54, including children and women. Public sentiment favored the Bonus Marchers. President Hoover could not escape the wrath of an astonished U.S. public that rebelled at such harsh tactics. It was a final straw in his decisive loss in that fall's election. Hoover's Democratic successor, FRANKLIN DELANO ROOSEVELT, while opposing payment of the bonus, created the Civilian Conservation Corps, setting aside jobs for many veterans; soon after his wife, ELEANOR ROOSEVELT, met with a small group of marchers in 1933. In 1944, during WORLD WAR II, Congress passed and Roosevelt signed the G.I. Bill of Rights, the United States' first-ever comprehensive and reliable benefit system for its military veterans.

JOHN M. MAYERNIK

Bose, Subhas Chandra

(1897–1945) *radical Indian politician*

Subhas Chandra Bose abandoned an intended career in the Indian civil service to support MOHANDAS K. GANDHI and the INDIAN NATIONAL CONGRESS (INC) in the cause of Indian independence from Great Britain. However, he later found Gandhi's nonviolent movement too moderate, attacked Gandhi for negotiating with the British authorities, and organized a Socialist Independence of India League in 1928. He also became a labor leader, organized strikes, and was elected president of the All-India Trade Union Congress (1929–31). When Gandhi suspended his *satyagraha* (truth, force, nonviolent protest) campaign against the British in 1933, Bose and the left-wing members of the INC called for Gandhi's suspension from the organization and its reorganization.

A showdown between Gandhi and Bose in 1937 resulted in the first contested election for president of the INC, which Bose won in 1938. He became an open admirer of ADOLF HITLER and took on the title *Netaji*, which means leader in Hindi, in emulation of the German NAZI leader. His policies so severely fractured the INC that it could not function, compelling him to resign. He broke off relations with the INC and Gandhi as a result and formed the Forward Bloc Party. Whereas Gandhi and the INC advocated noncooperation with the British government when WORLD WAR II broke out, Bose sponsored terrorism, sabotage, and assassination. His party was banned, and he fled India, arriving in Berlin via Afghanistan and the Soviet Union. He was welcomed by Hitler, who provided him with a radio facility to broadcast anti-British propaganda to India.

Bose arrived in Japan in mid-1943 in a German U-boat. He proceeded to Japanese-occupied Malaya and helped organize the "Indian National Army," which consisted of 40,000 soldiers from among the 45,000 Indian prisoners of war captured in Malaya and Singapore. However, command and control of that army remained in Japanese hands. In October 1943 Bose announced the creation of a Provisional Government of Free India and assumed the titles of head of state, prime minister, and minister of war and foreign affairs.

The people he supposedly controlled were the 2 million ethnic Indians who were living in Japanese-occupied Malaya and Singapore. However, the Japanese initially put Bose on the Andaman Islands. In November 1943 Bose and other Japanese puppets met in Tokyo in the Greater East Asia Conference.

This conference marked the high point of Japan's "New Order" in Asia and the GREATER EAST ASIA CO-PROSPERITY SPHERE it created and controlled. Bose's "government" was moved to Rangoon in Burma in 1944 as the Japanese-controlled Indian army advanced across the Indian border. It was turned back and surrendered in Rangoon in May 1945. Bose escaped with his Japanese patrons, fleeing to Indochina, and when Japanese forces collapsed there he left Saigon for Taiwan on the last Japanese plane, which crashed on landing. Captured officers who served under Bose were tried and convicted but were given suspended sentences.

JIU-HWA LO UPSHUR

Boxer Rebellion

The Boxer Rebellion in China was the culmination of the reactionary policies of the dowager empress Cixi (Tz'u-hsi) after she crushed the reform movement of 1898 and imprisoned Emperor Guangxu (Kuang-hsu), who had advocated the thoroughgoing reforms. The defeat of the Boxers by forces of seven Western powers and Japan would bring deeper losses of sovereignty and humiliation to China and totally discredit the Qing (Ch'ing) dynasty.

The Boxer movement was rooted in half a century of Western victories over China and the unequal treaties they had imposed on the Chinese, resulting in deep popular resentment among all segments of the people. Many Chinese resented the activities of Western Christian missionaries who had been free to build churches and proselytize throughout the country and were not subject to Chinese laws. The expansion of Western trade in China and the low tariff that they imposed made Chinese-produced goods noncompetitive against Western imports, damaging the economy. Shandong (Shantung) province was particularly hard hit by economic hardships, the result of frequent flood-

Watching the "Foreign Devils": Cantonese citizens peer through the gate of the English Bridge, barring them any further access.

ing of the Yellow River beginning in the 1880s. Local frustration reached a high point in 1898 due to two events: a particularly bad flooding of the Yellow River and Germany's establishment of a sphere of influence in Shandong. A Chinese secret society called the Yihe chuan (I-ho chuan), or the "Righteous and Harmonious Fists," capitalized on the popular discontent. It was an offshoot of the White Lotus Society and the Eight-Trigram Sect, which had risen in revolt against the Qing dynasty in the late 18th century. Their members claimed magical powers through the practice of shadow boxing, charms, and magical arts. Westerners called its members Boxers because they practised martial arts.

The Boxers were mostly poor unemployed farmers and were initially noted for being both antiforeign and antidynastic. However, they were soon co-opted by Cixi and the powerful reactionary Manchu nobles who surrounded her, who hoped to use them to consolidate their power. They skillfully manipulated the Boxers to support the Qing and whip up xenophobia among the people. The Boxers were initially most active in Shandong. However, acting governor YUAN SHIKAI (Yuan Shih-k'ai) was no fool and knew that their martial arts were no match for firearms. He defied Cixi's order to

afford them protection, suppressing them and driving them out of the province. They found a new home in Zhili and Shanxi (Shansi) provinces and were welcomed by Cixi into Beijing (Peking), where they were organized into a militia and “proved” their invulnerability to bullets by a demonstration before her with blanks. Then followed a reign of terror by the Boxers, killing Westerners, Chinese converts to Christianity, and anyone who opposed them. Cixi executed a number of officials opposed to the Boxers in the capital, thereby silencing opposition.

On June 21, 1900, Cixi issued an edict declaring war against all Western nations, ordered all Chinese diplomats stationed in the West to return home, and ordered provincial governors to round up all foreigners. She also ordered the cutting of telegraphic links between China and the outside world. Several Western diplomats were killed in the capital city, and a Boxer force besieged the Western diplomatic quarters. Fortunately, governors in the south and eastern provinces, including the senior statesman Li Hongzhang (Li Hungchang) and Yuan Shikai, among others, jointly declared the court’s declaration of war illegitimate and their intention to suppress the Boxers and protect the foreigners in their territories. Likewise, Chinese diplomats stationed in the West declared Cixi’s moves illegitimate since the rightful ruler, Emperor Guangxu, was held prisoner by her.

A relief force consisting of units of Great Britain, France, Germany, Russia, Austria-Hungary, Italy, the United States, and Japan was organized and captured Beijing on August 14, lifting the siege of the diplomatic quarters because with no artillery pieces, the Boxers had been unable to capture the sandbagged buildings that held the diplomats, Western missionaries, and Chinese Christians inside. Meanwhile, Cixi, her nephew the captive emperor, and her supporters had fled Beijing disguised as farmers. The city and environs were subjected to severe destruction and looting by the conquering soldiers.

Diplomats of the eight powers then negotiated terms among themselves to dictate to China. The Boxer Protocol (1900) had 12 clauses: official apologies, punishment of the guilty, suppression of antiforeign organizations, no civil service examinations to be held in provinces that supported Boxer activities, the demolition of Chinese forts at Taku (that controlled entry to Beijing by sea), no import of arms by China for two years, the Western powers to be able to garrison troops at designated points in northern China and to fortify their diplomatic quarters, the abolition of the Zongli

Yamen (Tsunli Yamen) that had conducted Chinese foreign affairs since 1862 (to be supplanted by a new ministry of foreign affairs), and an indemnity of 450 million gold taels (1 tael=1 1/3 ounces) to be paid over 40 years. China was not represented at the negotiations and was not permitted to change a word in the protocol. Li Hongzhang was appointed head of the delegation to offer apologies to the Western powers—he died soon after completing the task. Allied soldiers evacuated Beijing in September 1901. Cixi returned to Beijing in 1902 and issued a proclamation blaming Guangxu for all that had happened.

The Boxer Rebellion was propelled by popular anger against Western imperialism that was manipulated by an ignorant and reactionary court headed by Cixi. Both the Boxers and Western troops caused terrible suffering among innocent people, the inevitable collapse of the Boxer Rebellion plunged China’s existence into jeopardy, and ultimately it spelled the death knell of the Qing dynasty.

JIU-HWA LO UPSHUR

Brandeis, Louis D.

(1856–1941) *U.S. Supreme Court justice*

A son of German immigrants who became a crusading attorney and the United States’ first Jewish Supreme Court justice, Louis Brandeis made his mark as a leading progressive and helped shape President FRANKLIN D. ROOSEVELT’S NEW DEAL.

Brandeis was born in St. Louis but made Boston his home soon after graduating from Harvard University. He became a wealthy lawyer while also pursuing cases on behalf of embattled labor unions, immigrants, and others left behind in Gilded Age America. He took on streetcar and railroad interests and wrote MUCK-RAKING articles about banking. In 1910 New York City cloakmakers struck local sweatshops. Brandeis

negotiated a settlement satisfactory to both the International Ladies' Garment Workers Union (ILGWU) and the manufacturers.

Brandeis believed that big business tended to excessively concentrate economic power, harming regional and local enterprises and eliminating true competition. He played a key role in making the Constitution's Fourteenth Amendment, used mostly to bolster corporate rights since its adoption in 1868, into a vehicle expanding rights for ordinary people. His biggest victory came in 1908 when in *Muller v. Oregon* the Supreme Court unanimously ruled that the state could prevent manufacturers from making women work more than 10 hours a day. Brandeis's win came just three years after the Court had invalidated a maximum hours statute for bakery workers. In what was soon nicknamed a "Brandeis Brief," its namesake wrote a 112-page document that went far beyond narrow legal precepts, adding sociological information that, in the words of the *Muller* decision, included "extracts from over ninety reports of committees, bureaus of statistics, commissioners of hygiene, inspectors of factories, both in this country and in Europe, to the effect that long hours of labor are dangerous for women. . . ."

By the time President WOODROW WILSON nominated Brandeis, a political ally, to the Supreme Court, Brandeis had a national reputation as "the people's attorney." Nevertheless, his confirmation process was difficult. Both his liberalism and his religion were held against him. His "fitness" was questioned by leading attorneys, including former President William Howard Taft, and officials from his alma mater opposed him. Brandeis was confirmed by a 47-22 Senate vote in 1916.

Considered a reliably liberal member of a rather conservative court, Brandeis was a supporter of the New Deal but by no means a doormat. In 1935 he joined in the unanimous *Schechter* decision that killed Roosevelt's National Industrial Recovery Act, a centerpiece of the New Deal program. In 1932 Benjamin N. Cardozo joined the Court as its second justice of Jewish descent. Brandeis was instrumental in mentoring Felix Frankfurter, a law professor and Roosevelt aide, who became the third Jewish member of the Court, replacing Cardozo when he died in 1938. Brandeis, who was 80 when Roosevelt proposed his controversial 1937 Court-packing plan, was offended but decided to retire in 1939.

Brandeis was not especially religiously observant but took a strong interest in ZIONISM during WORLD WAR II. His Court duties and a falling-out with European Zionists, including CHAIM WEIZMANN, reduced his

involvement, but Brandeis continued to back creation of a Jewish state in British Palestine. In 1948, seven years after Brandeis's death and the year of Israel's founding, Brandeis University opened in Waltham, Massachusetts, commemorating its namesake as a Jewish-American legal pioneer and supporter of social justice.

MARSHA E. ACKERMANN

British mandate in Palestine

Although British control of Palestine started on December 11, 1917, the Palestine mandate was not approved by the council of the League of Nations until July 24, 1922, through the TREATY OF SAN REMO. The mandate was formally established on September 29, 1923. Some of the causes of the delay were uncertainties about the territorial boundaries of the new entity and the issue of the contradictory future obligations of the Mandatory Power. The land's symbolic and political significance by far exceeded its local or even regional importance.

The historical cradle of the Jewish people and the holy land of Christianity, Palestine had for many centuries been inhabited by a mainly Muslim and Arab-speaking population. Since the beginning of the 20th century the Zionist movement, established at the congress at Basel in 1897, sought to recreate there the Jewish national home, but up until WORLD WAR I it still had no international recognition and only limited Jewish support. During World War I on November 2, 1917, the British foreign secretary, Arthur James Balfour, seeking Jewish international support, issued a declaration assuring his government's support for the establishment in Palestine of the Jewish national home. The Palestine mandate copied the text of the BALFOUR DECLARATION, as both Britain and the LEAGUE OF NATIONS apparently believed that building a Jewish national home and protecting the Arab majority's rights and position were not incompatible objectives.

The Palestine mandate received by Britain in 1920 included the future Transjordan, but this was transformed into a separate territorial unit. The Emirate of Transjordan, never considered part of historic Palestine, was explicitly excluded from the area of Palestine designed as the Jewish national home. In this framework

of the Palestine mandate the Jews enjoyed numerous advantages over the local Arab Palestinian population. With the help of worldwide Jewish communities and the British government the Zionists made enormous progress in developing an up-to-date economic, social, and political system.

Their numbers increased quickly because of growing immigration, from 83,790 in 1922 to 174,606 in 1931, and were estimated at 528,702 in 1944; they grew from 12 percent of the total population in 1922, to about 17 percent in 1931, to about 31 percent in 1944. In spite of that, the Jewish population remained a minority and would not have achieved their goals and aspirations without constant British military and security guarantees and protection. In practice the British granted considerable autonomy to the various religious groups along the lines of the old Turkish *millet* system and intended to prevent the development of the national-minded Palestinian Arab ethnic community. Lack of self-rule institutions and elected representatives deprived the Palestinian population of many political chances in the future. Led mainly by the clan (*hamula*) and big land-owning families, the Palestinian population in the country by 1936 had increased to about 1 million, primarily as the result of a high birth rate.

The British government started to introduce limitations on Jewish immigration to Palestine, but these quotas and the very concept of the absorptive capacity of the country became controversial, particularly in the 1930s and early 1940s. The situation in Palestine deteriorated largely under the impact of external factors, which included the GREAT DEPRESSION and HITLER'S assumption of power in 1933 followed by the NAZI regime in Germany. Legal and illegal Jewish immigration to Palestine increased dramatically, from 9,553 in 1932 to 61,854 in 1935, because of which Arab-Jewish relations became tenser. Even before that, especially in 1921 and 1929, there had been violent clashes between the two communities. The Jewish Self-Defense Force, HAGANAH, was formed on June 15, 1920, and eventually evolved into the Israeli Defense force (IDF).

Between 1936 and 1939 there was the great Arab uprising, directed predominantly against the British mandatory power but also against Zionist settlers. The revolt began with a general strike that lasted some six months and soon evolved into a large-scale peasant revolt that mobilized the entire Palestinian Arab population. Almost 1,000 Palestinians and 80 Jews were killed in the first year, and by 1939 the British military had either killed or imprisoned most of the key Palestinian leaders. The revolt considerably weakened Palestinian political and

military organizations and caused the loss of key leaders who might have been effective after WORLD WAR II in the ongoing Arab-Israeli conflict.

The British also tried to find a political solution to the existing dilemma of conflicting Zionist and Palestinian demands for national control over the same territory. In 1936 the Peel Commission was sent to Palestine, and in 1937 it concluded that the mandate was unworkable in its present form. The Peel Commission recommended the partition of Palestine into a Jewish state, a Palestinian area to be merged with Transjordan, and Jerusalem and its neighborhood remaining under direct British control. The partition plan was opposed by both sides.

In May 1939 the Statement of Policy on Palestine replaced the partition plan with new directives. The British government declared that it wanted to establish "an independent Palestine State." This state was to be established within 10 years. During that period Jewish immigration would be limited to 15,000 per year during the first five years, after which no further Jewish immigration without Arab consent would be allowed. In 90 percent of Palestine, the transfer of Arab lands was forbidden or restricted.

Predictably, the most negative reaction came from the Zionist and Jewish circles, who dubbed it the "Black Paper." The most radical wing of the Zionist movement, the revisionists, almost immediately initiated violent actions against the British administration and the Arabs. The smuggling of arms and illegal immigrants into Palestine had begun before 1939, but it continued and intensified after that. Between 1939 and 1943 about 20,000 illegal Jewish immigrants and 19,000 legal ones entered the country.

After World War II several factors, such as U.S. support for the Zionist cause, the decline of British economic and political power, and the impact of the HOLOCAUST on world opinion persuaded the British to submit the Palestine question to the United Nations on April 12, 1947. On May 15, 1948, the British mandate was terminated, and the British evacuated their troops from Palestine. Caught between conflicting obligations and facing the decline of their own power, the British had no choice but to leave.

ANDREJ KREUTZ

Bryan, William Jennings

(1860–1925) U.S. political leader

Although he lost the presidency three times, William Jennings Bryan used powerful oratory and sympathy for America's downtrodden to transform the Democratic Party. In the WOODROW WILSON administration, Bryan tried unsuccessfully to keep the United States out of WORLD WAR I. A committed Christian, he spent his final days in Tennessee, opposing Darwinian evolution at the SCOPES TRIAL and thereby entering history as a hero to the devout and a laughingstock to an urbanizing nation.

Bryan grew up in rural Salem, Illinois, becoming a lawyer and a Democrat like his father. In 1887, seeing greater political opportunity, he moved to Nebraska, where he became in 1890 only the second Democrat to win a congressional seat in Nebraska's 23 years of statehood.

In an era that esteemed oratory, Bryan spoke clearest and loudest, attracting national attention as he took up "prairie insurgency" causes that challenged both major parties. A supporter of direct senatorial election and banking reform, he called for federal intervention on behalf of farmers and laborers who felt themselves oppressed. Bryan sided with those who demanded unlimited coinage of cheaper silver money, positioning himself in the depression year of 1896 as the one candidate who could make populist demands a reality. The Chicago nominating convention erupted in cheers when Bryan finished his 20-minute "Cross of Gold" speech. The next day Bryan outpolled 12 other hopefuls, winning nomination on the fifth ballot.

Bryan broke campaign tradition by barnstorming 18,000 miles through 26 states, while Republican senator William McKinley conducted a genteel campaign from his Ohio front porch. Despite attracting a huge following of "believers," Bryan could not match the Republicans' fund-raising prowess and had trouble

attracting urban support. He lost decisively and would lose again to McKinley in 1900 and to William Howard Taft in 1908.

Although he volunteered for the 1898 Spanish-American War (but never saw action), Bryan opposed imperialism and especially opposed U.S. efforts to rule the Philippines. Yet he disregarded Jim Crow laws that stifled African-American political participation. Bryan calculated that his political success depended on white votes from the "Solid South." Even so, black leader W. E. B. DUBOIS saw hope in the "Great Commoner's" concern for the poor and exploited.

Bryan's tenure as Woodrow Wilson's secretary of state was disastrous. Wilson, who meddled in the MEXICAN REVOLUTION and the Caribbean, did not share Bryan's idealistic pacifism. In June 1914 World War I broke out in Europe. Bryan counseled true neutrality but resigned after a German U-boat attack on Britain's *Lusitania* in 1915 killed 128 Americans and prompted a harsh presidential warning.

Although Bryan was a dedicated Christian and teetotaler who championed PROHIBITION, he was no rube. He became wealthy from speaking engagements yet supported the graduated income tax. He traveled widely abroad, visiting Russian writer and pacifist Leo Tolstoy. Bryan (and his wife, Mary Baird Bryan) strongly backed WOMEN'S SUFFRAGE. By the 1920s, though, Bryan seemed quaint to a new generation. His focus on Darwinism's evils and the Bible's truth seemed especially antimodern, even though he was among the first evangelists to speak on radio.

So when Bryan was brutally interrogated during the 1925 Scopes trial by famed lawyer Clarence Darrow, once a Bryan supporter, the legendary orator's weak showing seemed to prove the idiocy of his cause. Six days later Bryan, a diabetic, died in his sleep in Dayton. Mourned by thousands along its route, Bryan's funeral train carried him to burial in Arlington Cemetery. The Democratic Party of FRANKLIN D. ROOSEVELT and other future leaders would owe much to Bryan's initiatives.

MARSHA E. ACKERMANN

Cairo Conference (1921)

The Cairo Conference was convened by the British to decide how to govern their newly gained Arab territories after WORLD WAR I. Opening in March 1921, the conference represented a virtual who's who of British experts on the Middle East from the foreign office and the military. Lawrence of Arabia (T. E. LAWRENCE), champion of the Arab revolt; Gertrude Bell, an expert on Iraqi tribes and politics; as well as Sir Percy Cox, high commissioner for Iraq, and Sir Herbert Samuel, high commissioner for Palestine, all participated. The conference was chaired by WINSTON CHURCHILL, then secretary of state for the colonies.

The SAN REMO TREATY in 1920 had formalized British control over Iraq and Palestine, formerly territories of the now-defunct Ottoman Empire. However, the British had been caught off guard by the 1920 violent revolt against their occupation of Iraq. If possible, they wanted to avoid future confrontations that necessitated the deployment of British or imperial troops and that placed heavy financial burdens on the British treasury.

At the conference it was agreed that a plebiscite should be held in Iraq to elect a king who would rule in close conjunction with British advisers. Faysal, Sherif Husayn's son and a favorite of the British, was proposed as the British nominee. After some hesitation he accepted the position. Faysal won subsequent elections that were held under British supervision, and he duly became the king of Iraq. His heirs continued to rule

Iraq until they were overthrown in a violent military-led revolution in 1958. The installation of an Arab-led government made Iraq ostensibly independent, and it was ultimately granted entry into the LEAGUE OF NATIONS. But Iraq remained linked with Britain by a treaty that granted Britain extensive control over its foreign affairs and allowed the British military access whenever it chose.

Faysal's older brother Abdullah was selected to become amir (prince) and ultimately king of the land east of the River Jordan. Churchill coined this new entity, Transjordan, meaning on the other side of the Jordan. Abdullah was dependent on Britain for economic and military support, and his main military force, the Arab Legion, was led by a British military officer. This territory ultimately became the HASHEMITE MONARCHY IN JORDAN under the rule of Abdullah and his heirs. His great grandson, Abdullah II, ruled Jordan in the early 21st century. The creation of allegedly independent countries was meant to assuage Sherif Husayn and Arab demands that the promises regarding Arab independence after the war seemingly made by the British in the SHERIF HUSAYN-McMAHON CORRESPONDENCE be met.

In Palestine the British retained direct political and military control and assured their security concerns in the region, especially the protection of the vital Suez Canal. During the interwar years the British retained their preeminent position while attempting, with various degrees of success, to balance the conflicting national demands of the Palestinian Arabs for an independent

Arab state and the Zionists for an independent Jewish state. The BRITISH MANDATE IN PALESTINE lasted until after WORLD WAR II, when the British could no longer economically or militarily afford to maintain order in Palestine, and they consequently turned over the entire issue of who should rule Palestine to the newly formed United Nations.

The decisions made at the Cairo Conference failed to satisfy either Arab or Zionist demands for self-determination. They also formalized the division of the Arab territories into separate nations ruled by regimes established and in large part maintained by the British. The nationalist hostility and resentment fostered throughout the Arab world by the actions taken at the Cairo Conference lasted throughout the 20th century.

JANICE J. TERRY

Cairo Conference (1943)

China was Japan's first target during WORLD WAR II and fought alone from July 1937 until Japan attacked the U.S. Pacific naval base at PEARL HARBOR, the Philippines, and British interests in East and Southeast Asia in December 1941. These events led to a general declaration of war between the Allied and Axis powers and an expansion of World War II to Asia.

China's military position and diplomatic status improved significantly after December 1941. Militarily, it no longer fought alone. The Allies established the China-Burma-India theater of war, and Chinese leader CHIANG KAI-SHEK was appointed supreme commander of the China theater (which included Vietnam and Thailand) effective January 1, 1942. U.S. Lend-Lease aid to China increased, U.S. general Joseph STILWELL was appointed Chiang's chief of staff, and the until-now U.S. volunteers of the Flying Tigers were incorporated into the U.S. Fourteenth Air Force under the command of General CLAIRE CHENNAULT. On the diplomatic front, China was now recognized as one of the Big Four Powers among the 26 anti-Axis nations; it also became a founding member of the United Nations (UN) and a permanent member of the

U.S. officials leaving the 1943 Cairo Conference, which dealt with the future of Asia after World War II.

UN Security Council. New treaties were negotiated and signed between China, the United States, and Great Britain in 1943 that ended a century of inequality for China.

President FRANKLIN D. ROOSEVELT, a proponent of personal diplomacy, proposed a joint meeting with British prime minister WINSTON CHURCHILL, Soviet leader JOSEPH STALIN, and Chiang (Roosevelt had numerous meetings with Churchill). However, Chiang did not wish to meet Stalin due to his anger over the Soviet-Japanese Neutrality Treaty (1941) and Soviet assistance to the Chinese communists, both damaging to his war effort. Roosevelt agreed to meet first with Chiang and Churchill at Cairo, Egypt, and then with Stalin at Tehran, Iran. Accompanied by his popular U.S.-educated wife, Mei-ling Soong Chiang, Chiang met Roosevelt and Churchill in November 1943. The Cairo Declaration, published on December 1, 1943, stipulated the unconditional surrender of Japan, the complete restoration to China of territories that it had lost to Japan since 1895, the return of southern Sakhalin and the Kurile Islands to the Soviet Union, and that Japan give up the north Pacific islands it had received as mandates after WORLD WAR I.

The Cairo Conference was the only one during World War II that focused solely on Asia. It was also the first time in modern times that China's leader played a major world role. Roosevelt declared in his Christmas message in 1943: "Today we and the Republic of China are closer together than ever before in deep friendship and in unity of purpose."

JIU-HWA LO UPSHUR

Calles, Plutarco

(1877–1945) *Mexican president*

Plutarco Elías Calles was president of Mexico from 1924 to 1928, taking over from ALVARO OBREGÓN. He was the founder of the Partido Nacional Revolucionario (National Revolutionary Party), which in 1946 would become the Institutional Revolutionary Party and dominate Mexican politics until 1988.

Plutarco Calles was born on September 25, 1877, the son of Plutarco Elías Lucero, a Lebanese man hired by the U.S. Army to test the use of camels in the southwestern United States. He was orphaned when he was three and went to live with his father's sister, Josefa Campuzano, and her husband, Juan Bautista Calles. They looked after him well, and he took his uncle's surname as his own. Young Calles became one of the earliest teachers at the Colegio Sonora and also contributed some articles on problems in the Mexican educational system of the time. However, he left teaching, as he found the strictures too great for his independent thought.

During the MEXICAN REVOLUTION, Calles became a supporter of FRANCISCO MADERO and became mayor of Agua Prieta, a town on the Mexican side of the Mexican-U.S. border. When Madero was deposed and killed, Calles was involved in the resistance to the new government and rallied supporters of the revolution in Sonora. He was involved in a battle in 1915 against Maytorena, an ally of PANCHO VILLA, defeating him. However, he was a politician rather than a military strategist and became the interim and later the constitutional governor of Sonora. There he introduced some of the educational reforms that he had advocated as a teacher. He was also affected by the anticlerical traditions of the period, expelling all Roman Catholic priests from Sonora. He also introduced laws prohibiting the production and consumption of alcohol.

In 1914 President VENUSTIANO CARRANZA offered Calles a cabinet position on two occasions, with Calles finally accepting the post of minister of industry, trade, and labor in 1919. By this time Calles was seen as a

clear supporter of Alvaro Obregón, who was emerging as a major rival to Carranza. Both came from Sonora, and as the alliance between Carranza and Obregón began to falter Calles resigned from the cabinet and in April 1920 published his Plan de Agua Prieta calling on Sonorans to overthrow Carranza.

After the death of Carranza, Adolfo de la Huerta became president, and during his short presidency Calles became minister of war. He was then minister of the interior for three years during Obregón's period as president. It was not long before Obregón and de la Huerta were arguing, and very soon the latter was getting army support for a revolt. Calles sided with Obregón and quickly defeated the de la Huerta rebellion. When Obregón retired as president on December 1, 1924, Calles became the new president.

One of his most controversial political decisions was the Law Reforming the Penal Code. Published on July 2, 1926, this law reinforced the anticlerical provisions of the 1917 constitution by fining people who wore church decorations and even threatening five years in prison for anybody who questioned the law. Some Roman Catholics were involved in the CRISTERO REVOLT, which caused much trouble in central and western Mexico from 1926 until 1929.

Although Calles was a revolutionary, his enemies in the United States denounced him as a communist and even as a Bolshevik. On September 29, 1927, he established a direct telephone link with Calvin Coolidge. He also managed to get the new U.S. ambassador, Dwight Morrow, who had worked for banker J. P. Morgan, to get the famous aviator CHARLES LINDBERGH to visit Mexico City. There Lindbergh met Morrow's daughter Anne, whom he later married. Morrow was, however, critical of many of the measures that Calles had introduced.

Calles drew much of his support from the poor farmers, and his plan was to improve their lot as small businessmen. To help them, on February 1, 1926, he established the National Bank of Agricultural Credit, having overhauled the banking system and established the Bank of Mexico, modeled on the American FEDERAL RESERVE, five months earlier. He also introduced a new system of running the government finance ministry.

On November 30, 1928, Calles stood down as president, and with Obregón having been killed Emilio Portes Gil became provisional president. In 1934 Calles supported LÁZARO CÁRDENAS, who was elected president. In the following year the press became extremely critical of Calles, who returned from retirement to defend the decisions he had made in office. However,

in 1936 Cárdenas had Calles deported after he was accused of trying to establish his own political party. After some years in exile in San Diego, where he reflected on his time in office and played golf, in 1944 President Manuel Ávila Camacho invited him to return to the country to provide more unity during WORLD WAR II. He died on October 19, 1945, in Mexico City.

JUSTIN CORFIELD

Cárdenas, Lázaro

(1895–1970) *Mexican president*

Lázaro Cárdenas del Río was president of Mexico from 1934 to 1940 and was drawn into Mexican revolutionary politics during the presidency of FRANCISCO MADERO from 1911 until 1913. Born on May 21, 1895, in Jiquilpan de Juárez, Michoacán, Lázaro Cárdenas was the eldest of eight children. When his father died, Lázaro Cárdenas was 16 years old and had to look after the family, working variously for a printer, collecting taxes, and even in the local prison.

In 1913, with the overthrow of Madero, Cárdenas joined the Constitutional Army and served under ÁLVARO OBREGÓN and then PLUTARCO CALLES. When Obregón signed the Treaty of Teoloyucan, sending rival politician Adolfo de la Huerta into exile, Cárdenas was one of the witnesses. In 1928 he became a divisional general and also governor of Michoacán, where he became well known for his work on building roads, starting schools, and promoting land reform. Calles was president from 1924 to 1928, and Cárdenas served under him.

When Calles stepped down from office he was succeeded by Emilio Portes Gil, then by Pascual Ortiz Rubio, and then by Abelardo L. Rodríguez. All these men were seen as “puppets” of Calles, and when Cárdenas was nominated as the candidate for the ruling Partido Nacional Revolucionario (National Revolutionary Party), most people believed that Cárdenas was also under the control of Calles.

Cárdenas became president on December 1, 1934, and immediately set about trying to establish an administration that would earn the public’s respect. In a surprise move, one of his first acts was to cut his own salary in half. He then arrested Calles and many of his associates, and some of these were deported, includ-

ing Calles himself. Sweeping away many of the political and business elite, Cárdenas changed the name of his political party to the Party of the Mexican Revolution. In 1946 it would be renamed the Institutional Revolutionary Party. He also established a system of government whereby large trade unions, peasant organizations, and middle-class professionals played a major role in the political party, which took on a corporatist structure. Introducing a massive land reform program, Cárdenas granted large pay raises to industrial workers.

The money to pay for these developments was largely drawn from Mexican oil revenue, which followed the nationalization of the petroleum reserves. Cárdenas tried to negotiate with Mexican Eagle, a company controlled by Standard Oil of New Jersey, and Royal Dutch/Shell. However, oil executives refused a plan to establish a presidential commission to look into compensation for the companies. Eventually, on March 18, 1938, the oil companies agreed to accept 26 million pesos in compensation but rejected some of the other terms. For Cárdenas, the decision came too late, and at 9:45 P.M. he nationalized the oil reserves. This resulted in some 200,000 people marching in the streets of Mexico City to celebrate for the next six hours.

On the home front, Cárdenas also had to deal with an internal rebellion led by General Saturnino Cedillo. It was believed that he had been supported by foreign oil companies, and Cárdenas tried to negotiate personally with the rebel commander. With the death of Cedillo in January 1939, Mexico’s last military rebellion came to an end.

For his foreign policy, Cárdenas was resolutely left wing and issued strong condemnations of the invasion of Abyssinia by Mussolini, the Japanese actions in China, the German *Anschluss* of Austria, and the German persecution of the Jews. Britain severed diplomatic relations with Mexico, which, curiously, led to the Mexicans’ selling oil to NAZI Germany. With the outbreak of the SPANISH CIVIL WAR, Cárdenas proclaimed his support for the Spanish Republic, supplying weapons and ammunition. At the end of the war, he allowed 30,000 Spanish republicans to migrate to Mexico. After the outbreak of WORLD WAR II, Cárdenas condemned the German invasions of Belgium and the Netherlands and also the Soviet Union for invading Finland.

After his term as president ended on December 1, 1940, Cárdenas became secretary of defense until 1945. Never wealthy, he retired to a modest house on Lake Pátzcuaro and died of cancer on October 19, 1970.

His son, Cuauhtémoc Cárdenas Solórzano, contested the Mexican presidential elections in 1988, and his grandson, Lázaro Cárdenas Batel, was also prominent in Mexican politics.

Further reading: Becker, Marjorie. *Setting the Virgin on Fire: Lázaro Cárdenas, Michoacán Peasants and the Redemption of the Mexican Revolution*. Berkeley: University of California Press, 1995; Krauze, Enrique. *Mexico: Biography of Power*. New York: HarperCollins, 1997.

JUSTIN CORFIELD

Carranza, Venustiano

(1859–1920) *Mexican president*

Venustiano Carranza Garza was president of Mexico from 1914 to 1920, having been a supporter of the MEXICAN REVOLUTION of FRANCISCO MADERO. Born on December 29, 1859, at Cuatro Ciénegas, in Coahuila, he was the son of Colonel Jesús Carranza, who had served in the army of Benito Juárez, and María de Jesús Garza.

Carranza was educated at the Ateneo Fuente in Saltillo and then at the National Preparatory School in Mexico City, returning to Coahuila, where he took part in running the family farm and ranch. At school he had become interested in Latin American history, and this led him into a late involvement in politics when he became an opponent of Porfirio Díaz, leading a successful revolt against Díaz's handpicked governor of Coahuila. Carranza, who had been a municipal president, was allowed to retain much of his political power in Coahuila and was also a senator in the national congress. He initially became a supporter of General Bernardo Reyes but quickly came to support the presidential candidate Francisco Madero. Madero was forced to flee into exile in Texas, and from there he rallied his supporters for an attempt to overthrow Díaz. It had been Díaz who had narrowly beaten Madero in the 1910 election, but many, like Carranza, felt that Díaz should not have been allowed to stand, as it went against the Mexican constitution.

Madero became president in November 1911, and Carranza, who had been his secretary of war and of the navy, was appointed governor of Coahuila, where he improved working conditions for people. However, Madero was soon faced with several rebellions against him, and in February 1913 he was overthrown and replaced by General VICTORIANO HUERTA. Carranza then led a rebellion against Huerta, leading what

became known as the Constitutionalist Army, as it supported the reinstatement of Benito Juárez's liberal constitution of 1857.

On May 1, 1915, Carranza became president and immediately tried to continue the reforms introduced by Madero. This included land reform, the formation of a more independent judiciary, and the decentralization of political power. He wanted to control the developing Mexican Revolution by trying to regulate the economic problems facing the country. Carranza introduced rules to regulate the economy, regulating banks and forcing foreign investors to renounce any diplomatic protection they had previously enjoyed. One of his major targets was the U.S.-owned oil companies, from which the taxation revenue rose 800 percent during Carranza's five years as president. The government also took over the railways and boosted support for the *Compañía Telefónica y Telegráfica Mexicana* (CTTM). Although some commentators have seen Carranza as being anti-U.S. and seeking to move against foreign companies, he was actually more focused on promoting Mexican industry.

Facing criticism for being too dictatorial, Carranza was eager to prove that his moves were popular, and in November 1916 he held a constitutional convention in Querétaro, which resulted in the 1917 constitution. Carranza felt that it was too radical but agreed to implement it. It made extensive provisions for education and labor, ensuring that government schools were "free and secular," and limited work to the eight-hour day, with minimum wages, the right to collective bargaining, and the right to strike. In March 1917 special presidential elections were held, and Carranza was reelected.

Carranza became involved in the Plan de San Diego Revolt, whereby Mexican Americans in Texas staged a rebellion that they hoped would bring Texas back under Mexican control. To help, many hundreds of Mexican soldiers, disguised as civilians, crossed into Texas to launch attacks, which ended in October 1915 when the U.S. government recognized Carranza. In 1916, in answer to attacks across the border by PANCHO VILLA, the U.S. government sent Brigadier General John J. Pershing with 10,000 soldiers, mainly cavalry, to pursue Pancho Villa into Mexican territory with reluctant help from Carranza. Pershing had to withdraw in February 1917 without capturing Villa.

As well as international problems, Carranza had some immediate trouble from revolutionary insurgents. However, he put a bounty on the head of EMILIANO ZAPATA, who was killed soon afterward. He then turned to grooming Ignacio Bonillas as his successor, but this

Carranza's government took control of the railways and boosted support for Mexican-owned business interests.

was to annoy ALVARO OBREGÓN. One of Obregón's men tried to kill Carranza on April 8, 1920, forcing the president to flee Mexico City for Veracruz. He was deposed on May 7, and on his way to Veracruz, on May 21, in Tlaxcalantongo, in the Sierra Norte of Puebla State, he was assassinated by Rodolfo Herrera. He was succeeded as president by Adolfo de la Huerta, who was president until November, when he was replaced by Alvaro Obregón.

JUSTIN CORFIELD

Casely Hayford, Joseph Ephraim (1866–1930) *West African lawyer and politician*

J. E. Casely Hayford made enormously important contributions to the theory of PAN-AFRICANISM and organized the NATIONAL CONGRESS OF BRITISH WEST AFRICA. Casely Hayford became an inspiration for Ghana's independence movement leader and first president, Kwame Nkrumah, though Nkrumah's generation no longer accepted the British presence in the way that Casely Hayford and his colleagues had.

Born in 1866, the man whom many would later describe as the “uncrowned king of West Africa” enjoyed educational opportunities in Africa and in

England. He completed his secondary education at a Wesleyan (Methodist) boys' high school in Cape Coast, the major port in the colony known to the British as the GOLD COAST. He spent several years as a teacher and principal in Wesleyan schools in both Accra (Nigeria) and Cape Coast. Following an apprenticeship to a European lawyer, he traveled to London in 1893 to become a lawyer himself. He completed legal training in 1896 and soon returned to Cape Coast, where he established an active, admired private practice.

Casely Hayford largely identified himself with other professional, European-educated black Africans, but he did not forget the traditions and worldview characteristic of the Fanti. During his youth Casely Hayford's father had participated in protests against the British erosion of native autonomy and customs, particularly with regard to land distribution and usage. This early exposure to political activism and to debates about the virtues (and flaws) of traditional, as opposed to British, law prepared Casely Hayford to become involved in the activities of the Aboriginal Rights Protection Society (ARPS) that formed at the end of the 19th century. Shortly after the introduction of the 1897 Lands Bill into the British parliament, traditional elites and intellectuals of the Gold Coast joined together in the ARPS to resist this proposed introduction of British property laws. Casely Hayford and John Mensah Sarbah supported the ARPS's effort by authoring pamphlets that explicated the traditional systems and presented cogent arguments against the Lands Bill.

Over the next few decades, he augmented his already strong reputation by publishing several books that revealed his intelligence and his passionate commitment to achieving prosperity in Africa. *Gold Coast Native Institutions*, published in 1903, dealt with the issues at stake in the Lands Bill controversy. He asserted that these societies already possessed democratic institutions and a high degree of civilization. He thought of native institutions as an asset, not a liability, in the quest for progress and modernization.

In his 1911 autobiographical novel, *Ethiopia Unbound: Studies in Race Emancipation*, Casely Hayford provided a fictionalization of Pan-Africanist themes and ideals. By evoking the achievements and influence of the “Ethiopian” (in Pan-Africanist ideology, this signified all Africans and not just the inhabitants of a particular country in Africa), Casely Hayford boasted that the African could feel proud of his heritage despite the various racial theories that cast him as inferior. The goal of activism should be to encourage the expansion of education, the preservation of

indigenous customs where they proved durable and useful, and the unification of Africans both within a single colony and within a region governed by a single imperial power. Eventually, this unity should extend across Africa and would reap tremendous economic, political, and cultural benefits for all Africans as they strived to modernize.

In keeping with his ideology, Casely Hayford worked to organize the National Congress of British West Africa in the years immediately following WORLD WAR I. The group met for the first time in 1920, and Casely Hayford became its vice president. The congress's agenda of promoting economic development, education, and democratic institutions without seeking complete independence from Britain reflected Casely Hayford's own hopes. He expected that British West Africa would become the continent's leader in the overall effort to modernize.

Future generations might criticize Casely Hayford for his gradualism and willingness to accept British rule. Even when frustrated by British intransigence, he never resorted to violence or other radical tactics that might have gotten results. Despite his relatively few concrete achievements, he became the leader of his generation and urged his fellow citizens to prepare to govern themselves and to take pride in their culture and traditions.

Bristol, UK: Thoemmes Press, 1903, reprinted 2003; Osei-Nyame, Kwadwo. "Pan-Africanist Ideology and the African Historical Novel of Self-Discovery: The Examples of Kobina Sekyi and J.E. Casely Hayford." *Journal of African Cultural Studies*, 12 (December 1999).

MELANIE A. BAILEY

Chennault, Claire Lee

(1890–1958) *U.S. officer and Air Corps organizer*

Claire Lee Chennault grew up in rural northeastern Louisiana. He served as a fighter pilot of the U.S. Army Air Corps during WORLD WAR I. After the war he served as an instructor in the army air service, organized and led an air corps acrobatic team called Three Men on a Flying Trapeze, and worked on perfecting air combat tactics. Health problems led to his retirement from the military in April 1937.

On July 7, 1937, Japan attacked China, beginning WORLD WAR II in Asia, whereupon Italy, later Japan's partner in the Axis, withdrew its air force mission from China. Chinese leader CHIANG KAI-SHEK contacted Chennault and his two partners in Three Men on a Flying Trapeze to help China develop an air defense system; all three accepted. Chennault arrived in China in 1938 and was commissioned as a major in the Chinese air force. He developed a close working relationship with Madame Chiang Kai-shek (Mei-ling Soong Chiang), commander of the Chinese air force.

Chennault first developed an effective air raid warning system by training Chinese spotters in Japanese-occupied areas, using radios to report the takeoff and direction of Japanese planes on bombing raids. In October 1940 Chiang sent Chennault to the United States to procure planes and enlist American combat pilots and a support staff to defend China. He secured 100 P-40 Tomahawks originally intended for Great Britain (which received instead a newer model of the plane), funded with \$25 million through the Lend-Lease Act passed by Congress. President FRANKLIN D. ROOSEVELT then signed an executive order that allowed U.S. active and reserve military personnel to resign from their commissions and join the American Volunteer Group (AVG) to serve in China. Over 300 people—pilots, mechanics, and support personnel—signed up, including four women (two nurses and two office workers). They were given fictitious job descriptions and headed for Toungoo, Burma. There Chennault trained them in tactics of aerial combat, with special attention to the planes and techniques used by the Japanese air force. The AVG men liked the shark mouth painted on British Tomahawk planes in Egypt but changed the logo to the "Flying Tiger." The final design was created by Walt Disney. Their flight jackets had a patch called the "blood chit" that read in Chinese: "I am an aviator fighting for China against the Japanese. Please take me to the nearest communication agency." It proved a lifesaver for pilots shot down in Japanese-occupied China.

The AVG's first action took place on December 20, 1941, against 10 Japanese bombers flying out of Hanoi for Kunming in China. Only one returned. Between that day and July 4, 1942, when it was disbanded, the AVG fought and won 50 actions despite overwhelming negative odds. For example, on February 25, 1942, the 166 Japanese planes attacking Rangoon, Burma, met nine Flying Tigers, who downed 23 planes and made another 10 probable kills, losing only one plane themselves. Chennault had the backing of thousands of Chinese workers, who repaired the runways after Japanese raids, and a large network of scouts, who kept him informed of

Japanese movements. The Chinese government paid the AVG salaries and bonuses for downed Japanese planes. In all, the AVG had 299 confirmed kills and damaged 153 planes so badly that they probably could not fly again, in addition to many destroyed on the ground. It also destroyed thousands of tons of Japanese supplies and many trucks. A total of 29 AVG men would become aces for recording five or more enemy kills. It lost 12 planes in combat, 61 planes on the ground, 13 men in action, and 10 in operational accidents. Although the U.S. government could not honor the AVG members, the Chinese government decorated many for heroism, as did the British government for their actions over Rangoon. Many of its men joined the regular U.S. Army Air Corps after the AVG was disbanded. Chennault also continued to serve in China, but for the U.S. armed forces.

The AVG lasted for less than two years and saw action for nine months. Chennault's skill, temperament, and courage were essential for molding its members into a great fighting unit that inflicted heavy damage on the Japanese, boosted Chinese morale, and contributed to Allied victory in World War II.

Following the war Chennault remained in China to assist the Nationalist government against the Communists. During that time he organized an airline called Civil Air Transport (CAT), which would later become a major resource for the U.S. Central Intelligence Agency in South Asia. Chennault died on July 27, 1958, in New Orleans, Louisiana.

Chiang Kai-shek

(1887–1975) *Chinese military and political leader*

Chiang's proper name was Chung-cheng, but he is better known by his courtesy name, Kai-shek. The son of gentry parents from Fenghua in Zhejiang (Chekiang) Province, Chiang was raised by a widowed mother, graduated from the first class of Paoting Military Academy, and then studied in a Japanese military school, where he joined Dr. SUN YAT-SEN's revolutionary move-

Chiang Kai-shek led the Nationalist forces in the Northern Expedition and was ultimately defeated in the Chinese Civil War.

ment, later called the Kuomintang (KMT, or Nationalist Party [Guomindang]), in 1911. It became his lifelong cause. He fought in the wars that overthrew the Manchu Qing (Ch'ing) dynasty in 1911 and with Sun out of power in 1912, became a businessman in Shanghai.

In 1922 Chiang answered Sun's call in Canton. Sun sent him to the Soviet Union in 1923, where he spent three months studying Red Army techniques and in talks with LEON TROTSKY (father of the Soviet Red Army). This trip made him deeply suspicious of Soviet intentions in China. Back in China he founded the Whampoa Military Academy, which trained officers in Sun's Three People's Principles and in modern military techniques. In 1926 Chiang led the NORTHERN EXPEDITION to unite China under the Kuomintang. His rapid victories led to the capture of southern China and the Yangzi (Yangtze) River valley by 1927, whereupon he broke with the Soviet Union, expelled its advisers, and purged the KMT of its left-wing elements, led by WANG

JINGWEI, and their CHINESE COMMUNIST PARTY (CCP) allies. By 1928 Chiang's forces had captured Beijing (Peking). Defeated warlords and those facing defeat promised to obey the KMT, and China was unified, at least nominally.

The KMT-led National Government established its capital at Nanjing (Nanking), where for the next decade Chiang led China's first modern government, whose major nation-building projects included roads and railroads, modern schools, new law codes that made women equal, industries, and the military. Chiang and his government were challenged by three enemies: the remaining warlords and his rival generals in the KMT, whom he partly succeeded in taming; the CCP, which established a Chinese Soviet Republic in Jiangxi (Kiangsi) province in southern China (Chiang defeated but did not eliminate them in the encirclement campaigns and the LONG MARCH); and Japan, which sought to seize Chinese territories beginning with the MANCHURIAN INCIDENT in 1931 and culminating in the MARCO POLO BRIDGE INCIDENT in 1937, which led to eight years of war that became part of WORLD WAR II. Chiang led China in an exhausting war in which Japan occupied the coast but could not conquer China. China's role in World War II led to its recognition as a leading Allied power. It was a founding member of the United Nations and a permanent member of the Security Council.

However, victory came at a heavy price. China's economy was ruined, tens of millions of refugees awaited resettlement, and Chiang's troops were exhausted. War vastly expanded the CCP's power, from 30,000 troops in 1937 to 3 million in 1945. The CCP refused to participate in a constitutional process initiated by the KMT, and civil war broke out between the KMT and CCP forces in 1946. Chiang resigned as president of China in 1948, and all China came under CCP control in 1949. Remnant KMT forces rallied behind Chiang on Taiwan in 1949, and Chiang resumed his presidency in 1950 and continued to serve until he died in 1975. Chiang's government undertook land reforms and successful economic measures on Taiwan with U.S. economic and military aid. By 1975 it was well on its way to the success that made it one of the "Four Tigers" of Asia.

JIU-HWA LO UPSHUR

Chinese Civil War (1946–1949)

Japan's unconditional surrender on August 14, 1945, ended WORLD WAR II. China was Japan's first victim and had suffered eight years (since 1937) of devastating warfare on its soil. In 1945 its economy was in ruins, while about a fifth of its population awaited resettlement. While the Nationalist, or Kuomintang (KMT [Guomindang]), government and its army, led by CHIANG KAI-SHEK, had borne the brunt of the fighting, the war had given the CHINESE COMMUNIST PARTY (CCP) unprecedented opportunities for growth, reflected in the explosive expansion of its forces from around 30,000 men in 1937 to 1 million regular troops and 2 million militiamen in 1945.

MAO ZEDONG (Mao Tse-tung) immediately ordered his troops, called the People's Liberation Army (PLA), to seize land and equipment from surrendered Japanese forces. When Soviet forces evacuated Manchuria (China's Northeastern Provinces, which had been the Japanese puppet state Manchukuo) in 1946, prior notification of the CCP enabled the PLA to seize most of the land and arms left by Japan in that region also. On the other hand, Nationalist forces were scattered along many battlefronts and less favorably disposed to take control of land from the defeated Japanese despite U.S. aid in providing transportation.

To forestall civil war, Chiang invited Mao to negotiate in the wartime capital Chongqing (Chungking) with the mediation of U.S. special ambassador George Marshall. An agreement was signed between the two Chinese leaders in January 1946 that included the calling of a Political Consultative Conference to form a coalition government and to form a national army. However, the two sides' irreconcilable goals led to resumption of a bitter civil war. The CCP also refused to participate in a KMT-convened national assembly to write a constitution. Realizing his failure to mediate a peaceful settlement, President HARRY S. TRUMAN recalled Marshall in January 1947 and appointed him secretary of state. The United States then washed its hands of events in China.

Mao Zedong, leader of China's Communists, addresses some of his followers on December 6, 1944.

The Nationalists won most victories in the early phase of the civil war, even capturing the CCP capital Yan'an (Yenan) in March 1947. However, the tide turned in mid-1947, which Chiang's resignation in January 1948 and a change of command to his vice president Li Zongren (Li Tsung-jen) failed to stem. On October 1, 1949, Mao proclaimed the establishment of the People's Republic of China, while the KMT government and remnant KMT forces fled to Taiwan, where the Republic of China remained.

The outcome of the Chinese Civil War was due to Communist military victory and defeat of the KMT forces. However, many factors contributed to the outcome. World War II and China's sufferings, the ruined economy, high inflation, and corruption were blamed on the KMT government. The CCP capitalized on the KMT's problems and won over many people with promises of social and economic reforms. Internationally, the CCP benefited from the support of the Soviet Union. The initial U.S. support and its later abandonment of the KMT contributed to its defeat and collapse. The outcome of the Chinese Civil War was a result of World War II in Asia and contributed to the worldwide cold war.

Chinese Communist Party (1921–1949)

The Chinese Communist Party (CCP) was formed in 1921. On October 1, 1949, with the founding of the People's Republic of China, it became the ruling party of that country.

The October Revolution in Russia in 1917 and the subsequent success of the Communist Party in the Russian Civil War were the main external influence in the founding of the CCP. Domestically, China's failure at the PARIS PEACE CONFERENCE in 1919 and the subsequent MAY FOURTH MOVEMENT/INTELLECTUAL REVOLUTION resulted in some left-wing Chinese, disillusioned with the West, to turn to Marxism. They were led by Chen Duxiu (Ch'en Tu-hsiu) and Li Dazao (Li Ta-chao), dean of the faculty of arts and head librarian, respectively, of the National Beijing (Peking) University, who organized Marxist study groups in several cities across China. In April 1920 Grigorii Voitinsky, an agent of the Third Communist International (Comintern), arrived in China; he conferred with Chen and Li, and they decided to organize a Chinese Communist Party. In 1921, 12 men (neither Chen nor Li could attend, but MAO ZEDONG [Mao Tse-tung] did) met secretly in the French Concession in Shanghai, formed the Chinese Communist Party, and elected Chen Duxiu general secretary.

Starting in 1921 Russian Communist representatives began to negotiate with the Chinese government to establish formal diplomatic relations; one was Adolf Joffe, who arrived in Beijing in August 1922. Hitting an impasse with the Beijing government, he went to Shanghai in January 1923 to meet SUN YAT-SEN, father of the Chinese Republic and leader of the Nationalist Party, or Kuomintang (KMT), then out of power.

The result was a joint communique on January 26, 1923, whereby the Soviets agreed to assist Sun in reorganizing the KMT on the condition that the approximately 300 CCP members would be allowed to join

it. The communique clearly stated that the communist social order and the Soviet system were not suited to China. Despite this many KMT members were opposed to the agreement. The CCP was not consulted about the Sun-Joffe agreement.

Political shifts in 1923 allowed Sun to establish a government in Canton in opposition to the warlord government in Beijing. Many Russian advisers arrived in Canton, headed by Michael Borodin, who became political adviser to both Sun and the KMT. In January 1924 the KMT held its First Party Congress, which reorganized the party on Soviet lines and elected several CCP members, including Li Dazao and Mao, to key KMT committees. Sun's chief lieutenant in military affairs, CHIANG KAI-SHEK, was sent to Russia to study the organization of the Red Army, and General Galen (Blücher) came to China to help him train army officers.

A Sun Yat-sen University was established in Moscow to train Chinese in revolutionary techniques—its first students included Chiang's son Chiang Ching-kuo (later president of the Republic of China on Taiwan) and Deng Xiaoping (Teng Hsiao-p'ing, later general secretary of the CCP). The UNITED FRONT, however, was a marriage of convenience. Sun needed Soviet help, and the Soviets were willing to aid him in order to give the CCP a chance for rapid growth. Sun died in 1925, but the United Front continued under left-leaning KMT leaders.

In 1926 Chiang Kai-shek was appointed commander in chief of the National Revolutionary Army and began a NORTHERN EXPEDITION to oust the warlords. Chiang was spectacularly successful due to his tactical brilliance, the fighting quality of an ideologically motivated army, an upsurge in nationalistic fervor, and Communist propaganda that won the support of peasants. By early 1927 he had gained control to the Yangzi (Yangtze) River valley. Soviet leader JOSEPH STALIN intended to use the KMT to nurture the CCP to a point that it could seize power, then to throw out the KMT, in his words, like "squeezed out lemons." But Chiang squeezed first, expelling the Soviet advisers and purging the CCP. Many Communists were killed, but the leaders fled to the hills in the Jiangxi (Kiangsi) province in southeastern China, where they organized the Chinese Soviet Republic with its capital at a little town called Ruijin (Juichin).

The Nationalist government ruled China from the capital city Nanjing (Nanking) between 1928 and 1937. Besides having to deal with several major warlord revolts, it was faced with the twin challenges of Japanese imperialism and the Communist revolt. Chiang launched five campaigns against the CCP in Jiangxi between 1930 and 1934. The first four failed

because they were poorly commanded. He took personal command of the fifth campaign in 1934 and through a combination of political and economic reforms and effective military techniques forced the greatly reduced Communists to flee in the LONG MARCH. About 100,000 men and a few women fought as they fled through nine provinces from the southwest to northern Sha'anxi (Shensi) province between October 1934 and October 1935, with about 20,000 surviving. During the march the CCP held a conference at Zunyi (Tsunyi), where Mao emerged the most powerful leader.

Japan's attack on China in 1937 and the resulting SINO-JAPANESE WAR (1937–45) led to the forming of a Second United Front between the KMT and the CCP. Although Communist guerrilla forces also fought the Japanese, the KMT troops bore the brunt of the war and suffered the most losses. The war years were also the Yan'an period in CCP history, during which Mao and his second in command, Liu Shaoqi (Liu Shao-ch'i), wrote extensively on the theory and practice of Marxism and prepared their followers for the postwar struggle with the KMT. The civil war that followed Japan's surrender initially favored the KMT forces, but the tide turned in favor of the CCP in 1948. By the end of 1949 the Nationalist government had been defeated on mainland China. With the establishment of the People's Republic, the CCP became the ruling party of China.

JIU-HWA LO UPSHUR

Churchill, Winston

(1874–1965) *British prime minister*

Sir Winston Leonard Spencer Churchill, one of the greatest prime ministers of Great Britain and Nobel

laureate for literature, was born on November 30, 1874, in Oxfordshire. He studied at Harrow and the Royal Military College at Sandhurst. With intermingling careers in the army and in journalism, he traveled to Cuba, the North-West Frontier in India, SUDAN, and South Africa. His political career began as a member of the House of Commons in 1900. After the electoral victory of the Liberals in 1906, Churchill became the undersecretary of state for the colonies. He also became the president of the Board of Trade and afterward the home secretary, undertaking major social reforms. In 1911 he was appointed lord of the admiralty in the ministry of Herbert Asquith (1852–1928) and undertook modernization of the Royal Navy. An abortive naval attack on the Ottoman Turks and the Allied defeat at Gallipoli led to Churchill's resignation at the time of WORLD WAR I. He was called back and was put in charge of munitions production in the ministry of DAVID LLOYD GEORGE (1863–1945) and was instrumental in deploying tanks on the western front. He returned to the Conservative Party as chancellor of the exchequer in 1924 in the ministry of Stanley Baldwin (1867–1947). He reintroduced the gold standard in his tenure of five years. For about a decade he did not hold any ministerial office and was isolated politically because of his extreme views. Most of the political leaders also did not pay any heed to Churchill's caution against APPEASEMENT policy toward Germany and the German march toward armament.

For Prime Minister Neville Chamberlain (1869–1940) the policy of appeasement toward NAZI Germany was not working. There was no relenting of the march of Germany's army under ADOLF HITLER (1889–1945). Churchill became the premier on May 13, 1940, when he also took charge of the Department of Defense. As wartime policy, he initiated measures that enabled the country to withstand the Nazi onslaught and led Great Britain toward victory. However, the bombing of German cities, particularly the firebombing of Dresden, which resulted in the loss of thousands of innocent lives, brought criticism against him. Churchill initiated changes in the war efforts of his government. For the Air Raid Precautions (ARP), half a million volunteers were enlisted. Under the National Services Act, conscription and registration of men between 18 and 41 began. In 1944 the British army had a strength of about 2,700,000. Women's emancipation took another step when they were called upon to work outside the home in the war economy. Agencies like the Women's Transport Service (FANY), the Women's Auxiliary Air Force (WAAF), the Auxiliary Territorial Service (ATS),

Winston Churchill led Great Britain through the trials of World War II and stood in opposition to Soviet expansion.

and the Women's Royal Naval Service were created, by which women contributed to the nation's war efforts.

Churchill, along with the Soviet leader JOSEPH STALIN and FRANKLIN DELANO ROOSEVELT, formulated war strategy, peace plans, the reconstruction of Europe, and the fate of the Axis powers. Churchill had met Roosevelt on August 14, 1941, and signed the "Atlantic Charter," which spelled out a plan for international peace and adherence to national sovereignty. The "Grand Alliance" was committed to defeating Nazism and bringing about world peace. The last wartime conference that Churchill attended was the YALTA CONFERENCE in Crimea in the Soviet Union (now in Ukraine) with Roosevelt and Stalin between February 4 and 11, 1945. The differences between the Soviet Union on the one hand and the United States and Great Britain on the other were emerging. Churchill had many rounds of verbal dueling with Stalin over the fate of Poland, the division of Germany, and the occupation of Berlin. Once the war was over and their common enemy was defeated, the cold war began.

WORLD WAR II ended in victory, but Great Britain was no longer the country commanding the most

military and economic clout in the world. It was in debt £4.198 billion, and the cost of living had increased by 50 percent. Churchill's Conservative Party was defeated in the elections of July 1945, and the Labour Party under Clement Attlee (1883–1967) came to power. Disillusionment with the Conservative Party, Churchill's neglect of the health and educational sectors, and economic woes contributed to the Conservative defeat. Churchill was the leader of the opposition in the House of Commons. He was relentless in turning public opinion against international communism. His speech delivered on March 5, 1946, at Westminster College in Fulton, Missouri, was a clarion call to the West to be ultra careful against communism. He called for an alliance of the English-speaking peoples of the world before it was too late. This "iron curtain" speech was regarded as the beginning of the schism between the East and the West and the division of the world into two blocs.

With the return of the Conservative Party to power in Britain, Churchill became the prime minister as well as the minister of defense in October 1951. Great Britain intervened in Iran after its prime minister, Mohammed Mossadegh (1880–1967), nationalized the Anglo-Iranian Oil Company (AIOC). Churchill planned a coup to oust the government with the help of the United States. He dispatched British troops to the colony of Kenya in August 1952 at the time of the Mau Mau Rebellion, which was suppressed. Churchill's administration dealt with the rebellion against British colonial rule in Malaya. Churchill during his first and second premierships was never willing to grant self-government to the colonies. Although high-sounding words like *democracy*, *national sovereignty*, and *self-determination* had been uttered at the time of World War II by Churchill and other Allied leaders, granting independence to the colonies was not in Churchill's agenda. In fact, he had shown an apathetic attitude toward the Indian freedom movement. The Quit India movement of 1942 was suppressed ruthlessly. He had lampooned MOHANDAS K. GANDHI (1869–1948) as a "naked fakir." He was also indifferent to the devastating famine of 1943 in Bengal, which killed about 3 million people. Churchill resigned in April 1955 due to ill health. He continued as a backbencher in the House of Commons until 1964. Churchill died in London on January 24, 1965.

In his lifetime Churchill was bestowed with many honors. He became Sir Winston Churchill after becoming a Knight of the Garter in 1953. For his contribution to European ideals he was awarded the Karlspreis

award by the city of Aachen, Germany, in 1956. The U.S. government made him an honorary citizen in 1963. His writing career began with reports from the battlefield like *The Story of the Malakand Field Force* (1898) and *The River War* (1899). He published a biography of his father, *Life of Lord Randolph Churchill* (1906), and wrote one on his ancestor, *Marlborough: His Life and Times* (four volumes, 1933–38). Churchill's *The World Crisis* (1923–31) was a history of WORLD WAR I in four volumes. He also wrote *History of the English-Speaking Peoples* in four volumes (1956–58). In 1953 he was awarded the Nobel Prize in literature for his six-volume work *The Second World War* (1948–53).

PATIT PABAN MISHRA

Clemenceau, Georges

(1841–1929) *French politician*

Georges Clemenceau was one of the most famous political figures in the Third French Republic and a major contributor to the Allied victory in WORLD WAR I. He was born in 1841 in the small village of Mouilleron-en-Pareds in the Vendée, a region on the western coast of France. Trained as a doctor, he gave up the practice of medicine for a life in politics.

He began his career as mayor of Montmartre and in 1876 was elected to the Chamber of Deputies, where he identified with leftist causes and became a powerful figure in the Radical Party. A brilliant orator and a fiery critic of republicans in the Center and on the Right, he was instrumental in overthrowing many ministries, earning in the process the nickname "The Tiger." Implicated in the Panama Canal scandal, he lost his seat in

the elections of 1893 and for the following nine years earned his living as a journalist.

Clemenceau was elected to the senate in 1902 and in 1906 served as interior minister in the Jean Sarrien cabinet. When Sarrien resigned in October 1906, Clemenceau formed his own cabinet, which endured until 1909. While in office he strengthened ties with Britain and Russia to counter Germany's growing challenge to France. At home he continued his predecessors' anti-clerical policies and adopted a hard-line stance toward striking workers, alienating large sections of the political left. A sudden no-confidence vote after a violent debate brought down the government in the summer of 1909. Clemenceau returned to the senate and spent the years prior to 1914 urging the buildup of France's armed forces. In 1913 he founded a newspaper so he could warn the country about the need to rearm.

When World War I broke out in August 1914 Clemenceau was disappointed that he was not recalled to the helm. After the stalemate set in on the western front he assailed the French High Command for its fruitless offensives and for failing to make adequate preparations at Verdun, the target of a German onslaught in 1916. As 1917 wore on, the war was going badly for the Allies with the impending loss of Russia, a disastrous Italian defeat at Caporetto, and defeatism threatening both the military and civilian strength of France. In this particularly dark moment the president, Raymond Poincaré, called on the 76-year-old Clemenceau to form a government after the last one had fallen in November.

On taking office Clemenceau's single purpose was to win the war, subordinating all other considerations. He ended internecine fighting in the cabinet by selecting minor figures on whose loyalty he could depend. With the acquiescence of parliament he established a virtual dictatorship in order to prosecute the war more effectively. He cracked down on pacifists, defeatists, and traitors, anyone he considered uncommitted to total victory. He secured greater control over the military; made frequent visits to the front, where he spoke not only to generals but to ordinary soldiers; and helped bring about a unified command. His unflinching style of waging war revived popular morale and was instrumental in helping the nation withstand the series of German hammer blows in the spring of 1918.

Clemenceau presided over the PARIS PEACE CONFERENCE in 1919, where he sought to punish and disarm Germany. It soon became apparent that Clemenceau's demands for France's security clashed with the postwar aims of Britain and the United States. Clemenceau fought hard to create a buffer state in the Rhineland under per-

manent French control but reluctantly gave up the idea on receiving an Anglo-American pledge of assistance in case Germany again attacked France. What Clemenceau did not foresee was that the treaties would be repudiated by the U.S. Senate and Britain's parliament. Although the Versailles Treaty imposed harsh terms on Germany, Clemenceau was criticized by a sizable section of the French citizenry who considered it too lenient.

Clemenceau hoped to be elected president, a largely ceremonial post, when Poincaré's term expired in February 1920. Of all the candidates he seemed the most deserving in view of his wartime services. As it happened, the chamber and the senate rejected him in favor of the undistinguished Paul Deschanel. He resigned as premier the day after his defeat and left the senate as well. He died in 1929 and according to his wish was buried near his father at Colombier in his native Vendée.

GEORGE CASSAR

Comintern

During its existence (1919–43) the Third International, or Communist International (Comintern), was an umbrella organization of the world's Communist Parties. Its stated mission was to coordinate all Communist activities independent of the Soviet Union. In time, however, the Comintern was made to serve the objectives of the Communist Party of the Soviet Union and, thus, the goals of the Soviet Union. Placing its headquarters in Moscow reinforced this process.

The Comintern came into being in March 1919 in response to what Lenin perceived as a critical need. The socialists who had gathered under the framework of what was known as the Second International were undisciplined. Several of the socialist parties in the various nations had supported their nations' entry into WORLD WAR I and continued to support that effort. These socialist parties were thus seen as supporting bourgeois institutions rather than advancing the socialist cause. Having just completed the first stages of seizing the Russian government and beginning a civil war that would last for another four years, Lenin and the Russian Communists believed that socialists must be

devoted to worldwide revolution with their actions according to a prescribed party line. That line was defined by what were known as the 21 Points. Any Communist Party had to obey all of these directives in order to become part of the Third International.

The 21 Points included the requirements for member organizations to take the name Communist Party while removing members who did not accept the points, to subscribe to the philosophy of liberating colonies, to use the combination of both illegal and legal methods (as required), to change its internal rules to conform to Comintern policy, and to obey all Comintern directives. These points were drafted by Lenin in combination with the Comintern's first head, Gregory Zinoviev.

The Second Congress of the Comintern was held in 1920, with subsequent congresses in 1921, 1922, 1924, 1928, and 1935. Membership included the Communist Parties of Austria, Britain, Bulgaria, Czechoslovakia, France, Germany, Italy, Latvia, Portugal, Spain, the United States, Yugoslavia, and the parties of Japan and various Asian and South American Nations.

The official language of the organization at the beginning was German. Significantly, by the 1930s Russian became the official language. The Comintern was organized into several departments: Cadres (which maintained files on all members and worked very closely with NKVD, the secret police), Propaganda and Mass Organization, Administration of Affairs, Translation, Archives, and Communications. While not stated, one of the most important functions of the Comintern was to gather information that was then sent to Soviet intelligence organizations.

The leaders of the Comintern's national sections were the individuals leading various national parties in the interwar period. Those who survived the purges of the 1930s and WORLD WAR II became the leaders of the Eastern European states that became Communist in the aftermath of the war. These included George Dimitrov, head of the Comintern from 1935 to 1943 and leader of the Bulgarian Communist Party; László Rajk and Mátyás Rákosi of Hungary; Klement Gottwald of Czechoslovakia; and many in the mid- to higher levels of the new Communist governments.

This international staff were regarded by the Soviets with great suspicion. In the period of the purges (the second half of the 1930s), many Comintern staff disappeared. The most prominent of those arrested was Béla Kun, who had led the Hungarian Soviet in 1919, but many others perished as well. The height of this purge of foreigners was in the years 1937 to 1938,

after which it eased significantly. Maintenance of party discipline was extremely important, and directives concerning activities, organization, and other changes were conveyed from this headquarters to all of the Communist Parties. Even when Communist Parties were banned and had to go underground (as happened in Bulgaria, Finland, Germany, Italy, Lithuania, Poland, and Yugoslavia), they still had to report to Moscow. Comintern activities also included funding the parties.

Up until 1935 and the Seventh Comintern Congress the Comintern was opposed to cooperation with other socialist parties. Then the policy shifted with FASCISM being defined as the enemy. In addition to the Comintern's support of the popular fronts, its most significant effort was creating an army to fight for the republic in the SPANISH CIVIL WAR. The Comintern recruited, transported, and organized (politically as well as militarily) the volunteers who would form the International Brigades. Over 30,000 volunteers would be sent to Spain in this effort.

In 1939 the Soviet Union and Germany signed a nonaggression pact. From the beginning of World War II in September 1939 until the June 1941 invasion of the Soviet Union, the war was referred to as an imperialist conflict, and members of the Comintern were told not to oppose the fascists.

During the interwar period the Comintern (as well as communism and the Soviet Union in general) was feared by nearly all nations. The Comintern was regarded as the international arm of the Soviet Union. It was for this reason that to please his Western allies it was disbanded in 1943 on Stalin's orders. It revived in another form in 1947 as the Communist Bureau of Information (Cominform). Cominform's function was the same as the Comintern: to extend control over all international Communist Parties; it was abolished in 1956.

ROBERT STACY

Communist Party, U.S.

The Communist Party of the United States (CPUSA) is the most prominent communist political party in American history, though its influence has been minimal since the early days of the cold war. In 1919 VLADIMIR LENIN himself invited the communist faction of the Socialist Party to join the COMINTERN. Many of the Socialist Party members who broke away and formed CPUSA in response to Lenin's invitation belonged to groups of European immigrants in the United States, bound by a common language and a commitment to socialism. A number of delegates expelled from the Socialist Party convention formed a separate communist party, the Communist Labor Party, but by 1921—at the order of the Comintern—these two parties merged.

After the RUSSIAN REVOLUTION and other socialist victories around the world, the United States was coming under the grips of the RED SCARE. Many communist groups were explicit about their aims to overthrow existing institutions at the expense of those benefitting from or protected by those institutions. Racial and nationalist issues sometimes played into this anticommunist paranoia; many American communists were part of the waves of eastern European immigration that ended the 19th century—and a significant number of them were Jewish. CPUSA was predominantly eastern European and Jewish and found itself the target of anticommunist and anti-Semitic literature.

The late 1920s saw conflicts with JOSEPH STALIN, who regarded the success of CPUSA as entirely dependent on its followers' belief that the party was a link to the Comintern and who considered the party dangerously out of step with Soviet communism. CPUSA's goals in the period following this shift were focused principally on labor issues and civil rights, especially after the GREAT DEPRESSION increased the ranks of the working poor and made union issues even more critical. Though antifascist, CPUSA opposed military action against HITLER'S Germany until the invasion of the Soviet Union.

In the aftermath of WORLD WAR II, CPUSA became even more suspect than it had been during

the Red Scare, with membership or attendance at one of its meetings grounds for suspicion, firing, and blacklisting. The party continued to support the Civil Rights movements and allied itself with many leftist and liberal political movements throughout the 1950s and 1960s, many of which distanced themselves in response. Over the decades since World War II, this reluctance on the part of liberal interests to ally themselves with the Communist Party has led to a decrease in the party's influence.

Various revelations in the aftermath of the cold war have confirmed that at various periods the Soviet Union supported CPUSA financially, hoping that its survival would weaken the United States from within. In the early days of the cold war, there were several cases of American communists passing secrets to the Soviets, including details related to the design of the atomic bomb. But despite the fears of the McCarthyists and the hopes of the Soviets, CPUSA appears to have had little impact on the American infrastructure.

BILL KTE'PI

Communist Party of Indochina

The Communist Party of Vietnam was formally founded on February 3, 1930, in Hong Kong by a group of Vietnamese exiles. Its first members included Nguyen Ai Quoc (later better known as Ho Chi Minh). At the urging of the COMINTERN, the group changed the name to the Communist Party of Indochina (CPI). Despite its name, all of the initial members were Vietnamese.

There was political controversy over the name Communist Party of Indochina. The choice of *Indochina*, which recognized a French-imposed political unit, was anathema to many Vietnamese nationalists. This led many Cambodian nationalists to see it as an attempt by the Vietnamese to try to dominate Cambodia and preserve the French political unit of Indochina after independence. It was not until the late 1940s that any Cambodians or Laotians would join.

With the start of the worldwide GREAT DEPRESSION there was a precipitous decline in the demand for rub-

ber, and French plantations, largely located in southern and central Vietnam, responded by lowering wages or laying off workers.

This led to disputes and riots on these plantations, followed by strikes in factories throughout Cochinchina (southern Vietnam). The newly formed Communist Party of Indochina saw an opportunity to agitate against French rule and encouraged the peasants, who in the summer and the fall of 1930 started taking over their villages and establishing “soviets,” in which the villagers took over property from unpopular landlords and reduced rents and taxes, cutting off links with provincial governments. This rebellion became known as the Nghe-Tinh Soviet revolt because of the location of the main protests. The revolt was ruthlessly crushed by the French in the spring of 1931, and the CPI regional network was destroyed. Indeed, the headquarters of the Standing Committee of the party in Saigon was raided during a meeting in April 1931.

Although the revolt was disastrous in the short term, it did bring the Communist leadership the realization that they needed to be better organized for the eventual confrontation with the French. A Second Plenum had been held just before the April 1931 arrests, and soon afterward the party had been admitted into the Communist International (Comintern). Ho Chi Minh and the surviving leadership, all in exile, realized that any attempt to eject the French could no longer rely solely on a peasant revolt.

In 1936 the Popular Front government was formed in France, and from then until 1938 the CPI was able to organize again. One of the first actions of the new socialist government in France was to order the release of political prisoners in Indochina, among whom were many CPI members. The party also used this period to gain extra members and became the major political group for those opposed to French rule.

The signing of the NAZI-Soviet Pact in 1939 and France’s subsequent declaration of war on the Germans gave French authorities in Indochina an extra reason to crack down on the CPI and isolate it from the people. The Sixth Plenum of the CPI, held in November 1939, called for an armed uprising. France’s surrender to the Germans in 1940 destroyed the belief in the invincibility of the French army among Vietnamese. Soon afterward the Japanese were able to move their soldiers into Vietnam. This again caused the CPI to debate its approach to ending French rule. Some wanted to use the Japanese presence to agitate against the French. However, Ho Chi Minh urged caution. In 1941 the central committee of the CPI held a meeting at Pac Bo and declared the forma-

tion of the League for the Independence of Vietnam, a grouping that became known as the Vietminh Front.

With the outbreak of the Pacific war in December 1941, Ho Chi Minh sought to establish a friendly relationship with the United States, going as far as meeting General CLAIRE LEE CHENNAULT in March 1945. In that month the Japanese took control of Indochina, rounding up the French and throwing them in jail. On August 13–15, 1945, the CPI finally decided that the time for a national insurrection had come. Japan’s surrender on August 14 sealed the matter, and a general uprising in Hanoi took place on August 19, followed by a takeover of the imperial capital, Hue, four days later, and a seizing of much of Saigon two days after that. Although with British help the French were able to regain control of Saigon and later Hanoi, much of the countryside was in the hands of the CPI.

However, Ho Chi Minh realized that in the forthcoming conflict the CPI would be a liability, as the United States was becoming more anticommunist. As a result, on November 11, 1945, the CPI announced that it was dissolving itself and being replaced with the Indochinese Marxist Study Society. This was an attempt to portray the Vietminh as more nationalist than communist, and the communist movement became the Vietnamese Workers’ Party. This had the effect of allowing the eventual formation of separate Cambodian and Laotian Communist Parties.

JUSTIN CORFIELD

Cristero revolt

Between 1926 and 1929 a localized uprising exploded in Mexico’s western states in reaction to the anti-Catholic policies of Mexican president PLUTARCO CALLES, which attacked the privileged position of the Catholic Church.

Many Mexican revolutionaries viewed the church as the enemy and worked toward stripping it of its political power and landholdings. The writers of the constitution of 1917 sought to tip the balance of

power by weakening the church and subordinating it to a strong Mexican state through a variety of provisions. The constitution prohibited the church from owning property and barred clergy members from voting, holding political office, or assembling for political purposes. Calles enforced these constitutional provisions with anticlerical legislation that forbade the wearing of religious clothing in public, placed all primary education under state control, required the registration of clergy, allowed state governors to reduce the number of practicing ecclesiastics, and called for the deportation of foreign-born clerics. In reaction Mexican priests suspended their religious duties in July 1926, refusing to hold Mass, hear confessions, or administer the sacraments.

The attack on the Catholic Church enshrined in the constitution of 1917 had aroused considerable interest and action from many Mexicans. A few priests and several lay leaders encouraged direct action. One group to heed that call was the National League for the Defense of Religious Liberty (LNDLR), a civic organization that formed in May 1925. Responding to the religious strike by the clergy, the LNDLR called on Mexican Catholics to rise up in arms against the Calles government in the name of Christ and as defenders of the faith. The rebels, dubbed *Cristeros* due to their battle cry, “Vivo Cristo Rey,” or “Long Live Christ the King,” targeted schools in particular, the new symbol of the revolutionary regime in rural Mexico. They burned several to the ground and murdered teachers. Calles’s administration listed national education as a priority and viewed the building of 2,000 rural schools as a success; rural residents resented the schools, which placed financial and land burdens on poor communities and challenged traditional Catholic norms.

Full-blown rebellion exploded when Catholic insurgents bombed a government troop train. Sporadic unorganized guerrilla warfare characterized most of the violence, with local leaders recruiting a dozen to a hundred horsemen as a mounted fighting force, supported by groups of peasants serving as the infantry. Few of the leaders had military experience. The LNDLR attempted to direct the rebellion and create national cohesion among the *Cristeros*, but its members lacked knowledge of military tactics and command. The group named a journalist living in the United States, René Capistrán Garza, as the head of the Catholic revolution. Garza never assumed military command of the rebellion and worked unsuccessfully toward gaining the support of U.S. Catholics against the anticlericalism of the Mexican government. Conversely, many of the rebel leaders

in the field simply ignored the leadership of the LNDLR or were disenchanted with the organization’s inability to send supplies or reinforcements. Although many *Cristeros* fought courageously and mounted a significant challenge to the federal army, in the end they did little to threaten the stability of the Calles government.

The diplomatic work of U.S. ambassador Dwight Morrow brought the *Cristero* rebellion to an end. Morrow worked diligently to convince Calles to create peace in Mexico with the Catholic Church, and in 1929 negotiations between the government and the church resulted in a truce. The church agreed to operate within the law and resumed services, but it would never again command the prominent place in Mexican social and political life it had enjoyed for over two centuries. Although a minority of Catholics participated in the rebellion and it was centered in the western states of Jalisco, Michoacán, Oaxaca, Zacatecas, and Colima, by the end of the violence over 50,000 Mexicans had died, and many others had fled the country.

KATHLEEN LEGG

Cunha, Euclides da

(1866–1909) *Brazilian engineer and historian*

Euclides da Cunha was born on January 20, 1866, at Santa Rita do Rio Negro, near Cantagalo, close to Rio de Janeiro, Brazil, the eldest son of Manuel Rodrigues Pimenta da Cunha and Eudóxia Moreira. When the boy was three years old his mother died, and the family moved to Teresópolis and then went to stay with relatives in Rio de Janeiro. He attended Aquino College, where he studied under Benjamin Constant, an important republican historian. In 1886 he attended the Escola Militar da Praia Vermelha, a military school in Rio de Janeiro, then the capital of the country. Two years later he took part in a protest during a visit by Tomás Coelho, the minister of war in the last conservative cabinet under the Brazilian monarchy, which ended in the following year.

On December 11, 1888, for his role in the protest, he was expelled. Through the efforts of Major Solon Ribeiro, a prominent republican, and others, there was an amnesty for those who had protested against the emperor, and da Cunha was readmitted to the military school. He graduated in the following year and was commissioned second lieutenant. In that year he also married Ana, the daughter of Ribeiro.

In 1891 da Cunha went to the Escola de Guerra (War School) and was quickly promoted to first lieutenant. He then worked as a military engineer in the Brazilian army but left to study civil engineering, although he was soon working as a journalist. In 1896–97 he went, on behalf of the magazine *O Estado de São Paulo*, with the army to Canudos, a village in Bahia state in east-central Brazil, where Antônio Vicente Mendes Maciel “Conselheiro” (“the Counselor”) and his supporters had established their own “empire.” Some 30,000 people moved to Canudos with the promise of freedom for escaped slaves and impoverished Indians. The Conselheiro also promised the return of the Portuguese late medieval king, Sebastian.

There were five army expeditions over three years to Bahia in what became known as the War of Canudos. It took three generals, 19 guns, and 10,000 men to conquer the place, with the rebels fighting to the death for their messianic leader. Da Cunha’s first article on the rebellion had been published in March 1897 as “A Nossa Vendéis”; this led to his becoming a reporter attached to the general staff.

He spent the period from August 7 to October 1, 1897, writing about what he saw in the rebellion and the subsequent reprisals. This was to form the basis of his historical narrative, *Os Sertões* (1902), the first major work that championed the rights of Brazil’s Indi-

ans. On September 21, 1903, da Cunha was elected to the Academia Brasileira de Letras (Brazilian Academy of Letters). On December 13 of the same year he established the Instituto Histórico e Geográfico (Historical and Geographic Institute). In 1907 da Cunha was appointed to head a commission to deal with problems in Amazonia, and he spent December 1904 and much of 1905 traveling down the Amazon. In early 1909 da Cunha was appointed chairman and professor of logic at the Colégio Pedro II, a public secondary school in Rio de Janeiro.

Euclides da Cunha was a keen amateur geographer and geologist and spent the last years of his life visiting remote parts of Brazil and writing about the Indian tribal people he met. He also was influenced by the Darwinian aspects of naturalism. He was the author of *Contrastes e confrontos* (Contrasts and confrontations, 1907), and *Peru versus Bolívia* (1907).

On August 15, 1909, da Cunha was killed in a duel by a young army lieutenant, Dilermando de Assis, who was having an affair with his wife. He died at Piedade, Rio de Janeiro. He is commemorated by the Brazilian education department, and in August each year they observe a *Semana Euclideana* (Euclides Week) in his honor. The Euclides da Cunha Foundation in Brazil commemorates the historian and the role he played in the education system.

JUSTIN CORFIELD

D

D-day

Although it is a general military term, *D-day* has become synonymous with the Allied invasion of Normandy, France—code-named “Operation Overlord”—on June 6, 1944, during WORLD WAR II. Following the German invasion of the Soviet Union in 1941, Soviet premier JOSEPH STALIN called on the Allies to open a second front in western Europe. By May 1943 such a plan had become the Allies’ number one priority. At a meeting held in Quebec, Canada, Lieutenant General Frederick Morgan, chief of staff to the Supreme Allied Command, presented a preliminary plan to the Allied leadership. With input from Lord Louis Mountbatten, chief of the British War Department’s Combined Operations Division, Field Marshal Bernard L. Montgomery, and numerous others the invasion plan began to take shape; by D-day close to 30,000 civilian and military personnel had worked on the plan in some capacity.

Officially, “Overlord” was the overall designation for the Allied offensive that would run from June to August 1944; the naval and beach assault operations on the day of June 6 were code-named “Operation Neptune,” with various related operations, such as airborne drops, given their own code names. To gain a foothold on mainland Europe and liberate it from NAZI occupation, “Neptune” involved a strategy of coordinated attack from the air, sea, and land that culminated in an amphibious assault by Allied forces—composed of U.S., British, and Canadian troops—upon the German-held beaches of Normandy in northern France. In Decem-

ber 1943 American general Dwight D. Eisenhower was chosen as supreme Allied commander, with three British commanders in charge, respectively, of air, sea, and land forces: Air Chief Marshal Sir Trafford Leigh-Mallory, Admiral Sir Bertram H. Ramsay, and Field Marshal Montgomery. Likewise, Air Chief Marshal Sir Arthur Tedder, the deputy supreme Allied commander, and General Walter Bedell Smith, Eisenhower’s chief of staff, supervised the massive logistical task of coordinating the men and materials needed for the invasion.

Before settling on Normandy, Allied commanders had considered the Pas de Calais, the narrowest point in the English Channel between England and France. However, Mountbatten felt that although Normandy was farther away, it offered an ideal location for two main reasons: long, sheltered beaches that would be less defensible, theoretically, than Calais and two large ports vital to the invasion fleet, Cherbourg and Le Havre, which could be captured by land. As commander of all ground forces, Montgomery pushed for five beachheads, which Eisenhower endorsed—“Utah” and “Omaha,” assigned to the American-led Western Task Force, and “Gold,” “Juno,” and “Sword,” assigned to the British-led Eastern Task Force. Both task forces comprised the 21st Army Group, consisting of the British Second Army, commanded by Lieutenant General Sir Miles Dempsey; the Canadian First Army, commanded by General Henry D. G. Crerar; and the U.S. First Army, commanded by Lieutenant General Omar N. Bradley.

For the Germans, Field Marshal Gerd von Rundstedt commanded all forces in western Europe

Troops land on the beaches of Normandy, June 6, 1944. Code-named Operation Overlord, the amphibious landing by American, British, and Canadian troops led to the liberation of France and the eventual surrender of German forces in World War II.

(Oberbefehlshaber West), consisting of Army Groups (Heeresgruppen) B and G; Field Marshal ERWIN ROMMEL commanded Group B, which was given the task of defending the channel coast. Because of the fight with the Soviet Union that reduced troop strength in the west, ADOLF HITLER charged Rommel with shoring up gaps in the coastal defenses that exposed Germany's western flank to invasion. Coined the "Atlantic Wall"—consisting of concrete bunkers, gun emplacements, and varied obstacles on land and in the sea that extended along the English Channel, the Atlantic, and the French Mediterranean—by May 1944 the Germans had poured close to 18 million cubic meters of concrete and placed over half a million obstacles. Rundstedt and Rommel disagreed, however, on how to defend against an Allied

threat. Rundstedt pushed for a central reserve farther inland that could counterattack once Allied intentions were known; Rommel, on the other hand, advocated confrontation at the point of invasion, with the strongest units readied to "push them back into the sea." With neither willing to concede, a plan developed that encompassed both ideas—which would prove ineffective in the end.

THE CALAIS DECEPTION

Despite the Allies' choice of Normandy, Calais still played an integral part in their plan. Many in the German High Command, most notably Hitler himself, believed Calais to be the genuine target of any Allied offensive against the mainland. Through a deception

operation known as Operation Fortitude, the Allies broadcast fake radio traffic and invented nonexistent armies that pointed toward an invasion at Calais. Hitler and the High Command, headed by Field Marshal Wilhelm Keitel, believed that any actions by the Allies against the mainland would simply be a diversionary tactic to draw away from the real target of Calais. Consequently, the Germans concentrated a majority of their best reserves, including the powerful 15th Army (Armee Oberkommando), in the Pas de Calais region, with the weaker 7th Army stationed at Normandy—a maneuver that would prove costly when D-day arrived.

Originally planned for May 1, 1944, the invasion date was set for dawn on one of three days—June 4, 5, or 6. Imperative that a combination of moonlight and high tide coincide in order to aid, respectively, the airborne and beach landings, Allied commanders chose June 5. However, unfavorable weather conditions caused Eisenhower to delay for 24 hours. The next optimal window of opportunity not until late July, Eisenhower made the decision to proceed with the invasion.

Just after midnight on June 6, the American 82nd and 101st and British 6th Airborne Divisions landed by parachute and glider on the Cotentin Peninsula behind German lines in support of the amphibious landings only a few hours away. Throughout the previous month the Allies had conducted a bombing campaign against key areas of northern France to destroy German communications. In addition, French resistance, having received word of the impending invasion, sabotaged communication lines and railroads to delay German mobilization even more. The three airborne units, tasked with the further disruption of German capabilities, were to secure the flanks of the beaches, capture strategic bridges and causeways for Allied use, and destroy other key bridges that the German counterattack could utilize.

For the British 6th, assigned to capture the bridges spanning the Orne River and Caen Canal and protect the left flank of Sword Beach, mission execution was near flawless. Commanded by General Richard Gale, the division quickly completed its objectives within hours of landing in France and with very little mishap. They had only to hold their position to await relief from the main attack force and keep German reinforcements—specifically the armored tank units—from advancing on the beaches. Unfortunately, the same could not be said for American paratroopers. Due to poor visibility, German anti-aircraft fire, and

inexperienced pilots who had not flown in such conditions, both the 82nd and the 101st found themselves scattered across the peninsula. Nevertheless, per their training, units that failed to reach their designated zone were to carry out the missions assigned to the area in which they found themselves. As a result, mixed units were able to assemble, organize, and achieve objectives on a limited scale. Ironically, German commanders became confused as to the Allies' intended target due to this situation, thus failing further to mobilize against the impending invasion.

As the airborne units carried out their missions, an Allied armada—the largest ever in history, which included close to 1,000 warships and 4,000 transport ships—made its way from assembly areas in southern England toward the Normandy coast. Having cancelled coastal patrols, the Germans were unaware of the Allied advance across the English Channel.

Around 5:00 A.M. a sustained Allied naval bombardment and assaults by bomber aircraft commenced against the German defenses on Normandy. The sea-borne troops then began their approach to the five beaches by transport ships. The first ashore were elements of the U.S. 4th Division, landing at approximately 6:30 A.M. on Utah under intense German fire. South of their target zone they faced lighter resistance than anticipated, thus minimizing expected casualties, and advanced rapidly up the beach to gain their objective. Only a few minutes later elements of the U.S. 1st and 29th Divisions landed at Omaha, where intact obstacles and fierce opposition bogged down subsequent waves of soldiers and equipment. The congestion made the Americans easy targets for German gunners, resulting in the worst casualty rates of the entire invasion force—estimated at close to 95 percent for the first wave alone. Pinned by enemy positions atop the high bluffs that dominated the beach, many units suffered losses close to 60 percent and higher, which threatened the assault's success.

On the three other beaches the results were just as mixed. Landing around 7:30 A.M. on, respectively, Sword and Juno, the British 3rd Division, which also included French commandos, and the Canadian 3rd Division met typical conditions—obstacles that hindered their progress and strong opposition as well as the capacity to advance rapidly onward. Thanks to continued naval bombardments that suppressed German defensive fire, both divisions were able to move inland by early afternoon. However, the British 50th Division, landing on Gold only a few minutes before, encountered an almost identical situation to what

the Americans found on Omaha. Despite continual deployment of troops, the division could not secure the beach until after nightfall.

By the end of the day, close to 150,000 Allied troops had landed in France. In spite of heavy losses, although lower than expected, and the day's slow advance, which did not push inland as far as planned, the invasion was a dramatic success for the Allies.

STEVE SAGARRA

Debs, Eugene V.

(1855–1926) *U.S. labor leader and socialist*

Born in Terre Haute, Indiana, Eugene Victor Debs was a homegrown socialist at a time when most people in the United States reviled socialism as a European import. Debs ran five times for president, winning his largest vote total when he campaigned in 1920 from an Atlanta prison cell. A central figure in two railroad unions, Debs led an 1894–95 strike against Chicago's Pullman Car Company and later spoke out against U.S. participation in WORLD WAR I.

Debs, the son of Alsatian immigrants, dropped out of school at 14 to help support his family. By 1870 he was a railroad fireman, and in 1875 he helped organize a Terre Haute lodge of the Brotherhood of Locomotive Firemen, a national craft union founded in New York in 1873. A skilled and forceful writer, Debs was soon editing the union's national magazine. He would continue as editor even after he resigned from the brotherhood in 1891.

Meanwhile, Debs was also active in local politics. As a Democrat he served two terms as Terre Haute city clerk and was elected in 1885 to the Indiana general

assembly. He was a supporter of WOMEN'S SUFFRAGE, inviting controversial suffragist Susan B. Anthony to speak in Terre Haute and, as city clerk, declining to fine prostitutes as long as their customers went free.

In 1893 Debs organized the new American Railway Union (ARU). Unlike the brotherhood, the ARU would be less a fraternity than a mass worker organization, making it an important departure from Samuel Gompers's craft-based American Federation of Labor (AFL). With the U.S. economy sinking into depression, Debs in April 1894 engineered a successful strike against the Great Northern Railway. The union's 18-day stoppage ended with an ARU victory and a membership upsurge.

A month later Debs and his new union found themselves in a much more difficult situation. George Pullman, a Chicago entrepreneur who had made a fortune building luxurious private train cars for elite travelers, had also built a beautiful but paternalistic workers' town just outside the city. The sagging economy caused Pullman to slash wages, but rents and prices at Town of Pullman company stores stayed the same while laid-off workers lost their homes as well as their jobs. Reluctantly, Debs mounted a boycott on behalf of striking Pullman workers. It was crushed by federal troops because other unions, notably the AFL, withheld their support. When Debs and the ARU defied a back-to-work injunction, lawyer Clarence Darrow, later famous for the SCOPES TRIAL, defended them, but Debs was jailed for six months in 1895.

The Pullman strike ended Debs's formal union leadership but made him a national figure and five-time presidential candidate who campaigned as a Socialist in 1900, 1904, 1908, 1912, and 1920. Whistle-stopping across the United States in a "Red Special Train," Debs attracted enthusiastic crowds, but his third party garnered few votes. He achieved a 6 percent vote share in the 1912 election; in 1920, as "Federal Prisoner 9653," Debs won almost 914,000 votes.

In June 1918 in Canton, Ohio, Justice Department agents listened as Debs spoke against the war, blaming Wall Street's "master class." Convicted under WOODROW WILSON's wartime ESPIONAGE ACT, Debs was sentenced to 10 years. His health failing, Debs was released in December 1921 by President Warren G. Harding. One of Debs's final acts was to donate his prison release money to the Sacco and Vanzetti Defense Fund.

MARSHA E. ACKERMANN

Diagne, Blaise

(1872–1934) *Senegalese politician*

Gaiaye M'Baye Diagne was born on the island of Gorée, the old slave trade base, in 1872. His energy and intelligence attracted the attention of wealthy mulattoes (people of mixed race), who sponsored his education at a religious school, where he was baptized as Blaise. Diagne was educated in Senegal and France and entered the French colonial administrative service in 1891. He served in a number of administrative posts in parts of the French West African empire. In 1909 he married a Frenchwoman.

A proponent of assimilation and African rights as equal participants in French political and cultural life, Diagne became the first black African member of the French parliament in 1914. He became the first African member of the French government when he was appointed commissioner of the republic in West Africa in 1918; in the 1930s he became undersecretary of state for the colonies. During WORLD WAR I he was particularly active in recruiting Africans to serve in the French army. Large numbers of Africans from throughout the huge French West African empire served with distinction during the war, but many were disappointed by their subsequent treatment as inferiors once the war was over. Diagne's vision of assimilation was not realized, and many former African soldiers in the French army consequently became active supporters and leaders of the nationalist movements that struggled to secure independence from the French in the first half of the 20th century.

JANICE J. TERRY

dollar diplomacy

During the 30 years before the GREAT DEPRESSION, the United States used a policy of loan-for-supervision, also called dollar diplomacy, with countries that it per-

ceived as unstable. Dollar diplomacy was the U.S. policy encouraging private loans to countries in exchange for those countries' accepting financial advisers. This became a way for the government to advance its policies in the face of fiscal and institutional constraints such as Congress. It was believed that the professional advisers would help the targeted countries (China, many in Latin America, Persia, and Poland) reorganize their finances and create an infrastructure that would bring stability and allow for a large volume of trade. Along with the increase in trade would come a rise in the standard of living of the people in the targeted country and in the process increase the markets for U.S. goods.

In the aftermath of the Spanish-American War and the control the United States gained over the Philippines, Cuba, and Puerto Rico, opposition grew to the point that policy makers assumed that the United States could not make any more territorial gains by force. Yet many people, including anti-imperialists, believed that the United States had an obligation to create commercial ties to developing countries. Even after WORLD WAR I, when U.S. policy was viewed as isolationist, the United States did not try to avoid foreign entanglements.

At first policy makers tried to tie in commitments from the U.S. government to secure the loans, but this required the approval of Congress. Therefore, to avoid Congress the policy was changed to use financial experts to help stabilize a given country, and the U.S. government's involvement was reduced. It was the job of the experts to introduce reforms to the host country's financial structures. These included putting the country on a gold standard, creating a central bank, and using strict accounting practices. These reforms were seen as being modern and scientific.

Unfortunately, not all the countries receiving this help found it to their liking. In a number of cases dollar diplomacy was viewed as just another form of imperialism. In most cases the advisers did not speak the language of the countries they were assigned to, nor did they know the cultures of the countries. There was also the issue of the advisers' salaries. They expected to be paid based on U.S. standards of pay, which meant they were lavishly paid by local standards. To the locals these men seemed more interested in their own well-being than in that of the local population.

There was also disagreement in the United States about dollar diplomacy. As the years passed more people saw it as imperialism and exploitation in a different guise. Antibanking factions saw the policy as nothing more than a way for bankers to make more money for themselves and that the U.S. policy was being held

hostage to these profits. As the arguments against dollar diplomacy grew sharper and the quality of the loans deteriorated, the government tried to extract itself from the financial entanglements, which in turn reduced the confidence in the loans. By the early 1930s the government was working hard to detach itself from international economic affairs. It did not want to accept any of the responsibility for either international economic stability or losses of the bondholders.

DALLACE W. UNGER, JR.

DuBois, W. E. B.

(1868–1963) *African-American activist*

In a life spanning nearly a century William Edward Burghardt DuBois was one of the most brilliant, contentious, and significant leaders in the post-slavery United States. A sociologist and the founder of the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), DuBois wrote extensively on issues of race—the “problem of the color line”—and worked to achieve equality for African Americans weighed down by poverty and prejudice. Disillusioned with U.S. racial politics, DuBois late in life became a communist and left the United States for Africa, where he died a citizen of Ghana at age 95.

DuBois was born in Massachusetts just after the Civil War. As part of a tiny black minority, he suffered occasional racism, but not until he attended Fisk College in Nashville, Tennessee, did he see firsthand how emancipated slaves and other people of color were treated in the former Confederacy. By 1895 DuBois had become Harvard University’s first black Ph.D.

DuBois’s most influential book was published in 1903. *The Souls of Black Folk* is a meditation on history and race that lyrically describes what both whites and blacks need to do to overcome the “two-ness” that keeps African Americans from equal participation in U.S. society. More controversially, the book

launched a stinging attack on Booker T. Washington, a former slave who as head of Alabama’s Tuskegee Institute encouraged blacks to (temporarily) accept inferior status. Soon DuBois’s critique of the nation’s best-known black leader turned him from academic to activist.

In 1905 DuBois and 28 other opponents of Washington’s accommodationist policies met secretly in Buffalo, New York, once a stop on the underground railroad, to assert new roles for African Americans. Their public meeting in Fort Erie, Canada, soon followed. A year later members of this Niagara Movement met at Harper’s Ferry, the site of John Brown’s 1859 raid. Although the “Niagarites” failed to attract a large membership, they signaled a new militancy. In 1909 DuBois’s group joined with liberal whites who were shocked by rising racial violence to form the NAACP.

For 25 years DuBois served the NAACP as editor of *The Crisis*, using the magazine to focus attention on racism and African-American demands. His scorching editorials often offended other black leaders and white supporters, but circulation and membership soared. Unlike many others, DuBois encouraged blacks to fight in WORLD WAR I, later acknowledging that soldiers’ sacrifices had not translated into white respect or greater equality. During the 1920s DuBois helped to publicize the HARLEM RENAISSANCE but feuded with Jamaican MARCUS GARVEY, whose populist Universal Negro Improvement Association had very different goals and methods for racial uplift.

By the 1930s DuBois, who had once encouraged racial integration, was developing a separatist ideology similar to what in the 1960s would become the Black Power Movement. Leaving the NAACP in 1933, he returned to academia. From Atlanta he questioned the desirability of school integration and espoused PAN-AFRICANISM for black people around the world. He also saw in the RUSSIAN REVOLUTION an ideology that might overcome racism, although he did not officially become a communist until age 95.

A foe of imperialism and nuclear weapons, DuBois was deemed a subversive by the U.S. Justice Department during the cold war. Although acquitted, DuBois soon after expatriated himself to Ghana. He died there a day before Martin Luther King, Jr., led the Civil Rights March on Washington.

MARSHA E. ACKERMANN

dust bowl

Dust bowl is a term coined by an Associated Press correspondent when he described the drought conditions that affected the residents of 27 states as they struggled to grow wheat in the unforgiving weather conditions of the “dirty thirties.” The American South, primarily the plains of Kansas, western Colorado, northwestern New Mexico, and the panhandles of Texas and Oklahoma, was the most affected area as a cyclical meteorological phenomenon dropped Pacific Ocean air far to the south,

preventing the normal introduction of moist weather from the Atlantic Ocean into the Plains.

The national and international demand for wheat, a less drought resistant crop, was high during and immediately after WORLD WAR I; Plains farmers, eager to reap high profits, began the “great plow-up” using poor farming techniques that led to soil erosion. Grasses and native plants that had served as windbreaks were overplowed in the quest to produce more wheat; farmers believed that “rain follows the plow.”

But the rain did not follow these farmers’ plows; instead, it stopped. Amid record high temperatures, dust storms increased in number and intensity, carrying away millions of tons of topsoil and depositing the dust as far away as the East Coast. Before a storm, residents blocked their windows and doors with wet cloths but still shoveled dust out of their homes with wheat scoops afterward.

Drought and overfarming led to the dust bowl in the American heartland through the 1930s. Millions of acres of topsoil were swept away. The drought led to significant changes in agricultural practices.

The American Red Cross issued calls for facemasks for children who were contracting “dust pneumonia,” dead cattle were found with three inches of dirt in their stomachs, people spit up what looked like chewing tobacco, and starving jackrabbits came down from the hills to menace the land and devastate small gardens. Frustrated and overwhelmed, one of four families left the area, earning the nickname “Exodusters.” John Steinbeck’s novel *The Grapes of Wrath* chronicles the Joad family as it migrated toward the West Coast in search of employment picking crops.

After Black Sunday, April 14, 1935, the date of the worst dust storm, a day many believed was the end of the world, the NEW DEAL created programs that determined the farmers were responsible for soil and water erosion, and Congress established the Soil Conservation Service under the direction of Hugh Bennet. New plowing techniques were initiated, lands were allowed

to lay fallow, crops were rotated, plantings that retained topsoil were introduced, and a 100-mile-wide tree belt from Canada to Texas was proposed; these methods reduced blowing soil by 65 percent.

In the fall of 1939 the rains returned, and with the onset of WORLD WAR II and the end of the GREAT DEPRESSION the Plains were once again flush with wheat.

JOHN MAYERNIK

E

Edison, Thomas

(1847–1931) *American inventor*

The Wizard of Menlo Park, as journalists called him in reference to his New Jersey research laboratory, Thomas Edison was the quintessential American innovator. While many inventors are a century later remembered for one principal invention (Bell's telephone, Whitney's cotton gin), Edison is responsible for or associated with the phonograph, lightbulb, the microphone used in telephones until the end of the 20th century, and direct current—along with more than 1,000 patents for lesser-known creations. Only the more fanciful Nikola Tesla, his rival in the “war of the currents,” approached the breadth and variety of his work.

The seventh son of an Ohio family, Edison had less than a year of formal schooling and was largely educated by his mother, a retired schoolteacher. For the rest of his life, he praised her for encouraging him to read as a child and to experiment on what intrigued him. For some years he worked as a telegraph operator but at the age of 30 became famous for his invention of the phonograph, a device that recorded sound on tinfoil, later wax cylinders, then vinyl; though the sound quality was poor, the mere fact of its existence in 1877 was held as a marvel and captured the public attention, helping to create the fascination the public would have with inventors and cutting-edge technology.

More inventions followed, as well as refinements of earlier work; his incandescent lightbulb was not the first of its kind but was the first to be a success, efficient and

Thomas Edison, pictured with a phonograph. Edison was the quintessential American innovator.

bright enough to be used on a wide scale. His Edison Electric Light Company provided not only electric lamps but the power needed to use them.

Though Nikola Tesla had also developed a lightbulb, it was the “war of the currents” that made rivals of Edison and Tesla. While Edison had developed direct current (DC) for power distribution, Tesla developed alternating

current (AC), which could be carried by cheaper wires at higher voltages. Edison's famous tactic was to promote AC power for the use of the electric chair in order to demonstrate the dangers of the method; his employees publicly electrocuted animals as a scare tactic. The effort was in vain. AC slowly replaced DC as the power distribution method of choice and remains so today.

By the time of Edison's death in 1931, his inventions had helped lead to a world lit by incandescent lights and powered by electricity; entertained by radio plays, records, and motion pictures; connected by telephone and telegraph; and home to such works as James Joyce's *Finnegan's Wake* and Marcel Duchamp's "Nude Descending a Staircase," both of them inspired by and possible only in the Edisonian world.

BILL KTE'PI

Egyptian Revolution (1919)

The revolution in Egypt broke out in March 1919 after the British arrested SA'D ZAGHLUL, the leader of the WAFD PARTY, the main Egyptian nationalist party, and several other Wafdists. They were then deported to Malta. The exile of these popular leaders led to student demonstrations that soon escalated into massive strikes by students, government officials, professionals, women, and transport workers. Nationalist discontent had been fueled by the protectorate established by the British at the beginning of the war, wartime shortages of basic goods, increased prices, the forced conscription of peasants as laborers for the military, and the presence of huge numbers of Western soldiers in Egypt.

Within a week all of Egypt was paralyzed by general strikes and rioting. Violence resulted, with many Egyptians and Europeans killed or injured when the British attempted to crush the demonstrations. European quarters and citizens were attacked by angry crowds who hated the special privileges and economic benefits given to foreigners. Rail and telegraph lines were cut, and students refused to attend classes. Zaghlul had worked hard in the weeks prior

to his arrest to mold the Wafd into an efficient political party. He traveled around the countryside gathering support and collecting money. In spite of martial law, which was imposed by the British at the beginning of the war, large-scale public meetings were held. In his absence Zaghlul's wife, Safia, played a key role in party politics. Led by Safia and Huda Shaarawi, upper-class Egyptian women staged a political march through the streets of Cairo, throwing off their veils, waving banners, and shouting nationalist slogans.

Wafdist cells throughout the country coordinated the demonstrations and strikes through a central committee chain of command. Religious leaders, especially the sheikhs at al-Azhar, the premier Muslim university, also participated. Propaganda leaflets, posters, and postcards with pictures of Sa'd and Safia Zaghlul were distributed throughout the country. The Wafd's central committee maintained an active role within unions, student groups, and professional organizations.

Determined to maintain control over Egypt, the British government replaced High Commissioner Reginald Wingate, who was considered weak and too moderate, with General Edmund Allenby, the greatest British hero from WORLD WAR I. Allenby promptly met with leading Egyptians, who convinced him that the only way to restore order was to release the Wafd leaders. A realist, Allenby complied and permitted Zaghlul and others to travel to Paris. The Wafd kept up the pressure in Egypt, organizing boycotts of British goods and refusing to meet with the Milner Mission that had been sent out from London to investigate the situation. Steps were taken for more economic independence, and Talat Harb established an Egyptian bank in 1920.

Negotiations were held between the Wafd and the British in London in 1920, but the Wafd failed to secure a withdrawal of British troops, the end of the protectorate or the capitulations (favored status granted to foreign residents), or full independence. Nevertheless, the Wafd leaders were greeted as heroes when they returned home. When Zaghlul was again arrested and deported in 1921, a new wave of nationalist demonstrations erupted.

In light of the determined nationalist movement, Allenby forced a reluctant foreign office to end the protectorate, and in 1922 the British unilaterally declared Egyptian independence under a constitutional monarchy led by King Fu'ad. However, Britain retained widespread powers, including the stationing of troops in Egypt and a role in determining Egyptian foreign affairs as well as control over the Sudan. Consequently,

Egyptian nationalists continued in opposition to Britain throughout the interwar years.

JANICE J. TERRY

Einstein, Albert

(1879–1955) *scientist*

Perhaps the most significant individual of the 20th century, Albert Einstein's contributions to science reshaped physics in ways that continue to be explored and led to the development of atomic energy and the atomic bomb. A nonobservant German Jew, he was a late bloomer as a student, showing slow language development. Although folklore claims Einstein was a poor math student, he had a knack for mechanics and geometry at an early age, teaching himself geometry and calculus from a copy of Euclid's *Elements*. Any reputation he may have had as a poor student came from his dissatisfaction with the curriculum at the German gymnasiums; at age 16 he left school, failed his university entrance exam for the Federal Polytechnic Institute (FPI), and took steps toward formulating his theories of relativity.

He was accepted at the FPI the following year and four years after that was granted a teaching position. His first published paper, "Consequences on the Observations of Capillarity Phenomena," hinted at his hopes for universal physical laws, binding principles that would govern all of physics. When he graduated FPI, he took a job as a patent clerk and continued to work on scientific papers in his spare time. Four such papers were published in the *Annalen der Physik* journal in 1905, each of them major contributions to the shape of modern physics. Today they are called the "Annus Mirabilis" ("Extraordinary Year") papers.

The Annus Mirabilis papers concerned the photoelectric effect; Brownian motion, Einstein's treatment of which helped provide more evidence for the existence of atoms; matter and energy equivalence, the paper that included Einstein's equation $E=mc^2$; and special relativity, which contradicted Newtonian physics by stipulating the speed of light as a constant. The importance of these papers cannot be overstated—they continue to be relevant to physicists today, and the photoelectric effect

Albert Einstein's contributions to science reshaped physics in ways that continue to be explored.

paper had a huge effect on the development of quantum mechanics and earned Einstein a Nobel Prize.

It was during the war years that Einstein introduced his theory of general relativity, more radical than his special relativity. The general relativity theory replaces that most basic and intuitive of concepts from Enlightenment physics, Newtonian gravity, with the Einstein field equation. Under general relativity there is no ether or constant frame of reference, and gravity is reduced simply to an effect of curving space-time. Because of WORLD WAR I, Einstein's writings were not readily available to the rest of the world, but by war's end general relativity became a controversial topic. Einstein's importance to the scientific field of his day was assured when journals reported that experiments conducted during a 1919 solar eclipse confirmed general relativity's predictions about the bending of starlight in contradiction to the effects demanded by Newtonian models.

Throughout the next two decades Einstein sparred in papers and debates with other scientists, particularly about quantum theory, which he viewed as an inherently incomplete model of physical reality and hence an incorrect one. When the NAZIS came to power, he was working at Princeton University in the United States, where he remained after renouncing his German citizenship. Fearing the Germans would develop nuclear weapons, Einstein wrote to President

FRANKLIN DELANO ROOSEVELT advising the research and testing of fission bombs, a suggestion that led to the United States's MANHATTAN PROJECT, the outcome of which was the development of the first atomic bomb and its use to end the war in the Pacific.

Einstein continued to search for a “unified field theory” that would describe all physical laws in one theory, the quest that had driven everything from his capillarity paper to his theory of general relativity. He lived a quiet life, refusing the request of the government of Israel that he serve as its president, and died in 1955 of an aneurysm.

BILL KTE'PI

El Alamein

El Alamein is railway station west of the Egyptian port of Alexandria where a series of three battles were fought in 1942. The result was the end of German and Italian aspirations of conquering Egypt and advancing into the Middle East. El Alamein was one of the most decisive battles of WORLD WAR II not only because of its strategic results but also because of how it altered perceptions about who could win the war.

British troops, under the command of General Montgomery, march back from the battlefield after the victory at El Alamein.

In 1940 Libya was an Italian colony that bordered on Egypt, where British troops were stationed in force. When the Italians joined the war in June 1940 on Germany's side, they expected that they would be able to attack France and gain some quick and easy concessions. They did not expect that the British, outnumbered by the Italians, would attack. Yet under the direction of Generals O'Connor and Wavell, that is exactly what they did. The British captured the port city of Benghazi. They were well on their way toward capturing all of Libya when they were counterattacked by the Germans, reinforcing the Italians. The Germans took the city of Benghazi back from the British and then advanced to Egypt and the Suez Canal. The German commander ERWIN ROMMEL next attacked the city of Tobruk, was in turn attacked by the British, and was forced to retreat. The British managed to force him back deep into Libya.

In the next year Rommel counterattacked, retaking Benghazi and capturing Tobruk. From there he again advanced and crossed the border into Egypt. He was stopped at the First Battle of El Alamein in July 1942. Both sides waited for a time. The British solidified their positions, while Rommel gathered his increasingly small amount of supplies, including fuel for his vehicles. In the first week of September, Rommel felt he had to attack and so launched an assault on the British positions at a place called Alam Halfa in what became known as the Second Battle of El Alamein. Repulsed by the British, Rommel now began efforts to fortify his positions, creating obstacles through the use of minefields. He had no realistic expectation of attacking again and so had to remain in place. Although he had advanced so far into Egypt, the situation now favored the British.

The troops under the British commander Montgomery outnumbered Rommel's nearly two to one and had at least twice as many tanks. In all aspects the British supply situation was much better. Rommel had so little fuel that his ability to move was severely limited. At the same time, the British gasoline was more plentiful than water. That logistical superiority was to translate into immense tactical superiority on the night of October 23, 1942. That night the British opened with a massive artillery barrage using over 600 guns.

This extensive artillery preparation lasted several hours and moved its focal point up and down the German line. Then it moved forward to allow the combat engineers with supporting tanks to disarm the extensive minefields that formed the backbone of Rommel's defenses. The process of attacking by the 8th British

Army was slow and methodical and would concentrate first on one part of the German line and then on another. Montgomery referred to this process as “crumbling” the enemy’s defenses. The Germans counterattacked but failed in their attempt to drive the British back. Finally, on November 2 the British broke through the last belt of minefields, and the attack could begin. By November 4 Rommel decided to retreat to the west.

From the west, in French North Africa, the Americans landed an army of over 400,000 men, who advanced eastward. Caught between the British and the Americans, Rommel’s army surrendered in Tunisia in May 1943. The war in Africa was over.

At El Alamein Rommel was at his farthest point from his base of supplies. He had one route that followed the coastline; everything had to come to him that way from the Italians in Libya. Their bases were supplied by ship from Italy. This supply route was under constant attack by British submarines and aircraft. Italian and German ships were sunk, and much of what was supposed to go to Rommel never reached him. Supply superiority translated into tangible benefits: more tanks and cannon as well as massive air superiority. That also translated into intangibles such as better morale helped by ample stores of food and other supplies.

If the British had lost at El Alamein, they could have lost all of Egypt, which would have been catastrophic. The Germans had hoped to link up with their soldiers in Russia by this route. The Germans could have captured the Suez Canal and controlled the Mediterranean. A push further would have brought them into Palestine. There was no oil there, but a pipeline from Iraq built in the 1930s would have given them access to it. Considering that the government in Iraq was pro-NAZI, that would have solved Germany’s oil problems. Further, the loss would have damaged British prestige and credibility.

ROBERT N. STACY

El Salvador/*La Matanza*

La Matanza, a Spanish phrase translated as “the massacre” or “the slaughter,” refers to the aftermath of an indigenous, communist-inspired uprising in El Salvador in 1932. Although precise figures of the dead are difficult to discern, it is estimated that between 8,000 and 30,000 Salvadoran Indians were killed in the state-sponsored violence.

The roots of the insurrection lay in the appropriation of communal lands for coffee production by the elites and the resulting dislocation of a large number of peasants, many of them indigenous. In the 1880s the Salvadoran government passed laws outlawing Indian communal landholdings and passed vagrancy laws that forced the landless peasants to work on the large coffee plantations owned by the elites. In response peasants in El Salvador launched four unsuccessful uprisings in the late 19th century.

Coffee production expanded into the 20th century, as the country was ruled by a coalition of the coffee-growing oligarchy, foreign investors, military officers, and church officials. In the 1920s land used to grow coffee had expanded by more than 50 percent, causing the Salvadoran economy to be heavily dependent on the international price of coffee. This expansion also created a number of peasants with vivid memories of their recent displacement.

The GREAT DEPRESSION in 1929 resulted in a dramatic decline in coffee prices. By 1930 prices were at half of their peak levels, and by 1932 they were at one-third of the peak levels of the mid-1920s. In response the coffee producers cut the already low wages of their laborers up to 50 percent in some places, in addition to cutting employment.

Meanwhile, the country was experiencing a period of democratic reform unusual in Salvadoran history. In 1930 President Pío Romero Bosque announced that the 1931 election would be a free and open election. This democratic opening allowed Arturo Araujo to win the presidency with the support of students, peasants, and workers. Araujo was distrusted by much of the elite, whose distrust grew with his attempted implementation of a modest reform program. Araujo’s presidency would be marked by increasing social and political unrest and a deepening economic crisis, accompanied by the growth of leftist unions and political groups. On May Day 1930, 80,000 farm workers marched, demanding better conditions and the right to organize.

On December 2, 1931, Araujo was deposed in a military coup, and his vice president, General Maximiliano

Hernández Martínez, assumed the presidency. Martínez quickly ended Araujo's program of social reform and also ended the democratic opening.

In early 1932 Salvadoran Communist Party (PCS) members led by AUGUSTÍN FARABUNDO MARTÍ planned a revolt against the landowning elite. The insurrection was to be accompanied by a revolt in the military. Before the revolt could begin Martí was captured, and the rebels in the army were disarmed and arrested. Martí would be executed in the aftermath of the failed revolt.

Despite these setbacks Indian peasants heeded the call of the PCS and revolted in western El Salvador. On the night of January 22 farmers and agricultural workers armed with machetes and hoes launched attacks against various targets in western El Salvador, occupying Juayúa, Izalco, and Nahuizalco in Sonsonate and Tacuba in Ahuachapán.

The military counteroffensive quickly defeated the rebels and retook towns that had fallen to the rebels. While an estimated 20 to 30 civilians were killed in the initial revolt, thousands would die in its aftermath. The military along with members of the elite organized into a civic guard and carried out reprisals singling out Indian peasants, those who wore Indian dress, and those with Indian features. In the town of Izalco groups of 50, including women and children, were shot by firing squads on the outskirts of town. These reprisals would last for about a month after the insurrection. It is estimated that between 8,000 and 30,000 Salvadoran Indians were killed in the aftermath of the insurrection.

In addition to the loss of life suffered by the indigenous community, *La Matanza* would have other long-term effects. The massacre influenced many Indians to abandon traditional Indian dress, language, and other identifiable cultural traits in many communities in western El Salvador, although recent research has suggested that Indian identity was not completely destroyed.

For the Salvadoran elites the revolt would combine their strong fears of Indian rebellion and communist revolution. When the violence of *La Matanza* subsided, a combination of racism and anticommunism became the leading ideology of the elite. This ideology served to block social change and to justify repression. Politically, El Salvador would have a series of military juntas until the El Salvador civil war in the 1980s.

MICHAEL A. RIDGE, JR.

Ellis Island

Ellis Island was the chief port through which immigrants came to the United States from 1892 to 1954. Located at the mouth of the Hudson River in New York Harbor, Ellis Island witnessed the arrival of more than 12 million immigrants into the United States, most of whom were European. Of the millions who came through Ellis Island, nearly 2 percent were denied entrance to the United States for one reason or another.

Immigrants coming into the United States were classified according to the manner in which they arrived. Those who came in first- and second-class accommodations were presumed to be of good enough social standing that they would not prove to be a burden on American society. First- and second-class passengers came to Ellis Island only if they had particular legal or medical problems that could deny them entry into the country.

Third-class, or steerage, passengers were not so lucky. The accommodations of their crossing were substandard, located on the bottom of the ship, often in cramped quarters near the ship's supplies. The conditions in steerage were often unsanitary, crowded, and uncomfortable. Unaccompanied women were often in danger of sexual assault from the other passengers. The trials of third-class passage did not stop with the arrival of the ship to the United States. Because of the low cost of their passage, steerage passengers carried the risk of becoming a financial burden to the country. Hence, steerage passengers were sent to Ellis Island to gain entry. On Ellis Island these immigrants underwent legal and medical inspections that could last as long as five hours. Immigrants with debilitating medical conditions or significant legal problems were denied entrance.

These inspections were performed by the U.S. Public Health Service and the Bureau of Immigration, who referred to manifest logs from the ships at the time of the inspection. These manifests included personal information about the passengers such as name, date of birth, country of origin, current amount of avail-

able funds, and an address to which the person was traveling—generally that of a relative. All passengers needed a destination and could be denied entrance if they did not have a specific place to which they were going. Examiners asked questions that were used to determine the general health of immigrants, to detect chronic disease and mental health concerns, and to highlight legal problems. Those who did not possess the basic skills to work or had chronically poor health were sent back to their country of origin. Others were quarantined to prevent the spread of infectious disease. More than 3,000 immigrants died in the hospital on the island.

Once through the inspection, many of the new immigrants changed their names. Sometimes this was strictly for convenience, but often it was because both the immigrants and inspectors tended to be uneducated. Names were often spelled incorrectly, made more American, shortened, or spelled phonetically. Frequently, passengers came to Ellis Island without papers. These passengers, called “WOPs” by the examiners, were generally allowed to enter the country. Passengers traveling without papers tended to be Italian,

and the term *WOP* quickly became an epithet for all Italian immigrants.

While the immigration process was long and often frustrating, many underwent the process multiple times. Men frequently traveled back and forth between Europe and the United States as seasonal workers. Because of this, the immigration figures from Ellis Island are skewed. At the time there was no technology to accurately count people as repeat immigrants.

In 1897 a fire destroyed many of the Ellis Island facilities, causing them to close for a substantial renovation. During this time the Barge Office in Battery Park served as a temporary immigration station until the Ellis Island facilities could be reopened on December 17, 1900. After the renovation the processing of immigrants became more efficient. The facility expanded by 10 acres, and the island was capable of processing thousands of immigrants per day at a much faster pace than had been previously possible. Additionally, the facilities expanded to encompass a nearby island that included an administration building and hospital wards; 10 years later, a third island was added, housing additional hospitals for use as quarantine zones.

Ellis Island acted as the staging point for more than 12 million European immigrants to America. The island operated between the years of 1892 and 1954 and was for many the final stop on their journey between the continents.

Throughout much of its history, corruption was one of Ellis Island's biggest problems. In 1901 President THEODORE ROOSEVELT fired several high-ranking officials including the commissioner of immigration and the head of the Bureau of Immigration. Investigation found frequent instances of immigrants being pressured into bribing inspectors, with many being detained if the immigrants questioned the need for the bribe or did not (or were not able to) produce the money. Attractive young women, having survived the passage in steerage, were forced to grant sexual favors to inspectors to guarantee admittance to the country. Inspectors sold items such as lunches and railroad tickets at exorbitant prices, forcing the new immigrants to pay, with the officials and inspectors taking the additional revenue for themselves. Workers frequently lied about the exchange rate, pocketing the extra money, while other inspectors sold fake immigration citizenship certificates, giving a cut of the proceeds to ship officers. To Roosevelt's mind such corruption could not stand and needed to be stopped.

Roosevelt appointed William Williams, a New York lawyer, as commissioner in April 1902. Williams created an environment in which the immigrants were treated with respect, consideration, and kindness. Signs were posted throughout the island promoting kindness and respect and serving as a constant reminder to workers on how to conduct themselves. Williams's duty was to undo the damage caused by corruption.

Many European immigrants came to the United States during WORLD WAR I, but passage was eventually prohibited. Many immigrants stayed on Ellis Island because they could not be sent back to their home countries, and the island served as a confinement center for 1,500 German sailors and 2,200 secret agents and foreigners. Travel by ship was hazardous because of the frequency of submarine attacks, and many European nations shut down their borders. Additionally, the navy took over the island's large hospital during the war in order to care for injured naval soldiers and sailors. As a result, from 1918 to 1919 many immigrants and suspected subversives were taken off the island and sent elsewhere. During the RED SCARE immigrants suspected of involvement with radical organizations or under suspicion of fomenting revolution were deported from Ellis Island.

Such views were enhanced by the sabotage inflicted on Ellis Island on July 30, 1916. The Black Tom Wharf on the New Jersey shore was located about 300 yards from Ellis Island. Here there was a railroad yard and a place for barges to load cargo. On July 30 several railroad cars and as many as 14 barges were loaded

with dynamite, ready to have their cargoes transferred to waiting freighters. The cargoes exploded early that morning, causing extensive damage to Ellis Island and creating a blast that was felt as far away as Pennsylvania. The damage to Ellis Island was estimated at \$400,000—broken windows, jammed doors, and demolished roofs. During the chaos 125 workers transferred nearly 500 immigrants to the eastern part of the island and ferried them over to the Manhattan Barge Office. Ellis Island reopened in 1920.

Throughout the history of Ellis Island, laws and regulations were enacted to decrease the number of immigrants entering the United States. For instance, the Immigration Restriction League and other similar organizations created the Exclusion Act of 1882, prohibiting Chinese immigration for 10 years. This act continued to be reassessed and passed until 1943. In 1917 the Alien Contract Labor Law came into effect, further reducing immigration, while mandatory literacy tests in the same year allowed for the exclusion of more and more potential immigrants. While these acts did limit the number of new people entering the United States, more than half a million passed through Ellis Island in 1921 alone. In 1924 quota laws and the National Origins Act were passed through Congress; these laws allowed for limited numbers of specific ethnic groups to be given entry into the country as determined by the 1890 and 1910 censuses. Some 33 different classes of immigrants to be denied entrance were named in the legislation. In effect, the laws differentiated between northern European settlers and what were at the time immigrants from predominantly southern and eastern European countries.

Adding an additional layer of bureaucracy for potential immigrants, following World War I it became necessary to apply for visas in one's home country before being allowed to enter the United States. This increased the complexity of the immigration process, as it required a great deal of paperwork and medical inspection before arrival to the United States.

Following 1924 Ellis Island stayed in use, but as more of a quarantine and detention center than a center for the processing of immigrants. Those who stayed on Ellis Island tended to be those with complications in their medical records or those who had been displaced. Immigrants in general entered the United States through other locations. Proposals were made as early as 1924 to close down the island, but this did not occur until 1954. Before that, Ellis Island was used as a place to confine enemy foreign nationals during WORLD WAR II. In 1986 the island underwent a significant restoration

to the main building, and Ellis Island reopened in 1990 as a museum. Here visitors can access the records of family members who came to or passed through Ellis Island during its tenure as the largest entry point for immigrants into the United States.

NICOLE DECARLO

environmentalism/ conserving nature

New conceptions of how humans should interact with the natural world put down roots in 19th-century America. Aristocratic Europe's pastoral perspective valued neatly kept farms and artfully landscaped vistas. Some Americans had different views. Mid-19th-century Massachusetts transcendentalist Henry David Thoreau studied natural processes and experimented with a new kind of natural simplicity at Walden Pond, bemoaning the noisy incursion of trains. Gaining influence after his death in 1862, Thoreau fathered what eventually became an environmental movement.

By the first half of the 20th century, a growing U.S. conservation movement had saved some of the nation's most spectacular natural landscapes. In 1872 President Ulysses S. Grant and Congress created Yellowstone National Park in Montana and Wyoming, officially described as "a pleasuring-ground for the benefit and enjoyment of the people." Grant was first in a series of presidents to protect certain lands from most kinds of human exploitation. Many individual states mounted smaller parks projects.

By 1890, when the U.S. census revealed that America's frontier—its stock of unclaimed land—had virtually disappeared, rescuing remaining natural treasures took on new urgency. California's Yosemite became a national park in 1890. Taking office in 1901, THEODORE ROOSEVELT, an outdoorsman himself, ini-

tiated conservation programs that truly reshaped the nation. During his progressive presidency, Arizona's Grand Canyon and four other national parks were established. Advised by forester Gifford Pinchot, Roosevelt set aside more than 231,000 square miles of forested land and established the National Forest Service. His 1906 Antiquities Act helped to identify and preserve prehistoric and historic sites of special significance, including some Indian structures and major Civil War battlefields.

President William Howard Taft in 1910 created Montana's 1,600-square-mile Glacier National Park, long the dream of *Forest and Stream* editor George Bird Grinnell. But later that year a controversy between Taft and Pinchot over the proper use of forest set-asides led to Pinchot's firing and became a factor in Roosevelt's "Bull Moose" campaign against Taft in 1912. Their political feud revealed some of the difficulties and ironies of a nation legislating "wilderness" and scenic beauty. Especially in the American West, where the federal government owned a large percentage of the land, many interests clamored for greater commercial and personal access. Was providing seemingly untouched natural beauty to awed urban visitors really more important than a rancher, miner, or farmer making a decent living? Conservationists were often a minority in these local and regional arguments, although railroad interests often supported conservation projects that enhanced tourist travel by train.

Additionally, although this would hardly have bothered most white people at that time, many conservation, preservation, and set-aside programs effectively severed Native American tribes from their traditional uses of Yellowstone, Yosemite, Glacier, and other new American shrines. What conservationists worshipped as "virgin land" or "wilderness" had in many cases been used by Indians for centuries as habitat and hunting and fishing grounds.

Conservation leaders like Scots-born John Muir, a founder in 1892 of the Sierra Club, and Iowa native Aldo Leopold, cofounder in 1935 of the Wilderness Society, were naturalists who were primarily interested in protecting the natural environment as much as possible from human disturbance. Although they and their many allies worked closely with government agencies, there was a constant struggle over how protected lands could be used. Mining, grazing, farming, and timbering rights in park reserves were clearly a source of tension. So too was the very purpose of a growing national parks system—to expose large numbers of human visitors to "nature."

Tourism also could, and certainly would, endanger truly wild places.

Teddy Roosevelt once spent four days in Yosemite with Muir camping and hiking, but that did not mean that conservationists always had the ear of politicians. President WOODROW WILSON, who in 1916 authorized creation of the National Park Service, had three years earlier accepted congressional approval of the Hetch-Hetchy dam that flooded part of Yosemite in order to provide San Francisco with drinking water. It was a bitter defeat for the Sierra Club and Muir's last great wilderness crusade.

In 1907 Pinchot had defined conservation as "the use of the Earth for the good of Man." By the 1930s the NEW DEAL was siting and building huge dams for travel, irrigation, and hydroelectric power across the American landscape. Especially in Appalachia, site of the Tennessee Valley Authority (TVA) and along the Columbia River in the Pacific Northwest, these dams permanently reshaped ancient landscapes and affected fish and wildlife, usually for the worse. In this same era President FRANKLIN D. ROOSEVELT's young men's work initiative, the Civilian Conservation Corps, was a boon for neglected or underfunded national parks. Trails were cut, scenic overlooks created, and benches and tourist facilities provided or improved. But when the economy recovered, this meant that even more people could easily leave their own imprint on the landscape.

Starting his career with the Forest Service in 1909, Aldo Leopold came to believe that managing forested areas was not the same as protecting trees and their ecosystem. Leopold and others began to believe that nature's "rights" should and sometimes must trump human needs and desires. In his influential 1949 book, *A Sand County Almanac*, published after his death in a fire near his Wisconsin home, Leopold called for a "land ethic" that would encompass respect for "soils, waters, plants and animals." It was an early intimation of what emerged in the 1960s as a new environmental, or "Green," movement that looked beyond scenery and natural magnificence to the fundamental health of "soils, waters, plants and animals" and humans worldwide.

MARSHA E. ACKERMANN

Espionage and Sedition Acts

On June 17, 1917, little over two months after the United States entered WORLD WAR I as an associated power of the Allies, Congress passed the Espionage Act, which criminalized the provision to any party by any party of any information when the intent was to interfere with the success of the American armed forces.

The wording of the law was general rather than enumerating specific potential instances, and a year after its passing socialist EUGENE DEBS was arrested for obstructing military recruiting with an antiwar speech delivered in Canton, Ohio. He ran for president from prison as a way to draw public attention to his fate and was pardoned by President Harding after serving a third of his sentence.

Dozens of socialist and antiwar newspapers and magazines were forced to avoid coverage of the war, suspend publication, or risk having the Postmaster General revoke their right to use the mails. The law was challenged in *Schenck v. United States*, when Charles Schenck was arrested for circulating a pamphlet calling for resistance to the draft; the Supreme Court upheld the law, and its decision introduced two common phrases of American legal language. Justice Oliver Wendell Holmes, the author of the decision, said first that the guarantee of free speech did not protect words that presented a "clear and present danger," and that "the most stringent protection of free speech would not protect a man falsely shouting fire in a theater."

In 1918 the Sedition Act extended the bounds of the Espionage Act, outlawing various instances of speech against the government. Most of the laws associated with the two acts were repealed in 1921.

BILL KTE'PI

Estrada Cabrera, Manuel

(1857–1923) *Guatemalan president*

Manuel José Estrada Cabrera was president of Guatemala from 1898 to 1920 and established a tradition of Guatemalan strongmen that was to be revived by JORGE UBICO and later presidents. Estrada Cabrera is

also credited with running the longest one-man dictatorship in Central American history.

Born on November 21, 1857, in Quezaltenango in the southwest of Guatemala, the nation's second-largest city, Estrada Cabrera was educated in Roman Catholic schools, training as a lawyer. After many years practicing in Quezaltenango and then in Guatemala City, he became a judge of the Guatemalan supreme court before entering politics. Elected to congress, he became minister of public instruction, minister of justice, and then minister of the interior during the presidency of José María Reina Barrios. On February 8, 1898, the president was assassinated, and Estrada Cabrera, who was in Costa Rica, returned to Guatemala City. He was the second in line to the presidency. Estrada Cabrera was said to have burst in on the cabinet meeting where the politicians were discussing the succession. Charging in unannounced, he walked around the cabinet ministers and then drew a revolver from his pocket. Placing it on the table, he then announced: "Gentlemen, you are looking at the new president of Guatemala."

Estrada Cabrera was sworn in as the provisional president, elected soon afterward, and officially inaugurated on October 2, 1898. During his first term in office he respected the constitution, which forbade presidents' serving more than one term. Before this first term was over Estrada Cabrera changed the constitution to allow himself to be reelected in 1904, again in 1910, and on a third occasion in 1916, remaining president until April 15, 1920. Political commentators do not credit him with any personal popularity or any plan of action or change except anything that might keep him in office.

During his time as president of the country, Estrada Cabrera certainly gave Guatemala internal peace, and this was welcomed by the landowners and the Guatemalan middle class, although the latter gradually tired of his rule. There had been a financial crisis just before he came to power, and he managed to steer the country through it. He also encouraged investment by the UNITED FRUIT COMPANY, which during his presidency started to take over the economic life of the country. Minor Keith of the United Fruit Company was also granted the rights to establish a railway across Guatemala in 1906. When it was completed, the company took ownership not only of the railway but also of 170,000 acres of agricultural land. The actions of the United Fruit Company led to increased control of the Guatemalan economy by U.S. business interests, in contrast to the situation faced by U.S. companies in

Nicaragua, where the reformist president, JOSÉ SANTOS ZELAYA, was trying to replace U.S. businesses with European ones.

In 1910 the *Chicago Tribune* sent Frederic Palmer to visit Guatemala and other parts of Central America. He found that the president was living not in the presidential palace but in a nearby building that was easier to secure. In a meeting with the president, the journalist was told that the Guatemalan army numbered 15,000 to 16,000, but that in a time of war 60,000 could be fielded, which meant that Guatemala had one of the largest, relative to its population, standing armies in the world. Certainly Estrada Cabrera used the army and, more importantly, his secret police, controlled by Justo Rufino Barrios, to ensure he had no opposition, removing any liberal moves that had been introduced just before he came to power. He also used the presidency to loot the treasury and make himself a large fortune.

Estrada Cabrera was also responsible for building a few schools; improving sanitation, especially in Guatemala City, the nation's capital; and raising the level of agricultural production. However, he kept the Indians in a terrible state, marginalizing them politically and economically. One of Estrada Cabrera's eccentricities was to establish a cult to Minerva in Guatemala, with Greek-style "Temples of Minerva" built in many cities throughout Guatemala.

In 1906 rebels supported by other governments in Central America threatened to push him from office. However, Estrada Cabrera managed to get help from neighboring dictator Porfirio Díaz of Mexico. The Mexicans later became worried by Estrada Cabrera's power, and after the MEXICAN REVOLUTION he was to face bitter political opponents on Guatemala's northern borders, although internal strife in Mexico prevented them from intervening in Guatemala.

In April 1920 an armed revolt overthrew Estrada Cabrera, and the former dictator was thrown into jail. On April 15 the congress declared Estrada Cabrera to be medically unfit to hold office. He was replaced by Carlos Herrera and then by José María Orellana. This change ushered in a period of liberal political laws and a new reform government, which recognized opposition parties. Estrada Cabrera had hoped for U.S. intervention to save him, but the U.S. president, WOODROW WILSON, decided not to intervene. In fact, the conspirators who overthrew Estrada Cabrera moved only when they had information that Wilson would not act. Manuel Estrada Cabrera died on September 24, 1924, in jail in Guatemala City.

JUSTIN CORFIELD

Ethiopia (Abyssinia) and Italian aggression

In October 1935 Italian armies invaded Abyssinia (Ethiopia), beginning an eight-month war and a six-year occupation. Starting purely as an Italian colonial venture to expand Italy's control as well as to impress European nations, it came to have a significance all out of proportion to its original objectives.

Italy, as a unified nation, did not come into existence until the Risorgimento of 1870. For that reason, it was very late in developing an overseas empire; most of the colonial pickings had been taken by France and Britain. Italy had managed in the closing years of the 19th century to establish itself in eastern Africa (Eritrea), although a sound beating by the Abyssinians in 1896 at the Battle of Adowa stopped their progress there. Although Adowa was to be the most severe defeat ever suffered by Europeans in Africa, Italy managed to not only keep its Eritrean possessions but gain a bit more as well. In 1908 Somalia was declared to be an Italian colony, and the border between Somalia and Ethiopia was agreed on. Additionally, in 1911–12 Italy had managed to seize the Ottoman possessions in Libya. None of this, however, managed to satisfy a nation that as part of its mythic past looked back on the Roman Empire. Compounding that sense of unfulfilled entitlement, Italy, although an ally in WORLD WAR I, had not gained the territory it believed was its due. The sense of injury and historic destiny was given an added impetus in the 1920s and 1930s with the rise of the Fascists.

In the interim several events occurred. Although Abyssinia was an independent nation, it was not altogether considered to be the equal of other nations; when it applied for membership in the LEAGUE OF NATIONS, there were several delegates who were opposed to its entry. At first Italy opposed Abyssinia's application but then supported it. Abyssinia became a full member of the league in 1923. That fact would have later consequences, as membership meant that Italy could not attack Abyssinia without the threat of action of the entire league.

Italy and Abyssinia signed a treaty of friendship in 1928, but the Italians would maintain a very strong

military presence on their borders and on occasion send military detachments across the borders to see how far they could push without starting a war. By 1932 BENITO MUSSOLINI was committed to an eventual war of conquest in the area, and military planning began at about this time. Finally, in 1934 the Italians engineered a border incident that would eventually become the official cause of the war, which would start in October 1935.

The extent of military planning and the allocation of Italy's resources for this war would become a major effort. While in retrospect the campaign was one of tanks, aircraft, and machine guns against a primitively armed native population, there was no assumption of an easy military victory. Adowa, less than 40 years before, had been a serious and sobering defeat. Even new weapons, as the British, Spanish, and French had learned, did not guarantee victory in colonial wars. The Abyssinians, with their population of an estimated 12 million living in a rugged and wide-ranging homeland, could not be counted on to surrender at the first sight of an Italian tank or airplane.

On October 3, 1935, Italian forces attacking from Eritrea in the north and Italian Somaliland in the south invaded Abyssinia, meeting with substantial opposition from the very beginning. Mechanized and motorized forces and aircraft overpowered organized resistance. By May 5, 1936, the Italians had managed to defeat the Abyssinian army and entered the capital of Addis Ababa. Italian forces suffered about 5,000 casualties; most of these were natives serving as part of the Italian force.

With the capture of Abyssinia's capital, the Italians believed their mission accomplished and organized their African possessions into one large colony, Africa Orientale Italia (AOI), which they divided into six governorships. Occupying the territory and controlling all of it turned out to be a different matter: They never succeeded in holding more than half of the country. There was widespread opposition throughout the countryside that grew in severity. In 1937 an attempted assassination of Marshall Badoglio, the commander of the region, spurred extensive reprisals. This opposition kept up until the Italians were finally driven out in 1941 by the British.

Aside from the military aspects of the campaign, which showed how new technology could be effectively applied against native armies, the war had a political significance on an international scale. The conflict showed very quickly the ineffectiveness of the League of Nations. Further, it demonstrated both splits between

what were supposed to be solid allies and the lack of internal resolution of those allies.

On October 10, 1935, the league agreed to impose economic sanctions against Italy as punishment for its unprovoked invasion in direct defiance of the league's rules. The sanctions were not enthusiastically endorsed, although Canada suggested additional oil sanctions be applied. Part of the problem was that the league's standing did not support strong measures. Another factor was that despite the fact that Abyssinia was a member, many other members considered it to be little more than a very backward region. In their view, despite the unanimous declaration of 1923, Abyssinia should not be thought of as an independent nation. Also, sanctions were useless unless they were supported by everyone. The United States, which was not a member of the league, increased its exports of oil to Italy at this time.

There were attempts to resolve the crisis by diplomacy of individual nations, but these were not only ineffective but did not reflect well of the proposing nations. In negotiations with the Italians, the British and French offered to let Italy have large parts of the country. Britain would then donate part of British Somaliland, one of its ports, to Abyssinia. Neither HAILE SELASSIE nor any member of his government was brought into these talks. These negotiations were not looked on well by several members of the league who rightly thought it was rewarding aggression. Thus, the plan died, and Italy continued its war.

Abyssinian emperor Haile Selassie went to the League of Nations for assistance in June 1936. He got nothing for his efforts. Italian claims of atrocities partially undermined Ethiopia's case, although it was clear that the league would not have supported Ethiopia in any event.

The occupation of Abyssinia was not a quiet experience for occupiers or occupied. The Italians brought in the machinery and infrastructure of a colonial government, but nothing went exactly as it had been planned. For one thing, there was the active opposition of the natives, which never decreased from the day Addis Ababa fell until the British liberated the country. In 1935 Italians opened a concentration camp in Somalia. Eventually, more than 6,000 people from all over the AOI, but principally Abyssinia, were processed there. Its peak operating period was from the major repression of 1937 until the British arrived in 1941. In 1937 some opponents of the regime were sent to Eritrea and from there on to Italy. In a reversal, political detention camps were opened in the AOI that were used to house

Italian political dissidents. There were reported to be mass executions as well.

There were some positive developments. The Italians did bring an improvement in health care. Also, they stopped much of the intertribal fighting that had always plagued Abyssinia. These advantages must be seen, however, against the larger issue of Italy forcefully occupying a nation and repressing its people. One of the major reforms was a negative one that had to do with education. Italy feared the educated elite in Abyssinia, which they correctly saw as the backbone of opposition. The Italians repressed this elite and also ensured that there would be no schooling beyond the most basic for the general population.

Finally, the area was liberated in 1941 and administered by the British until after the war. Then Italy returned but only as a mandatory power for Eritrea and Somaliland. These countries eventually gained their independence. Abyssinia, more commonly referred to now as Ethiopia, regained its independence with the return of its emperor.

For what started as a colonial venture, the war between Italy and Abyssinia had far-reaching consequences. It demonstrated what military force could do against civilian populations and how far international bullying could go as well as improving the chances for a war in Europe.

Mussolini's popularity and political strength in Italy were improved by the war. In the minds of many, the victory and acquisition of land removed some of the perceived disgrace that came from the consequences of World War I. Mussolini, who often ruled by the creation and management of crises, mobilized a great deal of support for the prosecution of the war. In addition, the threat of league sanctions helped strengthen popular resolve because the Italian government managed to stir the population into a feeling that it was united against the league, improving the degree of political cohesion, at least for a while. Even the Catholic Church, which sometimes opposed Mussolini's policies, came down publicly in favor of the Italian effort in Africa.

Another development of great significance was the deployment of the technology of destruction. The Italians used their air force extensively in this war. Pioneers in the use of aircraft against ground targets, they had used aircraft in Libya against the Ottomans and later used them against the Libyan natives from 1921 to 1931. Now, after also leading the world in developing the theory of air power, they showed themselves to be expert practitioners. The latest in modern weaponry was used more widely and ruthlessly than ever against

not only combatants but against the civilian population. The Italians also bombed Red Cross stations, hospitals, ambulances, and civilian targets. In a way, the air attacks on the Abyssinians prefigured not only Guernica but later Warsaw, Rotterdam, and London.

On the continental scale, the war accelerated the political decisions and rivalries in Europe. It destroyed the good will that had existed between Britain and Mussolini's Fascist government. The crisis surrounding the war highlighted and increased the mutual suspicion between France and Britain. That impression was reinforced at Munich in 1938, leading ADOLF HITLER and Mussolini into assumptions that would lead them to war in 1939 and 1940. The alienation of Italy from its former allies and Europe at large brought it closer to Hitler's Germany. At the same time it deepened the contempt that Hitler and Mussolini had for the western powers, in large part because of their inability to do anything constructive.

Finally, it signaled the effective end of the League of Nations as a body capable of protecting small nations from aggression and preventing aggressive war. There had been defections from the league at least as far back as the 1920s based on smaller nations stating that the league was useless in protecting them. The Japanese invasion of Manchuria in 1931 and the invasion of Abyssinia only demonstrated and reinforced the perceived weaknesses of the league. While the league could point to accomplishments in areas such as improving health of people in poorer nations, it could not stop a war.

ROBERT STACY

eugenics

Sir Francis Galton, a cousin of Charles Darwin, coined the term and concept of eugenics in 1883. Eugenics,

often defined as "well-born," was an effort to apply Darwinian evolution and Gregor Mendel's recently recognized genetic discoveries to the physical, mental, and moral improvement of human beings. Eugenics gained many supporters in the progressive-era United States, Canada, and much of Europe. But the concept was riddled with class and racial biases that inflicted harm on thousands of supposedly "inferior" humans. When the excesses of ADOLF HITLER's WORLD WAR II eugenics programs became known, this effort at human engineering fell into disrepute.

Galton was a respected scientist and statistician, but his eugenics notions were based less on evolution than on Social Darwinism, a philosophy that conveniently justified growing inequities in industrializing societies. Nations could no longer wait for evolution to weed out the weak and stupid; rather, experts would facilitate the process of improving the race, by which most eugenicists meant white northern Europeans. Positive eugenics tried to encourage "superior" men and women to produce superior offspring. (The Galtons were childless.) Negative eugenics went much further. It proposed to discourage "defective" humans from reproducing at all.

Soon, eugenics agencies and research facilities were springing up. A eugenics laboratory, later named in Galton's honor, was founded at London's University College in 1904. In the United States Charles Davenport created a Eugenics Record Office on Long Island. U.S. president THEODORE ROOSEVELT, fearing "race suicide," heartily approved of this burgeoning movement to weed out the "unfit." The state of Indiana in 1907 was the first to pass a eugenics sterilization law.

Buck v. Bell, a eugenics sterilization case from Virginia, came before the U.S. Supreme Court in 1927. Speaking for eight of the nine justices, Oliver Wendell Holmes, Jr., ruled in favor of the state. Carrie Buck, he noted, "is a feeble-minded white woman . . . the daughter of a feeble-minded mother . . . and the mother of an illegitimate feeble-minded child," adding, "Three generations of imbeciles are enough." By 1933 28 states had sterilized more than 16,000 unconsenting women, men, and children.

In Canada interest in eugenics peaked among English speakers during the GREAT DEPRESSION, when the poor and sick seemed an impossible burden. The Soviet Union and many European nations also promoted fitter families while trying to minimize the "unfit." Everywhere the poor and uneducated, racial and ethnic minorities, and criminals were overwhelmingly beneficiaries of "genetic cleansing." But none took eugenics as far as NAZI

Germany, where Hitler copied many aspects of U.S. eugenics practices and passed laws in the 1930s that foreshadowed the elimination of millions of Jews, Gypsies, gays, and others considered unfit. In the wake of these atrocities, most eugenics organizations disbanded or rethought their goals. In 1942 the Supreme Court struck down involuntary sterilization of criminals; in 2001 Virginia apologized for *Buck* and other eugenics interventions.

As genetic science has expanded dramatically, the ethics of genetic improvement remains a very touchy topic. Birth control pioneers Margaret Sanger of the United States and Marie Stopes in Britain were both ardent eugenicists, leading today's abortion foes to distrust the underlying aims of family planning. New technologies raise the specter of prenatal engineering for "perfect" babies—a concept Galton did not precisely foresee but would probably have applauded.

MARSHA E. ACKERMANN

existentialism

Existentialism is a chiefly philosophical and literary movement that became popular after 1930 and that provides a distinctive interpretation of human existence. The question of the meaning of human existence is of supreme importance to existentialism, which advocates that people should create value for themselves through action and living each moment to its fullest.

Existentialism serves as a protest against academic philosophy and possesses an antiestablishment sensibility. It contrasts both the rationalist tradition, which defines humanity in terms of rational capacity, and positivism, which describes humanity in terms of observable behavior. Existential philosophy teaches that human beings exist in an indifferent, objective, ambiguous, and absurd context in which individual meaning is created through action and interpretation.

Although there is a diversity of thought in the movement, its thinkers agree that all individuals possess the freedom and responsibility to make the most of life. Existentialists maintain the principle that "existence

precedes essence," an observation made by Jean-Paul Sartre (1905–80), atheist humanist and the only self-proclaimed "existentialist." This principle advocates that there is no predefined essence of the human being and that essence is what a human makes for itself.

Each of the existentialist thinkers, however, worked out their own interpretations of existence. Søren Kierkegaard (1813–55), a religious Danish philosopher known as the "father of existentialism," possessed a belief in the Christian God. He attacked abstract Hegelian metaphysics and the worldly complacency of the Danish Church. Kierkegaard believed that individual existence indicates being withdrawn from the world, which causes individual self-awareness. Individuals despair when confronted with the truth that their finite existence emerged detached from God. This despair, thus, gives rise to faith, despite the absurdity of that faith. Other philosophical precursors who are believed to have influenced modern existentialist philosophy include St. Thomas Aquinas (1224–74), Blaise Pascal (1623–62), Fyodor Dostoyevsky (1821–81), and Friedrich Nietzsche (1844–1900).

German philosopher Martin Heidegger (1889–1976) believed that the starting place for philosophy should be studying the nature of the existence of the human being. In his book *Being and Time* (1962), he intended to provoke people to ask questions about the nature of human existence. He intended that such questioning would have the result of causing people to live a desirable life and "possess an authentic way of being."

Several French authors possessed existentialist beliefs. Parisian-born Gabriel Marcel (1889–1973) advocated that the purpose of philosophy was to elevate human thinking to the point of being able to accept divine revelation. He coined the term *existentialism* in order to characterize the thought of Sartre and his lifelong friend and associate Simone de Beauvoir (1908–86). De Beauvoir, a Parisian existentialist author and feminist, penned *She Came to Stay* (1943) and *The Blood of Others* (1945). These works suggested that the viewpoint of someone else is necessary for an individual to have a self or be a subject. Jean-Paul Sartre, also a Paris native, popularized existentialism in his widely known 1946 lecture "Existentialism and Humanism." The lecture set out the main tenets of the movement. Taking Sartre's lead, existentialists rejected the pursuit of happiness, as it was believed to be nothing but a fantasy of the middle class. Sartre's existential thought can best be observed in his novels *Nausea* (1938), credited as the manifesto of existentialism, and *No Exit* (1943).

Existential thought became further disseminated through Sartre's colleagues, who included Maurice Merleau-Ponty (1908–61) and Albert Camus (1913–60). Merleau-Ponty sought to provide a new understanding of sensory phenomena and a redefinition of the relationship between subject and object and between the self and the world. Perhaps the most influential and well-known 20th-century existential writers, Sartre and Camus, also took part in the French Resistance, having been galvanized by the atrocities of WORLD WAR II. Although the only self-professed existentialist was Sartre, the other thinkers associated with the movement are associated with it because of their similar beliefs. Camus wrote novels concerned with the existential problem of finding meaning in an otherwise meaningless world and taking responsibility for creating human meaning. He advocated that the chief virtue of humanity was the ability to rebel against the corrupt and philosophically undesirable status quo.

From the 1940s on, the movement influenced a diversity of other disciplines, including theology, and thinkers such as Rudolf Bultmann (1884–1976), Paul Tillich (1886–1965), and Karl Barth (1886–1968), whose 1933 biblical commentary on the Epistle to the Romans inspired the “Kierkegaard revival” in theology. The principles of existentialism entered psychology through the 1965 work of Karl Jaspers (1883–1969), *General Psychopathology*, and influenced other psychologists such as Ludwig Binswanger (1881–1966), Otto Rank (1884–1939), R. D. Laing (1927–89), and Viktor Frankl (1905–97). Other writers who expressed existentialist themes included the marquis de Sade (1740–1814), Henrik Ibsen (1828–1906), Hermann Hesse (1877–1962), Franz Kafka (1883–1924), Samuel Beckett (1906–89), Ralph Ellison (1914–94), Marguerite Duras (1914–96), and Jack Kerouac (1922–69). The work of artists Alberto Giacometti (1901–66), Jackson Pollock (1912–56), Arshile Gorky (1904–48), and Willem de Kooning (1904–97) and filmmakers Jean-Luc Godard (b. 1930) and Ingmar Bergman (1918–2007) also became understood in existential terms.

CHRISTOPHER M. COOK

expatriates, U.S.

Since the beginning of the U.S. republic, artists and writers have felt the need to study, paint, and write in Europe while maintaining their U.S. citizenship. For these artists, insecure about their young nation's rawness, Europe long represented true civilization, steeped in aristocratic traditions. Before 1850 some U.S. painters trained in Europe, but few stayed beyond their apprenticeships.

By the middle of the 19th century, some found it more advantageous to their careers to stay. John Singer Sargent and Mary Cassatt spent major parts of their painting careers in Europe; James McNeill Whistler, who left for Europe at age 21, never returned home. By 1904 the California impressionist Guy Rose observed that Giverny, where Claude Monet lived and painted, was overrun by American artists.

Affluent writers like Henry James and Edith Wharton began to establish residences in Europe during the late 19th century. By 1900 Ezra Pound had installed himself in London, and shortly afterward Gertrude and Leo Stein left Baltimore for Paris, where they became important patrons of modern art.

U.S. artists understood that they could only keep up with trends in modern art (cubism, fauvism) by going to Paris, and in 1913 two of them, Stanton Macdonald-Wright and Morgan Russell, created a movement called synchromism, which applied methods of musical composition to painting by using a color wheel. It was the only school of modern painting up to that time founded by Americans.

St. Louis-born poet T. S. Eliot made his home in London after 1914. By the 1920s artists including Man Ray and Thomas Hart Benton and musicians George Gershwin and Virgil Thompson were living in Europe for extended periods. The flow of writers accelerated greatly as politically committed writers came to Europe to assist the British in WORLD WAR I, and others, who had been too young for military service, arrived once the war ended.

Many gravitated to the salon led by Gertrude Stein, who coined the phrase *the lost generation* to describe them. This was a generation disgusted with U.S. materialism and prudery, including PROHIBITION;

Gertrude Stein was the preeminent host to expatriate American writers and artists in Paris in the 1920s.

they included Ernest Hemingway, F. Scott Fitzgerald, John Dos Passos, E.E. Cummings, Djuna Barnes, and Thornton Wilder.

Expatriates even had a meeting place in Paris at Shakespeare and Company, a bookstore run by the American Sylvia Beach. The literary critic Malcolm Cowley described expatriation during the 1920s as a rite of passage based on the idea that “the creative artist is . . . independent of all localities, nations and classes.”

African Americans particularly found Europe to be a refuge from racial discrimination. HARLEM RENAISSANCE writers Langston Hughes, Claude McKay, and Countee Cullen lived in Europe during the 1920s, as did dancer Josephine Baker. Many expatriates were forced home by the GREAT DEPRESSION; scandalous writer Henry Miller was an exception, spending the decade in France.

After WORLD WAR II writers continued to expatriate. African Americans Richard Wright and James Baldwin traveled to avoid continuing bigotry; others such as Irwin Shaw, William Styron, and several beat writers left to avoid the excesses of the U.S. RED SCARE. Writers, trying like many other Americans to avoid the military draft, sat out the Vietnam War in Canada and Europe. Now, as historian Michel Fabre notes, expatriation has come to refer to “living abroad” and has none of the characteristics of exile.

DAVID MILLER PARKER

F

fascism

Fascism was a major political belief in the early 20th century, and the word was used officially by a number of political parties, notably the Italian Fascist Party. The name itself was derived from the *fascēs*, the axe in a bundle of rods that represented the power and authority of ancient Rome. In 1922 the Fascist Party came to power in Italy, and the NAZI PARTY became a part of the German government in 1933. During WORLD WAR II a large number of Fascist movements were installed either by Nazi Germany or with its support. Outside Europe and after World War II, some pseudo-Fascist groups also operated, mainly on the political fringes, with some mainstream political parties and politicians often accused of fascist tendencies by their enemies.

Fascist movements have tended to be formulated around four major ideas: totalitarianism, economic socialism, extreme nationalism, and xenophobia. Most successful fascist movements have tended to be formed around charismatic leaders who preside over a totalitarian state wherein people are indoctrinated into believing in the leader and trusting in his judgment—fascist leaders have invariably been male. On an economic level, fascist movements have tended to adopt socialist policies and have generally been both antiliberal and anticonservative in their views. On the issue of nationalism fascist movements surround themselves with symbols of national identity such as flags, badges, and the adoption of certain historical characters and events as important in the creation of national identity. The

extreme xenophobia of fascist movements has often led to racism, racist ideas, and racist violence.

Although many historians see fascism as a reaction to an existing political situation, others see it as a historical trend, possibly with its origins from the Jacobins at the time of the French Revolution. Certainly BENITO MUSSOLINI, ADOLF HITLER, and other fascists dated many of their ideas from the late 19th century. There had been a development of racist ideas by the French diplomat Joseph-Arthur, comte de Gobineau (1816–82), who is credited with the modern concept of racism. This gained greater impetus with the ideas of Social Darwinism, in which evolution made the white or Aryan the most developed form of human. This was to be an influence on Friedrich Nietzsche, composer Richard Wagner, and the early fascists in Europe.

Although certain elements of the beliefs of the Jacobins were similar to the policies of some fascists, the mainstream European fascist movement has its origins in the reaction against the events of 1789 and the revolutions in 1830 and especially 1848 as well as the fear of the spread of ideas from the Paris Commune of 1870. Some commentators felt that the people who were rising to power were not as worthy as the old aristocracy, and Darwinism was used to argue that they were at a lower stage of biological evolution. In spite of this many fascists saw themselves as “revolutionary” in a noncommunist manner. More mainstream fascism viewed the revolutionary movements as tending to have their origins in the cities, and the peasants in the countryside, viewed as more racially pure, should be the true

inheritors of the new society. By the late 19th century and the rise of anti-Semitism, it was clear that many protofascists were becoming increasingly anti-Jewish, although a few certainly rejected such ideas. These disagreements can be seen in the eventual implementation of fascist policies. Although Nazi Germany had an avowed policy of anti-Semitism, which led to THE HOLOCAUST, Fascist Italy did not introduce anti-Jewish measures until 1938, and this may have been as much to ensure an Italian-German military alliance as for ideological reasons.

FASCIST GOVERNMENTS

The first fascist party to come to power was the National Fascist Party (Partito Nazionale Fascista) in Italy. It was led by Benito Mussolini, who became the prime minister of Italy after his MARCH ON ROME in 1922. The actions of Mussolini inspired those of some other politicians in Europe, and during the 1920s, especially the last years of the decade, a number of mainstream political figures announced their support for Mussolini. In Germany the Nationalsozialistische Deutsche Arbeiterpartei (National Socialist German Workers' Party, which became the Nazi Party) of Adolf Hitler began to emerge as a political force in the late 1920s. It had links with Mussolini, and Hitler usually flattered his Italian counterpart, even though he secretly had little time for him. Supporters in France were grouped in the Faisceau of Georges Valois, which operated from 1925 until 1928.

However, it was the onset of the GREAT DEPRESSION in 1929 that was to provide the fascist movements in Europe and elsewhere with their greatest number of recruits. The failure of mainstream political parties to deal with the social legacy of WORLD WAR I, rising unemployment, and the growing despair of many people throughout the world led to support for extremist political viewpoints, from the left and the right. This terminology persisted with right-wing politicians often denounced by their opponents as "fascists." Several political figures, worried about the rising influence of communism, sought out a fascist alternative.

On January 30, 1933, mainstream German political parties invited Hitler to become chancellor of the country. He rapidly used his position to take over the government, which was confirmed when new elections to the Reichstag on March 3 led to the Nazis' dominating the new parliament and expelling the communists. Over succeeding months the Nazis took more and more power, leading to the banning of other political parties on July 14. On December 1 the Nazi

"revolution," as it was called, saw the Nazi Party and the German state merged.

Other fascist parties were emerging at the same time. Those who came to run their countries included the Vaterländische Front (Fatherland Front) of Engelbert Dollfuss in Austria; the União Nacional (National Union) of ANTÓNIO DE OLIVEIRA SALAZAR in Portugal; and the Elefterofronoi (Party of Free Believers) of Ioannis Metaxas in Greece. The Nasjonal Samling (National Union) of Vidkun Quisling in Norway had much support in the early 1930s, although its membership dwindled in the late 1930s. Quisling himself was to collaborate with the Germans in World War II. In Spain in 1933 the Falange (Phalanx) was founded by the young and charismatic José Antonio Primo de Rivera. Although it never came to power in its own right—indeed, Primo de Rivera was killed at the start of the SPANISH CIVIL WAR in 1936—its members did ally themselves to FRANCISCO FRANCO, and many of them served in the Spanish governments during the 1940s, 1950s, and 1960s.

OTHER EUROPEAN FASCIST MOVEMENTS

With many of the early fascist thinkers being French, there was a major fascist movement in France. Much of it centered on the writings of Charles Maurras (1868–1952). He believed that a union of the monarchy and the church could save Europe from anarchy and formed his movement, Action Française (French Action). The Croix de Feu (Cross of Fire), later renamed the Parti Social Français (French Social Party), was led by Colonel François de La Rocque and became one of the major right-wing parties in 1936–38, with a membership between 700,000 and 1.2 million. By 1939 these included 3,000 mayors, 1,000 municipal councilors, and 12 parliamentary deputies. In neighboring Belgium the Rexist Party of Léon Degrelle won 10 percent of the parliamentary seats in the 1936 elections.

In eastern Europe the violently anti-Semitic Falanga of Bolesław Piasecki in Poland was an important political party but did not manage to dislodge the government of Józef Piłsudski. In Hungary the Nyilaskeresztes Párt (Arrow Cross Party) of Ferenc Szálasi was largely ineffectual until 1944, when Szálasi was appointed puppet prime minister of Hungary by Admiral Miklós Horthy. Romania also had its own fascist movement, known as the Garda de Fier (Iron Guard), which also operated under the names the League of Christian Defense, the Legion of the Archangel Michael, and All for the Fatherland. These groups, led by Corneliu Codreanu, were disbanded in 1938, with Codreanu himself arrest-

ed in the following year. There were also fascist groups in the Baltic, with Viktor Arajs in Latvia and Vihtori Kosola, whose Lapua Movement tried to stage a coup d'état in Finland in 1932.

As well as fascist movements within countries, there were also groups that recruited from exiles. The Ustaša (Insurgence) movement was led by Ante Pavelić from Croatia, who fled Yugoslavia in 1929 and only returned after the German invasion in 1941. Similarly, there were many Russian fascist groups whose recruits were White Russian exiles. Some of these operated from China, with branches in Manchuria and in Shanghai. Others had support from Russians in the United States. The largest of these were the Russian Fascist Party (VFP) of Konstantin Rodzaevsky and the All Russian Fascist Organization (VFO) of Anastasy Vonsiatsky.

NON-EUROPEAN FASCISM

Outside Europe several fascist groups were founded in the Middle East and in South Africa. The Syrian People's Party, the Syrian National Socialist Party, the "Phalange" youth movement in Lebanon, the Futuwa movement of Iraq, and the Young Egypt movement also had fascist sympathies. In South Africa fascists found ready recruits among the Afrikaner community, which had become particularly politically active with the 100th anniversary of the Great Trek.

The military dictatorship of Admiral TOJO HIDEKI in Japan was also regarded as fascist, and many secret societies, pressure groups, and the like were fascist in their views and their organization. These included the Anti-Red Corps, the Great Japan Youth Party, the Greater Japan National Essence Association, the Imperial Way Faction, the New Japan League, and the Taisho Sincerity League. In China the Blue Shirts certainly absorbed some fascist ideas.

In the United States the KU KLUX KLAN and the Black Legion were important mass movements that attracted many fascists. There were also the supporters of Father Charles Coughlin, whose radio broadcasts attracted widespread attention throughout the country. He became increasingly pro-Nazi and anti-Semitic and had the support of those members of the German communities in the United States who were members of the German-American Bund, which organized youth camps and mass rallies until 1941. In Latin America there were several indigenous fascist movements such as the Unión Revolucionaria (Revolutionary Union), which came to power when Luis Sánchez Cerro became president of Peru in 1930–31. Other groups included the Ação Integralista Brasileira (Brazilian Integralist

Action Party), which had up to 200,000 members until it was suppressed in 1938; the Nacis of Jorge González von Mareés in Chile; and the Gold Shirts of Nicolás Rodríguez in Mexico. In addition, there were people from of the German community who were members of local branches of the Nazi Party.

FASCISM DURING WORLD WAR II

When the German army and its allies conquered much of Europe during the first part of World War II, there was a flourishing of fascist movements, and many prewar fascists held government positions. Quisling became prime minister of Norway in 1940, and from 1942 to 1945 his name became the byword for collaborators, although there is much evidence that Quisling himself was not averse to challenging German "orders." In France the regime of Marshal Pétain incorporated many prewar fascists, and there was also a resurgence in fascism in Belgium and the Netherlands. In Denmark a very small group of fascists formed themselves into the Danmarks Nationalsocialistiske Arbejderparti (Danish National Socialist Workers' Party). Members of the German minority in eastern Europe were prominent in their support for the Nazi Party. In Latvia Viktor Arajs gave his name to the "Arajs Commando," a militia group that had been involved in the murder of several thousand Jews.

In contrast, in Allied countries World War II saw the internment of fascists. Senior members of the British Union of Fascists were arrested when war broke out, and the movement was banned in 1940. In South Africa some members of pro-German organizations were also imprisoned. Pressure from Britain and also the United States after 1941 led to crackdowns on Nazi and fascist movements throughout South America.

After World War II fascism was largely discredited in Europe, and it was many years before neofascist groups started emerging in Britain, France, Italy, and Austria, with small gatherings of neofascists in Germany. After the collapse of communism in eastern Europe fascist groups started organizing in the former East Germany, Romania, and Russia. In Austria, France, and Italy they had electoral success, but they remained on the fringe in most other countries. Outside Europe movements such as that of Juan Perón in Argentina had obvious similarities with European fascist parties, as did the military governments in other parts of Latin America, particularly in Stroessner's Paraguay and Augusto Pinochet's Chile. Fascist groups also continued to operate in South Africa until the establishment of black majority rule in 1994.

FASCISM TRENDS

The strength of fascist movements relied heavily on unquestioning support for a specific leader. Hitler's title, "Führer," and Mussolini's title, "Duce," led to Franco's resurrecting the old Spanish title *caudillo*. This lack of internal opposition, on account of total ruthlessness in suppressing it, clearly helped them form relatively successful totalitarian regimes. Oswald Mosley led the British fascist movement unchallenged during the 1930s and again after World War II. However, when he moved to France British fascists were left without a strong leader, and their movement fragmented.

Some fascist leaders, such as José Antonio Primo de Rivera in Spain and Oswald Mosley in Britain, were aristocrats who were well connected. However, many other fascist leaders were the children of government employees. Hitler's father was a customs official, Franco's father was a naval paymaster, Himmler's father was a schoolmaster, and Ferenc Szálasi's father was a soldier. Of the self-employed, Goebbels's father was an accountant, Mussolini's father was a blacksmith, and Salazar was the only one from a very poor background.

In economic terms many fascists had conservative economic programs, getting support from small businessmen, especially small farmers and shopkeepers. However, most fascist groups introduced economic policies that tended to benefit the wealthier people rather than their working-class supporters. Their support for big businesses, many of which had supported the fascist groups before they came to power, was shown by lavish government contracts, especially war contracts, making wealthy industrialists even richer. Hitler regarded much of his economic policy as being socialist, and he practiced widespread corporatism by organizing the major sectors of the economy into corporations. By contrast, the working class was hurt often with falls in real wages and reduction in the power of trade unions.

On the issue of nationalism, Primo de Rivera wrote, "Spain is not a territory, neither is it an aggregate of men and women—Spain is, above all, an indivisible destiny." This echoes Hitler's slogan "Ein Reich, Ein Volk, Ein Führer." Certainly one of the major traditions in fascism involves invoking the identity of one's own country, often idolizing a particular historical period when the country in question dominated its neighbors. Fascist Italy took on much of the symbolism and indeed some of the terminology of ancient Rome. The invasion of Albania in April 1939 was, as far as many Italians were concerned, Italy taking back a territory it had controlled in ancient and indeed in medieval times, when much of it was a part of the Venetian Empire.

In Germany Hitler harked back to the power of medieval Germany, with the "Third Reich" being seen as a logical successor to the "First Reich"—the medieval Holy Roman Empire—and the "Second Reich"—the German Empire built by Bismarck. Nazi Germany adopted as its heroes men like Charlemagne, Goethe, and Frederick the Great. The nationalist symbolism adopted by French fascists tended to involve an almost cult worshipping of Joan of Arc and Bertrand du Guesclin, who both fought the English during the Hundred Years' War. It is no accident that most of the fascist heroes from history were military leaders, and most fascist groups adopted the trappings of paramilitary organizations, such as the adoption of the Blackshirt uniform in Britain. The Germans used brown shirts, and most other fascist groups adopted blue shirts. All developed a clear, simple party symbol: the fasces, the swastika, the flash of lightning, an arrow, or a variation on the standard cross.

The last characteristic of many fascist groups was xenophobia and in many cases racism. Jean Renaud from French Solidarity wanted to prevent foreign migrants' turning France into what he called "a depository for trash." Others adopted similar policies, especially against Jews and Gypsies (Roma), who were the targets of Nazis and fascists from many other countries. Nazis also regarded Slavs as racially inferior, as Croatian fascists did the Serbs. Before World War II there was organized repression by the Nazis of Jews, Gypsies, and other groups. During the war itself the Nazis began a systematic extermination of these people in the Holocaust. Nazi propaganda also made frequent derogatory mentions of African Americans, and many fascists, especially post-war ones, have been antiblack. Some of the anti-Jewish beliefs were encapsulated in the views of Christianity of the period, viewing the Jews as the murderers of Jesus. In this regard it is curious that although many fascist ideologists tended to be agnostic or atheist in their views on religion, most European fascists and the vast majority of their Latin American counterparts were Christians and appealed to Christianity to justify many of their views.

The Federal Reserve building in Washington, D.C. Woodrow Wilson signed the Federal Reserve Act into law in 1913. According to many historians the Federal Reserve became the most significant economic legislation between the Civil War and the New Deal.

Federal Reserve banking system, U.S.

The Federal Reserve is the system of banking used since 1913 in the United States. Until the Federal Reserve Act of 1913, the U.S. banking system fell under the domain of the Civil War United States Banking Act. Historically, the United States used a central banking system. Federal statute legislated the First Bank of the United States in 1791 and the Second Bank in 1816. A free banking era without a central bank reigned from 1837 to 1862, followed by the 1863 National Banking Act.

The panic of 1907, however, revealed the weaknesses of the Civil War legislation and, mixed with the national impetus to improve government that came with the progressive era, a push began to organize a more appropriate institutional structure for a national bank.

The panic of 1907 illustrated the inflexibility of monetary policy under the Civil War-era structure. Monetary reserves were located in New York City and

a handful of other larger cities. The location of reserves made it difficult to mobilize and distribute funds in geographically appropriate locations. The progressive response, familiar in many other areas of governance, gained momentum in the banking system, and a demand for a more responsive and organized way of dealing with monetary issues blossomed. In 1913 Democrats and Republicans disagreed over the institutional structure necessary to address the difficulties revealed by the Panic of 1907. Republicans preferred a third national bank of the United States. The bank would be owned and run by the commercial banking community, who would issue a central currency. On the other hand, the Democratic solution emerged from the Pujo Committee. Arsène P. Pujo argued that the power of financial monopolies rested in the hidden vaults of Wall Street. Hence, Democrats called for a system that was more decentralized, privately owned, and free from the control of the bankers of Wall Street.

WOODROW WILSON signed the Federal Reserve Act into law in 1913. According to many historians, the Federal Reserve became the most significant economic legislation between the Civil War and the NEW DEAL. The Federal Reserve system that resulted carried the United States through WORLD WAR I and heralded progress of the United States toward the modern economic age. At the end of the day, however, the legislation failed in its primary purpose—preventing economic depression.

Out of the legislation of 1913 came a Federal Reserve Board. The board members were appointed by the president and oversaw a nationwide network of 12 regional reserve districts—each serviced by its own central bank: Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, St. Louis, Minneapolis, Kansas City, Dallas, and San Francisco. In turn the regional banks were owned by member financial institutions. The Federal Reserve Board assured a great degree of public control over the regional centers. Finally, the Federal Reserve Act empowered the board to issue “Federal Reserve Notes” as legal tender in the United States.

The Federal Reserve (Fed) also engages in a number of responsibilities necessary for economic well-being. It supervises all member banks and creates the mechanisms needed to control monetary policy. The Fed also controls the amount of currency produced and destroyed in close partnership with the Mint and Bureau of Engraving and Printing.

An important final point with regard to the Federal Reserve is its status as an independent agency. The Second Bank of the United States, during the 1830s, evolved into a political weapon used by Jackson and his Democratic supporters against the Whig Party. The intent and result of the 1913 legislation was to make the Federal Reserve independent of the executive branch.

The decisions of the Federal Reserve are subject to the guidelines of the Freedom of Information Act, but the actions taken by the Fed need not be ratified by the president or anyone else in the executive branch. The result has been an independence that allows the chair of the Fed and the Federal Reserve Board the latitude to implement far-reaching policies instead of the knee-jerk reactions common to partisan politics. Oversight of each Federal Reserve Bank is provided by the overall Board of Governors, who are appointed by the president and confirmed by the Senate. Members of the board are limited to one 14-year term and can only be removed by the president of the United States for cause.

MATTHEW H. WAHLERT

Flint sit-down strike (1936–1937)

During the GREAT DEPRESSION rapid advances in industrial technology allowed employers to reduce their workforces while demanding increased production; layoffs, speed-ups, and reduced pay burdened destitute auto workers who were overworked, underpaid, harassed, and threatened with unjustified termination. At 10:00 P.M. on December 30, 1936, workers at Fisher Body Plant Number One in Flint, Michigan, noticed rail men loading machine dies into railcars, an indication that General Motors planned to move their jobs to nonunion plants.

In response the employees began a nonviolent, legal work stoppage by sitting down near valuable equipment, a relatively new organizing tactic. They then refused to leave the plant. Previously, protesters who had chosen the picket line as a means of demonstration were beaten by local police, the Black Legion, or National Guardsmen in corporate violation of NEW DEAL legislation; by remaining inside and blocking doors and windows, the strikers were assured a high degree of safety. Shortly thereafter workers shut down Plant Number Two.

On January 11, 1937, the Women’s Emergency Brigade, consisting of wives and supporters of the men locked inside Plant Number Two, delivered food to the strikers. The Flint police, at the urging of General Motors, attempted to storm the plant; tear gas and bullets were answered with a hail of auto door hinges, bolts, and streams of cold water from fire hoses. The ensuing retreat came to be known as the “Battle of Bull’s Run,” for police were commonly referred to as “bulls.”

By January 29, 1937, strike strategists floated a rumor that the union would try to take over Plant Number Six while feigning an attack on Plant Number Nine. Company spies reported this plan, but guards and security personnel were unprepared for the union’s real objective—Plant Number Four, General Motors’

largest producer of Chevrolet engines. Both diversions were successful, and on February 1, 1937, union men easily took control of Plant Number Four, paralyzing national production.

Frank Murphy, Michigan's prolabor governor, refused General Motors' request to break the strike with the intervention of National Guardsmen, and on February 11, 1937, day 44 of the sit-down, the company signed a contract with the United Auto Workers, recognizing the union as the sole bargaining agent for all members in all plants. Within two months of the "Strike Heard Around the World," the Wagner Act was passed, guaranteeing workers the right to bargain collectively.

JOHN MAYERNIK

Flores Magón, Ricardo

(1874–1922) *Mexican journalist*

Ricardo Flores Magón was an influential Mexican anarchist writer. He was born on September 16, 1874—the 64th anniversary of the proclamation of Mexico's independence from Spain—in San Antonio Eloxochitlán, Oaxaca, Mexico. His father was Teodoro Flores, a Zapotec Indian, and his mother was Margarita Magón, half Indian and half Spanish. Teodoro was a strong believer in the communal ownership of land, and his ideas influenced his sons Ricardo, Jesús, and Enrique.

When he was nine Ricardo started attending the Escuela Nacional Primaria in Mexico City. He proceeded to the Escuela Nacional Preparatora and on May 16, 1892, took part in a large demonstration against the Mexican president, Porfirio Díaz. The crowd of 15,000 demanded the end of the Díaz dictatorship, and many were arrested, with Ricardo Flores sentenced to five months in prison for sedition.

On his release, Ricardo started working as a proof-reader for the *El Democrata* newspaper. In April 1893 the newspaper office was raided, and although most of the staff members were arrested, Ricardo managed to escape. In hiding for three months, he emerged to complete his law degree and become a lawyer. On

August 7, 1900, he published the newspaper *Regeneracion* with the support of his brother Enrique. It was an overtly anarchist newspaper and was directly critical of the Díaz dictatorship. Ricardo Flores was hugely affected by his reading of the works of the Russian anarchist Peter Kropotkin. Some of his ideas can also be traced to Karl Marx and the Norwegian playwright Henrik Ibsen.

In 1901 Ricardo Flores got in trouble with the government by calling for the resignation of Mexican president Porfirio Díaz. Ricardo and his older brother, Jesus, were arrested on May 22 and sentenced to 12 months in prison for "insulting the president." They spent the next 11 months in jail, during which time their mother died. Both sons were refused permission to leave Belem Prison to see her before she died. *Regeneracion* was still being printed while the two brothers were in prison, but publication was finally suspended in October, when Díaz threatened to shoot Ricardo if it did not.

Released on April 30, 1902, Ricardo and his younger brother, Enrique, were both arrested on September 12 and sentenced by a military tribunal to four months in prison for "insulting the army." They were released on January 23, 1903. By this time, Díaz was tired of dealing with the Flores brothers and offered Ricardo a government position. However, he declined and started running the newspaper *El Hijo del Ahuizote*, which gained a circulation of 24,000. On April 16 Ricardo was again arrested and jailed until October. On June 9 the supreme court of Mexico banned the publication of any article by Ricardo Flores.

On their release in October 1904, Ricardo and Enrique decided to move to the United States and settled in San Antonio, Texas, to avoid being arrested again. There they issued a second version of *Regeneracion*, and in December 1904 a man forced his way into the Flores house and tried to stab Ricardo. Enrique saved his brother's life but was fined for assaulting the hired assassin, who was freed. Then came pressure on the local government from San Antonio businessmen, causing Flores to move to St. Louis, Missouri, where he issued a third version of the newspaper, with circulation rising to as high as 30,000. In 1905 he joined with others to form the organising junta of the Mexican Liberal Party.

Ricardo Flores had influenced many U.S. anarchists and on March 21, 1918, he was arrested under the Sedition Act for "obstructing the war effort." On August 15, after a trial held in camera, Ricardo was sentenced to 20 years in prison, and his colleague

Librado was sentenced to 15 years. They were then taken to McNeil Island Penitentiary. In the following year Ricardo was moved to Leavenworth Penitentiary in Kansas, with Librado also being transferred there in the following year. The 1920 U.S. federal census lists Ricardo Flores as aged 25 and eight months (rather than 45 and eight months), and his occupation is listed as “writer.” Back in Mexico the president, ALVARO OBREGÓN, had awarded the two men a pension, and in the following year the Mexican embassy in Washington, D.C., was instructed to intervene to gain the two men’s release. This led to a strike in Mexico for Ricardo’s release. On November 21, 1922, Ricardo’s dead body was found in his cell. His death was suspicious, and there were bruise marks around his throat indicating that he may well have been strangled—many anarchists claim that he was murdered.

On the following day the Mexican chamber of deputies voted to pay all the costs for his burial in Mexico. His body was buried at the Rotonda de los Hombres Ilustres in Mexico City.

JUSTIN CORFIELD

Ford, Henry

(1863–1947) *automotive entrepreneur*

Henry Ford, the founder of the Ford Motor Company and the man who developed modern factory assembly lines for the mass production of his cars, was born on July 30, 1863, on a farm west of Detroit, Michigan. His father, William Ford, was born in Ireland, and his mother was born in Michigan, her parents having emigrated from Belgium.

As a teenager Ford became fascinated by mechanics, and by the time he was 15 he was well known for his ability to fix watches. His father had expected him to take over the family farm, but he left home to become an apprentice machinist, later returning to the farm, to which he brought some of his new-found skills using a Westinghouse portable steam engine. He then started working for Westinghouse. In 1891 Ford began as an engineer for the Edison Illuminating Company and two years later was appointed their chief engineer. In 1896 he developed the Quadricycle, a self-propelled vehicle that he test-drove.

In 1903 Ford and 11 others incorporated the Ford Motor Company, which led to the test-driving and then the production of the Model T Ford. It first appeared on October 1, 1908, and had the entire engine and transmission enclosed, as well as having the steering wheel on the left. They were offered for sale at \$825, with the price dropping each year. Anxious to get skilled workers and retain them, he paid a wage of \$5 per day from January 5, 1914, doubling the pay of many of his workers (who had previously received \$2.34 per day). Previously, staff turnover was such that he had employed 300 men to fill 100 positions. He also reduced the working day from nine hours to eight, gaining himself great loyalty from his staff. The moving assembly belts in his factories had been introduced in the previous year, and Ford’s factories in Detroit and then gradually elsewhere were producing cars so quickly and efficiently that sales passed 250,000 in 1914. Four years later it was reported that half of all cars in the United States were Model T Fords. Although the initial cars were available in several colors, they were soon all black in color, with the black paint being the quickest to dry, thereby again reducing costs. Ford was later to write that a customer could “have a car painted any color that he wants so long as it is black.” By 1927 some 15,007,034 Model T Ford cars had been produced.

At the request of U.S. president WOODROW WILSON, in 1918 Ford contested the Senate seat for Michigan as a Democrat. He supported interventionism and proclaimed himself a strong supporter of the Ford Motor Company. Soon afterward he turned over the presidency of the Ford Motor Company to Edsel Ford, his son. However, he continued to take part in the running of the company, intervening from time to time. Ford had high moral values and frowned on heavy drinking and gambling by his workforce. He also was opposed to trade unions operating in his factories. This regularly led to battles between his private security guards and union organizers and their supporters.

With Ford’s factories at River Rouge, Detroit, forming the world’s largest industrial complex, he also started selling cars overseas and established assembly plants in the 1920s in Germany, Australia, India, and France. By 1929 there were dealerships on all six continents and even a factory constructed in the city of Gorky (modern-day Nizhny Novgorod) in the Soviet Union in 1929. The depression of the 1930s hurt the Ford Motor Company badly, but the Ford family managed to keep it going. He had a stroke in 1938, when

A row of completed “Tim Lizzies,” or Model T automobiles, comes off the Ford assembly line in Detroit, Michigan, in 1917. Henry Ford’s mass-production techniques brought about a revolution in transportation.

he once again turned the running of the company over to Edsel, and died on April 7, 1947. One of his most famous sayings was “History is bunk.”

JUSTIN CORFIELD

Franco, Francisco

(1892–1975) *Spanish dictator*

The man who led the nationalists to victory during the Spanish civil war and governed Spain until his death in 1975, Francisco Franco Bahamonde was the longest-serving dictator in Europe in the 20th century, narrowly eclipsing the record set by his neighbor, Portuguese dictator ANTÓNIO DE OLIVEIRA SALAZAR.

Francisco Franco Bahamonde was born in 1892 in El Ferrol, near Corunna on the Atlantic coast of Spain. It was the country’s most important naval base, and his father, Nicolas, worked in the pay corps in the naval arsenal, as had his father before him. Franco’s father was

a gambler and drinker, so the upbringing of Francisco Franco and his four siblings was left to their mother, María, who raised the children as devout Roman Catholics. Franco was six when the Spanish-American War broke out, and it was not long before he saw what was left of the once-proud Spanish navy limp back into El Ferrol following the loss of the Philippines, Cuba, and Puerto Rico. Franco's application to the naval academy was rejected, so he went to the Infantry Training College at the Alcazar in Toledo, near Madrid.

There Franco was initially the smallest boy in his class, but he completed his time there in 1910, the youngest in his graduation year. Commissioned as a lieutenant, he went to Morocco, where he served in the Regulares. This unit, a forerunner of the Spanish foreign legion, was involved in some of the toughest combat against Abd el-Krim. Promoted to major at the age of 23, Franco was badly wounded in the stomach but miraculously survived. A later account had him threatening to shoot the doctor when the medic decided not to evacuate him because his wound was regarded as too serious.

Returning to Morocco in 1921, Franco led a brilliant action near Melilla, a Spanish-held town on the Mediterranean coast, and was promoted to lieutenant-colonel and then gazetted full colonel soon afterward. In October 1923 Franco was asked by King Afonso XIII to escort him when the royal party toured Spanish Morocco. Three years later Franco was promoted by a special decree to the rank of brigadier general, making him, at the age of 33, not only the youngest general in Spain but also the youngest general in Europe since Napoleon.

In 1927 the Spanish finally announced the defeat of Abd el-Krim, and Franco was appointed to head the General Military Academy in Saragossa. The aim of the academy was to create a new Spanish army, and this enabled Franco to inspect a training school at Leipzig. Franco was courted by the politician Primo de Rivera to stage a coup against King Alfonso XIII, but Franco declined. Primo de Rivera died soon afterward, and when the king visited the academy at Saragossa he publicly embraced Franco and gave the school the right to fly the royal standard. In April 1931 he abdicated the throne, and Spain became a republic.

The first elections during the republic saw a left-wing government come to power. The new government wanted to reduce the influence of the army, and one of the leaders of the republic, Manuel Azana, ordered the closure of the Saragossa Academy. In 1932 there was a plan to stage a military coup, but it never happened. In the following year's elections, a right-wing coalition government was elected. By now Franco's brother-in-

law, Ramón Serrano Súñer, was a rising politician, and he helped Franco in his next assignment. Opposing the conservative government, 40,000 miners in Asturias in the north of Spain went on strike, and Franco was sent to put down this revolt. He used Moorish soldiers and brutally crushed the miners' revolt—over 1,000 people died, and many more were thrown into prison.

Many Spaniards were worried by the treatment of the miners and also by the rise of Fascist Italy and NAZI Germany. In February 1936 the elections saw a new left-wing government elected, and the military prepared to stage a coup to bring down this Popular Front government. The new republican government, worried about Franco, posted him to the Canary Islands. On July 18 Franco was flown to Spanish Morocco, and the army there rose to support him as the generals openly proclaimed their aim to bring down the Spanish government.

With the outbreak of the SPANISH CIVIL WAR the republicans tried to prevent Franco and his men from reaching the Spanish mainland, but an airlift was organized by the Italians and Germans. Franco then marched his men and their mainland supporters toward Madrid. By the end of July Franco's supporters, the nationalists, controlled a large swath of territory in northern Spain, a pocket around Cádiz, Seville, and Córdoba in the south, and Spanish Morocco. Franco nearly reached Madrid but diverted his attack to rescue the besieged nationalists at the Alcazar in Toledo. Although this action was highlighted as an "honorable" action in the foreign press, it did allow the republicans to reinforce Madrid and thus prolong the war for another three years.

In October 1936 Franco, by then one of the leading commanders of the rebellion, was proclaimed the supreme commander of the nationalist forces and the chief of state of a nationalist government with its capital at Burgos in northern Spain. The original leader, General Sanjurjo, had been killed in a plane crash some months earlier. Over the next three years of the war, Franco emerged as a political figure who united his forces into a unified command structure. The Falange (Spanish fascists), monarchists, Carlists, moderate Catholics, and conservatives put aside their not inconsiderable differences to face the republicans, whose divisions and factional disputes became legendary.

With support from Germany and Italy, Franco's soldiers gradually captured more and more territory from the republicans. Adopting the title *caudillo*, he portrayed the war as a crusade by which he was to save Spain from Soviet communism, anarchists, and Freemasons. Franco remained a conservative military commander and avoided taking risks. As a result, he was

accused by his own supporters of holding back from delivering a decisive military thrust to allow his men to totally destroy the republicans by attrition. On May 18, 1939, Franco issued his last communiqué of the war, and on the following day he presided over a victory parade through Madrid.

Less than four months after the end of the Spanish civil war, WORLD WAR II broke out, and with the early German victories it was expected that Franco would declare Spanish support for the Axis. Even after Italy's entering the war and the defeat of France, Spain remained neutral. On October 12, 1940, ADOLF HITLER traveled to the French-Spanish frontier to meet Franco. Franco left San Sebastian for the 30-minute train journey, which took three hours. Later Franco was to use this to illustrate his reluctance, but it seems more probable that it was to do with the dilapidated state of the railway stock. The meeting went badly. Apparently, Franco wanted control of the French North African colonies as his price for involvement in the war. Franco also opposed the Germans' establishing bases in Spain, but he did allow submarines to refuel. He also allowed Spanish volunteers to serve on the Russian front and allowed the formation of the "Blue Division," as they were known.

Franco's caution meant that he did not attack Gibraltar, which he could probably have easily captured and which the Germans wanted him to take. However, he did take control of the international city of Tangier—which was returned to international rule at the conclusion of the war. Although Franco had remained neutral in 1945, Franco's government was treated as a pariah. In December 1946 the United Nations General Assembly condemned Spain and urged its members to withdraw their ambassadors from Madrid. It was not until 1955 that Spain was admitted to the United Nations, and it did not join the North Atlantic Treaty Organization (NATO) until 1982.

Gradually, Franco changed the overt nature of his regime. Although Franco dominated the political scene, the Spanish economy was devastated, and unemployment and underemployment were widespread. Franco was anxious to get economic aid from the United States and softened his stance in 1947 by holding a referendum on the "Law of Succession" that established Franco as a dictator acting as a regent of the Kingdom of Spain. It was, however, the first time the Spanish people had voted in 11 years.

Franco also started courting Argentina, which was the only country that had flouted the United Nations, request to withdraw ambassadors in 1946. Argentina at that time had not had an ambassador in Madrid, but after

the UN vote it hastily filled the vacancy. Soon afterward it was announced that Juan Perón, president of Argentina, and his wife, Eva, would visit Madrid. Eventually, it was Eva who made the state visit, and this signaled the end of Spain's international isolation.

In 1969 Franco finally named his successor as Prince Juan Carlos de Borbón, with the title prince of Spain. Technically, the father of Juan Carlos had a greater claim, but this also annoyed Carlists, who had supported Franco in the civil war. Four years later Franco gave up the post of head of government but remained head of state and commander in chief of the armed forces. He died on November 20, 1975, and was buried behind the high altar at the basilica at the Valle de los Caídos (Valley of the Fallen), a church carved into a mountain that officially serves as a memorial for the dead of both sides of the civil war but has long symbolized the nationalist cause.

JUSTIN CORFIELD

French mandate in Syria and Lebanon

Following the defeat and the subsequent collapse of the Ottoman Empire in 1918, the geographic area of greater Syria came under French mandate rule as stipulated by the LEAGUE OF NATIONS in 1920. Under French rule, the mandate authority, in addition to expanding the Ottoman Wilayat of Lebanon at the expense of Syria, divided Syria into four new separate districts: Aleppo, Latikia, Damascus, and Jebel Druze. French rule in Syria faced violence, rebellions, and political opposition by the Syrians, who never accepted French domination.

The country now known as Lebanon was created on September 1, 1920, by enlarging the Ottoman Wilayat of Lebanon to include previously Syrian-held territory north and south of its borders. The entity of greater Lebanon (1920–26), as the new state was called, was fashioned after French republican ideals with a constitution and an executive president elected by a

parliament. In 1932 a census was conducted that resulted in the confirmation of 18 religious sects in the country. In an attempt to provide better representation in the government, the results of the 1932 census were incorporated in Article 95 of the constitution, establishing a confessional system.

The Kingdom of Syria (1918–20) was declared soon after the Ottoman army had been defeated in 1918. Headed by the Hashemite king Faysal (also Feisal) I, the kingdom rejected the French mandate. The opposition to French rule did not end with the demise of the Hashemite Kingdom of Syria. On the contrary, it was fortified by a strong nationalist sentiment, and rebellions periodically erupted throughout the mandate years; these culminated in the Great Arab Rebellion of 1936, which resulted in the French bombardment of Damascus.

In 1940 during WORLD WAR II, the French overseas territories were controlled by the pro-NAZI VICHY French government. In 1941 British and Free French forces overthrew the Vichy forces and granted Syria and Lebanon nominal independence. In 1942 parliamentary elections in Syria brought the nationalist National Bloc to power; it began negotiating for independence with the French government. In Lebanon the political elite agreed on a formula to distribute power under the National Pact of 1943. With U.S. and Soviet recognition, Syrian independence was granted in 1943. Lebanon was also granted independence the same year, but French troops remained stationed in both countries until 1946. Syria celebrated its independence day on April 17, 1946, while Lebanon celebrated independence day on November 22, 1943, and marked withdrawal day on April 17, 1946.

RAMZIABOU ZEINEDDINE

French West Africa (Afrique occidentale française)

French West Africa came into being in 1895 when France decided to consolidate its African holdings. Initially, French West Africa was a temporary combination of Senegal, French Guinea (now Guinea), French

Sudan (now Mali), and Côte d'Ivoire. In 1904 it became permanent, with territories including Dahomey (now Benin), French Guinea, French Sudan, Côte d'Ivoire, Mauretania, Niger, Senegal, and Upper Volta (now Burkina Faso). The federation was ruled by a governor-general first from Saint-Louis and then, after 1902, from Dakar, both in Senegal. The federation supported VICHY France during WORLD WAR II before accepting the Free French in November 1942.

The federation occupied an area of 4,689,000 square kilometers, most of which was desert or semi-desert in the interior of Niger, Sudan, and Mauretania. One of the largest colonial possessions in Africa, the federation reached from westernmost Africa at Cape Verde to deep within the Sahara. Population at its creation was over 10 million. When the federation dissolved, its population was about 25 million.

West Africa was not a primitive area when the Europeans arrived. Precolonial empires and states included Ghana, Mali, Songhai, and Hausa. The precolonial era was also a time when Islam expanded into West Africa. The Europeans entered and disrupted a highly complex society.

The slave trade in West Africa expanded greatly beginning in the late 16th century and continued to grow into the mid-19th century. By the 18th century the slave trade was an important ingredient in the European interest in Africa, especially for providing slaves to New World plantation economies. The increasing New World demand coincided with Islamic jihads and rivalries between the precolonial states. The capture and transfer of Africans into slavery became the dominant commerce for the Portuguese, then the Dutch, then the British and French. The British, Dutch, and Portuguese controlled the major slave ports between Ghana and the Cameroons. Africans also facilitated the slave trade.

The French early on regarded their African possessions as overseas provinces. The early efforts to colonize were unsuccessful, though, and in the mid-19th century interest shifted from colonization to mercantile prospects. Trade with the savanna of the interior coincided with the race for Africa of the late 19th century.

The Berlin Act of 1885 formalized the partition of Africa, including West Africa. By 1890 the French had signed treaties with African leaders that in theory authorized their annexation of much of western Sudan. Military superiority allowed the French to acquire large territories, most of it desert or otherwise worthless. The French did not turn to commercial development until early in the 20th century.

In the early 1890s France conquered Dahomey, made Côte d'Ivoire a formal colony, and obtained territory in Upper Volta. French Africa ran from Algeria to the Gulf of Guinea. The administrative unit known as French West Africa included the coastal colonies—Senegal, French Guinea, and Côte d'Ivoire—as well as the French Sudan, the large interior territory that included present-day Mali, Niger, and Burkina Faso. Dahomey became part of French West Africa in 1899. French Sudan became Haut Senegal-Niger in 1904. Mauretania became a protectorate in 1905. Upper Volta separated from Haut Sénégal–Niger in 1919, and the remaining Haut Sénégal–Niger became French Sudan once more. Mauretania became a colony and part of French West Africa in 1920. Niger separated from French Sudan in 1922.

Senegal was the only part of French West Africa with even token assimilation, and participation by Africans in French affairs was confined to Saint-Louis. Elsewhere in French West Africa, inhabitants were subjects, not citizens. The European French were increasingly skeptical about the ability of the Africans to become “suitable” French citizens. The assimilationist philosophy of the original exploration was gone by the time of the French West African Federation in 1895. Rather than allow local authority, the French established direct rule in the form of a governor-general taking his orders directly from the minister of colonies and the government in Paris. The governor-general relayed orders and financing to his lieutenant governors in the territories. Senegal had representative government as a residue of the original assimilationist impulse—citizens could represent the Senegalese in France.

The French effort to make the colony pay its own way led to their pushing the productivity of groundnuts and cotton where suitable. Extraction of valuable resources was also emphasized. Taxes forced the population into the cash economy. Inhabitants of areas where cash crops were impractical were encouraged to migrate to wage-earning areas. Servitude nearing slavery was tolerated in the interest of profitability. The French did provide at least a small amount of missionary effort as well as minimal educational and health services. The economic benefit accrued to the French only.

After WORLD WAR I France relaxed its rule somewhat. Occasional revolts as well as a rediscovery of African tradition encouraged the easing of the slavery and aristocratic rule that had characterized the decades from the mid-1890s until the war. Tribal leaders were more respected after France reinstated them.

Initially loyal to Vichy France during WORLD WAR II, French West Africa shifted to the Allies after the U.S. invasion of North Africa and the occupation of Dakar, Senegal, by the Allies. The Free French under General CHARLES DE GAULLE took control of French West Africa.

When World War II was over, the Europeans were worn out, unwilling politically, and unable economically to resist demands for political reform in colonies that were increasingly an intolerable financial burden. The Europeans living in Africa were an issue. Also, the colonies provided valuable resources. But the benefits were far from matching the costs. And independence came in the 1960s. France also had an ego at stake in the post-war era. Defeat and occupation were not preconditions for an easy abandonment of the empire.

After World War II France's overseas colonies in Africa became overseas territories. Their inhabitants became eligible for French citizenship. They also received the right to organize political parties and have representation in the French legislature. When given the choice of complete independence or self-governance as members of the new French Community (France and its former colonies), which was intended for common defense, foreign policy, education, and other common matters, all elected to join the community except French Guinea, which became independent Guinea in October 1958. With the establishment of the French Community, French West Africa was no more.

The autonomous states of French Sudan, Senegal, Upper Volta, and Dahomey united into the Federation of Mali, named for the ancient African Mali Empire, in 1958. Upper Volta and Dahomey withdrew before the federation became operational in January 1960. By August 1960, when Senegal withdrew, the federation was defunct.

Postwar nationalism and the example of the newly independent English colonies, led by Ghana in 1957, produced a strong impulse toward independence in French West Africa. Between August and November 1960, Dahomey, Niger, Upper Volta, Côte d'Ivoire, Senegal, Mali, and Mauretania gained their independence.

Freud, Sigmund

(1856–1939) *founder of psychoanalysis*

Freud's theories had and still have great effects on psychiatry, psychology, and related fields. For many, Freud is the most influential intellectual of his age because his theories provided a completely new interpretation of culture, society, and history.

Freud was born into a Jewish family in Freiberg (today Příbor), Moravia, in the Austrian Empire (now the Czech Republic). His large family had only limited finances but made every effort to foster his intellect, which was apparent from an early age. In 1873 Freud entered the University of Vienna as a medical student, and in 1881 he received a doctorate. Beginning in 1882, he worked as a clinical assistant at the Central Hospital of Vienna. In 1885 Freud was appointed lecturer of neuropathology. At this time he also developed an interest in the pharmaceutical benefits of cocaine, which he pursued for several years. Despite some limited successes, the general outcome of this research was disastrous and tarnished Freud's medical reputation for some time.

In late 1885 Freud left Vienna and traveled to Paris to continue his studies under the guidance of the famous neurologist Jean-Martin Charcot. Charcot's work with patients classified as hysterics confronted Freud with the possibility that some, if not all, mental disorders might be caused by psychological factors rather than by organic diseases. This insight proved to be a turning point in Freud's career. Having been confronted with the use of hypnosis in therapy, Freud returned to Vienna in February 1886 with the seed of his revolutionary method implanted.

Several months after his return, Freud married the daughter of a prominent Jewish family, Martha Bernays. She was to bear him six children, one of whom, Anna Freud, was later to become a distinguished psychoanalyst in her own right. Freud then turned to a clinical practice in neuropsychology.

Shortly after his marriage Freud entered into a fruitful partnership with his fellow physician Josef Breuer. Their main cowritten work was *Studies in Hysteria*, published in 1895. This book contains a presentation of Freud's psychoanalytical method of free association. This pioneering method of psychoanalysis—a term Freud created in 1896—allowed him to arrive at numerous insights. Freud and Breuer discovered that for many of their patients the very act of verbalization of their problems seemed to provide some relief. Such a “talking cure” resulted in an abreaction.

Freud subsequently developed a theory of the human mind and clinical techniques for helping neurotics. The goal of Freudian therapy is to bring to consciousness repressed feelings. Typically, this is achieved by encouraging the patient to talk in free association and to repeat his or her dreams. Another important element of psychoanalysis is a lack of involvement by the analyst, which is meant to encourage the patient to project emotions onto the analyst. Through this transference the patient can resolve repressed conflicts. Freud also observed the power of what he called the patient's defenses against any expression of unconscious thoughts and feelings. He looked for a method to overcome such blockages. Freud was the first one to believe that the most insistent source of resisted material was sexual.

Perhaps the most significant contribution Freud made to modern interpretations of human nature is his conception of the dynamic unconscious. He suggested that we are not entirely aware of what we think and often act for reasons that have little to do with our conscious thoughts. On the contrary, Freud proposed that there were thoughts occurring below the surface. His basic assumption was that all dreams, even nightmares manifesting apparent anxiety, are the fulfillment of imaginary wishes. One could also regard dreams to be the disguised expression of wish fulfillments. Many commentators consider *The Interpretation of Dreams* Freud's masterwork because it provides a hermeneutic for the unmasking of the dream's disguise.

Crucial to the operation of the unconscious is repression. Because of the incompatibility of the unconscious with conscious thoughts, these feelings are normally hidden, forgotten, or unavailable to conscious reflection. Such thoughts and feelings cannot, Freud argued, be banished from the mind, but they can be banished from consciousness. Freud observed that the process of repression is itself a nonconscious act. He supposed that what people repressed was determined by their unconscious.

Freud sought to explain how the unconscious operates by proposing that it has a particular structure divided into three parts: id, ego, and superego. The unconscious id represents primary process thinking, our primitive need-gratification thoughts. The superego represents our socially induced conscience and counteracts the id with moral and ethical thoughts. The largely conscious ego stands in between both to balance our primitive needs and our moral beliefs. A healthy ego provides the ability to adapt to reality and interact with the outside world in a way that accommodates both id and superego. Freud was especially concerned with

the dynamic relationship between these three parts of the mind. According to Freud, the defense mechanisms are the method by which the ego can solve the conflicts between the superego and the id. The overuse of defense mechanisms can lead to either anxiety or guilt, which may result in psychological disorders.

In 1905 Freud published *Three Essays on the Theory of Sexuality*. The book established its author as a pioneer in the serious study of sexology. Sexuality, Freud concluded, is the prime mover in a great deal of human activities and behavior. Freud believed that humans were motivated by two drives, libidinal energy/Eros and the death drive/Thanatos. Freud's description of Eros/libido included all creative, life-producing drives. The death drive represented an urge inherent in all living things to return to a state of calm or of nonexistence.

According to Freud, children pass through a stage where they fixate on the parent of the opposite sex and think of the same-sexed parent as a rival. Every male child has the desire to sleep with his mother and remove his father, who is the obstacle to the realization of that wish. Turning, as he often did, to evidence from literary and mythical texts, Freud named his theory the Oedipus complex after the Greek tragedy by Sophocles.

Freud expressed highly influential and controversial views on the psychology of women. He was an early champion of both sexual freedom and education for women. Some feminists, however, have argued that Freud's views of women's sexual development set the progress of women back decades. Believing as Freud did that women are a kind of mutilated male who must learn to accept her deformity (the lack of a penis), he contributed to the vocabulary of misogyny. Terms such as *penis envy* and *castrating* discouraged women from entering any field dominated by men.

Psychoanalysis today maintains the same ambivalent relationship with medicine and academia that Freud experienced during his life. His psychological theories are still hotly disputed. Although Freud has been long regarded as a genius, psychiatry and psychology have been recast as scientific disciplines. Freud examined the rationality to be found even in material regarded as thoroughly irrational and meaningless, such as dreams, verbal slips, neurotic symptoms, and the verbal productions of psychotics. Conversely, he discovered irrationality even in material that is manifestly rational. Freud introduced a novel discursive technique in the talking cure. Psychoanalysis enables people to mitigate distress through the indirect revelation of unconscious content. The other schools of psychology have produced alternative methods of psychotherapy.

In 1909 Freud, together with Carl Gustav Jung and Sándor Ferenczi, visited the United States and lectured there. Generally, Freud had little tolerance for colleagues who diverged from his psychoanalytic doctrines. He attempted to expel those who disagreed with the movement or even refused to accept certain aspects of his theory that he considered central. The most widely noted schisms occurred with Adler in 1911 and Jung in 1913. These clashes were followed by later breaks with Ferenczi and Wilhelm Reich in the 1920s.

Freud lived and worked in Vienna for nearly 78 years, deeply inspired by the town's intellectual atmosphere. Following NAZI Germany's annexation of Austria in March 1938, Freud fled Austria with his family. On June 4, 1938, they were allowed across the border into France, and then they traveled to London. Freud died there three weeks after the first shots of WORLD WAR II had been fired.

MARTIN MOLL

Freyre, Gilberto

(1900–1987) *Brazilian ethnologist and politician*

Gilberto de Melo Freyre was the author of many books that traced the cultural heritage of Brazilians from Indians, Portuguese, and African slaves. He was born on March 15, 1900, at Apipucos, near Recife, and after being educated at home attended the American Baptist School, the Colégio Americano Gilreath de Pernambuco. From a wealthy plantation family, he traveled to the United States to complete his education, attending Baylor University at Waco, Texas, where he graduated with a bachelor of arts. He then went to Columbia University, where he graduated with a master of arts in Latin American history in 1923. At Columbia he was greatly influenced by lecturers Franz Boas, J. H. Hayes, and Edwin R. A. Seligman. Freyre then journeyed to Europe, visiting anthropology museums in Britain, France, Germany, and Portugal.

Returning to Brazil, Freyre, who started teaching sociology, organized in 1926 the first northeastern regionalist congress to be held in Recife, which saw the publication of his “Regionalist Manifesto.” His political activity in Brazil meant that after 1930 and the collapse of the Third Republic, Freyre had to leave Brazil. He left in October, going to Bahia and then to Portugal via Portuguese Africa, which he felt was a historic opportunity to experience the Portuguese diaspora. In Lisbon Freyre studied at the National Library, and in February 1931 he was offered a position in the United States working as a visiting professor at Stanford University. This allowed him to spend time researching the nature of slavery in the United States. Freyre returned to Brazil a few years later and helped found sociology departments at the University of Rio de Janeiro and the University of São Paulo. In 1934 he was to organize the first Congress of Afro-Brazilian Studies, which was held at Recife and achieved notoriety in political circles because of its emphasis on establishing the causes of Afro-Brazilian poverty as environmental.

Freyre spent most of his life studying the socio-economic development of the area around Recife—the northeastern part of Brazil. He documented the many links between that part of Latin America and the Portuguese colonies in Africa, particularly Portuguese Guinea (modern-day Guinea-Bissau), São Tomé and Príncipe, and Angola. His studies of Portuguese colonialism made him believe that since the Portuguese had, before they found Brazil, extensive colonial experiences in Africa, they were better equipped to deal with the problems in the Americas than the Spanish were. This, in turn, Freyre argued, led to a more successful multiracial and multicultural society.

The author of many books, his best known was *Casa-grande e senzala* (The big house and the slave quarters, published in 1933), which was translated

into English as *The Masters and the Slaves*. It was a detailed sociological thesis that described the relationships between the Portuguese colonial masters and their African slaves. It also includes plans of the Noruega Plantation in Recife, which was used as the basis for a section of the book. He compares and contrasts at length the Brazilian plantation society with that in the southern United States, noting that the planters in both areas were keen on “the rocking chair, good cooking, women, horses and gambling.”

Although early detractors called Freyre a communist and a pornographer, he was socially conservative and had worked as secretary to his cousin, Estácio de Albuquerque Coimbra, who was governor of Pernambuco from 1926 to 1927 and from 1929 to 1930. In 1946, with the reintroduction of democracy to Brazil, Freyre was elected to the national constituent assembly and was a member of the chamber of deputies from 1946 until 1950. In 1949 Freyre represented Brazil at the United Nations General Assembly with the rank of ambassador. He welcomed the right-wing military government of Humberto de Alencar Castelo Branco in 1964. He rapidly became closely identified as a supporter of the government, and his sociological work was increasingly criticized for its highlighting of “benign” aspects of Brazilian slavery. In 1968 he was awarded an honorary doctorate from the University of Münster, in Germany. Repeatedly nominated for the Nobel Prize, he was never invited to join the Brazilian Academy of Letters. He died on July 18, 1987, at Recife.

JUSTIN CORFIELD

Galveston flood

In 1900 Galveston, located on an island in the Gulf of Mexico about 50 miles southeast of Houston, was Texas's fourth-largest city and a bustling port. On September 8 a presumed Category 4 hurricane, accompanied by ferocious tidal surges, smashed into Galveston, killing at least 6,000 of its 38,000 residents and possibly twice as many. Some 10,000 lost their homes. These fatalities make it still the worst single disaster in U.S. history.

Although the storm had wiped out Galveston's rail link to the mainland, recovery began almost immediately, spearheaded by city officials, who appointed a relief committee on September 9, and the American Red Cross, under the leadership of 78-year-old Clara Barton, who arrived September 17. Restoring water and telegraph services was the first priority. By the third week saloons and the port had reopened, even as dead bodies continued to wash up on the island for at least a month after the disaster.

Armed with federal, state, and private donations, the people of Galveston mounted a hugely expensive project to protect the low-lying 27-mile-long island from future hurricanes. A 17-foot-high seawall was built along the island's Gulf Coast. (By the 1960s its length had grown to more than 10 miles.) In 1902 Galveston launched an even more ambitious project designed to boost the island's overall elevation above sea level. In eight years some 500 city blocks were raised. Some 16 million cubic yards of sand were dredged from the Gulf

of Mexico and pumped onto the island, where workers used jacks to raise structures, including utilities, and then shoveled the sand underneath. Most of the city is now 15 feet higher than its preflood level. A major hurricane in 1915 flooded much of the city, but that time Galveston survived.

The catastrophe had mixed effects on Galveston residents as they struggled to restore their way of life. In 1901 Galveston replaced its city government with five commissioners appointed by Texas's governor. Soon known as the Galveston Plan, this progressive municipal reform was seen as a way to supplant local cronyism with expertise and was widely imitated. Although the Red Cross tried to deal fairly with African-American flood survivors, many of them homeless, bogus stories of black violence, thievery, and refusal to join in recovery efforts circulated in the smitten city. As the city recovered, Jim Crow restrictions intensified, and African-American political power was further weakened. Galveston would never again compete with archrival Houston or any other major city. Remade as a resort town, Galveston for years wooed tourists with night spots, big-name entertainment, and illegal gambling.

By 1904 the disaster at Galveston had been turned into an entertainment attraction, both at the St. Louis World's Fair and at Brooklyn's Coney Island amusement park, where paying patrons could view a simulation of the destruction. In 1960 folk musician Tom Rush published and later recorded "Wasn't It a Mighty Storm," a song that sensitively portrayed the horror of

the September day “when death come howling on the ocean/death calls, you gotta go.”

MARSHA E. ACKERMANN

Gandhi, Mohandas K.

(1869–1948) *Indian nationalist leader*

The Indian leader Mohandas Karamchand Gandhi, who dominated the Indian political scene for three decades, became an internationally acclaimed person for his non-violent path of struggle to achieve Indian independence from British colonial rule. Through *ahimsa* (nonviolence) and *satyagraha* (true force, nonviolent protest), he led one of the largest mass movements in world history. Gandhi dedicated his life to the quest for truth and justice. He was called the *mahatma* (noble soul). In his varied career he led the struggle against apartheid in South Africa, conducted passive resistance against the British, and dedicated his life to the uplift of millions of Indians. Gandhi had been criticized and vilified but remained true to his convictions and led a life of austerity and simplicity. He was born in Porbandar, Gujarat, India, on October 2, 1869, to Karamchand and Putlibai. Gandhi was greatly influenced by the honesty and integrity of his father, who served as prime minister in the state of Rajkot. Putlibai’s religious nature created a lasting impression on Gandhi. He married at the age of 13 to Kasturbai, a noble lady of high moral character. Gandhi was also deeply moved by the saga of honesty, sacrifice, and dedication in Hindu mythology. After finishing his schooling he went to the Inner Temple in London in November 1888. He came back to India after three years and left for South Africa in 1893 to take up a legal career.

Gandhi’s 20-year stay in South Africa was instrumental in the blossoming of his philosophy and his course of action against injustice. Humiliating experiences and the racial arrogance of the whites there made him determined to fight against apartheid. The official discrimination against nonwhites caused him to help the minority community of Indians. His creed was one of peaceful coexistence of all communities, regardless of color or religion.

Gandhi charted out a course of action of passive resistance against the government by demonstrations. He was deeply influenced by the Hindu scripture the Bhagavad Gita, Jainism, the teachings of Jesus Christ, and the literature of U.S. author Henry David Thoreau (1817–62), English writer John Ruskin (1819–1900), and Russian Leo Tolstoy (1828–1910). In a campaign of passive resistance, nonviolence was the driving force, and noncooperation was the action itself. Gandhi organized campaigns and demonstrations against humiliating laws applied to nonwhites. He set up the Natal Indian Congress in 1894 to redress the grievances of Indian immigrants. Gandhi became a prominent figure and was engaged in civil rights issues. He was in India twice for short visits and acquainted the editors of newspapers and INDIAN NATIONAL CONGRESS (INC) leaders with the conditions in South Africa. Gandhi journeyed on trains and was appalled by the condition of common Indians.

On his return to South Africa he changed his lifestyle to one of utter simplicity and also undertook to fast. Gandhi did not see the British as the enemy and was prepared to help them in case of need. At the time of the BOER WAR, he organized the Indian ambulance corps. Gandhi was a prolific writer, and he wrote *Hind Swaraj* (Self-government of India) and published a journal, *Indian Opinion*, in 1904. He began to experiment with many novel ideas in the community firm that he set up in Phoenix. In 1910 he established another cooperative colony (Tolstoy Farm) for Indians near Durban. Gandhi organized a satyagraha against the obnoxious laws of the Transvaal government, which required the registration of Indians. Gandhi was jailed several times during the agitation. General JAN CHRISTIAAN SMUTS at last conceded to many of Gandhi’s demands and brought about reforms. Gandhi decided to return to India.

Great Britain declared war on Germany on August 4, 1914, two days before Gandhi reached London. He organized a medical corps in August 1914. After his return to India the next year, he urged the people to support the British in their time of crisis. The colonial government rewarded him with a medal, and he earned the sobriquet “recruiting agent of the government.” Gandhi traveled the length and breadth of India. He took up the cause of indigo cultivators in Champaran and workers in Ahmedabad mills. He was emerging as a mass leader and gave a new direction to the Indian freedom movement under the congress. It became an umbrella organization that drew support from all classes of the population. The Congress Party underwent a thorough revamping due to Gandhi’s organizational skill. The

Gandhian era in the Indian nationalist struggle began in 1919. After the draconian Rowlatt Act, which empowered the authorities to arrest and detain without trial, was passed, Gandhi called for a general strike in April 1919. The government suppressed the agitation, and the brutality of colonial masters was evident after the Jallianwalla Bagh massacre of April 13. A large number of Muslims joined the congress after Gandhi's support of the KHILAFAT MOVEMENT, which fought to preserve the authority of the Ottoman sultan.

With the noncooperation movement under Gandhi's leadership, a new phase of struggle against the British Raj began. A special session of the AICC met in Calcutta in September 1920 to start the movement with a boycott of educational institutions, law courts, elections, and legislatures. There was to be the promotion of Hindu-Muslim unity, along with use of homespun garments of khaddar. The goal was the attainment of *swaraj*, or self-government. The December annual session held in Nagpur endorsed the idea. A large number of students, women, peasants, and workers from different parts of the country participated. Demonstrations and strikes greeted the November 1921 visit of the prince of Wales. Non-cooperation and Khilafat went hand in hand under Gandhi, who had renounced the title of *kaiser-i-hind* that had been conferred on him by the British. Following a policy of repression, the government banned the Khilafat and congress.

After police fired on demonstrations on February 5, 1922, at Chauri Chaura in the Gorakhpur district of Uttar Pradesh, the police station was attacked, resulting in the death of 22 police personnel. Gandhi was stunned by this path of violence and suspended the noncooperation movement. He was steadfast in his commitment to nonviolent methods. Freedom through violence was not on his agenda. People in general and INC leaders like Jawaharlal Nehru (1889–1964) and SUBHAS CHANDRA BOSE (1897–1945) were annoyed by the decision, and some congressmen, like MOTILAL NEHRU (1861–1931), launched a program of council entry through the newly formed Swaraj Party of 1923. Gandhi was arrested in March 1922 and given six years' imprisonment for treason in an Ahmedabad court.

Gandhi was not only interested in swaraj, but also in the social and economic emancipation of the people. He was a crusader for economic and social reforms. His emphasis on *swadeshi* meant the use of hand-made goods from his home country rather than foreign machine-made goods. People were mobilized to boycott foreign goods. Handicraft was emphasized

Mohandas Karamchand Gandhi dominated the Indian political scene for three decades.

in education also. The hand weaving of dresses and the development of handicrafts, Gandhi hoped, would be a panacea for India's poverty, economic backwardness, and unemployment. Gandhi's economic philosophy was also part of his strategy against colonial rule, as the boycott of foreign goods would adversely affect British industry. Gandhi was not opposed to industrial revolution per se, but he desired to create a framework, keeping in mind the economic condition of India under alien rule.

Gandhi was back on the political scene in 1930 with his movement of civil disobedience. He launched the salt *satyagraha* with his famous Dandi March in March 1930. He and his followers covered a distance of 241 miles to the Arabian Sea to make salt. These civil disobedience movements witnessed participation in large numbers by tribal people, peasants, and women. Gandhi was arrested in May, but the British government agreed to negotiations. The movement was suspended by the pact signed between Gandhi and Viceroy of India Lord Irwin (1881–1959) in March 1931. He also was the INC delegate to the Second Round Table held in London, but the British government refused to grant self-government to the Indians. Gandhi was jailed again,

and the civil disobedience movement was withdrawn by him in May 1934.

Gandhi devoted himself to social and economic reconstruction work. Indian politics began to change at the time of WORLD WAR II. Gandhi had a difference of opinion with Subhas Bose, who parted from the congress. The British were not in a mood to give independence, and Gandhi launched another movement. With the call of “Do or Die,” the Quit India Movement was launched on August 8, 1942, and spread throughout the country. The British could not hold to the empire after the war due to domestic difficulties and offered India independence. India experienced unprecedented communal violence, and Gandhi toured the riot-affected area in support of Hindu-Muslim unity. The demand for the creation of Pakistan had been raised, and MOHAMMED ALI JINNAH (1876–1948) was relentless in his pursuit of the two-nation theory. Talks between Jinnah and Gandhi failed. Partition was inevitable. Gandhi’s insistence that Pakistan should get its due share of monetary assets angered Hindu fundamentalists. A fanatic named Nathuram Godse (1910–49) assassinated him on January 30, 1948, while he was on his way to evening prayers.

PATIT PABAN MISHRA

Garvey, Marcus

(1887–1940) Jamaican writer

The list of players involved in the 20th-century social empowerment and civil rights movements for blacks could not be complete without the story of Marcus

Garvey and the movement for separatist black nationalism started by him early in the century and known as the Universal Negro Improvement Association (UNIA). The tenets of the UNIA as an organization and the “Garveyites” as adherents to both were a complex mixture of race, class, politics, nationalism, and ideological conflicts surrounding the issue of blacks and their position in the world. Even today Garvey’s ideologies have some black leaders praising him for raising social consciousness in the 1910s and 1920s and others condemning him as a counterproductive obstacle to efforts for civil rights.

Marcus Mosiah Garvey was born on August 17, 1887, in St. Ann’s Bay, Jamaica, at a time when blacks in Jamaica were largely landless, poor, and wanting

Marcus Garvey fought for the idea of a separate, unified black culture and a sovereign black nation.

better conditions. By the time Garvey was a teenager he had become cognizant of the lines dividing blacks and whites.

Garvey supplemented his schooling with time spent reading from his father's library, fueling his own curiosities about the outside world. At 15 he began to learn the printer's trade, and in 1905 he moved to Kingston, Jamaica's capital city, where he eventually became a master printer. This knowledge of the printing business proved invaluable when he started his own newspapers and journals as a part of the organizations he founded.

By 1909 when he was 22, Garvey had learned that residents of Kingston liked to argue the sociopolitical ideas of the time. He found himself getting involved in these political and intellectual debates that dealt with the betterment of blacks in Jamaica and addressed the problems associated with imperialistic colonial rule. Seeking other work in 1910, Garvey traveled to Costa Rica to work for the giant American-owned UNITED FRUIT COMPANY. He was arrested for agitating for better working conditions, left Costa Rica, and began traveling around Latin America, noticing the generally oppressed state of black workers.

In 1912 Garvey went to England hoping to address Britain's colonial rule and its promotion of disparity between blacks and whites in the Caribbean and Central America. In London he got a job working for the *Africa Times and Orient Review*, one of the foremost Pan-African publications of the day.

Garvey returned to Jamaica in 1914 and immediately began the UNIA. His intent was to develop a separatist, nationalistic movement of international scope, meaning that it would allow the blacks of the world to eventually achieve a unified culture separate from the whites, including a separate country that would become a sovereign central nation for the world's blacks. These goals were the hallmark of "Garveyism."

Garvey came to America in 1916 to solicit the support of American blacks. In 1917 New York City's Harlem district was virtually the world's capital of black culture, and Garvey chose this as his temporary base. By 1918 Garvey was publishing *Negro World*, the internationally distributed paper that would be the voice of the UNIA, and he decided to stay in Harlem and run the UNIA headquarters from there.

Garvey's promotion of totally separate cultural spheres through his separatist ideals went so far as the conducting of (unsuccessful) negotiations between the UNIA and the African country of Liberia between

1922 and 1924 to allow establishment of settlements of black Americans. This caused considerable consternation among both blacks and whites in America and abroad.

Other prominent black-rights groups such as the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), led by the widely respected W. E. B. DuBois, increasingly criticized Garvey for hurting the cause of black unity and advancement. Garvey had his followers but was also criticized for his pursuit of racial separation, which was deemed counterproductive to the racial cooperation being sought by the NAACP.

Almost since his arrival in America, Garvey had been the object of scrutiny by governmental and corporate agencies that viewed his ideologies as subversive. Garvey was accused of fraud on several occasions because he attempted to start new businesses that would allegedly benefit the members of the UNIA but that proved to be financial fiascos. The best-known one was the 1919 venture known as the Black Star Line Steamship Corporation, which involved the purchase of obsolete ships using hopeful investors' money to start international freight and passenger shipping lines.

The end of Garvey's hopes for operating his organization from America came in 1922 when he and the top officials of the Black Star Line were indicted for mail fraud concerning the Black Star Line's business practices. Garvey's trial ended with a conviction in 1923, which he appealed. The appeal was rejected in 1925, and Garvey was sent to prison in Atlanta until 1927, when his five-year sentence was commuted. Upon his release, Garvey was deported back to Jamaica.

Garvey went back to England in 1928, where he unsuccessfully attempted to revive interest in the UNIA's goals. He died in London of complications from a stroke on June 10, 1940.

Geneva Conventions

The Geneva Conventions and their subsequent protocols are a series of four treaties regarding the fundamental rules of humanitarian concerns of soldiers and noncombatants during warfare. They were first established in Geneva, Switzerland, in 1864. In addition, there are three protocols added to the Geneva Conventions that prohibit certain methods of warfare and deal with issues regarding civil wars.

The first Geneva Convention dealt exclusively with the care of wounded soldiers on the battlefield and was later amended to cover warfare at sea and prisoners of war. The Red Cross, an international philanthropic organization, was formed because of the First Geneva Convention. Clara Barton, founder of the American Red Cross, was instrumental in campaigning for the ratification of the first Geneva Convention by the United States, which signed it in 1882.

The International Committee of the Red Cross (ICRC), under the first Geneva Convention, chapter 1, article 3, was recognized as an impartial humanitarian body permitted to offer its services during conflicts, and its emblem would be recognized as a neutral organization to parties to the conflict. This was later amended to include the emblems of the International Red Crescent and the Red Lion and Sun humanitarian organizations.

In brief the seven fundamental rules that form the tenets of the Geneva Conventions and protocols are:

1. Civilians not taking part in the conflict are entitled to respect for their lives and their moral and physical integrity; and shall in all instances be treated humanely.
2. It is forbidden to kill or injure an enemy who surrenders.
3. The wounded and sick shall be collected and cared for by the party to the conflict that has them in their power. Protection also covers medical personnel, establishments, transports, and equipment. The Red Cross and Red Crescent are two signs of such protection and must be respected.
4. Captured combatants and civilians are entitled to respect for their lives, dignity, personal rights, and convictions. They shall be protected against acts of violence and have the right to correspond with their families and to receive relief.
5. Everyone shall have the right to fundamental judicial guarantees. No one shall be subjected to physical or mental torture, corporal punishment, or cruel or degrading treatment.

6. It is prohibited to employ weapons that would produce unnecessary or extreme losses or excessive suffering.
7. Civilians shall be protected from attack and not the subject of attack. Attacks shall be directed solely against military objectives.

In 1949 each convention was revised and ratified after the horrific loss of human life in WORLD WAR II. These revisions had their basis in part in the 1899 and 1907 Hague Peace Conferences, which were initiated by Russian czar Nicholas II to discuss peace and disarmament during the Japanese-Russian conflicts. The original Hague Peace Conferences led to the establishment of the Permanent Court of Arbitration, the precursor to the International Court of Justice at The Hague, the principal judicial organ of the United Nations.

PAUL VON JANKOWSKY

Giichi Tanaka

(1863–1929) *Japanese politician*

Tanaka Giichi was a Japanese soldier, politician, and prime minister of Japan from April 20, 1927, to July 2, 1929. He was born on June 22, 1863. Tanaka served in the Japanese military in the Russo-Japanese War (1904–1905) and quickly parlayed a successful combat campaign into a rapid ascent to positions of greater power. In 1915 Tanaka took the position of subchief of Central Major State and in 1920 the rank of general. Prime Ministers Hara Takashi (1918–21) and Yamamoto Gonohe (1923–24) appointed him war minister. During his tenure, Tanaka supported the Siberian Expedition, sending Japanese troops to Russia. He officially retired from military service in 1921 in order to work with and later lead the Seiyukai political party. Tanaka, like many of his contemporaries, emerged as a significant military voice after Japan's decisive victory over Russia and when Japan dealt with the fallout of its own modernization program. Thus, Tanaka in many ways symbolized the new and modern Japanese military mind.

By 1927 Giichi successfully gained the position of prime minister and served concurrently as foreign affairs minister. His foreign policy was both aggressive and interventionist. Most notably, Giichi intervened militarily in Shandong (Shantung), China, in 1927 in order to prevent CHIANG KAI-SHEK from uniting the country. Domestically, he worked to suppress opposition and has been accused of manipulating elections in order to extend his rule.

He is the reputed author of the “Tanaka Memorial”—the Imperial Conquest Plan for the taking of Manchuria, Mongolia, the whole of China, and then the Soviet Far East and Central Asia. Japan claimed the plan was a forgery. What cannot be denied, however, is that the so-called Tanaka plan reflected much of the foreign policy of Japan during the 1930s and 1940s and ultimately led to WORLD WAR II.

His fall came from within his own administration. His supporter Kaku Mori, with ties to two secret Japanese societies, the *zaibatsu* and radical groups, was able to influence him and his policies as prime minister—the implementation of interventionist policies toward both Manchuria and Mongolia. Thus, Japan backed in 1928 the successful assassination of Manchurian warlord Zhang Zolin (Chang Tso-lin) in an attempt to seize Manchuria. Due to quick Chinese response, the plotters failed to seize Manchuria until 1931 as a result of the MANCHURIAN INCIDENT. Giichi’s political career came to an end with his signing of the Kellogg-Briand Pact.

Opponents criticized him for exceeding his power and failing to take into account the sovereignty of the emperor. The failure in Manchuria and Kellogg-Briand led to his resignation and the succession of Hamaguchi Osachi as prime minister. He died on September 29, 1929.

MATTHEW H. WAHLERT

Gold Coast (Ghana)

The modern West African nation of Ghana was called the Gold Coast until 1957. This small African country is nestled just under the continent as it juts out into the Atlantic Ocean a few miles above the equator. Ancient in its history and traditional in

its ethos, the Gold Coast garnered its name from the Portuguese in the 15th century. Calling the area “da Mina” or “El Mina,” denoting the mines, the Portuguese were astounded at the vast deposits of easily accessible gold. By 1472 the Portuguese had built a fort at El Mina to facilitate the emerging Atlantic trade system in gold, ivory, salt, slaves, and timber. Both historic and contemporary ties made Ghana a major cultural and symbolic icon in the consciousness of African Americans. Although the Gold Coast had several European nations as its primary trading partners, it is its British heritage that defines the contemporary nation.

Envious of Portugal’s success and wealth, other European nations began to explore West Africa. By 1600 the Dutch had built several forts along the coastal inlets of the Gold Coast at Komenda and Kormantsil. In 1637 the Dutch eclipsed the Portuguese as Ghana’s major trading partner when they seized Elmina Castle, and in 1642 they confirmed their regional hegemony by forcing the Portuguese to retreat from Fort St. Anthony at Axim. Dutch success gave strength to the ambitions of other European powers.

Thus, the British, Danes, and Swedes started to engage in regular trade as they built their own forts along the Gold Coast. In these areas they exchanged alcohol, cloth, guns, and ammunition for African commercial and human commodities.

Having ruled the area and exploited its wealth for almost 300 years, the Dutch ceded their position in the Gold Coast to the British in 1872. Rushing to confirm the hegemony of the British Empire, England annexed the Gold Coast as a Crown Colony in 1878. But after fighting several wars with local chiefs, the British still only controlled part of the area. Despite the superior weapons and cohesion of the British military, it was not able to conquer the Gold Coast easily. Many different groups fought the British, who attempted to exploit local ethnic and regional divisions. By allying themselves with the Fante on the coast, the British became the enemies of the Ashanti. This early and pragmatic decision cost the British thousands of lives over many decades. The Ashanti, foremost among the local groups who fought the British, proved England’s most capable foe. From the time that the British sent ambassadors to Kumasi between 1817 and 1821 to discuss peace with King Osei Bonsu (the Asantehene) to their defeat in 1900, the Ashanti rejected British claims.

The Ashanti people were victorious during the 1823–24 Ashanti-Denkyira War, despite a British-Fante

alliance that supported the Denkyiras. With superior armaments the British defeated the Ashanti at the Battle of Kantamanto near Dodowa, and in 1831 George MacLean signed a treaty with the Ashanti. Although this did not ensure the pacification of the region, by 1876 the British confirmed their mastery over the region by moving the capital to present-day Accra.

The last war in Ashanti history was led by Nana Yaa Asantewaa, the queen mother. She led an attack on the British fort in Kumasi in 1900 in response to the arrogant demand by Arnold Frederick Hodgson that the king deliver “the golden stool” to the British governor as a sign of surrender. The queen mother, having enormous power in a matrilineal society, led her people to war. Despite courageous and skillful fighting, the Ashanti were defeated; however, refusing to violate the sanctity of the customary institutions, the elders provided a fake stool to the British as they sued for peace to end the bloodshed and save their nation. The ancient golden stool, the national symbol of sovereignty and power, remained hidden and has never been occupied by a European.

As part of the British Empire, confirmed and carved up at the Conference of Berlin in 1885, Ghana began to emerge as a modern nation-state. The British sent some of the most able African students to study in the United States and Europe. In addition, participation in two world wars allowed many soldiers from the Gold Coast to experience the Western world. After WORLD WAR II African soldiers and students returned home; students, members of the privileged elite, had not been indoctrinated as the British had assumed, but returned to begin the process of decolonization.

These educated men and women rejected their comfortable and safe lives as members of the colonial bureaucracy and established a series of political organizations designed to raise the political consciousness of the people. Many realized that colonization was a form of economic exploitation and that the system was economically unfair to Africans and structured to the advantage of the British. Moreover, having been treated with dignity in Europe and America, these educated and sophisticated Africans chafed under the humiliations they often endured at the hands of local colonial administrators.

KWAME NKRUMAH

In particular, Kwame Nkrumah, who had attended Lincoln University in Pennsylvania and read positive messages about being black written by MARCUS GARVEY and W. E. B. DUBOIS, began to organize a nationalist

movement. He was also influenced by the speeches and rhetoric of the Pan-African Conference held in Manchester, England, in 1945. From this conference forward, Africans in particular and people of color in general began to question European notions of racial superiority, the administration of colonial justice, and the negative effects of imperial financial systems.

The agitation and anticolonial struggles in the Gold Coast forced the British to grant some local self-government. Finally, despite false imprisonment, violent repression, and the manipulation of ethnic and religious hostilities, Britain had to concede to demands for independence. In 1957 the Gold Coast became an independent nation, the first independent nation in Africa south of the Sahara.

ALPHINE W. JEFFERSON

Goldman, Emma

(1869–1940) *feminist and radical anarchist*

Emma Goldman, also known as “Red Emma,” was born to Jewish parents on June 27, 1869, in Kaunas, Lithuania (Kovno, Russia) in a climate of mounting czarist repression marked by periodic pogroms. In order to avoid such threats her family moved when she was 13 to St. Petersburg. Economic circumstances, however, ended her formal schooling and forced her to take up work as a corset maker in a factory.

In an effort to improve family prospects, Goldman and her half sister immigrated to America, where they joined another sister in Rochester, New York. There Goldman gained employment at \$2.50 a week as a seamstress in a clothing factory. Events surrounding the Chicago Haymarket Square riots of 1886 and the subsequent trial, conviction, and hanging of the accused agitators drew her into the anarchist cause. Following a short marriage to Jacob Kershner, Goldman, now age

20, headed east, first to New Haven, Connecticut, and eventually to New York City, where she soon fell under the influence of Johann Most (1846–1906), a revolutionary editor of a German paper.

Goldman's political development also saw her embrace the anarchist teachings of Peter Kropotkin (1842–1921) with their emphasis on individualism and revolution. She accepted the concept of "propaganda by deed" and supported friend, sometime lover, and fellow anarchist Alexander Berkman's 1892 plot to assassinate Carnegie Steel industrialist Henry Clay Frick. The attack only injured Frick but nevertheless brought Berkman a 22-year prison sentence. Although Goldman was not convicted, she did receive a year in New York's Blackwell Island Prison on a separate charge of encouraging the unemployed to use force to achieve their demands. A further arrest came in 1901 following Leon Czolgosz's (1873–1901) assassination of President William McKinley; however, Goldman was ultimately not charged.

In 1906 following Berkman's parole from prison, Goldman joined him and began editing the monthly journal *Mother Earth*, which ran until 1917. *Mother Earth* became a forum for her writing and anarchist-feminist political ideas. Her radical propaganda was winning her more enemies than friends, though, and in 1908 her citizenship was revoked. In 1914 she was again accused of involvement in bombing plots, this time supposedly against the oil baron J. D. Rockefeller, and in 1916 she was imprisoned for distributing birth control leaflets. Berkman at this stage had moved to San Francisco and was contributing to another anarchist journal, the *Blast*.

The coming of WORLD WAR I prompted Goldman to campaign against U.S. participation, and she, along with Berkman, led No Conscription League protests, which conflicted with the 1917 ESPIONAGE ACT. Searches of her offices produced incriminating documents and information on fellow revolutionaries. The material and correspondence would later aid investigators in their roundup of radicals. Her antiwar activities and agitation brought her further legal attention and another jail sentence, this time of two years. While in prison she developed a friendship with Gabriella Segata Antolini, a fellow anarchist and an associate of the radical anarchist editor Luigi Galleani (1861–1931).

The immediate aftermath of World War I, coming on the heels of the 1917 communist revolution in Russia, produced heightened U.S. fears of radical subversion. The U.S. attorney general, A. Mitchell Palmer, supported by eager federal investigative agents such as

Emma Goldman was jailed repeatedly for her views as the United States underwent a Red Scare following the Russian Revolution.

the young J. Edgar Hoover, instituted a campaign, subsequently labeled the RED SCARE of 1919–20, to deport immigrant radicals as undesirable aliens. Goldman and Berkman found themselves in this group, and on December 1, 1919, they and 247 other radicals were put on the U.S.S. *Buford* for transport to Russia. This journey took them to the heartland of the unfolding Bolshevik Revolution. Communist actions soon undercut their initial enthusiasm for this socialist experiment.

Leaving Russia in 1921, Goldman divided her time between England and France and eventually acquired a house in Saint Tropez. In 1931 while living in the south

of France, she completed her autobiographical volume, *Living My Life*. Now in possession of a British passport, she was able to travel and lecture, even returning to the United States for a lecture tour in 1934.

The rise of FASCISM in the 1920s and 1930s gave Goldman new opponents for her political campaigns, and the coming of the SPANISH CIVIL WAR in 1936 provided her with a new cause to champion. However, shortly before the outbreak of the war in 1936 she suffered the loss of her longtime companion and anarchist associate, Alexander Berkman, who after suffering from serious pain and chronic illness committed suicide. Visits to Spain in 1937 and 1938 convinced Goldman that more action was needed, and she joined with others to help the Committee to Aid Homeless Spanish Women and Children.

While on a visit to Toronto, Canada, Goldman suffered a stroke and died on May 14, 1940. U.S. authorities permitted her burial in what is now the Forest Home Cemetery in Forest Park, Illinois, close to the burial plots of the executed Haymarket Riot anarchists.

THEODORE W. EVERSELE

Gómez, Juan Vicente

(c. 1857–1935) *Venezuelan dictator*

The dictator who controlled Venezuela from 1909 until 1935, Juan Vicente Gómez was officially president on four occasions, from 1909 until 1910, from 1910 until 1914, from 1922 until 1929, and from 1931 until 1935. As a result of the brutal manner in which he ran the country, he was either known as El Brujo (“the sorcerer”) or simply El Bagre (“the catfish”).

It is not known for certain when Juan Vicente Gómez was born, although it was probably on July 24, 1857. He was of Indian ancestry, and he was born at San Antonio del Táchira in the northwest of Venezuela,

close to the border with Colombia. Despite having no formal education—he was barely literate—he rose to prominence around his hometown and joined the private army of Cipriano Castro in 1899. When Castro captured Caracas in October 1899, he became president and appointed Gómez his vice president. In this capacity Gómez was able to crush attempts to oust Castro. However, on December 20, 1908, when Castro was in Europe recuperating from an illness, Gómez seized power, and in February 1909 he took the opportunity of appointing himself provisional president, becoming president when Castro was formally deposed on August 11. From then until his death, he controlled the country either directly or through “puppet” presidents.

On April 19, 1910, Gómez formally stood down as president, appointing Emilio Constantino Guerrero acting president. However, Guerrero was replaced 10 days later by Jesús Ramón Ayala, who lasted just over a month, until June 3, when Gómez became president for the second time. On April 19, 1914, he was replaced by Victorino Márquez Bustillos, who remained in office as provisional president for eight years until Gómez reassumed the presidency again on June 24, 1922. For most of that time, all important decisions were still made by Gómez from his home at Maracay. He then relinquished the position to two successive acting presidents, Juan Bautista Pérez and Pedro Itriago Chacín. On July 13, 1931, Gómez began his fourth term, which ended with his death.

During his time running Venezuela, Gómez ensured that the country achieved a degree of economic independence but with rampant corruption managed to make himself reputedly the wealthiest man in South America. Much of the wealth of the country came from oil, which in 1918 was found near Lake Maracaibo. Gómez drove a hard bargain with the British, Dutch, and U.S. oil companies, using the newly found wealth to pay off Venezuela’s national debt as well as enrich himself. By the late 1920s Venezuela was the world’s largest exporter of oil. Gómez was ruthless to political opponents, who were jailed by the thousands. Many were put in huge leg irons, crippling them for life, and others were hung by meat hooks until they were dead.

At the same time Gómez started acquiring companies, farms, and industrial concerns for himself. He had spies and agents keeping a constant watch on the population, and his army was always one of the best equipped in South America. Gómez destroyed much of the power of the local political caudillos and also the Roman Catholic Church. He protected his own herds of cattle from disease but allowed those of others to suf-

fer. Although he personally did not like coffee, he owned many coffee plantations as well as sugarcane plantations and ranches. Gómez himself lived in the governor's palace in Maracay, which was equipped with escape passages. It was said that the reason why the town had such good roads was in case he had to flee. He never drank or smoked but had affairs with many women and boasted that he had fathered between 80 and 90 children. Many of these were given jobs in the public administration, giving rise to charges of nepotism. Even when he was dying, Gómez was still searching for a woman to marry so that he might have at least one legitimate child.

He died on December 17, 1935, at Maracay and was buried in a massive mausoleum he had built some years earlier in the town's cemetery. As soon as news reached Caracas and other places, people rushed into the streets to cheer and celebrate for two days. In an orgy of pent-up rage, they looted or burned down houses of his relatives and supporters and even attacked the oil installations at Lake Maracaibo. His political opponents and some allies turned on his family. His property, valued at \$200 million at his death, was seized by the state, and most of his children were forced into exile.

JUSTIN CORFIELD

Gompers, Samuel

(1850–1924) *U.S. labor leader*

Samuel Gompers, who ushered in a new era of organized labor in the United States, was born on January 27, 1850, in London. At the age of 13 he emigrated and settled on Houston Street, New York. He was interested in trade union activities and joined the local United Cigar Makers in 1864. He became the president of the Cigar Makers' International Union (CMIU) in New York City at the age of 25. Gompers was very much concerned with the plight of labor at a time when labor unions were not very strong. A man of conservative outlook, he preferred to work within the capitalist system. He was not in favor of independent political action and radicalism, was opposed to violence, advocated a moderate approach, and hesitated to call strikes. His agenda was provision of basic needs for workers: shorter work hours, more wages, safe working environments, and union protection. He became one of the founding

members of the Federation of Trades and Labor Unions (ATLU), which was established in 1881. Gompers was the chairperson and remained the vice president for five years. In 1886 it changed its name to the American Federation of Labor (AFL), and Gompers was its president for 40 years.

The governing philosophy behind the AFL was similar to that of the ATLU. Gompers was convinced that craft unions were far better organizations for extracting maximum concessions than industrial unions. The former were restricted to skilled workers in one particular trade, whereas the latter could organize workers of any skill in a particular industry. For Gompers, economic organization was essential. Persons were employed to recruit new members from nonunion shops. An emergency fund was created for the workers in case of a strike. Under the leadership of Gompers, the AFL swelled in membership. From a membership of 250,000 in 1890, the AFL increased to 1.7 million by 1904. Gompers also helped to establish the Women's Trade Union League in 1903.

Although Gompers was not aligned with any political party, under his stewardship the AFL supported pro-labor candidates in elections. The AFL also was instrumental in enacting measures in the U.S. Congress and state legislatures that were favorable to labor. President WOODROW WILSON appointed Gompers a member of the advisory committee to the Council of National Defense, which was created by Wilson to outline areas of the economy vital in a time of war. Gompers was instrumental in mobilizing labor support for the war effort. He also joined the National War Labor Board, created in April 1918, which gave the workers an eight-hour day, equal pay for women doing equal work, and a minimal living standard.

Gompers was at the PARIS PEACE CONFERENCE after the end of WORLD WAR I as a member of the Commission on International Labor Legislation for creating an organization with international dimensions under the LEAGUE OF NATIONS. As chairperson, he was responsible in a substantial way for the creation of the International Labour Organisation (ILO). Gompers helped various labor federations in Latin American countries. In 1921 he attended the congress of the Pan-American Federation of Labor in Mexico City despite deteriorating health. He had to be taken to the hospital in San Antonio, Texas, where he died on December 13, 1924. Gompers's efforts had resulted in a definite wartime labor policy of the U.S. government, and this policy was the foundation of the labor rights stipulated in the NEW DEAL. Gompers had left a lasting impression not

only in the history of the AFL, but also on the whole of the U.S. labor moment.

PATIT PABAN MISHRA

Good Neighbor Policy (1933–1945)

The Good Neighbor Policy, announced by President FRANKLIN DELANO ROOSEVELT (FDR) during his first inaugural address on March 4, 1933, at the height of the GREAT DEPRESSION, was a response to the powerful backlash against U.S. military intervention in the Caribbean and Central America over the previous 35 years. “In the field of world policy I would dedicate this Nation to the policy of the good neighbor,” Roosevelt declared, “the neighbor who resolutely respects himself and, because he does so, respects the rights of others. . . .” In effect, FDR’s policy shift amounted to a repudiation of his cousin THEODORE ROOSEVELT’s 1904 corollary to the Monroe Doctrine.

From 1898 to 1933, the United States had intervened militarily, economically, and politically in Cuba, Panama, Nicaragua, Mexico, Haiti, the Dominican Republic, and elsewhere, creating an informal empire in its “backyard,” with the aim of creating “order” and “stability” and asserting U.S. economic and geopolitical domination of the region, to the exclusion of European powers. This openly interventionist policy had generated a firestorm of protest throughout much of Latin America and Europe.

By the late 1920s it was clear that the unintended consequences of U.S. intervention were overshadowing its intended effects. The Good Neighbor Policy has thus been interpreted as a new stage in U.S. efforts to dominate the region, in the context of the Great Depression, the rise of FASCISM in Italy and Germany, and the threat to U.S. interests in Asia posed by imperial Japan. Overall the policy proved very effective, disarming critics, dampening opposition, and garnering important allies across the hemisphere. Its most important effects argu-

ably came during WORLD WAR II, when governments throughout Latin America backed the Allies in their war against Germany and Japan.

The short-term antecedents to the policy have been traced to president-elect HERBERT HOOVER’s tour of Latin America in late 1928, following the sixth Pan-American Conference in Havana in January (at which U.S. policy came under heavy criticism), when he announced his hope that the nations of the Western Hemisphere might get along like “good neighbors.” Under FDR the Good Neighbor Policy assumed military, economic, political, and cultural dimensions. Militarily, the United States withdrew its troops from Nicaragua (January 1933, an event predating formal announcement of the new policy, and in the works since late 1928) and Haiti (1934) and refused to send troops to help stabilize Cuba during the crisis of 1933–34. Also in 1934, the United States abrogated the 1901 Platt Amendment to the Cuban constitution, thus forfeiting its right to intervene militarily in Cuban affairs.

Economically, the United States actively encouraged trade and investment throughout the hemisphere while also wielding the carrot and stick of U.S. economic aid, loans, and technical assistance. In 1934, emblematic of the policy shift, Congress created the Export-Import Bank to assist U.S. firms doing business overseas and passed the Reciprocal Trade Agreements Act, which authorized bilateral trade agreements with individual countries. Politically, the United States affirmed its commitment to nonintervention in Latin American affairs at the 1933 Pan-American Conference in Montevideo and in 1936 at the Buenos Aires Conference.

The policy was put to a major test in the Mexican and Bolivian oil crises of 1938–39, when FDR refused to respond militarily to nationalist expropriations of U.S. property. The refusal overturned decades of U.S. policy toward its southern neighbors, in which the U.S. government’s right to protect U.S. “lives and property” was used to justify military intervention. The policy had an important cultural dimension as well, ranging from music, film, and printed texts to joint resolutions at inter-American conferences emphasizing the unity and distinctiveness of the nations of the Western Hemisphere. After World War II, the policy was subsumed under the rubric of “national security” and hemispheric security in the context of the cold war and the fight against the perceived menace of international communism. The origins, characteristics, and consequences of the Good Neighbor Policy have spawned an expansive literature.

MICHAEL J. SCHROEDER

Great Depression, worldwide

The most dramatic economic shock the world has ever known began on October 24, 1929, “Black Thursday.” After years of large-scale speculations, with millions of investors borrowing money to chase the dream of easy

riches and hundreds of banks willing to accept stocks as collateral, stock prices eventually far exceeded the companies’ actual productivity, and the bubble burst. The collapse of the New York stock exchange continued through October 29 (“Black Tuesday”), and during the following days and weeks countless investors found themselves broke, while hundreds of banks were forced to default on their loans.

By the early 1940s Dow Jones stock prices were still approximately 75 percent below the 1929 peak, a level that was only reached again in 1955. The FEDERAL RESERVE refused to provide emergency lending to help key banks to at least partially recover from their losses, so that the number of banks in operation almost halved over the next four years, driving thousands of business

New York City residents in a breadline beside the Brooklyn Bridge during the Great Depression. Rampant unemployment, the widespread failure of economic institutions, and crop failures created the greatest economic disaster in modern world history.

owners to the wall as their banks called in loans to stay afloat. Furthermore, because the banking system could no longer supply the necessary liquidity, new business enterprises could not be undertaken, and millions of workers lost their jobs with little hope of regaining them in the near future.

In 1933 and 1934 one-half of the total U.S. workforce was jobless or underemployed. To make things worse, home mortgages and loans had produced a huge amount of consumer debt, and although incomes decreased, debts did not. Predictably, consumer spending declined dramatically: Between 1929 and 1933 expenses for food and housing went down by more than 40 percent, with crop prices following the same downward path.

The crisis in the financial markets had set off a domino reaction, but U.S. president HERBERT HOOVER was a steadfast advocate of laissez-faire principles and believed that the “invisible hand” of the market and the moral fiber of the American people would ensure that everything would eventually work out. In keeping with the contemporary tendency to manage economic problems by trade measures, Hoover adopted austerity policies, and on June 17, 1930, he signed the Hawley-Smoot Tariff Act, which doubled import duties on selected goods, causing other Western countries, already burdened by war debts and reparations dating back to the Versailles Treaty of 1919, to react by raising their own import tariffs. This provoked a major disruption of world trade.

WORLD ECONOMIC DISASTER

Internationally, a combination of high external debt, falling export prices, government fiscal difficulties, and internal banking crises spelled disaster for the world economy. Latin American countries, the most dependent on selling raw materials to U.S. industries, were the first to default on their debts. Bolivia defaulted in January 1931, Peru in March of the same year, Chile in July, and Brazil and Colombia in October. Europe was hit in 1931, when several banking crises translated into foreign exchange and fiscal crises. Hungary, Yugoslavia, and Greece were forced to default in 1932, followed by Austria and Germany in 1933.

Austria’s largest bank, Vienna’s Kreditanstalt, failed in May 1931, an event that sent shockwaves across Europe. Depositors rushed to withdraw their money from banks that were perceived to be in weak financial conditions and, in so doing, they compromised the stability of the entire banking systems of several countries. By mid-June, many German banks had collapsed. The

three largest Italian banks were rescued by the Fascist regime.

One of the main consequences of this chain reaction was that trust in sovereign loans was shattered. The social and political repercussions were catastrophic. Industrial unemployment in the United States averaged 37.6 percent in 1933, while Germany reached its highest rate at 43.8 percent, the United Kingdom at 22.1, Sweden at 23.7, Denmark at 28.8, and Belgium at 20.4 percent. In western Canada more than one-fifth of the labor force remained unemployed throughout the 1930s. Meanwhile, in the United States, the penal system became increasingly punitive. More executions were carried out than in any other decade in U.S. history, and there was also a sharp rise in imprisonment. Crime rates did not significantly rise, but the mass media popularized the idea that the social order was on the verge of collapse, generating a “crime wave” frenzy among the public.

SLUMP STABILIZED

By the early 1930s, the economic slump had destabilized the international political order, the erosion of liberal values was at an advanced stage, and welfarist cost-benefit analysis had gained appeal and credibility. Prompted by the need to cut down on public spending and by the moral panic generated by the Great Depression, several governments of the most advanced democratic countries lost confidence in the effectiveness of social reforms and undertook programs for the involuntary sterilization of thousands of citizens. It was argued that under exceptional circumstances, basic rights could be withheld and that in order to reduce the burden on the public purse, social services should only be granted to those whose social usefulness and biological capability were past doubt. In the WEIMAR REPUBLIC, the country hardest hit by the depression, this ideological shift produced a radicalization of medical views on racial hygiene and “euthanasia.”

Trade protectionism, nationalism, and the growing appeal of FASCISM were among the most tragic results of the depression. Earlier enthusiasm for internationalism, cosmopolitan law, and international institutions completely disappeared, replaced by the feeling that large-scale conflicts between powers were once again inevitable.

In the Far East during the 1920s, hundreds of villages in the Chinese hinterland had seen their consumption patterns change dramatically as a consequence of the marketing campaigns of transnational corporations, which employed hundreds of thousands of Chinese

peasants. However, the progressive internationalization and connectedness of the Chinese economy meant that it became increasingly vulnerable to trade fluctuations. When the depression took place, the entire structure of Chinese agricultural production was hit with unprecedented force: The process of pauperization of the countryside population seemed unstoppable. Two major consequences ensued, the strengthening of the Communist Party and a major diaspora of Chinese emigrants seeking a better future abroad.

In Japan, a country that was heavily dependent on foreign trade, unemployment soared, and labor disputes became more and more frequent and violent, as did anti-Japanese insurgent movements in Korea and Taiwan. Rural debt forced poor tenant farmers to sell their daughters as prostitutes, and thousands of small businesses were gradually absorbed by the *zaibatsu*, huge financial combines that pushed for more authoritarian and imperialistic policies.

In the United States, Hoover's seeming idleness was interpreted by millions of U.S. voters as callousness, and the presidential candidate for the Democrats, FRANKLIN D. ROOSEVELT, who evoked a more interventionist and caring state, won a landslide victory in 1932. His presidency will be forever identified with the NEW DEAL, a series of Keynesian relief, recovery, and reform measures. This program revitalized the economy by reinvigorating mass consumption through deficit spending and restored psychological confidence and people's trust in U.S. institutions and in the future by effectively reshaping their expectations. Ultimately, the U.S. economy was reinvigorated by these measures but also by the industrial demands brought about by the coming of WORLD WAR II.

Deficit spending for government-funded public works programs was successfully used to aid economic recovery in Social Democratic Sweden but also in NAZI Germany, Fascist Italy, and imperialist Japan. These countries were among the first to overcome the crisis. On the other hand, in Britain and France, two countries whose currencies were pegged to the gold standard, mostly for reasons of national pride, a genuine recovery only began when large-scale rearmament was undertaken as a reaction to the National Socialist threat. It is noteworthy that those countries that remained on the gold standard fared far worse than those that did not.

In the final analysis, the depression lasted for about a decade and was aggravated by a steadfast and self-defeating loyalty to the gold standard, as well as by increased wealth inequality and financial speculation. It was brought to an end not by the concerted effort

of fair-minded and judicious leaders committed to the cause of world prosperity and peace, but by a vast military buildup leading straight into World War II.

STEFANO FAIT

Greater East Asia Co-Prosperity Sphere

The formal concept of the Greater East Asia Co-Prosperity Sphere was announced at a press conference on August 1, 1940, by Japanese prime minister Matsuoaka Yosuke. It was to be an autarkic bloc of Japanese-led Asian nations free from Western influence or control. Greater East Asia included both East Asia and Southeast Asia.

Japan's imperialist leaders regarded its values and ideals as superior to those of the rest of the world, including its East Asian neighbors. They took upon themselves the right to replace what they regarded as the conservative and negative influences of China and India within its borders. Japan would "civilize" the rest of Asia. The method chosen to spread the "benefits" of Japanese civilization was the Greater East Asia Co-Prosperity Sphere.

The Meiji Restoration of 1868 brought Japan back into diplomatic contact with the West. Exposure brought awareness that the West far surpassed Japan technologically. Japanese leaders realized that to avoid the humiliation of being treated as a second-class country Japan would have to modernize on the Western model. To develop a "rich economy and strong army," Japan began modernizing its political, economic, and military systems. As early as the 1880s Japanese intellectual leaders such as Fukuzawa Yukichi encouraged the idea that Japan had a manifest destiny to be Asia's leader. Imperialist groups such as the BLACK DRAGON Society and

Kita Ikki became popular forums for those who wanted to expel the foreigners.

JAPANESE IMPERIALISM

Japan believed it had earned its right to be as imperialistic as Western nations. As a result, Japan began subjecting its neighbors to its rule. It expanded into Hokkaido, subdued the indigenous Ainu, established treaty ports with extraterritoriality in Korea, took the Ryukyus, and fought a successful war with China. Expansion was to gain prestige, materiel, and markets, similar to the goals of imperialism of the Western nations. Indicating how successfully it had mastered the Western ways of imperialism and modernism, Japan beat Russia soundly in the Russo-Japanese War in 1905.

But the Western nations still looked down on Japan, which it resented. At the PARIS PEACE CONFERENCE in 1919, the Western powers rejected a Japanese demand for insertion of a racial equality clause in the LEAGUE OF NATIONS covenant. As a result, Japan felt the need to prove that it was as superior. By 1932 Japan had subjected Taiwan, Korea, and Manchuria to its control. The local populations of the conquered lands were exploited for the benefit of Japan.

After nearly half a century of conquest and exploitation, Japan enunciated the concept of the Greater East-Asia Co-Prosperity Sphere as justification for its aggression. Anticipating a long struggle to develop the new Asia under Japan, its war planners established a multistage process to acquire resources of the region as follows: Raw materials and surplus food would come from the southern region, while Manchuria and North China would provide the resources for heavy industry. The remaining areas of the sphere and parts of Asia outside it would serve as Japan's market. Japan would oversee the whole by providing planning, tools, skills, and military control.

GEOGRAPHIC BOUNDARIES

The geographic boundaries of the sphere were fluid, varying over time and political circumstance. They encompassed the Micronesian mandates and often Melanesia and Polynesia and consistently included Hawaii. It had three concentric rings. The innermost one included Japan, Korea, and Manchuria. A second ring would include China and extend to Hawaii. A third ring would include whatever area was necessary to guarantee the total economic self-sufficiency of greater East Asia.

Areas of the sphere were divided into four categories. Some lands were to be annexed outright; they included

Guam, Mindanao, and Hawaii. Others, including Indochina and the Dutch East Indies, were to become protectorates. Some would be independent but would have unbreakable economic and defense bonds with Japan; these would be Hong Kong, Thailand, and the Philippines. The fourth group was independent states with economic ties to Japan; they would include Australia, New Zealand, and India.

Japan had economic rationale for enlarging the sphere. It felt heavy pressure to find sources to become economically self-sufficient due to a Western embargo on key resources. It needed the oil of the Dutch East Indies and the rubber of Indochina to support its industries and its military venture in China. It also justified its imperialism by a perceived need for guaranteed markets for its manufactured goods as well as space for colonization by its people.

The Japanese had to sell their exploitative venture to the exploited. Their slogan was "Asia for Asians," and their message was the imperative of freeing Asia from the Western yoke. They promised economic equity and growth. To provide cover for their conquest, they installed puppets, local people who had the power to declare independence from the Western powers but not the power to exercise independence from Japan.

On December 12, 1941, Japanese media announced that the just-begun war it had instigated by attacking the United States, Britain, and the Netherlands in Asia was the "Greater East Asia War," a crusade to rid greater East Asia of CHIANG KAI-SHEK, communism, and Westerners.

Defeat by the United States and the Allies in 1945 ended Japan's imperial dream and the Greater East Asia Co-Prosperity Sphere.

JOHN H. BARNHILL

great migrations (1900–1950)

During the period 1900 until 1950, there were vast migrations of people around the world—some peo-

ples having to flee as refugees and others voluntarily migrating in order to have a better standard of living, with numbers of indentured laborers going to work in other lands, often staying there. In addition, there were large mass pilgrimages, such as those of Muslims on the Haj to Mecca, Shi'i Muslims to Karbala on the commemoration of the Day of Ashura, and Hindus to the River Benares. Mention should also be made of the Russian Orthodox pilgrims, whole villages of whom made pilgrimages to Jerusalem in the early years of the century.

WORLD WAR I

The period before WORLD WAR I saw the advent of massive ocean liners that took many tourists, but also settlers, across the Atlantic from Europe to the United States. Among the 1,317 passengers on the R.M.S. *Titanic* were large numbers of Irish seeking a better life in the Americas. At the same time many British left the British Isles to seek a new life in Australia, Canada, New Zealand and South Africa—those going to Australia being guaranteed a job under an Australian government incentive scheme. Many of these stayed in Australia, with large numbers serving in the Australian Expeditionary Force in World War I. There were also French and Italians moving to ALGERIA, where they established farms and small businesses, and significant numbers of British moving to Argentina, many to work on the railways. Political troubles during this period saw some Russians, especially after 1906, moving permanently, including numbers to Australia to work on the railways, as well as many Russian Jews leaving Russia owing to the pogroms, with many settling in the United States. There were also some Armenians and Christians leaving the Ottoman Empire before and during the BALKAN WARS.

Indentured laborers from India moved to South Africa, to Ceylon for work on tea plantations, and to Malaya to work on the rubber plantations and tin mines, with others from Malaya and the Netherlands East Indies moving to the West Indies, including numbers from the latter for Suriname. Many Chinese went to work in Transvaal, South Africa, on the goldfields, and men from Barbados and other places in the West Indies went to work on the PANAMA CANAL.

During World War I there were many migrations, especially in the Balkans, with Serbia being invaded by Austria-Hungary, and many Serbs having to flee Belgrade and other cities. In addition, there were internal migrations in Bosnia and Albania, also with Bulgars

having to evacuate Thrace. Similarly, many Armenians were forced to migrate, and the end of the war resulted in war between Greece and the Turks, with Greeks in Turkey, such as in Smyrna, fleeing the Turks.

There were other conflicts that followed World War I including the Russian Civil War, which led to the flight of many White Russians and Ukrainians, including numbers moving to Harbin and Shanghai in China, as well as major smaller migrations associated with the formation of Czechoslovakia, Estonia, Finland, Latvia, Lithuania (especially in Memel/Klaipeda), and Poland. Some ethnic Hungarians from Vojvodina left for Hungary, Mennonites left for Paraguay and other places, and the Irish civil war saw many Protestants leaving the newly created Irish Free State and others fleeing the fighting and settling in Northern Ireland or on the British mainland. In Asia, large numbers of Britons continued to go to India, Malaya, China, and Hong Kong, with Chinese moving to Malaya for the tin mines and Indians continuing to go to Malaya for the rubber plantations. Large numbers of Koreans also left Japanese-occupied Korea for Manchuria.

In the United States, many people moved to northern cities like Detroit, New York, Cleveland, and Chicago with the establishment of large auto works and other industrial centers like Pittsburgh. Many of those who migrated north were African Americans looking to escape the repressive Jim Crow laws of the South. Additionally, with the halt on European immigration during World War I, African Americans were able to find work in northern factories. The scope of the migration was huge: The African-American population in Detroit swelled from 6,000 in 1910 to nearly 120,000 by the start of the GREAT DEPRESSION.

BETWEEN THE WARS

During the 1920s and 1930s, there was continued British migration to India, Malaya, China, Hong Kong, and Singapore, to Burma with the enlarging of Burma Oil, as well as others going to Africa, especially with the copper mines at Broken Hill, NORTHERN RHODESIA (modern-day Zambia), and elsewhere. Other Europeans also moved to Rhodesia and South Africa, with some Italians moving to Argentina. Lebanese and Syrian traders started to establish themselves in the Caribbean and in West Africa, with many Indian traders and professionals moving to seek greater opportunities in East Africa. The Italians encouraged many of their people to settle in Africa, with numbers moving to Libya, Italian Somaliland, Eritrea, and also, after 1936, to Abyssinia (ETHIOPIA). Most left

at the end of WORLD WAR II, although some, especially farmers, remained. In China, owing to people wanting to flee the warlords and also the subsequent civil wars, many Chinese left for Southeast Asia and elsewhere. The economic problems in Japan resulted in Japanese moving to Brazil, Peru, and Paraguay, with the harsher Japanese rule in Korea causing even more Koreans to flee to find work in Manchuria. The establishment of constitutional government in Siam (Thailand) saw the departure of some Thai royalists. The most noticeable forced migration was that of Jews leaving Germany for a new life in the United States and other places. This coincided with the depression and many countries introducing measures to stop migrants arriving, such as Australia starting to use the now discredited “dictation test” and other legal restraints. As a result, many of the Jews leaving Europe had to seek refuge in any country that would take them, with numbers moving to China and settling in the international city of Shanghai and other cities such as the northern Chinese city of Harbin, and others migrating to places like Bolivia, which welcomed migrants. Other migrations forced by the rise of ADOLF HITLER included numbers of Germans from eastern Europe moving to Germany, including many Germans from the Baltic States, and also others from Poland and Czechoslovakia.

There were also major moves during the 1920s and 1930s within countries. The great Mississippi flood of 1927 displaced hundreds of thousands of African-American farm workers, who migrated both north and west. The DUST BOWL in the United States sent large numbers from states on the Great Plains, Oklahoma, Kansas, Nebraska, and South Dakota primarily, to California as their farms failed. This came about because of the failure of large numbers of farms and represented a massive move. It is estimated that one out of four families was forced to leave the area. The subsequent establishment of the Tennessee Valley Authority and other projects of FRANKLIN D. ROOSEVELT’S NEW DEAL saw people moving to where work could be found. Prior to that, work on the Hoover Dam had also attracted many people to Boulder City, Nevada. Many people throughout Latin America also headed to the big cities with the emergence of massive cities such as Buenos Aires, Rio de Janeiro, São Paulo, and Mexico City. Other cities in Africa and Asia also proved to be magnets to people from the countryside—Tangier, Algiers, Bone, Johannesburg, Cape Town, Salisbury,

Nairobi, Mombasa, and Dar-es-Salaam are some examples.

WORLD WAR II

During World War II, the Germans, after overrunning much of Europe, caused the “migration” of many of the people in the occupied territories. Many fled the fighting and the massacres by the Germans, and there were also 10 million “foreign workers” who were forced to take up employment in Germany, the largest movement of forced laborers since the end of slavery. The Japanese victories in the Pacific also saw large-scale movement of people, with Japanese civilians and Korean laborers settling into newly captured territories, indentured laborers from the Netherlands East Indies moving to Singapore, and the “Comfort Women” being forced to work in Japanese-run brothels for their armed forces throughout their newly won lands. The fighting also saw large numbers of people fleeing places to avoid the war, including Britons to Africa, especially Kenya, and wealthy Chinese escaping from the Japanese for Ceylon (modern-day Sri Lanka) and Australia. In the United States, African-American workers moved north, following jobs as industrial production in the North, Northeast, and West increased due to the war effort.

Major migrations took place in the Balkans, especially Yugoslavia, during and after the war, and JOSEPH STALIN in the Soviet Union deported whole nationalities during the war, including the Volga Germans and later the Chechens, Ingush, Balkars, Kalmyks, and Crimean Tartars. Many were relocated in Kazakhstan in Soviet Central Asia. The end of the war saw many Japanese, German, and Italian civilians being forced to return, respectively, to Japan, Germany, and Italy. Famine in Annam (central Vietnam) in 1945 also saw a large movement of people from that region.

The period from 1945 until 1950 saw many people leaving their places of residence in Europe and displaced persons camps being established to accommodate refugees, war orphans, and other stateless people—a large number of whom migrated to Australia, some working on projects such as the Snowy Mountain Scheme, which later led to the adoption of multiculturalism in Australia and other places. The end of fighting saw many eastern Europeans, including large numbers of Poles, returning to their homelands, and others such as Free Poles and anticommunists from the Baltic states being forced to establish new lives throughout the West, especially in the United States, Canada, and Australia. The Volga Germans were able

Armenian refugees on a Black Sea beach in 1920. In the years during and between the two world wars, millions of people around the world moved, either voluntarily or because of difficult conditions, causing a massive shift in world population.

to leave the Soviet Union, and the Greek Civil War (1946–49) saw many Greeks and Macedonians leave the region. Most of the Jews who survived THE HOLOCAUST left Europe. Many of these settled in Israel, Australia, the United States, and South America, especially in Argentina. There were also the “Ratlines” for NAZI war criminals and others suspected of being Nazi war criminals fleeing to South America, often with travel documents furnished by the Vatican. Many others also found a new life in Latin America, with many Spaniards and Italians encouraged to settle in Argentina by Evita Perón, while at the same time many Britons left Argentina following Juan Perón’s nationalization of the formerly British-owned railways. Britons during this period also started settling in Rhodesia and South Africa, as well as the “£10 Poms,” with many assisted migrants moving to Australia. Fairbridge and other children’s settlement schemes also saw many British

boys and girls being settled in Rhodesia, Australia, and South Africa.

Similarly, the great wealth being generated in Rhodesia and South Africa saw large numbers of Africans move in search of work, although many migrant workers from Mozambique were expelled from South Africa following the introduction of apartheid. Mention should also be made of the expatriates who went to work in the emerging oil industry in the Middle East, in Abadan, Basra, and other places.

There were also movements in the Middle East, with many Palestinians leaving their lands in the wars that followed the establishment of Israel. The largest migration of this period was undoubtedly the movement that followed the partition of India in 1947, with the British and many Anglo-Indians leaving and more importantly large numbers of Hindus leaving Pakistan and many Muslims leaving India for Pakistan. Many

also moved within both India and Pakistan, especially the former, which saw Muslims from the countryside move to areas where they were in greater numbers. Within Pakistan there was also a major movement of people to Karachi, which became the capital of Pakistan. Large numbers of Indians also had to leave Burma before and after it became independent in 1948.

JUSTIN CORFIELD

H

Haganah

The Haganah (Hebrew for “defense”) was an underground Jewish paramilitary organization created during the BRITISH MANDATE IN PALESTINE in 1920. The Haganah began as a small voluntary body of men called Ha Shomer, formed to guard Jewish settlements, or kibbutzim. The Haganah consisted of soldiers who had fought for the British in WORLD WAR I as well as local farmers who were determined to defend their property from Arab attacks. After the Arab riots of 1920 and 1921, when Jews and their property fell under attack, the Jewish population realized that the British administrators would do nothing to guarantee their safety and that they had to learn to defend themselves.

At this time, the Haganah was poorly armed and not well coordinated. Its duties mainly consisted of guarding the borders between Arab and Jewish populations. In the Arab-Jewish clashes of 1929, the Haganah improved as a defense organization by securing their three main sectors in Jerusalem, Tel-Aviv, and Haifa as well as in other settlements of Palestine. The Haganah became a countrywide organization including men and women of all ages from both kibbutzim and the cities. Training programs as well as officers’ training began, while a steady stream of weapons started to arrive from Europe. The underground production of weapons also began. During the Arab revolt in 1936–39, the Haganah matured and developed from a militia into a military body to successfully defend

Jewish quarters and settlements from Arab attack. The British did not officially recognize the Haganah, but in the midst of the uprising they did help to organize several special forces groups trained in different tactics to help defend British interests.

In April 1937, a revisionist splinter group of the Haganah known as Irgun Zvai Leumi, or simply Irgun, began its own operations. Irgun’s policies differed from those of the Haganah in that Irgun targeted the British as well as Arab Palestinians. The British 1939 White Paper, restricting Jewish immigration into Palestine, added to Jewish anger toward the British. The White Paper was viewed by Zionist leaders as a betrayal of British intentions stated in the BALFOUR DECLARATION of 1917. As a result, the Haganah began helping to guard illegal immigrant ships as they arrived along the Palestinian coast. In the process, many illegal Jewish immigrants died due to drowning and overcrowding on the tiny ships and also ended up in NAZI camps after being turned away by the British upon arrival. In June 1940, a splinter group of the Irgun left the organization after a disagreement on the decision to suspend its armed campaign against the British during WORLD WAR II. These members established a more radical group called Lehi, also known as the Stern Gang, named after its new leader.

The Haganah itself was evolving into a national and relatively nonpartisan clandestine Jewish army. At this time it wished to distance itself from the Irgun’s and Lehi’s methods. The Haganah was officially an illegal organization, too, and yet at the same time the British

cooperated with it during the Arab revolt (1936–39) and yet again during World War II. In 1941, select members of the Haganah under British training became an elite command force, the Palmah, which was created to counter an anticipated Nazi takeover of VICHY-held Lebanon and Syria. At the conclusion of World War II, it became apparent that Britain would not change its policies in Palestine, nor would it allow a mass Jewish migration into the region. The Haganah then decided to join in on the actions of the Irgun and Lehi by attacking the British in commando raids and sabotage attacks.

The Haganah membership consisted of illegal immigrants as well as over 26,000 Palestinian Jews who had served with the British in World War II. Some of the strengths of the Haganah included its bravery, its initiative, and its ability to improvise during battle. It developed an impressive military intelligence system that allowed it to spy on the British and the Palestinian Arabs. It also became very skilled in covert operation tactics such as stealing weapons from the British and hiding the many immigrants it helped smuggle into the region. Training activities and the purchase of weapons abroad were stepped up after the 1947 UN partition plan, which called for the partition of Palestine between the Palestinian Arabs and the Jews.

Shortly after this, the Haganah, along with Irgun and Lehi, began concerted attacks on Palestinian Arabs in an attempt to force them out of the Jewish areas that were outlined in the UN plan. Some 300,000 Palestinian Arabs were displaced from their homes in five weeks, including an all-day attack on Deir Yasin village resulting in the deaths of over 250 men, women, and children. Days after the British mandate ended, Israel was declared an independent state, and in the 1948 ARAB-ISRAELI WAR, also known as the War of Independence, Israel held on to the territory that had been allotted to it in the partition plan and also extended its territory by approximately one-third. At the time of the Israeli declaration of independence, the new government, led by DAVID BEN-GURION, decided that the new state would not have any armed militias or partisan groups, and the Haganah dissolved into the Israeli Defense Force, or IDF.

BRIAN M. EICHSTADT

Haitian massacre (1937)

For seven bloody days during October 1937, the Dominican army massacred thousands of Haitian men, women, and children living in the northwestern frontier region of the Dominican Republic. Thousands more fled for their lives across the border into Haiti. Many of the victims were Dominican-born and thus were accorded Dominican citizenship, as guaranteed by the country's constitution. Some came from families that had lived in the Dominican Republic for generations.

The country's president-dictator, RAFAEL TRUJILLO, ordered this wave of genocidal violence and justified his actions as an act of national self-preservation, declaring that an invasion of Haitians threatened the Dominican Republic. Trujillo, reflecting the view of many other Dominicans, defined Dominican national identity according to its difference from Haitians. Dominicans, especially the elite, identified themselves as a white and Hispanic nation, in stark opposition to the black and African Haiti.

The borderlands region dividing Haiti and the Dominican Republic represented a porous boundary marked by a transnational, bilingual, and bicultural community of Haitians and Dominicans, some of whom intermarried. Unlike Haitians living in the eastern regions of the Dominican Republic, the Haitians in the borderlands were mostly independent small farmers. Many Haitians had immigrated to the Dominican Republic in the second half of the 19th century in search of land in the sparsely populated western region of the country. Their descendants, although ethnically and culturally Haitian, were born on Dominican soil and considered it their home. The residents of this region did not regard the border between the two countries as a concrete boundary and frequently traveled back and forth several times a day.

The porous and transnational Haiti-Dominican border troubled Trujillo and the Dominican elite, and soon after his rise to power he worked to formalize the border. He feared that the open border provided an easy passageway for exiled revolutionaries to launch an attack on his regime. Trujillo signed a boundary treaty with Haitian president Sténio Vincent in March 1936. Trujillo and his elite Dominican officials actively engaged in a program of nation building and national identity dedicated to a strict geographic and cultural national boundary between Haiti and the Dominican Republic.

When the massacre began on October 2, both Haitians and Dominicans living in the borderland region

feared for their lives, having been caught completely unaware by the killing spree. No policies or actions by the Trujillo regime prior to the massacre had foreshadowed such an event. Some Dominicans risked their own lives to help their Haitian neighbors, while others aided the army in identifying Haitians. The fluidity of culture and language in this borderlands region made it difficult to distinguish Haitian from Dominican. Soldiers employed crude methods based on racially constructed stereotypes about Haitians to determine who lived and died, such as determining a person's ethnicity based on their pronunciation of the Spanish "r." The soldiers avoided the use of firearms, preferring machetes, clubs, and bayonets, suggesting to many scholars that Trujillo hoped to characterize the killings as a popular uprising, not government-sponsored genocide.

The massacre forever changed the borderlands region by imposing a strict dichotomy between Haitian and Dominican. Word of the government-sponsored massacre spread quickly as journalists and foreigners reported the atrocities. Trujillo set about creating an atmosphere of anti-Haitian sentiment to justify his military actions. President Sténio Vincent of Haiti feared a Dominican military invasion and called on the United States, Mexico, and Cuba to act as mediators between the two countries. Trujillo refused to submit to an inquiry, claiming that the incident was not a matter of international concern. The dictator subsequently offered Haiti \$750,000 to settle the matter, and President Vincent readily accepted the money.

KATHLEEN LEGG

Hara Kei

(1856–1921) *Japanese politician*

Hara Kei (Hara Takashi) was a leading member of the Seiyukai political party in Japan in the early 20th century and the prime minister of Japan from 1918 to 1921.

Hara was born into a family of samurai background in northern Japan in 1856. After working in fields as diverse as diplomacy and journalism, Hara joined the

Seiyukai, a political party founded by Ito Hirobumi in 1900, and quickly became one of its leading members. Although political parties were the leading force in the lower house of Japan's parliamentary body, the Diet, the key posts in the Japanese cabinet, including the position of prime minister, remained dominated at the turn of the century not by party officials but rather by elder statesmen. Hara became one of the foremost champions of allying the Seiyukai with the cabinet.

In 1904, Prime Minister Katsura Taro needed Seiyukai support in the Diet for budget increases in order to fight the Russo-Japanese War. Hara and Katsura made a bargain whereby Hara delivered the necessary assistance in exchange for the future appointment of Seiyukai's president, Saionji Kinmochi, as prime minister. Saionji eventually served twice as prime minister, from 1906 to 1908 and then from 1911 to 1912. As home minister in Saionji's first cabinet, Hara worked to strengthen the party by recruiting members of the civil bureaucracy into the organization. In addition, he built support for the party beyond the ranks of officialdom by providing funds for local economic development. By increasing spending on local schools, roads, harbors, and transportation, he gained a following for the Seiyukai among the electorate.

Hara became president of the Seiyukai in 1914 and was selected to serve as prime minister of Japan in the aftermath of the well-known 1918 rice riots, marking the first time that a career party politician held that leading office in the Japanese government. Although Japan had undergone an economic boom as a result of WORLD WAR I, those on the lower rungs of the social hierarchy struggled with inflation and falling wages. Hara was in many ways the only leader with significant support in both the Diet's party-dominated lower house and its upper house, the House of Peers, still largely the preserve of nonparty elites, despite the fact that some upper-house delegates had joined political parties. His connections with nonparty elites proved vital to his accession to prime minister.

Upon becoming prime minister, Hara did not embark on a program of sweeping, wholesale changes. The tax qualification for voting was lowered in a move that doubled the size of the electorate, but most of the newly enfranchised were small landholders largely favorable to the Seiyukai. In a more overtly partisan manner, Hara's government remapped electoral boundaries to benefit the Seiyukai, and his appointments within the bureaucracy were often made with blatantly partisan motives. His government likewise supported defense spending, and Hara made significant efforts to improve relations with the military leadership.

Responding to protests against Japanese imperial rule, Hara attempted to replace the military administrations of Japan's colonial holdings with civilian officials, though the military successfully resisted those efforts in Korea. He also called for assimilation of colonial populations, representation for colonies in the Diet, and the granting of greater civil liberties to colonials.

Hara's career came to a violent conclusion when he was assassinated by a right-wing fanatic in Tokyo Station in 1921, but Hara Kei had played an immensely important role in transforming the Seiyukai into a leading force in Japanese politics in the early 20th century.

ADAM C. STANLEY

Harlem Renaissance

The *Harlem Renaissance* is the name that was attached to the African-American literary, artistic, and intellectual movement that was centered in Harlem, a neighborhood in Upper Manhattan, New York. Many African Americans had migrated from the South to northern cities in the years after 1916 in what is known as the Great Migration, and Harlem, which had been developed as a residential area for whites, became the cultural capital of the African-American United States during the 1920s. The movement's participants knew it as "The New Negro Movement," after the title of art historian Alain Locke's book *The New Negro* (1925), in which Locke expressed the hope that the black artist would become "a collaborator and participant in American civilization."

Like any cultural movement, the Harlem Renaissance had antecedents, as the cultural life of African Americans in New York City was already well developed. Harlem, acknowledged as the black capital of the United States, was home to advocacy groups such as MARCUS GARVEY's Universal Negro Improvement Association, the NAACP (NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE), and the National Urban League, and most nationally known African Americans, including Garvey, W. E. B. DuBois, and A. Philip Randolph, lived there. The

intellectual center of Harlem was the local branch of the New York Public Library, which had the most extensive collection of material concerning African Americans in existence.

Scholars of the movement have placed its onset in 1910, when the NAACP began to publish *Crisis*, edited by W. E. B. DuBois. Others argue that it began in 1919, when black soldiers returned from WORLD WAR I and U.S. cities experienced an unprecedented amount of racial violence, or in the early 1920s, which saw the publication of James Weldon Johnson's *Book of American Negro Poetry* (1922), Jean Toomer's *Cane* (1923), and the launching of the newspaper *Opportunity* (1923), edited by sociologist Charles S. Johnson for the National Urban League. Both *Crisis* and *Opportunity* published fiction and poetry and sponsored contests to encourage African-American writers.

The Harlem Renaissance is remembered as a chiefly literary movement. Poetry constituted its first literary output, but prose forms, notably fiction, replaced poetry as the dominant literary form after 1924. Although the movement included visual arts, it excluded jazz, which, although it was performed in Harlem, had other antecedents (it should be noted that the 1920s dance craze the Charleston was first performed in Harlem). As artists and writers began to speak in terms of a "New Negro," they developed a definition of African Americans as a militant, self-assertive, and urbane group of people capable of speaking for themselves. Some writers, like Langston Hughes, were at the beginning of long and distinguished careers, and some, like Jean Toomer, never wrote anything else of significance. The literary movement did not have a consistent recognizable style, as it encompassed a debate over tradition and the nature of African-American culture. Wallace Thurman, Claude McKay, Arthur Huff Fauset, and Zora Neale Hurston, among others, stressed the distinctiveness and vitality of black ethnicity, particularly among working-class African Americans, while James Weldon Johnson, Jessie Fauset, Nella Larsen, and Alain Locke were more likely to write about middle-class African-American life as a means of ensuring that it would be seen as an integral part of U.S. culture as a whole. Langston Hughes and Countee Cullen found themselves agreeing with both sides of this debate.

Hughes (1902–67) and Hurston (1891[?]-1960) are the best-known writers of the movement. Hughes, born James Langston Hughes in Joplin, Missouri, worked at a variety of jobs, traveled in the Americas and Europe, and published his first volume of poetry, *The Weary Blues*, in 1926. Seen as the prototypical

New Negro, Hughes used the rhythms and language of jazz and blues in his poems, and his essay "The Negro Artist and the Racial Mountain" (1926) stands with *The New Negro* as a principal statement of the movement's ideology. Hurston, who grew up in the all-black hamlet of Eatonville, Florida, graduated from Barnard College, where she studied with the anthropologist Franz Boas. Hurston's literary output interpreted African-American folktales she had gathered in the rural South in collections and novels published during the 1930s.

Visual artists connected with the Harlem Renaissance are less renowned. Aaron Douglas is best known for his illustrations in *The New Negro* and in James Weldon Johnson's *God's Trombones: Seven Negro Sermons in Verse*. Palmer Hayden, who was trained in both New York and Paris, is best known for his paintings of African subjects. Other artists associated with the movement were Malvin G. Johnson and William H. Johnson. The best known sculptor is Augusta Savage, and photographers James Van Der Zee and Roy DeCarava are also associated with the movement.

The Harlem Renaissance contributed to placing black art and literature at the center of American life, but the incorporation was not entirely the work of African Americans. For African Americans, the movement was a response to calls from critics like Randolph Bourne and Van Wyck Brooks for a U.S. culture independent of European tradition. For white literary America, Harlem was exotic. When Harlem was embraced by white critics like H. L. Mencken and Carl Van Vechten, it was in part as a result of their own iconoclasm. Van Vechten's book *Nigger Heaven* (1926) "promoted" Harlem to white Americans (and caused anger and resentment among many African Americans), but Van Vechten also served as a patron to Langston Hughes and introduced other black writers to patrons such as Mrs. R. Osgood (Charlotte) Mason, Albert Barnes, Louise Bryant, the William E. Harmon Foundation, the Julius Rosenwald Fund, and the General Education Fund. Mencken published the work of African-American artists in the *American Mercury*.

As the GREAT DEPRESSION set in, resources available to African Americans in Harlem dwindled, making cultural activities even harder to maintain. The end of the Harlem Renaissance came in 1935, when a racially based riot convulsed Harlem. There has been a good deal of debate concerning what was seen as the failure of African American artists and writers to create and maintain independent cultural institutions, but it is generally agreed that the movement

provided subsequent African-American writers and artists with a cultural base upon which later generations could build.

DAVID MILLER PARKER

Hashemite dynasty in Iraq

The SAN REMO TREATY (1920) following WORLD WAR I granted Britain control over Iraq as a mandate. Following the bloody IRAQI REBELLION against the mandate, the British decided at the 1921 CAIRO CONFERENCE, attended by Sir Percy Cox as Iraqi high commissioner among others, to provide a semblance of independence by establishing an Iraqi monarchy that would be closely tied to Britain.

A member of the respected Hashemite family, Faysal (also Feisal), Sherif Husayn's son, was approached about becoming king of Iraq. Faysal was a favorite of the British from their relationship with him during the Arab revolt, and the French had recently militarily ousted him as king of Syria. Faysal reluctantly agreed to accept the position after a plebiscite had been held to confirm his support within Iraq. The plebiscite was held under British supervision, and Faysal was elected king. Faysal was crowned in the summer of 1921 with Cox remaining as the British high commissioner. The 1922 treaty between Iraq and Britain allowed for direct British administration over defense and domestic security; British advisers also retained veto power in other ministries. Legally, Faysal ruled under the 1925 constitution, which was written by the British. The constitution provided for a two-house parliament and a cabinet with wide executive powers. Elections were effectively stage-managed by the cabinet, and martial law was periodically implemented to prevent disorder.

The new government faced major domestic and regional problems. Iraq was a complex society of ethnic and religious groups. Kurds, who were Sunni Muslims, dominated the north and had nationalist ambitions for an independent state of their own. Sunni Muslim Arabs lived mostly in the center around Baghdad, and the

population in the south and the main city of Basra was mostly Shi'i Arab. There were also small populations of Assyrian Christians (who were persecuted in the 1930s), other Christians scattered around the nation, and Jews, who resided mostly in Baghdad. The borders of the new nation were unclear, and it had difficult relations with neighboring Iran. The borders with Iran were not settled until 1937, when Iraq was given sovereignty over the Shatt al-'Arab in the south and Iran gained the port of Abadan on the Persian Gulf. Along its southern border Iraq claimed Kuwait, an impoverished territory but one that had a long coastline along the Persian Gulf, but the claims were rejected by Cox at the 'Uqayr conference of 1922, leaving Iraq practically landlocked. There were also disputes with Turkey over the northern region of Mosul, but the British intervened in Iraq's favor. The territory, with its oil reserves, remained under Iraqi—and by extension British—control. In the north the British also periodically put down secessionist movements among the Kurds and again used poison gas as they had done during the 1920 rebellion.

The preponderance of Sunnis in key government and economic positions and the underrepresentation of the large Shi'i population also posed problems. Throughout the interwar years Nuri Said, who was notably pro-British, served repeatedly as prime minister. Economically, the revenues from petroleum helped create an urban middle class and finance some irrigation projects. A pipeline from Iraq to the port of Haifa on the Mediterranean was completed in the 1930s. But the concessions between the petroleum companies and the government favored the companies, and most Iraqis felt that the country did not receive appropriate compensation for its major resource.

Mounting nationalist and anti-British sentiments in the army posed problems for both the monarchy and the British. The nationwide curriculum instituted by Sati al-Husri, a pan-Arabist, stressed Arab history and culture and encouraged the development of national loyalties. This further alienated many Kurds and Shi'i, who felt, correctly, that they were underrepresented.

The Anglo-Egyptian Treaty of 1930 provided for the future full independence of Iraq but also enforced a close alliance with Britain. Under the treaty, which was the model for the 1936 treaty between Britain and Egypt, Britain retained the veto over Iraqi foreign policy and the right to station troops on Iraqi territory. With independence in 1932, Iraq was admitted into the LEAGUE OF NATIONS.

Opening of the Iraq parliament in 1942: The regent salutes with the prime minister, General Nuri as-Said, on his left.

Faysal died in 1933 and was succeeded by his son Ghazi, who was far more nationalistic and anti-British than his father had been. He increased the size of the army, which played an increasingly important role in Iraqi politics. A number of nationalist clubs and political parties were formed in the 1930s and 1940s, particularly the People's Party and the National Party, formed in the 1920s, and the Iraqi Communist Party (ICP), established in 1934.

Like many other Arab nationalists, Ghazi viewed relations with NAZI Germany as a possible way to decrease British control over the region. As war loomed, Britain and Nuri Said became increasingly worried about the monarch's loyalty. Consequently, when Ghazi died in an automobile crash in 1939, many Iraqis suspected foul play by the British. Because Ghazi's son was too young to rule, his openly pro-British uncle Abdul-Ilah was made regent.

Rashid Ali al-Qaylani, a judge and former cabinet member, became prime minister in the early 1940s. Al-Qaylani and key army officers, known as the Golden Square, looked to the Axis powers to counter the British in Iraq. After al-Qaylani was removed from office in a vote of no confidence, he was returned to power in a military coup d'état in the spring of 1941. The regent fled

to Jordan, which was ruled by Hashemite amir Abdullah, a close relative. To protect their interests the British promptly landed troops from India at Basra. The Iraqis surrounded the key Habbaniyya military base near Baghdad, and the British retaliated by bombing the Iraqi troops. The Iraqis held out, but with reinforcements from the Arab Legion (Jordanian forces commanded by the British), the British retook the base and ousted al-Qaylani and the Iraqi generals who had supported the coup. They were subsequently imprisoned, executed, or sent into exile. The British held Iraq, with Nuri Said often acting as prime minister, for the duration of WORLD WAR II.

After the war Iraq joined the Arab League and participated along with other Arab armies in the 1948 ARAB-ISRAELI WAR. Their loss in that war shocked Iraqis and resulted in mass uprisings, and Jews and Jewish-owned businesses were also attacked. As pan-Arab nationalism grew in the postwar era, the power and influence of the pro-British monarchy and its supporters eroded. Nuri ignored or underestimated demands for reforms and mounting opposition, and the monarchy was overthrown in a bloody revolution led by the Iraqi army in 1958.

JANICE J. TERRY

Hashemite monarchy in Jordan (1914-1953)

Like many other postcolonial states in the Middle East, the Hashemite monarchy of Jordan has largely artificial boundaries drawn by European imperial powers. The European powers, particularly Britain and France, divided the territories of much of the Middle East between themselves as the previous empire of the Ottoman Turks collapsed in the wake of WORLD WAR I. As part of the SYKES-PICOT wartime agreement between Britain and France, the territory that is now Jordan came under British tutelage. In 1921, having secured the LEAGUE OF NATIONS' official mandate for the territories of Palestine, Transjordan, and Iraq, the British government created the Emirate of Transjordan through an agreement with

its new ruler, Emir Abdullah (later King Abdullah I) of the Hashemite family.

The Hashemites had fought with the British in the "Great Arab Revolt" against the Ottoman Turkish Empire during World War I. But shortly after the war ended, the Hashemites were defeated and expelled from Arabia by their rival ABD AL-AZIZ IBN SAUD, who ultimately carved out the modern Kingdom of Saudi Arabia. In the postwar mandate period, the British government decided to install two brothers of the House of Hashem, Abdullah and Faysal, in their mandates of Jordan and Iraq, respectively. This move was in large part intended as a reward for Hashemite support in the Arab revolt against the Ottoman Empire during World War I.

Since its beginnings, Jordan has developed into a modern state that has long defied predictions of its imminent demise. What began as the British mandate of Transjordan in 1921 evolved into the Emirate of Transjordan at the time of independence from Britain in 1946, and finally into its current form as the Hashemite kingdom of Jordan beginning in 1949.

The Hashemite monarchy pointedly emphasized its Islamic lineage, especially the direct Hashemite family line descending from the prophet Muhammad. Beyond this emphasis on a religious and cultural source of legitimacy, the monarchy also established itself immediately as the premier and centralized political power in the emerging Jordanian state. It would come to dominate the economy through reliance on a large public sector and also predicate its rule on co-option of key constituencies, including ethnic and religious minorities, while also relying on the armed forces that benefited from extensive royal patronage.

Given its location, Jordan was from the outset deeply involved in the various dimensions of the Arab-Israeli conflicts. By the time of Jordanian independence in 1946, tensions were peaking in neighboring Palestine between Jews and Arabs over the issue of Zionist versus Palestinian aspirations to full statehood. When the United Nations voted to partition Palestine between the two peoples in 1947 and Israel declared its independence the following year, Jordan's Arab Legion was one of the Arab armies that attacked the new state, joining fighting that had already begun between the two communities. In what remains one of the most controversial moves in the history of modern Middle Eastern politics, King Abdullah formally annexed the West Bank to his Jordanian kingdom in 1950. The debate ever since has turned on whether Abdullah's move preserved Arab

territory from complete Israeli control or whether he foreclosed the possibility of a smaller Palestinian state by annexing the territory.

Abdullah paid for that decision with his life, when he was gunned down in East Jerusalem by a Palestinian nationalist in 1951. After a brief transitional period during which his son, Talal, was judged mentally unfit to rule, Abdullah's grandson Hussein became king in 1953.

CURTIS R. RYAN

Hatta, Muhammad

(1902–1980) *Indonesian vice president*

The first vice president of Indonesia, Muhammad Hatta was born on August 12, 1902, in Bukittinggi, West Sumatra. He had his early education in the Dutch schools of Padang and Batavia. He was in the Netherlands from 1922 to 1932, where he studied in Rotterdam and involved himself in political activities. He along with Minangkabau Sultan Sjahrir (1909–66) joined the Indische Vereeniging (Indies' Student Society) and became instrumental in changing the social club into a politically important association, the Perhimpunan Indonesia (Indonesian Union), in 1922. Hatta established Perhimpunan Mahasiswa Indonesia (Indonesian Students Association), becoming its chairperson in 1926. He joined the League against Imperialism and attended the Brussels meeting in February 1927. After returning to the Netherlands, he was imprisoned by the Dutch government but was released in 1928.

Hatta came back to Indonesia in 1932 and found the Partai Nasional Indonesia (PNI, NATIONALIST PARTY OF INDONESIA) faction-ridden after the arrest of its leader, Sukarno. Hatta believed in building up cadres who would be active in nationalist agendas. The Pendidikan Nasional Indonesia (Indonesian National Education Club) was formed from a splinter group of the PNI. Sukarno tried to bring different nationalist groups together after his release into a mass organization called Partai Indonesia (Partindo, Indonesian Party). It was short lived, as the leaders of the Indonesian nationalist movement were put behind bars by the reactionary

governor-general of the Dutch government, De Jonge (1931–36). Sukarno was exiled in 1933, and the following year Hatta and Sjahrir were assigned to penal camps. The nationalist struggle was effectively suppressed by the policy of repression.

The banishment of the leaders was over after the Japanese entered the country in March 1942. The Japanese desire to use the leaders in their war effort opened new avenues for the leaders. On August 17, 1945, two days after Japan surrendered to the Allies, Sukarno and Hatta proclaimed independence and established the Republic of Indonesia. Sukarno was elected president, and Hatta became the vice president. The Dutch returned, and the republic was attacked in 1947 and 1948. The archipelago was divided between republican-held territory and that being reoccupied by the Dutch. The republic's capital was captured, and most of its top leaders, including Sukarno and Hatta, were arrested and exiled. The world reaction was sharp, and the UN Security Council ordered an immediate cease-fire. Hatta presided over the delegation sent to The Hague for negotiating with the Dutch. The Hague Agreement of December 27, 1949, transferred sovereignty to the Indonesian federal government. On August 17, 1950, the Unitary State of the Republic of Indonesia was restored. Hatta was again premier in 1949 and 1950. He was vice president until 1956. He devoted the rest of his life to the development of cooperatives. The humble and much respected leader died on March 14, 1980, in Jakarta.

PATIT PABAN MISHRA

Haya de la Torre, Víctor Raúl

(1895–1979) *Peruvian president*

A prominent Peruvian political activist and the man who won the 1931 and 1962 Peruvian presidential elections, Haya de la Torre was the founder of the Aprista Party, which has been in the forefront of radical dissent in Peru since 1924. He wanted greater rights—political and economic—for the indigenous Indians of

Latin America and an end to the power of the Spanish oligarchies that controlled many of the countries, as well as an end to the domination of the economies of Latin American countries by foreign businesses.

Víctor Raúl Haya de la Torre was born on February 22, 1895, at Trujillo, in the north of Peru, the son of wealthy parents descended from conquistadores. As a teenager, Haya de la Torre learned to read and speak French and German and became interested in Nietzsche. He then proceeded to the University of Trujillo, where he studied literature and became a close friend of the Peruvian poet César Vallejo. He studied at the National University of San Marcos in Lima. While at San Marcos he was involved in the University Reform Movement, which had spread from Argentina, where he had spent some time studying. This was aimed at expanding the university to allow poorer people to attend.

Haya de la Torre was instrumental in the founding of the Universidades Populares Gonzalez Prada, which were night schools for workers.

Haya de la Torre was heavily influenced by three things: a visit to Cuzco, where he saw many Indians being badly treated; his student days at the University of Córdoba in Argentina; and the MEXICAN REVOLUTION. He was a student leader and in 1923 led a protest against the dedication of Peru to the Sacred Heart of Jesus. The idea had been suggested by the president, Augusto B. Leguía, and was unpopular with many people. The protests rocked Peru for three days, after which the archbishop of Lima suggested that Leguía withdraw his idea, which he did. However, Haya de la Torre had become nationally famous overnight, and he was arrested and then deported.

Haya de la Torre went into exile in Mexico City, where on May 7, 1924, he founded the Alianza Popular Revolucionaria Americana (APRA Popular Revolutionary American Party). It advocated Latin American unity, support for the indigenous Indian population, and the nationalization of foreign-owned businesses, especially those owned by U.S., British, and European interests, a doctrine now widely known as Aprismo. When Leguía was overthrown in 1930, Haya de la Torre was in Berlin. His supporters nominated him as a candidate for the forthcoming presidential elections, and when he returned to Lima he was greeted by the biggest crowd that had gathered in Peru up to that point. He won the elections, defeating Colonel Luis M. Sánchez Cerro, who had the support of the oligarchy, the church, and the army. Fraud saw Sánchez Cerro declared the winner, and in February 1932 Haya de la

Torre was arrested and thrown into jail without trial. He was held in prison for a total of 14 months. Sánchez Cerro was assassinated on April 30, 1933, and Haya de la Torre was released from prison.

From 1936 until 1945 Haya de la Torre was essentially a semifugitive, being sought by the police for various reasons. However, he was available to meet foreign journalists, and U.S. writer John Gunther had no trouble organizing three interviews with him. In 1945 APRA changed its name to the Partido del Pueblo (“People’s Party”) and declared its support for José Luis Bustamante y Rivero in the presidential elections. Bustamante won the elections with Haya de la Torre as the real power broker. It was, however, not an alliance that lasted for long. In 1947 Bustamante banned the Partido del Pueblo, which had been riven by disputes from members in Callao, and in October 1948 he imposed martial law to rule by decree. On October 28, 1948, Bustamante was overthrown in a political coup d’état, and Haya de la Torre was forced to take refuge in the Colombian embassy, where he remained until 1954.

In June 1962 another presidential election was held, and Haya de la Torre narrowly defeated Fernando Belaúnde Terry. Belaúnde claimed that the election victory had been achieved by fraud, and the military under President Pérez Godoy seized power and annulled the entire election. New elections were held in June 1963, and Belaúnde won. However, in October 1968 Belaúnde was himself overthrown. All political parties were banned until 1978, when a new constituent assembly was elected to write a new constitution. Haya de la Torre was the president of that assembly and signed the new constitution from his bed, unable to leave it owing to illness. He was then adopted as the APRA’s candidate for the 1980 presidential elections but died on August 2, 1979, in Lima.

JUSTIN CORFIELD

Hirohito

(1901–1989) *emperor of Japan*

Emperor Hirohito of Japan lived in an age of contradictions, caught between ancient traditions and modern

realities. The 124th in the line of the longest dynasty the world has known, Hirohito saw the Japanese monarchy become purely ceremonial. Japan was modernized during his reign when he died after 63 years on the throne, the longest reign of modern monarchs. The Japanese emperors were said to be direct descendants of the sun goddess who founded Japan more than 2,500 years ago. After WORLD WAR II at U.S. demand, he issued a renunciation of any claims to his divinity after ruling over his country during one of its most militaristic periods.

Born on April 29, 1901, Hirohito was the first son of Crown Prince Yoshito, son of Emperor Mutsuhito (better known as the Meiji emperor). As was the custom with the royal household, while still a tiny infant Hirohito was taken from his mother to be reared by foster parents. Count Kawamura, the foster father, was already 70 years old when he took the responsibility of rearing the royal infant, and he died when the child was three years old. At that time, Hirohito was returned to the residence of his parents, Akasara Palace. Even here, however, Hirohito was isolated from other children and from his parents. He rarely saw his unemotional father and visited his mother once a week.

In 1908 the young Hirohito was sent to Peers School, founded especially for males of noble birth, where he became interested in natural history and science. This interest developed into a passion for marine biology, a field in which Hirohito became a worldwide authority and on which he published eight books.

Meiji died in 1912 and was succeeded by Hirohito's father, the Taisho emperor; Hirohito, the heir apparent, became engaged to the daughter of a nobleman, Princess Nagako, in 1918, who became his only wife, bearing him five daughters and two sons.

In 1921 Hirohito, along with an enormous retinue, made an unprecedented visit to Europe. No other Japanese crown prince had ever visited another country. He was greatly impressed with what seemed to him the informality and freedom of the rulers, especially the British royal family. Later that year Hirohito was named regent for his father, who was declining mentally. In 1923 he survived an attempted assassination by a young radical.

At the age of 25 Hirohito became emperor of Japan. He chose the name Showa (Enlightened Peace) for his reign. Hirohito's grandfather had helped bring Japan into the modern world when he had dismantled the powers of the feudal shogun. When he came to the throne, Japan, like much of the world in the 1920s, was in the midst of growth and optimism. However, in the midst of the GREAT DEPRESSION OF

the 1930s, Japan became more fascist and militaristic, with many assassinations and domestic unrest, culminating in an uprising in January 1936 during which Tokyo was under the direct command of military divisions. Hirohito acted swiftly to control the insurrection and punish the leaders, but Japan's military continued to gain strength.

Japan invaded China in 1937 without Hirohito's direct approval but also without his intervention. The emperor did not like the policies of NAZI Germany and Fascist Italy, but he did not openly oppose Japan's alliance with them; he signed the declaration of war against the United States and the Allies in 1941. Hirohito's participation in events that led to and during World War II remain controversial due to the destruction of many documents immediately after Japan's surrender. Evidence shows that while he was not instrumental in Japan's aggressions beginning in the 1930s, he was fully aware of Japan's wartime goals and methods and participated in key meetings and decision making. In 1945 Hirohito made his famous radio address asking his people to surrender. It was the first time that the public had ever heard his voice.

When the United States began its occupation of Japan, Hirohito accepted full responsibility for the war and offered to abdicate his throne. However, the Allies felt Japan's stability would be better preserved if the emperor remained. As the figurehead ruler under the constitution promulgated in 1947, Hirohito had the luxury of devoting the remainder of his life to his scientific pursuits. He tried to establish a more open relationship with the people, and although he was a popular figure, he was awkward when meeting them.

Emperor Hirohito made two more foreign visits in his later years. In 1972 he traveled to Europe, and in 1975 he visited the United States. He died on January 7, 1989, and was succeeded by his eldest son, Crown Prince Akihito.

Hiroshima and Nagasaki

By the summer of 1945, WORLD WAR II in the Pacific was virtually over. Since December 1941, the United States had pushed Japanese forces back until only the homeland itself remained in Japanese control. The United States prepared to launch an invasion of Japan.

While preparing for the invasion, on July 26 U.S. president HARRY S. TRUMAN and British prime minister Clement Attlee, with Nationalist Chinese president CHIANG KAI-SHEK concurring, issued the Potsdam Declaration calling for the unconditional surrender of Japan and listing additional peace terms. At this point Truman knew that the first atomic bomb test at Alamogordo, New Mexico, had been successful 10 days earlier.

The test was the culmination of a three-year highly secret project. The first man-made atomic reactor was built in a squash court at the University of Chicago in 1942. More sophisticated reactors were built at Hanford, where the plutonium was produced. The first test of the plutonium bomb was at Alamogordo on July 16, 1945.

Although the Potsdam Declaration made it clear to the Japanese that they could anticipate severe consequences if they chose to continue the war, Japan rejected the ultimatum. Truman ordered the use of the bomb. His secretary of war, Henry L. Stimson, regarded the use of the bomb as less abhorrent than sacrificing U.S. lives. Truman's military advisers had indicated that the invasion of Japan could result in the loss of half a million U.S. soldiers plus millions of Japanese military and civilian lives. Truman wanted the war over, and he wanted the maximum possible blow in order to end the war without the invasion. The U.S. military selected Hiroshima and Kokura because the two were among the Japanese cities that had thus far escaped the destruction caused by U.S. and Allied bombs.

On August 6, 1945, at 9:15 A.M. Tokyo time, the B-29 bomber *Enola Gay*, piloted by Paul W. Tibbets, dropped a uranium atomic bomb, "Little Boy," on Hiroshima. In minutes half of Japan's seventh-largest city was gone, and thousands of people were dead. Between 60,000 and 70,000 people were dead or missing, and 140,000 were injured.

On August 6 another bomb was prepared on Tinian Island. On August 9 the B-29 *Bock's Car* prepared to bomb Kokura. Smoke over the target caused pilot Sweeney to seek his alternate target, Nagasaki.

The industrial city of Nagasaki fell to the bomb "Fat Man" at 11:02 A.M. Exploded at 1,800 feet to

The devastation caused by the atomic bombs on Hiroshima and Nagasaki quickly led to the end of World War II in the Pacific.

maximize the impact of the blast, Fat Man leveled buildings, destroyed electrical systems, and generated fires. The bomb destroyed 39 percent of the city, killed 42,000, and injured 40,000.

The two bombings killed 210,000 Japanese—140,000 in Hiroshima and 70,000 in Nagasaki, two-thirds of them women, children, and elderly. Deaths to military and foreign workers are unknown. What is known is that the explosion rather than the radiation was the primary cause of death. Some 24 Australian prisoners of war about 1.5 kilometers from Nagasaki ground zero survived, many to old age.

The bombs produced fires, blast pressure, and extremely high radiation levels. Both were detonated about 600 meters aboveground, so the belowground contamination was minimal from the bombs. Subsequent rainfall deposited radioactive material east of Nagasaki and west and northwest of Hiroshima, but

the great majority of the radioactive material was taken high into the atmosphere by the blasts themselves. The blasts also irradiated some stable metals—such as those found in metal roofs—for a day or two after the blast, but the damage was minimal.

In the cities victims died due to flash burns from the heat generated by the blast. People died when their homes burst into flames. Others were injured by flying debris. In Hiroshima a firestorm arose in the center of the devastation. People within 300 yards of ground zero were vaporized, leaving their shadows on the streets. Blast and heat also stripped skin off bodies, sucked out eyeballs, and burst stomachs. Radiation deaths in subsequent years totaled about 120,000.

Severe radiation produced death within days. Severe radiation injuries were suffered by all persons within a one-kilometer radius. At between one and two kilometers distance injuries were serious to moderate, and slight injury affected those within two to four kilometers.

In addition to the 103,000 killed by the bombs in the first four months, another 400 died from cancer and leukemia over the subsequent 30 years. The bombs also produced birth defects and stillbirths. The children of survivors seem to have suffered no genetic damage. As of 2004, 93,000 exposed survivors were being monitored.

On September 2, 1945, the Japanese government surrendered unconditionally. WINSTON CHURCHILL calculated that the bomb had saved the lives of 250,000 British and 1 million Americans.

Harry Truman's argument that the bomb would save half a million soldiers was unconvincing to critics, who in the years since have noted that the Japanese were prepared to ask for peace before the bombs were dropped and had already sought peace in previous months. To these critics, the real reason for the use of the bombs was Truman's desire to frighten and impress the Soviet Union, which was already moving from ally to rival. Truman wanted to end the war before the Soviets could enter the Pacific War and stake a claim to a piece of the postwar settlement.

The Hiroshima bomb used 60 kilograms of highly enriched uranium-235 to destroy about 90 percent of the city. The Nagasaki bomb used 8 kilograms of plutonium-239. The bombs were a thousand times more powerful than any exploded previously. Four years later the United States exploded the first hydrogen bomb, and it was not long before there were bombs a thousand times more powerful than the one that was dropped on Hiroshima. By the

1980s the world's arsenals included a million Hiroshima bombs.

The Soviet Union tested its atomic bomb in 1949, and quickly Great Britain, France, and China joined the atomic community.

Beginning in the 1950s the emphasis was on the use of atomic energy for electricity and medical purposes. In the early 21st century 16 percent of the world's electricity, including that of Hiroshima and Nagasaki, came from atomic power.

JOHN H. BARNHILL

Hitler, Adolf

(1889–1945) *German dictator*

Adolf Hitler, the dictator of Germany, proponent of Nazism, and perpetrator of THE HOLOCAUST, was born on April 20, 1889, in the Austrian town of Braunau near the German border. His father, Alois, was a customs official, and his mother, Klara, was a gentlewoman. Hitler did not finish his secondary education and moved to Vienna at the age of 18 to study art and architecture.

He was unsuccessful in getting admission and stayed in Vienna until 1913, doing menial jobs. Hitler developed a rabid nationalism and simultaneously showed deep anti-Semitism. He was influenced by anti-Jew writer Lanz von Liebenfels (1874–1954). The right-wing Austrian politician and mayor of Vienna Karl Lueger (1844–1910), along with Georg Ritter von Schönerer (1842–1921), an advocate of pan-Germanism, also shaped Hitler's violent hatred of the Jews.

He enlisted in the German army during WORLD WAR I. Hitler returned to Munich in 1919 with five medals and the prestigious German Iron Cross (twice) for his bold service as dispatch runner. The war had rescued him from the frustration of civilian life and inculcated in his mind a strong like of discipline and

authoritarianism. He had also developed a deep hatred of left-wing politics, and it was no coincidence that his anti-Semitism developed along with his political beliefs, as many of the advocates of socialism and communism were Jews.

The army employed Hitler as a political officer, and he freely gave vent to his feelings in the charged atmosphere following the humiliating Versailles Treaty of June 28, 1919. The treaty signed by the German politicians was a peace dictated by others, and German humiliation was complete. Hitler was to report the activities of the Deutsche Arbeiterpartei (DAP, German Workers' Party), and he soon found that the party ideals of extreme nationalism and anti-Semitism were in line with his own beliefs. With his excellent skill of delivery, Hitler impressed the members and joined the DAP. Thus, the political career of Hitler began in September 1919. He was soon placed in charge of propaganda and recruited fellow soldiers from the army who had also been disillusioned with the Treaty of Versailles.

NAZI PARTY

All the blame for Germany's woes was put on the Jews, communists, and inefficient political leadership of the Weimar Republic. Hitler made the symbol of the party the swastika (symbolizing victory for the Aryan race) with a red background (symbolizing the social idea) and enclosed in a white circle (symbolizing the national idea). Hitler changed the name of the DAP to the National Socialist German Workers' Party (NSDAP, Nationalsozialistische Deutsche Arbeiterpartei), NAZI for short. As chairperson of the party, Hitler was addressed as the *führer* (leader).

The WEIMAR REPUBLIC received a severe blow in January 1923, when France and Belgium occupied the Ruhr industrial area and brought the German economy to a standstill. Hitler tried to exploit the situation with the Beer Hall Putsch of November in Bavaria, but the coup failed and the *führer* was imprisoned. During his period of incarceration, he wrote *Mein Kampf* (My struggle). The memoir-cum-doctrinal Nazi guide book spelled out an agenda for an expanded Germany inhabited by a pure Aryan race and excluding Jews and other unwanted people.

Hitler was biding his time and realized that he could attain power through the ballot box. The collapse of the New York Stock Market on October 23, 1929, and the consequent worldwide GREAT DEPRESSION affected the German economy. The unemployment figure rose from 1.30 million to nearly 4 million by the end of 1930. Hitler exploited the deteriorating economic situ-

ation. He had assured the top industrialists, by issuing a pamphlet entitled *The Road to Resurgence*, that the Nazi Party was not against the wealthy. His promise of suppression of trade unionism and building up of the army was music to the ears of big industrialists. His technique of propaganda and rabble-rousing speeches appealed to the workers. The political elite began to accept him because of his emphasis on legality. In the 1932 elections Hitler's party was the strongest in Germany, with 40 percent of the votes. The Reich president, Paul von Hindenburg (1847–1934), was persuaded by conservative leaders and Nazi supporters to appoint Hitler chancellor in January 1933.

Nazi political opponents were subdued by mass demonstrations in favor of Hitler and terrorized by the brown-shirted SA, the Sturmabteilung (storm troopers), and the black-uniformed SS, the Schutzstaffel (security echelon). In March an act that granted dictatorial power to Hitler was passed. After four months all political parties were banned save the Nazi Party, and the common form of greeting became "Heil Hitler" with an outstretched right arm. A ministry of propaganda was instituted under Joseph Goebbels (1897–1945). On June 30, 1934, Hitler carried out a purge in the Nazi Party by murdering his opponents in the "night of the long knives." With the death of Hindenburg in August, Hitler, with the title of *führer*, was the supreme leader of Germany. The legal system was virtually nonexistent, and the Geheime Staatspolizei (the Gestapo, the secret state police), formed by Hermann Göring (1893–1946), threw the anti-Nazis into concentration camps. A rearmament and public housing program were initiated.

The economy revived, and the unemployment figures went down. Germany became 83 percent self-sufficient in agriculture by fixing farm prices and wages, banning the sale of farms of less than 312 acres, and reclaiming uncultivated lands. Industrial recovery was achieved by the Four-Year Plans of 1933 and 1936. The ministry of economics distributed raw materials and regulated prices, imports, and exports. Hitler's popularity soared, while Germany had been transformed into an authoritarian state.

Hitler struck against the Jews, which culminated in the Nazis' sending them into gas chambers and concentration camps during WORLD WAR II. The NUREMBERG LAWS of September 1935 denied the Jews citizenship and the right to marry non-Jews. Hitler's policies led to large-scale Jewish migration to different parts of the world. The November 1938 pogrom against the Jews resulted in massacre, looting of property, the forcing of

Jews to wear yellow stars of David so that they could be identified, and resettlement in ghettos.

Hitler posed as a defender of peace and a crusader against Bolshevism. The leadership of Britain and France appeased Hitler because to them JOSEPH STALIN (1879–1953) was a greater menace. With consummate skill Hitler began to scrap the provisions of the Treaty of Versailles and to follow the policy of *Lebensraum* in an eastward direction. Hitler withdrew from the Geneva Disarmament Conference as well as from the LEAGUE OF NATIONS in October 1933. He denounced the provisions of the Treaty of Versailles and introduced conscription in March 1934.

The next year Germany began expanding its armed forces and its navy in flagrant violation of the military clauses of the Treaty of Versailles. In March 1936, Hitler occupied the demilitarized Rhineland. Italy and Japan, with the same agenda of ultranationalism, militarism, and aggressive foreign policy, became close allies of Germany. The three countries signed pacts for furthering their aims. The Rome-Berlin Axis was established between BENITO MUSSOLINI (1883–1945) and Hitler in October 1936, and the following month Germany signed the Anti-COMINTERN Pact with Japan, which Italy joined in 1937.

Both Hitler and Mussolini supported General FRANCISCO FRANCO (1892–1975) in the SPANISH CIVIL WAR against the republicans. Continuing his policy of lebensraum, Hitler turned his attention toward Austria, which was German in tradition and language. There had already been a putsch in 1934 for *Anschluss* (annexation). In March 1938 the Nazi army marched in and annexed Austria.

The republic of Czechoslovakia, with its minority population of 3.25 million Sudeten Germans, was next on the agenda. Great Britain and France followed a policy of APPEASEMENT toward Hitler. They thought wrongly that Hitler would remain satisfied, but it was not so. At the Munich Conference of September 29, 1938, Czechoslovakia was dismembered, and the Sudeten area was handed over to Germany. In March 1939, the country was occupied by Hitler.

Feverish diplomatic activity, signing of alliances, and mobilization of armed forces were undertaken by the European powers. Hitler in his ingenuity and deviousness began to realize his aim. He signed a military alliance, the “Pact of Steel,” with Mussolini in May 1939. Hitler’s diplomacy reached its apogee when he signed the nonaggression pact with Russia on August 23, 1939. He could then turn his attention toward Poland, notwithstanding the fact that Great Britain

Adolf Hitler reinvigorated Germany in the 1930s and led the world into its most devastating conflict: World War II.

and Poland had signed a treaty of mutual assistance on August 25, 1939.

The free city of Danzig and the Polish Corridor, dividing eastern Prussia from Germany, were seen as an affront to the Germans. World War II began on April 1, 1939, after Nazi Germany’s invasion of Poland. Two days afterward Great Britain and France declared war against Germany. Appeasement had been a failure.

For about two years, the juggernaut of Hitler’s Wehrmacht (armed forces) incorporated Poland, Norway, Denmark, the Netherlands, and Belgium. The fall of France on June 22, 1940, was another triumph for Hitler. Flushed with success, Hitler began to commit the blunder of attacking the Soviet Union on June 22, 1941. Four days after the Japanese attack on PEARL HARBOR

on December 7, 1941 (December 8 in Japan), Hitler declared war on the United States.

The balance tilted in favor of the Allied powers, and the Axis of Germany, Italy, and Japan faced defeats. Hitler had lost battles in Russia and North Africa. He helped Mussolini set up a government after the Allied invasion of Sicily in 1943, but the Allied army reached Rome in June 1944. The Normandy invasion was launched on June 6. The Red Army of Russia was advancing from the east, and Hitler was ensconced in Berlin. Surrounded by the Soviet troops, Hitler committed suicide in the Führerbunker on April 30, 1945. On May 8 the German forces surrendered unconditionally at Rheims in France. The “thousand years Reich” had lasted for 12 years.

PATIT PABAN MISHRA

Holocaust, the

The term *holocaust*, derived from the Greek and literally meaning “a sacrifice totally consumed by fire,” refers to the NAZI incarceration and extermination of approximately 6 million European Jews and a million others, including half a million Gypsies, homosexuals, Jehovah’s Witnesses, Freemasons, resistants from occupied countries, and Russian prisoners of war plus miscellaneous others such as a few U.S. soldiers. The Nazi term was the “Final Solution to the Jewish Problem.” In modern German history anti-Semitism has waxed and waned, but in the 20th century before 1933 it was less acute than elsewhere in eastern Europe. However, for ADOLF HITLER anti-Semitism was a core belief.

From 1933 to 1939, Hitler imposed mounting persecution on Germany’s Jews (defined both religiously and racially), who made up less than 1 percent of its population. They were forced to wear a yellow star and progressively lost jobs, rights, and citizenship. The first concentration camp, at Dachau near Munich, opened in March 1933. Initially, inmates were political opponents: communists, socialists, liberals, and some clergy as well as prominent Jews. From 1938 on, the percentage of Jewish inmates grew. In these years, too, those deemed physically, mentally, or emotionally unfit for the “Master Race,” especially children, were registered, sterilized, and from 1938 on killed. The “euthanasia program” developed murder techniques, such as mobile killing vans and mass gas “showers,” that were later used on a large scale.

Many German Jews assumed this was simply another periodic spate of anti-Semitism. Others tried to flee. Some succeeded, but moving to western Europe proved futile in the end. Emigration to Palestine was restricted because of Jewish-Arab tension there and British need for Arab support if war came. Emigration elsewhere was limited by anti-Semitic officials and high unemployment owing to global depression.

When Hitler conquered Poland in 1939, Jews in western areas were forced into a central area not annexed by Germany. They faced random, unpredictable shooting sprees by Nazi paramilitaries. During the next year they were forced into ghettos, often the old Jewish ghettos liberated in the 19th century but now greatly overcrowded by a much-increased population. They were locked in at all times, guarded, and given starvation rations. These were supplemented by smuggling, chiefly by children, who could slither through cracks and pipes. Ghetto inmates hoped in vain that their slave labor would spare their lives.

The Nazis created a Jewish council (*Judenrat*) to administer each ghetto. To avoid riots, the Nazis assured deportees they were to be “resettled” in the east. Jewish ghetto leaders varied in quality and in approaches to their jobs, but all aimed to save or prolong lives. The ghetto system created in Poland was gradually extended through other eastern European areas Germany conquered.

After Germany conquered Norway, Denmark, the Low Countries, and France in the spring of 1940, Jewish inhabitants were registered, assigned yellow stars, and subjected to harsh measures. Many Norwegian and most Danish Jews escaped to neutral Sweden. In France and the Low Countries, however, roundups in 1942 sent most Jews to transit camps to await deportation eastward. Meanwhile, Hitler’s invasion of the Soviet Union

in June 1941 led to the use of mobile killing vans or, more commonly, troops in mobile killing squads who ordered Jews to line up, dig a trench, and strip; the troops then shot them so they fell into the graves they had dug.

EXTERMINATION

Plans for more systematic extermination of Europe's Jews proceeded in late 1941 and early 1942. The first death camp opened at Chelmno in December 1941. The first gassing experiments occurred in September 1941 at Auschwitz, where there were old Austrian army buildings as well as new construction. As the system developed into more than 9,000 installations, three types of camps emerged: transit camps (temporary holding pens); concentration and/or labor camps, where German firms used slave labor; and extermination camps, the last all in Poland. Though inmates died in ghettos and other camps of disease, starvation, execution, and despair, the six extermination camps were death factories whose administrators dealt with such problems as how to kill more people faster and how to dispose of bodies. Gassing with Zyklon B in mass gas chambers and burning bodies night and day in crematoria or in outdoor pits were the usual solutions.

Some camps served more than one purpose. The vast Auschwitz-Birkenau-Buna complex encompassed both a death factory and a labor camp for industrial purposes. Theresienstadt (Terezin) in Czechoslovakia was a ghetto, a supposedly "model" concentration camp twice visited by the German Red Cross and a transit station en route to Auschwitz. From 1942 into 1944 Jews were shipped across Europe to camps in the east. They were crammed standing up in freight cars without food, water, or lavatories for a trip of several days. Some died or went mad en route.

Upon arrival at a camp, if not immediately sent to die in the "showers," dazed Jews were deprived of their possessions, clothes, hair, and identity. They were issued a striped uniform with a number and a badge—yellow stars for Jews and otherwise triangles: homosexuals pink, political prisoners red, criminals green, and Gypsies brown. Existing in rough barracks on starvation rations, prisoners worked in manufacture for leading German firms or in pointless projects such as hauling boulders up steep hills to roll them down. Some were subjected to unethical medical experiments, often senseless. In time most died or were killed.

The Nazis wasted nothing from those who died or were gassed. Hair was woven into cloth, gold teeth were extracted from corpses, bones and ashes became fertilizer, and fat was used for soap or to fuel outdoor

fires. Tattooed skin was favored for lampshades; other skin became bookbindings and purses.

Resistance was almost impossible but occurred, nonetheless, usually when hope and dependent relatives were gone. Inmates worked slowly and badly with some sabotage. Some tried to escape, and a few succeeded. Some chose their own death on the electrified fences surrounding the camps. Most camps had an underground organization. Plans for rebellion were made in many camps and were realized in six; the prisoners succeeded in closing Sobibór and Treblinka.

In eastern Europe, Jews who had evaded initial registration and roundups fled to the forests and formed partisan bands. Usually strained relations with national underground movements meant scanty armaments, but they fought the Germans, engaged in sabotage, and provided potential havens for escapees from ghettos and camps. In the ghettos, smuggling, illegal education of children, and carefully hidden documentation of Nazi outrages were common. Though local undergrounds were reluctant to give weapons to those they considered doomed, ghetto revolts were numerous, especially in the smaller ghettos. Of the larger ghettos, Białystok fought for four days, Vilna achieved an armed breakout through the sewers into the forests, and Warsaw battled German forces from April 19 to May 10, 1942, when about 75 survivors slid forth from sewers.

FINAL SOLUTION

From mid-1942 on, Jewish leaders in Switzerland and Poland sought to inform the Allies of major aspects of the Final Solution. They succeeded, but much skepticism greeted such startling news on both sides of the Atlantic. President FRANKLIN ROOSEVELT, Prime Minister WINSTON CHURCHILL, and Foreign Secretary Anthony Eden were sympathetic, but they were preoccupied with the global struggle. Inaction prevented substantive aid. In mid-1943 an emissary of the Polish resistance saw four British cabinet members, including Eden and several top U.S. officials, and gave his own eyewitness account of conditions in the Warsaw ghetto and killing operations at Belzec. As a result, after bureaucratic delays Roosevelt established the War Refugee Board in January 1944. The British government and the State Department were hostile, but the board, with the aid of neutral states, distributed valuable neutral passports to Jews and sponsored the important rescue efforts of Swedish banker Raoul Wallenberg, among other activities. It saved perhaps 200,000 Jews.

Ordinary individuals played a role as well. In both Germany and occupied Europe, some abetted the Nazis,

Cremation ovens at Buchenwald, 1945. Despite efforts to destroy or conceal evidence of the mass murder of millions of European Jews, crematoria such as the above were discovered by Allied troops as they marched toward Berlin.

most avoided the issue, and a few helped Jews. In Germany, devout Christians, lay and clerical, Catholic and Protestant, engaged in acts of protest and resistance. There and in occupied nations, individuals hid Jews, provided false papers, and proffered food. Many a Jew with false papers in occupied Europe was vouched for to Nazi police and paramilitaries as a long-time neighbor by total strangers. Others escaped in priests' robes, although the Vatican made no overt statement. At war's end, a startling number of Jews emerged from hiding in Berlin's working-class districts.

Jewish leaders outside occupied Europe sought the bombing of Auschwitz's gas chambers. By mid-1944 this was possible, if difficult, from Italy. Churchill and Eden ordered it, but Foreign Office and Air Ministry officials delayed and obstructed. Equally, in the United States, the War Department (then home of the air force) opposed diversion of resources, though the United States bombed Auschwitz's factories repeatedly. Thus, nothing was done to prevent extermination, and Jewish representatives were told that a speedy military victory was their best hope of deliverance.

Though many lives could have been saved, the Holocaust was by then winding down. Its peak years were 1942–44, though many died later as well as earlier. By late 1944 many countries seemed largely *Judenrein* (cleansed of Jews); in late November killing at Auschwitz was ordered stopped, and the gas chambers and crematoria were destroyed to hide evidence of mass murder. The easternmost camps were emptied out, followed by others as the Soviet army approached, and those still alive were sent on difficult, wintry forced marches westward. The Red Army liberated Auschwitz in late January 1945 before its destruction was complete. In the west, Anglo-American troops similarly liberated concentration camps in the spring of 1945.

Once healthy, most survivors headed to Palestine, North America, or western Europe. The Holocaust provided the primary impetus for and the parameters of the United Nations' Genocide Convention passed in 1946. It also contributed an emotional and political pressure toward the creation of Israel in 1948. In Germany and Austria, Poland, and the Baltic states, 90 percent of the Jews had died; the percentages were somewhat lower elsewhere. In all, the Holocaust destroyed two-thirds of Europe's Jews, who amounted to one-third of the world's Jews, and wiped out a distinctive eastern European culture dating from ancient times.

SALLY MARKS

Hoover, Herbert

(1874–1964) U.S. president

The American president in the crucial years between 1929 and 1933, Republican Herbert Clark Hoover was born on August 10, 1874, in West Branch, Iowa, to Jesse and Hulda Hoover. He received his secondary education in Newberg, Oregon, and graduated with a degree in geology from Stanford University in 1895. In 1899 he became the chief engineer for the Chinese Engineering and Mining Company. For more than a decade he worked on engineering projects in Europe and Asia,

eventually becoming a consultant for mining companies throughout the world.

When WORLD WAR I broke out, Hoover was in a unique position. His career had made him wealthy, and his position as head of the American Repatriation Committee in London had him assisting U.S. citizens in their return home to avoid the war. Hoover became dedicated to charity and helped the Commission for Relief in Belgium, which sent food to about 10 million people in war zones. Back in the U.S., he became food administrator under President WOODROW WILSON (1913–21) after the U.S. entry into the war in April 1917. The Food Administration, set up under the Lever Act in August 1917, supervised the distribution of U.S. agricultural products both inside the United States and to the Allies. He encouraged voluntary conservation with slogans like “meatless Mondays” and “wheatless Wednesdays” and encouraged the production of basic foodstuffs like wheat, the acreage of which nearly doubled between 1917 and 1919. Under the direction of Hoover, the United States tripled its exports of meat, bread, and sugar in 1918. The end of the war brought famine to Europe, and Hoover provided relief, surplus food, and clothing to about 200 million people. These relief efforts gave Hoover increased personal political power; his humanitarianism made him greatly admired.

Hoover was secretary of commerce under both Warren G. Harding (1921–23) and Calvin Coolidge (1923–29) and also served as a member of the Advisory Committee and World War Foreign Debt Commission. His dedication to charity and relief works put him in a position to aid the victims of the great Mississippi flood of 1927. Because of his popularity and reputation, he was the most suitable choice for the Republicans as the presidential candidate in the election of 1928 and was nominated by the party on the first ballot. Hoover won the election easily with the promise of increased efficiency and prosperity. At his inauguration on March 4, 1929, he spoke about building a new economic, social, and political system based on equality of opportunity for the American people.

Once in office, Hoover attempted to live up to his campaign pledge starting with the Agricultural Marketing Act in mid-1929, which set up the Federal Farm Board. The function of the board was to stabilize the prices of agricultural products, but following the stock market crash, it became a fund for emergency agricultural relief. Other legislative acts of Hoover included the establishment of a \$50.00 monthly pension for Americans over 65, the building of the San Francisco Bay Bridge, and the cancellation of private oil leases

Herbert Hoover (center) became president of the United States mere months before the onset of the Great Depression. Despite being a capable leader and organizer noted for massive relief efforts, Hoover failed to adequately deal with the crisis.

on government lands. Hoover also approved the act that made the “Star-Spangled Banner” the American national anthem. Militarily, under Hoover the United States participated in the London Naval Conference of 1930, which limited the size and number of cruisers, destroyers, and submarines allowed to the major powers. When Japan invaded Manchuria in 1931, the response of Hoover and the United States was isolationist, a philosophy much in keeping with the times of the GREAT DEPRESSION. Hoover’s secretary of state, Henry L. Stimson (1867–1950), opposed the isolationist stance and developed the Stimson Doctrine, which stated that the United States would not recognize changes (such as Japan’s conquering of Manchuria) that had been made in violation of treaties. Maintaining his isolationist stance, Hoover believed that the doctrine would cause an economic boycott against Japan and did not endorse the policy.

Early in Hoover’s tenure as president, the October 1929 crash of Wall Street caused the most widespread and prolonged depression in world history. The depression, triggered by the October 29 crash, encompassed the prices of goods, employment, and the production of new goods. By mid-November, the average stock price had fallen to 40 percent of its previous value, while money supplies and prices of

goods fell by a third. This problem was intensified as across the country bank depositors withdrew their funds, causing widespread failure of the banking system. Across the country and the world, people lost their jobs and their savings. Businesses lost nearly 50 percent of their income.

In the face of such hardship, the optimism embodied by Hoover’s presidential campaign withered. His own dedication to voluntarism and personal cooperation instead of government programs and intervention proved to be no help in the face of economic catastrophe. In an effort to safeguard American businesses, Congress passed the Smoot-Hawley Tariff Bill in 1930, increasing the import duties on 20,000 items.

The Reconstruction Finance Corporation, set up by Congress in 1932, provided loans for troubled banks and businesses as well as funds for states to provide relief at the local level. Hoover also increased spending on public works, asking Congress for an additional \$400 million in the Federal Building Program. Hoover also attempted to aid relief of the depression in Europe by placing a moratorium on war debt payments, but the measure was ineffective in halting the collapse of the world economy.

On the home front, nothing Hoover tried proved effective. The Revenue Act of 1932 was passed, increasing taxes to meet the government’s expenditures. In

mid-1932, Hoover was further embarrassed by the BONUS ARMY; nearly 20,000 war veterans marched on the White House in June, demanding a bonus due in 1945. The veterans were dispersed by military action led by Army Chief of Staff DOUGLAS MACARTHUR. Thanks to the troubles of the country, Hoover's early popularity had been destroyed, and he became a symbol of U.S. failure to deal with the economic troubles. Despite this, he was nominated for a second term in the 1932 election. It surprised no one when Hoover lost in a landslide to Democrat FRANKLIN D. ROOSEVELT (1882–1945).

Roosevelt was elected on a platform of vehement criticism of Hoover and his policies that had resulted in runaway national debt and ineffective spending. Roosevelt squarely laid the blame for the Depression on Republican policy. He did not believe, like Hoover, that it had international origin.

In retrospect, Hoover's downfall as president seems more bad luck than anything else; he became the scapegoat for economic depression that occurred eight months after the beginning of his term as president and that he almost certainly didn't cause. However, his attempted relief policies failed, for which he was rightly blamed. A great humanitarian and relief worker, Hoover's failure to provide any relief to the American people ultimately forced the end of his tenure as president. After leaving the White House, Hoover worked as a trustee of Stanford University.

He was also involved in famine relief in Europe at the time of WORLD WAR II. Hoover was the chairperson of the commission dealing with the reorganization of executive departments. He died in New York on October 20, 1964.

PATIT PABAN MISHRA

House Committee on Un-American Activities (HUAC)

During the 1930s, members of the U.S. House of Representatives, alarmed by reports of domestic groups

that were sympathetic to NAZI Germany or the Soviet Union, sought to investigate subversive and “un-American” propaganda activities within the United States. In 1938 the House voted to create the Special Committee to Investigate Un-American Activities (often called the Dies Committee), under the chairmanship of Martin Dies, a Democrat from Texas. In 1945 this special committee became a permanent standing committee, the House Committee on Un-American Activities (HUAC). When Republicans gained control of Congress the following year, New Jersey representative J. Parnell Thomas became the chairman. As originally conceived, the committee was intended to be nonpartisan and dedicated to gathering information about homegrown political radicalism of all stripes. But under both Dies and Thomas the committee focused primarily on leftist groups and individuals associated with President FRANKLIN ROOSEVELT's administration, becoming a powerful conservative foe of the NEW DEAL.

Among the committee's early hearings was an investigation of communist influence in the Federal Theatre and Writers Project, part of the Works Progress Administration; the resulting political pressure led Congress to defund the project in 1939. Additional investigations dealt with labor unions that were part of the CIO—a major Roosevelt political ally—and with the American Youth Congress, a group with ties to ELEANOR ROOSEVELT. Another target was Secretary of Labor Frances Perkins, whom Dies attempted to have impeached after she refused to deport longshoreman's union leader Harry Bridges, a known communist. Dies did not believe that the New Deal was simply reform legislation intended to ameliorate the social and economic effects of the GREAT DEPRESSION; he thought that the New Deal was paving the way for communists to undermine America's capitalist system. In addition, he was concerned that the federal government, and particularly the executive branch, was accruing “autocratic” power.

The Dies Committee eventually accused 640 organizations, more than 430 newspapers, and almost 300 labor groups of being likely communist fronts. Their investigations were often “fishing expeditions”: If an initiative did not turn up information quickly, the committee would lose interest, and another initiative would be launched. Because the investigations made newspaper headlines, however, even an abortive effort could leave a group or individual publicly stigmatized. Dies was cavalier in how he handled his information, which was often based on inadequate research. The committee released alarmist reports that Dies claimed documented

the existence of plots to sabotage industry in the United States, but such reports were often haphazard compendiums of the theoretical writings of communist thinkers such as Karl Marx, without specifics.

Over the years many of the people investigated and accused by the committee never appeared at a hearing where they could defend themselves. If they did appear, they were not able to call supporting witnesses and could not cross-examine their accusers. When accused, individuals appealed to the U.S. courts that their civil liberties were being abused, but the courts found that the judiciary could not usurp Congress's investigatory powers. A few of the individuals exposed by the Dies Committee were committed members of the American Communist Party, which took its orders from Moscow.

Others were liberals affiliated with the party through "popular front" organizations, joining because they were concerned about the Great Depression or because they viewed communism as a vital bulwark against fascism in Europe. After the Soviet Union signed a nonaggression pact with Nazi Germany in 1939, many liberal sympathizers and some communists broke with the party. But the Dies Committee never considered these distinctions among suspects; all of them, in the committee's view, were "soft on communism" and therefore a threat. The committee's own anticommunist efforts were considerably complicated in 1941, when the Soviet Union became an American ally in WORLD WAR II. During the war the committee became less influential.

As the cold war heated up, HUAC undertook a series of high-profile hearings. In 1947 the committee investigated reports of communist subversion in the movie industry. Perhaps 300 Hollywood studio employees had joined the Communist Party during the 1930s and 1940s; the majority of them were screenwriters, and many had been sympathetic to a violent strike that wracked the industry in 1945. Several famous "friendly" witnesses testified about Hollywood communist activities, including studio head Jack Warner and actors Robert Taylor and Ronald Reagan, the president of the Screen Actors Guild. HUAC suspected that the screenwriters were attempting to inject procommunist messages into films, although they found little evidence to support this. A total of 10 screenwriters, including Academy Award nominee Dalton Trumbo, were subpoenaed to testify before the committee. These "unfriendly" witnesses—known as the Hollywood Ten—used the opportunity to angrily denounce HUAC, refused to answer questions about their political affiliations, and were

eventually cited for contempt and sentenced to prison terms. Worried about the negative publicity generated by the hearings, Hollywood studio executives thereafter "blacklisted" (refused to provide work for) suspected communists in the industry, a practice that continued throughout the 1950s.

In 1948 HUAC investigated prominent nuclear physicist Edward U. Condon, who had served on the MANHATTAN PROJECT and was the director of the National Bureau of Standards. Chairman Thomas stridently disagreed with Condon's view that civilians, instead of the military, should control the Atomic Energy Commission; in return Thomas labeled Condon "the weakest link" in the nation's security. The committee never found evidence of Condon's disloyalty and was publicly rebuked by President HARRY S. TRUMAN. In 1948 the committee also undertook what proved to be its most famous and successful investigation—the only one to demonstrate actual communist espionage within the government.

Whittaker Chambers, an editor for *Time* magazine and a former operative in the communist underground, appeared before HUAC and named Alger Hiss as a New Deal official who had passed classified documents to him during the 1930s. The highly accomplished Hiss, who had become president of the Carnegie Endowment for International Peace, flatly denied that he knew Chambers in a face-to-face confrontation before the committee.

A subsequent methodical investigation by committee member Richard M. Nixon uncovered evidence that Hiss and Chambers had known each other, and Hiss was sentenced to prison in 1950 for committing perjury. The Hiss-Chambers case added fuel to national fears about communist subversion and seemed to legitimize HUAC's conspiracy theories, confrontational tactics, and disdain for individual rights. These would serve as the template for Senator Joseph McCarthy's own investigations into communism during the 1950s.

Hu Hanmin (Hu Han-Min)

(1879–1936) *Chinese political leader*

Hu Hanmin was a close political associate of SUN YAT-SEN, founder of the Chinese Republic. The Hu family were minor civil servants who settled in Guangdong (Kwangtung) province. A brilliant scholar, Hu supported himself and a younger sister by working as a tutor after his parents' death. China's defeat in the SINO-JAPANESE WAR (1894–95) turned him into a revolutionary and took him to Japan, where he studied law and joined Sun's newly formed Tongmeng hui (T'ung-meng hui), or United Alliance, dedicated to overthrowing the Qing (Ch'ing) dynasty. He served as the organization's secretary and wrote for its official publication, the *Min Bao* (Min Pao), or *People's Journal*. One article, "The Six Principles," elaborated on Sun's ideals: nationalism, republicanism, and land nationalization, plus three items concerning immediate issues that faced the revolutionists in Japan. An eloquent writer, Hu played a major role in the pen war between advocates of Sun's ideals and those of Kang Youwei (K'ang Yu-wei), who favored a constitutional monarchy. He also traveled widely throughout South and Southeast Asia to organize support and raise funds for the Tongmeng hui.

Hu was elected military governor of Guangdong province after the outbreak of the October 10, 1911, revolution. He and other followers of Sun were ousted from their positions in 1913 by President YUAN SHIKAI (Yuan Shih-k'ai), who quashed democracy in an attempt to make himself emperor. When Sun established a government in Canton in 1923 with the help of a local warlord and began reorganizing the Kuomintang (KMT, Nationalist Party) with the assistance of the Soviet Union, Hu was again by his side, together with WANG JINGWEI (Wang Ching-wei) and a rising star, CHIANG KAI-SHEK.

Sun's death in 1925 led to a succession crisis in the Kuomintang. Wang Jingwei led the left wing, who were supported by Soviet advisers and were the immediate winners. Hu led the anticommunist wing of the party; they lost power and were forced out of Canton. Chiang Kai-shek led the center and remained in Canton, focusing on training a new army. In 1926 Chiang set out as commander in chief of the NORTHERN EXPEDITION to unify China. Military success led him to break with the left and the Soviet-dominated government under Wang Jingwei in 1927 and also led to the return to power of the anticommunist wing of the Kuomintang, including Hu. After completing the Northern Expedi-

tion in 1928, the Nationalists established a government in Nanjing (Nanking). Wang and his supporters lost power, while Hu was appointed president of the legislative Yuan (the legislature), which was charged with drafting legislation, passing the budget, and formulating new legal codes.

Chiang dominated the Nationalist government during the Nanjing era (1928–37) and faced several domestic problems. One was how to deal with the ambitions of his two senior colleagues, Wang Jingwei and Hu Hanmin. Chiang initially allied with Hu, but they broke in 1931 partly over interpretation of Sun's wishes on how to implement his programs. Chiang became so angry with Hu that he briefly put him under house arrest. Hu was so infuriated that he rejected all offers to rejoin the government, which forced Chiang to ally with Wang Jingwei. The power struggle between Chiang, Hu, and Wang showed the ideological and personality struggles in the Kuomintang after the death of its founder, Sun Yat-sen.

JIU-HWA LO UPSHUR

Hu Shi (Hu Shih)

(1891–1962) *Chinese liberal intellectual*

Hu Shi was the son of an official of modest means. At 13 he switched from a traditional Chinese school to a modern school in Shanghai, where he was introduced to Western learning. In 1910 he won a scholarship to study in the United States, where he was influenced by John Dewey's pragmatism and earned a doctorate in philosophy at Columbia University. While a student he became interested in Chinese language reform, writing an article titled "Some Tentative Suggestions for the Reform of Chinese Literature," that argued in favor of a new literature that used the vernacular instead of classical Chinese. The enthusiastic response from students and intellectuals led to a wide-ranging reevaluation of Chinese literary and ethical traditions that became known as the New Culture Movement.

A leading academic amid these cultural and political crosscurrents, Hu Shi spoke out on a wide range

of topics as editor and cofounder of several magazines during the 1920s and 1930s. He opposed the obsession with political ideology during the warlord era and advocated the concept of “good government.”

After 1928 he criticized the newly established Nationalist (Kuomintang) government for its authoritarianism and called for the protection of human rights and free speech. He served as ambassador to the United States between 1938 and 1942, lobbying the Roosevelt administration and the American public to eschew their isolationist policies and to aid China’s war of resistance.

He was president of National Beijing (Peking) University for two years after the end of WORLD WAR II but went to the United States in 1949 when the Nationalist government lost the civil war to the CHINESE COMMUNIST PARTY. He lived in semiretirement in New York until 1958, writing and speaking out as a loyal but critical friend of the Republic of China on Taiwan (ROC) and an adamant foe of communism. He returned to Taiwan in 1958 to preside over the Academic Sinica, the ROC’s leading research institution, until his death in 1962.

Hu Shi was unquestionably the best-known Western-oriented Chinese liberal intellectual in the 20th century. During the long years of political strife in China, his optimistic faith in nationalism, moderation, and democracy was a beacon for a brighter future. Singled out for harsh criticism by the Chinese Communist government in the 1950s, his reputation has had an unparalleled rehabilitation in China since the 1980s.

JIU-FONG L. CHANG

Huerta, Victoriano

(1845–1916) *Mexican president*

Victoriano Huerta seized power to become the second president of postrevolutionary Mexico, serving from 1913 to 1914. These two years witnessed the most violent stage of the revolution and its downward spiral into full civil war. Huerta was born in Colotlán, Jalisco, in 1845. With a limited education, he had few prospects

in life until he became the personal secretary of General Donato Guerra. Guerra used his position to smooth Huerta’s admission into the National Military College, where he excelled at astronomy and mathematics. In 1877 he received his military commission and went on to lead a distinguished career putting down rebellions under the Porfirian regime. In 1901 he was promoted to brigadier general.

During the MEXICAN REVOLUTION of 1910, the besieged president Porfirio Díaz dispatched Huerta to the south to quell EMILIANO ZAPATA’s revolt, but the general was called back to Mexico City before engaging the rebels in combat when Díaz fell from power. Huerta then served as the military escort for the ousted Díaz from Mexico City to Veracruz. Francisco León de la Barra, the interim president, sent Huerta south again to disarm and defeat Zapata’s forces, a mission in which he failed. When FRANCISCO MADERO took office he expressed disappointment in Huerta’s inability to defeat Zapata and in his connections with Bernardo Reyes, Madero’s only serious political opponent in the 1911 election. In 1912 Madero grudgingly sent Huerta to suppress a revolt initiated by PASCUAL OROZCO in the north. Huerta defeated Orozco and almost put PANCHO VILLA, then serving under Huerta, before the firing squad for theft. Only Madero’s intervention saved Villa, and the incident strained relations between the two men.

Stationed in Mexico City, Huerta knew of the growing conspiracy to oust Madero headed by Generals Bernardo Reyes and Félix Días, the nephew of the former dictator. Huerta declined to join the rebels, but as they attacked the National Palace in February 1913 and the tide of the battle increasingly pointed toward a successful rebellion, Huerta saw an opportunity for personal political gain. He made a secret deal with Félix Días and switched sides in exchange for the position of provisional president. On February 19, 1913, he arrested Madero and his vice president and demanded their resignations. Three days later, as the men were being transferred from the palace to a military prison, they were shot and killed, an assassination that many scholars believe Huerta ordered.

Almost immediately, domestic and foreign opponents to Huerta’s presidency sprung up. Rebellions throughout Mexico erupted, and in the face of congressional criticism, Huerta disbanded the congress and arrested many of its members. He resorted to a system of mandatory military service that forced the poor, with little or no training, to fight his opponents. This forced conscription failed, as many deserted or joined the rebellions.

The United States, under the leadership of WOODROW WILSON, took offense to Huerta's violent seizure of power and attempted to convince him to hold elections and declare peace with his internal adversaries, the Constitutionals. Huerta ignored these requests, and the United States actively assisted his opponents by supplying them with arms. The northern states of Coahuila, Chihuahua, and Sonora refused to recognize Huerta's presidency, and their leader, VENUSTIANO CARRANZA, declared himself president of Mexico. At the same time ALVARO OBREGÓN, also from the north, led forces south toward Mexico City to force Huerta's surrender.

Obregón's forces engaged Huerta's troops during the summer of 1914, taking several key areas, including the city of Guadalajara. Huerta, perhaps sensing impending defeat, resigned the presidency on July 15, 1914, and fled to Europe. With the help of the German government, Huerta conspired to regain his presidency through a revolution based out of El Paso, Texas. He joined forces with his former adversary, Pascual Orozco. The two men met in Newman, New Mexico, on June 28, 1915, and federal authorities who had been monitoring Huerta were waiting for them. Huerta and Orozco were arrested, and Huerta died on January 13, 1916, while in the custody of U.S. federal authorities.

KATHLEEN LEGG

Victoriano Huerta (center) seized power to become the second president of postrevolutionary Mexico, serving from 1913 to 1914.

Ibn Saud, Abd al-Aziz

(1880–1953) *Saudi Arabian monarch*

Abd al-Aziz Ibn Saud was the first monarch of Saudi Arabia. He was born in Riyadh to Abd al-Rahman bin Faisal bin Turki al-Saud and Sara bint Ahmad al-Kabir al-Sudairi. In 1890 he and his family were exiled to Kuwait after the Rashidi tribe conquered their lands.

Upon the death of his father in 1901, the 22-year-old Ibn Saud succeeded as the leader of the Saud dynasty and took the title of the sultan of the Nejd. Ibn Saud set out to recapture his ancestral lands from the Rashidis. In 1902 Ibn Saud assassinated Ibn Rashid and recaptured Riyadh. By 1912 he had consolidated his control over the Nejd and then founded the Ikhwan, a militant religious group that he used to aid him in future conquests. At this time he also revived the traditional al-Saud alliance with Wahhabism, a puritanical Islamic movement dating from the 18th century.

In 1915 during WORLD WAR I, the British signed a treaty with Ibn Saud whereby the lands of the Saud dynasty became a British protectorate. Britain asked for Ibn Saud's support in fighting against Ibn Rashid, who supported the Ottoman Empire, which had allied with the Central powers in the war. As a consequence of this alliance, Ibn Saud received financial support from the British. By 1922 Ibn Saud had defeated the Rashidis and had doubled his territorial holdings. In 1926 he defeated another rival, Sherif Husayn of the Hashemite dynasty, and captured the Muslim holy cities of Mecca and Medina. Sherif Husayn was forced into exile, and

Ibn Saud effectively became the ruler of Arabia. The British formally recognized the power of the Saud dynasty in the Treaty of Jeddah, which was signed in 1927. Under this treaty Ibn Saud's title was changed from sultan to king.

Ibn Saud consolidated the Saud family's control over the Arabian Peninsula between 1927 and 1932, when he renamed the conquered territories Saudi Arabia and proclaimed himself king of the new nation. The discovery of petroleum in 1938 gradually brought vast revenues into the previously impoverished country. Ibn Saud used the moneys to enrich both his family and the country, encouraging his nomadic subjects to settle in permanent cities and villages.

Saudi Arabia's contributions to WORLD WAR II were mostly token, but, although officially neutral, the Saudis did provide the Allies with significant oil supplies. Saudi Arabia remained on good terms with the Allies largely because of King Abd al-Aziz's personal friendship with President FRANKLIN D. ROOSEVELT.

Ibn Saud fathered between 50 and 200 children, and into the 21st century all Saudi kings were his sons. The Saudi Basic Law of 1992 stipulated that the king of Saudi Arabia must be a son or grandson of Ibn Saud. He died in Taif in 1953 and is commemorated as the founder of modern Saudi Arabia.

JULIE EADEH

India Act (1935)

The first Government of India Act (1858, after the Sepoy Rising of 1857) abolished the British East India Company and put India under British government administration. A second act in 1909 introduced the concept of elected government. Still, Indian troops served in WORLD WAR I because Britain, not India, declared India at war with Germany. In 1917 Secretary of State for India Edwin Montagu promised that India's government would gradually permit increased Indian participation in the administration of India, with the goal of eventual self-rule. Then the war ended. Although a third Government of India Act in 1919 gave local control of "nation building" areas such as education, it retained law and order and finance for Parliament-appointed governors and officials responsible to them. This system of power sharing was called dyarchy. Britain's harsh measures against alleged political extremists and the Punjab disturbances of 1919, including a massacre of 400 at Amritsar, led to the creation of a national Indian movement against British control. A nationalist leader, MOHANDAS K. GANDHI, rose to the fore.

Gandhi led a movement of noncooperation against Britain in 1920–22 and a civil disobedience effort in 1930–31. In 1942 he called for the British to "Quit India." He led the first negotiations for independence in 1930 at the Round Table Conferences in London. MOTILAL NEHRU, father of Jawaharlal Nehru, was also active in the movement for Indian self-government. He chaired a committee of the All Parties Conference that included Muslims. It issued the "Nehru Report" of 1928 that called for a dominion constitution for India written by Indians.

When the all-British Simon Commission visited India in 1927–28, it generated protests that the Indian police repressed violently, leading to the death of Punjabi leader Lalal Lajpat Raj and rallying a new generation of Indian nationalist leaders. Its report in 1930 rejected dyarchy and determined that local autonomy was in order. It proposed the retention of communal electorates for Muslims and Hindus until tensions calmed. The British government drafted legislation to provide the reforms. The Round Table Conferences decided that

Britain would unite the princely states with the provinces directly under its administration and eventually give the combined government of India dominion status. The congress and the Muslims split over details, leaving the decisions to the British.

The Government of India Act provided autonomy to the 11 Indian provinces it created. It separated Aden and Burma from India, increased the pool of eligible voters from 7 million to 35 million, and created two new provinces—Sind, split from Bombay, and Orissa, split from Bihar. Provincial assemblies included more elected Indian representatives. The governor, often British, retained the rights of intervention in emergencies. The first elections under the act occurred in 1937.

The act was the longest bill the British parliament ever passed. Parliament did not trust Indians, particularly Indian politicians, and wanted to be sure there was no room for interpretation or adjustment. Theoretically, it provided self-government in all areas but defense and foreign affairs. In practice, it reserved extensive powers for British intervention in Indian affairs through the British-appointed viceroy and provincial governors who were responsible to the secretary of state for India.

The act also had provisions for the formation of a federal government, but because half the states never agreed to its terms, a federation never occurred. It also failed to address the religious problem. Hindus were two-thirds of India's population, leading to concerns by the minority Muslims that they would be treated unfairly. When the Hindu-dominated Congress Party won eight of the 11 provincial elections in 1937 the Muslims led by MOHAMMAD ALI JINNAH began demanding a separate state, Pakistan.

Although the British parliament thought it was realistic to federate states of widely diverging size, sophistication, and structure, it did not happen. The princes failed to recognize that they could control the federation if they united in support of it. Instead, they pursued their own interests with the result that the federation never received the requisite majority.

The act failed to attract significant support from moderates, in large part because they did not trust the British. The Hindu electorate preferred the Congress Party, and the Congress Party wanted dominion status equal to that granted to the white dominions, which included control over foreign as well as internal affairs.

The first viceroy after the act was passed was Lord Linlithgow. He was intelligent, honest, hardworking, serious, and committed to the success of the act. He was also stolid, unimaginative, legalistic, and unable to deal with people other than those in his own circle.

Under pressure he turned to administrative details while becoming rigid on strategy. He struggled unsuccessfully to deal with Gandhi, Nehru, and Jinnah. Compromise between the four men was impossible.

Indian provinces enjoyed self-rule after 1937 for two years, until the onset of the war. Linlithgow tried and failed to get the princes to accept the federation, but neither the British government nor the princes supported him. In 1939, when Britain and Germany declared war, India was automatically included. His failure to consult with Indian leaders, while constitutionally correct, offended Indian public opinion. The congress ministers, who were not consulted, resigned, while Muslim leaders in provinces where they had a majority cooperated with Britain in war. Thus, chances for Indian unity died.

JOHN H. BARNHILL

India Act, Government of (1919)

WORLD WAR I was important for India's nationalist movement. Indians of all persuasions overwhelmingly supported Great Britain and the Allied cause during the war. Nearly 800,000 Indian soldiers plus 500,000 non-combatants served in Europe and the Middle East.

Communal relations between Hindus and Muslims took several turns between the passage of the INDIA COUNCILS ACT in 1909 and 1919. The reunion of Bengal in 1911 (which canceled its partition into two provinces) pleased the Hindus but antagonized the Muslims. The ALL-INDIA MUSLIM LEAGUE began to attract younger and bolder leaders, most notably a brilliant lawyer named MOHAMMAD ALI JINNAH (1876–1946). Similarly MOHANDAS K. GANDHI (1869–1948) and Jawaharlal Nehru (1889–1967) emerged as leaders of the INDIAN NATIONAL CONGRESS. Many in India's Muslim minority became concerned with the ultimate fate of the Muslim Ottoman Empire, which fought in the opposing Central Powers camp. World War I also aroused both the congress and the league to demand significant constitutional reforms from Britain. In 1916 they concluded a Congress-

League Scheme of Reforms, known as the Lucknow Pact. It made wide-ranging demands for greater self-government, equality of Indians with other races throughout the British Empire and Commonwealth (in response to racial discrimination in South Africa and Canada), and greater opportunities for Indians in the armed forces of India.

In response, the new secretary of state for India, Edwin Montagu, officially announced the British government's commitment to "the gradual development of self-governing institutions with a view to the progressive realization of responsible government in India" in August 1917. He then toured India, met with Indian leaders, and together with Viceroy Lord Chelmsford drafted a Report for Indian Constitutional Reform in 1918, popularly called the Montagu-Chelmsford Report. A modified version of the report was embodied in the Government of India Act of 1919. It introduced partial self-government to India's nine provinces in a system called dyarchy, whereby elected representatives controlled the departments of agriculture, sanitation, education, and so on, while the British-appointed governor and his advisers retained control of finance, the police, prisons, and relief. This was intended as a step toward complete responsible government. The viceroy, however, retained control of the central government, and the role of the mostly elected bicameral legislature remained advisory. The electorate was expanded, and separate electorates (Muslims elected their own representatives) were kept in place, on Muslim insistence.

The Government of India Act was a significant advance in India's freedom movement. Others included a separate Indian delegation to the PARIS PEACE CONFERENCE in 1919, in the same manner as the self-governing dominions (Canada, Australia, New Zealand, and South Africa). India also became a member of the LEAGUE OF NATIONS. But these advances did not satisfy Indian nationalists, who were inflamed by the continuation of wartime laws that abridged civil freedoms, and acts of peaceful and violent resistance continued. Hindu-Muslim accord continued during the KHALIFAT MOVEMENT, when Indians supported the Ottoman emperor's religious leadership as caliph of Islam. The cooperation collapsed when MUSTAFA KEMAL ATATÜRK established a republic in Turkey and abolished the caliphate in 1923 and also due to increasing competition between the two communal groups for power in a future independent India.

India Councils Act of 1909 (Morley-Minto Reforms)

During the late 19th century British-educated Indians began to demand a role in their government, which later developed into the independence movement. In 1885 an Englishman founded the INDIAN NATIONAL CONGRESS, although most of its members were high-caste Hindus. The congress met annually to promote the goal of greater participation of Indians in government.

By the early 20th century a radical wing had developed in the congress that was not content with the slow pace of reform. They were energized by the partition of the huge province of Bengal into two in 1905: East Bengal (including Assam) with a Muslim majority, and West Bengal (including Bihar and Orissa) with a Hindu majority. A storm of protest against the partition ensued and included an economic boycott of British goods and acts of terrorism. The congress was split over this issue, and a radical wing split off to form the New Party. The new viceroy, Lord Minto (1845–1914), on the one hand acted to repress the unrest, while on the other he worked to enact reforms with the secretary of state for India of the newly elected Liberal government in Great Britain, John (later Lord) Morley (1838–1923).

The partition of Bengal was a catalyst for Muslim political consciousness. Since the decline and fall of the Muslim Mughal dynasty, Indian Muslims had fallen behind Hindus in attaining a modern education and adjusting to new conditions. Unlike Hindus, Indian Muslims were encouraged by the formation of East Bengal. Realizing that constitutional reforms were in the works and that they would be a minority in a representative government, Western-educated Muslims led by AGA KHAN organized the ALL-INDIA MUSLIM LEAGUE in 1905 and lobbied Minto for a “fair share” for the Muslim community in any representative system. Like the congress, the league also met in annual conventions to formulate goals.

In 1909 the British parliament passed the Indian Councils Act. It increased membership of legisla-

tive councils in both the central and provincial governments (all appointed up to then) to make elected members the majority in the provincial legislatures. Importantly, educated men who paid a certain sum of taxes were allowed to vote for the first time in Indian history. Some seats were reserved for Muslim candidates, and only Muslims could vote for them. Moreover, the elected members were also empowered to question officials; to debate legislation, including the budget; and to introduce laws.

However, the viceroy and the governors still had total control and could veto any laws that were passed. The first elections were held in 1910 and elected 135 Indian representatives, who took their seats at various legislatures throughout India. This act and other measures gradually restored calm to India. The act is important because it established representative responsible government as the goal for India and introduced the elective principle to a nonwhite possession of Great Britain.

Indian National Congress (1885–1947)

The Indian National Congress (INC) was a leader of the Indian freedom movement against British colonial rule. One of the success stories of the nationalist struggle in Asia, the congress was established in 1885. A political consciousness was arising in the latter part of the 19th century among Indian intelligentsia, and various people emerged to raise their voices against foreign rule. The sincere endeavor of Allan Octavian Hume (1829–1912), along with the efforts of Indian leaders, resulted in the emergence of the INC on December 25, 1885.

From its first meeting, held in the city of Bombay (now Mumbai), the INC worked relentlessly to end alien rule in India. In its initial phases the INC was very modest in its demands, such as expansion of legislative councils and an increase in governmental grants to indigenous industries. It even pledged loy-

alty to the British Empire. It increased sentiments of national unity and rose above religious, caste, and regional divisions. Dadabhai Naoroji (1825–1917), the president of the INC in its second and ninth sessions, argued that the British government was responsible for poverty in India. The true character of the British Empire was revealed by various demands by the congress. A base also was created for the Congress Party, from which later leaders could work for the cause of Indian independence.

But a gradual disillusionment developed against the moderate leadership. A rift occurred, and the radical, or extremist, phase (1905–19) began in the history of the INC. The new generation was drawn from the lower middle class in urban areas. It was more radical in nature and sometimes took recourse to Hindu religious symbols like the Ganapati Festival, which became mass based under Bal Gangadhar Tilak's direction. The terrorist movement of Bengal invoked the name of the goddess Kali. The extremist brand of politics was aggressive in nature, and it was indigenous, with no attachment to Western ideals.

The goal of the extremists was *swaraj* (self-rule), and their efforts were imbued with *swadeshi* (indigenous) sentiment directed against foreign goods, dress, and education. The Punjab group was led by Lajpat Rai; the Bengal one was represented by Aurobindo (1872–1950) and Pal. The administration (1899–1905) of Viceroy Lord George Nathaniel Curzon (1859–1925) decided to partition the province of Bengal in October 1905, leading to the antipartition movement, which engulfed most of the country. Goods from British factories were boycotted, and the use of *swadeshi* was advocated.

A split occurred between the moderates and extremists at the Surat session of 1907, and the moderate leader, Gopal Krishna Gokhale (1866–1915), did not endorse Tilak as president for the 1908 session. The split harmed the INC and the nationalist movement. There was also a rise of communalism in Indian politics and a sizable section of the Muslims did not adhere to the congress ideology. The ALL-INDIA MUSLIM LEAGUE (AIML) was established on December 30, 1906.

The INC and the AIML would chart out separate courses, resulting in a vivisection of the country 41 years later. The congress was revived in the Lucknow session of 1916, where both the extremists and the moderates realized that the split was not serving the cause of the nationalist movement. In the same year the Lucknow Pact, which brought Hindu-Muslim rapprochement for

the time being, was signed between the congress and the league.

Meanwhile, WORLD WAR I had broken out, and Great Britain declared war on Germany on August 4, 1914. The INC supported the British war efforts in the hope that India would be suitably rewarded in its path toward self-government. But this hope was dashed. The ideals of self-determination presented by U.S. president WOODROW WILSON at the PARIS PEACE CONFERENCE were not applied to colonies in Asia. MOHANDAS K. GANDHI (1869–1948) was emerging as a mass leader in India and gave a new direction to the Indian freedom movement under the INC.

GENERAL STRIKE

Gandhi called for a general strike in April 1919, after the draconian Rowlatt Act that empowered the authorities to arrest and detain without trial, was enacted. A large numbers of Muslims began to participate in the activities of the INC.

The INC became an umbrella organization drawing support from all classes of the population. The revamping of the internal organization of the congress was retained with some modifications in independent India. The Pradesh (Provincial) Congress Committee (PCC) was formed at the state level, with 10 to 15 members belonging to the working committees. At the apex was the All-India Congress Committee (AICC), composed of state leaders from the PCC. The Congress Working Committee, consisting of senior party leaders, was in charge of important decisions.

The president of the INC was the national leader, presiding over annual sessions generally held in the month of December. These sessions spelled out the party programs and discussed measures to be taken in the ongoing struggle against British rule. Gandhi's emphasis on *ahimsa* (nonviolence) and *satyagraha* (nonviolent protest) became successful in shaking the foundation of the British Empire.

The INC entered a new phase in its struggle against the British raj between 1919 and 1922. The noncooperation movement, with its technique of nonviolent struggle, was launched. At a special session of the AICC held in Calcutta in September 1920, it was decided to initiate noncooperation with the British government by boycotting educational institutions, law courts, and legislatures. The use of hand spinning for producing khadi (cloth) was emphasized. A violent mob, after a police firing on February 5, 1922, at Chauri Chaura, attacked the police station, resulting in the deaths of 22 police personnel. Gandhi was

A city view of Benares, India, in 1922. The rich cultural heritage of the Indian people, evident in the scene above, helped fuel the resolve of India to be independent of British domination and to achieve self-rule through peaceful means.

aghast at this violent path, and the Congress Working Committee meeting at Bardoli suspended the noncooperation movement seven days afterward. Although Congress leaders like SUBHAS CHANDRA BOSE and Jawaharlal Nehru (1889–1964) as well as a large section of the populace were stunned by the Working Committee resolution, they abided by the decision. Gandhi was arrested in March 1922 and given six years' imprisonment for treason.

The INC was opposed to the formation of the Simon Commission in 1927–28, which was constituted to look into the constitutional reforms and appointed a committee headed by MOTILAL NEHRU to prepare a constitution for a free India. Dominion status for India was the main feature of the Nehru Report. The All-Party Conference, convened in Calcutta in December 1928, did not agree with the report. MOHAMMAD ALI JINNAH (1876–1948), the leader of the AIML, also

was against the report because his demands were not met. The radical wing of the congress, led by Motilal's son Jawaharlal, also was opposed to the report. It was decided to launch civil disobedience for the cause of *purna swaraj* (complete independence). The congress passed the resolution for complete independence in the historic Lahore session of 1929. The following year the civil disobedience movement started when Gandhi launched the salt *satyagraha* with his famous Dandi March in March 1930. Gandhi was arrested in May, and altogether 90,000 people were put behind bars. The British realized the need for congress participation and initiated a dialogue. As a result Lord Irwin (1881–1959), the viceroy, signed a pact with Gandhi in March 1931 by which the civil disobedience movement was suspended, and the congress agreed to join the ROUND TABLE CONFERENCE. In the Karachi session of the INC, talks with the British were endorsed.

The session was important as the congress passed resolutions on basic fundamental rights and launched key economic programs. The British did not accept the congress demand of complete independence, and Gandhi was arrested in January 1932 after returning to India.

The congress took part in the elections of 1937 per the provisions of the GOVERNMENT OF INDIA ACT of 1935 and performed very well in the general constituencies. At the time of WORLD WAR II it sympathized with the victims of Nazism and fascism. The blitzkrieg by Japan in Southeast Asia had brought the war to India's doorstep. The AICC passed the famous resolution of "Quit India" on August 8, 1942, and Nehru said that it was a "fight to finish." With a motto to "do or die," the Quit India movement began and was suppressed with the utmost force. The postwar scene was marked by devastating economic consequence of the war, the spread of communalism and communal riots, Jinnah's indomitable quest for control of Pakistan, and the congress's desire for a compromise.

Great Britain finally decided to leave India, which it could not hold with diminished resources, and ordered elections to central and provincial legislatures. The congress captured all the general seats in the center and obtained a majority in all the provinces except Sind, the Punjab, and Bengal. Between 1945 and 1947 there were serious revolts by peasants and workers. The league was determined in its demand for partition of the country. In September 1946 an interim government was formed by the congress. The British prime minister, Clement Attlee (1883–1967), had declared that the British would quit India. A compromise formula was finally worked out by the viceroy Lord (Louis) Mountbatten (1900–79) in his talks with the leaders of the congress and the league. It was announced in June 1947 that India and Pakistan would be independent from British colonial rule on August 15, 1947.

PATIT PABAN MISHRA

Indian Reorganization Act, U.S.

This 1934 legislation, also known as the Wheeler-Howard Act, was a NEW DEAL program that significantly reshaped, in mostly positive ways, federal policies concerning the Native American population. Spearheaded by reformer John Collier, the Indian Reorganization Act (IRA) empowered tribal leaders, recognized the legitimacy of Indian customs and culture, and preserved Indian land rights. It was not, however, a final "fix" in the tortured four-century history of white and Native interaction.

By 1900, 10 years after the last battle between federal troops and Sioux Indians at Wounded Knee, South Dakota, the U.S. Native population had dwindled to 237,000. By 1934 Native land holdings had declined by two-thirds, to 7,500 square miles.

Although in 1924 all Natives had been granted U.S. citizenship, the federal Bureau of Indian Affairs (BIA) continued to supervise every aspect of Natives' lives, while states with large native populations regularly imposed special restrictions on them. Efforts to separate and "civilize" Indian children continued at places like the Carlisle, Pennsylvania, and Albuquerque, New Mexico, Indian Schools.

Sympathetic whites, beginning with Helen Hunt Jackson in 1881 and Charles Lummis in the 1890s, took up the Indian cause in books and articles that caused a sensation but had minimal effect on actual Natives except often to romanticize their history and plight. Lummis was able to interest his Harvard classmate THEODORE ROOSEVELT in some Indian issues. John Collier, likewise born to wealth, was educated at Columbia University and in Paris. In 1919 he first encountered the "Indian problem" while visiting artist and heiress Mabel Dodge Luhan in New Mexico. (She had married Tony Luhan, a Pueblo Indian.) Collier soon came to oppose forced Americanization programs and attacked the competence and honesty of

BIA officials. At the urging of Collier and his Indian Defense Association, a two-year study, the Meriam Report, was released in 1928. It revealed vast failures in previous federal programs, especially the assimilationist 1887 Dawes Act.

Named commissioner of Indian affairs by FRANKLIN D. ROOSEVELT in 1933, John Collier created a special public works program for Natives—the Indian Civilian Conservation Corps. Serving as BIA head until 1945, Collier sought out more Indian staff for his agency. The BIA instituted new health programs and encouraged Native practices, including communal living and farming practices that the Dawes Act had tried to wipe out.

Less successful were efforts to turn tribal leadership into formal constitutional governing bodies. An estimated 60 percent of tribal units chose not to create governments sanctioned by the IRA. Suspicion kept some tribes from working effectively with their members or with mixed-blood relatives who were no longer tribally affiliated. Traditional Indians did not always appreciate the involvement of “progressive” tribal members who often lived in cities or later fought in WORLD WAR II. Despite infusions of aid during the GREAT DEPRESSION, Natives, already one of the poorest groups in the United States, saw little meaningful improvement in living conditions. Sometimes other New Deal programs ignored or harmed tribal groups. One such massive project to install dams along the Northwest’s Columbia River flooded tribal hunting and fishing lands.

By 1950 the IRA, although still considered a huge improvement over previous relationships between whites and Native peoples, had seemingly reached the limits of its ability to truly improve the lives and autonomy of America’s original inhabitants.

MARSHA E. ACKERMANN

Industrial Workers of the World

The Industrial Workers of the World (IWW) was a U.S. workers’ movement that had a significant impact on organized labor during the first two decades of

the 20th century. IWW members were commonly known as Wobblies (one story holds that this moniker came from the wobble saw used by lumberjacks). Founded in 1905, the organization was always small, with a peak membership numbering in the tens of thousands during the 1910s, but the Wobblies successfully agitated among many more workers. Influenced by European syndicalist ideas about remaking society, they sought to create “one big union” that would bring together all laborers. They offered the vision of a nation in which wages and private profits were abolished, and business-dominated government gave way to “industrial democracy.” Fierocious opponents of the American Federation of Labor, which organized only craft workers, the IWW focused on the semiskilled and unskilled: mass-production factory hands, loggers, longshoremen, migrant farm workers, and domestic servants. Their interest in organizing African Americans and newly arrived immigrants was particularly unusual in an era of racial and ethnic polarization.

Unlike other organized labor groups, the IWW rejected the idea of collective bargaining to improve wages and working conditions. They refused to sign contracts, arguing that this would impede workers’ ability to take action. They also were uninterested in traditional political activism, because many of the groups to whom they appealed were unable to vote. Instead, they wanted to foment change by creating a revolutionary proletarian culture.

Wobblies typically went out in “flying squadrons” of mobile agitators, riding the rails, sleeping in hobo “jungles” on the outskirts of towns, and preaching the IWW message to all those among whom they lived and worked. The Wobblies were known for their constant singing while they traveled or were in jail. Although they often used inflammatory rhetoric, this was paired with acts of nonviolent civil disobedience. One attention-grabbing tactic was their “free speech” fight. The point was to educate onlookers about their constitutional rights and the unjustness of authorities. A Wobbly would stand on a soapbox on a street corner, delivering a harangue. If he or she was arrested, another Wobbly would immediately take up the speech and be arrested in turn, until the local jail was flooded and the public expense became prohibitive. The IWW also taught various forms of nonviolent resistance on the job. Workers would surreptitiously slow down their pace of production, or they might deliberately feed a machine too quickly so that the wheels became clogged. The IWW pioneered the use of the sit-down strike; the

first recorded in U.S. history occurred in 1906 in Schenectady, New York, when 3,000 workers trained by Wobblies simply sat down in their factory and refused to leave.

While most labor organizations have a formal structure with elected officials, a central headquarters, and union locals, the IWW was the opposite: Members often boasted that they were all leaders and that their “locals” could be found under any traveling member’s hat. This decentralization made it possible for the Wobblies to agitate among a wide variety of laborers across the country. In 1912 they enjoyed a major success when they led a strike at textile mills in Lawrence, Massachusetts. They managed to sustain cross-ethnic solidarity among 23,000 workers during the difficult winter months, not only winning concessions on pay and work hours but also highlighting issues such as dangerous workplace conditions and child labor. In 1913 they led a similar strike in Paterson, New Jersey, which became a cause célèbre among New York City’s leftist intellectuals, culminating with a dramatic worker pageant held at Madison Square Garden. The Wobblies ultimately failed to build a long-term movement. Workers gravitated to the IWW when they wanted to fight for “bread and butter” issues, but upon attaining these immediate material goals they rarely stayed committed to the Wobbly call for revolution.

The IWW was viewed as a dangerous organization by business interests, and Wobbly agitators were sometimes subject to brutal repression. For example, in 1916 in Everett, Washington, a deputized crowd at a dock fired on a steamship full of singing Wobblies, killing or wounding several dozen. When the United States entered WORLD WAR I in 1917, the IWW had succeeded in organizing copper mines in the West to the extent that national production was threatened. In the heated wartime atmosphere, the IWW was denounced on the Senate floor as standing for “Imperial Wilhelm’s Warriors.” The WOODROW WILSON administration decided to prosecute Wobblies for espionage and “criminal syndicalism.” In September 1917 the Justice Department conducted raids on every significant IWW hall, and by the end of the year more than a hundred prominent organizers were locked up. In a mass trial in 1918, the government was unable to show that the Wobblies had committed any crimes, instead focusing on their “seditious and disloyal” teachings. Most were convicted, and over the next several years the organization expended its energies and meager financial resources fighting the convictions. Internal schisms and further legal repression left the IWW impotent by the mid-1920s.

TOM COLLINS

influenza pandemic (1918)

The influenza pandemic of 1918 was, in terms of loss of life, the most catastrophic illness to have ever afflicted the world’s population. Nothing before or since has approached its effects in terms of the number of fatalities or in the speed with which it spread. From the latter part of the 19th century until WORLD WAR I (1914–18), many Europeans and Americans had taken comfort in the idea that technical, scientific, and medical progress had created a better world. The war shattered most of that illusion, but any comfort that might have been derived from advances in medical science were not to be found as millions died from the disease.

The influenza of 1918 was often referred to as the Spanish influenza. It struck Spain, where it was reported on in detail. Because Spain was neutral in the war, there was no press censorship, and so the reports gave many the impression that it had started there. Where it came from is still unknown.

Whatever its point of origin, the pandemic killed between 25 million and 100 million people. Even at the lower number, it was a catastrophe; total casualties resulting from World War I were 15 million. One estimate is that 500,000,000 people were infected, one-third of the world’s population in 1918. Fatality rates were generally more than 2.5 percent of those infected. In Asia and Africa any public health statistics were partial or nonexistent. All estimates have to be taken as approximate with a great variance on which numbers can be considered reliable. One estimate, for example, puts the number of deaths in India at 17 million. In the United States estimates of influenza-related deaths range from 500,000 to 675,000. Britain’s figures of dead were said to be 200,000 and France’s twice that.

Earlier recorded pandemics of influenza had occurred in 1781, 1830–32, 1847, and 1889. These had crossed from east to west, from Asia to Europe and, to a lesser extent the Western Hemisphere. Although serious, they never approached the level of destruction of

A demonstration of procedure for nurses at the Red Cross Emergency Ambulance Station in Washington, D.C., during the influenza pandemic of 1918, which killed millions of people and infected millions more.

life found in 1918. The world was a far different place in 1918 than it was earlier, even far different from 1889. The World War had caused large numbers of people to move from one country to another, from one continent to another. It is fairly certain that soldiers from Europe brought the influenza virus back to America on troop ships. That war-driven mobility caused the virus to move farther and more rapidly than had ever been the case.

Another factor was that the war had displaced large numbers of people who had to live with decreased food supplies, no sure housing, lack of medical care, and susceptibility to infections or sickness. Another factor was the soldiers themselves who were cramped in barracks that were not healthy and who, because of the stress of combat, were physically susceptible to infections.

The influenza usually struck very quickly. There are many accounts of people appearing to be perfectly healthy and suddenly, within hours, becoming completely debilitated. From that point they could die, often the next day. Those stricken would cough up blood. The coughing was so severe that bodies that were autopsied showed serious tears of internal muscles due solely to severe coughing. Pneumonia combined with the influenza, and many essentially drowned because their lungs were filled with liquid they could not be rid of.

In many cases, a blue tinge would develop at the ears and spread to the rest of the face, darkening it. Doctors and nurses in the United States mentioned that it was often difficult to tell Caucasians from African Americans, as patients of both races would become so

dramatically discolored. Doctors and nurses generally believed that the most serious cases, the ones who would die, were those that showed the discoloration. The British army's medical department, as part of its record keeping during the pandemic and in order to educate doctors and nurses what to look for, commissioned artists to draw pictures of soldiers who had been stricken. These illustrations would show the coloration to look for. Even many years after the pandemic, these portraits of ill soldiers, many of them about to die, provide an excellent idea of what they were suffering.

The time that the pandemic began has generally been agreed to have been in the spring of 1918. This was the first wave. It was reported and treated in several U.S. Army camps in the Midwest, primarily in Kansas in March. Those soldiers eventually transferred to France, where it is believed they spread the disease. In August sailors from Europe reached Boston and brought the infection to that city. From there it traveled almost immediately to an army post in central Massachusetts, Fort Devens, where it killed 100 soldiers a day.

Influenza traveled very rapidly down the East Coast, following the transportation corridor created by the railroads. Of the cities on the east coast of the United States, Philadelphia was the hardest hit. By October influenza was so serious there that 4,600 people died in one week. The second wave of the pandemic hit hardest through November 1918. Despite the efforts of doctors and nurses, there was very little that could be done.

One of the effects of the pandemic was that in many places in the world, especially the United States, the public health service was mobilized. In the end that intervention did not significantly halt or affect the spread of the disease. It did, however, lead to the practice of mobilizing all resources and taking steps by the government to try to halt the disease. Bans and quarantines were put into place. In many communities citizens were forced to wear face masks, or they would not be allowed on trolleys or might even be fined or jailed. Reporting on the incidences of disease as well as the quality of reporting changed. Influenza had never been reported as a health issue until 1918. Record keeping was more stringent and included tissue samples, some of which would be used over 70 years later to support research on the spread of influenza and reconstruct the genome of the 1918 virus.

ROBERT STACY

International Court of Justice (ICJ)

The International Court of Justice (ICJ), often referred to as the World Court, is the principal judicial organ of the United Nations (UN) and was formally established by the Charter of the United Nations in 1945 under articles 92–96. The ICJ is the successor to the Permanent Court of International Justice (PCIJ) established in 1920 by the LEAGUE OF NATIONS to address the issues raised after the cessation of WORLD WAR I.

The ICJ is located at the Peace Palace in The Hague, Netherlands, and is the only body of the UN not located at UN headquarters in New York. The statute of the ICJ is similar to that of its predecessor and is the main constitutional document regulating the court. The court operates in two official languages, French and English, and all judicial activity is published in both languages. The ICJ as such has no criminal jurisdiction, and consequently it cannot try individuals charged with war crimes; these cases fall to national jurisdictions and to criminal tribunals established by the UN.

Jurisdiction is often a crucial question for the ICJ, whose key principle is consent. The issue of jurisdiction is considered in only two types of ICJ cases: those pertaining to legal disputes submitted by member states on contentious issues, which often pertain to boundary disputes, and the provision of advisory opinions on specific legal questions raised. Unlike contentious issues, an advisory opinion is an opportunity for a UN member or agency to address a question before the ICJ. The court typically seeks out useful information pertaining to questions raised and provides a forum to present such questions. A nonbinding opinion on the matter is then published to the UN member states.

Under article 93 of the UN Charter, all UN members fall under the court's statute. Non-UN members may also become parties to the court's statute under article 93(2). The court comprises 15 judges elected to nine-year terms by the UN General Assembly and Security

Council, with only one judge per any nationality sitting at one time on the court. Judges sitting on the court do not represent their respective countries and are free to vote against their national self-interests in pursuit of the goals of the UN Charter. Sources of law applied by the court include using international customs and procedures, current conventions and treaties, judicial decisions and teachings of highly qualified individuals, and application of general principles of law recognized by civilized nations.

PAUL VON JANKOWSKY

Iran-Soviet relations

Well before the 1920s one of Iran's greatest political obstacles was the imperial rivalry between Great Britain and Russia. Both imperial powers felt that Iran was of vital importance to their respective empires, and, spurred by economic interests, the British and the Russian czars followed by the Soviet government vied for influence and control over Iran.

During WORLD WAR I Iran declared neutrality. When Britain and Russia became allies in the war against Germany, they secretly entered into the Constantinople Agreement, by which they would divide Iranian territory between themselves. Denied representation at the Versailles Peace Conference following World War I, Iran faced postwar occupation by Britain not only in the south but also in the north after the Bolsheviks overthrew the Russian czarist monarchy and withdrew Russian military forces. Oil, protection of the route to India, and its postwar mandate over neighboring Iraq ensured Britain's continued interest in Iran. In contrast, the Soviets renounced the czar's imperialistic policies and declared the Constantinople Agreement void. The Soviet regime then recognized Iran's right to self-determination and repudiated historic concessions made by former Iranian governments.

During this period Soviet foreign policy objectives varied. Soviet officials wished to establish friendly

relations with bordering countries and to oppose Western domination in order to spread the communist revolution. To this end, Iran was of utmost importance, and the new Soviet policy effectively weakened British control over Iran. Six days before the signing of the Iran-Soviet Treaty of Friendship, a coup led by Colonel Reza Khan overthrew the Iranian government. Khan's rise to power culminated with his accession as shah in 1925 and the founding of the PAHLAVI DYNASTY. Khan's government initially instituted a wide variety of modernizing reforms. As Khan consolidated power his regime became less progressive and more dictatorial.

Relations with the Soviet Union were of considerable concern, particularly as the traditional power struggle between Great Britain and Russia had refashioned itself into a struggle between capitalism and communism. Iran had come to rely on Soviet trade, thus making it vulnerable to Soviet advances. In 1927 Khan negotiated an ad hoc agreement with the Soviets that sought a trade balance and defined terms for bilateral trade delegations. Iran's relations with the Soviet Union were also complicated by territorial disputes involving the northern region and access to the Caspian Sea. On February 20, 1926, Khan negotiated a treaty attempting to resolve the dispute; the treaty created a joint territorial commission but granted it little power to effect decisions, and the territorial issues remained. Iran also had problems with foreign interference, and on October 1, 1927, it signed a Treaty of Guarantee and Neutrality with the Soviet Union. The treaty was a nonaggression pact that assured that neither country would interfere in the other's internal operations. For the Soviet Union the treaty allayed border security fears, but it caused discontent in Iran, which saw it as a continuation of historical external encroachment on its right to sovereignty. After WORLD WAR II Iran would shift its alliance toward the United States in order to prevent Soviet expansion along the border.

MICHELLE DONNELLY

Iraqi rebellion (1920)

The Iraqi rebellion of 1920 was a massive nationalist revolt against the British occupation of the country. In 1915 in the midst of WORLD WAR I, British and imperial troops moved into southern Iraq and then north toward Baghdad, where they were defeated by Ottoman troops. In 1917 a new British expedition took Baghdad, and by the end of the war they controlled the northern Iraqi province of Mosul as well. Mosul was of particular importance owing to its oil fields, over which the British meant to retain control.

The initial British occupation met with little Iraqi resistance, but after the SAN REMO TREATY of 1920 formalized British control under the mandate, Iraqi opposition to a prolonged occupation mounted. The full-scale war that broke out in the summer of 1920 raged throughout the country but was particularly strong in rural areas. The war united Iraqis representing a complex mix of religious and ethnic groups. Sunni Muslim Kurds in the north, who wanted the British out of Mosul, joined with Shi'i in the south in their opposition to the British. Shi'i centers around the holy cities of Karbala and Najaf were among the first to resist. Tribal confederacies also joined the struggle, as did women who collected money for the cause and served as messengers. The war raged for four months and took the British by surprise.

Arnold Wilson, the top British civilian official in Iraq, had advocated a policy of direct control and had predicted no difficulties in holding the territory, but as the violence grew and casualties mounted the British were forced to bring in reinforcements. The British smashed the rebellion with military force and even employed the Royal Air Force to bomb tribal armies with poison mustard gas. In the face of British military superiority and internal disputes that prevented a clear-cut chain of command or unified strategy, the revolt was crushed. In the course of the rebellion, over 400 British troops and 10,000 Iraqis had been killed.

The British sent Sir Percy Cox to Baghdad to help bring civilian order, and he set up an Iraqi interim government. At the CAIRO CONFERENCE of 1921 the British addressed the problems of governing Iraq. The British decided on a policy of indirect rule, whereby the façade of independence would be created through the establishment of an Arab monarchy led by Faysal, son of Sherif Husayn and a member of the respected Hashemite family, which would be closely linked to Britain. Britain thereby retained real control over the foreign affairs and economic wealth of Iraq, particularly

its oil reserves, without assuming the financial costs necessitated by a large military presence and direct rule.

JANICE J. TERRY

Irish independence

Constitutional nationalists had long worked to pass home rule bills that would achieve Irish independence from Britain. None had achieved a lasting self-government for the Irish people. In Dublin on April 24, 1916, the Easter Uprising changed the struggle for Irish independence, not because of its military success but because of the British reaction to the Irish nationalists. With 450, mostly civilians, killed and 2,614 wounded, Britain exacted severe punishments upon the perpetrators of the rebellion. Seven men who had signed the Easter Proclamation, outlining the objectives of the rebels, were executed. The rebels quickly became martyrs in the eyes of the Irish and radicalized many who had previously been moderates.

The Irish Political Party, once dominant in English parliamentary politics, had advocated moderation and limited autonomy, but it became increasingly marginalized following the rebellion. Alternatives to the Irish Political Party emerged, and several organizations, including Sinn Féin and the Irish Republican Brotherhood, advanced nationalist goals. To many, British domination was cultural and social as well as political. They felt that British goods, the British educational system, and the Anglican religion had erased Irish identity. Organizations such as the Gaelic League and the Gaelic Athletic Association provided outlets for the expression of Irish cultural heritage based on education, language, and literature.

Sinn Féin's success in the 1918 election secured its dominance in the independence movement. The Easter Uprising had occurred when Britain had been preoccupied with WORLD WAR I, and Britain feared that a successful Irish separatist movement would spark similar revolts in its far-flung colonial holdings.

Éamon de Valera (right) was the president of Sinn Féin and later of the Dáil Éireann, the Irish parliament based in Dublin.

In 1918 Britain indicated that it would extend conscription to Ireland. The so-called conscription crisis further spurred and unified Irish nationalists. Rebels were encouraged by WOODROW WILSON's principles of self-determination, which intimated that every nation had the right to independence and sovereignty. In 1919 Irish representatives even traveled to attend the PARIS PEACE CONFERENCE in the hopes that Irish independence would be addressed during the postwar peace negotiations.

From 1919 to 1921 the progressive use of physical force effectively transformed the struggle into a guerilla war. Much of the fighting began during the last 12 months of the conflict, which caused over a thousand deaths. British reaction was harsh; there were frequent police raids of nationalist houses and large-scale arrests. But British retaliation only escalated the violence. The Black and Tans, former servicemen who

supported the British police, became notorious for violent tactics. Irish prisoners often went on hunger strikes as a form of political protest. On November 21, 1920, known as Bloody Sunday, 26 people were killed when nationalists attacked British intelligence agents and the British police retaliated during a Gaelic football game. Martial law was imposed on parts of the country, and an attempt was made to negotiate peace.

On July 9, 1921, the two sides agreed to a truce. ÉAMON DE VALERA, then president of Sinn Féin and later president of the Dáil Éireann (the Irish parliament based in Dublin), met with British prime minister DAVID LLOYD GEORGE several times over the summer of 1921. In these negotiations Valera insisted on a completely independent and unified state. The British delayed granting independence but did agree to an Anglo-Irish Conference. In the fall of 1921 a three-person delegation from the Dáil was chosen to represent Ireland. The resulting Anglo-Irish Treaty, signed on December 6, 1921, created a new but divided Ireland consisting of a six-county Northern Ireland linked to Britain, but with its own form of home rule. Mainly Protestant, the northern Ulster province had long opposed Irish independence. The remaining 26 counties formed a distinct Ireland with limited autonomy and ensured continued allegiance to the British monarch. With none of the major objectives met, the Irish delegation returned to angry resistance from the rest of the Dáil cabinet. Valera, who had decided not to participate in the conference, had instructed the delegation to consult with the rest of the cabinet prior to agreement on central issues and to send a draft of the treaty for review before signing it, but the delegation had not done so.

Michael Collins, representing the delegation, continued to support the treaty, while Valera remained adamantly opposed and continued to press for complete Irish independence. A bitter civil war between those opposing and those supporting the treaty ensured that the violence continued.

isolationism, U.S.

Isolationism played a dominant role in U.S. foreign policy in the first half of the 20th century. Particularly during the 1930s, the United States sought to retreat behind its ocean borders and decrease if not eliminate its international responsibilities. After WORLD WAR II, isolationism became increasingly discredited and was replaced by cold war internationalism as the dominant U.S. foreign policy belief.

Despite increasing reliance on foreign trade as a pillar of the U.S. economy, the United States sought to limit its global responsibilities in the aftermath of WORLD WAR I. The Senate's rejection of the Versailles Treaty meant that the United States would not join the LEAGUE OF NATIONS despite the fact that it was primarily the creation of President WOODROW WILSON. Instead, the United States pursued a policy of independent internationalism during the 1920s, promoting naval disarmament at the WASHINGTON CONFERENCE in 1921–22; establishing a “reparations triangle,” which established a relationship between German reparations payments to the Allies and Allied war debt payments to the United States through the Dawes and Young Plans (1924 and 1929, respectively); and intervening in Central America and the Caribbean throughout the decade. The onset of the GREAT DEPRESSION began to reverse this internationalism. During the latter stages of the HOOVER administration and the most of the first two terms of the FRANKLIN D. ROOSEVELT administration, isolationist sentiment grew in Congress and in the country.

This desire to limit involvement in the growing conflicts found in Europe and Asia in the mid-1930s became public policy through the creation of the Neutrality Acts of 1935, 1936, and 1937. The Neutrality Act of 1935 forbade arms sales to belligerents during a recognized state of war. The Neutrality Act of 1936 renewed the 1935 provision and added a commitment to stay out of the ongoing SPANISH CIVIL WAR while also forbidding loans by banks to belligerents. The Neutrality Act of 1937 added to the first two provisions that forbade citizens from traveling on belligerents' vessels and limited trade in nonmilitary goods with belligerents to a “cash-and-carry” basis, meaning that belligerents could purchase nonmilitary items from the United States with cash only and would have to pick up the goods from the United States in their own ships. These three acts limited presidential control of foreign policy by eliminating any distinction between aggressors and victims in a conflict, eliminating a key moral component

from U.S. policy. That these acts had very little relationship to the actual events in Europe and Asia troubled the isolationists not at all. Their goal was to keep the United States out of the growing conflicts in the rest of the world.

The Roosevelt administration's acquiescence in the creation of these acts reflected the president's emphasis on dealing with the Great Depression. The primary movers behind the Neutrality Acts tended to support the NEW DEAL. As events in Europe and Asia pushed the world once again toward war, Roosevelt began to take tentative steps toward challenging isolationist dominance. On October 5, 1937, he spoke to a nationwide audience from the isolationist stronghold of Chicago. In the speech he called for the quarantine of aggressor nations by the world's peace-loving peoples. However, when the British sought clarification on what Roosevelt intended to do to carry out this quarantine, the president responded that both U.S. public opinion and the Neutrality Acts precluded any actual preemptive actions by the president. Roosevelt all but repudiated the speech over the next several weeks.

One of the primary consequences of U.S. isolationism was the enhanced commitment of Britain and France to a policy of APPEASEMENT. If they could not count on the United States for loans, guns, or assistance, the British and French did not believe they could credibly resist Germany militarily. Hence, they were willing to trade land for peace, acquiescing in the *Anschluss* (unification) of Germany and Austria in March 1938. After a summer of crisis created by ADOLF HITLER's demand for autonomy for ethnic Germans living in the Sudetenland in Czechoslovakia, the British and French pressured the Czech government to meet the demand. When Hitler responded by changing the demand to German annexation of the territory, the British and French at first reluctantly mobilized their militaries but then agreed to meet with Hitler and Italian dictator BENITO MUSSOLINI at Munich, where the Czechs were forced to cede the territory to Germany.

During the intervening year, Roosevelt slowly and tentatively began to challenge isolationist dominance, specifically requesting a liberalization of the Neutrality Acts' limitation on arms sales in his State of the Union message on January 4, 1939. Building on the anti-German outcry over the *Kristallnacht* attacks on German Jews on November 10, 1938, Roosevelt began to salt his discussions with congressional leaders and the press with references to the growing danger of Germany, a danger confirmed by its seizure of the remainder of Czechoslovakia on March 15, 1939. This aggression

ended the policy of appeasement by Britain and France and seemed to strengthen Roosevelt's hand in demanding Neutrality Act revision.

When the war began with the German invasion of Poland on September 1, 1939, followed by the French and British declarations of war two days later, Roosevelt seized the opportunity to act. After issuing a neutrality proclamation in which he clearly was not calling for an absolutely neutral stance toward the belligerents in Europe, Roosevelt called Congress back into session to again take up the issue of revising the Neutrality Acts. Despite fierce resistance from the isolationists, the arms embargo was lifted. However, the isolationists did force a cash-and-carry provision into the act for the sale of arms and munitions.

Through 1940 and especially after the fall of France in June, isolationists hammered away at the sale of arms to the British, calling for arms to be used to defend the United States instead. Led by the organization America First, the isolationists predicted Britain's defeat and criticized Roosevelt for wasting U.S. resources on a lost cause. The most formidable spokesman for America First was aviation hero CHARLES LINDBERGH, who argued that the Germans were far superior to the British in air power and that this would inevitably lead to Britain's defeat. Nevertheless, Roosevelt not only continued to sell increasing amounts of arms to the British, he also authorized a trade of 50 U.S. destroyers to Britain in return for the right to lease nine British bases in the Western Hemisphere. The destroyers would both help the British convoy goods across the Atlantic and serve as morale-boosting evidence of the U.S. potential to assist.

Ironically, while isolationists condemned Roosevelt's behavior in the Atlantic as designed to trigger U.S. entry

into the war, it would be events in Asia that would actually bring about the end to neutrality and isolationism. U.S. economic sanctions against Japan over the seizure of French Indochina, particularly an embargo on the sale of oil, led to tense negotiations between the two sides. Ultimately, the negotiations failed because of incompatible goals; the United States demanded Japanese withdrawal from Indochina and China in return for normalizing trade, while the Japanese demanded that the United States recognize the new territorial arrangements in Asia and resume normal trade. As the talks broke down, the Japanese government implemented the plan of Admiral Isoroku Yamamoto to launch a surprise attack on the American Pacific Fleet at anchor at PEARL HARBOR, Hawaii. By attacking the United States in this manner, the Japanese accomplished something Roosevelt had failed to do for the previous two years: unite the people of the United States behind intervention in the war while mortally wounding isolationism in the United States. On December 8, 1941, Congress approved a declaration of war against Japan, with only one member dissenting. Isolationism was discredited, and the United States united behind the war effort.

RICHARD M. FILIPINK, JR.

Japan, U.S. occupation of

The U.S.-led occupation of Japan began at 8:28 A.M. on August 28, 1945, when U.S. army colonel Charles P. Tench of General DOUGLAS MACARTHUR's personal staff stepped out of a C-47 Dakota transport onto the battered runway of Atsugi Airfield outside Tokyo, becoming the first foreign conqueror of Japanese soil in its thousand-year history.

Tench and his crew were followed two days later by 4,000 men of the 11th Airborne Division. On the same day, the U.S. 6th Marine Division began landing troops at the Yokosuka Navy Base as U.S. and British ships steamed into Tokyo Bay and MacArthur himself put the seal on WORLD WAR II victory and the beginning of postwar occupation by landing in his aircraft at Atsugi saying, "Melbourne to Tokyo was a long road, but this looks like the payoff."

The occupation was planned concurrently with the invasion of the Home Islands in early 1945 by MacArthur's headquarters. The occupation plan was to demilitarize Japan so that it would never again threaten its neighbors and to create a democratic and responsible government and a strong, self-sufficient economy. Operation Blacklist was designed to bring about a sudden surrender or collapse of the Japanese government, realized with the atomic attacks on HIROSHIMA AND NAGASAKI.

The operation called for a three-phase military occupation of Japan and Korea, with 23 divisions and supporting naval and air forces. The first prior-

ity would be to secure bases of operation, control the Japanese government, disarm its military, and liberate 36,000 Allied prisoners of war and internees who were close to death from starvation, torture, and abuse.

The Japan that surrendered in 1945 was an exhausted, stunned, and starving nation. Having never known defeat or occupation in their history, the Japanese now saw their institutions destroyed, agriculture and industry wrecked, and 2 million countrymen dead. Acres of major cities were in ruins, thousands homeless, the emperor abject, and the armed forces defeated and dishonored. It was a complete collapse.

With Japan's surrender, MacArthur was appointed supreme commander for the Allied powers in Japan under a U.S. State Department directive entitled "United States Initial Post-Surrender Policy for Japan." Instead of Japan's being divided into separate nationally administered zones, as was done in Germany, the fallen empire would continue as one nation under its existing government and emperor, subject to U.S.-led direction. Above MacArthur was the 11-nation Far Eastern Commission in Washington, established in December 1945, which was to make policy for the occupation and which could discuss and approve but not rescind previous U.S. decisions. Thus, in practice, despite Soviet complaints and demands for a share in the occupation, MacArthur had supreme power over Japan.

The first U.S. move after securing operating bases was to recover and repatriate prisoners from more than 140 camps across the Home Islands, airdropping supplies and sending out medical and transport teams to

bring the survivors of Malaya and Bataan home. Nearly all of them were brought out by the end of 1945.

Meanwhile, some 250,000 occupying forces, including an Australian-led British Commonwealth occupation force of 36,000 Britons, Australians, New Zealanders, and Indians, fanned out across Japan. While the British force was assigned to southern Honshu and Shikoku Island (including Hiroshima), MacArthur banned Soviet troops from his occupation force.

With his headquarters at the Dai Ichi Building in Tokyo, MacArthur did not need to create a political structure to administer Japan. The nation's government was intact when it surrendered, so his directives were simply passed through his staff to the Japanese-established Central Liaison Office, which acted as intermediary between the occupation staff and the government ministries until the two groups developed working relationships.

After freeing the POWs, MacArthur moved to demobilize the battered Japanese war machine, whose 5.5 million soldiers, 1.5 million sailors, and 3.5 million civilian colonial overlords were still defending bypassed islands across the Pacific. The Imperial Japanese Army and Imperial Japanese Navy were converted into the First and Second Demobilization Bureaus, respectively, and administered the repatriation, disarming, and demobilization of these men. Most of this work was done by the Japanese under close Allied supervision. Japanese warships, even the aircraft carrier *Hosho*, carried defeated troops home, making their final voyages before going to the scrap yard, where these ships were joined in destruction by tanks, kamikaze planes, midget submarines, and artillery shells of the once-mighty Japanese armed forces.

The United States also moved to break down the Japanese police state, decentralizing the police, releasing political prisoners, and abolishing the Home Ministry, which had controlled Japan's secret police agency, the Kempei Tai. With these changes in place, the United States was able by December 1945 to issue a Bill of Rights directive, which gave the Japanese U.S.-style civil liberties, freedom of speech, and freedom of the press.

The role of the emperor was also changed. Shortly after the surrender he met MacArthur, which enabled many Japanese to accept the new regime. In January 1946 Emperor HIROHITO formally renounced his divinity, ending over a thousand years of Japanese tradition. He also began making public appearances in the style of Britain's royal family.

In April 1946 MacArthur ordered general elections as a referendum on the changes he planned. Three out

of four Japanese went to the polls, including 14 million newly enfranchised women, to elect a free diet. The results supported a mildly liberal, prodemocracy government, an endorsement for his plans. Next MacArthur directed the Japanese government to draft a constitution to replace the 1867 Meiji Constitution. While issued by the government in accordance with existing rules to change the constitution, this new document was drafted by MacArthur and his staff. It went into effect in May 1947.

The "MacArthur Constitution" created a parliamentary government, the Diet, with popularly elected upper and lower houses, a cabinet that held executive power, and a decentralized regional government of elected assemblies. The constitution also guaranteed basic freedoms. Its most famous section was article nine, in which Japan forever repudiated war as a means of settling disputes and banned the maintenance of military forces. As a result, the modern Japanese armed services are called the Self-Defense Forces.

The United States also had to cope with a shattered economy. One-fourth of Japan's national wealth was lost to the war, prices had risen 20 times, and workers could barely afford to purchase what little food was for sale. Many people had to barter their possessions for fish. MacArthur imposed numerous reforms on the Japanese economy. Believing that those who till the soil should own it, he had the Diet break up vast farms held by a few landlords. These farms were expropriated and sold cheaply to the former tenants. MacArthur also worked to break up the commercial empires of the *zaibatsu*, or "money cliques," but this proved less successful. The large Japanese businesses were vital to the nation's economic rebuilding, and names like Matsushita, Mitsubishi, Nissan, Honda, and Kawasaki, powerful before the war, remained so into the 21st century. Nevertheless, Japan's economy was rebuilt with speed and power.

MacArthur also rebuilt the Japanese education system by replacing nationalist curriculums and textbooks with more liberal materials, raising the school-leaving age, decentralizing the system, and replacing political indoctrination with U.S. and British ideals that supported independent thought.

MacArthur also liberated women by ending contract marriage, concubinage, and divorce laws that favored husbands. He also made high schools coeducational and opened 25 women's universities. The Japanese responded: 14,000 women became social workers, and 2,000 became police officers. Women filled up the colleges and new assemblies.

Changes wrought by the U.S. occupation were massive: Public health programs eliminated epidemics, U.S. police officials retrained Japanese policemen, and Japan's dull official radio programs of government speeches were replaced with a combination of public affairs shows, impartial newscasts, soap operas, and popular music, all of which attracted millions of listeners.

At the same time the Anglo-American presence in Japan did much to change Japanese society. The arrival of the occupation forces sent a shiver of fear through the Home Islands, fear that the dreaded gaijin—"hairy barbarians"—would rape, loot, and pillage, as Japanese soldiers had done in lands they conquered. MacArthur gave strict orders regarding his troops' behavior but did not issue nonfraternization orders. As a result, U.S. soldiers were soon overcoming language barriers to play softball games against Japanese teams, playing tourist at Japan's many attractions, and giving out chewing gum and candy to ubiquitous Japanese children.

By 1947 the occupation had succeeded in its political and economic goals. Despite Soviet intransigence, Japanese society had been transformed. The combination of MacArthur's steely resolve, U.S. generosity, and Japanese industriousness and adaptability created the modern Japan, able to connect to both its historic roots and the Western world with its democratic values, economic systems, and advanced technology. By March 1947 MacArthur himself said that the occupation was completed and began turning over control of the nation's affairs and policies to the Japanese. In 1951 the United States and most of its allies signed a peace treaty with Japan, ending an occupation that was generally conceded to have ended five years previously.

DAVID H. LIPPMAN

Japanese constitution (1947)

Japan surrendered unconditionally after its resounding defeat in WORLD WAR II. It was occupied by the U.S. military from 1945 to 1951 under the supervision of General DOUGLAS MACARTHUR, supreme commander for the Allied Powers. MacArthur undertook fundamental reforms of Japan, one of the most important being the

enactment of a new constitution in 1947, which became the underpinning of postwar democratic Japan.

MacArthur first ordered Japanese government leaders to submit to him the draft of a new constitution, but he found it unsatisfactory. Then he ordered his general headquarters, under General Courtney Whitney, to produce a model draft that incorporated U.S. ideals, which was readied one week later, on February 13, 1946. Japanese leaders had few opportunities to make changes to it, and the final draft was published on March 6 and ratified by the Japanese legislature.

The constitution, which went into effect on May 3, 1947, was fundamentally different from the Meiji Constitution of 1889. It transferred sovereignty from the emperor to the people, making the emperor the "symbol of the state and of the unity of the people." On MacArthur's order he had already renounced his claim of personal divinity in a proclamation on January 1, 1946. The constitution also gave women suffrage for the first time and granted them legal equality with men. It essentially copied the British parliamentary system with a bicameral legislature, called the Diet: the lower or house of representatives, elected every four years, held power over the upper house of councillors, also elected (every six years), which replaced the previous House of Peers that had comprised many hereditary nobles. The government was led by a prime minister selected from the Diet by its members. An independent judiciary was created under the supreme court, which was empowered to review the constitutionality of legislation. Article 9 of the constitution renounced war as an instrument of national policy, including the right of belligerence and the maintenance of all forms of war potential. The goal of this article was to prevent Japan's reversion to its prewar militarism; 31 articles were devoted to human rights, patterned after the U.S. Bill of Rights. Two-thirds majorities in both houses were necessary to initiate changes in the constitution.

Although the United States was the catalyst for the fundamental changes embodied in the 1947 constitution, it remained unchanged after Japan regained sovereignty in 1952, indicating that the majority of Japanese were satisfied with its provisions. The only significant modification pertained to the creation of a self-defense force in 1952. This was prompted by the United States, in recognition of the need for such a force during the cold war, and warranted because article 9 did not deny Japan the right of self-defense. However, Japan's self-defense force remained small, at 235,500 troops in 1995, and likewise its defense budget, at around 1

percent of the nation's GDP. Japan relied on protection by the United States, established under the Mutual Defense Treaty of 1952.

JIU-HWA LO UPSHUR

Japanese internment

After the Japanese attack on PEARL HARBOR in December 1941, pressure for control of the Japanese and Japanese Americans in their midst built among West Coast whites. Farmers who competed with Japanese Americans, politicians unwilling to take a stand against anti-Japanese sentiment, and ordinary citizens aroused by the attack on Pearl Harbor—all combined against the Japanese, over two-thirds of whom were U.S. citizens. Supporting the local bias was the belief on the part of many high-ranking U.S. military officers that the Japanese might invade the West Coast. The military was still off balance after the surprise attack of December 7, 1941.

U.S. officials also feared that the Japanese Americans might spy for the Japanese. They disregarded the U.S. citizenship of the majority of Japanese Americans and the fact that over half were children. They also disregarded the fact that there had been no previous cases of Japanese-American disloyalty to the United States.

On February 19, 1942, President FRANKLIN D. ROOSEVELT signed Executive Order 9066, which ordered the evacuation of all Japanese from the West Coast. The order authorized the “appropriate Military Commander” to decide who was a military risk and to exclude those so defined from the “war zones on the Pacific Frontier,” which included all of California, half of Oregon and Washington, and a third of Arizona. In the climate of the times, those so defined included all persons of Japanese descent.

The United States relocated 120,000 of its people to 10 internment camps, officially labeled internment centers, in California, Idaho, Utah, Arizona, Wyoming,

Colorado, and Arkansas. Although the camps usually took internees based on geographical location, some families were split into different camps.

The camps included Amache (Granada), Colorado; Manzanar, California; Minidoka, Idaho; Poston, Arizona; Rohwer, Arkansas; Topaz, Utah; Tule Lake, California; Gila River, Arizona; Heart Mountain, Wyoming; and Jerome, Arkansas. In June 1944 the Japanese prisoners from Jerome were relocated to Rohwer, and Jerome housed German prisoners of war. Gila River was divided into two camps, and about 1,100 inmates from both volunteered for the army. Gila River also had accredited schools and an 8,000-acre farm.

The internees fell into two categories. There were about 11,000 resident aliens of Japanese descent who were classified as enemy aliens and interned in Department of Justice camps because they were regarded as threats to national security. Their families could stay with them on a voluntary basis. They were colocated with Italian and German enemy aliens and their families, American or other. The other 114,000 internees were those, alien and citizen, evacuated from the West Coast defense areas due to doubts about their loyalty. Technically, these people were evacuated and relocated temporarily, not interned, but as a practical matter the distinction lacked any significance.

Canada evacuated 23,000 Nikkei to camps in British Columbia (BC). Males worked on sugar beet projects or in road camps. Women and children moved to six BC towns removed from the coast.

The U.S. camps, administered by the War Relocation Authority (WRA), tended to be overcrowded. Living conditions were poor. The internees had only short notice—48 hours—of their evacuation and could bring only a few possessions. They had to sell their belongings at fire sale prices to the fortune hunters who preyed on them during their 48 hours. The camps were fenced with barbed wire and guarded by armed soldiers. Camp leadership was open only to U.S.-born Nisei. The Issei, the Japanese-born elders, were subject by U.S. policy to the rule of their offspring. The WRA reported in 1943 that housing consisted of tar paper-covered frame barracks without plumbing or cooking facilities. Coal was scarce, so internees slept under as many blankets as they could find. Food was kept to a cost of 48 cents a day per internee. Meals were taken at mess halls seating 250 to 300 people. Deficient medical care and a high level of emotional stress proved fatal to some internees.

Tule Lake was the camp for troublemakers. It also became home to those who refused to take the loyalty

Eight Japanese-American women pose before the camp barbershop at the Tule Lake Relocation Center in Newell, California, in 1942. The United States questioned the loyalty of Japanese-American citizens after Pearl Harbor. Similarly, ethnic Japanese were interned in Canada.

oath in 1943. It became home to 18,000 Japanese, half of whom were U.S. citizens. The loyalty test was given to all internees over age 17. It included two questions: Are you willing to fight in the U.S. armed forces (women were asked if they would volunteer for the Women's Army Corps or Army Nurse Corps), and will you swear unqualified allegiance to the United States, defend it against all attack, and forswear allegiance to the Japanese emperor or any other government or entity?

When the United States offered the chance to leave the camps to those who joined the army, 1,200 internees enlisted. From Tule Lake came 13,000 applications for renunciation of U.S. citizenship. When all was done, 5,766 Nisei eventually renounced U.S. citizenship. All 10 people convicted of spying for Japan during the war were Caucasian. After two and a half years, in December 1944 under Public Proclamation Number 21, Roosevelt rescinded Executive Order 9066, effective in January 1945. The camps were all closed by the end of 1945, and internees returned home, relocated within the United States, or left the country.

Not all internees took their relocation passively. Some regarded the camps as concentration camps and internment as a violation of the right to habeas corpus. The most important challenges were the cases of *Hirabayashi v. United States* (1943) and *Korematsu v. United States* (1944). Fred Korematsu asked whether the government had the right to uproot citizens and intern them solely based on race.

The first attempt to atone came with the Evacuation Claims Act of 1948, under which over 26,000 claims were paid, usually for small amounts. In the 1960s agitation for atonement renewed, and by 1980 Congress had held hearings that produced the 1983 report "Personal Justice Denied," which condemned the internment and stated that *Korematsu*, still the law of the land, was overruled in the court of history.

In 1988 Congress enacted legislation awarding \$20,000 to each of the 60,000 surviving internees. The government of Canada in 1968 issued a formal apology to Japanese Canadians and paid each survivor \$21,000 Canadian dollars.

JOHN H. BARNHILL

Jinnah, Mohammad Ali

(1876–1948) *Pakistani leader*

Mohammad Ali Jinnah was an Indian politician who helped found the country of Pakistan, which he governed as its first governor-general from 1947.

Born into a prosperous Muslim merchant family in British India, Jinnah determined early in life that he wished to be a lawyer, and he studied in Britain and at the University of Bombay to that end. In Britain he was part of the successful campaign for the election of Dadabhai Naoroji, who became the first Indian to sit in the House of Commons. Jinnah divided his time between politics and the law. He was a moderate in religion; his views were rooted in Indian nationalism and the need for independence. However, as part of an educated elite in India he did not despise British political and social institutions but respected and admired the positive aspects of these, and aimed to retain them in an independent India in the future. He first served in an elected political office as part of the INDIAN NATIONAL CONGRESS of 1906.

By the early 20th century, political thought in India was becoming divided between Hindus and Muslims. Muslims were starting to fear domination by Hindus, who were the majority. The ALL-INDIA MUSLIM LEAGUE

was established in 1906, but Jinnah did not join until 1913, when he had been reassured that it was dedicated to a unified struggle for independence. Jinnah established a reputation as an upholder of Hindu-Muslim unity. He was instrumental in forging the 1916 Lucknow Pact, which led to joint action by the congress and the league. However, the political rise of MOHANDAS K. GANDHI, who came to dominate Indian nationalism, led Muslim politicians to feel overshadowed. Jinnah withdrew from the congress and emerged as leader of the Muslim League. However, he committed to constitutional change at a time when Muslim-Hindu riots were starting to flare.

Jinnah spent the years between 1930 and 1935 in London but returned in 1935 when the British parliament passed the GOVERNMENT OF INDIA ACT. He believed that the league should play an important role in a future coalition government. However, elections in 1937 were dominated by the congress, with the league winning only in provinces where Muslims were a majority. After this point relations between Hindus and Muslims broke down almost completely. Fearful of the continued violence and the possible systematic exclusion of Muslim voices from the governance of a future independent India, Jinnah endorsed an idea that had first surfaced in 1930: the concept of a Muslim homeland with its own state on the Indian subcontinent. This state was to be known as Pakistan.

Mohammad Ali Jinnah is the father of Pakistan and was its wise helmsman. He served as the first governor of Pakistan until his death in 1948.

JOHN WALSH

K

Karakhan Declaration, first and second

Immediately after the October Revolution in 1917 the Soviet government of Russia had focused its efforts on instigating revolutions in Europe, but with little success. After establishing the Third International in March 1919 in Moscow, one of whose divisions was in charge of promoting communist revolutions in Asia, China became a prime target of the world communist movement.

Leo Karakhan (1889–1937) was assistant foreign affairs commissar of the Soviet government. On July 25, 1919, he issued a declaration (which came to be known in retrospect as the first Karakhan Declaration) that offered to renounce the unequal treaties that the czarist government had forced on China and further payments by China of indemnity that resulted from the BOXER REBELLION of 1900.

This declaration sought to capitalize on widespread public anger among the Chinese about China's diplomatic defeat at the PARIS PEACE CONFERENCE earlier that year, blaming it on the arrogance of the Western powers and Japan. However, due to a breakdown of communications, the text of the declaration did not reach China until March 1920. Some Chinese intellectuals saw this declaration as a herald of good relations with the Soviet Union. But it had no immediate effect because Great Britain, France, the United States, and Japan were hostile to the Soviets, and under their influ-

ence, China continued to recognize and support the defunct Russian provisional government. Additionally, the Chinese Eastern Railway had, since the Communist Revolution in Russia, been under the joint control of Britain, the United States, Japan, and China.

In September 1920, Karakhan made a second declaration, in which the Soviet government repeated its offers of the previous year, except that it would now negotiate joint control of the Chinese Eastern Railway. China withdrew recognition from the provisional government in September 1920. In 1921 the two governments began negotiations.

Several Soviet representatives came to China between 1921 and 1923 but failed to reach agreement, the stumbling block being control of the railway and the status of Mongolia. In July 1923, Karakhan was appointed chief Soviet negotiator to China; in May 1924, a Sino-Soviet Treaty was signed. It was based on equality: The Soviet Union renounced extraterritorial rights in China, its concessions in several Chinese cities, and its share of the Boxer indemnity, but it retained control of the Chinese Eastern Railway. Mongolia had already become a Soviet satellite state and was not mentioned in the treaty.

From the first Karakhan Declaration, when the weak Soviet government offered to return the privileges its predecessor had obtained, to the Sino-Soviet Treaty of 1924, Soviet foreign policy toward China had hardened. This is because by 1924 the civil war had ended in Russia, and the Soviet government was in unchallenged control. It thus did not need to

conciliate China. Leo Karakhan was executed by Stalin in the purge of 1937.

JIU-HWA LO UPSHUR

Kato Takaaki

(1860–1926) *Japanese politician*

Kato Takaaki (also called Kato Komei) began his career in the firm of Mitsubishi after graduation from Tokyo University. His father-in-law was Yataro Iwasaki, founder of Mitsubishi, and throughout his political career, Kato was associated with Mitsubishi and its interests. Most of his career was spent in government service, beginning with a post in 1887 as private secretary to Okuma Shigenobu, the minister of foreign affairs. He advocated strong ties between Japan and Great Britain as a step on the road to making Japan a world power and was a strong supporter of the Japanese-British Exhibition of 1910.

Takaaki held numerous posts in the Japanese government over the course of his career, including director of the banking bureau in the finance ministry and member of the house of representatives and served three times as foreign minister. In 1913, while serving as foreign minister under Prime Minister Katsura Taro, he created the Kenseikai (Constitutional Party) through a reorganization of the Riekken Doshi-kai (Constitutional of Friends). He became chairman of the new party, which served as opposition to the Rikken Seiyukai (Friends of Constitutional Government Party), which was more conservative. In 1915, while serving as foreign minister, Kato played a major role in securing China's approval of the TWENTY-ONE DEMANDS, in which China granted Japan a number of industrial and strategic concessions.

Kato became prime minister in 1924, leading a coalition government. The following year, his party won a majority in the diet, and he instituted a series of democratic and other reforms. These reforms were partly influenced by his admiration for the British system of government, which he had observed while serving as ambassador to that country. The most sig-

nificant reform may have been the Universal Manhood Suffrage Law, which granted the right to vote to all Japanese men over age 25; this law increased the number of Japanese voters from 3 million to 13 million. Kato also reduced the size of the government bureaucracy and reduced government expenditures on the armed forces. However, not all Kato's legislation was progressive: His government also passed the Peace Preservation Act, the purpose of which was to suppress subversive activities. Takaaki died while in office in 1926.

SARAH BOSLAUGH

Kenseikai, later Minseito, and Seiyukai Parties

The Seiyukai and the Kenseikai/Minseito were the two most powerful political parties in Japan in the first decades of the 20th century.

Under the Meiji Constitution of 1889, sovereignty resided with the Japanese emperor, but considerable ambiguity existed in determining from whence the officials who would run the government were to be drawn. An oligarchic group of genro, or elder statesmen, dominated posts in the cabinet and determined who was to occupy the office of prime minister, but by the close of the 19th century there was rising impatience with oligarchic rule. This led to a period of political maneuvering at the turn of the century that helped bring political parties to positions of greater prominence in Japan.

The base of power for the political parties was the lower house of the Diet, Japan's parliamentary institution. The role of this body was limited, but it nonetheless provided an opportunity for elected representatives to influence affairs of state, most notably in the Diet's power over the national budget. Originally, a tone of confrontation marked relations between the oligarch-dominated cabinet and the party-led Diet, but by the middle of the 1890s both sides increasingly

recognized the possible benefits of cooperation and compromise.

The Seiyukai, a political party founded in 1900 by Ito Hirobumi—himself an elder statesman and one of the architects of the Meiji state—became the leading political party of the early 20th century in Japan. Internal divisions within his party led to Ito's own resignation in 1903, and another elder statesman, Saionji Kinmochi, became the Seiyukai's new president. Yet HARA KEI was quickly becoming the leading personality in the Seiyukai. It was he who struck a deal with Prime Minister Katsura Taro in 1904 whereby the Seiyukai, in exchange for its Diet members' support for government expenditures needed to prosecute the Russo-Japanese War, gained future access to the office of prime minister. Party president Saionji served two stints as prime minister, from 1906 to 1908 and from 1911 to 1912, and the intervening non-Saionji cabinets included party representatives. It was clear that the Seiyukai had become a fixture in Japanese politics. Kai worked to strengthen the party by recruiting members of the civil bureaucracy into the organization, providing funds for local development, and seeking the support of leading industrialists. Each of these efforts was designed to further the Seiyukai's fortunes in the Diet and to lead to eventual party rule in the government.

In 1912–13 financial constraints forced a showdown between the Seiyukai and the leadership of Japan's military, the latter of whom wanted funding to add new army divisions, which the Seiyukai leadership was unwilling to provide. In December 1912, the army toppled Saionji's cabinet by ordering the war minister to resign and refusing to replace him. Katsura resumed the post of prime minister, but discontent over these machinations within the government led a number of political officials, business leaders, and journalists to form a "movement to protect constitutional government," which helped to spark mass demonstrations. Katsura resigned after just two months in an episode that illustrated the growing power of the political parties, especially the Seiyukai.

Meanwhile, Katsura created a new political party, the Doshikai—this party was renamed the Kenseikai party in 1916 and then reorganized as the Minseito in 1927—in an attempt to build a rival party that could undermine Seiyukai dominance of the Diet's lower house. Upon Katsura's death in 1913, his new party was led by KATO TAKAAKI, and in the election of 1915 the Doshikai succeeded in relegating the Seiyukai to the position of second-largest party in the Diet. The

Seiyukai, however, regained a plurality of seats in 1917 and won an absolute majority in 1920.

As prime minister, Kai tried to build support for the Seiyukai through a "positive policy" of public spending on education and developing local infrastructure. Hara's government expanded the franchise by lowering the tax qualification for voting but did not act upon calls for universal male suffrage.

Hara was assassinated in 1921, and following his death, party government was dealt a setback, as from 1922 to 1924 the post of prime minister reverted back to a series of nonparty officials. The last of these was ousted from office by another "movement to protect constitutional government," this one consisting of a Diet coalition that included both the Kenseikai (the name for the Doshikai after 1916) and the Seiyukai. Thereupon Kenseikai president Kato Takaaki, whose party had regained a plurality of seats in the lower house of the Diet, became prime minister in 1924. For the next eight years until 1932, the heads of these two major parties alternated as prime ministers.

As early as 1920 the Kenseikai had sponsored, along with a number of smaller parties, a universal male suffrage bill in the Diet. At that time the proposal was voted down by the Seiyukai. With Kato Takaaki as prime minister, however, the Kenseikai was able to achieve passage of legislation guaranteeing universal suffrage for Japanese men aged 25 and older. The Kenseikai-led government took an approach more friendly to Japanese labor than their Seiyukai counterparts did. The new government legalized workers' strikes, legislated improvements in industrial conditions, and provided for health benefits for workers. In the realm of economics, the platform of the Kenseikai/Minseito party emphasized the imperative of fiscal conservatism and balanced budgets in opposition to the spending programs of the Seiyukai, though both parties spent considerable money on pork-barrel projects.

The foreign policy approach of the Kenseikai/Minseito party in the 1920s was based on conciliation with China and cooperation with the West. Yet this policy engendered discontent in some quarters, especially among the military, who were concerned about protecting Japanese interests in Manchuria, perceived as severely threatened by the end of the decade by Chinese nationalists and the Soviet military. Economically, as much of the globe descended into the GREAT DEPRESSION. Minseito-led cabinets tried to resolve Japan's financial difficulties, such as imbalance of trade and the too-low market price of rice, which hurt Japanese farmers but could not mitigate Japan's financial situation.

The era of party government was marked by an increase in public scandals and allegations of corruption that damaged the prestige of the parties, as did the occasionally unseemly conduct of rival party representatives on the floor of the Diet, including physical assaults. Party government also came under heavy criticism from rightist elements who felt that such a parliamentary system ran fundamentally counter to traditional Japanese values. With disenchantment toward party officials now spreading on all sides, popular acceptance or toleration of the existing system was tenuous in an atmosphere of national crisis, and military officials and members of “patriotic societies” were able to undermine the role of the parties in governance.

In late 1931 the Seiyukai again gained control of the government from the Minseito, but it would prove to be a short-lived cabinet. The maneuvering of antiparty elements, culminating in May 1932 with the assassination of prime minister Inukai Tsuyoshi, resulted in the fall of the Seiyukai cabinet. The era of party rule suddenly ended, as so-called national unity governments headed by military leaders or non-party elites eroded the influence of the parties, and party representatives in the cabinets declined. The parties continued to function in the Diet, but internal strife over how best to defend the Diet’s prerogatives in the face of increasing military authority may have prevented the parties from asserting themselves more strongly. As the 1930s progressed the Minseito tended to hold to its policy of supporting the nonparty cabinets, while the Seiyukai eventually took a more oppositional stance. The parties still managed to cling to their place in the Diet and even played a vital part in the ouster of multiple cabinets in the late 1930s and into 1940. In the latter year, however, Prime Minister Konoé Fumimaro’s government succeeded in formally dissolving Japan’s political party organizations in the name of creating a wartime new order. Former party officials continued to exercise parliamentary influence and as such to play a role in political affairs, albeit a considerably limited one.

ADAM C. STANLEY

Kerensky, Alexander Fyodorovich

(1881–1970) *Russian revolutionary leader*

Alexander Kerensky played a key role in toppling the czarist monarchy immediately before VLADIMIR LENIN’s Bolsheviks seized power in 1917.

Kerensky, the son of a headmaster, was born in Simbirsk (now Ulyanovsk), which was also Lenin’s birthplace. Kerensky graduated in law from Saint Petersburg University in 1904. In 1905, Kerensky joined the Socialist Revolutionary Party and became editor of a radical newspaper. He was arrested and exiled but returned to Saint Petersburg in 1906 and worked as a lawyer, demonstrating his political sympathies by his frequent defense of accused revolutionaries. In 1912, he was elected to the *duma*, imperial Russia’s central parliament, as a member of the Moderate Labor Party. He was nominated to the Provisional Committee as a leader of the opposition to Czar Nicholas II.

Unlike many radical socialist leaders, Kerensky supported Russia’s entrance into WORLD WAR I in 1914. However, he became more and more disappointed with the czar’s unsuccessful conduct of the war. Kerensky was dismayed by the weakness of the czar’s command of the Russian troops. When the February Revolution broke out in 1917, Kerensky urged the removal of Nicholas II. To Kerensky’s enthusiasm, he was elected vice chairman of the Saint Petersburg Soviet. When the czar abdicated on March 13, the *duma* formed a provisional government. Kerensky was appointed minister of justice and instituted a series of reforms, including civil liberties such as freedom of speech, assembly, and the press, as well as the abolition of ethnic and religious discrimination. He made plans for the introduction of universal suffrage. He became a widely known and popular figure among the revolutionary leaders. Handed the war and navy ministry in May 1917, Kerensky was determined to ensure Russia’s continued participation in the Allied war effort. He toured the front, where he made a series of inspiring speeches appealing to the demoralized troops to continue fighting. Kerensky subsequently planned a new offensive against Germany and Austria-Hungary. Encouraged by the Bolsheviks, there were mass demonstrations against Kerensky in Petrograd. The July 1 Offensive,

also named the Kerensky Offensive, was an attack on the whole Galician sector of the front. Low morale, poor supply, and the arrival of German reserves quickly brought the advance to a halt.

As a consequence of that defeat, the provisional government was compelled to reorganize. Kerensky, whose rhetoric still seemed to win him popular support, became prime minister. His essential problem was that his country was exhausted after three years of warfare. Kerensky, however, felt obliged by Russia's commitments to its allies to continue the war against the Central Powers. He also foresaw that Germany would demand vast territorial concessions as the price for peace. For those reasons, Kerensky decided to continue the war. Lenin and his Bolsheviks were promising "peace, land, and bread." There was a rapid increase in the number of deserters: By the autumn of 1917, an estimated 2 million men had left the army. Many of these soldiers used their weapons to seize land from the nobility. Kerensky was powerless to stop the redistribution of land in the countryside.

Kerensky's refusal to end Russia's engagement in the war proved his undoing. He found himself increasingly isolated between the extreme revolutionaries on the left and those on the right. He forced Lenin to flee the country following the July Days demonstration and subsequently announced a postponement of constituent assembly elections until November. Despite his efforts to unite the whole country, he alienated the moderate political factions as well as the officers' corps by dismissing the supreme commander, General Lavr Kornilov. In September, Kerensky took over his post personally.

When Kornilov started a revolt and marched on Petrograd, Kerensky was obliged to request assistance from Lenin and distribute weapons to the Petrograd workers. Most of these armed workers, however, soon sided with the Bolsheviks. Kerensky publicly declared a socialist republic on September 14 and released radical leaders from prison. Lenin was determined to overthrow Kerensky's government before it could be legitimized by elections. Kerensky's fall was triggered by his decision on November 5 to arrest the leaders of the Bolshevik committee, which resulted only in bringing about their uprising. On November 7, the Bolsheviks seized power in what became known as the October Revolution.

Kerensky escaped from Petrograd and went to Pskov, where he rallied loyal troops for an attempt to retake the capital. His troops were defeated. Kerensky lived in hiding until he could leave the country in May 1918. Kerensky, then only 36 years old, spent the remainder

of his long life in exile. He lived in Paris, engaged in the quarrels of the exiled Russian leaders. When the Germans occupied France in 1940, he escaped to the United States. In 1939 he had married the Australian journalist Lydia Tritton. In 1945, Kerensky traveled with her to Australia and lived there until her death in 1946. Thereafter, he returned to the United States and spent much of his time at Stanford University in California, where he used the Hoover Institution's archive on Russian history. He lectured at universities, wrote, and broadcast extensively on Russian politics and history as well as on his revolutionary experiences. When Kerensky died in 1970, he was the last surviving major participant in the events of 1917.

MARTIN MOLL

Khilafat movement

The institution of the *khalifa*, the leader or representative of the Muslim community after the death of the prophet Muhammad, had been associated with the Turkish Ottoman Empire since the 16th century. At the time of WORLD WAR I, the Ottoman emperor and *khalifa* headed the largest independent Islamic political entity in the world. When Great Britain declared war on the Ottoman Empire in November 1914, it promised the Muslim subjects of the British Empire in India that the conflict would not involve attacking the Muslim holy places in Arabia. In return, the British asked for the loyalty of their Muslim subjects to British war efforts. During the course of the war, it became evident that the Ottoman Empire would be dismembered. Consequently, the khilafat question came to be of increasing importance to Muslims in India. On March 20, 1919, at a public meeting of 15,000 Muslims from Bombay, a Khilafat committee was formed. By November 1919 following widespread public demonstrations in support of the Khilafat movement, an All-India Khilafat Conference assembled in Delhi. The conference protest-

ed the placing of former lands of the Ottoman Empire, such as Syria, Palestine, and Mesopotamia, under non-Muslim mandates on the grounds that dividing the Ottoman Empire and depriving its sovereign of his spiritual and political authority was an attack on Islam. The conference also called for a Muslim boycott of European goods if the peace treaty with the Ottoman Empire was unjust and jeopardized the khilafat. The efforts of the conference were supported by MOHANDAS K. GANDHI, who had at the time launched a movement of noncooperation with the British, and by the INDIAN NATIONAL CONGRESS.

The leaders of the Khilafat movement were Maulana Muhammad Ali and his brother Maulana Shaukat Ali. Maulana Muhammad Ali was chosen to lead the Muslim delegation that traveled to England in 1919 to represent Muslim interests to the British, and the Ali brothers pioneered the Khilafat Manifesto, which they presented on March 17, 1920, to British prime minister LLOYD GEORGE. Meanwhile, the terms of the Treaty of Sevres were published in May, whereby the Arab lands were to become independent of the Ottoman Empire. Syria, Mesopotamia, and Palestine became French and British mandates, and the Straits were internationalized. When the Turkish government signed the treaty on August 20, 1920, the delegation was left with no option but to return to India.

However, when MUSTAFA KEMAL ATATÜRK rejected the Treaty of Sèvres and began resisting Allied occupation in Anatolia, Khilafat leaders avidly supported his cause. It was only when Mustafa Kemal wrested a new treaty of peace from the European powers in 1922, established the republic of Turkey, and himself abolished the Khilafat in 1924 that the Khilafat movement in India came to an end. While the movement did not succeed in its goal of protecting the sovereignty of the Ottoman *khalifa*, it came to represent in the history of India both a moment of Hindu-Muslim cooperation against colonial rule and the eventual articulation of a distinct Indian Muslim identity.

TAYMIYA R. ZAMAN

Kikuyu Central Association

The Kikuyu Central Association (KCA) was an organization that took a central role in the Kenyan struggle for independence from the British Empire in the first half of the 20th century. The KCA was dominated by the Kikuyu ethnic people and eventually provided in Jomo Kenyatta the first prime minister and then president of independent Kenya.

The Kikuyu were a tribal agricultural people whose territory at one time extended across much of what is now modern Kenya. At the time of the arrival of expansionist European powers, Kikuyu power was declining owing to disease, particularly smallpox. Kenya was brought into the British Empire, and British and British-sponsored settlers took over much of the best land. The Kikuyu leader Mbatian died at this time, and his people were divided. It was not until the 1920s and 30s that the Kikuyu were reunited and started to organize themselves to protest against imperial control. The KCA was shaped in part by the intensely decentralized and tribal nature of the organization of the people and was largely inspired by the desire to recover the lands lost to the primarily white settlers. In the early 1920s, the East Africa Association was founded as the first expression of Kenyan independence. It was dissolved in 1925 owing to government pressure but then reconstituted as the KCA in the same year. Within a few years, the KCA came under the direction of Jomo Kenyatta, who became its general secretary.

Progress in obtaining independence was slow and hampered by the outbreak of WORLD WAR II. By the early 1950s, sentiment had hardened to the extent that the Kenyans were prepared to enter into violent struggle to ensure their independence. Those with this hard-line tendency came to be known as the Mau Mau, who were closely associated with the oaths that members of the KCA took to demonstrate their dedication to unity.

The Mau Mau Rebellion took a decade to succeed, during which time many thousands of rebels were killed by the British, and thousands more were interned in concentration camps. Mau Maus pursued a policy of sabotage and assassination, and the attempts to suppress them were severe but considered acceptable by authori-

ties in the field. The truth as to what happened during this period has only recently begun to become known widely. It was the Kikuyu people and the KCA who led the way in the Kenyan independence movement, and this enabled Kikuyus to take leading roles in the postindependence government. This led to subsequent political dissent.

JOHN WALSH

King Crane Commission (1919)

The King-Crane Commission of 1919 was a delegation sent to the territories of the former Ottoman Empire after WORLD WAR I. A champion of self-determination, U.S. president WOODROW WILSON proposed that an Inter-Allied Commission be sent to the region to determine the aspirations of local inhabitants. Wilson proposed the commission upon the conclusion of secret and contradictory negotiations between the Allied powers that did not consider the wishes of the natives.

The agreements that most dramatically emphasized the conflicting self-interests of the British and the French for the Ottoman territories during World War I were the SHERIF HUSAYN–MCMAHON CORRESPONDENCE, the SYKES-PICOT TREATY, and the BALFOUR DECLARATION. The Sherif Husayn–McMahon correspondence was an agreement made between the British high commissioner in Egypt, Henry McMahon, and Sherif Husayn of Mecca between 1914 and 1916. The British promised to recognize and help establish Arab independence if the Arabs agreed to fight in the war alongside the British. The Sykes-Picot agreement of 1916 defined areas of British and French control in Arab lands and in Turkey. Finally, in November of 1917 the British government publicly issued the Balfour Declaration, which stated British support for the “establishment in Palestine of a national home for the Jewish people.” The British negotiated the same territory on three separate occasions, making three distinctly different promises to three distinctly different groups of people.

The commission was to determine whether the region was prepared for self-determination and to ascertain what nations, if any, the indigenous population wanted to serve as mandatory powers. Wilson appointed Henry Churchill King, president of Oberlin College, and Charles R. Crane, a Chicago businessman and trustee of Robert College in Constantinople, to serve as the U.S. representatives. The King Crane Commission visited Palestine, Syria, Lebanon, and Anatolia between June and August 1919. The King Crane findings were first published in 1922 but not officially released by the U.S. Department of State until 1947.

The King Crane Commission began its inquiry on June 10, 1919, and traveled through Syria and Palestine for six weeks. The method of inquiry was to meet with individuals and delegations that would represent all the significant groups in the various communities to obtain the opinions and desires of the natives. The commission received 1,863 petitions with approximately 19,000 signatures and heard from representatives from over 1,500 villages. The commission concluded that if a foreign administration came to Syria, it should come not as a colonizing power but as a mandatory under the auspices of the LEAGUE OF NATIONS. The recommendations further emphasized the preservation of Syrian unity and recommended that Syria be placed under one mandatory power. Despite previous French ambitions, the commissioners recommended that the United States undertake the single mandate for all Syria. If such an arrangement were not possible, the Syrians desired that Great Britain assume the mandate. Syria was proclaimed an independent republic in 1944.

In Palestine, the King Crane Commission recommended serious modification of the Zionist program of unlimited immigration of Jews. King and Crane emphasized in their findings the centrality of the Holy Land as important to Christians, Jews, and Muslims alike and recommended against the creation of an entirely Jewish state. A number of factors, including President Wilson’s incapacitating stroke, prevented the findings and recommendations of the King Crane Commission from ever being implemented.

JULIE EADEH

Kitchener, Horatio Herbert

(1850–1916) *British general*

Herbert, first earl Kitchener of Khartoum and of Broome, was born near Listowel in County Kerry, Ireland, to English parents, Lieutenant Colonel Henry Kitchener, a retired army officer, and his first wife, Frances Anne. He attended the Royal Military Academy, Woolwich, graduating in 1870 and receiving his commission in the Royal Engineers the following year. He spent his early years in the army engaged in survey work in Palestine and Cyprus before accepting an assignment in Egypt in 1882, where through hard work and dedication he earned rapid promotion. In 1898, as sirdar (commander in chief) of the Egyptian army, he completed the reconquest of the SUDAN by destroying a Mahdist army at Omdurman with a force half the size of the Mahdi's. He soon learned that a small French expedition under Major Jean-Baptiste Marchand had cut across central Africa and planted the French flag at Fashoda. Loading five gunboats with soldiers, Kitchener headed upriver and confronted Marchand, forestalling his efforts to establish French sovereignty over parts of the Sudan. Returning home, Kitchener was raised to the peerage as Baron Kitchener of Khartoum and appointed governor of the Sudan.

After a series of losses by British forces in the BOER WAR, Kitchener was sent to South Africa in 1899 to serve as the chief of staff to Lord Roberts. The following year Roberts, having defeated the main Boer armies, turned command over to Kitchener. But the war was far from over, as the Boers adopted guerrilla warfare; Kitchener responded by adopting drastic measures that wore down the Boers, who accepted peace terms in 1902.

Back in England, he was created viscount and took up the post of commander in chief of the army in India. Although bitterly disappointed that he had not been appointed viceroy of India, he accepted the post of British agent and consul general in Egypt in 1911. As virtual ruler of Egypt, Kitchener devoted himself to developing its economic resources and protecting and improving the interests of the fellaheen (peasants). For his services he earned an earldom in 1914.

When it appeared that war with Germany was imminent in August 1914, Kitchener was appointed secretary of state for war. As he was the most acclaimed soldier in the land, his cabinet colleagues stood in awe of him and in the beginning allowed him to run the war as he saw fit. Kitchener alone believed that the war would last at least three years and that to win

Posters such as the one above, featuring Lord Kitchener, encouraged young men to enlist and support the armed effort against the Central Powers.

Britain would need to place a million-man army in the field. To that end, he would need to depend on patriotic enlistment, not conscription, which would not be adopted in Britain until the spring of 1916. Aiming for 70 divisions, as compared to the six available in 1914, Kitchener's recruitment campaign, highlighted by his famous poster "Your Country Needs You," drew in nearly 2.5 million volunteers. His second great service was to prevent Sir John French, commander in chief of the British army, from quitting the battle line in September 1914, a move that would have led to the piecemeal defeat of the Allies.

The onset of trench warfare at the close of 1914 gave rise to many unprecedented problems. Exacerbating the difficulties were the politicians, who intervened repeatedly in the conduct of the war, dragging the country into three disastrous expeditions in 1915: Gallipoli, Salonika, and Mesopotamia. Coinciding with the

ill-advised sideshows were the French's badly bungled operations on the western front, with each defeat contributing to the erosion of Kitchener's once immense reputation. Though they were hardly his fault, he was held responsible as the supreme warlord when things went wrong. An influential section of the cabinet came to see his methods as the principal cause of the defeats, rather than the outcome of their own interference, and gradually stripped him of much of his authority.

Late in May 1916, Kitchener accepted an invitation to visit Russia in the hope that he could use his influence to bolster the waning enthusiasm of the Russian armies. On June 5 the cruiser HMS *Hampshire*, carrying Kitchener to Archangel, hit a mine and sank, and practically everyone aboard, including Kitchener, were lost.

Recent scholarship has refuted many myths about Kitchener that his detractors circulated after his death. That he made mistakes is undeniable; he refused to admit his cabinet colleagues into his confidence, was unable or unwilling to delegate authority, and tended to ignore the Imperial General Staff. That said, his accomplishments greatly overshadowed his errors. He not only singlehandedly kept Britain in the war when the French wanted to cut and run, but also built a formidable army, which sustained the Allies in the war, stepping into the breach left by the collapse of Russia and the exhaustion of France. When everything is said and done, it can be fairly claimed that Kitchener contributed more to the victory of the Allies than any other single individual.

GEORGE H. CASSAR

Konoe Fumimaro

(1891–1945) *Japanese politician*

Prince Fumimaro Konoe was born into the aristocratic Fujiwara clan and studied at Tokyo Imperial University and Kyoto Imperial University, graduating from the law faculty of the latter institution in 1917. In his political career he was a protégé of Saionji Kinmochi, a member of the court aristocracy who served two terms as prime minister. Early in his political career Konoe attended the *PARIS PEACE CONFERENCE* and later criticized the

conference as an attempt by Western nations to preserve their already considerable spheres of influence.

Konoe's status as a prince allowed him membership in the upper house of the Japanese Diet (house of peers), where he served as vice president and then president. He first became prime minister of Japan in June 1937 and would serve three times in that post. Konoe was a moderate like his mentor Saionji and was particularly concerned with tempering the power of the military. However, after the *MARCO POLO BRIDGE INCIDENT* led to the outbreak of an undeclared war between China and Japan, Konoe's unsuccessful attempts to end that conflict contributed to the downfall of his cabinet in 1939. Konoe was reappointed prime minister in July 1940 and was involved in intense negotiations with the United States, hoping it could act as a mediator in the conflict between Japan and China on terms favorable to Japan. He also negotiated a nonaggression pact between Japan and the Soviet Union in 1941. Konoe resigned as prime minister in October 1941 in favor of the war minister, General HIDEKI TOJO, and was not centrally involved in the Japanese government again until the conclusion of *WORLD WAR II*.

After Japan's surrender in August 1945, Konoe served in the government of Prince Naruhiko Higashikuni. Konoe took his own life with potassium cyanide after it was announced by the American general DOUGLAS MACARTHUR, supreme commander of the Allied Forces and supervisor of the postwar occupation of Japan, that Konoe would be tried as a war criminal. It allowed him to evade the disgrace of conviction and execution by hanging. Konoe's grandson, Morihiro Hosokawa, served as prime minister of Japan from August 1993 to April 1994.

SARAH BOSLAUGH

Ku Klux Klan

The Ku Klux Klan (KKK, or Klan) refers to two distinct organizations, separated in time by nearly half a

century. The first Klan, founded in December 1865 in Pulaski, Tennessee, by a handful of ex-Confederate soldiers, was only the most prominent among numerous white supremacist secret societies that formed in the U.S. South at the end of the Civil War in opposition to radical Reconstruction and dedicated to maintaining white supremacy through violence and terror. (Similar organizations included the Knights of the White Camellia, the Night Riders, the Order of the White Rose, the Pale Faces, and others.)

Wearing white sheets, conical white hats, and white masks, KKK members and officers were identified by a series of preposterous-sounding names (Grand Wizard, Grand Dragons, Hydras, Grand Titans, Furies, Grand Giants, Night Hawks, Grand Cyclops, Ghouls, and others). By the late 1860s, the Klan was active in almost every southern state and strongest in Piedmont districts where whites outnumbered blacks. Congressional investigations revealed that the organization was responsible for thousands of murders, burnings, lynchings, beatings, rapes, tar-and-featherings, and other acts of violence and terror. Weakened by the Enforcement Acts of 1870 and 1871, the organization played an important role in maintaining white supremacy in the South and was largely defunct by the formal end of Reconstruction in 1877.

The second Klan, founded in 1915 by Alabama-born salesman and preacher William J. Simmons, had only tenuous links to the first. This resuscitated Klan was propelled into prominence in 1915 by D. W. Griffith's epic film *Birth of a Nation*, in turn based on several novels by southern writer Thomas Dixon, Jr., most notably *The Clansman*. Griffith's blatantly racist film, following Dixon, portrayed the Klan as a heroic organization devoted to redeeming the Union and saving white womanhood from savage Negro hordes bent on sowing mayhem and destruction in the aftermath of the Civil War.

Despite the film's malicious misrepresentations, it was endorsed by President WOODROW WILSON as an accurate depiction of the Klan's role in Reconstruction. In the late 1910s and early 1920s the organization grew rapidly in power and numbers. At its height in the mid-1920s, this second Klan had become a national political force, with as many as 6 million members from all walks of life and chapters in nearly every state. Women played an especially important role in organizing women's chapters and spreading the Klan's message. In practice, this meant antipathy not only toward blacks but also Catholics, Jews, immigrants, atheists, socialists, communists, gamblers, homosexuals, divor-

Klansmen in costume: The second Ku Klux Klan rose to prominence in part thanks to D. W. Griffith's epic film Birth of a Nation.

cees, "fornicators," those opposed to Prohibition, and anyone not identified as white, Anglo-Saxon, appropriately Protestant, and conforming to Klan-defined "traditional values." Especially strong in the Midwest and South, in the mid-1920s the Klan became a major political player, electing thousands of its members to offices.

Divided and weakened after 1925 by scandals, infighting, and public backlash—especially the murder and rape charges brought against Indiana Klan leader D. C. Stephenson—by 1930 national membership had dropped below 6,000, and the Klan ceased being a national political force. The organization survived through the 1930s and after, witnessing a resurgence with the Civil Rights movement (the "Second Reconstruction") of the 1960s. In the 1980s, various civil rights organizations, most notably the Southern Poverty Law Center, used the courts to drive the Klan into bankruptcy and effectively destroy it as a national organization. In both its first and second incarnations, the Ku Klux Klan used violence, terror, and other illegal means to advance its conservative, racist, white supremacist agenda.

MICHAEL J. SCHROEDER

Kwantung Army

Japan's military presence in and domination of Manchuria in northwestern China received a major victory with the end of the Russo-Japanese War in 1905. Under the Treaty of Portsmouth, Japan was required to withdraw its troops from Manchuria proper but gained a leased territory of the Liaotung (Liaodong) Peninsula in southern Manchuria, renamed the Kwantung Leased Territory, which included the fortress and port of Port Arthur. The army unit assigned to garrison the area and the Japanese-owned South Manchurian Railway (SMR), as far as Changchun, was named the Kwantung Army. From this date this army became the spearhead of Japanese imperialism in China.

With the railway administration working as a colonial power, running ports, harbors, tax collection, mines, and utility companies, the SMR turned the railway zone into a semiautonomous state, and the Kwantung Army was its security and police arm.

After WORLD WAR I, Japan gained control of former German holdings at Tsingtao in China's Shandong (Shantung) Province and deployed 70,000 troops from the Kwantung Army to Siberia to support the Whites in the Russian Civil War. The Japanese sought to expand their empire in Siberia, failed to do so, and withdrew in 1922.

In 1927, when CHIANG KAI-SHEK's troops were marching on Shandong to break the power of local warlords in the NORTHERN EXPEDITION, Japanese troops were sent to Shandong (Shantung). Soon Chinese and Japanese troops were clashing. Chiang withdrew his forces from the city of Tsinan, but the Kwantung Army attacked it the next day, killing 13,000 civilians.

Chiang turned his troops away from conflict with Japan. Tokyo, however, supported the Kwantung Army, issuing warnings to Chiang and Manchurian warlord Zang Zolin (Chang Tso-lin) not to attack Japanese forces or civilians. However, the new commander of the Kwantung Army, General Chotaro Muraoka, had other ideas, moving his headquarters in May 1928 from Port Arthur to Mukden, Manchuria's main city, and preparing his troops to take control of the region.

Ready to move, Muraoka and his troops waited, firing telegrams to Tokyo asking permission to move.

When Prime Minister GIICHI TANAKA refused, the Kwantung Army's officers were stunned. Muraoka decided to kill Zang Zolin, blasting a bridge as the warlord's train crossed it on June 4, 1928. The Kwantung Army reported to Tokyo that Zang had been killed by Manchurian guerrillas. The truth came out anyway, and Tokyo could do seemingly little to control the insubordinate army and its officers, who had a lot of support in Japan.

But Tanaka was determined to punish the officers responsible for the assassination plot and recommended so to Emperor HIROHITO, who agreed. But when the army as a whole objected, Tanaka temporized. He fired Muraoka and told the public that there was no evidence the Kwantung Army had been involved in the plot. Then Tanaka resigned. The Kwantung Army's officers had defied Tokyo and gotten away with it.

As the GREAT DEPRESSION wore on, the Japanese economy continued to crumble. Many Japanese army officers, angered by the economic situation, joined secret societies like the Cherry Blossom League, and a group of officers plotted to use the Kwantung Army to seize Manchuria for its rich resources. One of the key men was Colonel Doihara Kenji, who prepared a "Plan for Acquiring Manchuria and Mongolia."

Chiang Kai-shek, meanwhile, had succeeded in unifying China under the Kuomintang, and Zhang Xue-liang (Chang Hsueh-liang), Manchuria's new warlord, supported the Nationalist, or Kuomintang, government. In 1931 clashes broke out between Korean farmers who were Japanese subjects and Chinese farmers over water rights.

Doihara went to Manchuria and determined that a Japanese attempt to seize Manchuria would result in international condemnation. An "incident" had to be manufactured to make a Japanese occupation of Manchuria seem China's fault. In 1929 the Kwantung Army began to plot an incident under their new boss, Lieutenant General Shigeru Honjo, with Doihara as mastermind.

Japan's civilian leaders did nothing to control the insubordinate Kwantung Army. The emperor, however, ordered Major General Yoshitsugu Tatekawa to bring a message from him on September 15, 1931, ordering the Kwantung Army not to take any unauthorized action. Unfortunately for Hirohito, Tatekawa's assistant, Colonel Kingoro Hashimoto, was among the plotters, and he sent a message to officers of the Kwantung Army to let them know that Tatekawa was coming with imperial orders. When Tatekawa arrived in Mukden on September 17, Kwantung Army

officers took the general to a party, where he became drunk.

That night Kwantung Army officers blew up a section of track on the South Manchurian Railway 1,200 yards from a Chinese army that failed to derail the night express. Kwantung Army troops then attacked and shelled the Chinese barracks, killing many soldiers. By 10:00 A.M. on September 18, 1931, Mukden was under Japanese control, Chang's headquarters were ransacked, and his banks and government offices were occupied, as were a dozen other cities in southern Manchuria in a coordinated attack by Japanese units. Some 12 hours after their blast, Kwantung Army officers displayed to Western reporters the "proof" that the Chinese had tried to destroy the railroad, which was bodies of Chinese soldiers shot in the back lying facedown, supposedly cut down while fleeing the scene. The world was outraged by the political adventurism, and Tokyo was stunned. The emperor reminded Prime Minister Reijiro Wakatsuki that he had forbidden such action, and the foreign and finance ministers also objected. But Wakatsuki did not overrule his generals and colonels. The attack and subsequent conquest of Manchuria were accepted as a fait accompli.

From October to December 1931, the Kwantung Army, now empowered by Tokyo and advised by units of the Japanese army in Korea, expanded conquest of Manchuria, even plotting a coup in October to overthrow the civilian government in Tokyo. This attempted coup was ended when the leading plotters were secretly arrested. In December Wakatsuki resigned. Ki Inukai became the new prime minister, but General Araki, leader of the Kodo Ha faction, became war minister, effectively providing the military's endorsement to the Kwantung Army's actions. The Kwantung Army now became an occupation force in Manchuria, and its officers became heroes for all of Japan.

The Kwantung Army continued to seize Chinese territory, taking Rehe (Jehol) province in 1933 and Chahar province in 1934. Officers of the Kodo Ha movement were assigned to the Kwantung Army, strengthening its radicalism; among them was HIDEKI TOJO, who would become Japan's prime minister during WORLD WAR II.

In February 1936, the Kwantung Army showed its powerful influence when a group of Kodo Ha officers

attempted a coup d'état in Tokyo. It failed, the ringleaders were shot, and the civilian leaders regained some control over the Kwantung Army.

Leaving Chinese unity under Chiang Kai-shek's leadership, the Kwantung Army set to create an "incident" between Chinese and Japanese forces on July 7, 1937, at a railway junction near Beijing (Peking) in northern China, called the MARCO POLO BRIDGE INCIDENT. This led to the outbreak of the SINO-JAPANESE WAR, in which Japan committed unspeakable atrocities, such as the Rape of Nanjing. It became World War II in Asia. The Kwantung Army promised Tokyo victory in three months.

As World War II began and dragged on, the Kwantung Army remained in occupation of Manchuria, "Asia's Ruhr," against Soviet invasion. Over time, the army was stripped of most of its equipment and men, which were needed on other battlefronts.

When the Soviet Union declared war on Japan on August 8, 1945, and invaded Manchuria, the Kwantung Army had 1 million men under arms equipped with 1,155 tanks, 5,360 guns, and 1,800 aircraft. On paper, this was a match for the Soviets' 1.5 million men, but the Soviets also fielded 26,000 guns, 5,500 tanks, and 3,900 planes. In addition, the Kwantung Army was short of gasoline, ammunition, and transport.

Yet some of the Kwantung Army's hotheaded leaders refused to surrender when Japan surrendered to the Allies on August 14, 1945. Commanding general Otozo Yamada refused to obey the Imperial Rescript to surrender, summoned his officers to his headquarters at Changchun, debated the news from Tokyo, and by a majority vote chose to go on fighting.

In the end, the Kwantung Army did obey an imperial command and surrendered to the Soviet Army. Several of its leaders, including Doihara and Tojo, were tried, convicted, and executed at the Tokyo International Court.

DAVID H. LIPPMAN

LaFollette, Robert M.

(1855–1925) *U.S. progressive politician*

“Fighting Bob” LaFollette earned his sobriquet as the progressive political leader of Wisconsin, where he was elected governor and later represented his state in the U.S. Senate. A Republican, he attacked corporate privilege and worked to expand voting and consumer rights.

Born in Primrose, Wisconsin, to a farming family, LaFollette earned a law degree at the University of Wisconsin at Madison and served as district attorney of Dane County before winning three terms in the U.S. House of Representatives. Always controversial within his own party, he lost his House seat in 1890. He ran twice for governor before winning the first of his two-year terms in 1900.

Governor LaFollette supported “insurgents” and reformers who struggled to wrest leadership from corporate-influenced interests. By his final term he had successfully legislated an ambitious reform program called the “Wisconsin Idea.” A key target was the railroads, blamed by a desperate farming constituency for unfair rates and predatory business practices. New corporate taxes enabled Wisconsin to pay its bills, including enhanced spending on public education.

Under LaFollette, Wisconsin became the first state to replace a restrictive political caucus system with direct primary elections. The state set up a civil service system and limited lobbying activities, curtailing the power and influence of both corporations and political bosses.

Elected by Wisconsin lawmakers to the U.S. Senate in 1905, LaFollette took his fiery reformism to the national stage. He opposed the Payne-Aldrich tariff as a protectionist measure that helped wealthy eastern interests at the expense of farmers and other small producers. He fought for direct election of senators. He regularly sided with organized labor.

By 1911 LaFollette was determined to make a run for the presidency against his party’s incumbent, William Howard Taft. To his dismay, the ever-popular THEODORE ROOSEVELT reentered politics to run under the “Bull Moose” banner, forcing a resentful LaFollette out.

As a midwesterner, LaFollette tended toward isolationism and also represented a large German-American constituency. When war broke out in Europe, LaFollette was among those who feared that big business and wealthy speculators would gain riches while the common man fought in WORLD WAR I. He was widely criticized for voting against President WOODROW WILSON’s declaration of war in April 1917.

After the war, with the progressive movement fading, LaFollette worked to expose the Teapot Dome oil reserves scandal of the Warren Harding administration. In 1924, LaFollette finally ran for president as a progressive. He won almost 17 percent of the popular vote and his home state’s 13 electoral votes in a three-way race, but the campaign left him exhausted. LaFollette died in 1925 in Washington, D.C., and is buried in Madison.

JOHN M. MAYERNIK

Lansing-Ishii Agreement (1917)

The scramble for concessions in China opened in 1898 when Germany established a sphere of influence in Shandong (Shantung) Province. In 1914 Japan joined WORLD WAR I against the Central Powers in accordance with the Anglo-Japanese Alliance, conquered German-held islands in the northern Pacific, and drove the Germans out of Shandong. China remained neutral partly due to Japanese pressure. To ensure its right to Shandong, Japan presented a set of TWENTY-ONE DEMANDS to China in January 1915. They included China's agreement to the transfer of German rights in Shandong to Japan. China leaked the terms of the demands to the United States, hoping for its intervention in vain, partly because the administration of President WOODROW WILSON was preoccupied with events in Europe. Unable to resist Japanese pressure, China acceded to most of the terms of the Twenty-one demands in May 1915.

Japan subsequently negotiated secret agreements with Russia, Great Britain, France, and Italy that secured its claims to Shandong in postwar peace negotiations. In November 1917 Japan sent special ambassador viscount Ishii Kikujiro to Washington, ostensibly to congratulate the United States for joining the Allied cause but also to obtain U.S. agreement with Japan's claims on Shandong. In the resulting Lansing-Ishii Agreement (negotiated with U.S. secretary of state Robert Lansing), the United States recognized that "geographic propinquity creates special relations between nations," thus tacitly acknowledging Japan's special position in China. They also signed a secret protocol in which both nations pledged not to seek special privileges in China that would infringe on the existing rights of friendly nations. While the United States believed that the agreement upheld Chinese interests and the Open Door policy, Japan took it to mean the United States had accepted Japan's "paramount interest" in China. Its future in Shandong secure, Japan then allowed China to declare war against Germany and other Central Powers. Japan further consolidated its position in Shandong in 1918 by signing a secret pact

with the warlord then in power in China whereby in exchange for a Japanese loan, that warlord agreed to additional concessions to Japan in Shandong.

Japan came to the PARIS PEACE CONFERENCE after World War I as one of the Big Five powers, while China had the lowly status of an associated power. Japan also came armed with secret treaties bolstering its claim to Shandong. China pleaded for the return of Shandong based on President Wilson's support of the right of national self-determination and the fact that its declaration of war with Germany had terminated previous treaties and agreements between the two nations. Wilson's eventual acquiescence to Japan's demands on Shandong, over the objections of Secretary of State Lansing and other U.S. delegates, became an important issue when the Versailles Treaty with Germany was presented to the U.S. Senate for ratification and factored in its rejection. Thus the Lansing-Ishii Agreement further embroiled the United States in East Asian international relations.

JIU-HWA LO UPSHUR

Lateran Treaty (1929)

Between 1924 and 1926, the Italian Fascist leader BENITO MUSSOLINI consolidated his power until he had dictatorial control over the nation of Italy and was formally designated as Il Duce, the leader. No longer did Mussolini have to answer to parliament; only the monarch, Victor Emmanuel III, could dismiss him from his post. Once Mussolini became dictator, he turned his attention to societal issues. As part of this process he began discussions with the Holy See, the political entity of the papacy and Vatican City, in order to improve relations between the two parties.

The support of the papacy was extremely important to Mussolini's continued domination over the Italian people. However, the papacy had remained estranged from outright support for the Italian government following the confiscation without compensation of the Papal States during the process of Italian unification. This estrangement had a serious impact on the

relations between the papacy and the Italian government and resulted in 1874 in the pope's calling for all Catholics to boycott the political process and to refuse to take part in elections or join political parties. This situation persisted until the end of WORLD WAR I, when the pope revoked the earlier decree. The Vatican still held tremendous power, both real and symbolic. Therefore, in August 1926 Mussolini began a dialogue between state and church to reinforce his own power and from the point of view of the Vatican to preserve some of its own.

This dialogue was largely prompted by the establishment of the Opera Nazionale Balilla (ONB), the Fascist youth organization, and its actions to eliminate all other youth organizations and activities within Italy, including those run by the church. The church viewed these developments with alarm, since they would act to reduce its role in the formation of the character of youth. Although the government officially dissolved the Catholic Boy Scout organizations in 1927, the church, as part of the larger Lateran Treaty, did secure the continuation of Catholic youth groups. Under pressure from the ONB in the early 1930s, Mussolini toyed with the dissolution of these youth groups, which were increasingly seen as an alternative source of authority and indoctrination. However, he chose not take this step, which would have violated the terms of the Lateran Treaty.

On February 11, 1929, Mussolini, on behalf of King Victor Emmanuel III, and Cardinal Pietro Gasparri, on behalf of Pope Pius XI and the Vatican, signed the Lateran Treaty, which ended 60 years of dispute between Italy and the Vatican. This document was divided into three main sections: the conciliation treaty, the financial convention, and the concordat.

The conciliation treaty essentially established official diplomatic relations between the Vatican and Italy and affirmed Catholicism as the "state religion." The financial convention stipulated that the Italian state would pay the Vatican the sum of 750 million lire in cash as well as 5 percent Consolidated Bearer Bonds of 1 trillion lire to compensate the Holy See for the loss of lands in 1870. This payment would be made in full by June 30, 1929, and would not be subject to any tariffs or taxes. The concordat gave the Vatican power over religious teaching in public schools at both the primary and secondary school levels (taught by priests); extended papal control over marriage laws and wills; reiterated the sovereignty of the Holy See over its property, its ecclesiastical members and seminarians, and its message; and preserved the organization Catholic

Action, which was a branch of the Vatican, as the only independent organization left within Fascist Italy.

The Lateran Treaty as a whole provided benefits to each party. For Mussolini, reconciliation with the church brought his government further internal stability, as it broadened the base of support for the state by eliminating the rift that had persisted for six decades. In terms of its larger, international impact, the treaty elevated Mussolini and thereby his style of government in the eyes of the world and gave both additional legitimacy. For the Vatican, its power over key societal institutions such as marriage and education were extended and reaffirmed. Its terms were incorporated into the postwar constitution and remained in effect until 1985.

LAURA J. HILTON

Latin American cinema

Motion pictures arrived in Latin America not long after the Lumière brothers debuted their invention in Paris in 1859. Lumière agents fanned out across the globe to sell projection equipment, cameras, and film stock wherever there was a market to support it; in Latin America, this meant chiefly the large, stable economies of Argentina, Brazil, and Mexico.

Early filmgoers in South America invariably saw European imports; Italy had become the dominant force in the fledgling film industry by 1912. During WORLD WAR I, however, American companies used the disruption of the European film industry to gain a foothold in the market, and by 1926 an estimated 95 percent of screen time in South America went to American-made films. Local filmmakers could barely compete in this monopolized marketplace. Most were restricted to newsreels and documentaries.

The situation was particularly bad in Mexico, which was dominated from the start by the nearby U.S. film machine. Promising young stars like Lupe Velez and Dolores del Rio were lured to stardom in nearby Hollywood, while American directors exploited Mexican locales (and locals) for increasingly popular westerns.

During the Mexican Revolution, rebel army leader PANCHO VILLA signed with an American film company to film him in action—even going so far as to restage battles and skirmishes if cameramen had failed to get good shots during actual combat.

Appalled by being shown to world audiences as uncultured savages, early Mexican film directors like Manuel de la Bandera and Mimi Derba dedicated themselves to producing films that showed the “goodness and greatness” of their culture. Without the backing of the state, there was little they could do to counteract the endless output of American studios.

Things were only slightly better in Brazil and Argentina. Local feature films were eschewed by theater owners in favor of more profitable and American imports. However, film historian John King notes that several films produced during the period showed glimmers of what was to come. In Brazil, a 22-year-old director named Mario Peixoto created *Limite* (The boundry, 1931), chronicling the struggle for survival on a small boat after a wreck at sea. In Argentina, King identifies three films that presage the socially conscious films of the 1960s and 1970s: *El ultimo malon* (The last Indian attack, 1917), a fictionalized retelling of a turn-of-the-century uprising; *Juan sin ropa* (Juan without clothes, 1919) by the French Georges Benoît about a massacre during a contemporary strike; and Federico Valle's *El apostol* (The apostle, 1917), a political satire of the presidency of Hipolito Yrigoyen and the first full-length animated feature in film history.

Sound films arrived in Latin America in the late 1920s, but the technology was expensive and its distribution uneven. Many countries would not have “talkies” for years. Even in the few countries that had a well-developed film industry, it was a struggle to compete against the hegemony of the U.S. industry. But the period also saw the rise of Latin American musicals, including the *tanguera* in Argentina, the *chanchada* in Brazil, and the *ranchera* in Mexico, that blended indigenous songs and dance traditions of those countries with the formulas popularized by North American studios.

Thanks to wartime changes in the U.S. film industry and a decline in the powerful Argentine film industry, the 1940s became known as the “Golden Age” of Mexican cinema. The key film of the era was *Maria Candelaria* (1943), which brought together famed director Emilio “El Indio” Fernández, cinematographer Gabriel Figueroa, and actress Delores del Rio. With the end of WORLD WAR II, Mexican film slipped back into decline, where it would remain for more than a decade.

HEATHER K. MICHON

Latin American feminism and women's suffrage

Feminism and women's suffrage in Latin America blazed a different trail than their European or U.S. counterparts, although these movements provided inspiration. Latin American feminism is marked by diversity, as the region itself spans many ethnic and cultural zones, and class differences among Latin American women are pronounced. However, common threads do exist. Many Latin American feminists held to the idea that women are as *good* as men but not the *same* as men. Rather than demanding complete equality, these women advocated strengthening their power and prestige through traditional paradigms of gender, notably motherhood. They used conventional gender norms that constructed women as morally superior to men to demand special rights and a voice in the public realm. Suffrage came over a period of 30 years, with Ecuador first in 1929, followed by Brazil in 1932, Cuba in 1934, Argentina in 1947, Mexico in 1953, and Paraguay in 1961.

The construction of women's gender roles throughout Latin America is central to understanding the Latin American women's movement. The legacy of Spanish colonialism served as the basis for men and women's roles in society and thus influenced Latin American feminism. Traditional gender roles stemming from the colonial period dictated women's place in the home and men's place in the public realm. The Virgin Mary served as the model for ideal womanhood, encouraging self-denial, piety, humility, purity, and obedience in women. Family, honor, and the home were the central tenets of the patriarchal family structure and dictated that women would remain in the home as wives and mothers. Honor was paramount to the family and impacted social standing and business ties, and women's sexual purity in particular served as a marker of that honor. This focus on women as indicators of family honor created a double standard, as men's sexual

prohess served as a marker of masculinity and did not impact family reputation. Women had no legal rights in the public realm of law and government, including rights to divorce, children, or property.

After Latin America's independence from the European colonial powers in the early 19th century, the newly created liberal states mostly adhered to the Spanish legacy of gender inequality. These new states used the patriarchal structure of the family as a basis for their power. However, the prevailing political ideology of liberalism, based on liberty, equality, and popular sovereignty, did create some new prospects for elevating the status of women in society. Motherhood in particular and its importance to rearing the next generation of liberal citizens created opportunities for women. This emphasis on women's roles as mothers did buttress the patriarchal system but simultaneously allowed women access to power.

The nationalist and state-building period, from the early to mid-20th century, promised change in Latin America, including new gender roles adapted to fit nationalist aims of industrialization and progress. Industrialization translated into a need for workers, including women, which required their entrance into the masculine public realm. The pursuit of progress and modernity to compete on a global scale required women's work, justified by both economic necessity and social utility. Increased opportunities in the public realm through work and education allowed women some gains but overall constrained their aspirations within normative frameworks of gender. The number of middle-class women in the workforce did facilitate women's organizing around suffrage, and Brazilian women in particular boasted the largest and best-organized movement in Latin America.

Brazilian feminists worked to modernize women's gender identities without drastically altering the status quo of gender roles and relations. The *Federação Brasileira pelo Progresso Feminino* (FBPF), founded by BERTHA LUTZ, advocated for a modernization of women's roles that would not be considered radical by modern standards. The FBPF did not seek to eradicate women's traditional place in the home nor the qualities they believed were inherent to the female sex. They used these things as strengths toward women's greater participation in the public realm, and women in Brazil gained the right to vote in 1932 as a result of the work of these middle-class feminists.

The Cuban Revolution in 1959 introduced the Marxist definition of womanhood into Latin America, promising change for women in terms of gender equality

and their status in society. The National Federation of Cuban Women (FCW) advocated full and equal incorporation of women into all aspects of society. Vilma Espín, a woman who fought with guerrilla forces during the revolution, headed the organization. The FCW improved education for women and boosted female numbers in the workforce. It became a model that other Latin American countries would emulate. Despite such gains, some Latin American feminists argue that Cuban women still do not enjoy complete equality and are often relegated to auxiliary roles and activities.

Latin American women in the recent past have continued to fight for women's status in society and expanded rights in the public sphere, often from their traditional base of power as mothers. By the 1980s women's concerns and feminism began to become part of the mainstream media, drawing greater attention to women's issues. Although Latin American feminism continues to be divided along class lines, with different groups of women seeking different agendas, it continues to thrive, as evidenced by the many meetings Latin American women hold every year across the region to better their lives and those of their countrywomen.

KATHLEEN LEGG

Latin American import substitution

The term *import-substitution industrialization* (ISI) refers to the economic development strategy implemented by several Latin American governments in the period between the GREAT DEPRESSION and the debt crisis of 1982. Intended to encourage the growth of domestic industry, ISI emphasized an active role for the state in subsidizing and orchestrating the production of domestically produced goods. State-owned enterprises were

formed in such large-scale industries as petrochemicals, telecommunications, aircraft, and steel. In addition, high tariff walls and trade restrictions, including import licensing requirements, were imposed in order to protect infant industries from foreign competition. At the same time, the governments of the developing Latin American countries imposed foreign exchange controls to promote the import of intermediate products deemed critical to the industrialization process while restricting the quantity of nonessential imports.

The origins of the ISI model can be traced back to the late 1920s and 1930s. Prior to that time the Latin American economy depended on exporting raw materials to—and buying manufactured products from—the more industrialized nations in Europe and North America. With the stock market crash of 1929 and the onset of the Great Depression, Latin America's export markets were greatly diminished. The collapse of commodity prices undermined the export-oriented economies and led economic strategists to search for a strategy that would render Latin American countries less susceptible to the future fluctuations of the world market. Arguments for a change in policy were strengthened during WORLD WAR II, when a shift to wartime production in industrialized nations left developing countries vulnerable to shortages in consumer goods. In the years following the war, declining real prices for primary commodities further disadvantaged developing countries and led many third world leaders to search for an alternative to export-led economies.

The theoretical underpinnings for a policy of inward-looking development were articulated above all by Argentine economist Raúl Prebisch. As head of the United Nations (UN) Economic Commission for Latin America (ECLA), Prebisch greatly influenced Latin American economic policy in the 1950s. He and other dependency theorists posited an inherently unequal relationship between the “center” (industrialized nations) and the “periphery” (developing nations) and argued that unfettered international trade would consistently work to the disadvantage of the periphery. Proponents of ISI therefore advocated an active state policy to counteract the natural tendencies of the international market. State intervention was deemed justified by the apparent failure of market forces to produce sustainable growth in Latin America during the first several decades of the 20th century. Economic nationalists, eager to reduce dependence on the international market, turned to the state as the only economic actor with sufficient resources to compete with powerful multinational corporations.

The overarching goal of ISI was to develop domestic industries capable of producing substitutes for manufactured imports. State-owned enterprises proliferated in the three decades following World War II, particularly in industries that required heavy capital outlay. In some cases, rather than full state ownership, Latin American governments offered industrial incentives in the form of direct payments or tax breaks for firms engaging in import-substitution production. In addition, states used a combination of tariffs, quotas, and import licensing requirements to facilitate the industrialization process.

The effectiveness of ISI strategies varied considerably from one country to the next within Latin America. In general, countries with larger populations and at least some degree of industrial development in place had more success with ISI. In Mexico and Brazil, for example, the economies during the ISI period experienced rapid growth and diversification. Relatively poorer countries with smaller populations, on the other hand, often lacked a sufficient domestic market to support the profitable production of certain manufactured products, such as automobiles.

Even in relatively successful cases, the ISI model carried with it a number of interrelated problems, including overvalued exchange rates, inadequate export growth, and a large foreign debt. Dependence on imported consumer goods was simply replaced with dependence on imported capital goods such as heavy machinery. Trade deficits continued and in some cases even worsened as exchange controls created disincentives for exports. In addition, the lack of competition in a protectionist climate fostered inefficient enterprises. ISI also failed to remedy unemployment, and the rapid urban growth that resulted from industrialization created additional burdens on increasingly interventionist states. When governments responded by printing more money, rampant inflation resulted. One by one, Latin American countries abandoned the inward-looking strategy of ISI in favor of “neoliberal” economic policies.

Latin American *indigenismo*

Indigenismo refers to an artistic, literary, and political movement in Latin America that began in the late 19th century but reached its height during the nationalist period of the 1920s and 1930s. It coincided with the rise of nationalism as Latin Americans rejected European cultural superiority in favor of seeking out a unique Latin American identity that corresponded with the region's cultural and racial diversity. *Indigenismo* functioned as a rallying point for nationalism, especially in Mexico and Peru, nations home to large and diverse Indian populations. It glorified aspects of indigenous culture considered positive as symbols of national roots while simultaneously working to assimilate native peoples into a cultural mainstream often centered on a *mestizaje* identity, a social and biological designation meaning mixed race.

Latin America's colonial legacy lumped indigenous peoples together as a monolithic primitive group distinctly separate from mestizo culture. Spanish colonizers literally divided the population into two, creating a republic of Spaniards and a republic of Indians. The broad movement of *indigenismo* hoped to erase this divide to create homogenized social bodies. However, the movement suffered from the racist paradigm set by the colonizers by continuing to view indigenous peoples as an undifferentiated mass. Many *indigenistas* were elite white and mestizo individuals, and they imposed the ideology of *indigenismo* on Indian peoples without any prompting by such groups to do so. As a result, *indigenismo* was unable to escape Latin America's colonial legacy of social hierarchies predicated on race, and consequently *indigenismo* policies functioned with unintended paternalism and racism.

Mexico embraced *indigenismo* and thus serves as an important case study. The Mexican constitution of 1917 enshrined *indigenismo* as an official ideology by demanding an end to the exploitation of Indians by landowners and priests while encouraging their assimilation into the social body. The postrevolutionary Mexican state sought to create a new national identity, and indigenous groups would have to be united with the rest of Mexican society to achieve that goal. José Vasconcelos, the first minister of culture after the revolution, initiated the government effort to form a Mexican national culture by bringing the Indian and the mestizo together. During the 1920s, Vasconcelos hired artists such as Diego Rivera to paint murals in public areas and on government buildings that glorified Mexico's indigenous roots and depicted the darker side

of European conquest and colonization. Elements of indigenous culture, such as music, dance, folk art, and myth became celebrated aspects of Mexican nationalism. Vasconcelos believed that Mexico's future lay in the creation of a "cosmic race," a fusion of racial and ethnic groups. The cosmic race combined positive elements of different cultures to create a unique "Mexican" identity. *Indigenismo* and the idea of a cosmic race represent early attempts in Mexico to overcome the deep racial divides of the nation. The postrevolutionary government believed Mexico could not move forward without a unified social body and that if Indian peoples remained separate from the rest of society, the entire country would be negatively affected. Separate Indian nations or enclaves like the Native American reservations in the United States would work against unifying the Mexican nation, and as such, Indians were encouraged to become mestizo.

"THE INDIAN QUESTION"

The postrevolutionary Mexican state implemented a range of policies influenced by *indigenismo*. Although policy makers held a wide range of opinions on the "Indian question," they agreed that Mexico's indigenous populations needed to be integrated into the national mainstream respectfully and without coercion. The Instituto Nacional Indigenista was a government ministry created specifically to implement *indigenista* policies aimed at assimilation. Rural schools functioned as one of the key elements in bringing Indian peoples into mestizo culture. These schools trained bilingual Indian teachers and served as sites to indoctrinate postrevolutionary nationalism.

Despite the declarations of a noncoercive and respectful approach to assimilation, subtle racism pervaded *indigenismo* policies. *Indigenismo* tended to invert the very racist paradigms the movement sought to eradicate. In attempting to break away from colonial models that degraded everything Indian, *indigenismo* instead glorified indigenous cultures to a point that bordered on exoticism. *Indigenismo* often characterized Mexico's pre-Columbian past as a simpler, more pure way of life. This racism disseminated the idea that Indian cultures were innately superior to European and mestizo civilization. Such thinking depended on ideologies about race that attributed innate qualities to different races rather than breaking away from deterministic models as the movement hoped to do. Furthermore, *indigenismo* as an artistic, literary, and political movement lay in stark contrast to the social reality of Mexico's (and other Latin American) indigenous groups. Racism and

Pueblo perform a snake dance in northern Mexico in 1900. Indigenous cultures in Latin America were threatened throughout the 20th century, and European-based culture continues to dominate the region today.

prejudice against Indians in daily life continued, and the “whitening” of Latin America persists to the modern day as evidenced by Latin American film, television, and advertising.

In Peru, a stark division exists between the country’s indigenous groups in the highlands and the white, black, and mestizo population of the coastal region. Peruvian Indians literally existed outside the national community. The middle-class *indigenismo* movement of Peru advanced national solidarity by calling for the integration of these two distinct populations. Men such as VÍCTOR RAÚL HAYA DE LA TORRE took the ideas of *indigenismo* and created a political movement based on the belief that true national values came from Peru’s indigenous cultures. Haya de la Torre and others rejected European culture in favor of building a national iden-

tity from the cultural heritage of Peru’s Indian peoples. In addition, Peru’s constitution, promulgated on January 18, 1920, recognized the legal existence of Indian communities and protected these groups through special laws aimed at indigenous development and culture. The creation of the Indian Affairs Department in the Ministry of Development was charged with supervising the implementation of the constitutional measures designed to protect the rights of Indian peoples.

Despite such seeming advances in Indian legal rights, reality painted a different picture. Change was very slow, and many of the constitution’s laws designed to protect Indians were delayed or only partially enforced.

Although the adherents of *indigenismo* likely felt they acted with the best intentions, *indigenismo* in Latin America existed as a construction of the white

and mestizo elite, an ideology imposed on indigenous groups tinged with subtle racism. By envisioning Latin America's Indian peoples as monolithic groups with homogenized experiences, *indigenismo* followed a philosophy that certain Indian traits were good and others bad. However, the state's institution of these values would later provide Indian peoples with the tools to appropriate the movement for themselves. By the 1970s *neoindigenismo* became the new creed, with indigenous peoples at the helm rather than a white and mestizo elite.

KATHLEEN LEGG

Latin American modernism

Modernism in Latin America was a literary and cultural movement developed at the end of the 19th century. In Latin America, the word was adopted at the end of the 19th century to identify a cultural proposal intended to respond to the demands and requirements of modern times. Modernism represented a complex concept at the time, since it recovered the aesthetics and ideology of romanticism but aimed to connect Latin American culture with major traditions of the Westernized world. The modernization, democratization, and industrialization of Latin American capitals created a new public realm in which culture diversified and reached a new audience. Its main representatives were Rubén Darío (1867–1916), Manuel Gutiérrez Najera (1859–95), José Martí (1853–95), Ramón López Velarde (1888–1921), and José Asunción Silva (1865–96).

Octavio Paz (d. 1974) characterized modernity as a philosophical concept as well as a condition that had its beginning in the romanticism of the late 19th century. Modernity is founded in the construction of the notion of progress and human-generated change, which envisions a better future. The idea of moder-

nity in Latin America was inherited from 19th-century Europe, particularly France.

There is little doubt that Baron Haussmann in Paris had huge success as an urban strategist in Latin America. The baron's spectacular interventions in Paris were soon embraced as urban *savoir faire* and strengthened French predominance not only in social and political thought but also in the fine arts and city design. Latin American elites worshipped Haussmann's Paris as the ultimate model to follow in order to join the capitalist circuit of world cities. Urban reforms in general and urban renovation in particular were part of a package to modernize urban structures.

Urban planning in Latin America has been legitimized by ideological frameworks that nevertheless have been used to manipulate and enhance power structures over time. The idea of planning became part of the political agenda at the end of the 19th century, when national caudillos (dictators) ruled their countries following enlightened and hygienist models from Europe in order to "modernize" the countries.

Nevertheless, at the beginning of the 20th century, a more European model started when residential *colonias* (residential districts) around public spaces and modern infrastructures and services emerged. The districts were developed by private international investors, who profited from the government provision of licenses and tax benefits to enhance real estate developments. Under different dictatorships and with a stable economy, the cities aspired to access world-class circuits, even when income disparities and social inequalities were developing and strengthening a dual socioeconomic system. Planning had been characterized by hierarchical decision making, the legitimization of plans by groups of "experts," and international businessmen taking a leading role.

However, at the time, Mexico City and San Salvador were the only cities with more than 100,000 inhabitants, which showed the limited diversity of economic development they had achieved when mining became no longer profitable. At the end of the 19th century, French urbanism was very influential all over the continent, especially after Baron Haussmann's interventions in Paris, which were considered compelling high-profile urban operations to transform capital cities, such as Buenos Aires, Rio de Janeiro, and Caracas, into world-class cities. Later in the 20th century the continent experienced considerable economic expansion, the modernization of infrastructures, and a process of urbanization without precedent. Even when a rapid process of adaptation and assimilation of modernity occurred, leading to cultural integration

of different societal groups, it is also true that this could only be achieved through a certain amount of alienation and displacement of the local culture and traditional society. The history of modernity has been the quest for progress, which represents a long-sought aim and a recurrent framework that is never to be achieved in its totality.

In the late 19th century science and industrialization were considered the foundations of progress, embodying a rational, objective, and unquestionable tool of production and human knowledge. Modernity represented an ideal image of progress and the idea of an advanced model of living according to the economic, political, and intellectual elite. As reality was demonstrated to be far more complex, the idea of modernity became a supreme metaphor for a homogeneous and harmonic reality. Along with this cultural movement, positivism provided the philosophical grounds to maintain the idea of progress through the actions of the elites as representatives of a Darwinian natural selection. This philosophical approach also provided a general plan of government with the slogan “liberty, order and progress,” where liberty would be the means, order the general framework, and progress the ultimate end.

ALFONSO VALENZUELA AGUILERA

Latin American nationalism

Latin America's nationalism emerged as a reaction to the injuries inflicted during the colonial period and later with the wars of independence, revolution, and expansionism that—not surprisingly—generated a defensive stance toward the outside world. After independence, nationalism embraced modernity as a major state-related historical movement toward economic progress, technological innovation, and political liberty. This nationalism tended to be radical yet double ended, since while aiming to vindicate the historical

past it also embraced a political project for the future that would solve the modernization imperative.

The origins of nationalism in Latin America can be traced to two key periods: independence and modernization. After independence from the European powers in the 19th century, the need to define a new identity started to shape an image that responded to a sovereign national identity. The colonial period in the Americas extended from the 16th to the early 19th century, a period of nearly 300 years during which different developmental stages followed. It is not necessary to credit the Spaniards for introducing urbanization to America since the Aztec capital already featured monumental architecture, advanced infrastructure networks, highly specialized manufacturing, and a sophisticated administrative urban structure. However, a European city planning framework was implemented following Spanish regulations and building codes (*Leyes de las Indias* and the *Ordenanzas*), which dictated basic land, use zoning, streets' orientation and width, and various forms of land tenure.

Latin American countries gained their independence in the 1800s, when cities were already consolidated as socioeconomic and political centers on the continent. Likewise, at different stages in Latin America, the drive to become “modern” emerged as a requirement to accessing the world-class circuits and financial markets. However, in both cases the creation of national representation responded to the interaction among the networks of power. The glorification of the past is usually framed to convey sentiments and references that sustain a specific power structure. In most cases, the creation of a national image in each country was constructed by the people within the power circle (political, economic, or cultural), who, after considering several national images, identified the desired pattern of modernity. However, it is also clear that popular traditions, beliefs, and aspirations were also included in the construction of the national concept, even when choices were made among the different ways to frame the historical background of the country.

In various Latin American countries at the end of the colonial period in the 19th century, as well as during the industrial drive of the early 20th century, nationalism was modeled after a collage envisioned by the economic and military elites, which centered their aims within the transformation of the capital cities. These images served as a global outlining force that provided coherence and unity to the changing conditions of the territory. The creation of national images at the turn of the 20th century pursued the model of urban

cosmopolitanism and modern nationalism epitomized by France. In this sense, the nation represented a Westernized, homogeneous construction oriented toward international markets and ruled and organized by scientific means. However, Latin American nations were also shaped according to the reorganization, invention, and reinterpretation of their past, following the national rhetoric that originated in colonial times. Nationalism had political uses, such as obtaining international acceptance, achieving internal cohesion, and concentrating and consolidating the new political elites. It is also ironic that the search for a flagship identity led individuals to explore their national heritage and history but also opened new means of expressing their identity through new images of modernity. For instance, Latin American countries embraced modern architecture in order to express their cosmopolitan modernity through novel design and avant-garde construction technologies. However, the reaction to recent aesthetic and cultural values was often hatred directed against cultural memories associated with past regimes more than against foreign ideas, recreating the new national identity in this way.

An important element in the construction of modern nationalism was the transformation of capitals into world-class cities. Since modernity demanded infrastructures, communication, and compelling urban environments, cities became the materialization of the national aims themselves. Following Baron Haussmann's transformation of Paris at the end of the 19th century, Buenos Aires expanded its parks and green areas, Mexico City built its Paseo de la Reforma Boulevard, Santiago created its Santa Lucia and Forestal parks, and Montevideo defined the Prado's grounds as the next Bois de Boulogne. In most capital cities, Haussman's ideas were used selectively and limited to specific solutions and projects. However, a strong French influence was always present in the Latin American imagination, also present in education (most Latin American schools were modeled after the Ecole des Beaux Arts in Paris) and through professional consultancies (Fourestier, Rotival, etc.).

Later in the 20th century the continent experienced considerable economic expansion, the modernization of infrastructures, and a process of urbanization without precedent. In the 1930s the industrialization of Mexico, Venezuela, Colombia, Panama, Peru, and Brazil took place and increased right after WORLD WAR II, when national policies to substitute imports fostered development. The economic centralization of power was to overtly favor national capitals as

engines of growth. With World War II, industrialization policies in Latin American cities followed the North American urban model of introducing industrialized construction technology as well as automobile-oriented urban schemes that epitomized the ultimate instruments of modernity.

In the 20th century U.S. intervention in Latin American countries expanded, such as in the case of the PANAMA CANAL, the Cuban missile crisis, and the assassination of the democratically elected Salvador Allende in Chile. As a consequence of the growing awareness of interdependence, the Bogotá Conference of 1948 produced the Organization of American States (OAS) to promote hemispheric unity. In short, the biggest challenge that postcolonial states in Latin America have had to face has been their fragility. Right after their independence, the new governments had to substitute the prenational links with a sense of identity and a national commitment to the emerging nation. However, and in order to protect the nation's vulnerable condition, the states often favored a centralized administration, emphasizing the integration of the territory and stressing the need for political governance despite the different degrees of cohesion. It is not surprising that economic development represented the preeminent way to legitimize diverging loyalties in the territory and transfer them to the new state. In the late 19th century and early 20th century, industrialization led the way to modernity, which for a premature state meant more than a challenge; it was an imperative. In Latin American countries, the governments designed political projects that integrated a common past with a long-desired future, creating a sense of continuity in which the transcendent character of the nation would be revealed.

Latin American populism

Populist movements flourished in many Latin American nations from roughly 1920 until the mid-1960s. Populist regimes took a variety of forms in diverse national contexts, even within Latin America. Variations within populism were particularly pronounced because populist movements were based on ad hoc responses to circumstances rather than on any coherent or consistent ideology. Nevertheless, populist movements within Latin America did share several defining features. Overwhelmingly urban based, Latin American populist movements were characterized by multiclass, nonrevolutionary coalitions that aimed at the development of domestic industry, the redress of popular grievances, and the peaceful integration of the urban masses into a political arena hitherto controlled almost exclusively by elites. Populism in the Latin context had preconditions of both rapid urbanization and the rise of welfare states, both of which contributed to new understandings of the state's role in addressing social issues. In most cases the leaders of populist movements were charismatic figures who employed a personalist style of leadership to garner support. Examples of populist leaders include Juan Domingo Perón in Argentina, GETÚLIO VARGAS in Brazil, LÁZARO CÁRDENAS in Mexico, Jorge Eliécer Gaitán in Colombia, VÍCTOR RAÚL HAYA DE LA TORRE in Peru, and José María Velasco Ibarra in Ecuador.

Unlike its rural counterpart in North America, populism in the Latin American context was predominantly urban based. Occasionally, as was the case in Peru, plantation workers might be included in the movement if they worked in close proximity to the towns. Populism was largely a reaction to the phenomenal growth of cities between 1880 and 1930 and the social dislocation that resulted from this so-called metropolitan revolution. Although these factors were not sufficient to ensure a populist response, they did create an environment favorable to the proliferation of populist movements. Significant agrarian reforms occurred in Mexico under the presidency of Lázaro Cárdenas (1934–40). Cárdenas's agrarian policies were atypical of populist leaders, however; much more typical was his support for organized industrial labor in Mexico's cities.

The meteoric rise to power of Argentinian populist leader Juan D. Perón was due in large part to the charisma of Péron and his second wife, Eva Duarte de Perón, both of whom made extensive personal contact with workers throughout Argentina. Populist leaders frequently took advantage of advances in media technology in order to deliver their message to the popu-

lace. Pedro Ernesto, mayor of Rio de Janeiro and leader of Brazil's first populist movement, was among the first to explore the political potential of the radio as a means of mobilizing large segments of the population, as was Jorge Eliécer Gaitán in Colombia. In addition to making use of the airwaves to reach his followers, Gaitán also produced his own newspaper. In later years the Brazilian Department of Press and Publicity became a major source of propaganda on behalf of Getúlio Vargas, who embraced populist politics in the final decade of his career. José María Velasco Ibarra, five-time president of Ecuador, used various forms of propaganda to project a populist image throughout his lengthy career.

SOCIAL BASE

Another defining characteristic of Latin American populism was its multiclass social base. Although many of the movement's objectives appealed primarily to the working classes, supporters were recruited from all levels of society. Unlike socialism, which aimed at the overthrow of the bourgeoisie, populism sought the political integration of the masses without fundamental change to the social structure. Particularly in the early years of populism, known as the reformist or consensual era, members of the middle and elite classes often supported populist movements as an effective means to curb lower-class agitation. In many cases the middle classes stood to benefit materially from populist reform as well. The expansion of social services, for example, created thousands of professional jobs, while policies aimed at promoting industrial growth appealed to a broad spectrum of society. Peru's Aprista movement, founded by Haya de la Torre in 1924, exemplifies the type of multiclass coalition that characterized Latin American populism.

Populism became especially prevalent in Latin America during the 1930s and 1940s, in the wake of the stock market crash and the global GREAT DEPRESSION that followed. The virtual collapse of several Latin American export economies during the Great Depression prompted policy makers to impose high tariffs and consider methods of diversifying the Latin American economy, thus reducing dependence on the international market.

Although populism followed no consistent ideology, Latin American populist movements tended to include the expansion of state activism in order to promote accelerated industrialization. Several populist leaders, including Perón in Argentina and Vargas in Brazil, established state-owned enterprises in areas formally controlled by the private sector. In the case of Argentina, the Fabricaciones Militares was founded in 1943

to manufacture military equipment but quickly expanded to include such nonmilitary enterprises as mining and real estate. The Peronist regime also pursued the nationalization of crucial sectors of the economy such as public utilities, transportation, and foreign trade. Vargas for his part attempted to lay the foundations for industrial growth by infusing capital into projects to improve the nation's infrastructure and by organizing state marketing systems, in addition to developing state-owned petroleum and steel enterprises.

Although specific policies were not without their critics, the populist desire to strengthen domestic industry was certainly shared by a broad spectrum of society. The labor movement typically supported a protectionist policy, while middle-class industrialists as well as the military championed economic nationalism and domestic industrial development. As long as the economies continued to expand—as, for example, during the wartime and immediate postwar export boom in 1940s Argentina—such support was relatively easy to maintain.

ZERO-SUM GAME

Populist governments were able to dispense benefits to certain segments of society without reducing the incomes of other sectors. A much different picture emerged in the later phases of growth, when populist regimes faced a zero-sum game: Without an absolute rise in national income, policy makers were forced to decide whether to become genuinely redistributive. To do so was to risk alienating the middle classes, while failure to do so meant the loss of the working-class support on which populist regimes likewise depended. Either way, a broad-based coalition became increasingly difficult to maintain in the later years of the movement.

The results of economic stagnation, growing inflation, and increased social tensions were disastrous for Latin American populist leaders. Gaitán, who was widely expected to accede to the Colombian presidency in 1950, was murdered in downtown Bogotá before he could take office. Velasco, who had dominated Ecuadorian politics for nearly five decades, was forced into exile at the end of his fifth and final term. Perón also went into exile after he was ousted by a military coup in 1955. He spent the next 17 years in exile before returning to Argentina in 1972.

Perón was elected to a third presidential term the following year but was rendered nearly powerless by out-of-control inflation and factional violence; he died in 1974. Cárdenas's presidency ended amid dissent and controversy, and Vargas concluded his second term (1951–54)

by committing suicide. By the late 1960s the armed forces had outlawed populism in most of Latin America and established military regimes instead.

Several factors can be adduced to help explain populism's failure to live up to its initial promise. Above all, the changed economic circumstances following WORLD WAR II rendered the policies difficult, if not impossible, to sustain. Several Latin American countries faced economic crises in the early 1950s due to rising inflation and lagging economic growth. Promises of continually expanding social benefits could not be met in a period of relative economic stagnation, at least not without exacerbating the already rampant inflation.

At the same time, the very nature of populism as an expansionist movement and a great mobilizing force contributed to mounting instability as a larger and more confident working-class electorate pressed the populist regimes for more increasingly radical redistributive policies. In some cases the regime's capitulation to such radical demands prompted the middle classes to withdraw their support from what was formerly a multiclass coalition. Elsewhere the fear of widespread uprisings, particularly in the aftermath of the Cuban revolution, provided the armed services with a pretext for launching military coups to oust populist leaders.

Although the prevalent instability in several Latin American nations can be regarded as the unfortunate legacy of populism in that region, the movement had positive repercussions as well. Above all, the populist era ushered in mass participation in the electoral process on an unprecedented scale. The vote was extended to lower- and working-class citizens as well as to women, and these formerly marginalized groups were drawn into the realm of public discourse and debate.

Additionally, the effort to integrate and unite various classes through an inclusive national identity fostered a revived interest in native culture that has continued to the present day.

Latin American U.S. interventions

On September 20, 2006, the president of Venezuela, Hugo Chávez, addressed the United Nations General Assembly and spoke of the “hegemonic pretensions of the American empire.” In a speech that also referred to the president of the United States as a devil, Chavez gave voice to what many Latin Americans may have felt at one time or another in the nearly 200 years of U.S.-Latin American relations. Those relations have been characterized by the dynamic of a much stronger nation imposing its will on a collection of states that, in most instances, had no choice but to comply. Making the situation more complex, American intervention, while frequent and used to gain political, military, and economic benefits for itself, has also been frequently mixed with an honest desire to improve life for Latin Americans.

Latin America, including South America and the Caribbean, which have Spanish, Portuguese, and French as their native languages, achieved its independence from Europe a generation after the United States. By the 1820s, most of these nations were independent, but that was in jeopardy when a group of European powers styling themselves as the Holy Alliance embarked on a program of undermining U.S. influence and exploiting the newly independent nations of Latin America. The American response was issued in 1823 in a statement by the American president in what has since been referred to as the Monroe Doctrine.

The Monroe Doctrine, which stated that European powers were not to intervene in the affairs of the Western Hemisphere, was the point at which the United States began to exert a sometimes indirect, sometimes interventionist, policy of exercising control over the economics and politics of Latin America. Through the years the imperative behind America’s action as well as the corollaries or interpretations of the Monroe Doctrine have changed, but the willingness of the United States to intervene in Latin American affairs has been a constant.

MEXICO

Mexico, “so far from God, so close to the United States,” was the first Latin American nation to be fully affected by American diplomacy and military action. After winning its independence from Spain, Mexico took possession of a large portion of what would become the southwestern part of the United States. In order to secure its northern border from the Indians, Mexico in the 1820s invited American settlers to come to Texas. The results of that policy finally resulted, in 1836, with the loss of that part of Mexico when Texas

seceded and became an independent republic. Mexico could tolerate, though just barely, this independent entity on its border, but the likelihood of Texas becoming part of the United States was unacceptable.

Texas did become a state in 1845, and a border clash between Mexican and U.S. troops sent to guard the border in 1846 began the Mexican-American War. The American army, by a series of brilliant campaigns, won that conflict and as a result took approximately one-third of Mexico’s territory. While the victory was total, it was not without difficulty, and the victory of the United States had not been a foregone conclusion. The war demonstrated that the very high technical and tactical proficiency of the Americans and their ability to project their forces over great distances made them the most significant force in the Western Hemisphere.

In the last part of the 19th and early part of the 20th centuries, Mexico remained fairly stable until a revolution in 1914. To keep Europeans from intervening on the side of the Huerta government, President WOODROW WILSON sent military forces to capture the port city of Veracruz. This was done, and when American troops left they turned warehouses with arms over to the Carranzista, anti-Huerta forces. In 1916, the Mexican leader PANCHO VILLA attacked the American town of Columbus, New Mexico. This attack met with the response of an American expeditionary force unsuccessfully attempting to capture Villa. The expeditionary force stayed until January 1917. Just prior to WORLD WAR I, Germany offered Mexico the opportunity to retake the land it had lost in the 1840s if it would assist Germany against the United States. This offer, known as the Zimmermann Telegram, alienated U.S. relations with Germany, helping lead to America’s entry into the war.

In the years after the war, Mexican and American relations were brittle until FRANKLIN ROOSEVELT’S GOOD NEIGHBOR POLICY of 1934 was tested by the Mexicans. In 1938, the Mexican government took possession of all private petroleum company holdings. Franklin Roosevelt did not intervene militarily or diplomatically to retrieve American assets that had been nationalized. The significance of this action, so different from prior American actions, raised the credibility of Roosevelt’s policy in Latin America as well as improving America’s image in the region.

CUBA

America’s expressed interest can be dated to at least as far back as the 1850s. The Ostend Manifesto, a document

drawn up by three American diplomats in 1854, was a plan to either purchase Cuba or take it from Spain. The plan never came to fruition because, among other reasons, the assumption underlying its annexation was that it would become a slave state. American interest waned in the following years but by the 1880s and 1890s had revived.

Many members of Congress were on record as desiring to go to war with Spain to take Cuba. The president at that time, Grover Cleveland, stated that if Congress declared war nothing would happen because he would not mobilize troops to gain Cuba, an interesting and rare instance of deliberately not seeking to influence a Latin American region. By the William McKinley administration, however, popular opinion in America, encouraged by the prowar "Yellow Press," was in support of just such a venture. All that was needed was a pretext, and when the U.S. battleship *Maine* blew up in Havana harbor, Americans had their war.

In the end, Cuba received its freedom, but the United States exercised considerable control for the first third of the 20th century. A written statement known as the PLATT AMENDMENT to the Cuban constitution gave the United States financial control as well as the right to intervene in Cuba's affairs. In 1934, as part of Roosevelt's Good Neighbor Policy, the Platt Amendment was revoked. Until that time, however, U.S. control was exercised on a number of occasions to include the deployment of American troops from 1906 to 1909 and again in 1912 and 1917.

Cuba operated as a dictatorship through the 1920s through 1950s, but toward the end of this period there started to be serious opposition. Fidel Castro, a Cuban revolutionary who had been imprisoned earlier and then left for exile in Mexico, returned to Cuba in 1956 and by January 1, 1959 had established control over the government.

HAITI AND THE DOMINICAN REPUBLIC

The island of Hispaniola in the Caribbean is the location of two nations that have seen U.S. interventions on many occasions: the Dominican Republic and Haiti. Haiti was originally a French colony on the western part of the island that won its independence from France in 1804. The Dominican Republic won its independence in 1844, returned voluntarily to Spanish rule for two years in the 1860s, and reestablished its independence in 1865. Both nations are highly agricultural and since the 19th century have been of great interest to the United States. In the 1870s, there was some interest on the part of the United States in annexing the Dominican

Republic, an idea that died when faced by the prospect of integrating an area with a Spanish culture into the U.S. political system.

The United States maintained a high degree of economic interest and sent troops to keep order in 1904, 1905, 1912, 1914, and 1917 through 1924. From 1917 to 1922, the U.S. military used aircraft for the first time to support counterinsurgency operations. Stability was maintained with the rise of RAFAEL TRUJILLO, who ruled from 1931 until his assassination by the CIA in 1960.

Haiti's liberation was led by a former slave named Toussaint Louverture. In the 19th century the government was not stable, but the unrest was sufficiently low in intensity to allow substantial foreign investment. A combination of wishing to safeguard investments and curbing European influence led the United States to intervene in 1915. In that year the president of Haiti was overthrown and killed. Woodrow Wilson sent in both ships and ground troops to keep order. Through 1918, the marines were very busy in stabilizing operations and managed to impose a degree of stability, although they remained in that country until 1934. U.S. troops departed the country, but the United States would control the country's finances until 1947.

PANAMA

What is now the nation of Panama was originally part of Colombia. The U.S. interest in this region dated back to the time of the California gold rush, which had commenced in 1849. With the flood of Americans traveling to find gold, crossing through Panama (or Nicaragua) became one of the main ways to get to the West. By 1855, the United States signed a 20-year agreement with Colombia to allow Americans to cross without paying fees. There was soon a railroad running from Panama's east coast, where passengers would leave ships to cross the isthmus and then embark on ships docked on the west coast to continue the journey.

Nicaragua had also been a transportation link, but Panama was where the first attempts at a canal were made. An attempt to dig a canal in Panama in the late 19th century added to this interest. In 1903, the United States encouraged a revolt and assisted by sending 10 warships to the area. The effect was to keep the Colombians from sending help to their army fighting the rebels. The canal itself was bounded on each side by land under U.S. administration and known as the Canal Zone. There were also forts in the area to safeguard the canal from internal or external attack and as bases for counterinsurgency operations.

NICARAGUA

Nicaragua, the focus of so much U.S. attention and intervention in the 1980s, was also an area of American political and economic interest in the 19th century. Like Panama, crossing Nicaragua was relatively easy and served as a way for gold seekers on their way to California to reach the gold fields without taking the long and dangerous journey around Cape Horn. William Walker briefly set up a government there and tried to get Nicaragua admitted to the union. Nicaragua, while it never entered the union, was treated as an area in which Americans could do as they wished. On one occasion in 1853, an American gunboat commander, having a disagreement with a village on the coast, fired upon it on his own authority. His action was approved by Franklin Pierce, the president of the United States at the time.

By the beginning of the 20th century, the stability of Nicaragua, particularly as an area of American investments and other economic activity (such as the UNITED FRUIT COMPANY) justified intervention in the minds of Americans. American troops were sent into Nicaragua in 1909–10, 1912–25, and 1926–33. In the latter intervention, the United States assisted the Nicaraguan government against the rebel leader AUGUSTO SANDINO, who would become the namesake not only of his contemporary rebels but also of a later generation of foes to American policy in the 1980s.

In the 1930s, the U.S. government supported the SOMOZA family (who had executed Sandino in 1934), which ultimately ruled Nicaragua from 1936 until the late 1970s.

CONCLUSION

The economic interests and dollar diplomacy were replaced after WORLD WAR II by the concern that Latin America could come under control of the Soviet Union. That cold war imperative has since become dominated by concerns with terrorism, illegal immigration, and the drug cartels. Based on past history, it may be safe to assume that any relations between the United States and Latin America will not be a meeting of equals.

ROBERT STACY

Laurier, Wilfrid

(1841–1919) *Canadian prime minister*

Wilfrid Laurier, a political child of the 19th century, led his Liberal Party into the 20th century as Canada's first French-Canadian prime minister. Equally adept both in his native French and in English, Laurier promoted growth in prairie provinces and predicted a golden century for Canada. But his leadership foundered on trade and military issues related to U.S. economic power and British imperialism.

Laurier became politically active while at Montreal's McGill University. As a young lawyer he joined the Parti Rouge, Québec's homegrown liberal organization. He spoke eloquently against the 1867 British North America Act, which created a confederated Canada. Months before it became law he wrote, "Confederation is the second stage on the road to 'anglification.' ... We are being handed over to the English majority..."

His embrace of French-Canadian separatism proved a passing phase. Winning election to Québec's provincial parliament, Laurier worked to make Canada's new federal system advantageous to fellow French speakers. He also began to develop a new kind of politics, similar to that of Britain's Whigs, and cofounded the Parti National to attract like-minded politicians.

When a railway scandal brought down John A. Macdonald's Liberal-Conservative government in 1873, Laurier won a seat in parliament. By 1877 the young Liberal headed the internal revenue ministry and had been chosen to lead his party. Although the Liberals were soon swept out of power by a resurgent Macdonald, Laurier remained as leader and was well positioned to take advantage of Conservative fatigue after Macdonald's death in 1891. Laurier became prime minister in 1896.

Among Laurier's goals during his 15-year tenure were trade reciprocity with the United States and robust western immigration and agricultural development. Like THEODORE ROOSEVELT, his counterpart to the south, Laurier sought to safeguard Canada's environment. He reached out to labor interests while cautiously reining in corporate abuses. To foster western growth, Laurier proposed a second transcontinental railway. It

was, like its predecessor, beset by competing interests, but Laurier crafted a compromise that made the Canadian National Railway a reality. In 1905 he overcame tough opposition to create the western provinces of Alberta and Saskatchewan.

Although knighted during Queen Victoria's 1897 Jubilee, Laurier encountered difficulties with Britain that were only partly due to his continuing French-Canadian attachments. The British Empire was at its pre-WORLD WAR I zenith. Laurier's compliance with British demands for Canadian soldiers in the 1899 BOER WAR outraged nationalists, especially in Quebec. His 1909 proposal to create a semiautonomous Canadian navy deeply alarmed Britain and many Anglo-Canadians, showing that Canada, for all its growth, remained dependent.

The United States also disappointed Laurier and helped bring an end to his government. An Alaskan boundary dispute, made urgent by the 1897 gold rush in Canada's neighboring Yukon Territory, ended with most Canadian claims denied. In 1911 Laurier negotiated an agreement that would have been the first comprehensive trade measure between the two nations since 1866. But Conservatives, joined by many of Laurier's Liberals, attacked the reciprocity pact as a sell-out that portended Canada's annexation. Within weeks it and Laurier's government had failed.

Laurier remained party leader until his death of a cerebral hemorrhage but never again held power. Thousands accompanied his funeral bier to Notre-Dame Cemetery in Ottawa, where he had spent the best and worst years of his life.

MARSHA E. ACKERMANN

Lawrence, T. E.

(1888–1935) *British officer and writer*

Thomas Edward Lawrence, the second of five sons of his unmarried parents, was born on August 16, 1888, in Tremadoc, Wales, and died on May 19, 1935, in Dorset, England. From 1896 to 1907 he attended the Oxford High School for Boys, where he made rapid academic progress. His major interests included military archaeology, brass rubbing, and coin collecting. Owing to these

interests he became friends with D. G. Hogarth, keeper of the Ashmolean Museum. From 1907 to 1910 Lawrence studied at Oxford, where his mentor, Hogarth, encouraged his interest in the Arabic language and the Near East. After graduation Lawrence worked for three years under Hogarth and C. Leonard Woolley at a dig at the ancient Hittite city of Carchemish in Mesopotamia. Early in 1914 Lawrence was involved in a survey of the desert that was actually a cover for British intelligence spying on the Turkish defenses in southern Palestine.

In WORLD WAR I Lawrence served as a captain in the British military intelligence service operating out of Cairo, where he made maps and had contact with spies. In 1916 he was transferred to the Arab Bureau, a branch of the intelligence service concerned exclusively with Arab affairs, particularly with the revolt of Sherif Husayn of Mecca against the Ottoman Empire. Prince Faysal, son of Sherif Husayn, was chosen by Lawrence to lead the revolt with British backing. During the revolt, Lawrence donned Arab dress and was given the nickname "Lawrence of Arabia." His preferred method of warfare included railway attacks and guerrilla warfare instead of more conventional methods of war. With the help of Auda abu Tayi, the Homeric Bedouin desert fighter, Lawrence devised a brilliant plan of attack on Aqaba against the Turks. He gradually progressed from being an adviser and observer to being one of the principal participants in the revolt. In the midst of the revolt, Lawrence was captured at Deraa after a failed raid on the bridges over the Yarmuk River. During his capture he was tortured and sexually abused by the Turks.

In January 1919 Lawrence began writing the *Seven Pillars of Wisdom*, which he continued revising until 1926. The book was an account of his time spent during the Arab revolt, included essays on military strategy, and also served as a vehicle for expressing his bitterness toward the political outcome in the Arab provinces. His bitterness stemmed in part from his position as Faysal's adviser during the PARIS PEACE CONFERENCE of 1919, in which he watched France gain control over Syria despite promises made to Faysal by Lawrence and the British government. In January 1921 Lawrence became an adviser to WINSTON CHURCHILL in the Colonial Office. He resigned in 1922, declaring that he was satisfied that Britain had fulfilled its promises to the Arabs by placing Faysal in control of Iraq and by installing Abdullah on the throne of Transjordan.

In August 1922 Lawrence, under the name John Hume Ross, joined the Royal Air Force. In January 1923 he was discharged after reporters discovered his

real identity. A month after being dismissed by the air force, Lawrence reenlisted in the Tank Corps under the name T. E. Shaw. He stayed until 1925, when he succeeded in getting himself retransferred to the Royal Air Force serving in India. In January 1929 he was ordered back to England, where he remained in the Royal Air Force until shortly before his death. On May 13, 1935, T. E. Lawrence was fatally injured while speeding on his Brough Superior motorcycle in Dorset, and six days later he died.

BRIAN M. EICHSTADT

League of Nations

Founded on idealism and championed by U.S. president WOODROW WILSON as part of his Fourteen Points plan for international peace, the League of Nations founded on the geopolitical realities of the interwar period. Designed to prevent war as a means of resolving disputes between countries, the league proved unable to halt the Italian conquest of Ethiopia, the Japanese invasion of Manchuria, or NAZI Germany's rearmament. Yet even given its failures the League of Nations inspired leaders to rethink traditional diplomatic practices and embodied the pacific, cooperative ideals that another generation would try to realize through the United Nations.

Prior to the league's creation, international relations had been the province of ambassadors exchanged between governments who then lived in the country to which they had been posted. Although these diplomatic procedures did not disappear, the league sought to build on another, more recent development in diplomacy: the international conference. Institutions such as the International Court of Arbitration at The Hague had lacked the power to halt the slide into WORLD WAR I. Nevertheless, international conferences of the later 19th and early 20th centuries had established rules for war, standard time, and policies on matters of common interest. The league's creators drew upon such precedents, though the great powers themselves did not abandon the more traditional modes of secret diplomacy.

The idea for the league came originally from Woodrow Wilson, who wished to create a real and lasting peace. The creation of the league was an integral part of his Fourteen Points and was the only point to be approved by the Allies. At home, a group of senators and representatives headed by Henry Cabot Lodge opposed U.S. membership in the league and effectively prevented the country from joining. In Wilson's vision, the League of Nations would act as a force to prevent the outbreak of war and create stability on the global stage.

The covenant upon which negotiators agreed in 1919 included article 10, in which league members undertook collectively to defend "the territorial integrity and existing political independence of all Members." Actual practice departed from this principle, in part because article 5 required binding resolutions to receive unanimous consent and in part because the league had no army in its service nor any other means to impose its will on an aggressor. When the U.S. Senate rejected the treaty and refused membership in the League of Nations, the institution experienced a significant setback in its efforts to acquire legitimacy and real power to pursue its peaceful agenda.

The League of Nations was composed of a secretariat, a council, and an assembly. Sir Eric Drummond, formerly of the British Foreign Office, served as secretary-general for the first 14 years (1919–33) and helped to attract 675 men and women to work as an international civil service. The council met at least annually. At its foundation the body included France, Britain, and Italy as permanent members, along with other smaller powers. The council grew to 10 in 1922 and to 14 in 1926, when the additional members were supposed to counterbalance Germany's admission to the council. The membership of the assembly was largely European and South American, as most African and many Asian countries remained under European rule until after WORLD WAR II.

Although best known for its failures in the area of collective security, the league began its existence with several successes. The league council prevented war between Sweden and Finland over the Aaland Islands (1920), between Germany and Poland over Upper Silesia (1921), and between Greece and Bulgaria over the exact location of their shared border (1925). This raised some questions about whether the league would be able to deal with disputes that touched the interests of a country such as Britain or France. In fact, the great powers continued to pursue old-fashioned diplomacy and treaties, such as the LOCARNO AGREEMENTS.

Britain would not accept measures to reinforce the league's powers to react against aggression. The league-sponsored Disarmament Conference met during the late 1920s and early 1930s until HITLER withdrew Germany from the conference and from the league in 1933.

The weaknesses of the league became especially apparent in 1931. During its meeting in Geneva, the assembly learned that Japan had begun to attack the Chinese in Manchuria. As the days passed news grew worse, and the Chinese representative called upon the league council to authorize a response. After vacillating and accepting disingenuous assurances from the Japanese representative about his country's intentions, the league sent a commission of inquiry under Lord Lytton that arrived in April 1932. The Japanese army already exercised effective control over much of "Manchukuo." The LYTTON COMMISSION submitted a 100,000-word report on September 4, 1932. The assembly accepted its conclusion that the Japanese had violated the league covenant. It condemned the aggression against China but did nothing further. Japan simply withdrew from the league in March 1933.

Similar instances of impotence occurred after Italy invaded league member Ethiopia in 1935. Pierre Laval, the French foreign minister, and Sir Samuel Hoare, his British counterpart, went outside of the league framework to seek ways to appease BENITO MUSSOLINI, to serve their own interests, and to avoid war. These secret negotiations later became public knowledge, much to the chagrin of the participants, but the unwillingness of Britain and France to support the league did not change. The league first attempted conciliation and then studied the crisis. The assembly agreed that blame fell upon Italy, yet it could do nothing more than impose economic sanctions. The completion of Italian conquest indicated the failure of the sanctions, so the British pressed for them to be lifted in 1935. League members quietly accepted Italy's annexation of Ethiopia.

The League of Nations continued to meet in the late 1930s. It dissolved in 1946, when the United Nations came into existence. Founders of the United Nations attempted to learn from the supposed shortcomings of the league, especially with regard to collective security and the composition of the council.

MELANIE A. BAILEY

Lebanese independence and the Confessional System

The Lebanese Confessional System refers to the political and legal structuring of the Republic of Lebanon according to religious affiliations. The Lebanese government acknowledges over 17 different religious sects, but the main divide is between Christians and Muslims. The Confessional System was introduced prior to Lebanon's independence during the years of the FRENCH MANDATE (1917–1943). The French colonial authorities distributed governmental posts based on the population count in the 1932 census, which favored Christians over Muslims in a 6 to 5 ratio. There was not another census for the rest of the century. By the time Lebanon gained independence in 1943, the Lebanese population had become further polarized and identified along confessional lines.

In 1943, the independent Lebanese state enacted the National Pact (Al-Mithaq al-Watani), reinforcing the sectarian system of government by distributing the three top political positions along confessional lines. The national pact is an unwritten agreement and the result of numerous meetings between Lebanon's first president, Bishara al-Khoury (a Maronite Christian), and the first prime minister, Riyad Al-Solh (a Sunni Muslim). Khoury and Solh allocated government posts in a confessional manner in an attempt to please all religious communities and guarantee their participation in the newborn state.

The prime position of president was reserved for Christian Maronites, the post of prime minister was allocated to a Sunni Muslim, the position of speaker of the parliament was allocated to Shi'i Muslims, and the titles of deputy speaker of the house and deputy prime minister went to Greek Orthodox Christians.

The core of the national pact aimed to address the Christians' fear of being overwhelmed by the Muslim communities in Lebanon and the surrounding Arab countries, Syria in particular, and the Muslims' fear of Western hegemony. In return for the Christian promise not to seek foreign—specifically French—protection and to accept Lebanon's "Arab face," the Muslim side agreed to recognize the independence and legitimacy

of the Lebanese state in the 1920 boundaries and to renounce aspirations for union with Syria.

In addition to the national pact, the parliamentary electoral law equally enforced the sectarian system. The representatives in the parliament were divided equally between Christians and Muslims by the Taif Accord, with each sect occupying seats in proportion to the population percentage.

The religious communities represented in parliament, with the number of seats each occupies, is as follows: Maronite Christians (34), Sunni Muslims (27), Shi'i Muslims (27), Greek Orthodox (14), Greek Catholics (8), Druze (8), Armenian Orthodox (5), Alawites (2), Armenian Catholics (1), Protestants (1), and other Christian groups (1).

The confessional system outlined in the national pact was a pragmatic interim to override philosophical divisions between Christian and Muslim leaders at the time of the French withdrawal and independence. However, the frequent political disputes in recent history, the 1958 civil war, and the far bloodier 1975 civil war are testaments to the failure of the national pact to achieve the anticipated social and political integration.

RAMZI ABOU ZEINEDDINE

Lenin, Vladimir

(1870–1924) *Russian revolutionary leader*

Among the savviest and most single-minded politicians of the 20th century, Vladimir Lenin capitalized on the chaos in Russia caused by WORLD WAR I and the resentments spawned by the advent of industrial capitalism. By imposing discipline and a radical agenda on his Bolshevik Party and by providing a clear alternative to the repressive autocracy that had acquiesced before, if not abetted, Russian economic and social backwardness, Lenin acquired the power to lead his country toward socialism.

The Soviet regime established after the RUSSIAN REVOLUTION in 1917 did not meet Lenin's ideals, but he continued to strive to enact the reforms he deemed necessary for modernizing Russian culture, the econ-

omy, and society. Ruthless yet compassionate, pragmatic yet idealistic, Lenin was a paradox who knew how to recognize the opportunity for revolution when others did not.

Vladimir Ilych Ulyanov grew up in Simbirsk, on the Volga, where his father was a school inspector. Born on April 22, 1870, he had two brothers and three sisters with whom he had a close relationship. Along with others of similar education and professional attainments, Lenin's father hoped for major reforms to the Russian political, economic, and social systems. Yet Lenin's revolutionary aspirations and Marxist principles, which were avidly supported by his sisters, far transcended the reformist goals of his father.

Around 1886 Lenin began to develop his political thought and committed to revolution as a means of bringing about substantive, profound change in Russia. His brother Alexander was arrested in that year for having plotted to assassinate Czar Alexander III; his execution marked the young Vladimir and made him more politically conscious. He yearned for an end to crass materialism, the sexual double standard, and the corrupt values of late 19th-century Russia. Perhaps as a consequence of his brother's experience, Vladimir opted against terrorism and assassination; instead he cultivated the persona of a self-conscious, professional revolutionary.

As a consequence of his brother's conviction, Lenin endured police surveillance. Although he was among the best students in Russia, he could not obtain a place at any of the major universities; he settled for the local university in Kazan. He was soon expelled, however, along with all "risky" students. He later studied law by correspondence at the University of Saint Petersburg, but conventional careers were clearly closed to him.

As he began his sporadic work as a legal assistant in late 1893, Lenin continued his voracious reading. He delved even further and more deeply into the works of intellectuals such as George Plekhanov, the founding father of Russian social democracy, and Karl Marx. In 1889 he translated the *Communist Manifesto*.

While Lenin continued to mourn the loss of his much-loved sister Olga, who died in 1891, he met the woman who would become his longtime companion and wife, Nadezhda Krupskaya. Together they studied Marx, contemplated social democratic strategy, and started to practice the tactics required of political subversives in czarist Russia. Around the same time Lenin appeared in police surveillance records on his own account, having defended Marxist views in a debate

with a populist in 1894. He also wrote his first pamphlets and articles around this time.

Lenin made his first trip outside Russia in 1895, when he met with social democrats such as Wilhelm Liebknecht in Germany and Paul Laforgue in France. Upon his return to Russia, he cofounded a social democratic group and established a newspaper. These activities attracted police attention, and Lenin was arrested in December along with many of his colleagues. He spent about a year in Saint Petersburg, where he was interrogated four times, before being sentenced to three years in Siberia. Krupskaya was arrested while Lenin was in jail, and she received permission to join him in exile. Lenin spent the years in Siberia (1897–1900) reading, writing, and giving legal advice to local peasants. He began to develop his own interpretations of Marxism and to interpret Russian conditions in that light. Lenin and other Russian social democrats rejected the populist argument that peasants were proto-communists.

Lenin rigorously opposed the notion that socialism would “just happen” or even come about as a consequence of a series of incremental reforms to capitalism. He maintained that both dramatic political change and dramatic socioeconomic change would have to occur; social democrats had to fight for them all simultaneously. Lenin’s perspective was influenced by the ideas of Russian revolutionary and anarchist Mikhail Bakunin, who had focused criticism on the state and the church as the major sources of oppression in Russia. Lenin shared Bakunin’s antipathy toward religion and the Russian Orthodox Church, though he thought that the state could be captured and directed to serve the working class.

STRONG EXECUTIVE

When Lenin finished his period of exile in Siberia, he settled briefly in Pskov, where he worked in the Bureau of Statistics. He visited Nuremberg, Munich, Vienna, London, and other European cities. After he and Krupskaya settled in Geneva, they became central to the project of building an effective, disciplined Russian social democratic party.

Although Lenin occasionally sought reconciliation, the 1903 split between his Bolsheviks and the more reformist Mensheviks became permanent. Lenin averred that Russian social democracy most needed a tightly disciplined party with a strong executive. As events showed, his organizational model proved valid.

The RUSSIAN REVOLUTION of 1905 disappointed Russian radicals and revolutionaries, though they did find their way back into the country for a few years.

Lenin saw the beginnings of a bourgeois revolution, though the ephemeral character of constitutional reforms granted by the czar indicated that Russians had much revolutionary ground yet to travel. After returning to exile in Europe, where he would remain for the decade prior to 1917, Lenin resumed his efforts to push Russia out of its czarist rut.

The International Socialist Bureau did not recognize Lenin as sole leader of the Russian socialists, though he did gain control over the key newspapers of the group. In the years prior to WORLD WAR I, Lenin organized, read, and wrote. He published articles on party organization, socialism, religion (in which he recommended that the party oppose religion, even as a private affair), and socialism in Asia.

The outbreak of World War I found Lenin and Krupskaya in Kraków, Poland. Lenin had taken an interest in the implications of foreign affairs for social democracy in Russia since the turn of the century, and he reservedly predicted that the war would hasten the advent of socialism in Europe. Although unafraid of class, civil, or revolutionary wars if they would promote socialism, Lenin could not abide imperialist, bourgeois international wars. Lenin envisioned a Socialist International that would recognize national cultures as equal and sovereign while emphasizing the shared character of the socialist struggle. Lenin continued and further elaborated his thought on wars and the overall international situation in *Imperialism* (published in 1917) and *State and Revolution*.

When the revolutionary year of 1917 dawned, Lenin seemed a rather marginal figure on the Russian political stage. Having been out of Russia for decades and with only a relatively small group of ardent supporters, Lenin returned to Petrograd in April with apparently little prospect of acquiring power. He surprised even his allies, many of whom had greeted him upon his arrival at Finland Station, with his April Theses; the party did not fall into line with his radical demands until three weeks of debate had passed. Lenin’s refusal to endorse participation in the provisional government contravened the desire of many Bolsheviks (including JOSEPH STALIN) to exercise influence in any way they could. He advocated an immediate end to Russian participation in World War I.

GRADUAL SOCIALISM

He encouraged Bolsheviks to cultivate close relations with the soviets that had formed in the cities and the countryside. Lenin wanted to destroy the state institutions that were oppressing Russians, though he did not

Revolutionary leader Vladimir Lenin addresses the Second Soviet Congress in Smolny Palace, St. Petersburg, October 25–26, 1917. Lenin called not only for the end of czarist rule in Russia but also more ambitiously, he envisioned worldwide worker revolution.

state that he aimed to eliminate the police, the bureaucracy, and the army for good. Lenin further recommended the confiscation and redistribution of landed estates; he hoped to prevent small peasant farms from replacing them by immediately nationalizing the land. He planned to introduce socialism gradually, first by giving control over production and distribution to the soviets of workers' deputies.

As the days and months of 1917 passed, Lenin became an increasingly important leader, even after the provisional government began to hound the Bolsheviks. His decisive moves to capitalize on the weakness of that government enabled his party to seize power in October, even though the Bolsheviks had not yet converted even a minority of Russians to their ideology. The Bolsheviks did not have control over the countryside in 1917 or immediately thereafter, with the result that peasants had proceeded to form smallholdings; some of them had already begun to amass considerable acreage. Hence, collectivization could not occur as Lenin had hoped. The Ukraine and other provinces under the control of the Russian government experienced a revival of nationalist sentiment. The economy remained in shambles.

World War I had already demonstrated the incapacity of Russian infrastructure and industry to provide for the people, but Russia's gross national product suffered even further after the Bolsheviks gave control of factories to workers who had no training in management and little real knowledge of the overall production process. Lastly, the party abandoned real democracy; Lenin declared that the Bolsheviks had to direct the government and the economy until such time as the Russian people had experience with the new system and had enough education to appreciate the communist ideal. The Bolsheviks enacted legislation that gave equal rights to women, though the people had not pushed for such changes.

Lenin suffered a debilitating stroke in 1923 after having previously suffered two less harmful attacks. By that time the Communist government had yielded to political and economic pressure as well as the reality of food shortages and lack of industrial supplies, by enacting the NEW ECONOMIC POLICY. Lenin and his supporters intended for such reforms to ease nationalization, collectivization, and the end of private enterprise, though they allowed for the latter and for small family farms in the short term as a means to generate

the national wealth needed to effect the transition to communism.

Before Lenin died he had already surrendered real, everyday control over the government. He had not appointed a successor; his close associates LEON TROTSKY and Joseph Stalin each viewed themselves as such, along with several other aspirants. When he died in 1924, Lenin had effected a revolution that had radically changed perceptions of Russia and its prospects for the future. Whether his successors could realize the potential of the revolution and the promise of communism remained unknown.

MELANIE A. BAILEY

Lewis, John L.

(1880–1969) *American labor leader*

John L. Lewis, longtime president of the United Mine Workers of America (UMWA) and cofounder of the Congress of Industrial Organizations (CIO), was the United States' most powerful labor leader during the GREAT DEPRESSION. In 1933 he played a central role in the development of NEW DEAL legislation that affected workers. He successfully lobbied the administration of FRANKLIN ROOSEVELT to include a provision, section 7a, in the National Industrial Recovery Act (NIRA) that guaranteed workers the right to organize their own unions and to undertake collective bargaining with their employers. Lewis used the NIRA as a springboard to organize more than 95 percent of the nation's bituminous miners.

As one of the founders of the CIO in 1935, Lewis sought to organize workers in a wide variety of occupations, ranging from longshoremen to actors. He focused particularly on mass-production workers in U.S. heavy industries. This defied the agenda of the American Federation of Labor (AFL), which traditionally organized only skilled craft workers. Lewis gained vital federal and state support for the militant auto workers in Michigan who undertook a daring sit-down strike against General Motors in 1937. As a result of the strike, the automobile industry was forced to recognize the legitimacy of the United Automobile Workers (UAW). The same

year Lewis negotiated employer recognition of the Steel Workers Organizing Committee (SWOC), in a steel industry that was notoriously hostile to union activity. By the end of 1937, approximately one of every four U.S. nonagricultural workers belonged to a union.

Lewis's influence waned during the late 1930s, when he was an ardent isolationist. He correctly foresaw that if the United States became involved in WORLD WAR II, the Roosevelt administration would neglect its progressive domestic agenda in favor of building consensus support for the war effort. Lewis considered this to be a betrayal of the New Deal, and he shocked many of his cohorts when he endorsed Republican presidential candidate Wendell Willkie in 1940. In 1942 he withdrew the UMWA from the CIO because he felt that CIO leaders had lost their autonomy by supporting the administration. As a result, Lewis and the UMWA became isolated from much of the labor movement. Throughout the 1940s, he led a series of widely unpopular strikes, cementing his reputation as an adversary of federal power. Much hated by HARRY S. TRUMAN, in 1946 he defied a federal injunction to end a nationwide coal strike, for which he received enormous fines.

Historians find significant contradictions in Lewis's career. After successfully collaborating with the Roosevelt administration to win unprecedented legitimacy for unions, he became a vehement critic of government-labor alliances. Although he helped to empower millions of workers, he ran the UMWA with autocratic authority.

TOM COLLINS

Lindbergh, Charles

(1902–1974) *aviator*

The best-known pilot in the world both in his lifetime and in the annals of history, Charles Lindbergh started out as a barnstormer in a WORLD WAR I surplus biplane he bought while working as an airline mechanic in

Montana. The postwar years saw a great deal of public fascination with flight and with pilots, as the war had put the airplane in the spotlight. Lindbergh came to fame in 1927 when he won the \$25,000 prize offered eight years earlier by French businessman Raymond Orteig for making the first nonstop flight from New York City to Paris, a 34-hour flight without rest.

Lindbergh was received as a hero, bringing still more respect and attention to aviation while demonstrating the spirit of individualism of which Americans were so enamored. In an age of celebrity, when writers like F. Scott Fitzgerald spent much of their time on magazine covers, Lindbergh was a star, which made his 20-month-old son Charles A. Lindbergh, Jr., a prime target for kidnapping. For two months and 10 days, the world followed the course of the investigation: The baby disappeared sometime between nine and 10 at night, and a note demanding \$50,000 in small bills was found outside the nursery window. Four colonels participated in the investigation, liaisons were appointed to speak to the leaders of organized crime, and President HERBERT HOOVER himself was notified within hours of the kidnapping. Eventually, a baby's body was found five miles from the Lindbergh home; two years later German immigrant Bruno Hauptmann was found with some of the marked ransom money, arrested, and eventually executed. To this day, the evidence convicting Hauptmann of murder remains scant, and there is no forensic evidence that the baby was Charles, Jr.; though Lindbergh identified the remains, animals had left so little recognizable that medical examiners were unable to even determine the child's sex.

The Lindberghs became more reclusive following the kidnapping, avoiding the public eye. Lindbergh supported isolationism in the years leading up to WORLD WAR II and was widely suspected of NAZI sympathies, which led President FRANKLIN ROOSEVELT to ban him from military service. Nevertheless, though Lindbergh believed in the superiority of some races over others, he condemned the Nazis' treatment of Jews and spoke in support of African-American rights. Lindbergh died in Hawaii in 1974 after a quiet retirement. The *Spirit of Saint Louis*, the custom-built Ryan aircraft he used for his famous transatlantic flight, was donated to the Smithsonian Institution in 1928 and remains on display in the National Air and Space Museum in the main atrium—a position of honor shared by the first supersonic craft and the first privately funded spacecraft.

BILL KTE'PI

literature

AMERICAN LITERATURE

The 19th century saw the birth of science fiction and the detective novel, the heavy use of American dialects and the vernacular by such authors as Mark Twain and George Washington Cable, and the psychologically complex novels of writers like Henry James. The 20th century continued these trends. For instance, the regional interest of the Southwest humorists and the local color school gave way to Edith Wharton's examination of the eastern seaboard, F. Scott Fitzgerald's novels of New York and American expatriates, and William Faulkner's stories of Yoknapatawpha County, Mississippi. Faulkner often wrote not only in dialect that could at times be nearly impenetrable, he used the rambling stream of consciousness approach employed previously by James Joyce. In 1949 he won the Nobel Prize in literature for his contributions not only to American literature but to the world of letters. Two of his novels were awarded the Pulitzer Prize: *A Fable* and *The Reivers*, both of which are now considered minor works compared to *The Sound and the Fury*; *Absalom, Absalom!*; and *As I Lay Dying*.

Social concerns became prominent in American literature in the early 20th century, with Upton Sinclair's *The Jungle*—an attack on meat packing and on the ills of capitalism—an obvious example. Fitzgerald, John Dos Passos, Sherwood Anderson, John Steinbeck, Nathanael West, and Sinclair Lewis were deeply invested in their portraits of American life and American character. Lewis's *It Can't Happen Here* warned against the possibility of a fascist regime in the United States.

Gertrude Stein, meanwhile, coined the term *the lost generation* to refer to the American authors expatriated to Europe between WORLD WAR I and the GREAT DEPRESSION. The Lost Generation included Stein, Hemingway, Anderson, Fitzgerald, Dos Passos, and the poets Ezra Pound and T. S. Eliot, among others. Many of these authors drew not only on their European experiences but on nonliterary movements for inspiration in their work: Stein herself was fascinated by cubism, while Pound and Eliot were as influ-

enced by painting, sculpture, and music as they were by other authors.

The detective stories of Edgar Allan Poe and Britain's Arthur Conan Doyle in the 19th century led to a boom in mysteries in the 20th century, which in the United States particularly included the "hard-boiled" genre epitomized by Dashiell Hammett and Raymond Chandler. Other detective stories showed up in the pulps—cheap magazines and short novels, successors to the dime novels—alongside science fiction, horror (including H. P. Lovecraft's Cthulhu Mythos stories), sword and sorcery such as Robert E. Howard's Conan series, and adventure stories featuring jungle explorers, pilots, and crime fighters. The pulps, along with the newspaper comic strips now being nationally distributed, were a major influence on the comic books of the 1930s and 1940s, which saw the birth of Superman, Batman, Captain America, and others.

The 1930s also saw the emergence of the golden age of science fiction. The first all science fiction magazine—*Amazing Stories*—had been founded in 1926, but it was in the late 1930s, when John Campbell became editor of *Astounding Science Fiction*, that many of the greats of the genre came to prominence: Isaac Asimov, James Blish, and Robert Heinlein, among others. Campbellian science fiction emphasized the wonder and ingenuity of scientific achievement rather than acting as cautionary tales or allegories.

INTERNATIONAL LITERATURE

With the advent of the new century, a number of annual literary prizes were created: the Nobel in 1901, the Prix Goncourt in 1903, and the Pulitzer Prize in 1917. Those who won were largely European or North American, with the Nobel Prize having a heavy weighting to northern Europe.

In Britain there was a proliferation of literature that had backgrounds set during war, especially WORLD WAR I and then WORLD WAR II. Stories set in parts of the British Empire, both true and fictional, were very popular. One of the most prolific writers during this period was Rudyard Kipling, and he was awarded the Nobel Prize in literature in 1907 for his work. War stories were also popular in many other countries, with Henri Barbusse's *Under Fire* (1917), R. C. Sherriff's *Journey's End* (1928), Erich Maria Remarque's *All Quiet on the Western Front* (1929), and Jaroslav Hašek's *The Good Soldier Schweik* (1939) all being translated into many languages. The reduction in the cost of printing, as well as increased literacy, saw a huge demand for adventure stories for

William Faulkner won the 1954 Nobel Prize in literature for his contribution to the world of letters.

children. These helped introduce young people to other parts of the world and historical periods, and they were matched by an increase in historical fiction, with the Napoleonic era and the Roman Empire proving popular with novelists from Britain, France, Germany, and many other countries. By the 1940s many books were decorated by elaborate dust wrappers. In 1935 Allen Lane started Penguin Books, publishing works in cheaper paperback editions, a move quickly followed by many other publishers all around the world.

The period from 1900 until 1950 also saw an increase in the production of plays by British and European playwrights, often leading to films of the works. Some of the more popular plays were by writers such as George Bernard Shaw and John Galsworthy, both British Nobel laureates. There were also several new genres such as H. G. Wells's *The Time Machine* (1895). Then there were those warning about the future such as Aldous Huxley's *Brave New World* (1932) and George Orwell's *1984* (1948). There were also some fantasy writers with

J. R. R. Tolkien's *The Hobbit* (1937) becoming popular in the 1940s and C. S. Lewis's *The Lion, the Witch and the Wardrobe* (1950), leading, respectively, to further books on Middle Earth and Narnia. Lewis was a prominent writer on theology, and Bertrand Russell wrote philosophy, as did other writers such as Romain Rolland. There were also a few non-European writers who rose to prominence, the most famous probably being Rabindranath Tagore from India, who won the Nobel Prize in 1913.

BILL KTE'PI

Lloyd George, David

(1863–1945) *British politician*

David Lloyd George was the most dominant figure in British politics in the first quarter of the 20th century. Although Welsh on both sides of his family, he was actually born in Manchester, England, in 1863. His father, William George, then a headmaster of an elementary school in Manchester, died 17 months later, leaving his pregnant widow to raise the children. His mother, Elizabeth, took her family back to her home village of Llanystumdwy in north Wales to live with her bachelor brother, Richard Lloyd, a shoemaker and copastor of a little Baptist chapel. A Welsh nationalist and deeply religious, Richard Lloyd played an active role in the upbringing of young David, imbuing him with many of his formative beliefs. At the age of 14, David was apprenticed to one of the leading firms of solicitors in Portsmouth, passing his final examinations in 1884. During the early years of his practice, he met and married Margaret Owen, who bore him two sons and three daughters.

Bitten by the political bug while in his late teens, Lloyd George associated himself with the Liberal Party. In 1890 he was elected to Parliament for the Caernarfon Boroughs, a seat that he would retain for the next 55 years. A gifted speaker, audacious, and industrious, he soon became a leading spokesman for the radical wing of the party. As a pacifist he inveighed against the immo-

rality of the BOER WAR in South Africa and expressed sympathy for the Boer farmers.

When the Liberals returned to power in 1905, Lloyd George was appointed president of the Board of Trade, a position he held for three years, during which he sponsored much important legislation. He took over as chancellor of the Exchequer at a time when the government needed to find new sources of revenue to pay for the cost of social programs and additional battleships to keep ahead of the ambitious German naval program. Accordingly, his “peoples budget” in 1909 called for a heavy tax on unearned income such as inheritance, increased value of land, and investments. The House of Lords, which was dominated by Conservatives, vetoed the budget, defying the House of Commons’ traditional control of taxation. This provoked a constitutional crisis, forced two general elections, and ended in 1911 with the passage of the Parliament Act, which severely curtailed the powers of the House of Lords.

When the question of Britain’s entry into the war was debated in the cabinet in the opening days of August 1914, Lloyd George sat on the fence until Germany’s invasion of neutral Belgium provided him with a face-saving formula to join the ranks of the interventionists. Just as he had preached pacifism prior to 1914, he pursued his new course with vigor and determination.

At the Exchequer he handled the financial problems posed by the war, and when a coalition government was established in May 1915, Asquith appointed Lloyd George to head the new Ministry of Munitions. Here he applied the same energy to stimulate the production of munitions as well as push for the manufacture of bigger and more efficient guns. In the summer of 1916, he became secretary for war, succeeding HORATIO HERBERT KITCHENER, who drowned when the ship on which he was traveling to Russia struck a mine and sank. As the year wore on, Lloyd George grew increasingly disenchanted with Asquith’s lack of drive, and on December 1, with the backing of the Conservatives, he proposed that a small committee should be created to run the war with himself in charge. The king asked Bonar Law, the Conservative leader, to form a government, but he declined. Lloyd George was left as the logical alternative, and, when invited to serve as prime minister, he willingly accepted the challenge. He formed a coalition made up of Conservatives and Liberals. His intrigue against Asquith split the Liberal Party between a faction loyal to him and another loyal to the former prime minister. The breach became permanent and finished the Liberal Party as a major political force.

Lloyd George made institutional changes at the outset, creating new ministries and substituting a small war

cabinet, whose members were free from departmental responsibilities, for the unwieldy body that had hitherto conducted affairs. The prime minister's central concern was to change the direction of the war. Instead of concentrating on the western front, Lloyd George favored attacking Germany's allies, where progress was expected to be easier and the cost substantially less. As an amateur strategist, he never understood that the war could only be won by defeating the German army. Even if Douglas Haig had employed more imaginative tactics early on, the price of victory would have been tragically high. In the winter of 1917–18, Lloyd George tried his best to thwart Commander in Chief Haig's plans for an offensive by denying him the troops that he had requested. It was a misguided action that almost spelled defeat for the Allies when the Germans attacked the British sector in force in the spring of 1918.

The crisis led to the establishment of a unified Allied command under General Foch, in which military effectiveness was improved, and by May the situation had stabilized. Haig's series of victories in the summer and fall were instrumental in inducing the German government to ask for an armistice, but it was Lloyd George who represented himself as "the man who won the war." In truth, his legacy does not rest on his management of the war, where he did more harm than good. It was on the home front that he left his mark: safeguarding shipping and maintaining food supply, increasing war production, mobilizing manpower, and providing an unflagging display of optimism and resolve when things looked bleak.

His popularity at an all-time high, Lloyd George, popularly known as the "fighting Welshman," won an easy electoral victory in December 1918, which allowed him to continue the coalition. He played a leading part at the PARIS PEACE CONFERENCE, steering a middle course between WOODROW WILSON's idealism and GEORGES CLEMENCEAU's demands. It is to his credit that the final terms were not as severe on Germany as they would have been. His failure to rebuild the economy; a personal scandal in which he traded peerages and other honors for campaign contributions; the granting of independence to Ireland, which cost him Conservative support; and a reckless foreign policy that almost led to an unnecessary war with Turkey spelled his downfall in October 1922. He never regained power and died in March 1945 at the age of 82.

GEORGE H. CASSAR

Locarno agreements (1925)

The Pact of Locarno, negotiated on October 16, 1925, symbolized the atmosphere of goodwill between erstwhile enemies who had fought a global war 11 years before. The delegates from Germany, France, Great Britain, Belgium, Italy, Poland, and Czechoslovakia met in the city of Locarno, Switzerland.

The preceding months had eased the tension in western Europe. In November 1924 the French had ended the Ruhr occupation. The financial condition of France was not good, and occupation of the Ruhr had become costly. The attitude of France changed after the coming of a new government with foreign minister Aristide Briand (1862–1932). Briand had softened his earlier stand and had become a "pilgrim for peace." Gustav Stresemann (1879–1929), the foreign minister of the Weimar Republic, was in favor of reconciliation with France. In January 1925, Stresemann proposed a Rhineland Pact, which would guarantee the Franco-German border.

The German acceptance of a demilitarized Rhineland guaranteed the western frontier of France as well as Germany's acceptance of a part of the peace dictated at Versailles. Great Britain was interested in a general peace in Europe for the sake of its commercial and financial interests. The United States had been persuaded by Great Britain to overhaul reparations, and the consequent Dawes Plan gradually stabilized the German economy.

The Locarno Conference began on October 5, 1925. The German delegation was headed by Hans Luther (1879–1962), the chancellor, but most of the work was done by Stresemann. The British foreign secretary, Austen Chamberlain (1863–1937), played an important part in the deliberations at Locarno. Briand was the delegate from France. Emile Vandervelde (1866–1938), Vittorio Scialoja (1856–1933), Eduard Beneš (1884–1948), and Alexander Skrynski (1882–1931) were delegates of Belgium, Italy, Czechoslovakia, and Poland, respectively. The conference continued for 11 days. The diplomats patiently discussed the security of their frontiers in official meetings and

informal conversations. Seven treaties came out of the deliberations in an environment of cordiality and cooperation.

The Locarno agreements signaled high hopes immediately. It seemed to erase the bitter memory of WORLD WAR I. Paving the way for Germany's admission to the LEAGUE OF NATIONS in September 1926, it gave Germany its due place on the committee of nations. There was rapprochement between France and Germany. In 1926 Chamberlain, Briand, and Stresemann were awarded the Nobel Peace Prize. It was perceived in 1925 that the Locarno Pact would bring peace in Europe, and there would not be another world war. But beginning in the 1930s a series of events took place that ultimately led to another conflagration.

PATIT PABAN MISHRA

Long, Huey

(1893–1935) U.S. politician

Both populist and demagogue, Huey Long, nicknamed “Kingfish,” controlled his state of Louisiana as governor and U.S. senator and founded a political dynasty. During the GREAT DEPRESSION Long’s popular “Share Our Wealth” scheme made him a credible challenger to President FRANKLIN D. ROOSEVELT (FDR). That possibility abruptly ended in 1935 with Long’s assassination.

Long was born in rural northern Louisiana. Although his family was comfortable, as a lawyer he specialized in representing underdogs fighting powerful organizations. Elected to Louisiana’s Public Service Commission, he took on Standard Oil and telephone and railway companies. After an unsuccessful 1923 campaign for governor, Long won in 1927 using the slogan “Every Man a King, But No One Wears a Crown.”

Long ruthlessly consolidated power through patronage, threats, and guile, creating a powerful political

machine. He also gained popular support with initiatives to improve Louisiana’s wretched schools, expand its inadequate highway system, finance hospitals, and improve Louisiana State University. Unlike most southern leaders of his era, Long rarely used race-baiting tactics, although most Louisiana blacks remained poor and disenfranchised.

Usually surrounded by bodyguards, the flamboyant “Kingfish” used radio and sound trucks to bring voters his message unmediated by a mostly hostile press. Surviving impeachment in 1929 and term-limited by the state constitution, Long aspired to the Senate. But he declined to relinquish his grip on Louisiana, where he and his machine were collecting millions in kickbacks from those beholden to him for jobs or favorable legislation.

Long decisively won his Senate seat in 1930, staying in Baton Rouge until an obedient ally assumed the governorship. Loud, even buffoonish, in his clothing and manner, Long was fodder for a fascinated national press and soon attracted a host of enemies. In 1932, at first grudgingly, he supported Roosevelt’s candidacy, playing a key convention role to assure FDR’s nomination.

The “honeymoon” between Long and the new president was soon over. Long sharply criticized FDR’s emergency bank holiday of March 1933 and opposed other key NEW DEAL legislation. By late 1933 FDR had written Long off, cutting off his patronage opportunities and ordering federal officials to investigate his finances.

Long focused on his “Share Our Wealth” plan, developing support across the nation for his proposal to limit how much wealth rich Americans could accumulate. The surplus, Long argued, would guarantee ordinary Americans a minimum annual income. Meanwhile, Long regularly used Senate filibusters to annoy the Democratic leadership and promote his political agenda. In June 1935 Long spoke for almost 16 hours—the longest filibuster to that time.

That September Long returned to Baton Rouge, where he was still effectively governor. Leaving the House chamber on the evening of September 8, Long was shot by physician Carl Austin Weiss, son-in-law of a powerful judge who was Long’s bitter enemy. Incompetently treated, the “Kingfish” died two days later. A hundred thousand mourners attended the funeral on the capitol grounds where he was buried.

Rose McConnell Long completed her husband’s Senate term. His brother Earl became a controversial Louisiana governor. His brother George and cousins Gillis and Speedy Long served in the U.S. House. Russell Long, Huey’s son, won a Senate seat in 1948, rising to chairman-

ship of the Finance Committee before retiring in 1987. Years later Long was still popular despite ample proof of corrupt and despotic practices. Robert Penn Warren's best-selling 1946 novel, *All the King's Men*, a thinly veiled Long portrait, spawned several movie versions. A statue of Long stands in the U.S. Capitol's Statuary Hall.

MARSHA E. ACKERMANN

Long March

By late summer of 1934, the fifth encirclement campaign, led by CHIANG KAI-SHEK, had convincingly defeated the Chinese Communist Soviet and reduced it to a six-county area in Jiangxi (Kiangsi) Province. On October 15 the Communist government abandoned its capital, Ruijin (Juichin), with 85,000 soldiers, 15,000 party and government officials, and 35 women (wives of the high officials). They began the Long March, which would last for one year and cover about 6,000 miles (called the 25,000 *li* Long March in Chinese).

The Communists were able to break out of the eastern sector of the Nationalist encirclement because it was guarded by army units under dissident generals whom Chiang did not control and whose leaders feared that the elimination of the Communists would hurt them. The fleeing Communists were allowed to escape through a narrow corridor on the border of Guangdong (Kwangtung) and Guangxi (Kwangsi) (ruled by Nationalist generals who were opponents of Chiang) and entered Guizhou (Kueichow). Guizhou province, the domain of a corrupt warlord who grew rich from opium, was unable to prevent the Communist incursion.

In January 1935 the communists held a conference at Zungyi (Tungyi) in Guizhou where MAO ZEDONG (Mao Tse-tung) and his allies Zhou Enlai (Chou En-lai), and ZHU DE (Chu Teh) emerged victorious, blaming the previous defeats on their opponents in the party. They then decided to head for northern Sha'anxi (Shensi) Province, where a Communist base already existed. Chased out of Guizhou by Chiang's pursuing forces, the Communists headed for Yunnan, Sichuan (Szechuan), Sikang, and Gansu (Kansu) Provinces and were evicted from each in succession. Mao and 8,000 survivors reached northern Sha'anxi in October 1935; others who arrived later

boosted the total to 30,000. They established themselves in Yanan (Yenan), which would remain their headquarters until 1949.

The Long March was an epic of survival for the Chinese Communists: They survived terrible terrain and their pursuers. Although severely reduced in numbers, the leadership emerged intact. Mao became the clear leader of both the party and the military after the Zunyi Conference and would continue to dominate both until his death in 1975. Although Chiang Kai-shek could not eliminate the Communists the encirclement campaigns and the Long March also clearly strengthened both Chiang and the central government of the Nationalist Party (Kuomintang). Ending the Chinese Communist rebellion in Jiangxi consolidated government power in southeastern China.

Importantly, the inability of the autonomous warlords in Guizhou, Yunnan, Sichuan, Sikang, Gansu, and Sha'anxi Provinces to prevent the Communists from invading their domains led to central government troops entering these areas. After expelling the Communist invaders the government units remained and imposed many reforms and changes, which reduced the warlords to semiobedience to the national government. This was crucial for China's survival when Japan invaded in 1937 and seized the coastal regions, enabling the Chinese government to continue resisting Japan for eight years from its new base in Sichuan and the other provinces it had gained control of as a result of the Long March.

JIU-HWA LO UPSHUR

Lugard, Frederick, baron of Abinger (1858-1945) *British soldier*

Baron Lugard directed the conquest and administration of Nigeria as well as serving as a soldier elsewhere in British West Africa and as a governor in Hong Kong. His military career indicates the opportunities available to aspiring young officers who served the British Empire at its height. As an administrator, he theorized about the

responsibilities of the British to themselves and to the inhabitants of the conquered territories.

Born in Madras (Chennai) in British-controlled India to an Anglican minister, Lugard went to England early in his childhood. He received a solid education as a youth before entering the British Royal Military College at Sandhurst. Upon graduating he joined the army in 1878. He served in the Afghan War (1879–80), the British campaign in the Sudan (1884–85), and Burma (1886–87). He returned to Africa in 1888, where he was wounded in combat against Arab slave traders in NYASALAND.

In the service of the Imperial British East Africa Company, Lugard led a team of explorers in the region of the Sabaki River before heading to Uganda in 1890. After ensuring British control of the area and ending unrest, he earned the title of military administrator of Uganda. While in that capacity, he continued his explorations of Africa. He resigned his position in May 1892 and returned to London, where he convinced the government of Prime Minister Gladstone to remain in Uganda.

When Lugard returned to Africa in 1894, he worked for the Royal Niger Company. He pursued negotiations with various kings and chiefs so as to gain recognition of the company's power in the region and, by extension, that of the British over other European rivals. While conducting an expedition to Lake Ngami in 1897 for the British West Charterland Company, Lugard was recalled by the British government so that he could organize a force of native Africans to defend British interests against the French in Lagos and Nigeria. His West African Frontier Force remained under Lugard's command until December 1899.

From 1900 until 1906, Lugard served as high commissioner of the protectorate of Northern Nigeria. Various local potentates, such as the sultan of Sukoto, refused to accept the provisions of treaties that they had signed. In 1903 Lugard triumphed over this opposition through a combination of diplomacy and military force. Before he left in 1906, Lugard had secured British control over all of Nigeria, though the military still confronted uprisings. His efforts also resulted in an improvement in British commerce; newly laid rail lines carried tin, peanuts, and cotton to the coast.

Lugard favored indirect rule; by defeating indigenous rulers, he could control their peoples on behalf of the British. He accepted emirs who no longer traded slaves, acknowledged British authority, and introduced the measures that the British desired. These emirs retained their titles but took their orders from district officers; emirs could lose their positions if the

British high commissioner found them uncooperative. Thus, the British could reduce the number of colonial officers needed to supervise the territory. Lugard preserved Muslim control over education and medicine in Northern Nigeria, while Christian missionaries provided social services in the south. This resulted in an inequality between the two protectorates as conditions in the south improved.

Lugard spent the next few years in Hong Kong, where he held the position of governor until March 1912. He schemed to gain perpetual control over the rented New Territories, perhaps opening the way for permanent British control of Hong Kong, but his plans did not come to fruition. He also created the basis for the University of Hong Kong in 1911.

He returned to Nigeria as governor in 1912, when he focused on ending the existing system of two protectorates in favor of a single colony. Many intellectuals and the press in Lagos opposed the plan, but the citizenry as a whole did not react. Lugard became governor-general of the colony of Nigeria from 1914 to 1919. As governor he attempted to prevent the importation or consumption of alcoholic beverages; he also tried to end slavery in the colony.

Lugard published numerous works in which he traced the genesis of the British Empire in Africa and rationalized its rule over Africans. In *The Rise of Our East African Empire* (1893) he emphasized the economic motives that compelled the British to seek new markets and to secure sources of raw materials; he justified the initial costs of conquest and anticipated the enormous financial benefits to come.

He further contended that the British had inherited the duty to expand the empire from their ancestors, who had shown considerable initiative in exploring and settling North America and Australia. For Lugard, Britain's contributions to the welfare of Africans—the introduction of Christianity, the abolition of slavery, the spread of better medical treatments, and the improvement of education—would accompany its exploitation of Africa's natural and human resources for its own economic benefit.

Lugard's *The Dual Mandate in British Tropical Africa* (1922) presented a justification for his application of indirect rule in Nigeria, as well as continuing to elaborate a rationale for British rule in Africa. He perceived black Africans as different from white Europeans and believed that they needed training before they could control their own affairs entirely. By co-opting native elites, who spoke the local language and practiced the local customs, as administrators under

a British supervisor, Lugard believed that the British could increase cooperation on the part of natives.

After his decades of service to the British Empire, the aging Lugard settled down to live in England. He died in 1945, after having been appointed a member of the Privy Council in 1920 and being raised to the peerage in 1928.

MELANIE A. BAILEY

Lutz, Bertha

(1894–1976) *Brazilian scientist and feminist*

A zoologist and scientist, Bertha (or “Berta,” as her name is sometimes recorded) Maria Júlia Lutz was a prominent Brazilian feminist and campaigner for women’s rights in Brazil, as well as an important naturalist. Born on August 2, 1894, in São Paulo, her father was Adolfo Lutz (1855–1940), an important physician and epidemiologist, as well as a pioneer of tropical medicine. In 1881 he had moved to Brazil and settled in São Paulo, where he became a microbiologist specializing in the link between sanitation and epidemics, especially the plague, malaria, and yellow fever.

Bertha Lutz was educated in São Paulo and then went to France, where she studied at the University of Paris (Sorbonne). She specialized in natural sciences, biology, and zoology and returned to Brazil to follow up on her interests in amphibians. Her major scientific discovery was a type of frog, to which she gave her name: *Paratelmatobius lutzii* (“Lutz Rapids Frog”). In 1919 Bertha Lutz started work at the Museu Nacional in Rio de Janeiro, then the capital of Brazil, which made her stand out at an early age, as public service jobs were officially supposed to be taken by men.

In Paris Bertha Lutz had been hugely influenced by feminist ideas from France and Britain and had made contact with many French women suffragettes. When she returned to Brazil in 1918, she started agitating for the establishment of a feminist movement there. Only a year after her return, Lutz formed the *Federacao Feminista Progresso Brasileira* (“Brazilian Federation of Feminine Progress”). In 1922 she attended the Pan-

American Conference on Women and gained much useful advice from Paulina Luisi and Carrie Chapman Catt. She was also elected vice president of the conference. After the conference Lutz returned to Brazil and spent much of her time working for the women’s movement. She had seen the advances made by women in Europe and the United States and wanted to get the same rights recognized in Brazil, especially the right of women to work, the abolition of child labor, equal pay for equal work for women, and the right to maternity leave.

In 1932, owing to agitation by Lutz and others, women in Brazil were enfranchised and allowed to vote in elections, an act confirmed by the Brazilian president GETÚLIO VARGAS in amendments to the Brazilian constitution. Lutz made two unsuccessful attempts to be elected to the parliament on behalf of the Independent Electoral League. However, the death of one of the deputies, Candido Pereira, led to a casual vacancy, which was filled by Lutz, who became a deputy in 1934. In parliament she argued for women’s rights, three months’ maternity leave, and a reduction in the hours in the working day for both men and women. She also campaigned for young men to be able to get exemptions from national service.

On October 6, 1940, Adolfo Lutz died, and his daughter not only ensured that his papers were sent to the National Archives of Brazil but also that she cataloged them meticulously, a task that took her the next 30 years. The papers are still regularly studied by many scholars from all around the world and have been hugely augmented by her own collection of papers and books, which she also donated to the archives. Lutz remained in charge of botany at the National Museum for much of the rest of her life.

Her main work in English, *British Naturalists in Brazil*, was published in Rio de Janeiro in 1941. In 1948 Bertha Lutz was one of the four women who signed the United Nations’ Universal Declaration of Human Rights, the others being Minerva Bernardino from the Dominican Republic, Virginia Gildersleeves from the United States, and Wu Yi-tang from the Republic of China. In the 1930s Lutz had written a number of technical papers published in Rio de Janeiro.

In 1968 she completed three papers that were all published by the Texas Memorial Museum in Austin: “Geographic Variation in Brazilian Species of *Hyla*” (1968), “Taxonomy of the Neotropical Hylidae” (1968), and “New Brazilian Forms of *Hyla*” (1968, republished in Rio de Janeiro in 1973). She also wrote a substantial book, *Brazilian Species of Hyla*, written with Gualter

A. Lutz and with a foreword by W. Frank Blair, which was also published in Austin, Texas, in 1973. In 1975 Lutz represented Brazil at the first International Congress of Women at Mexico City, organized by the United Nations. Bertha Lutz died on September 16, 1976, in Rio de Janeiro. The Bertha Lutz Foundation was established in her honor; its symbol is a green butterfly.

JUSTIN CORFIELD

Luxemburg, Rosa

(1871–1919) *socialist revolutionary*

Rosa Luxemburg, the Marxist revolutionary, activist, and author, was born to Jewish parents, Eduard and Line Luxemburg, in the Polish Russian town of Zamosac on March 5, 1871. Politics was her main interest from her early days at school. She arrived in Zurich in 1889 to study law and political economy at the university there. Luxemburg found herself among some of the leading revolutionaries of the period, including George Plekhanov (1857–1918) and Leo Jogiches (1867–1919). Her association with the latter became lifelong, and both men helped to establish a new party, the Social Democracy of the Kingdom of Poland, which became the Socialist Democratic Party of the Kingdom of Poland and Lithuania (SDKPiL).

She was in Paris for a while, where she edited the party's mouthpiece, *Sprawa Robotnicza* (Workers' cause). She shifted to Berlin in 1898 and was associated with German socialism for the next 20 years. After getting her German citizenship, she settled in Berlin and became a member of the German Social Democratic Party. Luxemburg was the editor of the party organ *Vorwärts* (Forward) from 1905 onward.

Luxemburg developed many of her concepts of revolution during this period. For her, the Moscow uprising of December 1905 was due to mass action. Revolution was a long-term phenomenon. Moreover, it could happen in a comparatively underdeveloped country like Russia. She began to write profusely, emphasizing mass

strikes. The Bolsheviks and Mensheviks had different revolutionary strategies, and Luxemburg believed in the former's slogan of dictatorship of the proletariat and peasantry. However, she criticized the Bolsheviks after the October Revolution broke out. Luxemburg was imprisoned in Polish Russia in 1906 and later released. She continued with her political activities and was jailed for two months in June and July 1907. Luxemburg taught Marxism and economics at the Social Democratic Party School in Berlin between 1907 and 1914.

WORLD WAR I broke out on July 28, 1914, and the Bureau of the Socialist International met in Brussels the next day. Luxemburg, as a representative of the SDKPiL, advocated for mass demonstrations against the war. But SPD members voted in favor of the Reichstag's declaration of war on August 4. In September Luxemburg, along with her colleague Karl Liebknecht (1871–1919) and others, formed the International Group from her flat and decided to oppose the war. The group was converted to the Spartakusbund on January 1, 1916. Luxemburg was imprisoned many times during the war. She was released on November 8, 1919, from prison and went on to establish the German Communist Party (KPD) with the help of Liebknecht and socialist groups. Luxemburg organized the Spartakusbund uprising in January 1919 in Berlin but was captured along with Liebknecht. Both were killed on January 15.

Luxemburg's contributions to socialist theory and practice were immense. She was the most vocal spokesperson of the German labor movement. Luxemburg was not an armchair revolutionary like many of the Marxists but believed in action. She ultimately became a martyr for her beliefs, which never wavered from a strong basis of humanitarianism.

PATTI PABAN MISHRA

Lyautey, Louis-Hubert

(1854–1934) *French colonial official*

Louis-Hubert Gonzalve Lyautey was born in Nancy, France, on November 17, 1854. He was brought up

in the aristocratic and intellectual society of Nancy as well as in the simplicity of country life. When Lyautey was only 18 months old he fell from a balcony of the family house, which resulted in a spinal injury. Until the age of six he endured a long period of enforced inactivity, passing the time by reading.

In his teens he attended several schools, and at age 18 in 1873 he entered the French military academy, Saint-Cyr. In 1876 he enrolled in the military staff school and joined a cavalry regiment that was posted in Orleansville, ALGERIA. For the next two years Lyautey learned about Islam, North Africa, and colonial administration; he also began studying Arabic. Lyautey was promoted to the rank of captain in 1882 and was then ordered to join the IV regiment of the *Chasseurs Legers* at Epinal.

When Lyautey was about 33 he published an article on military reforms that ultimately changed his career. He was considered one of those rare men who enjoyed both the sword and the pen. As a reprimand for his article, Lyautey was transferred to Indochina; however, this turned out to be a blessing in disguise. He arrived in Saigon in 1894 and met with Colonel Joseph Gallieni, who became his inspiration; Gallieni also promoted him to chief of staff. While under Gallieni, Lyautey learned a core lesson in colonization, namely, not to offend local traditions nor to change customs, and to use the elite class to the benefit of the empire. Lyautey also learned tactics involving taking, securing, administering, and developing areas that were in enemy hands or subject to enemy attack. His principles concentrated on the well-being of the indigenous population, providing them with security in everyday life and administering their affairs with understanding, respect, and generosity.

In 1897 Lyautey followed Gallieni to Madagascar, where he was promoted to lieutenant colonel and had the opportunity to construct a city how he saw fit. By 1900 he was promoted to full colonel, and by 1903 he returned to Algeria as brigadier general. After the French took several cities in Morocco in an attempt to quell resistance to their occupation in neighboring Algeria, the Treaty of Fez, establishing a French protectorate over Morocco, was signed on March 30, 1912. Lyautey was then appointed the first resident general of Morocco. One of Lyautey's greatest qualities was his ability to adapt to new situations, and he did not adopt a specific or rigid formula in his administration of Morocco. He had qualities that appealed to Moroccans, Berbers, and Arabs alike, as he was a man of decision, integrity, and justice. In contrast to many of

his peers, Lyautey did not believe it was the mission of Europeans to force their civilization and religion on the peoples of colonized countries. He believed it was important that the French understand Islam and the values of the Muslim world. He also believed that a mass migration of European colonists into Morocco would cause problems (as it had in Algeria) but did not object if the colonies were willing to contribute to the country.

As resident general, Lyautey maintained local customs and architecture and established so-called flying columns of soldiers to move quickly from one location to another in order to put down any local rebellions. The establishment of local health clinics in remote areas helped to encourage Moroccan support of the French administration. Lyautey also modernized and enlarged ports, especially in Casablanca, and supported economic development projects in mining and trade. With the outbreak of WORLD WAR I, he managed to control Morocco with very few troops.

In 1916, in the midst of World War I, Lyautey was offered the post of minister of war. After some reluctance he accepted the post but soon clashed with other high-ranking military officers. He opposed Commander in Chief Robert Nivelle's plan for a new offensive against the Germans, but the plan was implemented over Lyautey's objections. Just as Lyautey had foreseen, the offensive failed and resulted in massive numbers of French casualties. Furious, Lyautey tendered his resignation and was asked to return to Morocco to resume his old post as resident general, which he happily accepted. After the war in 1921, Lyautey was promoted to the nation's highest military rank of marshal. He was 66 years old.

Lyautey was plagued by liver attacks that affected him for years that would force him to stay in bed for several weeks and for which he had to endure several operations. During the 1920s, plagued with ill health, Lyautey attempted to resign from the residency, but he was constantly persuaded to remain in Morocco.

During the early 1920s the successes of the RIF REBELLION under Abd el Krim against the Spanish enclaves in the north of Morocco threatened French rule in the rest of the nation. By 1925 Lyautey was reluctantly engulfed in military operations against Abd el Krim and his army. In the midst of the struggle, Lyautey was removed from the military command of Morocco, and Marshal Philippe Pétain, with whom he had previously clashed, replaced him. On September 24, 1925, the colonial veteran, now 70 years old, asked to be relieved of the supreme command in Morocco. His resignation was accepted, and

in October Lyautey left Morocco for France. As he left Rabat, a large crowd gathered to see him off. To the surprise of many, it was the British, not the French, who honored Lyautey with a naval escort of two destroyers through the Strait of Gibraltar. Lyautey spent most of his remaining years at Thorey, in his beloved Lorraine, preparing a few volumes of letters for publication.

Some of the developments in Morocco that Lyautey can be credited with are construction of roads, cities, hospitals, schools, dispensaries, and railways. Hubert Lyautey died in 1934, and his ashes were conveyed by a French naval squadron, accompanied by 14 ships of the British Second Battle Cruiser Squadron, to his mausoleum in Rabat, Morocco.

BRIAN M. EICHSTADT

Lytton Commission and report

On the night of September 18, 1931, the Japanese KWANTUNG ARMY stationed in Manchuria, China's northeastern provinces, staged a minor bomb explosion on the tracks of the South Manchurian Railway outside Mukden, the administrative capital of Manchuria. Claiming that it was Chinese sabotage, the Japanese military swung into action, simultaneously attacking over a dozen Chinese cities in the region. Japanese units from its colony Korea invaded to broaden the attack. This was known as the MANCHURIAN INCIDENT, or Mukden incident.

The Chinese army was no match for superior Japanese forces. Therefore, China decided not to resist militarily and appealed to the LEAGUE OF NATIONS for support. It also appealed to the United States as signatory of the Kellogg-Briand Pact of 1928 and the Washington Treaty of 1922. International support for China was expectedly lukewarm.

However, the league assembly passed two resolutions, on September 30 and October 24, enjoining Japan

to withdraw its forces, which the Japanese government promised to honor, but they had no effect on its military. On December 10 the league decided to dispatch a commission of investigation under British diplomat Lord Lytton, which spent six weeks in Manchuria plus some time in Japan and China.

Japan conquered Manchuria in five months, then established a puppet state called Manchukuo (state of the Manchus) on March 9, 1932. Next Colonel Doihara Kenji, intelligence chief of the Kwantung Army, enticed the last Qing (Ch'ing) emperor, Pu-i (P'u-yi), to Manchuria, installing him as chief executive (later as "emperor") in a regime totally controlled by the Japanese.

The Lytton Report, submitted to the league on October 1, 1932, refuted Japan's claim that Manchukuo had local support, condemned Japan for aggression, and recommended the restoration of Manchuria to Chinese sovereignty. It also recommended the maintenance of the OPEN DOOR POLICY in Manchuria and special consideration for Japanese and Soviet commercial interests in the region. China signaled total acceptance of the report's recommendations, as did the league assembly on February 14, 1933, with one dissenting vote—Japan's. On March 27 Japan announced its resignation from the league.

The failure of the League of Nations to halt Japanese aggression against China in the Manchurian incident signaled its impotence and doomed the international organization. The United States had on January 7, 1932, announced its Non-Recognition Doctrine (or Stimson Doctrine after Secretary of State Henry Stimson), stating that it would not recognize any situation created as a result of war in violation of the Kellogg-Briand Pact. Japanese militarists, encouraged by their success, would ignore both the league and the United States to pursue aggression.

JIU-HWA LO UPSHUR

M

MacArthur, Douglas (1880–1964) *U.S. general*

General Douglas MacArthur was born in Little Rock, Arkansas, on January 26, 1880, the son of Arthur MacArthur, a Civil War hero and military officer, and Mary Pinkney Hardy MacArthur. His early years were spent in military postings throughout the western part of the United States, but he eventually settled in Washington, D.C., following his father's move to the War Department. There he built a strong relationship with his grandfather, Arthur MacArthur, an influential judge who had access to important Washington contacts.

MacArthur's education was fairly transient and lackluster until his father enrolled him in the West Texas Military Academy, where he started to reveal talents that would take him to the U. S. Military Academy at West Point in 1898. At West Point he established a considerable reputation, emerging as first in his class in 1903. After graduation his first service was in the Philippines, where he established a lifelong love for the country. Following the death of his father in 1912, he took up a valuable posting in the War Department, where he came to the attention of Army Chief of Staff General Leonard Wood. In 1915 MacArthur was promoted to major, and within the year he became the army's first public relations officer, a post that helped him sell preparations for war to the U.S. public in the form of the Selective Service Act of 1917.

WORLD WAR I established MacArthur's reputation as a striking leader of dash and courage. He was

appointed brigadier general in August 1918 and became the youngest divisional commander in France, leading the 42nd Division. He was awarded 13 decorations and was cited for bravery seven times. Following military demobilization, MacArthur maintained his rank and became the youngest superintendent in the history of the U.S. Military Academy at West Point. He modernized the curriculum and doubled the size of the academy. In 1922 he married Henrietta Louise Cromwell Brooks, a marriage that led to divorce in 1929.

In the interwar years from 1922 until 1930, MacArthur served two tours in the Philippines, where he built a strong friendship with Philippine leader MANUEL QUEZON and commanded the army's Philippine department from 1928 until 1930. He became chief of staff of the U.S. Army in 1930, when the GREAT DEPRESSION was in full swing. Army strength was severely affected by cutbacks, and political protests drew MacArthur, along with George Patton and Dwight D. Eisenhower, to the unsavory task of suppressing the BONUS ARMY of 1932. This campaign by World War I veterans was met by tanks and cavalry, and the action was in some quarters deemed an excessive use of force.

In 1935 MacArthur returned to the Philippines at the request of President Quezon to head the U.S. military mission and help prepare the Philippines for full independence in 1946. It was at this time that he also met and married Jean Marie Faircloth, who would make MacArthur a father at age 58. After retirement from the army in 1937, MacArthur remained in the Philippines as a military adviser. Yet when negotiations

General Douglas MacArthur was charged with the task of reclaiming the Philippines from the Japanese in World War II.

with the Japanese broke down in 1941, President FRANKLIN D. ROOSEVELT recalled MacArthur to service with the rank of major general, and he was charged with the task of mobilizing the Philippine defenses. He built up his forces in Luzon and Mindanao and was confident in his ability to resist a Japanese attack, a fact that he reported to General George Marshall in Washington.

Immediately following PEARL HARBOR, the Japanese launched widespread attacks on the Philippines, where they quickly overcame MacArthur's defenses and destroyed his air force, much of it caught on the ground. Although previously encouraged to do so, MacArthur failed to attack the Japanese air bases in Taiwan; the Japanese invasion met little effective resistance. Luzon fell, as did Manila, and MacArthur retreated to the Bataan Peninsula and the fortress at Corregidor. In late February 1942 he was ordered to withdraw to Australia, leaving his surrounded army of 11,000 men under the command of General Jonath-

an Wainwright to face the Japanese. Their surrender would lead to the infamous Bataan Death March, which incensed all Americans and increased their desire for revenge. MacArthur's daring escape with his wife, son, and a small group of advisers was initially by patrol boat before connecting with an aircraft that got him to AUSTRALIA's Northern Territory by March 17. It was at Terowie, South Australia, that he made his now famous "I Shall Return" speech.

MacArthur now became supreme commander of the Allied forces in the southwest Pacific area, working with Admiral Chester Nimitz, commander in chief of the U.S. Pacific fleet, and Admiral Ernest King, commander in chief of the U.S. Navy. From offices in Brisbane, Australia, MacArthur developed an island-hopping strategy to counter the Japanese and stop their advance across the Pacific. By 1943, because of MacArthur's expert use of navy support and army and marine amphibious landings, as well as the benefits of major victories at Midway and at Guadalcanal, the tide turned. Importantly, New Guinea fell to the Allies in 1944, allowing MacArthur to plan the retaking of the Philippines. The destruction of the Japanese navy at Leyte was the largest naval battle in history and made the successful landings possible while ending all hope that the Japanese could counter. U.S. troops advanced across the Philippines and moved on to attack Luzon in January 1945. Manila was taken after brutal resistance by Japanese troops under the command of General Yamashita on March 4, 1945.

From headquarters now established in Manila, MacArthur planned the final attacks upon Japan, including a 1,300-ship invasion of Okinawa, which was but 350 miles from mainland Japan, on April 1, 1945. The struggle for Okinawa was extremely costly, resulting in 12,520 U.S. and 110,000 Japanese killed and the introduction of major kamikaze suicide raids on U.S. shipping. The heavy cost extracted from this invasion made an invasion of the Japanese main islands a daunting prospect. The atomic bomb strategy was introduced to quicken the end of the war and deliver Japan's unconditional surrender. On August 6, 1945, an atomic bomb was dropped on HIROSHIMA, which did not produce the desired capitulation. On August 9 a second bomb was dropped on Nagasaki. The Japanese accepted terms on August 10. Their surrender ended WORLD WAR II in the Pacific.

MacArthur received the formal surrender onboard the USS *Missouri* on September 2, 1945, and President HARRY S. TRUMAN appointed him head of the Allied occupation of Japan. Japan was a defeated and dev-

astated country, and MacArthur worked to salvage and reconstruct the country, including the creation of a democratic constitution that would ensure a peaceful Japan. MacArthur turned over authority in 1949 to a new Japanese government, which preserved the emperor but in a symbolic role. MacArthur remained in Japan until relieved by President Truman in April 1951.

The North Korean attack on South Korea in 1950 changed the course of Korean history, as it did MacArthur's own. MacArthur assumed command of a United Nations-sanctioned coalition of Allies authorized to drive out the North Koreans. He saved a desperate situation by organizing a brilliant rearguard amphibious landing at Inchon, which outflanked and destroyed much of the North Korean army, whose remnants hastily retreated back across the 38th parallel and then toward the Chinese border. The Chinese warned that they would become involved if their border was threatened. From his position of strength, MacArthur was dismissive of the Chinese threat until on October 25, 1950, the Chinese crossed the Yalu River and drove the Allies back. MacArthur wanted to now attack the Chinese with overwhelming force, including nuclear weapons, but President Truman feared this would involve the Soviet Union and create the framework for a new world war. MacArthur's relations with Truman broke down. By March 1951 the prewar boundary position along the 38th parallel was established. This development encouraged Truman to ask for a cease-fire and negotiations to end the conflict. While Truman tried to secure such talks, MacArthur continued to threaten the Chinese and undercut Truman's position as commander in chief. The president responded on April 11, 1951, by relieving MacArthur of his command.

Truman's decision, because of MacArthur's extreme popularity and influence, was not well received by many Americans, particularly those desiring a stronger cold war response to aggressive communist expansion. Upon his return to the United States, his first time on the mainland in 11 years, MacArthur was invited to address Congress. It was here that he gave a powerful performance, where he emotionally and famously ended his speech with the declaration, "Old soldiers never die, they just fade away."

MacArthur's considerable popular acclaim led to the belief that he would be a 1952 Republican challenger for the presidency, or at least be the vice presidential candidate on a Robert Taft ticket. His political views and a Senate investigation of his dismissal helped cool some of this enthusiasm. The successful emergence of

General Dwight David Eisenhower as the Republican presidential candidate ended MacArthur's involvement in national politics.

After leaving the army, MacArthur lived in New York and became chairman of the board at the Remington Rand Corporation. He did offer military advice to presidents, if requested, and did so for John F. Kennedy, when his advice was critical of the Pentagon policies of the day. He also managed a return visit in 1961 to the Philippines, where he received further accolades, including the naming of the Pan-Philippine Highway as MacArthur Highway in his honor.

General Douglas MacArthur was one of the most highly decorated soldiers in U.S. history, holding numerous citations as well as the highest award, the Medal of Honor. He died at Walter Reed Hospital in Washington on April 5, 1964.

THEODORE W. EVERSOLE

Macaulay, Herbert

(1864–1945) Nigerian politician

Herbert Macaulay was a Nigerian political leader, civil engineer, journalist, and musician. He was among the first Nigerians to oppose British rule in the African nation.

Macaulay's grandfather, Samuel Ajayi Crowther, was the first African bishop in Nigeria. Macaulay's father, Thomas Babington Macaulay, was also a minister and an educator. Herbert was born and educated in Lagos, one of the 12 states in present-day Nigeria. In 1881 he became a clerk for the public works department in Lagos. His abilities soon won him the respect of the government, and he was offered a scholarship to study civil engineering in England.

Returning from England three years later, Macaulay was named surveyor of the Crown lands for the

colony of Lagos. Soon, however, he became embittered by the racial inequities he saw in civil service. In 1898 Macaulay resigned his post and began his own surveying company.

Macaulay's dissatisfaction with colonial rule in Africa led him to express himself, contributing a number of articles to the Lagos *Daily Times*. Lagos and the entire Nigerian region were under the Lugard system called indirect rule. Britain established its power using extant administrative systems rather than imposing entirely new governmental institutions. Although the governments and officials were often Africans, they had no real power. British governors and primarily white legislatures made all the decisions. As a result, the leaders lost standing among their people, the people distrusted the British even more, and protests were common.

In an effort to compromise, the British marginally increased African representation. This action was partly the result of Macaulay's 1921 trip to London as a representative of the king of Lagos. Macaulay used the opportunity to denounce British rule for usurping the power of the king, or *eleko*, who Macaulay asserted was recognized by all Nigerians as their rightful ruler. In 1922 Lagos and Calabar were able to send African representatives to the legislature, but they remained in the minority. Macaulay then established the first Nigerian political party, which was able to win three seats in the legislative council in 1923.

The Nigerian National Democratic Party sought self-government for Lagos and all Nigeria, universal primary education, the building of schools, and more representation of Africans in government and civil service positions. Macaulay continued to work for these causes and in 1944 was instrumental in the formation of the National Council of Nigeria and the Cameroons (NCNC). Macaulay was elected president of the NCNC. The council brought together more than 40 different factions that represented many geographical, cultural, age, and ethnic groups.

Although he is often called the father of Nigerian nationalism, Herbert Macaulay did not see Nigerian independence. He became ill in 1945 while on a speaking tour promoting the NCNC agenda. He returned to Lagos, where he died the same year. Nigeria was granted independence from Britain on October 1, 1960.

JEAN SHEPHERD HAMM

Madero, Francisco

(1873–1913) *Mexican president*

The president of Mexico from 1911 until 1913, Francisco Indalecio Madero González was a prominent revolutionary who was from one of the richest families in Mexico. He was born on October 30, 1873, at Parras de la Fuente, Coahuila, in northeastern Mexico. His grandfather Evaristo Madero (1828–1911), of Portuguese ancestry, had established massive plantations in the region, becoming fabulously rich and also donating large sums to fund schools and orphanages in the area.

Francisco Madero went to school in Baltimore, Maryland, and then studied in Paris, where he attended the École des Hautes Études Commerciales before studying agriculture at the University of California, Berkeley. Madero came to respect both systems of democracy and was intent on going into politics.

In 1904 Madero organized the Benito Juárez Democratic Club, with himself as the president, and they managed to get a candidate elected in the local municipal elections. In 1905 they decided to contest the next election for governor when the incumbent illegally stood for reelection and protests did not succeed in getting him ousted.

In 1908 the Mexican dictator Porfirio Díaz announced that he would not stand for reelection. He later decided that he would stand, which was unconstitutional. In 1909 Madero wrote *The Presidential Succession of 1910*, in which he argued for free and fair elections and that rules to stop incumbents from standing for reelection should be enforced. This led to the formation of the Mexican Anti-Reelectionist Center, with Madero as cofounder. This movement rapidly gained support, and Madero's enemies decided to preempt the result by having him arrested. Madero was charged with stealing a *guayule* (a crop used in rubber cultivation). He evaded the police and managed to make it to the convention of the Anti-Reelectionists, where he was chosen as their candidate for the elections. On the eve of the election, Madero was arrested, as were 6,000 other Anti-Reelectionists. Porfirio Díaz was reelected with 196 votes in the electoral college.

As soon as the elections had ended, after being released on a large bail posted by his father, Madero started a campaign against the reelection of Porfirio Díaz. On October 4, 1910, Madero fled to Laredo, Texas. On November 20, 1910, he managed to persuade the people to take up arms and topple Díaz, who, Madero claimed, had subverted the constitution. Madero also declared that the elections were null and void. He was a better political speaker than a revolutionary leader, and the small force that he brought with him from the United States into Mexico was routed. His supporters, mainly drawn from the middle class and upper-class elite, were easily rounded up. This meant that Madero had to get help from many other people, some of whom had been traditional supporters of rebellion against the government, including the men who served FRANCISCO “PANCHO” VILLA. At one battle Madero held back from sending his men to attack government soldiers at the border town of Ciudad Juárez, and it was left to Pancho Villa and PASCUAL OROZCO to order an assault. At the subsequent Treaty of Ciudad Juárez, signed on May 17, the president’s representatives agreed that he would stand down and so end the civil war.

Díaz stood down on May 25, 1911, and Francisco León de la Barra became interim president. In October 1911 a presidential election was held, with Madero standing as presidential candidate. His former vice-presidential running mate, Francisco Vázquez Gómez, did not like Madero’s plans to stand down the revolutionary forces, and José María Pino Suárez became the new running mate. Madero easily won the elections, and on November 6, 1911, he became president.

As president, Madero introduced many reforms, including the freeing of all political prisoners and the abolition of the death penalty. He also lifted censorship of the press, although this did result in the various factions of his party managing to increase their hostility to each other. Madero allowed trade unions to organize railway workers, ending the system of giving preference to U.S. workers, and also, through a new department of labor, reduced the workday to a maximum of 10 hours and introduced regulations for the employment of women and children. His most far-reaching change in the political system was the ending of the *jefaturas políticas*, party bosses who had controlled various regions, towns, and provinces. They were replaced by nonpolitical municipal authorities who had the tasks of demobilizing the revolutionary soldiers, settling them back into the community, maintaining law and order, and overseeing local and national elections.

In October 1911 Félix Díaz, the nephew of Porfirio Díaz, staged a revolt to overthrow Madero. In November 1911 Madero became the subject of another rebellion when EMILIANO ZAPATA wanted a considerably more far-reaching agrarian reform program. In addition, some revolutionary soldiers felt that Madero had let them down and had not done enough for his former supporters. The economy began to stumble, and foreign companies and powerful Mexican business interests began to move against Madero. General Bernardo Reyes staged a third rebellion in December 1911, and Pascual Orozco led a rebellion in January 1912.

Finally, Madero was overthrown in February 1913 when troops led by General VICTORIANO HUERTA fought in the streets for 10 days. Madero was telephoned with the news that his opponents had seized the National Palace and had deposed him, believed to be the first time that a head of state was telephoned to be told of his overthrow. Madero resigned on February 18, 1913, and was executed four days later. He was only 39.

JUSTIN CORFIELD

Maginot line

There was never unanimous consensus among military men about the lessons of WORLD WAR I. When the adversaries of 1914–18 fought again in 1940, the Germans interpreted their experience as one that taught the need for a rapid and forceful offense. Interpreting that same conflict quite differently, France planned to fight almost purely defensively in the first stages. It would then attack the Germans, who they believed would have worn themselves out assaulting the centerpiece of French strategy, the Maginot line.

Planned in the 1920s and essentially completed by 1935, the Maginot line (named after a French minister of war) was a network of fortifications on the border between Germany, Luxembourg, and Italy. The line was designed and built to serve several purposes. First, the Maginot line would protect French industry in the Alsace-Lorraine region. Second, a strong defensive line would help the French make the

most of their available forces while mobilizing their remaining reserves. Finally, it was envisioned that the Germans would go directly for the line, allowing the French to hold them off and inflict heavy casualties. The relatively fresh French would then launch an assault of their own and defeat the Germans on their own territory.
